Participant agrees that NIH may conduct testing on the visualization tool or application to determine whether malware or other security threats may be present. NIEHS may disqualify the submission if, in NIEHS' judgment, the visualization tool or application or any other part of the submission may damage government or others' equipment or operating environment.

Additional Information: To help the public understand the health implications of climate change and improve the nation's ability to be resilient to negative impacts, HHS has organized the *Climate and Health Innovation Challenge Series*. This Challenge Series spotlights the over 150 climate and health data sets that have become available via the Climate Data Initiative, while also identifying and promoting additional relevant data sets. The Challenge Series will include challenges aimed at one or more of the following goals:

1. Create appealing applications that empower the public to take action by providing information about climate change's impacts on health or about the potential health benefits of personal actions to reduce greenhouse gas emissions.

2. Create climate change and health decision support tools for health professionals and, potentially, other professionals (e.g. urban planners).

3. Empower the academic and technology communities to analyze data in innovative ways, moving research forward in key areas (products may range from data visualizations to useful indices/metrics to adopt).

4. Challenge the private sector to combine government data with their own data to develop innovative decision support tools or address research questions.
