FEDERAL REGISTER

Vol. 80 Friday,
No. 205 October 23, 2015

Book 1 of 2 Books

Pages 64305–64660

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

How To Cite This Publication: Use the volume number and the page number. Example: 80 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

The President

Memorandum of October 20, 2015

Delegation of Authority for Drafting and Submission of the International Trade Data System Annual Report to the Congress

Memorandum for the Secretary of Homeland Security

By the authority vested in me as President by the Constitution and the laws of the United States of America, including section 301 of title 3, United States Code, I hereby delegate to you the reporting function conferred upon the President by section 405 of the SAFE Port Act of 2006, Public Law 109–347.

You are authorized and directed to publish this memorandum in the *Federal Register*.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 950

RIN 3206–AM68

Solicitation of Federal Civilian and Uniformed Service Personnel for Contributions to Private Voluntary Organizations

AGENCY: Office of Personnel Management.

ACTION: Final rule; delay of effective date.

SUMMARY: The United States Office of Personnel Management (OPM) is issuing a final rule to change the effective date of previously published Combined Federal Campaign regulations to January 1, 2017.

DATES: The effective date of the regulations published in the **Federal Register** on April 17, 2014 (79 FR 21581) is delayed until January 1, 2017.

Regarding funds contributed to the CFC during the 2016 campaign year, LFCCs and PCFOs will continue to operate, disburse funds, and submit to compliance requirements in accordance with regulations in 5 CFR part 950 as amended at 71 FR 67284, Nov. 20, 2006.

FOR FURTHER INFORMATION CONTACT: Mary Capule by telephone at (202) 606–2564; by FAX at (202) 606–5056; or by email at *cfc@opm.gov.*

SUPPLEMENTARY INFORMATION: The U.S. Office of Personnel Management (OPM) issued a Notice of Proposed Rulemaking on August 17, 2015 to amend 5 CFR part 950 to change the effective date of the new rule from January 1, 2016 to January 1, 2017. During the comment period, OPM received two comments, including one from a Federal agency and one from a Local Federal Coordinating Committee (LFCC). These comments are addressed below.

The Department of Defense expressed its support for the amendment to allow additional time to test new systems before they are deployed. The Greater Arkansas CFC LFCC requested clarification on the process by which a contract will be awarded to a vendor to serve as the Central Campaign Administrator and the method by which the system will be tested.

The revision involves the change of the effective date of the new CFC regulations published in the **Federal Register** on April 17, 2014. The new effective date for the CFC regulations would ensure that the tools need to put these reforms in place—including the pivotal online charity application and donor pledging systems—are thoroughly tested and fully operational before being made available to charities and donors.

On August 17, 2015 (80 FR 49173), OPM published a proposed rule with requests for public comment in the **Federal Register**. The Agency received two comments, neither of which opposed the change of date. It is therefore publishing the proposed rule as final without change.

Regulatory Flexibility Act

I certify that this regulation will not have a significant economic impact on a substantial number of small entities. Charitable organizations applying to the CFC have an existing, independent obligation to comply with the eligibility and public accountability standards contained in current CFC regulations. Streamlining these standards will be less burdensome.

Executive Orders 12866 and 13563, Regulatory Review

This rule has been reviewed by the Office of Management and Budget in accordance with Executive Orders 12866 and 13563.

List of Subjects in 5 CFR Part 950

Administrative practice and procedures, Charitable contributions, Government employees, Military personnel, Nonprofit organizations and Reporting and recordkeeping requirements.

U.S. Office of Personnel Management.

Beth F. Cobert,

Acting Director.

[Docket No. APHIS–2014–0086]

RIN 0579–AE07

Importation of Fresh Peppers From Ecuador Into the United States

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: We are amending the fruits and vegetables regulations to allow the importation of fresh peppers into the United States from Ecuador. As a condition of entry, the fruit will have to be produced in accordance with a systems approach that includes requirements for fruit fly trapping, pre-harvest inspections, production sites, and packinghouse procedures designed to exclude quarantine pests. The fruit will also be required to be imported in commercial consignments and accompanied by a phytosanitary certificate issued by the national plant protection organization of Ecuador stating that the consignment was produced and prepared for export in accordance with the requirements in the systems approach. This action allows for the importation of fresh peppers from Ecuador while continuing to provide protection against the introduction of plant pests into the United States.

DATES: Effective November 23, 2015.

FOR FURTHER INFORMATION CONTACT: Ms. Claudia Ferguson, Senior Regulatory Policy Specialist, Regulatory Coordination and Compliance, PPQ, APHIS, 4700 River Road Unit 133, Riverdale, MD 20737–1236; (301) 851–2352; *Claudia.Ferguson@aphis.usda.gov.*

SUPPLEMENTARY INFORMATION:

Background

Under the regulations in ''Subpart-Fruits and Vegetables'' (7 CFR 319.56–1 through 319.56–73, referred to below as the regulations), the Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture prohibits or restricts the importation of fruits and vegetables into the United

States from certain parts of the world to prevent plant pests from being introduced into and spread within the United States.

On April 24, 2015, we published in the **Federal Register** (80 FR 22930–22934, Docket No. APHIS–2014–0086) a proposal[1] to amend the regulations to allow the common bell pepper (*Capsicum annuum* L.), locoto pepper (*Capsicum baccatum* L.), habanero pepper (*Capsicum chinense* Jacq.), tabasco pepper (*Capsicum frutescens* L.), and manzano pepper (*Capsicum pubescens* Ruiz & Pav.) to be imported into the United States under a systems approach. (Hereafter we refer to these species as ''peppers.'') We also prepared a pest risk assessment (PRA) and a risk management document (RMD). The PRA evaluates the risks associated with the importation of fresh peppers from Ecuador into the United States. The RMD relies upon the findings of the PRA to determine the phytosanitary measures necessary to ensure the safe importation into the United States of fresh peppers from Ecuador.

In the proposed rule, we noted that the PRA rated six plant pests as having a high pest risk potential for following the pathway of peppers from Ecuador into the United States: The insects *Anastrepha fraterculus, Ceratitis capitata, Spodoptera litura, Thrips palmi,* and *Tuta absoluta,* and the fungus *Puccinia pampeana.* The PRA rated the insect *Neoleucinodes elegantalis* and the Andean potato mottle virus with a medium pest risk potential.

We determined in the PRA that measures beyond standard port of arrival inspection will mitigate the risks posed by these plant pests and proposed a systems approach that includes requirements for fruit fly trapping, pre-harvest inspections, production sites, and packinghouse procedures designed to exclude quarantine pests. We also proposed that the fruit be imported in commercial consignments only and accompanied by a phytosanitary certificate issued by the national plant protection organization of Ecuador stating that the consignment was produced and prepared for export in accordance with the systems approach.

We solicited comments concerning our proposal for 60 days ending June 23, 2015. We did not receive any comments.

We have made one minor change to this final rule, *i.e.,* we have added tomato leaf miner as another common name associated with the plant pest *Tuta absoluta.*

Therefore, for the reasons given in the proposed rule, we are adopting the proposed rule as a final rule with the change noted.

Executive Order 12866 and Regulatory Flexibility Act

This final rule has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget.

In accordance with the Regulatory Flexibility Act, we have analyzed the potential economic effects of this action on small entities. The analysis is summarized below. Copies of the full analysis are available by contacting the person listed under **FOR FURTHER INFORMATION CONTACT** or on the Regulations.gov Web site (see **ADDRESSES** above for instructions for accessing Regulations.gov).

This rule amends the regulations to allow the importation of fresh peppers from Ecuador into the United States when a systems approach to pest risk mitigation is used to prevent the introduction of quarantine pests. The systems approach will integrate prescribed mitigation measures that cumulatively achieve the appropriate level of phytosanitary protection.

The most recent production data available show that fresh pepper yields in Ecuador have expanded from approximately 12,522 pounds per hectare (pounds/ha) in 1996 to approximately 66,361 pounds/ha in 2006. The total quantity of fresh peppers that were exported from Ecuador in 2006 and 2007 was 96.3 metric tons (MT) and 206.5 MT, respectively. Sea shipping containers that are 40 feet in length hold approximately 20 U.S. MT. Considering the total volume exported from Ecuador during these years, APHIS estimates imports of no more than 10 containers (200 MT) of fresh peppers from Ecuador into the United States annually. This quantity is equivalent to less than 0.02 percent of annual U.S. fresh pepper production. Similarly, the estimated quantity of fresh pepper imports from Ecuador (200 MT annually) is minimal compared to the total quantity of fresh peppers imported by the United States in recent years (800,000 MT annually).

In the United States, the average value of bell pepper production per farm in 2012 was approximately $52,300, and the average value of chili pepper production per farm was approximately $20,700. Both levels are well below the small-entity standard of $750,000. Establishments classified within NAICS 111219, including pepper farms, are considered small by the Small Business Administration (SBA) if annual sales are not more than $750,000. Accordingly, pepper growers are predominantly small entities according to the SBA standard. Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action will not have a significant economic impact on a substantial number of small entities.

Executive Order 12988

This final rule allows fresh pepper fruit to be imported into the United States from Ecuador. State and local laws and regulations regarding fresh pepper fruit imported under this rule will be preempted while the fruit is in foreign commerce. Fresh fruits are generally imported for immediate distribution and sale to the consuming public, and remain in foreign commerce until sold to the ultimate consumer. The question of when foreign commerce ceases in other cases must be addressed on a case-by-case basis. No retroactive effect will be given to this rule, and this rule will not require administrative proceedings before parties may file suit in court challenging this rule.

Paperwork Reduction Act

In accordance with section 3507(d) of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the information collection or recordkeeping requirements included in this final rule, which were filed under 0579–0437, have been submitted for approval to the Office of Management and Budget (OMB). When OMB notifies us of its decision, if approval is denied, we will publish a document in the **Federal Register** providing notice of what action we plan to take.

E-Government Act Compliance

The Animal and Plant Health Inspection Service is committed to compliance with the E-Government Act to promote the use of the Internet and other information technologies, to provide increased opportunities for citizen access to Government information and services, and for other purposes. For information pertinent to E-Government Act compliance related to this rule, please contact Ms. Kimberly Hardy, APHIS' Information Collection Coordinator, at (301) 851–2727.

Lists of Subjects in 7 CFR Part 319

Coffee, Cotton, Fruits, Imports, Logs, Nursery stock, Plant diseases and pests, Quarantine, Reporting and recordkeeping requirements, Rice, Vegetables.

[1] To view the proposed rule and supporting documents, go to *http://www.regulations.gov/#!docketDetail;D=APHIS-2014-0086.*

Accordingly, we are amending 7 CFR part 319 as follows:

PART 319–FOREIGN QUARANTINE NOTICES

■ 1. The authority citation for part 319 continues to read as follows:

Authority: 7 U.S.C. 450 and 7701–7772, and 7781–7786; 21 U.S.C. 136 and 136a; 7 CFR 2.22, 2.80, and 371.3.

■ 2. Section 319.56–74 is added to read as follows:

§ 319.56–74 Peppers from Ecuador.

Fresh peppers (*Capsicum annum* L., *Capsicum baccatum* L., *Capsicum chinense* Jacq., *Capsicum frutescens* L., and *Capsicum pubescens* Ruiz & Pav.) from Ecuador may be imported into the United States only under the conditions described in this section. These conditions are designed to prevent the introduction of the following quarantine pests: Andean potato mottle virus; *Anastrepha fraterculus* (Wiedemann), South American fruit fly; *Ceratitis capitata* (Wiedemann), Mediterranean fruit fly; *Neoleucinodes elegantalis* (Guenée), a fruit boring moth; *Puccinia pampeana* Speg., a pathogenic fungus that causes pepper and green pepper rust; *Spodoptera litura* (Fabricius), a leaf-eating moth; *Thrips palmi* Karny, an arthropod; and *Tuta absoluta* (Meyrick) Povolny, South American tomato moth, tomato leaf miner.

(a) *General requirements.* The national plant protection organization (NPPO) of Ecuador must provide an operational workplan to APHIS that details activities that the NPPO of Ecuador will, subject to APHIS' approval of the workplan, carry out to meet the requirements of this section. The operational workplan must include and describe the specific requirements as set forth in this section.

(b) *Commercial consignments.* Peppers from Ecuador may be imported in commercial consignments only.

(c) *Production site requirements.* (1) Pepper production sites must consist of pest-exclusionary structures, which must have double self-closing doors and have all other windows, openings, and vents covered with 1.6 mm (or less) screening.

(2) All production sites that participate in the pepper export program must be registered with the NPPO of Ecuador.

(3) The production sites must be inspected prior to each harvest by the NPPO of Ecuador or its approved designee in accordance with the operational workplan. If any quarantine pests are found to be generally infesting or infecting the production site, the NPPO of Ecuador will immediately prohibit that production site from exporting peppers to the United States and notify APHIS of this action. The prohibition will remain in effect until the NPPO of Ecuador and APHIS agree that the pest risk has been mitigated. If a designee conducts the program, the designation must be detailed in the operational workplan. The approved designee can be a contracted entity, a coalition of growers, or the growers themselves.

(4) The registered production sites must conduct trapping for the fruit flies *A. fraterculus* and *C. capitata* at each production site in accordance with the operational workplan.

(5) If a single *A. fraterculus* or *C. capitata* is detected inside a registered production site or in a consignment, the NPPO of Ecuador must immediately prohibit that production site from exporting peppers to the United States and notify APHIS of the action. The prohibition will remain in effect until the NPPO of Ecuador and APHIS agree that the risk has been mitigated.

(6) The NPPO of Ecuador must maintain records of trap placement, checking of traps, and any quarantine pest captures in accordance with the operational workplan. Trapping records must be maintained for APHIS review for at least 1 year.

(7) The NPPO of Ecuador must maintain a quality control program, approved by APHIS, to monitor or audit the trapping program in accordance with the operational workplan.

(d) *Packinghouse procedures.* (1) All packinghouses that participate in the export program must be registered with the NPPO of Ecuador.

(2) The peppers must be packed within 24 hours of harvest in a pest-exclusionary packinghouse. The peppers must be safeguarded by an insect-proof mesh screen or plastic tarpaulin while in transit to the packinghouse and while awaiting packing. The peppers must be packed in insect-proof cartons or containers, or covered with insect-proof mesh or plastic tarpaulin, for transit into the United States. These safeguards must remain intact until arrival in the United States or the consignment will be denied entry into the United States.

(3) During the time the packinghouse is in use for exporting peppers to the United States, the packinghouse may only accept peppers from registered approved production sites.

(e) *Phytosanitary certificate.* Each consignment of peppers must be accompanied by a phytosanitary certificate issued by the NPPO of Ecuador bearing the additional declaration that the consignment was produced and prepared for export in accordance with the requirements of this section. The shipping box must be labeled with the identity of the production site.

(Approved by the Office of Management and Budget under control number 0579–0437)

Done in Washington, DC, this 19th day of October 2015.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

7 CFR Part 3430

RIN 0524–AA65

Competitive and Noncompetitive Non-Formula Federal Assistance Programs—Specific Administrative Provisions for the Food Insecurity Nutrition Incentive Grants Program

AGENCY: National Institute of Food and Agriculture, USDA.

ACTION: Final rule.

SUMMARY: The National Institute of Food and Agriculture (NIFA) is publishing a final rule for the Food Insecurity Nutrition Incentive Grants Program. This final rule adds a subpart entitled ''Food Insecurity Nutrition Incentive Grants Program'' to the part entitled ''Competitive and Noncompetitive Non-formula Federal Assistance Programs—General Award Administrative Provisions''.

DATES: This final rule becomes effective on October 23, 2015.

FOR FURTHER INFORMATION CONTACT: Lisa Scott-Morring, Policy Branch Chief, Policy and Oversight Division, Phone: 202–401–4515, Email: *lisa.scott-morring@nifa.usda.gov.*

SUPPLEMENTARY INFORMATION:

I. Background and Summary

Authority

The Food Insecurity Nutrition Incentive Program (FINI) is authorized under section 4405 of the Food, Conservation, and Energy Act of 2008 (7 U.S.C. 7517), as added by section 4208 of the Agricultural Act of 2014 (Pub. L. 113–79).

Organization of 7 CFR Part 3430

A primary function of NIFA is the fair, effective, and efficient administration of Federal assistance programs implementing agricultural research, education, and extension programs. The awards made under the above authority are subject to the NIFA assistance regulations at 7 CFR part 3430, Competitive and Noncompetitive Non-formula Federal Assistance Programs—General Award Administrative Provisions. NIFA's development and publication of this part serve to enhance its accountability and to standardize procedures across the Federal assistance programs it administers while providing transparency to the public. NIFA published 7 CFR part 3430 with subparts A through E as a final rule on September 4, 2009 [74 FR 45736–45752]. These regulations apply to all Federal assistance programs administered by NIFA except for the capacity grant programs identified in 7 CFR 3430.1(f), the Small Business Innovation Research programs, with implementing regulations at 7 CFR part 3403, and the Veterinary Medicine Loan Repayment Program, with implementing regulations at 7 CFR part 3431.

NIFA organized part 3430 as follows: Subparts A through E provide administrative provisions for all competitive and noncompetitive non-capacity Federal assistance programs. Subparts F and thereafter apply to specific NIFA programs.

NIFA is, to the extent practical, using the following subpart template for each program authority: (1) Applicability of regulations; (2) purpose; (3) definitions (those in addition to or different from § 3430.2); (4) eligibility; (5) project types and priorities; (6) funding restrictions; and (7) matching requirements. Subparts F and thereafter contain the above seven components in this order. Additional sections may be added for a specific program if there are additional requirements or a need for additional rules for the program (*e.g.,* additional reporting requirements). Through this rulemaking, NIFA is adding subpart P for the administrative provisions that are specific to the FINI program.

II. Administrative Requirements for the Rulemaking

Executive Order 12866

This action has been determined to be not significant for purposes of Executive Order 12866. The rule will not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; nor will it materially alter the budgetary impact of entitlements, grants, user fees, or loan programs; nor will it have an annual effect on the economy of $100 million or more; nor will it adversely affect the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities in a material way. Further, it does not raise a novel legal or policy issue arising out of legal mandates, the President's priorities, or principles set forth in the Executive Order.

Regulatory Flexibility Act of 1980

This final rule has been reviewed in accordance with the Regulatory Flexibility Act of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, (5 U.S.C. 601–612). The Department certifies that this final rule will not have a significant economic impact on a substantial number of small entities. The rule does not involve regulatory and informational requirements regarding businesses, organizations, and governmental jurisdictions subject to regulation.

Paperwork Reduction Act

The Department certifies that this final rule has been assessed in accordance with the requirements of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* The Department concludes that this final rule does not impose any new information requirements or increase the burden hours. In addition to the SF–424 form families (*i.e.,* Research and Related and Mandatory) and the SF–425 Federal Financial Report (FFR) No. 0348–0061, NIFA has three currently approved OMB information collections associated with this rulemaking: OMB Information Collection No. 0524–0042, NIFA REEport; No. 0524–0041, NIFA Application Review Process; and No. 0524–0026, Assurance of Compliance with the Department of Agriculture Regulations Assuring Civil Rights Compliance and Organizational Information.

Catalog of Federal Domestic Assistance

This final rule applies to the following Federal financial assistance programs administered by NIFA: CFDA No. 10.331 Food Insecurity Nutrition Incentive Grants Program.

Unfunded Mandates Reform Act of 1995 and Executive Order 13132

The Department has reviewed this final rule in accordance with the requirements of Executive Order No. 13132 and the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1501 *et seq.,* and has found no potential or substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. As there is no Federal mandate contained herein that could result in increased expenditures by State, local, or tribal governments, or by the private sector, the Department has not prepared a budgetary impact statement.

Clarity of This Regulation

Executive Order 12866 and the President's Memorandum of June 1, 1998, require each agency to write all rules in plain language. The Department invites comments on how to make this final rule easier to understand.

List of Subjects in 7 CFR Part 3430

Administrative practice and procedure, Agricultural research, Grant programs—agriculture, Privacy, Reporting and recordkeeping requirements.

Accordingly, 7 CFR part 3430 is amended as set forth below:

PART 3430—COMPETITIVE AND NONCOMPETITIVE NON-FORMULA FEDERAL ASSISTANCE PROGRAMS—GENERAL AWARD ADMINISTRATIVE PROVISIONS

■ 1. The authority citation for part 3430 continues to read as follows:

Authority: 7 U.S.C. 3316; Pub. L. 106–107 (31 U.S.C. 6101 note).

■ 2. Add subpart P to read as follows:

Subpart P—Food Insecurity Nutrition Incentive Program

Subpart P—Food Insecurity Nutrition Incentive Program

§ 3430.1100 Applicability of regulations.

The regulations in this subpart apply to the Food Insecurity Nutrition Incentive (FINI) grants program authorized under section 4405 of the Food, Conservation, and Energy Act of 2008 (7 U.S.C. 7517), as added by section 4208 of the Agricultural Act of 2014 (Pub. L. 113–79).

§ 3430.1101 Purpose.

The primary goal of the FINI grants program is to fund and evaluate projects intended to increase the purchase of fruits and vegetables by low-income consumers participating in Supplemental Nutrition Assistance Program (SNAP) by providing incentives at the point of purchase.

§ 3430.1102 Definitions.

The definitions applicable to the FINI grants program under this subpart include:

Community food assessment means a collaborative and participatory process that systematically examines a broad range of community food issues and assets, so as to inform change actions to make the community more food secure.

Emergency feeding organization means a public or nonprofit organization that administers activities and projects (including the activities and projects of a charitable institution, a food bank, a food pantry, a hunger relief center, a soup kitchen, or a similar public or private nonprofit eligible recipient agency) providing nutrition assistance to relieve situations of emergency and distress through the provision of food to needy persons, including low-income and unemployed persons. (See 7 U.S.C. 7501).

Exemplary practices means high quality community food security work that emphasizes food security, nutritional quality, environmental stewardship, and economic and social equity.

Expert reviewers means individuals selected from among those recognized as uniquely qualified by training and experience in their respective fields to give expert advice on the merit of grant applications in such fields who evaluate eligible proposals submitted to this program in their respective area(s) of expertise.

Food security means access to affordable, nutritious, and culturally appropriate food for all people at all times.

Fruits and vegetables means, for the purposes of the incentives provided under these grants, any variety of fresh, canned, dried, or frozen whole or cut fruits and vegetables without added sugars, fats or oils, and salt (*i.e.* sodium).

Logic model means a systematic and visual way to present and share an understanding of the relationships among resources available to operate a program, and includes: Planned activities and anticipated results; and the presentation of the resources, inputs, activities, outputs, outcomes and impacts.

Outcomes means the changes in the wellbeing of individuals that can be attributed to a particular project, program, or policy, or that a program hopes to achieve over time. They indicate a measurable change in participant knowledge, attitudes, or behaviors.

Process evaluation means examining program activities in terms of:

(1) The age, sex, race, occupation, or other demographic variables of the target population;

(2) The program's organization, funding, and staffing; and

(3) The program's location and timing. Process evaluation focuses on program activities rather than outcomes.

PromiseZone refers to designated high-poverty communities ''where the federal government will partner with and invest in communities to create jobs, leverage private investment, increase economic activity, expand educational opportunities, and improve public safety.'' See *https://www.hudexchange.info/programs/promise-zones/.*

Nonprofit organization means a special type of organizationthat has been organized to meet specific tax-exempt purposes. To qualify for nonprofit status, your organizationmust be formed to benefit:

(1) The public;

(2) A specific group of individuals; or

(3) The membership of the nonprofit.

StrikeForce means the ''USDA's StrikeForce Initiative for Rural Growth and Opportunity, which works to address the unique set of challenges faced by many of America's rural communities. Through StrikeForce, USDA is leveraging resources and collaborating with partners and stakeholders to improve economic opportunity and quality of life in these areas. See *http://www.usda.gov/wps/portal/usda/usdahome?navid=STRIKE_FORCE* for more information.

Supplemental Nutrition Assistance Program (SNAP) means the supplemental nutrition assistance program established under the Food and Nutrition Act of 2008 (7 U.S.C. 2011 *et seq.*).

Value chain means adding value to a product, including production, marketing, and the provision of after-sales service and incorporating fair pricing to farms. It also involves keeping the final pricing to customers within competitive range. Value chain development, therefore, is a process of building relationships between supplier and buyer that are reciprocal and win-win; instead of always striving to buy at lowest cost.

§ 3430.1103 Eligibility.

(a) *In general.* Eligibility to receive a grant under this subpart is limited to government agencies and nonprofit organizations. All applicants must demonstrate in their application that they are a government agency or nonprofit organization. Eligible government agencies and nonprofit organizations may include:

(1) An emergency feeding organization;

(2) An agricultural cooperative;

(3) A producer network or association;

(4) A community health organization;

(5) A public benefit corporation;

(6) An economic development corporation;

(7) A farmers' market;

(8) A community-supported agriculture program;

(9) A buying club;

(10) A SNAP-authorized retailer; and

(11) A State, local, or tribal agency.

(b) *Further eligibility requirements*—(1) *Related to projects.* To be eligible to receive a grant under this subpart, applicants must propose projects that:

(i) Have the support of the State SNAP agency;

(ii) Would increase the purchase of fruits and vegetables by low-income consumers participating in SNAP by providing incentives at the point of purchase;

(iii) Operate through authorized SNAP retailers and comply with all relevant SNAP regulations and operating requirements;

(iv) Agree to participate in the FINI comprehensive program evaluation;

(v) Ensure that the same terms and conditions apply to purchases made by individuals with SNAP benefits and with incentives under the FINI grants program as apply to purchases made by individuals who are not members of households receiving benefits as provided in § 278.2(b) of this title; and

(vi) Include effective and efficient technologies for benefit redemption systems that may be replicated in other States and communities.

(2) *Related to experience and other competencies.* To be eligible to receive a grant under this subpart, applicants must meet the following requirements:

(i) Have experience:

(A) In efforts to reduce food insecurity in the community, including food distribution, improving access to services, or coordinating services and programs; or

(B) With the SNAP program;

(ii) Demonstrate competency to implement a project, provide fiscal accountability, collect data, and prepare reports and other necessary documentation;

(iii) Secure the commitment of the State SNAP agency to cooperate with the project; and

(iv) Possess a demonstrated willingness to share information with researchers, evaluators (including the independent evaluator for the program), practitioners, and other interested parties, including a plan for dissemination of results to stakeholders.

(c) *Other, non-eligibility considerations.* Applicants are encouraged:

(1) To propose projects that will provide employees with important job skills; and

(2) To have experience the following areas:

(i) Community food work, particularly concerning small and medium-size farms, including the provision of food to people in low-income communities and the development of new markets in low-income communities for agricultural producers; and

(ii) Job training and business development activities for food-related activities in low-income communities.

(d) *Partnerships.* Applicants for a grant under this subpart are encouraged to seek and create partnerships with public or private, nonprofit or for-profit entities, including links with academic institutions (including minority-serving colleges and universities) or other appropriate professionals; community-based organizations; local government entities; PromiseZone lead applicant/organization or implementation partners; and StrikeForce area coordinators or partnering entities for the purposes of providing additional Federal resources and strengthening under-resourced communities. Only the applicant must meet the requirements specified in this section for grant eligibility. Project partners and collaborators need not meet the eligibility requirements.

§ 3430.1104 Project types and priorities.

(a) *FINI Pilot Projects (FPP).* FPPs are aimed at new entrants seeking funding for a project in the early stages of incentive program development.

(b) *FINI Projects (FP).* FPs are aimed at mid-sized groups developing incentive programs at the local or State level.

(c) *FINI Large Scale Projects (FLSP).* FLSPs are aimed at groups developing multi-county, State, and regional incentive programs with the largest target audience of all FINI projects.

§ 3430.1105 Funding restrictions.

(a) *Construction.* Funds made available for grants under this subpart shall not be used for the construction of a new building or facility or the acquisition, expansion, remodeling, or alteration of an existing building or facility (including site grading and improvement, and architect fees).

(b) *Indirect costs.* Subject to § 3430.54, indirect costs are allowable.

§ 3430.1106 Matching requirements.

(a) *In general.* Recipients of a grant under this subpart must provide matching contributions on a dollar-for-dollar basis for all Federal funds awarded.

(b) *Source and type.* The non-Federal share of the cost of a project funded by a grant under this subpart may be provided by a State or local government or a private source. The matching requirement in this section may be met through cash or in-kind contributions, including third-party in-kind contributions fairly evaluated, including facilities, equipment, or services.

(c) *Limitation.* If an applicant partners with a for-profit entity, the non-Federal share that is required to be provided by the applicant may not include the services of an employee of that for-profit entity, including salaries paid or expenses covered by that employer.

(d) *Indirect costs.* Use of indirect costs as in-kind matching contributions is subject to § 3430.52(b).

§ 3430.1107 Program requirements.

The term of a grant under this subpart may not exceed 5 years. No-cost extensions of time beyond the maximum award terms will not be considered or granted.

§ 3430.1108 Priorities.

(a) *In general.* Except as provided in paragraph (b) of this section, in awarding grants under this subpart, NIFA will give priority to projects that:

(1) Maximize the share of funds used for direct incentives to participants;

(2) Use direct-to-consumer sales marketing;

(3) Demonstrate a track record of designing and implementing successful nutrition incentive programs that connect low-income consumers and agricultural producers;

(4) Provide locally or regionally produced fruits and vegetables;

(5) Are located in underserved communities; or

(6) Address other criteria as established by NIFA and included in the requests for applications.

(b) *Exception.* The priorities in paragraph (a) of this section that are given by NIFA will depend on the project type identified in § 3430.1104. Applicants should refer to the requests for applications to determine which priorities will be given to which project types.

Done at Washington, DC, this 16th day of October, 2015.

Robert E. Holland,

Associate Director for Operations, National Institute of Food and Agriculture.

RIN 2120–AA64

Airworthiness Directives; Pratt & Whitney Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for certain Pratt & Whitney (PW) PW4164, PW4168, PW4168A, PW4164–1D, PW4168–1D, PW4168A–1D, and PW4170 turbofan engines. This AD was prompted by crack finds in the 6th stage low-pressure turbine (LPT) disk. This AD requires

removal of the affected 6th stage LPT disks. We are issuing this AD to prevent failure of the 6th stage LPT disk, which could lead to an uncontained disk release, damage to the engine, and damage to the airplane.

DATES: This AD is effective November 27, 2015.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of November 27, 2015.

ADDRESSES: For service information identified in this AD, contact Pratt & Whitney, 400 Main St., East Hartford, CT 06108; phone: 860–565–8770; fax: 860–565–4503. You may view this service information at the FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125. It is also available on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–0869.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–0869; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The address for the Docket Office (phone: 800–647–5527) is Document Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Besian Luga, Aerospace Engineer, Engine Certification Office, FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803; phone: 781–238–7750; fax: 781–238–7199; email: *besian.luga@faa.gov*.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all PW PW4164, PW4168, PW4168A, PW4164–1D, PW4168–1D, PW4168A–1D, and PW4170 turbofan engines. The NPRM published in the **Federal Register** on June 8, 2015 (80 FR 32316). The NPRM was prompted by findings of cracks in the 6th stage LPT disk. The NPRM proposed to require removal of the affected 6th stage LPT disks. We are issuing this AD to correct the unsafe condition on these products.

Comments

We gave the public the opportunity to participate in developing this AD. The following presents the comment received on the NPRM (80 FR 32316, June 8, 2015) and the FAA's response to this comment.

Request to Clarify Definition of LPT Shop Visit

An individual commenter requested that we define ''LPT shop visit'' more precisely to prevent unnecessary discussions regarding its meaning.

We agree. We revised the definition to read: ''For the purpose of this AD, an ''LPT shop visit'' is defined as the removal of the 6th stage disk from the LPT rotor and the removal of the blades from the disk.''

Conclusion

We reviewed the relevant data, considered the comment received, and determined that air safety and the public interest require adopting this AD with the change described previously.

Related Service Information Under 1 CFR Part 51

We reviewed PW Service Bulletin (SB) No. PW4G–100–72–252, dated November 18, 2014. The SB provides a list of PW 6th stage LPT disks affected by this AD. This service information is reasonably available because the interested parties have access to it through their normal course of business or see **ADDRESSES** for other ways to access this service information.

Costs of Compliance

We estimate that this AD affects 18 engines installed on airplanes of U.S. registry. We also estimate that no additional hours will be required per engine to comply with this AD because the engine is already disassembled in the shop when we require the part to be removed. The average labor rate is $85 per hour. We estimate that 6 engines will require replacement parts during an LPT shop visit, and that the prorated replacement parts cost will be $108,800 per engine. Based on these figures, we estimate the cost of this AD on U.S. operators to be $652,800.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska to the extent that it justifies making a regulatory distinction, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2015–21–04 Pratt & Whitney: Amendment 39–18296; Docket No. FAA–2015–0869; Directorate Identifier 2015–NE–11–AD.

(a) Effective Date

This AD is effective November 27, 2015.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Pratt & Whitney (PW) PW4164, PW4168, PW4168A, PW4164–1D, PW4168–1D, PW4168A–1D, and PW4170 turbofan engines with 6th stage low-pressure turbine (LPT) disks, part number 50N886, installed.

(d) Unsafe Condition

This AD was prompted by crack finds in the 6th stage LPT disk. We are issuing this AD to prevent failure of the 6th stage LPT disk, which could lead to an uncontained disk release, damage to the engine, and damage to the airplane.

(e) Compliance

Comply with this AD within the compliance times specified, unless already done. At the next LPT shop visit after the effective date of this AD, remove from service 6th stage LPT disks with serial numbers listed in the Accomplishment Instructions, Table 1, of PW Service Bulletin No. PW4G–100–72–252, dated November 18, 2014.

(f) Definition

For the purpose of this AD, an ''LPT shop visit'' is defined as the removal of the 6th stage disk from the LPT rotor and the removal of the blades from the disk.

(g) Alternative Methods of Compliance (AMOCs)

The Manager, Engine Certification Office, FAA, may approve AMOCs for this AD. Use the procedures found in 14 CFR 39.19 to make your request. You may email your request to: *ANE-AD-AMOC@faa.gov*.

(h) Related Information

For more information about this AD, contact Besian Luga, Aerospace Engineer, Engine Certification Office, FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803; phone: 781–238–7750; fax: 781–238–7199; email: *besian.luga@faa.gov*.

(i) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(3) The following service information was approved for IBR on November 27, 2015.

(i) Pratt & Whitney (PW) Service Bulletin No. PW4G–100–72–252, dated November 18, 2014.

(ii) Reserved.

(4) For PW service information identified in this AD, contact Pratt & Whitney, 400 Main St., East Hartford, CT 06108; phone: 860–565–8770; fax: 860–565–4503.

(5) You may view this service information at FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125.

(6) You may view this service information at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal-register/cfr/ibr-locations.html*.

Issued in Burlington, Massachusetts, on October 9, 2015.

Robert G. Mann,

Acting Directorate Manager, Engine & Propeller Directorate, Aircraft Certification Service.

Airworthiness Directives; Technify Motors GmbH Reciprocating Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for all Technify Motors GmbH TAE 125–02 reciprocating engines with a dual mass flywheel installed. This AD requires installation of a start phase monitoring system and associated specified software. This AD was prompted by reports of a gearbox drive shaft breaking during starting or restarting of the engine. We are issuing this AD to prevent overload and failure of the gearbox drive shaft, which could result in failure of the engine, in-flight shutdown, and loss of control of the airplane.

DATES: This AD becomes effective November 27, 2015.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of November 27, 2015.

ADDRESSES: For service information identified in this AD, contact Technify Motors GmbH, Platanenstrasse 14, D–09356 Sankt Egidien, Germany; phone: +49 37204 696 0; fax: +49 37204 696 29125; email: *info@centurion-engines.com;* and Diamond Aircraft Industries GmbH, N. A. Otto-Strasse 5, 2700 Wiener Neustadt, Austria; phone: +43 2622 26700; fax: +43 2622 26700 1369; email: *airworthiness@diamond-air.at.* You may view this service information at the FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125. It is also available on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–1383.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–1383; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the mandatory continuing airworthiness information (MCAI), the regulatory evaluation, any comments received, and other information. The address for the Docket Office (phone: 800–647–5527) is Document Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Robert Green, Aerospace Engineer, Engine Certification Office, FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803; phone: 781–238–7754; fax: 781–238–7199; email: *robert.green@faa.gov.*

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to the specified products. The NPRM was published in the **Federal Register** on July 8, 2015 (80 FR 38990). The NPRM proposed to correct an unsafe condition for the specified products. The MCAI states:

> Cases of a broken gearbox drive shaft have been reported on aeroplanes equipped with TAE 125–02 engines that have a Dual Mass Flywheel installed.
>
> Investigations results showed a possible overload of the gearbox drive shaft during starting of the engine or during restarting of the engine in-flight.
>
> This condition, if not corrected, could lead to engine power loss during flight, possibly resulting in loss of control of the aeroplane.

Comments

We gave the public the opportunity to participate in developing this AD. We received no comments on the NPRM (80 FR 38990, July 8, 2015).

Conclusion

We reviewed the available data and determined that air safety and the public interest require adopting this AD as proposed.

Related Service Information Under 1 CFR Part 51

Technify Motors GmbH has issued Service Bulletin No. SB TMG 125–1018 P1, Revision 1, dated February 5, 2015. The service information describes procedures for installing a start phase monitoring system and associated specified software mapping on particular airplane models. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section of this final rule.

Other Related Service Information

Technify Motors GmbH has also issued Technify Motors SB No. TM TAE 000–0007, Revision 28, dated February 5, 2015; Technify Motors Installation Manual No. IM–02–02, Issue 4, Revision 2, dated January 30, 2015, with Chapter 02–IM–13–02, section 13.8.16, Revision 1, dated November 28, 2014; Technify Motors SB No. SB TMG 601–1007 P1, Revision 3, dated February 5, 2015; and Technify Motors SB No. SB TMG 651–1004 P1, Revision 2, dated February 5, 2015. Diamond Aircraft Industries GmbH (DAI) has issued DAI Mandatory Service Bulletin (MSB) No. 42–109/1, dated February 4, 2015; and DAI MSB No. 42–007/16, dated February 4, 2015. The service information describes procedures for installing a start phase monitoring system and associated specified software mapping.

Costs of Compliance

We estimate that this AD affects 97 engines installed on airplanes of U.S. registry. We also estimate that it will take about 3 hours per engine to comply with this AD. The average labor rate is $85 per hour. For 13 of the engines, required parts cost about $285 per engine. For 84 of the engines, required parts cost about $206 per engine. Based on these figures, we estimate the cost of this AD on U.S. operators to be $45,744.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII, Part A, Subpart III, Section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska to the extent that it justifies making a regulatory distinction, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2015–21–01 Technify Motors GmbH (Type Certificate Previously Held by Thielert Aircraft Engines GmbH): Amendment 39–18293; Docket No. FAA–2015–1383; Directorate Identifier 2015–NE–15–AD.

(a) Effective Date

This AD becomes effective November 27, 2015.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Technify Motors GmbH TAE 125–02–99 (commercial designation CD–135, formerly Centurion 2.0) and TAE 125–02–114 (commercial designation CD–155, formerly Centurion 2.0S) reciprocating engines, with a dual mass flywheel installed.

(d) Reason

This AD was prompted by reports of a gearbox drive shaft breaking during starting or restarting of the engine. We are issuing this AD to prevent overload and failure of the gearbox drive shaft, which could lead to failure of the engine, in-flight shutdown, and loss of control of the airplane.

(e) Actions and Compliance

Comply with this AD within the compliance times specified, unless already done.

Within 110 flight hours or at the next scheduled inspection after the effective date of this AD, whichever occurs first, install a start phase monitoring system and software mapping. Use Technify Motors Service Bulletin (SB) No. SB TMG 125–1018 P1, Revision 1, dated February 5, 2015, to do the installation.

(f) Installation Prohibition

After the effective date of this AD, do not install onto any airplane any Technify Motors TAE 125–02–99 or TAE 125–02–114 reciprocating engine that is not equipped with a start phase monitoring system and software mapping.

(g) Alternative Methods of Compliance (AMOCs)

The Manager, Engine Certification Office, may approve AMOCs for this AD. Use the procedures found in 14 CFR 39.19 to make your request. You may email your request to: *ANE-AD-AMOC@faa.gov.*

(h) Related Information

(1) For more information about this AD, contact Robert Green, Aerospace Engineer, Engine Certification Office, FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803; phone: 781–238–7754; fax: 781–238–7199; email: *robert.green@faa.gov.*

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2015–2049; Airspace Docket No. 15–AGL–12]

Revocation of Class E Airspace; Vincennes, IN

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action removes Class E airspace at O'Neal Airport, Vincennes, IN. Controlled airspace is no longer needed as the airport was abandoned in 2009 and is being removed from the FAAs database.

DATES: Effective 0901 UTC, December 10, 2015. The Director of the Federal Register approves this incorporation by reference action under title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.9Z, Airspace Designations and Reporting Points, and subsequent amendments can be viewed on line at *http://www.faa.gov/airtraffic/publications/.* For further information, you can contact the Airspace Policy and ATC Regulations Group, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 29591; telephone: 202–267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to *http://www.archives.gov/federal_register/code_of_federal-regulations/ibr_locations.html.*

FAA Order 7400.9, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: Jim Pharmakis, Operations Support Group, Central Service Center, Federal Aviation Administration, Southwest Region, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone: (817) 222–5855.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part, A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it removes Class E airspace at O'Neal Airport, Vincennes, IN.

History

During an airspace review, the FAA found that O'Neal Airport, Vincennes, IN, has been abandoned since in 2009, therefore, controlled airspace is removed from the area. Since this eliminates the impact of controlled airspace on users of the National Airspace System, notice and public procedure under 553(b) are unnecessary. Class E airspace designations are published in paragraph 6005 of FAA Order 7400.9Z dated August 6, 2015, and effective September 15, 2014, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 removes Class E airspace extending upward from 700 feet above the surface within a 7-mile radius of O'Neal Airport, Vincennes, IN. The airport has been abandoned; therefore, controlled airspace is no longer necessary.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT

Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 311a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120, E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, effective September 15, 2015, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part, A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes controlled airspace at Concordia Parish Airport, Vidalia, LA.

History

On August 13, 2015, the FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to establish Class E airspace extending upward from 700 feet above the surface at Concordia Parish Airport, Vidalia, LA, (80 FR 48469). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.9Z, dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the ADDRESSES section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This action amends Title 14, Code of Federal Regulations (14 CFR), Part 71 by establishing Class E airspace extending upward from 700 feet above the surface within a 6.0-mile radius of Concordia Parish Airport, Vidalia, LA, to accommodate new Standard Instrument Approach Procedures at the airport. This action enhances the safety and management of IFR operations at the airport.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' paragraph 311a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exists that warrant preparation of an environmental assessment.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes controlled airspace at Pearson Field, Vancouver, WA.

History

On August 27, 2015, the FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to establish Class E surface area airspace Pearson Field, Vancouver, WA (80 FR 51970). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. Eight comments were received on the proposal. Seven comments were received supporting the proposal. One comment was received from Bryan Painter stating that the airport did not need Class E surface airspace. The FAA does not agree. The FAA's decision to establish Class E surface airspace at Pearson Field is the result of years of collaborative efforts between local aircraft owner/operators, airport officials, and the FAA to make the airspace safe for aircraft flying within the National Airspace System, specifically within Portland International Airport airspace.

Class E airspace designations are published in paragraph 6002 of FAA Order 7400.9Z, dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 establishes Class E surface area airspace, at Pearson Field, Vancouver, WA. A review of the airspace revealed current standard instrument approach procedures not being fully contained within controlled airspace. Class E surface area airspace is established within an area 4.9 miles west, 4 miles east, 2.9 miles north, and 1.8 miles south of Pearson Field.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 311a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015, is amended as follows:

BILLING CODE 4910–13–P

DEPARTMENT OF STATE

22 CFR Part 11

[Public Notice: 9324]

RIN 1400–AD59

Appointment of Foreign Service Officers

AGENCY: Department of State.

ACTION: Final rule.

SUMMARY: The Department of State amends provisions in the Code of Federal Regulations related to the appointment of Foreign Service Officers. The revised rules will be substantially the same as, and will supplement, Department of State guidance currently in the Foreign Affairs Manual, which is also available to the public.

DATES: This rule will be effective on November 23, 2015.

FOR FURTHER INFORMATION CONTACT: Alice Kottmyer, Office of the Legal Adviser, who may be reached at (202) 647–2318.

SUPPLEMENTARY INFORMATION: Pursuant to Section 206 of the Foreign Service Act of 1980 (the Act), codified at 22 U.S.C. 3926, the Secretary of State may prescribe regulations to carry out functions under the Act. The Secretary has done so in the Department's Foreign Affairs Manual (FAM).

The FAM is the formal written document for recording, maintaining, and issuing Department directives, which are written communications establishing and prescribing the organizations, policies, or procedures that provide an official basis of Department operation.

The Foreign Service includes personnel not only from the Department, but U.S. Agency for International Development, and certain offices within the Departments of Commerce and Agriculture, among others. FSOs may be recruited both from current federal personnel (for example, from the civil service) and from the general public. Recruitment from current federal service is covered by the FAM.

The procedures relating to recruitment of FSOs from the general public are covered by rules published in the CFR, in part 11. However, since many of the policies and procedures dealing with the latter appointments are the same as those used to appoint current federal personnel to the Foreign Service, the provisions of part 11 and the FAM must be consistent. Therefore, where part 11 uses the same procedures as the FAM, it refers to the relevant FAM provisions.

Other than a minor amendment in 2002 (*see* 67 FR 46108), part 11 has remained as it was drafted 31 years ago; whereas, the relevant provisions of the FAM were updated in 2013. This rulemaking harmonizes the two authorities. The Department believes that a revised part 11, together with the FAM, provide comprehensive guidance for both internal stakeholders and interested members of the general public on the appointment of Foreign Service Officers.

The Department's revision of part 11 is part of its Retrospective Review conducted pursuant to Executive Order 13563.

Regulatory Findings

Administrative Procedure Act

The revision to part 11 of 22 CFR relates to the Department's organization, procedure, or practice and is not subject to the notice-and-comment procedures of 5 U.S.C. 553(b).

Regulatory Flexibility Act/Executive Order 13272: Small Business

The Department certifies that this rulemaking is not expected to have a significant impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act, 5 U.S.C. 601–612, and Executive Order 13272, section 3(b).

The Congressional Review Act

This rulemaking is not a major rule as defined by 5 U.S.C. 804, for purposes of congressional review of agency rulemaking.

The Unfunded Mandates Reform Act of 1995

Section 202 of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1532, generally requires agencies to prepare a statement before proposing or adopting any rule that may result in an annual expenditure of $100 million or more by state, local, or tribal governments, or by the private sector. This rulemaking will not result in any such expenditure nor will it significantly or uniquely affect small governments.

Executive Orders 12372 and 13132: Federalism

This rulemaking will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Nor will the rule have federalism implications warranting the application of Executive Orders 12372 and 13132.

Executive Orders 12866 and 13563: Regulatory Review

Although the Department of State is generally exempt from the provisions of Executive Order 12866, it has reviewed this rulemaking to ensure its consistency with the regulatory philosophy and principles set forth in these Executive Orders, and has determined that the benefits of this rulemaking justify any costs. The Department cannot identify any cost to the public associated with this rulemaking. The Department does not consider this rulemaking to be a significant regulatory action within the scope of section 3 of Executive Order 12866. The Department considers this rule to be part of its Retrospective Review conducted pursuant to Executive Order 13563.

Executive Order 12988: Civil Justice Reform

The Department has reviewed this rulemaking in light of sections 3(a) and 3(b)(2) of Executive Order 12988 to eliminate ambiguity, minimize litigation, establish clear legal standards, and reduce burden.

Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

The Department has determined that this rulemaking will not have tribal implications, will not impose substantial direct compliance costs on Indian tribal governments, and will not pre-empt tribal law. Accordingly, the requirements of Section 5 of Executive Order 13175 do not apply to this rulemaking.

The Paperwork Reduction Act of 1995

The Department of State has determined that this rulemaking does not affect any existing collection of information under the Paperwork Reduction Act, nor does it create new information collections. The Department invites public comment on whether the Foreign Service Office Test Registration (OMB Control Number 1405–0008) burden estimates should be modified as a result of the notification requirements in Section 11.20(d)(2)(i)(B).

List of Subjects in 22 CFR Part 11

Foreign service, Foreign officials, Government employees.

Accordingly, revise 22 CFR part 11 to read as follows:

PART 11—APPOINTMENT OF FOREIGN SERVICE OFFICERS

Sec.

Authority: 22 U.S.C. 2651a, 3926, 3941.

§ 11.10 Links to relevant provisions of the Foreign Affairs Manual.

(a) The Foreign Affairs Manual (FAM) is the formal written document for recording, maintaining, and issuing Department of State (Department) directives that address personnel and other matters. It is the primary authority for appointment of current Department employees to the Foreign Service. This part is the primary authority for the appointment of non-employees to the Foreign Service. The FAM provides Department procedures and policies that are not repeated in this part. It is an important resource for understanding the provisions of this part.

(b) The two FAM volumes relevant to this part are Volume 3, Personnel, and Volume 16, Medical. FAM provisions are cited by volume followed by chapter or subchapter—for example, Chapter 210 of Volume 16 would be cited 16 FAM 210. All of the relevant FAM provisions are on the Department's public Web site. The links for the relevant FAM provisions are as follows:

3 FAM 2215	*http://www.state.gov/documents/organization/84854.pdf.*
3 FAM 2216.2	
3 FAM 2216.3	
3 FAM 2217	
3 FAM 2218	
3 FAM 2245	*http://www.state.gov/documents/organization/84851.pdf.*
3 FAM 2250	*http://www.state.gov/documents/organization/84850.pdf.*
3 FAM 2251.3	
3 FAM 2290	*http://www.state.gov/documents/organization/84846.pdf.*
16 FAM 210	*http://www.state.gov/documents/organization/89692.pdf.*

§ 11.20 Entry-level Foreign Service Officer career candidate appointments.

(a) *General considerations*—(1) *Authority.* Pursuant to section 302 of the Foreign Service Act of 1980 (hereinafter referred to as ''the Act''), all Foreign Service Officers shall be appointed by the President, by and with the advice and consent of the Senate. All appointments shall be made to a class and not to a particular post. No person shall be eligible for appointment as a Foreign Service Officer unless that person is a citizen of the United States, is twenty-one, and is world-wide available. Pursuant to section 306 of the Act, such appointment is initially a career-candidate appointment. The tenuring of Foreign Service Officer career candidates is governed by the provisions of 3 FAM 2245.

(2) *Veterans' preference.* Pursuant to section 301 of the Act, the fact that an applicant for appointment as a Foreign Service Officer candidate is a veteran or disabled veteran, as defined in 5 U.S.C. 2108, must be considered as an affirmative factor in making such appointments.

(3) *Policy.* Appointment as an Entry Level Foreign Service Officer career candidate of class 6, 5, or 4 is governed by these regulations. Successful applicants will be appointed as career candidates for a period not to exceed 5 years. Under precepts of the Commissioning and Tenure Board, career candidates may be granted tenure and recommended for appointment as career Foreign Service Officers. Those who are not granted tenure prior to the expiration of their career-candidate appointments will be separated from the Foreign Service. Separated candidates who originally were employees of an agency and who accepted a limited appointment to the Foreign Service with the consent of the head of the agency in which they were employed will be entitled to reemployment rights in their former agency in accordance with section 310 of the Act.

(b) *The Foreign Service Officer Test (FSOT).* The following regulations apply to the FSOT:

(1) *Purpose.* The FSOT is designed to enable the Board of Examiners for the Foreign Service to test the applicant's knowledge, skills, and abilities, including writing skills that are necessary to the work of a Foreign Service Officer.

(2) *Eligibility.* Before each FSOT, the Board of Examiners will establish a closing date for the receipt of applications for designation to take the test. No person will be designated to take the test who has not, as of that closing date, filed a complete application with the Board. To be designated to take the FSOT, an applicant, as of the date of the test, must be a citizen of the United States and at least 20 years of age.

(3) *When and where given.* The FSOT will be given periodically, in designated cities in the United States and at selected locales abroad, on dates established by the Board of Examiners and publicly announced on *careers.state.gov.*

(4) *Scoring.* The several parts of the FSOT will be weighted and graded according to standards established by the Board of Examiners. The Board of Examiners may adjust the passing score of the FSOT to reflect the projected hiring needs of the Foreign Service.

(c) *Qualifications Evaluation Panel (QEP).* The following regulations apply to the QEP:

(1) *Purpose.* Each QEP is designed to enable the Board of Examiners for the Foreign Service to review each candidate's file and evaluate it against established precepts of successful Foreign Service Officer performance. The QEPs rank order candidates within each career track.

(2) *Panels.* QEPs are career track specific and are staffed by panelists approved by the Board of Examiners from a roster of qualified active duty and retired Foreign Service Officers. At least one of the panelists will be from the same career track as those in the candidate pool.

(3) *Eligibility.* Candidates whose score on the FSOT is at or above the passing level set by the Board of Examiners will be invited to submit their responses to Personal Narrative Questions. The questions, linked to the Foreign Service performance precepts, are designed to elicit specific examples of past performance where the candidate demonstrated the requisite precept.

(4) *When administered.* The Board of Examiners holds one session of QEPs following each FSOT.

(5) *Scoring.* Panelists will score files according to standards established by the Board of Examiners. The candidacy of anyone whose score is at or above the passing level set by the Board of Examiners will continue. The candidacy of anyone whose score is below the passing level will be ended and may not be considered again until the candidate has passed a new FSOT, at minimum of a year later. The Board of Examiners sets the passing score for each QEP based on the projected hiring needs of the Foreign Service. All candidates exempt from the FSOT, except Mustang applicants, are also exempt from review by a QEP.

(i) The Board of Examiners may authorize QEPs to give special consideration in the selection of candidates to certain factors, *e.g.,* demonstrating language ability, which the Board will publicly announce on *careers.state.gov.*

(ii) The Board of Examiners may choose to verify accounts given by candidates in their personal narratives.

(d) *Foreign Service Oral Assessment (FSOA).* The following regulations apply to the FSOA:

(1) *Purpose.* The FSOA is designed to enable the Board of Examiners for the Foreign Service to test the candidate's ability to demonstrate the qualities or dimensions that are essential to the successful performance of Foreign Service work. The FSOA for the Entry Level Foreign Service Officer Career Candidate Program will consist of an assessment procedure publicly announced by the Board of Examiners on *careers.state.gov.* The process is generally referred to as the Foreign Service Oral Assessment or FSOA.

(2) *Eligibility*—(i) *Through the FSOT and QEP review.* (A) Candidates who pass the FSOT and whose score on the QEP review is at or above the passing level set by the Board of Examiners will be invited to take the FSOA.

(B) Candidates must schedule the FSOA within 12 months of receiving their invitation to take the FSOA unless they receive an extension of time. Candidates may request an extension of up to an additional 12 months. Active duty military have unrestricted time to take an FSOA if they notify the Board of Examiners of their active duty status. Failure to take the FSOA within 12 months of the invitation will result in the cancellation of the candidacy, unless the candidate has requested and obtained an extension of eligibility. The candidacy of anyone for whom the scheduling period is extended by the Board due to being outside of the United States will automatically be terminated if the candidate fails to notify his or her registrar of the change in status within three months of returning to the United States. The candidate must schedule an FSOA, but if a candidate fails to appear for a scheduled FSOA, the candidacy is automatically terminated. The Director of the Office of Recruitment, Examination, and Employment in the Bureau of Human Resources, or his/her designee, will consider requests to reschedule on a case-by-case basis if a candidate so requests prior to his/her scheduled FSOA.

(ii) *Through the Mustang Program.* Career employees of the Department of State in classes FS–6 and above or grades GS–5 and above who are at least 21 years of age and who have at least three years of service with the

Department may be selected by the Board of Examiners for admission to the FSOA for Entry Level Career Candidates under the Department's Mustang Program. Mustang candidates must meet all program requirements and submit all application material to be considered for the Mustang Program. See the procedures set forth in 3 FAM 2216.2–4 (Foreign Service Officer Oral Assessment (FSOA)).

(iii) *Through a mid-level conversion program.* Employees of the Department of State in grade GS–13 and above are eligible to apply to enter the Foreign Service through a mid-level conversion program (see 3 FAM 2216.3–2) whenever held.

(iv) *Through other programs.* (A) Under programs established pursuant to section 105(d)(1) of the Act, which addresses diversity within the Foreign Service.

(B) Under any other special entry programs created by the Department to meet specific needs of the Foreign Service.

(3) *When and where given.* The FSOA will be held intermittently in Washington, DC, and may be held in selected cities in the United States or abroad as necessary, as publicly announced.

(4) *Assessment panel.* (i) The FSOA will be given by a panel of assessors approved by the Board of Examiners from a roster of active duty and/or retired Foreign Service Officers.

(ii) Service as an assessor shall be limited to a maximum of 5 years, unless a further period is specifically authorized by the Board. Normally assessment panels shall be chaired by a career officer of the Foreign Service, trained in personnel testing and evaluation. Determinations of duly constituted panels of assessors are final unless modified by specific action of the Board of Examiners.

(5) *Scoring.* Candidates taking the FSOA will be scored numerically according to standards established and publicly announced by the Board of Examiners, in places such as *careers.state.gov.* The candidacy of anyone whose score is at or above the passing level set by the Board will be continued. The candidacy of anyone whose score is below the passing level will be terminated.

(e) *Background investigation.* Candidates who pass the FSOA and elect to continue the hiring process will be subject to a background investigation. The background investigation must be conducted to determine the candidate's eligibility for a security clearance and serves as the basis for determining suitability for appointment to the Foreign Service (see 3 FAM 2212.1 (Security Investigation)).

(f) *Medical examination*—(1) *Eligibility.* Candidates who pass the oral assessment and elect to continue the hiring process must undergo a medical examination. See the procedures in of 16 FAM 210 (Medical Clearances).

(2) [Reserved]

(g) *Suitability Review Panel.* Generally after the medical clearance has been issued and the background investigation is received, the candidate's entire file (excluding any medical records) is reviewed and evaluated by the Suitability Review Panel to determine the candidate's suitability for the Foreign Service. See the procedures in 3 FAM 2215 (Suitability Review). The candidacy of any candidate who is determined by the Suitability Review Panel to be unsuitable for appointment shall be terminated and the candidate so informed. According to procedures established by the Board of Examiners, a candidate may appeal this decision to the Board of Examiners Staff Director or designee whose decision will be final. The Bureau of Diplomatic Security (DS) will re-submit applicants to the Suitability Review Panel if they are found to have falsified information in the application process or are found to have disqualifying factors.

(h) *Certification for appointment*—(1) *Eligibility.* (i) A candidate will not be certified as eligible for appointment as a Foreign Service Officer Career Candidate unless that candidate is at least 21 years of age and a citizen of the United States.

(ii) Except for preference eligible individuals, career candidate appointments must be made before the candidate's 60th birthday. Preference eligible individuals must be appointed before their 65th birthday. The maximum age for appointment under this program is based on the requirement that all career candidates must be able to:

(A) Complete at least two full tours of duty, exclusive of orientation and training;

(B) Complete the requisite eligibility period for tenure consideration; and

(C) Complete the requisite eligibility period to receive retirement benefits, prior to reaching the mandatory retirement age of 65 prescribed by the Act.

(iii) A candidate may be certified as eligible for direct appointment to classes FS–6, FS–5 or FS–4 based on established, publicly available, criteria.

(iv) Employees who receive a career candidate appointment, *i.e.,* who are untenured, have five years to obtain tenure. These career-candidate appointments, including the appointment of an individual who is the employee of any agency, may not exceed five years in duration, and may not be renewed or be extended beyond five years. A candidate denied tenure under 3 FAM 2250 may not be reappointed as a career candidate to become a generalist.

(2) *Career-track rank-order registers.* The Board of Examiners maintains separate rank-order registers for career candidates in administrative, consular, economic, public diplomacy and political career tracks within the Department of State. Appointments from each career-track register will be made in rank order according to hiring needs.

(3) *Special programs.* Mustang candidates who are career employees of the Department of State and who have satisfactorily completed all aspects of the assessment process will be certified by the Board of Examiners for placement on the Hiring Register to compete for a hiring opportunity as a Foreign Service Officer. Mustang candidates who have previously passed the FSOT/QEP will continue in the career track they selected when registering for the FSOT and be placed on the appropriate career track register.

(4) *Foreign language requirement.* A candidate may be certified for appointment to classes FS–6, FS–5, or FS–4 without first having passed an examination in a foreign language, but the appointment will be subject to the condition that the newly appointed career candidate may not be appointed as a career Foreign Service Officer unless, within a specified period of time, proficiency in a foreign language is achieved.

(i) *Termination of eligibility*—(1) *Time limit.* Candidates who have qualified but have not been appointed because of lack of openings will be removed from the rank-order register 18 months after the date of placement on the rank-order register. Time spent in civilian Federal Government service abroad (to a maximum of 2 years of such service), including Peace Corps volunteer service, spouses of Foreign Service officers, or in active regular or reserve military service (no maximum), will not be counted as part of the 18-month eligibility period.

(2) *Extension.* The Board of Examiners may extend the eligibility period when such extension is, in its discretion, justified by the needs of the Foreign Service.

(3) *Postponement of entrance on duty.* Postponement of entrance on duty because of civilian Federal Government service abroad (to a maximum of 2 years

of such service), including Peace Corps volunteer service, or as spouse of a Foreign Service Officer, or active regular or reserve military service (to a maximum of the limit of such required service), may be authorized by the Board.

(j) *Travel expenses.* The travel and other personal expenses of candidates incurred in connection with the written and oral examination will not be borne by the Government. However, the participating foreign affairs departments may issue round-trip invitational travel orders to bring candidates to Washington, DC, at government expense, when it is determined by the agencies that this is necessary in the interest of the Foreign Service.

§ 11.30 Mid-level Foreign Service Officer career candidate appointments. [Reserved]

§ 11.40 Senior Foreign Service Officer career candidate appointments. [Reserved]

§ 11.50 Foreign Service specialist career candidate appointments.

(a) *General considerations.* (1) Pursuant to section 303 of the Act, the Secretary may appoint individuals to the Foreign Service (other than those who are in the personnel categories specified in section 302(a) of the Act). Pursuant to section 306 of the Act, such appointment is initially a career candidate appointment. Section 303 governs the appointment by the Department of State of Foreign Service specialist career candidates to classes FS–1 and all classes below. Specialist candidates comprise all candidates for career appointment in all career tracks other than generalist career tracks (*i.e.,* management, consular, economic, political, and public diplomacy). The tenuring of specialist career candidates is governed by the procedures in 3 FAM 2250.

(2) Veterans' preference shall apply to the selection and appointment of Foreign Service specialist career candidates. Veterans' preference is an affirmative factor once the candidate has been qualified for the position. As soon as veterans go on the Hiring Register, they may apply for additional points to increase their rank order standing.

(b) *Specialist career candidate appointments*—(1) *Certification of need.* (i) Candidates for appointment as specialist career candidates must be world-wide available and must have a professional or a functional skill for which there is a continuing need in the Foreign Service. No applicant shall be appointed for which there is no certified need established at a specific class level. Either the Director General may determine in advance which specialties are routinely or frequently in shortage or need periodic recruitment through publicly posted vacancy announcements, or the Director General may certify that there is a need for an applicant in a specific specialist category and at a specific class.

(ii) Candidates who receive a career candidate appointment, *i.e.,* who are untenured, have four years with the possibility of five years (see 3 FAM 2251.3) to obtain tenure. These appointments, including the appointment of an individual who is the employee of any agency, may not exceed five years in duration, and may not be renewed or be extended beyond five years. A specialist candidate denied tenure under 3 FAM 2250 generally may not be reappointed as a career candidate in the same career track.

(2) *Eligibility.* An applicant must be a citizen of the United States and at least 20 years of age. The minimum age for appointment as a career candidate is 21. Except for preference eligible candidates, all career candidate appointments shall be made before the candidate's 60th birthday. Preference eligible candidates may be appointed up to their 65th birthday. The maximum age for appointment under the program is based on the requirement that all career candidates shall be able to:

(i) Complete at least two full tours of duty, exclusive of orientation and training,

(ii) Complete the requisite eligibility period for tenure consideration, and

(iii) Complete the requisite eligibility period to receive retirement benefits, prior to reaching the mandatory retirement age of 65 prescribed by the Act.

(3) *Screening.* (i) Specialist career candidates will be screened initially on the basis of education and experience.

(ii) Based on a job analysis, the Board of Examiners, in coordination with any bureau responsible for the specialty, will establish the knowledge, skills, and abilities required to perform successfully the tasks and duties of Foreign Service specialists in that functional field. Assessors working for the Board of Examiners will screen applications under those approved criteria and select those who meet the requirements to invite to an oral assessment.

(4) *Oral assessment.* Candidates are selected through the initial screening process. The oral assessment will be given by a panel of assessors, at least one of whom will be a career Foreign Service employee proficient in the functional field for which the candidate is being tested. The assessment may include a writing sample. Candidates taking the oral assessment will be scored numerically according to standards set by the Board of Examiners. The candidacy of anyone whose score is at or above the passing level set by the Board will be continued. The candidacy of anyone whose score is below the passing level will be terminated. The candidate may only reapply after the first anniversary date of the original application.

(5) *Background investigation.* Specialist candidates who pass the oral assessment and elect to continue the hiring process will be subject to a background investigation. The background investigation must be conducted to determine the candidate's eligibility for a security clearance and serves as the basis for determining suitability for appointment to the Foreign Service (see 3 FAM 2212.1–1 (Security Investigation)).

(6) *Medical examination.* Candidates who pass the oral assessment and elect to continue the hiring process must undergo a medical examination. See the procedures in 16 FAM 210 (Medical Clearances).

(7) *Suitability Review Panel.* After the medical examination clearance has been issued and the background investigation is received, the candidate's entire file (excluding any medical records) is reviewed and evaluated by a Suitability Review Panel to determine the candidate's suitability for the Foreign Service. See the procedures in 3 FAM 2215 (Suitability Review). According to procedures established by the Board of Examiners, a candidate may appeal this decision to the Board of Examiners Staff Director or designee, whose decision will be final. DS will re-submit applicants to the Suitability Review Panel if they are found to have falsified information on their application or are found to have disqualifying factors.

§ 11.60 Limited non-career appointments.

Consistent with section 303 of the Act (22 U.S.C. 3943), the Secretary of State may also appoint Civil Service employees and other individuals to the Foreign Service, and, consistent with section 309 of the Act (22 U.S.C. 3949), such appointments may include limited non-career appointments (LNAs). After meeting the job specific requirements, candidates must meet applicable medical, security, and suitability requirements. Limited non-career appointments are covered under 3 FAM 2290.

Dated: September 11, 2015.

Arnold A. Chacon,

Director General of the Foreign Service and Director of Human Resources.

[FR Doc. 2015–27026 Filed 10–22–15; 8:45 am]

BILLING CODE 4710–15–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2015–0973]

Drawbridge Operation Regulations; York River, Yorktown, VA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulations.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Coleman Memorial Bridge (US 17) across the York River, mile 7.0, at Yorktown, VA. This deviation allows the bridge to remain in the closed-to-navigation position to facilitate mechanical repairs to the bridge.

DATES: This deviation is effective from 10 p.m. on November 14, 2015, until 7 a.m. on November 22, 2015.

ADDRESSES: The docket for this deviation, [USCG–2015–0973], is available at *http://www.regulations.gov.* Type the docket number in the ''SEARCH'' box and click ''SEARCH''.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Mr. Hal R. Pitts, Bridge Administration Branch Fifth District, Coast Guard; telephone (757) 398–6222, email *Hal.R.Pitts@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Virginia Department of Transportation, who owns and operates the Coleman Memorial Bridge (US 17), has requested a temporary deviation from the current operating regulations to facilitate mechanical repairs to the movable grating between one of the movable spans and the fixed bridge. The bridge is a swing bridge and has a vertical clearance in the closed position of 60 feet above mean high water.

The current operating schedule is set out in 33 CFR 117.1025. Under this temporary deviation, the bridge will remain in the closed-to-navigation position from 10 p.m. on November 14, 2015, until 7 a.m. on November 15, 2015. If necessary due to inclement weather on November 14, 2015, the bridge will remain in the closed-to-navigation position from 10 p.m. on November 21, 2015, until 7 a.m. on November 22, 2015. The York River is used by a variety of vessels including deep draft ocean-going vessels, U.S. government vessels, small commercial fishing vessels, recreational vessels and tug and barge traffic. The Coast Guard has carefully coordinated the restrictions with U.S. government and commercial waterway users.

Vessels able to pass through the bridge in the closed position may do so at anytime. The bridge will not be able to open for emergencies and there is no alternate route for vessels unable to pass through the bridge in the closed position. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notice to Mariners of the change in operating schedule for the bridge so that vessels can arrange their transits to minimize any impacts caused by this temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: October 19, 2015.

Hal R. Pitts,

Bridge Program Manager, Fifth Coast Guard District.

[FR Doc. 2015–26969 Filed 10–22–15; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2015–0947]

Drawbridge Operation Regulation; Snohomish River, Marysville, WA

AGENCY: Coast Guard, DHS.

ACTION: Notice of temporary deviation from regulations.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Burlington Northern Santa Fe Railroad Company (BNSF) Bridge 37.0 across the Snohomish River, mile 3.5 at Marysville, WA. The deviation is necessary to accommodate scheduled bridge rail joint maintenance and replacement. The deviation allows the bridges to remain in the closed-to-navigation position during the maintenance to allow safe movement of work crews.

DATES: This deviation is effective from November 1, 2015 through November 15, 2015.

ADDRESSES: The docket for this deviation, [USCG–2015–0947] is available at *http://www.regulations.gov.* Type the docket number in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email the Bridge Administrator, Coast Guard Thirteenth District; telephone 206–220–7234 email *d13-pf-d13bridges@uscg.mil.*

SUPPLEMENTARY INFORMATION: BNSF has requested a temporary deviation from the operating schedule for the BNSF RR Bridge 37.0, mile 3.5, crossing Snohomish River, at Marysville, WA. BNSF requested the BNSF RR Bridge 37.0 remain in the closed-to-navigation position for rail maintenance. This maintenance has been scheduled, and is funded as part of the Cascade Corridor Improvement Project.

The normal operating schedule for this bridge operates in accordance with 33 CFR 117.5 which states it must open promptly on signal at any time, and requires constant attendance by with a drawtender. BNSF RR Bridge 37.0 provides 10 feet of vertical clearance in the closed-to-navigation position.

This deviation allows the BNSF RR Bridge 37.0, at mile 3.5 crossing Snohomish River, to remain in the closed-to-navigation position, and need not open for maritime traffic from 10 a.m. until 4 p.m. from November 1, 2015 through November 15, 2015; except, the bridge will remain in the closed-to-navigation position from 8 a.m. until Midnight on November 10, 2015 and from 8 a.m. until Midnight on November 12, 2015. The bridge shall operate in accordance to 33 CFR part 117, subpart A at all other times.

Vessels able to pass through the bridge in the closed-to-navigation position may do so at anytime. The bridge will be required to open, if needed, for vessels engaged in emergency response operations during this closure period, but any time lost to emergency openings will necessitate a time extension added to the approved dates. Waterway usage on this part of the Snohomish River includes tug and barge to small pleasure craft. No immediate alternate route for vessels to pass is available on this part of the river. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notices to Mariners of the change in operating schedule for the bridge so that vessels can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridges must return to their regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: October 19, 2015.

Steven M. Fischer,

Bridge Administrator, Thirteenth Coast Guard District.

DEPARTMENT OF THE INTERIOR

National Park Service

36 CFR Part 13

[NPS–AKRO–18755; PPAKAKROZ5, PPMPRLE1Y.L00000]

RIN 1024–AE21

Alaska; Hunting and Trapping in National Preserves

AGENCY: National Park Service, Interior.

ACTION: Final rule.

SUMMARY: The National Park Service is amending its regulations for sport hunting and trapping in national preserves in Alaska. This rule provides that the National Park Service does not adopt State of Alaska management actions or laws or regulations that authorize taking of wildlife, which are related to predator reduction efforts (as defined in this rule). This rule affirms current State prohibitions on harvest practices by adopting them as federal regulation. The rule also prohibits the following activities that are allowed under State law: Taking any black bear, including cubs and sows with cubs, with artificial light at den sites; taking brown bears and black bears over bait; taking wolves and coyotes during the denning season; harvest of swimming caribou or taking caribou from a motorboat while under power; and using dogs to hunt black bears. The rule also simplifies and updates procedures for closing an area or restricting an activity in National Park Service areas in Alaska; updates obsolete subsistence regulations; prohibits obstructing persons engaged in lawful hunting or trapping; and authorizes the use of native species as bait for fishing.

DATES: This rule is effective November 23, 2015.

FOR FURTHER INFORMATION CONTACT: Andee Sears, Regional Law Enforcement Specialist, Alaska Regional Office, 240 West 5th Ave., Anchorage, AK 99501. Phone (907) 644–3417. Email: *AKR_Regulations@nps.gov*

SUPPLEMENTARY INFORMATION:

Background

Proposed Rule and Public Comment Period

On September 4, 2014, the National Park Service (NPS) published the proposed rule in the **Federal Register** (79 FR 52595). The rule was open for public comment for 90 days, until December 3, 2014. The NPS reopened the comment period from January 15, 2015 through February 15, 2015 (80 FR 2065). The NPS invited comments through the mail, hand delivery, and through the Federal eRulemaking Portal at *http://www.regulations.gov.*

During the first comment period in 2014, the NPS held 17 public hearings in various locations in Alaska. Approximately 168 individuals attended these hearings and approximately 120 participants provided testimony during the formal public comment sessions. During the second comment period, nine public meetings were held in the State. A total of 29 individuals attended the public meetings, and a total of nine attendees spoke during the formal public comment sessions. The NPS also held two statewide government-to-government consultation teleconferences, and offered to consult in person, with tribes. Four comments were received during the statewide government-to-government consultation conference calls and the NPS met with three tribes that requested consultation in person (Allakaket, Tazlina, and Chesh'na (Chistochina)).

The NPS received approximately 70,000 comments on the proposed rule during the public comment period. These included unique comment letters, form letters, and signed petitions. Approximately 65,000 comments were form letters. The NPS also received three petitions with a combined total of approximately 75,000 signatures. Some commenters sent comments by multiple methods. NPS attempted to match such duplicates and count them as one comment. Additionally, many comments were signed by more than one person. NPS counted a letter or petition as a single comment, regardless of the number of signatories.

A summary of comments and NPS responses is provided below in the section entitled ''Summary of and Responses to Public Comments.'' After considering the public comments and additional review, the NPS made some changes in the final rule from that proposed. These changes are summarized below in the section entitled ''Changes from the Proposed Rule.''

Federal and State Mandates for Managing Wildlife.

In enacting the Alaska National Interest Lands Conservation Act (ANILCA) (16 U.S.C. 410hh–410hh–5; 3101–3233) in 1980, Congress's stated purpose was to establish in Alaska various conservation system units that contain nationally significant values, including units of the National Park System, in order to preserve them ''for the benefit, use, education, and inspiration of present and future generations[.]'' 16 U.S.C. 3101(a). Included among the express purposes in ANILCA are preservation of wildlife, wilderness values, and natural undisturbed, unaltered ecosystems while allowing for recreational opportunities, including sport hunting. 16 U.S.C. 3101(a)–(b).

The legislative history of ANILCA reinforces the purpose of the National Park System units to maintain natural, undisturbed ecosystems. ''Certain units have been selected because they provide undisturbed natural laboratories—among them the Noatak, Charley, and Bremner River watersheds.'' Alaska National Interest Lands, Report of the Senate Committee on Energy and Natural Resources, Report No. 96–413 at page 137 [hereafter Senate Report]. Legislative history identifies Gates of the Artic, Denali, Katmai, and Glacier Bay National Parks as ''large sanctuaries where fish and wildlife may roam freely, developing their social structures and evolving over long periods of time as nearly as possible without the changes that extensive human activities would cause.'' Senate Report, at page 137.

The congressional designation of ''national preserves'' in Alaska was for the specific and sole purpose of allowing sport hunting and commercial trapping, unlike areas designated as national parks. 126 Cong. Rec. H10549 (Nov. 12, 1980) (Statement of Rep. Udall). 16 U.S.C. 3201 directs that national preserves shall be managed ''in the same manner as a national park . . . except that the taking of fish and wildlife for sport purposes and subsistence uses, and trapping shall be allowed in a national preserve[.]'' Under ANILCA and as used in this document, the term ''subsistence'' refers to subsistence activities by rural Alaska residents authorized by Title VIII of ANILCA, which ANILCA identifies as the priority consumptive use of fish and wildlife on public lands. 16 U.S.C. 3144. Subsistence taking of fish and wildlife in NPS areas is generally regulated by the Department of the Interior. Taking wildlife for sport purposes in national preserves is generally regulated by the State of Alaska.

In addressing wildlife harvest, the legislative history provided ''the Secretary shall manage National Park System units in Alaska to assure the optimum functioning of entire ecological systems in undisturbed natural habitats. The standard to be met in regulating the taking of fish and wildlife and trapping, is that the preeminent natural values of the Park System shall be protected in perpetuity, and shall not be jeopardized by human uses.'' 126 Cong. Rec. H10549 (Nov. 12, 1980) (Statement of Rep. Udall). This is reflected in the statutory purposes of various national preserves that were established by ANILCA, which include the protection of populations of fish and wildlife, including specific references to predators such as brown/grizzly bears and wolves.

Activities related to taking wildlife remain subject to other federal laws, including the mandate of the NPS Organic Act (54 U.S.C. 100101) ''to conserve the scenery, natural and historic objects, and wild life'' in units of the National Park System and to provide for visitor enjoyment of the same for this and future generations. Policies implementing the NPS Organic Act require the NPS to protect natural ecosystems and processes, including the natural abundances, diversities, distributions, densities, age-class distributions, populations, habitats, genetics, and behaviors of wildlife. NPS Management Policies 2006 §§ 4.1, 4.4.1, 4.4.1.2, 4.4.2. The legislative history of ANILCA reflects that Congress did not intend to modify the NPS Organic Act or its implementing policies in this respect: ''the Committee recognizes that the policies and legal authorities of the managing agencies will determine the nature and degree of management programs affecting ecological relationships, population's dynamics, and manipulations of the components of the ecosystem.'' Senate Report, at pages 232–331. NPS policy states that ''activities to reduce . . . native species for the purpose of increasing numbers of harvested species (*i.e.* predator control)'' are not allowed on lands managed by the NPS. NPS Management Policies 2006 § 4.4.3.

The State's legal framework for managing wildlife in Alaska is based on sustained yield, which is defined by State statute to mean ''the achievement and maintenance in perpetuity of the ability to support a high level of human harvest of game[.]'' AS § 16.05.255(k)(5). To that end, the Alaska Board of Game (BOG) is directed to ''adopt regulations to provide for intensive management programs to restore the abundance or productivity of identified big game prey populations as necessary to achieve human consumptive use goals[.]'' AS § 16.05.255(e). Allowances that manipulate natural systems and processes to achieve these goals, including actions to reduce or increase wildlife populations for harvest, conflict with laws and policies applicable to NPS areas that require preserving natural wildlife populations. See, *e.g.,* NPS Management Policies 2006 §§ 4.1, 4.4.3.

This potential for conflict was recognized by the Senate Committee on Energy and Natural Resources prior to the passage of ANILCA, when the Committee stated that ''[i]t is contrary to the National Park Service concept to manipulate habitat or populations to achieve maximum utilization of natural resources. Rather, the National Park System concept requires implementation of management policies which strive to maintain natural abundance, behavior, diversity and ecological integrity of native animals as part of their ecosystem, and that concept should be maintained.'' Senate Report, at page 171.

In the last several years, the State of Alaska has allowed an increasing number of liberalized methods of hunting and trapping wildlife and extended seasons to increase opportunities to harvest predator species. Predator harvest practices recently authorized on lands in the State, including lands in several national preserves, include:

• Taking any black bear, including cubs and sows with cubs, with artificial light at den sites;

• harvesting brown bears over bait (which often includes dog food, bacon/meat grease, donuts, and other human food sources); and

• taking wolves and coyotes (including pups) during the denning season when their pelts have little trophy, economic, or subsistence value.

These practices are not consistent with the NPS's implementation of ANILCA's authorization of sport hunting and trapping in national preserves. To the extent such practices are intended or reasonably likely to manipulate wildlife populations for harvest purposes or alter natural wildlife behaviors, they are not consistent with NPS management policies implementing the NPS Organic Act or the sections of ANILCA that established the national preserves in Alaska. Additional liberalizations by the State that are inconsistent with NPS management directives, policies, and federal law are anticipated in the future.

16 U.S.C. 3201 of ANILCA provides ''within national preserves the Secretary may designate zones where and periods when no hunting, fishing, trapping, or entry may be permitted for reasons of public safety, administration, floral and faunal protection, or public use and enjoyment.'' In order to comply with federal law and NPS policy, the NPS has adopted temporary restrictions under 36 CFR 13.40(e) to prevent the application of the above listed predator harvest practices to national preserves in Alaska (see, *e.g.,* 2013 Superintendent's Compendium for Denali National Park and Preserve). These restrictions protect fauna and provide for public use and enjoyment consistent with ANILCA. While the NPS prefers a State solution to these conflicts, the State has been mostly unwilling to accommodate the different management directives for NPS areas. In the last ten years, the NPS has objected to more than fifty proposals to liberalize predator harvest in areas that included national preserves, and each time the BOG has been unwilling to exclude national preserves from State regulations designed to manipulate predator/prey dynamics for human consumptive use goals.

In deciding not to treat NPS lands differently from State and other lands, the BOG suggested the NPS was responsible for ensuring that taking wildlife complies with federal laws and policies applicable to NPS areas, and that the NPS could use its own authority to ensure national preserves are managed in a manner consistent with federal law and NPS policy. See, *e.g.,* Statement of BOG Chairman Judkins to Superintendent Dudgeon, BOG Public Meeting in Fairbanks, Alaska (February 27, 2010) (NPS was testifying in opposition to allowing the take of black bear cubs and sows with cubs with artificial light in national preserves). In the absence of State action excluding national preserves, this rulemaking is required to make the temporary restrictions permanent. 36 CFR 13.50(d). This rule responds to the BOG's suggestion by promulgating NPS regulations to ensure national preserves are managed consistent with federal law and policy and prevent historically prohibited sport hunting practices from being authorized in national preserves.

The scope of this rule is limited—sport hunting and trapping are still allowed throughout national preserves and the vast majority of State hunting regulations are consistent with federal law and policy and continue to apply in national preserves. This rule only restricts sport hunting and trapping in national preserves, which constitute less than six percent of the lands in Alaska open to hunting. This rule does not limit the taking of wildlife for Title VIII subsistence uses under the federal subsistence regulations.

Final Rule

Summary of Final Rule

The rule separates regulations that govern the taking of fish and the taking of wildlife into two sections: 13.40 and 13.42, respectively. The rule makes the following substantive changes to existing NPS regulations:

(1) In accordance with NPS policies, taking wildlife, hunting or trapping activities, or management actions involving predator reduction efforts with the intent or potential to alter or manipulate natural predator-prey dynamics and associated natural ecological processes to increase harvest of ungulates by humans are not allowed on NPS-managed lands. It also explains how the NPS will notify the public of specific activities that are not consistent with this section.

(2) Affirms current State prohibitions on harvest practices by adopting them as federal regulation, and also maintains historical prohibitions on certain practices that the State has recently authorized for sport hunting of predators: (i) Taking any black bear, including cubs and sows with cubs, with artificial light at den sites; (ii) taking brown bears over bait; and (iii) taking wolves and coyotes during the denning season. The rule also eliminates exceptions to practices generally prohibited under State of Alaska law, thereby prohibiting: Taking caribou that are swimming, or from a motorboat that is under power, in two game management units (GMU); baiting black bears; and using dogs to hunt black bears.

(3) Prohibits intentionally obstructing or hindering persons actively engaged in lawful hunting or trapping.

(4) Updates and simplifies procedures for implementing closures or restrictions in park areas, including taking fish and wildlife for sport purposes.

(5) Updates NPS regulations to reflect federal assumption of the management of subsistence hunting and fishing under Title VIII of ANILCA from the State in the 1990s.

(6) Allows the use of native species as bait, commonly salmon eggs, for fishing in accordance with applicable federal and non-conflicting State law. This supersedes for park areas in Alaska the National Park System-wide prohibition on using certain types of bait in 36 CFR 2.3(d)(2).

Prohibiting Predator Reduction

Activities or management actions involving predator reduction efforts with the intent or potential to alter or manipulate natural ecosystems or processes (including natural predator/prey dynamics, distributions, densities, age-class distributions, populations, genetics, or behavior of a species) are inconsistent with the laws and policies applicable to NPS areas. The rule clarifies in regulation that these activities are not allowed on NPS lands in Alaska. Under this rule, the Regional Director will compile a list updated at least annually of activities prohibited by this section of the rule. Notice will be provided in accordance with 36 CFR 13.50(f) of this rule.

Prohibiting Methods and Means of Taking Wildlife in National Preserves

The rule codifies for national preserves current State prohibitions on harvest practices, and also maintains historical prohibitions on certain sport hunting practices that have been recently authorized by the State for taking predators. It also eliminates exceptions (as applied to national preserves) under State laws that authorize sport hunters to take swimming caribou, to take caribou from motorboats under power, to take black bears over bait, and to use dogs to hunt black bears. The elements of the rule that are described in this paragraph will not be implemented until January 1, 2016, to avoid any potential confusion that may arise from issuing this rule during the 2015 hunting seasons. Delaying the implementation of these provisions will give the general public and other stakeholders sufficient time to understand the new rules before the 2016 hunting seasons begin.

Prohibiting the Obstruction of Persons Engaged in Lawful Hunting or Trapping

The rule prohibits the intentional obstruction or hindrance of another person's lawful hunting or trapping activities. This includes (i) placing oneself in a location in which human presence may alter the behavior of the game that another person is attempting to take or alter the imminent feasibility of taking game by another person; or (ii) creating a visual, aural, olfactory, or physical stimulus in order to alter the behavior of the game that another person is attempting to take. These actions are prohibited by State law, but this law is not adopted under the regulations for national preserves, because it does not directly regulate hunting and trapping. This rule directly codifies these prohibitions into the NPS regulations, to prevent the frustration of lawful hunting and trapping in national preserves.

Updating Closure and Restriction Procedures

The rule updates and simplies the procedures for implementing closures and restrictions on certain activities in NPS areas in Alaska. These changes will make the procedures in Alaska more consistent with other NPS units outside of Alaska and with Alaska State Parks. The rule clarifies that Superintendents must use the procedures in § 13.50 to implement any closure or restriction in NPS areas in Alaska. This eliminates potential confusion about whether the procedures in § 13.50 apply only when they are referenced in a separate regulation in part 13 (currently found in the regulations for weapons, camping, and taking fish and wildlife), or whether they apply to all closures and restrictions in Alaska.

The rule requires rulemaking for nonemergency closures or restrictions if the closures or restrictions (or the termination or relaxation of them) are of a nature, magnitude and duration that will result in a significant alteration in the public use pattern of the area, adversely affect the area's natural, aesthetic, scenic or cultural values, or require a long-term or significant modification in the resource management objectives of the area. These rulemaking criteria are modeled after the the criteria that apply to closures and restrictions in Alaska State Parks (11 AAC 12.335), which are also similar to the criteria in 36 CFR 1.5(b) that apply to NPS areas outside of Alaska. Emergency closures and restrictions are limited to the duration of the emergency.

Before a nonemergency closure or restriction can be implemented, the NPS must issue a written determination explaining the basis of the closure or restriction. The NPS will also compile in writing a list, updated annually, of all closures and restrictions (*i.e.,* the compendium). The compendium and the written determinations of need will be posted on the NPS Web site and made available at park headquarters.

With respect to nonemergency restrictions on taking of fish and wildlife in national preserves, the final rule requires an opportunity for public comment, including a public meeting near the affected NPS unit, before the action is taken. This rule recognizes that, although the internet has become an effective method of communicating with the public, in-person public meetings may still be the most effective way to engage Alaskans, particularly those in rural areas. The rule also requires the NPS to consult with the State prior to adopting such closures and restrictions. Emergency closures or restrictions on the taking of fish or wildlife are limited to 60 days and may only be extended after consultation with the State and an opportunity for public comment, including a public meeting, near the affected NPS unit.

The following table summarizes the changes from the proposed rule regarding procedures to implement closures or restrictions in § 13.50:

Proposed rule procedures	Final rule procedures
Applicability	
Applies only to closures pertaining to weapons, camping, and taking of fish or wildlife.	Applies to all closures or restrictions except when more specific procedures apply in 36 CFR part 13.
Factors used to determine whether to close an area or restrict an activity	
Includes protecting the integrity of naturally-functioning ecosystems as an appropriate reason for a closure or restriction.	Retains factors in existing regulations at 13.50.
Written determinations	
Not required	Requires a written determination explaining the reason for the proposed closure/restriction in nonemergency situations. This determination will be posted on *www.nps.gov.*
Emergency Closures or Restrictions	
May not exceed 60 days	Duration of the emergency, except for emergency closures or restrictions on taking fish or wildlife, which may not exceed 60 days.
Restrictions on Taking Fish or Wildlife (nonemergency)	
Consultation with the State and opportunity for public comment prior to adopting a closure or restriction.	Consultation with the State and opportunity for public comment, including one or more public meetings near the affected NPS unit, prior to implementing a closure or restriction.
Notice	
Closures or restrictions will be effective upon publication on park website.	Some closures or restrictions will be effective upon publication on park websites, but other closures or restrictions may be posted on a park website prior to taking effect, to give the public adequate time to understand and comply with them. A list of closures and restrictions will be compiled in writing and updated annually, and will be posted on the park websites.

Update Subsistence Regulations to Reflect Federal Management

The rule updates the subsistence provisions in NPS regulations (36 CFR 13.470, 13.480, and 13.490) to reflect the federal government's assumption of the management and regulation of subsistence take of fish and wildlife under ANILCA and the transfer of subsistence management under Title VIII from the State to the Federal Subsistence Board. The rule makes other non-substantive, editorial changes to the language in 36 CFR 13.490 to streamline, clarify, and better organize this section.

Allowing the Use of Native Species as Bait for Fishing

NPS regulations generally prohibit the use of many forms of bait for fishing to help protect against the spread of nonnative species. Fish eggs from native species (usually salmon), are commonly used for fishing in Alaska. This rule allows the use of local native species as bait for fishing.

Frequently Asked Questions

This section explains some of the principal elements of the rule in a question and answer format.

Why is this rule necessary?

The rule responds to State hunting regulations that authorize wildlife harvest practices that conflict with ANILCA's authorization for sport hunting, the statutory purposes for which national preserves were established, and the NPS Organic Act as implemented by the NPS. These include liberalized predator harvest seasons, bear baiting, and the harvest of caribou while swimming. National park areas are managed for natural ecosystems and processes, including wildlife populations. The NPS legal and policy framework prohibits reducing native predators for the purpose of increasing numbers of harvested species.

As discussed above, the rule also responds to a number of other regulatory needs, by updating and streamlining closure procedures, updating subsistence provisions to reflect the program's actual management, prohibiting interference with lawful hunting consistent with State law, and allowing use of native species as bait for fishing.

Does this rule restrict subsistence harvest of wildlife under Title VIII of ANILCA?

No.

Does this rule prohibit all hunting under State regulations on national preserves in Alaska?

No. This rule restricts certain methods of harvest currently allowed on national preserves by the State of Alaska under its general hunting regulations. These include the taking of any black bear, including cubs and sows with cubs, with artificial light at den sites, taking brown and black bears over bait, taking wolves and coyotes between May 1 and August 9, harvest of swimming caribou or taking caribou from a motorboat while under power, and using dogs to hunt black bears. Additionally, State laws or regulations involving predator reduction efforts with the intent or potential to alter or manipulate natural predator-prey dynamics and associated natural ecological processes to increase harvest of ungulates by humans will not apply in national preserves, pursuant to this rule. These restrictions will affect a very small percentage of hunting practices authorized by State regulation and less than six percent of the lands in Alaska that are open to hunting.

What regulations apply to hunting and trapping in national preserves?

Title 36 of the Code of Federal Regulations (CFR) applies to sport hunting and trapping in national preserves. State harvest laws and regulations (Alaska Statute Title 16 and Alaska Administrative Code Title 5 AAC) that are consistent with 36 CFR also apply on national preserves. ANILCA Title VIII subsistence harvest of fish and wildlife by Federally-qualified rural residents is authorized in national preserves in Alaska under 36 CFR part 13 and 50 CFR part 100. Please contact the park chief ranger for additional information or assistance.

Do I still have to use the State regulations book when hunting on national preserves?

Yes. State hunting regulations apply to national preserves except when in conflict with federal regulation. Please contact the park chief ranger for additional information or assistance.

Does this rule restrict intensive management of predators on NPS lands?

Yes. Consistent with NPS Management Policies 2006, the NPS Organic Act, and the statutory purposes for which national preserves were established, this rule prohibits predator reduction activities on national preserves that have the intent or potential to alter or manipulate natural predator-prey dynamics and associated natural ecological processes to increase harvest of ungulates by humans.

What is the authority for the NPS to restrict hunting and trapping in this rule?

The NPS Organic Act authorizes the NPS to promulgate regulations that are necessary and proper for the use and management of National Park System units, including national preserves in Alaska, for the purpose of conserving the wild life and providing for the enjoyment of the wild life in such manner and by such means as will leave them unimpaired for the enjoyment of future generations. 54 U.S.C. 100101(a) and 100751. ANILCA authorizes the Secretary of the Interior, acting through the NPS, to promulgate regulations prescribing restrictions relating to hunting, fishing, or trapping for reasons of public safety, administration, floral and faunal protection, or public use and enjoyment. 16 U.S.C. 3201 and 3202.

The rule says that State laws or management actions involving predator reduction are not adopted in national preserves. How will I know if a State law involves predator reduction?

The Regional Director will compile a list updated at least annually of State laws and regulations that are not adopted in national preserves. This list will be posted at *www.nps.gov* and available upon request at NPS park headquarters.

I live in a nonrural area and hunt under State subsistence regulations. Does this rule restrict my subsistence harvest practices?

Title VIII of ANILCA limits subsistence activities to local rural residents. This rule does not restrict federally-qualified subsistence users who are hunting in accordance with federal subsistence regulations. But those persons living in nonrural areas (who therefore are not federally-qualified subsistence users) must comply with the restrictions in this rule. For example, only federally qualified subsistence users hunting under federal subsistence regulations will be able to take swimming caribou within national preserves, for all others this practice will now be prohibited in national preserves.

How is hunting on national preserves different than hunting on State land?

Hunting in national preserves is different than on State (or private) lands because NPS regulations also apply and govern in the event of a conflict with State law or regulation. However, harvest opportunities and practices in national preserves vary little from practices allowed under State law, except for some very specific circumstances for which where the NPS has issued regulations. For example, same-day airborne hunting of big game animals, arctic fox, red fox, and lynx has not been allowed on NPS lands since 1995. This rule adds several additional NPS regulations prohibiting the following harvest practices that are allowed under State law: (1) Taking any black bear, including cubs and sows with cubs, with artificial light at den sites, (2) taking brown bears and black bears over bait, (3) taking wolves and coyotes from May 1 through August 9, (4) harvest of swimming caribou and harvest of caribou from a moving motorboat by those other than local rural residents in those portions of Noatak, Gates of the Arctic, and Bering Land Bridge Preserves that are within GMUs 23 and 26, and (5) using dogs to hunt black bears.

Black bear baiting has been allowed for more than three decades. Why is the NPS prohibiting it now?

The NPS proposed prohibiting the harvest of brown bears over bait to avoid public safety issues, to avoid food-conditioning bears and other species, and to maintain natural bear behavior as required by NPS law and policy. Other land and wildlife management agencies strive to eliminate the feeding of bears through individual and collective educational efforts due to the increased likelihood that food-conditioned bears will be killed by agency personnel or the public in defense of life or property. Food-conditioned bears are also believed more likely to cause human injury. Baiting tends to occur in accessible areas used by multiple user groups, which contributes to the public safety concerns associated with baiting. The concerns presented with taking brown bears over bait also apply to black bear baiting. After reviewing public comment, the final rule prohibits taking both black bears and brown bears over bait in national preserves.

Why is the NPS prohibiting the take of swimming caribou by individuals who are not federally qualified subsistence users?

Taking swimming big game is already generally prohibited by State law, but there are exceptions in State law for the take of swimming caribou in GMUs 23 and 26, which include portions of Noatak, Bering Land Bridge, and Gates of the Arctic National Preserves. This method of harvest remains available to federally qualified subsistence users in their pursuit of food. However, as is further explained below, this method is one of those that NPS has found is not consistent with ANILCA's authorization for sport hunting in national preserves.

Does this rule impact fishing in NPS units in Alaska?

Yes. This rule allows federally qualified subsistence users to use native species as bait for fishing in accordance with federal subsistence regulations.

Others will also be able to use native species for bait when such use is in accordance with non-conflicting State fishing regulations.

What procedures must the NPS follow to adopt closures and restrictions in NPS units in Alaska?

The procedures in 36 CFR 13.50 apply to all closures and restrictions in NPS units in Alaska, unless there are more specific procedures stated elsewhere in law or regulation. For example, the following regulations have specific procedures:

- Unattended or abandoned property, 36 CFR 13.45
- Use of snowmobiles, motorboats, dog teams, and other means of surface transportation traditionally employed by local rural residents engaged in subsistence uses, 36 CFR 13.460
- Subsistence use of timber and plant material, 36 CFR 13.485
- Closure to subsistence uses of fish and wildlife, 36 CFR 13.490

What closures or restrictions will require notice and comment rulemaking that is published in the ***Federal Register****?*

Any nonemergency closure or restriction, or the termination or relaxation of such, which is of a nature, magnitude, and duration that will result in a significant alteration in the public use pattern of the area; adversely affect the area's natural, aesthetic, scenic, or cultural values; or require a long-term modification in the resource management objectives of the area.

Doesn't ANILCA require public hearings prior to adopting closures or restrictions?

Public hearings near the affected vicinity are required before restricting: (1) Subsistence harvest of fish or wildlife under Title VIII of ANILCA or (2) access authorized under 16 U.S.C. 3170 (a) of ANILCA. There is no statutory requirement for a public hearing for other types of closures or restrictions.

Did the NPS eliminate a requirement for public hearings in the affected areas before adopting closures or restrictions relating to the take of fish and wildlife?

The proposed rule included a requirement to provide an opportunity for public comment on potential restrictions to taking fish or wildlife. Public comment may include written comments, a public meeting, a public hearing, or a combination thereof. Based upon public comment and to be more consistent with the practices of the BOG and the Federal Subsistence Board, the NPS modified the proposed rule to provide that the opportunity for comment must include at least one public meeting near the affected NPS unit in nonemergency situations. This is a change from the existing regulations, which require a public hearing. Requiring a ''meeting'' instead of a ''hearing'' provides more flexibility on how the event is structured. During the public hearings conducted in 2014, the NPS received feedback that some local communities prefer a less formal approach and more opportunities for dialog with NPS managers. The NPS believes the term ''meeting'' more appropriately describes this type of informational exchange. The NPS also believes the term public meeting is broad enough to include a public hearing if that is more appropriate for the area.

Where can I find information about closures and restrictions?

Information about closures and restrictions is posted on each park's Web site at *www.nps.gov*. This information is also available upon request at NPS park headquarters.

Why did the NPS delete the references to State law in the subsistence regulations?

The NPS deleted the provisions adopting non-conflicting State law because the State no longer manages subsistence harvest under Title VIII of ANILCA. Subsistence harvest of fish and wildlife on federal public lands is generally regulated by the Federal Subsistence Board.

Is the NPS required to consult with the State prior to adopting closures or restrictions to taking fish or wildlife?

Yes, except in the case of emergencies.

Is the NPS required to consult with tribes and ANCSA Native Corporations?

Yes, the NPS is required to consult with tribes if an NPS action would have a substantial direct effect on federally recognized Indian tribes. Consultation with ANCSA Native Corporations is required if an NPS action would have a substantial direct effect on ANCSA Native Corporation lands, waters, or interests.

Is the NPS required to consult with affected user groups, such as Regional Advisory Committees, Subsistence Resource Commissions, hunting organizations, or other nongovernmental organizations?

While this kind of consultation is not required by law, the NPS regards the input from these advisory and other groups as invaluable. The NPS encourages these groups to engage with park managers on topics of interest. The NPS also invites and encourages these committees and groups to provide input on decisions affecting public use of NPS managed lands as outlined in this final rule.

Summary of and Responses to Public Comments

A summary of substantive comments and NPS responses is provided below followed by a table that sets out changes we have made to the proposed rule based on the analysis of the comments and other considerations.

Consultation

1. Comment: Some commenters stated the NPS did not adequately consult with the State of Alaska prior to publishing the proposed rule and in doing so, acted inconsistently with ANILCA, the Master Memorandum of Understanding between the NPS and the Alaska Department of Fish and Game (ADF&G), and Executive Order 12866.

NPS Response: The NPS respects its responsibility to consult with the State (and others) regarding NPS actions, especially given that wildlife management in NPS units is a responsibility that is shared between the NPS and the State. Publication of the proposed rule provided an opportunity for consultation between the NPS and the State. The NPS and the ADF&G met shortly after the publication of the proposed rule, which is consistent with ANILCA's consultation requirement. 16 U.S.C. 3201. The NPS has engaged in ongoing communications with the ADF&G, the BOG, the State of Alaska ANILCA Implementation Program, and the State of Alaska Citizen's Advisory Commission on Federal Areas for a number of years regarding the issues that this rule addresses.

Executive Order 12866 requires federal agencies to ''seek views of appropriate State, local, and tribal governments before imposing regulatory requirements that might significantly or uniquely affect those governmental entities.'' Sec. 1(b)(9). As discussed below, the Office of Management and Budget determined this rule is not a significant regulatory action subject to this requirement. Regardless, the NPS invited the views of State, local, and tribal governments before publishing this final rule, and also complied with its responsibilities under section 4 of the Executive Order by including the proposed rule in the Unified Regulatory Agenda that was published by the Office of Management and Budget on reginfo.gov.

The NPS signed and implemented the Master Memorandum of Understanding (MMOU) with the ADF&G in 1982. The MMOU states that the ADF&G will manage wildlife on NPS managed lands for natural species diversity and natural process. The NPS agreed to recognize ADF&G as having the primary responsibility to manage wildlife on lands in the State and utilize the State's regulatory process to the maximum extent possible. Both agencies agreed to coordinate planning to minimize conflicts from differing legal mandates and consult with each other when developing regulations. The NPS continues to recognize the State as having primary responsibility to manage fish and wildlife on lands in the State. However, the State's responsibility is not exclusive and it does not preclude federal regulation of wildlife on federal public lands, as is well-established in the courts and specifically stated in ANILCA. The NPS also attempted to utilize the State regulatory process to notify the BOG when proposals created a conflict with NPS laws, regulations, and policies, years before the publication of the proposed rule. During this time NPS requested that the conflicts be resolved, as a first resort, through the State regulatory process. Only after conflicts could not be resolved through that process, and the BOG suggested the NPS could use its own authority to meet is mandates for managing wildlife, did the NPS consider modifications to federal regulations to resolve the conflicts.

2. Comment: Some commenters stated that the NPS did not adequately consult with tribes, various advisory committees, and rural residents prior to publishing the proposed rule.

NPS Response: NPS has an obligation to consult with tribes prior to making a decision that would have a substantial direct effect on federally-recognized tribes. Even though the NPS determined that the proposed rule would not have a substantial direct effect on tribes, the NPS initiated consultation shortly after publication of the proposed rule. The NPS emailed a letter to tribes inviting them to consult and notifying them of two statewide conference calls dedicated to tribal consultation in the fall of 2014. No one provided comments or asked questions during the first call. On the second call, four individuals who serve as members of tribal councils provided comments. Park managers also contacted tribes with ties to the park areas by phone, email, and letter to invite them to consult. NPS met in person with three tribes that requested additional consultation. The NPS also provided information to affected Subsistence Resource Commissions and Regional Advisory Councils beginning when the first temporary wildlife harvest restrictions were considered in 2010, and provided periodic updates throughout the process. Since these harvest restrictions were first proposed, the NPS stated its intention to initiate rulemaking and solicited public comment on these provisions. After the proposed rule was published, the NPS provided 121 days for written comment, met with and provided information to multiple groups, and held an additional 26 public hearings across the State, in rural locations near affected units as well as Anchorage, Fairbanks, Palmer, and Soldotna.

3. Comment: Some commenters stated the NPS did not respond to comments and questions from the State of Alaska on the temporary wildlife harvest restrictions that were included in the proposed rule, which might have enabled the State to take action that would make the proposed harvest restrictions unnecessary. Commenters also suggested the NPS work with the State of Alaska collaboratively to address the wildlife harvest issues in this rule.

NPS Response: The NPS would have preferred a collaborative approach with a solution in State law or regulation rather than federal regulation. To that end, the NPS has testified before the Board of Game many times, requested the Board of Game take specific regulatory action to address NPS concerns, met with ADF&G, provided explanations for the restrictions in writing, and responded to comments in the annual park compendiums. The NPS acknowledges the State requested scientific data to support the temporary restrictions on taking black bears, including cubs and sows with cubs, with artificial light at den sites, taking brown bears over bait, and prohibiting the take of wolves and coyotes during the summer months. However, neither the temporary restrictions nor this rule are based on particular wildlife population levels, and do not require the preparation of such scientific data. The basis of the compendium provisions, as well as the rule, is the NPS legal and policy framework, which has been communicated verbally and in writing several times.

Process for Publishing the Proposed Rule

4. Comment: Several comments stated that the NPS should give more weight to comments on the proposed rule from Alaskans than other members of the public. Another comment urged the NPS to increase cooperation and dialogue with rural Alaskans. Others expressed concern that the NPS is not considering public comments when developing the final rule, and did not adequately respond to public comments delivered at public meetings.

NPS Response: The NPS agrees that it will continue to strive to increase cooperation and dialogue with rural Alaskans, many of whom live near the national preserves and may be affected by this rule. After consideration of public comments on the proposed rule, the NPS has included a provision in the final rule requiring it hold one or more public meetings near the affected NPS unit before implementing any non-emergency closure or restriction on the sport take of fish or wildlife in national preserves.

During the comment periods for the proposed rule, the NPS held 26 public hearings in Alaska in an effort to solicit the opinions and comments of Alaskans. The NPS has considered all relevant comments it received on the proposed rule, including those from rural Alaskans and those delivered at public meetings. The NPS considers each comment based upon its substantive content, and does not give greater weight to any comment based upon the residence of the commenter. This is also consistent with the statutory purpose for establishing the national preserves in Alaska for the benefit, use, education, and inspiration of present and future generations of all Americans.

5. Comment: Some comments stated that the NPS did not provide the public with sufficient time to review and comment on the proposed rule. Other comments felt that the NPS should not be allowed to make changes to the proposed rule without allowing the public to review and comment on those changes.

NPS Response: The policy of the U.S. Department of the Interior is ordinarily to provide at least 60 days for public comment on any proposed rule that is published in the **Federal Register**. Due to the anticipated interest in this rule, the NPS provided an initial comment period of 90 days so that the public would have additional time to consider the proposal and submit timely comments. After the initial 90-day comment period expired, the NPS received several requests to reopen the comment period to give the public more time to review and prepare comments. Acknowledging the interest in this rule, the NPS agreed with these requests and reopened the comment period for an additional 31 days. In total, the NPS provided the public with 121 days to review and comment on the proposed rule, and appreciates the thoughtful consideration and responses it received. The NPS believes that the length of the combined public comment period was adequate and does not intend to reopen, for a second time, the public comment period.

After considering public comments and after additional review, the NPS made certain changes to the proposed rule, which are described in the section below entitled ''Changes from the Proposed Rule.'' The changes are a logical outgrowth of the proposed rule, and were reasonably foreseeable by the public when the proposed rule was published. For example, the NPS specifically requested comment on taking black bears over bait in the proposed rule. This notified the public that the proposed rule could change with respect to this issue after consideration of public comment. Other changes to the proposed rule, such as requiring a public meeting before adopting a closure or restriction for taking wildlife, are consistent with the existing regulations at 36 CFR 13.50.

Comments on Guiding Laws and Regulations

6. Comment: Some commenters stated that NPS does not have the authority to supersede State wildlife regulations, while others requested the NPS clarify its authority to preempt conflicting State regulations under the Property and Supremacy Clauses of the Constitution.

NPS Response: Under the Property and Supremacy Clauses of the U.S. Constitution, State wildlife laws that conflict with NPS's efforts to carry out its statutory mandate are preempted. *See, e.g. Kleppe* v. *New Mexico,* 426 U.S. 529 (1976); *Hunt* v. *United States,* 278 U.S. 96 (1928); *New Mexico State Game Comm'n* v. *Udall,* 410 F.2d 1197 (10th Cir.), *cert. denied, New Mexico State Game Comm'n* v. *Hickel,* 396 U.S. 961 (1969); *United States* v. *Brown,* 552 F.2d 817 (8th Cir. 1977). Certain State-authorized hunting and trapping practices are not consistent with the NPS implementation of the NPS Organic Act and ANILCA. Consequently, the final rule is an appropriate exercise of the authority affirmed by the cases cited above.

7. Comment: Several commenters questioned how any take of wildlife on national preserve lands is permissible when regulations that may ''alter the natural predator/prey dynamics, distribution, densities, age-class distributions, populations, genetics or behavior of a species'' are interpreted as being incompatible with the laws and policies of the National Park Service.

NPS Response: ANILCA provides for harvest of wildlife in national preserves. Therefore some level of take is appropriate and compatible with the NPS legal and policy framework for Alaska national preserves. This rule does not prohibit all State-authorized hunting and trapping. The vast majority of State regulations are, and are expected to remain, compatible with the NPS management framework. Over the past several decades, only a handful of State regulations have been superseded by NPS regulations.

The NPS believes that the standard in the rule is a workable and limited standard that satisfies our legal and policy framework and does not include all actions that result in the harvest of wildlife. This rule provides that the NPS does not adopt State management actions or laws or regulations that authorize taking of wildlife, which are related to predator reduction efforts, meaning that they have the intent or potential to alter or manipulate natural predator-prey dynamics and associated natural ecological processes, in order to increase harvest of ungulates by humans. The NPS acknowledges that the public would benefit from greater clarity as to exactly which State laws and regulations are not adopted by the NPS. As a result, the rule requires the Regional Director to publish at least annually a list of all such laws and regulations not adopted in national preserves.

General Comments

8. Comment: Some commenters objected to the NPS description that some of the harvest practices, such as taking swimming caribou and hunting caribou from a motorboat while under power, are ''longstanding prohibited.''

NPS Response: The harvest methods prohibited by this rule stem from general hunting and trapping restrictions in State law and regulation, some of which have been relaxed in recent years in response to proposals to the BOG. Some of these proposals to relax hunting and trapping restrictions were adopted in whole or in part to reduce predators. Three of these proposals removed longstanding prohibitions on harvest methods. In response, the NPS prohibited these methods on a temporary basis: (1) Taking any black bear, including cubs and sows with cubs, with artificial light at den sites; (2) taking brown bears over bait; and (3) taking wolves and coyotes during the summer months. This rule makes the temporary restrictions permanent. This rule also prohibits some additional practices that the NPS acknowledges were not historically prohibited. These practices, however, existed only as exceptions to general prohibitions in State law: (1) Taking swimming caribou or taking caribou from a motorboat while under power, in GMUs 23 and 26; (2) black bear baiting; and (3) using dogs to hunt black bears. For the reasons explained herein, NPS believes these practices should also now be prohibited in national preserves.

9. Comment: Some comments stated that the hunting methods that would be prohibited by the proposed rule were not intended to reduce predators but were allowed by the BOG based on requests from the Alaskans for additional harvest opportunity or to authorize traditional practices. Other comments stated the NPS proposed rule would prefer predators over ungulates. Others supported the proposed rule because it would prohibit harvest practices designed to reduce predators, which is inconsistent with NPS laws.

NPS Response: The NPS acknowledges many of the harvest practices recently authorized by the State were based in whole or in part on proposals from Alaskan hunters, some of whom may also be federally-qualified subsistence users. However, the record shows some of these proposals and the decisions to act on them were based wholly or in part on a desire to reduce predator populations, and often far in excess of any previous authorizations. Before the BOG authorized taking cubs and sows with cubs at den sites, it had only allowed this activity as part of a predator control program. (Findings of the Alaska Board of Game 2012–194–BOG, Board of Game Bear Conservation, Harvest, and Management Policy, expiration June 30, 2016 (January 18, 2012)). The State's decision to expand wolf and coyote seasons was based in part on a desire to elevate survival rates of moose and caribou calves.

As explained in the background section of this rule, NPS management policies prohibit the manipulation of wildlife populations, and require the NPS to protect natural abundances, distributions, densities, and populations of wildlife. This rule does not favor predators over ungulates, which would also violate NPS management policies. The rule is primarily focused on the take of predators because the allowances implemented by the State target predators, not ungulates. Even in these circumstances, the rule is consistent with NPS policy to allow for the fluctuation of natural populations of all species in national preserves, by prohibiting the purposeful decrease of predator populations to achieve (or attempt) an increase of ungulate populations to benefit hunters.

10. Comment: One commenter stated the NPS misinterpreted the State sustained yield mandate in the proposed rule and requested the NPS clarify the State's statutory definition to make it clear the State has authority to manage for a variety of beneficial uses of wildlife rather than only to support a high level of human harvest of wildlife.

NPS Response: NPS acknowledges that the State may have broader authorities and goals, but in general, interpretation and clarification of State law is a matter for the State. This rule ensures that taking of wildlife in national preserves is consistent with federal laws and NPS policies that require the NPS to manage national preserves for natural processes.

11. Comment: Several commenters directly or indirectly commented on State-authorized subsistence harvest of fish and wildlife. Some commenters suggested ANILCA authorizes State subsistence separate from Title VIII subsistence. Some comments stated the proposed rule restricts subsistence uses by Alaska Natives. Some commenters stated that federally qualified subsistence users often prefer to harvest wildlife under State regulations because the State regulations are more liberal than federal subsistence regulations and the Federal Subsistence Board regulatory process is cumbersome and takes too long. Conversely, some subsistence hunters voiced support for the proposed regulations as they do not consider some of the methods prohibited by this rule to be traditional or consistent with natural processes and population dynamics.

NPS Response: ANILCA, 16 U.S.C. 3201, states that national preserves shall be managed ''in the same manner as a national park . . . except that the taking of fish and wildlife for sport purposes and subsistence uses, and trapping shall be allowed in a national preserve[.]'' Under ANILCA and in this rule, the term ''subsistence'' refers only to subsistence activities authorized by Title VIII of ANILCA, which must comply with the federal subsistence regulations (among other things, they are restricted to rural Alaska residents). ANILCA did not authorize any separate State subsistence activities. Take of wildlife is authorized in national preserves only to the extent it is consistent with either the federal subsistence regulations or with regulations applicable to taking of wildlife for ''sport purposes.''

The NPS acknowledges that some rural residents eligible to harvest wildlife under federal subsistence regulations in NPS units also harvest wildlife under State regulations in national preserves, particularly when the State methods, seasons, and bag limits are more liberal. To the extent that this harvest does not conflict with NPS regulations applicable to sport hunting, these opportunities are preserved. Any changes to federal subsistence regulations should be proposed to the Federal Subsistence Board.

12. Comment: Some commenters objected to the use of the term ''sport hunting'' in the proposed rule as offensive and inaccurate in certain cases such as when a federal subsistence user moves out of the area and is no longer eligible to harvest under federal subsistence regulations.

NPS Response: The NPS understands that some hunters who harvest wildlife under State regulations are not hunting for recreation or ''sport.'' Sometimes individuals who are harvesting under State regulations were once rural residents but are no longer federally qualified subsistence users. However, Congress used the term ''sport purposes'' in ANILCA and it would be inappropriate for the NPS to allow harvest that is neither for ''subsistence purposes'' nor for ''sport purposes'' under 16 U.S.C. 3201.

13. Comment: Some commenters supported the prohibition on the methods of take in the proposed rule because they are unsporting or unethical; others stated the NPS should not regulate ethics regarding wildlife harvest.

NPS Response: Although the term ''sport'' is not defined in ANILCA, each term in a statute is presumed to have meaning. Sportsmanship in hunting has more than a hundred years of tradition and meaning in the conservation movement in America. See John F. Reiger, American Sportsmen and the Origin of Conservation (Winchester Press 1975). When methods of harvest go beyond traditionally accepted norms of ''sport'' in hunting, they may fall outside of what Congress intended when it authorized hunting in statutes like ANILCA. In some such cases, NPS believes regulations may be needed to curtail these activities that were never intended to occur in units of the National Park System. Such situations historically have been rare. Except for the prohibition of same-day airborne hunting in 1995, the NPS has not restricted the practices authorized by the State through federal rulemaking published in the CFR. There has, however, been a departure in recent years by the BOG, which has sought to advance the goals of increasing harvested species by targeting predators. In order to comply with federal law and NPS policy, these recent allowances have been prohibited by the NPS in national preserves on a temporary basis through compendium actions, and are now permanently prohibited by this rule.

The NPS also recognizes that some practices that are being prohibited for ''sport'' hunters may be appropriate for subsistence users. An example of this is taking swimming caribou. On NPS lands, the take of swimming caribou for subsistence is allowed in accordance with federal subsistence regulations, but it is not appropriate as a ''sport'' hunting practice on waters within national preserves.

14. Comment: Some commenters stated the proposed rule would prohibit Alaska residents from participating in State subsistence fisheries.

NPS Response: This rule makes no changes to fishing regulations other than allowing the use of native species as bait for fishing. Fishing in NPS units under federal subsistence regulations must be in accordance with 36 CFR 13.470 and 50 CFR part 100. Other noncommercial fishing is authorized under 36 CFR 13.40 and in accordance with the provisions of 36 CFR 2.3. To the extent it is consistent with those regulations, State-authorized subsistence fishing is allowed within NPS units.

15. Comment: Some commenters asserted that NPS does not have authority to enact the proposed regulations and that the NPS actions are inconsistent with 16 U.S.C. 3114 and 16 U.S.C. 3125(3) of ANILCA.

NPS Response: This final rule is not promulgated under 16 U.S.C. 3114, which provides that subsistence take of fish and wildlife has priority over other uses when it is necessary to restrict the harvest of fish or wildlife to protect the viability of the population or to continue subsistence uses. The restrictions in this rule are not necessary to protect the viability of a population or to continue Title VIII subsistence uses, nor do they affect subsistence uses or priority. The NPS is promulgating this rule under the NPS Organic Act and 16 U.S.C. 3201, which provide NPS with authority to restrict the taking of wildlife for sport purposes in national preserves for reasons of public safety, administration, floral and faunal protection, or public use and enjoyment.

Similarly, 16 U.S.C. 3125(3) does not apply to this rule. That provision provides that ''[n]othing in this title shall be construed as . . . authorizing a restriction on the taking of fish and wildlife for nonsubsistence uses . . . unless necessary for the conservation of healthy populations of fish and wildlife . . . to continue subsistence uses of such populations [.]'' The phrase ''this title'' refers solely to Title VIII of ANILCA—this section does not apply to 16 U.S.C. 3201, which was enacted as part of Title XIII. This section thus does not preclude the NPS from authorizing restrictions under other titles in ANILCA (such as Title XIII) or other federal laws (such as the NPS Organic Act), as is the case here.

16. Comment: Some commenters stated the NPS should limit hunting to traditional harvest methods because current technology could result in overharvest. Commenters also stated that resources should be allocated to most local users when harvest must be reduced.

NPS Response: In consultation with the State and the Federal Subsistence Board, the NPS will consider restrictions on specific harvest practices on a case by case basis. In times of shortage ANILCA, 16 U.S.C. 3114, provides priority to local subsistence users over others.

17. Comment: Some commenters objected to the statement in the proposed rule that management of wildlife on national preserves must protect natural processes, because ANILCA calls for ''healthy'' populations, not ''natural'' populations.

NPS Response: Title VIII of ANILCA refers to conserving ''healthy'' populations of wildlife on federal public lands in Alaska. ANILCA also states that nothing in the statute modifies or repeals any federal law governing the conservation or protection of fish and wildlife. The statute explicitly identifies the NPS Organic Act as one of those federal laws. The NPS Organic Act requires the NPS to conserve the wild life in units of the National Park System (including national preserves) and to provide for visitor enjoyment of the wild life for this and future generations. 54 U.S.C. 100101. Policies implementing the NPS Organic Act require the NPS to protect natural ecosystems and processes, including the natural abundances, diversities, distributions, densities, age-class distributions, populations, habitats, genetics, and behaviors of wildlife. NPS Management Policies 2006 §§ 4.1, 4.4.1, 4.4.1.2, 4.4.2. The legislative history of ANILCA reflects that Congress did not intend to modify the NPS Organic Act in this respect: ''the Committee recognizes that the policies and legal authorities of the managing agencies will determine the nature and degree of management programs affecting ecological relationships, population's dynamics, and manipulations of the components of the ecosystem.'' Senate Report 96–413, Committee on Energy and Natural Resources at pages 232–233 (hereafter Senate Report 96–413). This is reflected in the statutory purposes of various national preserves that were established by ANILCA, which include the protection of populations of fish and wildlife.

18. Comment: Some commenters stated the proposed rule includes ambiguous terms and gives too much discretion to park superintendents.

NPS Response: The NPS believes the actions the superintendents are authorized to take in the rule are consistent with federal law and are comparable to the actions superintendents have long been authorized to take in similar circumstances. It also recognizes that superintendents are the subject matter experts regarding management of the park unit and have been delegated responsibility to take action and respond to changing circumstances that may affect the values and resources of a park unit.

19. Comment: Some commenters questioned the basis of the proposed rule because the NPS did not cite or provide evidence or data related to wildlife population-level effects or any conservation concern.

NPS Response: As discussed above, the rule is based on the NPS legal and policy framework, which among other things ''requires implementation of management policies which strive to maintain natural abundance, behavior, diversity and ecological integrity of native animals as part of their ecosystem . . . .'' Senate Report 96–413, at page 171. This rule is not based on particular wildlife population levels, and did not require the preparation of data on those levels. Rather the rule reflects the NPS responsibility to manage national preserves for natural processes, including predator-prey relationships, and responds to practices that are intended to alter those processes.

20. Comment: A couple of commenters asked for clarification about the harvest opportunities that would be prohibited by the proposed rule on a unit by unit basis.

NPS Response: The NPS believes the rule clearly describes the harvest practices that are prohibited. All but three of these practices are already prohibited by either NPS temporary actions or existing State law. The only currently allowed harvest practices that will be prohibited under this rule are taking caribou that are swimming or taking caribou from a motorboat while under power (currently allowed in portions of Noatak, Gates of the Arctic, and Bering Land Bridge National Preserves), black bear baiting, and using dogs to hunt black bears. The NPS will assist the public to understand the impacts of the rule on sport harvest of wildlife in national preserves. The public and visitors are encouraged to contact or visit the local NPS offices for information or assistance.

21. Comment: One commenter opposed the prohibition on the take of muskrats at pushups, adding that this practice has been authorized by the State since 1967 and that the practice is not known to have caused conservation or user problems.

NPS Response: The proposed rule would have prohibited the take of muskrats at pushups, which is currently authorized under State regulations. This was not the NPS's intent, and the final rule has been modified to allow for this practice.

22. Comment: One commenter stated the allowance in the proposed rule for using electronic calls to take big game (except moose) should be modified to allow electronic calls for all game (except moose).

NPS Response: The NPS agrees with the suggestion, which is consistent with State law. The NPS has modified the rule accordingly.

23. Comment: Some commenters objected to the practice of trapping and snaring generally due to the potential for user conflicts and safety concerns due to traps and snares on or near trails. Some commenters specifically objected to snaring bears. Some commenters said trapping should not be allowed near trails used by others in order to protect those visitors and their pets. Some commenters said trappers should be required to identify their traps with their name and contact information.

NPS Response: ANILCA generally allows for trapping (including snaring) in national preserves. Under this rule and adopted State law, there are restrictions on animals that may be trapped under a trapping license, types of traps, as well as restrictions on locations where traps may be set. Because pets are required to be leashed, traps—even those set near trails—have not been a concern historically. In the event that trapping presents safety concerns, the NPS will address those concerns on a case-by-case basis.

24. Comment: Commenters suggested there is an inconsistency between what is being proposed for NPS lands in Alaska and allowances in some Lower 48 parks, including taking coyotes year-round.

NPS Response: Units of the National Park System are ''united through their interrelated purposes and resources into one National Park System,'' and managed in a manner ''consistent with and founded in the purpose established by'' the NPS Organic Act, ''to the common benefit of all the people of the United States.'' 54 U.S.C. 100101. But units also are managed consistent with their enabling statutes and other laws specifically applicable to those units, such as ANILCA. Hunting of any kind is generally prohibited in units of the National Park System, 36 CFR 2.2, except where specifically authorized by statute, as is the case for national preserves in Alaska (as well as subsistence activities in other Alaska units). In those units that do allow hunting, hunting seasons for particular species generally vary from unit to unit and are often set by State law. When NPS sets seasons or other restrictions by regulation, it does so case by case, based on the resource and management needs of the particular unit.

25. Comment: Some commenters suggested that the rule should prohibit the more subtle means of affecting the natural functioning ecosystem, such as hunters not being required to obtain tags or permits for predators, same-day airborne hunting and trapping, and sale of raw hides and skulls.

NPS Response: Many of the activities described by the commenter are already prohibited under federal regulations. For example, same-day airborne hunting of big game animals, arctic fox, red fox, or lynx is not allowed on NPS lands. Additionally, sale of raw hides and skulls is not allowed under existing NPS regulations. The NPS has not identified a need for NPS-issued tags and permits and consequently has not required harvest permits and tags beyond those required by State regulations and federal subsistence regulations.

26. Comment: One commenter said that while ungulates will probably remain the focus of the State's intensive management program, it is conceivable that another species could become the focus in the future due to fads or economic interests. The commenter suggested that NPS needs the flexibility to include additional species when necessary to provide for naturally functioning ecosystems.

NPS Response: While naturally functioning ecosystems include natural diversity and abundances of native wildlife populations, the NPS does not believe it is necessary to modify the proposed rule to address this concern. Should the issue arise in the future, the NPS will work with the State and consider appropriate action at that time.

27. Comment: One commenter suggested adding ''intercepting'' wildlife to the list of prohibited actions that cannot be taken by an aircraft, snowmachine, or other motor vehicle. Also, the term ''positioning'' is used to refer to the practice of using snowmachines for lining caribou up for a shot. It should be clarified whether this practice is considered ''herding.''

NPS Response: Paragraph (g)(4) of this rule prohibits using an aircraft, snowmachine, off-road vehicle, motorboat, or other motor vehicle to harass wildlife, including chasing, driving, herding, molesting, or otherwise disturbing wildlife. Using an aircraft, snowmachine, or other motor vehicle to ''intercept'' or ''position'' wildlife is prohibited by this provision, because the wildlife would be (among other things) harassed, chased, driven, herded, molested, or otherwise disturbed by the use of the aircraft, snowmachine, or motor vehicle. As a result, the NPS does not believe it is necessary to revise the proposed rule to specifically prohibit ''intercepting'' or ''positioning'' wildlife as these activities are already covered by the rule.

28. Comment: Some commenters stated the NPS should also address bag limits for certain species, such as wolves.

NPS Response: The NPS generally believes bag limits are more appropriately addressed through the State regulatory process and Federal Subsistence Program in conjunction with harvest information and population data. Should bag limits become a concern in the future, the NPS will work with the State and the Federal Subsistence Board as appropriate.

29. Comment: Some commenters objected to prohibiting the harvest methods identified in the proposed rule as unnecessary since they duplicate State regulations already in effect or would eliminate harvest opportunities for Alaskans.

NPS Response: The NPS affirms current State prohibitions on harvest methods by codifying them as federal law. Should exceptions to these State prohibitions be made in the future, the NPS will consider whether to adopt the same exceptions for national preserves. The majority of existing harvest opportunities provided under State law will still be available for hunters in national preserves.

Annual List of Harvest Regulations Not Adopted

30. Comment: Some commenters objected to the provision in the proposed rule requiring the Regional Director to compile an annual list of State laws and regulations that are not adopted in national preserves because they are aimed at reducing predators. Some comments suggested that the NPS hold public hearings and a public comment period before the Regional Director places laws and regulations on this list. Other commenters stated this provision is inconsistent with ANILCA and would give superintendents too much discretionary authority.

NPS Response: The provision requiring the Regional Director to identify State laws and regulations not adopted under paragraph (f) is designed to remove any ambiguity about which State-authorized activities are prohibited on national preserves. The NPS does not believe that a hearing or public comment period is appropriate for the annual list because these activities will be prohibited by paragraph (f)(2) without any further action by the NPS or the Regional Director. The purpose of the list is to inform the public about which laws and regulations are not adopted by the NPS so that there is no confusion about what is allowed in national preserves. The list is expected to change only to the extent the State authorizes new predator reduction activities that otherwise would affect national preserves. The overall goal of this provision is to maintain the traditional status quo and prevent the introduction of new predator reduction activities in national preserves.

ANILCA allows the Secretary of the Interior (acting through the NPS) to restrict sport hunting and trapping in national preserves after consultation with the State of Alaska, and does not diminish the authority of the Secretary of the Interior over the management of public lands. See the Background section of this final rule for more information about NPS authority to promulgate this rule. The NPS believes that compiling and annually updating a list of the activities prohibited by paragraph (f) is consistent with the statutory authority provided to the NPS for the management of national preserves.

Taking Bears Over Bait

31. Comment: Some commenters stated that the practice of baiting black bears and brown bears is appropriate because it will not have adverse ecological or public safety effects. Others commented that baiting black bears and brown bears should be prohibited because it may create public safety issues, food-conditioned bears, or impact natural populations or processes.

NPS Response: The NPS proposed prohibiting the harvest of brown bears over bait to avoid public safety issues, to avoid food conditioning bears and other species, and to maintain natural bear behavior as required by the NPS legal and policy framework. By design, baiting typically uses human or pet food to alter the natural behavior of bears to predictably attract them to a specific location for harvest. Land and wildlife management agencies strive to eliminate the feeding of bears through individual and collective educational efforts, due to the increased likelihood that food-conditioned bears are killed by agency personnel or the public in defense of life or property. Food-conditioned bears are also believed more likely to cause human injury. To that end, NPS regulations prohibit feeding wildlife and the practice of baiting is at odds with this.

Because the concerns presented by taking brown bears over bait also apply to black bear baiting, the NPS requested public comment on whether taking black bears over bait should be allowed to continue on national preserves. After reviewing public comment, the NPS has decided to prohibit taking black bears over bait in national preserves. This decision is consistent with State regulations applicable to Denali State Park, where taking of wildlife is authorized but taking black bears over bait is prohibited (see 2014–2015 Alaska Hunting Regulations, p. 27 and 78 and 5 AAC 92.044 for game management units where the practice is authorized).

Bait stations tend to be located in accessible areas due to the infrastructure (typically a 55 gallon drum) and quantity (including weight) of bait used to engage in this activity and the frequency with which the stations must be replenished. Because of the accessibility of these areas, they are typically used by multiple user groups, which contributes to the public safety concerns associated with baiting. Although there are State regulations that prohibit bait stations within a certain distance of structures (cabins/residences), roads, and trails, these distances lack biological significance relative to bears, whose home ranges can include tens to hundreds of square miles.

32. Comment: Some commenters stated that bear baiting should be allowed in national preserves because it is a historical practice that predates the establishment of national preserves and it a customary practice by many Alaskans. Commenters also stated the practice should be allowed because the amount of take is or would be small.

