Title of Collection: Assessing the Role of Noncognitive and School

Environmental Factors in Students' Transitions to High School in New Mexico.

OMB Control Number: 1850—NEW.

Type of Review: A new information collection.

Respondents/Affected Public: State, Local and Tribal Governments.

Total Estimated Number of Annual Responses: 2,591.

Total Estimated Number of Annual Burden Hours: 773.

Abstract: The study will examine relationships between non-cognitive factors (e.g., growth mindset, learning strategies, and self-efficacy) and school environment and contextual factors (e.g., perceptions of school safety, supportive teachers and counselors, usefulness of academic work) and three measures of successful 9th grade transitions—overall freshman GPA, number of 9th grade course failures, and freshman year attendance for three districts in New Mexico. It will also examine whether non-cognitive and school environment factors contribute to the prediction of successful 9th grade transitions after academic factors have been taken into account. The study will use data that will be collected via a survey that was created with assistance from members of the New Mexico Achievement Gap Alliance. The survey data will be used in combination with extant student-level academic and demographic data that will be obtained from the New Mexico Public Education Department. This study will also include comparisons between Hispanic, Native American and white students.
