During this time, the licensee proposes to release flows through a conduit into a seasonal creek that is a tributary to the East Branch Russian River immediately downstream of the project powerhouse. The licensee states that if site conditions reach a Critically Dry water year status, it would instead, maintain the license-required minimum flow of 5 cfs. Finally, the licensee

proposes to regularly monitor the interim flows in the seasonal tributary. Upon completion of construction, the licensee states that it would notify the resource agencies and return to the license-required flows.