NPS Response: According to information provided by the State of Alaska, harvest of black bears over bait was authorized by State regulations in 1982. The creation of all NPS areas in Alaska preceded this date. Harvest of bears over the remains of legally-harvested animals not required to be salvaged will continue to be lawful provided the remains are not moved. To the extent the practice of baiting bears is a customary and traditional practice by rural residents, those uses may be authorized for Federally qualified rural residents pursuant to regulations adopted by the Federal Subsistence Board.

The NPS recognizes that the number of bears harvested over bait in national preserves may not be large. However, this provision is not based on how many bears are harvested or whether that harvest would impact bear population levels. It is based on the legal and policy framework that governs national preserves and calls for maintaining natural ecosystems and processes and minimizing safety concerns presented by food-conditioned bears.

33. Comment: One commenter recommended the definition of bait exclude legally taken fish and that bait should exclude legally taken wildlife that is not required to be salvaged under federal as well as State law. A comment was received that game that died of natural causes should not be considered bait.

NPS Response: The NPS has modified the definition of bait in a manner that excludes native fish, consistent with State law. Upon review, the NPS determined it is not necessary to reference State or federal law regarding salvage requirements in the definition of bait. The result is that parts of legally taken fish or wildlife that are not required to be salvaged are not considered bait if the parts are not moved from the kill site. The rule excludes from the definition of bait game that died of natural causes, if not moved from the location where it was found.

Taking Black Bears With Artificial Light at Den Sites

34. Comment: Some comments stated that the use of artificial light to aid the harvest of black bears in dens should be allowed to ensure proper species identification, prevent take of cubs or sows with cubs, and facilitate a human shot placement. Others commented that the use of artificial light to aid the harvest of black bears in dens should be prohibited due to effects on ecological processes and populations and the potential for dangerous orphaned cubs.

NPS Response: Although artificial light may, in some cases, aid the harvest of black bears in dens by assisting with species identification and shot placement, the NPS does not support authorizing this practice for sport hunting in national preserves. For rural subsistence users, the NPS believes this matter is more appropriately addressed by the Federal Subsistence Board. The final rule maintains the proposed prohibition on using artificial light to take wildlife, subject to certain exceptions.

Using Dogs To Hunt Black Bears

35. Comment: In response to a question in the proposed rule, some commenters supported the use of unleashed dogs to hunt black bears pursuant to a State permit. Some commenters stated that the use of dogs to hunt black bears has been allowed since 1970 and is not historically illegal. Other commenters opposed the use of dogs to hunt black bears. These comments stated that this activity would increase stress and trauma for the dogs and bears, reduce bear populations in national preserves, disrupt the natural balance of predator-prey dynamics, alter bear feeding patterns, harass other wildlife, transmit diseases to wildlife, interfere with other sport and subsistence hunters, and be dangerous for the dogs and humans in the area (including by driving bears into roadways and onto private property). Several comments stated that dogs used for hunting roam over large portions of the land, often out of the sight and control of their handlers. Some comments stated that this activity is unethical, unsportsmanlike, and does not have a traditional or cultural basis in Alaska. Other comments stated that dogs are often used to ''tree'' bears, which makes it difficult to determine the sex of the bear and could result in the killing of females with cubs.

NPS Response: Commenters are correct that using dogs to hunt black bears is not ''historically illegal.'' While State of Alaska law generally prohibits taking big game with the aid or use of a dog, there is an exception for using a dog to take black bears pursuant to a non-transferable permit issued by the ADF&G. The NPS agrees that this practice could have some of the adverse impacts suggested by commenters who oppose the practice. The NPS also believes the use of unleashed dogs to hunt black bears is one of the practices that is inconsistent with the traditional ''sport hunting'' that is authorized by ANILCA, as discussed above. The rule generally prohibits taking big game with the aid of use of a dog. The proposed rule has been modified to eliminate an exception that would have allowed the use of dogs to harvest black bears under a State permit.

36. Comment: Some commenters supported the use of unleashed dogs to hunt ''problem animals'' and the use of leashed dogs to hunt wounded black bears.

NPS Response: There is no allowance in State law to use unleashed dogs to hunt ''problem animals.'' Current State law allows use of a single, leashed dog in conjunction with tracking and dispatching a wounded big game animal, including black bear. The intent of the leash requirement is to ensure that native wildlife are not pursued, harassed, or killed by unleashed dogs and to prevent any contact between native wildlife and domestic dogs. The State-authorized use of a single, leashed dog in conjunction with tracking and dispatching a wounded big game animal will remain authorized in national preserves. The NPS will take appropriate action to protect the safety of park visitors and other wildlife from problem animals, such as bears.

37. Comment: Some commenters supported using sled dogs to travel to and from hunting and trapping areas, in search of game, and to haul out taken game, but not to chase wildlife.

NPS Response: Sled dogs are allowed under 16 U.S.C. 3121(b) of ANILCA for subsistence uses and under 16 U.S.C. 3170(a) of ANILCA for other traditional activities, unless prohibited or restricted on a site specific basis. There are currently no prohibitions or restrictions on this activity in areas where hunting and trapping are authorized. Herding, harassing, hazing, or driving wildlife is prohibited under NPS regulations. This includes ''chasing'' wildlife.

Wolves and Coyotes

38. Comment: Several commenters supported the limitations on taking wolves and coyotes in the proposed rule, and suggested additional protections such as extending the duration of the no-take period and imposing bag limits. These comments were concerned about hunting pressure, declining populations, and protecting pregnant females to avoid orphaned pups and unsuccessful rearing. Other commenters opposed the limitations on taking wolves and coyotes in the proposed rule, and suggested additional allowances for taking these species, including adoption of the State hunting seasons. Several commenters stated that extended hunting seasons for wolves and coyotes allow for a traditional form of hunting specifically authorized under the State subsistence program, and are not meant to be predator control.

NPS Response: The rule prohibits taking wolves and coyotes from May 1 through August 9. These dates reflect previously longstanding State harvest seasons that provided harvest opportunities while maintaining viable wolf and coyote populations. The rule maintains the decades-old management paradigm of State and federal managers, rather than adopting recently liberalized State regulations that lengthen the hunting seasons. Should wolf or coyote population levels become a concern in the future, the NPS will work with the State and consider appropriate action at that time.

39. Comment: Some commenters stated that coyotes are not native to Alaska.

NPS Response: Coyotes are native to North America, and while coyotes may not have historically occupied all of their current range, their expansion most likely occurred through natural processes. Consequently, the NPS manages coyotes in the same manner as other native species consistent with NPS Management Policies (§§ 4.1, 4.4.1, 4.4.1.2, 4.4.2).

40. Comment: A few commenters questioned whether wolf pelts taken during the denning season have limited value.

NPS Response: The NPS understands that some individuals may have uses for wolf pelts that are harvested outside the normal trapping season. This rule, however, protects wolves during the denning season when they are vulnerable. The rule preserves the opportunity to harvest wolves when the pelts are thicker for cold winter temperatures. A pelt that has begun to shed out for summer is thinner, may become patchy, and for these reasons is not generally considered as valuable.

Swimming Caribou

41. Comment: One commenter stated that the proposed prohibition on taking swimming caribou would be difficult to enforce because the harvest opportunities are along the river's edge and animals often fall in the low spots or the water. Another commenter supported the prohibition, noting that there are sufficient opportunities for sport hunters to harvest caribou on land.

NPS Response: NPS agrees that there are adequate opportunities for sport hunters to harvest caribou on land. Although there may be a few situations where it is difficult to tell whether a caribou was taken while swimming, the NPS believes that the prohibition will be enforceable. Also, under existing State regulations, this practice is limited to waters in GMUs 23 and 26. Noatak, Gates of the Arctic, and Bering Land Bridge are the only national preserves within these GMUs. To the extent individuals who are not federally qualified subsistence users engage in this activity elsewhere (*e.g.,* Onion Portage within Kobuk Valley National Park), such use is not authorized under existing NPS regulations, which allow only federally qualified subsistence users to hunt within certain national parks and monuments in Alaska.

42. Comment: Several commenters opposed the prohibition on the take of swimming caribou, stating that it would prevent those who no longer live in rural Alaska from harvesting foods in a traditional manner. Commenters stated that former residents would not be allowed to return to hunt or to assist elders with hunting in traditional ways. Other commenters supported the proposed prohibition of taking caribou while swimming, noting that it is unsporting and not consistent with fair chase.

NPS Response: The NPS recognizes that taking caribou while swimming is a customary and traditional subsistence practice in some areas of the State. The NPS supports continuation of this practice under federal subsistence regulations in NPS units. The NPS also agrees with the comment that the practice of taking caribou while swimming is not consistent with fair chase and thus believes it is not appropriate to allow as a sport hunting practice. Although former local residents who no longer qualify to hunt under federal subsistence regulations will not be able to engage in such subsistence harvests, they may participate in other aspects of the traditional practice.

Obstruction of Hunting

43. Comment: Some commenters opposed the proposed prohibition on obstructing hunting activities as unnecessary or providing special treatment to hunters. Others questioned the need for the provision because it is already in State law.

NPS Response: In the past, the NPS has received reports of individuals actively attempting to obstruct others from hunting. While this conduct is prohibited under State law, it is not currently prohibited under NPS regulations. Consequently, in the event of a violation of this type in a national preserve, only the State could take enforcement action. This rule allows the NPS also to take enforcement action. This protects the lawful rights of hunters in national preserves, but does not afford them special treatment above what they are currently entitled to by State law.

Bait for Fishing

44. Comment: Commenters generally supported using native species as bait for fishing. Some commenters suggested the species used should be obtained from the waters being fished to avoid introducing a species that is native to

Alaska but not native to a particular watershed.

NPS Response: The NPS agrees that bait species should be limited to those native to Alaska, but does not believe that allowing the use of species not native to a particular watershed poses a risk that new species will be introduced into that watershed. Existing State and federal regulations already prohibit the use of live fish for bait in fresh water, and using dead fish or unfertilized eggs removed from a harvested fish will not result in the introduction of new species that are not native to a particular watershed. In marine waters, existing regulations already require that any fish used for bait come from the same waters being fished.

45. Comment: One commenter supported allowing bait for fishing but stated the rule is not necessary because State regulations that allow bait apply to NPS units.

NPS Response: Section 13.40(b) provides that fishing must be consistent with 36 CFR 2.3. Section 2.3 prohibits the use of live or dead minnows or other bait fish, amphibians, nonpreserved fish eggs or fish roe as bait for fishing in fresh waters, along with methods other than hook and line. Consequently this rule is necessary to allow the use of native species of fish or fish eggs as bait for fishing.

46. Comment: Some commenters supported the intent to allow bait for fishing since it is a common practice and commonly allowed in Alaska, but said it would create confusion on waters where the State has prohibited bait. These commenters also noted the State allows many forms of bait that would not be considered native species, such as natural or synthetic scents, and natural or processed vegetable matter.

NPS Response: NPS regulations adopt non-conflicting State regulations. Under existing NPS regulations, the use of bait is allowed in accordance with State law under 36 CFR 2.3 except for the use of fish, amphibians or their eggs. This rule allows the use of native fish, amphibians, and their eggs as bait if authorized by the State. If the State does not allow the use of these types of bait in waters within NPS areas, State law will govern and the use of native fish, amphibians, and their eggs as bait will not be allowed.

Updating Federal Subsistence Regulations

47. Comment: Some commenters opposed removal of regulatory language providing for consultation with the State regarding potential closures to subsistence harvest of fish and wildlife. A suggestion was made to retain the provision adopting non-conflicting State laws for subsistence harvest of fish and wildlife. A comment also suggested adding several provisions to the subsistence closure procedures in 36 CFR 13.490, including consultation with various stakeholders, holding public hearings in the affected vicinity, and holding hearings in coordination with other meetings.

NPS Response: The existing provision that adopts non-conflicting State laws is not necessary due to the assumption by the Federal Subsistence Board of regulatory authority over Title VIII subsistence harvest of fish and wildlife. Federal subsistence regulations, which apply in NPS units where Title VIII subsistence is allowed, include regulatory language that adopts non-conflicting State laws. The provision in 36 CFR 13.490 is no longer necessary and will be removed by this rule.

Upon review of comments and considering the practices of the Federal Subsistence Board, the NPS agrees with the recommendation to retain the language providing for consultation with the State prior to the NPS implementing closures to subsistence take of fish and wildlife. Because harvest is regulated by the Federal Subsistence Board, the NPS has modified the proposed rule to also include consultation with the Federal Subsistence Board.

Finally, for consistency with 36 CFR 13.50, which was modified based upon comments (addressed below), the rule has been modified to specify that public hearings will be held near the affected park unit (rather than the ''affected vicinity'') prior to implementing the management action in nonemergency situations.

Updating Closure and Restriction Procedures

48. Comment: Some commenters objected to the changes in 36 CFR 13.50 as inconsistent with ANILCA or not appropriate for Alaska.

NPS Response: The changes to 36 CFR 13.50 bring procedures for implementing closures and restrictions more in line with procedures that apply to the entire National Park System under 36 CFR 1.5, as well as procedures used by Alaska State Parks. 11 AAC 12.355. The public will benefit from aligning procedures with other NPS units as well as Alaska State Parks. This consistency will enable the public to more effectively engage managers regarding their uses of the public lands and the resources on them.

While commenters referred generally to the proposed changes as being inconsistent with ANILCA, the only provision cited was 16 U.S.C. 3202. That section contains general savings provisions preserving the Secretary's authority to manage public lands and preserving the State's non-conflicting authority to manage fish and wildlife on those lands. Nothing in that section is specifically relevant to the closure and restriction provisions of 36 CFR 13.50; accordingly the NPS finds no conflict between ANILCA and these procedural updates.

49. Comment: Some commenters stated the proposed rule would give too much authority to the superintendents to adopt restrictions, specifically on taking of fish or wildlife for sport purposes. Some commenters stated that closures or restrictions must be based upon demonstrated biological considerations (*e.g.,* wildlife population data).

NPS Response: Federal statutes, including ANILCA, provide the NPS with substantial discretion in managing units of the National Park System. Generally, National Park System regulations need only be ''necessary or proper for the use and management of System units.'' 54 U.S.C. 100751. With respect to sport hunting in national preserves in Alaska, Congress authorized the NPS to restrict these activities for reasons of ''public safety, administration, floral and faunal protection, or public use and enjoyment.'' 16 U.S.C. 3201. The NPS thus is not required to base its management decisions regarding these restrictions only on biological considerations. The rule maintains the superintendent's long established authority to make management decisions for NPS units based upon a variety of criteria. The NPS plans to continue to require review of all proposed closures and restrictions at the regional level.

50. Comment: Some commenters were concerned that the proposed changes to 36 CFR 13.50 would limit Alaskans' ability to comment on potential closures and restrictions on NPS-managed areas by shortening the comment period, soliciting comments from non-residents of Alaska, and reducing the number of public meetings.

NPS Response: While hearings are required in certain circumstances (*e.g.,* restricting subsistence harvest of fish or wildlife under Title VIII of ANILCA or access authorized under 16 U.S.C. 3170(a)), there is no statutory requirement to take public comment on closures or restrictions that are not required to be published in the **Federal Register**. The NPS believes, however, that public involvement is an important component of managing NPS units.

Alaskans and all Americans have an important say in how these national interest lands are managed. Accordingly, except in emergencies, the rule requires an opportunity for public comment, including holding at least one public meeting near the affected NPS unit, prior to adopting a closure or restriction related to taking fish or wildlife. The changes to § 13.50 will not limit any existing opportunities, including public meetings, for Alaskan residents to comment on proposed closures and restrictions for NPS units in Alaska. The NPS posts online proposed closures and restrictions for NPS units in Alaska and invites public comment on them. The NPS intends to continue this practice.

51. Comment: Some commenters objected to removing the requirement that the NPS hold a hearing before implementing closures or restrictions on taking of fish and wildlife for sport purposes. Some were concerned that the NPS would cease meeting with local communities or that the change would give superintendents too much discretion to decide whether to meet with local communities. Some commenters stated the NPS should not consider the time or expense to the government or anticipated number of attendees in determining whether to hold public hearings.

NPS Response: The proposed rule would have replaced the existing regulatory requirement to hold a hearing in the affected vicinity with a requirement to provide an opportunity for public comment, which could include a written comment period, public meeting, public hearing, or a combination thereof. After reviewing comments and considering the similar procedures used by the BOG and the Federal Subsistence Board, the NPS modified the proposed rule to add a requirement to hold one or more public meetings near the affected park unit prior to implementing a closure or restriction on taking fish and wildlife in national preserves, except in the case of emergencies. The NPS will attempt to hold public meetings in conjunction with other events, like Subsistence Resource Commission meetings, when possible. The NPS will consider holding more than one public meeting depending the nature of the action, local interest, and other opportunities for engagement. The rule will also require the NPS to continue the current practice of providing an opportunity for public comment prior to implementing proposed closures and restrictions related to taking fish and wildlife. The NPS intends to continue its current practice of accepting written comments submitted electronically or by mail or hand delivery. This will give Alaskans and other Americans an opportunity to provide meaningful input on these management actions.

52. Comment: Some comments suggested the NPS provide public notice and hold a hearing prior to adopting emergency closures relating to fish and wildlife.

NPS Response: Although the NPS supports providing the public with a meaningful opportunity to comment, in certain circumstances action may be necessary to protect wildlife or public safety before there is an opportunity for public comment or a hearing. The NPS will provide appropriate notice of emergency closures and restrictions in accordance with the provisions of 36 CFR 13.50.

53. Comment: Some commenters stated the proposed rule would eliminate a requirement to do written determinations stating the basis for closures, restrictions, and other designations.

NPS Response: Although the procedures in 36 CFR 1.5(c) require a written determination of need explaining the reasons for closures or restrictions on public use, the current procedures in § 13.50 do not. The NPS however, has provided such determinations for all proposed closures and restrictions in NPS units in Alaska to better inform the public about the reasons for its decisions. This comment highlights the complexity regarding the various procedural regulations that currently apply to NPS units in Alaska. The NPS believes it is in the public's interest to streamline procedures as much as possible in order to make them more consistent. This will make it easier for the public to be involved in NPS decision-making in Alaska. Accordingly, the NPS has decided to apply the procedures of 36 CFR 13.50, as revised in this rule, to all closures and restrictions in NPS units in Alaska unless a more specific regulation in part 13 provides otherwise (*i.e.,* 36 CFR 13.490 pertaining to closures to subsistence harvest of fish and wildlife). These revised procedures that apply to all NPS units in Alaska require a written determination explaining the basis of the restriction.

54. Comment: Some commenters objected to utilizing web-based tools for information sharing and taking public comment since not all Alaskans have reliable internet. Other commenters objected to using the internet because it is easier for individuals outside Alaska to provide input. Some commenters interpreted the proposed rule to imply that the NPS will engage the public using social media exclusively.

NPS Response: The NPS acknowledges that some individuals, especially in rural Alaska, may not have reliable internet access or may prefer other methods of communicating with the NPS. The methods of providing notice in the rule are consistent with NPS practices in place in Alaska for more than a decade. The primary method of notifying the public of closures or restrictions has been posting notice online and disseminating press releases by email. It has been the practice for the NPS to invite public comment through electronic means as well as by mail or hand delivery. The majority of public comments are received electronically. The NPS will continue to accept written comments through electronic and traditional means (mail or hand delivery). The NPS will also use other notification procedures such as posting in local post offices and other public places when practical. Individuals may also request copies of the park compendium and other NPS documents by mail or in person. Social media is a valuable tool to inform as well as engage a certain segment of the public, but it is not, and will not be, the only way the NPS engages and communicates with the public. The NPS believes that using the internet will make it easier for some segments of the American public, regardless of residency, to provide input on proposed management actions for NPS units in Alaska. This is appropriate because National Park System units are federal lands that are protected and preserved for all Americans.

55. Comment: Some commenters suggested that the proposed rule should provide opening procedures.

NPS Response: The procedures in the rule apply to the termination and relaxation of closures and restrictions, which includes actions that open areas and allow activities that had been closed or restricted.

56. Comment: Some commenters suggested retaining the distinction between permanent and temporary restrictions. These commenters recommend temporary restrictions be limited to 12 months and rulemaking be required for all permanent restrictions or those restrictions in place longer than 12 months. Other comments stated the existing 30-day limitation on emergency closures should be retained with no extensions.

NPS Response: The categories distinguishing permanent and temporary closures or restrictions have been problematic and difficult to implement, as noted by the State and others during the annual compendium review process on several occasions. Under current regulations, closures or restrictions in place for more than 12 months must be implemented by rulemaking and cannot be extended, regardless of significance or public interest. The result of this structure is that the NPS must repropose and reissue temporary closures or restrictions each year, even in circumstances where there is little public interest in the action, or where the action is an insignificant management decision. The existing framework is overly rigid and complicated, and unnecessarily compromises the NPS's ability to protect resources and provide for public use and enjoyment. The NPS has determined that the criteria-based rulemaking structure that exists in the nationwide NPS regulations (and is mirrored by Alaska State Parks) provides a better framework. A criteria-based framework requires notice and comment rulemaking based on the impact the closure or restriction will have on the values, resources, and visitors of the park unit. This framework allows the superintendent to implement closures or restrictions that do not significantly impact values, resources, or visitor use without needing to publish a rule in the **Federal Register** or propose the same action again every year. For example, a prohibition on smoking near fuel storage tanks would not necessarily require a rulemaking, but closing an area to all sport harvest on a permanent basis would. The criteria-based framework allows managers to be more flexible and adapt to changing circumstances. The improved consistency with other NPS units and Alaska State Parks will also make it easier for the public to be involved in decision-making regarding the use of public lands in Alaska.

With regard to the duration of emergency closures, the NPS rule is more consistent with the practice of other agencies and NPS regulations that apply outside of Alaska. The existing regulations limit emergency closures to 30 days without extension. Federal subsistence regulations regarding subsistence harvest of fish and wildlife provide for emergency closures of up to 60 days and allow for extensions. National Park System-wide regulations and Alaska State Parks regulations do not provide a time limit on emergency closures. 36 CFR 1.5, 11 AAC 12.355. With respect to restrictions on taking fish and wildlife for sport purposes in national preserves, the NPS adopts the 60-day timeframe and allows for extensions—after consultation with the State and public comment (including a public meeting)—if the emergency persists. The NPS believes the public will benefit from this consistency with respect to emergency closures or restrictions on taking of fish or wildlife. Other emergency actions will have no explicit expiration date and may exist until the emergency is resolved. This is consistent with regulations for NPS units located outside of Alaska and for Alaska State Parks.

57. Comment: Some commenters stated the NPS should retain the provision requiring consultation with the State and with ''representatives of affected user groups'' prior to adopting restrictions on the take of wildlife for sport purposes, including Subsistence Resource Commissions, federal subsistence regional advisory councils, local fish and game advisory committees, tribes, and others. Some commenters also stated the NPS must implement the recommendations of Subsistence Resources Commissions unless the criteria of 16 U.S.C. 3118(b) apply.

NPS Response: 16 U.S.C. 3201 requires the NPS to consult with the State prior to prescribing restrictions relating to hunting, fishing, or trapping in national preserves. The rule does not eliminate that statutory requirement; it has moved this requirement into § 13.50 because it relates to closures and restrictions. The rule also requires the NPS to provide an opportunity for public comment, including one or more public meetings near the affected national preserve prior to implementing a closure or restriction on taking fish or wildlife. This will provide representatives of affected user groups an opportunity to provide comments to the NPS prior to the action being implemented. User groups are invited and encouraged to provide input on all such proposed actions.

The NPS agrees that input from advisory groups, NPS Subsistence Resource Commissions, and others is important and valuable and the NPS encourages these groups to engage with the park superintendents on topics of interest. The NPS, however, does not agree that the provisions of 16 U.S.C. 3118(b) apply as broadly as suggested. Under 16 U.S.C. 3118, Subsistence Resource Commissions are established for areas designated as national parks and monuments (not national preserves) to provide subsistence hunting program recommendations. ANILCA further provides that a subsistence hunting program recommendation for national parks and monuments must be implemented unless it ''violates recognized principles of wildlife conservation, threatens the conservation of healthy population of wildlife . . . is contrary to the purposes for which the park or park monument is established, or would be detrimental to the satisfaction of subsistence needs of local residents.'' While Subsistence Resource Commissions provide valuable input on multiple topics that affect national parks, monuments, and national preserves, the Subsistence Resource Commission's statutory charge is specific to Title VIII subsistence hunting program recommendations in national parks and monuments. This rule does not restrict Title VIII subsistence and applies only to sport harvest on national preserves. Therefore 16 U.S.C. 3118(b) does not apply.

58. Comment: Some commenters stated that the factors in the rule that must be considered by superintendents prior to adopting a closure or restriction are ambiguous and give too much discretion to park superintendents. Other commenters suggested adding factors, including ''natural,'' ''natural and healthy,'' ''healthy,'' and ''species of concern,'' to those in the proposed rule. Other commenters suggested retaining the reference to emergencies.

NPS Response: The factors that must be considered by superintendents place appropriate guidelines around their authority to manage NPS units in Alaska. The discretionary authority granted to superintendents recognizes that they are subject matter experts regarding management of the park unit and allows them to take action and respond to changing circumstances in the unit.

Under the existing regulations, the superintendent must consider factors including public health and safety, resource protection, protection of cultural or scientific values, subsistence uses, conservation of endangered or threatened species, and other management considerations in determining whether to adopt closures or restrictions on an emergency basis. These factors appear elsewhere in 36 CFR part 13 (*e.g.,* 36 CFR 13.460(b) and 13.485(c)). The NPS proposed to modify this section by requiring the superintendent to consider these factors for all closures and restrictions (not just emergencies), and adding the criteria of ''naturally functioning ecosystems'' based on *NPS Management Policies 2006,* which implement the NPS Organic Act.

In the final rule, the NPS has decided that adding a requirement that the superintendent consider protecting ''naturally functioning ecosystems'' is unnecessary because this consideration is encompassed by the existing requirement that the superintendent consider ''resource protection.'' The NPS considered adding the terms ''natural,'' ''natural and healthy,'' ''healthy,'' and ''species of concern,'' but determined such terms are not necessary because they are a part of ''resource protection'' or in some cases ''conservation of endangered or threatened species.''

Changes From the Proposed Rule

After taking the public comments into consideration and after additional review, the NPS made the following substantive changes in the final rule:

§ 13.1	Added an exception to the definition of ''bait'' for legally taken fish not required to be salvaged if not moved from the kill site. This change is consistent with State law and would exclude this practice from the prohibition on using bait in the rule. The term ''game'' was changed to ''wildlife'' for consistency with NPS terminology.
§ 13.42(g)	Delayed implementation of the prohibited methods of taking wildlife until January 1, 2016.
§ 13.42(g)(8)	Added an allowance for using electronic calls to take all game animals (not limited to big game animals) except for moose.
§ 13.42(g)(10)	Removed an exception that would have allowed the taking black bears over bait, which is now prohibited.
§ 13.42(g)(11)	Removed an exception that would have allowed the use of dogs to take black bears under a State permit.
§ 13.42(g)(14)	Added an exception to the prohibition on taking a fur animal by disturbing or destroying a den to allow taking muskrats at pushups or feeding houses.
§ 13.42(e)	Modified an existing requirement that individuals transporting wildlife through park areas must identify themselves and the location where the wildlife was taken to any NPS personnel. This information must now only be given to NPS law enforcement personnel. This type of information is relevant for law enforcement purposes and accordingly, the identification requirement should be limited to law enforcement officers.
§ 13.50(a)	Modified to reflect the applicability of § 13.50 to all NPS closures and restrictions in Alaska unless more specific procedures in part 13 apply.
§ 13.50(b)	Changed the title from ''criteria'' to ''factors'' because the regulatory text refers to the considerations as ''factors.'' Removed ''protecting the integrity of naturally functioning ecosystems'' as factor that must be considered by the superintendent in determining whether to close an area or restrict an activity.
§ 13.50(c)	Change the title from ''duration'' to ''rulemaking requirements'' to accurately reflect the content of the subsection. Removed the provision limiting all emergency closures and restrictions to 60 days.
§ 13.50(d)	Added a provision requiring written explanation of the reasons for implementing, relaxing, or terminating a closure or restriction, except in emergencies.
§ 13.50(e)	Prior to implementing nonemergency closures or restrictions on taking fish or wildlife, added a requirement to hold one or more public meetings near the affected NPS unit. Added a 60-day time limit for emergency closures or restrictions on taking fish or wildlife with extensions only upon consultation with the State and public comment, including a meeting near the affected NPS unit.
§ 13.50(f)	Closures or restrictions will be ''posted on the NPS website'' rather than ''effective upon publication on the NPS website.'' This change reflects that the NPS may post closures or restrictions on the NPS website prior to them taking effect. Also added a requirement to compile a written list, updated annually, of closures and restrictions which is posted on the NPS website.
§ 13.50	Removed existing regulations on ''Openings'' and ''Facility closures and restrictions'' because they are redundant with the revisions to this section.
§ 13.50(g)	Shortened for clarity and brevity.
§ 13.490	Added a requirement to consult with the State and the Federal Subsistence Board before temporary restrictions on taking fish or wildlife for subsistence uses under Title VIII of ANILCA. Updated the language regarding location of hearings to near the ''affected NPS unit'' for consistency with the changes in § 13.50.

Compliance With Other Laws, Executive Orders, and Department Policy

Regulatory Planning and Review (Executive Order 12866)

Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget will review all significant rules. OIRA has determined that this rule is not significant.

Executive Order 13563 reaffirms the principles of Executive Order 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. Executive Order 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this rule in a manner consistent with these requirements.

Regulatory Flexibility Act

This rule will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). This certification is based on the cost-benefit and regulatory flexibility analyses found in the report entitled ''Cost-Benefit and Regulatory Flexibility Analyses: Proposed Revisions to Wildlife Harvest Regulations in National Park System Alaska Region'' which can be viewed online at *http://parkplanning.nps.gov/akro,* by clicking the link entitled ''Amend Hunting and Trapping Regulations in National Preserves In Alaska'' and then clicking the link entitled ''Document List.''

Small Business Regulatory Enforcement Fairness Act (SBREFA)

This rule is not a major rule under 5 U.S.C. 804(2), the SBREFA. This rule:

a. Does not have an annual effect on the economy of $100 million or more.

b. Will not cause a major increase in costs or prices for consumers, individual industries, federal, state, or local government agencies, or geographic regions

c. Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S. based enterprises to compete with foreign-based enterprises.

Unfunded Mandates Reform Act

This rule does not impose an unfunded mandate on state, local, or tribal governments or the private sector of more than $100 million per year. The rule does not have a significant or unique effect on state, local or tribal governments or the private sector. A statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not required.

Takings (Executive Order 12630)

This rule does not effect a taking of private property or otherwise have taking implications under Executive Order 12630. A takings implication assessment is not required.

Federalism (Executive Order 13132)

Under the criteria in section 1 of Executive Order 13132, this rule does not have sufficient federalism implications to warrant the preparation of a Federalism summary impact statement. The rule's effect is limited to federal lands managed by the NPS in Alaska and it will not have a substantial direct effect on state and local government in Alaska. A Federalism summary impact statement is not required.

Civil Justice Reform (Executive Order 12988)

This rule complies with the requirements of Executive Order 12988. Specifically, this rule:

(a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

Consultation with Indian Tribes (E.O. 13175 and Department policy) and ANCSA Native Corporations

The Department of the Interior strives to strengthen its government-to-government relationship with Indian Tribes through a commitment to consultation with Indian Tribes and recognition of their right to self-governance and tribal sovereignty. We have evaluated this rule under the criteria in Executive Order 13175 and under the Department's tribal consultation and Alaska Native Claims Settlement Act (ANCSA) Native Corporation policies and have determined that tribal consultation is not required because the rule will have no substantial direct effect on federally recognized Indian tribes. While the NPS has determined the rule will have no substantial direct effect on federally recognized Indian tribes or ANCSA Native Corporation lands, water areas, or resources, the NPS consulted with Alaska Native tribes and Alaska Native Corporations on the proposed rule, as discussed above.

Paperwork Reduction Act (44 U.S.C. 3501 et seq.)

This rule does not contain information collection requirements, and a submission to the Office of Management and Budget under the Paperwork Reduction Act is not required. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

National Environmental Policy Act

The NPS has analyzed this rule in accordance with the criteria of the National Environmental Policy Act (NEPA) and 516 DM. We prepared an environmental assessment entitled ''Wildlife Harvest On National Park System Preserves In Alaska'' (EA) to determine whether this rule will have a significant impact on the quality of the human environment. This rule does not constitute a major Federal action significantly affecting the quality of the human environment, and an environmental impact statement is not required, because we reached a Finding of No Signficant Impact (FONSI). The EA and FONSI are available online at *http://www.parkplanning.nps.gov/akro,* by clicking on the link entitled ''Amend Hunting and Trapping Regulations in National Preserves In Alaska'' and then clicking on the link entitled ''Document List.''

Effects on the Energy Supply (Executive Order 13211)

This rule is not a significant energy action under the definition in Executive Order 13211. A Statement of Energy Effects is not required.

Drafting Information

The primary authors of this regulation are Jay Calhoun, Regulations Program Specialist, National Park Service, Division of Jurisdiction, Regulations, and Special Park Uses; Philip Hooge, Denali National Park and Preserve; Barbara Cellarius, Wrangell-St. Elias National Park and Preserve; and Guy Adema, Debora Cooper, Joel Hard, Grant Hilderbrand, Brooke Merrell, Bud Rice, and Andee Sears of the Alaska Regional Office, National Park Service.

List of Subjects in 36 CFR Part 13

Alaska, National Parks, Reporting and recordkeeping requirements.

In consideration of the foregoing, the National Park Service amends 36 CFR part 13 as set forth below:

PART 13—NATIONAL PARK SYSTEM UNITS IN ALASKA

■ 1. The authority citation for part 13 continues to read as follows:

Authority: 16 U.S.C. 3124; 54 U.S.C. 100101, 100751, 320102; Sec. 13.1204 also issued under Sec. 1035, Pub. L. 104–333, 110 Stat. 4240.

■ 2. In § 13.1, add in alphabetical order the terms ''Bait'', ''Big game'', ''Cub bear'', ''Fur animal'', ''Furbearer'', and ''Trapping'' to read as follows:

§ 13.1 Definitions.

* * * * *

Bait means, for purposes of taking wildlife other than fish, any material used to attract wildlife by sense of smell or taste except:

(1) Parts of legally taken wildlife or fish that are not required to be salvaged if the parts are not moved from the kill site; or

(2) Wildlife or fish that died of natural causes, if not moved from the location where it was found.

Big game means black bear, brown bear, bison, caribou, Sitka black-tailed deer, elk, mountain goat, moose, muskox, Dall's sheep, wolf, and wolverine.

* * * * *

Cub bear means a brown (grizzly) bear in its first or second year of life, or a black bear (including the cinnamon and blue phases) in its first year of life.

* * * * *

Fur animal means a classification of animals subject to taking with a hunting license, consisting of beaver, coyote, arctic fox, red fox, lynx, flying squirrel, ground squirrel, or red squirrel that have not been domestically raised.

Furbearer means a beaver, coyote, arctic fox, red fox, lynx, marten, mink, least weasel, short-tailed weasel, muskrat, land otter, red squirrel, flying squirrel, ground squirrel, Alaskan marmot, hoary marmot, woodchuck, wolf and wolverine.

* * * * *

Trapping means taking furbearers under a trapping license.

* * * * *

■ 3. In § 13.40, revise the section heading and paragraphs (d) and (e) to read as follows:

§ 13.40 Taking of fish.

* * * * *

(d) *Use of native species as bait.* Use of species native to Alaska as bait for fishing is allowed in accordance with non-conflicting State law and regulations.

(e) *Closures and restrictions.* The Superintendent may prohibit or restrict the non-subsistence taking of fish in accordance with the provisions of § 13.50.

■ 4. Add § 13.42 to read as follows:

§ 13.42 Taking of wildlife in national preserves.

(a) Hunting and trapping are allowed in national preserves in accordance with applicable Federal and non-conflicting State law and regulation.

(b) Violating a provision of either Federal or non-conflicting State law or regulation is prohibited.

(c) Engaging in trapping activities as the employee of another person is prohibited.

(d) It shall be unlawful for a person having been airborne to use a firearm or any other weapon to take or assist in taking any species of bear, caribou, Sitka black-tailed deer, elk, coyote, arctic and red fox, mountain goat, moose, Dall sheep, lynx, bison, musk ox, wolf and wolverine until after 3 a.m. on the day following the day in which the flying occurred. This prohibition does not apply to flights on regularly scheduled commercial airlines between regularly maintained public airports.

(e) Persons transporting wildlife through park areas must identify themselves and the location where the wildlife was taken when requested by NPS law enforcement personnel.

(f) State of Alaska management actions or laws or regulations that authorize taking of wildlife are not adopted in park areas if they are related to predator reduction efforts. Predator reduction efforts are those with the intent or potential to alter or manipulate natural predator-prey dynamics and associated natural ecological processes, in order to increase harvest of ungulates by humans.

(1) The Regional Director will compile a list updated at least annually of State laws and regulations not adopted under this paragraph (f).

(2) Taking of wildlife, hunting or trapping activities, or management actions identified in this paragraph (f) are prohibited. Notice of activities prohibited under this paragraph (f)(2) will be provided in accordance with § 13.50(f).

(g) This paragraph applies to the taking of wildlife in park areas administered as national preserves except for subsistence uses by local rural residents pursuant to applicable Federal law and regulation. As of January 1, 2016, the following are prohibited:

Prohibited acts	Any exceptions?
(1) Shooting from, on, or across a park road or highway	None.
(2) Using any poison or other substance that kills or temporarily incapacitates wildlife.	None.
(3) Taking wildlife from an aircraft, off-road vehicle, motorboat, motor vehicle, or snowmachine.	If the motor has been completely shut off and progress from the motor's power has ceased.
(4) Using an aircraft, snowmachine, off-road vehicle, motorboat, or other motor vehicle to harass wildlife, including chasing, driving, herding, molesting, or otherwise disturbing wildlife.	None.
(5) Taking big game while the animal is swimming	None.
(6) Using a machine gun, a set gun, or a shotgun larger than 10 gauge	None.
(7) Using the aid of a pit, fire, artificial salt lick, explosive, expanding gas arrow, bomb, smoke, chemical, or a conventional steel trap with an inside jaw spread over nine inches.	Killer style traps with an inside jaw spread less than 13 inches may be used for trapping, except to take any species of bear or ungulate.
(8) Using any electronic device to take, harass, chase, drive, herd, or molest wildlife, including but not limited to: artificial light; laser sights; electronically enhanced night vision scope; any device that has been airborne, controlled remotely, and used to spot or locate game with the use of a camera, video, or other sensing device; radio or satellite communication; cellular or satellite telephone; or motion detector.	(i) Rangefinders may be used. (ii) Electronic calls may be used for game animals except moose. (iii) Artificial light may be used for the purpose of taking furbearers under a trapping license during an open season from Nov. 1 through March 31 where authorized by the State. (iv) Artificial light may be used by a tracking dog handler with one leashed dog to aid in tracking and dispatching a wounded big game animal. (v) Electronic devices approved in writing by the Regional Director.
(9) Using snares, nets, or traps to take any species of bear or ungulate	None.
(10) Using bait	Using bait to trap furbearers.
(11) Taking big game with the aid or use of a dog	Leashed dog for tracking wounded big game.
(12) Taking wolves and coyotes from May 1 through August 9	None.
(13) Taking cub bears or female bears with cubs	None.
(14) Taking a fur animal or furbearer by disturbing or destroying a den	Muskrat pushups or feeding houses.

(h) The Superintendent may prohibit or restrict the non-subsistence taking of wildlife in accordance with the provisions of § 13.50.

(i) A person may not intentionally obstruct or hinder another person's lawful hunting or trapping by:

(1) Placing oneself in a location in which human presence may alter the behavior of the game that another person is attempting to take or the imminent feasibility of taking game by another person; or

(2) Creating a visual, aural, olfactory, or physical stimulus in order to alter the behavior of the game that another person is attempting to take.

■ 5. Revise § 13.50 to read as follows:

§ 13.50 Closure and restriction procedures.

(a) *Applicability and authority.* The Superintendent will follow the provisions of this section to close an area or restrict an activity, or terminate or relax a closure or restriction, in NPS areas in Alaska.

(b) *Factors.* In determining whether to close an area or restrict an activity, or whether to terminate or relax a closure or restriction, the Superintendent must ensure that the activity or area is managed in a manner compatible with the purposes for which the park area was established. The Superintendent's decision under this paragraph must therefore be guided by factors such as public health and safety, resource protection, protection of cultural or scientific values, subsistence uses, conservation of endangered or threatened species, and other management considerations.

(c) *Rulemaking requirements.* This paragraph applies only to a closure or restriction, or the termination or relaxation of such, which is of a nature, magnitude and duration that will result in a significant alteration in the public use pattern of the area; adversely affect the area's natural, aesthetic, scenic, or cultural values; or require a long-term modification in the resource management objectives of the area. Except in emergency situations, the closure or restriction, or the termination or relaxation of such, must be published as a rulemaking in the **Federal Register**.

(d) *Written determination.* Except in emergency situations, prior to implementing or terminating a closure or restriction, the superintendent shall prepare a written determination justifying the action. That determination shall set forth the reasons the closure or restriction authorized by paragraph (a) of this section has been established. This determination will be posted on the NPS Web site at *www.nps.gov.*

(e) *Restrictions on taking fish or wildlife.* (1) Except in emergencies, the NPS will consult with the State agency having responsibility over fishing, hunting, or trapping and provide an opportunity for public comment, including one or more public meetings near the affected NPS unit, prior to implementing a closure or restriction on taking fish or wildlife.

(2) Emergency closures or restrictions may not exceed a period of 60 days and may not be extended without following the nonemergency procedures of this section.

(f) *Notice.* A list of closures and restrictions will be compiled in writing and updated annually. The list will be posted on the NPS Web site at *www.nps.gov* and made available at park headquarters. Additional means of notice reasonably likely to inform residents in the affected vicinity will also be provided where available, such as:

(1) Publication in a newspaper of general circulation in the State or in local newspapers;

(2) Use of electronic media, such as the internet and email lists;

(3) Radio broadcast; or

(4) Posting of signs in the local vicinity.

(g) Violating a closure or restriction is prohibited.

§ 13.400 [Amended]

■ 6. In § 13.400, remove paragraph (e) and redesignate paragraph (f) as new paragraph (e).

■ 7. Revise § 13.470 to read as follows:

§ 13.470 Subsistence fishing.

Fish may be taken by local rural residents for subsistence uses in park areas where subsistence uses are allowed in compliance with applicable Federal law and regulation, including the provisions of §§ 2.3 and 13.40 of this chapter. Local rural residents in park areas where subsistence uses are allowed may fish with a net, seine, trap, or spear; or use native species as bait, where permitted by applicable Federal law and regulation.

■ 8. Revise § 13.480 to read as follows:

§ 13.480 Subsistence hunting and trapping.

Local rural residents may hunt and trap wildlife for subsistence uses in park areas where subsistence uses are allowed in compliance with this chapter and 50 CFR part 100.

■ 9. In § 13.490, revise paragraph (a) to read as follows:

§ 13.490 Closures and restrictions to subsistence uses of fish and wildlife.

(a) The Superintendent may temporarily restrict a subsistence activity or close all or part of a park area to subsistence uses of a fish or wildlife population after consultation with the State and the Federal Subsistence Board in accordance with the provisions of this section. The Superintendent may make a temporary closure or restriction notwithstanding any other provision of this part, and only if the following conditions are met:

(1) The restriction or closure must be necessary for reasons of public safety, administration, or to ensure the continued viability of the fish or wildlife population;

(2) Except in emergencies, the Superintendent must provide public notice and hold a public hearing near the affected NPS unit;

(3) The restriction or closure may last only so long as reasonably necessary to achieve the purposes of the closure.

Dated: September 9, 2015.

Michael Bean,

Principal Deputy Assistant Secretary for Fish and Wildlife and Parks.

[FR Doc. 2015–26813 Filed 10–22–15; 8:45 am]

BILLING CODE 4310–EJ–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R04–OAR–2015–0337; FRL–9936–05–Region 4]

Approval and Promulgation of Implementation Plans; Florida; Regional Haze Plan Amendment—Lakeland Electric C.D. McIntosh

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is finalizing approval of the State of Florida's March 10, 2015, State Implementation Plan (SIP) revision, submitted by the Florida Department of Environmental Protection (FDEP). This submittal fulfills Florida's commitment to EPA to provide a regional haze SIP revision with a Best Available Retrofit Technology (BART) nitrogen oxides (NOx) emissions limit for Unit 1 at the Lakeland Electric—C.D. McIntosh Power Plant (McIntosh) reflecting best operating practices for good combustion. States are required to address the BART provisions of the Clean Air Act (CAA or Act) and EPA's

regional haze regulations as part of a program to prevent any future and remedy any existing anthropogenic impairment of visibility in mandatory Class I areas (national parks and wilderness areas) caused by emissions of air pollutants from numerous sources located over a wide geographic area (also referred to as the ''regional haze program'') and to assure reasonable progress toward the national goal of achieving natural visibility conditions in Class I areas. In this action, EPA is approving the BART NOx emissions limit for Unit 1 at McIntosh into the Florida SIP.

DATES: This rule is effective November 23, 2015.

ADDRESSES: EPA has established a docket for this action under Docket Identification No. EPA–R04–OAR–2015–0337. All documents in the docket are listed on the *www.regulations.gov* Web site. Although listed in the index, some information may not be publicly available, *i.e.,* Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *www.regulations.gov* or in hard copy at the Air Regulatory Management Section, Air Planning and Implementation Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street, SW., Atlanta, Georgia 30303–8960. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday 8:30 a.m. to 4:30 p.m., excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT: Michele Notarianni, Air Regulatory Management Section, Air Planning and Implementation Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960. Ms. Notarianni can be reached by phone at (404) 562–9031 or via electronic mail at *notarianni.michele@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

On December 10, 2012, EPA proposed to approve the BART and reasonable progress determinations for a number of EGUs in Florida as part of Florida's regional haze SIP. *See* 77 FR 73369. In that action, EPA proposed approval of Florida's BART determination for emissions Units 1 and 2 at McIntosh found subject to BART. On August 29, 2013, EPA issued a final, full approval of Florida's regional haze SIP. *See* 78 FR 53250. In that final action, EPA approved the BART determination for the McIntosh facility, including the determination that the existing level of control for NOx at Unit 1, best operating practices for good combustion, is the NOx BART control for Unit 1. *See* 78 FR 53263. As described in the August 29, 2013, final action, FDEP submitted a letter to EPA dated July 30, 2013, in which the State committed to provide EPA with a regional haze SIP revision no later than March 19, 2015, the deadline for the State's five-year regional haze periodic progress report SIP, that would include a NOx BART emissions limit for Unit 1 reflecting best operating practices for good combustion. FDEP also committed to modify the title V permit for McIntosh to include this new limit.

To fulfill its commitment in accordance with the July 30, 2013 letter, the State of Florida submitted a SIP revision dated March 10, 2015, revising the State's regional haze SIP to include a NOx BART emissions limit for McIntosh Unit 1 and a construction permit (FDEP Permit No. 1050004–034–AC) dated April 30, 2014, for Unit 1 containing this limit. The permit contains supporting conditions (*e.g.,* monitoring requirements) and a condition specifying a schedule for McIntosh to apply for a revision to its title V permit to reflect the new permit conditions.

In a notice of proposed rulemaking (NPR) published on August 20, 2015, EPA proposed to approve Florida's March 10, 2015, regional haze SIP revision fulfilling the State's July 20, 2013, commitment to provide EPA with a SIP revision containing a NOx BART emissions limit for McIntosh Unit 1 reflecting best operating practices for good combustion and conditions to modify the title V permit to incorporate this limit. *See* 80 FR 50591. The details of Florida's submittal and the rationale for EPA's actions are explained in the NPR. Comments on the proposed rulemaking were due on or before September 21, 2015. No adverse comments were received.

II. Final Action

EPA is finalizing approval of the State of Florida's March 10, 2015, SIP revision and revising the regional haze SIP to include the NOx BART emissions limit for Unit 1 and the April 30, 2014, construction permit containing this limit. EPA is approving these changes to the Florida SIP because the submission meets the applicable regional haze requirements as set forth in the CAA and in EPA's regional haze regulations and the applicable requirements of section 110 of the CAA.

III. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. *See* 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

The SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), nor will it impose substantial direct costs on tribal governments or preempt tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by December 22, 2015. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. *See* section 307(b)(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: October 8, 2015.

Heather McTeer Toney,

Regional Administrator, Region 4.

40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42.U.S.C. 7401 *et seq.*

Subpart K—Florida

■ 2. Section 52.520(e) is amended by adding an entry for ''Regional Haze Plan Amendment 3'' at the end of the table to read as follows:

§ 52.520 Identification of plan.

* * * * *

(e) * * *

EPA-APPROVED FLORIDA NON-REGULATORY PROVISIONS

Provision	State effective date	EPA approval date	**Federal Register** notice	Explanation
*	*	*	* *	* *
Regional Haze Plan Amendment 3.	4/30/2014	10/23/2015 [Insert **Federal Register** citation].	[Insert **Federal Register** citation].	Establishes NO_X BART emissions limit for Unit 1 at the Lakeland Electric—C.D. McIntosh Power Plant and includes FDEP Permit No. 1050004–034–AC.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R10–OAR–2014–0562: FRL–9935–48–Region 10]

Approval and Promulgation of Implementation Plans; Oregon: Lane Regional Air Protection Agency Open Burning Rules and Oregon Department of Environmental Quality Enforcement Procedures

AGENCY: Environmental Protection Agency.

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving into Oregon's State Implementation Plan (SIP) a submittal from the Oregon Department of Environmental Quality (ODEQ) dated July 7, 2014, containing revisions to the Lane Regional Air Protection Agency's (LRAPA) open burning rules adopted on March 14, 2008. The revised LRAPA open burning rules make clarifications and provide for additional controls of open burning activities in Lane County, would reduce particulate emissions in Lane County, and would strengthen Oregon's SIP. The EPA is also approving a submittal from the ODEQ dated June 30, 2014, to update Oregon Administrative Rules (OAR) that relate to procedures in contested cases (appeals), enforcement procedures, and civil penalties. The EPA is approving most of the submitted provisions because the revisions clarify and strengthen the SIP and are consistent with the Clean Air Act (CAA). The EPA is not approving certain provisions of the submitted rules that do not relate to the requirements for SIPs under section 110 of the CAA. Finally, the EPA is correcting the SIP pursuant to the authority of section 110(k)(6) of the CAA to remove certain provisions previously approved by the EPA that do not relate to the requirements for SIPs under section 110 of the CAA.

DATES: This rule is effective on December 22, 2015, without further notice, unless the EPA receives adverse comment by November 23, 2015. If the EPA receives adverse comment, we will publish a timely withdrawal in the **Federal Register** informing the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R10–OAR–2014–0562, by any of the following methods:

- *Federal eRulemaking Portal http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *Email: R10-Public_Comments@epa.gov.*
- *Mail:* Mr. Keith Rose, EPA Region 10, Office of Air, Waste, and Toxics, AWT–150, 1200 Sixth Avenue, Suite 900, Seattle, WA 98101.
- *Hand Delivery/Courier:* EPA Region 10, 1200 Sixth Avenue, Suite 900, Seattle, WA 98101. Attention: Mr. Keith Rose, Office of Air, Waste, and Toxics, AWT–150. Such deliveries are only

accepted during normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–R10–OAR–2014–0562. The EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or email. The *http://www.regulations.gov* Web site is an ''anonymous access'' system, which means the EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to the EPA without going through *http://www.regulations.gov* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, the EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If the EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, the EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy. Publicly available docket materials are available at *http://www.regulations.gov* or at EPA Region 10, Office of Air, Waste, and Toxics, AWT–107, 1200 Sixth Avenue, Seattle, Washington 98101. The EPA requests that you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT: Keith A. Rose at (206) 553–1949, *rose.keith@epa.gov,* or the above EPA, Region 10 address.

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' are used, it is intended to refer to the EPA.

Table of Contents

I. Introduction

Title I of the CAA specifies the general requirements for states to submit SIPs to attain and maintain the National Ambient Air Quality Standards (NAAQS) and the EPA's actions regarding approval of those SIPs. The EPA received a submittal from the ODEQ on July 7, 2014 requesting that the EPA approve into the Oregon SIP the revisions to the LRAPA open burning rules (title 47) adopted on March 14, 2008. In general, the revised LRAPA open burning rules make clarifications and provide for additional controls of open burning activities in Lane County. The EPA also received a submittal from the ODEQ on June 30, 2014 that updates Oregon Administrative Rules (OAR) Chapter 340, Division 11, Rules of General Applicability and Organization, relating to contested cases (appeals of ODEQ actions) and OAR Chapter 340, Division 12, Enforcement Procedures and Civil Penalties. These divisions apply across all programs implemented by the ODEQ, including the air quality regulations that the EPA has approved into the SIP.

The July 7, 2014 and June 30, 2014 SIP submittals also contain amendments to OAR 340–200–0040. This rule describes the State's procedures for adopting its SIP and references all of the state air regulations that have been adopted by the ODEQ for approval into the SIP (as a matter of state law), whether or not they have yet been submitted to or approved by the EPA.

II. EPA Evaluation of the Submittals

A. LRAPA Title 47, Open Burning (July 7, 2014 Submittal)

LRAPA made numerous revisions throughout title 47, Open Burning. The key substantive changes are discussed below. A more detailed evaluation of the revisions to LRAPA's open burning rules is in the docket for this action. As discussed below, the EPA proposes to find that, overall, the revised rules will provide for additional controls for open burning activities in Lane County, reduce particulate emissions in Lane County, and strengthen Oregon's SIP.

1. Exemptions

LRAPA made several revisions to the types of open burning exempt from regulation and added one new exemption category. Although residential barbequing remains exempt, LRAPA has clarified that certain prohibited materials, such as garbage or plastic, may not be burned as fuel. The exemption for residential fires for recreational purposes has been narrowed by prohibiting the use of yard waste as fuel and prohibiting such fires altogether on yellow and red home wood heating advisory days called by LRAPA in the winter months within the Eugene/Springfield Urban Growth Boundary (ESUGB) and within the city limits of Oakridge. Religious ceremonial fires have been added as a new category of fires exempt from title 47. See LRAPA 47–005–2.C and 47–010 (definition of ''religious ceremonial fires''). LRAPA expects religious ceremonial fires to occur infrequently and the definition requires that such fires be controlled, be ''integral to a religious ceremony or ritual,'' and that prohibited materials not be burned. Given the narrow scope of this exemption, that the exemptions from title 47 have otherwise been narrowed, and that the other revisions to title 47 generally strengthen the prohibitions on open burning, the EPA finds that the new exemption for religious ceremonial fires will not interfere with attainment or maintenance of the NAAQS or any other applicable requirement of the CAA. The EPA therefore approves the revisions to LRAPA 47–005, Exemptions from these Rules.

2. Definitions

The following definitions in LRAPA 47–010 have been revised: Agricultural open burning, commercial wastes, construction wastes, construction open burning, demolition wastes, demolition open burning, Eugene-Springfield Urban Growth Boundary, industrial open burning, and industrial waste. In general, the revisions to these definitions clarify the types of burn and waste categories. For example, through revisions to the definitions of construction waste, demolition waste, and commercial waste, it is now clear that wastes transported offsite are considered commercial waste even if the waste might otherwise meet the definition of construction or demolition waste. Because requirements for the open burning of commercial waste are generally more restrictive, these clarifications make the rules more stringent. These changes to definitions also make clear that materials included in the list of prohibited materials in LRAPA 47–015–1.E cannot be burned even if the material otherwise meets the specified definition. Again, these revisions make the rules more stringent.

Definitions have been added to LRAPA 47–010 for agricultural operation, agricultural waste, bonfire, forest slash open burning, nuisance, recreational fire, religious ceremonial fire, and salvage. The new definition of ''religious ceremonial fire'' is discussed above in Section II.A.1 and the new definition of ''forest slash opening burning'' is discussed in Section II.A.3 below. In general, the other new definitions clarify the meaning of terms previously used in the rules and thus enhance the enforceability of the rules.

Because the revised and new definitions in LRAPA 47–010 either increase the stringency of the rules or provide clarification to enhance enforceability, the EPA approves revisions to LRAPA 47–010 except for the definition of ''nuisance,'' which is discussed in more detail in Section II.A.5 below.

Note that the introductory language in LRAPA 47–010 references title 12 of the LRAPA regulations for additional definitions. Proposed revisions to title 12 were included in a SIP submission that the EPA received on August 28, 2014. The present action does not address those revisions. The EPA will be acting on that submission in a future action.

3. Open Burning Requirements

LRAPA 47–015 contains most of the requirements for open burning, with general requirements to be met for all open burning and specific requirements for residential open burning, construction and demolition open burning, commercial open burning, industrial open burning, and a new category, forest slash open burning.

Requirements for residential open burning have been made more stringent in a number of respects. The ending times for open burns are now set by a LRAPA burning advisory, rather than automatically extending until sunset. All open burning remains prohibited within the city of Eugene, and the prohibition on open burning within the city of Springfield has been expanded so that the burning of woody yard trimmings on lots of a half acre or more is now only allowed between March 1 through June 15 and October 1 through October 31, rather than from October 1 to June 15. The period of allowed residential open burning outside of the Eugene and Springfield city limits but within the ESUGB has similarly been narrowed. The Hazeldell and Siuslaw fire districts have been added to the list of fire districts that must comply with the open burning requirements for fire districts, which include the prohibition on burning construction/demolition debris unless authorized by a letter permit. Therefore, the conditions for open burning in the two newly added fire districts are now more stringent. Finally, a new section restricts residential open burning of woody yard trimmings, leaves and grass in Lane County outside of the affected areas identified in LRAPA 47–015–2.B–F to approved burn days from October 1 through June 15, instead of year around. There have been no substantive changes to the requirements for construction and demolition open burning, commercial open burning, or industrial open burning.

A new section has been added to specifically address forest slash open burning. LRAPA 47–015–6.A confirms that forest slash open burning in areas covered by the Oregon Smoke Management Plan is regulated by the Oregon Department of Forestry under ORS 477.515 and not under LRAPA title 47. Such burning is already specifically exempt from LRAPA title 47 under the current SIP. See LRAPA 47–005–1.D.

LRAPA 47–015–6.B addresses forest slash open burning in Lane County outside of areas covered by the Oregon Smoke Management Plan. Forest slash open burning in such areas is now expressly prohibited within the ESUGB. Forest slash open burning is also prohibited unless authorized by a letter permit under LRAPA 47–020, in the fire districts identified in LRAPA 47–015–2.F and other properties not covered by the Oregon Smoke Management Plan. Maps provided by LRAPA show that there is very limited forest land in Lane County that is not covered by the Smoke Management Plan, and would therefore be covered by the LRAPA forest slash open burning rules.

Any slash burning in Lane County must now be coordinated with the South Cascade and Western Lane districts, and be consistent with slash burning advisories issued by Oregon Department of Forestry. In addition, under LRAPA 47–020–1, letter permits for such forest slash open burning can only be issued on a singly occurring or infrequent basis. According to LRAPA, forest slash open burning was not previously expressly regulated under title 47 prior to 1995. Seen in that light, the regulation of forest slash open burning on land not covered by the Oregon Smoke Management Plan would be an increase in the stringency of the Oregon SIP. The EPA considers the language in LRAPA 47–001 (''all open burning is prohibited in Lane County except as expressly allowed by these rules or if exempted from these rules by Oregon Statute''), which is currently approved in the SIP, however, as potentially prohibiting forest open slash burning on land that is not covered by the Oregon Smoke Management Plan. In that respect, authorizing forest slash open burning through a letter permit under certain conditions could be considered less stringent than the current SIP. In any event, given the many other provisions of this SIP revision that make the SIP more stringent, that only one instance of such open slash burning has been issued a letter permit by LRAPA since 1995, the factors considered by LRAPA and findings LRAPA must make in issuing a letter permit for forest slash open burning in LRAPA 47–020–5 and –6, the EPA concludes that allowing this narrow category of open burning will not interfere with attainment and maintenance of the NAAQS or any other applicable requirement of the CAA. Accordingly, with the exception of LRAPA 47–015–6(B)(5), discussed in Section II.A.5 below, the EPA approves the revisions to LRAPA 47–015, Open Burning Requirements, because the revisions increase the overall stringency of the restrictions on open burning.

4. Letter Permits

LRAPA 47–020 authorizes certain types of open burning under letter permits issued by LRAPA. As discussed in Section II.A.3 above, this section has been amended to add forest slash burning for a single occurrence or on an infrequent basis to the list of the categories of open burning that may be allowed by a letter permit issued by LRAPA. It has also been amended to authorize issuance of letter permits for a bonfire held for a single event. The EPA finds that the potential increase in emissions that would result from these infrequent activities would be de minimis in light of the other restrictions on open burning imposed by the other revisions to title 47 in this SIP submittal.

LRAPA 47–020–5 contains a list of factors to be considered by LRAPA in determining whether to issue a letter permit. This provision has been amended to allow LRAPA to consider as an alternative disposal method whether waste materials can be salvaged.

Because the availability of alternative disposal options mitigates against authorizing open burning under LRAPA's rules, see LRAPA 47–001, expanding the list of what can be considered as an alternative disposal method makes the rules more stringent.

With the exception of certain provisions discussed below in Section II.A.5 that do not relate to the requirements of section 110 of the CAA, the EPA approves the revisions to LRAPA 47–020 because the revisions do not interfere with attainment and maintenance of the NAAQS or any other applicable requirement of the CAA.

5. Summary Table

LRAPA has removed the table is section 47–030, Summary of Seasons, Areas, and Permit Requirements for Open Burning. This table was a summary of the text explaining what type of burning was allowed in each area of Lane County. Removing this table has no impact on the stringency of the rule.

6. Rules Not Approved or Being Removed From the SIP

Title 47 contains several provisions, both previously approved by the EPA into the Oregon SIP, and newly enacted or revised provisions, that relate to nuisance, fire safety, or environmental issues that do not relate to air quality. The EPA's authority to approve SIPs extends to provisions related to attainment and maintenance of the NAAQS and carrying out other specific requirements of section 110 of the CAA. Section 110(k)(6) of the CAA authorizes the EPA, upon a determination that the EPA's action approving, disapproving or promulgating any SIP or plan revision (or any part thereof) was in error, to revise such action as appropriate.

In this action, the EPA is not approving into the SIP and is removing from the SIP the following provisions of title 47 that do not relate to attainment and maintenance of the NAAQS or the other requirements of section 110 the CAA: The definition of ''nuisance'' in LRAPA 47–010; LRAPA 47–015–1.D (currently in the SIP); LRAPA 47–015–1.H; LRAPA 47–015–6.B(5); LRAPA 47–020–3 (currently in the SIP); LRAPA 47–020–9.I; LRAPA 47–020–10 (first sentence currently in the SIP).

B. ODEQ Chapter 340, Divisions 11 and 12 (June 30, 2014 Submittal)

1. Division 11, Rules of General Applicability and Organization

Oregon's June 30, 2014 submittal revises OAR Chapter 340, Division 11, to align with the Oregon Attorney General Model Rules, which address procedures for filing and serving documents in contested cases (appeals of ODEQ actions). These rule revisions were adopted by Oregon on December 11, 2013 and became effective on January 6, 2014. The rules were revised to improve the clarity and completeness of contested case appeals coming before the Environmental Quality Commission.

Division 11 provides authority needed for implementing the SIP and is consistent with the CAA requirements for the issuance of permits and enforcement authority. The EPA is therefore approving the revisions to Division 11 submitted by the ODEQ, subject to the qualifications discussed below in Section III.

2. Division 12, Enforcement Procedures and Civil Penalties

Division 12 contains enforcement procedures and civil penalty provisions that apply across all programs implemented by the ODEQ, including the air quality regulations that the EPA has approved into the SIP. Division 12 provides the authority and procedures under which the ODEQ notifies regulated entities of violations, determines the appropriate penalties for violations, and assesses penalties for such violations. The revisions to Division 12 made by the ODEQ implement legislative increases in statutory maximum penalties, align violation classifications and magnitudes with ODEQ program priorities, provide greater mitigating credit for correcting violations, and make minor housekeeping changes.

The EPA has reviewed the revisions to OAR Chapter 340, Division 12 and finds that these rules continue to provide the ODEQ with adequate authority for enforcing the SIP as required by section 110 of the Clean Air Act and 40 CFR 50.230(b). Importantly, OAR 340–012–0160(1) gives the ODEQ the discretion to increase a base penalty to that derived using the next highest penalty matrix value and OAR 340–012–0160(4) gives the ODEQ the discretion to deviate from the penalty matrices and assess penalties of $25,000 per day, per violation based on the facts and circumstances of the individual case. The EPA therefore approves into the SIP the revisions to Division 12 submitted by the ODEQ, subject to the qualifications discussed below in Section III.

III. Final Action

The EPA is taking the following action on the revisions to LRAPA title 47, Open Burning, adopted on May 14, 2008, and submitted to the EPA by the ODEQ on July 7, 2014. We approve the revisions to the following sections except as identified below: 47–001, General Policy; 47–005, Exemptions from These Rules; 47–010, Definitions; 47–015, Open Burning Requirements; and 47–020, Letter Permits. As discussed in Section II.A.5 above, because the EPA's authority to approve SIPs extends to provisions related to attainment and maintenance of the NAAQS and carrying out other specific requirements of section 110 of the CAA, we are not approving into the SIP and are removing from the SIP under the authority of CAA section 110(k)(6) the following provisions: The definition of ''nuisance'' in LRAPA 47–010; LRAPA 47–015–1.D (currently in the SIP); LRAPA 47–015–1.H; LRAPA 47–015–6.B(5); LRAPA 47–020–3 (currently in the SIP); LRAPA 47–020–9.I; LRAPA 47–020–10 (first sentence currently in the SIP).

The EPA also approves revisions to OAR Chapter 340, Division 11, adopted on December 11, 2013 and submitted by the ODEQ on June 30, 2014. The EPA is approving this division, however, only to the extent it relates to implementation of requirements contained in the Oregon SIP. The EPA is not incorporating these rules by reference into the Code of Federal Regulations, however, because the EPA relies on its independent administrative and enforcement procedures under the CAA.

The EPA also approves revisions to OAR Chapter 340, Division 12, adopted on December 11, 2013 and submitted by the ODEQ on June 30, 2014, except for the following provisions that do not relate to air emissions and were not submitted by the ODEQ for approval: OAR 340–012–0027,[1] –0055, –0060, –0065, –0066, –0067, –0068, –0071, –0072, –0073, –0074, –0079, –0081, –0082, –0083, –0097. In addition, the EPA is approving the remaining sections in Chapter 340, Division 12, only to the extent they relate to enforcement of requirements contained in the Oregon SIP. Again, the EPA is not incorporating these rules by reference into the Code of Federal Regulations, however, because the EPA relies on its independent enforcement procedures and penalty provisions in bringing enforcement actions and assessing penalties under the CAA.

The EPA is not approving the revisions to OAR 340–200–0040 in these SIP submittals because these provisions address state SIP adoption procedures and because the Federally-approved SIP consists only of regulations and other requirements that have been submitted by the ODEQ and approved by the EPA.

[1] No such citation appears in Division 12, but these provisions have not been submitted by the ODEQ in any event.

IV. Incorporation by Reference

In this rule, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is incorporating by reference the ODEQ regulations described in the amendments to 40 CFR part 52 set forth below. The EPA has made, and will continue to make, these documents generally available electronically through *www.regulations.gov* and/or in hard copy at the appropriate EPA office (see the **ADDRESSES** section of this preamble for more information).

V. Statutory and Executive Orders Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

The SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by December 22, 2015. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. Parties with objections to this direct final rule are encouraged to file a comment in response to the parallel notice of proposed rulemaking for this action published in the proposed rules section of today's **Federal Register**, rather than file an immediate petition for judicial review of this direct final rule, so that the EPA can withdraw this direct final rule and address the comment in the proposed rulemaking. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Intergovernmental relations, Incorporation by reference, Particulate matter, Reporting, and recordkeeping requirements.

Dated: September 25, 2015.

Michelle L. Pirzadeh,

Acting Regional Administrator, Region 10.

For the reasons stated in the preamble, 40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for Part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart MM—Oregon

■ 2. Section 52.1970 is amended:

■ a. In paragraph (c) Table 4—EPA Approved Lane Regional Air Protection Agency (LRAPA) Rules for Oregon by:

■ i. Revising entries 47–001, 47–005, 47–010, 47–015, and 47–020.

■ ii. Removing the entry 47–030.

■ b. In paragraph (e) table titled ''Oregon Administrative Rules Approved, But Not Incorporated By Reference'' by:

■ i. Revising entry 011–0005.

■ ii. Adding entries 011–0010, 011–0024, 011–0029, 011–0046, 011–0053, 011–0061, 011–0310, 011–0330, 011–0340, 011–0360, 011–0370, 011–0380, 011–0390, and 011–0500 in numerical order.

■ iii. Revising entries 011–0510 and 011–0515.

■ iv. Adding entries 011–0520, 011–0525, 011–0530, 011–0535, 011–0540, 011–0545, 011–0550, 011–0555, 011–0565, and 011–0570 in numerical order.

■ v. Revising entries 011–0573 and 011–0575.

■ vi. Adding entries 011–0580 and 011–0585 in numerical order.

■ vii. Revising entries 012–0026, 012–0028, 012–0030, 012–0038, 012–0041, 012–0045, 012–0053, 012–0054, 012–0130, 012–0135, 012–0140, 012–0145, 012–0150, 012–0155, 012–0160, 012–0162, 012–0165, and 012–0170.

The revisions and additions read as follows:

§ 52.1970 Identification of plan.

BILLING CODE 6560–50–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Indian Health Service

42 CFR Part 137

Change of Address for the Interior Board of Indian Appeals

AGENCY: Indian Health Service, Health and Human Services.

ACTION: Final rule.

SUMMARY: The Department of Health and Human Services (HHS or the Department) is revising its regulations governing administrative appeals to reflect a change of address for the Interior Board of Indian Appeals (IBIA). The IBIA moved to a new address at 801 North Quincy St., Suite 300, Arlington, VA 22203 effective February 11, 2002.

DATES: This rule is effective October 23, 2015.

FOR FURTHER INFORMATION CONTACT: Carl Mitchell, Acting Director, Division of Regulatory Affairs, Indian Health Service, 801 Thompson Avenue, Rockville, Maryland 20852, Telephone: (301) 443–1116.

SUPPLEMENTARY INFORMATION:

I. Background

Through a two-person panel of administrative judges, the Interior Board of Indian Appeals (IBIA) has the authority to consider appeals from decisions of agency officials and administrative law judges in cases under the Indian Self-Determination and Education Assistance Act (ISDEAA). Located within the Department of Interior's Office of Hearings and Appeals (OHA), IBIA is separate and independent from the Bureau of Indian Affairs (BIA) and the Assistant Secretary—Indian Affairs.

Effective February 11, 2002, the IBIA was relocated to 801 North Quincy Street, Arlington, Virginia. To avoid confusion with appeals, HHS is updating its administrative appeals regulations to reflect the IBIA's new street address.

II. Procedural Requirements

A. Determination To Issue Final Rule Effective in Less Than 30 Days

The Department has determined that the public notice and comment provisions of the Administrative Procedure Act, 5 U.S.C. 553(b), do not apply to this rulemaking because the changes being made relate solely to matters of agency organization, procedure, and practice. It, therefore, satisfies the exemption from notice and comment rulemaking in 5 U.S.C. 553(b)(A).

Moreover, the Department has determined that there is good cause to waive the requirement of publication 30 days in advance of the rule's effective date under 5 U.S.C. 553(d). The error in the IBIA's location could cause misdirection of appeals. Thus, if the changes in this rule were to become effective 30 days after publication, it could cause further delays in processing appeals. Because an earlier effective date benefits the public, there is good cause for making this rule effective in less than 30 days, as permitted by 5 U.S.C. 553(d)(3).

B. Review Under Procedural Statutes and Executive Orders

The Department has reviewed this rule under the following statutes and executive orders governing rulemaking procedures: The Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1501 *et seq.;* the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.;* the Small Business Regulatory Enforcement Fairness Act of 1996, 5 U.S.C. 801 *et seq.;* the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.;* the National Environmental Policy Act of 1969, 42 U.S.C. 4321 *et seq.;* Executive Order 12630 (Takings); Executive Order 12866 (Regulatory Planning and Review); Executive Order 12988 (Civil Justice Reform); Executive Order 13132 (Federalism); Executive Order 13175 (Tribal Consultation); and Executive Order 13211 (Energy Impacts). The Department has determined that this rule does not trigger any of the procedural requirements of those statutes and executive orders, since this rule merely changes the street address for the IBIA.

Dated: August 17, 2015.

Robert G. McSwain,

Deputy Director, Indian Health Service.

Approved: October 9, 2015.

Sylvia M. Burwell,

Secretary, Health and Human Services.

For the reasons set forth in the preamble, the Department, through the Indian Health Service amends subpart P of title 42 of the Code of Federal Regulations part 137 to read as follows:

PART 137 [AMENDED]

■ 1. The authority citation for part 137 continues to read as follows:

Authority: 25 U.S.C. 458 *et seq.*

§ 137.418 [Amended]

■ 2. In § 137.418, revise ''4015 Wilson Boulevard, Arlington, VA 22203'' to read ''801 North Quincy St., Suite 300, Arlington, VA 22203''.

§ 137.423 [Amended]

■ 3. In § 137.423, revise ''4015 Wilson Boulevard, Arlington, VA 22203'' to read ''801 North Quincy St., Suite 300, Arlington, VA 22203''.

§ 137.425 [Amended]

■ 4. In § 137.425, in paragraph (b), revise ''4015 Wilson Boulevard, Arlington, VA 22203'' to read ''801 North Quincy St., Suite 300, Arlington, VA 22203''.

§ 137.440 [Amended]

■ 5. In § 137.440, in paragraph (b), revise ''4015 Wilson Boulevard, Arlington, VA 22203'' to read ''801 North Quincy St., Suite 300, Arlington, VA 22203''.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 14–226; FCC 15–118]

Broadcast Licensee-Conducted Contests

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document, the Federal Communications Commission (''Commission'') amends the portion of its rules known as the ''Contest Rule'' to permit broadcast licensees to comply with their obligation to disclose material contest terms either by broadcasting those terms or by making them available in writing on a publicly accessible Internet Web site. In particular, the Commission amends the Contest Rule to allow licensees to satisfy their disclosure obligation by posting material contest terms on the station's Web site, the licensee's Web site, or, if neither the individual station nor the licensee has its own Web site, any Internet Web site that is readily accessible to the public. The Commission also adopts requirements that define the disclosure obligation in cases where a licensee has chosen to meet its obligation through an Internet Web site.

DATES: This rule contains information collection requirements that have not been approved by OMB. The Commission will publish a document in the **Federal Register** announcing the effective date.

FOR FURTHER INFORMATION CONTACT: Raelynn Remy, *Raelynn.Remy@fcc.gov,* or Raphael Sznajder, *Raphael.Sznajder@fcc.gov,* Federal Communications Commission, Media Bureau, (202) 418–2120.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *Report and Order* (''*Order*''), MB Docket No. 14–226, FCC 15–118, which was adopted and released on September 17, 2015. The full text of this document is available for public inspection and copying during regular business hours in the FCC Reference Center, Federal Communications Commission, 445 12th Street SW., Room CY–A257, Washington, DC 20554. This document will also be available via ECFS at *http://fjallfoss.fcc.gov/ecfs/.* Documents will be available electronically in ASCII, Microsoft Word, and/or Adobe Acrobat. Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format), by sending an email to *fcc504@fcc.gov* or calling the Commission's Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY).

Paperwork Reduction Act of 1995 Analysis

This document contains new or modified information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA).[1] The requirements will be submitted to the Office of Management and Budget (OMB) for review under Section 3507(d) of the PRA. OMB, the general public, and other Federal agencies will be invited to comment on the new or modified information collection requirements contained in this proceeding. In addition, we note that pursuant to the Small Business Paperwork Relief Act of 2002, we previously sought specific comment on how the Commission might further reduce the information collection burden for small business concerns with fewer than 25 employees.

I. Introduction

1. Our ''Contest Rule,'' Section 73.1216 of our rules, requires broadcast licensees to disclose on air the material terms of contests that they broadcast. In this *Order,* we update that rule to permit broadcast licensees to comply with their obligation to disclose material contest terms either by broadcasting those terms or by making them available in writing on a publicly accessible Internet Web site. In particular, we amend the Contest Rule to allow licensees to satisfy their disclosure obligation by posting material contest terms on the station's Web site, the licensee's Web site, or, if neither the individual station nor the licensee has its own Web site, any Internet Web site that is readily accessible to the public. Commenters in this proceeding uniformly support updating the Contest Rule, which has remained unchanged since its adoption by the Commission almost forty years ago.

2. We also adopt, with some modifications, requirements proposed in the Notice of Proposed Rulemaking that define the disclosure obligation in cases where a licensee has chosen to meet its obligation through an Internet Web site. Specifically, we revise the Contest Rule to specify that in such cases a licensee: (i) Must broadcast the relevant Web site address periodically with information sufficient for a consumer easily to find material contest terms online; (ii) must establish a link or tab to material contest terms on the Web site's home page; (iii) must maintain contest terms online for a period of at least thirty days after the contest has ended; and (iv) must announce on air that the material terms of a contest have changed since the contest was first announced, where that is the case, and direct participants to the Web site to review the changes. As discussed below, the announcements of any change in contest terms must be made within 24 hours of the change and periodically thereafter. Finally, we require that licensees ensure that any material terms disclosed on a Web site conform in all substantive respects to those mentioned over the air.

3. The actions we take in this *Order* to update the Contest Rule advance the public interest by affording broadcasters more flexibility in the manner of their compliance with Section 73.1216 while giving consumers improved access to important contest information. Through this *Order,* we take another step to modernize our rules to reflect how Americans access and consume information in the 21st century. At the same time, we affirm the core principles of the Contest Rule. Regardless of the medium of disclosure, broadcasters must provide complete, accurate, and timely information about the contests they conduct, ensure that such information is not false, misleading, or deceptive, and conduct their contests substantially as announced or advertised.

---

[1] The Paperwork Reduction Act of 1995 (PRA), Public Law 104–13, 109 Stat. 163 (1995) (codified in Chapter 35 of title 44 U.S.C.).

II. Background

4. Radio and television broadcast stations often conduct contests as a means of entertainment, promoting station support, and deepening audience engagement.[2] Almost forty years ago, in 1976, the Commission adopted the Contest Rule to address concerns about the way in which broadcast stations were conducting contests.[3] Although under the existing rule, a licensee may use non-broadcast methods to disclose material contest terms, it cannot substitute such methods for the required broadcast disclosure and be deemed compliant with the rule.[4]

5. In January 2012, Entercom Communications Corp. (''Entercom'' or ''Petitioner'') filed an unopposed Petition for Rulemaking asking the Commission to update the disclosure requirements of Section 73.1216.[5] Petitioner principally sought an amendment to Section 73.1216 that would allow broadcasters to satisfy their obligation to disclose material contest terms either through broadcast announcements or by making such terms available in written form on an Internet Web site. In November 2014, the Commission issued a Notice of Proposed Rulemaking (''*NPRM''*) seeking comment on a number of possible revisions to the Contest Rule. Commenters responding to the *NPRM,* largely broadcasters, support updating the Contest Rule but advocate some modifications to the Commission's proposed revisions.

[2] *See NPRM,* 79 FR 75773.

[3] *See* 47 CFR 73.1216; *Amendment of Part 73 of the Commission's Rules Relating to Licensee-Conducted Contests,* Report and Order, 60 F.C.C.2d 1072 (1976). *See also Public Notice Concerning Failure of Broadcast Licensees to Conduct Contests Fairly,* 45 F.C.C.2d 1056 (1974) (identifying contest practices that raise questions about a broadcast licensee's responsibility to the public, such as: (1) Disseminating false or misleading information regarding the amount or nature of prizes; (2) failing to control the contest to assure a fair opportunity for contestants to win the announced prizes; (3) urging participation in a contest, or urging persons to stay tuned to the station in order to win, at times when it is not possible to win prizes; (4) failing to award prizes, or failing to award them within a reasonable time; (5) failing to set forth fully and accurately the rules and conditions for contests; (6) changing the rules or conditions of a contest without advising the public or doing so promptly; and (7) using arbitrary or inconsistently applied standards in judging entries).

[4] 47 CFR 73.1216, Note 2 (''The material terms should be disclosed periodically by announcements broadcast on the station conducting the contest. . . . In addition to the required broadcast announcements, disclosure of the material terms may be made in a non-broadcast manner.'').

III. Discussion

A. Satisfying the Obligation To Disclose Material Contest Terms through an Internet Web site

6. As advocated by all of the commenters, we amend the Contest Rule to allow broadcast licensees to meet their obligation to disclose material contest terms either by broadcasting the material terms or by making those terms available in written form on a readily accessible public Internet Web site. We agree with parties who assert that, given the ubiquitous nature of the Internet and current consumer expectations about how to obtain information, broadcast disclosure of material contest terms no longer reflects the best means of conveying such information to the public in all cases. For example, although on-air disclosure may be preferable in certain circumstances, *e.g.,* simple contests and cases in which stations lack Web sites, we believe that broadcasters should be given flexibility to meet their disclosure obligation either through broadcast announcements or the Internet, and we will defer to broadcasters' discretion in selecting between those means of disclosure. As explained below, we find that revising the Contest Rule to permit reliance on online disclosure will provide benefits to both consumers and broadcasters, and that such benefits outweigh any associated costs.

7. Based on the record, we conclude that allowing broadcasters to meet their obligation to disclose material contest terms through the Internet in lieu of broadcasting the terms will benefit consumers by improving their access to important contest information, to the extent that our action results in greater use of online disclosure. Because the current rule requires that licensees disclose material contest terms via broadcast announcements periodically, audience members interested in a contest may not hear or see contest disclosures if they are not tuned into the broadcast at the time the announcement is aired. Moreover, even in cases where prospective contestants hear or see a contest disclosure, the length or complexity of contest terms or the speed at which licensees communicate those terms may render it difficult for many to comprehend or recall the information conveyed. For these reasons, we agree with parties who assert that broadcasters' online posting of material terms will allow consumers to obtain ''on demand'' access to those terms and to review them at their convenience, thereby increasing the likelihood that contest terms will be understood and remembered.

8. We find that this revision to the Contest Rule is consistent with consumer expectations about how to obtain contest information. As many parties note, the public today accesses information in ways that are dramatically different from how they did when the Contest Rule was adopted. The Internet has become a fundamental part of consumers' daily lives and now represents the medium used most by the public to obtain information instantaneously. Given that Americans today are accustomed to using the Internet to obtain a broad range of information, we agree with parties who assert that consumers reasonably expect to obtain information about licensee-conducted contests through the Internet. Indeed, as some parties note, broadcasters already use the Internet to post contest-related information, and consumers often enter and participate in contests via the Internet. Amending the Contest Rule to permit reliance on online disclosure of material contest terms thus brings the rule into alignment with current consumer expectations.

9. As noted, permitting reliance on online disclosure of contest terms also will benefit broadcasters by affording them greater flexibility in the manner of their compliance with Section 73.1216 and by freeing up air time for other programming. Because many broadcasters already have dedicated Web sites where they can post complete contest information that the public can access ''on demand,'' and because we are not requiring broadcasters to use online posting if they prefer to broadcast contest terms over the air, we agree with parties who assert that the benefits of this rule change outweigh any associated costs.

B. Requirements Governing Online Disclosure of Material Contest Terms

10. Although this rule revision is intended, in part, to give broadcasters more flexibility in how they satisfy their obligation to disclose material contest terms, we find that the public interest will be served by establishing specific requirements that define the disclosure obligation in cases where a broadcaster chooses to meet that obligation through an Internet Web site. In particular, we believe that these requirements, which are comparable to those that apply to on-air disclosures,[6] will provide guidance to licensees and facilitate useful access to contest information by the public. We discuss each requirement, in turn, below.

[6] *See* 47 CFR 73.1216, Notes 1 through 3.

11. *''Publicly Accessible'' Web site.* We require that any Internet Web site relied on by a broadcaster to disclose material contest terms be ''publicly accessible.'' We interpret the term ''publicly accessible'' to mean that the Internet Web site is designed to be accessible to the public 24/7, for free, and without any registration requirement.[7] This may include either the station's Web site, the licensee's Web site, or, if neither the individual station nor the licensee has its own Web site, any Internet Web site that is readily accessible to the public. Commenters generally agree that consumers should have access to material contest terms disclosed on a Web site without any fee or registration, and we believe that adopting these requirements will facilitate widespread and unfettered access to contest terms by broadcast audiences. Some parties assert that broadcasters should not be required to make available material contest terms on a 24/7 basis because factors beyond their control, such as system outages, power failures, and hacked Web sites could prevent them from ensuring 24/7 access. Thus, they express concern that they could be exposed to liability for violation of the Contest Rule even where they have made a good faith effort to ensure public accessibility. Because we require that any Web site used to disclose material contest terms be *designed* to be accessible to the public on a 24/7 basis, we believe the rule we adopt accounts for factors beyond the control of the licensee.

12. *Broadcast Identification of Web site Address.* We also amend the Contest Rule to require that a licensee broadcast the address of an Internet Web site on which it relies to disclose material contest terms with information sufficient for a consumer to find those terms easily. Although we proposed in the *NPRM* to require licensees that choose to satisfy their disclosure obligation through the Internet to broadcast the ''complete, direct Web site address'' where contest terms are posted,[8] we decline to adopt this requirement. We agree with commenters that a literal interpretation of such a requirement could be unduly burdensome to broadcasters and confusing to the public. Some parties contend, for example, that a rule requiring identification of the ''complete, direct'' Web site address could be interpreted to require a mechanical recitation of a web address as it appears on an Internet browser (*e.g.,* ''http-colon-backslash, etc.''), and that such a rule is less helpful to consumers than one that allows broadcasters to identify the relevant address through simple instructions or natural language (*e.g.,* ''for contest rules go to kxyz.com and then click on the contest tab''). In addition, Joint Commenters assert that Web site addresses and their subdirectories may change while contests are ongoing, and thus requiring identification of a ''complete, direct'' address, including local host names and subdirectories, would be unnecessarily onerous to broadcasters and could be confusing to consumers. We require that broadcasters identify the Web site in language that enables a typical consumer easily to locate the Web site's home page online, such as in the example provided above (''for contest rules go to kxyz.com and then click on the contest tab''). As with all elements of contest-related announcements, the burden is on the broadcaster to inform the public, not on the public to discern the message.

13. Consistent with broadcasters' existing obligation to broadcast contest rule disclosures ''periodically,'' we conclude further that licensees must broadcast the Web site address where contest terms are posted ''periodically'' during the period of the contest. Although we proposed in the *NPRM* to require licensees to broadcast the Web site address ''each time the station mentions or advertises the contest,''[9] we decline to adopt this requirement, which parties uniformly oppose. For example, some commenters argue that such a requirement could create unnecessary aural clutter and disrupt the listener experience. Parties also assert that, given the number of contests that are conducted simultaneously and the multitude and variety of contest references, requiring licensees to identify the relevant Web site address each time a contest is mentioned will reduce the amount of air time that can be utilized for other programming. Some parties contend further that the burdens imposed by such a requirement could cause stations to reduce the number of contest mentions or not to adopt online disclosure. For these reasons, we are persuaded that the potential drawbacks of requiring broadcast identification of the Web site address where contest terms are posted each time a contest is mentioned outweigh any associated benefits.

14. We decline at this time to adopt a more prescriptive requirement governing the frequency of broadcast identification of the Web site address where contest terms are posted as some parties have suggested.[10] We conclude that requiring on-air identification of the Web site address a specified number of times daily, *e.g.,* an average of three times per day, would not serve the public interest because such a rule could lead broadcasters to identify the Web site address the specified minimum number of times irrespective of how often a contest is mentioned. Similarly, we decline to require broadcast identification of the Web site address only when a station substantially highlights or discusses a contest, as proposed by Hubbard and NSBA, as this approach would make the Contest Rule more challenging to enforce by requiring the Commission to assess in a particular case whether a contest has been ''substantially'' highlighted or discussed.[11] On balance, we find that the public interest would be better served by providing licensees with flexibility to determine the frequency with which they broadcast the Web site address where contest terms are made available to the public. As noted, the requirement we adopt is harmonious with licensees' existing obligation to broadcast contest disclosures ''periodically''[12] and the discretion long afforded licensees in this area.[13] If we find that licensees are failing to broadcast the Web site address with adequate frequency, we will revisit this issue in the future.

15. *Internet Link to Contest Terms.* As proposed in the *NPRM,* we also amend

[7] *See NPRM,* 79 FR 75773, 75775.

[8] *Id.*

[9] *Id.*

[10] *See, e.g.,* iHeartMedia Comments at 13; Joint Parties Comments at 7 (suggesting that the Commission could require licensees to broadcast the Web site address an average of at least three times per day, excluding the hours of 12 to 6 a.m.). *See also* Hubbard Comments at 4; NSBA Comments at 5 (suggesting that the Commission could require licensees to broadcast the Web site address when they substantially highlight or discuss a contest, *i.e.,* not during passing references). We note that some of these suggestions were proffered as an alternative to our proposal in the *NPRM* to require licensees to broadcast the relevant Web site address *each time* a contest is mentioned, and that some of these parties advocate principally for the requirement adopted herein (*i.e.,* periodic broadcast identification of the Web site address). Nevertheless, we set forth above our reasons for declining to adopt those alternatives.

[11] Given the potential number of spontaneous, unscripted contest promotions, *e.g.,* by on-air radio personalities, we also believe that adopting this proposal could result in a high number of Contest Rule violations. *See, e.g.,* Entercom Comments at 9; iHeartMedia Comments at 12; NSBA Comments at 5.

[12] *See* 47 CFR 73.1216, Note 2 (directing, among other things, disclosure of material contest terms be made ''periodically by announcements broadcast on the station conducting the contest, but need not be enumerated each time an announcement promoting the contest is broadcast'').

[13] *Id.* (stating that ''[i]n general, the time and manner of disclosure of the material terms of a contest are within the licensee's discretion,'' and that ''[d]isclosure of material terms in a reasonable number of announcements is sufficient'').

the Contest Rule to require that licensees establish a link or tab on the home page of an Internet Web site used to disclose material contest terms, that takes consumers to contest information.[14] That link or tab must be conspicuously located on the Web site home page and must be labeled in a way that makes clear its relation to contest information. We disagree with commenters' assertions that the Commission need not adopt any rules to facilitate access to contest information because broadcasters have a natural incentive to make such information readily accessible and consumers can utilize Internet search engines to locate contest information quickly. Even if many consumers are able to locate contest terms absent any guidance, we believe that requiring broadcasters to establish a conspicuous link or tab on the Web site home page that takes users to contest terms will facilitate ready access to those terms by the public. As noted, the record reflects that many broadcasters already make available a link or tab to contest information on their Web site home page, which suggests that compliance with such a requirement is not unduly burdensome. Although some parties assert that licensees are in the best position to determine where contest information should be posted on a Web site, the rule we adopt requiring a link or tab to contest terms on a Web site home page does not dictate the location where material terms must be disclosed. To the contrary, the rule preserves the ability of broadcasters to maintain contest terms on a dedicated Web page, so long as that Web page is accessible by a link or tab on the home page that meets the requirements above.

16. *Duration of Online Disclosure Obligation.* We also require licensees that choose to disclose material contest terms via an Internet Web site to maintain such terms on the Web site for at least thirty days after the contest has concluded (*i.e.,* thirty days after a winner has been selected and the station has notified the winner personally or publicly announced the winner by broadcast announcement or over the Internet site where it disclosed the contest rules). We note that under the existing rule, a licensee's obligation to disclose material terms ''arises at the time the audience is first told how to enter or participate and continues thereafter;'' however, the rule is silent on when this obligation ends.[15] In the *NPRM,* we sought comment on how long a licensee should be required to maintain contest information on an Internet Web site.[16] Although no commenter proposed the thirty-day period we adopt herein, we believe this time period is reasonable because it strikes an appropriate balance between the public's interest in accessing material terms after a contest has ended and the interest of broadcasters in keeping their Web sites up-to-date.[17] We disagree with parties who assert that the Commission should refrain from specifying the duration that material contest terms must remain available online, or should require broadcasters to maintain online disclosures only until a contest winner has been selected. We believe that requiring broadcasters to maintain contest terms online for a reasonable period of time after a contest winner has been selected is necessary to ensure that contest information is readily available not only to potential contest participants, but also to actual contestants or others who wish to consult or confirm the rules after the contest has ended.[18] To address concerns that maintaining contest rules online after a contest has ended could create confusion about whether a contest is ongoing, licensees should timely label expired contest terms to make clear that a contest has ended, including the date that a winner was selected.[19]

17. *Changes to Material Contest Terms.* The Contest Rule prohibits false, misleading or deceptive contest descriptions and requires broadcasters to conduct their contests substantially as announced.[20] Accordingly, we do not expect broadcasters to regularly change the material terms of a contest after the contest has commenced. Nevertheless, we recognize that, on rare occasions, limited changes to a contest's terms may be necessary to address changes in circumstances beyond the anticipation or control of the broadcaster. We therefore adopt our proposal to require that, in cases where a licensee chooses to satisfy its disclosure obligation through the Internet, if the material terms of a contest are changed after the contest is first announced, the licensee must announce on air that the contest rules have been changed and direct participants to the Web site to review the changes.[21] With the exception of NPR, commenters support this proposal. As suggested by some parties, we require licensees to make such announcements on air within 24 hours of the change in material terms on the Web site,[22] and periodically thereafter, until the contest has concluded.[23] We are not persuaded by NPR's speculative assertion that requiring broadcasters to announce changes to material contest terms over the air could lead to public confusion about whether contest terms posted on a Web site are accurate.[24] We believe that stations can address this concern by labeling contest terms with information that indicates, for example, the date that the terms were last updated. We believe that requiring on-air announcements of changes in material contest terms is necessary to address the potential that some broadcasters will use their ability to disclose terms online as a means of changing contest rules in a way that is misleading or deceptive to the public. We emphasize that a broadcaster that effectuates a change in terms that unfairly or deceptively alters the

[14] *See NPRM,* 79 FR 75775 (seeking comment on how the Commission can ensure that material contest terms are easy for consumers to locate on an Internet Web site, and on whether to require a link on the Web site's home page to contest terms).

[15] *See* 47 CFR 73.1216, Note 2.

[16] *See NPRM,* 79 FR 75775.

[17] We note that the Commission, in other contexts, has found thirty days to be a reasonable period of notification to the public. *See, e.g., https://www.fcc.gov/asr/localnotice* (visited July 15, 2015) (providing that the Commission will post for thirty days information submitted by applicants for antenna structures that could raise environmental concerns); 47 CFR 76.1601 (requiring that a cable operator provide at least thirty days' notice to subscribers prior to deleting or repositioning a broadcast signal).

[18] Absent such a requirement, for example, a contest winner might not be able to readily confirm that the prize he/she has been awarded after the content has ended is, in fact, the prize disclosed online. Similarly, a losing contestant that wished to consult the contest rules could not readily do so if licensees were permitted to remove the rules immediately upon the contest's conclusion.

[19] *See* 47 CFR 73.1216, Note 1(b) (''Material terms include . . . [the] *time* and means *of selection of winners''*) (emphasis added).

[20] *See* 47 CFR 73.1216.

[21] *See NPRM,* 79 FR 75775 (also seeking comment on the appropriate frequency and duration of this requirement).

[22] *See* Entercom Comments at 11; iHeartMedia Comments at 14 (advocating a requirement that licensees announce changes to material contest terms within 24 hours of the change). We expect licensees to broadcast forthwith announcements of the changes in material terms that they have posted on a Web site, and to not wait 24 hours before doing so.

[23] Although a few parties have suggested that licensees be required to announce on air that contest terms have changed three times daily, *see* Entercom Comments at 11; iHeartMedia Comments at 14; Joint Parties Comments at 9, we conclude that requiring such announcements on a periodic basis will give broadcasters more flexibility in how they satisfy their disclosure obligation, and is consistent with licensees' existing obligation to broadcast contest disclosures ''periodically'' and the discretion granted licensees under the Contest Rule. We note that this requirement also is harmonious with the rule we adopt above governing broadcast identification of Web site addresses.

[24] *See* NPR Comments at 5 (rather than requiring licensees to disclose on air that material contest terms have been changed, the Commission should require them to state clearly on the Web site that contest terms have changed).

operation of the contest or the nature or value of the prize or materially disadvantages existing contestants will be deemed to have rendered prior descriptions false, misleading, and deceptive and, thus, would violate the Contest Rule, regardless of whether such alterations are announced on air or posted to a Web site.[25]

18. *Consistency of Contest Terms.* We adopt our proposal in the *NPRM* to require that any material contest terms disclosed on an Internet Web site conform in all substantive respects to contest terms broadcast over the air.[26] Although no commenter specifically addressed this proposal, we conclude that amending the Contest Rule to include such a requirement serves the public interest by ensuring that contest information made available by broadcasters in written and oral form is consistent. We note that the Contest Rule currently requires licensees, among other things, to disclose material contest terms ''fully and accurately'' and to conduct contests ''substantially as announced or advertised.'' [27] The Contest Rule directs further that ''[n]o contest description shall be false, misleading or deceptive with respect to any material term.'' [28] We believe that prohibiting broadcasters from disclosing material contest terms on an Internet Web site that differ in any substantive respect from contest information broadcast over the air is harmonious with broadcasters' existing obligations under the Contest Rule. In particular, we find that a licensee's failure to disseminate consistent information about a contest it conducts constitutes a violation of the requirements noted above to disclose material contest terms accurately, to conduct contests substantially as announced or advertised, and to provide contest descriptions that are not false, misleading, or deceptive. To the extent that there are any ambiguities in contest disclosures that generate inconsistency, we place broadcasters on notice that the Commission will construe such ambiguities against the licensee. We believe that this approach will benefit broadcast audiences by facilitating clarity and consistency in contest disclosures.

[25] *See* 47 CFR 73.1216.

[26] *See NPRM,* 79 FR 75775. As noted in the *NPRM,* for example, if a broadcast contest announcement identifies a particular prize by brand name or model, then the terms disclosed on the Web site must be the same. *Id.* para. 12, n.41.

[27] *See* 47 CFR 73.1216.

[28] *Id.*

IV. Procedural Matters

A. Regulatory Flexibility Act

19. As required by the Regulatory Flexibility Act of 1980, as amended (''RFA'') [29] an Initial Regulatory Flexibility Act Analysis (''IRFA'') was incorporated in the *Notice of Proposed Rulemaking* (''*NPRM''*) in this proceeding. The Commission sought written public comment on the proposals in the *NPRM,* including comment on the IRFA. The Commission received no comments on the IRFA. This Final Regulatory Flexibility Act Analysis (''FRFA'') conforms to the RFA.[30]

1. Need for, and Objectives of, the Rule Changes

20. This proceeding stems from an unopposed Petition for Rulemaking filed by Entercom Communications Corp. requesting that the Commission update Section 73.1216 of its rules governing broadcast licensee-conducted contests (the ''Contest Rule'') [31] in a manner that reflects how consumers access information in the 21st Century.[32] In November 2014, the Commission issued a *NPRM* seeking comment on certain proposals intended to modernize the Contest Rule by providing broadcasters with more flexibility in how they satisfy their obligation to disclose material contest terms, without relaxing their duty to conduct contests with due regard for the public interest.

21. In the accompanying *Order,* the Commission amends the Contest Rule to permit broadcast licensees to comply with their obligation to disclose material contest terms either by broadcasting such terms or by making them available in writing on a publicly accessible Internet Web site. In particular, the *Order* amends the rule to allow a broadcast licensee to satisfy its disclosure obligation by posting material contest terms on the station's Web site, the licensee's Web site, or, if neither the individual station nor the licensee has its own Web site, any Internet Web site that is readily accessible to the public.

22. The *Order* also revises the Contest Rule to specify that, in cases where a licensee chooses to disclose material contest terms through an Internet Web site, the licensee: (i) Must broadcast the relevant Web site address periodically with information sufficient for a consumer to easily find material contest terms online; (ii) must establish a link or tab to material contest terms on the Web site's home page; (iii) must maintain contest terms online for a period of at least thirty days after the contest has ended; and (iv) that changes the material terms of a contest after the contest is first announced must announce on air that the contest rules have changed and direct participants to the Web site to review the changes. The *Order* requires that such announcements be made on air within 24 hours of the change in contest terms on the Web site, and periodically thereafter. Finally, licensees must ensure that any material terms disclosed on a Web site conform in all substantive respects to those mentioned over the air.

[29] *See* 5 U.S.C. 603. The RFA, *see* 5 U.S.C. 601 through 612, has been amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), Public Law 104–121, Title II, 110 Stat. 857 (1996).

[30] *See* 5 U.S.C. 604.

2. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

23. No comments were filed that specifically addressed the IRFA.

3. Description and Estimates of the Number of Small Entities to Which the Proposed Rules Will Apply

24. The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted.[33] The RFA generally defines the term ''small entity'' as having the same meaning as the terms ''small business,'' ''small organization,'' and ''small governmental jurisdiction.'' [34] In addition, the term ''small business'' has the same meaning as the term ''small business concern'' under the Small Business Act.[35] A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.[36] The rules

[33] 5 U.S.C. 603(b)(3).

[34] 5 U.S.C. 601(6).

[35] 5 U.S.C. 601(3) (incorporating by reference the definition of ''small business concern'' in 15 U.S.C. 632). Pursuant to 5 U.S.C. 601(3), the statutory definition of a small business applies ''unless an agency, after consultation with the Office of Advocacy of the Small Business Administration and after opportunity for public comment, establishes one or more definitions of such term which are appropriate to the activities of the agency and publishes such definition(s) in the **Federal Register.''** 5 U.S.C. 601(3).

[36] 15 U.S.C. 632. Application of the statutory criteria of dominance in its field of operation and independence are sometimes difficult to apply in the context of broadcast television. Accordingly, the Commission's statistical account of television stations may be over-inclusive.

adopted in the accompanying *Order* will directly affect small television and radio broadcast stations. Below, we provide a description of these small entities, as well as an estimate of the number of such small entities, where feasible.

25. *Television Broadcasting.* This economic Census category ''comprises establishments primarily engaged in broadcasting images together with sound.'' [37] The SBA has created the following small business size standard for such businesses: Those having $38.5 million or less in annual receipts.[38] The 2007 U.S. Census indicates that 808 firms in this category operated in that year. Of that number, 709 had annual receipts of $25,000,000 or less, and 99 had annual receipts of more than $25,000,000.[39] Because the Census has no additional classifications that could serve as a basis for determining the number of stations whose receipts exceeded $38.5 million in that year, we conclude that the majority of television broadcast stations were small under the applicable SBA size standard.

26. Apart from the U.S. Census, the Commission has estimated the number of licensed commercial television stations to be 1,387 stations.[40] Of this total, 1,221 stations (or about 88 percent) had revenues of $38.5 million or less, according to Commission staff review of the BIA Kelsey Inc. Media Access Pro Television Database (BIA) on July 2, 2014. In addition, the Commission has estimated the number of licensed noncommercial educational (NCE) television stations to be 395.[41] NCE stations are non-profit, and therefore considered to be small entities.[42] Based on these data, we estimate that the majority of television broadcast stations are small entities.

27. *Class A TV and LPTV Stations.* The same SBA definition that applies to television broadcast stations would apply to licensees of Class A television stations and low power television (LPTV) stations, as well as to potential licensees in these television services. As noted above, the SBA has created the following small business size standard for this category: Those having $38.5 million or less in annual receipts.[43] The Commission has estimated the number of licensed Class A television stations to be 432.[44] The Commission has also estimated the number of licensed LPTV stations to be 2,028.[45] Given the nature of these services, we will presume that these licensees qualify as small entities under the SBA definition.

28. We note, however, that in assessing whether a business concern qualifies as ''small'' under the above definition, business (control) affiliations [46] must be included. Because we do not include or aggregate revenues from affiliated companies in determining whether an entity meets the revenue threshold noted above, our estimate of the number of small entities affected is likely overstated. In addition, we note that one element of the definition of ''small business'' is that an entity not be dominant in its field of operation. We are unable at this time to define or quantify the criteria that would establish whether a specific television broadcast station is dominant in its field of operation. Accordingly, our estimate of small television stations potentially affected by the proposed rules includes those that could be dominant in their field of operation. For this reason, such estimate likely is over-inclusive.

29. *Radio Stations.* This economic Census category ''comprises establishments primarily engaged in broadcasting aural programs by radio to the public.'' [47] The SBA has created the following small business size standard for this category: Those having $38.5 million or less in annual receipts.[48] Census data for 2007 shows that 2,926 firms in this category operated in that year.[49] Of this number, 2,877 firms had annual receipts of less than $25,000,000, and 49 firms had annual receipts of $25,000,000 or more.[50] Because the Census has no additional classifications that could serve as a basis for determining the number of stations whose receipts exceeded $38.5 million in that year, we conclude that the majority of television broadcast stations were small under the applicable SBA size standard.

30. Apart from the U.S. Census, the Commission has estimated the number of licensed commercial AM radio stations to be 4,553 stations and the number of commercial FM radio stations to be 6,622, for a total number of 11,175.[51] Of this total, 9,898 stations (or about 90 percent) had revenues of $38.5 million or less, according to Commission staff review of the BIA Kelsey Inc. Media Access Pro Television Database (BIA) on October 23, 2014. In addition, the Commission has estimated the number of licensed noncommercial educational (''NCE'') AM radio stations to be 168 stations and the number of noncommercial educational FM radio stations to be 4,082, for a total of 4,250.[52] NCE stations are non-profit, and therefore considered to be small entities.[53] Therefore, we estimate that the majority of radio broadcast stations are small entities.

31. *Low Power FM Stations.* The same SBA definition that applies to radio stations would apply to low power FM stations. As noted above, the SBA has created the following small business size standard for this category: Those having $38.5 million or less in annual receipts.[54] The Commission has estimated the number of licensed low power FM stations to be 814.[55] Given the nature of these services, we will presume that these licensees qualify as small entities under the SBA definition.

32. We note again, however, that in assessing whether a business concern qualifies as ''small'' under the above definition, business (control) affiliations [56] must be included. Because

Accordingly, our estimate of small radio stations potentially affected by the proposed rules includes those that could be dominant in their field of operation. For this reason, such estimate likely is over-inclusive.

4. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

33. In this section, we identify the reporting, recordkeeping, and other compliance requirements for small entities that the Commission adopts in the *Order.*

34. *Reporting Requirements.* The *Order* does not adopt reporting requirements.

35. *Recordkeeping Requirements.* The *Order* adopts certain recordkeeping requirements that apply to broadcast entities, including small broadcast entities, that choose to disclose material contest terms by posting such terms on an Internet Web site. In particular, the *Order* requires such entities:

- to broadcast the relevant Web site address periodically with information sufficient for a consumer to easily find material contest terms online;
- to establish a link or tab to material contest terms on the Web site's home page;
- to maintain contest terms online for a period of at least thirty days after the contest has ended;
- in cases where such entities change the material terms of a contest after the contest is first announced, to announce on air that the contest rules have changed and direct participants to the Web site to review the changes, and to make such announcements on air within 24 hours of the change on the Web site and periodically thereafter; and
- to ensure that any material terms disclosed on a Web site conform in all substantive respects to those mentioned over the air.

control the other or a third party or parties controls or has the power to control both.'' 13 CFR 21.103(a)(1).

36. *Other Compliance Requirements.* The *Order* does not adopt other compliance requirements.

37. Based on the record, we cannot estimate with precision the impact of the rules adopted in the *Order* on small entities. However, the rule revisions will afford all licensees, including small broadcasters, greater flexibility in their manner of compliance with the Contest Rule. In addition, we note that some of the rule revisions were derived from the Petition for Rulemaking in this proceeding, which was unopposed and supported by all commenters, including small broadcasters. Thus, we find it reasonable to conclude that any costs or burdens on small entities resulting from the requirements will be outweighed by the benefits.

5. Steps Taken To Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

38. The RFA requires an agency to describe any significant, specifically small business, alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance and reporting requirements under the rule for such small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.[57]

39. The accompanying *Order* amends Section 73.1216 of the Commission's rules by allowing all licensees, including small broadcasters, to meet their obligation to disclose material contest terms either through broadcast announcements or by making such terms available in writing on a publicly accessible Internet Web site. This revision to the rule is intended to give broadcasters greater flexibility in the manner by which they satisfy their obligation to disclose material contest terms, while ensuring adequate notice of such terms to the public. Whereas under the current rule, licensees must expend time and resources developing broadcast messages that adequately disclose important contest information, under the revised rule, licensees will have the option to disclose such information through the Internet. Permitting disclosure through this additional method likely is less costly and administratively burdensome for licensees, including small entities. One commenter has estimated, for example, that as much as two hours that are presently devoted by licensees to the production of contest-related broadcast spots will be spared. Moreover, the air time that is likely to be freed up as a result of more abbreviated contest-related announcements could be used for non-contest-related programming. As noted above, the Petition for Rulemaking in this proceeding was uniformly supported by commenting parties, including small entities. Thus, we expect that the rule revisions adopted in the *Order* will benefit small broadcast entities.

[57] 5 U.S.C. 603(c)(1)–(c)(4).

B. Report to Congress

40. The Commission will send a copy of this *Order* to Congress and the Government Accountability Office pursuant to the Congressional Review Act, see 5 U.S.C. 801(a)(1)(A).

C. Paperwork Reduction Act

41. This document contains new or modified information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA). The requirements will be submitted to the Office of Management and Budget (OMB) for review under Section 3507(d) of the PRA. OMB, the general public, and other Federal agencies will be invited to comment on the new or modified information collection requirements contained in this proceeding. In addition, we note that pursuant to the Small Business Paperwork Relief Act of 2002, we previously sought specific comment on how the Commission might further reduce the information collection burden for small business concerns with fewer than 25 employees.

V. Ordering Clauses

42. Accordingly, IT IS ORDERED that, pursuant to the authority contained in Sections 4(i), 4(j) and 303 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 154(j), and 303, this *Report and Order* IS ADOPTED, and shall become effective upon announcement in the **Federal Register** of OMB approval and an effective date of the rules adopted therein.

43. IT IS FURTHER ORDERED that, pursuant to the authority found in Sections 4(i), 4(j) and 303 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 154(j), and 303, the Commission's rules ARE HEREBY AMENDED as set forth in Appendix B.

44. IT IS FURTHER ORDERED that the Commission's Consumer and

Governmental Affairs Bureau, Reference Information Center, SHALL SEND a copy of this *Report and Order,* including the Final Regulatory Flexibility Act Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

45. IT IS FURTHER ORDERED that the Commission SHALL SEND a copy of this *Report and Order* in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

List of Subjects in 47 CFR Part 73

Advertising, Consumer protection, Fraud, Television broadcasters.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR part 73 as follows:

PART 73—RADIO BROADCAST SERVICE

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 303, 334, 336, and 339.

■ 2. Revise § 73.1216 to read as follows:

§ 73.1216 Licensee-conducted contests.

(a) A licensee that broadcasts or advertises information about a contest it conducts shall fully and accurately disclose the material terms of the contest, and shall conduct the contest substantially as announced or advertised over the air or on the Internet. No contest description shall be false, misleading or deceptive with respect to any material term.

(b) The disclosure of material terms shall be made by the station conducting the contest by either:

(1) Periodic disclosures broadcast on the station; or

(2) Written disclosures on the station's Internet Web site, the licensee's Web site, or if neither the individual station nor the licensee has its own Web site, any Internet Web site that is publicly accessible.

(c) In the case of disclosure under paragraph (b)(1) of this section, a reasonable number of periodic broadcast disclosures is sufficient. In the case of disclosure under paragraph (b)(2) of this section, the station shall:

(1) Establish a conspicuous link or tab to material contest terms on the home page of the Internet Web site;

(2) Announce over the air periodically the availability of material contest terms on the Web site and identify the Web site address where the terms are posted with information sufficient for a consumer to find such terms easily; and

(3) Maintain material contest terms on the Web site for at least thirty days after the contest has concluded. Any changes to the material terms during the course of the contest must be fully disclosed on air within 24 hours of the change on the Web site and periodically thereafter or the fact that such changes have been made must be announced on air within 24 hours of the change, and periodically thereafter, and such announcements must direct participants to the written disclosures on the Web site. Material contest terms that are disclosed on an Internet Web site must be consistent in all substantive respects with those mentioned over the air.

Note 1 to § 73.1216: For the purposes of this section:

(a) A contest is a scheme in which a prize is offered or awarded, based upon chance, diligence, knowledge or skill, to members of the public.

(b) Material terms include those factors which define the operation of the contest and which affect participation therein. Although the material terms may vary widely depending upon the exact nature of the contest, they will generally include: How to enter or participate; eligibility restrictions; entry deadline dates; whether prizes can be won; when prizes can be won; the extent, nature and value of prizes; basis for valuation of prizes; time and means of selection of winners; and/or tie-breaking procedures.

Note 2 to § 73.1216: In general, the time and manner of disclosure of the material terms of a contest are within the licensee's discretion. However, the obligation to disclose the material terms arises at the time the audience is first told how to enter or participate and continues thereafter.

Note 3 to § 73.1216: This section is not applicable to licensee-conducted contests not broadcast or advertised to the general public or to a substantial segment thereof, to contests in which the general public is not requested or permitted to participate, to the commercial advertisement of non-licensee-conducted contests, or to a contest conducted by a non-broadcast division of the licensee or by a non-broadcast company related to the licensee.

BILLING CODE 6712–01–P

DEPARTMENT OF ENERGY

48 CFR Parts 925, 952 and 970

RIN 1991–AB99

Acquisition Regulations: Export Control

AGENCY: Department of Energy.

ACTION: Final rule.

SUMMARY: The Department of Energy (DOE) is adopting as final, with changes, a rule amending the Department of Energy Acquisition Regulation (DEAR) to add clauses regarding applicable export control requirements for DOE contracts. The rule recognizes contractor responsibilities to comply with all applicable export control laws and regulations in the performance of DOE contracts and prescribes Export Clauses to address these responsibilities.

DATES: *Effective Date:* November 23, 2015.

Applicability Date: This final rule is applicable to solicitations issued on or after November 23, 2015.

FOR FURTHER INFORMATION CONTACT: Lawrence Butler, (202) 287–1945 or *lawrence.butler@hq.doe.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Purpose and Legal Authority

The purpose of this rulemaking is to add new DEAR Subparts 925.71 and 970.2571 to clarify requirements concerning compliance with export control laws and regulations applicable in the performance of DOE contracts.

Export control laws and regulations that may apply to a DOE contract include, but are not limited to: The Atomic Energy Act of 1954 (42 U.S.C. 2011 *et seq.*), as amended; the Arms Export Control Act (22 U.S.C. 2751 *et seq.*); the Export Administration Act of 1979 (50 U.S.C. app. 2401 *et seq.*), as continued under the International Emergency Economic Powers Act (Title II of Pub. L. 95–223, 91 Stat. 1626, October 28, 1977); Trading with the Enemy Act (50 U.S.C. App. 1 *et seq.* as amended by the Foreign Assistance Act of 1961); Assistance to Foreign Atomic Energy Activities (10 Code of Federal Regulations (CFR) Part 810); Export Administration Regulations (15 CFR parts 730 through 774); International Traffic in Arms Regulations (22 CFR parts 120 through 130); Export and Import of Nuclear Equipment and Material (10 CFR part 110); and regulations administered by the Office of Foreign Assets Control of the Department of the Treasury (31 CFR parts 500 through 598).

DOE provided summaries of these export control laws in section II of its proposed rule. See 78 FR 35195 (June 12, 2013).

B. Summary of Major Provisions

DOE is amending the DEAR to add provisions similar to the 2013 amendments to the Defense Federal Acquisition Regulation Supplement (DFARS) (DFARS 225, Foreign Acquisition, and DFARS 252, 78 FR 36108, June 17, 2013); DFARS 252, Foreign Acquisition, 78 FR 48331, August 8, 2013; and to the DFARS Procedures, Guidance, and Information (PGI) 225 ''Foreign Acquisition'' (revised June 26, 2013).

1. Part 925—Foreign Acquisition

Part 925 is amended by adding new section 925.71 to set forth requirements for contractors concerning compliance with U.S. export control laws and regulations.

Points of contact and specific U.S. government agency requirements for export controls can be found as follows:

Department of Commerce (DOC): *http://www.bis.doc.gov/licensing/exportingbasics.htm*

Department of Energy, National Nuclear Security Administration, Office of Nonproliferation and International Security: *http://nnsa.energy.gov/aboutus/ourprograms/nonproliferation/programoffices/officenonproliferation internationalsecurity.*

Nuclear Regulatory Commission: *http://www.nrc.gov/about-nrc/ip/export-import.html.*

Department of State: *http://www.pmddtc.state.gov/about/key_personnel.html* and *http://www.pmddtc.state.gov/documents/ddtc_getting_started.pdf.*

Department of Treasury: *http://www.treasury.gov/services/Pages/Foreign-Transaction-Licensing-and-Reporting.aspx.*

DOE contractors are responsible for complying with export control requirements applicable to their contracts as set forth in new DEAR Export Clauses. It is a contractor's responsibility to comply with all applicable export control laws and regulations. This responsibility exists independent of, and is not established or limited by, this DEAR rulemaking.

2. Part 952—Solicitation Provisions and Contract Clauses

Part 952 is amended by adding new clause 952.225–71 to set forth requirements for DOE contractors concerning compliance with applicable export control laws and regulations.

Points of contact and specific U.S. government agency requirements for export controls can be found as follows:

Department of Commerce (DOC): *http://www.bis.doc.gov/licensing/exportingbasics.htm*

Department of Energy, National Nuclear Security Administration, Office of Nonproliferation and International Security: *http://nnsa.energy.gov/aboutus/ourprograms/nonproliferation/programoffices/officenonproliferation internationalsecurity.*

Nuclear Regulatory Commission: *http://www.nrc.gov/about-nrc/ip/export-import.html.*

Department of State: *http://www.pmddtc.state.gov/about/key_personnel.html* and *http://www.pmddtc.state.gov/documents/ddtc_getting_started.pdf.*

Department of Treasury: *http://www.treasury.gov/services/Pages/Foreign-Transaction-Licensing-and-Reporting.aspx.*

DOE contractors are responsible for complying with export control requirements applicable to their contracts as set forth in new DEAR Export Clauses. It is a contractor's responsibility to comply with all applicable export control laws and regulations. This responsibility exists independent of, and is not established or limited by, this DEAR rulemaking.

3. Part 970—DOE Management and Operating Contracts

Subpart 970.25 is amended by adding new section 970.2571 to set forth requirements for management and operating contractors concerning compliance with applicable export control laws and regulations. Subpart 970.52 is amended by adding new clause 970.5225–1 to set forth requirements for management and operating contractors concerning compliance with applicable export control laws and regulations.

Points of contact and specific U.S. government agency requirements for U.S. export controls can be found as follows:

Department of Commerce (DOC): *http://www.bis.doc.gov/licensing/exportingbasics.htm.*

Department of Energy, National Nuclear Security Administration, Office of Nonproliferation and International Security: *http://nnsa.energy.gov/aboutus/ourprograms/nonproliferation/programoffices/officenonproliferation internationalsecurity.*

Nuclear Regulatory Commission: *http://www.nrc.gov/about-nrc/ip/export-import.html.*

Department of State: *http://www.pmddtc.state.gov/about/key_personnel.html* and *http://www.pmddtc.state.gov/documents/ddtc_getting_started.pdf.*

Department of Treasury: *http://www.treasury.gov/services/Pages/Foreign-Transaction-Licensing-and-Reporting.aspx.*

DOE management and operating contractors are responsible for complying with export control requirements applicable to their contracts as set forth in new DEAR Export Clauses. It is the contractor's responsibility to comply with all applicable export control laws and regulations. This responsibility exists independent of, and is not established or limited by, this DEAR rulemaking.

II. Summary of Comments and Responses

DOE published a notice of proposed rulemaking (NOPR) on June 12, 2013 (78 FR 35195). The NOPR reflected the approach previously taken by the Department of Defense (DoD) in the Defense Acquisition Regulations Supplement (DFARS) to address requirements for complying with export control laws and regulations when performing DoD contracts. DOE has received recommendations from the General Accounting Office and the DOE Inspector General to modify the DEAR for the same purpose. DOE received comments from 15 organizations in response to the NOPR. In addition, within days of publication of the NOPR, the DoD revised the DFARS to address issues similar to those reflected in comments received on the NOPR and provided guidance relating to the release of fundamental research information. This final rule reflects the approach taken by the DoD on June 17, 2013, to changes to sections 225.79 and 252.225–7048 of the DFARS (Foreign Acquisition, 78 FR 36108), and to changes to Part 225 of the DFARS PGI—225.79 (Foreign Acquisition, Export Control). This NOPR also reflects DoD guidance in 78 FR 48331, August 8, 2013, related to the release of research information that may be export controlled.

The following paragraphs describe the changes included in this final rule as a result of those comments and provide DOE's response to the comments received.

Summary of Changes to the NOPR

(a) All notification and reporting requirements have been removed.

(b) The requirement for contractors to comply with DOE directives ''in effect on the date of the contract award'' has been removed.

(c) References to ''transfers'' have been removed.

(d) References to specific DOE Orders have been removed.

(e) The Export Restriction Notice has been removed from the Export Clauses.

(f) The phrase ''subject to export controls'' has been removed from the Export Clauses.

(g) All listings of U.S. export control laws and regulations are preceded by, ''include, but are not limited to:''

(h) All references to ''export-controlled items'' and ''export control of items'' have been removed. The rule addresses ''compliance with export control laws and regulations'' and does not attempt to define what is and is not export controlled.

Discussion of comments and responses.

1. Comment: Six respondents claimed that export control laws exist and already apply to U.S. persons, regardless of whether a contractor represents to DOE that it is complying with applicable export laws.

Response: As stated in the NOPR, export compliance responsibilities exist independent of and are not established or limited by the proposed rule. It is customary practice for laws and regulations applicable to DOE contracts to be listed in the contracts. In addition, DOE is requiring the new Export Clauses to be added to all applicable contracts. Listing applicable export laws and regulations in the Export Clauses will help ensure that contractors are aware of their responsibilities, emphasize the importance to DOE of contractor compliance with such laws and regulations, and minimize the risk of non-compliance with U.S. laws and regulations that could have major programmatic and financial impacts on DOE and contractors. No change was made to the text as a result of this comment.

2. Comment: Six respondents claimed that the rule encroaches on the export authority of other U.S. export licensing authorities.

Response: The rule does not affect the export authority of any U.S. Government agency. The purpose of the rule is to direct DOE contractors to seek guidance from and to communicate with export licensing officers at export licensing agencies and not to ask DOE Contracting Officers for assistance in complying with export control requirements. The rule provides explicit instructions to DOE Contracting Officers, if asked by a DOE contractor to provide export assistance, to direct contractors to applicable export laws and regulations and to the agencies administering them. The final rule makes it clear that DOE does not have an export compliance officer overseeing DOE contractor export activities, and that contractors are responsible for compliance with export controls. No change was made to the text as a result of this comment.

3. Comment: Four respondents claimed the proposed rule has existing or potential inconsistencies with export control authorities.

Response: As noted above, the purpose of the rule is to direct DOE contractors to seek guidance from and to communicate with export licensing officers at export licensing agencies and not to ask for export control compliance assistance from DOE Contracting Officers. The final rule has been revised to remove reporting and marking requirements, as well as language cited by one respondent as potentially inconsistent with other authorities.

4. Comment: One respondent expressed concern as to how differences of opinion on the applicability of export control requirements between agencies responsible for administering the laws and the DOE Contracting Officer would be resolved.

Response: The rule makes clear that DOE Contracting Officers do not make any decisions regarding the applicability of export control laws or regulations. The appropriate licensing agency determines whether export control requirements apply. It is a contractor's responsibility to adhere to all relevant export control laws and regulations. No change was made to the text as a result of this comment.

5. Comment: One respondent claimed that DOE is potentially setting up a conflict for a contractor between complying with changes in export laws and regulations that are not yet changed in its contract clause.

Response: The listing of export control laws and regulations in the Export Clauses in the final rule are preceded by ''include, but are not limited to:''. Any changes in U.S. export laws or regulations would apply to a contractor because the Export Clauses require compliance with all applicable export control laws and regulations. No change was made to the text as a result of this comment.

6. Comment: Two respondents alleged that the proposed rule is inconsistent with the Export Control Reform Initiative.

Response: The final rule is consistent with the Export Control Reform Initiative (ECRI). The purpose of this rule is to simplify the export process for DOE contractors, by directing them to the proper export licensing authorities. Reporting requirements have been removed from the final rule.

7. Comment: Three respondents claimed that the proposed rule is redundant to DEAR 970.5204–2 Laws, Regulations and DOE Directives, because that clause adequately covers compliance with export laws and regulations.

Response: The rule clarifies DOE contractor and Contracting Officer responsibilities regarding export controls not clearly stated in any other law or regulation. The Export Clauses clarify that DOE contractors are to contact appropriate export licensing agencies and not DOE Contracting Officers with questions regarding export control compliance. The Export Clauses direct DOE Contracting Officers to address contractor export control questions by directing them to relevant export control laws and regulations and licensing agencies. No change was made to the text as a result of this comment.

8. Comment: One respondent questioned the requirement for contractors to comply with DOE directives ''in effect on the date of the contract award,'' as individual DOE contracts specify applicable DOE directives for each DOE contract.

Response: DOE acknowledges that contracts specify applicable DOE directives. This language has been removed from the final rule.

9. Comment: Two respondents claimed that DOE already has adequate contractual enforcement tools.

Response: The purpose of the rule is not to provide additional enforcement tools. This rule is needed to clarify DOE contractor and Contracting Officer export control responsibilities not clearly stated in any other law or regulation. No change was made to the text as a result of this comment.

10. Comment: Six respondents claimed that export control requirements are not needed in the DEAR and that the Federal Acquisition Regulation (FAR) limits agency acquisition regulations to those necessary to implement FAR policies and procedures.

Response: The final rule provides necessary policies and procedures not included in the FAR. It clarifies that DOE contractors are to consult appropriate export licensing agencies and not DOE Contracting Officers with questions regarding export compliance. The final rule directs DOE Contracting Officers to handle export control questions posed by contractors by directing the contractors to the relevant export licensing agencies. This rule is needed to clarify DOE contractor and DOE Contracting Officer responsibilities that are not clearly stated in any other law or regulation. No change was made to the text as a result of this comment.

11. Comment: Six respondents claimed that the proposed rule exceeds the stated purpose of the rule, which is to amend the DEAR for consistency with a 2010 amendment to the DFARS. They said that the proposed rule is not consistent with the revised DFARS clauses.

Response: The final rule reflects the approach taken in the June 17, 2013, changes to 225.79 and 252.225–7048 of the DFARS (Foreign Acquisition, 78 FR 36108) and to the June 17, 2013 changes to Part 225.79 of the DFARS PGI–225 (Foreign Acquisition). No change was made to the text as a result of this comment.

12. Comment: Three respondents claimed that the proposed rule is ineffective as a way to respond to 2004 and 2007 DOE Inspector General (IG) and 2011 Government Accountability Office (GAO) reports on DOE contractor non-compliance with export laws.

Response: The rule responds to DOE IG and GAO recommendations in the cited reports for DOE to provide specific export control guidance to DOE contractors. In particular, the 2007 DOE IG report recommended that DOE ''ensure that export control guidance is disseminated and implemented throughout the complex.'' To implement that recommendation, the IG report stated that ''NNSA management should expedite action, such as issuing a directive or modifying the Department of Energy Acquisition Regulation (DEAR), to fully implement the open recommendation.'' The 2011 GAO report repeated its prior recommendations for DOE to provide guidance to its contractors. The proposed rule is in direct response to the DOE IG recommendation to modify the DEAR, as well as the recommendations in the GAO report. No change was made to the text as a result of this comment.

13. Comment: Two respondents claimed that the proposed rule unfairly asks Contracting Officers to make export control decisions for which they are not trained. One respondent proposed rewording the requirement for Contracting Officers to insert the export control clause as follows: ''The Contracting Officer shall insert the clause at 952.225–71, Compliance with export control laws, regulations and directives (Export Clause), in all solicitations and contracts.''

Response: The purpose of the new rule is to set forth the responsibilities of DOE contractors and DOE Contracting Officers concerning contractor compliance with export-controlled activities. Contracting Officers are required to include the Export Clause at DEAR 952.225–71 or DEAR 970.5225–1 in solicitations and contracts that would involve export-controlled activities. While the rule has been revised to be applicable to ''all solicitations and contracts,'' export control laws would not be applicable to solicitations and contracts that do not involve export-controlled activities. As noted above, the revised language is similar to the policy approach taken DoD.

14. Comment: Nine respondents claimed that certain reporting requirements included in the Export Clauses would unduly burden DOE contractors because the requirement of a timely, written notification of export controls and compliance for DOE contracts would be an overbroad approach to ensuring export control compliance. Also, the requirement to flow down the reporting requirement would impose administrative and audit burdens on contractors.

Response: The final rule removes the requirements for a contractor to notify the DOE Contracting Officer when the contract may require export activities and for a contractor to assure the DOE Contracting Officer of its ability to comply with U.S. export laws and regulations. The reporting and notification requirements in the proposed rule were not required by any law or regulation, or recommended by any auditors. The purpose of the Export Clauses is to clarify that DOE contractors should consult appropriate export licensing agencies, and not DOE Contracting Officers, with questions regarding compliance with export-controlled activities. The reporting and notification requirements were removed from the rule to avoid any implication that DOE Contracting Officers have any export compliance responsibilities.

15. Comment: Two respondents were concerned about the impact on small business subcontractors and universities.

Response: U.S. export control laws and regulations already apply to activities conducted by small businesses and by universities that have DOE contracts, so there would be no substantive change regarding export control requirements applicable to these entities. No change was made to the text as a result of this comment.

16. Comment: Three respondents claimed that the proposed rule is not consistent with National Security Decision Directive (NSDD) 189 because ''products'' most often generated and disseminated while performing fundamental research are scientific findings excluded from export regulations under the ''Fundamental Research Exclusion'' set forth in NSDD–189 and the exclusion of fundamental research from export controls in EAR and ITAR provisions.

Response: NSDD 189 establishes a national policy that, to the maximum extent possible, the products of fundamental research shall remain unrestricted. NSDD 189 provides that no restrictions may be placed upon the conduct or reporting of federally funded fundamental research that has not received national security classification, except as provided in applicable U.S. statutes. As a result, contracts confined to the performance of unclassified fundamental research generally do not involve any export-controlled activities. NSDD 189 does not take precedence over statutes. As it clearly states in the directive, NSDD 189 does not exempt any research from statutes that apply to export control laws and regulations. In addition, NSDD 189 is focused on the products of fundamental research and does not exempt access to export-controlled technology used or generated during the conduct of fundamental research. The final rule therefore is consistent with NSDD–189 regarding fundamental research because it does not have an impact on the NSDD–189 exemption for fundamental research and it does not modify restrictions already imposed by U.S. export control laws and regulations on research.

DFARS PGI–225.79 (revised June 17, 2013) and [the final rule on the release of fundamental research information in DFARS 252.204–7000 (August 8, 2013) address release of fundamental research information]. Note that the revised

DFARS PGI–225 places reporting requirements on contractors who want to release information that they have determined to be the product of fundamental research. This final rule does not place any reporting requirements on the release of fundamental research by DOE contractors.

17. Comment: Two respondents questioned the scope of the Export Restriction Notice requirement.

Response: The Export Restriction Notice requirement has been removed from the final rule because requirements for the use of such a notice are defined in 41 CFR 109 and do not need to be restated in this rule.

18. Comment: Three respondents recommended that DOE would be better served by providing educational materials to contractors to increase export compliance awareness.

