

responded and agreed with Reclamation's jurisdictional decision over hydropower development at the Boise Project's Anderson Ranch dam, powerhouse, and reservoir. However, the Commission would retain jurisdiction for hydropower facilities that would be located outside of Reclamation's development. Thus, an entity seeking to build a hydropower project that would use Reclamation's Boise Project facilities would need to obtain a lease of power privilege from Reclamation, but it also would need to obtain a license from the Commission for those facilities of the hydropower project that are not under Reclamation's jurisdiction.

On July 27, 2015, Owyhee Hydro filed a revised application providing an additional alternative to the proposed Anderson Ranch project. The revised Anderson Ranch project has three alternatives: Alternatives A, B, and C. Alternatives A and B would use the existing Anderson Ranch dam, reservoir, powerhouse, tailrace, and transmission lines, and would consist of the following new facilities: (1) A 1,060-foot-long, 65-foot-high zoned earth or concrete faced rockfill dam; (2) a 900-acre-foot impoundment as an upper reservoir; (3) a 4,180-foot-long, 9.1-foot-diameter single steel penstock (6.5-foot-diameter if twin conduit); (4) a single 80-megawatt (MW) reversible pump turbine/generator to be located within the third bay of the existing powerhouse; and (5) appurtenant facilities. Alternative C would use the existing Anderson Ranch dam, reservoir, and powerhouse, and would consist of the same new facilities as in Alternatives A and B except it would have: (1) A 4,180-foot-long, 9.1-foot-diameter single steel penstock (6.5-foot-diameter if twin conduit) and a 3,440-foot-long, 9.1-foot-diameter single steel penstock (6.5-foot-diameter if twin conduit); (2) a 250-foot-long, 90-foot-wide concrete powerhouse located adjacent to the existing Anderson Ranch reservoir; (3) a single 80-MW Pelton turbine/generator; and (4) a 3,400-foot-long, 69 or 115-kilovolt transmission line interconnecting with the existing Bonneville Power Administration Dixie Substation. The estimated annual generation for the Anderson Ranch project would be 175.2 gigawatt-hours.

[Project No. 14690-000]

#### Blue River Hydro Power, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On July 1, 2015, Blue River Hydro Power, LLC filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Blue River Hydroelectric Project (Blue River Project or project) to be located at Blue River Dam near the Town of Blue River in Lane County, Oregon. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application

during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would utilize flows at the existing Blue River Dam, and would consist of the following new features: (1) A 12-foot-diameter, 500-foot-long steel liner pipe installed in the downstream portion of the existing dam outlet tunnel, (2) a gatehouse containing two 7-foot-wide, 8-foot-high steel slidegates to regulate pipe pressure and release excess water, (3) a 9-foot- to 12-foot-diameter, 600-foot-long steel penstock, (4) a 70-foot-wide, 55-foot-long reinforced concrete powerhouse, (5) two 10 megawatt vertical-shaft Francis turbine/generators, (6) an approximately 40-foot-wide, 40-foot-long concrete tailrace returning flows to the Blue River, (7) a switchyard and a 2.5-mile-long, 12.5-kilovolt buried transmission line interconnecting with Lane Electric Cooperative's existing Blue River substation, and (8) appurtenant facilities. The estimated annual generation of the Blue River Project would be 50 gigawatt-hours.
