amendment of its November 21, 2013 license. The licensee states that, due to economic shifts, it is no longer economically feasible to add a 1,026 kilowatt (kW) low flow turbine to the existing powerhouse, as proposed during the relicensing process. The licensee instead proposes to replace the existing fixed-blade turbine with a variable pitch Kaplan turbine in order to achieve compliance with instantaneous run-of-river operations and other license requirements. The licensee's proposed amendment would reduce the authorized installed capacity from 3,026 kW to 2,000 kW. The licensee indicates that its proposed amendment would allow for electricity generation over a broader range of inflows, as low as 160 cubic feet per second, while enabling the project to meet its run-of-river operational requirement for the protection of aquatic resources downstream.