Response: The purpose of the new rule is to direct DOE contractors to seek guidance from and to communicate with export licensing officers at appropriate export licensing agencies, and not to ask for export control compliance assistance from DOE Contracting Officers. Compliance training offices of Department of Commerce, Department of State and other agencies provide appropriate training on their respective export regulations. No change was made to the text as a result of this comment.

19. Comment: Two respondents believed that DOE may inadvertently assume liability because of requirements in the Export Clauses should a contractor be in non-compliance with export control requirements.

Response: DOE will not assume any liability due to inclusion of the Export Clauses in contracts or for contractor noncompliance with export control requirements. No change was made to the text as a result of this comment.

20. Comment: Eight respondents claimed that the proposed rule potentially increases DOE contractors' risk by specifically listing regulations in the contract. They also were concerned that contractors could be liable under the False Claims Act and other laws for their actions or for those of their subcontractors. If the contractor is not in compliance with export control regulations, it may also be subject to Qui Tam penalties, and the rule would make failure to comply with export regulations a contractual obligation. This liability may be assumed by the M&O contractor for all of its subcontractors, including lower-tier subcontractors.

Response: The Export Clauses in the final rule do not require reporting or written assurances. Contractors will not assume new liabilities due to insertion of the Export Clauses in DOE contracts.

21. Comment: One respondent claimed that the proposed rule potentially increases DOE contractors' risk by requiring the contractor to identify specific aspects of the contract governed by export laws.

Response: For the reasons stated previously, reporting and written assurance requirements have been removed from the final rule.

22. Comment: One respondent claimed that adoption of the proposed regulation would increase costs for DOE procurements.

Response: For the reasons stated previously, reporting requirements and written assurances have been removed from the final rule. The only *de minimis* costs associated with the final rule are costs to add the Export Clauses to solicitations and contracts. No further change was made to the text as a result of this comment.

23. Comment: One respondent believed that the rule affects 10 CFR part 810 procedures for contractors subject to that regulation.

Response: The proposed rule does not affect implementation of 10 CFR part 810 with respect to DOE program activities. No change was made to the text as a result of this comment.

24. Comment: One respondent claimed that DOE Contracting Officers will be required to submit all DOE contracts to the Office of Nonproliferation and International Security (NIS) of the National Nuclear Security Administration for 10 CFR part 810 review.

Response: The reporting requirements have been removed from the revised rule. The rule does not place any requirements on DOE Contracting Officers to submit contracts to the office now called the Office of Nonproliferation and Arms Control for 10 CFR part 810 review. No change was made to the text as a result of this comment.

25. Comment: Two respondents asked that this rule to be pursued in conjunction with the revised 10 CFR part 810.

Response: The final rule amending 10 CFR part 810 (part 810) was issued on February 23, 2015. 80 FR 9359 (Feb. 23, 2014). The purpose of that final rule and this final rule are different. Part 810 controls the export of unclassified nuclear technology and assistance, and is one of the export rules that may apply to contractors. It was revised to, among other things, reflect current global civil nuclear trade practices. The purpose of this rule final is to direct DOE contractors to seek guidance from and to communicate with export licensing officers at export licensing agencies regarding export rules such as 10 CFR part 810. No change was made to the text as a result of this comment.

26. Comment: Two respondents stated that the meaning of ''transfer'' is not clear.

Response: References to ''transfers'' have been removed from the final rule.

27. Comment: One respondent stated that the list of items to be transferred that are subject to the Notice is ambiguous.

Response: The Export Restriction Notice has been removed from the rule.

28. Comment: One respondent pointed out that DOE cites obsolete and unavailable references with regard to DoD directives. For instance, DOE lists DOE Order 580.1A which directs the reader to follow requirements in a DoD Demilitarization Manual 4160.21–M–1, that was cancelled and replaced. In addition, the replacement (DoD 4160.28–M series) directs users to obtain disposal guidance for ITAR items from Web sites that are available only to DoD components or those with .mil email addresses.

Response: References to specific DOE Orders in the rule have been removed. References in the NOPR were current at the time that it was published.

29. Comment: Six respondents recommended that the rule more closely follow the DoD example in the revised DFARS.

Response: The final rule has been revised consistent with June 17, 2013, changes to sections 225.79 and 252.225–7048 of the DFARS and the DFARS PGI–225.

30. Comment: One respondent disagreed with the implication in the Export Restriction Notice that all items are subject to export controls.

Response: The Export Restriction Notice has been removed from the final rule. As noted above, the phrase ''subject to export controls'' has been removed from the Export Clauses.

III. Procedural Requirements

A. Review Under Executive Orders 12866 and 13563

Today's regulatory action has been determined not to be a ''significant regulatory action'' under Executive Order 12866, ''Regulatory Planning and Review,'' (58 FR 51735, October 4, 1993). Accordingly, this rule is not subject to review under the Executive Order by the Office of Information and Regulatory Affairs (OIRA) of the Office of Management and Budget (OMB).

DOE has also reviewed this regulation pursuant to Executive Order 13563, issued on January 18, 2011 (76 FR 3281 (Jan. 21, 2011)). Executive Order 13563 is supplemental to, and explicitly reaffirms the principles, structures, and definitions governing, regulatory review established in Executive Order 12866. To the extent permitted by law, agencies are required by Executive Order 13563 to: (1) Propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

DOE emphasizes as well that Executive Order 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, the Office of Information and Regulatory Affairs has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. DOE believes that today's final rule is consistent with these principles, including the requirement that, to the extent permitted by law, agencies adopt a regulation only upon a reasoned determination that its benefits justify its costs and, in choosing among alternative regulatory approaches, those approaches maximize net benefits.

B. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, ''Civil Justice Reform,'' 61 FR 4729 (February 7, 1996), imposes on Executive agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; and (3) provide a clear legal standard for affected conduct rather than a general standard and promote simplification and burden reduction.

With regard to the review required by section 3(a), section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) Clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law; these proposed regulations meet the relevant standards of Executive Order 12988.

C. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.)* requires preparation of a regulatory flexibility analysis for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.

As required by Executive Order 13272, ''Proper Consideration of Small Entities in Agency Rulemaking,'' 67 FR 53461 (August 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the rulemaking process. 68 FR 7990 (February 19, 2003), DOE has made its procedures and policies available on the Office of the General Counsel's Web site (*http://energy.gov/gc/office-general-counsel*).

DOE certifies that this rule would not have a significant impact on a substantial number of small entities because the rule is intended only to recognize existing export control compliance obligations and to clarify the role of DOE and its contracting officers in relation to these requirements. The rule itself does not impose any new requirements on manufacturers. In addition, DOE notes that the reporting requirements referenced in the proposed rule have been eliminated from the final rule for the reasons discussed in response to the comments received on this issue. DOE transmitted this certification to the Small Business Administration (SBA) as required by 5 U.S.C. 605(b).

D. Review Under the Paperwork Reduction Act

This final rule does not impose a collection of information requirement subject to the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* DOE's procurement reporting and recordkeeping burdens have been approved under OMB Control No. 1910–4100.

E. Review Under the National Environmental Policy Act

DOE has concluded that promulgation of this final rule falls into a class of actions which would not individually or cumulatively have significant impact on the human environment, as determined by DOE's regulations (10 CFR part 1021, subpart D) implementing the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*). Specifically, this final rule is categorically excluded from NEPA review because the amendments to the DEAR are strictly procedural (categorical exclusion A6). Therefore, this final rule does not require an environmental impact statement or environmental assessment pursuant to NEPA.

F. Review Under Executive Order 13132

Executive Order 13132, 64 FR 43255 (August 4, 1999), imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. Agencies are required to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and carefully assess the necessity for such actions. DOE has examined today's rule and has determined that it does not preempt State law and does not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. No further action is required by Executive Order 13132.

G. Review Under the Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) generally requires a Federal agency to perform a detailed assessment of costs and benefits of any rule imposing a Federal Mandate with costs to State, local or tribal governments, or to the private sector, of $100 million or more. This rulemaking does not impose a Federal mandate on State, local or tribal governments or on the private sector.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277), requires Federal agencies to issue a Family Policymaking Assessment for any rule or policy that may affect family well being. This rule will have no impact on family well-being. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 13211

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'', 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to the Office of Information and Regulatory Affairs (OIRA), Office of Management and Budget, a Statement of Energy Effects for any significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgates or is expected to lead to promulgation of a final rule, and that: (1) Is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (3) is designated by the Administrator of OIRA as a significant energy action. For any proposed significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution and use. Today's rule is not a significant energy action. Accordingly, DOE has not prepared a Statement of Energy Effects.

J. Review Under the Treasury and General Government Appropriations Act, 2001

The Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for agencies to review most disseminations of information to the public under implementing guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (February 22, 2002), and DOE's guidelines were published at 67 FR 62446 (October 7, 2002). DOE has reviewed today's notice under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13609

Executive Order 13609 of May 1, 2012, ''Promoting International Regulatory Cooperation,'' requires that, to the extent permitted by law and consistent with the principles and requirements of Executive Order 13563 and Executive Order 12866, each Federal agency shall:

(a) If required to submit a Regulatory Plan pursuant to Executive Order 12866, include in that plan a summary of its international regulatory cooperation activities that are reasonably anticipated to lead to significant regulations, with an explanation of how these activities advance the purposes of Executive Order 13563 and this order;

(b) Ensure that significant regulations that the agency identifies as having significant international impacts are designated as such in the Unified Agenda of Federal Regulatory and Deregulatory Actions, on RegInfo.gov, and on Regulations.gov;

(c) In selecting which regulations to include in its retrospective review plan, as required by Executive Order 13563, consider:

(i) Reforms to existing significant regulations that address unnecessary differences in regulatory requirements between the United States and its major trading partners, consistent with section 1 of this order, when stakeholders provide adequate information to the agency establishing that the differences are unnecessary; and

(ii) Such reforms in other circumstances as the agency deems appropriate; and

(d) For significant regulations that the agency identifies as having significant international impacts, consider, to the extent feasible, appropriate, and consistent with law, any regulatory approaches by a foreign government that the United States has agreed to consider under a regulatory cooperation council work plan.

DOE has reviewed this final rule under the provisions of Executive Order 13609 and determined that the rule complies with all requirements set forth in the order.

L. Approval by the Office of the Secretary of Energy

The Office of the Secretary of Energy has approved issuance of this final rule.

M. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule prior to its effective date. The report will state that it has been determined that the rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 48 CFR Parts 925, 952 and 970

Government procurement.

Issued in Washington, DC, on October 8, 2015.

Patrick Ferraro,

Director, Office of Acquisition Management, Department of Energy.

For reasons set out in the preamble, the DOE is amending Chapter 9 of Title 48 of the Code of Federal Regulations as set forth below.

PART 925—FOREIGN ACQUISITION

■ 1. The authority citation for part 925 continues to read as follows:

Authority: 42 U.S.C. 7101 *et seq.,* and 50 U.S.C. 2401 *et seq.*

■ 2. Subpart 925.71 is added to part 925 to read as follows:

Subpart 925.71—Export Control

Subpart 925.71—Export Control

925.7100 Scope of subpart.

This subpart implements Department of Energy (DOE) requirements for contractors concerning compliance with U.S. export control laws and regulations.

925.7101 Policy.

(a) DOE and its contractors must comply with all applicable U.S. export control laws and regulations.

(b) Export control laws and regulations include, but are not limited to, the Atomic Energy Act of 1954 (42 U.S.C. 2011 *et seq.*), as amended; the Arms Export Control Act (22 U.S.C. 2751 *et seq.*); the Export Administration Act of 1979 (50 U.S.C. app. 2401 *et seq.*), as continued under the International Emergency Economic Powers Act (Title II of Pub. L. 95–223, 91 Stat. 1626, October 28, 1977; 50 U.S.C. 1701 *et seq.*); Trading with the Enemy Act (50 U.S.C. App. 5(b), as amended by the Foreign Assistance Act of 1961); Assistance to Foreign Atomic Energy Activities (Title 10 of the Code of Federal Regulations (CFR) Part 810); Export Administration Regulations (15 CFR parts 730 through 774); International Traffic in Arms Regulations (22 CFR parts 120 through 130); Export and Import of Nuclear Equipment and Material (10 CFR part 110); and regulations administered by the Office of Foreign Assets Control of the Department of the Treasury (31 CFR parts 500 through 598).

(c) Contractors seeking guidance on how to comply with export control laws and regulations should review the illustrative list of laws and regulations set forth in Clause 952.225–71. Contractors also may contact the agencies responsible for administration of export laws or regulations applicable to a particular export (*e.g.,* Departments of State, Commerce, Treasury and Energy, or the Nuclear Regulatory Commission).

(d) DOE Contracting Officers will not answer contractor questions regarding how to comply with U.S. export laws and regulations. Contracting Officers should direct contractors to the export laws, regulations, and agencies cited in the Export Clause at section 952.225–71 of this subpart.

(e) It is the contractor's responsibility to comply with all applicable export control laws and regulations. This responsibility exists independent of, and is not established or limited by, this subpart.

925.7102 Contract clause.

The Contracting Officer shall insert the clause at 952.225–71, Compliance with Export Control Laws and Regulations (Export Clause), in all solicitations and contracts.

PART 952—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 3. The authority citation for part 952 continues to read as follows:

Authority: 42 U.S.C. 2201; 2282a; 2282b; 2282c; 42 U.S.C. 7101 *et seq.;* 50 U.S.C. 2401 *et seq.*

■ 4. Section 952.225–71 is added to read as follows:

952.225–71 Compliance with export control laws and regulations (Export Clause)

As prescribed in 925.7102, use the following clause:

COMPLIANCE WITH EXPORT CONTROL LAWS AND REGULATIONS (NOV 2015)

(a) The Contractor shall comply with all applicable export control laws and regulations.

(b) The Contractor's responsibility to comply with all applicable export control laws and regulations exists independent of, and is not established or limited by, the information provided by this clause.

(c) Nothing in the terms of this contract adds to, changes, supersedes, or waives any of the requirements of applicable Federal laws, Executive Orders, and regulations, including but not limited to—

(1) The Atomic Energy Act of 1954 (42 U.S.C. 2011 *et seq.*), as amended;

(2) The Arms Export Control Act (22 U.S.C. 2751 *et seq.*);

(3) The Export Administration Act of 1979 (50 U.S.C. app. 2401 *et seq.*), as continued under the International Emergency Economic Powers Act (Title II of Pub. L. 95–223, 91 Stat. 1626, October 28, 1977; 50 U.S.C. 1701 *et seq.*);

(4) Trading with the Enemy Act (50 U.S.C. App. 5(b), as amended by the Foreign Assistance Act of 1961);

(5) Assistance to Foreign Atomic Energy Activities (10 CFR part 810);

(6) Export and Import of Nuclear Equipment and Material (10 CFR part 110);

(7) International Traffic in Arms Regulations (ITAR) (22 CFR parts 120 through 130);

(8) Export Administration Regulations (EAR) (15 CFR Parts730 through 774); and

(9) The regulations administered by the Office of Foreign Assets Control of the Department of the Treasury (31 CFR parts 500 through 598).

(d) In addition to the Federal laws and regulations cited above, National Security Decision Directive (NSDD) 189, National Policy on the Transfer of Scientific, Technical, and Engineering Information, establishes a national policy that, to the maximum extent possible, the products of fundamental research shall remain unrestricted. NSDD 189 provides that no restrictions may be placed upon the conduct or reporting of federally funded fundamental research that has not received national security classification, except as provided in applicable U.S. statutes. As a result, contracts confined to the performance of unclassified fundamental research generally do not involve any export-controlled activities.

NSDD 189 does not take precedence over statutes. NSDD 189 does not exempt any research from statutes that apply to export controls such as the Atomic Energy Act, as amended; the Arms Export Control Act; the Export Administration Act of 1979, as amended; or the U.S. International Emergency Economic Powers Act, or regulations that implement parts of those statutes (*e.g.,* the ITAR, the EAR, 10 CFR part 110 and 10 CFR part 810). Thus, if items (*e.g.,* commodities, software or technologies) that are controlled by U.S. export control laws or regulations are used to conduct research or are generated as part of the research efforts, export control laws and regulations apply to the controlled items.

(e) The Contractor shall include the substance of this clause, including this paragraph (e), in all solicitations and subcontracts.

PART 970—DOE MANAGEMENT AND OPERATING CONTRACTS

■ 5. The authority citation for part 970 continues to read as follows:

Authority: 42 U.S.C. 2201; 2282a; 2282b; 2282c; 42 U.S.C. 7101 *et seq.;* 50 U.S.C. 2401 *et seq.*

■ 6. Subpart 970.25 is revised to read as follows:

Subpart 970.25—Foreign Acquisition

Subpart 970.25—Foreign Acquisition

970.2570 Buy American Act.

970.2570–1 Contract clause.

Contracting officers shall insert the clauses at 48 CFR 52.225–1, Buy American Act—Supplies, and 48 CFR 52.225–9, Buy American Act—Construction Materials, in management and operating contracts. The clause at 48 CFR 52.225–1 shall be modified in paragraph (d) of this section by substituting the word ''use'' for the word ''deliver.''

970.2571 Export control.

970.2571–1 Scope of subpart.

This subpart implements DOE requirements for DOE management and operating contractors concerning compliance with U.S. export control laws and regulations.

970.2571–2 Policy.

(a) DOE and its contractors must comply with all applicable export control laws and regulations.

(b) Export control laws and regulations include, but are not limited to, the Atomic Energy Act of 1954, as amended; the Arms Export Control Act (22 U.S.C. 2751 *et seq.*); the Export Administration Act of 1979 (50 U.S.C. app. 2401 *et seq.*), as continued under the International Emergency Economic Powers Act (Title II of Pub. L. 95–223, 91 Stat. 1626, October 28, 1977; 50 U.S.C. 1701 *et seq.*); Trading with the Enemy Act (50 U.S.C. App. 5(b), as amended by the Foreign Assistance Act of 1961); Assistance to Foreign Atomic Energy Activities (Title 10 of the Code of Federal Regulations (CFR) Part 810);

Export Administration Regulations (15 CFR parts 730 through 774); International Traffic in Arms Regulations (22 CFR parts 120 through 130); Export and Import of Nuclear Equipment and Material (10 CFR part 110); and regulations administered by the Office of Foreign Assets Control of the Department of the Treasury (31 CFR parts 500 through 598).

(c) Contractors seeking guidance on how to comply with export control requirements should review the illustrative list of laws and regulations applicable to the export of unclassified information, materials, technology, equipment or software set forth in clause 970.5225–1. Contractors also may contact the agencies responsible for administration of export laws and regulations applicable to a particular export (*e.g.,* Departments of State, Commerce, Treasury and Energy, or the Nuclear Regulatory Commission).

(d) The contracting officer will not answer any questions a contractor may ask regarding how to comply with export regulations. If asked, the contracting officer should direct the contractor to export regulations and agencies cited in the Export Clause at 970.5225–1.

(e) It is the contractor's responsibility to comply with all applicable U.S. export control laws and regulations. This responsibility exists independent of, and is not established or limited by, this subpart.

970.2571–3 Contract clause.

The Contracting Officer shall insert the clause at 970.5225–1, Compliance with Export Control Laws and Regulations (Export Clause), in all solicitations and contracts.

Subpart 970.52—Solicitation Provisions and Contract Clauses for Management and Operating Contracts

■ 7. Section 970.5225–1 is added to read as follows:

970.5225–1 Compliance with export control laws and regulations (Export Clause).

As prescribed in 970.2571–3, use the following clause:

COMPLIANCE WITH EXPORT CONTROL LAWS AND REGULATIONS (NOV 2015)

(a) The Contractor shall comply with all applicable U.S. export control laws and regulations.

(b) The Contractor's responsibility to comply with all applicable laws and regulations exists independent of, and is not established or limited by, the information provided by this clause.

(c) Nothing in the terms of this contract adds to, changes, supersedes, or waives any of the requirements of applicable Federal laws, Executive Orders, and regulations, including but not limited to—

(1) The Atomic Energy Act of 1954, as amended;

(2) The Arms Export Control Act (22 U.S.C. 2751 *et seq.*);

(3) The Export Administration Act of 1979 (50 U.S.C. app. 2401 *et seq.*), as continued under the International Emergency Economic Powers Act (Title II of Pub. L. 95–223, 91 Stat. 1626, October 28, 1977; 50 U.S.C. 1701 *et seq.*);

(4) Trading with the Enemy Act (50 U.S.C. App. 5(b), as amended by the Foreign Assistance Act of 1961);

(5) Assistance to Foreign Atomic Energy Activities (10 CFR part 810);

(6) Export and Import of Nuclear Equipment and Material (10 CFR part 110);

(7) International Traffic in Arms Regulations (ITAR) (22 CFR parts 120 through 130);

(8) Export Administration Regulations (EAR) (15 CFR parts 730 through 774); and

(9) Regulations administered by the Office of Foreign Assets Control (31 CFR parts 500 through 598).

(d) In addition to the Federal laws and regulations cited above, National Security Decision Directive (NSDD) 189, National Policy on the Transfer of Scientific, Technical, and Engineering Information establishes a national policy that, to the maximum extent possible, the products of fundamental research shall remain unrestricted. NSDD 189 provides that no restrictions may be placed upon the conduct or reporting of federally funded fundamental research that has not received national security classification, except as provided in applicable U.S. statutes. As a result, contracts confined to the performance of unclassified fundamental research generally do not involve any export-controlled activities.

NSDD 189 does not take precedence over statutes. NSDD 189 does not exempt any research from statutes that apply to export controls such as the Atomic Energy Act, as amended; the Arms Export Control Act; the Export Administration Act of 1979, as amended; or the U.S. International Emergency Economic Powers Act; or the regulations that implement those statutes (*e.g.,* the ITAR, the EAR, 10 CFR part 110 and 10 CFR part 810). Thus, if items (*e.g.,* commodities, software or technologies) that are controlled by U.S. export control laws or regulations are used to conduct research or are generated as part of the research efforts, the export control laws and regulations apply to the controlled items.

(e) The Contractor shall include the substance of this clause, including this paragraph (e), in all solicitations and subcontracts.

BILLING CODE 6450–01–P

Proposed Rules

Federal Register

Vol. 80, No. 205

Friday, October 23, 2015

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF ENERGY

10 CFR Parts 429 and 431

[Docket No. EERE–2013–BT–STD–0022]

RIN 1904–AD00

Energy Conservation Program: Energy Conservation Standards for Refrigerated Beverage Vending Machines

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Reopening of public comment period.

SUMMARY: On August 19, 2015, the U.S. Department of Energy (DOE) published a notice of proposed rulemaking (NOPR) in the **Federal Register** regarding energy conservation standards for refrigerated beverage vending machines (BVM ECS NOPR). DOE also held a public meeting on September 29, 2015. The comment period was scheduled to end October 19, 2015. After receiving a request for additional time to prepare and submit comments, DOE has decided to reopen the comment period for submitting comments regarding the BVM ECS NOPR. The comment period is reopened through November 23, 2015.

DATES: DOE will accept comments, data, and information in response to the NOPR received no later than November 23, 2015.

ADDRESSES: Any comments submitted must identify the NOPR for Energy Conservation Standards for Refrigerated Beverage Vending Machines, and provide docket number EERE–2013–BT–STD–0022 and/or regulatory information number (RIN) number 1904–AD00. Comments may be submitted using any of the following methods:

1. *Federal eRulemaking Portal: www.regulations.gov.* Follow the instructions for submitting comments.

2. *Email: BVM2013STD0022@ee.doe.gov.* Include the docket number EERE–2013–BT–STD–0022 and/or RIN 1904–AD00 in the subject line of the message.

3. *Mail:* Ms. Brenda Edwards, U.S. Department of Energy, Building Technologies Program, Mailstop EE–5B, 1000 Independence Avenue SW., Washington, DC, 20585–0121. If possible, please submit all items on a CD. It is not necessary to include printed copies.

4. *Hand Delivery/Courier:* Ms. Brenda Edwards, U.S. Department of Energy, Building Technologies Program, 950 L'Enfant Plaza SW., Suite 600, Washington, DC 20024. Telephone: (202) 586–2945. If possible, please submit all items on a CD. It is not necessary to include printed copies.

Docket: The docket, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at regulations.gov. All documents in the docket are listed in the regulations.gov index. However, some documents listed in the index, such as those containing information that is exempt from public disclosure, may not be publicly available.

A link to the docket Web page can be found at: [*www.regulations.gov/#!docketDetail;D=EERE-2013-BT-STD-0022*]. This Web page contains a link to the docket for this notice on the regulations.gov site. The regulations.gov Web page contains instructions on how to access all documents, including public comments, in the docket.

For further information on how to submit a comment or review other public comments and the docket, contact Ms. Brenda Edwards at (202) 586–2945 or by email: *Brenda.Edwards@ee.doe.gov.*

FOR FURTHER INFORMATION CONTACT: John Cymbalsky, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Program, EE–5B, 1000 Independence Avenue SW., Washington, DC 20585–0121. Telephone: (202) 287–1692. Email *John.Cymbalsky@ee.doe.govmailto:.*

For legal issues, please contact Ms. Sarah Butler, U.S. Department of Energy, Office of General Counsel, GC–33, 1000 Independence Avenue SW., Washington, DC 20585–0121. Telephone: (202) 586–1777. Email: *Sarah.Butler@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: On August 19, 2015, DOE published a notice of proposed rulemaking (NOPR) in the **Federal Register** regarding energy conservation standards for refrigerated beverage vending machines (BVM ECS NOPR). 80 FR 50462. The notice provided for the submission of written comments by October 19, 2015, and oral comments were also accepted at a public meeting held on September 29, 2015.

DOE received a request from several stakeholders requesting additional time to prepare and submit comments (Docket No. EERE–2013–BT–STD–0022, Royal Vendors, No. 46 at p. 1, NAMA, No. 44 at p. 1, and AMS, No. 43 at p. 1). In response to these requests, DOE is reopening the public comment period to allow interested parties to provide DOE with written comments and data in response to the BVM ECS NOPR.

DOE will consider any comments in response to the BVM ECS NOPR received by midnight of November 23, 2015, and deems any comments received by that time to be timely submitted.

Issued in Washington, DC, on October 15. 2015.

Kathleen B. Hogan,

Deputy Assistant Secretary for Energy Efficiency, Energy Efficiency and Renewable Energy.

[Docket No. EERE–2014–BT–STD–0031]

RIN 1904–AD20

Energy Conservation Program: Energy Conservation Standards for Residential Furnaces

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Reopening of public comment period.

SUMMARY: On September 14, 2015, the U.S. Department of Energy (DOE) published a notice of data availability (NODA) in the **Federal Register** regarding energy conservation standards for residential furnaces (RF ECS NODA). The comment period was scheduled to

end October 14, 2015. After receiving a request for additional time to prepare and submit comments, DOE has decided to reopen the comment period for submitting comments regarding the RF ECS NODA. The comment period is reopened through November 6, 2015.

DATES: DOE will accept comments, data, and information in response to the NODA received no later than November 6, 2015.

ADDRESSES: Any comments submitted must identify the NODA for Energy Conservation Standards for Residential Furnaces, and provide docket number EERE–2014–BT–STD–0031 and/or regulatory information number (RIN) number 1904–AD20. Comments may be submitted using any of the following methods:

1. *Federal eRulemaking Portal: www.regulations.gov.* Follow the instructions for submitting comments.

2. *Email: ResFurnaces2014STD0031@ee.doe.gov* Include the docket number EERE–2014–BT–STD–0031 and/or RIN 1904–AD20 in the subject line of the message.

3. *Mail:* Ms. Brenda Edwards, U.S. Department of Energy, Building Technologies Program, Mailstop EE–2J, 1000 Independence Avenue SW., Washington, DC 20585–0121. If possible, please submit all items on a CD. It is not necessary to include printed copies.

4. *Hand Delivery/Courier:* Ms. Brenda Edwards, U.S. Department of Energy, Building Technologies Program, 950 L'Enfant Plaza SW., Suite 600, Washington, DC 20024. Telephone: (202) 586–2945. If possible, please submit all items on a CD. It is not necessary to include printed copies.

Docket: The docket, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at regulations.gov. All documents in the docket are listed in the regulations.gov index. However, some documents listed in the index, such as those containing information that is exempt from public disclosure, may not be publicly available.

A link to the docket Web page can be found at: [*www.regulations.gov/#!docketDetail;D=EERE-2014-BT-STD-0031*]. This Web page contains a link to the docket for this notice on the regulations.gov site. The regulations.gov Web page contains instructions on how to access all documents, including public comments, in the docket.

For further information on how to submit a comment or review other public comments and the docket, contact Ms. Brenda Edwards at (202) 586–2945 or by email: *Brenda.Edwards@ee.doe.gov.*

FOR FURTHER INFORMATION CONTACT: John Cymbalsky, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Program, EE–5B, 1000 Independence Avenue SW., Washington, DC 20585–0121. Telephone: (202) 287–1692. Email *John.Cymbalsky@ee.doe.govmailto:.*

For legal issues, please contact Ms. Johanna Hariharan, U.S. Department of Energy, Office of General Counsel, GC–33, 1000 Independence Avenue SW., Washington, DC 20585–0121. Telephone: (202) 287–6307. Email: *Johanna.Hariharan@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: On September 14, 2015, DOE published a notice of data availability (NODA) in the **Federal Register** regarding energy conservation standards for residential furnaces (RF ECS NODA). 80 FR 55038. The notice requested that interested parties submit written comments by October 14, 2015.

DOE received a joint request from the American Gas Association (AGA) and the American Public Gas Association (APGA) requesting additional time to prepare and submit comments (Docket No. EERE–2014–BT–STD–0031, AGA/APGA, No. 168 at p. 2). In response to this request, DOE is reopening the public comment period to allow interested parties to provide DOE with written comments and data in response to the RF ECS NODA.

DOE will consider any comments in response to the RF ECS NODA received by midnight of November 6, 2015, and deems any comments received by that time to be timely submitted.

Issued in Washington, DC, on October 15, 2015.

Kathleen B. Hogan,

Deputy Assistant Secretary for Energy Efficiency, Energy Efficiency and Renewable Energy.

BILLING CODE 6450–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2015–4204; Directorate Identifier 2015–NM–001–AD]

RIN 2120–AA64

Airworthiness Directives; Airbus Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain Airbus Model A300 B4–600, B4–600R, and F4–600R series airplanes, and Model A300 C4–605R Variant F airplanes (collectively called Model A300–600 series airplanes) modified by a particular supplemental type certificate (STC). This proposed AD was prompted by a report of chafing found on the overflow sensor harness of the surge tank, and subsequent contact between the electrical wiring and fuel tank structure. This proposed AD would require a one-time inspection for damage of the outer tank of the overflow sensor harness, and repair if necessary. This proposed AD would also require modification of the sensor harness. We are proposing this AD to prevent chafing of the harness and subsequent contact between the electrical wiring and fuel tank structure, which could result in electrical arcing and a fuel tank explosion.

DATES: We must receive comments on this proposed AD by December 7, 2015.

ADDRESSES: You may send comments using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

Federal eRulemaking Portal: Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.

Fax: (202) 493–2251.

Mail: U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

Hand Delivery: U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact Simmonds Precision Products, Inc., A UTC Aerospace Company, 100 Panton Road, Vergennes, Vermont 05491; phone 802–877–2911; fax 802–877–4444; Internet *http://www.utcaerospacesystems.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–4204; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Operations office (telephone (800) 647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:
Marc Ronell, Aerospace Engineer, Boston Aircraft Certification Office, FAA, 12 New England Executive Park, Burlington, MA 01803; phone: 781–238–7776; fax: 781–238–7170; email: *marc.ronell@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2015–4204; Directorate Identifier 2015–NM–001–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD based on those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, issued EASA Airworthiness Directive 2013–0193, dated August 23, 2013 (referred to after this as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for all Airbus Model A300 series airplanes and all Model A300–600 series airplanes.

The MCAI corresponds to FAA AD 2015–03–03, Amendment 39–18099 (80 FR 11101, March 2, 2015), which applies to Airbus Model A300 series airplanes and Model A300–600 series airplanes, all serial numbers, except for airplanes modified by supplemental type certificate ST00092BO (*http://rgl.faa.gov/Regulatory_and_Guidance_Library/rgstc.nsf/0/D41C5AE8E46B4901862574900069E004?OpenDocument&Highlight=st00092bo*).

In AD 2015–03–03, Amendment 39–18099 (80 FR 11101, March 2, 2015), we explained that airplanes that have had the in-tank fuel quantity system modified by STC ST00092BO cannot accomplish the actions required by AD 2015–03–03 by using Airbus Service Bulletin A300–28–6109, Revision 01, dated December 20, 2013.

We also stated that we were considering separate rulemaking to require the procedures and compliance time specified in UTC Aerospace Systems Service Bulletin 300723–28–03 (V–1577), dated October 10, 2014, for airplanes modified by STC ST00092BO. We now have determined that further rulemaking is indeed necessary, and this proposed AD follows from that determination.

Related Service Information Under 1 CFR Part 51

UTC Aerospace Systems has issued Service Bulletin 300723–28–03 (V–1577), Revision 01, dated July 20, 2015. The service information describes procedures for an inspection for damage of the outer tank of the overflow sensor harness, repair, and modification of the sensor harness. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section of this AD.

FAA's Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of these same type designs.

Proposed AD Requirements

This proposed AD would require accomplishing the actions specified in the service information described previously.

Costs of Compliance

We estimate that this proposed AD affects 65 airplanes of U.S. registry.

We also estimate that it would take about 3 work-hours per product to comply with the inspections required by this proposed AD. The average labor rate is $85 per work-hour. Based on these figures, we estimate the cost of this inspection proposed by this AD on U.S. operators to be $16,575, or $255 per product.

We estimate that it takes about 11 work-hours per product to comply with the modification requirements of this AD. The average labor rate is $85 per work-hour. Required parts cost about $100 per product. Based on these figures, we estimate the cost of this modification on U.S. operators to be $67,275, or $1,035 per product.

We have received no definitive data that would enable us to provide cost estimates for the on-condition actions specified in this proposed AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII, Part A, Subpart III, Section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866;

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);

3. Will not affect intrastate aviation in Alaska; and

4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Airbus: Docket No. FAA–2015–4204; Directorate Identifier 2015–NM–001–AD.

(a) Comments Due Date

We must receive comments by December 7, 2015.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the Airbus airplanes specified in paragraphs (c)(1), (c)(2), (c)(3), and (c)(4) of this AD; certificated in any category; modified by Simmonds Precision Products, Inc., supplemental type certificate (STC) ST00092BO (*http://rgl.faa.gov/Regulatory_and_Guidance_Library/rgstc.nsf/0/D41C5AE8E46B4901862v574900069E004?OpenDocument&Highlight=st00092bo*).

(1) Model A300 B4–601, B4–603, B4–620, and B4–622 airplanes.

(2) Model A300 B4–605R and B4–622R airplanes.

(3) Model A300 F4–605R and F4–622R airplanes.

(4) Model A300 C4–605R Variant F airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 28, Fuel.

(e) Reason

This AD was prompted by a report of chafing found on the overflow sensor harness of the surge tank, and subsequent contact between the electrical wiring and fuel tank structure. We are issuing this AD to prevent chafing of the harness and subsequent contact between the electrical wiring and fuel tank structure, which could result in electrical arcing and a fuel tank explosion.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) One-Time Inspection and Repair

Within 12 months after the effective date of this AD: Do the actions required by paragraphs (g)(1), (g)(2), and (g)(3) of this AD, in accordance with the Accomplishment Instructions of UTC Aerospace Systems Service Bulletin 300723–28–03 (V–1577), Revision 01, dated July 20, 2015.

(1) Perform a one-time general visual inspection for damage of the outer tank sensor harness, and if any damage is found on the expando sleeving, before further flight, do a detailed inspection of the underlying wires for exposed conductor wires. If any exposed conductor wire is found, before further flight, replace the outer wing harness assembly.

(2) Install new brackets and re-route the surge tank overflow sensor harness.

(3) Modify the harness protection.

(h) Credit for Previous Actions

This paragraph provides credit for actions required by paragraph (g) of this AD, if those actions were performed before the effective date of this AD using UTC Aerospace Systems Service Bulletin 300723–28–03 (V–1577), dated October 10, 2014. This service information is not incorporated by reference in this AD.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Boston Aircraft Certification Office (ACO) ANE–150, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (j)(1) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(j) Related Information

(1) For more information about this AD, contact Marc Ronell, Aerospace Engineer, Boston ACO, FAA, 12 New England Executive Park, Burlington, MA 01803; phone: 781–238–7776; fax: 781–238–7170; email: *marc.ronell@faa.gov.*

(2) For service information identified in this AD, contact Simmonds Precision Products, Inc., A UTC Aerospace Company, 100 Panton Road, Vergennes, Vermont 05491; phone 802–877–2911; fax 802–877–4444; Internet *http://www.utcaerospacesystems.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on October 15, 2015.

Jeffrey E. Duven,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Engine Alliance Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain Engine Alliance (EA) GP7270 turbofan engines. This proposed AD was prompted by reports of the installation of non-conforming honeycomb seals in the high-pressure compressor (HPC) adjacent to the HPC rotor stage 2 to 5 spool and stage 7 to 9 spool. This proposed AD would require removal and replacement of the affected HPC rotor stage 2 to 5 and stage 7 to 9 spools. We are proposing this AD to prevent failure of the HPC rotor stage 2 to 5 and stage 7 to 9 spools, which could lead to uncontained engine failure and damage to the airplane.

DATES: We must receive comments on this proposed AD by December 22, 2015.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact Engine Alliance, 400 Main St., East Hartford, CT 06108, M/S 169–10, phone: 800–565–0140; email: *help24@pw.utc.com;*

Web site: *www.enginealliance portal.com.* You may view this service information at the FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–3713; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Martin Adler, Aerospace Engineer, Engine & Propeller Directorate, FAA, 12 New England Executive Park, Burlington, MA 01803; phone: 781–238–7157; fax: 781–238–7199; email: *martin.adler@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2015–3713; Directorate Identifier 2015–NE–23–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We learned from the manufacturer that non-conforming honeycomb seals were installed in the affected HPCs adjacent to the HPC rotor stage 2 to 5 spools and stage 7 to 9 spools. The honeycomb seals in the HPC were machined to an incorrect radial height which resulted in reduced clearances between the honeycomb and the rotating spools. This error could lead to cracks on the spools prior to reaching their full life. This condition, if not corrected, could result in failure of the HPC rotor stage 2 to 5 and stage 7 to 9 spools, which could lead to uncontained engine failure, and damage to the airplane.

Relevant Service Information Under 1 CFR Part 51

Engine Alliance has issued EA Service Bulletin (SB) No. EAGP7–72–327, dated July 21, 2015; and SB No. EAGP7–72–328, dated July 21, 2015. The SBs describe procedures for removal and replacement of HPC rotor stage 2 to 5 spools and HPC rotor stage 7 to 9 spools, respectively. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section of this document.

FAA's Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require removal and replacement of the affected HPC rotor stage 2 to 5 and stage 7 to 9 spools.

Costs of Compliance

We estimate that this proposed AD affects zero engines installed on airplanes of U.S. registry. The average labor rate is $85 per hour. Based on these figures, we estimate the cost of this proposed AD on U.S. operators to be $0.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska to the extent that it justifies making a regulatory distinction, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Engine Alliance: Docket No. FAA–2015–3713; Directorate Identifier 2015–NE–23–AD.

(a) Comments Due Date

We must receive comments by December 22, 2015.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Engine Alliance (EA) GP7270 turbofan engines with one or both of the following installed:

(1) A high-pressure compressor (HPC) rotor stage 2 to 5 spool, part number (P/N) 382–104–807–0, with a serial number (S/N) listed in EA Service Bulletin (SB) No. EAGP7–72–327, dated July 21, 2015; or

(2) an HPC rotor stage 7 to 9 spool, P/N 2031M90G04, 2031M90G05, or 2031M90G07, with an S/N listed in EA SB No. EAGP7–72–328, dated July 21, 2015.

(d) Unsafe Condition

This AD was prompted by reports of the installation of non-conforming honeycomb seals in the HPC adjacent to the HPC rotor stage 2 to 5 spool and stage 7 to 9 spool. We are issuing this AD to prevent failure of the HPC rotor stage 2 to 5 spools and stage 7 to 9 spools, which could lead to uncontained engine failure and damage to the airplane.

(e) Compliance

Comply with this AD within the compliance times specified, unless already done. Within 30 days after the effective date of this AD or before accumulating 2,100 engine cycles since the last disassembly of the compressor module of the engine, whichever occurs later:

(1) For engines with an HPC rotor stage 2 to 5 spool, P/N 382–104–807–0, installed with a S/N listed in EA SB No. EAGP7–72–327, dated July 21, 2015, do the following:

(i) Remove the HPC rotor stage 2 to 5 spool from service and replace with a part eligible for installation.

(ii) Remove and replace the honeycomb seals on the HPC stage 5 vanes.

(2) For engines with an HPC rotor stage 7 to 9 spool, P/N 2031M90G04, 2031M90G05, or 2031M90G07 installed with an S/N listed in EA SB No. EAGP7–72–328, dated July 21, 2015, do the following:

(i) Remove the HPC rotor stage 7 to 9 spool from service and replace with a part eligible for installation.

(ii) Remove and replace the honeycomb seals on the HPC stage 6, stage 7, and stage 8 vanes.

(f) Alternative Methods of Compliance (AMOCs)

The Manager, Engine Certification Office, may approve AMOCs for this AD. Use the procedures found in 14 CFR 39.19 to make your request. You may email your request to: *ANE-AD-AMOC@faa.gov.*

(g) Related Information

(1) For more information about this AD, contact Martin Adler, Aerospace Engineer, Engine & Propeller Directorate, FAA, 12 New England Executive Park, Burlington, MA 01803; phone: 781–238–7157; fax: 781–238–7199; email: *martin.adler@faa.gov.*

(2) EA SBs No. EAGP7–72–327, dated July 21, 2015; and No. EAGP7–72–328, dated July 21, 2015 can be obtained from EA using the contact information in paragraph (g)(3) of this proposed AD.

(3) For service information identified in this AD, contact Engine Alliance, 400 Main St., East Hartford, CT 06108, M/S 169–10, phone: 800–565–0140; email: *help24@pw.utc.com;* Web site: *www.enginealliance portal.com.*

(4) You may view this service information at the FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125.

Issued in Burlington, Massachusetts, on October 16, 2015.

Colleen M. D'Alessandro,

Directorate Manager, Engine & Propeller Directorate, Aircraft Certification Service.

Airworthiness Directives; Airbus Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to supersede Airworthiness Directive (AD) 2012–18–12, for certain Airbus Model A318, A319, and A320 series airplanes. AD 2012–18–12 currently requires modifying the off-wing escape slide (OWS) enclosures on the left-hand (LH) side and right-hand (RH) side of the fuselage. Since we issued AD 2012–18–12, we have received reports that additional OWS part numbers have been affected. This proposed AD would retain the requirements of AD 2012–18–12 and expand the applicability to all Airbus Model A318, A319, and A320 series airplanes. We are proposing this AD to prevent off-wing exits on the LH and RH sides of the fuselage from becoming inoperative, which, during an emergency, could impair the safe evacuation of occupants, possibly resulting in personal injuries.

DATES: We must receive comments on this proposed AD by December 7, 2015.

ADDRESSES: You may send comments by any of the following methods:

- Federal eRulemaking Portal: Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- Fax: 202–493–2251.
- Mail: U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- Hand Delivery: U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For Airbus service information identified in this proposed AD, contact Airbus, Airworthiness Office—EIAS, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email *account.airworth-eas@airbus.com;* Internet *http://www.airbus.com.* For Air Cruisers service information identified in this proposed AD, contact Air Cruisers Company, Cage Code 70167, 1747 State Route 34, Wall Township, NJ 07727–3935; telephone 732–681–3527; fax 732–681–9163; Internet *http://www.zodiacaerospace.com/en/our-activities/aerosafety/zodiac-evacuation-systems.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–4202; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Operations office (telephone 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Sanjay Ralhan, Aerospace Engineer, International Branch, ANM–116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057–3356; telephone 425–227–1405; fax 425–227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2015–4202; Directorate Identifier 2014–NM–016–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD based on those comments.

We will post all comments we receive, without change, to *http://*

www.regulations.gov, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

On August 31, 2012, we issued AD 2012–18–12, Amendment 39–17189 (77 FR 57003, September 17, 2012). AD 2012–18–12 requires actions intended to address an unsafe condition on certain Airbus Model A318, A319, and A320 series airplanes.

Since we issued AD 2012–18–12, Amendment 39–17189 (77 FR 57003, September 17, 2012), we received reports that additional OWS part numbers have been affected which requires expanding the applicability to all Airbus Model A318, A319, and A320 series airplanes.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA Airworthiness Directive 2014–0025R1, dated May 26, 2014 (referred to after this as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition on all Airbus Model A318, A319, and A320 series airplanes. The MCAI states:

> One operator reported a torn out aspirator during scheduled deployment (for on ground testing purposes) of the Left Hand (LH) off-wing [escape] slide (OWS). Investigation results revealed that the aspirator of the OWS system interfered with the extrusion lip of the OWS enclosure during the initial stage of the deployment sequence.
>
> This condition, if not corrected, could lead to an off-wing exit, either LH or Right Hand (RH), becoming unserviceable, which, during an emergency situation, could impair the safe evacuation of occupants, possibly resulting in personal injuries.
>
> To address this potential unsafe condition, Airbus issued Service Bulletin (SB) A320–25–1649 containing modification instructions for certain part number (P/N) OWS enclosures. Consequently, EASA issued [EASA] AD 2010–0210 [(*http://ad.easa.europa.eu/ad/2010-0210*)] which corresponds to FAA AD 2012–18–12, Amendment 39–17189 (77 FR 57003, September 17, 2012)] to require modification of the affected OWS enclosures.
>
> Since that [EASA] AD was issued, several other OWS P/N[s] have been identified as potentially impacted.
>
> For the reason described above, this [EASA] AD retains the requirements of EASA AD 2010–0210, which is superseded, expands the Applicability to all A318, A319 and A320 aeroplanes, and expands the batch of affected P/N[s] prohibited to be installed on an aeroplane.
>
> For the reason described above, EASA issued AD 2014–0025, retaining the requirements of EASA AD 2010–0210, which was superseded, expanding the Applicability to all A318, A319 and A320 aeroplanes, and expanding the batch of affected P/N[s] prohibited to be installed on an aeroplane. That [EASA] AD also retained the requirements of * * * [an AD, which was superseded], which required modification of the OWS and its aspirator.
>
> This [EASA] AD is revised to amend paragraphs (1) and (3) to restore the original applicability of DGAC France AD 2001–380 and EASA AD 2010–0210, respectively, and to correct paragraph (2) to give credit for certain production modifications that were equivalent for the in-service actions previously required by DGAC France AD 2001–380.

You may examine the MCAI in the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–4202.

Related Service Information Under 1 CFR Part 51

Airbus has issued the following service information.

- Airbus Service Bulletin A320–25–1156, Revision 03, dated December 5, 2001. This service information describes procedures for modifying OWS enclosures having part numbers (P/N) D31865–101, D31865–102, D31865–103, D31865–104, D31865–105, D31865–106, D31865–107, or D31865–108 of certain Airbus Model A319 and A320 series airplanes.
- Airbus Service Bulletin A320–25–1265, Revision 01, dated December 5, 2001. This service information describes procedures for modifying and installing the OWS enclosure on the LH and RH sides of the fuselage on certain Airbus Model A319 and A320 series airplanes.
- Airbus Service Bulletin A320–25–1649, dated February 16, 2010. This service information describes procedures for modifying and installing OWS enclosures having part numbers (P/N) D31865–109, D31865–110, D31865–209, or D31865–210, on the LH and RH sides of the fuselage on certain Airbus Model A318, A319, and A320 series airplanes.

Air Cruisers has issued Service Bulletin A320 004–25–84, Revision 4, dated November 9, 2012. This service information describes procedures for modifying LH and RH OWS.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section of this NPRM.

FAA's Determination and Requirements of This Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with the State of Design Authority, we have been notified of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all pertinent information and determined an unsafe condition exists and is likely to exist or develop on other products of the same type design.

Costs of Compliance

We estimate that this proposed AD affects 851 airplanes of U.S. registry.

The actions required by AD 2012–18–12, Amendment 39–17189 (77 FR 57003, September 17, 2012), and retained in this proposed AD take about 14 work-hours per product, at an average labor rate of $85 per work-hour. Required parts cost $0 per product. Based on these figures, the estimated cost of the actions that are required by AD 2012–18–12 is $1,190 per product.

We also estimate that it would take about 48 work-hours per product to comply with the basic requirements of this proposed AD. The average labor rate is $85 per work-hour. Required parts would cost $0 per product. Based on these figures, we estimate the cost of this proposed AD on U.S. operators to be $3,472,080, or $4,080 per product.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII, Part A, Subpart III, Section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866;

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);

3. Will not affect intrastate aviation in Alaska; and

4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by removing Airworthiness Directive (AD) 2012–18–12, Amendment 39–17189 (77 FR 57003, September 17, 2012), and adding the following new AD:

Airbus: Docket No. FAA–2015–4202; Directorate Identifier 2014–NM–016–AD.

(a) Comments Due Date

We must receive comments by December 7, 2015.

(b) Affected ADs

This AD replaces (AD) 2012–18–12, Amendment 39–17189 (77 FR 57003, September 17, 2012).

(c) Applicability

This AD applies to the Airbus airplanes identified in paragraphs (c)(1), (c)(2), and (c)(3) of this AD, certificated in any category, all manufacturer serial numbers.

(1) Model A318–111, –112, –121, and –122 airplanes.

(2) Model A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes.

(3) Model 320–211, –212, –214, –231, –232, and –233 airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/furnishings.

(e) Reason

This AD was prompted by a report of a torn out aspirator due to the aspirator interfering with the extrusion lip of the off-wing escape slide (OWS) enclosure during the initial stage of the deployment sequence. This AD was also prompted by reports that additional OWS part numbers have been affected which requires expanding the applicability to all Airbus Model A318, A319, and A320 series airplanes. We are issuing this AD to prevent off-wing exits on the left-hand (LH) and right-hand (RH) sides of the fuselage from becoming inoperative, which, during an emergency, could impair the safe evacuation of occupants, possibly resulting in personal injuries.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Retained Modification

This paragraph restates the requirements of paragraph (g) of AD 2012–18–12, Amendment 39–17189 (77 FR 57003, September 17, 2012) with no changes. For airplanes equipped with OWS enclosures having part number (P/N) D31865–109, D31865–110, D31865–209, or D31865–210, except as provided by paragraph (i)(1) of this AD: Within 36 months after October 22, 2012, (the effective date of AD 2012–18–12), modify the OWS enclosures and install an OWS enclosure having P/N D31865–309, D31865–311, D31865–310, or D31865–312 on the LH side and RH side of the fuselage, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–25–1649, dated February 16, 2010.

(h) New Modification of Affected OWS Enclosures and Aspirators

For airplanes equipped with an OWS enclosure having P/N D31865–101, D31865–102, D31865–103, D31865–104, D31865–105, D31865–106, D31865–107, or D31865–108, except as provided by paragraph (i)(2) of this AD: Within 36 months after the effective date of this AD, do the actions specified in paragraphs (h)(1) and (h)(2) of this AD.

(1) Modify the OWS enclosures and their aspirators in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–25–1156, Revision 03, dated December 5, 2001.

(2) Install off-wing escape slides having P/N D31865–109, D31865–110, D31865–209, or D31865–210 on the LH side and RH side of the fuselage, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–25–1265, Revision 01, dated December 5, 2001; and accomplish the modification required by paragraph (g) of this AD.

(i) Exceptions to the Requirements of Paragraphs (g) and (h) of This AD

(1) Airplanes having Airbus modification 30088 embodied in production using an OWS enclosure having P/N D31865–111 or D31865–112 are not affected by the requirements of paragraph (g) of this AD, unless a replacement OWS enclosure, having a part number listed in paragraphs (k)(9) through (k)(12) of this AD, has been installed on that airplane since first flight.

(2) Airplanes on which Airbus modifications 24850, 25844, and 27275 have been embodied in production, or on which modifications of the LH and RH OWS enclosures and their aspirators have been accomplished using Airbus Service Bulletin A320–25–1156, Revision 01, dated February 2, 1999, or Revision 2, dated October 26, 1999, and Airbus Service Bulletin A320–25–1265, dated June 6, 2001, are compliant with the modification requirement of paragraph (h) of this AD.

(j) Optional Method of Compliance for Paragraph (g) of This AD

Installing both LH and RH OWS that have been modified in accordance with the Accomplishment Instructions of Air Cruisers Service Bulletin A320 004–25–84, Revision 4, dated November 9, 2012, is an acceptable method of compliance with the modification required by paragraph (g) of this AD.

(k) Part Installation Prohibition

As of the effective date of this AD, do not install on any airplane an OWS enclosure having a part number listed in paragraphs (k)(1) through (k)(12) of this AD, except as required by paragraph (h)(2) of this AD for the OWS enclosures identified in paragraph (h) of this AD.

(1) D31865–101
(2) D31865–102
(3) D31865–103
(4) D31865–104
(5) D31865–105
(6) D31865–106
(7) D31865–107
(8) D31865–108
(9) D31865–109
(10) D31865–110
(11) D31865–209
(12) D31865–210

(l) Credit for Previous Actions

(1) This paragraph provides credit for the actions specified in paragraph (h)(1) of this AD, if those actions were performed before the effective date of this AD using the service information identified in paragraph (l)(1)(i) or (l)(1)(ii) of this AD, which is not incorporated by reference.

(i) Airbus Service Bulletin A320–25–1156, Revision 01, dated February 2, 1999.

(ii) Airbus Service Bulletin A320–25–1156, Revision 02, dated October 26, 1999.

(2) This paragraph provides credit for the actions specified in paragraph (h)(2) of this AD, if those actions were performed before the effective date of this AD using Airbus Service Bulletin A320–25–1265, dated June 6, 2001, which is not incorporated by reference.

(3) This paragraph provides credit for the actions specified in paragraph (j) of this AD, if those actions were performed before the effective date of this AD using the service information identified in paragraph (l)(3)(i), (l)(3)(ii), (l)(3)(iii), or (l)(3)(iv) of this AD, which is not incorporated by reference.

(i) Air Cruisers Service Bulletin A320 004–25–84, dated February 5, 2010.

(ii) Air Cruisers Service Bulletin A320 004–25–84, Revision 1, dated April 9, 2010.

(iii) Air Cruisers Service Bulletin A320 004–25–84, Revision 2, dated February 11, 2011.

(iv) Air Cruisers Service Bulletin A320 004–25–84, Revision 3, dated October 28, 2011.

(m) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Branch, send it to ATTN: Sanjay Ralhan, Aerospace Engineer, International Branch, ANM–116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057–3356; telephone 425–227–1405; fax 425–227–1149 Information may be emailed to: *9-ANM-116-AMOC-REQUESTS@faa.gov.*

(i) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office. The AMOC approval letter must specifically reference this AD.

(ii) AMOCs approved previously for AD 2012–18–12, Amendment 39–17189 (77 FR 57003, September 17, 2012), are approved as AMOCs for the corresponding provisions of paragraph (g) of this AD.

(2) *Contacting the Manufacturer:* As of the effective date of this AD, for any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA); or Airbus's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(n) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) European Aviation Safety Agency (EASA) Airworthiness Directive 2014–0025R1, dated May 26, 2014, for related information. This MCAI may be found in the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2015–4202.

(2) For Airbus service information identified in this AD, contact Airbus, Airworthiness Office—EIAS, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email *account.airworth-eas@airbus.com*; Internet *http://www.airbus.com.* For Air Cruisers service information identified in this AD, contact Air Cruisers Company, Cage Code 70167, 1747 State Route 34, Wall Township, NJ 07727–3935; telephone 732–681–3527; fax 732–681–9163; Internet *http://www.zodiacaerospace.com/en/our-activities/aerosafety/zodiac-evacuation-systems.* You may view this service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on October 11, 2015.

Jeffrey E. Duven,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

Definition of Terms Relating to Marital Status

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document contains proposed regulations that reflect the holdings of *Obergefell* v. *Hodges,* 576 U.S. __, 135 S. Ct. 2584 (2015), *Windsor* v. *United States,* 570 U.S. __, 133 S. Ct. 2675 (2013), and Revenue Ruling 2013–17 (2013–38 IRB 201), and that define terms in the Internal Revenue Code (Code) describing the marital status of taxpayers. The proposed regulations primarily affect married couples, employers, sponsors and administrators of employee benefit plans, and executors. This document invites comments from the public regarding these proposed regulations.

DATES: Written or electronic comments and requests for a public hearing must be received by December 7, 2015.

ADDRESSES: Send submissions to: CC:PA:LPD:PR (REG–148998–13), Room 5205, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044. Submissions may be hand-delivered Monday through Friday between the hours of 8 a.m. and 4 p.m. to CC:PA:LPD:PR (REG–148998–13), Courier's Desk, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC; or sent electronically via the Federal eRulemaking Portal at *www.regulations.gov* (IRS REG–148998–13).

FOR FURTHER INFORMATION CONTACT: Concerning the proposed amendments to the regulations, Mark Shurtliff at (202) 317–3400; concerning submissions of comments and requests for a hearing, Regina Johnson at (202) 317–6901 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background and Explanation of Provisions

This document contains proposed amendments to the Income Tax Regulations (26 CFR part 1), the Estate Tax Regulations (26 CFR part 20), the Gift Tax Regulations (26 CFR part 25), the Generation-Skipping Transfer Tax Regulations (26 CFR part 26), the Employment Tax and Collection of Income Tax at Source Regulations (26 CFR part 31), and the Regulations on Procedure and Administration (26 CFR part 301).

Amendments to Regulations Incorporating Holdings of Windsor, Obergefell, and Revenue Ruling 2013–17

On June 26, 2013, the Supreme Court in *United States* v. *Windsor,* 570 U.S. __, 133 S. Ct. 2675 (2013), held that Section 3 of the Defense of Marriage Act, which generally prohibited the federal government from recognizing the marriages of same-sex couples, is unconstitutional because it violates the principles of equal protection and due process. Revenue Ruling 2013–17 provides guidance on the *Windsor* decision's effect on the IRS's interpretation of Code sections that refer to taxpayers' marital status. *Cf.* Notice 2014–19 (2014–47 IRB 979), amplified by Notice 2014–37 (2014–24 IRB 1100) (regarding the application of the *Windsor* decision to qualified retirement plans); Notice 2014–1 (2014–02 IRB 270) (regarding elections and reimbursements for same-sex spouses under cafeteria plans, flexible spending arrangements, and health savings accounts following the Windsor decision); Notice 2013–61 (2013–44 IRB 432) (regarding the application of the *Windsor* decision and Rev. Rul. 2013–17 to employment taxes and special administrative procedures for employers to make adjustments or claims for refund or credit); and Revenue Procedure 2014–18 (2014–7 IRB 513) (regarding extensions of time for estates to make a portability election). On June 26, 2015, the Supreme Court in *Obergefell* v. *Hodges,* 576 U.S. __ (2015), held that state laws are ''invalid to the extent they exclude same-sex couples from civil marriage on the same terms and conditions as opposite-sex couples'' and ''that there is no lawful basis for a State to refuse to recognize a lawful same-sex marriage performed in another State on the ground of its same-sex character.'' *Obergefell,* 576 U.S. at 23, 28.

In light of the holdings of *Windsor* and *Obergefell,* the Treasury Department and the IRS have determined that, for federal tax purposes, marriages of couples of the same-sex should be treated the same as marriages of couples of the opposite-sex and that, for reasons set forth in Revenue Ruling 2013–17, terms indicating sex, such as ''husband,'' ''wife,'' and ''husband and wife,'' should be interpreted in a neutral way to include same-sex spouses as well as opposite-sex spouses. Accordingly, these proposed regulations amend the current regulations under section 7701 of the Internal Revenue Code (Code) to provide that, for federal tax purposes, the terms ''spouse,'' ''husband,'' and ''wife'' mean an individual lawfully married to another individual, and the term ''husband and wife'' means two individuals lawfully married to each other. These definitions apply regardless of sex.

In addition, these proposed regulations provide that a marriage of two individuals will be recognized for federal tax purposes if that marriage would be recognized by any state, possession, or territory of the United States. Under this rule, whether a marriage conducted in a foreign jurisdiction will be recognized for federal tax purposes depends on whether that marriage would be recognized in at least one state, possession, or territory of the United States. This comports with the general principles of comity where countries recognize actions taken in foreign jurisdictions, but only to the extent those actions do not violate their own laws. See *Hilton* v. *Guyot,* 159 U.S. 113, 167 (1895) (''A judgment affecting the status of persons, such as a decree confirming or dissolving a marriage, is recognized as valid in every country, unless contrary to the policy of its own law.'').

Although these proposed regulations define terms relating to marital status for federal tax purposes, the IRS may provide additional guidance as needed. For example, the IRS has already issued more particular guidance for employers regarding the application of Revenue Ruling 2013–17 to qualified retirement plans, and that guidance remains in effect. See Notice 2014–19 (2014–47 IRB 979).

Registered Domestic Partnerships, Civil Unions, or Other Similar Relationships Not Denominated as Marriage

For federal tax purposes, the term ''marriage'' does not include registered domestic partnerships, civil unions, or other similar relationships recognized under state law that are not denominated as a marriage under that state's law, and the terms ''spouse,'' ''husband and wife,'' ''husband,'' and ''wife'' do not include individuals who have entered into such a relationship.

Except when prohibited by statute, the IRS has traditionally looked to the states to define marital status. See *Loughran* v. *Loughran,* 292 U.S. 216, 223 (1934) (''Marriages not polygamous or incestuous, or otherwise declared void by statute, will, if valid by the law of the state where entered into, be recognized as valid in every other jurisdiction.''); see also Revenue Ruling 58–66 (1958–1 CB 60) (if a state recognizes a common-law marriage as a valid marriage, the IRS will also recognize the couple as married for purposes of federal income tax filing status and personal exemptions). States have carefully considered the types of relationships that they choose to recognize as a marriage and the types that they choose to recognize as something other than a marriage. Although some states extend all of the rights and responsibilities of marriage under state law to couples in registered domestic partnerships, civil unions, or other similar relationships, those states have intentionally chosen not to denominate those relationships as marriages. Similar rules exist in some foreign jurisdictions.

Some couples have chosen to enter into a civil union or registered domestic partnership even when they could have married, and some couples who are in a civil union or registered domestic partnership have chosen not to convert those relationships into a marriage even when they have had the opportunity to do so. In many cases, this choice was deliberate, and couples who enter into civil unions or registered domestic partnerships may have done so with the expectation that their relationship will not be treated as a marriage for purposes of federal law. For some of these couples, there are benefits to being in a relationship that provides some, but not all, of the protections and responsibilities of marriage. For example, some individuals who were previously married and receive Social Security benefits as a result of their previous marriage may choose to enter into a civil union or registered domestic partnership (instead of a marriage) so that they do not lose their Social Security benefits. More generally, the rates at which some couples' income is taxed may increase if they are considered married and thus required to file a married-filing-separately or married-filing-jointly federal income tax return. Treating couples in civil unions and registered domestic partnerships the same as married couples who are in a relationship denominated as marriage under state law could undermine the expectations certain couples have regarding the scope of their relationship. Further, no provision of the Code indicates that Congress intended to recognize as marriages civil unions, registered domestic partnerships, or similar relationships. Accordingly, the IRS will not treat civil unions, registered domestic partnerships, or other similar relationships as marriages for federal tax purposes.

Effect on Other Documents

These proposed regulations would, as of the date they are published as final regulations in the **Federal Register**, obsolete Revenue Ruling 2013–17. Taxpayers may continue to rely on guidance related to the application of Revenue Ruling 2013–17 to employee benefit plans and the benefits provided under such plans, including Notice 2013–61, Notice 2014–37, Notice 2014–19, and Notice 2014–1.

Proposed Effective/Applicability Date

The regulations, as proposed, would be applicable as of the date of publication of a Treasury decision adopting these rules as final regulations in the **Federal Register**.

Statement of Availability for IRS Documents

For copies of recently issued Revenue Procedures, Revenue Rulings, Notices, and other guidance published in the Internal Revenue Bulletin, please visit the IRS Web site at *http://www.irs.gov.*

Special Analyses

Certain IRS regulations, including this one, are exempt from the requirements of Executive Order 12866, as supplemented and reaffirmed by Executive Order 13563. Therefore, a regulatory impact assessment is not required. It has also been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) does not apply to these regulations. In addition, because the regulations do not impose a collection of information on small entities, the Regulatory Flexibility Act (5 U.S.C. chapter 6) does not apply. Accordingly, a regulatory flexibility analysis is not required under the Regulatory Flexibility Act (5 U.S.C. chapter 6). Pursuant to section 7805(f) of the Code, this notice of proposed rulemaking will be submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small businesses.

Comments and Requests for Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any comments that are submitted timely to the IRS as prescribed in this preamble under the **ADDRESSES** heading. Treasury and the IRS request comments on all aspects of the proposed rules. All comments will be available at *www.regulations.gov* or upon request. A public hearing will be scheduled if requested in writing by any person who timely submits written comments. If a public hearing is scheduled, notice of the date, time, and place for the public hearing will be published in the **Federal Register**.

Drafting Information

The principal author of these proposed regulations is Mark Shurtliff of the Office of the Associate Chief Counsel, Procedure and Administration.

List of Subjects

26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

26 CFR Part 20

Estate taxes, Reporting and recordkeeping requirements.

26 CFR Part 25

Gift taxes, Reporting and recordkeeping requirements.

26 CFR Part 26

Estate, Reporting and recordkeeping requirements.

26 CFR Part 31

Employment taxes, Income taxes, Penalties, Pensions, Reporting and recordkeeping requirements, Social Security, Unemployment compensation.

26 CFR Part 301

Employment taxes, Estate taxes, Excise taxes, Gift taxes, Income taxes, Penalties, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, 26 CFR parts 1, 20, 25, 26, 31, and 301 are proposed to be amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par 2.** Section 1.7701–1 is added to read as follows:

§ 1.7701–1 Definitions; spouse, husband and wife, husband, wife, marriage.

(a) *In general.* For the definition of the terms spouse, husband and wife, husband, wife, and marriage, see § 301.7701–18 of this chapter.

(b) *Effective/applicability date.* The rules of this section apply to taxable years ending on or after the date of publication of the Treasury decision adopting these rules as final regulation in the **Federal Register**.

PART 20—ESTATE TAX; ESTATES OF DECEDENTS DYING AFTER AUGUST 16, 1954

■ **Par. 3.** The authority citation for part 20 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 4.** Section 20.7701–2 is added to read as follows:

§ 20.7701–2 Definitions; spouse, husband and wife, husband, wife, marriage.

(a) *In general.* For the definition of the terms spouse, husband and wife, husband, wife, and marriage, see § 301.7701–18 of this chapter.

(b) *Effective/applicability date.* The rules of this section apply to taxable years ending on or after the date of publication of the Treasury decision adopting these rules as final regulation in the **Federal Register**.

PART 25—GIFT TAX; GIFTS MADE AFTER DECEMBER 31, 1954

■ **Par. 5.** The authority citation for part 25 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 6.** Section 25.7701–2 is added to read as follows:

§ 25.7701–2 Definitions; spouse, husband and wife, husband, wife, marriage.

(a) *In general.* For the definition of the terms spouse, husband and wife, husband, wife, and marriage, see § 301.7701–18 of this chapter.

(b) *Effective/applicability date.* The rules of this section apply to taxable years ending on or after the date of publication of the Treasury decision adopting these rules as final regulation in the **Federal Register**.

PART 26—GENERATION-SKIPPING TRANSFER TAX REGULATIONS UNDER THE TAX REFORM ACT OF 1986

■ **Par. 7.** The authority citation for part 26 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 8.** Section 26.7701–2 is added to read as follows:

§ 26.7701–2 Definitions; spouse, husband and wife, husband, wife, marriage.

(a) *In general.* For the definition of the terms spouse, husband and wife, husband, wife, and marriage, see § 301.7701–18 of this chapter.

(b) *Effective/applicability date.* The rules of this section apply to taxable years ending on or after the date of publication of the Treasury decision adopting these rules as final regulation in the **Federal Register**.

PART 31—EMPLOYMENT TAXES AND COLLECTION OF INCOME TAX AT THE SOURCE

■ **Par. 9.** The authority citation for part 31 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 10.** Section 31.7701–2 is added to read as follows:

§ 31.7701–2 Definitions; spouse, husband and wife, husband, wife, marriage.

(a) *In general.* For the definition of the terms spouse, husband and wife, husband, wife, and marriage, see § 301.7701–18 of this chapter.

(b) *Effective/applicability date.* The rules of this section apply to taxable years ending on or after the date of publication of the Treasury decision adopting these rules as final regulation in the **Federal Register**.

PART 301—PROCEDURE AND ADMINISTRATION

■ **Par. 11.** The authority citation for part 301 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 12.** Section 301.7701–18 is added to read as follows:

§ 301.7701–18 Definitions; spouse, husband and wife, husband, wife, marriage.

(a) *In general.* For federal tax purposes, the terms *spouse, husband,* and *wife* mean an individual lawfully married to another individual. The term *husband and wife* means two individuals lawfully married to each other.

(b) *Persons who are married for federal tax purposes.* A marriage of two individuals is recognized for federal tax purposes if the marriage would be recognized by any state, possession, or territory of the United States.

(c) *Persons who are not married for federal tax purposes.* The terms *spouse, husband,* and *wife* do not include individuals who have entered into a registered domestic partnership, civil union, or other similar relationship not denominated as a marriage under the law of a state, possession, or territory of the United States. The term *husband*

and wife does not include couples who have entered into such a relationship, and the term *marriage* does not include such relationships.

(d) *Effective/applicability date.* The rules of this section apply to taxable years ending on or after the date of publication of the Treasury decision adopting these rules as final regulation in the **Federal Register**.

John M. Dalrymple,

Deputy Commissioner for Services and Enforcement.

[FR Doc. 2015–26890 Filed 10–21–15; 4:15 pm]

BILLING CODE 4830–01–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R10–OAR–2014–0562: FRL–9935–47–Region 10]

Approval and Promulgation of Implementation Plans; Oregon: Lane Regional Air Protection Agency Open Burning Rules and Oregon Department of Environmental Quality Enforcement Procedures

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve into Oregon's State Implementation Plan (SIP) a submittal from the Oregon Department of Environmental Quality (ODEQ) dated July 7, 2014, containing revisions to the Lane Regional Air Protection Agency's (LRAPA) open burning rules adopted on March 14, 2008. The revised LRAPA open burning rules make clarifications and provide for additional controls of open burning activities in Lane County, would reduce particulate emissions in Lane County, and would strengthen Oregon's SIP. The EPA is also proposing to approve a submittal from the ODEQ dated June 30, 2014, to update Oregon Administrative Rules (OAR) that relate to procedures in contested cases (appeals), enforcement procedures, and civil penalties. The EPA is proposing to approve most of the submitted provisions because the revisions clarify and strengthen the SIP and are consistent with the Clean Air Act (CAA). The EPA is not proposing to approve certain provisions of the submitted rules that do not relate to the requirements for SIPs under section 110 of the CAA. Finally, the EPA is proposing to correct the SIP pursuant to the authority of section 110(k)(6) of the CAA to remove certain provisions previously approved by the EPA that do not relate to the requirements for SIPs under section 110 of the CAA.

DATES: Comments must be received on or before November 23, 2015.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R10–OAR–2014–0562, by any of the following methods:

- *Federal eRulemaking Portal http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *Email: R10-Public_Comments@epa.gov*
- *Mail:* Mr. Keith Rose, U.S. EPA Region 10, Office of Air, Waste and Toxics, AWT–150, 1200 Sixth Avenue, Suite 900, Seattle, WA 98101
- *Hand Delivery/Courier:* U.S. EPA Region 10, 1200 Sixth Avenue, Suite 900, Seattle, WA 98101. Attention: Keith Rose, Office of Air, Waste and Toxics, AWT–150. Such deliveries are only accepted during normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Please see the direct final rule which is located in the Rules section of this **Federal Register** for detailed instructions on how to submit comments.

FOR FURTHER INFORMATION CONTACT: Keith Rose at telephone number: (206) 553–1949, email address: *rose.keith@epa.gov,* or the above EPA, Region 10 address.

SUPPLEMENTARY INFORMATION: For further information, please see the direct final action, of the same title, which is located in the Rules section of this **Federal Register**. The EPA is simultaneously approving the State's SIP revision as a direct final rule without prior proposal because the EPA views this as a noncontroversial SIP revision and anticipates no adverse comments. A detailed rationale for the approval is set forth in the preamble to the direct final rule. If the EPA receives no adverse comments, the EPA will not take further action on this proposed rule.

If the EPA receives adverse comments, the EPA will withdraw the direct final rule and it will not take effect. The EPA will address all public comments in a subsequent final rule based on this proposed rule. The EPA will not institute a second comment period on this action. Any parties interested in commenting on this action should do so at this time. Please note that if we receive adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, the EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment.

Dated: September 25, 2015.

Michelle L. Pirzadeh,

Acting Regional Administrator, Region 10.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 15 and 73

[GN Docket No. 12–268; Report No. 3028]

Petitions for Reconsideration of Action in Rulemaking Proceeding

AGENCY: Federal Communications Commission.

ACTION: Petition for reconsideration.

SUMMARY: Petitions for Reconsideration (Petitions) have been filed in the Commission's Rulemaking Proceeding by Ari Q. Fitzgerald, on behalf of GE Healthcare; Ronald J. Bruno on behalf of The VideoHouse, Inc.; Benjamin Perez on behalf of Abacus Television; Lawrence Rogow on behalf of WMTM, LLC; and Larry E. Morton on behalf of KMYA, LLC.

DATES: Oppositions to the Petitions must be filed on or before November 9, 2015. Replies to an opposition must be filed on or before November 17, 2015.

ADDRESSES: Federal Communications Commission, 445 12th Street SW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Joyce Bernstein, Media Bureau, (202) 418–1647, email: *joyce.bernstein@fcc.gov*.

SUPPLEMENTARY INFORMATION: This is a summary of Commission's document, Report No. 3028, released September 21, 2015. The full text of the Petitions is available for viewing and copying in Room CY–B402, 445 12th Street SW., Washington, DC 20554 or may be accessed online via the Commission's Electronic Comment Filing System at *http://apps.fcc.gov/ecfs/.* The Commission will not send a copy of this *Notice* pursuant to the Congressional Review Act, 5 U.S.C. 801(a)(1)(A), because this notice does not have an impact on any rules of particular applicability.

Subject: Expanding the Economic and Innovation Opportunities of Spectrum Through Incentive Auctions, Second Order on Reconsideration, published at 80 FR 46824, August 6, 2015, in GN Docket No. 12–268, and published pursuant to 47 CFR 1.429(e). *See also* 47 CFR 1.4(b)(1).

Number of Petitions Filed: 2.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 300

[Docket No. 150929898–5951–01]

RIN 0648–XE001; 0648–BF41

International Fisheries; Western and Central Pacific Fisheries for Highly Migratory Species; Treatment of U.S. Purse Seine Fishing With Respect to U.S. Territories

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of decision on petition for rulemaking; advance notice of proposed rulemaking; request for comments.

SUMMARY: This document includes two distinct but related NMFS actions. First, NMFS announces that it has denied a petition for rulemaking from Tri Marine Management Company, LLC, related to purse seine fishing effort limits in the area of competence of the Commission for the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean (Commission). Second, NMFS issues an advance notice of proposed rulemaking related to the treatment of U.S.-flagged purse seine vessels and their fishing activities in regulations implementing decisions of the Commission.

DATES: Comments on this advance notice of proposed rulemaking must be submitted in writing by November 23, 2015.

ADDRESSES: The notice of receipt of the petition for rulemaking, the petition, and the public comments on the petition are available via the Federal e-Rulemaking Portal at *www.regulations.gov* (search for Docket ID NOAA–NMFS–2015–0088).

NMFS is not requesting comments on the notice of decision on the petition.

You may submit comments on the advance notice of proposed rulemaking, identified by NOAA–NMFS–2015–0128, by either of the following methods:

• *Electronic submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal.

1. Go to *www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2015-0128,*
2. Click the ''Comment Now!'' icon, complete the required fields, and
3. Enter or attach your comments.

- OR -

• *Mail:* Submit written comments to Michael D. Tosatto, Regional Administrator, NMFS, Pacific Islands Regional Office (PIRO), 1845 Wasp Blvd., Building 176, Honolulu, HI 96818.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, might not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *www.regulations.gov* without change. All personal identifying information (*e.g.,* name and address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Tom Graham, NMFS PIRO, 808–725–5032.

SUPPLEMENTARY INFORMATION:

Background on the Convention

The Convention on the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean (Convention) focuses on the conservation and management of highly migratory species (HMS) and the management of fisheries for HMS. The objective of the Convention is to ensure, through effective management, the long-term conservation and sustainable use of HMS in the WCPO. To accomplish this objective, the Convention established the Commission, which includes Members, Cooperating Non-members, and Participating Territories. The United States of America is a Member. American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands are Participating Territories.

As a Contracting Party to the Convention and a Member of the Commission, the United States implements domestically conservation and management measures adopted by the Commission and other decisions of the Commission. The Western and Central Pacific Fisheries Convention Implementation Act (16 U.S.C. 6901 *et seq.;* WCPFC Implementation Act), authorizes the Secretary of Commerce, in consultation with the Secretary of State and the Secretary of the Department in which the United States Coast Guard is operating (currently the Department of Homeland Security), to promulgate such regulations as may be necessary to carry out the obligations of the United States under the Convention, including the decisions of the Commission. The WCPFC Implementation Act further provides that the Secretary of Commerce shall ensure consistency, to the extent practicable, of fishery management programs administered under the WCPFC Implementation Act and the Magnuson-Stevens Fishery Conservation and Management Act (MSA; 16 U.S.C. 1801 *et seq.*), as well as other specific laws (see 16 U.S.C. 6905(b)). The Secretary of Commerce has delegated the authority to promulgate regulations under the WCPFC Implementation Act to NMFS. A map showing the boundaries of the area of application of the Convention (Convention Area), which comprises the majority of the WCPO, can be found on the WCPFC Web site at: *www.wcpfc.int/doc/convention-area-map.*

Background on Purse Seine Fishing Effort Limits in the Convention Area

Since 2009, NMFS regulations have established limits on fishing effort by U.S. purse seine fishing vessels in the area of application of the Convention (Convention Area), including in the area known as the Effort Limit Area for Purse Seine, or ELAPS, which is comprised of all areas of high seas and the U.S. exclusive economic zone (EEZ) between the latitudes of 20° N. and 20° S. in the Convention Area. These regulations are promulgated under authority of the WCPFC Implementation Act and have been codified at 50 CFR 300.223(a).

NMFS has established the purse seine fishing effort limits in the ELAPS to implement a series of Commission decisions for tropical tuna stocks in the Convention Area.

NMFS established a purse seine fishing effort limit in the ELAPS for 2015 in an interim rule published May 21, 2015 (80 FR 29220). NMFS issued a final rule, responding to comments on the interim rule and making final the interim rule, on August 25, 2015 (80 FR 51476). The limit is 1,828 fishing days.

On June 8, 2015, NMFS issued a notice announcing that the U.S. purse seine fishery in the ELAPS would close as a result of reaching the limit of 1,828 fishing days (80 FR 32313). The closure took effect June 15, 2015, and will remain in effect through December 31, 2015. The closure applies to all U.S. purse seine fishing vessels. During the closure, fishing vessels of the United

States equipped with purse seine gear may not be used to fish in the ELAPS.

Petition for Rulemaking

Under the Administrative Procedure Act, interested persons may petition Federal agencies for the issuance, amendment, or repeal of a rule.

As described further below, NMFS received such a petition from Tri Marine Management Company, LLC (Tri Marine). On July 17, 2015, NMFS issued a notice of receipt of the petition and a request for comments on the petition (80 FR 42464). The comment period ended August 17, 2015.

The Petition

In a petition dated May 12, 2015, Tri Marine requested that NMFS take two actions. First, Tri Marine requested that ''NOAA undertake an emergency rulemaking with respect to the 2015 ELAPS limits for fishing days on the high seas.'' Second, Tri Marine requested that ''NOAA issue a rule exempting from that high seas limit any US flag purse seine vessel which, pursuant to contract or declaration of intent, delivers or will deliver at least 50 percent of its catch to tuna processing facilities based in American Samoa.''

At the time of Tri Marine's initial request, NMFS was preparing to issue an interim rule establishing a limit on purse seine fishing effort in the ELAPS for 2015. As described above, NMFS established a limit in the ELAPS for 2015 in an interim rule published May 21, 2015. Accordingly, the first part of Tri Marine's request has been fully addressed and is not further discussed in this notice. NMFS acknowledged that it had received Tri Marine's petition for rulemaking in the May 21, 2015, interim rule, and stated that it would consider and respond to the petition separately.

With regard to the second part of Tri Marine's request, the petition explains that as a result of decisions by the Republic of Kiribati, U.S. purse seine vessels' access to their traditional fishing grounds in 2015 has been dramatically reduced, and that the high seas portion of the ELAPS can be expected to be closed to fishing as early as June. The petition further states that because of the limited fishing grounds now available to the American Samoa-based purse seine fleet and other factors, including an unusually low tuna price and the higher cost of access to fishing grounds in the region, the ability of American Samoa-based tuna vessels to operate profitably is in serious question, and the loss of a reliable supply of tuna from these vessels will jeopardize the ability of the canneries in American Samoa to compete in world markets. The petition states that under the Convention, American Samoa is afforded special treatment as a small island developing state or participating territory for purposes of applying conservation and management measures of the Commission, and therefore NMFS should develop rules that exempt from the ELAPS limit those vessels that deliver at least 50 percent of their catch to the canneries in American Samoa.

The petition includes further information on the basis of the request, including information related to the recommendations of the Governor of American Samoa's Fisheries Task Force, and an ''issue brief'' with statements about the nature of the issue and how the requested rule(s) would address it.

In a second letter to NMFS dated May 26, 2015, which supplements the May 12, 2015, petition, Tri Marine acknowledged the interim rule published May 21, 2015, and amended its request to include the U.S. EEZ. Tri Marine requested that ''NOAA undertake an emergency rulemaking with respect to the 2015 ELAPS limits for fishing days (both) on the high seas and in the US EEZ,'' and further requested that ''NOAA issue a rule exempting from the ELAPS limits any US flag purse seine vessel which, pursuant to contract or declaration of intent, delivers or will deliver at least 50 percent of its catch to tuna processing facilities based in American Samoa.''

Public Comments on the Petition

NMFS received comments on the petition from about 100 parties, including individuals employed in fish processing facilities in American Samoa and their families and friends; owners, operators and crew members of U.S. purse seine vessels; owners and operators of fish processing facilities in American Samoa; other businesses doing business in American Samoa; non-governmental organizations; and government officials of American Samoa and the United States. Most comments were in favor of the petition. Those in favor cited what they believed are adverse economic impacts of the 2015 ELAPS limit on purse seine fishing businesses, on fish processing facilities and other businesses in American Samoa, on employment in those businesses, and on the American Samoa economy in general. The comments in opposition to the petition argued that the requested action would unfairly favor certain businesses in the U.S. purse seine fishery over others and would be inconsistent with the Convention and the decisions of the Commission.

Decision on the Petition

After considering the petition and the public comments on the petition, NMFS finds that it is not appropriate to grant the petitioner's request to issue a rule exempting from the 2015 ELAPS limit any U.S.-flagged purse seine vessel which, pursuant to contract or declaration of intent, delivers or will deliver at least 50 percent of its catch to tuna processing facilities based in American Samoa. As described in the regulatory impact review prepared for the rule to establish the 2015 ELAPS limit, NMFS found that the limit is expected to have substantial adverse economic impacts on U.S. purse seine fishing businesses in the WCPO, and also that adverse impacts in terms of income and employment could occur in business sectors with backward and forward linkages to the producers. These sectors could include businesses that supply the purse seine fishing vessels, and the fish processing facilities in American Samoa. However, to sufficiently assess whether such impacts, or other circumstances, warrant the regulatory action requested by the petition would require additional information that is not readily available to NMFS, as well as sufficient time to examine such information. In particular, NMFS does not have information that demonstrates that the 2015 ELAPS limit will adversely impact American Samoa's fish processing facilities and its economy in the manner alleged by the petitioner. The petitioner argues that lacking the requested regulatory action, the ability of the American Samoa-based purse seine fleet to operate profitably would be in serious question, and the loss of a reliable supply of tuna from those vessels would jeopardize the ability of the canneries in American Samoa to compete in world markets with lower-cost competitors, and further, that tuna landings and processing are essential to the overall economic health of American Samoa.

NMFS has received some relevant information in the public comments on the petition, and NMFS intends to collect additional economic and other information. However, NMFS does not yet have sufficient information to determine whether the 2015 ELAPS limit is likely to jeopardize the ability of the American Samoa canneries to compete in world markets, or to determine how the loss of such competitiveness would affect American Samoa's overall economy. Moreover, if the 2015 ELAPS limit is found to impact American Samoa's fish processing facilities and its economy in the manner alleged in the petition, NMFS would need to determine whether the requested action is appropriate to address the problem, and further, whether it can be implemented consistent with U.S. obligations under the Convention and other applicable laws. NMFS does not expect that collecting and analyzing the necessary information, determining the appropriate course of action, if any, and completing such action could be accomplished before the end of 2015. For this reason, NMFS denies the second part of Tri Marine's petition for rulemaking.

Although NMFS has denied the petition, NMFS acknowledges that some of the issues raised in the petition warrant further examination. As described in the following section, NMFS intends to more fully examine the problems raised by the petitioner and by commenters on the petition. If the findings of that examination confirm a problem that—given U.S. obligations under the Convention and other applicable laws—warrants corrective action, NMFS would consider further rulemaking. At this time, however, NMFS cannot predict the timing or provisions of any future proposed or final rule.

Advance Notice of Proposed Rulemaking

Under the WCPFC Implementation Act, NMFS exercises broad discretion when determining how it implements Commission decisions, such as purse seine fishing restrictions. NMFS intends to examine the potential impacts of the domestic implementation of Commission decisions for purse seine fisheries on the economies of the U.S. Participating Territories, and examine the connectivity between the activities of U.S.-flagged purse seine fishing vessels and the economies of the territories. Based on those findings, NMFS will consider proposing regulations that mitigate adverse economic impacts of purse seine fishing restrictions on the U.S. Participating Territories, to the extent consistent with U.S. obligations under the Convention. Also, NMFS is considering proposing regulations that recognize that in the context of the Convention, one or more of the U.S. Participating Territories have their own purse seine fisheries that are distinct from the purse seine fishery of the United States. In that case, the purse seine fisheries of the U.S. Participating Territories might be subject to special provisions of the Convention and of Commission decisions, and NMFS would implement those provisions and decisions accordingly.

NMFS notes that the Tri Marine petition focused on the 2015 ELAPS limit. This advanced notice of proposed rulemaking is broader in scope, and could apply to other types of restrictions on purse seine fishing that are adopted by the Commission.

In summary, NMFS provides notice that it is considering proposing a rule that would establish rules and/or procedures to address the treatment of U.S.-flagged purse seine vessels and their fishing activities and how they relate to the U.S. Participating Territories in regulations issued by NMFS that implement decisions of the Commission.

NMFS solicits comments on this advance notice of proposed rulemaking. NMFS is particularly interested in receiving any information that would be helpful in assessing the impacts of Commission decisions for purse seine fisheries—as implemented domestically—on the economies of the U.S. Participating Territories, and any information that demonstrates connections between the U.S. Participating Territories and U.S.-flagged purse seine vessels and their fishing activities.

Classification

This advance notice of proposed rulemaking has been determined to be not significant for the purposes of Executive Order 12866.

Authority: 16 U.S.C. 6901 *et seq.*

Dated: October 19, 2015.

Eileen Sobeck,

Assistant Administrator for Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

Notices

Federal Register

Vol. 80, No. 205

Friday, October 23, 2015

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

Submission for OMB Review; Comment Request

October 19, 2015.

The Department of Agriculture will submit the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13 on or after the date of publication of this notice. Comments regarding (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), New Executive Office Building, Washington, DC; New Executive Office Building, 725 17th Street NW., Washington, DC, 20503. Commenters are encouraged to submit their comments to OMB via email to: *OIRA_Submission@omb.eop.gov* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602.

Comments regarding these information collections are best assured of having their full effect if received by November 23, 2015. Copies of the submission(s) may be obtained by calling (202) 720–8681.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Agricultural Marketing Service

Title: Application for Plant Variety Protection Certificate and Objective Description of Variety.

OMB Control Number: 0581–0055.

Summary of Collection: The Plant Variety Protection Act (PVPA) (December 24, 1970; 84 Stat. 1542, 7 U.S.C. 2321 *et seq.*) was established to encourage the development of novel varieties of sexually-reproduced plants and make them available to the public, providing intellectual property rights (IPR) protection to those who breed, develop, or discover such novel varieties, and thereby promote progress in agriculture in the public interest. The PVPA is a voluntary user funded program that grants intellectual property ownership rights to breeders of new and novel seed-and tuber-reproduced plant varieties. To obtain these rights the applicant must provide information that shows the variety is eligible for protection and that it is indeed new, distinct, uniform, and stable, as the law requires. Applicants are provided with applications to identify the information that is required to issue a certificate of protection.

Need and Use of the Information: Applicants must complete the ST–470, ''Application for Plant Variety Protection Certificate,'' and the ST–470 series of forms, ''Objective Description of Variety'' along with other forms. The Agricultural Marketing Service will use the information from the applicant to be evaluated by examiners to determine if the variety is eligible for protection under the PVPA. If this information were not collected there will be no basis for issuing certificate of protection, and no way for applicants to request protection.

Description of Respondents: Business or other for-profit; Federal Government.

Number of Respondents: 86.

Frequency of Responses: Reporting: On occasion; Other (varies).

Total Burden Hours: 2,907.

Charlene Parker,

Departmental Information Collection Clearance Officer.

[Docket No. APHIS–2015–0059]

Notice of Request for Revision to and Extension of Approval of an Information Collection; Importation of Citrus From Peru

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Revision to and extension of approval of an information collection; comment request.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Animal and Plant Health Inspection Service's intention to request a revision to and extension of approval of an information collection associated with importation of citrus from Peru.

DATES: We will consider all comments that we receive on or before December 22, 2015.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov/#!docketDetail;D=APHIS-2015-0059.*
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2015–0059, Regulatory Analysis and Development, PPD, APHIS, Station 3A–03.8, 4700 River Road Unit 118, Riverdale, MD 20737–1238.

Supporting documents and any comments we receive on this docket may be viewed at *http://www.regulations.gov/#!docketDetail;D=APHIS-2015-0059* or in our reading room, which is located in Room 1141 of the USDA South Building, 14th Street and Independence Avenue SW., Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799–7039 before coming.

FOR FURTHER INFORMATION CONTACT: For information on the importation of citrus from Peru, contact Mr. Juan (Tony) Román, Senior Regulatory Policy Specialist, RCC, IRM, PHP, PPQ, APHIS, 4700 River Road Unit 156, Riverdale, MD 20737; (301) 851–2242. For copies of more detailed information on the information collection, contact Ms. Kimberly Hardy, APHIS' Information Collection Coordinator, at (301) 851–2727.

SUPPLEMENTARY INFORMATION:

Title: Importation of Citrus From Peru.

OMB Control Number: 0579–0289.

Type of Request: Revision to and extension of approval of an information collection.

Abstract: The Plant Protection Act (PPA, 7 U.S.C. 7701 *et seq.*) authorizes the Secretary of Agriculture to restrict the importation, entry, or interstate movement of plants, plant products, and other articles to prevent the introduction of plant pests, including fruit flies, into the United States or their dissemination within the United States. Regulations authorized by the PPA concerning the importation of fruits and vegetables into the United States from certain parts of the world are contained in ''Subpart—Fruits and Vegetables'' (7 CFR 319.56–1 through 319.56–73).

In accordance with § 319.56–41, the citrus (grapefruit, limes, mandarins or tangerines, sweet oranges, and tangelos) from Peru is subject to certain conditions before entering the continental United States to prevent the introduction of plant pests into the United States. The regulations require the use of information collection activities, including inspections by national plant protection organization (NPPO) officials from Peru, grower registration and agreement, fruit fly trapping, monitoring, recordkeeping, and a phytosanitary certificate.

Since the last approval of this collection, we have adjusted the estimates of burden to more accurately reflect the number of grower registrations and agreements, the number of hours for recordkeeping, the number of respondents for phytosanitary certificates, and to account for activities that were omitted from the last collection (fruit fly management program, reinstatement of production sites, permits, and certification and recertification of cold treatment carriers).

We are asking the Office of Management and Budget (OMB) to approve our use of these information collection activities, as described, for an additional 3 years.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. These comments will help us:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies; *e.g.,* permitting electronic submission of responses.

Estimate of burden: The public reporting burden for this collection of information is estimated to average 7.382 hours per response.

Respondents: NPPO of Peru and importers and growers of citrus fruit in Peru.

Estimated annual number of respondents: 31.

Estimated annual number of responses per respondent: 137.

Estimated annual number of responses: 4,245.

Estimated total annual burden on respondents: 31,339 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 19th day of October 2015.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

Animal and Plant Health Inspection Service

[Docket No. APHIS–2015–0012]

Notice of Decision To Authorize the Importation of Fresh Pitahaya From Israel Into the Continental United States

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice.

SUMMARY: We are advising the public of our decision to authorize the importation of fresh pitahaya fruit from Israel into the continental United States. Based on the findings of the pest risk analysis, which we made available to the public to review and comment through a previous notice, we have concluded that the application of one or more designated phytosanitary measures will be sufficient to mitigate the risks of introducing or disseminating plant pests or noxious weeds via the importation of fresh pitahaya fruit from Israel.

DATES: Effective October 23, 2015.

FOR FURTHER INFORMATION CONTACT: Mrs. Nicole Russo, Assistant Director, Imports, Regulations, and Manuals, PPQ, APHIS, 4700 River Road Unit 133, Riverdale, MD 20737–1231; (301) 851–2159.

SUPPLEMENTARY INFORMATION: Under the regulations in ''Subpart—Fruits and Vegetables'' (7 CFR 319.56–1 through 319.56–73, referred to below as the regulations), the Animal and Plant Health Inspection Service (APHIS) prohibits or restricts the importation of fruits and vegetables into the United States from certain parts of the world to prevent plant pests from being introduced into or disseminated within the United States.

Section 319.56–4 of the regulations contains a performance-based process for approving the importation of commodities that, based on the findings of a pest risk analysis, can be safely imported subject to one or more of the designated phytosanitary measures listed in paragraph (b) of that section. Under that process, APHIS publishes a notice in the **Federal Register** announcing the availability of the pest risk analysis that evaluates the risks associated with the importation of a particular fruit or vegetable. Following the close of the 60-day comment period, APHIS may begin issuing permits for importation of the fruit or vegetable subject to the identified designated measures if: (1) No comments were received on the pest risk analysis; (2) the comments on the pest risk analysis revealed that no changes to the pest risk analysis were necessary; or (3) changes to the pest risk analysis were made in response to public comments, but the changes did not affect the overall conclusions of the analysis and the Administrator's determination of risk.

In accordance with that process, we published a notice [1] in the **Federal Register** on April 28, 2015 (80 FR 23497, Docket No. APHIS–2015–0012), in which we announced the availability, for review and comment, of a pest risk assessment (PRA) that evaluated the risks associated with the importation into the continental United States of fresh pitahaya fruit from Israel and a risk management document (RMD) prepared to identify phytosanitary measures that could be applied to the commodities to mitigate the pest risk.

We solicited comments on the PRA and RMD for 60 days ending on June 29, 2015. We did not receive any comments by that date.

Therefore, in accordance with § 319.56–4(c)(2)(ii), we are announcing our decision to authorize the importation of fresh pitahaya fruit from Israel into the continental United States subject to the following phytosanitary measures:

- The pitahaya must be imported into the continental United States in commercial consignments only.
- Each consignment of pitahaya must be accompanied by a phytosanitary certificate issued by the national plant protection organization of Israel.
- Each consignment of pitahaya is subject to inspection upon arrival at the port of entry to the United States.

These conditions will be listed in the Fruits and Vegetables Import Requirements database (available at *http://www.aphis.usda.gov/favir*). In addition to these specific measures, fresh pitahaya fruit from Israel will be subject to the general requirements listed in § 319.56–3 that are applicable to the importation of all fruits and vegetables.

Authority: 7 U.S.C. 450, 7701–7772, and 7781–7786; 21 U.S.C. 136 and 136a; 7 CFR 2.22, 2.80, and 371.3.

Done in Washington, DC, this 19th day of October 2015.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

Animal and Plant Health Inspection Service

[Docket No. APHIS–2014–0042]

Notice of Determination of the Classical Swine Fever, Foot-and-Mouth Disease, Rinderpest, and Swine Vesicular Disease Status of Croatia

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice.

SUMMARY: We are adding Croatia to the lists of regions that are considered free of foot-and-mouth disease, rinderpest, and swine vesicular disease, and to the list of regions considered free or low risk for classical swine fever. We are taking this action because we have determined that this region is free of foot-and-mouth disease, rinderpest, and swine vesicular disease, and is low risk for classical swine fever. This action establishes the disease status of Croatia with regard to foot-and-mouth disease, rinderpest, swine vesicular disease, and classical swine fever while continuing to protect the United States from an introduction of those diseases.

DATES: Effective November 23, 2015.

FOR FURTHER INFORMATION CONTACT: Mr. Donald Link, Import Risk Analyst, Regionalization Evaluation Services, National Import Export Services, Veterinary Services, APHIS, 920 Main Campus Drive, Suite 200, Raleigh, NC 27606; (919) 855–7731; *Donald.B.Link@aphis.usda.gov.*

SUPPLEMENTARY INFORMATION:

Background

The regulations in 9 CFR part 94 (referred to below as the regulations) govern the importation of certain animals and animal products into the United States to prevent the introduction of various animal diseases, including classical swine fever (CSF), foot-and-mouth disease (FMD), rinderpest, and swine vesicular disease (SVD). The regulations prohibit or restrict the importation of live ruminants and swine, and products from these animals, from regions where these diseases are considered to exist.

Within part 94, § 94.1 contains requirements governing the importation of ruminants and swine from regions where rinderpest or FMD exists and the importation of the meat of any ruminants or swine from regions where rinderpest or FMD exists to prevent the introduction of either disease into the United States. We consider rinderpest and FMD to exist in all regions except those listed in accordance with paragraph (a) of that section as free of rinderpest and FMD. Section 94.9 contains requirements governing the importation of pork and pork products from regions where CSF exists. Section 94.10 contains importation requirements for swine from regions where CSF is considered to exist and designates the Animal and Plant Health Inspection Service (APHIS)-defined European CSF region as a single region of low-risk for CSF. Section 94.31 contains requirements governing the importation of pork, pork products, and swine from the APHIS-defined European CSF region. We consider CSF to exist in all regions of the world except those listed in accordance with paragraph (a) of § 94.9 as free of the disease.

Section 94.11 of the regulations contains requirements governing the importation of meat of any ruminants or swine from regions that have been determined to be free of rinderpest and FMD, but that are subject to certain restrictions because of their proximity to or trading relationships with rinderpest- or FMD-affected regions. Such regions are listed in accordance with paragraph (a) of that section.

Section 94.12 of the regulations contains requirements governing the importation of pork or pork products from regions where SVD exists. We consider SVD to exist in all regions of the world except those listed in accordance with paragraph (a) of that section as free of SVD.

Section 94.13 contains importation requirements governing the importation of pork or pork products from regions that have been declared free of SVD as provided in § 94.12(a) but supplement their national pork supply by the importation of fresh (chilled or frozen) meat of animals from regions where SVD is considered to exist, or have a common border with such regions, or have trade practices that are less restrictive than are acceptable to the United States. Such regions are listed in accordance with paragraph (a) of § 94.13.

Section 94.14 states that no swine which are moved from or transit any region in which SVD is known to exist may be imported into the United States except wild swine imported in accordance with § 94.14(b).

The regulations in 9 CFR part 92, § 92.2, contain requirements for requesting the recognition of the animal health status of a region (as well as for the approval of the export of a particular type of animal or animal product to the United States from a foreign region). If, after review and evaluation of the information submitted in support of the request, APHIS believes the request can be safely granted, APHIS will make its evaluation available for public comment through a document published in the **Federal Register.**

In accordance with that process, on February 3, 2015, we published in the **Federal Register** (80 FR 5728–5729, Docket No. APHIS–2014–0042) a notice [1] announcing the availability for review and comment of our risk evaluation of the CSF, FMD, rinderpest, and SVD status of Croatia. Based on this evaluation, we determined that that the animal disease surveillance, prevention, and control measures implemented by Croatia are sufficient to minimize the likelihood of introducing CSF, FMD, rinderpest, and SVD into the United States via imports of species or products susceptible to these diseases.

In addition, we determined in our evaluation that Croatia is low risk for CSF and therefore eligible to be added to the APHIS-defined European CSF region. This region is subject to the conditions in § 94.31 for pork, pork products, and swine and § 98.38 for swine semen. We also determined that the provisions of § 94.11 for import conditions for meat or meat products from ruminants or swine from FMD-free regions, and § 94.13 for import conditions for pork or pork products from SVD-free regions, are applicable to Croatia.

With respect to rinderpest, the global distribution of the disease has diminished significantly in recent years as a result of the Food and Agriculture Organization Global Rinderpest Eradication Program. The last known cases of rinderpest worldwide occurred in the southern part of the ''Somali pastoral ecosystem'' consisting of southern Somalia, eastern Kenya, and southern Ethiopia. In May 2011, the World Organization for Animal Health (OIE) announced its recognition of global rinderpest freedom.

We solicited comments on the notice of availability for 60 days ending on April 6, 2015. We received two comments by that date, both from national pork industry associations. Both commenters raised specific concerns about disease risks regarding our proposed action to recognize Croatia as being free of FMD, rinderpest, and SVD, and low risk for CSF, as this action would allow for the importation into the United States of swine, pork, and pork products from Croatia subject to the regulations. The comments are discussed below.

Smuggling of Prohibited Articles

The commenters noted that international passenger traffic was identified in the APHIS evaluation as a key risk factor for the introduction of the disease hazards. The commenters stated that limited data exists to determine the quantity of prohibited products smuggled into Croatia and that APHIS obtained estimates of international passenger traffic from 2006 data that is no longer current. The commenters requested that we require Croatia to provide updated information on passenger traffic in order to determine if the risk evaluation needs to be modified.

We agree with the commenter that limited data exists regarding smuggling of prohibited products into Croatia. Such data is by its nature limited because the intent of smuggling is to avoid disclosure, documentation, or inspection. We also acknowledge the volume of international passenger traffic into Croatia and agree that the introduction of prohibited products into Croatia could play a role in the transmission of animal diseases. As the commenters requested, we have provided more recent data for passenger traffic into Croatia.

Data available from the World Bank indicates that 9,111,000, 9,927,000, and 10,369,000 international inbound tourists (overnight visitors) entered Croatia in 2010, 2011, and 2012, respectively.[2] Additional data published by the Organisation for Economic Cooperation and Development (OECD) [3] (see Table 1) indicates total inbound tourism and primary countries of origin for arriving passengers.

TABLE 1—INBOUND TOURISM: TOTAL ARRIVALS AND PRIMARY COUNTRIES OF ORIGIN, CROATIA, 2008–2012

	2008	2009	2010	2011	2012
Total Intl Arrivals (x1000)	8,665	8,694	9,111	9,927	10,369
Top Markets (x1000).					
Germany	1,405	1,463	1,525	1,661	1,853
Slovenia	985	963	1,017	1,100	1,054
Italy	1,009	1,058	1,018	1,150	1,051
Austria	692	776	810	892	946
Czech Republic	589	579	606	638	647

While the above data indicates that Croatia has seen an increase in the number of international arrivals over the period indicated, the data does not change our conclusions in the risk evaluation. The updated number of arrivals does not differ substantially from the 2006 number we used in the risk evaluation. Additionally, the primary countries of origin listed in Table 1 for arriving passengers are other European Union (EU) Member States that APHIS recognizes to be free of FMD and rinderpest and low risk for CSF. Germany, Slovenia, Austria, and the Czech Republic are also free of SVD, as are several regions of Italy. We determined in the Croatia risk evaluation and previous swine disease status assessments of the EU and individual Member States that the animal health rules governing trade and travel between Member States mitigate the risk of contagious animal disease transmission through international passenger traffic.

We conclude that the risk of virus introduction into Croatia via the pathway of intentionally smuggled or unintentionally carried prohibited products is effectively mitigated by implementing EU-level and Croatian national policies regarding commodities for personal consumption and by the interdiction efforts of Croatia's Border Veterinary Inspection and International

[1] To view the notice of availability, risk evaluation, environmental assessment, and comments we received, go to *http://www.regulations.gov/#!docketDetail;D=APHIS-2014-0042.*

[2] *http://data.worldbank.org/indicator/ST.INT.ARVL.* The data on inbound tourists refer to the number of arrivals, not to the number of people traveling. Thus a person who makes several trips to a country during a given period is counted each time as a new arrival.

[3] Organisation for Economic Co-operation and Development (2014), ''Croatia'', in OECD Tourism Trends and Policies 2014, OECD Publishing. (Data cited by OECD was sourced from Croatian Bureau of Statistics data on tourism: *http://www.dzs.hr/default_e.htm.*)

Trade (BVIITS) and Customs departments. As described in the risk analysis, BVIITS and Customs are the Croatian authorities responsible for the inspection and confiscation and disposal of prohibited animal products at Croatia's points of entry. Furthermore, in addition to border controls, we determined in our risk assessment that Croatia has systems in place for surveillance and early detection of CSF, FMD, SVD, and rinderpest should any of these diseases be introduced via incoming passenger traffic into Croatia or any other pathway.

Disease Detection and Surveillance

The commenters stated concerns over the ability of commercial swine operations in Croatia to conduct surveillance for and detect foreign animal diseases. As evidence, the commenters cited in the risk evaluation a reference to an interview we conducted with the operator of a company-owned swine fattening farm, in which the operator seemed more aware of potential production impacts than on the clinical signs that would accompany an outbreak of CSF or SVD. The commenters asked if APHIS is confident that the level of awareness of swine operations in Croatia is sufficient for early detection of trade-limiting foreign animal diseases of swine. They recommended that prior to announcing a decision on Croatia's disease status, we should require Croatia to provide us with verification that the industry has been provided with the training or educational materials necessary to assist in active disease surveillance.

We reply that APHIS is confident in the level of awareness for swine diseases in Croatia's commercial swine operations. This particular commercial fattening farm represents Croatia's high intensity, high biosecurity, vertically integrated production and marketing system. Given the advanced swine husbandry standards, premises monitoring by company veterinarians, swine disease training, awareness and sampling, APHIS considers it highly likely that a trade-limiting swine disease in Croatia would be quickly detected and contained. Additionally, we consider Croatia's commercial swine production system to be the most likely source of pork or pork products for export to the United States, and consider the risk of undetected CSF-, FMD-, or SVD-contaminated products being sourced from this production chain to be low.

Regarding this particular commercial farm and farm operator, despite the observation the commenters cited in the risk evaluation, the same farm operator seemed knowledgeable of farm operations, company procedures, and Croatian veterinary and legal requirements. As noted on page 43 of the risk evaluation, we also observed evidence of strong operational, biosecurity, and recordkeeping practices on that farm, as well as strong veterinary oversight. State veterinary authorities reported that the farm receives educational information distributed by Croatia's Ministry of Agriculture, Fisheries, and Rural Development (MAFRD) and that company officials have attended swine disease symposia organized by the MAFRD Veterinary Directorate, which is the central competent authority for animal health and veterinary services in Croatia. In addition, a company veterinarian visits the premises every 2 weeks on average or when called to provide veterinary care. We also observed that the authorized veterinarian for this farm visits regularly to issue health certificates and movement documents.

Overall, our Croatia risk evaluation determined that Croatia has an effective surveillance system in place for detection of swine diseases, including surveillance strategies for the commercial swine sector. We agree with the commenters that early disease detection is a core element of all trade-participating countries and we saw no evidence that Croatia was lacking in this regard.

Small Farms and Backyard Premises

The commenters noted that we considered the disease risk posed by the small, family-operated breeding farm we visited (and backyard premises in general) to be different from that of vertically integrated commercial swine production systems, particularly with respect to animal disease traceability, animal sampling, and biosecurity. The commenters recommended that, before making a decision on Croatia's disease status, we require Croatia to provide a plan for risk reduction for small farms and backyard premises that addresses improving pre-harvest traceability, disease and biosecurity awareness, and disease sampling strategies that aid in early detection of trade-limiting foreign animal diseases.

In reply, we do consider the disease risk posed by small family-operated breeding farms and backyard premises to differ from the risk associated with Croatia's vertically integrated commercial swine production systems. However, we also observed measures that mitigate the risks associated with the small family-operated breeding farm we visited, including satisfactory operational, husbandry, and biosecurity standards. The farm controlled and catalogued on- and off-farm movements of animals, people, and supplies, and satisfied animal disease traceability requirements. Additionally, this farm was included in Croatia's swine disease surveillance program, as are other small farms in Croatia.

Regarding risk reduction plans, we note that Croatia does have such a plan in place for CSF in the form of legislation that places additional restrictions on swine, pork, and pork products produced in or moving from the counties of Vukovar-Srijem, Sisak-Moslavina, Karlovac, and Brod-Posavina, which are considered higher risk for CSF due to past serological events for CSF in feral swine. The family-operated breeding farm visited by APHIS was in Karlovac County and thus subject to these additional restrictions. As noted in the risk evaluation,[4] the additional risk reduction measures include specific biosecurity requirements such as cleaning and disinfection of vehicles and equipment. Additional measures also require that domestic swine from premises situated in the higher-risk counties can be marketed within Croatia if they undergo clinical examination and sampling procedures prior to movement from the premises of origin. The swine must also test negative for CSF within the 7 days prior to movement, and no swine must have been introduced to the premises within 30 days prior to movement. Domestic swine from higher-risk counties must be accompanied by a health certificate that includes the number of swine, place of origin, date of clinical examination, and disease sampling and diagnostic test results.

The additional risk reduction measures stipulate that fresh meat, meat preparations, or meat products consisting of or containing meat of swine originating from premises in Karlovac, Vukovar-Srijem, and Sisak-Moslavina Counties may be marketed and sold outside of these counties only if no evidence of CSF has been recorded in the previous 12 months on the premises and the premises is located outside a protection or surveillance zone. The swine are required to have resided for at least 90 days on the premises, and no swine are permitted to have been introduced into the premises within the previous 30 days before dispatch to slaughter. Under the additional risk reduction measures, Croatia also requires each premises to be

[4] Section 4, "Active Disease Control Programs," page 19.

inspected by an authorized veterinarian, including appropriate clinical examination and sampling of animals, twice per year. If swine are moved directly to slaughter, the animals are required to be clinically examined and sampled by an authorized veterinarian, culminating in a signed health certificate. Finally, the additional restrictions prevent semen, ova, and embryos from swine from these higher-risk counties from being marketed outside of those counties.

Animal Movement Safeguards

The commenters stated concern about the movement of swine within Croatia, noting that swine can be kept in livestock markets for no more than 12 hours and must be returned to the premises if not sold in that time. The commenters noted that commingling of swine outside of a production system or premises of origin at a market presents an elevated risk of disease transmission. For this reason, the commenters asked APHIS to clarify what, if any, regulations apply to reporting that animal movement back to the premises of origin and if there are any quarantine or movement restrictions or disease monitoring placed on that animal. The commenters recommended that APHIS ensure that reporting takes place for animal movement back to the premises of origin, that there are quarantine or movement restrictions as necessary, and that official monitoring for disease be in place and verified by Croatia.

We agree with the commenters that commingling of potentially infected but undetected swine in markets could contribute to rapid transmission and spread of contagious swine diseases. We acknowledged on page 46 of our risk evaluation that backyard premises with a single pig are exempt from most of Croatia's premises and animal registration requirements and that this presents a gap in animal disease traceability. We also acknowledged that backyard premises may present a biosecurity gap as some may not always conduct animal disease sampling or collect, analyze, and respond to changes in production data.

However, we consider it unlikely that animals/products from small farms or backyard premises will enter the export chain, as the movement and marketing patterns of Croatia's small farms and family premises are local and domestic in scope. Additionally, we concluded from our risk evaluation that the risk of disease transmission in small farm and backyard premises is mitigated at the premises and market levels. Although these premises are exempt from entry in the Croatian Agricultural Agency's Farm Register database, they must report the purchase of any pig to the competent veterinary organization at the time of delivery. Moreover, as the pig is most likely fed and fattened for personal consumption, we consider it unlikely that the pig would be moved off of a single- or double-swine backyard premises. Any swine that do move from a small premises require a movement permit and corresponding health certificate, and would most likely enter the local livestock market and be subject to the regulations enforced there. Livestock market regulations include the requirement that each animal consignment arriving to the market must be accompanied by a veterinary health certificate, issued within 30 days prior to movement, indicating veterinary inspection was performed prior to animals leaving the premises, as well as a travel document indicating that the transport vehicle underwent cleaning and disinfection.

Finally, the risk associated with an infected animal arriving at an animal market and being sent back to the premises of origin is also mitigated by veterinary inspection and corresponding documentation prior to animals moving to the market, as well as by the requirement that transport vehicles be disinfected.

Disease risk is further mitigated by other control measures that can be implemented in the event that a contagious animal disease is suspected or confirmed. The measures we observed included disinfection wheelbaths for vehicles and footbaths for people, and requiring that employees don personal protective clothing prior to entering the sale and transfer part of the market. Animal disease awareness educational pamphlets and contingency plans were on display in the market office, and the market has participated in disease outbreak simulation exercises.

Overall, we determined that Croatia has a sufficient infrastructure in place for reporting movement of pigs, including livestock markets, and concluded that disease monitoring took place at all critical points of Croatia's movement and marketing channels.

Surveillance for African Swine Fever

The commenters noted that Croatia conducts active surveillance for CSF, SVD, and FMD. However, they asked if we could determine whether active or passive surveillance is conducted for African swine fever (ASF), and whether the veterinary authority in Croatia rules out ASF in swine that present for inspection with case-compatible lesions.

We do not currently consider Croatia affected with ASF and did not conduct an evaluation of Croatia's ASF status. Thus, as the commenters acknowledged, passive and active surveillance for ASF are not specifically related to the risk assessment, which was conducted specifically for CSF, FMD, SVD, and rinderpest. However, we did conclude that Croatia maintains effective CSF and FMD emergency response plans, so if a disease investigation was triggered by case-compatible lesions we consider it highly likely that ASF would be appropriately confirmed or ruled out by Croatian veterinary officials.

We acknowledge that ASF has been a concern in the EU and in areas adjacent to the EU. The EU has laid down prevention and control measures [5] to be applied where ASF is suspected or confirmed, either in agricultural establishments or in wild boars. As an EU Member State, Croatia is required to implement EU-mandated prevention and control measures for all swine diseases, including ASF. APHIS continues to monitor the ASF situation in the EU, and Croatia would be subject to any restrictive action that APHIS takes towards the EU or individual Member States to mitigate the risk of introduction of ASF.

CSF Testing Methods

The commenters stated that the methods of investigation and testing in Croatia for suspected cases of CSF included in the risk evaluation appear to be inconsistent with the laboratory methods conducted in the United States that ensure rapid detection of CSF from samples submitted from a farm. The commenters suggested that this inconsistency could result in a significant delay in confirming the presence of CSF on farms in Croatia with case-compatible lesions and recommended that the competent veterinary authority of Croatia be required to improve laboratory detection methods so they are equivalent to those used in the United States.

Under OIE guidelines, APHIS import risk analyses are required to assess whether the end result of a sanitary measure or standard, in this case CSF detection methodology and disease confirmation, is equivalent to the end result of the importing country's measure or standard. While Croatia's CSF investigation and testing procedures may diverge slightly from U.S. protocols, we concluded from information gathered during the site visit that Croatia's CSF diagnostic

[5] *http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:02002L0060-20080903:EN:NOT.*

testing protocols are in accordance with international standards and their end result would be rapid detection of CSF. We determined that Croatia's laboratory system was capable of quickly and accurately receiving, processing, and completing diagnostic tests on samples received. We also determined that these labs were able to accurately diagnose CSF, FMD, and SVD, distinguish them from differential diagnoses, and quickly communicate test results to the Croatian Veterinary Directorate and back to the field. Finally, we determined that Croatia's epidemiological investigations will capably trigger an appropriate surveillance response that would result in timely and accurate diagnosis of CSF.

Contaminated Food Waste

The commenters questioned our determination that contaminated food waste from Croatia poses a low disease risk to swine in the United States, noting that the risk findings we cited to help support this determination were conducted in 1995 and 2001 and do not reflect current risks to the U.S. pork industry.

One risk the commenters cited was the increased interstate trade of swine from States that allow the regulated feeding of garbage. The commenters recommended that the 1995 assessment be repeated using more recent data.

To the commenter's point, if contaminated meat products were imported from Croatia and managed to make it into plate waste, U.S. garbage feeding regulations will mitigate that risk. In 1995, we conducted a pathway analysis to estimate the likelihood of exposing domestic swine to infected waste. With 95 percent confidence, we estimated that 0.023 percent or less of plate and manufacturing waste would be inadequately processed prior to feeding to swine. Based on this percentage, less than 1 part in 4,300 of imported beef fed to swine as plate or manufacturing waste is likely to be inadequately cooked. The findings of a 2001 APHIS survey, which showed a substantial reduction in waste-feeding operations, further indicated that the risk of FMD exposure via feeding of contaminated waste to swine was continuing to decline.

Treatment of food waste to be fed to swine is covered under the Swine Health Protection Act[6] (SHPA) regulations in 9 CFR part 166 and supported by APHIS' Veterinary Service (VS) Swine Health Program (SHP). Under the regulations, waste feeder operations must be licensed and regularly inspected by APHIS inspectors. In addition to other safeguards, the licensing process requires that producers adequately cook the waste fed to swine using methods designed to destroy foreign animal disease agents.

We acknowledge that waste feeding continues to be a potential pathway for transmission of swine diseases and that interstate trade patterns are subject to change. We maintain, however, that the 1995 and 2001 risk findings, combined with existing SHPA requirements, indicate to us a low likelihood of exposure of domestic swine to CSF, FMD, SVD, and rinderpest from food waste originating from Croatia.

Verification of Garbage Heating Requirements

The commenters noted that the SHPA requires licensed facilities to have quarterly or bi-yearly temperature checks of garbage-cooking equipment for a minimum of two and a maximum of four temperature checks each fiscal year. The commenters asked how many of the licensed garbage feeders actually were temperature checked twice in 2014 by a regulatory official. They indicated concerns with the records licensed facilities maintain to verify that they are meeting cooking time and temperature requirements on days they are not inspected, and recommended that we determine what records licensed facilities maintain in order to provide such verification to State and Federal animal health officials.

While we require that licensed U.S. garbage-feeding facilities observe all garbage heating requirements under the SHPA regulations, cooking temperature and treatment requirements are outside the scope of this risk evaluation. Regulations addressing these practices are contained in 9 CFR part 166 and include provisions for inspection of heating equipment and records. Garbage-feeding facilities suspected of violating the regulations for storing and heating garbage for feeding are subject to license suspension or revocation.

Unlicensed Garbage Feeders

The commenters presented data from APHIS–VS reports to the U.S. Animal Health Association's Transmissible Diseases of Swine Committee indicating that, from 2009 to 2013, the number of non-licensed garbage feeders found by State and Federal animal health authorities in searches for non-licensed feeders was 104, 142, 68, 125, and 160, respectively. The commenters asked if APHIS has any supporting information on estimates of the number of unlicensed garbage-feeding facilities. Citing the disease risk posed by unlicensed garbage-feeding operations, the commenters expressed concern with our level of confidence that foreign animal diseases can be detected promptly in unlicensed garbage-feeding operations and asked if our emphasis on finding non-licensed feeders increased or decreased over the past couple of years. Procedures for the handling, processing, and feeding of food waste to swine in the United States are subject to our swine health protection regulations in 9 CFR part 166. Compliance with the regulations has improved in recent years, thereby reducing the probability of survival of FMD virus in the food waste. Searches for non-licensed garbage feeding facilities are regularly conducted using several different techniques as part of the duties of APHIS animal health staff, as well as State animal health and other State agency staff. During fiscal year 2014, animal health and other inspectors conducted 28,774 searches for non-licensed garbage feeding facilities with 122 documented non-licensed facilities identified, which indicates that unlicensed activity is infrequent.

When unlicensed garbage feeding facilities are identified, the unauthorized activity is documented, and the facility is brought into compliance. Depending on the State, all swine on such premises may be quarantined and tested for foreign animal diseases. Information on the number of inspections conducted to detect unlicensed garbage feeding facilities, the number of unlicensed facilities identified, and resolution of cases resulting from such identification are captured at the State level and evaluated by APHIS on a regular basis. Given the regular monitoring of these facilities and their relatively small number, we stand by the conclusions we reached in our 1995 risk analysis cited above.

SHPA Budget

The commenters stated a concern that budget cuts to APHIS–VS and State animal health officials have negatively affected the ability to effectively carry out the regulatory activities supporting the SHPA. They also expressed concern that the reduction in such activities has reduced the number of inspection and searches for unlicensed garbage-feeding operations to a level that is lower than what was indicated in the 1995 risk analysis.

Budget cuts to APHIS have necessitated a reordering of priorities in relation to SHPA-related activities. We have deemphasized or passed on to State partners or other cooperators lower-yield activities, such as visiting

[6] 7 U.S.C. 3801.

restaurants to inquire about garbage-disposal methods, in favor of allowing inspectors to spend more time interacting with and educating swine producers and conducting inspections. The regular presence of APHIS inspectors in U.S. garbage feeding facilities provides opportunities to educate operators on disease signs and reporting requirements and to conduct direct observation of animals for signs of illness. APHIS believes, therefore, that the presence of animal products infected with FMD or other reportable conditions entering the United States would be detected more quickly in these types of premises than in other, unregulated premises.

Environmental Assessment

The commenters noted that the environmental assessment (EA) provided with this rulemaking was the May 2011 EA for the importation of swine and swine commodities from Slovakia. They also noted that APHIS provided a supporting document that was an amended finding of no significant impact (FONSI) from importation of swine and swine commodities from Croatia that uses the EA from Slovakia as the basis for the amended finding related to Croatia. The commenters requested that APHIS expand on how it is justifiable to use an EA prepared for other countries and apply it to Croatia.

APHIS has conducted animal health status evaluations for multiple EU Member States for swine diseases. Since 2006 we have recognized the CSF, FMD, SVD, and/or rinderpest status for EU Member States Latvia, Lithuania, Poland, the Czech Republic, Slovakia, Slovenia, Estonia, and Hungary, and for certain countries that have entered into agricultural equivalence agreements with the EU. In each case, we determined that measures are in place to mitigate the risk of CSF, SVD, FMD, and/or rinderpest introduction into the United States through importation of swine, swine commodities, ruminants, and ruminant commodities from countries or regions that we recognize as low risk for CSF and free of SVD, FMD, and rinderpest.

Given that the EU applies and ensures enforcement of the same disease mitigation requirements across all EU Member States, we recognized that the single-state evaluations we were conducting were redundant and thus unnecessary with respect to meeting the requirements of the National Environmental Protection Act (NEPA). After we consulted with Agency specialists on NEPA, we did an environmental impact analysis comparison of the 2011 Slovakia EA analysis in regards to the proposed action of this notice for the EU Member State Croatia and determined that the environmental analyses of the Slovakia EA were similar and sufficient to cover the proposed action for Croatia. The 2011 Slovakia EA stated that for any like/similar future regionalization actions proposed for EU Member States, APHIS would incorporate the Slovakia EA by reference in a new FONSI issued for a proposed new action for an EU Member State. That is what we have done for this proposed action for Croatia.

Additionally, we determined that future proposed actions of this nature pose negligible environmental impacts to each EU Member State or country that has entered into an agricultural equivalency agreement with the EU, provided that a disease assessment finds them to be free of or a low risk for relevant diseases. As Croatia is an EU Member State and because we have determined that Croatia is free of SVD, FMD, and rinderpest, and at low risk for CSF, we believe that the ''like/similar action'' environmental analyses approach as presented in the 2011 Slovakia EA/FONSI is appropriate to use for the proposed action for Croatia.

Based on the evaluation and the reasons given in this document in response to comments, we are recognizing Croatia as free of FMD, rinderpest, and SVD, and low risk for CSF. The lists of regions recognized as free or at low risk of these diseases can be found by visiting the APHIS Web site at *http://www.aphis.usda.gov/wps/portal/aphis/ourfocus/importexport* and following the link to ''Animal or Animal Product.'' Copies of the lists are also available via postal mail, fax, or email upon request to the Regionalization Evaluation Services, National Import Export Services, Veterinary Services, Animal and Plant Health Inspection Service, 4700 River Road Unit 39, Riverdale, Maryland 20737.

BILLING CODE 3410–34–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–928]

Uncovered Innerspring Units From the People's Republic of China: Affirmative Preliminary Determination of Circumvention of the Antidumping Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (''the Department'') preliminarily determines that uncovered innerspring units (''innersprings units'') completed or assembled in Malaysia by Goldon Bedding Manufacturing Sdn. Bhd. (''Goldon'') using components from the People's Republic of China (''PRC''), and exported to the United States, are circumventing the antidumping duty order on innersprings from the PRC, as provided in section 781(b) of the Tariff Act of 1930, as amended (''the Act'').[1]

DATES: *Effective Date:* October 23, 2015.

FOR FURTHER INFORMATION CONTACT: Susan Pulongbarit, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–4031.

SUPPLEMENTARY INFORMATION:

Background

On December 31, 2014, the Department initiated an anticircumvention inquiry on imports of innersprings from the PRC exported by Goldon.[2] On January 12, 2015, the Department issued a circumvention inquiry questionnaire.[3] On January 22, 2015, we placed information on the record confirming Goldon's receipt of the questionnaire.[4] The Department has,

[1] *See Uncovered Innerspring Units from the People's Republic of China: Notice of Antidumping Duty Order,* 74 FR 7661 (February 19, 2009) (''*Order*'').

[2] *See Uncovered Innerspring Units From the People's Republic of China: Initiation of Anticircumvention Inquiry on Antidumping Duty Order,* 79 FR 78792 (December 31, 2014) (''*Initiation*'').

[3] *See* Letter from the Department, to Goldon, regarding ''Uncovered Innerspring Units from the People's Republic of China: Circumvention Inquiry Questionnaire,'' dated January 12, 2015 (''Circumvention Questionnaire'').

[4] *See* Memo to the File, through Scot T. Fullerton, Program Manager, Office V, AD/CVD Operations, Enforcement and Compliance, from Steven Hampton, International Trade Compliance Analyst, Office V, AD/CVD Operations, Enforcement and Compliance, regarding ''Uncovered Innerspring Units from the People's Republic of China: Anticircumvention Inquiry Questionnaire:

to date, not received any responses to our requests for information from Goldon.

Because Goldon failed to respond to the questionnaire, the record does not contain complete information regarding the factors set forth in section 781(b) of the Tariff Act of 1930 (the ''Act''). Accordingly, we have based our determination on facts otherwise available, pursuant to sections 776(a)(2)(A) and (C) of the Act, applying an adverse inference, pursuant to section 776(b) of the Act.[5]

Scope of the Antidumping Duty Order

The merchandise subject to the order is uncovered innerspring units. The product is currently classified under subheading 9404.29.9010 and has also been classified under subheadings 9404.10.0000, 7326.20.0070, 7320.20.5010, 7320.90.5010, or 7326.20.0071 of the Harmonized Tariff Schedule of the United States (''HTSUS''). The HTSUS subheadings are provided for convenience and customs purposes only; the written product description of the scope of the order is dispositive.[6]

Scope of the Anticircumvention Inquiry

The products covered by this inquiry are innerspring units, as described above, that are manufactured in Malaysia by Goldon with PRC-origin components and other direct materials, such as helical wires, and that are subsequently exported from Malaysia to the United States.

Methodology

The Department has conducted this preliminary determination of circumvention in accordance with section 781(b) of the Act and 19 CFR 351.225(h). For a full description of the methodology underlying our conclusions, *see* the Preliminary Decision Memorandum. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (''ACCESS''). ACCESS is available to registered users at *http://access.trade.gov* and is available to all parties in the Central Records Unit, room B8024 of the main Department of Commerce building. In addition, the signed Preliminary Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/index.html*. The signed Preliminary Decision Memorandum and the electronic version of the Preliminary Decision Memorandum are identical in content. The Preliminary Decision Memorandum is hereby adopted by this notice.

Affirmative Preliminary Determination of Circumvention

As detailed in the Preliminary Decision Memorandum, the Department preliminarily determines, based on facts available with an adverse inference pursuant to sections 776(a) and (b) of the Act, that innerspring units completed and assembled in Malaysia by Goldon using components from the PRC and exported from Malaysia to the United States are circumventing the *Order*. Moreover, because we are unable to distinguish between those innerspring units that Goldon is exporting to the United States which contain PRC-origin components and those that do not, the Department has preliminarily determined that it is appropriate to instruct U.S. Customs and Border Protection (''CBP'') to suspend liquidation of all entries of innerspring units from Malaysia produced by Goldon as subject to the *Order*.

Suspension of Liquidation

In accordance with 19 CFR 351.225(l)(2), the Department will direct CBP to suspend liquidation and to require a cash deposit of estimated duties at the rate applicable to the exporter, on all unliquidated entries of innerspring units produced by Goldon that were entered, or withdrawn from warehouse, for consumption on or after December 22, 2014, the date of initiation of the anticircumvention inquiry.

Should the Department conduct an administrative review in the future, and determine in the context of that review that Goldon did not produce for export innerspring units using PRC-origin innerspring components, the Department will consider initiating a changed circumstances review pursuant to section 751(b) of the Act to determine if the continued suspension of all innerspring units produced by Goldon is warranted.[7]

Notification to the International Trade Commission

The Department, consistent with section 781(e)(1)(B) of the Act and 19 CFR 351.225(f)(7)(i)(B), has notified the International Trade Commission (''ITC'') of this preliminary determination to include the merchandise subject to this anticircumvention inquiry within the *Order*. Pursuant to section 781(e)(2) of the Act, the ITC may request consultations concerning the Department's proposed inclusion of the subject merchandise. If, after consultations, the ITC believes that a significant injury issue is presented by the proposed inclusion, it will have 15 days to provide written advice to the Department.[8]

Public Comment

Interested parties may submit case briefs within 15 days after the date of publication of these preliminary results of review in the **Federal Register**. Rebuttals to case briefs, which are limited to issues raised in the case briefs, must be filed within five days after the time limit for filing case briefs. Parties who submit case or rebuttal briefs are requested to submit with the argument (a) a statement of the issue, (b) a brief summary of the argument, and (c) a table of authorities. Parties submitting briefs should do so using the Department's electronic filing system, ACCESS.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, filed electronically using ACCESS. An electronically filed document must be received successfully in its entirety by the Department's electronic records system, ACCESS, by 5:00 p.m. Eastern Time, within 30 days after the date of publication of this notice.[9] Hearing requests should contain the party's name, address, and telephone number, the number of participants, and a list of the issues parties intend to present at the hearing. If a request for a hearing is made, the Department intends to hold the hearing at the U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230, at a time and location to be determined. Prior to the date of the hearing, the Department will contact all parties that submitted case or rebuttal brief to determine if they wish to participate in the hearing.

Documentation to Confirm Goldon's Receipt of the Questionnaire,'' dated January 22, 2015.

[5] For more information, *see* Department Memorandum, ''Anticircumvention Inquiry Regarding the Antidumping Duty Order on Uncovered Innerspring Units from the People's Republic of China: Preliminary Determination Decision Memorandum for Goldon Bedding Manufacturing Sdn. Bhd.,'' dated concurrently with these results (''Preliminary Decision Memorandum'').

[6] *See* Preliminary Decision Memorandum for a complete description of the scope of the *Order*.

