- The goal of this action is to proactively protect the ecosystem role of unmanaged forage species. In this context, “unmanaged” refers to species not currently managed by the Mid-Atlantic, New England, or South Atlantic Fishery Management Councils, or the Atlantic States Marine Fisheries Commission. The Council has not yet determined which type of action it will develop. The action could take the form of a new fishery management plan, an amendment to an existing fishery management plan, or another action.
- Scoping is the process of identifying issues, potential impacts, and a reasonable range of alternatives associated with a management action.

Scoping provides the first and best opportunity for the public to make suggestions and raise concerns about new Council actions. Public comments early in the development of this action will help the Council identify effective management alternatives and issues of concern.