[7] *See, e.g., Certain Tissue Paper Products from the People's Republic of China: Affirmative Final Determination of Circumvention of the Antidumping Duty Order,* 76 FR 47554 (August 5, 2011).

[8] *See* section 781(e)(2) of the Act.

[9] *See* 19 CFR 351.310(c).

The Department will then distribute a hearing schedule to the parties prior to the hearing and only those parties listed on the schedule may present issues raised in their briefs.

Final Determination

Pursuant to section 781(f) of the Act, the final determination with respect to this anticircumvention inquiry, including the results of the Department's analysis of any written comments, will be issued no later than December 2, 2015, unless extended.

This preliminary affirmative circumvention determination is published in accordance with section 781(b) of the Act and 19 CFR 351.225.

Dated: October 19, 2015.

Ronald K. Lorentzen,

Acting Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XE264

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The New England Fishery Management Council (Council) is scheduling a public meeting of its Ecosystem Based Fishery Management Committee to consider actions affecting New England fisheries in the exclusive economic zone (EEZ). Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate.

DATES: This meeting will be held on Tuesday, November 10, 2015 at 9 a.m.

ADDRESSES: The meeting will be held at the Fairfield Inn & Suites, 185 MacArthur Drive, New Bedford, MA 02740; telephone: (774) 634–2000; fax: (774) 634–2001.

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Thomas A. Nies, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492.

SUPPLEMENTARY INFORMATION:

Agenda

The committee will receive a progress report and provide guidance to the Plan Development Team on the development of an example Fishery Ecosystem Plan (FEP). This meeting will focus on the FEP components, strawman goals and objectives and a summary of how various ecosystem models address FEP data needs. The Committee will also formulate comments on NOAA Fisheries Draft Ecosystem-Based Fisheries Management Policy *(http://s3.amazonaws.com/nefmc.org/2_Draft-EBFM-Policy-9.9.2015-for-release.pdf*). Final comments on the Draft Policy will be approved at the December 2015 Council meeting.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Thomas A. Nies, Executive Director, at (978) 465–0492, at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 20, 2015.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Oceanic and Atmospheric Administration (NOAA).

Title: Socioeconomics of Guided Wildlife Viewing Operations in Monterey Bay National Marine Sanctuary (MBNMS).

OMB Control Number: 0648–xxxx.

Form Number(s): None.

Type of Request: Regular (request for a new information collection).

Number of Respondents: 56.

Average Hours per Response: 2.5 hours.

Burden Hours: 140.

Needs and Uses: This request is for a new information collection.

NOAA is mentoring student interns from the Monterey Institute for International Studies to estimate the market and non-market economic values associated with non-consumptive recreation uses (*e.g.* whale watching, other wildlife observation, SCUBA diving, snorkeling, beach activities, surfing, wind-surfing, kite boarding, paddle boarding, etc.) in the Monterey Bay National Marine Sanctuary (MBNMS) for those accessing the MBNMS via ''for hire'' operation boats.

We will conduct surveys of the for hire operations that take people out for non-consumptive recreation, to obtain total use by type of activity and the spatial use by type of activity. Information will also be obtained on costs-and-earnings of the operations, knowledge, attitudes and perceptions of sanctuary management strategies and regulations, and demographic information on owner/captains and crews. Surveys will also be conducted of the passengers aboard the for hire operation boats to obtain their market and non-market economic use values for non-consumptive recreation use and how those value change with changes in natural resource attribute conditions and user characteristics. Additional information will be obtained on importance-satisfaction ratings of key natural resource attributes, facilities and services, knowledge, attitudes and perceptions of management strategies and regulations, and demographic profiles of passengers.

Affected Public: Business or other for-profit organizations.

Frequency: One time.

Respondent's Obligation: Voluntary.

This information collection request may be viewed at reginfo.gov. Follow the instructions to view Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *OIRA_Submission@omb.eop.gov* or fax to (202) 395–5806.

Dated: October 20, 2015.

Sarah Brabson,

NOAA PRA Clearance Officer.

South Atlantic Fishery Management Council (Council); Public Hearings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public hearings.

SUMMARY: The South Atlantic Fishery Management Council (SAFMC) will hold a series of public hearings pertaining to Regulatory Amendment 25 to the Snapper Grouper Fishery Management Plan (FMP) for the South Atlantic and Regulatory Amendment 1 to the Dolphin Wahoo Fishery Management Plan for the Atlantic. Regulatory Amendment 25 to the Snapper Grouper FMP addresses management measures for blueline tilefish, yellowtail snapper and black sea bass. Regulatory Amendment 1 to the Dolphin Wahoo FMP addresses a commercial trip limit for the dolphin fishery in the Atlantic.

DATES: The public hearings will be held via webinar with listening/comment stations from November 9–12, 2015. A webinar with listening/comment stations will be held November 9, 2015 for Regulatory Amendment 25. A webinar with listening/comment stations will be held November 12, 2015 for both Snapper Grouper Regulatory Amendment 25 and Dolphin Wahoo Regulatory Amendment 1.

The public hearings will be conducted via webinar and accessible via the internet from the Council's Web site at *www.safmc.net.* The hearings will begin at 6 p.m. Registration for each webinar is required. Registration information will be posted on the SAFMC Web site at *www.safmc.net* as it becomes available. Webinar registrants may test/confirm their computer set up for the webinar one hour prior to each hearing and contact Mike Collins at (843) 763–1050 to address any questions regarding webinar setup. Local listening/comment stations will be provided at the following locations:

ADDRESSES:

Public Hearings for Regulatory Amendment 25 to the Snapper Grouper FMP:

November 9, 2015—Local Listening/Comment Stations: Georgia Department of Natural Resources, Coastal Resources Division, One Conservation Way, Brunswick, GA 31520–8687; phone: (912) 264–7218 and Hilton Garden Inn Charleston Airport, 5265 International Boulevard, North Charleston, SC 29418; phone: (843) 308–9330.

2. November 12, 2015—Local Listening/Comment Station: Dare County Government Complex, Room 168, 1st Floor, 954 Marshall C. Collins Drive, Manteo, NC 27954; phone: (252) 475–5000; and Wingate by Wyndham (Hotel), 2465 State Route 16, St. Augustine, FL 32092; phone: (904) 824–9229.

Public Hearing for Regulatory Amendment 1 to the Dolphin Wahoo FMP

1. November 12, 2015—Local Listening/Comment Station: Dare County Government Complex, Room 168, 1st Floor, 954 Marshall C. Collins Drive, Manteo, NC 27954; phone: (252) 475–5000; and Wingate by Wyndham (Hotel), 2465 State Route 16, St. Augustine, FL 32092; phone: (904) 824–9229.

Council address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N. Charleston, SC 29405

FOR FURTHER INFORMATION CONTACT: Kim Iverson, Public Information Officer, SAFMC; phone: (843) 571–4366 or toll free: (866) SAFMC–10; fax: (843) 769–4520; email: *kim.iverson@safmc.net.*

SUPPLEMENTARY INFORMATION:

Regulatory Amendment 25 to the Snapper Grouper FMP

This amendment includes alternatives to:

(1) For blueline tilefish, specify the Acceptable Biological Catch (ABC) for the South Atlantic, adjust Annual Catch Limit (ACL), Optimum Yield (OY) and other management parameters as necessary based on the new ABC; revise the commercial trip limit; and modify the recreational bag limit;

(2) Modify the recreational and commercial fishing year and commercial Accountability Measures for yellowtail snapper; and

(3) Increase the recreational bag limit for black sea bass.

Regulatory Amendment 1 to the Dolphin Wahoo FMP

This amendment includes management alternatives to:

(1) Establish a commercial trip limit for dolphin.

Written comments may be directed to Bob Mahood, Executive Director, SAFMC (see Council address) or via email to*: Mike.Collins@safmc.net.* Note that email comments should specify ''Snapper Grouper Reg Amendment 25'' or ''Dolphin Wahoo Reg Amend 1'' in the Subject *Line of the email according to the comment being submitted.* Public hearing comments for both Snapper Grouper Regulatory Amendment 25 and Dolphin Wahoo Regulatory Amendment 1 will be accepted until 5:00 p.m. on November 16, 2015. Copies of the public hearing documents for each amendment will be posted on the Council's Web site at *www.safmc.net* when they become available.

During the webinars, Council staff will present an overview of the amendment and will be available for informal discussions and to answer questions via webinar. Members of the public will have an opportunity to go on record to record their comments for consideration by the Council. Area Council representatives will be present at the local comment stations.

Special Accommodations

These hearings are physically accessible to people with disabilities. Requests for auxiliary aids should be directed to the Council office (see **ADDRESSES**) 3 days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 20, 2015.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Pacific Fishery Management Council; Online Webinar

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of online webinar.

SUMMARY: The Pacific Fishery Management Council's (Pacific Council's) Scientific and Statistical Committee (SSC) will hold an online webinar to review a revised west coast limited entry trawl individual fishing quota (IFQ) projection model developed by the Pacific Council's Groundfish Management Team (GMT). The online SSC webinar is open to the public.

DATES: The SSC webinar will commence at noon PST, Monday, November 9, 2015 and continue until 2 p.m. or as necessary to complete business for the day.

ADDRESSES: To attend the SSC webinar, please join online at *http://www.gotomeeting.com/online/webinar/join-webinar* and enter the webinar ID: 148–230–579, as well as your name and email address. Once you have joined the webinar, call the toll number 1 (914) 614–3221 and enter 117–723–807 when prompted for the audio access code. Then enter your audio phone pin (shown after joining the webinar). Participants are encouraged to use their telephone, as this is the best practice to avoid technical issues and excessive feedback (see *http://www.pcouncil.org/wp-content/uploads/PFMC_Audio_Diagram_GoToMeeting.pdf* for best practices). System requirements for PC-based attendees: Windows 7, Vista, or XP; for Mac-based attendees: Mac OS X 10.5 or newer; and for mobile attendees: iPhone, iPad, Android phone, or Android tablet (see the *GoToMeeting Webinar Apps*). If you experience technical difficulties and would like assistance, please contact Mr. Kris Kleinschmidt at (503) 820–2280, extension 425. A public listening station will also be provided at the Pacific Council office.

Council address: Pacific Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220–1384.

FOR FURTHER INFORMATION CONTACT: Mr. John DeVore, Pacific Council; telephone: (503) 820–2413.

SUPPLEMENTARY INFORMATION: The specific objectives of the SSC webinar are to review revisions to the GMT's west coast limited entry trawl IFQ projection model to ensure the changes recommended by the SSC's Groundfish and Economics Subcommittees in June were implemented and the model behaves as expected. During the webinar, the SSC will consider endorsing the GMT's IFQ model to inform management decisions. No management actions will be decided in this webinar. Public comments during the webinar will be received from attendees at the discretion of the SSC chair.

Although non-emergency issues not identified in the webinar agenda may come before the webinar participants for discussion, those issues may not be the subject of formal action during this webinar. Formal action at the webinar will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under Section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the webinar participants' intent to take final action to address the emergency.

Special Accommodations

The public listening station at the Pacific Council office is physically accessible to people with disabilities. Requests for auxiliary aids should be directed to Mr. Kris Kleinschmidt at (503) 820–2280 at least 5 days prior to the webinar date.

Dated: October 20, 2015.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration

RIN 0648–XE270

Magnuson-Stevens Act Provisions; General Provisions for Domestic Fisheries; Application for Exempted Fishing Permits

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; request for comments.

SUMMARY: The Assistant Regional Administrator for Sustainable Fisheries, Greater Atlantic Region, NMFS, has made a preliminary determination that an Exempted Fishing Permit application contains all of the required information and warrants further consideration. This Exempted Fishing Permit would allow commercial fishing vessels to fish outside of the limited access sea scallop regulations in support of study investigating coastal spawning of winter flounder in Southern New England.

Regulations under the Magnuson-Stevens Fishery Conservation and Management Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed Exempted Fishing Permits.

DATES: Comments must be received on or before November 9, 2015.

ADDRESSES: You may submit written comments by any of the following methods:

- *Email: nmfs.gar.efp@noaa.gov.* Include in the subject line ''DA15–063 CFF SNE Essential Fish Habitat Study EFP.''
- *Mail:* John K. Bullard, Regional Administrator, NMFS, Greater Atlantic

Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope ''DA15–063 CFF SNE Essential Fish Habitat Study EFP.''

FOR FURTHER INFORMATION CONTACT: Shannah Jaburek, Fisheries Management Specialist, 978–282–8456.

SUPPLEMENTARY INFORMATION: NOAA has awarded the Coonamesset Farm Foundation (CFF) a grant through the 2015 Saltonstall-Kennedy grant program, in support of a project titled ''Investigating Offshore Essential Fish Habitat of Southern New England Winter Flounder.'' To conduct this research, CFF submitted a complete application for an EFP on August 4, 2015. The applicant proposes to investigate questions associated with spawning winter flounder in Southern New England (SNE) by conducting multiple research activities, which include:

1. A paired scallop dredge survey to identify and monitor the distribution of winter flounder;
2. Test dredge gear twine top configurations and apron lengths to reduce finfish bycatch;
3. Attempt to observe winter flounder spawning behavior using a remotely operated vehicle (ROV);
4. Conduct a benthic habitat video survey; and
5. Sample for a winter flounder eggs using a plankton net.

CFF is requesting exemptions that would allow commercial fishing vessels be exempt from the Atlantic sea scallop days-at-sea (DAS) allocations at 50 CFR 648.53(b); crew size restrictions at § 648.51(c); Atlantic sea scallop observer program requirements at § 648.11(g); and possession limits and minimum size requirements specified in 50 CFR part 648, subsections B and D through O, for sampling purposes only. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.

Five vessels would conduct the dredge survey and gear testing on six 5-day trips, for 30 total DAS. Each trip would complete approximately 60 dredge tows per trip for an overall total of 360 tows for the project. The project would also conduct a single video survey trip utilizing a benthic sled. Trips would take place in the open areas of SNE in December 2015–May 2016.

All dredge tows would use two 15-foot (4.57-m) Turtle Deflector Dredges (TDD) and be conducted in tandem for a duration of 30 minutes at a tow speed of approximately 4.8 knots. One dredge would be rigged with a 7-row apron and 60-mesh wide twine top while the other dredge would be rigged with a 5-row apron and 45-mesh wide twine top. To examine factors that may influence flatfish bycatch rates such as habitat characteristics and fish behavior in response to the TDD, each dredge would have an underwater camera attached to the bale bar. When researchers identify large numbers of spawning winter flounder during the dredge survey, they would deploy the ROV to film spawning behavior interactions.

For all tows, researchers would count and weigh sea scallop catch. Researchers would measure scallops from one randomly selected basket from each dredge in 5-mm increments to determine size selectivity. Researchers would sort finfish catch by species then count, weigh, and measure finfish catch in 1-mm increments. Researchers would also weigh, sex, and assess the reproductive stage of all winter flounder greater than 32 cm. The vessels would not retain catch for longer than needed to conduct sampling and vessels would not land any catch for sale. CFF researchers would accompany all trips, and be in charge of sampling activities.

PROJECT CATCH ESTIMATES

Species	lb	kg
Scallops	21,000	9,525
Yellowtail	500	227
Winter Flounder	1,500	680
Windowpane Flounder	2,600	1,179
Monkfish	8,000	3,629
Barndoor Skate	500	227
NE Skate Complex	50,000	22,680
Other Fish	1,500	680

The project would also use a commercial vessel for a single dedicated video trip utilizing a benthic underwater survey sled. At each of the survey stations the benthic sled would be deployed and towed for 5–10 minutes at a speed of 1.5–2 knots. Researchers would attach a live feed video camera transmitting video back to the vessel, and two underwater cameras taking high definition still shots to the benthic sled. There would also be two low level lights attached to the benthic sled in order to illuminate the area for the cameras. The video footage and photos from the benthic sled survey would be compared to still shots take during the dredge surveys. Researchers would also attach a plankton net to the benthic sled. The plankton net would be 101.60 cm long with a 27.94 x 45.72-cm opening, and a mesh size of 0.05 cm. The plankton net would allow researchers to see if there are winter flounder eggs present at each of the survey stations.

CFF has requested these exemptions to allow them to conduct experimental dredge towing without being charged DAS. Participating vessels need crew size waivers to accommodate science personnel and possession waivers will enable them to conduct finfish sampling activities. NMFS would waive observer notification requirements because the research activity is not representative of a commercial scallop fishing trip.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 20, 2015.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration

RIN 0648–XE230

Atlantic Coastal Fisheries Cooperative Management Act Provisions; Horseshoe Crabs; Application for Exempted Fishing Permit, 2015; Reopening of Comment Period

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notification of a proposal to conduct exempted fishing; reopening of comment period.

SUMMARY: This action reopens the comment period for an application for an exempted fishing permit for horseshoe crab that published on October 7, 2015. The original comment period closed 13 days later on October 19, 2015, which is two days shorter than the 15-day minimum comment time period required in our regulations. We are therefore reopening the comment period through October 27, 2015, to make-up for this shortfall and to provide additional opportunity for public comment.

DATES: Written comments must be received on or before October 27, 2015.

ADDRESSES: Written comments should be sent to Alan Risenhoover, Director, Office of Sustainable Fisheries, NMFS, 1315 East-West Highway, Room 13362, Silver Spring, MD 20910. Mark the outside of the envelope ''Comments on Horseshoe Crab EFP Proposal.''

Comments may also be sent via fax to (301) 713–0596. Comments on this notice may also be submitted by email to: *nmfs.state-federal@noaa.gov.* Include in the subject line of the email comment the following document identifier: ''Horseshoe Crab EFP Proposal Comments.''

FOR FURTHER INFORMATION CONTACT: Derek Orner, Office of Sustainable Fisheries, (301) 427–8567.

SUPPLEMENTARY INFORMATION: A notification of a proposal to conduct exempted fishing was published on October 7, 2015 (80 FR 60633) that would allow the harvest of up to 10,000 horseshoe crabs from the Carl N. Schuster Jr. Horseshoe Crab Reserve for biomedical purposes and require, as a condition of the exempted fishing permit (EFP), the collection of data related to the status of horseshoe crabs within the reserve. The Director, Office of Sustainable Fisheries, has made a preliminary determination that the subject EFP application submitted by Limuli Laboratories of Cape May Court House, NJ, contains all the required information and warrants further consideration.

The notification of EFP application published in the **Federal Register** with a 13-day comment period that closed on October 19, 2015. Due to a clerical oversight, NMFS provided the public with a 13-day comment period instead of the 15-day comment period required by our regulations at 50 CFR 600.745. As a result, NMFS is extending the comment period to allow for additional time for public comment for interested parties to provide comment on this activity. Thus, NMFS is reopening the comment period through October 27, 2015.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 19, 2015.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

BUREAU OF CONSUMER FINANCIAL PROTECTION

[Docket No: CFPB–2015–0043]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Bureau of Consumer Financial Protection.

ACTION: Notice and request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Consumer Financial Protection Bureau (Bureau) is proposing to renew the Office of Management and Budget (OMB) approval for an existing information collection titled, ''Generic Information Collection Plan for the Collection of Qualitative Feedback on Bureau Service Delivery.''

DATES: Written comments are encouraged and must be received on or before November 23, 2015 to be assured of consideration.

ADDRESSES: You may submit comments, identified by the title of the information collection, OMB Control Number (see below), and docket number (see above), by any of the following methods:

- *Electronic: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *OMB:* Office of Management and Budget, New Executive Office Building, Room 10235, Washington, DC 20503 or fax to (202) 395–5806. Mailed or faxed comments to OMB should be to the attention of the OMB Desk Officer for the Bureau of Consumer Financial Protection. *Please note that comments submitted after the comment period will not be accepted.* In general, all comments received will become public records, including any personal information provided. Sensitive personal information, such as account numbers or social security numbers, should not be included.

FOR FURTHER INFORMATION CONTACT: Documentation prepared in support of this information collection request is available at *www.reginfo.gov* (this link active on the day following publication of this notice). Select ''Information Collection Review,'' under ''Currently under review, use the dropdown menu ''Select Agency'' and select ''Consumer Financial Protection Bureau'' (recent submissions to OMB will be at the top of the list). The same documentation is also available at *http://www.regulations.gov.* Requests for additional information should be directed to the Consumer Financial Protection Bureau, (Attention: PRA Office), 1700 G Street NW., Washington, DC 20552, (202) 435–9575, or email: *PRA@cfpb.gov. Please do not submit comments to this email box.*

SUPPLEMENTARY INFORMATION:

Title of Collection: Generic Information Collection Plan for the Collection of Qualitative Feedback on Bureau Service Delivery.

OMB Control Number: 3170–0024.

Type of Review: Extension without change of a currently approved collection.

Affected Public: Individual or Households; State, Local, or Tribal Governments; and Private Sector.

Estimated Number of Respondents: 30,000.

Estimated Total Annual Burden Hours: 7,875.

Abstract: This generic information collection plan provides for the collection of qualitative feedback from consumers, financial institutions, and stakeholders on a wide range of services the Bureau provides in an efficient, timely manner, in accordance with the Bureau's commitment to improving service delivery. By qualitative feedback, the Bureau means information that provides useful insights on, for example, comprehension, usability, perceptions, and opinions, but are not statistical surveys that yield quantitative results that can be generalized to the population of study. The Bureau expects this feedback to include insights into consumer, financial institution, or stakeholder perceptions, experiences, and expectations, provide an early warning of issues with service, or focus attention on areas where communication, training or changes in operations might improve delivery of products or services. These collections will allow for ongoing, collaborative, and actionable communications between the Bureau and consumers, financial institutions, and stakeholders. It will also allow feedback to contribute directly to the improvement of program management.

This submission is requesting OMB to renewal for additional three (3) years its approval of this generic information collection plan.

Request for Comments: The Bureau issued a 60-day **Federal Register** notice on June 15, 2015 (80 FR 34148). Comments were solicited and continue to be invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the Bureau, including whether the information will have practical utility; (b) The accuracy of the Bureau's estimate of the burden of the collection of information, including the validity of the methods and the assumptions used; (c) Ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record.

Dated: October 20, 2015.

Darrin A. King,

Paperwork Reduction Act Officer, Bureau of Consumer Financial Protection.

BILLING CODE 4810–AM–P

BUREAU OF CONSUMER FINANCIAL PROTECTION

[Docket No: CFPB–2015–0044]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Bureau of Consumer Financial Protection.

ACTION: Notice and request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Consumer Financial Protection Bureau (Bureau) is proposing a new information collection for Office of Management and Budget (OMB) approval titled, ''Owning a Home Evaluation Study.''

DATES: Written comments are encouraged and must be received on or before November 23, 2015 to be assured of consideration.

ADDRESSES: You may submit comments, identified by the title of the information collection, OMB Control Number (see below), and docket number (see above), by any of the following methods:

- *Electronic: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *OMB:* Office of Management and Budget, New Executive Office Building, Room 10235, Washington, DC 20503 or fax to (202) 395–5806. Mailed or faxed comments to OMB should be to the attention of the OMB Desk Officer for the Bureau of Consumer Financial Protection. *Please note that comments submitted after the comment period will not be accepted.* In general, all comments received will become public records, including any personal information provided. Sensitive personal information, such as account numbers or social security numbers, should not be included.

FOR FURTHER INFORMATION CONTACT: Documentation prepared in support of this information collection request is available at *www.reginfo.gov* (this link active on the day following publication of this notice). Select ''Information Collection Review,'' under Currently under review, use the dropdown menu ''Select Agency'' and select ''Consumer Financial Protection Bureau'' (recent submissions to OMB will be at the top of the list). The same documentation is also available at *http://www.regulations.gov.* Requests for additional information should be directed to the Consumer Financial Protection Bureau, (Attention: PRA Office), 1700 G Street NW., Washington, DC 20552, (202) 435–9575, or email: *PRA@cfpb.gov. Please do not submit comments to this email box.*

SUPPLEMENTARY INFORMATION:

Title of Collection: Owning a Home Evaluation Study.

OMB Control Number: 3170–XXXX (Will be assigned upon OMB approval).

Type of Review: New Collection (Request for a new OMB control number).

Affected Public: Individuals or households.

Estimated Number of Respondents: 170,200.

Estimated Total Annual Burden Hours: 12,480.

Abstract: The Dodd Frank Act directs the Bureau to develop a program of consumer education and engagement. As part of that program, the Bureau has developed a suite of online tools and resources, known as the Owning a Home project, to help consumers make better, more informed decisions about mortgages. The purpose of this information collection is to learn about the behavioral mechanisms and evaluate the hypotheses underlying the Owning a Home project. This information collection is structured as a randomized-controlled trial field study.

Request for Comments: The Bureau issued a 60-day **Federal Register** notice on September 26, 2014 (79 FR 57892). Comments were solicited and continue to be invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the Bureau, including whether the information will have practical utility; (b) The accuracy of the Bureau's estimate of the burden of the collection of information, including the validity of the methods and the assumptions used; (c) Ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record.

Dated: October 20, 2015.

Darrin A. King,

Paperwork Reduction Act Officer, Bureau of Consumer Financial Protection.

[FR Doc. 2015–27078 Filed 10–22–15; 8:45 am]

BILLING CODE 4810–AM–P

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

Proposed Information Collection; Comment Request

AGENCY: Corporation for National and Community Service.

ACTION: Notice.

SUMMARY: The Corporation for National and Community Service (CNCS), as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, and the impact of the requirement on respondents can be properly assessed.

Currently, CNCS is soliciting comments concerning its recordkeeping requirement in 45 CFR 2540.205 and 2540.206. CNCS grantees and subgrantees must maintain records to document completion of required National Service Criminal History Checks. This is not a notice of proposed rulemaking.

DATES: Written comments must be submitted to the individual and office listed in the **ADDRESSES** section by December 22, 2015.

ADDRESSES: You may submit comments, identified by the title of the information collection activity, by any of the following methods:

(1) *By mail sent to:* Corporation for National and Community Service, Aaron Olszewski, Office of General Counsel; 1201 New York Avenue NW., Washington, DC 20525.

(2) *By hand delivery or by courier* to the CNCS mailroom at Room 8100 at the mail address given in paragraph (1) above, between 9:00 a.m. and 4:00 p.m. Eastern Time, Monday through Friday, except Federal holidays.

(3) *By fax to:* (202) 606–3467, Attention: Paperwork Reduction Act.

(4) *Electronically,* through *www.regulations.gov.*

Individuals who use a telecommunications device for the deaf (TTY–TDD) may call 1–800–833–3722 between 8:00 a.m. and 8:00 p.m. Eastern Time, Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Aaron Olszewski, 202–606–6670, or by email at *aolszewski@cns.gov.*

SUPPLEMENTARY INFORMATION: This is not a notice of proposed rulemaking. CNCS is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the efficient performance of the functions of CNCS, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are expected to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (*e.g.,* permitting electronic submissions of responses).

Background

Section 189D of the National and Community Service Act of 1990, as amended, requires CNCS grantees and subgrantees to conduct a National Service Criminal History Check on individuals in covered positions. Documenting compliance with the requirement is critical to that responsibility.

Current Action

CNCS requests renewal of the previous approval.

The requirements will be used in the same manner as the existing application. CNCS also seeks to continue using the current application until the revised application is approved by OMB. The current application is due to expire on February 29, 2016.

Type of Review: Renewal of Approved Recordkeeping Requirement.

Agency: Corporation for National and Community Service.

Title: National Service Criminal History Check Recordkeeping Requirement.

OMB Number: 3045–0145.

Agency Number: None.

Affected Public: CNCS Grantees and Subgrantees.

Total Respondents: 112,357.

Frequency: Three times per covered position.

Average Time per Response: Five minutes.

Estimated Total Burden Hours: 28,089 hours.

Total Burden Cost (capital/startup): None.

Total Burden Cost (operating/maintenance): None.

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval; they will also become a matter of public record.

Dated: October 20, 2015.

Jeremy Joseph,

General Counsel.

[FR Doc. 2015–26996 Filed 10–22–15; 8:45 am]

BILLING CODE 6050–28–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Judicial Proceedings Since Fiscal Year 2012 Amendments Panel (Judicial Proceedings Panel); Notice of Federal Advisory Committee Meeting

AGENCY: Department of Defense.

ACTION: Notice of meeting.

SUMMARY: The Department of Defense is publishing this notice to announce the following Federal Advisory Committee meeting of the Judicial Proceedings since Fiscal Year 2012 Amendments Panel (''the Judicial Proceedings Panel'' or ''the Panel''). The meeting is open to the public.

DATES: A meeting of the Judicial Proceedings Panel will be held on Friday, November 6, 2015. The Public Session will begin at 9:00 a.m. and end at 4:45 p.m.

ADDRESSES: The Holiday Inn Arlington at Ballston, 4610 N. Fairfax Drive, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Ms. Julie Carson, Judicial Proceedings Panel, One Liberty Center, 875 N. Randolph Street, Suite 150, Arlington, VA 22203. Email: *whs.pentagon.em.mbx.judicial-panel@mail.mil.*. Phone: (703) 693-3849. Web site: *http://jpp.whs.mil*.

SUPPLEMENTARY INFORMATION: Due to circumstances beyond the control of the Designated Federal Officer and the Department of Defense, the Judicial Proceedings since Fiscal Year 2012 Amendments Panel (''the Judicial Proceedings Panel was unable to provide public notification of its meeting of November 6, 2015, as required by 41 CFR 102–3.150(a). Accordingly, the Advisory Committee Management Officer for the Department of Defense, pursuant to 41 CFR 102–3.150(b), waives the 15-calendar day notification requirement.

This public meeting is being held under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102–3.150.

Purpose of the Meeting: In Section 576(a)(2) of the National Defense Authorization Act for Fiscal Year 2013 (Pub. L. 112–239), as amended, Congress tasked the Judicial Proceedings Panel to conduct an independent review and assessment of judicial proceedings conducted under the Uniform Code of Military Justice (UCMJ) involving adult sexual assault and related offenses since the amendments made to the UCMJ by section 541 of the National Defense Authorization Act for Fiscal Year 2012 (Public Law 112–81; 125 Stat. 1404), for the purpose of developing recommendations for improvements to such proceedings. At this meeting, the Panel will hear about a recently completed assessment of the Uniform Code of Military Justice conducted by the Military Justice Review group. It will also continue its review of military justice data for sexual assault crimes and comparative sentencing schemes and continue deliberations on issues relating to retaliation against individuals who report incidents of sexual assault within the military. The Panel is interested in written and oral comments from the public, including non-governmental organizations, relevant to these issues or any of the Panel's tasks.

Agenda

- 9:00–10:15 Overview of Issues Examined by the Military Justice Review Group
- 10:30–11:30 Department of Defense Sexual Assault Prevention and Response Office Overview of Statistics from Annual Reports to Congress

- 11:30–12:00 Staff Presentation: Research and Methodology Used to Obtain and Analyze Information about the Military's Adjudication of Sexual Assault Crimes
- 12:00–1:00 Lunch
- 1:00–2:00 Staff Presentation: Descriptive Overview of Sexual Assault Case Outcomes and Comparative Data
- 2:00–3:00 Panel Discussion: Identifying Focus Areas for Further Examination Regarding Military Sexual Assault Adjudications
- 3:00–4:30 Deliberations: Retaliation Against Victims of Sexual Assault
- 4:30–4:45 Public Comment

Availability of Materials for the Meeting: A copy of the November 6, 2015 public meeting agenda or any updates or changes to the agenda, to include individual speakers not identified at the time of this notice, as well as other materials provided to Panel members for use at the public meeting, may be obtained at the meeting or from the Panel's Web site at *http://jpp.whs.mil*.

Public's Accessibility to the Meeting: Pursuant to 5 U.S.C. 552b and 41 CFR 102–3.140 through 102–3.165, and the availability of space, this meeting is open to the public. Seating is limited and is on a first-come basis.

Special Accommodations: Individuals requiring special accommodations to access the public meeting should contact the Judicial Proceedings Panel at *whs.pentagon.em.mbx.judicial-panel@mail.mil* at least five (5) business days prior to the meeting so that appropriate arrangements can be made.

Procedures for Providing Public Comments: Pursuant to 41 CFR 102–3.140 and section 10(a)(3) of the Federal Advisory Committee Act of 1972, the public or interested organizations may submit written comments to the Panel about its mission and topics pertaining to this public session. Written comments must be received by the JPP at least five (5) business days prior to the meeting date so that they may be made available to the Judicial Proceedings Panel for their consideration prior to the meeting. Written comments should be submitted via email to the Judicial Proceedings Panel at *whs.pentagon.em.mbx.judicial-panel@mail.mil* in the following formats: Adobe Acrobat or Microsoft Word. Please note that since the Judicial Proceedings Panel operates under the provisions of the Federal Advisory Committee Act, as amended, all written comments will be treated as public documents and will be made available for public inspection. If members of the public are interested in making an oral statement, a written statement must be submitted along with a request to provide an oral statement. Oral presentations by members of the public will be permitted from 4:30 p.m. to 4:45 p.m. on November 6, 2015 in front of the Panel members. The number of oral presentations to be made will depend on the number of requests received from members of the public on a first-come basis. After reviewing the requests for oral presentation, the Chairperson and the Designated Federal Officer will, if they determine the statement to be relevant to the Panel's mission, allot five minutes to persons desiring to make an oral presentation.

Committee's Designated Federal Officer: The Panel's Designated Federal Officer is Ms. Maria Fried, Department of Defense, Office of the General Counsel, 1600 Defense Pentagon, Room 3B747, Washington, DC 20301–1600.

Dated: October 20, 2015.

Morgan F. Park,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2015–OS–0101]

Privacy Act of 1974; System of Records

AGENCY: Office of the Secretary of Defense, DoD.

ACTION: Notice to alter an existing System of Records.

SUMMARY: The Office of the Secretary of Defense proposes to alter an existing system of records, DPR 32, entitled ''Employer Support of the Guard and Reserve Ombudsman and Outreach Programs'' to record information related to the mediation of disputes and answering of inquiries related to the USERRA; by tracking case assignments and mediation results of potential conflicts between employers and the National Guard, Reserves, or NDMS members they employ; and by reporting statistics related to the Ombudsman Program in aggregate and at the state committee-level. These records are also used as a management tool for statistical analysis, tracking, reporting, evaluating program effectiveness and conducting research.

DATES: Comments will be accepted on or before November 23, 2015. This proposed action will be effective the day following the end of the comment period unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

* *Federal Rulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments.

* *Mail:* Department of Defense, Office of the Deputy Chief Management Officer, Directorate of Oversight and Compliance, Regulatory and Audit Matters Office, 9010 Defense Pentagon, Washington, DC 20301–9010.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Ms. Cindy Allard, Chief, OSD/JS Privacy Office, Freedom of Information Directorate, Washington Headquarters Service, 1155 Defense Pentagon, Washington, DC 20301–1155, or by phone at (571)372–0461.

SUPPLEMENTARY INFORMATION: The Office of the Secretary of Defense notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the address in **FOR FURTHER INFORMATION CONTACT** or at *http://dpcld.defense.gov/* . The proposed system report, as required by 5 U.S.C. 552a(r) of the Privacy Act of 1974, as amended, was submitted on August 27, 2015, to the House Committee on Oversight and Government Reform, the Senate Committee on Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A–130, ''Federal Agency Responsibilities for Maintaining Records About Individuals,'' dated February 8, 1996 (February 20, 1996, 61 FR 6427).

Dated: October 20, 2015.

Morgan F. Park,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DPR 32

SYSTEM NAME:

Employer Support of the Guard and Reserve Ombudsman and Outreach

Programs (November 14, 2007, 72 FR 64058).

CHANGES:

SYSTEM IDENTIFIER:

Delete entry and replace with ''DHRA 16.''

SYSTEM NAME:

Delete entry and replace with ''Inquiry and Case Management System (ICMS).''

SYSTEM LOCATION:

Delete entry and replace with ''Defense Information Systems Agency (DISA), Computing Directorate Mechanicsburg, 5450 Carlisle Pike, Mechanicsburg, PA 17050–2411.

Backup: Iron Mountain, 1665 S 5350 W., Salt Lake City, UT 84104–4721.''

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Delete entry and replace with ''Members of the National Guard, Reserves, and National Disaster Medical System (NDMS) who submit inquiries or request mediation; Employer Support of the Guard and Reserve (ESGR) employees; civilian employers; contractors and volunteers who handle inquiries and cases; and those who submit inquiries.''

CATEGORIES OF RECORDS IN THE SYSTEM:

Delete entry and replace with ''Individual's full name, home address, phone number, email address; current Uniformed Service and Service member pay grade; ESGR case number; type of Uniformed Services Employment and Reemployment Rights Act (USERRA) issue; employer name, employer type, employer's contact name, contact phone, email and address; name, email and state committee/ESGR affiliation of ESGR employee, contractor, or volunteer that handles an inquiry or mediation case; and case notes.''

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Delete entry and replace with ''38 U.S.C. 43, Employment and Reemployment Rights of Members of the Uniformed Services; 5 U.S.C. 574, Confidentiality; 5 U.S.C. Part I, Chapter 5, Subchapter IV, Alternative Means of Dispute Resolution in the Administrative Process; 42 U.S.C. 300hh–11, National Disaster Medical System, ((d)(3) Employment and reemployment rights); 20 CFR 1002, Regulations Under the Uniformed Services Employment and Reemployment Rights Act of 1994; 5 CFR 353, Restoration to Duty from Uniformed Service or Compensable Injury; DoD Directive 1250.01, National Committee for Employer Support of the Guard and Reserve (NCESGR); DoD Instruction 1205.22, Employer Support of the Guard and Reserve; and DoD Instruction 1205.12, Civilian Employment and Reemployment Rights of Applicants for, and Service Members and Former Service Members of the Uniformed Services.''

PURPOSE(S):

Delete entry and replace with ''To record information related to the mediation of disputes and answering of inquiries related to the USERRA; by tracking case assignments and mediation results of potential conflicts between employers and the National Guard, Reserves, or NDMS members they employ; and by reporting statistics related to the Ombudsman Program in aggregate and at the state committee-level. These records are also used as a management tool for statistical analysis, tracking, reporting, evaluating program effectiveness and conducting research.''

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Delete entry and replace with ''In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act of 1974, as amended, the records contained herein may be disclosed outside the DoD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

To Department of Labor for Congressionally-mandated USERRA reporting (38 U.S.C. Employment and Reemployment Rights of Members of the Uniformed Services § 4432, Reports).

Law Enforcement Routine Use: If a system of records maintained by a DoD Component to carry out its functions indicates a violation or potential violation of law, whether civil, criminal, or regulatory in nature, and whether arising by general statute or by regulation, rule, or order issued pursuant thereto, the relevant records in the system of records may be referred, as a routine use, to the agency concerned, whether federal, state, local, or foreign, charged with the responsibility of investigating or prosecuting such violation or charged with enforcing or implementing the statute, rule, regulation, or order issued pursuant thereto.

Disclosure When Requesting Information Routine Use: A record from a system of records maintained by a DoD Component may be disclosed as a routine use to a federal, state, or local agency maintaining civil, criminal, or other relevant enforcement information or other pertinent information, such as current licenses, if necessary to obtain information relevant to a DoD Component decision concerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant, or other benefit.

Disclosure of Requested Information Routine Use: A record from a system of records maintained by a DoD Component may be disclosed to a federal agency, in response to its request, in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

Congressional Inquiries Disclosure Routine Use: Disclosure from a system of records maintained by a DoD Component may be made to a congressional office from the record of an individual in response to an inquiry from the congressional office made at the request of that individual.

Disclosure to the Office of Personnel Management Routine Use: A record from a system of records subject to the Privacy Act and maintained by a DoD Component may be disclosed to the Office of Personnel Management (OPM) concerning information on pay and leave, benefits, retirement deduction, and any other information necessary for the OPM to carry out its legally authorized government-wide personnel management functions and studies.

Disclosure to the Department of Justice for Litigation Routine Use: A record from a system of records maintained by a DoD Component may be disclosed as a routine use to any component of the Department of Justice for the purpose of representing the Department of Defense, or any officer, employee or member of the Department in pending or potential litigation to which the record is pertinent.

Disclosure of Information to the National Archives and Records Administration Routine Use: A record from a system of records maintained by a DoD Component may be disclosed as a routine use to the National Archives and Records Administration for the purpose of records management inspections conducted under authority of 44 U.S.C. 2904 and 2906.

Disclosure to the Merit Systems Protection Board Routine Use: A record from a system of records maintained by a DoD Component may be disclosed as a routine use to the Merit Systems Protection Board, including the Office of the Special Counsel for the purpose of litigation, including administrative proceedings, appeals, special studies of the civil service and other merit systems, review of OPM or component rules and regulations, investigation of alleged or possible prohibited personnel practices; including administrative proceedings involving any individual subject of a DoD investigation, and such other functions, promulgated in 5 U.S.C. 1205 and 1206, or as may be authorized by law.

Data Breach Remediation Purposes Routine Use: A record from a system of records maintained by a Component may be disclosed to appropriate agencies, entities, and persons when (1) The Component suspects or has confirmed that the security or confidentiality of the information in the system of records has been compromised; (2) the Component has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Component or another agency or entity) that rely upon the compromised information; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Components efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

The DoD Blanket Routine Uses set forth at the beginning of the Office of the Secretary of Defense (OSD) compilation of systems of records notices may apply to this system. The complete list of DoD Blanket Routine Uses can be found online at: *http://dpcld.defense.gov/Privacy/SORNsIndex/BlanketRoutineUses.aspx*''

STORAGE:

Delete entry and replace with ''Electronic storage media.''

RETRIEVABILITY:

Delete entry and replace with ''Individual's full name and ESGR case number.''

SAFEGUARDS:

Delete entry and replace with ''Physical controls include combination locks, cipher locks, key cards, identification badges, closed circuit televisions, and controlled screenings. Technical controls include user identification and password, intrusion detection system, encryption, Common Access Card, firewall, virtual private network, role-based access controls, and two-factor authentication. Administrative controls include periodic security audits, regular monitoring of users' security practices, methods to ensure only authorized personnel access information, encryption of backups containing sensitive data, backups secured off-site, and use of visitor registers.''

RETENTION AND DISPOSAL:

Delete entry and replace with ''Temporary. Contact information (email, phone number, details/notes of questions asked) from the inquiry data destroy 90 days after inquiry has been closed.

Masterfile: Destroy 3 years after settlement is implemented or case is discontinued.''

SYSTEM MANAGER(S) AND ADDRESS:

Delete entry and replace with ''Executive Director, Headquarters, Employer Support of the Guard and Reserve, 4800 Mark Center Drive, Alexandria, VA 22350–1200.''

NOTIFICATION PROCEDURE:

Delete entry and replace with ''Individuals seeking to determine if information about themselves is contained in this system of records should address written inquiries to the Executive Director, Headquarters, Employer Support of the Guard and Reserve, 4800 Mark Center Drive, Alexandria, VA 22350–1200.

Signed, written requests should contain the individual's full name and personal contact information (address, phone number, and email).''

RECORD ACCESS PROCEDURES:

Delete entry and replace with ''Individuals seeking access to records about themselves contained in this system should address written inquiries to the Office of the Secretary of Defense/Joint Staff, Freedom of Information Act Requester Service Center, Office of Freedom of Information, 1155 Defense Pentagon, Washington, DC 20301–1155.

Signed, written requests should include the individual's full name and personal contact information (address, phone number, email) and the name and number of this system of records notice.''

* * * * *

RECORD SOURCE CATEGORIES:

Delete entry and replace with ''Individual, and Member Management System (MMS).''

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Health Board; Notice of Federal Advisory Committee Meeting

AGENCY: Department of Defense (DoD).

ACTION: Notice of Federal Advisory Committee meeting.

SUMMARY: The Department of Defense is publishing this notice to announce that the following Federal Advisory Committee meeting of the Defense Health Board will take place.

DATES:

Monday, November 9, 2015

9:30 a.m.–11:30 a.m. (Open Session)
11:30 a.m.–12:30 p.m. (Administrative Working Meeting)
12:30 p.m.–5:00 p.m. (Open Session)

ADDRESSES: Davis Conference Center, 7633 Bayshore Boulevard, MacDill Air Force Base, Florida 33621 (Pre-meeting screening and registration required; see guidance in **SUPPLEMENTARY INFORMATION**, ''Public's Accessibility to the Meeting'').

FOR FURTHER INFORMATION CONTACT: The Executive Director of the Defense Health Board is Ms. Christine Bader, 7700 Arlington Boulevard, Suite 5101, Falls Church, Virginia 22042, (703) 681–6653, Fax: (703) 681–9539, *christine.e.bader.civ@mail.mil.* For meeting information, please contact Ms. Kendal Brown, 7700 Arlington Boulevard, Suite 5101, Falls Church, Virginia 22042, *kendal.l.brown2.ctr@mail.mil,* (703) 681–6670, Fax: (703) 681–9539.

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102–3.150, and in accordance with section 10(a)(2) of the Federal Advisory Committee Act.

Additional information, including the agenda and electronic registration, is available at the DHB Web site, *http://www.health.mil/About-MHS/Other-MHS-Organizations/Defense-Health-Board/Meetings.*

Purpose of the Meeting

The purpose of the meeting is to conduct a decision briefing for deliberation and provide progress updates on specific taskings before the DHB. In addition, the DHB will receive information briefings on current issues or lessons learned related to military medicine, health policy, health research, disease/injury prevention, health promotion, and healthcare delivery.

Agenda

Pursuant to 5 U.S.C. 552b, as amended, and 41 CFR 102–3.140 through 102–3.165 and subject to availability of space, the DHB meeting is open to the public from 9:30 a.m. to 11:30 a.m. and 12:30 p.m. to 5:00 p.m. on November 9, 2015. The DHB anticipates deliberating a decision briefing from the Neurological/Behavioral Health Subcommittee regarding Population Normative Values for Post-Concussive Computerized Neurocognitive Assessments. In addition, information briefings will be presented on mental health treatment collaboration with the James A. Haley Veterans' Hospital, Sustained Medical and Readiness Training (SMART), medical evaluation boards, an update on the work of the Joint Committee to Create a National Policy to Enhance Survivability from Intentional Mass-Casualty and Active Shooter Events, and medical implications of anti-access/area denial.

Public's Accessibility to the Meeting

Pursuant to 5 U.S.C. 552b, as amended, and 41 CFR 102–3.140 through 102–3.165 and subject to availability of space, this meeting is open to the public. Seating is limited and is on a first-come basis. All members of the public who wish to attend the public meeting must contact Ms. Kendal Brown at the number listed in the section **FOR FURTHER INFORMATION CONTACT** no later than 12:00 p.m. on Friday, October 30, 2015 to register and must provide their driver's license number and social security number to Ms. Brown. Public attendees enter MacDill AFB through the Dale Mabry Gate. Attendees should allow one hour for the security check and travel to meeting location. Additional details will be provided to all registrants.

Special Accommodations

Individuals requiring special accommodations to access the public meeting should contact Ms. Kendal Brown at least five (5) business days prior to the meeting so that appropriate arrangements can be made.

Written Statements

Any member of the public wishing to provide comments to the DHB may do so in accordance with 41 CFR 102–3.105(j) and 102–3.140 and section 10(a)(3) of the Federal Advisory Committee Act, and the procedures described in this notice.

Individuals desiring to provide comments to the DHB may do so by submitting a written statement to the DHB Designated Federal Officer (DFO) (see **FOR FURTHER INFORMATION CONTACT**). Written statements should not be longer than two type-written pages and address the following details: the issue, discussion, and a recommended course of action. Supporting documentation may also be included, as needed, to establish the appropriate historical context and to provide any necessary background information.

If the written statement is not received at least five (5) business days prior to the meeting, the DFO may choose to postpone consideration of the statement until the next open meeting.

The DFO will review all timely submissions with the DHB President and ensure they are provided to members of the DHB before the meeting that is subject to this notice. After reviewing the written comments, the President and the DFO may choose to invite the submitter to orally present their issue during an open portion of this meeting or at a future meeting. The DFO, in consultation with the DHB President, may allot time for members of the public to present their issues for review and discussion by the Defense Health Board.

Dated: October 20, 2015.

Morgan F. Park,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

Notice of Intent To Prepare a Draft Environmental Impact Statement for the Sacramento River Flood Control Project, California, General Reevaluation

AGENCY: Department of the Army, U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: The U.S. Army Corps of Engineers, Sacramento District (Corps), intends to prepare a draft Environmental Impact Statement (DEIS) for the general reevaluation of the Sacramento River Flood Control Project, California. The Corps will serve as the lead agency for compliance with the National Environmental Policy Act (NEPA). The general reevaluation is assessing opportunities to restore ecosystem function along the Sacramento River and improve flood risk reduction capabilities of the flood conveyance system originally constructed in 1917. The system is located along the Sacramento River, from Elder Creek near Tehama to its confluence with the San Joaquin River in the Sacramento-San Joaquin Delta near Collinsville. System features are also located along a number of tributaries, sloughs, and bypass channels, including the Feather River, American River, Sutter Bypass, and Yolo Bypass.

DATES: Written comments regarding the scope of the general reevaluation and DEIS should be received by the Corps on or before November 23, 2015.

ADDRESSES: Send written comments and suggestions concerning this general reevaluation and DEIS to Mr. Dan Artho, U.S. Army Corps of Engineers, Sacramento District, Attn: Planning Division (CESPK–PD), 1325 J Street, Sacramento, CA 95814 or via email at *daniel.f.artho@usace.army.mil.* Requests to be placed on the mailing list should also be sent to this address.

FOR FURTHER INFORMATION CONTACT: Mr. Dan Artho via telephone at (916) 557–7723, email at *daniel.f.artho@usace.army.mil,* or fax at (916) 557–7856. Study information will also be posted periodically on the internet at *http://bit.ly/sacrivergrr.*

SUPPLEMENTARY INFORMATION:

1. *Proposed Action.* The Corps, in cooperation with its non-Federal sponsors (The Central Valley Flood Protection Board and the State of California Department of Water Resources), is reevaluating the Sacramento River Flood Control Project to identify opportunities to restore the function and processes of the Sacramento River's aquatic ecosystem as well as improve the project's flood risk reduction performance. The general reevaluation is authorized pursuant with the Flood Control Act, Public Law 64–367, § 2, 39 Stat. 948 (1917) as amended and modified by subsequent Acts of Congress and as modified by Flood Control Act, Public Law 86–654, § 203, 74 Stat. 498 (1960), as supplemented by the River Basin Monetary Authorization Act, Public Law 93–252, § 202, 88 Stat. 49 (1974), and the Continuing Appropriations Resolution, Public Law 97–377, § 140, 96 Stat. 1916 (1982), and the Water Resources Development Act, Public Law 110–114, § 3031, 121 Stat. 1113 (2007).

2. *Alternatives.* The general reevaluation will assess a combination of one or more ecosystem restoration and flood risk management measures including widening existing bypasses,

modifying existing weirs, optimizing weir operations, constructing setback levees, developing floodplain management plans, restoring riverine aquatic and riparian habitat, removing barriers to fish passage, and restoring natural geomorphic processes, among others. Changes or modifications to the Sacramento River Flood Control Project may include updates or revisions to the operation and maintenance manuals in affected areas. In addition, a no action alternative will be assessed. Mitigation measures for any significant adverse effects on environmental resources will be identified and incorporated into the alternatives in compliance with various Federal and State statutes.

3. *Scoping Process:*

a. Public scoping meetings will be held on November 3rd, 2015, from 3:00 p.m. to 7:00 p.m. at the City of West Sacramento, 1110 W. Capitol Ave., West Sacramento, California 95691, and November 9th, 2015 from 3:00 p.m. to 7:00 p.m. at the Yuba County Board of Supervisors, 915 Eighth Street, Marysville, California 95901. An overview of the study and the NEPA process will be presented, and an opportunity will be afforded to all interested parties to provide comments regarding the scope of the draft general reevaluation and DEIS analysis as well as potential alternatives.

b. Issues that will be analyzed in depth in the DEIS include effects on hydrology and hydraulics, vegetation and wildlife, special-status species, water quality, air quality, socioeconomic conditions, transportation, agricultural resources, hazardous materials, and cultural resources. Other issues may include geology, soils, topography, noise, esthetics, climate and recreation. This is a large geographic extent with many technical, physical, biological, and social complexities associated with it.

c. The Corps will consult with the U.S. Fish and Wildlife Service and the National Marine Fisheries Service to comply with the Endangered Species Act and the Fish and Wildlife Coordination Act. The Corps will also consult with the State Historic Preservation Officer to comply with the National Historic Preservation Act and coordinate with the U.S. Bureau of Indian Affairs to establish consultation requirements with tribes having trust assets and tribal interests that could be affected by the general reevaluation's outcome.

d. A 45-day review period will be allowed for all interested agencies and individuals to review and comment on the DEIS. All interested persons are encouraged to respond to this notice and provide a current address if they wish to be contacted about the DEIS.

4. *Availability.* The DEIS is scheduled to be available for public review and comment in the Spring of 2017.

Dated: October 16, 2015.

Michael J. Farrell,

Colonel, U.S. Army, District Commander.

[FR Doc. 2015–27032 Filed 10–22–15; 8:45 am]

BILLING CODE 3720–58–P

DEPARTMENT OF ENERGY

Meeting; President's Council of Advisors on Science and Technology

AGENCY: Office of Science, Department of Energy.

ACTION: Notice of partially-closed meeting.

SUMMARY: This notice sets forth the schedule and summary agenda for a partially-closed meeting of the President's Council of Advisors on Science and Technology (PCAST), and describes the functions of the Council. The Federal Advisory Committee Act (Pub. L. 92–463, 86 Stat. 770) requires that public notice of these meetings be announced in the **Federal Register**.

DATES: November 20, 2015, 9:00 a.m. to 12:00 p.m.

ADDRESSES: National Academy of Sciences, 2101 Constitution Avenue NW., Washington, DC in the Lecture Room.

FOR FURTHER INFORMATION CONTACT: Information regarding the meeting agenda, time, location, and how to register for the meeting is available on the PCAST Web site at: *http://whitehouse.gov/ostp/pcast.* A live video webcast and an archive of the webcast after the event are expected to be available at *http://whitehouse.gov/ostp/pcast.* The archived video will be available within one week of the meeting. Questions about the meeting should be directed to Ms. Jennifer Michael at *jmichael@ostp.eop.gov,* (202) 395–2121. Please note that public seating for this meeting is limited and is available on a first-come, first-served basis.

SUPPLEMENTARY INFORMATION: The President's Council of Advisors on Science and Technology (PCAST) is an advisory group of the nation's leading scientists and engineers, appointed by the President to augment the science and technology advice available to him from inside the White House, cabinet departments, and other Federal agencies. See the Executive Order at *http://www.whitehouse.gov/ostp/pcast.* PCAST is consulted about and provides analyses and recommendations concerning a wide range of issues where understandings from the domains of science, technology, and innovation may bear on the policy choices before the President. PCAST is co-chaired by Dr. John P. Holdren, Assistant to the President for Science and Technology, and Director, Office of Science and Technology Policy, Executive Office of the President, The White House; and Dr. Eric S. Lander, President, Broad Institute of the Massachusetts Institute of Technology and Harvard.

Type of Meeting: Open and Closed.

Proposed Schedule and Agenda: The President's Council of Advisors on Science and Technology (PCAST) is scheduled to meet in open session on November 20, 2015 from 9:00 a.m. to 12:00 p.m.

Open Portion of Meeting: During this open meeting, PCAST is scheduled to discuss its study on private sector activities for adaptation and resilience to climate change and its letter report on hearing technologies. They will also hear from speakers who will remark on nanotechnology and who will discuss new regulatory frameworks for research. Additional information and the agenda, including any changes that arise, will be posted at the PCAST Web site at: *http://whitehouse.gov/ostp/pcast.*

Closed Portion of the Meeting: PCAST may hold a closed meeting of approximately 1 hour with the President on November 20, 2015, which must take place in the White House for the President's scheduling convenience and to maintain Secret Service protection. This meeting will be closed to the public because such portion of the meeting is likely to disclose matters that are to be kept secret in the interest of national defense or foreign policy under 5 U.S.C. 552b(c)(1).

Public Comments: It is the policy of the PCAST to accept written public comments of any length, and to accommodate oral public comments whenever possible. The PCAST expects that public statements presented at its meetings will not be repetitive of previously submitted oral or written statements.

The public comment period for this meeting will take place on November 20, 2015 at a time specified in the meeting agenda posted on the PCAST Web site at *http://whitehouse.gov/ostp/pcast.* This public comment period is designed only for substantive commentary on PCAST's work, not for business marketing purposes.

Oral Comments: To be considered for the public speaker list at the meeting, interested parties should register to speak at *http://whitehouse.gov/ostp/pcast,* no later than 12:00 p.m. Eastern Time on November 12, 2015. Phone or email reservations will not be accepted. To accommodate as many speakers as possible, the time for public comments will be limited to two (2) minutes per person, with a total public comment period of up to 15 minutes. If more speakers register than there is space available on the agenda, PCAST will randomly select speakers from among those who applied. Those not selected to present oral comments may always file written comments with the committee. Speakers are requested to bring at least 25 copies of their oral comments for distribution to the PCAST members.

Written Comments: Although written comments are accepted continuously, written comments should be submitted to PCAST no later than 12:00 p.m. Eastern Time on November 12, 2015 so that the comments may be made available to the PCAST members prior to this meeting for their consideration. Information regarding how to submit comments and documents to PCAST is available at *http://whitehouse.gov/ostp/pcast* in the section entitled ''Connect with PCAST.''

Please note that because PCAST operates under the provisions of FACA, all public comments and/or presentations will be treated as public documents and will be made available for public inspection, including being posted on the PCAST Web site.

Meeting Accommodations: Individuals requiring special accommodation to access this public meeting should contact Ms. Jennifer Michael at least ten business days prior to the meeting so that appropriate arrangements can be made.

Issued in Washington, DC, on October 19, 2015.

LaTanya R. Butler,

Deputy Committee Management Officer.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. AD06–6–000]

Joint Meeting of the Nuclear Regulatory Commission and the Federal Energy Regulatory Commission; Notice of Joint Meeting of the Federal Energy Regulatory Commission and the Nuclear Regulatory Commission

The Federal Energy Regulatory Commission (FERC) and the Nuclear Regulatory Commission (NRC) will hold a joint meeting on Wednesday, October 21, 2015 at the headquarters of the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. The meeting is expected to begin at 9:00 a.m. and conclude at approximately 11:30 a.m. Eastern Time. Members of the public may attend the open session. Commissioners from both agencies are expected to participate.

The format for the joint meeting will consist of discussions between the two sets of Commissioners following presentations by their respective staffs. In addition, representatives of the North American Electric Reliability Corporation (NERC) will attend and participate in this meeting.

The technical conference will be transcribed. Transcripts of the technical conference will be available for a fee from Ace-Federal Reporters, Inc. (202) 347–3700. There will be a free webcast of the conference. The webcast will allow persons to listen to the technical conference, but not participate. Anyone with Internet access can listen to the conference by navigating to the Calendar of Events at *www.ferc.gov* and locating the technical conference in the Calendar. The technical conference will contain a link to its webcast. The Capital Connection provides technical support for the webcast and offers the option of listing to the meeting via phone-bridge for a fee. If you have any questions, please visit *www.CapitolConnection.org* or call 703–993–3100.[1]

Pre-registration is not required but is highly encouraged for those attending in person. Attendees may register in advance at the following Web page: *https://www.ferc.gov/whats-new/registration/10-21-15-NRC-form.asp.* Attendees should bring a photo ID and allow time to pass through building security procedures. There is no fee to attend the open meeting.

Commission conferences are accessible under section 508 of the Rehabilitation Act of 1973. For accessibility accommodations please send an email to *accessibility@ferc.gov* or call toll free 1–866–208–3372 (voice) or 202–502 -8659 (TTY); or send a fax to 202–208–2106 with the required accommodations.

Questions about the meeting should be directed to Sarah McKinley at *sarah.mckinley@ferc.gov* or by phone at 202–502–8368.

Dated: October 16, 2015.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP16–1–000]

Dominion Transmission, Inc.; Notice of Application

Take notice that on October 1, 2015, Dominion Transmission, Inc. (DTI) 120 Tredegar Street, Richmond, VA, filed an application pursuant to section 7(b) of the Natural Gas Act (NGA) and the Federal Energy Regulatory Commission's (Commission) regulations seeking authorization to: (1) Abandon

[1] The webcast will continue to be available on the Calendar of Events on the Commission's Web site *www.ferc.gov* for three months after the conference.

by sale its gathering and products extraction facilities to Dominion Gathering & Processing, Inc. (DGP) located within the states of West Virginia and Pennsylvania; and (2) refunctionalize certain compression facilities at a processing plant located in Lewis County, West Virginia to gathering and include the compression facilities in the abandonment by sale to DGP, all as more fully described in the application which is on file with the Commission and open to public inspection. The filing may also be viewed on the web at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll-free, (866) 208–3676 or TTY, (202) 502–8659.

Any questions regarding this application should be directed Machelle F. Grim, Dominion Resources Services, Inc., 701 East Cary Street, Richmond, VA 23219, or call (804) 771–3805, or fax (804) 771–4804, or by email: *Machelle.F.Grim@dom.com.*

Pursuant to section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either: Complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit 7 copies of filings made in the proceeding with the Commission and must mail a copy to the applicant and to every other party. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commentors will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commentors will not be required to serve copies of filed documents on all other parties. However, the non-party commentors will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy regulatory Commission, 888 First Street NE., Washington, DC 20426.

Comment Date: 5:00 p.m. Eastern Time on November 6, 2015.

Dated: October 16, 2015.

Kimberly D. Bose,

Secretary.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2015–0503; FRL–9934–96]

Certain New Chemicals; Receipt and Status Information for August 2015

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA is required under the Toxic Substances Control Act (TSCA) to publish in the **Federal Register** a notice of receipt of a premanufacture notice (PMN); an application for a test marketing exemption (TME), both pending and/or expired; and a periodic status report on any new chemicals under EPA review and the receipt of notices of commencement (NOC) to manufacture those chemicals. This document covers the period from August 1, 2015 to August 31, 2015.

DATES: Comments identified by the specific PMN number or TME number, must be received on or before November 23, 2015.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2015–0183, and the specific PMN number or TME number for the chemical related to your comment, by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.
- *Mail:* Document Control Office (7407M), Office of Pollution Prevention and Toxics (OPPT), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *http://www.epa.gov/dockets/contacts.html.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT:

For technical information contact: Jim Rahai, IMD (7407M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; telephone number: 202–564–8593; email address: *Rahai.jim@epa.gov.*

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCA-Hotline@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general. As such, the Agency has not attempted to describe the specific entities that this action may apply. Although others may be affected, this action applies directly to the submitter of the PMNs addressed in this action.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *http://www.epa.gov/dockets/comments.html.*

II. What action is the agency taking?

This document provides receipt and status reports, which cover the period from August 2, 2015 to August 31, 2015, and consists of the PMNs and TMEs both pending and/or expired, and the NOCs to manufacture a new chemical that the Agency has received under TSCA section 5 during this time period.

III. What is the agency's authority for taking this action?

Under TSCA, 15 U.S.C. 2601 *et seq.,* EPA classifies a chemical substance as either an ''existing'' chemical or a ''new'' chemical. Any chemical substance that is not on EPA's, TSCA Inventory is classified as a ''new chemical,'' while those that are on the TSCA Inventory are classified as an ''existing chemical.'' For more information about the TSCA Inventory go to: *http://www.epa.gov/opptintr/newchems/pubs/inventory.htm.*

Anyone who plans to manufacture or import a new chemical substance for a non-exempt commercial purpose is required by TSCA section 5 to provide EPA with a PMN before initiating the activity. Section 5(h)(1) of TSCA authorizes EPA to allow persons, upon application, to manufacture (includes import) or process a new chemical substance, or a chemical substance subject to a significant new use rule (SNUR) issued under TSCA section 5(a), for ''test marketing'' purposes, which is referred to as a test marketing exemption, or TME. For more information about the requirements applicable to a new chemical go to: *http://www.epa.gov/oppt/newchems.*

Under TSCA sections 5(d)(2) and 5(d)(3), EPA is required to publish in the **Federal Register** a notice of receipt of a PMN or an application for a TME and to publish in the **Federal Register** periodic status reports on the new chemicals under review and the receipt of NOCs to manufacture those chemicals.

IV. Receipt and Status Reports

As used in each of the tables, (S) indicates that the information in the table is the specific information provided by the submitter, and (G) indicates that the information in the table is generic information because the specific information provided by the submitter was claimed as CBI.

For the PMNs received by EPA during this period, Table 1 provides the following information (to the extent that such information is not claimed as CBI). The EPA case number assigned to the PMN, the date the PMN was received by EPA, the projected end date for EPA's review of the PMN, the submitting manufacturer/importer, the potential uses identified by the manufacturer/importer in the PMN, and the chemical identity.

TABLE 1—STATUS OF THE 45 PMNS RECEIVED FROM AUGUST 1, 2015 TO AUGUST 31, 2015

Case No.	Received date	Projected end date for EPA review	Manufacturer importer	Use	Chemical
P–15–0666	8/4/2015	11/2/2015	CBI	(G) Epoxy hardener	(G) Formaldehyde, polymer with aromatic diamine, 2-(chloromethyl)oxirane and phenol.
P–15–0667	8/4/2015	11/2/2015	Fritz industries, Inc	(S) Oil field additive	(S) Poly[oxy(methyl-1,2-ethanediyl)], alpha-[2-[bis(phosphonomethyl) amino]methylethyl]-omega-[2-[bis (phosphonomethyl)amino]methylethoxy]-, sodium salt (1:4).
P–15–0669	8/4/2015	11/2/2015	CBI	(S) Agricultural iron micronutrient.	(G) Glycine, n,n′-alkyldiylbis-, reaction products with formaldehyde, iron chloride (fecl3) and phenol, potassium salts.
P–15–0670	8/4/2015	11/2/2015	CBI	(G) Fluid Stabilizer	(S) 1,6-Hexanediamine, acetate (1:2).
P–15–0670	8/4/2015	11/2/2015	CBI	(G) Fluid Stabilizer	(S) Ethanol, 2-[(2-aminoethyl)amino]-, acetate (1:2).
P–15–0670	8/4/2015	11/2/2015	CBI	(G) Fluid Stabilizer	(S) 1,2-Cyclohexanediamine, acetate (1:2).
P–15–0670	8/4/2015	11/2/2015	CBI	(G) Fluid Stabilizer	(S) 1,2-Ethanediamine, n1-(2-aminoethyl)-, acetate (1:3).
P–15–0670	8/4/2015	11/2/2015	CBI	(G) Fluid Stabilizer	(S) 1,2-Ethanediamine, n1,n2-bis(2-aminoethyl)-, acetate (1:4).
P–15–0671	8/5/2015	11/3/2015	Tri-State Asphalt, LLC	(S) Emulsifying agent used in the production of asphalt emulsions for “chipsealing” and other road maintenance techniques.	(S) 9-Octadecen-1-amine, hydrochloride (1:1), (9Z).
P–15–0672	8/5/2015	11/3/2015	CBI	(S) Filtration Media (not for drinking water).	(G) Carbon Nanotube.
P–15–0673	8/6/2015	11/4/2015	CBI	(S) Modified urethane polymer used as a deflocculating and dispersing additive in industrial paints and coatings.	(G) Modified Urethane Polymer.
P–15–0674	8/6/2015	11/4/2015	Cardolite Corporation	(G) Cashew nutshell liquid based, epoxy hardener for Higher solids epoxy formulations.	(G) Cashew nutshell liquid polymner with formaldehyde and amine.
P–15–0675	8/7/2015	11/5/2015	CBI	(G) Reactive polyol in automotive coatings application.	(G) Carbamate ester.
P–15–0676	8/7/2015	11/5/2015	CBI	(G) Reactive polyol in automotive coatings application.	(G) Carbamate ester.
P–15–0678	8/10/2015	11/8/2015	CBI	(G) Industrial paper additive.	(G) Metal salt of mineral acid, reaction products with alumina, aluminum hydroxide, aluminum hydroxide oxide (al(oh)o), silica, titanium oxide (tio2) and 3-(triethoxysilyl)-1-propanamine.

TABLE 1—STATUS OF THE 45 PMNS RECEIVED FROM AUGUST 1, 2015 TO AUGUST 31, 2015—Continued

Case No.	Received date	Projected end date for EPA review	Manufacturer importer	Use	Chemical
P–15–0679	8/10/2015	11/8/2015	CBI	(G) Industrial paper additive.	(G) Metal salt of mineral acid, reaction products with alumina, aluminum hydroxide, aluminum hydroxide oxide (al(oh)o), silica, titanium oxide (tio2) and 3-(triethoxysilyl)-n-[3-(triethoxysilyl)propyl]-1-propanamine.
P–15–0680	8/10/2015	11/8/2015	CBI	(G) Ingredient in liquid paint coating.	(G) Propenoic acid, alkyl ester, polymer with 1,3-cyclohexanedialkylamine, reaction products with oxirane(alkoxyalkyl).
P–15–0681	8/11/2015	11/9/2015	CBI	(S) Modified urethane polymer used as a deflocculating and dispersing additive in industrial coatings.	(G)Modified Urethane Polymer.
P–15–0682	8/11/2015	11/9/2015	CBI	(G) Fluid loss control additive.	(G) Acrylic-humic acid-based polymer.
P–15–0683	8/11/2015	11/9/2015	CBI	(G) Demulsifier	(G) Silylated polyether.
P–15–0684	8/12/2015	11/10/2015	Allnex USA Inc	(S) Protective general industrial metal coating resin.	(G) Substituted alkenoic acid, alkyl ester, telomer with alkanethiol and oxiranylalkyl alkyl-alkenoatenoate.
P–15–0686	8/12/2015	11/10/2015	Eden Innovations LLC	(G) Part C: As a concrete admixture, the liquid product containing Part C is mixed with cement, rock aggregates, water and other additives at a concrete mixing plant, usually for delivery by truck to a construction site. Future potential use as an additive for polymers and/or coatings.	(G) Future potential use as an additive for polymers and/or coatings. (G) Part C.
P–15–0687	8/12/2015	11/10/2015	CBI	(G) Adhesive for open non-descriptive use.	(G) Polyester adduct.
P–15–0688	8/13/2015	11/11/2015	CBI	(G) Ingredient for consumer products; dispersive use.	(S) Ethyl tetrahydrofuran-2-carboxylate.
P–15–0689	8/17/2015	11/15/2015	CBI	(S) Chemical Intermediate.	(G) Vegetable Fatty Acid Alkyl Ester.
P–15–0690	8/17/2015	11/15/2015	CBI	(S) Chemical Intermediate.	(G) Vegetable Fatty Acid Alkyl Ester.
P–15–0691	8/17/2015	11/15/2015	CBI	(G) Polymer backbone for further processing.	(G) Polyaminoamide.
P–15–0692	8/17/2015	11/15/2015	CBI	(G) Open non-dispersive use; dispersive use.	(G) Fatty acid esters with polyol.
P–15–0693	8/17/2015	11/15/2015	CBI	(G) Sheet moulding additive.	(G) 1,2-Ethanediamine, n1-(2-aminoethyl)-, reaction products with polyethylenimine and polypropylene alkyol ethers.
P–15–0694	8/18/2015	11/16/2015	CBI	(G) Epoxy Hardener	(G) Phenol, polymer with formaldehyde, glycidyl ether, polymers with aromatic diamine, reaction products with (alkoxymethyl)oxirane.

TABLE 1—STATUS OF THE 45 PMNS RECEIVED FROM AUGUST 1, 2015 TO AUGUST 31, 2015—Continued

Case No.	Received date	Projected end date for EPA review	Manufacturer importer	Use	Chemical
P–15–0695	8/18/2015	11/16/2015	CBI	(G) Additive in oil and gas production.	(G) Cocoamidoamine, methanesulfonates.
P–15–0696	8/19/2015	11/17/2015	CBI	(G) Crosslinker for coatings.	(G) Urethane Acrylate.
P–15–0697	8/19/2015	11/17/2015	CBI	(S) Boron-free, ferrous corrosion inhibitor for water-based metalworking fluids.	(G) Alkyl alkylenetriamine compd. with alkanol ethoxylate phosphate.
P–15–0698	8/20/2015	11/18/2015	CBI	(S) Binder polymer for industrial coatings (focus: metal protection).	(G) Polymer of Aliphatic dicarboxylic acid, Alkanediol and Cycloaliphatic diol.
P–15–0700	8/20/2015	11/18/2015	Bostik, Inc	(G) Adhesive	(G) Long chain oil, pre polymer with Methylenebis [isocyanatobenzene], oxepanone and hydroxy terminated triol.
P–15–0702	8/26/2015	11/24/2015	CBI	(G) Additive, open, non-dispersive use.	(G) Modified polyethyleneglycol diacrylate salt with acidic polyethylene ester.
P–15–0704	8/26/2015	11/24/2015	Gelest	(S) Formation of specialty silicone Elastomers; research.	(S) Siloxanes and silicones, di-me, [(butylethenylmethylsilyl)oxy]- and hydrogen-terminated.
P–15–0705	8/26/2015	11/24/2015	CBI	(S) Alkylarylamine used as an additive and octane booster in aviation fuels.	(G) Alkylarylamine.
P–15–0706	8/27/2015	11/25/2015	CBI	(G) Ingredient for multipurpose exterior coatings.	(G) Mixture of aliphatic N-alkyl ureas containing substituted cyclohexyl and terminal alkoxysilane groups.
P–15–0707	8/27/2015	11/25/2015	CBI	(G) Ingredient for multipurpose exterior coatings.	(G) Mixture of aliphatic N-alkyl ureas containing aspartic ester and terminal alkoxysilane groups.
P–15–0708	8/28/2015	11/26/2015	CBI	(S) Production moisture curing PU hot melts (adhesive).	(G) Polyester Polymer of Aliphatic dicarboxylic acid, Alkanediol and Polyethylen glycol methylphosphonate.
P–15–0709	8/28/2015	11/26/2015	CBI	(S) Cement particle dispersant in concrete mixtures.	(G) Carboxylic acid polymer with sodium phosphinate ester with a-methyl- w-hydroxypoly (oxy-1,2-ethanediyl).
P–15–0710	8/28/2015	11/26/2015	CBI	(S) Cement particle dispersant in concrete mixtures.	(G) Carboxylic acid polymer ester with a-methyl-w-hydroxypoly (oxy-1,2-ethanediyl).
P–15–0711	8/29/2015	11/27/2015	CBI	(G) Organic light-emitting diode material.	(G) Amine-alkyl-polyaromatic hydrocarbon polymer.
P–15–0712	8/31/2015	11/29/2015	CBI	(G) Material for highly dispersive use in consumer products.	(G) Disubstituted cycloalkanol.

For the TMEs received by EPA during this period, Table 2 provides the following information (to the extent that such information is not claimed as CBI). The EPA case number assigned to the TME, the date the TME was received by EPA, the projected end date for EPA's review of the TME, the submitting manufacturer/importer, the potential uses identified by the manufacturer/importer in the TME, and the chemical identity.

TABLE 2—STATUS OF THE 2 TMES RECEIVED FROM AUGUST 1, 2015 TO AUGUST 31, 2015

Case No.	Received date	Projected end date for EPA review	Manufacturer importer	Use	Chemical
T–15–0015	8/17/2015	10/1/2015	CBI	(S) Chemical Intermediate	(G) Vegetable Fatty Acid Alkyl Ester.
T–15–0016	8/17/2015	10/1/2015	CBI	(S) Chemical Intermediate	(G) Vegetable Fatty Acid Alkyl Ester.

For the NOCs received by EPA during this period, Table 3 provides the following information (to the extent that such information is not claimed as CBI). The EPA case number assigned to the NOC, the date the NOC was received by EPA, the projected end date for EPA's review of the NOC, and chemical identity.

TABLE 3—STATUS OF THE 42 NOCS RECEIVED FROM AUGUST 1, 2015 TO AUGUST 31, 2015

Case No.	Received date	Commencement date	Chemical
P–10–0237	8/31/2015	8/21/2015	(S) 2-Propenenitrile polymer with 1,1′-[oxybis(2,1-ethanediyloxy)]bis[ethene], sapond., sodium salts.
P–12–0480	8/4/2015	7/15/2015	(G) Alkyl maleimide substituted bicyclic olefin.
P–13–0180	8/5/2015	6/1/2015	(G) Fatty acid amide.
P–13–0181	8/5/2015	6/1/2015	(G) Fatty acid amide.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2015–0651; FRL–9934–39]

Pesticide Program Dialogue Committee; Notice of Charter Renewal

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Notice is hereby given that the Environmental Protection Agency has determined that, in accordance with the provisions of the Federal Advisory Committee Act (FACA), 5 U.S.C. App.2., the Pesticide Program Dialogue Committee (PPDC) is a necessary committee which is in the public interest. Accordingly, PPDC will be renewed for an additional two-year period. The purpose of PPDC is to provide advice and recommendations to the EPA Administrator on issues associated with regulatory development and reform initiatives, evolving public policy and program implementation issues, and science issues associated with evaluating and reducing risks from use of pesticides.

FOR FURTHER INFORMATION CONTACT: Dea Zimmerman, Designated Federal Officer, Pesticide Program Dialogue Committee (PPDC), U.S. EPA, (mail code LC–8J), 77 W. Jackson Boulevard, Chicago, IL 60604, telephone number: (312) 353–6344; email address: *zimmerman.dea@epa.gov*.

SUPPLEMENTARY INFORMATION:

A. Does this action apply to me?

You may be potentially affected by this action if you work in in agricultural settings or if you are concerned about implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA); the Federal Food, Drug, and Cosmetic Act (FFDCA); and the amendments to both of these major pesticide laws by the Food Quality Protection Act (FQPA) of 1996; the Pesticide Registration Improvement Act, and the Endangered Species Act. Potentially affected entities may include, but are not limited to: Agricultural workers and farmers; pesticide industry and trade associations; environmental, consumer, and farm worker groups; pesticide users and growers; animal rights groups; pest consultants; State, local, and tribal governments; academia; public health organizations; and the public. If you have questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. How can I get copies of this document and other related information?

The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2015–0651, is available at *http://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805. Please review the visitor instructions and additional information about the docket available at *http://www.epa.gov/dockets*.

Authority: 5 U.S.C. App.2.

Dated: October 13, 2015.

Jack Housenger,

Director, Office of Pesticide Programs.

FEDERAL MARITIME COMMISSION

[Petition No. P5–15]

Petition of Pacific International Lines and Mariana Express Lines for an Exemption From Commission Regulations; Notice of Filing and Request for Comments

This is to provide notice of filing and to invite comments on or before November 13, 2015, with regard to the Petition described below.

Pacific International Lines (Private) Limited (PIL) and Mariana Express Lines Pte. Ltd. (MELL) (Petitioners), have petitioned the Commission pursuant to 46 CFR 502.74, for an exemption ‘‘equivalent to that contained in 46 CFR 535.307.’’ The Commission's regulations at 46 CFR 535.307 exempt agreements between or among wholly owned subsidiaries from the filing requirements of the Shipping Act. Specifically, Petitioners state that on March 11, 2015, PIL acquired sixty-five (65%) percent of the shares of MELL. Petitioners assert that FMC law and regulations would likely require PIL and MELL to file a number of agreements between themselves with the FMC, delay and what should be routine day-to-day decisions between a parent and its subsidiary.

The Petition in its entirety will be posted on the Commission's Web site at *http://www.fmc.gov/p5-15.* Comments filed in response to this Petition also will be posted on the Commission's Web site at this location.

In order for the Commission to make a thorough evaluation of the Petition, interested persons are requested to submit views or arguments in reply to the Petition no later than November 13, 2015. Commenters must send an original and 5 copies to the Secretary, Federal Maritime Commission, 800 North Capitol Street NW., Washington, DC 20573–0001, and be served on Petitioner's counsel, Neal M. Mayer, Hoppel, Mayer & Coleman, 1050 Connecticut Avenue NW., 10th Floor, Washington, DC 20036. A text-searchable PDF copy of the reply must also be sent as an attachment to *secretary@fmc.gov* and include in the subject line: ‘‘P5–15, PIL and MELL Petition.’’ Replies containing confidential information should not be submitted by email.

Karen V. Gregory,

Secretary.

BILLING CODE 6731–AA–P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than November 9, 2015.

A. Federal Reserve Bank of Kansas City (Dennis Denney, Assistant Vice President) 1 Memorial Drive, Kansas City, Missouri 64198–0001:

1. *The Franklin D. Gaines Wife's Trust, Beverly J. Tipton, individually and as trustee, Michael D. Jeffers, all of Fredonia, Kansas, and Betheny L. Winkler,* Santa Fe, New Mexico, as trustees; to acquire voting shares of First National Bancshares Corporation of Fredonia, and thereby indirectly acquire voting shares of First National Bank in Fredonia, both in Fredonia, Kansas.

Board of Governors of the Federal Reserve System, October 20, 2015.

Michael J. Lewandowski,

Associate Secretary of the Board.

BILLING CODE 6210–01–P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The applications will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than November 19, 2015.

A. Federal Reserve Bank of Kansas City (Dennis Denney, Assistant Vice President) 1 Memorial Drive, Kansas City, Missouri 64198–0001:

1. *Farmers Exchange Bancorporation, Inc.,* Cherokee, Oklahoma; to acquire 100 percent of the voting shares of The First National Bank of Nash, Nash, Oklahoma.

Board of Governors of the Federal Reserve System, October 20, 2015.

Michael J. Lewandowski,

Associate Secretary of the Board.

GENERAL SERVICES ADMINISTRATION

[Notice–2015–ISP–2015–02; Docket No. 2015–0002; Sequence 2]

Privacy Act of 1974; Notice of an Updated System of Records

AGENCY: Office of the Chief Information Officer; General Services Administration.

ACTION: Updated notice.

SUMMARY: GSA proposes to update a system of records subject to the Privacy Act of 1974, as amended, 5 U.S.C. 552a.

DATES: *Effective:* November 23, 2015.

ADDRESSES: GSA Privacy Act Officer (ISP), General Services Administration, 1800 F Street NW., Washington, DC 20405.

FOR FURTHER INFORMATION CONTACT: Call the GSA Privacy Act Officer at 202–368–1852 or email *gsa.privacyact@gsa.gov.*

SUPPLEMENTARY INFORMATION: GSA is updating a system of records subject to the Privacy Act of 1974, 5 U.S.C. 552a. The notice provides updated information. Nothing in the notice will impact individuals' rights to access or amend their records in the systems of records.

Dated: October 16, 2015.

David A. Shive,

Chief Information Officer, Office of GSA IT (I).

GSA/GOVT–7

SYSTEM NAME:

HSPD–12 USAccess.

SYSTEM LOCATION:

Records covered by this system are maintained by a contractor at the contractor's site.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

The Personal Identity Verification Identity Management System (PIV IDMS) records will cover all participating agency employees, contractors and their employees, consultants, and volunteers who require routine, long-term access to federal facilities, information technology systems, and networks. The system also includes individuals authorized to perform or use services provided in agency facilities (*e.g.,* Credit Union, Fitness Center, etc.). At their discretion, participating Federal agencies may include short-term employees and contractors in the PIV program and, therefore, inclusion in the PIV IDMS. Federal agencies shall make risk-based decisions to determine whether to issue PIV cards and require prerequisite background checks for short-term employees and contractors. The system does not apply to occasional visitors or short-term guests. GSA and participating agencies will issue temporary identification and credentials for this purpose.

CATEGORIES OF RECORDS IN THE SYSTEM:

Enrollment records maintained in the PIV IDMS on individuals applying for the PIV program and a PIV credential through the GSA HSPD–12 managed service include the following data fields: Full name; Social Security Number; Applicant ID number, date of birth; current address; digital color photograph; fingerprints; biometric template (two fingerprints); organization/office of assignment; employee affiliation; work email address; work telephone number(s); office address; copies of identity source documents; employee status; military status; foreign national status; federal emergency response official status; law enforcement official status; results of background check; Government agency code; and PIV card issuance location. Records in the PIV IDMS needed for credential management for enrolled individuals in the PIV program include: PIV card serial number; digital certificate(s) serial number; PIV card issuance and expiration dates; PIV card PIN; Cardholder Unique Identifier (CHUID); and card management keys. Agencies may also choose to collect the following data at PIV enrollment which would also be maintained in the PIV IDMS: Physical characteristics (*e.g.,* height, weight, and eye and hair color). Individuals enrolled in the PIV managed service will be issued a PIV card. The PIV card contains the following mandatory visual personally identifiable information: Name, photograph, employee affiliation, organizational affiliation, PIV card expiration date, agency card serial number, and color-coding for employee affiliation. Agencies may choose to have the following optional personally identifiable information printed on the card: Cardholder physical characteristics (height, weight, and eye and hair color). The card also contains an integrated circuit chip which is encoded with the following mandatory data elements which comprise the standard data model for PIV logical credentials: PIV card PIN, cardholder unique identifier (CHUID), PIV authentication digital certificate, and two fingerprint biometric templates. The PIV data model may be optionally extended by agencies to include the following logical credentials: Digital certificate for digital signature, digital certificate for key management, card authentication keys, and card management system keys. All PIV logical credentials can only be read by machine.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301; Federal Information Security Management Act of 2002 (44 U.S.C. 3554); E-Government Act of 2002 (Pub. L. 107–347, Sec. 203); Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et al.) and Government Paperwork Elimination Act (Pub. L. 105–277, 44 U.S.C. 3504 note); Homeland Security Presidential Directive 12 (HSPD–12), Policy for a Common Identification Standard for Federal Employees and Contractors, August 27, 2004.

PURPOSES:

The primary purposes of the system are: To ensure the safety and security of Federal facilities, systems, or information, and of facility occupants and users; to provide for interoperability and trust in allowing physical access to individuals entering Federal facilities; and to allow logical access to Federal information systems, networks, and resources on a government-wide basis.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. Section 552a(b) of the Privacy Act, all or a portion of the records or information contained in this system may be disclosed outside GSA as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

a. To the Department of Justice (DOJ) when: (1) The agency or any component thereof; or (2) any employee of the agency in his or her official capacity; (3) any employee of the agency in his or her individual capacity where agency or the Department of Justice has agreed to represent the employee; or (4) the United States Government is a party to litigation or has an interest in such litigation, and by careful review, the agency determines that the records are both relevant and necessary to the litigation and the use of such records by DOJ and is therefore deemed by the agency to be for a purpose compatible with the purpose for which the agency collected the records.

b. To a court or adjudicative body in a proceeding when: (1) The agency or any component thereof; (2) any employee of the agency in his or her official capacity; (3) any employee of the agency in his or her individual capacity where the agency or the Department of Justice has agreed to represent the employee; or (4) the United States Government is a party to litigation or has an interest in such litigation, and by careful review, the agency determines that the records are both relevant and necessary to the litigation and the use of such records and is therefore deemed by the agency to be for a purpose that is compatible with the purpose for which the agency collected the records.

c. Except as noted on Forms SF 85, SF 85–P, and SF 86, when a record on its face, or in conjunction with other records, indicates a violation or potential violation of law, whether civil, criminal, or regulatory in nature, and whether arising by general statute or particular program statute, or by regulation, rule, or order issued pursuant thereto, disclosure may be made to the appropriate public authority, whether Federal, foreign, State, local, or tribal, or otherwise, responsible for enforcing, investigating or prosecuting such violation or charged with enforcing or implementing the statute, or rule, regulation, or order issued pursuant thereto, if the information disclosed is relevant to any enforcement, regulatory, investigative or prosecutorial responsibility of the receiving entity.

d. To a Member of Congress or to a Congressional staff member in response to an inquiry of the Congressional office made at the written request of the constituent about whom the record is maintained.

e. To the National Archives and Records Administration (NARA) or to the General Services Administration for records management inspections conducted under 44 U.S.C. 2904 and 2906.

f. To agency contractors, grantees, or volunteers who have been engaged to assist the agency in the performance of a contract, service, grant, cooperative agreement, or other activity related to this system of records and who need to have access to the records in order to perform their activity. Recipients shall be required to comply with the requirements of the Privacy Act of 1974, as amended, 5 U.S.C. 552a, the Federal Information Security Management Act (Pub. L. 107–296), and associated OMB policies, standards and guidance from the National Institute of Standards and Technology, and the General Services Administration.

g. To a Federal agency, State, local, foreign, or tribal or other public authority, on request, in connection with the hiring or retention of an employee, the issuance or retention of a security clearance, the letting of a contract, or the issuance or retention of a license, grant, or other benefit, to the extent that the information is relevant and necessary to the requesting agency's decision.

h. To the Office of Management and Budget (OMB) when necessary to the review of private relief legislation pursuant to OMB Circular No. A–19.

i. To a Federal, State, or local agency, or other appropriate entities or individuals, or through established liaison channels to selected foreign governments, in order to enable an intelligence agency to carry out its responsibilities under the National Security Act of 1947, as amended; the CIA Act of 1949, as amended; Executive Order 12333 or any successor order; and applicable national security directives, or classified implementing procedures approved by the Attorney General and promulgated pursuant to such statutes, orders, or Directives.

j. To designated agency personnel for controlled access to specific records for the purposes of performing authorized audit or authorized oversight and administrative functions. All access is controlled systematically through authentication using PIV credentials based on access and authorization rules for specific audit and administrative functions.

k. To the Office of Personnel Management (OPM), the Office of Management and Budget (OMB), the Government Accountability Office (GAO), or other Federal agency in accordance with the agency's responsibility for evaluation of Federal personnel management.

l. To the Federal Bureau of Investigation for the FBI National Criminal History check.

m. To appropriate agencies, entities, and persons when (1) the Agency suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (2) the Agency has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by GSA or another agency or entity) that rely upon the compromised information; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with GSA's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records are stored in electronic media and in paper files.

RETRIEVABILITY:

Records may be retrieved by name of the individual, Cardholder Unique Identification Number, Applicant ID, Social Security Number, and/or by any other unique individual identifier.

SAFEGUARDS:

Consistent with the requirements of the Federal Information Security Management Act (Pub. L. 107–296), and associated OMB policies, standards and guidance from the National Institute of Standards and Technology, and the General Services Administration, the GSA HSPD–12 managed service office protects all records from unauthorized access through appropriate administrative, physical, and technical safeguards. Access is restricted on a ''need to know'' basis, utilization of PIV Card access, secure VPN for Web access, and locks on doors and approved storage containers. Buildings have security guards and secured doors. All entrances are monitored through electronic surveillance equipment. The hosting facility is supported by 24/7 onsite hosting and network monitoring by trained technical staff. Physical security controls include: Indoor and outdoor security monitoring and surveillance; badge and picture ID access screening; biometric access screening. Personally identifiable information is safeguarded and protected in conformance with all Federal statutory and OMB guidance requirements. All access has role-based restrictions, and individuals with access privileges have undergone vetting and suitability screening. All data is encrypted in transit. While it is not contemplated, any system records stored on mobile computers or mobile devices will be encrypted. GSA maintains an audit trail and performs random periodic reviews to identify unauthorized access. Persons given roles in the PIV process must be approved by the Government and complete training specific to their roles to ensure they are knowledgeable about how to protect personally identifiable information.

RETENTION AND DISPOSAL:

Disposition of records will be according to NARA disposition authority N1–269–06–1 (pending).

SYSTEM MANAGER AND ADDRESS:

Director, HSPD–12 Managed Service Office, Federal Acquisition Service (FAS), General Services Administration, 1800 F Street NW., 4th Floor, Washington, DC 20405.

NOTIFICATION PROCEDURE:

A request for access to records in this system may be made by writing to the System Manager. When requesting notification of or access to records covered by this Notice, an individual should provide his/her full name, date of birth, agency name, and work location. An individual requesting notification of records must provide identity documents sufficient to satisfy the custodian of the records that the requester is entitled to access, such as a government-issued photo ID.

RECORD ACCESS PROCEDURES:

Same as Notification Procedure above.

CONTESTING RECORD PROCEDURES:

Same as Notification Procedure above. State clearly and concisely the information being contested, the reasons for contesting it, and the proposed amendment to the information sought.

RECORD SOURCE CATEGORIES:

Employee, contractor, or applicant; sponsoring agency; former sponsoring agency; other Federal agencies; contract employer; former employer.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS–6063–N2]

Medicare Program; Expansion of Prior Authorization for Repetitive Scheduled Non-Emergent Ambulance Transports

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice.

SUMMARY: This notice announces an expansion of the 3-year Medicare Prior Authorization Model for Repetitive Scheduled Non-Emergent Ambulance Transport in accordance with section 515(a) of the Medicare Access and CHIP Reauthorization Act of 2015. The model is being expanded to the states of Maryland, Delaware, the District of Columbia, North Carolina, West Virginia, and Virginia.

DATES: This expansion will begin on January 1, 2016 in Maryland, Delaware, the District of Columbia, North Carolina, Virginia, and West Virginia.

FOR FURTHER INFORMATION CONTACT: Angela Gaston, (410) 786–7409.

Questions regarding the Medicare Prior Authorization Model Expansion for Repetitive Scheduled Non-Emergent Ambulance Transport should be sent to *AmbulancePA@cms.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Medicare may cover ambulance services, including air ambulance (fixed-wing and rotary-wing) services, if the ambulance service is furnished to a beneficiary whose medical condition is such that other means of transportation are contraindicated. The beneficiary's condition must require both the ambulance transportation itself and the level of service provided in order for the billed service to be considered medically necessary.

Non-emergent transportation by ambulance is appropriate if either the—(1) beneficiary is bed-confined and it is documented that the beneficiary's condition is such that other methods of transportation are contraindicated; or (2) beneficiary's medical condition, regardless of bed confinement, is such that transportation by ambulance is medically required. Thus, bed confinement is not the sole criterion in determining the medical necessity of non-emergent ambulance transportation; rather, it is one factor that is considered in medical necessity determinations.[1]

A repetitive ambulance service is defined as medically necessary ambulance transportation that is furnished in 3 or more round trips during a 10-day period, or at least 1 round trip per week for at least 3 weeks.[2] Repetitive ambulance services are often needed by beneficiaries receiving dialysis or cancer treatment.

Medicare may cover repetitive, scheduled, non-emergent transportation by ambulance if the—(1) medical necessity requirements described previously are met; and (2) ambulance provider/supplier, before furnishing the service to the beneficiary, obtains a written order from the beneficiary's attending physician certifying that the medical necessity requirements are met (see 42 CFR 410.40(d)(1) and (2)).[3]

In addition to the medical necessity requirements, the service must meet all other Medicare coverage and payment requirements, including requirements relating to the origin and destination of the transportation, vehicle and staff, and billing and reporting. Additional information about Medicare coverage of ambulance services can be found in 42 CFR 410.40, 410.41, and in the Medicare Benefit Policy Manual (Pub. 100–02), Chapter 10, at *http://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/downloads/bp102c10.pdf* .

According to a study published by the Government Accountability Office in October 2012, entitled ''Costs and Medicare Margins Varied Widely; Transports of Beneficiaries Have Increased,'' [4] the number of basic life support (BLS) non-emergent transports for Medicare fee-for-service beneficiaries increased by 59 percent from 2004 to 2010. A similar finding published by the Department of Health and Human Services' Office of Inspector General in a 2006 study, entitled ''Medicare Payments for Ambulance Transports,'' [5] indicated a 20-percent nationwide improper payment rate for non-emergent ambulance transport. Likewise, in June 2013, the Medicare Payment Advisory Commission published a report [6] that included an analysis of non-emergent ambulance transports to dialysis facilities and found that, during the 5-year period between 2007 and 2011, the volume of transports to and from a dialysis facility increased 20 percent, more than twice the rate of all other ambulance transports combined.

Section 1115A of the Social Security Act (the Act) authorizes the Secretary to test innovative payment and service delivery models to reduce program expenditures, while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries.

Section 1115A(d)(1) of the Act authorizes the Secretary to waive such requirements of Titles XI and XVIII and of sections 1902(a)(1), 1902(a)(13), and 1903(m)(2)(A)(iii) of the Act as may be necessary solely for purposes of carrying out section 1115A of the Act with respect to testing models described in section 1115A(b) of the Act. For these models, consistent with this standard, we will waive such provisions of sections 1834(a)(15) and 1869(h) of the Act that limit our ability to conduct prior authorization. While these provisions are specific to durable medical equipment and physicians' services, we will waive any portion of these sections as well as any portion of 42 CFR 410.20(d), which implements section 1869(h) of the Act, that could be construed to limit our ability to conduct prior authorization. We have determined that the implementation of this model does not require the waiver of any fraud and abuse law, including sections 1128A, 1128B, and 1877 of the Act. Thus providers and suppliers affected by this model must comply with all applicable fraud and abuse laws.

II. Provisions of the Notice

In the November 14, 2014 **Federal Register** (79 FR 68271), we published a notice entitled ''Medicare Program; Prior Authorization of Repetitive Scheduled Non-emergent Ambulance Transports,'' which announced the implementation of a 3-year Medicare Prior Authorization model that established a process for seeking prior authorizations for repetitive scheduled non-emergent ambulance transport rendered by ambulance providers/suppliers garaged in 3 states (New Jersey, Pennsylvania, and South Carolina). These states were selected as the initial states for the model because of their high utilization and improper payment rates for these services. The model began on December 1, 2014, and will end in all 3 states on December 1, 2017. Prior authorization will not apply to or be given for services furnished after that date.

Section 515(a) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10), requires expansion of the previously referenced prior authorization model to cover, effective not later than January 1, 2016, states located in Medicare Administrative Contractor (MAC) regions L and 11 (consisting of Delaware, the District of Columbia, Maryland, New Jersey, Pennsylvania, North Carolina, South Carolina, West Virginia, and Virginia). As such, in accordance with section 515(a) of MACRA, our initial expansion of the prior authorization model for repetitive scheduled non-emergent ambulance transport will include six additional states: Delaware, the District of Columbia, Maryland, North Carolina, Virginia, and West Virginia. This expansion will begin on January 1, 2016. The model will end in all states on December 1, 2017. Prior authorization will not apply to or be given for services furnished after that date.

We will continue to test whether prior authorization helps reduce

[1] 42 CFR 410.40(d)(1).

[2] Program Memorandum Intermediaries/Carriers, Transmittal AB–03–106.

[3] Per 42 CFR 410.40(d)(2), the physician's order must be dated no earlier than 60 days before the date the service is furnished.

[4] Government Accountability Office Cost and Medicare Margins Varied Widely; Transports of Beneficiaries Have Increased (October 2012).

[5] Office of Inspector General Medicare Payment for Ambulance Transport (January 2006).

[6] Medicare Payment Advisory Commission, June 2013, pages 167–193.

expenditures, while maintaining or improving quality of care, using the established prior authorization process for repetitive scheduled non-emergent ambulance transport to reduce utilization of services that do not comply with Medicare policy.

We will continue to use this prior authorization process to help ensure that all relevant clinical or medical documentation requirements are met before services are furnished to beneficiaries and before claims are submitted for payment. This prior authorization process further helps to ensure that payment complies with Medicare documentation, coverage, payment, and coding rules.

The use of prior authorization does not create new clinical documentation requirements. Instead, it requires the same information that is already required to support Medicare payment, just earlier in the process. Prior authorization allows providers and suppliers to address coverage issues prior to furnishing services.

The prior authorization process under this model will apply in the additional six states listed previously for the following codes for Medicare payment:

- A0426 Ambulance service, advanced life support, non-emergency transport, Level 1 (ALS1).
- A0428 Ambulance service, BLS, non-emergency transport.

While prior authorization in the additional six states is not needed for the mileage code, A0425, a prior authorization decision for an A0426 or A0428 code will automatically include the associated mileage code.

Prior to the start of the expansion, we will conduct (and thereafter will continue to conduct) outreach and education to ambulance providers/suppliers, as well as beneficiaries, through such methods as the issuance of an operational guide, frequently asked questions (FAQs) on our Web site, a beneficiary mailing, a physician letter explaining the ambulance providers/suppliers' need for the proper documentation, and educational events and materials issued by the MACs. Additional information about the implementation of the prior authorization model is available on the CMS Web site at *http://go.cms.gov/PAAmbulance.*

Under this model, an ambulance provider/supplier or beneficiary is encouraged to submit to the MAC a request for prior authorization along with all relevant documentation to support Medicare coverage of a repetitive scheduled non-emergent ambulance transport. Submitting a prior authorization request is voluntary. However, if prior authorization has not been requested by the fourth round trip in a 30-day period, the claims will be stopped for pre-payment review.

In order to be provisionally affirmed, the request for prior authorization must meet all applicable rules and policies, and any local coverage determination (LCD) requirements for ambulance transport claims. A provisional affirmation is a preliminary finding that a future claim submitted to Medicare for the service likely meets Medicare's coverage, coding, and payment requirements. After receipt of all relevant documentation, the MACs will make every effort to conduct a review and postmark the notification of their decision on a prior authorization request within 10 business days for an initial submission. Notification will be provided to the ambulance provider/supplier and to the beneficiary. If a subsequent prior authorization request is submitted after a non-affirmative decision on an initial prior authorization request, the MACs will make every effort to conduct a review and postmark the notification of their decision on the request within 20 business days.

An ambulance provider/supplier or beneficiary may request an expedited review when the standard timeframe for making a prior authorization decision could jeopardize the life or health of the beneficiary. If the MAC agrees that the standard review timeframe would put the beneficiary at risk, the MAC will make reasonable efforts to communicate a decision within 2 business days of receipt of all applicable Medicare-required documentation. As this model is for non-emergent services only, we expect requests for expedited reviews to be extremely rare.

A provisional affirmative prior authorization decision may affirm a specified number of trips within a specific amount of time. The prior authorization decision, justified by the beneficiary's condition, may affirm up to 40 round trips (which equates to 80 one-way trips) per prior authorization request in a 60-day period. Alternatively, a provisional affirmative prior authorization decision may affirm less than 40 round trips in a 60-day period, or may affirm a request that seeks to provide a specified number of transports (40 round trips or less) in less than a 60-day period. A provisional affirmative decision can be for all or part of the requested number of trips. Transports exceeding 40 round trips (or 80 one-way trips) in a 60-day period require an additional prior authorization request.

The following describes examples of various prior authorization scenarios:

- *Scenario 1:* When an ambulance provider/supplier or beneficiary submits a prior authorization request to the MAC with appropriate documentation and all relevant Medicare coverage and documentation requirements are met for the ambulance transport, the MAC will send a provisional affirmative prior authorization decision to the ambulance provider/supplier and to the beneficiary. When the claim is submitted to the MAC by the ambulance provider/supplier, it is linked to the prior authorization via the claims processing system and the claim will be paid so long as all Medicare coding, billing, and coverage requirements are met. However, after submission, the claim could be denied for technical reasons, such as the claim was a duplicate claim or the claim was for a deceased beneficiary. In addition, a claim denial could occur because certain documentation, such as the trip record, needed in support of the claim cannot be reviewed on a prior authorization request.
- *Scenario 2:* When an ambulance provider/supplier or beneficiary submits a prior authorization request, but all relevant Medicare coverage requirements are not met, the MAC will send a non-affirmative prior authorization decision to the ambulance provider/supplier and to the beneficiary, advising them that Medicare will not pay for the service. The provider/supplier or beneficiary may then resubmit the request with documentation showing that Medicare requirements have been met. Alternatively, an ambulance provider/supplier could furnish the service, and submit a claim with a non-affirmative prior authorization tracking number, at which point the MAC would deny the claim. The ambulance provider/supplier and the beneficiary would then have the Medicare denial for secondary insurance purposes and would have the opportunity to submit an appeal of the claim denial if they believe Medicare coverage was denied inappropriately.
- *Scenario 3:* When an ambulance provider/supplier or beneficiary submits a prior authorization request with incomplete documentation, a detailed decision letter will be sent to the ambulance provider/supplier and to the beneficiary, with an explanation of what information is missing. The ambulance provider/supplier or beneficiary can rectify the situation and resubmit the prior authorization request with appropriate documentation.
- *Scenario 4:* When an ambulance provider or supplier renders a service to

a beneficiary that is subject to the prior authorization process, and the claim is submitted to the MAC for payment without requesting a prior authorization, the claim will be stopped for prepayment review and documentation will be requested.

++ If the claim is determined not to be medically necessary or to be insufficiently documented, the claim will be denied, and all current policies and procedures regarding liability for payment will apply. The ambulance provider/supplier or the beneficiary or both can appeal the claim denial if they believe the denial was inappropriate.

++ If the claim is determined to be payable, it will be paid.

Under the model, we will work to limit any adverse impact on beneficiaries and to educate beneficiaries about the process. If a prior authorization request is not affirmed, and the claim is still submitted by the provider/supplier, the claim will be denied in full, but beneficiaries will continue to have all applicable administrative appeal rights.

Only one prior authorization request per beneficiary per designated time period can be provisionally affirmed. If the initial provider/supplier cannot complete the total number of prior authorized transports (for example, the initial ambulance company closes or no longer services that area), the initial request is cancelled. In this situation, a subsequent prior authorization request may be submitted for the same beneficiary and must include the required documentation in the submission. If multiple ambulance providers/suppliers are providing transports to the beneficiary during the same or overlapping time period, the prior authorization decision will only cover the provider/supplier indicated in the provisionally affirmed prior authorization request. Any provider/supplier submitting claims for repetitive scheduled non-emergent ambulance transports for which no prior authorization request is recorded will be subject to 100 percent pre-payment medical review of those claims.

Additional information is available on the CMS Web site at *http://go.cms.gov/PAAmbulance.*

III. Collection of Information Requirements

Section 1115A(d)(3) of the Act, as added by section 3021 of the Affordable Care Act, states that chapter 35 of title 44, United States Code (the Paperwork Reduction Act of 1995), shall not apply to the testing and evaluation of models or expansion of such models under this section. Consequently, this document need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995.

IV. Regulatory Impact Statement

This document announces an expansion of the 3-year Medicare Prior Authorization Model for Repetitive Scheduled Non-Emergent Ambulance Transport. Therefore, there are no regulatory impact implications associated with this notice.

Authority: Section 1115A of the Social Security Act.

Dated: October 2, 2015.

Andrew M. Slavitt,

Acting Administrator, Centers for Medicare & Medicaid Services.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2012–N–0560]

Agency Information Collection Activities; Proposed Collection; Comment Request; Guidance on Informed Consent for In Vitro Diagnostic Device Studies Using Leftover Human Specimens That Are Not Individually Identifiable

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on the guidance on informed consent for in vitro diagnostic device studies using leftover human specimens that are not individually identifiable.

DATES: Submit either electronic or written comments on the collection of information by December 22, 2015.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *http://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *http://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2012–N–0560 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; Guidance on Informed Consent for In Vitro Diagnostic Device Studies Using Leftover Human Specimens That Are Not Individually Identifiable.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *http://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *http://www.regulations.gov.* Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *http://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: FDA PRA Staff, Office of Operations, Food and Drug Administration, 8455 Colesville Rd., COLE–14526, Silver Spring, MD 20993–0002, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Guidance on Informed Consent for In Vitro Diagnostic Device Studies Using Leftover Human Specimens That Are Not Individually Identifiable—OMB Control Number 0910–0582—Extension

FDA's investigational device regulations are intended to encourage the development of new, useful devices in a manner that is consistent with public health, safety, and compliant with ethical standards. Investigators should have freedom to pursue the least burdensome means of accomplishing this goal. However, to ensure that the balance is maintained between product development and the protection of public health, safety, and ethical standards, FDA has established human subject protection regulations addressing requirements for informed consent and institutional review board (IRB) review that apply to all FDA-regulated clinical investigations involving human subjects. In particular, informed consent requirements further both safety and ethical considerations by allowing potential subjects to consider both the physical and privacy risks they face if they agree to participate in a trial.

Under FDA regulations, clinical investigations using human specimens conducted in support of premarket submissions to FDA are considered human subject investigations (see 21 CFR 812.3(p)). Many investigational device studies are exempt from most provisions of part 812, Investigational Device Exemptions, under 21 CFR 812.2(c)(3), but FDA's regulations for the protection of human subjects (21 CFR parts 50 and 56) apply to all clinical investigations that are regulated by FDA (see 21 CFR 50.1, 21 CFR 56.101, 21 U.S.C. 360j(g)(3)(A), and 21 U.S.C. 360j(g)(3)(D)).

FDA regulations do not contain exceptions from the requirements of informed consent on the grounds that the specimens are not identifiable or that they are remnants of human specimens collected for routine clinical care or analysis that would otherwise have been discarded. Nor do FDA regulations allow IRBs to decide whether or not to waive informed consent for research involving leftover or unidentifiable specimens.

In a level 1 guidance document, entitled ''Guidance on Informed Consent for In Vitro Diagnostic Device Studies Using Leftover Human Specimens that are Not Individually Identifiable,'' issued under the Good Guidances Practices regulation, 21 CFR 10.115, FDA outlines the circumstances in which it intends to exercise enforcement discretion as to the informed consent regulations for clinical investigators, sponsors, and IRBs.

The recommendations of the guidance impose a minimal burden on industry. FDA estimates that 700 studies will be affected annually. Each study will result in one annual record, estimated to take 4 hours to complete. This results in a total recordkeeping burden of 2,800 hours (700 × 4 = 2,800).

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL RECORDKEEPING BURDEN [1]

FD&C Act section	No. of recordkeepers	No. of records per recordkeeper	Total annual records	Average burden per recordkeeping	Total hours
520(g)	700	1	700	4	2,800

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Dated: October 15, 2015.

Leslie Kux,

Associate Commissioner for Policy.

[Docket No. FDA–2011–N–0793]

Agency Information Collection Activities; Announcement of Office of Management and Budget Approval; Medical Device Recall Authority

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a collection of information entitled ''Medical Device Recall Authority'' has been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995.

FOR FURTHER INFORMATION CONTACT: FDA PRA Staff, Office of Operations, Food and Drug Administration, 8455 Colesville Rd., COLE–14526, Silver Spring, MD 20993–0002, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: On June 15, 2015, the Agency submitted a proposed collection of information entitled ''Medical Device Recall Authority'' to OMB for review and clearance under 44 U.S.C. 3507. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. OMB has now approved the information collection and has assigned OMB control number 0910–0432. The approval expires on September 30, 2018. A copy of the supporting statement for this information collection is available on the Internet at *http://www.reginfo.gov/public/do/PRAMain.*

Dated: October 15, 2015.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Public Meeting of the Presidential Commission for the Study of Bioethical Issues

AGENCY: Presidential Commission for the Study of Bioethical Issues, Office of the Assistant Secretary for Health, Office of the Secretary, Department of Health and Human Services.

ACTION: Notice of meeting.

SUMMARY: The Presidential Commission for the Study of Bioethical Issues (the Commission) will conduct its twenty third meeting on November 17, 2015. At this meeting, the Commission will continue to discuss the role of deliberation and deliberative methods to engage the public and inform consideration in bioethics, and how to integrate pubic dialogue into the bioethics conversation; bioethics education as a forum for fostering deliberative skills, and preparing students to participate in public dialogue in bioethics; goals and methods of bioethics education; and integrating bioethics education across a

range of professional disciplines and educational levels.

DATES: The meeting will take place November 17, 2015, from 9 a.m. to approximately 5 p.m.

ADDRESSES: Hilton Arlington Hotel, 950 North Stafford Street, Arlington, VA 22203.

FOR FURTHER INFORMATION CONTACT: Lisa M. Lee, Executive Director, Presidential Commission for the Study of Bioethical Issues, 1425 New York Avenue NW., Suite C–100, Washington, DC 20005. Telephone: 202–233–3960. Email: *Lisa.Lee@bioethics.gov.* Additional information may be obtained at *www.bioethics.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to the Federal Advisory Committee Act of 1972, Public Law 92–463, 5 U.S.C. app. 2, notice is hereby given for the twenty-third meeting of the Commission. The meeting will be open to the public with attendance limited to space available. The meeting will also be webcast at *www.bioethics.gov.*

Under authority of Executive Order 13521, dated November 24, 2009, the President established the Commission. The Commission is an expert panel of not more than 13 members who are drawn from the fields of bioethics, science, medicine, technology, engineering, law, philosophy, theology, or other areas of the humanities or social sciences. The Commission advises the President on bioethical issues arising from advances in biomedicine and related areas of science and technology. The Commission seeks to identify and promote policies and practices that ensure scientific research, health care delivery, and technological innovation are conducted in a socially and ethically responsible manner.

The main agenda items for the Commission's twenty-third meeting are to continue discussing the role of deliberation and deliberative methods to engage the public in bioethics, and how to integrate pubic dialogue into the bioethics conversation; bioethics education as a forum for fostering deliberative skills, and preparing students to participate in public dialogue in bioethics; goals and methods of bioethics education; and integrating bioethics education across a range of professional disciplines and educational levels. The draft meeting agenda and other information about the Commission, including information about access to the webcast, will be available at *www.bioethics.gov.*

The Commission welcomes input from anyone wishing to provide public comment on any issue before it. Respectful consideration of opposing views and active participation by citizens in public exchange of ideas enhances overall public understanding of the issues at hand and conclusions reached by the Commission. The Commission is particularly interested in receiving comments and questions during the meeting that are responsive to specific sessions. Written comments will be accepted at the registration desk and comment forms will be provided to members of the public in order to write down questions and comments for the Commission as they arise. To accommodate as many individuals as possible, the time for each question or comment may be limited. If the number of individuals wishing to pose a question or make a comment is greater than can reasonably be accommodated during the scheduled meeting, the Commission may make a random selection.

Written comments will also be accepted in advance of the meeting and are especially welcome. Please address written comments by email to *info@bioethics.gov,* or by mail to the following address: Public Commentary, Presidential Commission for the Study of Bioethical Issues, 1425 New York Avenue NW., Suite C–100, Washington, DC 20005. Comments will be publicly available, including any personally identifiable or confidential business information that they contain. Trade secrets should not be submitted.

Anyone planning to attend the meeting who needs special assistance, such as sign language interpretation or other reasonable accommodations, should notify Esther Yoo by telephone at (202) 233–3960, or email at *Esther.Yoo@bioethics.gov* in advance of the meeting. The Commission will make every effort to accommodate persons who need special assistance.

Dated: October 9, 2015.

Lisa M. Lee,

Executive Director, Presidential Commission for the Study of Bioethical Issues.

[FR Doc. 2015–26905 Filed 10–22–15; 8:45 am]

BILLING CODE 4154–06–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting of the Advisory Committee on Blood and Tissue Safety and Availability

AGENCY: Office of the Assistant Secretary for Health, Office of the Secretary, Department of Health and Human Services.

ACTION: Notice.

SUMMARY: As stipulated by the Federal Advisory Committee Act, the U.S. Department of Health and Human Services is hereby giving notice that the Advisory Committee on Blood and Tissue Safety and Availability (ACBTSA) will hold a meeting. The meeting will be open to the public.

DATES: The meeting will take place Monday, November 9, 2015, from 8:00 a.m.–4:30 p.m. and Tuesday, November 10, 2015, from 8:00 a.m.–4:00 p.m.

ADDRESSES: Veterans' Health Administration National Conference Center, 2011 Crystal Drive, 1st floor Conference Center, Crystal City, VA 22202.

FOR FURTHER INFORMATION CONTACT: Mr. James Berger, Designated Federal Officer for the ACBTSA, Senior Advisor for Blood and Tissue Policy, Office of the Assistant Secretary for Health, Department of Health and Human Services, 1101 Wootton Parkway, Suite 250, Rockville, MD 20852. Phone: (240) 453–8803; Fax (240) 453–8456; Email *ACBTSA@hhs.gov*.

SUPPLEMENTARY INFORMATION: The ACBTSA provides advice to the Secretary through the Assistant Secretary for Health. The Committee advises on a range of policy issues to include: (1) Identification of public health issues through surveillance of blood and tissue safety issues with national biovigilance data tools; (2) identification of public health issues that affect availability of blood, blood products, and tissues; (3) broad public health, ethical and legal issues related to the safety of blood, blood products, and tissues; (4) the impact of various economic factors (*e.g.,* product cost and supply) on safety and availability of blood, blood products, and tissues; (5) risk communications related to blood transfusion and tissue transplantation; and (6) identification of infectious disease transmission issues for blood, organs, blood stem cells and tissues. The Committee has met regularly since its establishment in 1997.

In December 2013, the Committee made recommendations regarding the blood system. At that time, the Committee expressed concern about the ongoing reductions in blood use, the number of large scale consolidations occurring, the cost recovery issues for blood centers, and the potential effects on safety and innovation due to instability. Past recommendations made by the ACBTSA may be viewed at *www.hhs.gov/bloodsafety*.

This meeting will provide a focused examination of the mechanisms to fund recently approved blood safety innovations, such as pathogen reduction, bacterial testing, and infectious disease testing. It is anticipated that the implementation of these blood safety innovations will come with significant costs to blood collection centers, and it remains unclear how or if the blood industry can afford such implementation. Speakers will include a broad range of stakeholders including blood banks, physicians, blood purchasers, and organizations that reimburse for blood and blood products.

The public will have an opportunity to present their views to the Committee during a public comment session scheduled for November 10, 2015. Comments will be limited to five minutes per speaker and must be pertinent to the discussion. Pre-registration is required for participation in the public comment session. Any member of the public who would like to participate in this session is required to contact the Designated Federal Officer at his/her earliest convenience to register for time (limited to 5 minutes); registration must be completed prior to close of business on November 2, 2015. If it is not possible to provide 30 copies of the material to be distributed at the meeting, then individuals are requested to provide a minimum of one (1) copy of the document(s) to be distributed prior to the close of business on November 2, 2015. It is also requested that any member of the public who wishes to provide comments to the Committee utilizing electronic data projection submit the necessary material to the Designated Federal Officer prior to the close of business on November 2, 2015.

Dated: October 16, 2015.

James J. Berger,

Senior Advisor for Blood and Tissue Safety Policy.

[FR Doc. 2015–26904 Filed 10–22–15; 8:45 am]

BILLING CODE 4150–41–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Eye Institute; Notice of Closed Meeting.

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Eye Institute Special Emphasis Panel NEI Clinical and Epidemiological Applications: Uveitis, Cornea and Refractive Error.

Date: November 10, 2015.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Hilton Garden Inn Bethesda, 7301 Waverly Street, Bethesda, MD 20814.

Contact Person: JEANETTE M HOSSEINI, Ph.D. Scientific Review Officer, 5635 Fishers Lane, Suite 1300, Bethesda, MD 20892, 301–451–2020, *jeanetteh@mail.nih.gov.*

National Institutes of Health

Eunice Kennedy Shriver National Institute of Child Health and Human Development; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of a meeting of the Board of Scientific Counselors, NICHD.

The meeting will be open to the public as indicated below, with the attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

The meeting will be closed to the public as indicated below in accordance with the provisions set forth in section 552b(c)(6), Title 5 U.S.C., as amended for the review, discussion, and evaluation of individual intramural programs and projects conducted by the Eunice Kennedy Shriver National Institute of Child Health and Human Development, including consideration of personnel qualifications and performance, and the competence of individual investigators, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Board of Scientific Counselors, NICHD.

Date: December 4, 2015.

Open: 8:00 a.m. to 12:15 p.m.

Agenda: A report by the Scientific Director, NICHD, on the status of the NICHD Division of Intramural Research, talks by various intramural scientists, and proposed organizational change.

Place: National Institutes of Health, Building 31A, Conference Room 2A48, 31 Center Drive, Bethesda, MD 20892.

Closed: 12:15 p.m. to 4:00 p.m.

Agenda: To review and evaluate personal qualifications and performance, and competence of individual investigators.

Place: National Institutes of Health, Building 31A, Conference Room 2A48, 31 Center Drive, Bethesda, MD 20892.

Contact Person: Constantine A. Staratakis, MD, D(med)Sci Scientific Director, Eunice Kennedy Shriver National Institute of Child Health and Human Development, NIH, Building 31A, Room 2A46, 31 Center Drive, Bethesda, MD 20892, 301–594–5984, *stratakc@mail.nih.gov.*

Information is also available on the Institute's/Center's home page: *http://dir.nichd.nih.gov/dirweb/home.html,* where an agenda and any additional information for the meeting will be posted when available.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2015–0909]

Information Collection Request to Office of Management and Budget; OMB Control Number: 1625–0039

AGENCY: Coast Guard, DHS.

ACTION: Sixty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the

U.S. Coast Guard intends to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting approval of revisions to the following collection of information: 1625–0039, Declaration of Inspection Before Transfer of Liquid in Bulk. Our ICR[s] describe[s] the information we seek to collect from the public. Before submitting this ICR to OIRA, the Coast Guard is inviting comments as described below.

DATES: Comments must reach the Coast Guard on or before December 22, 2015.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2015–0909] to the Coast Guard using the Federal eRulemaking Portal at *http://www.regulations.gov.* See the ''Public participation and request for comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

A copy of the ICR is available through the docket on the Internet at *http://www.regulations.gov.* Additionally, copies are available from: COMMANDANT (CG–612), ATTN: PAPERWORK REDUCTION ACT MANAGER, U.S. COAST GUARD, 2703 MARTIN LUTHER KING JR AVE SE., STOP 7710, WASHINGTON, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: Mr. Anthony Smith, Office of Information Management, telephone 202–475–3532, or fax 202–372–8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This Notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. In response to your comments, we may revise this ICR or decide not to seek approval of revisions of the Collection. We will consider all comments and material received during the comment period.

We encourage you to respond to this request by submitting comments and related materials. Comments must contain the OMB Control Number of the ICR and the docket number of this request, [USCG–2015–0909], and must be received by December 22, 2015.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *http://www.regulations.gov* and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Information Collection Request

1. *Title:* Declaration of Inspection Before Transfer of Liquid in Bulk.

OMB Control Number: 1625–0039.

Summary: A Declaration of Inspection (DOI) documents the transfer of oil and hazardous materials, to help prevent spills and damage to a facility or vessel. Persons-in-charge of the transfer operations must review and certify compliance with procedures specified by the terms of the DOI.

Need: Title 33 U.S.C. 1321(j) authorizes the Coast Guard to established regulations to prevent the discharge of oil and hazardous material from vessels and facilities. The DOI regulations appear at 33 CFR 156.150 and 46 CFR 35.35–30.

Respondents: Persons-in-charge of transfers.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 62,514 hours to 77,973 hours a year due to an increase in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: October 18, 2015.

Thomas P. Michelli,

U.S. Coast Guard, Deputy Chief Information Officer.

Information Collection Request

1. *Title:* Marine Casualty Information & Periodic Chemical Drug and Alcohol Testing of Commercial Vessel Personnel.

OMB Control Number: 1625–0001.

Summary: Marine casualty information is needed for Coast Guard investigations of commercial vessel casualties involving death, vessel damage, etc., as mandated by Congress. Chemical testing information is needed to improve CG detection/reduction of drug use by mariners.

Need: Section 6101 of 46 U.S.C., as delegated by the Secretary of Homeland Security to the Commandant, authorizes the Coast Guard to prescribe regulations for the reporting of marine casualties involving death, serious injury, material loss of property, material damage affecting the seaworthiness of a vessel, or significant harm to the environment. It also requires information on the use of alcohol being included in a marine casualty report. Section 7503 of 46 U.S.C. authorizes the Coast Guard to deny the issuance of licenses, certificates of registry, and merchant mariner's documents (seaman's papers) to users of dangerous drugs. Similarly, 46 U.S.C. 7704 requires the Coast Guard to revoke such papers unless a holder provides satisfactory proofs that the holder is cured.

Forms: CG–2692, Report of Marine Casualty, Commercial Diving Casualty, or OCS-related Casualty; CG–2692A, Barge Addendum; CG–2692B, Report of Mandatory Chemical Testing Following a Serious Marine Incident Involving Vessels in Commercial Service; CG–2692C, Personnel Casualty Addendum; CG–2692D, Involved Persons and Witnesses Addendum.

Why Is The Coast Guard Proposing To Add 2 New Forms: The Coast Guard recently reviewed its regulations and policies with respect to the marine casualty reporting requirements found in 46 CFR part 4. During this project, an evaluation of comments and feedback from the maritime industry and general public, as well as an internal assessment of current statutory and regulatory requirements and Coast Guard policies, identified the need to revise the form used by the public to submit written reports of marine casualties, the form CG–2692 (currently titled Report of Marine Accident, Injury or Death) and its Addendum forms.

The resulting proposal to revise these forms, which includes revising the title name of the form and taking certain sections of the CG–2692 and moving them to two new Addendum forms (facilitates multiple entry capability not currently available) have been drafted with the following goals in mind:

- Reduce the overall amount of information required to be entered to submit reports for marine casualties while still meeting all statutory and regulatory requirements.
- Clarify what types of incidents require the submission of the written report and seek the inclusion of additional information, entered on one or more of the Addendum forms, only when it is necessary.
- Reformat and organize the information on the forms such that it is more adaptable to the development of an alternate electronic means of submission.

Respondents: Vessel owners and operators.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 20,986 hours to 23,586 hours a year due to an increase in the estimated number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: October 18, 2015.

Thomas P. Michelli,

U.S. Coast Guard, Deputy Chief Information Officer.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2015–0630]

Collection of Information Under Review by Office of Management and Budget; OMB Control Number: 1625–0035

AGENCY: Coast Guard, DHS.

ACTION: Thirty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 the U.S. Coast Guard is forwarding an Information Collection Request (ICR), abstracted below, to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting approval of a revision to the following collection of information: 1625–0035, Title 46 CFR Subchapter Q: Lifesaving, Electrical, Engineering and Navigation Equipment, Construction and Materials & Marine Sanitation Devices (33 CFR part 159). Our ICR describe the information we seek to collect from the public. Review and comments by OIRA ensure we only impose paperwork burdens commensurate with our performance of duties.

DATES: Comments must reach the Coast Guard and OIRA on or before November 23, 2015.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2015–0630] to the Coast Guard using the Federal eRulemaking Portal at *http://www.regulations.gov.* Alternatively, you may submit comments to OIRA using one of the following means:

(1) *Email: OIRA-submission@omb.eop.gov.*

(2) *Mail:* OIRA, 725 17th Street NW., Washington, DC 20503, attention Desk Officer for the Coast Guard.

(3) *Fax:* 202–395–6566. To ensure your comments are received in a timely manner, mark the fax, attention Desk Officer for the Coast Guard.

A copy of the ICR is available through the docket on the Internet at *http://www.regulations.gov.* Additionally, copies are available from: COMMANDANT (CG–612), ATTN: PAPERWORK REDUCTION ACT MANAGER, U.S. COAST GUARD, 2703 MARTIN LUTHER KING JR AVE SE., STOP 7710, WASHINGTON, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: Mr. Anthony Smith, Office of Information Management, telephone 202–475–3532, or fax 202–372–8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This Notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection. The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. These comments will help OIRA determine whether to approve the ICR referred to in this Notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, [USCG–2015–0630], and must be received by November 23, 2015.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *http://www.regulations.gov* and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

OIRA posts its decisions on ICRs online at *http://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0035.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard has published the 60-day notice (80 FR 45671, July 31, 2015) required by 44 U.S.C. 3506(c)(2). That Notice elicited no comments. Accordingly, no changes have been made to the Collections.

Information Collection Request

1. *Title:* Title 46 CFR Subchapter Q: Lifesaving, Electrical, Engineering and Navigation Equipment, Construction and Materials & Marine Sanitation Devices (33 CFR part 159).

OMB Control Number: 1625–0035.

Summary: This information is used by the Coast Guard to ensure that regulations governing specific types of safety equipment, material and Marine Sanitation Devices (MSDs) installed on commercial vessels and pleasure craft are met. Manufacturers are required to submit drawings, specifications, and laboratory test reports to the Coast Guard before any approval is given.

Need: Title 46 U.S.C. 2103, 3306, 3703, and 4302 authorize the Coast Guard to establish safety equipment and material regulations. Title 46 CFR parts 159 to 164 prescribe these requirements. Title 33 U.S.C. 1322 authorizes the Coast Guard to establish MSD regulations. Title 33 CFR part 159 prescribes these rules. NVIC 8–01 (Chg 2) prescribes the standards for navigation equipment. This information is used to determine whether manufacturers are in compliance with Coast Guard regulations. When the Coast Guard approves any safety equipment, material or MSD for use on a commercial vessel or pleasure craft, the manufacturer is issued a Certificate of Approval.

Respondents: Manufacturers of safety equipment, materials and marine sanitation devices.

Forms: CG–10030, Certificate of Approval.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 58,414 hours to 118,594 hours a year due to an increase in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: October 18, 2015.

Thomas P. Michelli,

U.S. Coast Guard, Deputy Chief Information Officer.

[Docket No. USCG–2015–0475]

Collection of Information Under Review by Office of Management and Budget; OMB Control Number: 1625–0095

AGENCY: Coast Guard, DHS.

ACTION: Thirty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 the U.S. Coast Guard is forwarding an Information Collection Request (ICR), abstracted below, to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting an extension of its approval for the following collection of information: 1625–0095, Oil and Hazardous Material Pollution Prevention and Safety Records, Equivalents/Alternatives and Exemptions without change.

Our ICR describe the information we seek to collect from the public. Review and comments by OIRA ensure we only impose paperwork burdens commensurate with our performance of duties.

DATES: Comments must reach the Coast Guard and OIRA on or before November 23, 2015.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2015–0475] to the Coast Guard using the Federal eRulemaking Portal at *http://www.regulations.gov.* Alternatively, you may submit comments to OIRA using one of the following means:

(1) *Email: OIRA-submission@omb.eop.gov.*

(2) *Mail:* OIRA, 725 17th Street NW., Washington, DC 20503, attention Desk Officer for the Coast Guard.

(3) *Fax:* 202–395–6566. To ensure your comments are received in a timely manner, mark the fax, attention Desk Officer for the Coast Guard.

A copy of the ICR is available through the docket on the Internet at *http://www.regulations.gov.* Additionally, copies are available from: COMMANDANT (CG–612), ATTN: PAPERWORK REDUCTION ACT MANAGER, U.S. COAST GUARD, 2100 2ND STREET SW., STOP 7710, WASHINGTON, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: Contact Mr. Anthony Smith, Office of Information Management, telephone 202–475–3532, or fax 202–372–8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This Notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection. The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. These comments will help OIRA determine whether to approve the ICR referred to in this Notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, [USCG–2015–0475], and must be received by November 23, 2015.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *http://www.regulations.gov* and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005 issue of the **Federal Register** (70 FR 15086).

OIRA posts its decisions on ICRs online at *http://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0095.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (80 FR 45666, July 31, 2015) required by 44 U.S.C. 3506(c)(2). That Notice elicited no comments. Accordingly, no changes have been made to the Collections.

Information Collection Request

1. *Title:* Oil and Hazardous Material Pollution Prevention and Safety Records, Equivalents/Alternatives and Exemptions.

OMB Control Number: 1625–0095.

Summary: The information is used by the Coast Guard to ensure that an oil or hazardous material requirement alternative or exemption provides an equivalent level of safety and protection from pollution.

Need: Under 33 U.S.C. 1321 and Executive Order 12777 the Coast Guard is authorized to prescribe regulations to prevent the discharge of oil and hazardous substances from vessels and facilities and to contain such discharges. Coast Guard regulations in 33 CFR parts 154–156 are intended to: (1) Prevent or mitigate the results of an accidental release of bulk liquid hazardous materials being transferred at waterfront facilities; (2) ensure that facilities and vessels that use vapor control systems are in compliance with the safety standards developed by the Coast Guard; (3) provide equipment and operational requirements for facilities and vessels that transfer oil or hazardous materials in bulk to or from vessels with a 250 or more barrel capacity; (4) provide procedures for vessel or facility operators who request exemption or partial exemption from the requirements of the pollution prevention regulations.

Forms: N/A.

Respondents: Owners and operators of bulk oil and hazardous materials facilities and vessels. The estimated number of respondents is 180.

Frequency: On occasion.

Hour Burden Estimate: The estimated annual burden remains 1,440 hours a year.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended.

Dated: October 18, 2015.

Thomas P. Michelli,

U.S. Coast Guard, Deputy Chief Information Officer.

Coast Guard

[Docket No. USCG–2015–0755]

Information Collection Request to Office of Management and Budget; OMB Control Number: 1625–0016

AGENCY: Coast Guard, DHS.

ACTION: Sixty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the U.S. Coast Guard intends to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting approval of revisions to the following collection of information: 1625–0016, Welding and Hot Works Permits; Posting of Warning Signs. Our ICR describe the information we seek to collect from the public. Before submitting this ICR to OIRA, the Coast Guard is inviting comments as described below.

DATES: Comments must reach the Coast Guard on or before December 22, 2015.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2015–0755] to the Coast Guard using the Federal eRulemaking Portal at *http://www.regulations.gov*. See the ''Public participation and request for comments'' portion of the SUPPLEMENTARY INFORMATION section for further instructions on submitting comments.

A copy of the ICR is available through the docket on the Internet at *http://www.regulations.gov*. Additionally, copies are available from: COMMANDANT (CG–612), ATTN: PAPERWORK REDUCTION ACT MANAGER, U.S. COAST GUARD, 2703 MARTIN LUTHER KING JR AVE SE., STOP 7710, WASHINGTON, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: Mr. Anthony Smith, Office of Information Management, telephone 202–475–3532, or fax 202–372–8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This Notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. In response to your comments, we may revise this ICR or decide not to seek approval of revisions of the Collection. We will consider all comments and material received during the comment period.

We encourage you to respond to this request by submitting comments and related materials. Comments must contain the OMB Control Number of the ICR and the docket number of this request, [USCG–2015–0755], and must be received by December 22, 2015.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *http://www.regulations.gov*. If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the FOR FURTHER INFORMATION CONTACT section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *http://www.regulations.gov* and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Information Collection Request

1. *Title:* Welding and Hot Works Permits; Posting of Warning Signs.

OMB Control Number: 1625–0016.

Summary: This information collection helps to ensure that waterfront facilities and vessels are in compliance with safety standards. A permit must be issued prior to welding or hot work at certain waterfront facilities; and, the posting of warning signs is required on certain facilities.

Need: The information is needed to ensure safe operations on certain waterfront facilities and vessels.

Forms: CG–4201, Welding and Hot Work.

Respondents: Owners and operators of certain waterfront facilities and vessels.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 546 hours to 593 hours a year due to an increase in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: October 18, 2015.

Thomas P. Michelli,

U.S. Coast Guard, Deputy Chief Information Officer.

[Docket No. USCG–2015–0634]

Collection of Information Under Review by Office of Management and Budget; OMB Control Number: 1625–0014

AGENCY: Coast Guard, DHS.

ACTION: Thirty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 the U.S. Coast Guard is forwarding an Information Collection Request (ICR), abstracted below, to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting approval of a revision to the following collection of information: 1625–0014, Request for Designation and Exemption of Oceanographic Research Vessels. Our ICR describe the information we seek to collect from the public. Review and comments by OIRA ensure we only impose paperwork burdens commensurate with our performance of duties.

DATES: Comments must reach the Coast Guard and OIRA on or before November 23, 2015.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2015–0634] to the Coast Guard using the Federal eRulemaking Portal at *http://www.regulations.gov.* Alternatively, you may submit comments to OIRA using one of the following means:

(1) *Email: OIRA-submission@omb.eop.gov.*

(2) *Mail:* OIRA, 725 17th Street NW., Washington, DC 20503, attention Desk Officer for the Coast Guard.

(3) *Fax:* 202–395–6566. To ensure your comments are received in a timely manner, mark the fax, attention Desk Officer for the Coast Guard.

A copy of the ICR is available through the docket on the Internet at *http://www.regulations.gov.* Additionally, copies are available from: COMMANDANT (CG–612), ATTN: PAPERWORK REDUCTION ACT MANAGER, U.S. COAST GUARD, 2703 MARTIN LUTHER KING JR. AVE. SE., STOP 7710, WASHINGTON, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: Contact Mr. Anthony Smith, Office of Information Management, telephone 202–475–3532, or fax 202–372–8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This Notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection. The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. These comments will help OIRA determine whether to approve the ICR referred to in this Notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, [USCG–2015–0634], and must be received by November 23, 2015.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *http://www.regulations.gov* and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

OIRA posts its decisions on ICRs online at *http://www.reginfo.gov/public/do/PRAMain* after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0014 .

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (80 FR 45669, July 31, 2015) required by 44 U.S.C. 3506(c)(2). That Notice elicited no comments. Accordingly, no changes have been made to the Collection.

Information Collection Request

1. *Title:* Request for Designation and Exemption of Oceanographic Research Vessels.

OMB Control Number: 1625–0014.

Summary: This collection requires submission of specific information about a vessel in order for the vessel to be designated as an Oceanographic Research Vessel (ORV).

Need: Title 46 U.S.C. 2113 authorizes the Secretary of the Department of Homeland Security to exempt Oceanographic Research Vessels (ORV), by regulation, from provisions of Subtitle II, of Title 46, Shipping, of the United States Code, concerning maritime safety and seaman's welfare laws. This information is necessary to ensure a vessel qualifies for the designation of ORV under 46 CFR part 3 and 46 CFR part 14, subpart D.

Forms: N/A.

Respondents: Owners or operators of certain vessel.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has decreased from 51 hours to 25 hours a year due to a decrease in the estimated annual number of respondents.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: October 18, 2015.

Thomas P. Michelli,

U.S. Coast Guard, Deputy Chief Information Officer.

Coast Guard

[Docket No. USCG–2010–0164]

National Boating Safety Advisory Council

AGENCY: Coast Guard, DHS.

ACTION: Notice of Federal Advisory Committee Meeting.

SUMMARY: The National Boating Safety Advisory Council and its

Subcommittees will meet on November 12 and 13, 2015, in Arlington, VA, to discuss issues relating to recreational boating safety. These meetings will be open to the public.

DATES: The National Boating Safety Advisory Council will meet Thursday, November 12, 2015, from 12:00 p.m. to 3:30 p.m. and Friday, November 13, 2015 from 1:30 p.m. to 4 p.m. The Boats and Associated Equipment Subcommittee will meet on November 12, 2015, from 3:30 p.m. to 5:15 p.m. The Prevention through People Subcommittee will meet on November 12, 2015, from 5:15 p.m. to 5:45 p.m. on November 12, 2015, and from 8:05 a.m. to 9:05 a.m. on November 13, 2015. The Recreational Boating Safety Strategic Planning Subcommittee will meet on November 13, 2015, from 9:05 a.m. to 12:00 p.m. Please note that these meetings may conclude early if the National Boating Safety Advisory Council has completed all business.

ADDRESSES: All meetings will be held in the Ballroom of the Holiday Inn Arlington (*http://www.hiarlington.com*), 4610 N. Fairfax Drive, Arlington, VA 22203.

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, contact Mr. Jeff Ludwig, Alternate Designated Federal Officer, telephone 202–372–1061, or at *jeffrey.a.ludwig@uscg.mil.*

To facilitate public participation, we are inviting public comment on the issues to be considered by the Council as listed in the ''Agenda'' section below. Written comments for distribution to Council members must be submitted no later than November 2, 2015, if Council review is desired prior to the meeting. Written comments may be submitted using the Federal eRulemaking Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

Instructions: All submissions received must include the words ''Department of Homeland Security'' and the docket number of this action, USCG–2010–0164. Comments received will be posted without alteration at *http://www.regulations.gov,* including any personal information provided. You may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Docket: For access to the docket to read documents or comments related to this notice, go to *http://www.regulations.gov* insert USCG–2010–0164 in the ''Search'' box, press Enter, then click the item you wish to view.

FOR FURTHER INFORMATION CONTACT: Mr. Jeff Ludwig, Alternate Designated Federal Officer for the National Boating Safety Advisory Council, telephone (202) 372–1061, or at *jeffrey.a.ludwig@uscg.mil.*

SUPPLEMENTARY INFORMATION: Notice of this meeting is given under the *Federal Advisory Committee Act,* (Title 5, U.S.C., Appendix). Congress established the National Boating Safety Advisory Council in the *Federal Boat Safety Act of 1971* (Pub. L. 92–75). The National Boating Safety Advisory Council currently operates under the authority of 46 U.S.C. 13110, which requires the Secretary of Homeland Security and the Commandant of the Coast Guard by delegation to consult with the National Boating Safety Advisory Council in prescribing regulations for recreational vessels and associated equipment and on other major safety matters. See 46 U.S.C. 4302(c) and 13110(c).

Meeting Agenda

The agenda for the National Boating Safety Advisory Council meeting is as follows:

Thursday, November 12, 2015

(1) Opening remarks and presentation of awards to outgoing members.

(2) Receipt and discussion of the following reports:

(a) Chief, Office of Auxiliary and Boating Safety, Update on the Coast Guard's implementation of National Boating Safety Advisory Council Resolutions and Recreational Boating Safety Program report.

(b) Alternate Designated Federal Officer's report concerning Council administrative and logistical matters.

(c) Coast Guard Adoption of Electronic Aids to Navigation.

(d) Nonprofit Organization Grant Update.

(e) Progress Report on the Next National Recreational Boating Survey.

(3) Subcommittee Session: Boats and Associated Equipment Subcommittee *Issues to be discussed include alternatives to pyrotechnic visual distress signals; grant projects related to boats and associated equipment; and updates to 33 CFR 181 ''Manufacturer Requirements'' and 33 CFR 183 ''Boats and Associated Equipment.''*

(4) Prevention Through People Subcommittee. *Issues to be discussed include life jacket carriage requirements for certain recreational vessels and licensing requirements for on-water boating safety instruction providers.*

(5) Public comment period.

(6) Adjournment of Meeting.

Friday, November 13, 2015

The morning session will be dedicated to Subcommittee sessions:

(1) Recreational Boating Safety Strategic Planning Subcommittee. *Issues to be discussed include progress on implementation of the 2012–2016 Strategic Plan, and development of the 2017–2021 Strategic Plan.*

The full Council will resume meeting in the afternoon on November 13, 2015.

(1) Receipt and Discussion of the Boats and Associated Equipment, Prevention through People and The Recreational Boating Safety Strategic Planning Subcommittee reports.

(2) Discussion of any recommendations to be made to the Coast Guard.

(3) Public comment period.

(4) Voting on any recommendations to be made to the Coast Guard.

(5) Adjournment of meeting.

There will be a comment period for the National Boating Safety Advisory Council members and a comment period for the public after each report presentation, but before each is voted on by the Council. The Council members will review the information presented on each issue, deliberate on any recommendations presented in the Subcommittees' reports, and formulate recommendations for the Department's consideration.

The meeting agenda and all meeting documentation can be found at: *http://homeport.uscg.mil/NBSAC.* Alternatively, you may contact Mr. Jeff Ludwig as noted in the **FOR FURTHER INFORMATION CONTACT** section above.

Public oral comment periods will be held during the meetings after each presentation and at the end of each day. Speakers are requested to limit their comments to 3 minutes. Please note that the public comment periods may end before the time indicated, following the last call for comments. Contact Mr. Jeff Ludwig as indicated above to register as a speaker.

Dated: October 20, 2015.

Verne B. Gifford, Jr.

Captain, U.S. Coast Guard, Director of Inspections and Compliance.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2015–0911

Information Collection Request to Office of Management and Budget; OMB Control Number: 1625–0112

AGENCY: Coast Guard, DHS.

ACTION: Sixty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the U.S. Coast Guard intends to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting approval for reinstatement, with change, of the following collection of information: 1625–0112, Enhanced Maritime Domain Awareness via Electronic Transmission of Vessel Transit Data. Our ICR describe the information we seek to collect from the public. Before submitting this ICR to OIRA, the Coast Guard is inviting comments as described below.

DATES: Comments must reach the Coast Guard on or before December 22, 2015.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2015–0911] to the Coast Guard using the Federal eRulemaking Portal at *http://www.regulations.gov*. See the ''Public participation and request for comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

A copy of the ICR is available through the docket on the Internet at *http://www.regulations.gov*. Additionally, copies are available from: COMMANDANT (CG–612), ATTN: PAPERWORK REDUCTION ACT MANAGER, U.S. COAST GUARD, 2703 MARTIN LUTHER KING JR. AVE. SE., STOP 7710, WASHINGTON, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: Mr. Anthony Smith, Office of Information Management, telephone 202–475–3532, or fax 202–273–8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This Notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. In response to your comments, we may revise this ICR or decide not to seek reinstatement of the Collection. We will consider all comments and material received during the comment period.

We encourage you to respond to this request by submitting comments and related materials. Comments must contain the OMB Control Number of the ICR and the docket number of this request, [USCG–2015–0911], and must be received by December 22, 2015.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at *http://www.regulations.gov*. If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at *http://www.regulations.gov* and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Information Collection Request

1. *Title:* Enhanced Maritime Domain Awareness via Electronic Transmission of Vessel Transit Data.

OMB Control Number: 1625–0112.

Summary: The Coast Guard collects, stores, and analyzes data transmitted by Long Range Identification and Tracking (LRIT) and Automatic Identification System (AIS) to enhance maritime domain awareness (MDA). Awareness and threat knowledge are critical for securing the maritime domain and the key to preventing adverse events. Data is also used for marine safety and environmental protection purposes.

Need: To ensure port safety and security and to ensure the uninterrupted flow of commerce.

Forms: None.

Respondents: Owners or operators of certain vessels.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 204 hours to 47,245 hours a year due to an increase in the estimated annual number of responses. The increase in responses is due to the inclusion of AIS into this ICR.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: October 18, 2015.

Thomas P. Michelli,

U.S. Coast Guard, Deputy Chief Information Officer.

30-Day Notice of Proposed Information Collection: Continuum of Care Homeless Assistance Grant Application

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: HUD has submitted the proposed information collection requirement described below to the Office of Management and Budget (OMB) for review, in accordance with the Paperwork Reduction Act. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: *Comments Due Date:* November 23, 2015.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB

Control Number and should be sent to: HUD Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; fax: 202–395–5806. Email: *OIRA_Submission@omb.eop.gov*

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QMAC, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov* or telephone 202–402–3400. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

The **Federal Register** notice that solicited public comment on the information collection for a period of 60 days was published on August 11, 2015.

A. Overview of Information Collection

Title of Information Collection: Continuum of Care Homeless Assistance Grant Application.

OMB Approval Number: 2506–0112.

Type of Request: Revision of a currently approved collection.

Form Number: CoC Consolidated Application (all parts), SF 424, HUD SF 424 SUPP, HUD–2991, HUD–92041, HUD–27300, HUD–2880, SF–LLL, HUD–40090–4, HUD–50070.

Description of the need for the information and proposed use: The regulatory authority to collect this information is contained in 24 CFR part 578, and is authorized by the McKinney-Vento Act, as amended by S. 896 The Homeless Emergency Assistance and Rapid Transition to Housing (HEARTH) Act of 2009 (42 U.S.C. 11371 *et seq.*) which states that ''The Secretary shall award grants, on a competitive basis, and using the selection criteria described in section 427, to carry out eligible activities under this subtitle for projects that meet the program requirements under section 426, either by directly awarding funds to project sponsors or by awarding funds to unified funding agencies.''(SEC.422(a))

The CoC Homeless Assistance Grant Application (OMB 2506–0112) is the second phase of the information collection process to be used in HUD's CoC Program Competition authorized by the HEARTH Act. During this phase, HUD collects information from the state and local Continuum of Cares (CoCs) through the CoC Consolidated Application which is comprised of the CoC Application, and the Priority Listing which includes the individual project recipients' project applications.

The CoC Consolidated Grant Application is necessary for the selection of proposals submitted to HUD (by State and local governments, public housing authorities, and nonprofit organization) for the grant funds available through the Continuum of Care Program, in order to make decisions for the awarding CoC Program funds.

Respondents (*i.e.* affected public): States, local governments, private nonprofit organizations, public housing authorities, and community mental health associations that are public nonprofit organizations.

Estimated Number of Respondents: 4,577 applicants.

Estimated Number of Responses: 8,869 applications.

Frequency of Response: 1 response per year.

Average Hours per Response: 22.75 hours.

Total Estimated Burdens: 201,779.87 hours.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: 12 U.S.C. 1701z–1 Research and Demonstrations.

Dated: October 16, 2015.

Colette Pollard,

Department Reports Management Officer, Office of the Chief Information Officer.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5831–N–51]

30-Day Notice of Proposed Information Collection: Loan Guarantee Recovery Fund Established Pursuant to the Church Arson Prevention Act of 1996

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: HUD has submitted the proposed information collection requirement described below to the Office of Management and Budget (OMB) for review, in accordance with the Paperwork Reduction Act. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: *Comments Due Date:* November 23, 2015.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: HUD Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; fax: 202–395–5806. Email: *OIRA_Submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QMAC, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov* or telephone 202–402–3400. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

The **Federal Register** notice that solicited public comment on the information collection for a period of 60 days was published on August 19, 2015.

A. Overview of Information Collection

Title of Information Collection: Loan Guarantee Recovery Fund established pursuant to the Church Arson Prevention Act of 1996.

OMB Approval Number: 2506–0159.

Type of Request: Extension of currently approved collection.

Form Number: HUD–40076–LGA, SF–424.

Description of the need for the information and proposed use: The purpose of this submission is for the application of the Section 4 Loan Guarantee Recovery Fund loan guarantee process. Under this program, HUD provides loan guarantees to lending institutions that provide loans to houses of worship that have been the victims of hate crime or arson. Under the Loan Guarantee Agreement, the lending institution is required to provide repayment information to HUD on a monthly basis to ensure the lender is repaying the loan within the guidelines of the Loan Guarantee Agreement.

Respondents (*i.e.* affected public): 36.

Estimated Number of Respondents: 36.

Estimated Number of Responses: 432.

Frequency of Response: 24.

Average Hours per Response: 2.

Total Estimated Burdens: 864.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

Authority: 12 U.S.C. 1701z–1 Research and Demonstrations.

Dated: October 16, 2015.

Colette Pollard,

Department Reports Management Officer, Office of the Chief Information Officer.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5828–N–43]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402–3970; TTY number for the hearing- and speech-impaired (202) 708–2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800–927–7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless* v. *Veterans Administration,* No. 88–2503–OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for ''off-site use only'' recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to: Ms. Theresa M. Ritta, Chief Real Property Branch, the Department of Health and Human Services, Room 5B–17, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301)-443–2265 (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1–800–927–7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (*i.e.,* acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: ARMY: Ms. Veronica Rines, Office of the Assistant Chief of Staff for Installation Management, Department of Army, Room 5A128, 600 Army Pentagon, Washington, DC 20310, (571) 256–8145; COAST GUARD: Commandant, United States Coast Guard, Attn: Aretha Swann, 2703 Martin Luther King Jr. Avenue SE, Stop 7741, Washington, DC 20593–7714; (202) 475–5628; GSA: Mr. Flavio Peres, General Services Administration, Office of Real Property Utilization and Disposal, 1800 F Street NW., Room 7040 Washington, DC 20405, (202) 501–0084; NAVY: Mr. Steve Matteo, Department of the Navy, Asset Management; Division, Naval Facilities Engineering Command, Washington Navy Yard, 1330 Patterson Ave. SW., Suite 1000, Washington, DC 20374; (202) 685–9426; (These are not toll-free numbers).

Dated: October 15, 2015.

Brian P. Fitzmaurice,

Director, Division of Community Assistance, Office of Special Needs Assistance Programs.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–HQ–IA–2015–0153; FXIA16710900000–156–FF09A30000]

Endangered Species; Marine Mammals; Issuance of Permits

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of issuance of permits.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), have issued the following permits to conduct certain activities with endangered species, marine mammals, or both. We issue these permits under the Endangered Species Act (ESA) and Marine Mammal Protection Act (MMPA).

ADDRESSES: Brenda Tapia, U.S. Fish and Wildlife Service, Division of Management Authority, Branch of Permits, MS: IA, 5275 Leesburg Pike, Falls Church, VA 22041; fax (703) 358–2281; or email *DMAFR@fws.gov.*

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, (703) 358–2104 (telephone); (703) 358–2281 (fax); *DMAFR@fws.gov* (email).

SUPPLEMENTARY INFORMATION: On the dates below, as authorized by the provisions of the ESA (16 U.S.C. 1531 *et seq.*), as amended, and/or the MMPA, as amended (16 U.S.C. 1361 *et seq.*), we issued requested permits subject to certain conditions set forth therein. For each permit for an endangered species, we found that (1) The application was filed in good faith, (2) The granted permit would not operate to the disadvantage of the endangered species, and (3) The granted permit would be consistent with the purposes and policy set forth in section 2 of the ESA.

[Docket No. FWS–HQ–IA–2015–0154; FXIA16710900000–156–FF09A30000]

Endangered Species; Receipt of Applications for Permit

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of applications for permit.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on the following applications to conduct certain activities with endangered species. With some exceptions, the Endangered Species Act (ESA) prohibits activities with listed species unless Federal authorization is acquired that allows such activities.

DATES: We must receive comments or requests for documents on or before November 23, 2015.

ADDRESSES: *Submitting Comments:* You may submit comments by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments on Docket No. FWS–HQ–IA–2015–0154.
- *U.S. mail or hand-delivery:* Public Comments Processing, Attn: Docket No. FWS–HQ–IA–2015–0154; U.S. Fish and Wildlife Service Headquarters, MS: BPHC; 5275 Leesburg Pike, Falls Church, VA 22041–3803.

We will post all comments on *http://www.regulations.gov.* This generally means that we will post any personal information you provide us (see the Public Comments section below for more information). *Viewing Comments:* Comments and materials we receive will be available for public inspection on *http://www.regulations.gov,* or by appointment, between 8 a.m. and 4 p.m., Monday through Friday, except Federal holidays, at the U.S. Fish and Wildlife Service, Division of Management Authority, 5275 Leesburg Pike, Falls Church, VA 22041–3803; telephone 703–358–2095.

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, (703) 358–2104 (telephone); (703) 358–2281 (fax); *DMAFR@fws.gov* (email).

SUPPLEMENTARY INFORMATION:

I. Public Comment Procedures

A. How do I request copies of applications or comment on submitted applications?

Send your request for copies of applications or comments and materials concerning any of the applications to the contact listed under **ADDRESSES**. Please include the **Federal Register** notice publication date, the PRT-number, and the name of the applicant in your request or submission. We will not consider requests or comments sent to an email or address not listed under **ADDRESSES**. If you provide an email address in your request for copies of applications, we will attempt to respond to your request electronically.

Please make your requests or comments as specific as possible. Please confine your comments to issues for which we seek comments in this notice, and explain the basis for your comments. Include sufficient information with your comments to allow us to authenticate any scientific or commercial data you include.

The comments and recommendations that will be most useful and likely to influence agency decisions are: (1) Those supported by quantitative information or studies; and (2) Those that include citations to, and analyses of, the applicable laws and regulations. We will not consider or include in our administrative record comments we receive after the close of the comment period (see **DATES**) or comments delivered to an address other than those listed above (see **ADDRESSES**).

B. May I review comments submitted by others?

Comments, including names and street addresses of respondents, will be available for public review at the street address listed under **ADDRESSES**. The public may review documents and other information applicants have sent in support of the application unless our allowing viewing would violate the Privacy Act or Freedom of Information Act. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

II. Background

To help us carry out our conservation responsibilities for affected species, and in consideration of section 10(a)(1)(A) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), along with Executive Order 13576, ''Delivering an Efficient, Effective, and Accountable Government,'' and the President's Memorandum for the Heads of Executive Departments and Agencies of January 21, 2009—Transparency and Open Government (74 FR 4685; January 26, 2009), which call on all Federal agencies to promote openness and transparency in Government by disclosing information to the public, we invite public comment on these permit applications before final action is taken.

III. Permit Applications

Endangered Species

Applicant: Megan Cattau, New York, NY; PRT–61197B

The applicant requests a permit to import hair samples from wild orangutans (*Pongo pygmaeus*) from Indonesia for scientific research purposes.

Applicant: Tanganyika Wildlife Park, Goddard, KS; PRT–57032B

The applicant requests a permit to import one male and three female captive-bred cheetahs (*Acinonyx jubatus*) from De Wildt Cheetah Breeding Centre, De Wildt, South Africa, for the purpose of enhancement of the survival of the species.

Applicant: Christopher Shaw, Rolla, MO; PRT–78418b

The applicant requests a permit to import a sport-hunted trophy of one male bontebok (*Damaliscus pygargus pygargus*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancement of the survival of the species.

Brenda Tapia,

Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

[156A2100DD/AAKC001030/ A0A501010.999900 253G]

Indian Gaming

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of extension of Tribal-State Class III Gaming Compact.

SUMMARY: This publishes notice of the extension of the Class III gaming compact between the Pyramid Lake Paiute Tribe and the State of Nevada.

DATES: *Effective Date:* October 23, 2015.

FOR FURTHER INFORMATION CONTACT: Ms. Paula L. Hart, Director, Office of Indian Gaming, Office of the Deputy Assistant Secretary—Policy and Economic Development, Washington, DC 20240, (202) 219–4066.

SUPPLEMENTARY INFORMATION: Pursuant to 25 CFR 293.5, an extension to an existing tribal-state Class III gaming compact does not require approval by the Secretary if the extension does not include any amendment to the terms of the compact. The Pyramid Lake Paiute Tribe and the State of Nevada have reached an agreement to extend the expiration of their existing Tribal-State Class III gaming compact to February 23, 2017. This publishes notice of the new expiration date of the compact.

Dated: October 16, 2015.

Kevin K. Washburn,

Assistant Secretary—Indian Affairs.

[156A2100DD/AAKC001030/ A0A501010.999900 253G]

Indian Gaming

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of Tribal-State Class III Gaming Compacts taking effect.

SUMMARY: The Bureau of Indian Affairs provides notice that the Tribal State Compact between the State of California and the Jackson Band of Miwuk Indians governing Class III gaming (Compact) is effective on publication of this notice.

DATES: *Effective Date:* October 23, 2015.

FOR FURTHER INFORMATION CONTACT: Ms. Paula L. Hart, Director, Office of Indian Gaming, Office of the Deputy Assistant Secretary—Policy and Economic Development, Washington, DC 20240, (202) 219–4066.

SUPPLEMENTARY INFORMATION: Under section 11 of the Indian Gaming Regulatory Act (IGRA) Public Law 100–497, 25 U.S.C. 2701 *et seq.,* the Secretary of the Interior shall publish in the **Federal Register** notice of approved Tribal-State compacts for the purpose of engaging in Class III gaming activities on Indian lands. As required by 25 CFR 293.4, all compacts are subject to review and approval by the Secretary. The Secretary took no action on the Compact within 45 days of its submission. Therefore, the Compact is considered to have been approved, but only to the extent the Compact is consistent with IGRA. *See* 25 U.S.C. 2710(d)(8)(C).

Indian Gaming

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of Tribal-State Class III Gaming Compact taking effect.

SUMMARY: Notice is hereby given that the Indian Gaming Compact between the State of New Mexico and the Pueblo of Laguna governing Class III gaming (Compact) is taking effect.

DATES: *Effective date:* October 23, 2015.

FOR FURTHER INFORMATION CONTACT: Ms. Paula L. Hart, Director, Office of Indian Gaming, Office of the Assistant Secretary—Indian Affairs, Washington, DC 20240, (202) 219–4066.

SUPPLEMENTARY INFORMATION: Under section 11 of the Indian Gaming Regulatory Act (IGRA) Public Law 100–497, 25 U.S.C. 2701 *et seq.,* the Secretary of the Interior shall publish in the **Federal Register** notice of approved Tribal-State compacts for the purpose of engaging in Class III gaming activities on Indian lands. As required by 25 CFR 293.4, all compacts are subject to review and approval by the Secretary. The Secretary took no action on the Compact within 45 days of its submission. Therefore, the Compact is considered to have been approved, but only to the extent the Compact is consistent with IGRA. *See* 25 U.S.C. 2710(d)(8)(C).

Dated: October 16, 2015.

U.S. Extractive Industries Transparency Initiative Advisory Committee Request for Nominees

AGENCY: Office of Natural Resources Revenue, Interior.

ACTION: Notice.

SUMMARY: The Department of the Interior (Interior) is seeking nominations for individuals to be Committee members or alternates on the U.S. Extractive Industries Transparency Initiative Advisory Committee (Committee). We seek nominees who can represent stakeholder constituencies from government, civil society, and industry so that we can fill current vacancies and create a roster of candidates in case future vacancies occur.

DATES: Submit nominations by December 31, 2015.

ADDRESSES: You may submit nominations by any of the following methods:

- Mail or hand-carry nominations to Ms. Rosita Compton Christian; Department of the Interior, 1849 C Street NW., MS 4211, Washington, DC 20240.
- Email nominations to *USEITI@ios.doi.gov*.

FOR FURTHER INFORMATION CONTACT: Rosita Compton Christian at (202) 208–0272 or (202) 513–0597; fax (202) 513–0682; email *Rosita.ComptonChristian@onrr.gov* or *USEITI@ios.doi.gov*; or via mail at the Department of the Interior; 1849 C Street NW., MS 4211; Washington, DC 20240.

SUPPLEMENTARY INFORMATION: Interior established the Committee on July 26, 2012, in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended (5 U.S.C. App.2), and with the concurrence of the General Services Administration. The Committee serves as the U.S. Extractive Industries Transparency Initiative Multi-Stakeholder Group and advises the Secretary of the Interior on design and implementation of the initiative.

The Committee does the following:

- Oversees the U.S. implementation of the Extractive Industries Transparency Initiative (EITI), a global standard for governments to publicly disclose revenues received from oil, gas, and mining assets belonging to the government, with parallel public disclosure by companies of payments to the

government (such as royalties, rents, bonuses, taxes, or other payments)
- Develops and recommends to the Secretary a fully-costed work plan, containing measurable targets and a timetable for implementation and incorporating an assessment of capacity constraints; this plan will be developed in consultation with key EITI stakeholders and published upon completion
- Provides opportunities for collaboration and consultation among stakeholders
- Advises the Secretary and posts for consideration by other stakeholders proposals for conducting long-term oversight and other activities necessary to achieve and maintain EITI-compliant status

The Committee consists of representatives from three stakeholder sectors. The sectors are as follows:
- Industry, including non-Federal representatives from the extractive industry-including oil, gas, and mining companies and industry-related trade associations
- Civil society, including organizations with an interest in extractive industries, transparency, and government oversight; members of the public; and public and/or private investors
- Government, including Federal, State, local, and Tribal governments and individual Indian mineral owners

In addition to honoring the EITI principle of self-selection within the stakeholder sector, we will consider the following criteria when making final selections:
- Understanding of and commitment to the EITI process
- Ability to collaborate and operate in a multi-stakeholder setting
- Access to and support from a relevant stakeholder constituency
- Basic understanding of the extractive industry and/or revenue collection or willingness to be educated on such matters

Nominations should include a resume providing relevant contact information and an adequate description of the nominee's qualifications, including information that would enable the Department of the Interior to make an informed decision regarding meeting the membership requirements for the Committee and to permit the Department of the Interior to contact a potential member.

Parties are strongly encouraged to work with and within stakeholder sectors (including industry, civil society, and government sectors, as the EITI process defines) to jointly consider and submit nominations that, overall, reflect the diversity and breadth of their sector. Nominees are strongly encouraged to include supporting letters from constituents, trade associations, alliances, and/or other organizations that indicate support by a meaningful constituency for the nominee.

Individuals who are Federally registered lobbyists are ineligible to serve on FACA and non-FACA boards, committees, or councils in an individual capacity. The term ''individual capacity'' refers to individuals who are appointed to exercise their own individual best judgment on behalf of the government, such as when they are designated Special Government Employees, rather than being appointed to represent a particular interest.

The Committee will meet quarterly or at the request of the Designated Federal Officer. Non-Federal members of the Committee will serve without compensation. However, we may pay the travel and per diem expenses of Committee members, if appropriate, under the Federal Travel Regulations.

To learn more about USEITI please visit the official Web site at *www.doi.gov/eiti.*

Dated: October 14, 2015.

Paul A. Mussenden,

Deputy Assistant Secretary—Natural Resources Revenue Management.

Bureau of Land Management

[LLORW00000.L10200000.ML0000. LXSSEWRA0000.16XL1109AF.HAG16–0027]

Notice of Public Meeting for the Eastern Washington Resource Advisory Council

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Land Policy and Management Act and the Federal Advisory Committee Act of 1972, and the U.S. Department of the Interior, Bureau of Land Management (BLM), the Eastern Washington Resource Advisory Council (RAC) will meet as indicated below:

DATES: The Eastern Washington RAC will hold a public meeting Thursday, Nov. 5, 2015. The meeting will run from 9:00 a.m. to 4:30 p.m. The meeting will be held at the Holiday Inn in Yakima, Washington, and will include a field trip to the Yakima River Canyon. A public comment period will be available in the afternoon.

FOR FURTHER INFORMATION CONTACT: Jeff Clark, Public Affairs Specialist, BLM Spokane District Office, 1103 N. Fancher Rd., Spokane, Washington 99212, (509) 536–1297, or email *jeffclark@blm.gov.* Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1(800) 877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The Eastern Washington RAC consists of 15 members chartered and appointed by the Secretary of the Interior. Their diverse perspectives are represented in commodity, conservation, and general interests. They provide advice to BLM resource managers regarding management plans and proposed resource actions on public land in central and eastern Washington.

Agenda items for the November 2015 meeting include a field tour of the Yakima River Canyon Recreation Area, an update on the Eastern Washington Resource Management Plan, a presentation of the business plan for a fee season extension for the Yakima River Canyon, committee and member updates, and any other matters that may reasonably come before the RAC. This meeting is open to the public in its entirety; however, transportation during the field tour portion of the meeting on Nov. 5 will not be provided to members of the public. Information to be distributed to the Eastern Washington RAC is requested prior to the start of each meeting. A public comment period will be available on Nov. 5, 2015, at 3:30 p.m. Unless otherwise approved by the Eastern Washington RAC Chair, the public comment period will last no longer than 30 minutes. Each speaker may address the RAC for a maximum of 5 minutes. Meeting times and the duration scheduled for public comment periods may be extended or altered when the authorized representative considers it necessary to accommodate business and all who seek to be heard regarding matters before the Eastern Washington RAC.

Dennis Strange,

Spokane District Manager.

Bureau of Land Management

[LLCON05000–L16100000–DU0000–16X]

Notice of Meeting, Northwest Resource Advisory Council's Travel Management Sub-Group

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Land Policy and Management Act and the Federal Advisory Committee Act of 1972, the U.S. Department of the Interior, Bureau of Land Management (BLM) Northwest Resource Advisory Council (RAC) Travel Management Sub-Group will meet as indicated below.

DATES: The Northwest RAC Travel Management Sub-Group has scheduled a meeting November 16, 2015, from 1 to 3 p.m., with a public comment period regarding matters on the agenda at 2 p.m. A specific agenda for the meeting will be available prior to the meeting at *http://www.blm.gov/co/st/en/BLM_Resources/racs/nwrac.html.*

ADDRESSES: The meeting will be held at the BLM White River Field Office, 220 E. Market St., Meeker, CO 81641.

FOR FURTHER INFORMATION CONTACT: Heather Sauls, Planning and Environmental Coordinator, White River Field Office, see address above. Phone: (970) 878–3855. Email: *hsauls@blm.gov.* Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, seven days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The 15-member Northwest RAC advises the Secretary of the Interior, through the BLM, on a variety of planning and management issues associated with public land management in northwest Colorado. The Northwest RAC has formed a 13-member Travel Management Sub-Group to assist with the BLM Colorado White River Field Office's Travel and Transportation Management Resource Management Plan Amendment. The sub-group provides recommendations to the Northwest RAC but does not directly advise the BLM. This meeting is open to the public. At this meeting, the sub-group will discuss: introductions of new members; an overview of the travel management planning process within the White River Field Office; and the roles and responsibilities of the sub-group, the RAC and the BLM during this planning effort. The public is able to make oral comments to the sub-group at 2 p.m. or submit written comments for the sub-group's consideration. Summary minutes for the Northwest RAC Travel Management Sub-Group meetings will be maintained in the White River Field Office and will be available for public inspection and reproduction during regular business hours for 30 days following the meeting.

Ruth Welch,

Colorado State Director.

BILLING CODE 4310–JB–P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NRSS–15890; PPWONRADE2.PMP00EI05.YP0000]

Draft Environmental Impact Statement Non-Federal Oil and Gas Regulations

AGENCY: National Park Service, Interior.

ACTION: Notice of availability.

SUMMARY: Pursuant to the National Environmental Policy Act of 1969, 42 U.S.C. 4332(2)(C), the National Park Service (NPS) announces the availability of the Draft Environmental Impact Statement (DEIS) for the Nonfederal Oil and Gas Regulations (36 CFR part 9, subpart B) Revisions.

DATES: The NPS will accept comments on the DEIS from the public for a period of 60 days following publication by the Environmental Protection Agency (EPA) of the Notice of Availability of the Draft Environmental Impact Statement in the **Federal Register**. We will also announce the dates, times and location to solicit public comments on the DEIS through the NPS Planning, Environment, and Public Comment (PEPC) Web site at *http://parkplanning.nps.gov/DEIS9B* and media outlets. A web link to a pre-recorded webinar providing an overview of the project will also be listed.

ADDRESSES: Copies of the DEIS will be available for public review at *http://parkplanning.nps.gov/DEIS9B.* A limited number of hard copies will be available upon request.

FOR FURTHER INFORMATION CONTACT: David Steensen, Chief, Geologic Resource Division, National Park Service, P.O. Box 25287, Denver, CO 80225; phone 303.969.2014.

SUPPLEMENTARY INFORMATION: The DEIS evaluates the impacts of three alternatives, including the following alternative elements:

- Elimination of two regulatory provisions that exempt 60% of the oil and gas operations in NPS units. All operators in NPS units would be required to comply with the 9B regulations.
- Elimination of the financial assurance (bonding) cap. Financial assurance would be equal to the reasonable estimated cost of site reclamation.
- Improving enforcement authority by incorporating existing NPS penalty provisions. Law enforcement staff would have authority to write citations for noncompliance with the regulations.
- Authorizing compensation to the federal government for new access on federal lands outside the boundary of an operator's mineral right.
- Reformatting the regulations to make it easier to identify an operator's information requirements and operating standards that apply to each type of operation.

If you wish to comment electronically, you may submit your comments online at the PEPC Web site by visiting *http://parkplanning.nps.gov/DEIS9B.* NPS encourages commenting electronically through PEPC. The deadline for submitting comments online is midnight, Eastern Time, on the last day of the public comment period, which will be 60 days after the EPA's Notice of Availability for this DEIS is published in the **Federal Register**. You may also submit written comments by mail to: David Steensen, Chief, Geologic Resource Division, National Park Service, P.O. Box 25287, Denver, CO 80225. Comments will not be accepted by fax, email, or in any other way than those specified above. Bulk comments in any format (hard copy or electronic) submitted on behalf of others will not be accepted. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

The responsible official for this DEIS is the Associate Director, Natural Resources, Stewardship and Science, 1849 C Street NW., Washington, DC 20240.

Dated: January 15, 2015.

Ray Sauvajot,

Associate Director, Natural Resources, Stewardship and Science, Washington Office, National Park Service.

Editorial Note: This document was received for publication by the Office of the Federal Register on October 20, 2015.

[FR Doc. 2015–26999 Filed 10–22–15; 8:45 am]

BILLING CODE 4312–52–P

DEPARTMENT OF JUSTICE

Bureau of Alcohol, Tobacco, Firearms, and Explosives

[Docket No. 2015R–23]

Commerce in Explosives; 2015 Annual List of Explosive Materials

AGENCY: Bureau of Alcohol, Tobacco, Firearms, and Explosives (ATF); Department of Justice.

ACTION: Notice of list of explosive materials.

SUMMARY: Pursuant to 18 U.S.C. 841(d) and 27 CFR 555.23, the Department must publish and revise at least annually in the **Federal Register** a list of explosives determined to be within the coverage of 18 U.S.C. 841 *et seq*. The list covers not only explosives, but also blasting agents and detonators, all of which are defined as explosive materials in 18 U.S.C. 841(c). This notice publishes the 2015 Annual List of Explosive Materials.

DATES: The list becomes effective October 23, 2015.

FOR FURTHER INFORMATION CONTACT: William E. Frye Jr., Chief, Explosives Industry Programs Branch; Firearms and Explosives Industry Division; Bureau of Alcohol, Tobacco, Firearms, and Explosives; United States Department of Justice; 99 New York Avenue NE., Washington, DC 20226; 202 648–7120.

SUPPLEMENTARY INFORMATION: The list includes all mixtures containing any of the materials on the list. Materials constituting blasting agents are marked by an asterisk. While the list is comprehensive, it is not all-inclusive. The fact that an explosive material is not on the list does not mean that it is not within the coverage of the law if it otherwise meets the statutory definitions in 18 U.S.C. 841. Explosive materials are listed alphabetically by their common names followed, where applicable, by chemical names and synonyms in brackets.

The Department has not added any new terms to the list of explosive materials or removed or revised any listing since its last publication. This list supersedes the List of Explosive Materials dated October 7, 2014 (Docket No. 2014R–25T, 79 FR 60496).

Notice of the 2015 Annual List of Explosive Materials

Pursuant to 18 U.S.C. 841(d) and 27 CFR 555.23, I hereby designate the following as explosive materials covered under 18 U.S.C. 841(c):

A

Acetylides of heavy metals.
Aluminum containing polymeric propellant.
Aluminum ophorite explosive.
Amatex.
Amatol.
Ammonal.
Ammonium nitrate explosive mixtures (cap sensitive).
* Ammonium nitrate explosive mixtures (non-cap sensitive).
Ammonium perchlorate having particle size less than 15 microns.
Ammonium perchlorate explosive mixtures (excluding ammonium perchlorate composite propellant (APCP)).
Ammonium picrate [picrate of ammonia, Explosive D].
Ammonium salt lattice with isomorphously substituted inorganic salts.
* ANFO [ammonium nitrate-fuel oil].
Aromatic nitro-compound explosive mixtures.
Azide explosives.

B

Baranol.
Baratol.
BEAF [1, 2-bis (2, 2-difluoro-2-nitroacetoxyethane)].
Black powder.
Black powder based explosive mixtures.
Black powder substitutes.
*Blasting agents, nitro-carbo-nitrates, including non-cap sensitive slurry and water gel explosives.
Blasting caps.
Blasting gelatin.
Blasting powder.
BTNEC [bis (trinitroethyl) carbonate].
BTNEN [bis (trinitroethyl) nitramine].
BTTN [1,2,4 butanetriol trinitrate].
Bulk salutes.
Butyl tetryl.

C

Calcium nitrate explosive mixture.
Cellulose hexanitrate explosive mixture.
Chlorate explosive mixtures.
Composition A and variations.
Composition B and variations.
Composition C and variations.
Copper acetylide.
Cyanuric triazide.
Cyclonite [RDX].
Cyclotetramethylenetetranitramine [HMX].
Cyclotol.
Cyclotrimethylenetrinitramine [RDX].

D

DATB [diaminotrinitrobenzene].
DDNP [diazodinitrophenol].
DEGDN [diethyleneglycol dinitrate].
Detonating cord.
Detonators.
Dimethylol dimethyl methane dinitrate composition.
Dinitroethyleneurea.
Dinitroglycerine [glycerol dinitrate].
Dinitrophenol.
Dinitrophenolates.
Dinitrophenyl hydrazine.
Dinitroresorcinol.
Dinitrotoluene-sodium nitrate explosive mixtures.
DIPAM [dipicramide; diaminohexanitrobiphenyl].
Dipicryl sulfone.
Dipicrylamine.
Display fireworks.
DNPA [2,2-dinitropropyl acrylate].
DNPD [dinitropentano nitrile].
Dynamite.

E

EDDN [ethylene diamine dinitrate].
EDNA [ethylenedinitramine].
Ednatol.
EDNP [ethyl 4,4-dinitropentanoate].
EGDN [ethylene glycol dinitrate].
Erythritol tetranitrate explosives.
Esters of nitro-substituted alcohols.
Ethyl-tetryl.
Explosive conitrates.
Explosive gelatins.
Explosive liquids.
Explosive mixtures containing oxygen-releasing inorganic salts and hydrocarbons.
Explosive mixtures containing oxygen-releasing inorganic salts and nitro bodies.
Explosive mixtures containing oxygen-releasing inorganic salts and water insoluble fuels.
Explosive mixtures containing oxygen-releasing inorganic salts and water soluble fuels.
Explosive mixtures containing sensitized nitromethane.
Explosive mixtures containing tetranitromethane (nitroform).
Explosive nitro compounds of aromatic hydrocarbons.
Explosive organic nitrate mixtures.
Explosive powders.

F

Flash powder.
Fulminate of mercury.
Fulminate of silver.

Fulminating gold.
Fulminating mercury.
Fulminating platinum.
Fulminating silver.

G

Gelatinized nitrocellulose.
Gem-dinitro aliphatic explosive mixtures.
Guanyl nitrosamino guanyl tetrazene.
Guanyl nitrosamino guanylidene hydrazine.
Guncotton.

H

Heavy metal azides.
Hexanite.
Hexanitrodiphenylamine.
Hexanitrostilbene.
Hexogen [RDX].
Hexogene or octogene and a nitrated N-methylaniline.
Hexolites.
HMTD [hexamethylenetriperoxidediamine].
HMX [cyclo-1,3,5,7-tetramethylene 2,4,6,8-tetranitramine; Octogen].
Hydrazinium nitrate/hydrazine/aluminum explosive system.
Hydrazoic acid.

I

Igniter cord.
Igniters.
Initiating tube systems.

K

KDNBF [potassium dinitrobenzo-furoxane].

L

Lead azide.
Lead mannite.
Lead mononitroresorcinate.
Lead picrate.
Lead salts, explosive.
Lead styphnate [styphnate of lead, lead trinitroresorcinate].
Liquid nitrated polyol and trimethylolethane.
Liquid oxygen explosives.

M

Magnesium ophorite explosives.
Mannitol hexanitrate.
MDNP [methyl 4,4-dinitropentanoate].
MEAN [monoethanolamine nitrate].
Mercuric fulminate.
Mercury oxalate.
Mercury tartrate.
Metriol trinitrate.
Minol-2 [40% TNT, 40% ammonium nitrate, 20% aluminum].
MMAN [monomethylamine nitrate]; methylamine nitrate.
Mononitrotoluene-nitroglycerin mixture.
Monopropellants.

N

NIBTN [nitroisobutametriol trinitrate].
Nitrate explosive mixtures.
Nitrate sensitized with gelled nitroparaffin.
Nitrated carbohydrate explosive.
Nitrated glucoside explosive.
Nitrated polyhydric alcohol explosives.
Nitric acid and a nitro aromatic compound explosive.
Nitric acid and carboxylic fuel explosive.
Nitric acid explosive mixtures.
Nitro aromatic explosive mixtures.
Nitro compounds of furane explosive mixtures.
Nitrocellulose explosive.
Nitroderivative of urea explosive mixture.
Nitrogelatin explosive.
Nitrogen trichloride.
Nitrogen tri-iodide.
Nitroglycerine [NG, RNG, nitro, glyceryl trinitrate, trinitroglycerine].
Nitroglycide.
Nitroglycol [ethylene glycol dinitrate, EGDN].
Nitroguanidine explosives.
Nitronium perchlorate propellant mixtures.
Nitroparaffins Explosive Grade and ammonium nitrate mixtures.
Nitrostarch.
Nitro-substituted carboxylic acids.
Nitrourea.

O

Octogen [HMX].
Octol [75 percent HMX, 25 percent TNT].
Organic amine nitrates.
Organic nitramines.

P

PBX [plastic bonded explosives].
Pellet powder.
Penthrinite composition.
Pentolite.
Perchlorate explosive mixtures.
Peroxide based explosive mixtures.
PETN [nitropentaerythrite, pentaerythrite tetranitrate, pentaerythritol tetranitrate].
Picramic acid and its salts.
Picramide.
Picrate explosives.
Picrate of potassium explosive mixtures.
Picratol.
Picric acid (manufactured as an explosive).
Picryl chloride.
Picryl fluoride.
PLX [95% nitromethane, 5% ethylenediamine].
Polynitro aliphatic compounds.
Polyolpolynitrate-nitrocellulose explosive gels.
Potassium chlorate and lead sulfocyanate explosive.
Potassium nitrate explosive mixtures.
Potassium nitroaminotetrazole.
Pyrotechnic compositions.
Pyrotechnic fuses.
PYX [2,6-bis(picrylamino)] 3,5-dinitropyridine.

R

RDX [cyclonite, hexogen, T4, cyclo-1,3,5,-trimethylene-2,4,6,-trinitramine; hexahydro-1,3,5-trinitro-S-triazine].

S

Safety fuse.
Salts of organic amino sulfonic acid explosive mixture.
Salutes (bulk).
Silver acetylide.
Silver azide.
Silver fulminate.
Silver oxalate explosive mixtures.
Silver styphnate.
Silver tartrate explosive mixtures.
Silver tetrazene.
Slurried explosive mixtures of water, inorganic oxidizing salt, gelling agent, fuel, and sensitizer (cap sensitive).
Smokeless powder.
Sodatol.
Sodium amatol.
Sodium azide explosive mixture.
Sodium dinitro-ortho-cresolate.
Sodium nitrate explosive mixtures.
Sodium nitrate-potassium nitrate explosive mixture.
Sodium picramate.
Special fireworks.
Squibs.
Styphnic acid explosives.

T

Tacot [tetranitro-2,3,5,6-dibenzo-1,3a,4,6a tetrazapentalene].
TATB [triaminotrinitrobenzene].
TATP [triacetonetriperoxide].
TEGDN [triethylene glycol dinitrate].
Tetranitrocarbazole.
Tetrazene [tetracene, tetrazine, 1(5-tetrazolyl)-4-guanyl tetrazene hydrate].
Tetrazole explosives.
Tetryl [2,4,6 tetranitro-N-methylaniline].
Tetrytol.
Thickened inorganic oxidizer salt slurried explosive mixture.
TMETN [trimethylolethane trinitrate].
TNEF [trinitroethyl formal].
TNEOC [trinitroethylorthocarbonate].
TNEOF [trinitroethylorthoformate].
TNT [trinitrotoluene, trotyl, trilite, triton].
Torpex.
Tridite.
Trimethylol ethyl methane trinitrate composition.
Trimethylolthane trinitrate-nitrocellulose.

Trimonite.
Trinitroanisole.
Trinitrobenzene.
Trinitrobenzoic acid.
Trinitrocresol.
Trinitro-meta-cresol.
Trinitronaphthalene.
Trinitrophenetol.
Trinitrophloroglucinol.
Trinitroresorcinol.
Tritonal.

U

Urea nitrate.

W

Water-bearing explosives having salts of oxidizing acids and nitrogen bases, sulfates, or sulfamates (cap sensitive).

Water-in-oil emulsion explosive compositions.

X

Xanthamonas hydrophilic colloid explosive mixture.

Date approved: October 19, 2015.

BILLING CODE 4410–FY–P

DEPARTMENT OF JUSTICE

Antitrust Division

Notice Pursuant to the National Cooperative Research and Production Act of 1993—Petroleum Environmental Research Forum

Notice is hereby given that, on September 22, 2015, pursuant to section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), Petroleum Environmental Research Forum (''PERF'') has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Ramboll Environ, Inc., Houston, TX, has been added as a party to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and PERF intends to file additional written notifications disclosing all changes in membership.

On February 10, 1986, PERF filed its original notification pursuant to section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to section 6(b) of the Act on March 14, 1986 (51 FR 8903).

The last notification was filed with the Department on December 9, 2014. A notice was published in the **Federal Register** pursuant to section 6(b) of the Act on January 5, 2015 (80 FR 259).

Patricia A. Brink,

Director of Civil Enforcement, Antitrust Division.

Notice Pursuant to the National Cooperative Research and Production Act of 1993—Cooperative Research Group on Separation Technology Research Program

Notice is hereby given that, on September 22, 2015, pursuant to section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), Southwest Research Institute—Cooperative Research Group on Separation Technology Research Program (''STAR'') has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Technip USA, Inc., Houston, TX; GE Oil & Gas, Sandvika, NORWAY; Single Buoy Moorings, Inc., Marly, SWITZERLAND; and Aker Subsea AS, Fornebu, NORWAY, have been added as parties to this venture.

Also, PetroSkills, LLC, Katy, TX, has withdrawn as a party to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and STAR intends to file additional written notifications disclosing all changes in membership.

On August 8, 2014, STAR filed its original notification pursuant to section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to section 6(b) of the Act on September 8, 2014 (79 FR 53215).

The last notification was filed with the Department on May 15, 2015. A notice was published in the **Federal Register** pursuant to section 6(b) of the Act on June 8, 2015 (80 FR 32411).

BILLING CODE P

DEPARTMENT OF LABOR

Employment and Training Administration

Comment Request for Information Collection on Employment and Training (ET) Handbook 361, Unemployment Insurance (UI) Data Validation (DV), Extension With Revisions

AGENCY: Employment and Training Administration (ETA), Labor.

ACTION: Notice.

SUMMARY: The Department of Labor (Department), as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation program to provide the public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 [44 U.S.C. 3506(c)(2)(A)]. This program helps ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed.

Currently, ETA is soliciting comments concerning the collection of data for the UI DV program. Collection authority for this program expires May 31, 2016.

DATES: Submit written comments to the office listed in the addresses section below on or before December 22, 2015.

ADDRESSES: Send written comments to Rachel Beistel, Room S–4519, Employment and Training Administration, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210. Telephone number: 202–693–2736 (this is not a toll-free number). Individuals with hearing or speech impairments may access the telephone number above via TTY by calling the toll-free Federal Information Relay Service at 1–877–889–5627 (TTY/TDD). Email: *Beistel.Rachel@dol.gov.* To obtain a copy of the proposed information collection request (ICR), please contact the person listed above.

SUPPLEMENTARY INFORMATION:

I. Background

Section 303(a)(6) of the Social Security Act specifies that the Secretary of Labor will not certify State UI programs to receive administrative grants unless the State's law includes provisions for: making of such reports . . . as the Secretary of Labor may from time to time require, and compliance with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports.

The Department considers data validation one of those ''provisions . . . necessary to assure the correctness and verification'' of the reports it requires.

The Government Performance and Results Act of 1993 (GPRA) requires Federal agencies to develop annual and strategic performance plans that establish performance goals, have concrete indicators of the extent that goals are achieved, and set performance targets. Each year, the agency is to issue a report that ''evaluate[s] the performance plan for the current fiscal year relative to the performance achieved toward the performance goals in the fiscal year covered by the report.'' Section 1116 (d)(2) of OMB Circular A–11, which implements the GPRA process, cites the Reports Consolidation Act of 2000 to emphasize the need for data validation by requiring that the agency's annual performance report ''contain an assessment of the completeness and reliability of the performance data included in it [that] . . . describes any material inadequacies in the completeness and reliability of the data.'' (OMB Circular A–11, Section 230.2 (f)). The Department emphasizes the importance of complete and accurate information for program monitoring and improving program performance.

The UI DV program employs a refined and automated approach to review 322 elements reported on 13 benefits reports and one tax report. The Department uses many of these elements for key performance measures as well as for workload analysis.

The validation process assesses the validity (accuracy) of the counts of transactions or measurements of status as follows. Guided by a detailed handbook, the state first constructs extract files containing all pertinent individual transactions for the desired report period to be validated. These transactions are grouped into 16 benefits and five tax populations. Each transaction record contains the necessary characteristics or dimensions that enable it to be summed into an independent recount of what the state has already reported. The Department provides state agencies with software that edits the extract file (to identify and remove duplicate transactions and improperly built records, for example), then aggregates the transactions to produce an independent reconstruction or ''validation count'' of the reported figure. The reported count is considered valid by this ''quantity'' validation test if it is within ±2% of the validation count (±1% for a GPRA-related element).

The software also draws samples of most transaction types from the extract files. Guided by a state-specific handbook, the validators review these sample records against documentation in the state's management information system to determine whether the transactions in the extract file are supported by system documentation. This qualitative check determines whether the validation count can be trusted as accurate. The benefits extract files are considered to pass this ''quality'' review if random samples indicate that no more than 5% of the records contain errors; tax files are subjected to different but related tests. A reported count is considered valid only if it differs from a reconstructed (validation) count by no more than the appropriate criterion of ±2% or ±1%, and the validation count comes from an extract file that has satisfied all quality tests.

For Federal fiscal years 2011 and beyond, all states will be required to conduct a complete validation every three years. In three cases the three-year rule does not apply, and a revalidation must occur within one year: (1) Groups of reported counts that are summed for purposes of making a Pass/Fail determination and do not pass validation by being within ±2% of the reconstructed counts or the extract file does not pass all quality tests; (2) the validation applies to the two benefits populations and one tax population used for GPRA measures; and (3) reports are produced by new reporting software. Every year states must also certify that Module 3 of the Benefits and Tax handbooks are up to date.

In August 2015, through Unemployment Insurance Program Letter 08–12, Change 1, the Department issued changes that increased the high dollar overpayment threshold from $5,000 to $25,000 on the ETA 227 report. The ETA 227 report is validated through four of the 16 benefit populations. Only the validation of Benefits Population 12 will be affected by the new threshold of $25,000. Accommodating the new threshold requires: (1) Changing the threshold amount in the data validation database programming; (2) making one-time changes to two rows of data that validate the 227 report; and (3) adapting the affected Overpayment rules (called Steps or Substeps) to Module 3 of the Benefits handbook, which contains State definitions and data system locations for Federal reporting requirements. These changes will impose little to no additional burden on state validators.

II. Review Focus

The Department is particularly interested in comments which:

• Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

• Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

• Enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

III. Current Actions

Type of Review: Extension with revisions.

Title: Unemployment Insurance Data Validation Program.

OMB Number: 1205–0431.

Affected Public: State Workforce Agencies.

Form(s): ET Handbook 361.

Estimated Total Annual Respondents: 53.

Annual Frequency: At least five validation items per state (two benefits populations and one tax population) plus reviewing and certifying that Benefits and Tax Module items are up to date.

Estimated Total Annual Responses: 265 (53 states × 5 populations).

Average Time per Response: 446 Hours.

Estimated Total Annual Burden Hours: 23,644 Hours.

Total Annual Burden Cost for Respondents: $1,115,997.

We will summarize and/or include in the request for OMB approval of the ICR, the comments received in response to this comment request; they will also become a matter of public record.

Portia Wu,

Assistant Secretary for Employment and Training, Labor.

[FR Doc. 2015–26944 Filed 10–22–15; 8:45 am]

BILLING CODE 4510–FW–P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Prohibited Transaction Exemption 1990–1, Insurance Company Pooled Separate Accounts

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) is submitting the Employee Benefits Security Administration (EBSA) sponsored information collection request (ICR) titled, ''Prohibited Transaction Exemption 1990–1, Insurance Company Pooled Separate Accounts,'' to the Office of Management and Budget (OMB) for review and approval for continued use, without change, in accordance with the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.* Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before November 23, 2015.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov Web site at *http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201509-1210-001* (this link will only become active on the day following publication of this notice) or by contacting Michel Smyth by telephone at 202–693–4129, TTY 202–693–8064, (these are not toll-free numbers) or by email at *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request by mail or courier to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL–EBSA, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503; by Fax: 202–395–5806 (this is not a toll-free number); or by email: *OIRA_submission@omb.eop.gov.* Commenters are encouraged, but not required, to send a courtesy copy of any comments by mail or courier to the U.S. Department of Labor-OASAM, Office of the Chief Information Officer, Attn: Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW., Washington, DC 20210; or by email: *DOL_PRA_PUBLIC@dol.gov*.

FOR FURTHER INFORMATION CONTACT: Michel Smyth by telephone at 202–693–4129, TTY 202–693–8064, (these are not toll-free numbers) or by email at *DOL_PRA_PUBLIC@dol.gov*.

Authority: 44 U.S.C. 3507(a)(1)(D).

SUPPLEMENTARY INFORMATION: This ICR seeks to extend PRA authority for the Prohibited Transaction Exemption 1990–1 (PTE 90–1), Insurance Company Pooled Separate Accounts information collection. PTE 90–1 provides an exemption from certain Employee Retirement Income Security Act of 1974 (ERISA) provisions relating to transactions involving insurance company pooled separate accounts in which employee benefit plans participate. Without the exemption, Internal Revenue Code section 4975(c)(1) and ERISA sections 406 and 407(a) might prohibit a party in interest to a plan from furnishing goods or services to an insurance company pooled separate account in which the plan has an interest or prohibit engaging in other transactions. *See* 26 U.S.C. 4975(c)(1) and 29 U.S.C. 1106 and 1107(a). Under the exemption, a person who is a party in interest to a plan that invests in a pooled separate account, such as a service provider, may engage in otherwise prohibited transactions with the separate account if the plan's participation in the separate account does not exceed specified limits and other conditions are met. These other conditions include a requirement that the party in interest not be the insurance company, or an affiliate thereof, that holds the plan assets in its pooled separate account or other separate account. The terms of the transaction to which the exemption is applied must be at least as favorable to the pooled separate account as those that would be obtained in a separate arms-length transaction with an unrelated party, and the insurance company must maintain records of any transaction to which the exemption applies for a period of six years. This ICR covers the recordkeeping requirement. Internal Revenue Code section 4975(c)(2) and ERISA section 408(a) authorize this information collection. *See* 26 U.S.C. 4975(c)(2) and 29 U.S.C. 1108(a).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1210–0083.

OMB authorization for an ICR cannot be for more than three (3) years without renewal, and the current approval for this collection is scheduled to expire on October 31, 2015. The DOL seeks to extend PRA authorization for this information collection for three (3) more years, without any change to existing requirements. The DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on June 17, 2015 (80 FR 34696).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1210–0083. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Agency: DOL–EBSA.

Title of Collection: Prohibited Transaction Exemption 90–1; Insurance Company Pooled Separate Accounts.

OMB Control Number: 1210–0083.

Affected Public: Private Sector—businesses or other for-profits.

Total Estimated Number of Respondents: 96.

Total Estimated Number of Responses: 960.

Total Estimated Annual Time Burden: 160 hours.

Total Estimated Annual Other Costs Burden: $0.

Dated: October 19, 2015.

Michel Smyth,

Departmental Clearance Officer.

BILLING CODE 4510–29–P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Arts

Proposed Collection; Comment Request

ACTION: Notice.

SUMMARY: The National Endowment for the Arts (NEA), as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) [44 U.S.C. 3506(c)(A)]. This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, the NEA is soliciting comments concerning the proposed information collection on arts participation in the U.S. A copy of the current information collection request can be obtained by contacting the office listed below in the address section of this notice.

DATES: Written comments must be submitted to the office listed in the address section below within 60 days from the date of this publication in the **Federal Register**. The NEA is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

• Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used;

• Enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

BILLING CODE 7537–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2015–0141]

Information Collection: Exemptions and Continued Regulatory Authority in Agreement States and in Offshore Waters Under Section 274

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of submission to the Office of Management and Budget; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has recently submitted a request for renewal of an existing collection of information to the Office of Management and Budget (OMB) for review. The information collection is entitled, ''Exemptions and Continued Regulatory Authority in Agreement States and in Offshore Waters Under Section 274.''

DATES: Submit comments by November 23, 2015.

ADDRESSES: Submit comments directly to the OMB reviewer at: Vlad Dorjets, Desk Officer, Office of Information and Regulatory Affairs (3150–0032), NEOB–10202, Office of Management and Budget, Washington, DC 20503; telephone: 202–395–7315, email: *oira_submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Tremaine Donnell, NRC Clearance Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–6258; email: *INFOCOLLECTS.Resource@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2015–0141 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

• *Federal Rulemaking Web site:* Go to *http://www.regulations.gov* and search for Docket ID NRC–2015–0141.

• *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''*ADAMS Public Documents*'' and then select ''*Begin Web-based ADAMS Search.*'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The supporting statement is available in ADAMS under Accession No. ML15258A181.

• *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

• *NRC's Clearance Officer:* A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, Tremaine Donnell, Office of Information Services, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–6258; email: *INFOCOLLECTS.Resource@NRC.GOV.*

B. Submitting Comments

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. All comment submissions are posted at *http://www.regulations.gov* and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the OMB, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC recently submitted a request for renewal of an existing collection of information to OMB for review entitled, ''Exemptions and Continued Regulatory Authority in Agreement States and in Offshore Waters Under Section 274.'' The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on June 17, 2015, 80 FR 34707.

1. *The title of the information collection:* 10 CFR part 150, ''Exemptions and Continued Regulatory Authority in Agreement States and in Offshore Waters Under Section 274.''

2. *OMB approval number:* 3150–0032.

3. *Type of submission:* Extension.

4. *The form number if applicable:* N/A.

5. *How often the collection is required or requested:* Sections 150.16(b), 150.17(c), and 150.19(c) of title 10 of the *Code of Federal Regulations* (10 CFR), require the submission of reports following specified events, such as the theft or unlawful diversion of licensed radioactive material. The source material inventory reports required under 10 CFR 150.17(b) must be submitted annually by certain licensees.

6. *Who will be required or asked to respond:* Agreement State licensees authorized to possess source or special nuclear material at certain types of facilities, or at any one time and location in greater than specified amounts. In addition, persons engaging in activities in non-Agreement States, in areas of exclusive Federal jurisdiction within Agreement States, or in offshore waters.

7. *The estimated number of annual responses:* 8.

8. *The estimated number of annual respondents:* 8.

9. *An estimate of the total number of hours needed annually to comply with the information collection requirement or request:* 190.

10. *Abstract:* Part 150 provides certain exemptions from NRC regulations for persons in Agreement States. Part 150 also defines activities in Agreement States and in offshore waters over which the NRC regulatory authority continues, including certain information collection requirements. The information is needed to permit the NRC to make reports to other governments and the International Atomic Energy Agency in accordance with international agreements. The information is also used to carry out the NRC's safeguards and inspection programs.

Dated at Rockville, Maryland, this 20th day of October 2015.

For the Nuclear Regulatory Commission.

Kristen Benney,

Acting NRC Clearance Officer, Office of Information Services.

[FR Doc. 2015–27064 Filed 10–22–15; 8:45 am]

BILLING CODE 7590–01–P

PENSION BENEFIT GUARANTY CORPORATION

Proposed Submission of Information Collection for OMB Review; Comment Request; Locating and Paying Participants

AGENCY: Pension Benefit Guaranty Corporation.

ACTION: Notice of intent to request OMB approval of modifications to information collection.

SUMMARY: The Pension Benefit Guaranty Corporation (''PBGC'') intends to request that the Office of Management and Budget (''OMB'') approve modifications to a collection of information under the Paperwork Reduction Act. The purpose of the information collection is to enable the PBGC to pay benefits to participants and beneficiaries. This notice informs the public of PBGC's intent and solicits public comment on the collection of information, as modified.

DATES: Comments should be submitted by December 22, 2015.

ADDRESSES: Comments may be submitted by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the Web site instructions for submitting comments.

Email: paperwork.comments@pbgc.gov.

Fax: 202–326–4224.

Mail or Hand Delivery: Office of the General Counsel, Pension Benefit Guaranty Corporation, 1200 K Street NW., Washington, DC 20005–4026.

PBGC will make all comments available on its Web site at *www.pbgc.gov.*

Copies of the collection of information may be obtained without charge by writing to the Disclosure Division of the Office of the General Counsel of PBGC at the above address or by visiting that office or calling 202–326–4040 during normal business hours. (TTY and TDD users may call the Federal relay service toll-free at 1–800–877–8339 and ask to be connected to 202–326–4040.) The regulations relating to this collection of information are available on PBGC's Web site at *www.pbgc.gov* .

FOR FURTHER INFORMATION CONTACT: Jo Amato Burns, Attorney, Office of the General Counsel, Pension Benefit Guaranty Corporation, 1200 K Street NW., Washington, DC 20005–4026, 202–326–4400. (For TTY and TDD, call 800–877–8339 and ask to be connected to 202–326–4400.)

SUPPLEMENTARY INFORMATION: PBGC intends to request that OMB approve modifications to a collection of information needed to pay participants and beneficiaries who may be entitled to pension benefits under defined benefit plans that have terminated. The collection consists of information participants and beneficiaries are asked to provide in connection with an application for benefits. In addition, in some instances, as part of an effort to identify participants and beneficiaries who may be entitled to benefits, PBGC requests individuals to provide identifying information that the individual would provide as part of an initial contact with PBGC. All requested information is needed to enable PBGC to determine benefit entitlements and to make appropriate payments.

The information collection includes My Pension Benefit Account (My PBA), an application on PBGC's Web site, *http://www.pbgc.gov,* through which plan participants and beneficiaries may conduct electronic transactions with PBGC, including applying for pension benefits, designating a beneficiary, granting a power of attorney, electing monthly payments, electing to withhold income tax from periodic payments, changing contact information, and applying for electronic direct deposit.

PBGC is proposing to add a new form to the information collection: Form XXX, Benefit Inquiry Questionnaire. PBGC will send this form to individuals who contact PBGC to inquire whether PBGC is holding any benefits to which they are entitled. The questionnaire will request information that PBGC needs to determine whether the individual is owed benefits and, if so, the benefit amount.

In addition, PBGC is making clarifying, simplifying, editorial, and other changes to other forms in the information collection.

The existing collection of information under the regulation was approved under OMB control number 1212–0055 (expires December 31, 2015). PBGC intends to request that OMB extend its approval (with modifications) for three years. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

PBGC estimates the total annual burden associated with this collection of information will be 73,000 hours and $1,900.

PBGC is soliciting public comments to—

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Issued in Washington, DC, this 20th day of October, 2015.

Judith Starr,

General Counsel, Pension Benefit Guaranty Corporation.

BILLING CODE 7709–02–P

OFFICE OF PERSONNEL MANAGEMENT

[SF 2809, 3206–0160]

Submission for Review: Health Benefits Election Form

AGENCY: Office of Personnel Management.

ACTION: 30-Day notice and request for comments.

SUMMARY: The Healthcare & Insurance/Federal Employee Insurance Operations (FEIO), Office of Personnel Management (OPM) offers the general public and other federal agencies the opportunity to comment on a revised information collection request (ICR) 3206–0160, Health Benefits Election Form. As required by the Paperwork Reduction Act of 1995, (Pub. L. 104–13, 44 U.S.C. chapter 35) as amended by the Clinger-Cohen Act (Pub. L. 104–106), OPM is soliciting comments for this collection. The information collection was previously published in the **Federal Register** on June 10, 2015 at Volume 80 FR 32994 allowing for a 60-day public comment period. No comments were received for this information collection. The purpose of this notice is to allow an additional 30 days for public comments.

DATES: Comments are encouraged and will be accepted until November 23, 2015. This process is conducted in accordance with 5 CFR 1320.1.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW., Washington, DC 20503, Attention: Desk Officer for the Office of Personnel Management or sent via electronic mail to *oira_submission@omb.eop.gov* or faxed to (202) 395–6974.

FOR FURTHER INFORMATION CONTACT: A copy of this ICR, with applicable supporting documentation, may be obtained by contacting the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW., Washington, DC 20503, Attention: Desk Officer for the Office of Personnel Management or sent via electronic mail to *oira_submission@omb.eop.gov* or faxed to (202) 395–6974.

SUPPLEMENTARY INFORMATION: The Office of Management and Budget is particularly interested in comments that:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
3. Enhance the quality, utility, and clarity of the information to be collected; and
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

The Health Benefits Election Form is used by Federal employees, annuitants other than those under the Civil Service Retirement System (CSRS) and the Federal Employees Retirement System (FERS) including individuals receiving benefits from the Office of Workers' Compensation Programs, former spouses eligible for benefits under the Spouse Equity Act of 1984, and separated employees and former dependents eligible to enroll under the Temporary Continuation of Coverage provisions of the FEHB law (5 U.S.C. 8905a). A different form (OPM 2809) is used by CSRS and FERS annuitants whose health benefit enrollments are administered by OPM's Retirement Operations.

Analysis

Agency: Federal Employee Insurance Operations, Office of Personnel Management.

Title: Health Benefits Election Form.

OMB Number: 3206–0160.

Frequency: On Occasion.

Affected Public: Individuals or Households.

Number of Respondents: 18,000.

Estimated Time per Respondent: 30 minutes.

Total Burden Hours: 9,000.

U.S. Office of Personnel Management.

Beth F. Cobert,

Acting Director. U.S. Office of Personnel Management.

BILLING CODE 6325–38–P

POSTAL REGULATORY COMMISSION

[Docket No. MC2016–7; Order No. 2766]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning the Postal Service's request to remove Global Direct Contracts from the competitive products list. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* October 26, 2015.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

In accordance with 39 U.S.C. 3642 and 39 CFR 3020.30 *et seq.,* the Postal Service filed a formal request and associated supporting information to remove Global Direct Contracts from the competitive product list.[1]

To support its Request, the Postal Service filed four attachments as follows:

- Attachment A—a redacted copy of the Governors' Decision No. 11–6 authorizing the removal of the product from the competitive product list, including a redacted management analysis;
- Attachment B—an application for nonpublic treatment of Governors' Decision No. 11–6;
- Attachment C—a Statement of Supporting Justification as required by 39 CFR 3020.32; and
- Attachment D—proposed changes to the Mail Classification Schedule (MCS) competitive product list.

The Postal Service seeks to remove Global Direct Contracts from the competitive product list due to the absence of customer demand for this service. Request at 1. The Postal Service asserts that removal of Global Direct Contracts is an attempt to align its service offerings with current customer needs and preferences. *Id.* at 2.

In addition, in the Statement of Supporting Justification, Giselle E. Valera, Vice President and Managing Director of Global Business, asserts that because the Postal Service is requesting product removal, the product's ability to cover its own costs has no impact on the instant Request. *Id.* Attachment C at 2. Ms. Valera maintains that removal of the product from the competitive product list attempts to ensure that there will be no issue of market dominant products subsidizing competitive products. *Id.*

[1] Request of the United States Postal Service to Remove Global Direct Contracts from the Competitive Product List, October 16, 2015 (Request).

II. Notice of Filings

The Commission establishes Docket No. MC2016–7 to consider the Request pertaining to the removal of Global Direct Contracts from the competitive product list.

Interested persons may submit comments on whether the Postal Service's filings in the captioned docket are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR part 3010, 39 CFR part 3015, and 39 CFR part 3020, subpart B and subpart E. Comments are due no later than October 26, 2015. The public portions of the filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints James F. Callow to serve as Public Representative in this docket.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket No. MC2016–7 to consider the Postal Service's Request.

2. Pursuant to 39 U.S.C. 505, James F. Callow is appointed to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in these proceedings.

3. Comments by interested persons in these proceedings are due no later than October 26, 2015.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

Ruth Ann Abrams,

Acting Secretary.

BILLING CODE 7710–12–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76188; File No. SR–FINRA–2015–042]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Relating to the New Securities Trader Qualification Examination (Series 57)

October 19, 2015.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'' or ''SEA'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 13, 2015, Financial Industry Regulatory Authority, Inc. (''FINRA'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by FINRA. FINRA has designated the proposed rule change as constituting a ''non-controversial'' rule change under paragraph (f)(6) of Rule 19b–4 under the Act,[3] which renders the proposal effective upon receipt of this filing by the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

FINRA is filing the content outline and selection specifications for the new Securities Trader qualification examination (Series 57).[4] FINRA is not proposing any textual changes to the By-Laws, Schedules to the By-Laws or Rules of FINRA.

The Series 57 content outline is attached.[5] The Series 57 selection specifications have been submitted to the Commission under separate cover with a request for confidential treatment pursuant to SEA Rule 24b–2.[6]

The text of the proposed rule change is available on FINRA's Web site at *http://www.finra.org,* at the principal office of FINRA and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Section 15A(g)(3) of the Act [7] authorizes FINRA to prescribe standards of training, experience, and competence for persons associated with FINRA members. In accordance with that provision, FINRA has developed examinations that are designed to establish that persons associated with FINRA members have attained specified levels of competence and knowledge, consistent with applicable registration requirements under FINRA rules.

The Commission recently approved a proposed rule change to amend NASD Rule 1032(f) (Limited Representative—Equity Trader) to replace the Equity Trader registration category and qualification examination (Series 55) with the Securities Trader registration category and qualification examination (Series 57).[8] The rule provides that each associated person of a member who is included within the definition of ''representative'' in NASD Rule 1031 (Registration Requirements) is required to register with FINRA as a Securities

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 17 CFR 240.19b–4(f)(6).

[4] FINRA also is establishing the Series 57 question bank. FINRA is submitting this filing for immediate effectiveness pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6) thereunder, and is not filing the question bank. *See* Letter to Alden S. Adkins, Senior Vice President and General Counsel, NASD Regulation, from Belinda Blaine, Associate Director, Division of Market Regulation, SEC, dated July 24, 2000. The question bank is available for SEC review.

[5] The Commission notes that the content outline is attached to the filing, not to this Notice.

[6] 17 CFR 240.24b–2.

[7] 15 U.S.C. 78*o*–3(g)(3).

[8] *See* Securities Exchange Act Release No. 75783 (August 28, 2015), 80 FR 53369 (September 3, 2015) (Order Approving File No. SR–FINRA–2015–017) (''Approval Order'').

Trader if, with respect to transactions in equity (including equity options), preferred or convertible debt securities effected otherwise than on a securities exchange, such person is engaged in proprietary trading, the execution of transactions on an agency basis or the direct supervision of such activities.[9] In addition, NASD Rule 1032(f) provides that in order to register as a Securities Trader, an applicant must pass the Series 57 examination. The Series 57 examination will qualify an associated person to function as a Securities Trader. There is no prerequisite registration requirement for Securities Trader registration. An associated person registered as a Securities Trader will not be qualified to function in any other registered capacity, unless he or she is qualified and registered in that other registration category.[10] For instance, a person registered as a Securities Trader will not be able to engage in any retail or institutional sales activities, unless he or she is qualified and registered in the appropriate registration category, such as a General Securities Representative.

In addition, the Commission approved amendments to NASD Rule 1022(a) (General Securities Principal) to establish a Securities Trader Principal registration category and require each associated person of a member who is included within the definition of ''principal'' in NASD Rule 1021 (Registration Requirements) with supervisory responsibility over the securities trading activities described in NASD Rule 1032(f), to qualify and register as a Securities Trader Principal.[11] To qualify for registration as a Securities Trader Principal, an associated person must be registered as a Securities Trader and pass the General Securities Principal qualification examination (Series 24). An associated person registered as a Securities Trader Principal will not be eligible to register as a General Securities Principal unless the person passes the appropriate prerequisite examination for General Securities Principal registration, such as the Series 7 examination. In this regard, NASD Rule 1022(a) provides that a person qualified and registered as a Securities Trader Principal may only have supervisory responsibility over the activities specified in NASD Rule 1032(f), unless the person is separately qualified and registered in another appropriate principal registration category, such as the General Securities Principal registration category.

FINRA is expecting the national securities exchanges to file similar proposed rule changes to replace the Proprietary Trader qualification examination (Series 56) with the Series 57 examination in their respective registration rules relating to securities trading activities. Further, the Series 57 examination will replace the Series 56 examination for those exchange registration categories, such as the Proprietary Trader Principal registration category, where the Series 56 examination is currently an acceptable prerequisite.

FINRA developed the Series 57 examination in consultation with a committee of industry representatives and representatives of several exchanges. The examination is based on the current job functions of a Securities Trader and includes elements of the Series 55 and 56 examinations. The Series 57 content outline covers the laws, rules and regulations relevant to securities trading as well as the functions and associated tasks performed by a Securities Trader.

Series 57 Content Outline

The Series 57 content outline is divided into four major job functions that are performed by a Securities Trader. The following are the four major job functions, denoted Function 1 through 4, with the associated number of questions:

Function 1: Market Overview and Products, 22 questions;

Function 2: Engaging in Professional Conduct and Adhering to Regulatory Requirements, 12 questions;

Function 3: Trading Activities, 79 questions; and

Function 4: Maintaining Books and Records and Trade Reporting, 12 questions.

The number of questions assigned to each major job function reflects the key tasks performed by a Securities Trader.

Each function also includes specific tasks describing activities associated with performing that function. There are three tasks (1.1–1.3) associated with Function 1; two tasks (2.1–2.2) associated with Function 2; three tasks (3.1–3.3) associated with Function 3; and two tasks (4.1–4.2) associated with Function 4.[12] By way of example, one such task, Task 4.2, relates to creating, retaining, and reporting required records of orders and transactions.[13] Further, the content outline lists the knowledge required to perform each function and associated tasks (*e.g.,* in connection with Task 4.2, large trader ID and related reporting and monitoring requirements and order execution/routing information).[14] In addition, where applicable, the content outline lists the laws, rules and regulations a candidate is expected to know to perform each function and associated tasks.[15] These include applicable federal securities laws, as well as FINRA and other self-regulatory organization rules and regulations. FINRA conducted a job analysis study of Securities Traders, which included the use of a survey, in developing each function and associated tasks and the required knowledge set forth in the content outline. The functions and associated tasks reflect the day-to-day activities of a Securities Trader. The Series 57 selection specifications and question bank cover the topics in the content outline.

The content outline also includes sample questions [16] and reference materials.[17] In the preface, the content outline includes, among other things: (1) A table of contents; (2) details regarding the purpose of the examination; (3) eligibility requirements; (4) the application procedures; (5) information regarding the structure of the examination; (6) details regarding the development and maintenance of the content outline and examination; (7) information regarding the administration of the examination; (8) an explanation that the passing score is determined by FINRA based on a number of factors including industry trends, historical exam performance and evaluations of the content difficulty by a committee of industry professionals, using a standard setting procedure, and that a statistical adjustment process known as equating is used in scoring examinations; and (9) an explanation that each candidate will receive a score report at the end of the test session, which will indicate a pass or fail status and include a score profile listing the candidate's performance on each major content area covered on the examination.[18]

The number of questions on the Series 57 examination will be 125 scored

[9] There is an exception from the Securities Trader registration requirement for any associated person of a member whose trading activities are conducted principally on behalf of an investment company that is registered with the SEC pursuant to the Investment Company Act of 1940 and that controls, is controlled by, or is under common control with the member.

[18] *See* Exhibit 3a, Outline Pages 2–5.

multiple-choice questions,[19] and candidates will have three hours and 45 minutes to complete the examination. The passing score will be 70 percent.

Availability of Content Outline

The Series 57 content outline is available on FINRA's Web site, at *http://www.finra.org/industry/qualification-exams*.

FINRA is filing the proposed rule change for immediate effectiveness. FINRA proposes to implement the Series 57 examination on January 4, 2016. FINRA will announce the proposed rule change and the implementation date in a *Regulatory Notice*.

2. Statutory Basis

FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(6) of the Act,[20] which requires, among other things, that FINRA rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and Section 15A(g)(3) of the Act,[21] which authorizes FINRA to prescribe standards of training, experience, and competence for persons associated with FINRA members. FINRA believes that the proposed rule change furthers these purposes by establishing the qualification examination that individuals, including associated persons of FINRA members, must pass to register and function as Securities Traders and Securities Trader Principals. The examination is intended to safeguard the investing public by helping to ensure that individuals registering as Securities Traders, as well as those responsible for the supervision of securities trading activities, are competent to perform their job functions.

B. Self-Regulatory Organization's Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The new examination aligns with the functions and associated tasks currently performed by associated persons engaged in securities trading and tests knowledge of the laws, rules, regulations and skills relevant to those functions and associated tasks.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act[22] and Rule 19b–4(f)(6) thereunder.[23]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–FINRA–2015–042 on the subject line.

Paper Comments

- Send paper comments in triplicate to Robert W. Errett, Deputy Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–FINRA–2015–042. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of FINRA. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–FINRA–2015–042 and should be submitted on or before November 13, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[24]

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76190; File No. SR–FINRA–2015–039]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Relating to the Series 28 Examination Program

October 19, 2015.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'' or ''SEA'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that

[19] Consistent with FINRA's practice of including ''pretest'' items on qualification examinations, which is designed to ensure that new examination items meet acceptable testing standards prior to use for scoring purposes, the examination includes 10 additional, unidentified pretest items that do not contribute towards the candidate's score. Therefore, the examination actually consists of 135 items, 125 of which are scored. The 10 pretest items are randomly distributed throughout the examination.

[20] 15 U.S.C. 78*o*–3(b)(6).

[21] 15 U.S.C. 78*o*–3(g)(3).

[22] 15 U.S.C. 78s(b)(3)(A).

[23] 17 CFR 240.19b–4(f)(6).

[24] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

on October 13, 2015, Financial Industry Regulatory Authority, Inc. (''FINRA'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by FINRA. FINRA has designated the proposed rule change as ''constituting a stated policy, practice, or interpretation with respect to the meaning, administration, or enforcement of an existing rule'' under Section 19(b)(3)(A)(i) of the Act [3] and Rule 19b–4(f)(1) thereunder,[4] which renders the proposal effective upon receipt of this filing by the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

FINRA is filing revisions to the content outline and selection specifications for the Introducing Broker-Dealer Financial and Operations Principal (Series 28) examination program.[5] The proposed revisions update the material to reflect changes to the laws, rules and regulations covered by the examination and to incorporate the functions and associated tasks currently performed by an Introducing Broker-Dealer Financial and Operations Principal. In addition, FINRA is proposing to make changes to the format of the content outline. FINRA is not proposing any textual changes to the By-Laws, Schedules to the By-Laws or Rules of FINRA.

The revised content outline is attached.[6] The Series 28 selection specifications have been submitted to the Commission under separate cover with a request for confidential treatment pursuant to SEA Rule 24b–2.[7]

The text of the proposed rule change is available on FINRA's Web site at *http://www.finra.org,* at the principal office of FINRA and at the Commission's Public Reference Room.

[3] 15 U.S.C. 78s(b)(3)(A)(i).

[4] 17 CFR 240.19b–4(f)(1).

[5] FINRA also is proposing corresponding revisions to the Series 28 question bank. FINRA is submitting this filing for immediate effectiveness pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(1) thereunder, and is not filing the question bank. *See* Letter to Alden S. Adkins, Senior Vice President and General Counsel, NASD Regulation, from Belinda Blaine, Associate Director, Division of Market Regulation, SEC, dated July 24, 2000. The question bank is available for SEC review.

[6] The Commission notes that the content outline is attached to the filing, not to this Notice.

[7] 17 CFR 240.24b–2.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Section 15A(g)(3) of the Act [8] authorizes FINRA to prescribe standards of training, experience, and competence for persons associated with FINRA members. In accordance with that provision, FINRA has developed examinations that are designed to establish that persons associated with FINRA members have attained specified levels of competence and knowledge, consistent with applicable registration requirements under FINRA rules. FINRA periodically reviews the content of the examinations to determine whether revisions are necessary or appropriate in view of changes pertaining to the subject matter covered by the examinations.

NASD Rule 1022(c)(1) requires that every member that is subject to the requirements of SEA Rule 15c3–1,[9] other than a member operating pursuant to SEA Rule 15c3–1(a)(1)(ii),[10] SEA Rule 15c3–1(a)(2)(i) [11] or SEA Rule 15c3–1(a)(8),[12] shall designate as Introducing Broker-Dealer Financial and Operations Principal [13] those persons associated with it, at least one of whom shall be its chief financial officer, who perform the duties described in paragraph (c)(2) of the rule. The rule provides that each person associated with a member who performs such duties shall be required to register as an Introducing Broker-Dealer Financial and Operations Principal with FINRA and shall pass an appropriate qualification examination before such registration may become effective. Paragraph (b)(2) of the rule provides that the term Introducing Broker-Dealer Financial and Operations Principal shall mean a person associated with a member whose duties include:

- Final approval and responsibilities for the accuracy of financial reports submitted to any duly established securities industry regulatory body;
- final preparation of such reports;
- supervision of individuals who assist in the preparation of such reports;
- supervision of and responsibility for individuals who are involved in the actual maintenance of the member's books and records from which such reports are derived;
- supervision and/or performance of the member's responsibilities under all financial responsibility rules promulgated pursuant to the provisions of the Act;
- overall supervision of and responsibility for the individuals who are involved in the administration and maintenance of the member's back office operations; or
- any other matter involving the financial and operational management of the member.

NASD Rule 1022(c)(3) provides that, except as set forth in NASD Rule 1021(c),[14] a person designated pursuant to the provisions of NASD Rule 1022(c)(1) shall not be required to take the Introducing Broker-Dealer Financial and Operations Principal examination and shall be qualified for registration as such if the person is qualified to be registered or is registered as a Financial and Operations Principal as defined in NASD Rule 1022(b)(2).[15]

NASD Rule 1022(c)(4) provides that a person registered solely as an Introducing Broker-Dealer Financial and Operations Principal shall not be qualified to function in a principal capacity with responsibility over any

[8] 15 U.S.C. 78*o*–3(g)(3).

[9] 17 CFR 240.15c3–1. SEA Rule 15c3–1 is the SEC's net capital rule for brokers and dealers.

[10] 17 CFR 240.15c3–1(a)(1)(ii). SEA Rule 15c3–1(a)(1)(ii) addresses net capital requirements for brokers or dealers that elect not to be subject to the Aggregate Indebtedness Standard of paragraph (a)(1)(i) under Rule 15c3–1.

[11] 17 CFR 240.15c3–1(a)(2)(i). SEA Rule 15c3–1(a)(2)(i) addresses net capital requirements for brokers or dealers that carry customer accounts.

[12] 17 CFR 240.15c3–1(a)(8). SEA Rule 15c3–1(a)(8) addresses net capital requirements for municipal securities brokers' brokers, as defined under the rule.

[13] The term ''Limited Principal—Introducing Broker/Dealer Financial and Operations'' as set forth in NASD Rule 1022(c) is referred to as ''Introducing Broker-Dealer Financial and Operations Principal'' for purposes of this filing. The term ''principal'' is defined in NASD Rule 1021(b) (Definition of Principal).

[14] NASD Rule 1021(c) addresses requirements for examination on lapse of registration.

[15] For purposes of this filing, the term ''Financial and Operations Principal'' is used interchangeably with the term ''Limited Principal—Financial and Operations'' as set forth in NASD Rule 1022(b). Rule 1022(b)(2) sets forth the duties of a Financial and Operations Principal. *See* SR–FINRA–2015–038 (establishing revisions to the content outline and selection specifications for the Financial and Operations Principal (Series 27) examination program).

area of business activity not described in paragraph (c)(2) of the rule. The rule provides that such person shall not be qualified to function in a principal capacity at a member unless the member operates under paragraph (c)(1) of the rule.

In consultation with a committee of industry representatives, FINRA recently undertook a review of the Series 28 examination program. As a result of this review, FINRA is proposing to make revisions to the content outline to reflect changes to the laws, rules and regulations covered by the examination and to incorporate the functions and associated tasks currently performed by an Introducing Broker-Dealer Financial and Operations Principal. FINRA also is proposing to make changes to the format of the content outline.

Current Outline

The current content outline is divided into five sections. The following are the five sections and the number of questions associated with each of the sections, denoted Section 1 through Section 5:

1. Keeping And Preservation of Records and Broker-Dealer Financial Reporting Requirements, 16 questions;
2. Net Capital Requirements, 36 questions;
3. Customer Protection, 10 questions;
4. Uniform Practice Rules, 5 questions; and
5. Other Relevant Regulations and Interpretations, 28 questions.

Each section also includes the applicable laws, rules and regulations associated with that section. The current outline also includes a preface (addressing, among other things, the purpose, administration and scoring of the examination), sample questions and reference materials.

Proposed Revisions

To develop the revised outline, FINRA conducted a job analysis study of Introducing Broker-Dealer Financial and Operations Principals, which included the use of a survey. The study provided detailed information regarding the day-to-day roles, responsibilities and job functions of Introducing Broker-Dealer Financial and Operations Principals. As a result, FINRA is proposing to revise the structure of the outline as described below to include functions and associated tasks that reflect the day-to-day activities of an Introducing Broker-Dealer Financial and Operations Principal.

Specifically, FINRA is proposing to divide the content outline into four major job functions that are performed by an Introducing Broker-Dealer Financial and Operations Principal. The following are the four major job functions, denoted Function 1 through Function 4, with the associated number of questions:

Function 1: Financial Reporting, 16 questions;

Function 2: Operations, General Securities Industry Regulations, and Preservation of Books and Records, 30 questions;

Function 3: Net Capital, 31 questions; and

Function 4: Customer Protection, Funding and Cash Management, 18 questions.

As noted above, each major job function includes an assigned number of questions. FINRA determined the number of questions for each function based on the results of the job analysis study. Thus, compared to the existing outline, the allocation of questions in the revised outline more closely reflects the current day-to-day activities of an Introducing Broker-Dealer Financial and Operations Principal.

Each function also includes specific tasks describing activities associated with performing that function. There are five tasks (1.1–1.5) associated with Function 1; three tasks (2.1–2.3) associated with Function 2; seven tasks (3.1–3.7) associated with Function 3; and three tasks (4.1–4.3) associated with Function 4.[16] By way of example, one such task (Task 2.2) is prepare and preserve financial records to ensure accuracy and completeness of internal financial documents.[17] Further, the outline lists the knowledge required to perform each function and associated tasks (*e.g.,* general ledger and sub-ledgers).[18] In addition, where applicable, the outline lists the laws, rules and regulations a candidate is expected to know to perform each function and associated tasks. These include the applicable FINRA Rules (*e.g.,* FINRA Rule 4160), NASD Rules (*e.g.,* NASD Rule 2340) and SEC rules (*e.g.,* SEA Rule 17a–4).[19]

As noted above, FINRA also is proposing to revise the content outline to reflect changes to the laws, rules and regulations covered by the examination. Among other revisions, FINRA is proposing to revise the content outline to reflect the adoption of rules in the consolidated FINRA rulebook (*e.g.,* NASD Rule 2430 (Charges for Services Performed) and NASD Rule 3110 (Books and Records) were adopted as FINRA Rule 2122 (Charges for Services Performed) and FINRA Rule 4510 Series (Books and Records Requirements), respectively).[20]

FINRA is proposing similar changes to the Series 28 selection specifications and question bank.

Finally, FINRA is proposing to make changes to the format of the content outline, including the preface, sample questions and reference materials. Among other changes, FINRA is proposing to: (1) Add a table of contents;[21] (2) provide more details regarding the purpose of the examination;[22] (3) provide more details on the application procedures;[23] (4) provide more details on the development and maintenance of the content outline and examination;[24] (5) explain that the passing scores are established by FINRA staff, in consultation with a committee of industry representatives, using a standard setting procedure and that the scores are an absolute standard independent of the performance of candidates taking the examination;[25] and (6) note that each candidate will receive a score report at the end of the test session, which will indicate a pass or fail status and include a score profile listing the candidate's performance on each major content area covered on the examination.[26]

The number of questions on the Series 28 examination will remain at 95 multiple-choice questions, and candidates will continue to have 120 minutes to complete the examination. Currently, a score of 70 percent is required to pass the examination. The passing score for the revised Series 28 examination will be 69 percent.

Availability of Content Outlines

The current Series 28 content outline is available on FINRA's Web site, at *http://www.finra.org/industry/qualification-exams.* The revised Series 28 content outline will replace the current content outline on FINRA's Web site.

FINRA is filing the proposed rule change for immediate effectiveness. FINRA proposes to implement the revised Series 28 examination program on December 14, 2015. FINRA will

[25] *See* Exhibit 3a, Outline Page 5.

[26] *See* Exhibit 3a, Outline Page 5.

announce the proposed rule change and the implementation date in a *Regulatory Notice.*

2. Statutory Basis

FINRA believes that the proposed revisions to the Series 28 examination program are consistent with the provisions of Section 15A(b)(6) of the Act,[27] which requires, among other things, that FINRA rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and Section 15A(g)(3) of the Act,[28] which authorizes FINRA to prescribe standards of training, experience, and competence for persons associated with FINRA members. FINRA believes that the proposed revisions will further these purposes by updating the examination program to reflect changes to the laws, rules and regulations covered by the examination and to incorporate the functions and associated tasks currently performed by an Introducing Broker-Dealer Financial and Operations Principal.

B. Self-Regulatory Organization's Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The updated examination aligns with the functions and associated tasks currently performed by an Introducing Broker-Dealer Financial and Operations Principal and tests knowledge of the most current laws, rules, regulations and skills relevant to those functions and associated tasks. As such, the proposed revisions would make the examination more efficient and effective.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [29] and paragraph (f)(1) of Rule 19b–4 thereunder.[30] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or

• Send an email to *rule-comments@sec.gov.* Please include File Number SR–FINRA–2015–039 on the subject line.

Paper Comments

• Send paper comments in triplicate to Robert W. Errett, Deputy Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–FINRA–2015–039. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of FINRA. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–FINRA–2015–039 and should be submitted on or before November 13, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[31]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76186; SR–NYSEArca–2015–02]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Withdrawal of a Proposed Rule Change, as Modified by Amendment No. 1 Thereto, To Amend NYSE Arca Equities Rule 8.600 To Adopt Generic Listing Standards for Managed Fund Shares

October 19, 2015.

On February 17, 2015, NYSE Arca, Inc. (''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend NYSE Arca Equities Rule 8.600 to adopt generic listing standards for Managed Fund Shares. The proposed rule change was published for comment in the **Federal Register** on March 10, 2015.[3] On April 17, 2015, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to either approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] On June 3, 2015, the Exchange filed Amendment No. 1 to the proposed rule change. On June 11, 2015, the Commission published a notice of filing

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 74433 (Mar. 4, 2015), 80 FR 12690.

[4] 15 U.S.C. 78s(b)(2).

[5] *See* Securities Exchange Act Release No. 74755, 80 FR 22762 (Apr. 23, 2015). The Commission determined that it was appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider the proposed rule change and the comments received. Accordingly, the Commission designated June 8, 2015 as the date by which it should approve, disapprove, or institute proceedings to determine whether to disapprove the proposed rule change.

of Amendment No. 1 to the proposed rule change and an order instituting proceedings under Section 19(b)(2)(B) of the Act[6] to determine whether to approve or disapprove the proposed rule change, as modified by Amendment No. 1 thereto.[7] On September 2, 2015, pursuant to Section 19(b)(2) of the Act,[8] the Commission designated a longer period within which to either approve or disapprove the proposed rule change.[9]

On October 13, 2015, the Exchange withdrew the proposed rule change (SR–NYSEArca–2015–02), as modified by Amendment No. 1 thereto.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[10]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76187; File No. SR–Phlx–2015–80]

Self-Regulatory Organizations; NASDAQ OMX PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to the Options Floor Broker Management System

October 19, 2015.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 7, 2015, NASDAQ OMX PHLX LLC (''Phlx'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I and II, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to extend the implementation rollout of its enhanced Options Floor Broker Management System, described in more detail below.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Currently and until November 3, 2015, the Exchange operates two Floor Broker Management Systems concurrently on the options trading floor: The original Floor Broker Management System operating since 2005 (''FBMS 1''); and the enhanced Floor Broker Management System (''FBMS 2''). The purpose of the proposal is to continue the concurrent operation of FBMS 1 and FBMS 2 for a temporary period ending April 1, 2016 for the reasons stated below; otherwise the Exchange's concurrent operation of FBMS 1 and FBMS 2 would expire November 3, 2015.

FBMS 1 enables Floor Brokers and/or their employees to enter, route, and report transactions stemming from options orders received on the Exchange. FBMS 1 also establishes an electronic audit trail for options orders represented by Floor Brokers on the Exchange. Floor Brokers can also use FBMS 1 to submit orders to Phlx XL, rather than executing the orders in the trading crowd.

FBMS 2 was launched in March 2014. With FBMS 2, all options transactions on the Exchange involving at least one Floor Broker are required to be executed by FBMS 2. In connection with order execution, the Exchange allows FBMS 2 to execute two-sided orders entered by Floor Brokers, including multi-leg orders up to 15 legs, after the Floor Broker has represented the orders in the trading crowd. FBMS 2 also provides Floor Brokers with an enhanced functionality called the complex calculator that calculates and displays a suggested price of each individual component of a multi-leg order, up to 15 legs, submitted on a net debit or credit basis.

The Exchange received approval to implement FBMS 2 as of June 1, 2013,[3] and delayed its implementation until July 2013,[4] until September 2013,[5] until December 2013,[6] and until March 2014.[7] Implementation began on March 7, 2014, with FBMS 2 operating concurrently with FBMS 1. The Exchange intended to retire FBMS 1 after a specified implementation period for FBMS 2. FBMS 2 has been fully rolled out to all Floor Brokers and in all options. Nevertheless, the Exchange delayed the retirement of FBMS 1 until September 1, 2014,[8] November 3, 2014.[9] and, most recently, until November 3, 2015,[10] for reasons relating to the performance of FBMS 2.[11]

The purpose of the delay was originally to repair FBMS 2, and then ultimately the Exchange determined to replace it with a new system. The Exchange contracted with a third-party entity to provide an alternative system (''FBMS 3'') to ultimately replace both FBMS 1 and FBMS 2. The Exchange had intended to implement FBMS 3 by November 3, 2015, but, based on recent estimates from the third-party entity, it will not be ready until March 2016. There were inadvertent delays in the construction of the new system.

During this additional time period, the Exchange will continue to permit Floor Brokers to use both FBMS 1 and FBMS 2 based on their business needs and Floor Brokers can choose whether to use one or both. Both FBMS 1 and FBMS 2 will continue to be available in

[9] Securities Exchange Act Release No. 73246 (September 29, 2014), 79 FR 59874 (October 3, 2014) (SR–Phlx–2014–59).

[10] Securities Exchange Act Release No. 73586 (November 13, 2014), 79 FR 68931 (November 19, 2014) (SR–Phlx–2014–71).

[11] The Exchange previously described those performance issues. *Id.*

all options and to all Floor Brokers. For example, a Floor Broker will be able to use FBMS 1 for one order and FBMS 2 for the next order. Accordingly, the Exchange believes that the performance issues with FBMS 2 are less likely and should decrease because the Floor Broker also has the option to use FBMS 1.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act [12] in general, and furthers the objectives of Section 6(b)(5) of the Act [13] in particular, in that it is designed to promote just and equitable principles of trade and protect investors and the public interest, by providing options Floor Brokers with two different FBMS offerings for order entry and processing. Despite its performance issues, FBMS 2 offers many beneficial features to the Floor Brokers that FBMS 1 does not, such as the complex calculator and increased automation described above, such that the Exchange has determined not to shut down FBMS 2. Having two options for order entry and processing should enable Floor Brokers to operate their businesses and comply with the relevant rules, which is consistent with the protection of investors and the public interest. Continuing to operate both FBMS 1 and FBMS 2 concurrently for a temporary period should also promote just and equitable principles of trade by providing Floor Brokers with the tools to enter and process their orders efficiently. The proposal is not unfairly discriminatory because all Floor Brokers will be able to use both FBMS 1 and FBMS 2.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that permitting Floor Brokers to use both FBMS 1 and FBMS 2 for an additional period of time while the Exchange receives delivery of a new system should allow it to compete with other floor-based exchanges and help the Exchange's Floor Brokers compete with floor brokers on other options exchanges.

[12] 15 U.S.C. 78f(b).

[13] 15 U.S.C. 78f(b)(5).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No comments were solicited. One comment letter was received by the Exchange when the Exchange communicated to the Floor Brokers that the old FBMS would be retired on September 1, 2014.[14] The Comment Letter requested the Commission and Phlx postpone the implementation rollout of the new FBMS from September 1, 2014 to a later date. The Comment Letter alleges that the Floor Brokers did not have proper notice of the end of the implementation period resulting in the termination of the old FBMS. This is not relevant to the proposal at hand. Also, the Comment Letter requests that the new FBMS be postponed to ensure the public outcry system is maintained. The Exchange notes that under FBMS 2, orders will continue to be represented in the trading crowd; order exposure has not been eliminated. The Exchange is merely modernizing how orders are executed and reported to support enhancements to the maintenance of an accurate audit trail.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act [15] and subparagraph (f)(6) of Rule 19b–4 thereunder.[16] A proposed rule change filed under Rule 19b–4(f)(6) normally does not become operative prior to 30 days after the date of filing.[17] Rule 19b–4(f)(6)(iii), however, permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest.[18]

[14] *See* letter from various Phlx Floor Brokers to Mary Jo White, Chairwoman of the Securities and Exchange Commission, dated August 28, 2014 (''Comment Letter'').

[15] 15 U.S.C. 78s(b)(3)(a)(iii).

[16] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[17] 17 CFR 240.19b–4(f)(6)(iii).

[18] *Id.*

The Exchange has requested that the Commission waive the 30-day operative delay. The Exchange has indicated that it has experienced performance issues with FBMS 2 and that it needs additional time to implement the new FBMS 3. Until FBMS 3 becomes available, the Exchange represents that it will continue to operate FBMS 1 and FBMS 2 concurrently and that all Floor Brokers may use either FBMS. Based on the foregoing, the Commission has determined to waive the 30-day operative date so that the proposal may take effect upon filing.[19]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act.[20] If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.[21]

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or

• Send an email to *rule-comments@sec.gov.* Please include File Number SR–Phlx–2015–80 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–Phlx–2015–80. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent

[19] For purposes only of waiving the 30-day operative delay, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[20] 15 U.S.C. 78s(b)(3)(C).

[21] *Id.*

amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–Phlx–2015–80, and should be submitted on or before November 13, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[22]

Robert W. Errett,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76191; File No. SR–PHLX–2015–82]

Self-Regulatory Organizations; NASDAQ OMX PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to Mini Options

October 19, 2015.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 13, 2015, NASDAQ OMX PHLX LLC (''Phlx'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[22] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Commentary .13 to Rule 1012 (Series of Options Open for Trading), entitled ''Mini Options Contracts.'' Specifically, the Exchange proposes to replace the name ''Google Inc.'' with ''Alphabet Inc.''

The Exchange requests that the Commission waive the 30-day operative delay period contained in Exchange Act Rule 19b–4(f)(6)(iii).[3]

The text of the proposed rule change is available on the Exchange's Web site at *http://nasdaqomxphlx.cchwallstreet.com/,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Commentary .13 to Rule 1012, regarding Mini Options traded on Phlx, to replace the name ''Google Inc.'' with ''Alphabet Inc.'' Google Inc. (''Google'') recently announced plans to reorganize and create a new public holding company, which will be called Alphabet Inc. (''Alphabet''). As a result of the holding company reorganization, each share of Class A Common Stock (''GOOGL''), which the Exchange has listed as a Mini Option, will automatically convert into an equivalent corresponding share of Alphabet Inc. stock.[4] The symbol ''GOOGL'' remains unchanged.

The Exchange is proposing to make this change to Commentary .13 to Rule 1012 to enable the continued trading of Mini Options on Google's, now Alphabet's Class A shares. The Exchange is proposing to make this change because, on October 5, 2015 Google reorganized and as a result underwent a name change.

[3] 17 CFR 240.19b–4(f)(6)(iii).

[4] The Class C Capital Stock (''GOOG'') which is also impacted by the reorganization are not eligible to be listed as Mini Options on the Exchange, only the Class A Common Stock.

The purpose of this change is to ensure that Commentary .13 to Rule 1012 properly reflects the intention and practice of the Exchange to trade Mini Options on only an exhaustive list of underlying securities outlined in Commentary .13 to Rule 1012. This change is meant to continue the inclusion of Class A shares of Google in the current list of underlying securities that Mini Options can be traded on, while continuing to make clear that class C shares of Google are not part of that list as that class of options has not been approved for Mini Options trading. As a result, the proposed change will help avoid confusion.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[5] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[6] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[7] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the proposed rule change to change the name Google to Alphabet to reflect the new ownership structure is consistent with the Act because the proposed change is merely updating the current name associated with the stock symbol GOOGL to allow for continued mini option trading on Google's class A shares. The proposed change will allow for continued benefit

[5] 15 U.S.C. 78f(b).

[6] 15 U.S.C. 78f(b)(5).

[7] *Id.*

to investors by providing them with additional investment alternatives.

B. Self-Regulatory Organization's Statement on Burden on Competition

Phlx does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed change does not impose any burden on intra-market competition because it applies to all members and member organizations uniformly. There is no burden on inter-market competition because the Exchange is merely attempting to continue to permit trading of GOOGL as a Mini Options, as is the case today. As a result, there will be no substantive changes to the Exchange's operations or its rules.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [8] and Rule 19b–4(f)(6) thereunder.[9]

A proposed rule change filed under Rule 19b–4(f)(6) [10] normally does not become operative for 30 days after the date of filing. However, pursuant to Rule 19b–4(f)(6)(iii) [11] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest.

The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest, as it will allow the Exchange to continue to list mini options on the Google Class A shares, now Alphabet's Class A shares, following Google's reorganization. For this reason, the Commission designates the proposed rule change to be operative upon filing.[12]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or

• Send an email to *rule-comments@sec.gov.* Please include File Number SR–PHLX–2015–82 on the subject line.

Paper Comments

• Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–PHLX–2015–82. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–PHLX–2015–82, and should be submitted on or before November 13, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[13]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76189; File No. SR–FINRA–2015–038]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Relating to the Series 27 Examination Program

October 19, 2015.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'' or ''SEA'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 13, 2015, Financial Industry Regulatory Authority, Inc. (''FINRA'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by FINRA. FINRA has designated the proposed rule change as ''constituting a stated policy, practice, or interpretation with respect to the meaning, administration, or enforcement of an existing rule'' under Section 19(b)(3)(A)(i) of the Act [3] and Rule 19b–4(f)(1) thereunder,[4] which renders the proposal effective upon receipt of this filing by the Commission. The Commission is publishing this notice to solicit comments on the

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A)(i).

[4] 17 CFR 240.19b–4(f)(1).

proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

FINRA is filing revisions to the content outline and selection specifications for the Financial and Operations Principal (Series 27) examination program.[5] The proposed revisions update the material to reflect changes to the laws, rules and regulations covered by the examination and to incorporate the functions and associated tasks currently performed by a Financial and Operations Principal. In addition, FINRA is proposing to make changes to the format of the content outline. FINRA is not proposing any textual changes to the By-Laws, Schedules to the By-Laws or Rules of FINRA.

The revised content outline is attached.[6] The Series 27 selection specifications have been submitted to the Commission under separate cover with a request for confidential treatment pursuant to SEA Rule 24b–2.[7]

The text of the proposed rule change is available on FINRA's Web site at *http://www.finra.org,* at the principal office of FINRA and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[5] FINRA also is proposing corresponding revisions to the Series 27 question bank. FINRA is submitting this filing for immediate effectiveness pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(1) thereunder, and is not filing the question bank. *See* Letter to Alden S. Adkins, Senior Vice President and General Counsel, NASD Regulation, from Belinda Blaine, Associate Director, Division of Market Regulation, SEC, dated July 24, 2000. The question bank is available for SEC review.

[6] The Commission notes that the content outline is attached to the filing, not to this Notice.

[7] 17 CFR 240.24b–2.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Section 15A(g)(3) of the Act[8] authorizes FINRA to prescribe standards of training, experience, and competence for persons associated with FINRA members. In accordance with that provision, FINRA has developed examinations that are designed to establish that persons associated with FINRA members have attained specified levels of competence and knowledge, consistent with applicable registration requirements under FINRA rules. FINRA periodically reviews the content of the examinations to determine whether revisions are necessary or appropriate in view of changes pertaining to the subject matter covered by the examinations.

NASD Rule 1022(b)(1) requires that each member that operates pursuant to the provisions of SEA Rule 15c3–1(a)(1)(ii),[9] SEA Rule 15c3–1(a)(2)(i)[10] or SEA Rule 15c3–1(a)(8)[11] shall designate as Financial and Operations Principal[12] those persons associated with it, at least one of whom shall be its chief financial officer, who perform the duties described in paragraph (b)(2) of the rule. The rule provides that each person associated with a member who performs such duties shall be required to register as a Financial and Operations Principal with FINRA and shall pass an appropriate qualification examination before such registration may become effective. Paragraph (b)(2) of the rule provides that the term Financial and Operations Principal shall mean a person associated with a member whose duties include:

- Final approval and responsibility for the accuracy of financial reports submitted to any duly established securities industry regulatory body;
- final preparation of such reports;
- supervision of individuals who assist in the preparation of such reports;
- supervision of and responsibility for individuals who are involved in the actual maintenance of the member's books and records from which such reports are derived;
- supervision and/or performance of the member's responsibilities under all financial responsibility rules promulgated pursuant to the provisions of the Act;
- overall supervision of and responsibility for the individuals who are involved in the administration and maintenance of the member's back office operations; or
- any other matter involving the financial and operational management of the member.

[8] 15 U.S.C. 78*o*–3(g)(3).

[9] 17 CFR 240.15c3–1(a)(1)(ii). SEA Rule 15c3–1(a)(1)(ii) addresses net capital requirements for brokers or dealers that elect not to be subject to the Aggregate Indebtedness Standard of paragraph (a)(1)(i) under Rule 15c3–1.

[10] 17 CFR 240.15c3–1(a)(2)(i). SEA Rule 15c3–1(a)(2)(i) addresses net capital requirements for brokers or dealers that carry customer accounts.

[11] 17 CFR 240.15c3–1(a)(8). SEA Rule 15c3–1(a)(8) addresses net capital requirements for municipal securities brokers' brokers, as defined under the rule.

[12] The term "Limited Principal—Financial and Operations" as set forth in NASD Rule 1022(b) is referred to as "Financial and Operations Principal" for purposes of this filing. The term "principal" is defined in NASD Rule 1021(b) (Definition of Principal).

NASD Rule 1022(b)(3) provides that a person registered solely as a Financial and Operations Principal shall not be qualified to function in a principal capacity with responsibility over any area of business activity not described in paragraph (b)(2) of the rule.

In consultation with a committee of industry representatives, FINRA recently undertook a review of the Series 27 examination program. As a result of this review, FINRA is proposing to make revisions to the content outline to reflect changes to the laws, rules and regulations covered by the examination and to incorporate the functions and associated tasks currently performed by a Financial and Operations Principal. FINRA also is proposing to make changes to the format of the content outline.

Current Outline

The current content outline is divided into seven sections. The following are the seven sections and the number of questions associated with each of the sections, denoted Section 1 through Section 7:

1. Keeping And Preservation of Records and Broker-Dealer Financial Reporting Requirements, 15 questions;
2. Net Capital Requirements, 44 questions;
3. Customer Protection, 36 questions;
4. Municipal Securities Rulemaking Board—Regulations, 9 questions;
5. Extensions Of Credit In The Securities Industry, 8 questions;
6. Procedural Rules, 12 questions; and
7. Other Relevant Regulation and Interpretations, 21 questions.

Each section also includes the applicable laws, rules and regulations associated with that section. The current outline also includes a preface (addressing, among other things, the purpose, administration and scoring of the examination), sample questions and reference materials.

Proposed Revisions

To develop the revised outline, FINRA conducted a job analysis study of Financial and Operations Principals, which included the use of a survey. The study provided detailed information regarding the day-to-day roles, responsibilities and job functions of Financial and Operations Principals. As a result, FINRA is proposing to revise the structure of the outline as described below to include functions and associated tasks that reflect the day-to-day activities of a Financial and Operations Principal.

Specifically, FINRA is proposing to divide the content outline into five major job functions that are performed by a Financial and Operations Principal. The following are the five major job functions, denoted Function 1 through Function 5, with the associated number of questions:

Function 1: Financial Reporting, 25 questions;

Function 2: Operations, General Securities Industry Regulations, and Preservation of Books and Records, 42 questions;

Function 3: Customer Protection, 24 questions;

Function 4: Net Capital, 41 questions; and

Function 5: Funding and Cash Management, 13 questions.

As noted above, each major job function includes an assigned number of questions. FINRA determined the number of questions for each function based on the results of the job analysis study. Thus, compared to the existing outline, the allocation of questions in the revised outline more closely reflects the current day-to-day activities of a Financial and Operations Principal.

Each function also includes specific tasks describing activities associated with performing that function. There are five tasks (1.1–1.5) associated with Function 1; three tasks (2.1–2.3) associated with Function 2; five tasks (3.1–3.5) associated with Function 3; seven tasks (4.1–4.7) associated with Function 4; and two tasks (5.1–5.2) associated with Function 5.[13] By way of example, one such task (Task 2.2) is to prepare and preserve financial records to ensure accuracy and completeness of internal financial documents.[14] Further, the outline lists the knowledge required to perform each function and associated tasks (*e.g.,* general ledger and sub-ledgers).[15] In addition, where applicable, the outline lists the laws, rules and regulations a candidate is expected to know to perform each function and associated tasks. These include the applicable FINRA Rules (*e.g.,* FINRA Rule 4160), NASD Rules (*e.g.,* NASD Rule 2340) and SEC rules (*e.g.,* SEA Rule 17a–4).[16]

As noted above, FINRA also is proposing to revise the content outline to reflect changes to the laws, rules and regulations covered by the examination. Among other revisions, FINRA is proposing to revise the content outline to reflect the adoption of rules in the consolidated FINRA rulebook (*e.g.,* NASD Rule 2430 (Charges for Services Performed) and NASD Rule 3110 (Books and Records) were adopted as FINRA Rule 2122 (Charges for Services Performed) and FINRA Rule 4510 Series (Books and Records Requirements), respectively).[17] Further, based on the MSRB's elimination of the Financial and Operations Principal requirements in MSRB Rule G–3(d), the revised outline does not include any MSRB rules.[18]

FINRA is proposing similar changes to the Series 27 selection specifications and question bank.

Finally, FINRA is proposing to make changes to the format of the content outline, including the preface, sample questions and reference materials. Among other changes, FINRA is proposing to: (1) Add a table of contents;[19] (2) provide more details regarding the purpose of the examination;[20] (3) provide more details on the application procedures;[21] (4) provide more details on the development and maintenance of the content outline and examination;[22] (5) explain that the passing scores are established by FINRA staff, in consultation with a committee of industry representatives, using a standard setting procedure and that the scores are an absolute standard independent of the performance of candidates taking the examination;[23] and (6) note that each candidate will receive a score report at the end of the test session, which will indicate a pass or fail status and include a score profile listing the candidate's performance on each major content area covered on the examination.[24]

The number of questions on the Series 27 examination will remain at 145 scored multiple-choice questions,[25] and candidates will continue to have 225 minutes to complete the examination. Currently, a score of 70 percent is required to pass the examination. The passing score for the revised Series 27 examination will be 69 percent.

Availability of Content Outlines

The current Series 27 content outline is available on FINRA's Web site, at *http://www.finra.org/industry/qualification-exams*. The revised Series 27 content outline will replace the current content outline on FINRA's Web site.

FINRA is filing the proposed rule change for immediate effectiveness. FINRA proposes to implement the revised Series 27 examination program on December 14, 2015. FINRA will announce the proposed rule change and the implementation date in a *Regulatory Notice*.

2. Statutory Basis

FINRA believes that the proposed revisions to the Series 27 examination program are consistent with the provisions of Section 15A(b)(6) of the Act,[26] which requires, among other things, that FINRA rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and Section 15A(g)(3) of the Act,[27] which authorizes FINRA to prescribe standards of training, experience, and competence for persons associated with FINRA members. FINRA believes that the proposed revisions will further these purposes by updating the examination program to reflect changes to the laws, rules and regulations covered by the examination and to incorporate the functions and associated tasks currently performed by a Financial and Operations Principal.

[13] *See* Exhibit 3a, Outline Pages 6–20. The Commission notes that all references to Exhibit 3a refer to Exhibit 3a to the proposed rule change.

[14] *See* Exhibit 3a, Outline Page 10.

[15] *See* Exhibit 3a, Outline Page 10.

[16] *See* Exhibit 3a, Outline Page 10.

[17] *See* Rule Conversion Chart, available at *http://www.finra.org/Industry/Regulation/FINRARules/p085560*.

[18] *See* Securities Exchange Act Release No. 72743 (August 1, 2014), 79 FR 46290 (August 7, 2014) (Order Approving File No. SR–MSRB–2014–04).

[19] *See* Exhibit 3a, Outline Page 2.

[20] *See* Exhibit 3a, Outline Page 3.

[24] *See* Exhibit 3a, Outline Page 5.

[25] Consistent with FINRA's practice of including ''pre-test'' questions on certain qualification examinations, which is designed to ensure that new examination questions meet acceptable testing standards prior to use for scoring purposes, the examination includes ten additional, unidentified pre-test questions that do not contribute towards the candidate's score. Therefore, the examination actually consists of 155 questions, 145 of which are scored. The ten pre-test questions are randomly distributed throughout the examination.

[27] 15 U.S.C. 78*o*–3(g)(3).

B. Self-Regulatory Organization's Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The updated examination aligns with the functions and associated tasks currently performed by a Financial and Operations Principal and tests knowledge of the most current laws, rules, regulations and skills relevant to those functions and associated tasks. As such, the proposed revisions would make the examination more efficient and effective.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [28] and paragraph (f)(1) of Rule 19b–4 thereunder.[29] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–FINRA–2015–038 on the subject line.

Paper Comments

- Send paper comments in triplicate to Robert W. Errett, Deputy Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–FINRA–2015–038. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of FINRA. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–FINRA–2015–038 and should be submitted on or before November 13, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[30]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

Investment Company Act Release No. 31870; File No. 812–14536 Advisors Asset Management, Inc. and AAM ETF Trust; Notice of Application

October 19, 2015.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice of an application for an order under section 12(d)(1)(J) of the Investment Company Act of 1940 (the ''Act'') for an exemption from sections 12(d)(1)(A), (B), and (C) of the Act and under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and (2) of the Act. The requested order would permit certain registered open-end investment companies to acquire shares of certain registered open-end investment companies, registered closed-end investment companies, business development companies, as defined in section 2(a)(48) of the Act, and unit investment trusts (collectively, ''Underlying Funds'') that are within and outside the same group of investment companies as the acquiring investment companies, in excess of the limits in section 12(d)(1) of the Act.

APPLICANTS: AAM ETF Trust, a Massachusetts business trust that intends to register under the Act as an open-end management investment company with multiple series and Advisors Asset Management, Inc., a Delaware Corporation registered as an investment adviser under the Investment Advisers Act of 1940.

FILING DATES: The application was filed on August 20, 2015.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on November 13, 2015 and should be accompanied by proof of service on the applicants, in the form of an affidavit, or, for lawyers, a certificate of service. Pursuant to Rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary.

ADDRESSES: Brent J. Fields, Secretary, U.S. Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090. Applicants: c/o Scott I. Colyer, Advisors Asset Management, Inc., 18925 Base Camp Road, Suite 203, Monument, Colorado 80132.

FOR FURTHER INFORMATION CONTACT: Barbara T. Heussler, Senior Counsel, at (202) 551–6990, or Mary Kay Frech, Branch Chief, at (202) 551–6821 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission's Web site by searching for the file number, or for an applicant using the Company name box, at *http://www.sec.gov/search/search.htm,* or by calling (202) 551–8090.

Summary of the Application

1. Applicants request an order to permit (a) a Fund [1] (each a ''Fund of Funds'') to acquire shares of Underlying Funds [2] in excess of the limits in sections 12(d)(1)(A) and (C) of the Act and (b) the Underlying Funds that are registered open-end investment companies or series thereof, their principal underwriters and any broker or dealer registered under the Securities Exchange Act of 1934 to sell shares of the Underlying Fund to the Fund of Funds in excess of the limits in section 12(d)(1)(B) of the Act.[3] Applicants also request an order of exemption under sections 6(c) and 17(b) of the Act from the prohibition on certain affiliated transactions in section 17(a) of the Act to the extent necessary to permit the Underlying Funds to sell their shares to, and redeem their shares from, the Funds of Funds.[4] Applicants state that such transactions will be consistent with the policies of each Fund of Funds and each Underlying Fund and with the general purposes of the Act and will be based on the net asset values of the Underlying Funds.

2. Applicants agree that any order granting the requested relief will be subject to the terms and conditions stated in the application. Such terms and conditions are designed to, among other things, help prevent any potential (i) undue influence over an Underlying Fund that is not in the same ''group of investment companies'' as the Fund of Funds through control or voting power, or in connection with certain services, transactions, and underwritings, (ii) excessive layering of fees, and (iii) overly complex fund structures, which are the concerns underlying the limits in sections 12(d)(1)(A), (B), and (C) of the Act.

3. Section 12(d)(1)(J) of the Act provides that the Commission may exempt any person, security, or transaction, or any class or classes of persons, securities, or transactions, from any provision of section 12(d)(1) if the exemption is consistent with the public interest and the protection of investors. Section 17(b) of the Act authorizes the Commission to grant an order permitting a transaction otherwise prohibited by section 17(a) if it finds that (a) the terms of the proposed transaction are fair and reasonable and do not involve overreaching on the part of any person concerned; (b) the proposed transaction is consistent with the policies of each registered investment company involved; and (c) the proposed transaction is consistent with the general purposes of the Act. Section 6(c) of the Act permits the Commission to exempt any persons or transactions from any provision of the Act if such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Robert W. Errett,

Deputy Secretary.

[FR Doc. 2015–26917 Filed 10–22–15; 8:45 am]

BILLING CODE 8011–01–P

[1] Applicants request that the order apply to each existing and future series of AAM ETF Trust and to each existing and future registered open-end investment company or series thereof that is advised by Advisors Asset Management, Inc. or its successor or by any entity controlling, controlled by or under common control with Advisors Asset Management, Inc. or its successor and is part of the same ''group of investment companies'' as AAM ETF Trust (each, a ''Fund''). For purposes of the requested order, ''successor'' is limited to an entity that results from a reorganization into another jurisdiction or a change in the type of business organization. For purposes of the request for relief, the term ''group of investment companies'' means any two or more investment companies, including closed-end investment companies and business development companies, that hold themselves out to investors as related companies for purposes of investment and investor services.

[2] Certain of the Underlying Funds have obtained exemptions from the Commission necessary to permit their shares to be listed and traded on a national securities exchange at negotiated prices and, accordingly, to operate as an exchange-traded fund (''ETF'').

[3] Applicants represent that a Funds of Funds will not invest in reliance on the order in business development companies or closed-end investment companies that are not listed and traded on a national securities exchange.

[4] A Fund of Funds generally would purchase and sell shares of an Underlying Fund that operates as an ETF through secondary market transactions rather than through principal transactions with the Underlying Fund. Applicants nevertheless request relief from section 17(a) to permit a Fund of Funds to purchase or redeem shares from the ETF. A Fund of Funds will purchase and sell shares of an Underlying Fund that is a closed-end fund through secondary market transactions at market prices rather than through principal transactions with the closed-end fund. Accordingly, applicants are not requesting section 17(a) relief with respect to transactions in shares of closed-end funds (including business development companies).

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76192; File No. SR–CBOE–2015–091]

Self-Regulatory Organizations; Chicago Board Options Exchange, Incorporated; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fees Schedule

October 19, 2015.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 9, 2015, Chicago Board Options Exchange, Incorporated (the ''Exchange'' or ''CBOE'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to amend its Fees Schedule. The text of the proposed rule change is available on the Exchange's Web site (*http://www.cboe.com/AboutCBOE/CBOELegalRegulatoryHome.aspx*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

In March 2015, the Exchange launched Extended Trading Hours (''ETH'') for options on the S&P 500

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

Index (''SPX'') and CBOE Volatility Index® (''VIX''), two of the Exchange's exclusively listed options,[3] as alternatives for hedging and other investment purposes, particularly as a complementary investment tool to VIX futures.[4] Rule 6.1A(c) provides that the Exchange may designate as eligible for trading during ETH any exclusively listed index option designated for trading under Rules 24.2 and 24.9. In response to customer demand for additional options to trade during ETH for similar purposes, the Exchange recently designated p.m.-settled options on the Standard & Poor's 500 Stock Index (''SPXpm'') to be eligible for trading during ETH. The Exchange commenced trading of SPXpm during ETH on October 1, 2015. As such, the Exchange proposes to establish fees for the trading of SPXpm during ETH (all fees referenced herein are per-contract unless otherwise stated).[5] First, the Exchange proposes to amend Footnote 37, which provides general information regarding the two trading sessions and indicates which products will be available in ETH, to include trading of SPXpm.

Transaction Fees

The Exchange proposes to assess the same fees for SPXpm in the ETH session as are assessed for SPXpm in the Regular Trading Hours session (''RTH'').[6] As in RTH, the Proprietary Index Options Rate Table will apply during ETH. Transaction fees for SPXpm options will be as follows (all listed rates are per contract):

Customer (Premium > or = $1)	$0.44
Customer (Premium < $1)	0.35
Clearing Trading Permit Holder Proprietary	0.25
CBOE Market-Maker/LMM	0.20
Joint Back-Office, Broker-Dealer, Non-Trading Permit Holder Market-Maker	0.40
Professional/Voluntary Professional	0.40

Additionally, the Exchange notes that SPXpm transactions executed via AIM during ETH will be assessed AIM Agency/Primary and AIM Contra fees based on an order's origin code (which is currently the case during RTH as well).

Surcharges

The Exchange also proposes to apply in ETH, like RTH, an Index License Surcharge Fee of $0.13 per contract for SPXpm options for all non-customer orders. The surcharges are assessed to help the Exchange recoup license fees the Exchange pays to index licensors for the right to list S&P 500 Index-based products for trading.

LMM Rebate

CBOE Rule 6.1A (Extended Trading Hours) provides that the Exchange may approve one or more Market-Makers to act as Lead Market-Makers (''LMMs'') in each class during ETH in accordance with Rule 8.15A for terms of at least one month.[7] However, to the extent the Exchange approves Market-Makers to act as LMMs during ETH, subparagraph (e)(iii)(B) of Rule 6.1A provides that LMMs must comply with the continuous quoting obligation and other obligations of Market-Makers described in subparagraph (ii) of Rule 6.1A,[8] but not the obligations set forth in Rule 8.15A [9] during ETH for their allocated classes. It further provides that LMMs do not receive a participation entitlement as set forth in Rules 6.45B and 8.15B during ETH. Rather, pursuant to subparagraph (e)(iii)(C) of Rule 6.1A, if an LMM (1) provides continuous electronic quotes in at least the lesser of 99% of the non-adjusted series or 100% of the non-adjusted series minus one call-put pair in an ETH allocated class (excluding intra-day add-on series on the day during which such series are added for trading) during ETH in a given month and (2) ensures an opening of the same percentage of series by 2:05 a.m. for at least 90% of the trading days during ETH in a given month, the LMM will receive a rebate for that month in an amount to be set forth in the Fees Schedule.[10] Specifically, for TPHs acting as LMMs in SPXpm options during ETH, the Exchange proposes to provide in the Fees Schedule (new Footnote 39) that if a LMM meets the heightened standard described above, the LMM will receive a rebate of $1,000 per month. The Exchange believes it is more fitting to implement an incentive program with a rebate during ETH, rather than the obligation/benefit structure that currently exists during RTH. LMMs will not be obligated to satisfy heightened continuous quoting and opening quoting standards during ETH. Instead, LMMs must satisfy a heightened standard to receive a rebate, which the Exchange believes will encourage LMMs to provide liquidity during ETH. Additionally, the Exchange notes that LMMs may have to undertake other expenses to be able to quote at the

[3] An ''exclusively listed option'' is an option that trades exclusively on an exchange because the exchange has an exclusive license to list and trade the option or has the proprietary rights in the interest underlying the option. An exclusively listed option is different than a ''singly listed option,'' which is an option that is not an ''exclusively listed option'' but that is listed by one exchange and not by any other national securities exchange.

[4] *See* Securities Exchange Act Release No. 34–73704 (November 28, 2014), 79 FR 72044 (December 4, 2014) (SR–CBOE–2014–062) (order granting accelerated approval of proposed rule change to adopt Extended Trading Hours for SPX and VIX).

[5] The Exchange initially filed the proposed fee changes on October 1, 2015 (SR–CBOE–2015–083). On October 9, 2015, the Exchange withdrew that filing and submitted this filing.

[6] Rule 1.1(qqq) defines ''Regular Trading Hours'' as the hours during which transactions in options may be made on the Exchange as set forth in Rule 6.1 (which hours are from 8:30 a.m. to either. 3:00 p.m. or 3:15 p.m. Chicago time).

[7] *See* CBOE Rule 6.1A(e)(iii)(A).

[8] Rule 6.1A(e)(ii) provides that notwithstanding the 20% contract volume requirement in Rule 8.7(d)(ii), Market-Makers with appointments during Extended Trading Hours must comply with the quoting obligations set forth in Rule 8.7(d)(ii) (except during ETH the Exchange may determine to have no bid/ask differential requirements as set forth in subparagraph (A) and there will be no open outcry quoting obligation as set forth in subparagraph (C)) and all other obligations set forth in Rule 8.7 during that trading session. Additionally, notwithstanding the 90-day and next calendar quarter delay requirements in Rule 8.7(d), a Market-Maker with an ETH appointment in a class must immediately comply with the quoting obligations in Rule 8.7(d)(ii) during ETH.

[9] Rule 8.15A (and Rule 1.1(ccc)) requires LMMs to provide continuous electronic quotes in at least the lesser of 99% of the non-adjusted series or 100% of the non-adjusted series minus one call-put pair within their appointed classes, with the term call-put pair referring to one call and one put that cover the same underlying instrument and have the same expiration date and exercise price, for 90% of the time.

[10] Notwithstanding Rule 1.1(ccc), for purposes of subparagraph (C) of Rule 6.1A, an LMM is deemed to have provided ''continuous electronic quotes'' if the LMM provides electronic two-sided quotes for 90% of the time during Extended Trading Hours in a given month. If a technical failure or limitation of a system of the Exchange prevents the LMM from maintaining, or prevents the LMM from communicating to the Exchange, timely and accurate electronic quotes in a class, the duration of such failure shall not be considered in determining whether the LMM has satisfied the 90% quoting standard with respect to that option class. The Exchange may consider other exceptions to this quoting standard based on demonstrated legal or regulatory requirements or other mitigating circumstances.

heightened standard during ETH such as purchase additional bandwidth.

The Exchange also proposes to make a corollary change to Footnote 38. The Exchange notes that currently, for SPX and VIX options, LLMs [sic] are subject to a different rebate program.[11] As such, the Exchange proposes to clarify that such rebate program is for TPHs acting as a LMM during ETH for SPX and VIX options only.

The Exchange lastly notes that fees, rebates and programs that excluded SPXpm, during RTH will also not apply in ETH.[12]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[13] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [14] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitation transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with Section 6(b)(4) of the Act,[15] which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Trading Permit Holders and other persons using its facilities.

The proposed transaction fee amounts for SPXpm orders during the ETH session are reasonable, equitable and not unfairly discriminatory because they are the same as the amounts of corresponding fees for SPXpm orders during the RTH session. The Exchange notes that the fee amounts for each separate type of market participant will be assessed equally for each product to all such market participants (*i.e.* all Broker-Dealer orders will be assessed the same amount, all Joint Back-Office orders will be assessed the same amount, etc).

Assessing the Index License Surcharge Fee of $0.13 per contract to SPXpm during ETH is reasonable because the amount is the same as the amount of the corresponding surcharge for SPXpm orders during RTH. The surcharge fee is equitable and not unfairly discriminatory because it will be assessed to all market participants to whom the SPXpm will apply in both RTH and ETH.

The Exchange believes it is reasonable, equitable and not unfairly discriminatory to offer LMMs in SPXpm during ETH that meet a certain heightened quoting standard (described above) a rebate of $1,000 per month given added costs that a LMM may undertake (*e.g.,* purchase of an additional bandwidth) and because it will encourage LMMs in SPXpm to provide increased liquidity. More specifically, the Exchange believes the amount of the proposed rebate is reasonable because it takes into consideration certain additional costs an LMM may incur and the Exchange believes the proposed amount is such that it will incentivize LMMs to meet the heighted quoting standard. Additionally, if a LMM does not satisfy the heightened quoting standard, then it will not receive the proposed rebate. The Exchange believes it is equitable and not unfairly discriminatory to only offer the rebate to LMMs because it benefits all market participants in ETH to encourage LMMs to satisfy the heightened quoting standards, which may increase liquidity during those hours and provide more trading opportunities and tighter spreads. The Exchange also believes it is more fitting, as well as equitable and not unfairly discriminatory to implement an incentive program with a rebate during ETH, rather than the obligation/benefit structure that exists during RTH. Particularly, the Exchange notes that creating an incentive program in which LMMs must satisfy a heightened standard to receive the rebate, encourages LMMs to provide significant liquidity during ETH, which is important as the Exchange expects lower trading liquidity and trading levels during ETH and thus fewer opportunities for an LMM to receive a participation entitlement (as they currently do during RTH). Therefore, a rebate is more appropriate than imposing an obligation to receive a participation entitlement. The Exchange notes that offering a rebate during ETH is merely a different type of financial benefit that may be given to LMMs during ETH if it achieves a heightened quoting level. The Exchange believes it is equitable and not unfairly discriminatory to provide a lesser rebate for LMMs appointed in SPXpm options as compared to LMMs for SPX and VIX options because the Exchange expects lower trading volume in SPXpm options during ETH as compared to volume for SPX and VIX. Therefore, it would not be economically viable for the Exchange to offer the same amount of rebate to LMMs in SPXpm as is offered to LMMs for SPX and VIX.

Finally, not applying in ETH fees, rebates and programs that exclude SPXpm during RTH is reasonable because these fees, rebates and programs will not apply to all TPHs and will be consistent across sessions.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule changes will impose any burden on competition that are not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because, while different fees and rebates are assessed to different market participants in some circumstances, these different market participants have different obligations and different circumstances. For example, Clearing TPHs have clearing obligations that other market participants do not have. Market-Makers have quoting obligations that other market participants do not have. There is a history in the options markets of providing preferential treatment to Customers, as they often do not have as sophisticated trading operations and systems as other market participants, which often makes other market participants prefer to trade with Customers. Further, the proposed fees, rebates and programs for ETH are intended to encourage market participants to bring liquidity to the Exchange during ETH (which benefits all market participants), while still covering Exchange costs (including those associated with the upgrading and maintenance of Exchange systems).

The Exchange does not believe that the proposed rule changes will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because SPXpm is a proprietary product that will only be traded on CBOE. To the extent that the proposed changes

[11] *See* CBOE Fees Schedule, Footnote 38. If a LMM meets the heightened quoting standard, the LMM will receive a pro-rata share of an LMM compensation pool totaling an amount of $25,000 per month, per LMM, per class for SPX and VIX.

[12] *See e.g.,* Exchange Fees Schedule, Liquidity Provider Sliding Scale, Marketing Fee, Clearing Trading Permit Holder Fee Cap, and Volume Incentive Program (''VIP'').

[13] 15 U.S.C. 78f(b).

[14] 15 U.S.C. 78f(b)(5).

[15] 15 U.S.C. 78f(b)(4).

make CBOE a more attractive marketplace for market participants at other exchanges, such market participants are welcome to become CBOE market participants.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [16] and paragraph (f) of Rule 19b–4 [17] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or

• Send an email to *rule-comments@sec.gov*. Please include File Number SR–CBOE–2015–091 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–CBOE–2015–091. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–CBOE–2015–091, and should be submitted on or before November 13, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[18]

Robert W. Errett,

Deputy Secretary.

SMALL BUSINESS ADMINISTRATION

Data Collection Available for Public Comments

ACTION: 60-day notice and request for comments.

SUMMARY: The Small Business Administration (SBA) intends to request approval, from the Office of Management and Budget (OMB) for the collection of information described below. The Paperwork Reduction Act (PRA) of 1995, 44 U.S.C Chapter 35 requires federal agencies to publish a notice in the **Federal Register** concerning each proposed collection of information before submission to OMB, and to allow 60 days for public comment in response to the notice. This notice complies with that requirement.

DATES: Submit comments on or before December 22, 2015.

ADDRESSES: Send all comments to Gina Beyer, Program Analyst, Office of Disaster Assistance, Small Business Administration, 409 3rd Street, 6th Floor, Washington, DC 20416.

FOR FURTHER INFORMATION CONTACT: Gina Beyer, Program Analyst, Disaster Assistance, *gina.beyer@sba.gov* 202–205–6458, or Curtis B. Rich, Management Analyst, 202–205–7030, *curtis.rich@sba.gov;*

SUPPLEMENTARY INFORMATION: A team of Quality Assurance staff at the Disaster Assistance Center (DASC) will conduct a brief telephone survey of customers to determine their satisfaction with the services received from the (DASC) and the Field Operations Centers. The result will help the Agency to improve where necessary, the delivery of critical financial assistance to disaster victims.

Solicitation of Public Comments

SBA is requesting comments on (a) Whether the collection of information is necessary for the agency to properly perform its functions; (b) whether the burden estimates are accurate; (c) whether there are ways to minimize the burden, including through the use of automated techniques or other forms of information technology; and (d) whether there are ways to enhance the quality, utility, and clarity of the information.

Summary of Information Collection

Title: Disaster Assistance Customer Satisfaction Survey.

Description of Respondents: Disaster Customers satisfaction with service received.

Form Number: SBA Form 2313FOC, 2313CSC.

Total Estimated Annual Responses: 24,284.

Total Estimated Annual Hour Burden: 199.

[Disaster Declaration #14503 and #14504]

Washington Disaster #WA–00060

AGENCY: U.S. Small Business Administration.

ACTION: Notice.

SUMMARY: This is a Notice of the Presidential declaration of a major disaster for Public Assistance Only for the State of Washington (FEMA–4242–DR), dated 10/15/2015.

Incident: Severe Windstorm.

Incident Period: 08/29/2015.

Effective Date: 10/15/2015.

Physical Loan Application Deadline Date: 12/14/2015.

Economic Injury (EIDL) Loan Application Deadline Date: 07/15/2016.

ADDRESSES: Submit completed loan applications to: U.S. Small Business Administration, Processing and Disbursement Center, 14925 Kingsport Road, Fort Worth, TX 76155.

FOR FURTHER INFORMATION CONTACT: A Escobar, Office of Disaster Assistance, U.S. Small Business Administration, 409 3rd Street SW., Suite 6050, Washington, DC 20416.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the President's major disaster declaration on 10/15/2015, Private Non-Profit organizations that provide essential services of governmental nature may file disaster loan applications at the address listed above or other locally announced locations.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties: Island; Jefferson; Snohomish.

The Interest Rates are:

	Percent
For Physical Damage:	
Non-Profit Organizations With Credit Available Elsewhere	2.625
Non-Profit Organizations Without Credit Available Elsewhere	2.625
For Economic Injury:	
Non-Profit Organizations Without Credit Available Elsewhere	2.625

The number assigned to this disaster for physical damage is 14503B and for economic injury is 14504B

BILLING CODE 8025–01–M

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

North American Free Trade Agreement; Invitation for Applications for Inclusion on the Chapter 19 Roster

AGENCY: Office of the United States Trade Representative.

ACTION: Invitation for applications.

SUMMARY: Chapter 19 of the North American Free Trade Agreement (''NAFTA'') provides for the establishment of a roster of individuals to serve on binational panels convened to review final determinations in antidumping or countervailing duty (''AD/CVD'') proceedings and amendments to AD/CVD statutes of a NAFTA Party. The United States annually renews its selections for the Chapter 19 roster. Applications are invited from eligible individuals wishing to be included on the roster for the period April 1, 2016, through March 31, 2017.

DATES: Applications should be received no later than November 20, 2015.

ADDRESSES: Applications should be submitted (i) electronically to *www.regulations.gov,* docket number USTR–2015–0017 or (ii) by fax, to Sandy McKinzy at (202) 395–3640.

FOR FURTHER INFORMATION CONTACT: Katherine Wang, Assistant General Counsel, Office of the United States Trade Representative, (202) 395–6214.

SUPPLEMENTARY INFORMATION:

Binational Panel Reviews Under NAFTA Chapter 19

Article 1904 of the NAFTA provides that a party involved in an AD/CVD proceeding may obtain review by a binational panel of a final AD/CVD determination of one NAFTA Party with respect to the products of another NAFTA Party. Binational panels decide whether such AD/CVD determinations are in accordance with the domestic laws of the importing NAFTA Party, and must use the standard of review that would have been applied by a domestic court of the importing NAFTA Party. A panel may uphold the AD/CVD determination, or may remand it to the national administering authority for action not inconsistent with the panel's decision. Panel decisions may be reviewed in specific circumstances by a three-member extraordinary challenge committee, selected from a separate roster composed of fifteen current or former judges.

Article 1903 of the NAFTA provides that a NAFTA Party may refer an amendment to the AD/CVD statutes of another NAFTA Party to a binational panel for a declaratory opinion as to whether the amendment is inconsistent with the General Agreement on Tariffs and Trade (''GATT''), the GATT Antidumping or Subsidies Codes, successor agreements, or the object and purpose of the NAFTA with regard to the establishment of fair and predictable conditions for the liberalization of trade. If the panel finds that the amendment is inconsistent, the two NAFTA Parties shall consult and seek to achieve a mutually satisfactory solution.

Chapter 19 Roster and Composition of Binational Panels

Annex 1901.2 of the NAFTA provides for the maintenance of a roster of at least 75 individuals for service on Chapter 19 binational panels, with each NAFTA Party selecting at least 25 individuals. A separate five-person panel is formed for each review of a final AD/CVD determination or statutory amendment. To form a panel, the two NAFTA Parties involved each appoint two panelists, normally by drawing upon individuals from the roster. If the Parties cannot agree upon the fifth panelist, one of the Parties, decided by lot, selects the fifth panelist from the roster. The majority of individuals on each panel must consist of lawyers in good standing, and the chair of the panel must be a lawyer.

Upon each request for establishment of a panel, roster members from the two involved NAFTA Parties will be requested to complete a disclosure form, which will be used to identify possible conflicts of interest or appearances thereof. The disclosure form requests information regarding financial interests and affiliations, including information regarding the identity of clients of the roster member and, if applicable, clients of the roster member's firm.

Criteria for Eligibility for Inclusion on Chapter 19 Roster

Section 402 of the NAFTA Implementation Act (Pub. L. 103–182, as amended (19 U.S.C. 3432)) (''Section 402'') provides that selections by the United States of individuals for inclusion on the Chapter 19 roster are to be based on the eligibility criteria set out in Annex 1901.2 of the NAFTA, and without regard to political affiliation. Annex 1901.2 provides that Chapter 19 roster members must be citizens of a NAFTA Party, must be of good character and of high standing and repute, and are to be chosen strictly on the basis of their objectivity, reliability, sound judgment, and general familiarity with international trade law. Aside from judges, roster members may not be affiliated with any of the three NAFTA Parties. Section 402 also provides that, to the fullest extent practicable, judges and former judges who meet the eligibility requirements should be selected.

Adherence to the NAFTA Code of Conduct for Binational Panelists

The ''Code of Conduct for Dispute Settlement Procedures Under Chapters 19 and 20'' (*see https://www.nafta-sec-alena.org/Default.aspx?tabid=99&language=en-US*), which was established pursuant to Article 1909 of the NAFTA, provides that current and former Chapter 19 roster members ''shall avoid impropriety and the appearance of impropriety and shall observe high standards of conduct so that the integrity and impartiality of the dispute settlement process is preserved.'' The Code of Conduct also provides that candidates to serve on chapter 19 panels, as well as those who are ultimately selected to serve as panelists, have an obligation to ''disclose any interest, relationship or matter that is likely to affect [their] impartiality or independence, or that might reasonably create an appearance of impropriety or an apprehension of bias.'' Annex 1901.2 of the NAFTA provides that roster members may engage in other business while serving as panelists, subject to the Code of Conduct and provided that such business does not interfere with the performance of the panelist's duties. In particular, Annex 1901.2 states that ''[w]hile acting as a panelist, a panelist may not appear as counsel before another panel.''

Procedures for Selection of Chapter 19 Roster Members

Section 402 establishes procedures for the selection by the Office of the United

States Trade Representative (''USTR'') of the individuals chosen by the United States for inclusion on the Chapter 19 roster. The roster is renewed annually, and applies during the one-year period beginning April 1 of each calendar year.

Under Section 402, an interagency committee chaired by USTR prepares a preliminary list of candidates eligible for inclusion on the Chapter 19 Roster. After consultation with the Senate Committee on Finance and the House Committee on Ways and Means, the U.S. Trade Representative selects the final list of individuals chosen by the United States for inclusion on the Chapter 19 roster.

Remuneration

Roster members selected for service on a Chapter 19 binational panel will be remunerated at the rate of 800 Canadian dollars per day.

Applications

Eligible individuals who wish to be included on the Chapter 19 roster for the period April 1, 2016, through March 31, 2017, are invited to submit applications. Applications may be submitted either by fax to Sandy McKinzy at 202–395–3640 or electronically to *www.regulations.gov,* docket number USTR–2015–0017.

To submit an application via *www.regulations.gov,* enter docket number USTR–2015–0017 on the home page and click ''search.'' The site will provide a search-results page listing all documents associated with this docket. Find a reference to this notice by selecting ''Notice'' under ''Document Type'' on the left side of the search-results page, and click on the link entitled ''Comment Now!.'' (For further information on using the *www.regulations.gov* Web site, please consult the resources provided on the Web site by clicking on the ''How to Use Regulations.gov'' on the bottom of the page.)

The *www.regulations.gov* site provides the option of providing comments by filling in a ''Type Comment'' field or by attaching a document. USTR prefers applications to be provided in an attached document. If a document is attached, please type ''Application for Inclusion on NAFTA Chapter 19 Roster'' in the ''Upload File'' field.

Applications must be typewritten, and should be headed ''Application for Inclusion on NAFTA Chapter 19 Roster.'' Applications should include the following information, and each section of the application should be numbered as indicated:

1. Name of the applicant.
2. Business address, telephone number, fax number, and email address.
3. Citizenship(s).
4. Current employment, including title, description of responsibility, and name and address of employer.
5. Relevant education and professional training.
6. Spanish language fluency, written and spoken.
7. Post-education employment history, including the dates and addresses of each prior position and a summary of responsibilities.
8. Relevant professional affiliations and certifications, including, if any, current bar memberships in good standing.
9. A list and copies of publications, testimony, and speeches, if any, concerning AD/CVD law. Judges or former judges should list relevant judicial decisions. Only one copy of publications, testimony, speeches, and decisions need be submitted.
10. Summary of any current and past employment by, or consulting or other work for, the Governments of the United States, Canada, or Mexico.
11. The names and nationalities of all foreign principals for whom the applicant is currently or has previously been registered pursuant to the Foreign Agents Registration Act, 22 U.S.C. 611 *et seq.,* and the dates of all registration periods.
12. List of proceedings brought under U.S., Canadian, or Mexican AD/CVD law regarding imports of U.S., Canadian, or Mexican products in which the applicant advised or represented (for example, as consultant or attorney) any U.S., Canadian, or Mexican party to such proceeding and, for each such proceeding listed, the name and country of incorporation of such party.
13. A short statement of qualifications and availability for service on Chapter 19 panels, including information relevant to the applicant's familiarity with international trade law and willingness and ability to make time commitments necessary for service on panels.
14. On a separate page, the names, addresses, telephone and fax numbers of three individuals willing to provide information concerning the applicant's qualifications for service, including the applicant's character, reputation, reliability, judgment, and familiarity with international trade law.

Current Roster Members and Prior Applicants

Current members of the Chapter 19 roster who remain interested in inclusion on the Chapter 19 roster only need to indicate that they are reapplying and submit updates (if any) to their applications on file. Current members do not need to resubmit their applications. Individuals who have previously applied but have not been selected must submit new applications to reapply. If an applicant, including a current or former roster member, has previously submitted materials referred to in item 9, such materials need not be resubmitted.

Public Disclosure

Applications normally will not be subject to public disclosure and will not be posted publicly on *www.regulations.gov.* They may be referred to other federal agencies and Congressional Committees in the course of determining eligibility for the roster, and shared with foreign governments and the NAFTA Secretariat in the course of panel selection.

False Statements

Pursuant to section 402(c)(5) of the NAFTA Implementation Act, false statements by applicants regarding their personal or professional qualifications, or financial or other relevant interests that bear on the applicants' suitability for placement on the Chapter 19 roster or for appointment to binational panels, are subject to criminal sanctions under 18 U.S.C. 1001.

Privacy Act

The following statements are made in accordance with the Privacy Act of 1974, as amended (5 U.S.C. 552a). The authority for requesting information to be furnished is section 402 of the NAFTA Implementation Act. Provision of the information requested above is voluntary; however, failure to provide the information will preclude your consideration as a candidate for the NAFTA Chapter 19 roster. This information is maintained in a system of records entitled ''Dispute Settlement Panelists Roster.'' Notice regarding this system of records was published in the **Federal Register** on November 30, 2001. The information provided is needed, and will be used by USTR, other federal government trade policy officials concerned with NAFTA dispute settlement, and officials of the other NAFTA Parties to select well-qualified individuals for inclusion on the Chapter 19 roster and for service on Chapter 19 binational panels.

Juan A. Millán,

Acting Assistant United States Trade Representative for Monitoring and Enforcement.

BILLING CODE 3290–F6–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Buy America Waiver Notification

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice.

SUMMARY: This notice provides information regarding FHWA's finding that a Buy America waiver is appropriate for the use of non-domestic stainless steel grooved butterfly valves, grooved couplings, and electrical conduit bodies and fittings for the I–90 project in the State of Washington.

DATES: The effective date of the waiver is October 26, 2015.

FOR FURTHER INFORMATION CONTACT: For questions about this notice, please contact Mr. Gerald Yakowenko, FHWA Office of Program Administration, (202) 366–1562, or via email at *gerald.yakowenko@dot.gov.* For legal questions, please contact Mr. Jomar Maldonado, FHWA Office of the Chief Counsel, (202) 366–1373, or via email at *Jomar.Maldonado@dot.gov.* Office hours for the FHWA are from 8:00 a.m. to 4:30 p.m., E.T., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Electronic Access

An electronic copy of this document may be downloaded from the Federal Register's home page at: *http://www.archives.gov* and the Government Printing Office's database at: *http://www.access.gpo.gov/nara.*

Background

The FHWA's Buy America policy in 23 CFR 635.410 requires a domestic manufacturing process for any steel or iron products (including protective coatings) that are permanently incorporated in a Federal-aid construction project. The regulation also provides for a waiver of the Buy America requirements when the application would be inconsistent with the public interest or when satisfactory quality domestic steel and iron products are not sufficiently available. This notice provides information regarding FHWA's finding that a Buy America waiver is appropriate for use of non-domestic stainless steel grooved butterfly valves, grooved couplings, and electrical conduit bodies and fittings for the I–90 project in the State of Washington.

In accordance with Division K, section 122 of the ''Consolidated and Further Continuing Appropriations Act, 2015'' (Pub. L. 113–235), FHWA published a notice of intent to issue a waiver on its Web site (*http://www.fhwa.dot.gov/construction/contracts/waivers.cfm?id=114*) on September 10th. The FHWA received no comments in response to the publication. Based on all the information available to the agency, FHWA concludes that there are no domestic manufacturers of stainless steel grooved butterfly valves, grooved couplings, and electrical conduit bodies and fittings for the I–90 project in the State of Washington.

In accordance with the provisions of section 117 of the SAFETEA–LU Technical Corrections Act of 2008 (Pub. L. 110–244, 122 Stat. 1572), FHWA is providing this notice as its finding that a waiver of Buy America requirements is appropriate. The FHWA invites public comment on this finding for an additional 15 days following the effective date of the finding. Comments may be submitted to FHWA's Web site via the link provided to the waiver page noted above.

(**Authority:** 23 U.S.C. 313; Pub. L. 110–161, 23 CFR 635.410)

Dated: October 16, 2015.

Gregory G. Nadeau,

Administrator, Federal Highway Administration.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–2013–0050]

Final Designation of the Highway Primary Freight Network

AGENCY: Federal Highway Administration (FHWA), Department of Transportation (DOT).

ACTION: Notice; response to comments.

SUMMARY: This notice publishes the final designation of the highway-only Primary Freight Network (highway-only PFN). Section 167(d) of title 23, United States Code (U.S.C.) requires the Secretary of Transportation to establish the highway-only PFN and re-designate it every 10 years, giving consideration to certain factors. This designation meets the requirements of the law, but the Department and a multitude of public comments recognize that the highway-only PFN fails to demonstrate that freight moves through a complex and extensive network of highways, railroads, waterways, pipelines, and airways. While specific commodities are likely to be moved on a particular mode or series of modes, a complex multimodal system is required to carry the growing volume of bulk and high-velocity, high-value goods in the United States. In addition, the 27,000-mile cap required by the law does not yield a PFN representative of all the critical highway elements of the United States freight system. While the Department is designating the highway-only PFN to meet the statutory requirements of the authorizing law, the Department is concurrently and simultaneously proposing a comprehensive Multimodal Freight Network for public comment in the draft National Freight Strategic Plan to identify key infrastructure for all modes that is critical for the efficient movement of freight.

FOR FURTHER INFORMATION CONTACT: For questions about this program, contact Coral Torres, FHWA Office of Freight Management and Operations, (202) 366–7602, or by email at *Coral.Torres@dot.gov.* For legal questions, please contact William Winne, FHWA Office of the Chief Counsel, (202) 366–1397, or by email at *William.Winne@dot.gov.* Business hours for the FHWA are from 8:00 a.m. to 4:30 p.m., EST/EDT, Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Electronic Access

You may retrieve a copy of the notice through the Federal eRulemaking portal at: *http://www.regulations.gov.* The Web site is available 24 hours each day, every day of the year. Electronic submission and retrieval help and guidelines are available under the help section of the Web site. You may also download an electronic copy of this document from Office of the Federal Register's home page at: *http://www.archives.gov/federal_register* and the Government Printing Office's Web page at: *http://www.gpoaccess.gov.*

Background

Section 167(c) of title 23, U.S.C., directs the Secretary to establish a National Freight Network (NFN) to assist States in strategically directing resources toward improved system performance for efficient movement of freight on the highway portion of the Nation's freight transportation system, including the National Highway System (NHS), freight intermodal connectors, and aerotropolis transportation systems.

Under 23 U.S.C. 167(c), the NFN will consist of three components: The highway-only PFN, the portions of the Interstate System not designated as part of the highway-only PFN, and Critical Rural Freight Corridors (CRFC), which are designated by the States.

The Moving Ahead for Progress in the 21st Century Act (MAP–21) limited the highway-only PFN to not more than 27,000 centerline miles of existing roadways that are most critical to the movement of freight. In addition, MAP–21 allowed an additional 3,000 centerline miles (that may include existing or planned roads) critical to the future efficient movement of goods on the highway-only PFN. The MAP–21 instructed DOT to base the highway-only PFN on an inventory of national freight volumes conducted by the FHWA Administrator, in consultation with stakeholders, including system users, transport providers, and States. The MAP–21 defined eight factors to consider in designating the highway-only PFN.

The eight factors are:

1. Origins and destinations of freight movement in the United States;
2. Total freight tonnage and value of freight moved by highways;
3. Percentage of annual average daily truck traffic in the annual average daily traffic on principal arterials;
4. Annual average daily truck traffic on principal arterials;
5. Land and maritime ports of entry;
6. Access to energy exploration, development, installation, or production areas;
7. Population centers; and
8. Network connectivity.

Section 167(d)(3) of title 23, U.S.C., mandates that the Secretary shall re-designate the highway-only PFN every 10 years. The highway-only PFN announced by this notice is the first iteration of the network.

Multimodal Freight Network

Freight in America travels over an extensive network of highways, railroads, waterways, pipelines, and airways: 985,000 miles of Federal-aid highways; 141,000 miles of railroads; 28,000 miles waterways; and more than 2.6 million miles of pipelines. There are over 13,000 airports in the United States, with approximately 500 serving commercial operations, and over 5,000 coastal, Great Lakes, and inland waterway facilities moving cargo. While specific commodities are likely to be moved on a particular mode or series of modes, a complex multimodal system is required to carry the growing volume of bulk and high-velocity, high-value goods in the United States. For freight shipments moving more than 750 miles (the distance beyond which the benefits of multimodal shipping are more pronounced), 35 percent of U.S. freight by value (including air freight and mails) moves on multiple freight modes. And while 70 percent of freight by weight and 64 percent by value is moved by truck, the goods moved may be processed foods, manufactured goods or other finished products that were carried on other modes or include raw materials that traveled by other modes during an earlier stage of production.

Public comments on the draft highway-only PFN requested consideration of a network that was reflective of the Nation's entire multimodal freight system. While the DOT recognizes that freight is moved through the country by a complex multimodal system, MAP–21 mandated that the highway-only PFN consist solely of ''existing roadways that are most critical to the movement of freight.'' (23 U.S.C. 167(d)(1)(A)(ii)) As a result, the final highway-only PFN announced by this notice does not identify or prioritize other modal aspects of the U.S. freight system.

In recognition of the public comments indicating the need for a multimodal NFN that reflects the key components of each transportation mode in the nation's freight system, DOT is concurrently and simultaneously proposing a comprehensive Multimodal Freight Network (MFN) as part of the release of the National Freight Strategic Plan. The Department engaged all DOT modes with freight relevance (Federal Highway Administration, Federal Railroad Administration, Maritime Administration, Pipeline and Hazardous Materials Safety Administration and the Federal Aviation Administration) in building an MFN to identify key infrastructure for all modes that are critical for freight movement.

As part of this multimodal effort, DOT considered the feedback provided on the designation of the highway-only PFN (described below in this notice) and built a multimodal network using revised thresholds and a modified set of criteria, without the constraints of a mileage cap. This MFN was designed to satisfy the National Freight Policy goals and objectives at a multimodal level. The DOT will seek additional feedback from public and private transportation stakeholders in order to better identify what the goals, objectives and future use of this MFN will be at the regional, State, and local levels. The Department will also work with stakeholders to identify critical urban and rural connectors and corridors.

The GROW AMERICA Proposal

In the Generating Renewal, Opportunity, and Work with Accelerated Mobility, Efficiency, and Rebuilding of Infrastructure and Communities throughout America Act (GROW AMERICA), the Administration proposed to improve national freight policy to give it a multimodal focus. To this end, the GROW AMERICA would streamline existing law by eliminating the highway-only PFN and CRFCs and establish a multimodal NFN to inform public and private planning, to prioritize Federal investment, aid the public and private sector in strategically directing resources, and support Federal decisionmaking. This network would consist of connectors, corridors and facilities in all transportation modes most critical to the current and future movement of freight in the national freight system. The proposal would ensure a more accurate and relevant network by shortening the period of re-designation to a 5-year cycle and would require consideration of public input, including that from Metropolitan Planning Organizations (MPO) and States on critical freight facilities that are vital links in national or regionally significant goods movement and supply chains.

Purpose of the Notice

The purpose of this notice is to publish the final designation of the highway-only PFN as required by 23 U.S.C. 167(d), provide information about the methodology and data used in the designation, and provide an analysis of the comments received on the draft designation of this network.

Final Designation of the Primary Freight Network

With this notice, the FHWA Administrator, based on the delegation of authority by the Secretary, officially designates the final highway-only PFN. This final designation includes the same routes identified in the draft highway-only PFN, previously released on November 19, 2013 (78 FR 69520). Links illustrating the 26,966 miles on the highway-only PFN are available on the Web site maintained by FHWA (*http://www.ops.fhwa.dot.gov/freight/infrastructure/pfn/index.htm*). The DOT provides this final highway-only PFN to comply with the requirements of 23 U.S.C. 167. However, due to the challenges experienced in developing a network that would adhere to MAP–21 requirements and convey the full nature of the Nation's freight system, the Department recommends consideration of an alternative multimodal network using a revised methodology that includes criteria supported by the public comments on the designation of the highway-only PFN, such as the one proposed in GROW AMERICA or provided for public comment in the draft National Freight Strategic Plan.

Analyses of Comments on the Draft Designation of the Highway-Only PFN and NFN

On November 19, 2013, FHWA published the draft designation of the 27,000-mile highway-only PFN in the **Federal Register** at 78 FR 69520. The initial notice also provided a larger network of routes (a 41,518-mile comprehensive highway-only PFN) for consideration and information regarding State designation of the CRFCs and the establishment of the complete NFN. The FHWA asked stakeholders to review the draft highway-only PFN and provide feedback.

Stakeholders requested additional time to analyze the draft highway-only PFN methodology, maps, and the highway-only PFN's potential impact on their communities. In response to these requests, FHWA twice extended the public comment period. The comment period closed on February 15, 2014, at which point the docket recorded a total of 307 responses, including over 1,200 discrete comments. The following section presents a quantitative and qualitative analysis of the trends, themes, and patterns identified in the public comments.

Comments by Organization Type

The initial highway-only PFN notice generated comments from a range of stakeholders in the private and public sectors. The following table identifies the number and percentage of comments received by organization type. The majority of comments came from MPOs, local government agencies, and State DOTs.

Public or private stakeholders	Organization type	Number of comment entries	Percentage of comments [1]
Private	Business	22	7.2
	Industry Association	21	6.8
	Private Citizen	21	6.8
Public/Private	Port	12	3.9
	Other	33	10.7
Public	State DOT	51	16.6
	Federal Agency	2	0.7
	Foreign	1	0.3
	Local Government Agency	64	20.8
	Metropolitan Planning Organization	68	22.1
	Other State Agency	5	1.6
	Regional Commission	2	0.7
	Congress	5	1.6
Total		307	100.0

Comments by Subject Area

The FHWA asked stakeholders to review the draft highway-only PFN and provide feedback on five topics:

1. Specific route deletions, additions or modifications to the draft designation of the highway-only PFN as outlined in the notice;
2. The methodology for achieving a 27,000-mile final designation;
3. How the NFN and its components could be used by freight stakeholders in the future;
4. How the NFN may fit into a multimodal National Freight System; and
5. Suggestions for an urban-area route designation process.

Most responses addressed two or more of the five topics, with 33 percent focusing on the methodology and 21 percent commenting on route deletions, additions, or modifications.

Type of comment	Number of comments	Percent of total comments [2]
1. Specific route deletions, additions or modifications	267	21.2
2. Methodology for a 27,000 mile designation	419	33.3
3. NFN use by freight stakeholders in the future	105	8.4
4. NFN and a multimodal National Freight System	135	10.7
5. Suggestions for an urban route designation process	174	13.8
6. Funding Issues	108	8.6
7. Request for Comment Extension	6	0.1
8. Other	43	3.4
Total Comments	1,257	100

Specific Route Additions, Deletions or Modifications

The highway-only PFN Web site provides information on the requested additions, deletions and modifications to the highway-only PFN as well as a map reflecting these routes and segments, which totaled approximately 8,400 additional or modified miles and 230 miles proposed for deletion. This information can be found in the following Web site: *http://www.ops.fhwa.dot.gov/freight/infrastructure/pfn/index.htm.*

Additions

The majority of comments related to route changes suggested that FHWA consider the addition of specific road

[1] Due to rounding, figures do not add to 100 percent.

[2] Due to rounding, figures do not add to 100 percent.

segments and facilities. However, in some cases, respondents requested that entire State and Interstate highways be included. The comments requesting that routes be added to the highway-only PFN most often cited one of the following reasons:

1. Incorporating roads necessary for improving current freight movements;
2. Incorporating roads necessary for planning future commodity growth on the segment;
3. Affirming local freight planning efforts that identified the segment and/or facility as a major critical freight route or generator;
4. Incorporating roads necessary to close gaps and connect one facility, city, region, or State to another;
5. Incorporating roads necessary for resolving omissions of key segments and facilities such as those with major significance to national security and/or goods movement. Examples include: military facilities, airports, ports, bridges, rail yards and intermodal connectors;
6. Including the ''first'' and ''last'' mile of freight movements on routes designated in the draft highway-only PFN;
7. Incorporating a route or facility related to an international trade corridor;
8. Incorporating roads based on traffic counts and truck data indicating the segment is a critical link in the area's freight network;
9. Incorporating roads identified in the past by FHWA as a ''Corridor of the Future'' or that may become critical to the future movement of freight; and/or,
10. Including new, planned roads that, when constructed, will—
   - Provide continuity in the freight network;
   - Provide a connection to population centers;
   - Provide connectivity to intermodal facilities;
   - Relieve congestion on existing Interstates; and
   - Provide benefits to national commerce as a route in a long-distance trucking corridor.

Deletions and Modifications

Some respondents submitted requests for deletions and/or modifications to the highway-only PFN. The reasons offered for these requests included the following:

1. A desire to emphasize a different or more logical route than that included in the highway-only PFN (respondents often expressed that their agencies conducted evaluations using a different methodology or criteria that yielded other routes as more freight-relevant than the ones proposed in the draft highway-only PFN);
2. A desire to discourage non-local truck traffic through an area such as a neighborhood, commercial district, or downtown; requests to remove local streets not connected to freight facilities; and
3. Erroneous or outdated facility names.

The FHWA appreciates the comments requesting additions, deletions, or modifications to the draft highway-only PFN. In analyzing the route-related comments, FHWA determined that the level of information or data solicited in the draft highway-only PFN designation and provided through comments did not provide the specificity necessary to make accurate or consistent modifications to the network. For example, in order to change a route designation it is important to have mile marker identification of segments and common data years (in the case of data-driven segments). Although some respondents provided information such as beginning and end points or name of a route or facility (such as a specific intermodal connector), their requests to add, delete, or modify the designation of the routes and facilities did not comply with the criteria and threshold used for the draft designation, or different data sources were used as a justification.

Despite the lack of specificity in the data provided by commenters, many additions and modifications reflected some aspect that FHWA considers relevant for the efficiency, reliability, safety, and sustainability of the freight system and may have been incorporated into the highway-only PFN if not for the current mileage cap imposed by the law. Therefore, although no route modifications were made for the final designation of the highway-only PFN, FHWA considered these requests in its development of an alternative multimodal freight network, which is discussed in further detail in the National Freight Strategic Plan as displayed here: *http://www.transportation.gov/policy/freight/NFSP.*

Methodology for Achieving a 27,000-Mile Designation

Approximately 420 comments addressed the methodology for achieving a 27,000-mile designation. The commenters expressed concern regarding the complexity of the process for developing a highway-only PFN that incorporates the criteria identified in MAP–21 and appreciated the challenge of adhering to only 27,000 centerline miles of roads. Other comments were critical of the criteria, concept, and data used for the designation. The following subsections summarize comments on the methodology.

Limitations of the 27,000 Centerline Miles Threshold

Comments regarding the highway-only PFN's centerline mileage threshold expressed concern that combining multiple network criteria with a mileage cap does not yield a highway-only PFN representative of the most critical highway elements of the United States freight system. Virtually all respondents preferred the sample 41,518-mile ''comprehensive'' (yet highway-only) network offered by DOT for comparison. Some respondents recommended that DOT work with Congress to develop statutory language to designate a more comprehensive and connected highway freight network that links directly to other freight modes. These commenters asked that Congress either (1) eliminate or raise the mileage threshold, or (2) use a corridor basis instead of the statutorily required centerline roadway mile basis. Some respondents sought a connected 27,000-mile network of key freight routes but did not provide a specific set of criteria. Others proposed that the highway-only PFN incorporate the entire Interstate System in a non-statutory designation. Respondents also noted that the comprehensive network (*e.g.,* the 41,518-mile network) included many of the highway freight routes necessary to ensure sufficient connections to Land Ports of Entry (LPOE) to Mexico and Canada and maritime ports of entry in coastal states that are important for the Nation's global competitiveness.

Section 167 of title 23, U.S.C., specifies that the highway-only PFN designation cannot exceed a cap of 27,000 centerline roadway miles. Therefore, in order to comply with Federal law, the final highway-only PFN designation comprises no more than 27,000 centerline miles (and includes the LPOEs for the most freight-active border crossings by truck volumes).

Highway-Only PFN Criteria and Designation Methodology

This subsection discusses the comments on the statutory criteria and the methodology developed by FHWA for the highway-only PFN designation process. Some respondents proposed reconfiguring the highway-only PFN to connect significant freight origins and destinations for agriculture, energy production, manufacturing, mining, and national defense to other key infrastructure such as the Interstate system, ports of entry, and intermodal connectors. Some respondents expressed concern that agriculture was not listed as a specific factor for consideration. They felt that the factor pertaining to the value of goods failed to give sufficient weight to the movement of agricultural products. These respondents commented that the NFN should directly address the importance of agriculture to the U.S. and, without this focus; the resulting network would be flawed. They suggested the use of criteria to better reflect the movement of agricultural products by truck from field to market, directly or by railheads, rather than measuring the movement of imported goods. These commenters cited domestic agricultural commodities as being vital to the U.S. economy and the health and well-being of the U.S. population and stated that agricultural goods are among the most significant generators of truck-freight in several States. Some of these respondents commented that identifying routes in the NFN can enhance energy, agricultural, and natural resource freight movement and provide new opportunities for economic development.

In response, FHWA acknowledges that to better represent the movement of agricultural products on the freight system, it would be necessary to consider the data and the road-, rail-, air- and water-based routes of a multimodal freight system. National data shows agricultural products as being some of the top commodities under current models and forecasted trends. The current highway-only PFN methodology does not prioritize for type of commodity and was intended to be supplemented by CRFCs that could include routes serving key agricultural facilities. The FHWA believes a multimodal freight network map would more accurately depict the movement of agricultural commodities, which move by truck, rail, or barge, or combinations of these methods.

Respondents also expressed concern for the lack of sensitivity in the model to routes seasonal fluctuations and spikes in volumes that have low annual averages, such as agricultural or forest products routes and energy development, production, and extraction areas. They felt that the freight mileage on these routes does not meet the highway-only PFN threshold yet still accommodates a degree of truck traffic relevant for inclusion in the network. Some comments proposed a separate prioritization process for seasonally critical agricultural corridors beyond the CRFCs designation established in MAP–21 and a shorter re-designation cycle of the NFN and highway-only PFN to better capture these trends.

In response, FHWA acknowledges that additional research, data and refinements to the model could be developed to capture freight surges. The FHWA will consider opportunities for incorporating seasonality or surges into future network development.

Respondents also suggested modifications to the methodology and different thresholds for the criteria. Some noted that the initial step of the methodology should be changed to identify critical freight nodes. In this alternative methodology, the highway-only PFN would represent roadways that support certain critical freight nodes rather than a subset that carry the most freight (the format for the current methodology). The alternative methodology would then use additional analysis to define the subset of roadways most critical to serve these nodes. Respondents noted that by focusing on identifying critical roadways closest to freight nodes, this methodology would better assist States in strategically directing resources toward improved system performance for efficient movement of freight on the highway portion of the Nation's freight transportation system.

In response, FHWA notes that it explored the development of a highway-only PFN that started with critical freight nodes (predominantly urban areas and freight-intensive border crossings) and built out from these points. After analyzing the data and simulating the network, the Department selected a hybrid approach that used origin and destination data from the Freight Analysis Framework (FAF) and cross-referenced it with these nodes using Average Annual Daily Truck Traffic (AADTT) as a guide for how freight moves, by both tonnage and value, between nodes. There are many ways to develop the highway-only PFN, and that is in part why the FHWA sought public comment on the methodology. The FHWA felt that a node-based map would require leaving routes within a node undesignated, as FHWA lacked data specificity for these routes. As a result, use of a node-based map would require an additional step and time to obtain public input or to develop better data.

The comments noted that while the methodology itemized several factors considered for the draft network, it appears the base was drawn using AADTT and then adding or subtracting to accommodate each of the other factors. Respondents believed this may give undue weight to densely populated regions with the associated large regional distribution movements. Respondents also noted that this led to illogical results that appear to be related to data discrepancies between States.

Comments also addressed thresholds for the criteria used for designation. Several comments flagged the limits for AADTT and population used in the designation process as being too high. In particular, comments noted that the AADTT threshold of 8,500 trucks to identify roadway segments was set too high and precluded the establishment of a rational and connected national network, which they argued was the fundamental task of the national designation. Respondents advocated for a percent of trucks in the AADTT and a 1,500 AADTT threshold for the highway-only PFN. The commenters felt that these changes could provide a more useful picture of the freight economic corridors the Nation relies on to support interstate and international commerce.

Respondents also noted that the functional classification of roadways should be changed to include collectors and above, and to consider the allowance of lower vehicle classifications of truck traffic. Others argued that the percentage of trucks should not be the deciding factor but rather one of many factors considered for highway-only PFN designation, including connectivity to and between freight facilities. Finally, respondents believed the 25 percent AADTT requirement proposed for designating a CRFC corridor would be too restrictive for identifying urban area routes; they proposed using a separate data threshold for urban area freight corridor designation.

In response, FHWA acknowledges that AADTT levels had a fundamental role in the highway-only PFN designation process. The FHWA selected the AADTT and percent of truck traffic thresholds to meet the 27,000-mile limitation set in statute. The CRFC threshold of 25 percent truck traffic was set by statute in MAP–21. When identifying data from certain roadway classification and truck types, the FHWA focused on aspects of freight that would be most relevant to national goods movement, while also limiting the scope of the highway-only PFN to meet the mileage threshold.

Respondents expressed that to develop the highway-only PFN effectively, FHWA must provide a stronger consultative role for State DOTs to identify the critical individual State components of the highway-only PFN. They felt that FHWA should build as much flexibility into the designation process as possible, especially by providing the States with an opportunity to identify an alternative network of freight highway routes or corridors. Further, the States were thought to be in the best position to regularly review the designated network for updates and revisions.

In response, FHWA agrees that involvement of State DOTs, MPOs, local agencies, and the private sector is key to developing a national or primary freight network. The FHWA also recognizes the need to have national consistency in the approach and scale of facilities included on a freight network. The FHWA encourages States to use State Freight Plans and to consult with State Freight Advisory Committees to identify facilities most critical to freight movement in each State.

A few comments recommended using the United States Census definition for urban areas instead of those with a population of 200,000 or more. In the Census definition, urbanized areas consist of territory that contains 50,000 or more people. Respondents criticized FHWA's use of the higher population threshold to meet the ''arbitrary'' limit of 27,000 centerline miles. Respondents noted that significant national and international trade flows to and from mid-size communities across the country are missed at the 200,000 population level.

In response, FHWA recognizes that the approach employed for connecting population areas of 200,000 or greater risks bypassing areas of important freight activity. However, FHWA encountered difficulty keeping the highway-only PFN to under 27,000 centerline roadway miles under scenarios that included all population centers of 50,000 or more people.

Furthermore, the lack of a stated application for the highway-only PFN and NFN introduced uncertainty into the designation process. Without a better understanding of the goals for the highway-only PFN, it was challenging to weight the factors for designation and to gauge which resulting network would best meet freight planning and investment needs. Each individual criterion yields different network coverage when compared to the other factors. The FHWA undertook an extensive research effort to fully understand the challenges of the proposed criteria and to develop a methodology that would generate the most comprehensive network. This resulted in dozens of scenarios that did not satisfy the mileage cap or the inclusion of all of the statutory criteria. The aggregation of these factors results in a map that is difficult to limit to 27,000 miles without some significant prioritization of the factors and their thresholds. Further, FHWA acknowledges that the 27,000-mile highway-only PFN does not meet the statutory criterion for network connectivity. To fix these problems, the alternative methodology applied by FHWA during the highway-only PFN development resulted in the second, comprehensive map that exceeded the statutory cap but is inclusive of all the criteria suggested in MAP–21 and reaches more population centers.

Centerline Versus Corridor Approach

The majority of respondents expressed concern regarding the fragmented nature of the highway-only PFN. While it was widely understood that the non-contiguous highway-only PFN resulted from a need to meet competing statutory factors under a mileage threshold, respondents recommended that FHWA designate a continuous and linked multistate network of transportation infrastructure that provides a high level of support for international, national, and State economies. Some suggested the highway-only PFN use a corridor approach instead of the statutory requirement for measuring centerline roadway miles. Respondents agreed with FHWA's suggestion that corridor-level analysis and investment has the potential for widespread freight benefits and can improve the performance and efficiency of the highway-only PFN.

These respondents provided suggestions for a more comprehensive corridor-based approach to the highway-only PFN to designate multiple parallel routes in each region that provide a high level of support for international, national, and State economies and connect regional population and economic centers. Comments noted that the use of corridor miles rather than centerline miles would allow greater flexibility for States and local jurisdictions for funding opportunities and in applying future performance measures, not only to a single identified route but also to important intermodal and urban connectors as well as nearby parallel routes for use in freight-related congestion mitigation. In addition, commenters noted that these corridor designations will better correspond to a truly multimodal freight network to avoid or allow (as needed) route redundancies between all surface modes.

In response, FHWA agrees that a corridor approach for a highway network allows for coverage of multiple routes as well as freight facilities that satisfy the criteria in MAP–21. However, such an approach will not meet the centerline highway miles requirement of MAP–21. Also, because MAP–21 directed the Secretary to create a highway-only PFN, the lack of consideration of water freight and rail freight movements yields an incomplete representation of the nation's freight corridors.

Data Limitations and Accuracy

The majority of comments that discussed the sources and limitations of data agreed that the national data sets utilized in the development of the draft highway-only PFN were insufficient to understand fully the behavior of freight at the regional and local levels. Respondents mentioned that the data used to develop the highway-only PFN do not accurately reflect freight movements at the State, regional, and local level and that the designation of this network relies on outdated information. Points raised included concerns that existing sources of data are fragmented, incomplete, and often not useful in supporting transportation operations, policy, and investment decisions. For example, one State noted that the Functional Classification Evaluations in their State had not been updated for over 20 years.

Respondents also expressed a view that the quality of the Highway Performance Monitoring System (HPMS) data, which were used to identify AADTT, varies greatly from State to State and depends upon the quantity and location of counts, the age and frequency of counts, and the upkeep of counting equipment. Respondents also felt that the highway-only PFN methodology did not take into account more complete and accurate data available from States, MPOs, and other local stakeholders. Comments suggested that FHWA coordinate with the States and their planning partners to ensure the currency and validity of the data sources that support the analyses conducted over the course of MAP–21 policy development and implementation. Respondents suggested that the next reauthorization fund a comprehensive data program that enables DOT, States, and MPOs to undertake the freight analysis and planning called for in MAP–21 at the national, State, and regional levels. Comments indicated that such a program should include safety data. Because significant freight facilities for energy transport appear in more remote areas and in outlying urban areas, respondents noted that data should capture information in rural and smaller outlying urban areas, as well as major metropolitan centers.

Comments noted that access to private sector data is needed as well as other proprietary sources of real-time data. Respondents noted that such data can be used to map the most critical first- and last-mile segments, including rural areas. Comments also recommended giving DOTs and MPOs access to reliable and inexpensive data to conduct sound planning.

In response, FHWA notes that goods movement occurs in a very fluid environment. During the development of the draft highway-only PFN, and as an internal reference point of comparison to an earlier mapping effort, FHWA took the major freight corridors map that was originally developed for Freight Story 2008 and ran an analysis in the spring of 2013 to see how that map would look using current data. The Freight Story 2008 map contained 27,500 miles: 26,000 miles based on truck data and parallel intermodal rail lines and 1,500 miles representing goods movement on parallel major bulk rail lines or waterways. Using the same methodology with 2011 HPMS and rail data, data revealed that the mileage based solely on the truck and intermodal rail activity had grown to over 31,000 miles of roads since 2008, not including consideration of growth in other freight modes on parallel major bulk rail lines or waterways.

The FHWA recognizes that the data utilized for the development of the final highway-only PFN comprises the best information available on freight behavior at a national level. Nevertheless, national data is not sufficient to understand fully the behavior of freight at the regional and local levels. In particular, urban areas include a freight-generating population and in most cases, are the site of significant freight facilities where highway freight intersects with other modes at rail yards, ports, and major airports. These ''first- and last- mile'' connections, which also occur in rural areas, do not always show up in data sets. In order to develop a network that provides a better picture of freight in urban and rural areas, additional data collection at State and local levels is needed to improve the assessment of local and regional freight trends. This will require coordination with stakeholders at a local, State, and regional level. This data could provide a better understanding of seasonal and regional trends around the country that national data sets often do not capture.

The FHWA acknowledges a continuing national need for more robust data collection methods. The FHWA also acknowledges that additional coordination with MPOs and State DOTs is needed for future designation of the highway-only PFN and any other freight networks to address some of the data issues of the final highway-only PFN. As part of its development of an MFN and for any future designation of the highway-only PFN or other freight networks, DOT will seek additional coordination with MPOs and State DOTs to address some of the outlying issues remaining in this iteration of the network.

NFN Use by Freight Stakeholders in the Future

Because MAP–21 did not provide a specific purpose for the highway-only PFN, it was challenging to establish thresholds in the methodology and prioritize criteria to achieve the mileage limitation when it was unclear how the highway-only PFN and the NFN would be utilized. To better inform the process, FHWA sought comments on how the NFN and its components could be used by freight stakeholders in the future. A number of respondents echoed the concern that the future use of the NFN and highway-only PFN could not be identified without understanding its purpose and goals in relation to transportation policy and programs. Respondents requested additional information from DOT and Congress, with some recommending that the next transportation bill clearly identify a policy and provide funding for NFN or highway-only PFN facilities.

Many comments linked the highway-only PFN to funding, believing the highway-only PFN would be eventually be used to prioritize funding for projects. Some respondents proposed that Congress use this network for strategic investment in freight on a national network of key freight routes by specifically directing Federal highway funding through a formula program apportioned to States. They felt it would be appropriate for Congress to direct most of this funding to the NFN, with the addition of urban routes. There was concern about using the more limited highway-only PFN to allocate or apportion resources without making adjustments to the methodology. Suggestions for improving the map for directing investment included using the NFN, which includes the Interstate System, and adding urban routes, intermodal connectors, and last- and first-mile connectors.

Some respondents indicated funding should not be directed until the designation is vetted by States and MPOs and that resources should not be directed away from other highway programs to fund NFN-related projects. Respondents also suggested that DOT work with Governors to develop and evaluate funding options for a multimodal NFN that takes into account States' transportation infrastructure assets and limitations as detailed in State Freight Plans. The notice elicited concerns relating to restrictions on the ability to shift infrastructure funding to non-designated facilities and the potential assessment of freight user fees.

Other commenters were concerned that the NFN or highway-only PFN would be used in the future to impose restrictions on how the designated infrastructure could be used or impose minimum investment requirements. In addition, commenters raised concerns regarding the ease and speed of the re-designation process. Commenters also cautioned against using this network to direct the use of private property. Respondents requested that these and other potential issues be given consideration and that the government offer carefully structured and definitive guidance. In the absence of such guidance, respondents stated that they could not fully support the designation of any infrastructure, public or private, as a part of the highway-only PFN.

Respondents viewed the NFN as a tool to facilitate a closer working relationship between the government and private sectors who share an interest in a fully-functioning freight system. Having State DOTs, MPOs, trucking companies, the manufacturing and warehousing industries, and other highway freight stakeholders participate in a closer working relationship would be helpful to determine where limited highway funding can best be invested and where it will have the greatest and most widespread positive return on investment. Respondents supported the use of the network to strategically direct resources to improve system performance for efficient movement of freight on the highway portion of the National Freight System. They projected that the most important outcome would be the ability to identify and focus attention on the highways and related projects that would target freight mobility problems and lead to improved freight flow to maintain and enhance U.S. economic activity.

Respondents mentioned that the NFN may be a useful resource or tool in developing State Freight Networks and State Freight Plans. Respondents felt that designation of a highway-only PFN could aid States in such freight planning efforts as the designation of CRFCs, the development and update of State Freight Plans, input to State Freight Advisory Councils, and other planning activities. Respondents recommend that FHWA give greater weight to factors that States suggest, including consideration of State Freight Plans that may already be developed.

Respondents commented that the highway-only PFN could provide the locations to target for valuable data collecting efforts to measure the fluidity of highway freight network. For example, the identification of segments with the highest AADTT could provide the location of potential capacity constraints and congestion issues.

In response, FHWA appreciates the concerns related to the lack of a stated application for the highway-only PFN and NFN. Without a better understanding of the goals for the highway-only PFN, the FHWA found it challenging to weight the factors for designation relative to one another and to gauge whether the resulting network would meet future public planning and investment needs. Each individual criterion yields different network coverage when compared to the simulations for the other factors. The aggregation of all the suggested criteria resulted in a map that was difficult to limit to 27,000 miles without some significant prioritization of the many factors and application of numerical thresholds in each measure.

The FHWA believes a multimodal NFN as described in the Department's GROW AMERICA surface transportation proposal will have the ability to inform public and private planning, to help prioritize for Federal investment, to aid the public and private sector in strategically directing resources, and to support Federal decisionmaking to achieve the national freight policy goals.

NFN and Multimodal National Freight System

Respondents provided feedback on how the NFN fits into a larger multimodal national freight system and how to define a multimodal national freight system. Nearly 11 percent of the comments addressed this topic. The majority of respondents on this topic acknowledged that the highway-only PFN is a highway-only network and that the highway-only PFN and NFN are therefore incomplete in their representation of the multimodal system that is required to efficiently and effectively move freight in the United States. The FHWA agrees with these comments.

Comments suggested the highway-only PFN be designated in a way that would ensure future inclusion of the other freight modes that comprise the Nation's freight and goods transportation system. Respondents also voiced concern that the draft highway-only PFN did not include most of the segments that make up the first and last mile of key freight movements, which include local roads providing access to ports, intermodal facilities, rail yards, and other freight facilities. FHWA agrees with these comments.

Most respondents recognized these omissions were the result of the mileage cap and recommended FHWA advocate for the elimination of the mileage threshold. The FHWA agrees with these comments and has taken action by addressing this in both the Department's GROW AMERICA surface transportation proposal and the National Strategic Freight Plan.

Respondents believe that the highway NFN could be an important modal component of a multimodal national freight system, but that the NFN is not sufficient to describe the entirety of a system that moves freight by a variety of modes. The FHWA agrees with these comments.

Some comments strongly encouraged DOT to focus the National Freight Strategic Plan and other freight transportation work on the entire multimodal freight system, and recommended that the final highway-only PFN and NFN maps be overlaid with intermodal connectors, ports of entry, marine highways (waterborne routes), important inland river corridors and Class 1 rail lines to show a more comprehensive surface transportation network critical to the movement of freight. The FHWA agrees with these comments and has followed this recommendation.

Comments indicated the NFN should be combined with the other modes of transportation to form a true multimodal system that operates economically, efficiently, and harmoniously in the movement of freight both nationally and internationally. Respondents suggested building upon the FHWA's initial 41,518 centerline mile highway network as a basis for ultimately developing a more comprehensive, multimodal freight network. In addition, comments noted that FHWA and State DOTs should compare the highway freight network map with strategic freight railroad, waterway system, and aviation maps to locate connectivity gaps. Commenters recommended that highway routes connecting to intermodal facility locations be included in the NFN to ensure that the network reflects a well-connected multimodal freight system. The FHWA agrees with these comments and believes this is an activity that should be undertaken by DOT in consultation with States and MPOs.

Many respondents supported the expansion of this network to a more broadly defined multimodal network. They recommend that dedicated funding be made available to support projects included in an approved Regional Transportation Plan to enhance the performance and efficiency of the highway-only PFN and NFN, as well as to mitigate adverse freight movement impacts on surrounding communities and include eligibility for highway-rail grade separations and other mitigation projects located along nationally significant trade corridors.

In summary, FHWA agrees with the comments. In response to these recommendations, FHWA is providing the final designation of the highway-only PFN as required by MAP–21, while concurrently and simultaneously releasing a MFN as part of the National Freight Strategic Plan. The release of this Plan coincides with the issuance of this notice, and the Department will seek public comment on its proposed MFN.

Suggestions for an Urban-Area Route Designation Process

State DOTs and MPOs provided comments in partnership with freight facility owners in support of a metropolitan area designation process similar to the CRFC designation. The comments included suggestions for methodologies and more precise data that could be used in the identification of these critical urban freight routes. Almost 14 percent of total comments related to this topic.

Supporters felt this additional network modification is necessary to improve the accuracy and utility of the highway-only PFN. These commenters felt that the next reauthorization should make provisions for designation of urban freight routes and connectors. It was noted that metropolitan areas are the economic engines of the 21st Century economy and that most of the population and most of the high-value and high-tech manufacturing is in metropolitan areas. Comments also noted that much of the cost of moving freight is the result of the congestion encountered in urban areas.

Respondents envisioned that the FHWA would reach out to local stakeholders to establish a formal urban-area route designation process and methodology. They felt strongly that State DOTs and urban representatives should be allowed to provide input on what factors might drive urban designations within the highway-only PFN. Respondents indicated they believe that State DOTs, MPOs, and other local agencies have the knowledge and data to identify the critical urban-area freight corridors and therefore these agencies should be responsible for identifying the critical urban routes and submitting these to FHWA.

Some comments proposed that FHWA provide the framework and basic guidelines for designation, but give States the ultimate responsibility in establishing parameters and thresholds, in addition to identifying the routes for inclusion in the network. The limits to be set by the States and localities, as proposed by the commenters, would take into consideration the freight demand relative to a State's population, consumption and production, and commodity flows for designating both rural and urban freight systems.

Respondents suggested the use of the following criteria for the Critical Urban Freight Corridors (CUFC) designation: (1) High truck volume corridors; (2) strategic military facilities; (3) connections to major intermodal facilities; (4) significant freight intensive land uses on manufacturing and warehouse industrial lands; (5) energy exploration, development, installation, or production areas; (6) areas of significant congestion and delay for trucks; (7) locations of at-grade highway rail crossings; (8) number and severity of truck crashes; (9) geometric deficiencies that inhibit safe or efficient truck movement; (10) negative community/environmental impacts caused by truck traffic; (11) motor carrier enforcement and safety efforts; (12) availability of overnight or safe truck parking; (13) connections between major points of entry or key trip generators and the highway-only PFN (supported by locally derived data and analysis); (14) connectivity with the other elements of the NFN; and (15) freight value. Commenters did not support the inclusion of truck percent of AADT because they felt that it had little relevance in urban areas.

Respondents expressed the view that both the national freight strategy and the networks should include consideration for the urban first and last miles needed to make a complete freight trip.

Others suggested that FHWA should not set the thresholds for truck volume and percent for urban areas, but instead should require that each State set the truck volume and/or truck percent thresholds for their State. The commenters suggested that the context of percent truck traffic and/or truck volumes varied significantly across the country with regard to each State's consumption or production of goods and services and as a result, the thresholds should not be standardized for the Nation.

In addition, comments noted that States should be responsible for working with State freight stakeholders as well as MPOs and Rural Planning Organizations (RPO) in the designation of such systems within their respective State and that States should coordinate with neighboring States to ensure systems take into consideration multistate freight flows. They also noted that as with the CRFC designation process, this process should allow flexibility for States and metro areas to determine the most strategic and important freight routes.

Respondents believed that engaging State DOTs and MPOs in proposing urban-area freight routes would maximize the utility and relevance of each agency's existing freight planning processes, plans, and study initiatives. They felt that by elevating the responsibility of State and local entities to identify criteria, set targets, and identify CUFCs, freight planning would be in the forefront and freight plans would be aligned with other transportation, economic development, and environmental plans or programs.

In response, FHWA recognizes that many highway freight bottlenecks, chokepoints and first and last mile connectors are located in both rural and urban areas. This makes these areas critical to the efficiency of domestic and international supply chains. Although Federal law provided a mechanism to enable connectivity to critical freight ''last mile'' origins and destinations in rural areas through the designation of CRFC by the States, the language in 23 U.S.C. 167(d) lacks a parallel process for designating critical urban freight routes to address the need for connectivity to urban areas. Further, public and private sector representatives are increasingly emphasizing the significant role of cities and metropolitan areas in the safe and efficient movement of freight.

Given the lack of precision of national data at the urban level, FHWA believes there is merit in establishing a process for MPOs, RPOs, and State DOTs to designate critical urban freight routes and critical rural freight corridors that may have been missed when analyzing national-level data but are nonetheless important for freight movement to, from, and through an urban and rural areas. The FHWA recognizes that cities are best positioned to understand the complexities of freight movement in individual urban and rural areas, including current freight movement patterns, and plans or projections for shifts in freight movement within these areas, and could assist in the identification of thresholds for use in the designation of CUFCs.

In response to these comments, FHWA has begun developing preliminary concepts to aid in the designation of freight corridors should they be included in future legislation. The Department has also included language in GROW AMERICA surface transportation proposal that incorporates additional criteria in a NFN designation that gives consideration to bottlenecks and other impediments contributing to significant measurable congestion and delay in freight movement, facilities of future freight importance based on input from stakeholders, and an analysis of projections for future growth and changes to the freight system. In addition, the Department included language that considers elements of the freight system identified and documented by States and MPOs using national or local data as having critical freight importance to the region as part of the NFN.

Funding Issues

Nearly 9 percent of total comments received mentioned funding. In general, respondents believe that the value of the highway-only PFN is limited without the provision of dedicated resources to address freight needs. Some referenced the need for these funds to maintain and enhance a multimodal national transportation system. Some commenters felt that existing Federal funding should not be diverted to the NFN unless current program funding levels could at least be maintained or expanded. Comments also noted that State DOTs and MPOs cannot fully comment on the impact of NFN designations without understanding the potential funding implications, which are not addressed in MAP–21. Further, they cautioned that the NFN should not be used to direct State or Federal investment in freight transportation systems until the network has been revised to reflect highways that serve continuous and efficient freight flow.

The commenters also suggested that planning and policy work would be of limited value if funds are not provided to realize the planning vision. Comments noted the highway-only PFN and an expanded multimodal national freight system could help make the case for a program that leverages local, regional, and private funds to invest in critical freight infrastructure needs.

Others respondents expressed concern about supporting a system that lacks connectivity and does not accurately represent freight trends. As previously discussed in this notice, some respondents recommended refraining from using the NFN for directing State or Federal investment in freight transportation systems. They noted that when the NFN has been restructured to reflect highways that serve continuous and efficient freight flow and is supported by Federal funds accordingly, freight stakeholders should be able to use this system as a benchmark around which to center economic activity and investment. Others mentioned that they will likely focus investment and other decisions on the strategic freight network designated in their State freight plan rather than the NFN. Comments noted that some jurisdictions have already designated a strategic freight network of key corridors which connect additional areas of the State and provide redundancy to Interstate corridors.

Most respondents expressed new funding should be prioritized to support sustainable economic vitality and global competitiveness for the U.S. Some respondents stated that this funding program should support national freight movement through enhancing the NFN by funding highway traffic count stations, truck weigh stations, truck rest area facilities, state of good repair for freight-traveled pavement and bridges, and operations management priorities such as congestion management and travel time reliability. Respondents suggested that funding could also be made available to support freight projects included in an approved Regional Transportation Plan or Transportation Improvement Program. In their view, these projects should be prioritized on the basis of demonstrable contribution to the performance and efficiency of the highway-only PFN and NFN, as well as to mitigate adverse freight movement impacts on surrounding communities.

Respondents also noted that although MAP–21 provides modest funding for the Projects of National and Regional Significance (PNRS), they felt that the PNRS program should be expanded to provide freight funding using a more robust, multimodal PFN. They suggest an expanded PNRS program should build on considerable past efforts, including the freight corridor designations and funding program established under the previous Federal transportation authorization, the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA–LU).

In response, FHWA recognizes the need for additional freight investment in the U.S. That is why the GROW AMERICA proposes a six-year, $9 billion multimodal freight incentive program and a 6-year, $9 billion national freight infrastructure program. Given the increased emphasis on transportation performance management, FHWA believes it is prudent not to limit funding to a specific facility on a network map but to allow State and local governments, the private sector, and other entities to determine the best solutions to improving the safety and efficiency of the freight system through data and analysis in State Freight Plans and with the active engagement of the State Freight Advisory Committees.

Other Issues Raised in Comments

The sections below summarize comments received on other issues raised in response to the solicitation of comments on the draft highway-only PFN.

Primary Freight Network Update Cycle

Several comments raised concerns regarding the 10-year timeframe for updating the highway-only PFN. Comments expressed that this length of time does not reflect the changing nature of economic patterns and goods movement. Comments noted there are constant changes in market trends, population, infrastructure, technology, data, demographics, globalization, and investment. Respondents believe that a 10- or 20-year cycle will not allow policy makers and stakeholders to make optimal use of time, resources, and funding. With the MPO planning process based on a 4-year cycle, and freight and rail plans updated on 5-year cycles, respondents recommended FHWA pursue reducing the update cycle to match other metropolitan transportation planning cycles or at a minimum, provide an amendment process that enables States to request and receive approval for highway-only PFN changes between 10-year updates.

In response, FHWA agrees that the current 10-year update cycle is not sufficient. The FHWA does not have statutory authority to change the re-designation cycle but has proposed a 5-year update cycle in the GROW AMERICA surface transportation proposal. The Department will also be proposing a 5-year update cycle as part of the MFN in the National Strategic Freight Plan.

Highway Safety Considerations

A small number of respondents raised the issue of highway safety and the highway-only PFN. Stakeholders noted that safety issues and performance measures should be considered in the establishment of the NFN. These comments emphasize that safety data needs to be part of the analysis and improving safety on our freight systems should be a goal of any Federal action related to the establishment of a NFN. Comments noted that factors should include freight moved by trucks, truck crash rates, the underlying causes of highway deaths and injuries, and infrastructure maintenance and vulnerabilities. Respondents noted that the highway-only PFN should take into account these interactions and impacts on the traveling public, especially if the highway-only PFN designation will increase truck traffic on those roadways.

In response, safety is the top priority for DOT and is a main goal of MAP–21's National Freight Policy. Although safety is not an express goal or factor in the designation of the highway-only PFN, each State's Strategic Highway Safety Plan (SHSP) affords a comprehensive approach and in-depth analysis for truck safety. The SHSPs are statewide, coordinated safety plans that provide a framework for reducing highway fatalities and serious injuries on all public roads. An SHSP identifies a State's key safety needs and guides investment decisions toward strategies and countermeasure with the most potential to save lives and prevent injuries. States are required to develop, implement, evaluate, and update an SHSP that identifies and analyzes highway safety problems and opportunities on all public roads.

Section 1118(b)(3) of MAP–21 requires that State Freight Plans include a description of how the plan will improve the ability of the State to meet the national freight goals established under section 167 of title 23, U.S.C., which include safety, and consideration of innovative technologies and operational strategies to improve the safety of freight movement. Sections 1118(b)(5) and (6) of MAP–21 also require consideration of routes projected to substantially deteriorate due to heavy vehicles and of areas of reduced mobility such as bottlenecks. The interim guidance for developing State Freight Plans pursuant to MAP–21 includes numerous safety elements.

There are data sources available to help States and MPOs measure these aspects of truck safety. The FHWA will work with our partners to ensure truck safety is considered and analyzed as appropriate in the SHSPs, as well as in State Freight Plans. The FHWA believes it is important to identify critical infrastructure through a multimodal freight network and to continue working with our partners and stakeholders to encourage actions to improve truck safety for these nationally significant areas and across the Nation's roadways.

Environmental and Greenhouse Gas Emissions Considerations

Respondents noted that the highway-only PFN designation does not incorporate environmental considerations, including greenhouse gas reduction and public health. More specifically, in the description of the methods and data sources used, no data sources incorporating environmental data were used. Comments noted this could be a critical element that would validate the designations and ensure that limited funding also provides environmental and public health benefits. Comments noted that the network should directly establish environmental and public health criteria (*e.g.,* emission reduction benefits) that are used in the designation process and later used in assessment of projects receiving funding, priority, or other benefits. Comments also noted that including environmental criteria provides additional contextual data to the network for understanding implications of a proposed project or identifying alternatives when viewed as a map overlay or other analysis.

In response, FHWA acknowledges the importance of understanding and mitigating the negative effects of freight on the environment and on communities. Freight projects, like other transportation projects, should consider and address environmental justice and access, air quality, water quality, and noise pollution, for example. With respect to mapping a freight network to reflect these aspects, however, the NFN and highway-only PFN requirements do not include factors relating to the environment or public health. The MAP–21 directed the Department to designate ''not more than 27,000 centerline miles of existing roadway that are most critical for the movement of freight'' in an NFN that is focused on ''improved system performance for efficient movement of freight.'' Further, national-level environmental data is limited in being able to offer a comprehensive assessment of these issues. In order to meet the various Federal requirements and advance human and environmental protection, the FHWA believes it is important to first identify the critical infrastructure in a multimodal freight network and then work with our partners and stakeholders to protect the environment and public health.

Designation of Private Roads and Rail Lines

Several respondents discussed the inclusion of private roads and rail lines, with many calling for the incorporation of private rail systems in a multimodal PFN. However, respondents representing railroads expressed concern that there is no information as to how a designation of a facility as part of the highway-only PFN will be used in the future. As discussed more generally in the previous section on ''NFN Use by Freight Stakeholders in the Future,'' commenters urged DOT to define the highway-only PFN's purpose before determining whether to include private infrastructure on the highway-only PFN or the NFN. Railroad stakeholders were concerned that Congress would establish minimum investment requirements or restrict future uses of the rail infrastructure. They questioned whether designation of private rail facilities would have consequences for funding decisions for these facilities, impact the ability to shift infrastructure funding to non-designated facilities, or result in freight user fees.

In response, FHWA acknowledges there are potential challenges related to designating private infrastructure as part of a highway-only PFN or NFN. However, because the Nation's multimodal freight system is comprised of both public and private infrastructure and the interdependencies, redundancies, and efficiencies of this entire network is relevant to understanding freight movement, it would be very beneficial to national and regional planning to include both types in a multimodal freight network. This is why we are concurrently and simultaneously releasing the draft Nation Freight Strategic Plan. The FHWA will continue to consider the implications of designating private and non-Federal infrastructure as they relate to the goals, objectives, and a future purpose of an MFN.

Intermodal Connectors

Some respondents supported incorporating all intermodal connections, arguing that this was imperative in building a seamless highway-only PFN. Respondents also highlighted the importance of having an updated listing of NHS freight intermodal connectors on the highway-only PFN map. Respondents recommended that intermodal connectors, specifically if they are adjacent to a trade gateway, major industrial, distribution and consumption area, seaport, river terminal or designated freight corridor, be prioritized for inclusion in the final highway-only PFN. Specific comments requested the inclusion of marine highways and urban intermodal connectors. Respondents also supported establishing a formal process for designating critical urban and rural freight routes that include first and last miles and/or intermodal connectors.

Comments touched on the need to include in the highway-only PFN more than just the intermodal connectors occurring in population centers of 200,000 or more. While the majority of commenters understood why FHWA chose to use the metric of AADTT to identify which segments of the NHS would appear on the highway-only PFN, there was confusion about why AADTT was not also used to measure and select intermodal connectors. Commenters were concerned with the fact that data sources used to analyze the intermodal connectors are incomplete. The respondents strongly recommended that FHWA consult with State DOTs, which, by working with their regional and local partners could assist the Federal Government in identifying routes that will ensure network connectivity to nationally significant intermodal facilities.

In response, FHWA agrees that NHS intermodal connectors are vital elements of the NFN. If the highway-only PFN was not mileage-constrained at 27,000 miles, priority consideration would be given to including all relevant urban and non-urban NHS freight intermodal connectors (these are included in the 41,518 mile comprehensive network). To adhere to the mileage cap, FHWA excluded those not meeting the AADTT threshold from the highway-only PFN. Regarding data, FHWA's listing of NHS intermodal connectors is current. However, FHWA does not have comprehensive data on the conditions and performance of each NHS intermodal connector. The FHWA supports efforts by infrastructure owners to collect comprehensive data on these facilities and update it on a frequent basis to help measure the performance of these connectors. The FHWA is conducting a research study to assess the conditions and performance of a representative sample of intermodal connectors. This information will assist the agency, its partners, and infrastructure owners in better assessing the current use of freight intermodal connectors, freight connector condition and performance, and in identifying connector impediments and solutions to allocate resources for the efficient flow of goods.

Military Bases/Facilities

Respondents requested that FHWA add strategic military bases to the origins and destinations of freight movements to be considered in the highway-only PFN designation. Comments indicated this would help provide for logistics that support a strong national defense. Respondents sought inclusion of U.S. Military Power

Projection Platform locations, as well as seaports and airports, because of their importance to national defense and their role as centers of significant regional economic activity. Respondents mentioned that the U.S. Army and U.S. Marine Corps have a list of power projection platforms, officially designated seaports of embarkation, and aerial ports of embarkation, that should be considered for the designation of these facilities. Respondents also noted that the Department of Defense (DOD) and the U.S. Maritime Administration have designated certain commercial seaports as ''Strategic Ports'' as part of the National Ports Readiness Network, because of the significant role they play in supporting port readiness, emergency operations, and cargo throughput capacity for global projection of our Armed Forces. Respondents supported FHWA's focus on the efficiency of freight movement in the highway-only PFN and believe that a benefit to freight movement in general will be a benefit to DOD cargo movement.

In response, FHWA acknowledges the importance of a variety of modes and types of facilities for the efficient movement of freight for the U.S. Armed Forces. The FHWA believes there are various national highway systems that have already been designated to meet the specific needs of the military and transportation of equipment and supplies. These systems include the U.S. Interstate Highway System, which was in part based on roads necessary for national defense, and the Strategic Highway Network (STRAHNET). The STRAHNET and the Strategic Rail Corridor Network were established as critical to DOD domestic operations, such as emergency mobilization and peacetime movement of heavy armor, fuel, ammunition, repair parts, food, and other commodities to support U.S. military operations. As a result, FHWA does not think access to every military base or strategic port needs to be part of the highway-only PFN. The DOT will consider how best to include them on the MFN. The FHWA has identified a number of intermodal connectors under the 41,000 comprehensive networks that connect to military bases/facilities and will include these NHS freight intermodal connectors in future designations of the highway-only PFN if the mileage cap is increased. In addition, the entire mileage of the final highway-only PFN is part of STRAHNET.

National Freight Advisory Committee (NFAC)

The Secretary of Transportation established the National Freight Advisory Committee (NFAC) in 2013 to provide advice and recommendations on matters related to freight transportation in the United States. This Committee is composed of representatives from the public and private sector, local and State governments, labor unions, safety organizations, transportation organizations, freight shipping companies, and other freight stakeholder organizations. The NFAC undertook an extensive review of the draft designation of the highway-only PFN and provided the comments and recommendations, which can be found here: *https://www.transportation.gov/sites/dot.gov/files/docs/NFAC%20Joint%20Comment%20to%20Hwy%20PFN%20-Initial%20Comments%20Consolidated.pdf.*

The NFAC stated that it did not endorse the proposed highway-only PFN and directed its comments to both Congress and DOT. Its primary concerns were related to the size and nature of the 27,000 centerline miles limitation and the need for a multimodal freight network. The NFAC felt the draft highway-only PFN lacked critical elements of first and last mile connectors, especially in urban areas, as well as port connectors and North American gateway connections. The Committee preferred a hub- and corridor-based, multimodal approach for designation and opposed the statutory imposition of a mileage threshold. They urged DOT to proceed with a multimodal network, engaging the public and including an urban designation process. They supported the use of AADTT in a highway-only PFN. In the absence of a revised highway-only PFN, they preferred that funding be prioritized to solve truck congestion on existing freight corridors and gateways.

Regarding the lack of a stated purpose for the PFN, the NFAC felt DOT should develop goals in coordination with a variety of public and private sector stakeholders and use these goals to inform the development of the Conditions and Performance Report and the National Freight Strategic Plan. They felt that these goals must address the intended use of the highway-only PFN, whether it should have a role in prioritizing needs or justifying investment, and why it did not give full consideration to first or last mile segments. According to the NFAC, the lack of goals impedes the ability to have a national investment strategy.

When highway-only PFN goals are established, the NFAC believes flexible investment strategies should be afforded to the States and private railroads should retain their autonomy to manage their infrastructure. They called on Congress in the next reauthorization to provide for a comprehensive data program and for access to private sector data and other sources to support freight planning. They cited the value of State Freight Plans and State Freight Advisory Committees in informing national planning and sought to make these mandatory. There was strong support for local and State leadership in designating urban freight networks. They called on DOT to consider and incorporate future trends in goods movement, and to re-designate or modify more frequently than the 10-year cycle. The NFAC urged the creation of dedicated funding from additional revenue sources to support both planning and to incentivize investment in projects.

The NFAC further recommended that DOT consider where freight should be encouraged to move as opposed to only reflecting current movements. The Committee requested the location of structurally deficient bridges or ''freight restricted bridges'' be considered for the highway-only PFN. They also submitted the following list of routes they felt was missing from the highway-only PFN:

- Primary high-traffic connectors between freight terminals and Interstate highways;
- Intermodal connectors, connections to logistics centers and manufacturing centers (freight origin and destination points);
- Highway segments that provide unique through-routes for 53-foot national standard tractor-trailers;
- Metropolitan components and urban connectors;
- Critical highways based on where activity is happening, not just those on the Interstate system (non-Interstate networks);
- Farm-to-market routes;
- Waterways;
- International gateways such as highway border crossings, airports, seaports, Great Lakes ports and river terminals that provide significant freight movement; and
- Interstate crossings connecting urban areas with national manufacturers and distribution centers in different states.

Highway-Only PFN Data and Methodology

Section 167(c) of title 23, U.S.C., directed the Secretary to establish a NFN to assist States in strategically directing resources toward improved system performance for efficient movement of freight on the highway portion of the Nation's freight transportation system. Consistent with the national freight policy in MAP–21, DOT's goal was to designate a highway-only PFN that would improve system performance, maximize freight efficiency, and be effectively integrated with the entire freight transportation system, including non-highway modes of freight transport. The FHWA explored the development of a NFN to provide connectivity between and throughout the three elements that comprise the NFN (highway-only PFN, remainder of the Interstate System, and CRFC).

Data Used for the Designation of the Highway-Only Primary Freight Network

In undertaking the highway-only PFN designation, FHWA developed multiple scenarios to identify a network that represents the most critical highway portions of the United States freight system. The highway-only PFN was informed by measurable and objective national data. In performing the analysis that led to the development of the highway-only PFN, FHWA considered the following criteria and data sources, which are further described at the listed Web locations:

Factor	Data source	Parameters
Origins/d destinations of freight.	FAF 3.4 *http://faf.ornl.gov/fafweb/Extraction0.aspx*	Connect top origins/destinations.
Freight tonnage and value by highways.	FAF 3.4 *http://faf.ornl.gov/fafweb/Extraction0.aspx*	Include top routes by weight of freight transported; Include top routes by value of commodity transported.
Percentage of AADTT on principal arterials.	HPMS 2010 AADTT *http://www.fhwa.dot.gov/policyinformation/hpms.cfm*.	Include top routes by percentage of AADTT on principal arterials.
AADTT on principal arterials	HPMS 2010 AADTT *http://www.fhwa.dot.gov/policyinformation/hpms.cfm*.	Include top routes by AADTT on principal arterials.
Land and maritime ports of entry.	USACE U.S. Army Corps, Navigation Data Center, special request, October 2012 via BTS.	Connect top seaports and river terminals ranked by weight and values.
	MARAD *http://www.marad.dot.gov/documents/Container_by_US_Customs_Ports.xls*.	Connect top seaports and river terminals ranked by number of 20-foot equivalent unit containers (TEUs).
	BTS Transborder data *http://www.bts.gov/programs/international/transborder/TBDR_QuickSearch.html*.	Connect top land ports for both weight and values.
Access to energy exploration, development, installation or production areas.	EIA (U.S. Energy Information Administration) *http://www.eia.gov/pub/oil_gas/natural_gas/analysis_publications/maps/maps.htm#geodata*.	Include access to coal basins, top coal mines, coalbed methane fields, natural gas production locations, gas and oil exploration areas.
	Pennwell Mapsearch data via Pipeline and Hazardous Materials Safety Administration (PHMSA) *http://www.mapsearch.com*.	Include access to oil refineries and distribution centers.
	Pennwell Mapsearch data via Pipeline and Hazardous Materials Safety Administration (PHMSA) *http://www.mapsearch.com*.	Include access to pipeline terminal locations.
	Pennwell Mapsearch data via Pipeline and Hazardous Materials Safety Administration (PHMSA) *http://www.mapsearch.com*.	Include access to biodiesel and ethanol plants.
Population centers	2010 Census *http://www.census.gov/cgibin/geo/shapefiles2010/main*.	Connect top urbanized areas; Utilize Census Urbanized Area Boundary for geographic areas.
Network connectivity	FAF 3.4 *http://faf.ornl.gov/fafweb/Extraction0.aspx*	Reduce gaps by connecting highway-only PFN segments to each other or to the Interstate System, or begin/end at access point.

Methodology Used for the Designation of the Highway-Only Primary Freight Network

The FHWA developed the following methodology with the intention of generating a network that could include as many of the MAP–21 criteria as practicable. The FHWA undertook extensive research and numerous approaches to better understand and model the criteria. This research informed our finding that compliance with the mileage cap yields a network that does not sufficiently accommodate the full set of criteria. In order to comply with the mileage cap while still accommodating the statutory criteria, FHWA developed a methodology that prioritized the application of the criteria and set thresholds within the data sets. The FHWA used the following methodology to develop the highway-only PFN:

(1) Used the FAF and HPMS data sets to generate the top 20,000 miles of road segments that qualified in at least two of the following four factors: Value of freight moved by highway; tonnage of freight moved by highway; AADTT on principal arterials; and percentage of AADTT in the annual average daily traffic on principal arterials.

(2) Analyzed the segments identified in Step 1 and gaps between segments for network connectivity. Created the network by connecting segments if the gap between segments was equal to or less than 440 miles (440 miles being the distance a truck could reasonably travel in 1 day). Eliminated a segment if it was less than one-tenth of the length of the nearest qualifying segment on the highway-only PFN.

(3) Identified land ports of entry with truck traffic higher than 75,000 trucks per year. Connected these land ports of entry to the network created in Steps 1 and 2.

(4) Identified the NHS Freight Intermodal Connectors within urban areas with a population of 200,000 or more.[3] The NHS Freight Intermodal Connectors included any connectors categorized as connecting to a freight rail terminal, port, river terminal, or pipeline. In addition, these NHS Freight Intermodal Connectors included routes to the top 50 airports by landed weight of all cargo operations (representing 89 percent of the landed weight of all cargo operations in the U.S.). Connected the NHS Freight Intermodal Connectors back to the network created in Steps 1 and 2 along the route with the highest AADTT using HPMS data.

(5) Identified road segments within urban areas with a population of

[3] The Census defined urban areas (UZAs) were used rather than the adjusted UZAs since these were not available at the time of the analysis.

200,000 or more that have an AADTT of 8,500 trucks/day or more.[4] Connected segments to the network established in Steps 1 and 2 if they were equal to or greater than one-tenth of the length of the nearest qualifying segment on the highway-only PFN. Removed segments not meeting this rule as they were more likely to represent discrete local truck movement unrelated to the national system.

(6) Analyzed the network to determine the relationship to population centers, origins and destinations, ports, river terminals, airports, and rail yards and added minor network connectivity adjustments.

(7) Analyzed the road systems in Alaska, Hawaii, and Puerto Rico using HPMS data. These routes would not otherwise qualify under a connected network model but play a critical role in the movement of products from the agriculture and energy sectors, as well as international import/export functions for their States and urban areas and added roads connecting key seaports to population centers.

(8) Analyzed the network to determine the relationship to energy exploration, development, installation, or production areas. Since the data points for the energy sector are scattered around the United States, often in rural areas, and because some of the related freight may move by barge or other maritime vessel, rail, or even pipeline, FHWA did not presume a truck freight correlation.

(9) Steps 1 through 8 resulted in a network of 41,518 centerline miles, including 37,436 centerline miles of Interstate and 4,082 centerline miles of non-Interstate roads.[5] In order to obtain the 27,000 centerline miles, FHWA identified those segments with the highest AADTT. These road segments represented on the final highway-only PFN map comprise 26,966 miles of centerline roads.

Final Highway-Only Primary Freight Network Map

The FHWA has posted the details of the final initial highway-only PFN, including the 26,966-mile highway-only PFN map, State maps, and lists of designated routes and tables of mileage by State at: *http://ops.fhwa.dot.gov/freight/infrastructure/nfn/index.htm.*

This final highway-only PFN, which is unchanged from the draft released in November 2013, attempts to reflect the many criteria established in MAP–21 while also complying with the mileage cap. As a result, the highway-only PFN results in an unconnected network with major gaps in the system, including components of the global and domestic supply chains. Therefore, DOT is concurrently and simultaneously developing an MFN as part of the National Freight Strategic Plan that better represents the complex multimodal freight system in the U.S. and has proposed the GROW AMERICA legislation that is responsive to the many public comments outlined in this notice.

BILLING CODE 4910–22–P

[4] Ibid.

[5] Readers should note the 2011 HPMS database and the current FAF database differ in the delineation and exact geo-location of the NHS system. This may result in plus/minus 1–2% variation on the total mileage because the mileage is based on the geospatial network and actual mileage reported by States may vary due to vertical and horizontal curves that are not always accurate in GIS databases. The DOT will look to integrate the 2011 HPMS database with the FAF database to reduce variation in future iterations.

Federal Highway Administration

Buy America Waiver Notification

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice.

SUMMARY: This notice provides information regarding FHWA's finding that a Buy America waiver is appropriate for the use of non-domestic fabrication of cable mesh for 8′–0″ high oxidized stainless steel cable net safety fence on Interstate 5, MP 28.7 in San Diego, California.

DATES: The effective date of the waiver is October 26, 2015.

FOR FURTHER INFORMATION CONTACT: For questions about this notice, please contact Mr. Gerald Yakowenko, FHWA Office of Program Administration, (202) 366–1562, or via email at *gerald.yakowenko@dot.gov.* For legal questions, please contact Mr. Jomar Maldonado, FHWA Office of the Chief Counsel, (202) 366–1373, or via email at *Jomar.Maldonado@dot.gov.* Office hours for the FHWA are from 8:00 a.m. to 4:30 p.m., E.T., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Electronic Access

An electronic copy of this document may be downloaded from the **Federal Register**'s home page at: *http://www.archives.gov* and the Government Printing Office's database at: *http://www.access.gpo.gov/nara.*

Background

The FHWA's Buy America policy in 23 CFR 635.410 requires a domestic manufacturing process for any steel or iron products (including protective coatings) that are permanently incorporated in a Federal-aid construction project. The regulation also provides for a waiver of the Buy America requirements when the application would be inconsistent with the public interest or when satisfactory quality domestic steel and iron products are not sufficiently available. This notice provides information regarding FHWA's finding that a Buy America waiver is appropriate for use of non-domestic fabrication process to convert the stainless steel products into safety cable mesh. The stainless steel product for the cable mesh is produced domestically in the United States. However, there is no domestic manufacturer capable of fabricating the stainless steel products into safety cable mesh.

In accordance with Division K, section 122 of the ''Consolidated and Further Continuing Appropriations Act, 2015'' (Pub. L. 113–235), FHWA published a notice of intent to issue a waiver on its Web site (*http://www.fhwa.dot.gov/construction/contracts/waivers.cfm?id=113*) on September 9th. The FHWA received no comments in response to the publication. Based on all the information available to the agency, FHWA concludes that there are no domestic manufacturers capable of fabricating the safety cable mesh.

In accordance with the provisions of section 117 of the SAFETEA–LU Technical Corrections Act of 2008 (Pub. L. 110–244, 122 Stat. 1572), FHWA is providing this notice as its finding that a waiver of Buy America requirements is appropriate. The FHWA invites public comment on this finding for an additional 15 days following the effective date of the finding. Comments may be submitted to FHWA's Web site via the link provided to the waiver page noted above.

Authority: 23 U.S.C. 313; Pub. L. 110–161, 23 CFR 635.410.

Issued on: October 16, 2015.

Gregory G. Nadeau,

Administrator, Federal Highway Administration.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. FD 35962]

Terminal Railroad Association of St. Louis—Trackage Rights Exemption—Norfolk Southern Railway Company

Norfolk Southern Railway Company (NSR), pursuant to a written trackage rights agreement dated July 31, 2015, has agreed to grant limited local trackage rights to the Terminal Railroad Association of St. Louis (TRRA) over approximately 0.49 miles of rail line in St. Louis, Mo. (the Line). Specifically, TRRA will acquire trackage rights between TRRA's connection with NSR at approximately North Market Street, St. Louis, Mo., and the Kiesel Facility at approximately Dock Street, St. Louis, Mo.

TRRA may consummate its acquisition on or after November 7, 2015, the effective date of the exemption (30 days after the verified notice of exemption was filed).

TRRA states that NSR, who currently operates over TRRA via trackage rights to access the Line and serve the Kiesel Facility, intends to discontinue a nearby two-mile segment of trackage. According to TRRA, granting TRRA limited local trackage rights over the Line for the sole purpose of serving the Kiesel Facility (the only active shipper accessible via the Line) will allow NSR and TRRA to operate more efficiently in this area after NSR's nearby discontinuance while also preserving rail service to an existing customer. TRRA will assume maintenance of the Line until NSR decides to resume active operations over the Line.

As a condition to this exemption, any employees affected by the trackage rights will be protected by the conditions imposed in *Norfolk & Western Railway—Trackage Rights—Burlington Northern, Inc.,* 354 I.C.C. 605 (1978), as modified in *Mendocino Coast Railway—Lease & Operate—California Western Railroad,* 360 I.C.C. 653 (1980).

This notice is filed under 49 CFR 1180.2(d)(7). If the notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed by October 30, 2015 (at least seven days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 35962, must be filed with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001. In addition, a copy of each pleading must be served on Asim S. Raza, Terminal Railroad Association of St. Louis, 415 S. 18th Street, Suite 200, St. Louis, MO 63103.

Board decisions and notices are available on our Web site at *WWW.STB.DOT.GOV.*

Decided: October 20, 2015.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

[FR Doc. 2015–26987 Filed 10–22–15; 8:45 am]

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. FD 35966]

Martin Marietta Materials, Inc.—Acquisition of Control Exemption—Rock & Rail, Inc.

Martin Marietta Materials, Inc. (MMM), a noncarrier, has filed a verified notice of exemption under 49 CFR 1180.2(d)(2) to acquire control of Rock & Rail, Inc. (RRI), a Class III rail carrier.

According to MMM, it currently controls Alamo North Texas Railroad (ANT),[1] a Class III rail carrier, which has lines in Wise County, Tex., and Alamo Gulf Coast Railroad (AGC), a Class III rail carrier, which has lines in Bexar County, Tex. MMM states that RRI has lines in Pueblo and Canon City, Colo., and that the proposed transaction would not connect ANT, AGC, or RRI. MMM and RRI have signed a letter of intent [2] by which MMM will acquire indirect ownership of 100% of the stock of RRI. The transaction is scheduled to be consummated on or after November 8, 2015, the effective date of the exemption.

MMM states that: (i) The railroads do not connect with each other or any railroad in their corporate family; (ii) the proposed transaction is not part of a series of anticipated transactions that would connect the railroads with each other or any railroad in their corporate family; and (iii) the transaction does not involve a Class I carrier. Therefore, the transaction is exempt from the prior approval of requirements of 49 U.S.C. 11323. *See* 49 CFR 1180.2(d)(2).

Under 49 U.S.C. 10502(g), the Board may not use its exemption authority to relieve a rail carrier of its statutory obligation to protect the interests of its employees. Section 11326(c), however, does not provide for the labor protection for transactions under §§ 11324 and 11325 that involve only Class III rail carriers. Because this transaction involves Class III rail carriers only, the Board, under the statute, may not impose labor protective conditions for this transaction.

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the transaction. Petitions to stay must be filed no later than October 30, 2015 (at least seven days before the exemption becomes effective).

An original and ten copies of all pleadings referring to Docket No. FD 35966, must be filed with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001. In addition, a copy of each pleading must be served on William A. Mullins, Baker & Miller PLLC, 2401 Pennsylvania Ave. NW., Suite 300, Washington, DC 20037.

Board decisions and notices are available on our Web site at *WWW.STB.DOT.GOV.*

Decided: October 20, 2015.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Brendetta S. Jones,

Clearance Clerk.

[2] An unredacted copy of the letter of intent was filed concurrently under seal, along with a motion for protective order pursuant to 49 CFR 1104.14(b). That motion will be addressed in a separate decision.

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. AB 1112X]

Caldwell Railroad Commission—Abandonment Exemption—in Caldwell County, NC

Caldwell Railroad Commission (CRC) has filed an amended verified notice of exemption under 49 CFR pt. 1152 subpart F—*Exempt Abandonments* to abandon an approximately 3.91-mile rail segment extending between milepost 108.79 and milepost 112.7 in Caldwell County, N.C. (the Line).[1] The

[1] CRC previously filed a verified notice of exemption that was dismissed as moot, because CRC's predecessor had obtained a 49 U.S.C. Subtitle

Continued

Line traverses United States Postal Service Zip Code 28645.

CRC has certified that: (1) No freight traffic has moved over the Line for at least two years; (2) any overhead traffic over the Line can and has been rerouted; (3) no formal complaint filed by a user of rail service on the Line (or by a state or local government entity acting on behalf of such user) regarding cessation of service over the Line is either pending with the Surface Transportation Board (Board) or with any U.S. District Court or has been decided in favor of complainant within the two-year period; and (4) the requirements at 49 CFR 1105.7(c) (environmental report), 49 CFR 1105.11 (transmittal letter), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to governmental agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received, this exemption will be effective on November 24, 2015, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues,[2] formal expressions of intent to file an OFA under 49 CFR 1152.27(c)(2),[3] and interim trail use/rail banking requests under 49 CFR 1152.29 must be filed by November 2, 2015. Petitions to reopen or requests for public use[4] conditions under 49 CFR 1152.28 must be filed by November 12, 2015, with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001.

A copy of any petition filed with the Board should be sent to CRC's representative: David H. Coburn, Steptoe & Johnson LLP, 1330 Connecticut Ave. NW., Washington, DC 20036.

If the verified notice contains false or misleading information, the exemption is void ab initio.

CRC has filed environmental and historic reports that address the effects, if any, of the abandonment on the environment and historic resources. OEA will issue an environmental assessment (EA) by October 30, 2015. Interested persons may obtain a copy of the EA by writing to OEA (Room 1100, Surface Transportation Board, Washington, DC 20423–0001) or by calling OEA at (202) 245–0305. Assistance for the hearing impaired is available through the Federal Information Relay Service at (800) 877–8339. Comments on environmental and historic preservation matters must be filed within 15 days after the EA becomes available to the public.

Environmental, historic preservation, public use, or interim trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), CRC shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the Line. If consummation has not been effected by CRC's filing of a notice of consummation by October 23, 2016, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

Board decisions and notices are available on our Web site at *WWW.STB.DOT.GOV.*

Decided: October 20, 2015.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

BILLING CODE 4915–01–P

IV exemption over the relevant portion of the Line, which encompassed authority to abandon the Line. *Caldwell R.R. Comm'n—Aban. Exemption—in Caldwell Cty., N.C.,* AB 1112X (STB served May 22, 2015). CRC subsequently obtained a partial revocation of that Subtitle IV exemption, which allows CRC to pursue abandonment authority. *Caldwell R.R. Comm'n—Exemption from 49 U.S.C. Subtitle IV,* FD 32659 (Sub-No. 2) (STB served Sept. 8, 2015).

[2] The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Office of Environmental Analysis (OEA) in its independent investigation) cannot be made before the exemption's effective date. *See Exemption of Out-of-Serv. Rail Lines,* 5 I.C.C.2d 377 (1989). Any request for a stay should be filed as soon as possible so that the Board may take appropriate action before the exemption's effective date.

[3] Each OFA must be accompanied by the filing fee, which is currently set at $1,600. *See* 49 CFR 1002.2(f)(25).

[4] CRC states that the Line may be suitable for other public purposes or trail use, but may be subject to reversionary interests.

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Docket No. DOT–OST–2015–0197]

Privacy Act of 1974; Department of Transportation, Office of the Secretary of Transportation; DOT/ALL–18, International Freight Data System (IFDS)

AGENCY: Office of the Departmental Chief Information Officer, Office of the Secretary of Transportation, DOT.

ACTION: Notice of retirement of one Privacy Act system of records.

SUMMARY: In accordance with the Privacy Act of 1974, the Department of Transportation (DOT) is giving notice that it will retire the following Privacy Act system of records: DOT/ALL 18, International Freight Data System (IFDS) (April 14, 2008, 73 FR 20084). The IFDS was never implemented by the DOT and the DOT will continue to rely upon the U.S. Customs and Border Protection's Automated Commercial Environment/International Trade Data System for its data needs.

DATES: This change will take effect upon publication.

FOR FURTHER INFORMATION CONTACT: For questions, please contact: Claire W. Barrett, Departmental Chief Privacy Officer, Privacy Office, Department of Transportation, Washington, DC 20590; *privacy@dot.gov;* or 202.527.3284.

SUPPLEMENTARY INFORMATION:

I. Background

Pursuant to the provisions of the Privacy Act of 1974, 5 U.S.C. 552a, and as part of its ongoing integration and management efforts, DOT is retiring the system of records notice, DOT/ALL 18 International Freight Data System (IFDS) (April 14, 2008, 73 FR 20084), which was intended to be an automated system that provided participating DOT Operating Administrations with international commercial information to perform their enforcement, statistical, analytical, modeling and policy responsibilities. The IFDS was never implemented by the DOT and the DOT will continue to rely upon DHS/CBP–001, Automated Commercial Environment/International Trade Data System (January 19, 2006, 71 FR 3109) for the collection and dissemination of international commercial information.

Eliminating the system of records notice DOT/ALL 18, International Freight Data System, will have no adverse impacts on individuals and will accurately characterize DOT Privacy Act record systems.

Claire W. Barrett,

Departmental Chief Privacy Officer.

BILLING CODE 4910–9X–P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Docket No. DOT–OST–2015–0160]

Privacy Act of 1974; Department of Transportation/ALL 8, Parking and Transit Benefit System

AGENCY: Privacy Office, Office of the Secretary of Transportation, DOT.

ACTION: Notice of Privacy Act system of records.

SUMMARY: In accordance with the Privacy Act of 1974, the U.S. Department of Transportation proposes to rename, update, and reissue the Department of Transportation system of records currently titled, ''Department of Transportation/ALL 8 Employee Transportation Facilitation System of Records.'' This system of records allows the Department of Transportation/Office of the Secretary to collect and maintain records on Department of Transportation employees who participate in the Department's transit, carpool/vanpool, bicycle and parking benefit program, employees of other Federal agencies for whom DOT administers a Federal carpool/vanpool, and/or parking and transit benefit program. It also allows the Federal Aviation Administration to collect and maintain records on behalf of its employees who participate in transit and parking benefit programs administered by the Federal Aviation Administration. In addition to non-substantive changes to simply the formatting and text of the previously published notice, we are revising this notice to reflect System Manager's address change, and clarify the routine uses of information in the system. This updated system will be renamed and included in the Department of Transportation's inventory of record systems and referred to as ''DOT/ALL 8—Parking and Transit Benefit System.''

DATES: Written comments should be submitted on or before November 23, 2015. The Department may publish an amended SORN in light of any comments received. This revised system will be effective November 23, 2015.

ADDRESSES: You may submit comments, identified by docket number DOT–OST–2015–0160 by any of the following methods:

- *Federal e-Rulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Ave. SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* West Building Ground Floor, Room W12–140, 1200 New Jersey Ave. SE., between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal Holidays.
- *Fax:* (202) 493–2251.

Instructions: You must include the agency name and docket number DOT–OST–2015–0160. All comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided.

Privacy Act: Anyone is able to search the electronic form of all comments received in any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act statement in the **Federal Register** published on January 17, 2008 (73 FR 3316–3317).

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov* or to the street address listed above. Follow the online instructions for accessing the docket.

FOR FURTHER INFORMATION CONTACT: For questions, please contact: Claire W. Barrett, Departmental Chief Privacy Officer, Privacy Office, Department of Transportation, Washington, DC 20590; *privacy@dot.gov;* or (202) 527–3284.

SUPPLEMENTARY INFORMATION:

I. Background

The DOT/Office of the Secretary (OST) manages a Transportation Subsidy Program (TSP) and facilitates the distribution of public-transport fare media to DOT and other Federal Agency employees, to schedule distribution of the fare media, to maintain an inventory of fare media on hand, and to manage the fare media billing. DOT administers the TSP for its employees, and, also, for employees of other Federal agencies through Interagency Agreements between DOT and the employer-agency. Additionally, the Office of Transportation Services (TRANServe), within DOT's Office of the Assistant Secretary for Administration, manages the bicycle benefit program and the vehicle parking resources at the DOT South East Federal Center (SEFC) Headquarters Facility. Parking at the Headquarters Facility is allocated via the DOT Headquarters Parking Application (DOT HPA) reservation system. The Federal Aviation Administration (FAA) administers its own parking and transit benefit program for FAA employees in the Washington, DC area (transit and parking benefits for FAA field office employees are administered by OST).

In accordance with the Privacy Act of 1974, 5 U.S.C. 552a, the U.S. Department of Transportation (DOT)/Office of the Secretary of Transportation (OST) proposes to rename, update, and reissue the DOT system of records currently titled, ''DOT/ALL–8 Employee Transportation Facilitation.'' This system of records will be renamed ''DOT/ALL–8, Parking and Transit Benefit System.''

In addition, we are updating this system of records notice to reflect the change in the system manager's address resulting from DOT's move from its previous headquarters location at 400 7th Street SW., Washington, DC 20950, to its new location of 1200 New Jersey Ave. SE., Washington, DC 20590. We have also updated the system to provide greater detail about the categories of records collected and maintained, and include additional categories to reflect DOT's administration of the bicycle benefit program. Additionally, DOT will begin to collect the names of other riders in van pools (in addition to those individuals who are participating in the TSP). DOT will collect this information to aid in efforts to identify potential waste, fraud, and abuse. Finally, we are updating the routine uses to provide greater clarity and specificity to our routine uses of the information in this system. The current SORN generally describes the routine uses for this system in a narrative format. We wish to update this to provide great specificity about who we disclose these records to and the purposes for which we make the disclosure. We believe that these changes do not substantively alter the current routine uses, but merely provide greater transparency.

This updated system will be included in DOT's inventory of record systems.

II. Privacy Act

The Privacy Act (5 U.S.C. 552a) governs the means by which the Federal Government collects, maintains, and uses personally identifiable information (PII) in a System of Records. A ''System of Records'' is a group of any records under the control of a Federal agency from which information about individuals is retrieved by name or other personal identifier. The Privacy

Act requires each agency to publish in the **Federal Register** a System of Records notice (SORN) identifying and describing each System of Records the agency maintains, including the purposes for which the agency uses PII in the system, the routine uses for which the agency discloses such information outside the agency, and how individuals to whom a Privacy Act record pertains can exercise their rights under the Privacy Act (*e.g.,* to determine if the system contains information about them and to contest inaccurate information).

In accordance with 5 U.S.C. 552a(r), DOT has provided a report of this system of records to the Office of Management and Budget and to Congress.

SYSTEM OF RECORDS:

DOT/ALL 8

SYSTEM NAME:

Parking and Transit Benefit System.

SECURITY CLASSIFICATION:

Unclassified, sensitive.

SYSTEM LOCATION:

Department of Transportation, Office of the Secretary, Parking and Transit Benefit Office, 1200 New Jersey Ave. SE., Washington, DC 20950; Federal Aviation Administration, Transit Benefit Office, 800 Independence Ave. SW., Washington, DC 20591.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Federal employees' who receive transit or bicycle subsidies, who hold parking permits, or are members of carpools and vanpools; applicants for ridesharing information; recipients of match letters for carpooling; applicants for transit subsidies issued by DOT; vanpool operators.

CATEGORIES OF RECORDS IN THE SYSTEM:

Categories of records in the system include:

The following information about recipients of bicycle or transit subsidies; holders of parking permits, participants in carpools or vanpools; or applicants for ridesharing information:

Full name

Employee identification number (which, depending on the employer, may be the employee's social security number, the last four digits of the employee's social security number, or some other identification number used by a Federal agency as an employee's identification number)

Employer name

Employer's address

Home address

Business telephone number

Employee's work email address

Transit provider name, address, and mode of transportation used for commute

Location employee commutes to/from

Number of days employee commutes per month

Subsidy amount

System identifier (number randomly generated by DOT's system and assigned to files)

Transit card number

Parking permit number

License plate number and issuing state

Parking permit holder payment status (paid/unpaid) and payment information

Bicycle benefit recipients' itemized lists of expenditures eligible for bicycle benefit

The following information may be collected and maintained about van pool operators:

Full name

Business address

First and last name of individuals who use the van pool

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 7905; 26 U.S.C. 132; 26 CFR 132f; Executive Order 13150 (April 21, 2001)

PURPOSE:

The purpose of this system is to collect and maintain information about Federal employees' and vanpool operators who participate in carpool/vanpool, transit, parking, or bicycle benefit programs in connection with the DOT's administration of these programs for its and other Federal agency employees.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, all or a portion of the records or information contained in this system may be disclosed outside DOT as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

1. To the Federal agency for whom DOT administers a transit benefit program, for purposes of verifying that agency's employee's participation in the program, and auditing and verifying disbursements;

2. To the operators of transit systems or vanpools for purposes of activating, distributing, and verifying benefits;

3. To the entity that manages the parking facility at the DOT Headquarters in Southeast Washington, DC, information about individuals who have delinquent daily parking fees for purpose of ensuring eligibility of daily parkers;

4. To the Department of Treasury's approved Financial Agent for purposes of distributing transit benefits;

5. To consumer reporting agencies (collecting on behalf of the United States Government) as defined in the Fair Credit Reporting Act (15 U.S.C. 1681a(f)) or the Federal Claims Collection Act of 1982 (31 U.S.C. 3701(a)(3));

6. See ''Prefatory Statement of General Routine Uses'' (available at *http://www.dot.gov/privacy/privacyactnotices*). Other possible routine uses of the information, applicable to all DOT Privacy Act systems of records, are published in the **Federal Register** at 75 FR 82132, December 29, 2010, and 77 FR 42796, July 20, 2012, under ''Prefatory Statement of General Routine Uses'' (available at *http://www.dot.gov/privacy/privacyactnotices*).

DISCLOSURES TO CONSUMER REPORTING AGENCIES:

Disclosures may be made from this system to consumer reporting agencies (collecting on behalf of the United States Government) as defined in the Fair Credit Reporting Act (15 U.S.C. 1681a(f)) or the Federal Claims Collection Act of 1982 (31 U.S.C. 3701(a)(3)).

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Hard copy or electronically. Hard copies are maintained at the System Manager address.

RETRIEVABILITY:

Records can be retrieved by employer agency name, participant name, or any other identifier in the system

SAFEGUARDS:

Records in this system are safeguarded in accordance with applicable rules and policies, including all applicable DOT automated systems security and access policies. Appropriate controls have been imposed to minimize the risk of compromising the information that is being stored. Access to records in this system is limited to those individuals who have a need to know the information for the performance of their official duties and who have appropriate permissions.

RETENTION AND DISPOSAL:

Records in this system are retained for three years and then destroyed, in accordance with General Record Schedule 9, Item 7. Source documents provided to DOT by its Federal agencies customers are considered temporary records and are destroyed not more than 120 after of receipt by DOT.

SYSTEM MANAGER(S) AND ADDRESS:

OST Parking and Transit Office, 1200 New Jersey Ave. SE., Washington, DC 20950; FAA Transit Benefit Office, 800 Independence Ave. SW., Washington, DC 20591.

NOTIFICATION PROCEDURE:

Individuals seeking notification of and access to any record contained in this system of records, or seeking to contest its content, may submit a request in writing to the OST Parking and Transit Office at the contact information provided under ''System Manager and Address.'' FAA employees in the National Capital Region seeking notification of and access to any record contained in this system, or seeking to contest its content, may submit a request in writing to the FAA Transit Benefit Office at the contact information provided under ''System Manager and Address.''

When seeking records about yourself from this system of records or any other Departmental system of records your request must conform with the Privacy Act regulations set forth in 49 CFR part 10. You must sign your request, and your signature must either be notarized or submitted under 28 U.S.C. 1746, a law that permits statements to be made under penalty of perjury as a substitute for notarization. While no specific form is required, you may obtain forms for this purpose from the Departmental Freedom of Information Act Officer, *http://www.dot.gov/foia* or 202.366.4542. In addition you should provide the following:

- An explanation of why you believe the Department would have information on you;
- Identify which component(s) of the Department you believe may have the information about you;
- Specify when you believe the records would have been created;
- Provide any other information that will help the FOIA staff determine which DOT component agency may have responsive records; and

If your request is seeking records pertaining to another living individual, you must include a statement from that individual certifying his/her agreement for you to access his/her records. Without this bulleted information the component(s) may not be able to conduct an effective search, and your request may be denied due to lack of specificity or lack of compliance with applicable regulations.

RECORD ACCESS PROCEDURES:

See ''Notification procedure'' above.

CONTESTING RECORD PROCEDURES:

See ''Notification procedure'' above.

RECORD SOURCE CATEGORIES:

Records are obtain from applications submitted by individuals for parking permits, carpool and vanpool membership, ridesharing information, and fare subsidies; from notifications from other Federal agencies in the program; and from periodic certifications or recertifications and reports regarding fare subsidies.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

Claire W. Barrett,

Departmental Chief Privacy Officer.

BILLING CODE 4910–9X–P

DEPARTMENT OF THE TREASURY

Community Development Financial Institutions Fund

Funding Opportunity Title: Notice of Allocation Availability (NOAA) Inviting Applications for the Calendar Year (CY) 2015 Allocation Round of the New Markets Tax Credit (NMTC) Program

Announcement Type: Announcement of NMTC allocation availability.

DATES: Electronic applications must be received by 5:00 p.m. ET on December 16, 2015. Applications sent by mail, facsimile or other form will not be accepted. Please note the Community Development Financial Institutions Fund (CDFI Fund) will only accept applications and attachments (*i.e.,* the CDE's authorized representative signature page, the Controlling Entity's representative signature page, investor letters and organizational charts) in electronic form (see Section IV.C of this NOAA for more details). Applications must meet all eligibility and other requirements and deadlines, as applicable, set forth in this NOAA. Any Applicant that is not yet certified as a Community Development Entity (CDE) must submit an application for CDE certification through the CDFI Fund's Awards Management Information System (AMIS) on or before 5:00 p.m. ET on November 6, 2015 (see Section III.A.1 of this NOAA for more details on CDE certification).

Executive Summary: This NOAA is issued in connection with the CY 2015 allocation round (Allocation Round) of the New Markets Tax Credit (NMTC) Program, as authorized by Title I, subtitle C, section 121 of the Community Renewal Tax Relief Act of 2000 (Pub. L. 106–554) and amended by section 221 of the American Jobs Creation Act of 2004 (Pub. L. 108–357), section 101 of the Gulf Opportunity Zone Act of 2005 (Pub. L. 108–357), Division A, section 102 of the Tax Relief and Health Care Act of 2006 (Pub. L. 109–432), section 733 of the Tax Relief, Unemployment Insurance Reauthorization and Job Creation Act of 2010 (Pub. L. 111–312), section 305 of the American Taxpayer Relief Act of 2012 (Pub. L. 112–240), and section 115 of the Tax Increase Prevention Act of 2014 (Pub. L. 113–295). Through the NMTC Program, the CDFI Fund provides authority to CDEs to offer an incentive to investors in the form of tax credits over seven years, which is expected to stimulate the provision of private investment capital that, in turn, will facilitate economic and community development in Low-Income Communities. Through this NOAA, the CDFI Fund announces the availability of up to $5.0 billion of NMTC investment authority in this Allocation Round, subject to Congressional authorization.

In this NOAA, the CDFI Fund specifically addresses how a CDE may apply to receive an allocation of NMTCs, the competitive procedure through which NMTC allocations will be made, and the actions that will be taken to ensure that proper allocations are made to appropriate entities.

I. Allocation Availability Description

A. *Programmatic changes from CY 2014 allocation round:*

1. As a condition of eligibility for this Allocation Round, the Applicant will not be permitted the use of the proceeds of Qualified Equity Investments (QEIs) to make Qualified Low-Income Community Investments (QLICIs) in Qualified Active Low-Income Community Businesses (QALICBs) where QLICI proceeds are used to repay or refinance any debt or equity provider or a party related to any debt or equity provider whose capital was used to fund the QEI except if: (i) The QLICI proceeds are used to repay documented reasonable expenditures that are directly attributable to the qualified business of the QALICB, and such past expenditures were incurred no more than 24 months prior to the QLICI closing date; or (ii) no more than five percent of the QLICI proceeds are used to repay or refinance prior investment in the QALICB. Refinance includes transferring cash or property directly to

any debt or equity provider or indirectly to a party related to any debt or equity provider.

2. *Prior QEI Issuance Requirements:* In order to be eligible to apply for a NMTC allocation in this Allocation Round, as described in Section III.A.3(a), any Applicant that received a NMTC allocation award in a previous Allocation round is required to meet the corresponding minimum Qualified Equity Investment (QEI) issuance threshold with respect to its prior-year allocation. These thresholds and deadlines have been revised in comparison to the CY 2014 NOAA.

B. *Program guidance and regulations:* This NOAA describes application and allocation requirements for this Allocation Round of the NMTC Program and should be read in conjunction with: (i) Guidance published by the CDFI Fund on how an entity may apply to become certified as a CDE (66 **Federal Register** 65806, December 20, 2001); (ii) the final regulations issued by the Internal Revenue Service (the IRS) (26 CFR 1.45D–1, published on December 28, 2004), as amended and related guidance, notices and other publications; and (iii) the application and related materials for this Allocation Round. All such materials may be found on the CDFI Fund's Web site at *https://www.cdfifund.gov.* The CDFI Fund encourages Applicants to review these documents. Capitalized terms used, but not defined, in this NOAA have the respective meanings assigned to them in the NMTC Program Allocation application, IRC § 45D or the IRS regulations. In the event of any inconsistency between this NOAA, the allocation application, and guidance issued by the CDFI Fund thereto, IRC § 45D or the IRS regulations, the provisions of IRC § 45D and the IRS regulations shall govern.

II. Allocation Information

A. *Allocation amounts:* Pursuant to the Act, the CDFI Fund expects that it may allocate to CDEs the authority to issue to their investors up to the aggregate amount of $5.0 billion in equity as to which NMTCs may be claimed, as permitted under IRC § 45D(f)(1)(D). Pursuant to this NOAA, the CDFI Fund anticipates that it will not issue more than $125 million in tax credit investment authority per Allocatee. The CDFI Fund, in its sole discretion, reserves the right to allocate amounts in excess of or less than the anticipated maximum allocation amount should the CDFI Fund deem it appropriate. In order to receive an allocation in excess of the $125 million cap, an Applicant, at a minimum, must demonstrate that: (i) No part of its strategy can be successfully implemented without an allocation in excess of the applicable cap; and/or (ii) its strategy will produce extraordinary community outcomes. The CDFI Fund reserves the right to allocate NMTC authority to any, all, or none of the entities that submit applications in response to this NOAA, and in any amounts it deems appropriate.

B. *Type of award:* NMTC Program awards are made in the form of allocations of tax credit investment authority.

C. *Allocation Agreement:* Each Allocatee must sign an Allocation Agreement, which must be countersigned by the CDFI Fund, before the NMTC allocation is effective. The Allocation Agreement contains the terms and conditions of the NMTC allocation. For further information, see Section VI of this NOAA.

III. Eligibility

A. *Eligible Applicants:* IRC § 45D specifies certain eligibility requirements that each Applicant must meet to be eligible to apply for an allocation of NMTCs. The following sets forth additional detail and certain additional dates that relate to the submission of applications under this NOAA for the available NMTC investment authority.

1. *CDE certification:* For purposes of this NOAA, the CDFI Fund will not consider an application for an allocation of NMTCs unless: (a) The Applicant is certified as a CDE at the time the CDFI Fund receives its NMTC Program allocation application; or (b) the Applicant submits an application for certification as a CDE through the CDFI Fund's Awards Management Information System (AMIS) on or before 5:00 p.m. ET on November 6, 2015. Applicants for CDE certification may obtain information regarding CDE certification and the CDE certification application process in AMIS on the CDFI Fund's Web site at *https://www.cdfifund.gov.* Applications for CDE certification must be submitted in AMIS. Paper versions of the CDE certification application will not be accepted.

The CDFI Fund will not provide NMTC allocation authority to Applicants that are not certified as CDEs or to entities that are certified as Subsidiary CDEs.

If an Applicant that has already been certified as a CDE wishes to change its designated CDE Service Area, it must submit its request for such change to the CDFI Fund, and the request must be received by the CDFI Fund by 5:00 p.m. ET on November 6, 2015. A request to change a CDE's Service Area must be submitted through the CDFI Fund's Awards Management Information System (AMIS) as a Service Request. Such requests will need to include, at a minimum, the applicable CDE control number, the revised service area designation, and updated accountability information that demonstrates that the CDE has the required representation from Low-Income Communities in the revised Service Area.

2. As a condition of eligibility for this Allocation Round, the Applicant will not be permitted the use of the proceeds of Qualified Equity Investments (QEIs) to make Qualified Low-Income Community Investments (QLICIs) in Qualified Active Low-Income Community Businesses (QALICBs) where QLICI proceeds are used to repay or refinance any debt or equity provider or a party related to any debt or equity provider whose capital was used to fund the QEI except if: (i) The QLICI proceeds are used to repay documented reasonable expenditures that are directly attributable to the qualified business of the QALICB, and such past expenditures were incurred no more than 24 months prior to the QLICI closing date; or (ii) no more than five percent of the QLICI proceeds are used to repay or refinance prior investment in the QALICB. Refinance includes transferring cash or property directly to any debt or equity provider or indirectly to a party related to any debt or equity provider.

3. *Prior award recipients or Allocatees:* Applicants must be aware that success in a prior application or allocation round of any of the CDFI Fund's programs is not indicative of success under this NOAA. For purposes of this section, the CDFI Fund will consider an Affiliate to be any entity that meets the definition of Affiliate as defined in the NMTC allocation application materials, or any entity otherwise identified as an Affiliate by the Applicant in its NMTC allocation application materials. Prior award recipients of any CDFI Fund program are eligible to apply under this NOAA, except as follows:

(a) *Prior Allocatees and Qualified Equity Investment (QEI) issuance requirements:* The following describes the QEI issuance requirements applicable to prior Allocatees.

An Allocatee in the CY 2010 allocation round of the NMTC Program is not eligible to receive a NMTC allocation pursuant to this NOAA unless the Allocatee is able to affirmatively demonstrate that, as of 11:59 p.m. ET on January 29, 2016, it has finalized at least 95 percent of its

QEIs relating to its CY 2010 NMTC allocation.

An Allocatee in the CY 2011 allocation round of the NMTC Program is not eligible to receive a NMTC allocation pursuant to this NOAA unless the Allocatee is able to affirmatively demonstrate that, as of 11:59 p.m. ET on January 29, 2016, it has: (i) Finalized at least 80 percent of its QEIs relating to its CY 2011 NMTC allocation; or (ii) it has finalized at least 70 percent of its QEIs and that at least 100 percent of its total CY 2011 NMTC allocation has been finalized, or has been committed by its investors.

An Allocatee in the CY 2012 allocation round of the NMTC Program is not eligible to receive a NMTC allocation pursuant to this NOAA unless the Allocatee is able to affirmatively demonstrate that, as of 11:59 p.m. ET on January 29, 2016, it has: (i) Finalized at least 70 percent of its QEIs relating to its CY 2012 NMTC allocation; or (ii) it has finalized at least 60 percent of its QEIs and that at least 80 percent of its total CY 2012 NMTC allocation has been finalized, or has been committed by its investors.

An Allocatee (with the exception of a Rural CDE Allocatee) in the CY 2013 allocation round of the NMTC Program is not eligible to receive a NMTC allocation pursuant to this NOAA unless the Allocatee is able to affirmatively demonstrate that, as of 11:59 p.m. ET on January 29, 2016, it has: (i) Finalized at least 50 percent of its QEIs relating to its CY 2013 NMTC allocation; or (ii) it has finalized at least 40 percent of its QEIs and that at least 60 percent of its total CY 2013 NMTC allocation has been finalized, or has been committed by its investors. A prior Rural CDE Allocatee in the CY 2013 is not eligible to receive a NMTC allocation pursuant to this NOAA unless the Allocatee can demonstrate that, as of 11:59 p.m. ET on January 29, 2016, it has finalized at least 30 percent of its CY 2013 NMTC Allocation.

An Allocatee (with the exception of a Rural CDE Allocatee) in the CY 2014 allocation round of the NMTC Program is not eligible to receive a NMTC allocation pursuant to this NOAA unless the Allocatee is able to affirmatively demonstrate that, as of 11:59 p.m. ET on January 29, 2016, it has: (i) Finalized at least 30 percent of its QEIs relating to its CY 2014 NMTC allocation; or (ii) finalized at least 20 percent of its QEIs and that at least 50 percent of its total CY 2014 NMTC allocation has been finalized, or has been committed by its investors. A Rural CDE is not required to meet the above QEI issuance and commitment thresholds with regard to its CY 2014 NMTC allocation award.

Alternatively, an Applicant that has received multiple NMTC allocations between CY 2010 and CY 2014 can also meet the QEI issuance requirements on a cumulative basis. If an Applicant has received multiple NMTC allocation awards between CY 2010 and CY 2014, the Applicant shall be deemed to be eligible to apply for a NMTC allocation pursuant to this NOAA if the Applicant is able to affirmatively demonstrate that, as of 11:59 p.m. ET on January 29, 2016, it has finalized at least 90 percent of its QEIs relating to its cumulative allocation amounts from these prior NMTC Program rounds. Rural CDEs that received allocations under the CY 2013 allocation round may choose to exclude such allocations from this cumulative calculation, provided that the Allocatee has finalized at least 20 percent of its QEIs relating to its CY 2013 allocation. Rural CDEs that received allocations under the CY 2014 allocation round may choose to exclude such allocation from this cumulative calculation.

In addition to the requirements described above, an entity is not eligible to receive a NMTC allocation pursuant to this NOAA if an Affiliate of the Applicant is a prior Allocatee and has not met the requirements for the issuance and/or commitment of QEIs as set forth above for the Allocatees in the prior allocation rounds of the NMTC Program.

For purposes of this section of the NOAA, the CDFI Fund will only recognize as ''finalized'' those QEIs that have been properly reported in the CDFI Fund's Allocation Tracking System (ATS) by the deadlines specified above. Allocatees and their Subsidiary Allocatees, if any, are advised to access ATS to record each QEI that they issue to an investor in exchange for funds in-hand. For purposes of this section of the NOAA, ''committed'' QEIs are only those Equity Investments that are evidenced by a written, signed document in which an investor: (i) Commits to make a QEI in the Allocatee in a specified amount and on specified terms; (ii) has made an initial disbursement of the investment proceeds to the Allocatee, and such initial disbursement has been recorded in ATS as a QEI; (iii) commits to disburse the remaining investment proceeds to the Allocatee based on specified amounts and payment dates; and (iv) commits to make the final disbursement to the Allocatee no later than January 29, 2018.

The Applicant will be required, upon notification from the CDFI Fund, to submit adequate documentation to substantiate the required issuances of and commitments for QEIs.

Applicants should be aware that these QEI issuance requirements represent the minimum threshold requirements that must be met in order to submit an application for assistance under this NOAA. As stated in Section V.C.1 of this NOAA, the CDFI Fund reserves the right to reject an application and/or adjust award amounts as appropriate based on information obtained during the review process—including an Applicant's track record of raising QEIs and/or deploying its Qualified Low Income Community Investments (QLICIs).

Any prior Allocatees that requires any action by the CDFI Fund (*i.e.,* certifying a subsidiary entity as a CDE; adding a subsidiary CDE to an Allocation Agreement; etc.) in order to meet the QEI issuance requirements above must submit a Certification Application for subsidiary CDEs by no later than November 6, 2015 and Allocation Agreement Amendment requests by no later than December 31, 2015 in order to guarantee that the CDFI Fund completes all necessary approvals prior to January 29, 2016. Applicants for CDE certification may obtain information regarding CDE certification and the CDE certification application process in AMIS on the CDFI Fund's Web site at *https://www.cdfifund.gov.* Applications for CDE certification must be submitted in AMIS. Paper versions of the CDE certification application will not be accepted.

(b) *Pending determination of noncompliance or default:* If an Applicant is a prior award recipient or Allocatee under any CDFI Fund program and if: (i) It has submitted reports to the CDFI Fund that demonstrate potential noncompliance with or default under a previous assistance, award or Allocation Agreement; and (ii) the CDFI Fund has yet to make a final determination as to whether the entity is in noncompliance or default of its previous assistance, award or Allocation Agreement, the CDFI Fund will consider the Applicant's application under this NOAA pending final determination of whether the entity is in noncompliance or default, in the sole determination of the CDFI Fund. Further, if an Affiliate of the Applicant is a prior CDFI Fund award recipient or Allocatee and if such entity: (i) Has submitted reports to the CDFI Fund that demonstrate potential noncompliance with or default under a previous assistance, award or Allocation Agreement; and (ii) the CDFI Fund has yet to make a final determination as to whether the entity is in noncompliance or default of its previous assistance, award or Allocation Agreement, the CDFI Fund will consider the Applicant's application under this NOAA pending final determination of whether the entity is in noncompliance or default, in the sole determination of the CDFI Fund.

Any Applicant or Affiliate that is in default of its previously executed Allocation Agreement is deemed ineligible under this NOAA if: (i) The CDFI Fund has made a determination that such Applicant is in default of a previously executed Allocation Agreement and (ii) the CDFI Fund has provided written notification of such determination to the Applicant. Moreover, any Applicant that is otherwise eligible as of the application deadline must continue to be compliant with its Allocation Agreement(s) after the application deadline, in order for the CDFI Fund to continue evaluating its application. If an Applicant fails to do such, the CDFI Fund will no longer deem the Applicant eligible.

(c) *Default status:* The CDFI Fund will not consider an application submitted by an Applicant that is a prior CDFI Fund award recipient or Allocatee under any CDFI Fund program if, as of the application deadline of this NOAA: (i) The CDFI Fund has made a determination that such Applicant is in default of a previously executed assistance, allocation, or award agreement; (ii) the CDFI Fund has provided written notification of such determination to the Applicant; and (iii) the application deadline of the NOAA is within a period of time specified in the CDFI Fund's notification to the prior CDFI Fund award recipient or Allocatee for which any new application from the Applicant to the CDFI Fund for an award, allocation, or assistance is prohibited. Further, the CDFI Fund will not consider an application submitted by an Applicant for which there is an Affiliate that is a prior award recipient or Allocatee under any CDFI Fund Program if, as of the application deadline of this NOAA: (i) The CDFI Fund has made a determination that such Affiliate is in default of a previously executed assistance, allocation, or award agreement; (ii) the CDFI Fund has provided written notification of such determination to the Affiliate; and (iii) the application deadline of the NOAA is within a period of time specified in a notification to the prior CDFI Fund award recipient or Allocatee for which any new application from the Affiliate to the CDFI Fund for an award, allocation, or assistance is prohibited.

(d) *Undisbursed award funds:* The CDFI Fund will not consider an application submitted by an Applicant that is a prior award recipient under the CDFI Program (CDFI), Native Initiatives (NI), and Bank Enterprise Award (BEA) Program if the Applicant has a balance of undisbursed award funds (defined below) under said prior award(s), as of the applicable application deadline of this NOAA. Furthermore, an entity is not eligible to apply for an award pursuant to this NOAA if an Affiliate of the Applicant is a prior award recipient under any CDFI Fund program, and has a balance of undisbursed award funds under said prior award(s), as of the applicable application deadline of this NOAA. In a case where an Affiliate of the Applicant is a prior award recipient under any CDFI Fund program and has a balance of undisbursed award funds under said prior award(s) as of the applicable application deadline of this NOAA, the CDFI Fund will include the combined awards of the Applicant and such Affiliated entities when calculating the amount of undisbursed award funds.

For purposes of the calculation of undisbursed award funds for the BEA Program, only awards made to the Applicant (and any Affiliates) three to five calendar years prior to the end of the calendar year of the application deadline of this NOAA are included (''includable BEA awards''). Thus, for purposes of this NOAA, undisbursed BEA Program award funds are the amount of FYs 2010, 2011, 2012 awards that remain undisbursed as of the application deadline of this NOAA.

For purposes of the calculation of undisbursed award funds for the CDFI Program and the NI, only awards made to the Applicant (and any entity that Controls the Applicant, is Controlled by the Applicant or shares common management officials with the Applicant, as determined by the CDFI Fund) two to five calendar years prior to the end of the calendar year of the application deadline of this NOAA are included (''includable CDFI/NI awards''). Thus, for purposes of this NOAA, undisbursed CDFI Program and NI awards are the amount of FYs 2010, 2011, 2012, and 2013 awards that remain undisbursed as of the application deadline of this NOAA.

To calculate total includable BEA/CDFI/NI awards: Amounts that are undisbursed as of the application deadline of this NOAA cannot exceed five percent (5%) of the total includable awards. Please refer to an example of this calculation in the Round Allocation Application Q&A document, available on the CDFI Fund's Web site.

The ''undisbursed award funds'' calculation does not include: (i) NMTC allocation authority; (ii) any award funds for which the CDFI Fund received a full and complete disbursement request from the award recipient by the applicable application deadline of this NOAA; (iii) any award funds for an award that has been terminated, in writing, by the CDFI Fund or de-obligated by the CDFI Fund; or (iv) any award funds for an award that does not have a fully executed assistance or award agreement. The CDFI Fund strongly encourages Applicants requesting disbursements of ''undisbursed funds'' from prior awards to provide the CDFI Fund with a complete disbursement request at least 30 business days prior to the application deadline of this NOAA.

(e) *Contact the CDFI Fund:* Accordingly, Applicants that are prior award recipients and/or Allocatees under any other CDFI Fund program are advised to: (i) Comply with the requirements specified in assistance, allocation and/or award agreement(s), and (ii) contact the CDFI Fund as necessary to ensure that all required actions are underway for the disbursement of any outstanding balance of a prior award(s). All outstanding reports and compliance questions should be directed to the Office of Certification, Compliance Monitoring, and Evaluation through a Service Request initiated in AMIS. All disbursement questions related to the CDFI and NACA Programs should be directed to the CDFI Fund Help Desk by telephone at (202) 653–0421 (Option 1 for CDFI Program, Option 2 for the NACA Program) or via email at *cdfihelp@cdfi.treas.gov.* All disbursement questions related to the BEA Program should be directed to the CDFI Fund Help Desk by telephone at (202) 653–0421 (Option 4 for BEA Program) or via email at *cdfihelp@cdfi.treas.gov.* Requests submitted less than thirty calendar days prior to the application deadline may not receive a response before the application deadline.

The CDFI Fund will respond to Applicants' reporting, compliance or disbursement questions between the hours of 9:00 a.m. and 5:00 p.m. ET, starting the date of publication of this NOAA through December 14, 2015 (two days before the application deadline). The CDFI Fund will not respond to Applicants' reporting, compliance, CDE certification, or disbursement phone calls or email inquiries that are received after 5:00 p.m. ET on December 14, 2015 until after the funding application deadline of December 16, 2015.

4. *Failure to accurately respond to a question in the Assurances and Certifications section of the application and submit the required written explanation:* In its sole discretion, the CDFI Fund may deem the Applicant's application ineligible, if the CDFI Fund determines that the Applicant inaccurately responded to a question and failed to submit a required written explanation, or accurately answered a question yet failed to submit a required written explanation, with respect to the application Assurances and Certifications. In making this determination, the CDFI Fund will take into consideration, among other factors, the materiality of the question, the substance of any supplemental responses provided, and whether the information in the Applicant's supplemental responses will have a material adverse effect on the Applicant, its financial condition or its ability to perform under an allocation agreement, should the Applicant receive an allocation.

5. *Entities that propose to transfer NMTCs to Subsidiaries:* Both for-profit and non-profit CDEs may apply for NMTC allocation authority, but only a for-profit CDE is permitted to provide NMTCs to its investors. A non-profit Applicant wishing to apply for a NMTC allocation must demonstrate, prior to entering into an Allocation Agreement with the CDFI Fund, that: (i) It controls one or more Subsidiaries that are for-profit entities; and (ii) it intends to transfer the full amount of any NMTC allocation it receives to said Subsidiaries.

An Applicant wishing to transfer all or a portion of its NMTC allocation to a Subsidiary is not required to create the Subsidiary prior to submitting a NMTC allocation application to the CDFI Fund. However, the Subsidiary entities must be certified as CDEs by the CDFI Fund, and enjoined as parties to the Allocation Agreement at closing or by amendment to the Allocation Agreement after closing. Before the NMTC allocation transfer may occur it must be pre-approved by the CDFI Fund, in its sole discretion.

The CDFI Fund strongly encourages a non-profit Applicant to submit a CDE certification application to the CDFI Fund on behalf of at least one Subsidiary within 60 days after the non-profit Applicant receives the Notice of Allocation (NOA) from the CDFI Fund, as such Subsidiary must be certified as a CDE prior to entering into an Allocation Agreement with the CDFI Fund. A non-profit Applicant that does not already have a certified for-profit Subsidiary and that fails to submit a certification application for one or more for-profit Subsidiaries within 60 days of the date of the NOA from the CDFI Fund is subject to the CDFI Fund rescinding the award.

6. *Entities that submit applications together with Affiliates; applications from common enterprises:*

(a) As part of the allocation application review process, the CDFI Fund will evaluate whether Applicants are Affiliates, as such term is defined in the allocation application. If an Applicant and its Affiliate(s) wish to submit allocation applications, they must do so collectively, in one application; an Applicant and its Affiliate(s) may not submit separate allocation applications. If Affiliated entities submit multiple applications, the CDFI Fund will reject all such applications received, except for those State–owned or State–controlled governmental Affiliated entities. In the case of State-owned or State-controlled governmental entities, the CDFI Fund may accept applications submitted by different government bodies within the same State, but only to the extent the CDFI Fund determines that the business strategies and/or activities described in such applications, submitted by separate entities, are distinctly dissimilar and/or are operated and/or managed by distinctly dissimilar personnel, including staff, board members or identified consultants. If the CDFI Fund determines that the applications submitted by different government bodies in the same State are not distinctly dissimilar and/or operated and/or managed by distinctly dissimilar personnel, it will reject all such applications. In such cases, the CDFI Fund reserves the right to limit award amounts to such entities to ensure that the entities do not collectively receive more than the $125 million cap.

(b) For purposes of this NOAA, the CDFI Fund will also evaluate whether each Applicant is operated or managed as a ''common enterprise'' with another Applicant in this Allocation Round using the following indicia, among others: (i) Whether different Applicants have the same individual(s), including the Authorized Representative, staff, board members and/or consultants, involved in day-to-day management, operations and/or investment responsibilities; (ii) whether the Applicants have business strategies and/or proposed activities that are so similar or so closely related that, in fact or effect, they may be viewed as a single entity; and/or (iii) whether the applications submitted by separate Applicants contain significant narrative, textual or other similarities such that they may, in fact or effect, be viewed as substantially identical applications. In such cases, the CDFI Fund will reject all applications received from such entities.

(c) Furthermore, an Applicant that receives an allocation in this Allocation Round (or its Subsidiary Allocatee) may not become an Affiliate of or member of a common enterprise (as defined above) with another Applicant that receives an allocation in this Allocation Round (or its Subsidiary Allocatee) at any time after the submission of an allocation application under this NOAA. This prohibition, however, generally does not apply to entities that are commonly Controlled solely because of common ownership by QEI investors. This requirement will also be a term and condition of the Allocation Agreement (see Section VI.B of this NOAA and additional application guidance materials on the CDFI Fund's Web site at *https://www.cdfifund.gov* for more details).

7. *Entities created as a series of funds:* An Applicant whose business structure consists of an entity with a series of funds must apply for CDE certification for each fund. If such an Applicant represents that it is properly classified for Federal tax purposes as a single partnership or corporation, it may apply for CDE certification as a single entity. If an Applicant represents that it is properly classified for Federal tax purposes as multiple partnerships or corporations, then it must submit a CDE certification application for the Applicant and each fund it would like to participate in the NMTC Program, and each fund must be separately certified as a CDE. Applicants should note, however, that receipt of CDE certification as a single entity or as multiple entities is not a determination that an Applicant and its related funds are properly classified as a single entity or as multiple entities for Federal tax purposes. Regardless of whether the series of funds is classified as a single partnership or corporation or as multiple partnerships or corporations, an Applicant may not transfer any NMTC allocations it receives to one or more of its funds unless the fund is a certified CDE that is a Subsidiary of the Applicant, enjoined to the Allocation Agreement as a Subsidiary Allocatee.

8. *Entities that are BEA Program award recipients:* An insured depository institution investor (and its Affiliates and Subsidiaries) may not receive a NMTC allocation in addition to a BEA Program award for the same investment in a CDE. Likewise, an insured depository institution investor (and its Affiliates and Subsidiaries) may not receive a BEA Program award in

addition to a NMTC allocation for the same investment in a CDE.

IV. Application and Submission Information

A. *Address to request application package:* Applicants must submit applications electronically under this NOAA, through the CDFI Fund Web site. Following the publication of this NOAA, the CDFI Fund will make the electronic allocation application available on its Web site at *https://www.cdfifund.gov.* Applications sent by mail, facsimile or other form will not be accepted. Please note the CDFI Fund will only accept the application and attachments (*i.e.,* the Applicant's authorized representative signature page, the Controlling Entity's representative signature page, investor letters and organizational charts) in electronic form.

B. *Application content requirements:* Detailed application content requirements are found in the application related to this NOAA. Applicants must submit all materials described in and required by the application by the applicable deadlines. Applicants will not be afforded an opportunity to provide any missing materials or documentation, except, if necessary and at the request of the CDFI Fund. Electronic applications must be submitted solely by using the format made available at the CDFI Fund's Web site. Additional information, including instructions relating to the submission of supporting information (*i.e.,* the Applicant's authorized representative signature page, the Controlling Entity's representative signature page, investor letters and organizational charts), is set forth in further detail in the electronic application. An application must include a valid and current Employer Identification Number (EIN) issued by the Internal Revenue Service (IRS) and assigned to the Applicant and, if applicable, its Controlling Entity. Electronic applications without a valid EIN are incomplete and cannot be transmitted to the CDFI Fund. For more information on obtaining an EIN, please contact the IRS at (800) 829–4933 or *www.irs.gov.* Do not include any personal Social Security Numbers as part of the application.

An Applicant may not submit more than one application in response to this NOAA. In addition, as stated in Section III.A.6 of this NOAA, an Applicant and its Affiliates must collectively submit only one allocation application; an Applicant and its Affiliates may not submit separate allocation applications except as outlined in Section III.A.6 above. Once an application is submitted, an Applicant will not be allowed to change any element of its application.

C. *Form of application submission:* Applicants may only submit applications under this NOAA electronically. Applications sent by facsimile or by email will not be accepted. Submission of an electronic application will facilitate the processing and review of applications and the selection of Allocatees; further, it will assist the CDFI Fund in the implementation of electronic reporting requirements.

1. *Electronic applications:* Electronic applications must be submitted solely by using the CDFI Fund's Web site and must be sent in accordance with the submission instructions provided in the electronic application form. The CDFI Fund recommends use of Internet Explorer version 8 or higher on a Microsoft Windows-based computer (Windows Vista or higher), and optimally at least a 56Kbps Internet connection in order to meet the electronic application submission requirements. Use of other browsers (*i.e.,* Firefox, Chrome, Safari), other versions of Internet Explorer, or other systems (*i.e.,* Mac) might result in problems during submission of the application. The CDFI Fund's electronic application system will only permit the submission of applications in which all required questions and tables are fully completed. Additional information, including instructions relating to the submission of supporting information (*i.e.,* the Applicant's authorized representative signature page, the Controlling Entity's representative signature page, investor letters and organizational charts) is set forth in further detail in the electronic application and the Online Application Instructions for this Allocation Round.

D. *Application submission dates and times:*

1. *Application deadlines:*

(a) *Electronic applications:* Must be received by 5:00 p.m. ET on December 16, 2015. Electronic applications cannot be transmitted or received after 5:00 p.m. ET on December 16, 2015. In addition, Applicants must separately submit supporting information (*i.e.,* the Applicant's authorized representative signature page, the Controlling Entity's representative signature page, investor letters and organizational charts) via their myCDFIFund account. The Applicant's authorized representative signature page, the Controlling Entity's representative signature page, investor letters and organizational charts must be submitted on or before 11:59 p.m. on December 18, 2015. Attachments may not exceed a size limit of 5 megabytes (MB). See application instructions, provided in the electronic application and the Round Allocation Application Q&A, for further detail. Applications and other required documents received after this date and time will be rejected. If the Applicant's authorized representative signature page is not received by the deadline specified above, the CDFI Fund reserves the right to reject the application. Please note that the document submission deadlines in this NOAA and/or the allocation application are strictly enforced.

E. *Intergovernmental Review:* Not applicable.

F. *Funding Restrictions:* For allowable uses of investment proceeds related to a NMTC allocation, please see 26 U.S.C. 45D and the final regulations issued by the Internal Revenue Service (26 CFR 1.45D–1, published December 28, 2004 and as amended) and related guidance. Please see Section I, above, for the Programmatic Changes of this NOAA.

G. *Paperwork Reduction:* Under the Paperwork Reduction Act (44 U.S.C. chapter 35), an agency may not conduct or sponsor a collection of information, and an individual is not required to respond to a collection of information, unless it displays a valid OMB control number. Pursuant to the Paperwork Reduction Act, the application has been assigned the following control number: 1559–0016.

V. Application Review Information

A. *Review and selection process:* All allocation applications will be reviewed for eligibility and completeness. To be complete, the application must contain, at a minimum, all information described as required in the application form. An incomplete application will be rejected. Once the application has been determined to be eligible and complete, the CDFI Fund will conduct the substantive review of each application in two parts (Phase 1 and Phase 2) in accordance with the criteria and procedures generally described in this NOAA and the allocation application.

In Phase 1, three reviewers will evaluate and score the Business Strategy and Community Outcomes sections of each application. An Applicant must exceed a minimum overall aggregate base score threshold *and* exceed a minimum aggregate section score threshold in each scored section in order to advance from the Phase 1 to the Phase 2 part of the substantive review process. In Phase 2, the CDFI Fund will rank Applicants and determine the dollar amount of allocation authority awarded in accordance with the procedures set forth below.

B. *Criteria:*

1. *Business Strategy* (25-point maximum):

(a) When assessing an Applicant's business strategy, reviewers will consider, among other things: The Applicant's products, services and investment criteria; the prior performance of the Applicant or its Controlling Entity, particularly as it relates to making similar kinds of investments as those it proposes to make with the proceeds of QEIs; the Applicant's prior performance in providing capital or technical assistance to disadvantaged businesses or communities; the projected level of the Applicant's pipeline of potential investments; the extent to which the Applicant intends to make QLICIs in one or more businesses in which persons unrelated to the entity hold a majority equity interest; and the extent to which Applicants that otherwise have notable relationships with the Qualified Active Low Income Community Businesses (QALICBs) financed will create benefits (beyond those created in the normal course of a NMTC transaction) to Low-Income Communities.

Under the Business Strategy criterion, an Applicant will generally score well to the extent that it will deploy debt or investment capital in products or services which are flexible or non-traditional in form and on better terms than available in the marketplace. An Applicant will also score well to the extent that, among other things: (i) It has a track record of successfully deploying loans or equity investments and providing services similar to those it intends to provide with the proceeds of QEIs; (ii) it has identified a set of clearly-defined potential borrowers or investees; (iii) its projected dollar volume of NMTC deployment is supported by its track record of deployment; (iv) in the case of an Applicant proposing to purchase loans from CDEs, the Applicant will require the CDE selling such loans to re-invest the proceeds of the loan sale to provide additional products and services to Low-Income Communities.

(b) *Priority Points:* In addition, as provided by IRC § 45D(f)(2), the CDFI Fund will ascribe additional points to entities that meet one or both of the statutory priorities. First, the CDFI Fund will give up to five (5) additional points to any Applicant that has a record of having successfully provided capital or technical assistance to disadvantaged businesses or communities. Second, the CDFI Fund will give five (5) additional points to any Applicant that intends to satisfy the requirement of IRC § 45D(b)(1)(B) by making QLICIs in one or more businesses in which persons unrelated (within the meaning of IRC § 267(b) or IRC § 707(b)(1)) to an Applicant (or the Applicant's subsidiary CDEs) hold the majority equity interest. Applicants may earn points for one or both statutory priorities. Thus, Applicants that meet the requirements of both priority categories can receive up to a total of ten (10) additional points. A record of having successfully provided capital or technical assistance to disadvantaged businesses or communities may be demonstrated either by the past actions of an Applicant itself or by its Controlling Entity (*i.e.,* where a new CDE is established by a nonprofit corporation with a history of providing assistance to disadvantaged communities). An Applicant that receives additional points for intending to make investments in unrelated businesses and is awarded a NMTC allocation must meet the requirements of IRC § 45D(b)(1)(B) by investing substantially all of the proceeds from its QEIs in unrelated businesses. The CDFI Fund will factor in an Applicant's priority points when ranking Applicants during Phase 2 of the review process, as described below.

2. *Community Outcomes* (25-point maximum): In assessing the potential benefits to Low-Income Communities that may result from the Applicant's proposed investments, reviewers will consider, among other things, the degree to which the Applicant is likely to: (i) Achieve significant and measurable community development outcomes in its Low-Income Communities; (ii) invest in particularly economically distressed markets: (iii) Engage with local communities regarding investments; (iv) the level of involvement of community representatives in the Governing Board and/or Advisory Board in approving investment criteria or decisions; and (v) demonstrate a track record of investing in businesses that spur additional private capital investment in Low-Income Communities.

An Applicant will generally score well under this section to the extent that, among other things: (a) It has a track record of producing quantitative and qualitative community outcomes that are similar to those projected to be achieved with an NMTC allocation; (b) it is working in particularly economically distressed or otherwise underserved communities; (c) its activities are part of a broader community or economic development strategy; (d) it demonstrates a track record of community engagement around past investment decisions; (e) it ensures that an NMTC investment into a project or business is supported by and will be beneficial to Low-Income Persons and residents of Low-Income Communities (LICs); and (f) it is likely to engage in activities that will spur additional private capital investment.

C. *Phase 2 Evaluation.*

1. *Final Rank Score*

(a). *Anomaly Reviews:* Using the numeric scores from Phase 1, Applicants are ranked on the basis of each Applicant's combined scores in the Business Strategy and Community Outcomes sections of the application plus one half of the priority points. If, in the case of a particular application, a reviewer's total base score or section score(s) (in one or more of the two application scored sections) varies significantly from the median of the three reviewers' total base scores or section scores for such application, the CDFI Fund may, in its sole discretion, obtain the evaluation and numeric scoring of an additional fourth reviewer to determine whether the anomalous score should be replaced with the score of the additional fourth reviewer.

(b). *Late Reports:* In the case of an Applicant or any Affiliates that has previously received an award or allocation from the CDFI Fund through any CDFI Fund program, the CDFI Fund will deduct points from the Applicant's ''Final Rank Score'' for the Applicant's (or its Affiliate's) failure to meet any of the reporting deadlines set forth in any assistance, award or Allocation Agreement(s), if the reporting deadlines occurred during the period from October 1, 2014 to the application deadline in this NOAA (December 16, 2015).

(c). *Prior Year Allocatees:* In the case of Applicants (or their Affiliates) that are prior year Allocatees, the CDFI Fund will review the activities of the prior year Allocatee to determine whether the entity has: (i) Effectively utilized its prior-year allocations in a manner generally consistent with the representations made in the relevant allocation application; and (ii) substantiated a need for additional allocation authority.

The CDFI Fund will award allocations in the order of the ''Final Rank Score,'' subject to Applicants meeting all other eligibility requirements; provided, however, that the CDFI Fund, in its sole discretion, reserves the right to reject an application and/or adjust award amounts as appropriate based on information obtained during the review process.

2. *Management Capacity:* In assessing an Applicant's management capacity, CDFI Fund will consider, among other

things, the qualifications of the Applicant's Principals, its board members, its management team, and other essential staff or contractors, with specific focus on: Experience in deploying capital or technical assistance, including activities similar to those described in the Applicant's business strategy; asset management and risk management experience; experience with fulfilling compliance requirements of other governmental programs, including other tax programs; and the Applicant's (or its Controlling Entity's) financial health. CDFI Fund evaluators will also consider the extent to which an Applicant has protocols in place to ensure ongoing compliance with NMTC Program requirements and the Applicant's projected income and expenses related to managing an NMTC allocation.

An Applicant will be generally evaluated more favorably under this section to the extent that its management team or other essential personnel have experience in: (a) Deploying capital or technical assistance in Low-Income Communities, particularly those likely to be served by the Applicant with the proceeds of QEIs; (b) asset and risk management; and (c) fulfilling government compliance requirements, particularly tax credit program compliance. An Applicant will also be evaluated favorably to the extent it demonstrates strong financial health and a high likelihood of remaining a going-concern; it clearly explains levels of income and expenses; has policies and systems in place to ensure ongoing compliance with NMTC Program requirements; and, if it is a Federally-insured financial institution, its most recent Community Reinvestment Act (CRA) rating was ''outstanding.''

3. *Capitalization Strategy:* When assessing an Applicant's capitalization strategy, CDFI Fund will consider, among other things: The key personnel of the Applicant (or Controlling Entity) and their track record of raising capital, particularly from for-profit investors; the extent to which the Applicant has secured investments or commitments to invest in NMTC (if applicable), or indications of investor interest commensurate with its requested amount of tax credit allocations, or, if a prior Allocatee, the track record of the Applicant or its Affiliates in raising Qualified Equity Investments in the past five years; the Applicant's strategy for identifying additional investors, if necessary, including the Applicant's (or its Controlling Entity's) prior performance with raising equity from investors, particularly for-profit investors; the distribution of the economic benefits of the tax credit; and the extent to which the Applicant intends to invest the proceeds from the aggregate amount of its QEIs at a level that exceeds the requirements of IRC § 45D(b)(1)(B) and the IRS regulations.

An Applicant will be evaluated more favorably under this section to the extent that: (a) It or its Controlling Entity demonstrate a track record of raising investment capital; (b) it has secured investor commitments, or has a reasonable strategy for obtaining such commitments, or, if it or its Affiliates is a prior Allocatee with a track record in the past five years of raising Qualified Equity Investments or; (c) it generally demonstrates that the economic benefits of the tax credit will be passed through to a QALICB; and (d) it intends to invest the proceeds from the aggregate amount of its QEIs at a level that exceeds the requirements of IRC § 45D(b)(1)(B) and the IRS regulations. In the case of an Applicant proposing to raise investor funds from organizations that also will identify or originate transactions for the Applicant or from Affiliated entities, said Applicant will be evaluated more favorably to the extent that it will offer products with more favorable rates or terms than those currently offered by its investor(s) or Affiliated entities and/or will target its activities to areas of greater economic distress than those currently targeted by the investor or Affiliated entities.

D. *Allocations serving Non-Metropolitan counties:* As provided for under Section 102(b) of the Tax Relief and Health Care Act of 2006 (P. L. 109–432), the CDFI Fund shall ensure that Non-Metropolitan counties receive a proportional allocation of QEIs under the NMTC Program. To this end, the CDFI Fund will ensure that the proportion of Allocatees that are Rural CDEs is, at a minimum, equal to the proportion of Applicants in the highly qualified pool that are Rural CDEs. The CDFI Fund will also endeavor to ensure that 20 percent of the QLICIs to be made using QEI proceeds are invested in Non-Metropolitan counties. A Rural CDE is one that has a track record of at least three years of direct financing experience, has dedicated at least 50 percent of its direct financing dollars to Non-Metropolitan counties over the past five years, and has committed that at least 50 percent of its NMTC financing dollars with this Allocation will be deployed in such areas. Non-Metropolitan counties are counties not contained within a Metropolitan Statistical Area, as such term is defined in OMB Bulletin No. 10–02 (Update of Statistical Area Definitions and Guidance on Their Uses) and applied using 2010 census tracts.

Applicants that meet the minimum scoring thresholds will be advanced to Phase 2 review and will be provided with ''preliminary'' awards, in descending order of Final Rank Score, until the available allocation authority is fulfilled. Once these ''preliminary'' award amounts are determined, the CDFI Fund will then analyze the Allocatee pool to determine whether the two Non-Metropolitan proportionality objectives have been met.

The CDFI Fund will first examine the ''preliminary'' awards and Allocatees to determine whether the percentage of Allocatees that are Rural CDEs is, at a minimum, equal to the percentage of Applicants in the highly qualified pool that are Rural CDEs. If this objective is not achieved, the CDFI Fund will provide awards to additional Rural CDEs from the highly qualified pool, in descending order of their Final Rank Score, until the appropriate percentage balance is achieved. In order to accommodate the additional Rural CDEs in the Allocatee pool within the available allocation limitations, a formula reduction will be applied as uniformly as possible to the allocation amount for all Allocatees in the pool that have not committed to investing a minimum of 20 percent of their QLICIs in Non-Metropolitan counties.

The CDFI Fund will then determine whether the pool of Allocatees will, in the aggregate, invest at least 20 percent of their QLICIs (as measured by dollar amount) in Non-Metropolitan counties. The CDFI Fund will first apply the ''minimum'' percentage of QLICIs that Allocatees indicated in their applications would be targeted to Non-Metropolitan areas to the total allocation award amount of each Allocatee (less whatever percentage the Allocatee indicated would be retained for non-QLICI activities), and total these figures for all Allocatees. If this aggregate total is greater than or equal to 20 percent of the QLICIs to be made by the Allocatees, then the pool is considered balanced and the CDFI Fund will proceed with the allocation process. However, if the aggregate total is less than 20 percent of the QLICIs to be made by the Allocatees, the CDFI Fund will consider requiring any or all of the Allocatees to direct up to the ''maximum'' percentage of QLICIs that the Allocatees indicated would be targeted to Non-Metropolitan counties, taking into consideration their track record and ability to deploy dollars in Non-Metropolitan counties. If the CDFI Fund cannot meet the goal of 20 percent of QLICIs in Non-Metropolitan counties by requiring any or all Allocatees to commit up to the maximum percentage of QLICIs that they indicated would be targeted to Non-Metropolitan counties, the CDFI Fund may add additional Rural CDEs (in descending order of final rank score) to the Allocatee pool. In order to accommodate any additional Allocatees within the allocation limitations, a formula reduction will be applied as uniformly as possible, to the allocation amount for all Allocatees in the pool that have not committed to investing a minimum of 20 percent of their QLICIs in Non-Metropolitan counties.

E. *Questions:* All outstanding reports or compliance questions should be directed to the Office of Certification, Compliance Monitoring, and Evaluation through the submission of a Service Request in AMIS or by telephone at (202) 653–0423. The CDFI Fund will respond to reporting or compliance questions between the hours of 9:00 a.m. and 5:00 p.m. ET, starting the date of the publication of this NOAA through December 14, 2015. The CDFI Fund will not respond to reporting or compliance phone calls or email inquiries that are received after 5:00 p.m. ET on December 14, 2015 until after the funding application deadline of December 16, 2015.

F. *Right of rejection:* The CDFI Fund reserves the right to reject any NMTC allocation application in the case of a prior CDFI Fund award recipient, if such Applicant has failed to comply with the terms, conditions, and other requirements of the prior or existing assistance or award agreement(s) with the CDFI Fund. The CDFI Fund reserves the right to reject any NMTC allocation application in the case of a prior CDFI Fund Allocatee, if such Applicant has failed to comply with the terms, conditions, and other requirements of its prior or existing Allocation Agreement(s) with the CDFI Fund. The CDFI Fund reserves the right to reject any NMTC allocation application in the case of any Applicant, if an Affiliate of the Applicant has failed to meet the terms, conditions and other requirements of any prior or existing assistance agreement, award agreement or Allocation Agreement with the CDFI Fund.

The CDFI Fund reserves the right to reject any NMTC allocation application in the case of a prior Allocatee, if such Applicant has failed to use its prior NMTC allocation(s) in a manner that is generally consistent with the business strategy (including, but not limited to, the proposed product offerings, QALICB type, and markets served) set forth in the allocation application(s) related to such prior allocation(s) or such Applicant has been found by the IRS to have engaged in a transaction or series of transactions designed to achieve a result that is inconsistent with the purposes of IRC § 45D. The CDFI Fund also reserves the right to reject any NMTC allocation application in the case of an Affiliate of the Applicant that is a prior Allocatee and has failed to use its prior NMTC allocation(s) in a manner that is generally consistent with the business strategy set forth in the allocation application(s) related to such prior allocation(s) or has been found by the IRS to have engaged in a transaction or series of transactions designed to achieve a result that is inconsistent with the purposes of IRC § 45D.

The CDFI Fund reserves the right to reject an NMTC allocation application if information (including administrative errors or omission of information) comes to the attention of the CDFI Fund that adversely affects an Applicant's eligibility for an award, adversely affects the CDFI Fund's evaluation or scoring of an application, adversely affects the CDFI Fund's prior determinations of CDE certification, or indicates fraud or mismanagement on the part of an Applicant or the Controlling Entity, if such fraud or mismanagement by the Controlling Entity would hinder the Applicant's ability to perform under the Allocation Agreement. If the CDFI Fund determines that any portion of the application is incorrect in any material respect, the CDFI Fund reserves the right, in its sole discretion, to reject the application.

As a part of the substantive review process, the CDFI Fund may permit the Allocation Recommendation Panel member(s) to request information from Applicants for the sole purpose of obtaining, clarifying or confirming application information or omission of information. In no event shall such contact be construed to permit an Applicant to change any element of its application. At this point in the process, an Applicant may be required to submit additional information about its application in order to assist the CDFI Fund with its final evaluation process. If the Applicant (or the Controlling Entity or any Affiliate) has previously been awarded an NMTC allocation, the CDFI Fund may also request information on the use of those NMTC allocations, to the extent that this information has not already been reported to the CDFI Fund. Such requests must be responded to within the time parameters set by the CDFI Fund. The selecting official(s) will make a final allocation determination based on an Applicant's file, including, without limitation, eligibility under IRC§ 45D, the reviewers' scores and the amount of allocation authority available.

In the case of Applicants (or the Controlling Entity, or Affiliates) that are regulated or receive oversight by the Federal government or a State agency (or comparable entity), the CDFI Fund may request additional information from the Applicant regarding Assurances and Certifications or other information about the ability of the Applicant to effectively perform under the Allocation Agreement. The Allocation Recommendation Panel or selecting official(s) reserve(s) the right to consult with and take into consideration the views of the appropriate Federal or State banking and other regulatory agencies. The CDFI Fund reserves the right to reject any NMTC Allocation Application if additional information is obtained that, after further due diligence and in the discretion of the CDFI Fund, would hinder the Applicant's ability to effectively perform under the Allocation Agreement. In the case of Applicants (or Affiliates of Applicants) that are also Small Business Investment Companies, Specialized Small Business Investment Companies or New Markets Venture Capital Companies, the CDFI Fund reserves the right to consult with and take into consideration the views of the Small Business Administration.

The CDFI Fund reserves the right to conduct additional due diligence, as determined reasonable and appropriate by the CDFI Fund, in its sole discretion, related to the Applicant, Affiliates, the Applicant's Controlling Entity and the officers, directors, owners, partners and key employees of each. This includes the right to consult with the IRS if the Applicant (or the Controlling Entity, or Affiliates) has previously been awarded an NMTC allocation.

Each Applicant will be informed of the CDFI Fund's award decision through an electronic notification whether selected for an allocation or not selected for an allocation, which may be for reasons of application incompleteness, ineligibility or substantive issues. All Applicants that are not selected for an allocation based on substantive issues will likely be given the opportunity to receive feedback on their applications. This feedback will be provided in a format and within a timeframe to be determined by the CDFI Fund, based on available resources.

The CDFI Fund further reserves the right to change its eligibility and evaluation criteria and procedures, if the CDFI Fund deems it appropriate. If said changes materially affect the CDFI Fund's award decisions, the CDFI Fund will provide information regarding the changes through the CDFI Fund's Web site.

There is no right to appeal the CDFI Fund's NMTC allocation decisions. The CDFI Fund's NMTC allocation decisions are final.

VI. Award Administration Information

A. *Allocation Award Compliance.*

1. *Failure to meet reporting requirements:* If an Allocatee, or an Affiliate of an Allocatee, is a prior CDFI Fund award recipient or Allocatee under any CDFI Fund program and is not current on the reporting requirements set forth in the previously executed assistance, allocation, or award agreement(s), as of the date of the NOAA or thereafter, the CDFI Fund reserves the right, in its sole discretion, to reject the application, delay entering into an Allocation Agreement, and/or impose limitations on an Allocatee's ability to issue QEIs to investors until said prior award recipient or Allocatee is current on the reporting requirements in the previously executed assistance, allocation, or award agreement(s). Please note that the automated systems the CDFI Fund uses for receipt of reports submitted electronically typically acknowledges only a report's receipt; such an acknowledgment does not warrant that the report received was complete and therefore met reporting requirements. If said prior award recipient or Allocatee is unable to meet this requirement within the timeframe set by the CDFI Fund, the CDFI Fund reserves the right, in its sole discretion, to terminate and rescind the allocation made under this NOAA.

2. *Pending determination of noncompliance or default:* If an Allocatee is a prior award recipient or Allocatee under any CDFI Fund program and if: (i) It has submitted reports to the CDFI Fund that demonstrate potential noncompliance with or a default under a previous assistance, award, or Allocation Agreement; and (ii) the CDFI Fund has yet to make a final determination as to whether the entity is in noncompliance with or default under its previous assistance, award, or Allocation Agreement, the CDFI Fund reserves the right, in its sole discretion, to delay entering into an Allocation Agreement and/or to impose limitations on the Allocatee's ability to issue Qualified Equity Investments to investors, pending final determination of whether the entity is in noncompliance or default, and determination of remedies, if applicable, in the sole determination of the CDFI Fund. Further, if an Affiliate of an Allocatee is a prior CDFI Fund award recipient or Allocatee and if such entity: (i) Has submitted reports to the CDFI Fund that demonstrate potential noncompliance/default under a previous assistance, award, or Allocation Agreement; and (ii) the CDFI Fund has yet to make a final determination as to whether the entity is in noncompliance/default under its previous assistance, award, or Allocation Agreement, the CDFI Fund reserves the right, in its sole discretion, to delay entering into an Allocation Agreement and/or to impose limitations on the Allocatee's ability to issue QEIs to investors, pending final determination of whether the entity is in noncompliance or default, and determination of remedies, if applicable, in the sole determination of the CDFI Fund. If the prior award recipient or Allocatee in question is unable to satisfactorily resolve the issues of noncompliance, in the sole determination of the CDFI Fund, the CDFI Fund reserves the right, in its sole discretion, to terminate and rescind the award notification made under this NOAA.

3. *Default status:* If prior to entering into an Allocation Agreement through this NOAA: (i) The CDFI Fund has made a determination that an Allocatee that is a prior CDFI Fund award recipient or Allocatee under any CDFI Fund program is in default of a previously executed assistance, allocation, or assistance agreement(s); (ii) the CDFI Fund has provided written notification of such determination to such organization; and (iii) the anticipated date for entering into an Allocation Agreement is within a period of time specified in such notification throughout which any new award, allocation, or assistance is prohibited, the CDFI Fund reserves the right, in its sole discretion, to delay entering into an Allocation Agreement and/or to impose limitations on the Allocatee's ability to issue QEIs to investors, or to terminate and rescind the Notice of Allocation and the allocation made under this NOAA. Furthermore, if prior to entering into an Allocation Agreement through this NOAA: (i) The CDFI Fund has made a determination that an Affiliate of the Allocatee that is a prior CDFI Fund award recipient or Allocatee under any CDFI Fund program is in default of a previously executed assistance, allocation, or award agreement(s); (ii) the CDFI Fund has provided written notification of such determination to such organization; and (iii) the anticipated date for entering into an Allocation Agreement is within a period of time specified in such notification throughout which any new award, allocation, or assistance is prohibited, the CDFI Fund reserves the right, in its sole discretion, to delay entering into an Allocation Agreement and/or to impose limitations on the Allocatee's ability to issue QEIs to investors, or to terminate and rescind the Notice of Allocation and the allocation made under this NOAA.

B. *Allocation Agreement:* Each Applicant that is selected to receive a NMTC allocation (including the Applicant's Subsidiary Allocatees) must enter into an Allocation Agreement with the CDFI Fund. The Allocation Agreement will set forth certain required terms and conditions of the NMTC allocation which may include, but are not limited to, the following: (i) The amount of the awarded NMTC allocation; (ii) the approved uses of the awarded NMTC allocation (*i.e.,* loans to or equity investments in Qualified Active Low-Income Businesses or loans to or equity investments in other CDEs); (iii) the approved service area(s) in which the proceeds of QEIs may be used, including the dollar amount of QLICIs that must be invested in Non-Metropolitan counties; (iv) commitments to specific ''innovative activities'' discussed by the Applicant in its Allocation Application; (v) the time period by which the Applicant may obtain QEIs from investors; (vi) reporting requirements for all Applicants receiving NMTC allocations; and (vii) a requirement to maintain certification as a CDE throughout the term of the Allocation Agreement. If an Applicant has represented in its NMTC allocation application that it intends to invest substantially all of the proceeds from its investors in businesses in which persons unrelated to the Applicant hold a majority equity interest, the Allocation Agreement will contain a covenant whereby said Applicant agrees that it will invest substantially all of said proceeds in businesses in which persons unrelated to the Applicant hold a majority equity interest.

In addition to entering into an Allocation Agreement, each Applicant selected to receive a NMTC allocation must furnish to the CDFI Fund an opinion from its legal counsel or a similar certification, the content of which will be further specified in the Allocation Agreement, to include, among other matters, an opinion that an Applicant (and its Subsidiary Allocatees, if any): (i) Is duly formed and in good standing in the jurisdiction in which it was formed and the jurisdiction(s) in which it operates; (ii) has the authority to enter into the Allocation Agreement and undertake the activities that are specified therein;

(iii) has no pending or threatened litigation that would materially affect its ability to enter into and carry out the activities specified in the Allocation Agreement; and (iv) is not in default of its articles of incorporation, bylaws or other organizational documents, or any agreements with the Federal government.

If an Allocatee identifies Subsidiary Allocatees, the CDFI Fund reserves the right to require an Allocatee to provide supporting documentation evidencing that it Controls such entities prior to entering into an Allocation Agreement with the Allocatee and its Subsidiary Allocatees. The CDFI Fund reserves the right, in its sole discretion, to rescind its allocation award if the Allocatee fails to return the Allocation Agreement, signed by the authorized representative of the Allocatee, and/or provide the CDFI Fund with any other requested documentation, including an approved legal opinion, within the deadlines set by the CDFI Fund.

C. *Fees:* The CDFI Fund reserves the right, in accordance with applicable Federal law and, if authorized, to charge allocation reservation and/or compliance monitoring fees to all entities receiving NMTC allocations. Prior to imposing any such fee, the CDFI Fund will publish additional information concerning the nature and amount of the fee.

D. *Reporting:* The CDFI Fund will collect information, on at least an annual basis from all Applicants that are awarded NMTC allocations and/or are recipients of QLICIs, including such audited financial statements and opinions of counsel as the CDFI Fund deems necessary or desirable, in its sole discretion. The CDFI Fund will require the Applicant to retain information as the CDFI Fund deems necessary or desirable and shall provide such information to the CDFI Fund when requested to monitor each Allocatee's compliance with the provisions of its Allocation Agreement and to assess the impact of the NMTC Program in Low-Income Communities. The CDFI Fund may also provide such information to the IRS in a manner consistent with IRC § 6103 so that the IRS may determine, among other things, whether the Allocatee has used substantially all of the proceeds of each QEI raised through its NMTC allocation to make QLICIs. The Allocation Agreement shall further describe the Allocatee's reporting requirements.

The CDFI Fund reserves the right, in its sole discretion, to modify these reporting requirements if it determines it to be appropriate and necessary; however, such reporting requirements will be modified only after due notice to Allocatees.

VII. Agency Contacts

The CDFI Fund will provide programmatic and information technology support related to the allocation application between the hours of 9:00 a.m. and 5:00 p.m. ET through December 14, 2015. The CDFI Fund will not respond to phone calls or emails concerning the application that are received after 5:00 p.m. ET on December 14, 2015 until after the allocation application deadline of December 16, 2015. Applications and other information regarding the CDFI Fund and its programs may be obtained from the CDFI Fund's Web site at *https://www.cdfifund.gov.* The CDFI Fund will post on its Web site responses to questions of general applicability regarding the NMTC Program.

A. *Information technology support:* Technical support can be obtained by calling (202) 653–0422 or by email at *ithelpdesk@cdfi.treas.gov.* People who have visual or mobility impairments that prevent them from accessing the Low-Income Community maps using the CDFI Fund's Web site should call (202) 653–0422 for assistance. These are not toll free numbers.

B. *Programmatic support:* If you have any questions about the programmatic requirements of this NOAA, contact the CDFI Fund's NMTC Program Manager by email at *cdfihelp@cdfi.treas.gov;* or by telephone at (202) 653–0421. These are not toll-free numbers.

C. *Administrative support:* If you have any questions regarding the administrative requirements of this NOAA, contact the CDFI Fund's NMTC Program Manager by email at *cdfihelp@cdfi.treas.gov,* or by telephone at (202) 653–0421. These are not toll free numbers.

D. *IRS support:* For questions regarding the tax aspects of the NMTC Program, contact Jian Grant and James Holmes, Office of the Associate Chief Counsel (Passthroughs and Special Industries), IRS, by telephone at (202) 317–4137, or by facsimile at (202) 317–6731. These are not toll free numbers. Applicants wishing formal ruling request should see IRS Internal Revenue Bulletin 2015–1, issued January 2, 2015.

VIII. Information Sessions

In connection with this NOAA, the CDFI Fund may conduct one or more information sessions that will be produced in Washington, DC and broadcast over the internet via webcasting as well as telephone conference calls. For further information on these upcoming information sessions, please visit the CDFI Fund's Web site at *https://www.cdfifund.gov.*

Authority: 26 U.S.C. 45D; 31 U.S.C. 321; 26 CFR 1.45D–1.

Dated: October 20, 2015.

Mary Ann Donovan,

Director, Community Development Financial Institutions Fund.

[FR Doc. 2015–26971 Filed 10–22–15; 8:45 am]

BILLING CODE 4810–70–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Revenue Procedure 2011–4, Revenue Procedure 2011–5, Revenue Procedure 2011–6, and Revenue Procedure 2011–8

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Revenue Procedure 2011–4 (Letter Rulings), Revenue Procedure 2011–5 (Technical Advice), Revenue Procedure 2011–6 (Determination Letters), and Revenue Procedure 2011–8 (User Fees).

DATES: Written comments should be received on or before December 22, 2015 to be assured of consideration.

ADDRESSES: Direct all written comments to Elaine Christophe, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the revenue procedures should be directed to Allan Hopkins, at Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the Internet, at *Allan.M.Hopkins@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Revenue Procedure 2011–4 (Letter Rulings), Revenue Procedure 2011–5 (Technical Advice), Revenue Procedure 2011–6 (Determination Letters), and Revenue Procedure 2011–8 (User Fees).

OMB Number: 1545–1520.

Revenue Procedure Number: Revenue Procedure 2011–4, Revenue Procedure 2011–5, Revenue Procedure 2011–6, and Revenue Procedure 2011–8.

Abstract: The information requested in these revenue procedures is required to enable the Office of the Division Commissioner (Tax Exempt and Government Entities) of the Internal Revenue Service to give advice on filing letter ruling, determination letter, and technical advice requests, to process such requests, and to determine the amount of any user fees.

Current Actions: There are no changes being made to these revenue procedures at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households, business or other for-profit organizations, not-for-profit institutions, farms, and state, local or tribal governments.

Estimated Number of Respondents: 83,074.

Estimated Time per Respondent: 2 hours, 8 minutes.

Estimated Total Annual Burden Hours: 178,146.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: October 13, 2015.

Elaine Christophe,

OMB Reports Clearance Officer.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Notice 2009–31 and Revenue Procedure 2009–43

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Notice 2009–31, Election and Notice Procedures for Multiemployer Plans under Sections 204 and 205 of WRERA and Revenue Procedure 2009–43, Revocation of Elections by Multiemployer Plans to Freeze Funded Status under section 204 of WRERA.

DATES: Written comments should be received on or before December 22, 2015 to be assured of consideration.

ADDRESSES: Direct all written comments to Elaine Christophe, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of notice should be directed to Allan Hopkins, at Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the internet, at *Allan.M.Hopkins@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Election and Notice Procedures for Multiemployer Plans under Sections 204 and 205 of WRERA.

OMB Number: 1545–2141.

Notice Number: Notice 2009–31 and Revenue Procedure 2009–43.

Abstract: Notice 2009–31 provides guidance for sponsors of multiemployer defined benefit plans relating to the elections described in sections 204 and 205 of the Worker, Retiree, and Employer Recovery Act of 2008, Public Law 110–458 (WRERA), and on the notice required to be provided if a plan sponsor makes an election under section 204. Revenue Procedure 2009–43 provides follow-up guidance to Notice 2009–31. This new guidance describes procedures for revoking elections under WRERA.

Current Actions: Renewal of OMB approval. There is no change to the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: State, local, or tribal governments.

Estimated Number of Respondents: 1,600.

Estimated Average Time Per Respondent: 1 hour.

Estimated Total Annual Burden Hours: 1,600.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: October 13, 2015.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Forms 5498–QA and 1099–QA

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13(44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Form 5498–QA, ABLE Account Contribution Information, and Form 1099–QA, Distributions from ABLE Accounts.

DATES: Written comments should be received on or before December 22, 2015 to be assured of consideration.

ADDRESSES: Direct all written comments to Elaine Christophe, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Allan Hopkins, at Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the internet, at *Allan.M.Hopkins@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: ABLE Account Contribution Information; Distributions from ABLE Accounts.

OMB Number: 1545–2262. *Form Numbers:* 5498–QA; 1099–QA.

Abstract: Form 5498–QA, ABLE Account Contributions Information. Public Law 113–295, ABLE Act of 2014 allows individuals and families to set money aside in this special account for the purpose of supporting individuals with disabilities to maintain health, independence, and quality of life, without impacting eligibility for other social service financial assistance programs such as Medicaid. Form 1099–QA allows these individuals and families to draw from the special account.

Current Actions: There are no changes being made to the forms at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Respondents: 20,000.

Estimated Time per Respondent: 11 min.

Estimated Total Annual Burden Hours: 3,600.

The following paragraph applies to all of the collections of information covered by this notice:

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Proposed Collection; Comment Request; Office of Investment Security

AGENCY: Departmental Offices, Department of the Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the Office of Investment Security, within the Department of the Treasury, is soliciting comments concerning the information collection provisions of the Regulations Pertaining to Mergers, Acquisitions and Takeovers by Foreign Persons, 31 CFR 800.402.

DATES: Written comments must be received on or before December 22, 2015 to be assured of consideration.

ADDRESSES: Direct all written comments to Stephen Hanson, Director, Office of Investment Security, Department of the Treasury, 1500 Pennsylvania Avenue NW., Room 5221, Washington, DC 20220; *CFIUS@treasury.gov.*

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Justin Huff, Office of Investment Security, Department of the Treasury, 1500 Pennsylvania Avenue NW., Washington, DC 20220; (202) 622–6133.

SUPPLEMENTARY INFORMATION:

OMB Number: 1505–0121.

Title: Regulations Pertaining to Mergers, Acquisitions and Takeovers by Foreign Persons.

Abstract: The information request in this proposed collection is contained in 31 CFR 800.402. The information collected under these regulations is used by the Committee on Foreign Investment in the United States (CFIUS), an inter-agency committee chaired by the Secretary of the Treasury and comprised of the Secretaries of State, Defense, Treasury, Commerce, Homeland Security, Energy, and Labor; the Attorney General; the U.S. Trade Representative; and the Directors of National Intelligence and the Office of Science and Technology Policy. CFIUS, on behalf of the President, is authorized under section 721 of the Defense Production Act of 1950 to conduct reviews to determine the effects on the national security of transactions proposed or pending after the date of enactment (August 23, 1988) by or with foreign persons that could result in foreign control of any person engaged in interstate commerce in the United States (''covered transactions'').

Current Actions: Revision of a currently approved collection.

Affected Public: Parties to mergers, acquisitions, and takeovers of U.S businesses.

Estimated Number of Responses: 130.

Estimated Time per Respondent: This varies, depending on individual circumstances, with an average of 116 hours.

Estimated Total Annual Burden Hours: 15,080 hours.

Reason for change: There is an adjustment in the number of respondents from 105 to 130.

Requests for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: October 19, 2015.

Dawn D. Wolfgang,

Treasury PRA Clearance Officer.

BILLING CODE 4810–25–P

DEPARTMENT OF THE TREASURY

Multiemployer Pension Plan Application To Reduce Benefits

AGENCY: Department of the Treasury.

ACTION: Notice of availability; request for comments.

SUMMARY: The Board of Trustees of the Central States, Southeast and Southwest Areas Pension Plan (Central States Pension Plan), a multiemployer pension plan, has submitted an application to Treasury to reduce benefits under the Central States Pension Plan in accordance with the Multiemployer Pension Reform Act of 2014 (MPRA). The purpose of this notice is to announce that the application submitted by the Board of Trustees of the Central States Pension Plan has been published on the Treasury Web site, and to request public comments on the application from interested parties, including contributing employers, employee organizations, and participants and beneficiaries of the Central States Pension Plan.

DATES: Comments must be received by December 7, 2015.

ADDRESSES: You may submit comments electronically through the Federal eRulemaking Portal at *http://www.regulations.gov,* in accordance with the instructions on that site. Electronic submissions through *www.regulations.gov* are encouraged.

Comments may also be mailed to the Department of the Treasury, MPRA Office, 1500 Pennsylvania Avenue NW., Room 1224, Washington, DC 20220. Attn: Deva Kyle. Comments sent via facsimile and email will not be accepted.

Additional Instructions. All comments received, including attachments and other supporting materials, will be made available to the public. Do not include any personally identifiable information (such as Social Security number, name, address, or other contact information) or any other information in your comment or supporting materials that you do not want publicly disclosed. Treasury will make comments available for public inspection and copying on *www.regulations.gov* or upon request. Comments posted on the Internet can be retrieved by most Internet search engines.

FOR FURTHER INFORMATION CONTACT: For information regarding the application from the Board of Trustees of the Central States Pension Plan, please contact Treasury at (202) 622–1534 (not a toll-free number).

SUPPLEMENTARY INFORMATION: The Multiemployer Pension Reform Act of 2014 (MPRA) amended the Internal Revenue Code to permit a multiemployer plan that is projected to have insufficient funds to reduce pension benefits payable to participants and beneficiaries if certain conditions are satisfied. In order to reduce benefits, the plan sponsor is required to submit an application to the Secretary of the Treasury, which the Department of the Treasury (Treasury), in consultation with the Pension Benefit Guaranty Corporation (PBGC) and the Secretary of Labor, is required to approve or deny.

On September 25, 2015, the Board of Trustees of the Central States Pension Plan submitted an application for approval to reduce benefits under the Central States Pension Plan. As required by the MPRA, that application has been published on Treasury's Web site at *http://www.treasury.gov/services/Pages/central-states-application.aspx.* Treasury is publishing this notice in the **Federal Register**, in consultation with PBGC and the Department of Labor, to solicit public comments on all aspects of the Central States Pension Plan application, including with respect to the interpretation of section 432(e)(9)(D)(vii) of the Internal Revenue Code that is reflected in the application.

Comments are requested from interested parties, including contributing employers, employee organizations, and participants and beneficiaries of the Central States Pension Plan. Consideration will be given to any comments that are timely received by Treasury.

Dated: October 20, 2015.

David R. Pearl,

Executive Secretary, Department of the Treasury.

Standards of Performance for Greenhouse Gas Emissions From New, Modified, and Reconstructed Stationary Sources: Electric Utility Generating Units

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is finalizing new source performance standards (NSPS) under Clean Air Act (CAA) section 111(b) that, for the first time, will establish standards for emissions of carbon dioxide (CO_2) for newly constructed, modified, and reconstructed affected fossil fuel-fired electric utility generating units (EGUs). This action establishes separate standards of performance for fossil fuel-fired electric utility steam generating units and fossil fuel-fired stationary combustion turbines. This action also addresses related permitting and reporting issues. In a separate action, under CAA section 111(d), the EPA is issuing final emission guidelines for states to use in developing plans to limit CO_2 emissions from existing fossil fuel-fired EGUs.

DATES: This final rule is effective on October 23, 2015. The incorporation by reference of certain publications listed in the rule is approved by the Director of the Federal Register as of October 23, 2015.

ADDRESSES: The EPA has established dockets for this action under Docket ID No. EPA–HQ–OAR–2013–0495 (Standards of Performance for Greenhouse Gas Emissions from New Stationary Sources: Electric Utility Generating Units) and Docket ID No. EPA–HQ–OAR–2013–0603 (Carbon Pollution Standards for Modified and Reconstructed Stationary Sources: Electric Utility Generating Units). All documents in the dockets are listed on the *www.regulations.gov* Web site. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy at the EPA Docket Center (EPA/DC), Room 3334, EPA WJC West Building, 1301 Constitution Ave. NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the Air Docket is (202) 566–1742.

FOR FURTHER INFORMATION CONTACT: Dr. Nick Hutson, Energy Strategies Group, Sector Policies and Programs Division (D243–01), U.S. EPA, Research Triangle Park, NC 27711; telephone number (919) 541–2968, facsimile number (919) 541–5450; email address: *hutson.nick@epa.gov* or Mr. Christian Fellner, Energy Strategies Group, Sector Policies and Programs Division (D243–01), U.S. EPA, Research Triangle Park, NC 27711; telephone number (919) 541–4003, facsimile number (919) 541–5450; email address: *fellner.christian@epa.gov.*

Organization of This Document. The information presented in this preamble is organized as follows:

I. General Information

A. Executive Summary

1. Purpose of the Regulatory Action

In this final action the EPA is establishing standards that limit greenhouse gas (GHG) emissions from newly constructed, modified, and reconstructed fossil fuel-fired electric utility steam generating units and stationary combustion turbines, following the issuance of proposals for such standards and an accompanying Notice of Data Availability.

On June 25, 2013, in conjunction with the announcement of his Climate Action Plan (CAP), President Obama issued a

Presidential Memorandum directing the EPA to issue a proposal to address carbon pollution from new power plants by September 30, 2013, and to issue ''standards, regulations, or guidelines, as appropriate, which address carbon pollution from modified, reconstructed, and existing power plants.'' Pursuant to authority in section 111(b) of the CAA, on September 20, 2013, the EPA issued proposed carbon pollution standards for newly constructed fossil fuel-fired power plants. The proposal was published in the **Federal Register** on January 8, 2014 (79 FR 1430; ''January 2014 proposal'').[1] In that proposal, the EPA proposed to limit emissions of CO_2 from newly constructed fossil fuel-fired electric utility steam generating units and newly constructed natural gas-fired stationary combustion turbines.

The EPA subsequently issued a Notice of Data Availability (NODA) in which the EPA solicited comment on its initial interpretation of provisions in the Energy Policy Act of 2005 (EPAct05) and associated provisions in the Internal Revenue Code (IRC) and also solicited comment on a companion Technical Support Document (TSD) that addressed these provisions' relationship to the factual record supporting the proposed rule. 79 FR 10750 (February 26, 2014).

On June 2, 2014, the EPA proposed standards of performance, also pursuant to CAA section 111(b), to limit emissions of CO_2 from modified and reconstructed fossil fuel-fired electric utility steam generating units and natural gas-fired stationary combustion turbines. 79 FR 34960 (June 18, 2014) (''June 2014 proposal''). Specifically, the EPA proposed standards of performance for: (1) Modified fossil fuel-fired steam generating units, (2) modified natural gas-fired stationary combustion turbines, (3) reconstructed fossil fuel-fired steam generating units, and (4) reconstructed natural gas-fired stationary combustion turbines.

In this action, the EPA is issuing final standards of performance to limit emissions of GHG pollution manifested as CO_2 from newly constructed, modified, and reconstructed fossil fuel-fired electric utility steam generating units (*i.e.,* utility boilers and integrated gasification combined cycle (IGCC) units) and from newly constructed and reconstructed stationary combustion turbines. Consistent with the requirements of CAA section 111(b), these standards reflect the degree of emission limitation achievable through the application of the best system of emission reduction (BSER) that the EPA has determined has been adequately demonstrated for each type of unit. These final standards are codified in 40 CFR part 60, subpart TTTT, a new subpart specifically created for CAA 111(b) standards of performance for GHG emissions from fossil fuel-fired EGUs.

In a separate action that affects the same source category, the EPA is issuing final emission guidelines under CAA section 111(d) for states to use in developing plans to limit CO_2 emissions from existing fossil fuel-fired EGUs. Pursuant to those guidelines, states must submit plans to the EPA following a schedule set by the guidelines.

The EPA received numerous comments and conducted extensive outreach to stakeholders for this rulemaking. After careful consideration of public comments and input from a variety of stakeholders, the final standards of performance in this action reflect certain changes from the proposals. Comments considered include written comments that were submitted during the public comment period and oral testimony provided during the public hearing for the proposed standards.

2. Summary of Major Provisions and Changes to the Proposed Standards

The BSER determinations and final standards of performance for affected newly constructed, modified, and reconstructed EGUs are summarized in Table 1 and discussed in more detail below. The final standards for new, modified, and reconstructed EGUs apply to sources that commenced construction—or modification or reconstruction, as appropriate—on or after the date of publication of corresponding proposed standards.[2] The final standards for newly constructed fossil fuel-fired EGUs apply to those sources that commenced construction on or after the date of publication of the proposed standards, January 8, 2014. The final standards for modified and reconstructed fossil fuel-fired EGUs apply to those sources that modify or reconstruct on or after the date of publication of the proposed standards, June 18, 2014.

TABLE 1—SUMMARY OF BSER AND FINAL STANDARDS FOR AFFECTED EGUS

Affected EGUs	BSER	Final standards of performance
Newly Constructed Fossil Fuel-Fired Steam Generating Units.	Efficient new supercritical pulverized coal (SCPC) utility boiler implementing partial carbon capture and storage (CCS).	1,400 lb CO_2/MWh-g.
Modified Fossil Fuel-Fired Steam Generating Units.	Most efficient generation at the affected EGU achievable through a combination of best operating practices and equipment upgrades.	Sources making modifications resulting in an increase in CO_2 hourly emissions of more than 10 percent are required to meet a unit-specific emission limit determined by the unit's best historical annual CO_2 emission rate (from 2002 to the date of the modification); the emission limit will be no more stringent than: 1. 1,800 lb CO_2/MWh-g for sources with heat input >2,000 MMBtu/h. 2. 2,000 lb CO_2/MWh-g for sources with heat input ≤2,000 MMBtu/h.
Reconstructed Fossil Fuel-Fired Steam Generating Units.	Most efficient generating technology at the affected source (supercritical steam conditions for the larger; and subcritical conditions for the smaller).	1. Sources with heat input >2,000 MMBtu/h are required to meet an emission limit of 1,800 lb CO_2/MWh-g. 2. Sources with heat input ≤2,000 MMBtu/h are required to meet an emission limit of 2,000 lb CO_2/MWh-g.

[1] The EPA previously proposed performance standards for newly reconstructed fossil fuel-fired EGUs in April 2012 (77 FR 22392). In that action, the EPA proposed standards for steam generating units and natural gas-fired combustion turbines based on a single Best System of Emission Reduction determination. On January 8, 2014, the EPA withdrew that proposal (79 FR 1352).

[2] See CAA section 111(a)(2).

TABLE 1—SUMMARY OF BSER AND FINAL STANDARDS FOR AFFECTED EGUS—Continued

Affected EGUs	BSER	Final standards of performance
Newly Constructed and Reconstructed Fossil Fuel-Fired Stationary Combustion Turbines.	Efficient NGCC technology for base load natural gas-fired units and clean fuels for non-base load and multi-fuel-fired units.[3]	1. 1,000 lb CO_2/MWh-g or 1,030 lb CO_2/MWh-n for base load natural gas-fired units. 2. 120 lb CO_2/MMBtu for non-base load natural gas-fired units. 3. 120 to 160 lb CO_2/MMBtu for multi-fuel-fired units.[4]

a. Fossil Fuel-Fired Electric Utility Steam Generating Units

This action establishes standards of performance for newly constructed fossil fuel-fired steam generating units[5] based on the performance of a new highly efficient SCPC EGU implementing post-combustion partial carbon capture and storage (CCS) technology, which the EPA determines to be the BSER for these sources. After consideration of a wide range of comments, technical input received on the availability, technical feasibility, and cost of CCS implementation, and publicly available information about projects that are implementing or planning to implement CCS, the EPA confirms its proposed determination that CCS technology is available and technically feasible to implement at fossil fuel-fired steam generating units. However, the EPA's final standard reflects the consideration of legitimate concerns regarding the cost to implement available CCS technology on a new steam generating unit. Accordingly, the EPA is finalizing an emission standard for newly constructed fossil fuel-fired steam generating units at 1,400 lb CO_2/MWh-g, a level that is less stringent than the proposed limitation of 1,100 lb CO_2/MWh-g. This final standard reflects our identification of the BSER for such units to be a lower level of partial CCS than we identified as the basis of the proposed standards—one that we conclude better represents the requirement that the BSER be implementable at reasonable cost.

The EPA proposed that the BSER for newly constructed steam generating EGUs was highly efficient new generating technology (*i.e.,* a supercritical utility boiler or IGCC unit) implementing partial CCS technology to achieve CO_2 emission reductions resulting in an emission limit of 1,100 lb CO_2/MWh-g.[6]

The BSER for newly constructed steam generating EGUs in the final rule is very similar to that in the January 2014 proposal. In this final action, the EPA finds that a highly efficient new supercritical pulverized coal (SCPC) utility boiler EGU implementing partial CCS to the degree necessary to achieve an emission of 1,400 lb CO_2/MWh-g is the BSER. Contrary to the January 2014 proposal, the EPA finds that IGCC technology—either with natural gas co-firing or implementing partial CCS—is not part of the BSER, but recognizes that IGCC technology can serve as an alternative method of compliance.

The EPA finds that a highly efficient SCPC implementing partial CCS is the BSER because CCS technology has been demonstrated to be technically feasible and is in use or under construction in various industrial sectors, including the power generation sector. For example, the Boundary Dam Unit #3 CCS project in Saskatchewan, Canada is a full-scale, fully integrated CCS project that is currently operating and is designed to capture more than 90 percent of the CO_2 from the lignite-fired boiler. A newly constructed, highly efficient SCPC utility boiler burning bituminous coal will be able to meet this final standard of performance by capturing and storing approximately 16 percent of the CO_2 produced from the facility. A newly constructed, highly efficient SCPC utility boiler burning subbituminous coal or dried lignite[7] will be able to meet this final standard of performance by capturing and storing approximately 23 percent of the CO_2 produced from the facility. As an alternative compliance option, utilities and project developers will also be able to construct new steam generating units (both utility boilers and IGCC units) that meet the final standard of performance by co-firing with natural gas. This final standard of performance for newly constructed fossil fuel-fired steam generating units provides a clear and achievable path forward for the construction of such sources while addressing GHG emissions and supporting technological innovation. The standard of 1,400 lb CO_2/MWh-g is achievable by fossil fuel-fired steam generating units for all fuel types, under a wide range of conditions, and throughout the United States.

We note that identifying a highly efficient new SCPC EGU implementing partial CCS as the BSER provides a path forward for new fossil fuel-fired steam generation in the current market context. Numerous studies have predicted that few new fossil fuel-fired steam generating units will be constructed in the future. These analyses identify a range of factors unrelated to this rulemaking, including low electricity demand growth, highly competitive natural gas prices, and increases in the supply of renewable energy. The EPA recognizes that, in certain circumstances, there may be interest in building fossil fuel-fired steam generating units despite these market conditions. In particular, utilities and project developers may build new fossil fuel-fired steam generating EGUs in order to achieve or maintain fuel diversity within generating fleets, as a hedge against the possibility of natural gas prices far exceeding projections, or to co-produce both power and chemicals, including capturing CO_2 for use in enhanced oil

[3] The term ''multi-fuel-fired'' refers to a stationary combustion turbine that is physically connected to a natural gas pipeline, but that burns a fuel other than natural gas for 10 percent or more of the unit's heat input capacity during the 12-operating-month compliance period.

[4] The emission standard for combustion turbines co-firing natural gas with other fuels shall be determined at the end of each operating month based on the amount of co-fired natural gas. Units only burning natural gas with other fuels with a relatively consistent chemical composition and an emission factor of 160 lb CO_2/MMBtu or less (*e.g.,* natural gas, distillate oil, etc.) only need to maintain records of the fuels burned at the unit to demonstrate compliance. Units burning fuels with variable chemical composition or with an emission factor greater than 160 lb CO_2/MMBtu (*e.g.,* residual oil) must conduct periodic fuel sampling and testing to determine the overall CO_2 emission rate.

[5] Also referred to as just ''steam generating units'' or as ''utility boilers and IGCC units''. These are units that are covered under 40 CFR part 60, subpart Da for criteria pollutants.

[6] Using the most recent data on partial capture rates to meet an emission standard of 1,100 lb CO_2/MWh-gross, about 35 percent capture would be required at an SCPC unit and about 22 percent capture would be required at an IGCC unit.

[7] For a summary of lignite drying technologies, see ''Techno-economics of modern pre-drying technologies for lignite-fired power plants'' available at *www.iea-coal.org.uk/documents/83436/9095/Techno-economics-of-modern-pre-drying-technologies-for-lignite-fired-power-plants,-CCC/241*; ''Drying the lignite prior to combustion in the boiler is thus an effective way to increase the thermal efficiencies and reduce the CO_2 emissions from lignite-fired power plants.''

recovery (EOR) projects.[8] As regulatory history has shown, identifying a new highly efficient SCPC EGU implementing partial CCS as the BSER in this rule is likely to further boost research and development in CCS technologies, making the implementation even more efficacious and cost-effective, while providing a competitive, low emission future for fossil fuel-fired steam generation.

The EPA is also issuing final standards for steam generating units that implement ''large modifications,'' (*i.e.,* modifications resulting in an increase in hourly CO_2 emissions of more than 10 percent when compared to the source's highest hourly emissions in the previous 5 years).[9] The EPA is not issuing final standards, at this time, for steam generating units that implement ''small modifications'' (*i.e.,* modifications resulting in an increase in hourly CO_2 emissions of less than or equal to 10 percent when compared to the source's highest hourly emissions in the previous 5 years).

The standards of performance for modified steam generating units that make large modifications are based on each affected unit's own best potential performance as the BSER. Specifically, such a modified steam generating unit will be required to meet a unit-specific CO_2 emission limit determined by that unit's best demonstrated historical performance (in the years from 2002 to the time of the modification).[10] The EPA has determined that this standard based on each unit's own best potential performance can be met through a combination of best operating practices and equipment upgrades and that these steps can be implemented cost-effectively at the time when a source is undertaking a large modification. To account for facilities that have already implemented best practices and equipment upgrades, the final rule also specifies that modified facilities will not have to meet an emission standard more stringent than the corresponding standard for reconstructed steam generating units (*i.e.,* 1,800 lb CO_2/MWh-g for units with heat input greater than 2,000 MMBtu/h and 2,000 lb CO_2/MWh-g for units with heat input less than or equal to 2,000 MMBtu/h).

The final standards for steam generating units implementing large modifications are similar to the proposed standards for such units. In the proposal, we suggested that the standard should be based on when the modification is undertaken (*i.e.,* before being subject to requirements under a CAA section 111(d) state plan or after being subject to such a plan). We also suggested that for units that undertake modifications prior to becoming subject to an approved CAA section 111(d) state plan, the standard should be its best historical performance plus an additional two percent reduction. In response to comments on the proposal, we are not finalizing separate standards that are dependent upon when the modification takes place, nor are we finalizing the proposed additional two percentage reduction.

The EPA is not promulgating final standards of performance for, and is withdrawing the proposed standards for steam generating sources that make modifications resulting in an increase of hourly CO_2 emissions of less than or equal to 10 percent (see Section XV of this preamble). As we indicated in the proposal, the EPA has been notified of very few modifications for criteria pollutant emissions from the power sector to which NSPS requirements have applied. As such, we expect that there will be few NSPS modifications for GHG emissions as well. Even so, we also recognize (and we discuss in this preamble) that the power sector is undergoing significant change and realignment in response to a variety of influences and incentives in the industry. We do not have sufficient information at this time, however, to anticipate the types of modifications, if any, that may result from these changes. In particular, we do not have sufficient information about the types of modifications, if any, that would result in increases in CO_2 emissions of 10 percent or less, and what the appropriate standard for such sources would be. Therefore, we conclude that it is prudent to delay issuing standards for sources that undertake small modifications (*i.e.,* those resulting in an increase in CO_2 emissions of less than or equal to 10 percent).

For reconstructed steam generating units, the EPA is finalizing standards based on the performance of the most efficient generating technology for these types of units as the BSER (*i.e.,* reconstructing the boiler if necessary to use steam with higher temperature and pressure, even if the boiler was not originally designed to do so).[11] The emission standard for these sources is 1,800 lb CO_2/MWh-g for large sources, (*i.e.* those with a heat input rating of greater than 2,000 MMBtu/h) or 2,000 lb CO_2/MWh-g for small sources (*i.e.,* those with a heat input rating of 2,000 MMBtu/h or less). The difference in the standards for larger and smaller units is based on greater availability of higher pressure/temperature steam turbines (*e.g.,* supercritical steam turbines) for larger units. The standards can also be met through other non-BSER options, such as natural gas co-firing.

b. Stationary Combustion Turbines

This action also finalizes standards of performance for newly constructed and reconstructed stationary combustion turbines. In the January 2014 proposal for newly constructed EGUs, the EPA proposed that natural gas-fired stationary combustion turbines (*i.e.,* turbines combusting over 90 percent natural gas) would be subject to a standard of performance for CO_2 emissions if they are constructed for the purpose of supplying and actually annually supply to the grid (1) one-third or more of their potential electric output[12] and (2) more than 219,000 MWh,[13] based on a three-year rolling average. We refer to units that operate above the electric sales thresholds as ''base load units,'' and we refer to units that operate below these thresholds as ''non-base load units.''

In the January 2014 proposal for newly constructed combustion turbines, the EPA proposed standards for two subcategories of base load natural gas-fired stationary combustion turbines. The proposed standard for small combustion turbines (units with base load ratings less than or equal to 850 MMBtu/h) was 1,100 lb CO_2/MWh-g. The proposed standard for large combustion turbines (units with base

[8] As the EIA has stated: Policy-related factors, such as environmental regulations and investment or production tax credits for specified generation sources, can also impact investment decisions. Finally, although levelized cost calculations are generally made using an assumed set of capital and operating costs, the inherent uncertainty about future fuel prices and future policies may cause plant owners or investors who finance plants to place a value on *portfolio diversification.* While EIA considers many of these factors in its analysis of technology choice in the electricity sector, these concepts are not included in LCOE or LACE calculations. *http://www.eia.gov/forecasts/aeo/electricity_generation.cfm.*

[9] 40 CFR 60.14(h) provides that no physical change, or change in the method of operation, at an existing electric utility steam generating unit will be treated as a modification provided that such change does not increase the maximum hourly emissions above the maximum hourly emissions achievable at that unit during the 5 years prior to the change.

[10] For the 2002 reporting year the EPA introduced new automated checks in the software that integrated automated quality assurance (QA) checks on the hourly data. Thus, the EPA believes that the data from 2002 and forward are of higher quality.

[11] Steam with higher temperature and pressure has more thermal energy that can be more efficiently converted to electrical energy.

[12] We refer to thresholds related to an EGU's actual annual electrical sales (as a fraction of potential annual output) as ''percentage electric sales criteria.''

[13] We refer to thresholds related to an EGU's actual annual electrical sales in megawatt-hours as ''total electric sales criteria.''

load ratings greater than 850 MMBtu/h) was 1,000 lb CO_2/MWh-g. The EPA did not propose standards for non-base load units.

In the June 2014 proposal for modified and reconstructed combustion turbines, the EPA solicited comment on alternative approaches for establishing applicability and subcategorization criteria, including (1) eliminating the ''constructed for the purpose of supplying'' qualifier for the total electric sales and percentage electric sales criteria, (2) eliminating the 219,000 MWh total electric sales criterion altogether, (3) replacing the fixed percentage electric sales criterion with a variable percentage electric sales criterion (*i.e.,* the sliding-scale approach [14]), and (4) eliminating the proposed small and large subcategories for base load natural gas-fired combustion turbines. These proposed applicability requirements were intended to exclude combustion turbines that are used for the purpose of meeting peak power demand, as opposed to those that are used to meet base load power demand.

In both proposals, the EPA also solicited comment on a broad applicability approach that would include non-base load natural gas-fired units (primarily simple cycle combustion turbines) and multi-fuel-fired units (primarily distillate oil-fired combustion turbines) in the general applicability of subpart TTTT. As part of the broad applicability approach, the EPA solicited comment on imposing ''no emission standard'' or establishing separate numerical limits for these two subcategories.

In this action, the EPA is finalizing a variation of the approaches put forward in the January 2014 proposal for new sources and the June 2014 proposal for modified and reconstructed sources. Based on our review of public comments related to the proposed subcategories for small and large combustion turbines and our additional data analyses, we have determined that there is no need to set two separate standards for different sizes of combustion turbines for base load natural gas-fired combustion turbines. The EPA has determined that all sizes of affected newly constructed and reconstructed stationary combustion turbines can achieve the final standards. For newly constructed and reconstructed base load natural gas-fired stationary combustion turbines, the EPA is finalizing a standard of 1,000 lb CO_2/MWh-g based on efficient natural gas combined cycled (NGCC) technology as the BSER. Alternatively, owners and operators of base load natural gas-fired combustion turbines may elect to comply with a standard based on net output of 1,030 lb CO_2/MWh-n.

The EPA is eliminating the 219,000 MWh total annual electric sales criterion for non-CHP units. In addition, the EPA is finalizing the sliding-scale approach for deriving the unit-specific, percentage electric sales threshold above which a combustion turbine transitions from the subcategory for non-base load units to the subcategory for base load units. For newly constructed and reconstructed non-base load natural gas-fired stationary combustion turbines, the EPA is finalizing the combustion of clean fuels (natural gas with a small allowance for distillate oil) as the BSER with a corresponding heat input-based standard of 120 lb CO_2/MMBtu. This standard of performance will apply to the vast majority of simple cycle combustion turbines. The EPA is finalizing a heat input-based clean fuels standard because we have insufficient information at this time to set a uniform output-based standard that can be achieved by all new and reconstructed non-base load units.

In addition, for newly constructed and reconstructed multi-fuel-fired stationary combustion turbines, the EPA is finalizing an input-based standard of 120 to 160 lb CO_2/MMBtu based on the combustion of clean fuels as the BSER.[15] The EPA has similarly determined that it has insufficient information at this time to set a uniform output-based standard for stationary combustion turbines that operate with significant quantities of a fuel other than natural gas.

We are not promulgating final standards of performance for stationary combustion turbines that make modifications at this time. We are simultaneously withdrawing the proposed standards for modifications (see Section XV of this preamble). As we indicated in the proposal, sources from the power sector have notified the EPA of very few NSPS modifications, and we expect that there will be few NSPS modifications for CO_2 emissions as well. Moreover, our decision to eliminate the subcategories for small and large EGUs and set a single standard of 1,000 lb CO_2/MWh-g has raised questions as to whether smaller existing combustion turbines that undertake a modification can meet this standard. As a result, we have concluded that it is prudent to delay issuing standards for sources that undertake modifications until we can gather more information.

A more detailed discussion of the final standards of performance for stationary combustion turbines, the applicability criteria, and the comments that influenced the final standards is provided in Sections VIII and IX of this preamble.

3. Costs and Benefits

As explained in the regulatory impact analysis (RIA) for this final rule, available data—including utility announcements and Energy Information Administration (EIA) modeling—indicate that, even in the absence of this rule, (i) existing and anticipated economic conditions are such that few, if any, fossil fuel-fired steam-generating EGUs will be built in the foreseeable future, and (ii) utilities and project developers are expected to choose new generation technologies (primarily NGCC) that would meet the final standards and renewable generating sources that are not affected by these final standards. These projections are consistent with utility announcements and EIA modeling that indicate that new units are likely to be NGCC and that any coal-fired steam generating units built between now and 2030 would have CCS, even in the absence of this rule.[16] Therefore, based on the analysis presented in Chapter 4 of the RIA, the EPA projects that this final rule will result in negligible CO_2 emission changes, quantified benefits, and costs by 2022 as a result of the performance standards for newly constructed EGUs.[17] However, as noted earlier, for a variety of reasons, some companies may consider coal-fired steam generating units that the modeling does not anticipate. Thus, in Chapter 5 of the RIA, we also present an analysis of the project-level costs of a newly constructed coal-fired steam generating unit with partial CCS that meets the requirements of this final rule alongside the project-level costs of a newly constructed coal-fired unit without CCS. This analysis indicates that the

[14] The sliding-scale approach determines a unit-specific percentage electric sales threshold equivalent to a unit's net design efficiency (the maximum value is capped at 50 percent).

[15] Combustion turbines co-firing natural gas with other fuels shall determine fuel-based site-specific standards at the end of each operating month. The site-specific standards depend on the amount of co-fired natural gas.

[16] The EPA's Integrated Planning Model (IPM) projects no new non-compliant coal (*i.e.,* newly constructed coal-fired plants that do not meet the final standard of performance) throughout the model horizon of 2030 (there is a small amount of new coal with CCS that is hardwired into the modelling, consistent with EIA assumptions to represent units already under construction or under development).

[17] Conditions in the analysis year of 2022 are represented by a model year of 2020.

quantified benefits of the standards of performance would exceed their costs under a range of assumptions.

As explained in the RIA and further below, the EPA has been notified of few power sector NSPS modifications or reconstructions. Based on that experience, the EPA expects that few EGUs will trigger either the modification or the reconstruction provisions that we are finalizing in this action. In Chapter 6 of the RIA, we discuss factors that limit our ability to quantify the costs and benefits of the standards for modified and reconstructed sources.

B. Does this action apply to me?

The entities potentially affected by the standards are shown in Table 2 below.

TABLE 2—POTENTIALLY AFFECTED ENTITIES [a]

Category	NAICS code	Examples of potentially affected entities
Industry	221112	Fossil fuel electric power generating units.
Federal Government	[b]221112	Fossil fuel electric power generating units owned by the federal government.
State/Local Government	[b]221112	Fossil fuel electric power generating units owned by municipalities.
Tribal Government	921150	Fossil fuel electric power generating units in Indian Country.

[a] Includes NAICS categories for source categories that own and operate electric power generating units (including boilers and stationary combined cycle combustion turbines).

[b] Federal, state, or local government-owned and operated establishments are classified according to the activity in which they are engaged.

This table is not intended to be exhaustive, but rather to provide a guide for readers regarding entities likely to be affected by this action. To determine whether your facility, company, business, organization, etc., would be regulated by this action, refer to Section III of this preamble for more information and examine the applicability criteria in 40 CFR 60.1 (General Provisions) and § 60.550840 of subpart TTTT (Standards of Performance for Greenhouse Gas Emissions for Electric Utility Generating Units). If you have any questions regarding the applicability of this action to a particular entity, consult either the air permitting authority for the entity or your EPA regional representative as listed in 40 CFR 60.4 or 40 CFR 63.13 (General Provisions).

C. Where can I get a copy of this document?

In addition to being available in the docket, an electronic copy of this final action will also be available on the Worldwide Web (WWW). Following signature, a copy of this final action will be posted at the following address: *http://www2.epa.gov/carbon-pollution-standards.*

D. Judicial Review

Under section 307(b)(1) of the CAA, judicial review of this final rule is available only by filing a petition for review in the U.S. Court of Appeals for the District of Columbia Circuit by December 22, 2015. Moreover, under section 307(b)(2) of the CAA, the requirements established by this final rule may not be challenged separately in any civil or criminal proceedings brought by the EPA to enforce these requirements. Section 307(d)(7)(B) of the CAA further provides that ''[o]nly an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment (including any public hearing) may be raised during judicial review.'' This section also provides a mechanism mandating the EPA to convene a proceeding for reconsideration if the person raising an objection can demonstrate that it was impracticable to raise such objection within the period for public comment or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule. Any person seeking to make such a demonstration should submit a Petition for Reconsideration to the Office of the Administrator, U.S. EPA, Room 3000, Ariel Rios Building, 1200 Pennsylvania Ave. NW., Washington, DC 20460, with a copy to both the person(s) listed in the preceding **FOR FURTHER INFORMATION CONTACT** section, and the Associate General Counsel for the Air and Radiation Law Office, Office of General Counsel (Mail Code 2344A), U.S. EPA, 1200 Pennsylvania Ave. NW., Washington, DC 20460.

E. How is this preamble organized?

This action presents the EPA's final standards of performance for newly constructed, modified, and reconstructed fossil fuel-fired electric utility steam generating units and newly constructed and reconstructed stationary combustion turbines. Section II provides background information on climate change impacts from GHG emissions, GHG emissions from fossil fuel-fired EGUs, the utility power sector, the statutory and regulatory background relating to CAA section 111(b), EPA actions prior to this final action, and public comments regarding the proposed actions. Section III explains the EPA's authority to regulate CO_2 and EGUs, identifies affected EGUs, and describes the source categories. Section IV provides a summary of the final standards for newly constructed, modified, and reconstructed fossil fuel-fired steam generating units. Sections V through VII present the rationale for the final standards for newly constructed, modified, and reconstructed steam generating units, respectively. Sections VIII and IX provide a summary of the final standards for stationary combustion turbines and present the rationale for the final standards for newly constructed and reconstructed combustion turbines, respectively. Section X provides a summary of other final requirements for newly constructed, modified, and reconstructed fossil fuel-fired steam generating units and stationary combustion turbines. Section XI addresses the consistency of the respective BSER determinations in these rules and under the emission guidelines issued separately under CAA section 111(d). Interactions with other EPA programs and rules are described in Section XII. Projected impacts of the final action are then described in Section XIII, followed by a discussion of statutory and executive order reviews in Section XIV. Section XV addresses the withdrawal of the proposed standards for steam generating EGUs that make modifications resulting in an increase of hourly CO_2 emissions of less than or equal to 10 percent and the proposed standards for modified stationary combustion turbines. The statutory authority for this action is provided in Section XVI. We address major comments throughout this preamble and in greater detail in an accompanying response-to-comments document located in the docket.

II. Background

In this section, we discuss climate change impacts from GHG emissions, both on public health and public welfare. We also present information about GHG emissions from fossil fuel-fired EGUs and describe the utility power sector and its changing structure. We then summarize the statutory and regulatory background relevant to this final rulemaking. In addition, we provide background information on the EPA's January 8, 2014 proposed carbon pollution standards for newly constructed fossil fuel-fired EGUs, the June 18, 2014 proposed carbon pollution standards for modified and reconstructed EGUs, and other actions associated with this final rulemaking. We close this section with a general discussion of comments and stakeholder input that the EPA received prior to issuing this final rulemaking.

A. Climate Change Impacts From GHG Emissions

According to the National Research Council, ''Emissions of CO_2 from the burning of fossil fuels have ushered in a new epoch where human activities will largely determine the evolution of Earth's climate. Because CO_2 in the atmosphere is long lived, it can effectively lock Earth and future generations into a range of impacts, some of which could become very severe. Therefore, emission reduction choices made today matter in determining impacts experienced not just over the next few decades, but in the coming centuries and millennia.'' [18]

In 2009, based on a large body of robust and compelling scientific evidence, the EPA Administrator issued the Endangerment Finding under CAA section 202(a)(1).[19] In the Endangerment Finding, the Administrator found that the current, elevated concentrations of GHGs in the atmosphere—already at levels unprecedented in human history—may reasonably be anticipated to endanger public health and welfare of current and future generations in the United States. We summarize these adverse effects on public health and welfare briefly here.

1. Public Health Impacts Detailed in the 2009 Endangerment Finding

Climate change caused by human emissions of GHGs threatens the health of Americans in multiple ways. By raising average temperatures, climate change increases the likelihood of heat waves, which are associated with increased deaths and illnesses. While climate change also increases the likelihood of reductions in cold-related mortality, evidence indicates that the increases in heat mortality will be larger than the decreases in cold mortality in the United States. Compared to a future without climate change, climate change is expected to increase ozone pollution over broad areas of the U.S., especially on the highest ozone days and in the largest metropolitan areas with the worst ozone problems, and thereby increase the risk of morbidity and mortality. Climate change is also expected to cause more intense hurricanes and more frequent and intense storms and heavy precipitation, with impacts on other areas of public health, such as the potential for increased deaths, injuries, infectious and waterborne diseases, and stress-related disorders. Children, the elderly, and the poor are among the most vulnerable to these climate-related health effects.

2. Public Welfare Impacts Detailed in the 2009 Endangerment Finding

Climate change impacts touch nearly every aspect of public welfare. Among the multiple threats caused by human emissions of GHGs, climate changes are expected to place large areas of the country at serious risk of reduced water supplies, increased water pollution, and increased occurrence of extreme events such as floods and droughts. Coastal areas are expected to face a multitude of increased risks, particularly from rising sea level and increases in the severity of storms. These communities face storm and flood damage to property, or even loss of land due to inundation, erosion, wetland submergence and habitat loss.

Impacts of climate change on public welfare also include threats to social and ecosystem services. Climate change is expected to result in an increase in peak electricity demand. Extreme weather from climate change threatens energy, transportation, and water resource infrastructure. Climate change may also exacerbate ongoing environmental pressures in certain settlements, particularly in Alaskan indigenous communities, and is very likely to fundamentally rearrange U.S. ecosystems over the 21st century. Though some benefits may balance adverse effects on agriculture and forestry in the next few decades, the body of evidence points towards increasing risks of net adverse impacts on U.S. food production, agriculture and forest productivity as temperature continues to rise. These impacts are global and may exacerbate problems outside the U.S. that raise humanitarian, trade, and national security issues for the U.S.

3. New Scientific Assessments and Observations

Since the administrative record concerning the Endangerment Finding closed following the EPA's 2010 Reconsideration Denial, the climate has continued to change, with new records being set for a number of climate indicators such as global average surface temperatures, Arctic sea ice retreat, CO_2 concentrations, and sea level rise. Additionally, a number of major scientific assessments have been released that improve understanding of the climate system and strengthen the case that GHGs endanger public health and welfare both for current and future generations. These assessments, from the Intergovernmental Panel on Climate Change (IPCC), the U.S. Global Change Research Program (USGCRP), and the National Research Council (NRC), include: IPCC's 2012 *Special Report on Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation* (SREX) and the 2013–2014 Fifth Assessment Report (AR5), the USGCRP's 2014 National Climate Assessment, *Climate Change Impacts in the United States* (NCA3), and the NRC's 2010 *Ocean Acidification: A National Strategy to Meet the Challenges of a Changing Ocean* (Ocean Acidification), 2011 *Report on Climate Stabilization Targets: Emissions, Concentrations, and Impacts over Decades to Millennia* (Climate Stabilization Targets), 2011 *National Security Implications for U.S. Naval Forces* (National Security Implications), 2011 *Understanding Earth's Deep Past: Lessons for Our Climate Future* (Understanding Earth's Deep Past), 2012 *Sea Level Rise for the Coasts of California, Oregon, and Washington: Past, Present, and Future,* 2012 *Climate and Social Stress: Implications for Security Analysis* (Climate and Social Stress), and 2013 *Abrupt Impacts of Climate Change* (Abrupt Impacts) assessments.

The EPA has carefully reviewed these recent assessments in keeping with the same approach outlined in Section III.A of the 2009 Endangerment Finding, which was to rely primarily upon the major assessments by the USGCRP, the IPCC, and the NRC of the National Academies to provide the technical and scientific information to inform the Administrator's judgment regarding the question of whether GHGs endanger public health and welfare. These

[18] National Research Council, Climate Stabilization Targets, p. 3.

[19] ''Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act,'' 74 FR 66496 (Dec. 15, 2009) (''Endangerment Finding'').

assessments addressed the scientific issues that the EPA was required to examine, were comprehensive in their coverage of the GHG and climate change issues, and underwent rigorous and exacting peer review by the expert community, as well as rigorous levels of U.S. government review.

The findings of the recent scientific assessments confirm and strengthen the conclusion that GHGs endanger public health, now and in the future. The NCA3 indicates that human health in the United States will be impacted by ''increased extreme weather events, wildfire, decreased air quality, threats to mental health, and illnesses transmitted by food, water, and disease-carriers such as mosquitoes and ticks.'' The most recent assessments now have greater confidence that climate change will influence production of pollen that exacerbates asthma and other allergic respiratory diseases such as allergic rhinitis, as well as effects on conjunctivitis and dermatitis. Both the NCA3 and the IPCC AR5 found that increasing temperature has lengthened the allergenic pollen season for ragweed, and that increased CO_2 by itself can elevate production of plant-based allergens.

The NCA3 also finds that climate change, in addition to chronic stresses such as extreme poverty, is negatively affecting indigenous peoples' health in the United States through impacts such as reduced access to traditional foods, decreased water quality, and increasing exposure to health and safety hazards. The IPCC AR5 finds that climate change-induced warming in the Arctic and resultant changes in environment (*e.g.,* permafrost thaw, effects on traditional food sources) have significant impacts, observed now and projected, on the health and well-being of Arctic residents, especially indigenous peoples. Small, remote, predominantly-indigenous communities are especially vulnerable given their ''strong dependence on the environment for food, culture, and way of life; their political and economic marginalization; existing social, health, and poverty disparities; as well as their frequent close proximity to exposed locations along ocean, lake, or river shorelines.'' [20] In addition, increasing temperatures and loss of Arctic sea ice increases the risk of drowning for those engaged in traditional hunting and fishing.

The NCA3 concludes that children's unique physiology and developing bodies contribute to making them particularly vulnerable to climate change. Impacts on children are expected from heat waves, air pollution, infectious and waterborne illnesses, and mental health effects resulting from extreme weather events. The IPCC AR5 indicates that children are among those especially susceptible to most allergic diseases, as well as health effects associated with heat waves, storms, and floods. The IPCC finds that additional health concerns may arise in low-income households, especially those with children, if climate change reduces food availability and increases prices, leading to food insecurity within households.

Both the NCA3 and IPCC AR5 conclude that climate change will increase health risks facing the elderly. Older people are at much higher risk of mortality during extreme heat events. Pre-existing health conditions also make older adults susceptible to cardiac and respiratory impacts of air pollution and to more severe consequences from infectious and waterborne diseases. Limited mobility among older adults can also increase health risks associated with extreme weather and floods.

The new assessments also confirm and strengthen the conclusion that GHGs endanger public welfare, and emphasize the urgency of reducing GHG emissions due to their projections that show GHG concentrations climbing to ever-increasing levels in the absence of mitigation. The NRC assessment, *Understanding Earth's Deep Past,* projected that, without a reduction in emissions, CO_2 concentrations by the end of the century would increase to levels that the Earth has not experienced for more than 30 million years.[21] In fact, that assessment stated that ''the magnitude and rate of the present greenhouse gas increase place the climate system in what could be one of the most severe increases in radiative forcing of the global climate system in Earth history.'' [22] Because of these unprecedented changes, several assessments state that we may be approaching critical, poorly understood thresholds. As stated in the assessment, ''As Earth continues to warm, it may be approaching a critical climate threshold beyond which rapid and potentially permanent—at least on a human timescale—changes not anticipated by climate models tuned to modern conditions may occur.'' The NRC *Abrupt Impacts* report analyzed abrupt climate change in the physical climate system and abrupt impacts of ongoing changes that, when thresholds are crossed, can cause abrupt impacts for society and ecosystems. The report considered destabilization of the West Antarctic Ice Sheet (which could cause 3–4 m of potential sea level rise) as an abrupt climate impact with unknown but probably low probability of occurring this century. The report categorized a decrease in ocean oxygen content (with attendant threats to aerobic marine life); increase in intensity, frequency, and duration of heat waves; and increase in frequency and intensity of extreme precipitation events (droughts, floods, hurricanes, and major storms) as climate impacts with moderate risk of an abrupt change within this century. The NRC *Abrupt Impacts* report also analyzed the threat of rapid state changes in ecosystems and species extinctions as examples of irreversible impacts that are expected to be exacerbated by climate change. Species at most risk include those whose migration potential is limited, whether because they live on mountaintops or fragmented habitats with barriers to movement, or because climatic conditions are changing more rapidly than the species can move or adapt. While the NRC determined that it is not presently possible to place exact probabilities on the added contribution of climate change to extinction, they did find that there was substantial risk that impacts from climate change could, within a few decades, drop the populations in many species below sustainable levels, thereby committing the species to extinction. Species within tropical and subtropical rainforests such as the Amazon and species living in coral reef ecosystems were identified by the NRC as being particularly vulnerable to extinction over the next 30 to 80 years, as were species in high latitude and high elevation regions. Moreover, due to the time lags inherent in the Earth's climate, the NRC *Climate Stabilization Targets* assessment notes that the full warming from any given concentration of CO_2 reached will not be fully realized for several centuries, underscoring that emission activities today carry with them climate commitments far into the future.

Future temperature changes will depend on what emission path the world follows. In its high emission scenario, the IPCC AR5 projects that

[20] IPCC, 2014: *Climate Change 2014: Impacts, Adaptation, and Vulnerability. Part B: Regional Aspects.* Contribution of Working Group II to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change [Barros, V.R., C.B. Field, D.J. Dokken, M.D. Mastrandrea, K.J. Mach, T.E. Bilir, M. Chatterjee, K.L. Ebi, Y.O. Estrada, R.C. Genova, B. Girma, E.S. Kissel, A.N. Levy, S. MacCracken, P.R. Mastrandrea, and L.L. White (eds.)]. Cambridge University Press, Cambridge, p. 1581.

[21] National Research Council, Understanding Earth's Deep Past, p. 1.

[22] *Id.*, p. 138.

average global temperatures by the end of the century will likely be 2.6 degrees Celsius (°C) to 4.8 °C (4.7 to 8.6 degrees Fahrenheit (°F)) warmer than today. Temperatures on land and in northern latitudes will likely warm even faster than the global average. However, according to the NCA3, significant reductions in emissions would lead to noticeably less future warming beyond mid-century, and therefore less impact to public health and welfare.

While rainfall may only see small globally and annually averaged changes, there are expected to be substantial shifts in where and when that precipitation falls. According to the NCA3, regions closer to the poles will see more precipitation, while the dry subtropics are expected to expand (colloquially, this has been summarized as wet areas getting wetter and dry regions getting drier). In particular, the NCA3 notes that the western U.S., and especially the Southwest, is expected to become drier. This projection is consistent with the recent observed drought trend in the West. At the time of publication of the NCA, even before the last 2 years of extreme drought in California, tree ring data was already indicating that the region might be experiencing its driest period in 800 years. Similarly, the NCA3 projects that heavy downpours are expected to increase in many regions, with precipitation events in general becoming less frequent but more intense. This trend has already been observed in regions such as the Midwest, Northeast, and upper Great Plains. Meanwhile, the NRC Climate Stabilization Targets assessment found that the area burned by wildfire is expected to grow by 2 to 4 times for 1 °C (1.8 °F) of warming. For 3 °C of warming, the assessment found that 9 out of 10 summers would be warmer than all but the 5 percent of warmest summers today, leading to increased frequency, duration, and intensity of heat waves. Extrapolations by the NCA also indicate that Arctic sea ice in summer may essentially disappear by mid-century. Retreating snow and ice, and emissions of CO_2 and methane released from thawing permafrost, will also amplify future warming.

Since the 2009 Endangerment Finding, the USGCRP NCA3, and multiple NRC assessments have projected future rates of sea level rise that are 40 percent larger to more than twice as large as the previous estimates from the 2007 IPCC 4th Assessment Report due in part to improved understanding of the future rate of melt of the Antarctic and Greenland Ice sheets. The NRC *Sea Level Rise* assessment projects a global sea level rise of 0.5 to 1.4 meters (1.6 to 4.6 feet) by 2100, the NRC *National Security Implications* assessment suggests that ''the Department of the Navy should expect roughly 0.4 to 2 meters (1.3 to 6.6 feet) global average sea-level rise by 2100,'' [23] and the NRC *Climate Stabilization Targets* assessment states that an increase of 3 °C will lead to a sea level rise of 0.5 to 1 meter (1.6 to 3.3 feet) by 2100. These assessments continue to recognize that there is uncertainty inherent in accounting for ice sheet processes. Additionally, local sea level rise can differ from the global total depending on various factors. The east coast of the U.S. in particular is expected to see higher rates of sea level rise than the global average. For comparison, the NCA3 states that ''five million Americans and hundreds of billions of dollars of property are located in areas that are less than four feet above the local high-tide level,'' and the NCA3 finds that ''[c]oastal infrastructure, including roads, rail lines, energy infrastructure, airports, port facilities, and military bases, are increasingly at risk from sea level rise and damaging storm surges.'' [24] Also, because of the inertia of the oceans, sea level rise will continue for centuries after GHG concentrations have stabilized (though more slowly than it would have otherwise). Additionally, there is a threshold temperature above which the Greenland ice sheet will be committed to inevitable melting. According to the NCA, some recent research has suggested that even present day CO_2 levels could be sufficient to exceed that threshold.

In general, climate change impacts are expected to be unevenly distributed across different regions of the United States and have a greater impact on certain populations, such as indigenous peoples and the poor. The NCA3 finds that climate change impacts such as the rapid pace of temperature rise, coastal erosion and inundation related to sea level rise and storms, ice and snow melt, and permafrost thaw are affecting indigenous people in the U.S. Particularly in Alaska, critical infrastructure and traditional livelihoods are threatened by climate change and, ''[i]n parts of Alaska, Louisiana, the Pacific Islands, and other coastal locations, climate change impacts (through erosion and inundation) are so severe that some communities are already relocating from historical homelands to which their traditions and cultural identities are tied.'' [25] The IPCC AR5 notes, ''Climate-related hazards exacerbate other stressors, often with negative outcomes for livelihoods, especially for people living in poverty (high confidence). Climate-related hazards affect poor people's lives directly through impacts on livelihoods, reductions in crop yields, or destruction of homes and indirectly through, for example, increased food prices and food insecurity.'' [26]

CO_2 in particular has unique impacts on ocean ecosystems. The NRC *Climate Stabilization Targets* assessment found that coral bleaching will increase due both to warming and ocean acidification. Ocean surface waters have already become 30 percent more acidic over the past 250 years due to absorption of CO_2 from the atmosphere. According to the NCA3, this acidification will reduce the ability of organisms such as corals, krill, oysters, clams, and crabs to survive, grow, and reproduce. The NRC *Understanding Earth's Deep Past* assessment notes that four of the five major coral reef crises of the past 500 million years were caused by acidification and warming that followed GHG increases of similar magnitude to the emissions increases expected over the next hundred years. The NRC *Abrupt Impacts* assessment specifically highlighted similarities between the projections for future acidification and warming and the extinction at the end of the Permian which resulted in the loss of an estimated 90 percent of known species. Similarly, the NRC *Ocean Acidification* assessment finds that ''[t]he chemistry of the ocean is changing at an unprecedented rate and magnitude due to anthropogenic CO_2 emissions; the rate of change exceeds any known to have occurred for at least the past

Cambridge University Press, p. 796.

hundreds of thousands of years.'' [27] The assessment notes that the full range of consequences is still unknown, but the risks ''threaten coral reefs, fisheries, protected species, and other natural resources of value to society.'' [28]

Events outside the United States, as also pointed out in the 2009 Endangerment Finding, will also have relevant consequences. The NRC *Climate and Social Stress* assessment concluded that it is prudent to expect that some climate events ''will produce consequences that exceed the capacity of the affected societies or global systems to manage and that have global security implications serious enough to compel international response.'' The NRC *National Security Implications* assessment recommends preparing for increased needs for humanitarian aid; responding to the effects of climate change in geopolitical hotspots, including possible mass migrations; and addressing changing security needs in the Arctic as sea ice retreats.

In addition to future impacts, the NCA3 emphasizes that climate change driven by human emissions of GHGs is already happening now and it is happening in the United States. According to the IPCC AR5 and the NCA3, there are a number of climate-related changes that have been observed recently, and these changes are projected to accelerate in the future. The planet warmed about 0.85 °C (1.5 °F) from 1880 to 2012. It is extremely likely (>95 percent probability) that human influence was the dominant cause of the observed warming since the mid-20th century, and likely (>66 percent probability) that human influence has more than doubled the probability of occurrence of heat waves in some locations. In the Northern Hemisphere, the last 30 years were likely the warmest 30-year period of the last 1400 years. U.S. average temperatures have similarly increased by 1.3 to 1.9 °F since 1895, with most of that increase occurring since 1970. Global sea levels rose 0.19 m (7.5 inches) from 1901 to 2010. Contributing to this rise was the warming of the oceans and melting of land ice. It is likely that 275 gigatons per year of ice have melted from land glaciers (not including ice sheets) since 1993, and that the rate of loss of ice from the Greenland and Antarctic ice sheets has increased substantially in recent years, to 215 gigatons per year and 147 gigatons per year respectively, since 2002. For context, 360 gigatons of ice melt is sufficient to cause global sea levels to rise 1 mm. Annual mean Arctic sea ice has been declining at 3.5 to 4.1 percent per decade, and Northern Hemisphere snow cover extent has decreased at about 1.6 percent per decade for March and 11.7 percent per decade for June. Permafrost temperatures have increased in most regions since the 1980s, by up to 3 °C (5.4 °F) in parts of Northern Alaska. Winter storm frequency and intensity have both increased in the Northern Hemisphere. The NCA3 states that the increases in the severity or frequency of some types of extreme weather and climate events in recent decades can affect energy production and delivery, causing supply disruptions, and compromise other essential infrastructure such as water and transportation systems.

In addition to the changes documented in the assessment literature, there have been other climate milestones of note. In 2009, the year of the Endangerment Finding, the average concentration of CO_2 as measured on top of Mauna Loa was 387 parts per million, far above preindustrial concentrations of about 280 parts per million.[29] The average concentration in 2013, the last full year before this rule was proposed, was 396 parts per million. The average concentration in 2014 was 399 parts per million. And the monthly concentration in April of 2014 was 401 parts per million, the first time a monthly average has exceeded 400 parts per million since record keeping began at Mauna Loa in 1958, and for at least the past 800,000 years based on ice core records.[30] Arctic sea ice has continued to decline, with September of 2012 marking a new record low in terms of Arctic sea ice extent, 40 percent below the 1979–2000 median. Sea level has continued to rise at a rate of 3.2 mm per year (1.3 inches/decade) since satellite observations started in 1993, more than twice the average rate of rise in the 20th century prior to 1993.[31] And 2014 was the warmest year globally in the modern global surface temperature record, going back to 1880; this now means 19 of the 20 warmest years have occurred in the past 20 years, and except for 1998, the ten warmest years on record have occurred since 2002.[32] The first months of 2015 have also been some of the warmest on record.

These assessments and observed changes make it clear that reducing emissions of GHGs across the globe is necessary in order to avoid the worst impacts of climate change, and underscore the urgency of reducing emissions now. The NRC Committee on America's Climate Choices listed a number of reasons ''why it is imprudent to delay actions that at least begin the process of substantially reducing emissions.'' [33] For example:

- The faster emissions are reduced, the lower the risks posed by climate change. Delays in reducing emissions could commit the planet to a wide range of adverse impacts, especially if the sensitivity of the climate to greenhouse gases is on the higher end of the estimated range.
- Waiting for unacceptable impacts to occur before taking action is imprudent because the effects of greenhouse gas emissions do not fully manifest themselves for decades and, once manifest, many of these changes will persist for hundreds or even thousands of years.
- In the committee's judgment, the risks associated with doing business as usual are a much greater concern than the risks associated with engaging in strong response efforts.

4. Observed and Projected U.S. Regional Changes

The NCA3 assessed the climate impacts in eight regions of the United States, noting that changes in physical climate parameters such as temperatures, precipitation, and sea ice retreat were already having impacts on forests, water supplies, ecosystems, flooding, heat waves, and air quality. Moreover, the NCA3 found that future warming is projected to be much larger than recent observed variations in temperature, with precipitation likely to increase in the northern states, decrease in the southern states, and with the heaviest precipitation events projected to increase everywhere.

In the Northeast, temperatures increased almost 2 °F from 1895 to 2011, precipitation increased by about 5 inches (10 percent), and sea level rise of about a foot has led to an increase in coastal flooding. The 70 percent increase in the amount of rainfall falling in the 1 percent of the most intense events is a larger increase in extreme precipitation than experienced in any other U.S. region.

In the future, if emissions continue increasing, the Northeast is expected to experience 4.5 to 10 °F of warming by

[33] NRC, 2011: *America's Climate Choices,* The National Academies Press.

the 2080s. This will lead to more heat waves, coastal and river flooding, and intense precipitation events. The southern portion of the region is projected to see 60 additional days per year above 90 °F by mid-century. Sea levels in the Northeast are expected to increase faster than the global average because of subsidence, and changing ocean currents may further increase the rate of sea level rise. Specific vulnerabilities highlighted by the NCA include large urban populations particularly vulnerable to climate-related heat waves and poor air quality episodes, prevalence of climate sensitive vector-borne diseases like Lyme and West Nile Virus, usage of combined sewer systems that may lead to untreated water being released into local water bodies after climate-related heavy precipitation events, and 1.6 million people living within the 100-year coastal flood zone who are expected to experience more frequent floods due to sea level rise and tropical-storm induced storm-surge. The NCA also highlighted infrastructure vulnerable to inundation in coastal metropolitan areas, potential agricultural impacts from increased rain in the spring delaying planting or damaging crops or increased heat in the summer leading to decreased yields and increased water demand, and shifts in ecosystems leading to declines in iconic species in some regions, such as cod and lobster south of Cape Cod.

In the Southeast, average annual temperature during the last century cycled between warm and cool periods. A warm peak occurred during the 1930s and 1940s, followed by a cool period, and temperatures then increased again from 1970 to the present by an average of 2 °F. There have been increasing numbers of days above 95 °F and nights above 75 °F, and decreasing numbers of extremely cold days since 1970. Daily and five-day rainfall intensities have also increased, and summers have been either increasingly dry or extremely wet. Louisiana has already lost 1,880 square miles of land in the last 80 years due to sea level rise and other contributing factors.

The Southeast is exceptionally vulnerable to sea level rise, extreme heat events, hurricanes, and decreased water availability. Major consequences of further warming include significant increases in the number of hot days (95 °F or above) and decreases in freezing events, as well as exacerbated ground-level ozone in urban areas. Although projected warming for some parts of the region by the year 2100 is generally smaller than for other regions of the United States, projected warming for interior states of the region is larger than coastal regions by 1 °F to 2 °F. Projections further suggest that there will be fewer tropical storms globally, but that they will be more intense, with more Category 4 and 5 storms. The NCA identified New Orleans, Miami, Tampa, Charleston, and Virginia Beach as being specific cities that are at risk due to sea level rise, with homes and infrastructure increasingly prone to flooding. Additional impacts of sea level rise are expected for coastal highways, wetlands, fresh water supplies, and energy infrastructure.

In the Northwest, temperatures increased by about 1.3 °F between 1895 and 2011. A small average increase in precipitation was observed over this time period. However, warming temperatures have caused increased rainfall relative to snowfall, which has altered water availability from snowpack across parts of the region. Snowpack in the Northwest is an important freshwater source for the region. More precipitation falling as rain instead of snow has reduced the snowpack, and warmer springs have corresponded to earlier snowpack melting and reduced streamflows during summer months. Drier conditions have increased the extent of wildfires in the region.

Average annual temperatures are projected to increase by 3.3 °F to 9.7 °F by the end of the century (depending on future global GHG emissions), with the greatest warming expected during the summer. Continued increases in global GHG emissions are projected to result in up to a 30 percent decrease in summer precipitation. Earlier snowpack melt and lower summer stream flows are expected by the end of the century and will affect drinking water supplies, agriculture, ecosystems, and hydropower production. Warmer waters are expected to increase disease and mortality in important fish species, including Chinook and sockeye salmon. Ocean acidification also threatens species such as oysters, with the Northwest coastal waters already being some of the most acidified worldwide due to coastal upwelling and other local factors. Forest pests are expected to spread and wildfires to burn larger areas. Other high-elevation ecosystems are projected to be lost because they can no longer survive the climatic conditions. Low lying coastal areas, including the cities of Seattle and Olympia, will experience heightened risks of sea level rise, erosion, seawater inundation and damage to infrastructure and coastal ecosystems.

In Alaska, temperatures have changed faster than anywhere else in the United States. Annual temperatures increased by about 3 °F in the past 60 years. Warming in the winter has been even greater, rising by an average of 6 °F. Arctic sea ice is thinning and shrinking in area, with the summer minimum ice extent now covering only half the area it did when satellite records began in 1979. Glaciers in Alaska are melting at some of the fastest rates on Earth. Permafrost soils are also warming and beginning to thaw. Drier conditions have contributed to more large wildfires in the last 10 years than in any previous decade since the 1940s, when recordkeeping began. Climate change impacts are harming the health, safety, and livelihoods of Native Alaskan communities.

By the end of this century, continued increases in GHG emissions are expected to increase temperatures by 10 to 12 °F in the northernmost parts of Alaska, by 8 to 10 °F in the interior, and by 6 to 8 °F across the rest of the state. These increases will exacerbate ongoing arctic sea ice loss, glacial melt, permafrost thaw and increased wildfire, and threaten humans, ecosystems, and infrastructure. Precipitation is expected to increase to varying degrees across the state. However, warmer air temperatures and a longer growing season are expected to result in drier conditions. Native Alaskans are expected to experience declines in economically, nutritionally, and culturally important wildlife and plant species. Health threats will also increase, including loss of clean water, saltwater intrusion, sewage contamination from thawing permafrost, and northward extension of diseases. Wildfires will increasingly pose threats to human health as a result of smoke and direct contact. Areas underlain by ice-rich permafrost across the state are likely to experience ground subsidence and extensive damage to infrastructure as the permafrost thaws. Important ecosystems will continue to be affected. Surface waters and wetlands that are drying provide breeding habitat for millions of waterfowl and shorebirds that winter in the lower 48 states. Warmer ocean temperatures, acidification, and declining sea ice will contribute to changes in the location and availability of commercially and culturally important marine fish.

In the Southwest, temperatures are now about 2 °F higher than the past century, and are already the warmest that region has experienced in at least 600 years. The NCA notes that there is evidence that climate change-induced warming on top of recent drought has influenced tree mortality, wildfire frequency and area, and forest insect outbreaks. Sea levels have risen about 7 or 8 inches in this region, contributing to inundation of Highway 101 and back up of seawater into sewage systems in the San Francisco area.

Projections indicate that the Southwest will warm an additional 5.5 to 9.5 °F over the next century if emissions continue to increase. Winter snowpack in the Southwest is projected to decline (consistent with the record lows from this past winter), reducing the reliability of surface water supplies for cities, agriculture, cooling for power plants, and ecosystems. Sea level rise along the California coast will worsen coastal erosion, increase flooding risk for coastal highways, bridges, and low-lying airports, pose a threat to groundwater supplies in coastal cities such as Los Angeles, and increase vulnerability to floods for hundreds of thousands of residents in coastal areas. Climate change will also have impacts on the high-value specialty crops grown in the region as a drier climate will increase demands for irrigation, more frequent heat waves will reduce yields, and decreased winter chills may impair fruit and nut production for trees in California. Increased drought, higher temperatures, and bark beetle outbreaks are likely to contribute to continued increases in wildfires. The highly urbanized population of the Southwest is vulnerable to heat waves and water supply disruptions, which can be exacerbated in cases where high use of air conditioning triggers energy system failures.

The rate of warming in the Midwest has markedly accelerated over the past few decades. Temperatures rose by more than 1.5 °F from 1900 to 2010, but between 1980 and 2010, the rate of warming was three times faster than from 1900 through 2010. Precipitation generally increased over the last century, with much of the increase driven by intensification of the heaviest rainfalls. Several types of extreme weather events in the Midwest (*e.g.,* heat waves and flooding) have already increased in frequency and/or intensity due to climate change.

In the future, if emissions continue increasing, the Midwest is expected to experience 5.6 to 8.5 °F of warming by the 2080s, leading to more heat waves. Though projections of changes in total precipitation vary across the regions, more precipitation is expected to fall in the form of heavy downpours across the entire region, leading to an increase in flooding. Specific vulnerabilities highlighted by the NCA include long-term decreases in agricultural productivity, changes in the composition of the region's forests, increased public health threats from heat waves and degraded air and water quality, negative impacts on transportation and other infrastructure associated with extreme rainfall events and flooding, and risks to the Great Lakes including shifts in invasive species, increases in harmful algal blooms, and declining beach health.

High temperatures (more than 100 °F in the Southern Plains and more than 95 °F in the Northern Plains) are projected to occur much more frequently by mid-century. Increases in extreme heat will increase heat stress for residents, energy demand for air conditioning, and water losses. North Dakota's increase in annual temperatures over the past 130 years is the fastest in the contiguous U.S., mainly driven by warming winters. Specific vulnerabilities highlighted by the NCA include increased demand for water and energy, changes to crop-growth cycles and agricultural practices, and negative impacts on local plant and animal species from habitat fragmentation, wildfires, and changes in the timing of flowering or pest patterns. Communities that are already the most vulnerable to weather and climate extremes will be stressed even further by more frequent extreme events occurring within an already highly variable climate system.

In Hawaii, other Pacific islands, and the Caribbean, rising air and ocean temperatures, shifting rainfall patterns, changing frequencies and intensities of storms and drought, decreasing baseflow in streams, rising sea levels, and changing ocean chemistry will affect ecosystems on land and in the oceans, as well as local communities, livelihoods, and cultures. Low islands are particularly at risk.

Rising sea levels, coupled with high water levels caused by tropical and extra-tropical storms, will incrementally increase coastal flooding and erosion, damaging coastal ecosystems, infrastructure, and agriculture, and negatively affecting tourism. Ocean temperatures in the Pacific region exhibit strong year-to-year and decadal fluctuations, but since the 1950s, they have exhibited a warming trend, with temperatures from the surface to a depth of 660 feet rising by as much as 3.6 °F. As a result of current sea level rise, the coastline of Puerto Rico around Rincón is being eroded at a rate of 3.3 feet per year. Freshwater supplies are already constrained and will become more limited on many islands. Saltwater intrusion associated with sea level rise will reduce the quantity and quality of freshwater in coastal aquifers, especially on low islands. In areas where precipitation does not increase, freshwater supplies will be adversely affected as air temperature rises.

Warmer oceans are leading to increased coral bleaching events and disease outbreaks in coral reefs, as well as changed distribution patterns of tuna fisheries. Ocean acidification will reduce coral growth and health. Warming and acidification, combined with existing stresses, will strongly affect coral-reef fish communities. For Hawaii and the Pacific islands, future sea surface temperatures are projected to increase 2.3 °F by 2055 and 4.7 °F by 2090 under a scenario that assumes continued increases in emissions. Ocean acidification is also taking place in the region, which adds to ecosystem stress from increasing temperatures. Ocean acidity has increased by about 30 percent since the pre-industrial era and is projected to further increase by 37 percent to 50 percent from present levels by 2100.

The NCA also discussed impacts that occur along the coasts and in the oceans adjacent to many regions, and noted that other impacts occur across regions and landscapes in ways that do not follow political boundaries.

B. GHG Emissions From Fossil Fuel-Fired EGUs

Fossil fuel-fired EGUs are by far the largest emitters of GHGs among stationary sources in the U.S., primarily in the form of CO_2. Among fossil fuel-fired EGUs, coal-fired units are by far the largest emitters. This section describes the amounts of these emissions and places these amounts in the context of the U.S. Inventory of Greenhouse Gas Emissions and Sinks [34] (the U.S. GHG Inventory).

The EPA implements a separate program under 40 CFR part 98 called the Greenhouse Gas Reporting Program [35] (GHGRP) that requires emitting facilities that emit over certain threshold amounts of GHGs to report their emissions to the EPA annually. Using data from the GHGRP, this section also places emissions from fossil fuel-fired EGUs in the context of the total emissions reported to the GHGRP from facilities in the other largest-emitting industries.

The EPA prepares the official U.S. GHG Inventory to comply with commitments under the United Nations Framework Convention on Climate

[34] "Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2013", Report EPA 430–R–15–004, United States Environmental Protection Agency, April 15, 2015. *http://epa.gov/climatechange/ghgemissions/usinventoryreport.html.*

[35] U.S. EPA Greenhouse Gas Reporting Program Dataset, see *http://www.epa.gov/ghgreporting/ghgdata/reportingdatasets.html.*

Change (UNFCCC). This inventory, which includes recent trends, is organized by industrial sector. It provides the information in Table 3 below, which presents total U.S. anthropogenic emissions and sinks[36] of GHGs, including CO_2 emissions, for the years 1990, 2005 and 2013.

TABLE 3—U.S. GHG EMISSIONS AND SINKS BY SECTOR (MILLION METRIC TONS CARBON DIOXIDE EQUIVALENT (MMT CO_2e))[37 38]

Sector	1990	2005	2013
Energy[39]	5,290.5	6,273.6	5,636.6
Industrial Processes and Product Use	342.1	367.4	359.1
Agriculture	448.7	494.5	515.7
Land Use, Land-Use Change and Forestry	13.8	25.5	23.3
Waste	206.0	189.2	138.3
Total Emissions	6,301.1	7,350.2	6,673.0
Land Use, Land-Use Change and Forestry (Sinks)	(775.8)	(911.9)	(881.7)
Net Emissions (Sources and Sinks)	5,525.2	6,438.3	5,791.2

Total fossil energy-related CO_2 emissions (including both stationary and mobile sources) are the largest contributor to total U.S. GHG emissions, representing 77.3 percent of total 2013 GHG emissions.[40] In 2013, fossil fuel combustion by the utility power sector—entities that burn fossil fuel and whose primary business is the generation of electricity—accounted for 38.3 percent of all energy-related CO_2 emissions.[41] Table 4 below presents total CO_2 emissions from fossil fuel-fired EGUs, for years 1990, 2005, and 2013.

TABLE 4—U.S. GHG EMISSIONS FROM GENERATION OF ELECTRICITY FROM COMBUSTION OF FOSSIL FUELS (MMT CO_2)[42]

GHG emissions	1990	2005	2013
Total CO_2 from fossil fuel-fired EGUs	1,820.8	2,400.9	2,039.8
—from coal	1,547.6	1,983.8	1,575.0
—from natural gas	175.3	318.8	441.9
—from petroleum	97.5	97.9	22.4

In addition to preparing the official U.S. GHG Inventory to present comprehensive total U.S. GHG emissions and comply with commitments under the UNFCCC, the EPA collects detailed GHG emissions data from the largest emitting facilities in the U.S. through its GHGRP. Data collected by the GHGRP from large stationary sources in the industrial sector show that the utility power sector emits far greater CO_2 emissions than any other industrial sector. Table 5 below presents total GHG emissions in 2013 for the largest emitting industrial sectors as reported to the GHGRP. As shown in Table 4 and Table 5, respectively, CO_2 emissions from fossil fuel-fired EGUs are nearly three times as large as the total reported GHG emissions from the next ten largest emitting industrial sectors in the GHGRP database combined.

TABLE 5—DIRECT GHG EMISSIONS REPORTED TO GHGRP BY LARGEST EMITTING INDUSTRIAL SECTORS (MMT CO_2e)[43]

Industrial sector	2013
Fossil Fuel-Fired EGUs	2,039.8
Petroleum Refineries	176.7
Onshore Oil & Gas Production	94.8
Municipal Solid Waste Landfills	93.0
Iron & Steel Production	84.2
Cement Production	62.8
Natural Gas Processing Plants	59.0
Petrochemical Production	52.7
Hydrogen Production	41.9
Underground Coal Mines	39.8
Food Processing Facilities	30.8

[36] Sinks are physical units or processes that store GHGs, such as forests or underground or deep sea reservoirs of CO_2.

[37] From Table ES–4 of ''Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2013'', Report EPA 430–R–15–004, United States Environmental Protection Agency, April 15, 2015. *http://epa.gov/climatechange/ghgemissions/usinventoryreport.html.*

[38] 1 metric ton (tonne) is equivalent to 1,000 kilograms (kg) and is equivalent to 1.1023 short tons or 2,204.62 pounds (lb).

[39] The energy sector includes all greenhouse gases resulting from stationary and mobile energy activities including fuel combustion and fugitive fuel emissions.

[40] From Table ES–2 ''Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2013'', Report EPA 430–R–15–004, United States Environmental Protection Agency, April 15, 2015. *http://epa.gov/climatechange/ghgemissions/usinventoryreport.html.*

[41] From Table 3–1 ''Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2013'', Report EPA 430–R–15–004, United States Environmental Protection Agency, April 15, 2015. *http://epa.gov/climatechange/ghgemissions/usinventoryreport.html.*

[42] From Table 3–5 ''Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2013'', Report EPA 430–R–15–004, United States Environmental Protection Agency, April 15 2015. *http://epa.gov/climatechange/ghgemissions/usinventoryreport.html.*

[43] U.S. EPA Greenhouse Gas Reporting Program Dataset as of August 18, 2014. *http://ghgdata.epa.gov/ghgp/main.do.*

It should be noted that the discussion above concerned all fossil fuel-fired EGUs. Steam generators emitted 1,627 MMT CO_2e and combustion turbines emitted 401 MMT CO_2e in 2013.[44]

C. The Utility Power Sector

1. Modern Electric System Trends

The EPA includes a background discussion of the electricity system in the Clean Power Plan (CPP) rulemaking, which is the companion rulemaking to this rule that promulgates emission guidelines for states to use in regulating emissions of CO_2 from existing fossil fuel-fired EGUs. Readers are referred to that rulemaking. The following discussion of electricity sector trends is of particular relevance for this rulemaking.

The electricity sector is undergoing a period of intense change. Fossil fuels—such as coal, natural gas, and oil—have historically provided a large percentage of electricity in the U.S., with smaller amounts being provided by other types of generation, including nuclear and renewables such as wind, solar, and hydroelectric power. Coal has historically provided the largest percentage of fossil-fuel generation.[45] In recent years, the nation has seen a sizeable increase in renewable generation such as wind and solar, as well as a shift from coal to natural gas.[46] In 2013, fossil fuels supplied 67 percent of U.S. electricity, but renewables made up 38 percent of the new generation capacity (over 5 GW out of 13.5 GW).[47] From 2007 to 2014, use of lower- and zero-carbon energy sources has grown, while other major energy sources such as coal and oil have experienced declines. Renewable electricity generation, including from large hydro-electric projects, grew from 8 percent to 13 percent over that time period.[48] Between 2000 and 2013, approximately 90 percent of new power generation capacity built in the U.S. has come in the form of natural gas or renewable energy facilities.[49] In 2015, the U.S. Energy Information Administration (EIA) projected the need for 28.4 GW of additional base load or intermediate load generation capacity through 2020, with approximately 0.7 GW of new coal-fired capacity, 5.5 GW of new nuclear capacity, and 14.2 GW of new NGCC capacity already in development.[50]

The change in the resource mix has accelerated in recent years, but wind, solar, other renewables, and energy-efficiency resources have been reliably participating in the electric sector for a number of years. This rapid development of non-fossil fuel resources is occurring as much of the existing power generation fleet in the U.S. is aging and in need of modernization and replacement.[51] For example, the average age of U.S. coal steam units in 2015 is 45 years.[52] In its *2013 Report Card for America's Infrastructure,* the American Society for Civil Engineers noted that ''America relies on an aging electrical grid and pipeline distribution systems, some of which originated in the 1880s.'' [53] While there has been an increased investment in electric transmission infrastructure since 2005, the report also found that ''ongoing permitting issues, weather events, and limited maintenance have contributed to an increasing number of failures and power interruptions.''[54] However, innovative technologies have increasingly entered the electric energy space, helping to provide new answers to how to meet the electricity needs of the nation. These new technologies can enable the nation to answer not just questions as to how to reliably meet electricity demand, but also how to meet electricity demand reliably and cost-effectively[55] with the lowest possible emissions and the greatest efficiency.

Natural gas has a long history of meeting electricity demand in the U.S. with a rapidly growing role as domestic supplies of natural gas have dramatically increased. Natural gas net generation increased by approximately 36 percent between 2004 and 2014.[56] In 2014, natural gas accounted for approximately 27 percent of net generation.[57] The EIA projects that this demand growth will continue, with its *Annual Energy Outlook 2015* (AEO 2015) reference case forecasting that natural gas will produce 31 percent of U.S. electric generation in 2040.[58]

Renewable sources of electric generation also have a history of meeting electricity demand in the U.S. and are expected to have an increasing role going forward. A series of energy crises provided the impetus for renewable energy development in the early 1970s. The OPEC oil embargo in 1973 and oil crisis of 1979 caused oil price spikes, more frequent energy shortages, and significantly affected the national and global economy. In 1978, partly in response to fuel security concerns, Congress passed the Public Utilities Regulatory Policies Act (PURPA) which required local electric utilities to buy power from qualifying facilities (QFs).[59] QFs were either cogeneration facilities [60] or small

[44] These figures are based on data for EGUs in the Acid Rain Program plus additional ones that report to the EPA under the Regional Greenhouse Gas Initiative.

[60] Cogeneration facilities utilize a single source of fuel to produce both electricity and another form of energy such as heat or steam. Casazza, J. and Delea, F., *Understanding Electric Power Systems,* IEEE Press, at 220–221 (2d ed. 2010).

generation resources that use renewables such as wind, solar, biomass, geothermal, or hydroelectric power as their primary fuels.[61] Through PURPA, Congress supported the development of more renewable energy generation in the U.S. States have taken a significant lead in requiring the development of renewable resources. In particular, a number of states have adopted renewable portfolio standards (RPS). As of 2013, 29 states and the District of Columbia have enforceable RPS or similar laws.[62] In its AEO 2015 Reference case, the EIA found that renewable energy will account for 38 percent of the overall growth in electricity generation from 2013 to 2040.[63] The AEO 2015 Reference case forecasts that the renewables share of U.S. electricity generation will grow from 13 percent in 2013 to 18 percent in 2040.[64]

Price pressures caused by oil embargoes in the 1970s also brought the issues of conservation and energy efficiency to the forefront of U.S. energy policy.[65] This trend continued in the early 1990s. Some state regulatory commissions and utilities supported energy efficiency through least-cost planning, with the National Association of Regulatory Utility Commissioners (NARUC) ''adopting a resolution that called for the utility's least cost plan to be the utility's most profitable plan.'' [66] Energy efficiency has been utilized to meet energy demand to varying levels since that time. As of April 2014, 25 states [67] have ''enacted long-term (3+ years), binding energy savings targets, or energy efficiency resource standards (EERS).'' [68] Funding for energy efficiency programs has grown rapidly in recent years, with budgets for electric efficiency programs totaling $5.9 billion in 2012.[69]

Advancements and innovation in power sector technologies provide the opportunity to address CO_2 emission levels at affected power plants while at the same time improving the overall power system in the U.S. by lowering the carbon intensity of power generation, and ensuring a reliable supply of power at a reasonable cost.

2. Fossil Fuel-Fired EGUs Regulated by this Action, Generally

Natural gas-fired EGUs typically use one of two technologies: NGCC or simple cycle combustion turbines. NGCC units first generate power from a combustion turbine (the combustion cycle). The unused heat from the combustion turbine is then routed to a heat recovery steam generator (HRSG) that generates steam, which is then used to produce power using a steam turbine (the steam cycle). Combining these generation cycles increases the overall efficiency of the system. Simple cycle combustion turbines use a single combustion turbine to produce electricity (*i.e.,* there is no heat recovery or steam cycle). The power output from these simple cycle combustion turbines can be easily ramped up and down making them ideal for ''peaking'' operations.

Coal-fired utility boilers are primarily either pulverized coal (PC) boilers or fluidized bed (FB) boilers. At a PC boiler, the coal is crushed (pulverized) into a powder in order to increase its surface area. The coal powder is then blown into a boiler and burned. In a coal-fired boiler using FB combustion, the coal is burned in a layer of heated particles suspended in flowing air.

Power can also be generated using gasification technology. An IGCC unit gasifies coal or petroleum coke to form a synthetic gas (or syngas) composed of carbon monoxide (CO) and hydrogen (H_2), which can be combusted in a combined cycle system to generate power.

3. Technological Developments and Costs

Natural gas prices have decreased dramatically and generally stabilized in recent years as new drilling techniques have brought additional supply to the marketplace and greatly increased the domestic resource base. As a result, natural gas prices are expected to be competitive for the foreseeable future, and EIA modeling and utility announcements confirm that utilities are likely to rely heavily on natural gas to meet new demand for electricity generation. On average, as discussed below, the cost of generation from a new natural-gas fired power plant (a NGCC unit) is expected to be significantly lower than the cost of generation from a new coal-fired power plant.[70]

Other drivers that may influence decisions to build new power plants are increases in renewable energy supplies, often due to state and federal energy policies. As previously discussed, many states have adopted RPS, which require a certain portion of electricity to come from renewable energy sources such as solar or wind. The federal government has also offered incentives to encourage further deployment of other forms of electric generation including renewable energy sources and new nuclear power plants.

Reflecting these factors, the EIA projections from the last several years show that natural gas is likely to be the most widely-used fossil fuel for new construction of electric generating capacity through 2020, along with renewable energy, nuclear power, and a limited amount of coal with CCS.[71]

While EIA data shows that natural gas is likely to be the most widely-used fossil fuel for new construction of electric generating capacity through 2030, a few coal-fired units still remain as viable projects at various advanced stages of construction and development. One new coal facility that has essentially completed construction,

Southern Company's Kemper County Energy Facility, deploys IGCC with partial CCS. Additionally, another project, Summit Power's Texas Clean Energy Project (TCEP), which will deploy IGCC with CCS, continues as a viable project.[72] The EIA modeling projects that coal-fired power generation will remain the single largest portion of the electricity sector beyond 2030. The EIA modeling also projects that few, if any, new coal-fired EGUs will be built in this decade and that those that are built will have CCS.[73] Continued progress on these projects is consistent with the EIA modeling that suggests that a small number of coal-fired power plants may be constructed. The primary reasons for this rate of current and projected future development of new coal projects include highly competitive natural gas prices, lower electricity demand growth, and increases in the supply of renewable energy. We recognize, however, that a variety of factors may come into play in a decision to build new power generation, and we want to ensure that there are standards in place to make sure that whatever fuel is utilized is done so in a way that minimizes CO_2 emissions, as Congress intended with CAA section 111.[74]

4. Energy Sector Modeling

Various energy sector modeling efforts, including projections from the EIA and the EPA, forecast trends in new power plant construction and utilization of existing power plants that are consistent with the above-described technological developments and costs. The EIA's annual report, the AEO, forecasts the structure of and developments in the power sector. These reports are based on economic modeling that reflects existing policy and regulations, such as state RPS programs and federal tax credits for renewables.[75] The current report, AEO 2015:[76] (i) Shows that a modest amount of coal-fired power plants that are currently under construction are expected to begin operation in the next several years (referred to as ''planned''); and (ii) projects in the reference case[77] that a very small amount of new (''unplanned'') conventional coal-fired capacity, with CCS, will come online after 2012 and through 2037 in response to federal and state incentives. According to the AEO 2015, the vast majority of new generating capacity during this period will be either natural gas-fired or renewable sources. Similarly, the EIA projections from the last several years show that natural gas is likely to be the most widely-used fossil fuel for new construction of electric generating capacity through 2030.[78]

Specifically, the AEO 2015 projects 30.3 GW of additional base load or intermediate load generation capacity through 2020 (this includes projects that are under development—*i.e.,* being constructed or in advance planning—and model-projected nuclear, coal, and NGCC projects). The vast majority of this new electric capacity (20.4 GW) is already under development (under construction or in advanced planning); it includes about 0.7 GW of new coal-fired capacity, 5.5 GW of new nuclear capacity, and 14.2 GW of new NGCC capacity. The EPA believes that most current fossil fuel-fired projects are already designed to meet limits consistent with this rule (or they have already commenced construction and are thus not subject to these final standards). The AEO 2015 also projects an additional 9.9 GW of new base load capacity additions, which are model-projected (unplanned). This consists of 7.7 GW of new NGCC capacity, 1.2 GW of new geothermal capacity, 0.7 GW of new hydroelectric capacity, and 0.3 GW of new coal equipped with CCS (incentivized with some government funding). Therefore, the AEO 2015 projection suggests that the new power generation capacity added through 2020 is expected to already meet the final emissions standards without incurring further control costs. This is also true during the period from 2020 through 2030, where new model-projected (unplanned) intermediate and base load capacity is expected to be compliant with the standards without incurring further control costs (*i.e.,* an additional 31.3 GW of NGCC and no additional coal, for a total, from 2015 through 2030, of 39 GW of NGCC and 0.3 GW of coal with CCS).

Under the EIA projections, existing coal-fired generation will remain an important part of the mix for power generation. Modeling from both the EIA and the EPA project that coal-fired generation will remain the largest single source of electricity in the U.S. through 2040. Specifically, in the EIA's AEO 2015, coal will supply approximately 40 percent of all electricity in the electric power sector in both 2020 and 2025.

The EPA modeling using the Integrated Planning Model (IPM), a detailed power sector model that the EPA uses to support power sector regulations, also shows limited future construction of new coal-fired power plants under the base case.[79] The EPA's projections from IPM can be found in the RIA.

5. Integrated Resource Plans

The trends in the power sector described above are also apparent in publicly available long-term resource plans, known as integrated resource plans (IRPs).

The EPA has reviewed publicly available IRPs from a range of companies (*e.g.,* varying in size, location, current fuel mix), and these plans are generally consistent with both EIA and EPA modeling projections.[80] These IRPs indicate that companies are focused on demand-side management programs to lower future electricity demand and are mostly reliant on a mix of new natural gas-fired generation and renewable energy to meet increased load demand and to replace retired generation capacity.

Notwithstanding this clear trend towards natural gas-fired generation and renewables, many of the IRPs highlight the value of fuel diversity and include options to diversify new generation capacity beyond natural gas and renewable energy. Several IRPs indicate that companies are considering new nuclear generation, including either traditional nuclear power plants or small modular reactors, and a smaller number are considering new coal-fired generation capacity with and without CCS technology. Based on public comments and on the information contained in these IRPs, the EPA acknowledges that a small number of

[72] ''Odessa coal-to-gas power plant to break ground this year'', Houston Chronicle (April 1, 2015).

[73] This projection is for business as usual and does not account for the proposed or final CO_2 emission standard. Even in its sensitivity analysis that assumes higher natural gas prices and electricity demand, EIA does not project any additional coal-fired power plants beyond its reference case until 2023, in a case where power companies assume no GHGs emission limitations, and until 2024 in a case where power companies do assume GHGs emission limitations.

[74] These sources received federal assistance under EPAct 2005. See Section III.H.3.g below. However, none of the constraints in that Act affect the discussion in the text above, since that discussion does not relate to technology use or emissions reduction by these sources.

[75] *http://www.eia.gov/forecasts/aeo/chapter_legs_regs.cfm.*

[76] Energy Information Administration's Annual Energy Outlook for 2015, Final Release available at *http://www.eia.gov/forecasts/aeo/index.cfm.*

[77] EIA's reference case projections are the result of its baseline assumptions for economic growth, fuel supply, technology, and other key inputs.

[78] Annual Energy Outlook 2010, 2011, 2012, 2013, 2014 and 2015.

new coal-fired power plants may be built in the near future. While this outcome would be contrary to the economic modeling predictions, the agency understands that economic modeling may not fully reflect the range of factors that a particular company may consider when evaluating new generation options, such as fuel diversification. Further, it is possible that some of this potential new coal-fired construction may occur because developers are able to design projects with specific business plans, such as the cogeneration of chemicals, which allow the source to provide competitively priced electricity in specific geographic regions.

D. Statutory Background

The U.S. Supreme Court ruled in *Massachusetts* v. *EPA* that GHGs [81] meet the definition of ''air pollutant'' in the CAA,[82] and premised its decision in *AEP* v. *Connecticut,*[83] that the CAA displaced any federal common law right to compel reductions in CO_2 emissions from fossil fuel-fired power plants, on its view that CAA section 111 applies to GHG emissions.

CAA section 111 authorizes and directs the EPA to prescribe new source performance standards (NSPS) applicable to certain new stationary sources (including newly constructed, modified and reconstructed sources).[84] As a preliminary step to regulation, the EPA must list categories of stationary sources that the Administrator, in his or her judgment, finds ''cause[], or contribute[] significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare.'' The EPA has listed and regulated more than 60 stationary source categories under CAA section 111.[85] The EPA listed the two source categories at issue here in the 1970s—listing fossil fuel-fired electric steam generating units in 1971 [86] and listing combustion turbines in 1977.[87]

Once the EPA has listed a source category, the EPA proposes and then promulgates ''standards of performance'' for ''new sources'' in the category.[88] A ''new source'' is ''any stationary source, the construction or modification of which is commenced after,'' in general, final standards applicable to that source are promulgated or, if earlier, proposed.[89] A modification is ''any physical change . . . or change in the method of operation . . . which increases the amount of any air pollutant emitted by such source or which results in the emission of any air pollutant not previously emitted.'' [90] The EPA, through regulations, has determined that certain types of changes are exempt from consideration as a modification.[91]

The NSPS general provisions (40 CFR part 60, subpart A) provide that an existing source is considered to be a new source if it undertakes a ''reconstruction,'' which is the replacement of components of an existing facility to an extent that (1) the fixed capital cost of the new components exceeds 50 percent of the fixed capital cost that would be required to construct a comparable entirely new facility, and (2) it is technologically and economically feasible to meet the applicable standards.[92]

CAA section 111(a)(1) defines a ''standard of performance'' as ''a standard for emissions . . . achievable through the application of the best system of emission reduction which [considering cost, non-air quality health and environmental impact, and energy requirements] the Administrator determines has been adequately demonstrated.'' This definition makes clear that the standard of performance must be based on ''the best system of emission reduction . . . adequately demonstrated'' (BSER).

The standard that the EPA develops, reflecting the performance of the BSER, is commonly a numeric emission limit, expressed as a numeric performance level that can either be normalized to a rate of output or input (*e.g.,* tons of pollution per amount of product produced—a so-called rate-based standard), or expressed as a numeric limit on mass of pollutant that may be emitted (*e.g.,* 100 ug/m^3—parts per billion). Generally, the EPA does not prescribe a particular technological system that must be used to comply with a standard of performance.[93] Rather, sources generally may select any measure or combination of measures that will achieve the emissions level of the standard.[94] In establishing standards of performance, the EPA has significant discretion to create subcategories based on source type, class, or size.[95]

The text and legislative history of CAA section 111, as well as relevant court decisions, identify the factors that the EPA is to consider in making a BSER determination. The system of emission reduction must be technically feasible, the costs of the system must be reasonable, and the emission standard that the EPA promulgates based on the system of emission reduction must be achievable. In addition, in identifying a BSER, the EPA must consider the amount of emissions reductions attributable to the system, and must also consider non-air quality health and environmental impacts and energy requirements. The case law addressing CAA section 111 makes it clear that the EPA has discretion in weighing costs, amount of emission reductions, energy requirements, and impacts of non-air quality pollutants, and may weigh them differently for different types of sources or air pollutants. We note that under the case law of the D.C. Circuit, another factor is relevant for the BSER determination: Whether the standard would effectively promote further deployment or development of advanced technologies. Within the constraints just described, the EPA has discretion in identifying the BSER and the resulting emission standard. See generally Section III.H below.

For more than four decades, the EPA has used its authority under CAA section 111 to set cost-effective emission standards which ensure that newly constructed, reconstructed, and modified stationary sources use the best performing technologies to limit emissions of harmful air pollutants. In this final action, the EPA is following the same well-established interpretation and application of the law under CAA section 111 to address GHG emissions from newly constructed, reconstructed, and modified fossil fuel-fired power plants. For each of the standards in this final action, the EPA considered a number of alternatives and evaluated them against the statutory factors. The BSER for each category of affected EGUs and the standards of performance based on these BSER are based on that evaluation.

[81] The EPA's 2009 endangerment finding defines the air pollution which may endanger public health and welfare as the well-mixed aggregate group of the following gases: CO_2, methane (CH_4), nitrous oxide (N_2O), sulfur hexafluoride (SF_6), hydrofluorocarbons (HFCs), and perfluorocarbons (PFCs).

E. Regulatory Background

In 1971, the EPA initially included fossil fuel-fired EGUs (which includes natural gas, petroleum and coal) that use steam-generating boilers in a category that it listed under CAA section 111(b)(1)(A),[96] and promulgated the first set of standards of performance for sources in that category, which it codified in subpart D.[97] In 1977, the EPA initially included fossil fuel-fired combustion turbines in a category that the EPA listed under CAA section 111(b)(1)(A),[98] and the EPA promulgated standards of performance for that source category in 1979, which the EPA codified in subpart GG.[99]

The EPA has revised those regulations, and in some instances, has revised the codifications (that is, the 40 CFR part 60 subparts), several times over the ensuing decades. In 1979, the EPA divided subpart D into 3 subparts—Da (''Standards of Performance for Electric Utility Steam Generating Units for Which Construction is Commenced After September 18, 1978''), Db (''Standards of Performance for Industrial-Commercial-Institutional Steam Generating Units'') and Dc (''Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units'')—in order to codify separate requirements that it established for these subcategories.[100] In 2006, the EPA created subpart KKKK, ''Standards of Performance for Stationary Combustion Turbines,'' which applied to certain sources previously regulated in subparts Da and GG.[101] None of these subsequent rulemakings, including the revised codifications, however, constituted a new listing under CAA section 111(b)(1)(A).

The EPA promulgated amendments to subpart Da in 2006, which included new standards of performance for criteria pollutants for EGUs, but did not include specific standards of performance for CO_2 emissions.[102]

Petitioners sought judicial review of the rule, contending, among other issues, that the rule was required to include standards of performance for GHG emissions from EGUs.[103] The January 8, 2014 preamble to the proposed CO_2 standards for new EGUs [104] includes a discussion of the GHG-related litigation of the 2006 Final Rule as well as other GHG-associated litigation.

F. Development of Carbon Pollution Standards for Fossil Fuel-Fired Electric Utility Generating Units

On April 13, 2012, the EPA initially proposed standards under CAA section 111 for newly constructed fossil fuel-fired electric utility steam generating units. 77 FR 22392 (''April 2012 proposal''). The EPA withdrew that proposal (79 FR 1352 (January 8, 2014)), and, on the same day, proposed the standards addressed in this final rule. 79 FR 1430 (''January 2014 proposal''). Specifically, the EPA proposed standards under CAA section 111 to limit emissions of CO_2 from newly constructed fossil fuel-fired electric utility steam generating units and newly constructed natural gas-fired stationary combustion turbines.

In support of the January 2014 proposal, on February 26, 2014, the EPA published a notice of data availability (NODA) (79 FR 10750). Through the NODA and an associated technical support document, *Effect of EPAct05 on Best System of Emission Reduction for New Power Plants,* the EPA solicited comment on its interpretation of the provisions in the Energy Policy Act of 2005 (EPAct05),[105] including how the provisions may affect the rationale for the EPA's proposed determination that partial CCS is the best system of emission reduction adequately demonstrated for fossil fuel-fired electric utility steam generating units.

On June 18, 2014, the EPA proposed standards of performance to limit emissions of CO_2 from modified and reconstructed fossil fuel-fired electric utility steam generating units and natural gas-fired stationary combustion turbines (79 FR 34960; June 2014 proposal). Specifically, the EPA proposed standards of performance for: (1) Modified fossil fuel-fired electric utility steam generating units, (2) modified natural gas-fired stationary combustion turbines, (3) reconstructed fossil fuel-fired electric utility steam generating units, and (4) reconstructed natural gas-fired stationary combustion turbines.

G. Stakeholder Engagement and Public Comments on the Proposals

1. Stakeholder Engagement

The EPA has engaged extensively with a broad range of stakeholders and the general public regarding climate change, carbon pollution from power plants, and carbon pollution reduction opportunities. These stakeholders included industry and electric utility representatives, state and local officials, tribal officials, labor unions, non-governmental organizations and many others.

In February and March 2011, early in the process of developing carbon pollution standards for new power plants, the EPA held five listening sessions to obtain information and input from key stakeholders and the public. Each of the five sessions had a particular target audience: The electric power industry, environmental and environmental justice organizations, states and tribes, coalition groups, and the petroleum refinery industry.

The EPA conducted subsequent outreach prior to the June 2014 proposals of standards for modified and reconstructed EGUs and emission guidelines for existing EGUs, as well as during the public comment periods for the proposals. Although this stakeholder outreach was primarily framed around the GHG emission guidelines for existing EGUs, the outreach encompassed issues relevant to this rulemaking and provided an opportunity for the EPA to better understand previous state and stakeholder experience with reducing CO_2 emissions in the power sector. In addition to 11 public listening sessions, the EPA held hundreds of meetings with individual stakeholder groups, and meetings that brought together a variety of stakeholders to discuss a wide range of issues related to the electricity sector and regulation of GHGs under the CAA. The agency met with electric utility associations and electricity grid operators. Agency officials engaged with labor unions and with leaders representing large and small industries. The agency also met with energy industries, such as coal and natural gas interests, as well as with representatives of energy-intensive industries, such as

[104] 79 FR 1430, 1444.

[105] See Section III.H.3.g below. The Energy Policy Act of 2005 (EPAct05) was signed into law by President George W. Bush on August 8, 2005. EPAct05 was intended to address energy production in the United States, including: (1) Energy efficiency; (2) renewable energy; (3) oil and gas; (4) coal; (5) Tribal energy; (6) nuclear matters and security; (7) vehicles and motor fuels, including ethanol; (8) hydrogen; (9) electricity; (10) energy tax incentives; (11) hydropower and geothermal energy; and (12) climate change technology. *www2.epa.gov/laws-regulations/summary-energy-policy-act.*

the iron and steel, and aluminum industries, to better understand the potential concerns of large industrial purchasers of electricity. In addition, the agency met with companies that offer new technology to prevent or reduce carbon pollution. The agency provided and encouraged multiple opportunities for engagement with state, local, tribal, and regional environmental and energy agencies. The EPA also met with representatives of environmental justice organizations, environmental groups, public health professionals, public health organizations, religious organizations, and other community stakeholders.

The EPA received more than 2.5 million comments submitted in response to the original April 2012 proposal for newly constructed fossil fuel-fired EGUs. Because the original proposal was withdrawn, the EPA instructed commenters that wanted their comments on the April 2012 proposal to be considered in connection with the January 2014 proposal to submit new comments to the EPA or to re-submit their previous comments. We received more comments in response to the January 2014 proposal, as discussed in the section below.

The EPA has given stakeholder input provided prior to the proposals, as well as during the public comment periods for each proposal, careful consideration during the development of this rulemaking and, as a result, it includes elements that are responsive to many stakeholder concerns and that enhance the rule. This preamble and the Response-to-Comments (RTC) document summarize and provide the agency's responses to the comments received.

2. Comments on the January 2014 Proposal For Newly Constructed Fossil Fuel-Fired EGUs

Upon publication of the January 8, 2014 proposal for newly constructed fossil fuel-fired EGUs, the EPA provided a 60-day public comment period. On March 6, 2014, in order to provide the public additional time to submit comments and supporting information, the EPA extended the comment period by 60 days, to May 9, 2014, giving stakeholders over 120 days to review, and comment upon, the January 2014 proposal, as well as the NODA. A public hearing was held on February 6, 2014, with 159 speakers presenting testimony.

The EPA received more than 2 million comments on the proposed standards for newly constructed fossil fuel-fired EGUs from a range of stakeholders that included industry and electric utility representatives, trade groups, equipment manufacturers, state and local government officials, academia, environmental organizations, and various interest groups. The agency received comments on a range of topics, including the determination that a new highly-efficient steam generating EGU implementing partial CCS was the BSER for such sources, the level of the CO_2 standard based on implementation of partial CCS, the criteria that define which newly constructed natural gas-fired stationary combustion turbines will be subject to standards, the establishment of subcategories based on combustion turbine size, and the rule's potential effects on the Prevention of Significant Deterioration (PSD) preconstruction permit program and Title V operating permit program.

3. Comments on the June 2014 Proposal For Modified and Reconstructed Fossil Fuel-Fired EGUs

Upon publication of the June 18, 2014 proposal for modified and reconstructed fossil fuel-fired EGUs, the EPA offered a 120-day public comment period—through October 16, 2014. The EPA held public hearings in four locations during the week of July 28, 2014. These hearings also addressed the EPA's June 18, 2014 proposed emission guidelines for existing fossil fuel-fired EGUs (reflecting the connections between the proposed standards for modified and reconstructed sources and the proposed emission guidelines). A total of 1,322 speakers testified, and a further 1,450 attended but did not speak. The speakers were provided the opportunity to present data, views, or arguments concerning one or both proposed actions.

The EPA received over 200 comments on the proposed standards for modified and reconstructed fossil fuel-fired EGUs from a range of stakeholders similar to those that submitted comments on the January 2014 proposal for newly constructed fossil fuel-fired EGUs (*i.e.,* industry and electric utility representatives, trade groups, equipment manufacturers, state and local government officials, academia, environmental organizations, and various interest groups). The agency received comments on a range of topics, including the methodology for determining unit-specific CO_2 standards for modified steam generating units and the use of supercritical boiler conditions as the basis for the CO_2 standards for certain reconstructed steam generating units. Many of the comments regarding modified and reconstructed natural gas-fired stationary combustion turbines are similar to the comments regarding newly constructed combustion turbines described above (*e.g.,* applicability criteria and subcategories based on turbine size).

III. Regulatory Authority, Affected EGUs and Their Standards, and Legal Requirements

In this section, we describe our authority to regulate CO_2 from fossil fuel-fired EGUs. We also describe our decision to combine the two existing categories of affected EGUs—steam generators and combustion turbines—into a single category of fossil fuel-fired EGUs for purposes of promulgating standards of performance for CO_2 emissions. We also explain that we are codifying all of the requirements in this rule for new, modified, and reconstructed affected EGUs in new subpart TTTT of part 60 of Title 40 of the Code of Federal Regulations. In addition, we explain which sources are and are not affected by this rule, and the format of these standards. Finally, we describe the legal requirements for establishing these emission standards.

A. Authority To Regulate Carbon Dioxide From Fossil Fuel-Fired EGUs

The EPA's authority for this rule is CAA section 111(b)(1). CAA section 111(b)(1)(A) requires the Administrator to establish a list of source categories to be regulated under section 111. A category of sources is to be included on the list "if in [the Administrator's] judgment it causes, or contributes significantly to, air pollution which may reasonably be anticipated to endanger public health and welfare." This determination is commonly referred to as an "endangerment finding" and that phrase encompasses both the "causes or contributes significantly" component and the "endanger public health and welfare" component of the determination. Then, for the source categories listed under section 111(b)(1)(A), the Administrator promulgates, under section 111(b)(1)(B), "standards of performance for new sources within such category."

In this rule, the EPA is establishing standards under section 111(b)(1)(B) for source categories that it has previously listed and regulated for other pollutants and which now are being regulated for an additional pollutant. Because of this, there are two aspects of section 111(b)(1) that warrant particular discussion.

First, because the EPA is not listing a new source category in this rule, the EPA is not required to make a new endangerment finding with regard to affected EGUs in order to establish standards of performance for the CO_2 emissions from those sources. Under the plain language of CAA section

111(b)(1)(A), an endangerment finding is required only to list a source category. Further, though the endangerment finding is based on determinations as to the health or welfare impacts of the pollution to which the source category's pollutants contribute, and as to the significance of the amount of such contribution, the statute is clear that the endangerment finding is made with respect to the source category; section 111(b)(1)(A) does not provide that an endangerment finding is made as to specific pollutants. This contrasts with other CAA provisions that do require the EPA to make endangerment findings for each particular pollutant that the EPA regulates under those provisions. E.g., CAA sections 202(a)(1), 211(c)(1), and 231(a)(2)(A); *see also American Electric Power Co. Inc.,* v. *Connecticut,* 131 S. Ct. 2527, 2539 (2011) (''[T]he Clean Air Act directs the EPA to establish emissions standards for *categories* of stationary sources that, 'in [the Administrator's] judgment,' 'caus[e], or contribut[e] significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare.' § 7411(b)(1)(A).'') (emphasis added).

Second, once a source category is listed, the CAA does not specify what pollutants should be the subject of standards from that source category. The statute, in section 111(b)(1)(B), simply directs the EPA to propose and then promulgate regulations ''establishing federal standards of performance for new sources within such category.'' In the absence of specific direction or enumerated criteria in the statute concerning what pollutants from a given source category should be the subject of standards, it is appropriate for the EPA to exercise its authority to adopt a reasonable interpretation of this provision. *Chevron U.S.A. Inc.* v. *NRDC,* 467 U.S. 837, 843–44 (1984).[106]

The EPA has previously interpreted this provision as granting it the discretion to determine which pollutants should be regulated. *See* Standards of Performance for Petroleum Refineries, 73 FR 35838 (June 24, 2008) (concluding that the statute provides ''the Administrator with significant flexibility in determining which pollutants are appropriate for regulation under section 111(b)(1)(B)'' and citing cases). Further, in directing the Administrator to propose and promulgate regulations under section 111(b)(1)(B), Congress provided that the Administrator should take comment and then finalize the standards with such modifications ''as he deems appropriate.'' The D.C. Circuit has considered similar statutory phrasing from CAA section 231(a)(3) and concluded that ''[t]his delegation of authority is both explicit and extraordinarily broad.'' *National Assoc. of Clean Air Agencies* v. *EPA,* 489 F.3d 1221, 1229 (D.C. Cir. 2007).

In exercising its discretion with respect to which pollutants are appropriate for regulation under section 111(b)(1)(B), the EPA has in the past provided a rational basis for its decisions. See *National Lime Assoc.* v. *EPA,* 627 F.2d 416, 426 & n.27 (D.C. Cir. 1980) (court discussed, but did not review, the EPA's reasons for not promulgating standards for oxides of nitrogen (NO_X), sulfur dioxide (SO_2) and CO from lime plants); Standards of Performance for Petroleum Refineries, 73 FR at 35859–60 (June 24, 2008) (providing reasons why the EPA was not promulgating GHG standards for petroleum refineries as part of that rule). Though these previous examples involved the EPA providing a rational basis for not setting standards for a given pollutant, a similar approach is appropriate where the EPA determines that it should set a standard for an additional pollutant for a source category that was previously listed and regulated for other pollutants.

In this rulemaking, the EPA has a rational basis for concluding that emissions of CO_2 from fossil fuel-fired power plants, which are the major U.S. source of GHG air pollution, merit regulation under CAA section 111. As noted, in 2009, the EPA made a finding that GHG air pollution may reasonably be anticipated to endanger public health or welfare, and in 2010, the EPA denied petitions to reconsider that finding. The EPA extensively reviewed the available science concerning GHG pollution and its impacts in taking those actions. In 2012, the U.S. Court of Appeals for the D.C. Circuit upheld the finding and the denial of petitions to reconsider.[107] In addition, assessments from the NRC, the IPCC, and other organizations published after 2010 lend further credence to the validity of the Endangerment Finding. No information that commenters have presented or that the EPA has reviewed provides a basis for reaching a different conclusion. Indeed, current and evolving science discussed in detail in Section II.A of this preamble is confirming and enhancing our understanding of the near- and longer-term impacts emissions of CO_2 are having on Earth's climate and the adverse public health, welfare, and economic consequences that are occurring and are projected to occur as a result.

Moreover, the high level of GHG emissions from fossil fuel-fired EGUs makes clear that it is rational for the EPA to regulate GHG emissions from this sector. EGUs emit almost one-third of all U.S. GHGs and comprise by far the largest stationary source category of GHG emissions; indeed, as noted above, the CO_2 emissions from fossil fuel-fired EGUs are almost three times as much as the emissions from the next ten source categories combined. Further, the CO_2 emissions from even a single new coal-fired power plant may amount to millions of tons each year. See, *e.g.,* Section V.K below (noting that even the difference in CO_2 emissions between a highly efficient SCPC and the same unit meeting today's standard of performance can amount to hundreds of thousands of tons each year). These facts provide a rational basis for regulating CO_2 emissions from affected EGUs.

Some commenters have argued that the EPA is required to make a new endangerment finding before it may regulate CO_2 from EGUs. We disagree, for the reasons discussed above. Moreover, as discussed in the January 2014 proposal,[108] even if CAA section 111 required the EPA to make endangerment and cause-or-contribute significantly findings as prerequisites for this rulemaking, then, so far as the ''CO_2 endangers public health and welfare'' component of an endangerment finding is concerned, the information and conclusions described above should be considered to constitute the requisite endangerment finding. Similarly, so far as a cause-or-contribute significantly finding is concerned, the information and conclusions described above should be considered to constitute the requisite finding. The EPA's rational basis for regulating CO_2 under CAA section 111 is based primarily on the analysis and conclusions in the EPA's 2009 Endangerment Finding and 2010 denial of petitions to reconsider that Finding, coupled with the subsequent assessments from the IPCC and NRC that describe scientific developments since those EPA actions. In addition, we have reviewed comments presenting other scientific information to

[106] In *Chevron,* the U.S. Supreme Court held that an agency must, at Step 1, determine whether Congress's intent as to the specific matter at issue is clear, and, if so, the agency must give effect to that intent. If Congressional intent is not clear, then, at Step 2, the agency has discretion to fashion an interpretation that is a reasonable construction of the statute.

[107] *Coalition for Responsible Regulation* v. *EPA,* 684 F.3d 102, 119–126 (D.C. Circuit 2012).

[108] 79 FR 1430, 1455–56 (January 8, 2014).

determine whether that information has any meaningful impact on our analysis and conclusions. For both the endangerment finding and the rational basis, the EPA focused on public health and welfare impacts within the United States, as it did in the 2009 Finding. The impacts in other world regions strengthen the case because impacts in other world regions can in turn adversely affect the United States or its citizens.

More specifically, our approach here—reflected in the information and conclusions described above—is substantially similar to that reflected in the 2009 Endangerment Finding and the 2010 denial of petitions to reconsider. The D.C. Circuit upheld that approach in *Coalition for Responsible Regulation* v. *EPA,* 684 F.3d 102, 117–123 (D.C. Cir. 2012) (noting, among other things, the ''substantial . . . body of scientific evidence marshaled by EPA in support of the Endangerment Finding'' (id. at 120); the ''substantial record evidence that anthropogenic emissions of greenhouse gases 'very likely' caused warming of the climate over the last several decades'' (id. at 121); ''substantial scientific evidence . . . that anthropogenically induced climate change threatens both public health and public welfare . . . [through] extreme weather events, changes in air quality, increases in food- and water-borne pathogens, and increases in temperatures'' (id.); and ''substantial evidence . . . that the warming resulting from the greenhouse gas emissions could be expected to create risks to water resources and in general to coastal areas. . . .'' (id.)). The facts, unfortunately, have only grown stronger and the potential adverse consequences to public health and the environment more dire in the interim. Accordingly, that approach would support an endangerment finding for this rulemaking.[109]

Likewise, if the EPA were required to make a cause-or-contribute-significantly finding for CO_2 emissions from the fossil fuel-fired EGUs as a prerequisite to regulating such emissions under CAA section 111, the same facts that support our rational basis determination would support such a finding. As shown in Tables 3 and 4 in this preamble, fossil fuel-fired EGUs are very large emitters of CO_2. All told, these fossil fuel-fired EGUs emit almost one-third of all U.S. GHG emissions, and are responsible for almost three times as much as the emissions from the next ten stationary source categories combined. The CO_2 emissions from even a single new coal-fired power plant may amount to millions of tons each year, and the CO_2 emissions from even a single NGCC unit may amount to one million or more tons per year. It is not necessary in this rulemaking for the EPA to decide whether it must identify a specific threshold for the amount of emissions from a source category that constitutes a significant contribution; under any reasonable threshold or definition, the emissions from combustion turbines and steam generators are a significant contribution. Indeed, these emissions far exceed in magnitude the emissions from motor vehicles, which have already been held to contribute to the endangerment. See *Coalition for Responsible Regulation,* 684 F. 3d at 121 (''substantial evidence'' supports the EPA's determination ''that motor-vehicle emissions of greenhouse gases contribute to climate change and thus to the endangerment of public health and welfare'').[110]

B. Treatment of Categories and Codification in the Code of Federal Regulations

As discussed in the January 2014 proposal of carbon pollution standards for newly constructed EGUs (79 FR 1430) and above, in 1971 the EPA listed fossil fuel-fired steam generating boilers as a new category subject to CAA section 111 rulemaking, and in 1979 the EPA listed fossil fuel-fired combustion turbines as a new category subject to the CAA section 111 rulemaking. In the ensuing years, the EPA has promulgated standards of performance for the two categories and codified those standards, at various times, in 40 CFR part 60, subparts D, Da, GG, and KKKK.

In the January 2014 proposal of carbon pollution standards for newly constructed EGUs (79 FR 1430) and the June 2014 proposal of carbon pollution standards for modified and reconstructed EGUs (79 FR 34960), the EPA proposed separate standards of performance for new, modified, and reconstructed sources in the two categories. The EPA took comment on combining the two categories into a single category solely for purposes of the CO_2 emissions from new, modified, and reconstructed affected EGUs. In addition, the EPA proposed codifying the standards of performance in the same Da and KKKK subparts that currently contain the standards of performance for other pollutants from those sources addressed in the NSPS program, but co-proposed codifying all the standards of performance for CO_2 emissions in a new 40 CFR part 60, subpart TTTT.

In this rule, the EPA is combining the steam generator and combustion turbine categories into a single category of fossil fuel-fired electricity generating units for purposes of promulgating standards of performance for GHG emissions. Combining the two categories is reasonable because they both provide the same product: Electricity services. Moreover, combining them in this rule is consistent with our decision to combine them in the CAA section 111(d) rule for existing sources that accompanies this rule. In addition,

[109] Nor does the EPA consider the cost of potential standards of performance in making this Finding. Like the Endangerment Finding under section 202(a) at issue in *State of Massachusetts* v. *EPA,* 549 U.S. 497 (2007) the pertinent issue is a scientific inquiry as to whether an endangerment to public health or welfare from the relevant air pollution may reasonably be anticipated. Where, as here, the scientific inquiry conducted by the EPA indicates that these statutory criteria are met, the Administrator does not have discretion to decline to make a positive endangerment finding to serve other policy grounds. Id. at 532–35. In this regard, an endangerment finding is analogous to setting national ambient air quality standards under section 109(b), which similarly call on the Administrator to set standards that in her ''judgment'' are ''requisite to protect the public health''. The EPA is not permitted to consider potential costs of implementation in setting these standards. *Whitman* v. *American Trucking Assn's,* 531 U.S. 457, 466 (2001); see also *Michigan* v. *EPA,* U.S. (no. 14–46, June 29, 2015) slip op. pp. 10–11 (reiterating *Whitman* holding). The EPA notes further that section 111(b)(1) contains no terms such as ''necessary and appropriate'' which could suggest (or, in some contexts, require) that costs may be considered as part of the finding. Compare CAA section 111(n)(1)(A); see *State of Michigan,* slip op. pp. 7–8. The EPA, of course, must consider costs in determining whether a best system of emission reduction is adequately demonstrated and so can form the basis for a section 111(b) standard of performance, and the EPA has carefully considered costs here and found them to be reasonable. See section V. H. and I. below. The EPA also has found that the rule's quantifiable benefits exceed regulatory costs under a range of assumptions were new capacity to be built. RIA chapter 5 and section XIII.G below. Accordingly, this endangerment finding would be justified if (against our view) it is both required, and (again, against our view) costs are to be considered as part of the finding.

[110] The ''air pollution'' defined in the Endangerment Finding is the atmospheric mix of six long-lived and directly emitted greenhouse gases: Carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). See 74 FR 66496 at 66497. The standards of performance adopted in the present rulemaking address only one component of this air pollution: CO_2. This is reasonable, given that CO_2 is the air pollutant emitted in the largest volume by the source category, and which is (necessarily) emitted by every affected EGU. There is, of course, no requirement that standards of performance address each component of the air pollution which endangers. Section 111(b)(1)(A) requires the EPA to establish ''standards of performance'' for listed source categories, and the definition of ''standard of performance'' in section 111(a)(1) does not specify which air pollutants must be controlled. See also Section III.G below explaining that CH_4 and N_2O emissions represent less than 1 percent of total estimated GHG emissions (as CO_2e) from fossil fuel-fired electric power generating units.

many of the monitoring, reporting, and verification requirements are the same for both source categories, and, as discussed next, we are codifying all requirements in a single new subpart of the regulations; as a result, combining the two categories into a single category will reduce confusion. It should be noted that in this rule, we are not combining the two categories for purposes of standards of performance for other air pollutants.

Because these two source categories are pre-existing listed source categories and the EPA will not be subjecting any additional sources in the categories to CAA regulation for the first time, the combination of these two categories is not considered a new source category subject to the listing requirements of CAA section 111(b)(1)(A). As a result, this final rule does not list a new category under CAA section 111(a)(1)(A), nor does this final rule revise either of the two source categories. Thus, the EPA is not required to make a new endangerment and contribution finding for the combination of the two categories,[111] although as discussed in the previous section, the evidence strongly supports such findings. Thus, the EPA has found, in the alternative, that this category of sources contributes significantly to air pollution which may be reasonably anticipated to endanger public health and welfare.

C. Affected Units

We generally refer to fossil fuel-fired electric generating units that would be subject to a CAA section 111 emission standard as ''affected'' or ''covered'' sources, units, facilities or simply as EGUs. An EGU is any boiler, IGCC unit, or combustion turbine (in either simple cycle or combined cycle configuration) that meets the applicability criteria. Affected EGUs include those that commenced construction after January 8, 2014, and meet the specified applicability criteria and, for modifications and reconstructions, EGUs that commenced those activities after June 18, 2014, and meet the specified applicability criteria.

To be considered an EGU, the unit must: (1) Be capable of combusting more than 250 MMBtu/h (260 GJ/h) heat input of fossil fuel; [112] and (2) serve a generator capable of supplying more than 25 MW net to a utility distribution system (*i.e.,* for sale to the grid).[113] However, we are not finalizing CO_2 standards for certain EGUs. The EGUs that are not covered by the standards we are finalizing in this rule include: (1) Non-fossil fuel units subject to a federally enforceable permit that limits the use of fossil fuels to 10 percent or less of their heat input capacity on an annual basis; (2) combined heat and power (CHP) units that are subject to a federally enforceable permit limiting annual net-electric sales to no more than the unit's design efficiency multiplied by its potential electric output, or 219,000 MWh or less, whichever is greater; (3) stationary combustion turbines that are not physically capable of combusting natural gas (*e.g.,* not connected to a natural gas pipeline); (4) utility boilers and IGCC units that have always been subject to a federally enforceable permit limiting annual net-electric sales to one-third or less of their potential electric output (*e.g.,* limiting hours of operation to less than 2,920 hours annually) or limiting annual electric sales to 219,000 MWh or less; (5) municipal waste combustors that are subject to subpart Eb of this part; and (6) commercial or industrial solid waste incineration units subject to subpart CCCC of this part.

D. Units Not Covered by This Final Rule

As described in the previous section, the EPA is not issuing standards of performance for certain types of sources—specifically, dedicated non-fossil fuel-fired (*e.g.,* biomass) units and industrial CHP units, as well as certain projects under development. This section discusses these sources and our rationale for not issuing standards for them. Because the rationale applies to both steam generating units and combustion turbines, we are describing it here rather than in the separate steam generating unit and combustion turbine discussions. We discuss the proposed applicability criteria, the topics where the agency solicited comment, a brief summary of the relevant comments, and the rationale for the final applicability approach for these sources.

1. Dedicated Non-fossil Fuel Units

The proposed applicability for newly constructed EGUs included those that primarily combust fossil fuels (*e.g.,* coal, oil, and natural gas). The proposed applicability criteria were that affected units must burn fossil fuels for more than 10 percent of the unit's total heat input, on average, over a 3-year period.[114] Under the proposed approach, applicability under the final NSPS for CO_2 emissions could have changed on an annual basis depending on the composition of fuel burned. We solicited comment on several aspects of the proposed applicability criteria for non-fossil fuel units. Specifically, we solicited comment on a broad applicability approach that would include non-fossil fuel-fired units as affected units, but that would impose an alternate standard when the unit fires fossil fuels for 10 percent or less of the heat input during the 3-year applicability-determination period. We solicited comment on whether, if such a subcategory is warranted, the applicability-determination period for the subcategory should be 1-year or a 3-year rolling period. We also solicited comment on whether the standard for such a subcategory should be an alternate numerical limit or ''no emission standard.''

While the proposed exemption applied to all non-fossil fuels, most commenters focused on biomass-specific issues. Many commenters supported an exclusion for biomass-fired units that fire no more than 10 percent fossil fuels. Some commenters suggested that the exclusion for biomass-fired units should be raised to a 25 percent fossil fuel-use threshold.

Many commenters supported the proposed 3-year averaging period for the fossil fuel-use criterion because it provides greater flexibility for operators to use fossil fuels when supply chains for the primary non-fossil fuels are disrupted, during unexpected malfunctions of the primary non-fossil fuel handling systems, or when the unit's maximum generating capacity is required by system operators for reliability reasons. Many commenters supported the 3-year averaging period because it is consistent with the final requirements under the EPA's Mercury and Air Toxics Standards (MATS) and would allow non-fossil fuel-fired units to use some fossil fuels for flame stabilization without triggering applicability. Some commenters requested that the EPA clarify the method an operator should use during the first 3 years of operations to determine if a particular unit will meet the 10 percent fossil fuel-use threshold. Others asked whether or not an affected facility has a compliance obligation during the first 3-year period and, if an

[111] See, *e.g., American Trucking Assn's* v. *EPA,* 175 F.3d 1027, 1055, rev'd on other grounds sub. nom. *Whitman* v. *Am. Trucking Assn's,* 531.U.S. 457 (because fine particulate matter ($PM_{2.5}$) was already included as a sub-set of the listed pollutant particulate matter, it was not a new pollutant necessitating a new listing).

[112] We refer to the capability to combust 250 MMBtu/h of fossil fuel as the ''base load rating criterion.'' Note that 250 MMBtu/h is equivalent to 73 MW or 260 GJ/h heat input.

[113] We refer to the capability to supply 25 MW net to the grid as the ''total electric sales criterion.''

[114] We refer to the fraction of heat input derived from fossil fuels as the ''fossil fuel-use criterion.''

affected facility does not meet the 10 percent fossil fuel-use threshold during several 12-month periods during the first 3 years, whether compliance calculations would be required for such 12-month periods. Other commenters had concerns with the 3-year averaging period, stating that a source would no longer be subject to the NSPS if it fell below the threshold for any of the applicability metrics that the EPA proposed to calculate on a 3-year (or, in some cases, annual) basis. They argued that this would create a situation in which no one would know whether a particular plant will be subject to the standards until years after the emissions had already occurred. Some commenters were concerned that plants operating near the threshold could move in and out of the regulatory system, which would provide complications for compliance, enforcement, and permitting.

After considering these comments, the EPA has concluded that the proposed fossil fuel-use criterion based on the actual amount of fossil fuel burned is not an ideal approach to determine applicability. As commenters pointed out, facilities, permitting authorities, and the public would not know when construction is commenced whether a facility will be subject to the final NSPS, and after operation has commenced, a unit could move in and out of applicability each year. The intent of this rulemaking is to establish CO_2 standards for fossil fuel-fired EGUs, not for non-fossil fuel-fired EGUs. Therefore, to simplify compliance and establish CO_2 standards for only those sources which we set out to regulate, we are finalizing a fossil fuel-use criterion that will exempt dedicated non-fossil units. Specifically, units that are capable of burning 50 percent or more non-fossil fuel are exempt from the final standards so long as they are subject to a federally enforceable permit that limits their use of fossil fuels to 10 percent or less of their heat input capacity on an annual basis. This approach establishes clear applicability criteria and avoids the prospect of units moving in and out of applicability based on their actual fuel use in a given year. Consistent with the applicability approach in the steam generating unit criteria pollutant NSPS, subpart Da, the final fossil fuel-use criterion does not include ''constructed for the purpose of'' language. Therefore, an owner or operator could change a unit's applicability in the future by seeking a modification of the unit's permit conditions. A unit with the appropriate permit limitation will not be subject to the requirements in this rulemaking. Similarly, an existing unit that takes a permit limitation restricting fossil-fuel use would no longer be an affected unit for the purposes of 111(d) state plans. This is consistent with our intent to reduce GHG emissions from fossil fuel-fired EGUs.

We considered using either an annual or 3-year average for calculating compliance with the final fossil fuel-use criterion. Ultimately, we concluded that an annual average would provide sufficient flexibility for dedicated non-fossil units to combust fossil fuels for flame stabilization and other ancillary purposes, while maintaining consistency with the 12-month compliance periods used for most permit limitations. A 3-year average potentially would allow units to combust a significant quantity of fuels in a given year, leading to higher CO_2 emissions, so long as they curtailed fossil-fuel use in a later year. This would defeat the purpose of the criterion, which is to exempt dedicated non-fossil units only. Finally, we are finalizing the 10 percent fossil-fuel use threshold in relation to a unit's heat input capacity rather than its actual heat input, which is consistent with past approaches we have taken under the industrial boiler criteria pollutant NSPS.

2. Industrial CHP Units

Another approach to generating electricity is the use of CHP units. A CHP unit can use a boiler, combustion turbine, reciprocating engine, or various other generating technologies to generate electricity and useful thermal energy in a single, integrated system. CHP units are generally more efficient than conventional power plants because the heat that is normally wasted in a conventional power generation cooling system (*e.g.,* cooling towers) is instead recovered as useful thermal output. While the EPA did propose some applicability provisions specific to CHP units (*e.g.,* subtract purchased power of adjacent facilities when determining total electric sales), in general, the proposed applicability criteria for electric-only units and CHP units were similar. The intent of the proposed total and percentage electric sales criteria was to cover only utility CHP units, not industrial CHP units. To the extent that the proposal's applicability provisions would have the effect of covering industrial CHP units, we solicited comment on an appropriate applicability exemption, and the criteria for that exemption, for highly efficient CHP facilities.

Many commenters supported the exclusion of CHP units as a means of encouraging capital investments in highly efficient and reliable distributed generation technologies. These commenters recommended that the EPA adopt an explicit exemption for CHP units at facilities that are classified as industrial (*e.g.,* gas-fired CHPs within SIC codes 2911—petroleum refining, 13—oil and gas extraction, and other industrial SIC codes as appropriate). They also stated that the EPA should exclude CHP units that have an energy savings of 10 percent or more compared to separate heat and power. One commenter suggested that the final rule should cover only industrial-commercial-institutional CHP units that supply, on a net basis, more than two-thirds of their potential combined thermal and electric energy output and more than 450,000 MWh net-electric output to a utility power distribution system on an annual basis for five consecutive calendar years. The commenter also suggested that CHP units which have total thermal energy production that approaches or exceeds their total electricity production should be exempted.

Other commenters suggested exempting CHP units by fuel type or based on the definition of potential electric output. For example, some commenters suggested modifying the percentage electric sales threshold to be based on net system efficiency (including useful thermal output) rather than the rated net-electric-output efficiency. They also suggested that the applicability criteria should use a default efficiency of 50 percent for CHP units. Some commenters suggested that a CHP unit should not be considered an affected EGU if 20 percent or more of its total gross or net energy output consisted of useful thermal output on a 3-year rolling average basis. Other commenters said that highly efficient CHP units that achieve an overall efficiency level of 60 to 70 percent or higher should be excluded from applicability.

The intent of this rulemaking is to cover only utility CHP units, because they serve essentially the same purpose as electric-only EGUs (*i.e.,* the sale of electricity to the grid). Industrial CHP units, on the other hand, serve a different primary purpose (*i.e.,* providing useful thermal output with electric sales as a by-product). With these facts in mind and after considering the comments, the EPA has concluded that it is appropriate to consider two factors for the final CHP exemption: (1) Whether the primary purpose of the CHP unit is to provide useful thermal output rather than electricity and (2) whether the CHP unit is highly efficient and thus achieves environmental benefits.

We rejected many of the approaches suggested by the commenters because they did not achieve one or both of the factors we identified. Specifically, the EPA has concluded that SIC code classification is not a sufficient indicator of the purpose (*i.e.,* it does not correlate to useful thermal output) or environmental benefits (*i.e.,* efficiency) of a unit. Further, an exemption based on SIC code could result in circumvention of the intended applicability. For example, this approach would allow a new EGU to locate near an industrial site, provide a trivial amount of useful thermal output to that site, sell electricity to the grid, and nonetheless avoid applicability. Similarly, increasing the electric sales criteria to two-thirds of potential electric output and 450,000 MWh would essentially amount to a blanket exemption that tells us nothing about the primary purpose or efficiency of the unit.

On the other hand, exemptions based on useful thermal output being greater than 20 percent of total output, thermal output being greater than electric output, or overall design efficiency value would identify whether the primary purpose of a unit is to generate thermal output, but they would not recognize the environmental benefits of highly efficient CHP units. While overall efficiency may appear to be a good indicator of environmental benefits, this is not always the case with CHP units. Overall efficiency is a function of both efficient design and the power to heat ratio (the amount of electricity relative to the amount of useful thermal output). For example, boiler-based CHP units tend to produce large amounts of useful thermal output relative to electric output and tend to have high overall efficiencies. For units producing primarily useful thermal output, the equivalent separate heat and power efficiency (*i.e.,* the theoretical overall efficiency if the electricity and useful thermal output were produced by a stand-alone EGU and stand-alone boiler) would approach that of a stand-alone boiler (*e.g.,* 80 percent). However, combustion turbine-based CHP units tend to produce relatively equal amounts of electricity and useful thermal output. In this case, the equivalent separate heat and power efficiency would be closer to 65 percent. Therefore, an exemption based on overall efficiency is not an indication of the fuel savings a CHP unit will achieve relative to separate heat and power. Further, this approach would encourage the development of CHP units that just meet the efficiency exemption criterion and would still cover many combustion turbine-based industrial CHP units. Conversely, while an exemption based on fuel savings relative to separate heat and power would recognize the environmental benefit of highly efficient CHP units, it would not consider the primary purpose of the CHP unit.

In the end, the EPA has concluded that maintaining the proposed percentage electric sales criterion with two adjustments addresses both factors with which we are concerned. First, we are changing the definition of ''potential electric output'' to be based on overall net efficiency at the maximum electric production rate, instead of just electric-only efficiency. Second, we are changing the percentage electric sales criterion to reflect the sliding scale, which is the overall design efficiency, calculated at the maximum useful thermal rating of the CHP unit (*e.g.,* a CHP unit with a extraction condensing steam turbine would determine the efficiency at the maximum extraction/bypass rate), of the unit multiplied by the unit's potential electric output instead of one-third of potential electric output as proposed. This approach recognizes the primary purpose of industrial CHP units by providing a more generous percentage electric sales exemption to CHP units with high thermal output. As described previously, CHP units with high thermal loads tend to be more efficient and will therefore have a higher allowable percentage electric sales. By amending both the definition of ''potential electric output'' and the electric sales threshold, we assure that CHP units that primarily produce useful thermal output are exempted as industrial CHP units even if they are selling all of their electric output to the grid. As the relative amount of electricity generated by the CHP unit increases, efficiency will generally decrease, thus limiting allowable electric sales before applicability is triggered. This approach also recognizes the environmental benefits of increased efficiency by encouraging industrial CHP units to be designed as efficiently as possible to take advantage of the higher electric sales permitted by the sliding scale.

In conclusion, a CHP unit will be an affected source unless it is subject to a federally enforceable permit that limits annual total electric sales to less than or equal to the unit's design efficiency multiplied by its potential electric output or 219,000 MWh,[115] whichever is greater. This final applicability criterion will only cover CHP units that condense a significant portion of steam generated by the unit and use the electric power generated as a result of condensing that steam to supply electric power to the grid. CHP facilities that do not have a condensing steam turbine (*e.g.,* combustion turbine-based CHP units without a steam turbine and boiler-based systems with a backpressure steam turbine) would generally not be physically capable of selling enough electricity to meet the applicability criterion, even if they sold 100 percent of the electricity generated and did not subtract out the electricity used by the thermal host(s). The EPA has concluded that this is appropriate because these sources are industrial by design and provide mostly useful thermal output.

CHP facilities with a steam extraction condensing steam turbine will determine their potential electric output based on their efficiency on a net basis at the maximum electric production rate at the base load heat input rating (*e.g.,* the CHP is condensing as much steam as possible to create electricity instead of using it for useful thermal output). We have concluded that it is necessary for CHP units with extraction condensing steam turbines to calculate their potential electric output at the maximum condensing level to avoid circumvention of the applicability criteria. For example, to avoid applicability a CHP unit could locate next to an industrial host and have the capability of selling significant quantities of useful thermal output without ever actually intending to supply much, if any, useful thermal output to the industrial host. If we calculated the potential electric output at the maximum level of thermal output, this type of CHP unit could operate at full condensing mode at base load conditions for the entire year and still not exceed the electric sales threshold. During the permitting process, the owner or operator will be able to determine if the unit is subject to the final standards in this rule.

New EGUs with only limited useful thermal output will be subject to the final standards, but the vast majority of new CHP units will be classified as industrial CHP and will not be subject to the final standards. The EPA has concluded that this approach is similar to exempting CHP facilities that sell less than half of their total output (electricity plus thermal), but has the benefit of accounting for overall design efficiency.

[115] The EPA has concluded that it is appropriate to maintain the 219,000 MWh total electric sales criterion for combustion turbine based CHP units to avoid potentially covering smaller industrial CHP units.

This approach both limits applicability to the industrial CHP units and encourages the installation of the most efficient CHP systems because more efficient designs will be able to have higher permitted electric sales while not being subject to the CO_2 standards included in this rulemaking.

3. Municipal Waste Combustors and Commercial and Industrial Solid Waste Incinerators

The purpose of this rulemaking is to establish CO_2 standards for fossil fuel-fired EGUs. Municipal waste combustors and commercial and industrial solid waste incinerators typically have not been included in this source category. Therefore, even if one of these types of units meets the general heat input and electric sales criteria, we are not finalizing CO_2 emission standards for municipal waste combustors subject to subpart Eb of this part and commercial and industrial solid waste incinerators subject to subpart CCCC of this part.

4. Certain Projects Under Development

The EPA proposed that a limited class of projects under development should not be subject to the proposed standards. These were planned sources that may be capable of commencing construction (within the meaning of section 111(a)) shortly after the standard's proposal date, and so would be classified as new sources, but which have a design which would be incapable of meeting the proposed standard of performance. See 79 FR 1461 and CAA section 111(a)(2). The EPA proposed that these sources would not be subject to the generally-applicable standard of performance, but rather would be subject to a unit-specific permitting determination if and when construction actually commences. The EPA indicated that there could be three sources to which this approach could apply, and further indicated that the EPA could ultimately adopt the generally-applicable standard of performance for these sources (if actually constructed). 79 FR 1461.

As explained at Section III.J below, the EPA is finalizing this approach in this final rule. We again note that these sources, if and when constructed, could be ultimately subject to the 1,400 lb CO_2/MWh-g standard, especially if there is no engineering basis, or demonstrated action in reliance, showing that the new source could not meet that standard.

E. Coal Refuse

In the April 2012 proposal, we solicited comment on subcategorizing and exempting EGUs that burn over 75 percent coal refuse on an annual basis. Multiple commenters supported the exemption, citing numerous environmental benefits of remediating coal refuse piles. Observing that coal refuse-fired EGUs typically use fluidized bed technologies, other commenters disagreed with any exemption, specifically citing the N_2O emissions from fluidized bed boilers. In light of the environmental benefits of remediating coal refuse piles cited by commenters, the limited amount of coal refuse, and the fact that a new coal refuse-fired EGU would be located in close proximity to the coal refuse pile, we sought additional comments regarding a subcategory for coal refuse-fired EGUs in the January 2014 proposal. Specifically, we requested additional information on the net environmental benefits of coal refuse-fired EGUs and information to support an appropriate emissions standard for coal refuse-fired EGUs. One commenter on the April 2012 proposal stated that existing coal refuse piles are naturally combusting at a rate of 0.3 percent annually, and we requested comment on this rate and the proper approach to account for naturally occurring emissions from coal refuse piles in the January 2014 proposal.

Commenters said that a performance standard is not feasible for coal refuse CFBs since there is no economically feasible way to capture CO_2 through a conveyance designed and constructed to capture CO_2. Commenters suggested that the EPA establish BSER for GHGs at modified coal refuse CFBs as a boiler tune-up that must be performed at least every 24 months. Commenters stated that the EPA should exempt coal refuse CFB units relative to their CO_2 emissions to the extent that these units offset the uncontrolled ground level emissions from spontaneous combustion of legacy coal refuse stockpiles and noted that the mining of coal waste not only produces less emissions in the long term, but also helps to reclaim land that is currently used to store coal waste. In contrast, one commenter saw no legitimate basis for coal refuse to be subcategorized and stated that it should be treated in the same manner as all other coal-fired EGUs.

The EPA has concluded that an explicit exemption or subcategory specifically for coal refuse-fired EGUs is not appropriate. The costs faced by coal refuse facilities to install CCS are similar to coal-fired EGUs burning any of the primary coals, and the final applicable requirements and standards in the rule do not preclude the development of new coal refuse-fired units without CCS. Specifically, we are not finalizing CO_2 standards for industrial CHP units. Many existing coal refuse-fired units are relatively small and designed as CHP units. Due to the expense of transporting coal refuse long distances, we anticipate that any new coal refuse-fired EGU would be relatively small in size. Moreover, sites with sufficient thermal demand exist such that the unit could be designed as an industrial CHP facility and the requirements of this rule would not apply.

F. Format of the Output-Based Standard

1. Net and Gross Output-Based Standards

For all newly constructed units, the EPA proposed standards as gross output emission rates consistent with current monitoring and reporting requirements under 40 CFR part 75.[116] For a non-CHP EGU, gross output is the electricity generation measured at the generator terminals. However, we solicited comment on finalizing equivalent net-output-based standards either as a compliance alternative or in lieu of the proposed gross-output-based standards. Net output is the gross electrical output less the unit's total parasitic (*i.e.,* auxiliary) power requirements. A parasitic load for an EGU is a load or device powered by electricity, steam, hot water, or directly by the gross output of the EGU that does not contribute electrical, mechanical, or useful thermal output. In general, parasitic energy demands include less than 7.5 percent of non-IGCC and non-CCS coal-fired station power output, approximately 15 percent of non-CCS IGCC-based coal-fired station power output, and about 2.5 percent of non-CCS NGCC power output. The use of CCS increases both the electric and steam parasitic loads used internal to the unit, and these outputs are not considered when determining the emission rate. Net output is used to recognize the environmental benefits of: (1) EGU designs and control equipment that use less auxiliary power; (2) fuels that require less emissions control equipment; and (3) higher efficiency motors, pumps, and fans. For modified and reconstructed combustion turbines, the EPA also proposed standards as gross output emission rates, but solicited comment on finalizing net output standards. The rationale was that due to the low auxiliary loads in non-CCS NGCC designs, the difference between a gross-output standard and a net-output standard has a limited

[116] 79 FR 1447–48.

impact on environmental performance. Auxiliary loads are more significant for modified and reconstructed boilers and IGCC units, and the EPA proposed standards on a net output basis for these units. The rationale included that this would enable owners/operators of these types of units to pursue projects that reduce auxiliary loads for compliance purposes. However, the EPA solicited comment on finalizing the standards on a gross-output basis. We also proposed to use either gross-output or net-output bases for each respective subcategory of EGUs (*i.e.,* utility boilers, IGCC units, and combustion turbines) consistently across all CAA section 111(b) standards for new, modified, and reconstructed EGUs.

Many commenters supported gross-output-based standards, maintaining that a net-output standard penalizes the operation of air pollution control equipment. Several commenters disagreed with the agency's proposed rationale that a net-output standard would provide incentive to minimize auxiliary loads. The commenters believe utility commissions and existing economic forces already provide utilities with appropriate incentives to properly manage all of these factors. Some commenters supported a gross-output-based standard because variations in site conditions (*e.g.,* available natural gas pressure, available cooling water sources, and elevation) will likely penalize some owners and benefit others simply through variations in their particular plant-site conditions if a net basis is used. Several commenters stated that if the final rule includes a net-output-based standard, it should be included as an option in conjunction with a gross-output-based option.

Several commenters opposed net-output-based standards because they believe it is difficult to accurately determine the net output of an EGU. They pointed out that many facilities have transformers that support multiple units at the facility, making unit-level reporting difficult. These commenters also stated that station electric services may come from outside sources to supply certain ancillary loads. One commenter stated that the benefit of switching to net-output-based standards would be small and would not justify the substantial complexities in both defining and implementing such a standard. Conversely, other commenters stated that net-metering is a well-established technology that should be required, particularly for newly constructed units.

Other commenters, however, maintained that the final rule should strictly require compliance on a net output-basis. They believe that this is the only way for the standards to minimize the carbon footprint of the electricity delivered to consumers. These commenters believe that, at a minimum, net-output-based standards should be included as an option in the final rule.

We are only finalizing gross-output-based standards for utility boilers and IGCC units. Providing an alternate net-output-based standard that is based on gross-output-based emissions data and an assumed auxiliary load is most appropriate when the auxiliary load can be reasonably estimated and the choice between the net- and gross-output-based standard will not impact the identified BSER. For example, the auxiliary load for combustion turbines is relatively fixed and small, approximately 2.5 percent, so the choice between a gross and net-output-based standard will not substantially impact technology choices. However, in the case of utility boilers, we have concluded that we do not have sufficient information to establish an appropriate net-output-based standard that would not impact the identified BSER for these types of units. The BSER for newly constructed steam generating units is based on the use of partial CCS. However, unlike the case for combustion turbines, owners/operators of utility boilers have multiple technology pathways available to comply with the actual emission standard. The choice of both control technologies and fuel impact the overall auxiliary load. For example, a coal-fired hybrid EGU (*e.g.,* one that includes integrated solar thermal equipment for feedwater heating or steam augmentation) or a coal-fired EGU co-firing natural gas would have lower non-CCS related auxiliary loads and, because the amount of CCS needed to comply with the standard would also be smaller, the CCS auxiliary loads would also be reduced. Therefore, we cannot identify an appropriate assumed auxiliary load to establish an equivalent net-output-based standard. In addition, many IGCC facilities (which could be used as an alternative technology for complying with the standard of performance; see Sections IV.B and V.P below) have been proposed or are envisioned as co-production facilities (*i.e.,* to produce useful by-products and chemicals along with electricity). As noted in the proposal, we have concluded that predicting the net electricity at these co-production facilities would be more challenging to implement under these circumstances.

In contrast, based on further evaluation and review of issues raised by commenters, the EPA is finalizing the CO_2 standard for combustion turbine EGUs in a format that is similar to the current NSPS format for criteria pollutants. The default final standards establish a gross-output-based standard. This allows owners/operators of new combustion turbines to comply with the CO_2 emissions standard under part 60 using the same data currently collected under part 75.[117] However, many permitting authorities commented persuasively that the environmental benefits of using net-output-based standards can outweigh any additional complexities for particular units, and have indeed adopted net-output standards in recent GHG operating permits for combustion turbines. We expect this trend to continue and have concluded that it is appropriate to support the expanded use of net-output-based standards, and therefore are allowing certain sources to elect between gross output-based and net-output-based standards. Only combustion turbines are eligible to make this election.

The rule specifies an alternative net-output-based standard of 1,030 lb CO_2/MWh-n for combustion turbines. This standard is equivalent to the otherwise-applicable gross-output-based standard of 1,000 lb CO_2/MWh-g.[118]

The procedures for requesting this alternative net-output-based standard require the owner or operator to petition the Administrator in writing to comply with the alternate applicable net-output-based standard. If the Administrator grants the petition, this election would be binding and would be the unit's sole means of demonstrating compliance. Owners or operators complying with the net-output-based standard must similarly petition the Administrator to switch back to complying with the gross-output-based standard.

2. Useful Thermal Output

For CHP units, useful thermal output is also used when determining the emission rate. Previous rulemakings issued by the EPA have prescribed various ''discount factors'' of the measured useful thermal output to be used when determining the emission rate. We proposed that 75 percent credit is the appropriate discount factor for useful thermal output, and we solicited

[117] Additionally, having an NSPS standard that is measured using the same monitoring equipment as required under the operating permit minimizes compliance burden. If a combustion turbine were subject to both a gross and net emission limit, more expensive higher accuracy monitoring could be required for both measurements.

[118] Assuming a 3 percent auxiliary load for the NGCC system.

comment on a range from two-thirds to three-fourths credit for useful thermal output in the proposal for newly constructed units and two-thirds to one hundred percent credit in the proposal for modified and reconstructed units. The 75 percent credit was based on matching the emission rate, but not the overall emissions, of a hypothetical CHP unit to the proposed emission rate.

Many commenters said that in order to fully account for the environmental benefits of CHP and to reflect the environmental benefits of CHP, the EPA should allow 100 percent of the useful thermal output from CHP units. Commenters noted that providing 100 percent credit for useful thermal output is consistent with the past practice of the EPA in the stationary combustion turbine criteria pollutant NSPS and state approaches for determining emission rates for CHP units.

Based on further consideration and review of the comments submitted, we are finalizing 100 percent credit for useful thermal output for all newly constructed, modified, and reconstructed CHP sources. We have concluded that this is appropriate because, at the same reported emission rate, a hypothetical CHP unit would have the same overall GHG emissions as the combined emission rate of separate heat and power facilities. Any discounting of useful thermal output could distort the market and discourage the development of new CHP units. Full credit for useful thermal output appropriately recognizes the environmental benefit of CHP.

G. CO_2 Emissions Only

The air pollutant regulated in this final action is greenhouse gases. However, the standards in this rule are expressed in the form of limits on only emissions of CO_2, and not the other constituent gases of the air pollutant GHGs.[119] We are not establishing a limit on aggregate GHGs or separate emission limits for other GHGs (such as methane (CH_4) or nitrous oxide (N_2O)) as other GHGs represent less than 1 percent of total estimated GHG emissions (as CO_2e) from fossil fuel-fired electric power generating units.[120] Notwithstanding this form of the standard, consistent with other EPA regulations addressing GHGs, the air pollutant regulated in this rule is GHGs.[121]

H. Legal Requirements for Establishing Emission Standards

1. Introduction

In the January 2014 proposal, we described the principal legal requirement for standards of performance under CAA section 111(b), which is that the standards of performance must consist of standards for emissions that reflect the degree of emission limitation achievable though the application of the ''best system of emission reduction . . . adequately demonstrated,'' taking into account cost and any non-air quality health and environment impact and energy requirements. We noted that the D.C. Circuit has handed down numerous decisions that interpret this CAA provision, including its component elements, and we reviewed that case law in detail.[122]

We received comments on our proposed interpretation, and in light of those comments, in this rule, we are clarifying our interpretation in certain respects. We discuss our interpretation below.[123]

2. CAA Requirements and Court Interpretation

As noted above, the CAA section 111 requirements that govern this rule are as follows: As the first step towards establishing standards of performance, the EPA ''shall publish . . . a list of categories of stationary sources . . . [that] cause[ ], or contribute[ ] significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare.'' CAA section 111(b)(1)(A). Following that listing, the EPA ''shall publish proposed regulations, establishing federal standards of performance for new sources within such category'' and then ''promulgate . . . such standards'' within a year after proposal. CAA section 111(b)(1)(B). The EPA ''may distinguish among classes, types, and sizes within categories of new sources for the purpose of establishing such standards.'' CAA section 111(b)(2). The term ''standard of performance'' is defined to ''mean[ ] a standard for emissions . . . achievable through the application of the best system of emission reduction which [considering cost, non-air quality health and environmental impact, and energy requirements] the Administrator determines has been adequately demonstrated.'' CAA section 111(a)(1).

As noted in the January 2014 proposal, Congress first included the definition of ''standard of performance'' when enacting CAA section 111 in the 1970 Clean Air Act Amendments (CAAA), amended it in the 1977 CAAA, and then amended it again in the 1990 CAAA to largely restore the definition as it read in the 1970 CAAA. It is in the legislative history for the 1970 and 1977 CAAAs that Congress primarily addressed the definition as it read at those times, and that legislative history provides guidance in interpreting this provision.[124] In addition, the D.C. Circuit has reviewed rulemakings under CAA section 111 on numerous occasions during the past 40 years, handing down decisions dated from 1973 to 2011,[125] through which the

[119] As noted above, in the Endangerment Finding, the EPA defined the relevant ''air pollution'' as the atmospheric mix of six long-lived and directly-emitted greenhouse gases: carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). 74 FR 66497.

[120] EPA Greenhouse Gas Reporting Program; *www.epa.gov/ghgreporting/.*

[121] See 77 FR 31257–30 (June 3, 2010).

[122] 79 FR 1430, 1462 (January 8, 2014).

[123] We also discuss our interpretation of the requirements for standards of performance and the BSER under section 111(d), for existing sources, in the section 111(d) rulemaking that the EPA is finalizing with this rule. Our interpretations and applications of these requirements in the two rulemakings are generally consistent with each other except to the extent that they reflect distinctions between new and existing sources. For example, the BSER for new industrial facilities, which are expected to have lengthy useful lives, should include, at a minimum, the most advanced pollution controls available, but for existing sources, the additional costs of retrofit may render those controls too expensive.

[124] In the 1970 CAAA, Congress defined ''standard of performance,'' under section 111(a)(1), as—a standard for emissions of air pollutants which reflects the degree of emission limitation achievable through the application of the best system of emission reduction which (taking into account the cost of achieving such reduction) the Administrator determines has been adequately demonstrated.

In the 1977 CAAA, Congress revised the definition to distinguish among different types of sources, and to require that for fossil fuel-fired sources, the standard: (i) Be based on, in lieu of the ''best system of emission reduction . . . adequately demonstrated,'' the ''best technological system of continuous emission reduction . . . adequately demonstrated;'' and (ii) require a percentage reduction in emissions. In addition, in the 1977 CAAA, Congress expanded the parenthetical requirement that the Administrator consider the cost of achieving the reduction to also require the Administrator to consider ''any nonair quality health and environment impact and energy requirements.''

In the 1990 CAAA, Congress again revised the definition, this time repealing the requirements that the standard of performance be based on the best technological system and achieve a percentage reduction in emissions, and replacing those provisions with the terms used in the 1970 CAAA version of section 111(a)(1) that the standard of performance be based on the ''best system of emission reduction . . . adequately demonstrated.'' This 1990 CAAA version is the current definition. Even so, because parts of the definition as it read under the 1977 CAAA were retained in the 1990 CAAA, the explanation in the 1977 CAAA legislative history, and the interpretation in the case law, of those parts of the definition in the case law remain relevant to the definition as it reads today.

Continued

Court has developed a body of case law that interprets the term ''standard of performance.''

3. Key Elements of Interpretation

By its terms, the definition of ''standard of performance'' under CAA section 111(a)(1) provides that the emission limits that the EPA promulgates must be ''achievable'' by application of a ''system of emission reduction'' that the EPA determines to be the ''best'' that is ''adequately demonstrated,'' ''taking into account . . . cost . . . nonair quality health and environmental impact and energy requirements.'' The D.C. Circuit has stated that, in determining the ''best'' system, the EPA must also take into account ''the amount of air pollution'' [126] reduced and the role of ''technological innovation.'' [127] The Court has emphasized that the EPA has discretion in weighing those various factors.[128] [129]

Our overall approach to determining the BSER, which incorporates the various elements, is as follows: First, the EPA identifies the ''system[s] of emission reduction'' that have been ''adequately demonstrated'' for a particular source category. Second, the EPA determines the ''best'' of these systems after evaluating extent of emission reductions, costs, any non-air health and environmental impacts, and energy requirements. And third, the EPA selects an achievable standard for emissions—here, the emission rate—based on the performance of the BSER. The remainder of this subsection discusses the various elements in that analytical approach.

a. ''System[s] of Emission Reduction . . . Adequately Demonstrated''

The EPA's first step is to identify ''system[s] of emission reduction . . . adequately demonstrated.'' For the reasons discussed below, for the various types of newly constructed, modified, and reconstructed sources in this rulemaking, the EPA focused on efficient generation, add-on controls, efficiency improvements, and clean fuels as the systems of emission reduction.

An ''adequately demonstrated'' system, according to the D.C. Circuit, is ''one which has been shown to be reasonably reliable, reasonably efficient, and which can reasonably be expected to serve the interests of pollution control without becoming exorbitantly costly in an economic or environmental way.'' [130] It does not mean that the system ''must be in actual routine use somewhere.'' [131] Rather, the Court has said, ''[t]he Administrator may make a projection based on existing technology, though that projection is subject to the restraints of reasonableness and cannot be based on 'crystal ball' inquiry.'' [132] Similarly, the EPA may ''hold the industry to a standard of improved design and operational advances, so long as there is substantial evidence that such improvements are feasible.'' [133] Ultimately, the analysis ''is partially dependent on 'lead time,' '' that is, ''the time in which the technology will have to be available.'' [134] Per CAA section 111(e), standards of performance under CAA section 111(b) are applicable immediately after the effective date of their promulgation.

(1) Technical Feasibility of the Best System of Emission Reduction

As the January 2014 proposal indicates, the requirement that the standard for emissions be ''achievable'' based on the ''best system of emission reduction . . . adequately demonstrated'' indicates that one of the requirements for the technology or other measures that the EPA identifies as the BSER is that the measure must be technically feasible. See 79 FR 1430, 1463 (January 8, 2014).

b. ''Best''

In determining which adequately demonstrated system of emission reduction is the ''best,'' the EPA considers the following factors:

(1) Costs

Under CAA section 111(a)(1), the EPA is required to take into account ''the cost of achieving'' the required emission reductions. As described in the January 2014 proposal,[135] in several cases the D.C. Circuit has elaborated on this cost factor and formulated the cost standard in various ways, stating that the EPA may not adopt a standard the cost of which would be ''exorbitant,'' [136] ''greater than the industry could bear and survive,'' [137] ''excessive,'' [138] or ''unreasonable.'' [139] For convenience, in this rulemaking, we use 'reasonableness' to describe costs well within the bounds established by this jurisprudence.[140]

The D.C. Circuit has indicated that the EPA has substantial discretion in its consideration of cost under section 111(a). In several cases, the Court upheld standards that entailed significant costs, consistent with Congress's view that ''the costs of applying best practicable control technology be considered by the owner of a large new source of pollution as a normal and proper expense of doing business.'' [141] *See Essex Chemical Corp.* v. *Ruckelshaus,* 486 F.2d 427, 440 (D.C. Cir. 1973); [142] *Portland Cement Association* v. *Ruckelshaus,* 486 F.2d 375, 387–88 (D.C. Cir. 1973); *Sierra Club* v. *Costle,* 657 F.2d 298, 313 (D.C. Cir.

Portland Cement Ass'n v. *EPA,* 665 F.3d 177 (D.C. Cir. 2011). *See also Delaware* v. *EPA,* No. 13–1093 (D.C. Cir. May 1, 2015).

[126] See *Sierra Club* v. *Costle,* 657 F.2d 298, 326 (D.C. Cir. 1981).

[127] See *Sierra Club* v. *Costle,* 657 F.2d at 347.

[128] See *Lignite Energy Council* v. *EPA,* 198 F.3d 930, 933 (D.C. Cir. 1999).

[129] Although section 111(a)(1) may be read to state that the factors enumerated in the parenthetical are part of the ''adequately demonstrated'' determination, the D.C. Circuit's case law appears to treat them as part of the ''best'' determination. See *Sierra Club* v. *Costle,* 657 F.2d at 325–26. It does not appear that those two approaches would lead to different outcomes. In this rule, the EPA is following the D.C. Circuit case law and treating the factors as part of the ''best'' determination.

[130] *Essex Chem. Corp.* v. *Ruckelshaus,* 486 F.2d 427, 433 (D.C. Cir. 1973), *cert. denied,* 416 U.S. 969 (1974).

[131] *Portland Cement Ass'n* v. *Ruckelshaus,* 486 F.2d 375, 391 (D.C. Cir. 1973) (citations omitted) (discussing the Senate and House bills and reports from which the language in CAA section 111 grew).

[132] *Portland Cement Ass'n* v. *Ruckelshaus,* 486 F.2d 375, 391 (D.C. Cir. 1973) (citations omitted).

[133] *Sierra Club* v. *Costle,* 657 F.2d 298, 364 (1981).

[134] *Portland Cement Ass'n* v. *Ruckelshaus,* 486 F.2d 375, 391 (D.C. Cir. 1973) (citations omitted).

[135] 79 FR 1464 (January 8, 2014).

[136] *Lignite Energy Council* v. *EPA,* 198 F.3d 930, 933 (D.C. Cir. 1999).

[137] *Portland Cement Ass'n* v. *EPA,* 513 F.2d 506, 508 (D.C. Cir. 1975).

[138] *Sierra Club* v. *Costle,* 657 F.2d 298, 343 (D.C. Cir. 1981).

[139] *Sierra Club* v. *Costle,* 657 F.2d 298, 343 (D.C. Cir. 1981).

[140] These cost formulations are consistent with the legislative history of section 111. The 1977 House Committee Report noted:

In the [1970] Congress [*sic:* Congress's] view, it was only right that the costs of applying best practicable control technology be considered by the owner of a large new source of pollution as a normal and proper expense of doing business.

1977 House Committee Report at 184. Similarly, the 1970 Senate Committee Report stated:

The implicit consideration of economic factors in determining whether technology is ''available'' should not affect the usefulness of this section. The overriding purpose of this section would be to prevent new air pollution problems, and toward that end, maximum feasible control of new sources at the time of their construction is seen by the committee as the most effective and, in the long run, the least expensive approach.

S. Comm. Rep. No. 91–1196 at 16. Some commenters asserted that we do not have authority to revise the cost standard as established in the case law, *e.g.,* ''exorbitant,'' ''excessive,'' etc., to a ''reasonableness'' standard that may be considered less protective of the environment. We agree that we do not have authority to revise the cost standard as established in the case law, and we are not attempting to do so here. Rather, our description of the cost standard as ''reasonableness'' is intended to be a convenient term for referring to the cost standard as established in the case law.

[141] 1977 House Committee Report at 184.

[142] The costs for these standards were described in the rulemakings. *See* 36 FR 24876 (December 23, 1971), 37 FR 5767, 5769 (March 21, 1972).

1981) (upholding standard imposing controls on SO_2 emissions from coal-fired power plants when the ''cost of the new controls . . . is substantial'').[143] Moreover, section 111(a) does not provide specific direction regarding what metric or metrics to use in considering costs, again affording the EPA considerable discretion in choosing a means of cost consideration.[144]

As discussed below, the EPA may consider costs on both a source-specific basis and a sector-wide, regional, or nationwide basis. The EPA is finding here that whether costs are considered on a source-specific basis, an industry/national basis, or both, they are reasonable. See Sections V.H and I below.

(2) Non-Air Quality Health and Environmental Impacts

Under CAA section 111(a)(1), the EPA is required to take into account ''any nonair quality health and environmental impact'' in determining the BSER. As the D.C. Circuit has explained, this requirement makes explicit that a system cannot be ''best'' if it does more harm than good due to cross-media environmental impacts.[145] The EPA has carefully considered such cross-media impacts here, in particular potential impacts to underground sources of drinking water posed by CO_2 sequestration, and water use necessary to operate carbon capture systems. See Sections V.N and O below.

(3) Energy Considerations

Under CAA section 111(a)(1), the EPA is required to take into account ''energy requirements.'' As discussed below, the EPA may consider energy requirements on both a source-specific basis and a sector-wide, region-wide, or nationwide basis. Considered on a source-specific basis, ''energy requirements'' entail, for example, the impact, if any, of the system of emission reduction on the source's own energy needs. In this rulemaking, as discussed below in Section V.O.3, the EPA considered the parasitic load requirements of partial CCS. The EPA is finding here that whether energy requirements are considered on a source-specific basis, an industry/national basis, or both, they are reasonable. See Sections V.O.3 and XIII.C.

(4) Amount of Emissions Reductions

At proposal, we noted that although the definition of ''standard of performance'' does not by its terms identify the amount of emissions from the category of sources or the amount of emission reductions achieved as factors the EPA must consider in determining the ''best system of emission reduction,'' the D.C. Circuit has stated that the EPA must in fact do so. *See Sierra Club* v. *Costle,* 657 F.2d 298, 326 (D.C. Cir. 1981) (''we can think of no sensible interpretation of the statutory words ''best . . . system'' which would not incorporate the amount of air pollution as a relevant factor to be weighed when determining the optimal standard for controlling . . . emissions'').[146] The fact that the purpose of a ''system of emission reduction'' is to reduce emissions, and that the term itself explicitly incorporates the concept of reducing emissions, supports the Court's view that in determining whether a ''system of emission reduction'' is the ''best,'' the EPA must consider the amount of emission reductions that the system would yield.[147] Even if the EPA were not required to consider the amount of emission reductions, the EPA has the discretion to do so, on grounds that either the term ''system of emission reduction'' or the term ''best'' may reasonably be read to allow that discretion.

(5) Sector or Nationwide Component of the BSER Factors

As discussed in the January 2014 proposal, another component of the D.C. Circuit's interpretations of CAA section 111 is that the EPA may consider the various factors it is required to consider on a national or regional level and over time, and not only on a plant-specific level at the time of the rulemaking.[148] The D.C. Circuit based this conclusion on a review of the legislative history, stating,

> The Conferees defined the best technology in terms of ''long-term growth,'' ''long-term cost savings,'' effects on the ''coal market,'' including prices and utilization of coal reserves, and ''incentives for improved technology.'' Indeed, the Reports from both Houses on the Senate and House bills illustrate very clearly that Congress itself was using a long-term lens with a broad focus on future costs, environmental and energy effects of different technological systems when it discussed section 111.[149]

The Court has upheld rules that the EPA ''justified . . . in terms of the policies of the Act,'' including balancing long-term national and regional impacts:

> The standard reflects a balance in environmental, economic, and energy consideration by being sufficiently stringent to bring about substantial reductions in SO_2 emissions (3 million tons in 1995) yet does so at reasonable costs without significant energy penalties. . . . By achieving a balanced coal demand within the utility sector and by promoting the development of less expensive SO_2 control technology, the final standard will expand environmentally acceptable energy supplies to existing power plants and industrial sources.
>
> By substantially reducing SO_2 emissions, the standard will enhance the potential for long term economic growth at both the national and regional levels.[150]

Some commenters objected that this case law did not allow the EPA to ignore source-specific impacts (particularly cost impacts) by basing determinations solely on impacts at a regional or national level. In fact, the EPA's consideration of cost, non-air quality impacts, and energy requirements reflect source-specific impacts, as well as (for some considerations) impacts that are sector-wide, regional, or national. See Section V.H.6 below.

c. Achievability of the Standard for Emissions

In the January 2014 proposal, the EPA recognized that the first element of the definition of ''standard of performance'' is that ''the emission limit [*i.e.,* the 'standard for emissions'] that the EPA promulgates must be 'achievable' ''

[143] Indeed, in upholding the EPA's consideration of costs under the provisions of the Clean Water Act authorizing technology-based standards based on performance of a best technology taking costs into account, courts have also noted the substantial discretion delegated to the EPA to weigh cost considerations with other factors. *Chemical Mfr's Ass'n* v. *EPA,* 870 F.2d 177, 251 (5th Cir. 1989); *Association of Iron and Steel Inst.* v. *EPA,* 526 F.2d 1027, 1054 (3d Cir. 1975); *Ass'n of Pacific Fisheries* v. *EPA,* 615 F.2d 794, 808 (9th Cir. 1980).

[144] See, *e.g., Husqvarna AB* v. *EPA,* 254 F.3d 195, 200 (D.C. Cir. 2001) (where CAA section 213 does not mandate a specific method of cost analysis, the EPA may make a reasoned choice as to how to analyze costs).

[145] *Portland Cement* v. *EPA,* 486 F.2d at 384; *Sierra Club* v. *Costle,* 657 F.2d at 331; see also *Essex Chemical Corp.* v. *Ruckelshaus,* 486 F.2d at 439 (remanding standard to consider solid waste disposal implications of the BSER determination).

[146] *Sierra Club* v. *Costle,* 657 F.2d 298 (D.C. Cir. 1981) was governed by the 1977 CAAA version of the definition of ''standard of performance,'' which revised the phrase ''best system'' to read, ''best *technological* system.'' As noted above, the 1990 CAAA deleted ''technological,'' and thereby returned the phrase to how it read under the 1970 CAAA. The court's interpretation of this phrase in *Sierra Club* v. *Costle* to require consideration of the amount of air emissions reductions remains valid for the phrase ''best system.''

[147] See also *NRDC* v. *EPA,* 479 F.3d 875, 880 (D.C. Cir. 2006) (''best performing'' source for purposes of CAA section 112 (d)(3) is source with the lowest emission levels).

[148] 79 FR 1430, 1465 January 8, 2014) (citing *Sierra Club* v. *Costle,* 657 F.2d at 351).

[149] *Sierra Club* v. *Costle,* 657 F.2d at 331 (citations omitted) (citing legislative history).

[150] *Sierra Club* v. *Costle,* 657 F.2d at 327–28 (quoting 44 FR 33583/3–33584/1). In the January 2014 proposal, we explained that although the D.C. Circuit decided *Sierra Club* v. *Costle* before the *Chevron* case was decided in 1984, the D.C. Circuit's decision could be justified under either *Chevron* step 1 or 2. 79 FR 1430, 1466 (January 8, 2014).

based on performance of the BSER. 79 FR 1430, 1463 (January 8, 2014). According to the D.C. Circuit, a standard for emissions is ''achievable'' if a technology can reasonably be projected to be available to new sources at the time they are constructed that will allow them to meet the standard.[151] Moreover, according to the Court, ''[a]n achievable standard is one which is within the realm of the adequately demonstrated system's efficiency and which, while not at a level that is purely theoretical or experimental, need not necessarily be routinely achieved within the industry prior to its adoption.'' [152] To be achievable, a standard ''must be capable of being met under most adverse conditions which can reasonably be expected to recur and which are not or cannot be taken into account in determining the 'cost of compliance.' '' [153] To show that a standard is achievable, the EPA must ''(1) identify variable conditions that might contribute to the amount of expected emissions, and (2) establish that the test data relied on by the agency are representative of potential industry-wide performance, given the range of variables that affect the achievability of the standard.'' [154]

In Sections V.J and IX.D below, we show both that the BSER for new steam generating units and combustion turbines is technically feasible and adequately demonstrated, and that the standards of 1,400 lb CO_2/MWh-g and 1,000 lb CO_2/MWh-g are achievable considering the range of operating variables that affect achievability.

d. Expanded Use and Development of Technology

In the January 2014 proposal, we noted that the D.C. Circuit has made clear that Congress intended for CAA section 111 to create incentives for new technology and therefore that the EPA is required to consider technological innovation as one of the factors in determining the ''best system of emission reduction.'' [155]

The Court grounded its reading in the statutory text.[156] In addition, in the January 2014 proposal, we noted that the Court's interpretation finds additional support in the legislative history.[157] We also explained that the legislative history identifies three different ways that Congress designed CAA section 111 to authorize standards of performance that promote technological improvement: (i) The development of technology that may be treated as the ''best system of emission reduction . . . adequately demonstrated'' under section 111(a)(1); (ii) the expanded use of the best demonstrated technology; and (iii) the development of emerging technology.[158] Even if the EPA were not required to consider technological innovation as part of its determination of the BSER, it would be reasonable for the EPA to consider it, either because technological innovation may be considered an element of the term ''best,'' or because the term ''best system of emission reduction'' is ambiguous as to whether technological innovation may be considered. The interpretation is likewise consistent with the evident purpose of section 111(b) to require new sources to maximize emission reductions using state-of-the-art means of control.

Commenters stated that the requirement to consider technological innovation does not authorize the EPA to identify as the BSER a technology that is not adequately demonstrated. The proposal did not, and we do not in this final rule, claim to the contrary. In any event, as discussed below, the EPA may justify the control technologies identified in this rule as the BSER even without considering the factor of incentivizing technological innovation or development.

e. Agency Discretion

As discussed in the January 2014 proposal, the D.C. Circuit has made clear that the EPA has broad discretion in determining the appropriate standard of performance under the definition in CAA section 111(a)(1), quoted above. Specifically, in *Sierra Club* v. *Costle,* 657 F.2d 298 (D.C. Cir. 1981), the Court explained that ''section 111(a) explicitly instructs the EPA to balance multiple concerns when promulgating a NSPS,'' [159] and emphasized that ''[t]he text gives the EPA broad discretion to weigh different factors in setting the standard.'' [160] In *Lignite Energy Council* v. *EPA,* 198 F.3d 930 (D.C. Cir. 1999), the Court reiterated:

> Because section 111 does not set forth the weight that should be assigned to each of these factors, we have granted the agency a great degree of discretion in balancing them. . . . EPA's choice [of the 'best system'] will be sustained unless the environmental or economic costs of using the technology are exorbitant. . . . EPA [has] considerable discretion under section 111.[161]

f. Lack of Requirement That Standard Must Be Met by All Sources

In the January 2014 proposal, the EPA proposed that, under CAA section 111, an emissions standard may meet the requirements of a ''standard of performance'' even if it cannot be met by every new source in the source category that would have constructed in the absence of that standard. As described in the January 2014 proposal, the EPA based this view on (i) the legislative history of CAA section 111, read in conjunction with the legislative history of the CAA as a whole; (ii) case law under analogous CAA provisions; and (iii) long-standing precedent in the EPA rulemakings under CAA section 111.[162]

[151] *Portland Cement,* 486 F.2d at 391–92. Some commenters stated that the EPA's analysis of the requirements for ''standard of performance,'' including the BSER, attempted to eliminate the requirement that the standard for emissions must be ''achievable.'' We disagree with this comment. As just quoted, the EPA's analysis recognizes that the standard for emissions must be achievable through the application of the BSER.

[152] *Essex Chem. Corp.* v. *Ruckelshaus,* 486 F.2d 427, 433–34 (D.C. Cir. 1973), *cert. denied,* 416 U.S. 969 (1974).

[153] *Nat'l Lime Ass'n* v. *EPA,* 627 F.2d 416, 433, n.46 (D.C. Cir. 1980).

[154] *Sierra Club* v. *Costle,* 657 F.2d 298, 377 (D.C. Cir. 1981) (citing *Nat'l Lime Ass'n* v. *EPA,* 627 F.2d 416 (D.C. Cir. 1980). In considering the representativeness of the source tested, the EPA may consider such variables as the '''feedstock, operation, size and age' of the source.'' *Nat'l Lime Ass'n* v. *EPA,* 627 F.2d 416, 433 (D.C. Cir. 1980). Moreover, it may be sufficient to ''generalize from a sample of one when one is the only available sample, or when that one is shown to be representative of the regulated industry along relevant parameters.'' *Nat'l Lime Ass'n* v. *EPA,* 627 F.2d 416, 434, n.52 (D.C. Cir. 1980).

[155] See 79 FR 1430, 1465 (January 8, 2014), *Sierra Club* v. *Costle,* 657 F.2d at 346–47.

[156] *Sierra Club* v. *Costle,* 657 F.2d at 346 (''Our interpretation of section 111(a) is that the mandated balancing of cost, energy, and nonair quality health and environmental factors embraces consideration of technological innovation as part of that balance. The statutory factors which the EPA must weigh are broadly defined and include within their ambit subfactors such as technological innovation.'').

[157] *See* 79 FR 1430, 1465 (January 8, 2014) (citing S.Rep. 91–1196 at 16 (1970)) (''Standards of performance should provide an incentive for industries to work toward constant improvement in techniques for preventing and controlling emissions from stationary sources''); S. Rep. 95–127 at 17 (1977) (cited in *Sierra Club* v. *Costle,* 657 F.2d at 346 n. 174) (''The section 111 Standards of Performance . . . sought to assure the use of available technology and to stimulate the development of new technology'').

[158] 79 FR 1465 (citing case law and legislative history).

[159] *Sierra Club* v. *Costle,* 657 F.2d at 319.

[160] *Sierra Club* v. *Costle,* 657 F.2d at 321; see also *New York* v. *Reilly, 969 F. 2d at 1150* (because Congress did not assign the specific weight the Administrator should assign to the statutory elements, ''the Administrator is free to exercise [her] discretion'' in promulgating an NSPS).

[161] *Lignite Energy Council* v. *EPA,* 198 F.3d 930, 933 (D.C. Cir. 1999) (paragraphing revised for convenience). S*ee also NRDC* v. *EPA,* 25 F.3d 1063, 1071 (D.C. Cir. 1994) (The EPA did not err in its final balancing because ''neither RCRA nor EPA's regulations purports to assign any particular weight to the factors listed in subsection (a)(3). That being the case, the Administrator was free to emphasize or deemphasize particular factors, constrained only by the requirements of reasoned agency decision making.'').

[162] 79 FR 1430, 1466 (January 8, 2014).

Commenters contested this assertion, arguing that a 111(b) standard must be achievable by all new sources. We continue to take the same position as at proposal for the reasons described there. We note that as a practical matter, in this rulemaking, the issue of whether all new steam-generating sources can implement partial-capture CCS is largely dependent on the geographic scope of geologic sequestration sites. As discussed below in Section V.M, geologic sequestration sites are widely available, and a steam-generating plant with partial CCS that is sited near an area that is suitable for geologic sequestration can serve demand in a large area that may not have sequestration sites available. In any event, the standard of 1,400 lb CO_2/MW-g that we promulgate in this final rule can be achieved by new steam generating EGUs—including new utility boilers and IGCC units—through co-firing with natural gas in lieu of installing partial CCS, which moots the issue of the geographic availability of geologic sequestration.

g. EPAct05

The Energy Policy Act of 2005 (''EPAct05'') authorizes assistance in the form of grants, loan guarantees, as well as federal tax credits for investment in ''clean coal technology.'' Sections 402(i), 421(a), and 1307(b) (adding section 48A(g) to the Internal Revenue Code (''IRC'')) address the extent to which information from clean coal projects receiving assistance under the EPAct05 may be considered by the EPA in determining what is the best system of emission reduction adequately demonstrated. Section 402(i) of the EPAct05 limits the use of information from facilities that receive assistance under EPAct05 in CAA section 111 rulemakings:

''No technology, or level of emission reduction, solely by reason of the use of the technology, or the achievement of the emission reduction, by 1 or more facilities receiving assistance under this Act, shall be considered to be adequately demonstrated [ ] for purposes of section 111 of the Clean Air Act. . . .'' [163]

IRC section 48A(g) contains a similar constraint concerning the use of technology or level of emission reduction from EGU facilities for which a tax credit is allowed:

''No use of technology (or level of emission reduction solely by reason of the use of the technology), and no achievement of any emission reduction by the demonstration of any technology or performance level, by or at one or more facilities with respect to which a credit is allowed under this section, shall be considered to indicate that the technology or performance level is adequately demonstrated [ ] for purposes of section 111 of the Clean Air Act. . . .''

The EPA specifically solicited comment on its interpretation of these provisions. 79 FR 10750 (Feb. 26, 2014) (Notice of Data Availability). With respect to EPAct05 sections 402(i) and 421(a), the EPA proposed that these provisions barred consideration where EPAct05-assisted facilities were the sole support for the BSER determination, but that these sources could support a BSER determination so long as there is additional evidence supporting the determination.[164] In addition, the EPA viewed the two prohibitions as relating only to the technology or emissions reduction for which assistance was given.[165] The EPA likewise interpreted IRC section 48A(g)—based on the plain language and the context provided by sections 402(i) and 421(a)—to mean that use of technology, or emission performance, from a facility for which the credit is allowed cannot, by itself, support a finding that the technology or performance level is adequately demonstrated, but the information can corroborate an otherwise supported determination or otherwise provide part of the basis for such a determination.[166] The EPA also proposed to interpret the phrase ''with respect to which a credit is allowed under this section'' as referring to the entire phrase ''use of technology (or level of emission reduction . . .) and [] achievement of any emission reduction . . . , by or at one or more facilities.'' Thus, if technology A received a tax credit, but technology B at the same facility did not, the constraint would not apply to technology B.[167]

Some commenters supported the EPA's proposed interpretation. Others contended that the EPA's interpretation would allow it to support a BSER determination even where EPAct05 facility information comprised 99 percent of the supporting information for a BSER determination because that determination would not be based ''solely'' on EPAct05 sources. These commenters urged the EPA to conclude that a determination ''solely'' on the basis of information from EPAct05-assisted facilities is any determination where ''but for'' that information, the EPA could not justify its chosen standard as the BSER.[168] Other commenters argued that the provisions bar the EPA from all consideration of EPAct05 facilities when determining that a technology or level of performance is adequately demonstrated.

In this final rule, the EPA is adopting the interpretations of all three provisions that it proposed, largely for the reasons previously advanced. The EPA thus interprets these provisions to preclude the EPA from relying solely on the experience of facilities that received DOE assistance, but not to preclude the EPA from relying on the experience of such facilities in conjunction with other information. This reading of sections 402(i) and 421(a) is consistent with the views of the only court to date to consider the matter.[169]

The EPA notes that the extreme hypothetical posed in the comments (where the EPA might avoid a limitation on its consideration of EPAct05-assisted facilities by including a mere scintilla of evidence from non-EPAct05 facilities) is not presented here, where the principal evidence that partial post-combustion CCS is a demonstrated and feasible technology comes from sources which received no assistance of any type under EPAct05. The EPA also concludes that the ''but for'' test urged by these commenters is an inappropriate reading of the term ''solely'' in sections 402(i) and 421(a), as any piece of evidence may be a necessary, or ''but for,'' cause without being a sufficient, or ''sole,'' cause.[170] Nonetheless, if the ''but for'' test were applicable here, the available evidence would satisfy it.

[163] Codified at 42 U.S.C. 15962(a). EPAct05 section 421(a) similarly states: ''No technology, or level of emission reduction, shall be treated as adequately demonstrated for purpose [sic] of section 7411 of this title, . . . solely by reason of the use of such technology, or the achievement of such emission reduction, by one or more facilities receiving assistance under section 13572(a)(1) of this title''.

[169] *State of Nebraska* v. *EPA,* 2014 U.S. Dist. LEXIS 141898 at n. 1 (D. Nebr. 2014). (''But the Court notes that § 402(i) only forbids the EPA from considering a given technology or level of emission reduction to be adequately demonstrated *solely* on the basis of federally-funded facilities. 42 U.S.C. 15962(i). In other words, such technology might be adequately demonstrated if that determination is based at least in part on non-federally-funded facilities'') (emphasis original).

[170] For example, any vote of a Justice on the Supreme Court may be a necessary but not sufficient cause. In a 5–4 decision, the decision of the Court would have been different ''but for'' the assent of Justice A or Justice B, who were in the majority. But it would be incorrect to say that the assent of Justice A was the ''sole'' reason for the outcome, when the decision also required the assent of Justice B.

Other commenters took the extreme position that the EPAct05 provisions bar all consideration of a facility's existence if the facility received EPAct05 assistance.[171] The EPA does not accept this argument because it is contrary to both the plain statutory language [172] (see Chapter 2 of the Response-to-Comment document) and to Congress's intent that the EPAct05 programs advance the commercialization of clean coal technology. For the same reason, the EPA does not accept some commenters' suggestion that sections 402(i), 421(a), and 48A(g) preclude the EPA from considering NETL's cost projections for CCS, which base cost estimates on up-to-date vendor quotes reflecting costs for the CCS technology being utilized at the Boundary Dam Unit #3 facility (a facility receiving no assistance under EPAct05), but also considers that to-be-built plants will no longer be first-of-a kind. See generally Section V.I.2 below. Commenters suggest that the EPAct05 requires that the EPA treat future plants as ''first of a kind'' when projecting costs, as if EPAct05 facilities simply did not exist. This reading is contrary to the text of the provisions, which as noted, relates specifically to a source's performance and operation (whether a technology is demonstrated, and the level of performance achieved by use of technology), not to sources' existence. NETL's cost projections, on the other hand, merely acknowledge the evident fact that CCS technologies exist, and reasonably project that they will continue to develop. See Section V.I.2. The NETL cost estimates, moreover, are based on vendor quotes for the CCS technology in use at the Boundary Dam facility, a Canadian plant which obviously is not a recipient of EPAct05 assistance. See sections V.D.2.a and V.I.2 below.

In any case, as shown in Section V below, the EPA finds that a new highly-efficient SCPC EGU implementing partial post-combustion CCS is the best system of emission reduction adequately demonstrated and is doing so based in greater part on performance of facilities receiving no assistance under EPAct05, and on other information likewise not having any connection to EPAct05 assistance. The corroborative information from EPAct05 facilities, though supportive, is not necessary to the EPA's findings.

I. Severability

This rule has numerous components, and the EPA intends that they be severable from each other to the extent that they function separately. For example, the EPA intends that each set of BSER determinations and standards of performance in this rulemaking be severable from each other set. That is, the BSER determination and standard of performance for newly constructed fossil fuel-fired electric utility steam generating units are severable from all the other BSER determinations and standards of performance, and the same is true for the BSER determination and standard of performance for modified fossil fuel-fired electric utility steam generating units, and so on. It is reasonable to consider each set of BSER determination and standard of performance to be severable from each other set of BSER determination and standard of performance because each set is independently justifiable and does not depend on any other set. Thus, in the event that a court should strike down any set of BSER determination and standard of performance, the remaining BSER determinations and standards of performance should not be affected.

J. Certain Projects Under Development

In the January 2014 proposal, the EPA indicated that the proposed Wolverine EGU project (Rogers City, Michigan) appeared to be the only fossil fuel-fired steam generating unit that was currently under development that may be capable of ''commencing construction'' for NSPS purposes at the time of the proposal. See 79 FR 1461. The EPA also acknowledged that the Wolverine EGU, as designed, would not meet the proposed standard of 1,100 lb CO_2/MWh for new utility steam generating EGUs. The EPA proposed that, at the time of finalization of the proposed standards, if the Wolverine project remains under development and has not either commenced construction or been canceled, we anticipated proposing a standard of performance specifically for that facility. Additional discussion of the approach can be found in the proposal or in the technical support document in the docket entitled ''Fossil Fuel-Fired Boiler and IGCC EGU Projects under Development: Status and Approach.''

In December 2013—after the proposed action was signed, but before it was published—Wolverine Power Cooperative announced that it was cancelling construction of the proposed coal-fired power plant in Rogers City, MI.[173] Therefore, we are not finalizing the proposed exclusion for that project.

In the January 2014 proposal, the EPA also identified two other fossil fuel-fired steam generating EGU projects that, as currently designed, would not meet the proposed 1,100 lb CO_2/MWh emissions standard—the Plant Washington project in Georgia and the Holcomb 2 project in Kansas. We indicated that, at the time of the proposal, those projects appeared to remain under development but that the project developers had represented that the projects have commenced construction for NSPS purposes and, thus, would not be new sources subject to the proposed or final NSPS. Based solely on the developers' representations, the EPA indicated that those projects, if ultimately fully constructed, would be existing sources, and would thus not be subject to the standards of performance in this final action.

To date, neither developer has sought a formal EPA determination of NSPS applicability. As we specified in the January 2014 proposal—and we reiterate here—if such an applicability determination concludes that either the Plant Washington (GA) project or the Holcomb 2 (KS) project did not commence construction prior to January 8, 2014 (the publication of the January 2014 proposal), then the project should be situated similarly to the disposition the EPA proposed for the Wolverine project. Accordingly, the EPA is finalizing in this action that if it is determined that either of these projects has not commenced construction as January 8, 2014, then that project will be addressed in the same manner as was proposed for the Wolverine project.

In public comments submitted in response to the January 2014, Power4Georgians (P4G), the Plant Washington developer, reiterated that they had executed binding contracts for the purchase and erection of the facility boiler prior to publication of the January 2014 proposal and believe that the binding contracts are sufficient to constitute commencement of construction for purposes of the NSPS program, so that they are existing rather than new sources for purposes of this

[171] Supplemental Comments of Murray Energy p. 11 (Docket entry: EPA–HQ–OAR–2013–0495–9498).

[172] With respect to sections 402(i) and 421(a), commenters fail to reconcile their reading of the statute with the Act's grammatical structure, as explained in detail in chapter 2 of the Response-to-Comment document. One commenter supported its reading by adding suggested text to the statutory language, a highly disfavored form of statutory construction. Comments of UARG, p.124 n.38 (Docket entry: EPA–HQ–OAR–2013–0495–9666). With respect to section 48A(g), commenters misread the phrase ''considered to indicate,'' and do not explain how their reading of all three provisions together is tenable.

[173] ''Wolverine ends plant speculation in Rogers City'', The Alpena News, December 17, 2013. *http://www.thealpenanews.com/page/content.detail/id/527862/Wolverine-ends-plant-speculation-in-Rogers-City.html?nav=5004.*

rule.[174] Public comments submitted by Tri-State Generation and Transmission Association and Sunflower Electric Power Corporation, the developers of the Holcomb 2 project, discussed the cost incurred in the development of the project. They also indicated they had awarded contracts for the turbine/generator purchase and had negotiated a rail-supply agreement that provides for the delivery of fuel to the proposed Holcomb 2 site. The developers did not, however, explicitly characterize the construction status of the project.[175] Other groups submitted comments contending that neither project has actually commenced construction.

In October 2013, the Kansas Supreme Court invalidated the 2010 air pollution permit granted to Sunflower Electric Power Corporation by the Kansas Department of Health and Environment (KDHE).[176] In May 2014, the KDHE issued an air quality permit addendum for the proposed Holcomb 2 coal plant. The addendum addressed federal regulations that the Kansas Supreme Court held had been overlooked in the initial permitting determination. In June 2014, the Sierra Club filed an appeal with the Kansas Appellate Court challenging the legality of the May 2014 permit. Since the publication of the January 2014 proposal, the EPA is unaware of any physical construction activity at the proposed Holcomb 2 site.

In October 2014, the Plant Washington project was given an 18-month air permit extension by the Georgia Environmental Protection Division (EPD). However, as with the Holcomb expansion project, the EPA is unaware of any physical construction that has taken place at the proposed Plant Washington site and a recent audit of the project described it as ''dormant''.[177]

Based on this information, it appears that these sources have not commenced construction for purposes of section 111(b) and therefore would likely be new sources should they actually be constructed. As noted above, the EPA proposed that, if these projects are determined to not have commenced construction for NSPS purposes prior to the publication of the proposed rule, they will be addressed in the same manner proposed for the Wolverine project. 79 FR 1461. We are finalizing that proposal here. However, because these units may never actually be fully built and operated, we are not promulgating a standard of performance at this time because such action may prove to be unnecessary.[178]

There is one possible additional new EGU, the Two Elk project in Wyoming. In a supporting TSD accompanying the January 2014 proposal, we discussed the Two Elk project and relied on developer statements and state acquiescence that the unit had commenced construction for NSPS purposes before January 8, 2014.[179] We did not, therefore, propose any special section 111(b) standard for the project. Some commenters maintained that a continuous program of construction at the facility has not been maintained and that if the plant is ultimately constructed, it should be classified as a new source under CAA section 111(b). These comments were not specific enough to change the EPA's view of the project for purposes of this rulemaking. We accordingly continue to rely on developer statements that this facility has commenced construction and would not be a new source for purposes of this proceeding.

IV. Summary of Final Standards for Newly Constructed, Modified, and Reconstructed Fossil Fuel-Fired Electric Utility Steam Generating Units

This section sets forth the standards for newly constructed, modified, and reconstructed steam generating units (*i.e.,* utility boilers and IGCCs). We explain the rationale for the final standards in Sections V (newly constructed steam generating unit), VI (modified steam generating units), and VII (reconstructed steam generating units).

A. Applicability Requirements and Rationale

We generally refer to fossil fuel-fired electric utility generating units that would be subject to an emission standard in this rulemaking as ''affected'' or ''covered'' sources, units, facilities or simply as EGUs. These units meet both the definition of ''affected'' and ''covered'' EGUs subject to an emission standard as provided by this rule, and the criteria for being considered ''new,'' ''modified'' or ''reconstructed'' sources as defined under the provisions of CAA section 111 and the EPA's regulations. This section discusses applicability for newly constructed, modified, and reconstructed steam generating units.

1. General Applicability Criteria

The EPA is finalizing applicability criteria for new, modified, and reconstructed electric utility steam generating units (*i.e.,* utility boilers and IGCC units) in 40 CFR part 60, subpart TTTT that are similar to the applicability criteria for those units in 40 CFR part 60, subpart Da (utility boiler and IGCC performance standards for criteria pollutants), but with some differences. The proposed applicability criteria, relevant comments, and final applicability criteria specific to newly constructed, modified, and reconstructed steam generating units are discussed below.

The applicability requirements in the proposal for newly constructed EGUs included that a utility boiler or IGCC unit must: (1) Be capable of combusting more than 250 MMBtu/h heat input of fossil fuel; (2) be constructed for the purpose of supplying, and actually supply, more than one-third of its potential net-electric output capacity to any utility power distribution system (that is, to the grid) for sale on an annual basis; (3) be constructed for the purpose of supplying, and actually supply, more than 219,000 MWh net-electric output to the grid on an annual basis; and (4) combust over 10 percent fossil fuel on a heat input basis over a 3-year average. At proposal, applicability was determined based on a combination of design and actual operating conditions that could change annually depending on the proportion and the amount of electricity actually sold and on the proportion of fossil fuels combusted by the unit.

In the proposal for modified and reconstructed EGUs, we proposed a broader applicability approach such that applicability would be based solely on design criteria and would be identical to the applicability requirements in

[176] ''Kansas High Court Invalidates 895–MW Coal Project Air Permit'', Power Magazine, 10/10/2013, available at: *www.powermag.com/kansas-high-court-invalidates-2010-895-mw-coal-project-air-permit/.*

[177] *http://www.macon.com/2015/06/23/3811798/audit-sandersville-coal-plant.html.*

[178] In the proposed emission guidelines for existing EGUs, the EPA did not include estimates of emissions for either Plant Washington or the Holcomb 2 unit in baseline data used to calculate proposed state goals for Georgia and Kansas. It appears that the possibility of these plants actually being built and operating is too remote. If either unit eventually seeks an applicability determination and that unit is determined to be an existing source, and there is reliable evidence that the source will operate, then the source will be subject to the final 111(d) rule and the EPA will allow the state to adjust its state goal to reflect adjustment of the state's baseline data so as to include the unit. Guidance for adjustment of state goals is provided in the record for the EPA's final CAA section 111(d) rulemaking.

[179] ''Fossil Fuel-Fired Boiler and IGCC EGU Projects Under Development: Status and Approach'', Technical Support Document at pp. 10–1 (Docket Entry: EPA–HQ–OAR–2013–0495–0024).

subpart Da. First, we proposed electric sales criteria that the source be constructed for the purpose of selling more than one-third of their potential electric output and more than 219,000 MWh to the grid on an annual basis, regardless of the actual amount of electricity sold (*i.e.,* we did not include the applicability criterion that the unit actually sell the specified amount of electricity on an annual basis). In addition, we proposed a base load rating criterion that the source be capable of combusting more than 250 MMBtu/h of fossil fuel, regardless of the actual amount of fossil fuel burned (*i.e.,* we did not include the fossil fuel-use criterion that an EGU actually combust more than 10 percent fossil fuel on a heat input basis on a 3-year average). Under this approach, applicability would be known prior to the unit actually commencing operation and would not change on an annual basis. We also proposed that the final applicability criteria would be consistent for newly constructed, reconstructed, and modified units. The proposed broad applicability criteria would still not have included boilers and IGCC units that were constructed for the purpose of selling one-third or less of their potential output or 219,000 MWh or less to the grid on an annual basis. These units are not covered under subpart Da (the utility boiler and IGCC EGU criteria pollutant NSPS) but are instead covered as industrial boilers under subpart Db (industrial, institutional, and commercial boilers NSPS) or subpart KKKK (the combustion turbine criteria pollutant NSPS).

We solicited comment on whether, to avoid implementation issues related with different interpretations of ''constructed for the purpose,'' the total and percentage electric sales criteria should be recast to be based on permit conditions. The ''constructed for the purpose'' language was included in the original subpart Da rulemaking. At that time, the vast majority of new steam generating units were clearly base load units. The ''constructed for the purpose'' language was intended to exempt industrial CHP units. These units tend to be relatively small and were not the focus of the rulemaking. In addition, units not meeting the electric sales applicability criteria in subpart Da would be covered by other NSPS so there is limited regulatory incentive, or impact to the environment, for owners/operators to avoid applicability with the utility NSPS. However, for new units, there is no corresponding industrial unit CO_2 NSPS and existing units could debate their original intent (*i.e.,* the purpose for which they were constructed) in an attempt to avoid applicability under section 111(d) requirements. Consequently, there could be a regulatory incentive for owners/operators to circumvent the CO_2 NSPS applicability. For units that avoid coverage, there would also be a corresponding environmental impact. For example, an owner/operator of a new unit could initially request a permit restriction to limit electric sales to less than one-third of potential annual electric output, but amend the operating permit shortly after operation has commenced to circumvent the intended applicability. Many existing units were initially built with excess capacity to account for projected load growth and were intended to sell more than one-third of their potential electric output. However, due to various factors (lower than expected load growth, availability of other lower cost units, etc.), certain units might have sold less than one-third of their potential electric output, at least during their initial period of operation. Therefore, the EPA has concluded that determining applicability based on whether a unit is ''*constructed for the purpose of* supplying one-third or more of its potential electric output and more than 219,000 MWh as net-electric sales'' (emphasis added) could create applicability uncertainty for both the regulated community and regulators. In addition, we have concluded that applicability based on actual operating conditions (*i.e.,* actual electric sales) is not ideal because applicability would not be known prior to determining compliance and could change annually.

This action finalizes applicability criteria based on design characteristics and federally enforceable permit restrictions included in each individual permit. Based on restrictions, if any, on annual total electric sales in the operating permit, it will be clear from the time of construction whether or not a new unit is subject to this rule. The applicability includes all utility boilers and IGCC units unless the electric sales restriction was in the original and remains in the current operating permit without any lapses (this is to be consistent with the 'constructed for the purpose of' criteria in subpart Da). We have concluded that this approach is equivalent to, but clearer than, the existing language used in subpart Da. In addition, we have concluded that it is important for both the 111(b) and 111(d) requirements for electric-only steam generating units that the permit restriction limiting annual electric sales be included in both the original and current operating permit. Without this restriction, existing units could avoid obligations under state plans developed as part of the 111(d) program by amending their operating permit to limit total annual electric sales to one-third of potential electric output. These units would not be subject to any GHG NSPS requirements because they would not meet the 111(b) or 111(d) applicability criteria and, at this time, there is no NSPS that would cover these units. As described in Section III, industrial CHP and dedicated non-fossil units also are not affected EGUs under this final action.

In this rule, we are finalizing the definition of a steam generating EGU as a utility boiler or IGCC unit that: (1) Has a base load rating greater than 260 GJ/h (250 MMBtu/h) of fossil fuel (either alone or in combination with any other fuel) and (2) serves a generator capable of supplying more than 25 MW-net to a utility distribution system (*i.e.,* for sale to the grid). However, we are not establishing final CO_2 standards for certain EGUs. These include: (1) Steam generating units and IGCC units that are currently subject to—and have been continuously subject to—a federally enforceable permit limiting annual electric sales to one-third or less of their potential electric output (*e.g.,* limiting hours of operation to less than 2,920 hours annually) or limiting annual electric sales to 219,000 MWh or less; (2) units subject to a federally enforceable permit that limits the use of fossil fuels to 10 percent or less of the unit's heat input capacity on an annual basis; and (3) CHP units that are subject to a federally enforceable permit condition limiting annual total electric sales to no more than their design efficiency times their potential electric output, or to no more than 219,000 MWh, whichever is greater.

2. Applicability Specific to Newly Constructed Steam Generating Units

In CAA section 111(a)(2), a ''new source'' is defined as any stationary source, the construction or modification of which is commenced after the publication of regulations (or if earlier, proposed regulations) prescribing a standard of performance under this section which will be applicable to such source. Accordingly, for purposes of this rule, a newly constructed steam generating EGU is a unit that fits the definition and applicability criteria of a fossil fuel-fired steam generating EGU and commences construction on or after January 8, 2014, which is the date that the proposed standards were published for those sources (see 79 FR 1430).

3. Applicability Specific to Modified Steam Generating Units

In CAA section 111(a)(4), a ''modification'' is defined as ''any physical change in, or change in the method of operation of, a stationary source'' that either ''increases the amount of any air pollutant emitted by such source or . . . results in the emission of any air pollutant not previously emitted.'' The EPA, through regulations, has determined that certain types of changes are exempt from consideration as a modification.[180]

For purposes of this rule, a modified steam generating EGU is a unit that fits the definition and applicability criteria of a fossil fuel-fired steam generating EGU and that modifies on or after June 18, 2014, which is the date that the proposed standards were published for those sources (see 79 FR 34960).

4. Applicability Specific to Reconstructed Steam Generating Units

The NSPS general provisions (40 CFR part 60, subpart A) provide that an existing source is considered a new source if it undertakes a ''reconstruction,'' which is the replacement of components of an existing facility to an extent that: (1) The fixed capital cost of the new components exceeds 50 percent of the fixed capital cost that would be required to construct a comparable entirely new facility, and (2) it is technologically and economically feasible to meet the applicable standards.[181]

For purposes of this rule, a reconstructed steam generating EGU is a unit that fits the definition and applicability criteria of a fossil fuel-fired steam generating EGU and that reconstructs on or after June 18, 2014, which is the date that the proposed standards were published for those sources (see 79 FR 34960).

B. Best System of Emission Reduction

1. BSER for Newly Constructed Steam Generating Units

In the January 2014 proposal, the EPA proposed that highly efficient new generation technology implementing partial CCS is the BSER for GHG emissions from new steam generating EGUs. (See generally 79 FR 1468–1469.) In this final action, the EPA has determined that the BSER for newly constructed steam generating units is a new highly efficient supercritical pulverized coal (SCPC) boiler implementing partial CCS technology to the extent of removal efficiency that meets a final emission limitation of 1,400 lb CO_2/MWh-g. The final standard of performance is less stringent than the proposed emission limitation of 1,100 lb CO_2/MWh-g. This change, as will be discussed in greater detail later in this preamble, is in response to public comments and reflects both a re-examination of the potential BSER technologies and the most recent, reliable information regarding technology costs. A newly constructed fossil fuel-fired supercritical utility boiler will be able to meet the final standard by implementing post-combustion carbon capture treating a slip-stream of the combustion flue gas. Alternative potential compliance paths are to build a new IGCC unit and co-fire with natural gas (or use pre-combustion carbon capture on a slip-stream), or for a supercritical utility boiler to co-fire with natural gas.

The EPA of course realizes that the final standard of performance (1,400 lb CO_2/MWh-g) differs from the proposed standard (1,100 lb CO_2/MWh-g). The EPA notes further, however, that the methodology for determining the final standard of performance is identical to that at proposal—determining that a new highly efficient generating technology implementing some degree of partial CCS is the BSER, with that degree of implementation being determined based on the reasonableness of costs. A key means of assessing the reasonableness of cost at proposal was comparison of the levelized cost of electricity (LCOE) with that of other dispatchable, base load non-NGCC generating options. We have maintained that approach in identifying BSER for the final standard. Applying this methodology to the most recent cost information has led the EPA to adopt the final standard of performance of 1,400 lb CO_2/MWh-g. See Section V.H at Table 8 below. This final standard reflects the level of emission reduction achievable by a highly efficient SCPC implementing the degree of partial CCS that remains cost comparable to the other non-NGCC dispatchable base load generating options.

The BSER for newly constructed steam generating EGUs in the final rule is very similar to that in the proposal. In this final action, the EPA finds that a highly efficient new SCPC EGU implementing partial CCS to the degree necessary to achieve an emission of 1,400 lb CO_2/MWh-g is the BSER. Contrary to the January 2014 proposal, the EPA finds that IGCC technology—either alone or implementing partial CCS—is not part of the BSER, but rather is a viable alternative compliance option. As noted at proposal, a BSER typically advances performance of a technology beyond current levels of performance. 79 FR 1465, 1471. Similarly, promotion of technology innovation can be a relevant factor in BSER determinations. Id. and Section III.H.3.d above. For these reasons, the EPA at proposal voiced concerns about adopting standards that would allow an IGCC to comply without utilizing CCS for slip-stream control. Id. at 1471. The final standard of 1,400 lb CO_2/MWh-g, adopted as a means of assuring reasonableness of costs, allows IGCC units to comply without using partial CCS. Thus, although the standard can be met by a highly efficient new IGCC unit using approximately 3 percent partial CCS (see Sections V.E and V.H.7 below), the EPA does not believe that implementation of partial CCS at such a low level, while technically feasible, is the option that utilities and project developers will choose. The EPA believes that IGCC project developers will either choose to meet the final standard by co-firing with natural gas—which would be a less costly and very straightforward process for a new IGCC unit—or they will choose to install CCS equipment that will allow the facility to achieve much deeper CO_2 reductions than required by this rule—likely to co-produce chemicals and/or to capture large volumes of CO_2 for use in EOR operations. Similarly, project developers may also—as an alternative to utilizing partial CCS technology—meet the final standard by co-firing approximately 40 percent natural gas in a new highly efficient SCPC EGU.

While the EPA does not find that IGCC technology—either alone or with implementation of partial CCS—is part of the BSER for new steam generating EGUs, we remain convinced that it is technically feasible (see Section V.E below) and believe that it represents a viable alternative compliance option that some project developers will consider to meet the final standard issued in this action. The EPA notes further that IGCC is available at reasonable cost (see Table 9 below), and involves use of an advanced technology. So, although the final standard reflects performance of a BSER which includes partial CCS, even in the instances that a compliance alternative might be utilized, that alternative would both result in emission reductions consistent with use of the BSER, and would reflect many of the underlying principles and attributes of the BSER (costs are both reasonable, not greatly dissimilar than BSER, no collateral adverse impacts on health or the environment, and reflects

[180] 40 CFR 60.2, 60.14(e).

[181] 40 CFR 60.15.

performance of an advanced technology).

In reaching the final standard of performance, the EPA is aware that at proposal, the agency stated that it was not ''currently considering'' a standard of performance as high as 1,400 lb CO_2/MWh-g. 79 FR 1471. However, in that same discussion, the EPA noted the reasons for its reservations (chiefly reservations about the extent of emission reductions, promotion of advanced CO_2 control technologies, and whether the standard could be met by either utility boilers or IGCC units co-firing with natural gas, or otherwise complying without utilizing partial CCS), and we specifically solicited comment on the issue: ''We request that commenters who suggest emission rates above 1,200 lb CO_2/MWh address potential concerns about providing adequate reductions and technology development to be considered BSER.'' Id. The proposal thus both solicited comment on higher emission standards (including 1,400 lb CO_2/MWh-g based on a less aggressive rate of partial CCS), and provided ample notice of the methodology the EPA would use to determine the final BSER and the corresponding final standard.[182] For these reasons, the EPA believes that it provided adequate notice of this potential outcome at proposal, that the final standard of performance was reasonably foreseeable, and that the final standard is a logical outgrowth of the proposed rule. *Allina Health Services* v. *Sebelius,* 746 F. 3d 1102, 1107 (D.C. Cir. 2014).

A more detailed discussion of the rationale for the final BSER determination and of other systems that were also considered is provided in Section V.P of this preamble.[183]

2. BSER for Modified Steam Generating Units

The EPA has determined that, as proposed, the BSER for steam generating units that trigger the modification provisions is the modified unit's own best potential performance. However, as explained below, the final BSER determination and the scope of modifications to which the final standards apply differ in some important respects from what the EPA proposed.

The EPA proposed that the modified unit's best potential performance would be determined depending upon when the unit implemented the modification (*i.e.,* before or after being subject to an approved CAA section 111(d) state plan). For units that commenced modification prior to becoming subject to an approved CAA section 111(d) state plan, the EPA proposed unit-specific standards consistent with each modified unit's best one-year historical performance (during the years from 2002 to the time of the modification) plus an additional two percent reduction. For sources that commenced modification after becoming subject to an approved CAA section 111(d) plan, the EPA proposed that the unit's best potential performance would be determined from the results of an efficiency audit.

The final standards in this action do not depend upon when the modification commences, as long as it commences after June 18, 2014. We are establishing emission standards for large modifications in this rule and deferring at this time the setting of standards for small modifications.

In this final action, the EPA is issuing final emission standards for affected steam generating units that implement larger modifications that are consistent with the proposed BSER determination for those units. The final standard for those sources that implement larger modifications is a unit-specific emission limitation consistent with each modified unit's best one-year historical performance (during the years from 2002 to the time of the modification), but does not include the additional two percent reduction that was proposed in the January 2014 proposal.

In this action, the EPA is not finalizing standards for those sources that conduct smaller modifications and is withdrawing the proposed standards for those sources. See Section XV below.

A more detailed discussion of the rationale for the BSER determination and final standards is provided in Section VI of this preamble.

3. BSER for Reconstructed Steam Generating Units

Consistent with our proposal, the EPA has determined that the BSER for reconstructed steam generating units is the most efficient demonstrated generating technology for these types of units (*i.e.,* meeting a standard of performance consistent with a reconstructed boiler using the most efficient steam conditions available, even if the boiler was not originally designed to do so). A more detailed discussion of the rationale for the BSER determination and the final standards is provided in Section VII of this preamble.

C. Final Standards of Performance

The EPA is issuing final standards of performance for newly constructed, modified, and reconstructed affected steam generating units based on the degree of emission reduction achievable by application of the best system of emission reduction for those categories, as described above. The final standards are presented below in Table 6.

TABLE 6—FINAL STANDARDS OF PERFORMANCE FOR NEW, MODIFIED, AND RECONSTRUCTED STEAM GENERATING UNITS

Source	Description	Final standard * lb CO_2/MWh-g
New Sources	All newly constructed steam generating EGUs	1,400.

[182] Although co-firing with natural gas is not part of BSER, as noted above, it could be part of a compliance pathway for either SCPC or IGCC units. In this regard, a number of commenters addressed the issue of natural gas co-firing, indicating that there were circumstances where it could be part of BSER. See *e.g.* Comments of Exelon Corp. p. 12 (Docket entry: EPA–HQ–OAR–2013–0495–9406); Comments of the Sierra Club p. 108 Docket entry: EPA–HQ–OAR–2013–0495–9514). See *Northeast Md. Waste Disposal Authority* v. *EPA,* 358 F.3d 936, 952 (D.C. Cir. 2004); *Appalachian Power* v. *EPA,* 135 F.3d 791, 816 (D.C. Cir. 1998) (commenters understood a matter was under consideration when they addressed it in comments).

[183] Certain commenters maintained that the BSER determination does not comply with (purportedly) binding legal requirements created by regulations implementing the Information Quality Act. These comments are mistaken as a matter of both law and fact. The Information Quality Act does not create legal rights in third parties (see, *e.g. Mississippi Comm'n on Environmental Quality* v. *EPA,* no. 12–1309 at 84 (D.C. Cir. June 2, 2015)), and the OMB Guidelines are not binding rules but rather, as their title indicates, guidance to assist agencies. See *State of Mississippi,* 744 F.3d at 1347 (the Guidelines provide ''policy and procedural guidance'', are meant to be ''flexible'' and are to be implemented differently by different agencies accounting for circumstances). There are also significant factual omissions and mischaracterizations in these comments regarding peer review of the proposed standard and underlying record information. The complete response to these comments is in chapter 2 of the RTC. See also Section V.I.2.a and N below describing findings of the SAB panel that materials of the National Energy Technology Laboratory had been fully and adequately peer reviewed, and that the EPA findings related to sequestration of captured CO_2 reflected the best available science.

TABLE 6—FINAL STANDARDS OF PERFORMANCE FOR NEW, MODIFIED, AND RECONSTRUCTED STEAM GENERATING UNITS—Continued

Source	Description	Final standard * lb CO_2/MWh-g
Modified Sources	Sources that implement larger modifications—those resulting in an increase in hourly CO_2 emissions (lb CO_2/hr) of more than 10 percent.	Best annual performance (lb CO_2/MWh-g) during the time period from 2002 to the time of the modification.
Reconstructed Sources	Large **	1,800.
Reconstructed Sources	Small **	2,000.

* Standards are to be met over a 12-operating-month compliance period.
** Large units are those with heat input capacity of >2,000 mmBtu/hr; small units are those with heat input capacity of ≤2,000 mmBtu/hr.

For newly constructed and reconstructed steam generating units and for modified steam generating sources that result in larger hourly increases of CO_2 emissions, the EPA is finalizing standards in the form of a gross energy output-based CO_2 emission limit expressed in units of mass per useful energy output, specifically, in pounds of CO_2 per megawatt-hour (lb CO_2/MWh-g).[184] The standard of performance will apply to affected EGUs upon the effective date of the final action.

Compliance with the final standard will be demonstrated by summing the emissions (in pounds of CO_2) for all operating hours in the 12-operating-month compliance period and then dividing that value by the sum of the useful energy output (on a gross basis, *i.e.,* gross megawatt-hours) over the rolling 12-operating-month compliance period. The final rule requires rounding of emission rates with numerical values greater than or equal to 1,000 to three significant figures and rounding of rates with numerical values less than 1,000 to two significant figures.

For newly constructed steam generating units, we proposed two options for the compliance period. We proposed that a newly constructed source could choose to comply with a 12-operating-month standard or with a more stringent standard over an 84-operating-month compliance period, and we solicited comment on including an interim 12-operating-month standard (based on use of supercritical boiler technology, see 79 FR at 1448). We are not finalizing the proposed 84-operating-month compliance period option because the final standard of performance for newly constructed sources is less stringent than the proposed standard and because, as discussed in Section V below, we are identifying alternative compliance pathways for new steam generating EGUs. Specifically, we have concluded that there are unlikely to be significant issues with short-term variability during initial operation, in view of both the reduced numerical stringency of the standard, and the availability of compliance alternatives. The EPA notes that co-firing of natural gas can also serve as an interim means to reduce emissions if a new source operator believes additional time is needed to phase-in the operation of a CCS system. Therefore, the applicable final standards of performance for all newly constructed, modified, and reconstructed steam generating units must be met over a rolling 12-operating-month compliance period.

In the Clean Power Plan, which is a separate rulemaking under CAA section 111(d) published at the same time as the present rulemaking under CAA section 111(b), the EPA is promulgating emission guidelines for states to develop state plans regulating CO_2 emissions from existing fossil fuel-fired EGUs. Existing sources that are subject to state plans under CAA section 111(d) may undertake modifications or reconstructions and thereby become subject to the requirements under section 111(b) in the present rulemaking. In the section 111(d) Clean Power Plan rulemaking, the EPA discusses how undertaking a modification or reconstruction affects an existing source's section 111(d) requirements.

V. Rationale for Final Standards for Newly Constructed Fossil Fuel-Fired Electric Utility Steam Generating Units

In the discussion below, the EPA describes the rationale and justification of the BSER determination and the resulting final standards of performance for newly constructed steam generating units. We also explain why this determination is consistent with the constraints imposed by the EPAct05.

A. Factors Considered in Determining the BSER

In evaluating the final determination of the BSER for newly constructed steam generating units, the EPA considered the factors for the BSER described above, looked widely at all relevant information and considered all the data, information, and comments that were submitted during the public comment period. We re-examined and updated the information that was available to us and concluded, as described below, that the final standard of 1,400 lb CO_2/MWh-g is consistent with the degree of emission reduction achievable through the implementation of the BSER. This final standard of performance for newly constructed fossil fuel-fired steam generating units provides a clear and achievable path forward for the construction of new coal-fired generating sources that addresses GHG emissions.

B. Highly Efficient SCPC EGU Implementing Partial CCS as the BSER for Newly Constructed Steam Generating Units

In the sections that follow, we explain the technical configurations that may be used to implement BSER to meet the final standard, describe the operational flexibilities that partial CCS offers, and then provide the rationale for the final standard of performance. After that, we discuss, in greater detail, consideration of the criteria for the determination of the BSER. We describe why a highly efficient new SCPC EGU implementing partial CCS in the amount that results in an emission limitation of 1,400 lb CO_2/MWh-g best meets those criteria, including, among others, that such a system is technically feasible, provides meaningful emission reductions, can be implemented at a reasonable cost, does not pose non-air quality health and environmental concerns or impair energy reliability, and consequently is adequately demonstrated. We also explain why the emission standard of 1,400 lb CO_2/MWh-g is achievable, including under all circumstances

[184] Note that the standards for sources that conduct larger modifications is a unit-specific numerical standard based on the unit's best one-year historical performance during the period from 2002 to the time of the modification. The unit-specific standard will also be in the form of a gross energy output-based CO_2 emission limit expressed in pounds of CO_2 per megawatt-hour (lb CO_2/MWh-g).

reasonably likely to occur when the system is properly designed and operated. We also discuss alternative compliance options that new source project developers can elect to use, instead of SCPC with partial CCS, to meet the final standard of performance.

C. Rationale for the Final Emission Standards

1. The Proposed Standards

In the January 2014 proposal, the EPA proposed an emission limitation of 1,100 lb CO_2/MWh-g, which a new highly efficient utility boiler burning bituminous coal could have met by capturing roughly 40 percent of its CO_2 emissions and a new highly efficient IGCC unit could have met by capturing and storing roughly 25 percent of its CO_2 emissions. The captured CO_2 would then be securely stored in sequestration repositories subject to either Class II or Class VI standards under the Underground Injection Control program. The EPA arrived at the proposed standard by examining the available CCS implementation configurations and concluding that the proposed standard at the corresponding levels of partial CCS best balanced the BSER criteria and resulted in an achievable emission level. The EPA also proposed to find that highly efficient new generation implementing ''full CCS'' (*i.e.,* more than 90 percent capture and storage) was not the BSER because the costs of that configuration—for both utility boilers and IGCC units—are projected to substantially exceed the projected costs of other non-NGCC dispatchable technologies that utilities and project developers are considering (*e.g.,* new nuclear and biomass). See generally 79 FR at 1477–78. Conversely, the EPA rejected highly efficient SCPC as the BSER because it would not result in meaningful emission reductions from any newly constructed PC unit. Id. at 1470. The EPA also declined to base the BSER on IGCC operating alone due to the same concern—lack of emission reductions from a new IGCC unit otherwise planned. Id.

2. Basis for the Final Standards

For this final action, the EPA reexamined the BSER options available at proposal. Those options are: (1) Highly efficient generation without CCS, (2) highly efficient generation implementing partial CCS, and (3) highly efficient generation implementing full CCS. Consistent with our determination in the January 2014 proposal, we remain convinced that highly efficient generation (*i.e.,* a new supercritical utility boiler or a new IGCC unit) without CCS does not represent the BSER because it does not achieve emission reductions beyond the sector's business as usual, when options that do achieve more emission reductions are available. 79 FR 1470; see also Section V.P below. We also do not find that a highly efficient new steam generating unit implementing full CCS is the BSER because, at this time, the costs are predicted to be significantly more than the costs for implementation of partial CCS and significantly more than the costs for competing non-NGCC base load, dispatchable technologies—primarily new nuclear generation—and are, therefore, potentially unreasonable. See Section V.P.

As with the proposal, the EPA has determined the final BSER and corresponding emission limitation by appropriately balancing the BSER criteria and determining that the emission limitation is achievable. The final standard of performance of 1,400 lb CO_2/MWh-g is less stringent than at proposal and reflects changes that are responsive to comments received on, and the EPA's further evaluation of, the costs to implement partial CCS. The EPA has determined that a newly constructed highly efficient supercritical utility boiler burning bituminous coal can meet this final emission limitation by capturing 16 percent of the CO_2 produced from the facility (or 23 percent if burning subbituminous or dried lignite), which would be either stored in on-site or off-site geologic sequestration repositories subject to control under either the Class VI (for geologic sequestration) or Class II (for Enhanced Oil Recovery) standards under the UIC program. This BSER is technically feasible, as shown by the fact that post-combustion CCS technology—both the capture and storage components—is demonstrated in full-scale operation within the electricity generating industry. There are also numerous operating results from smaller-scale projects that are reasonably predictive of operation at full-scale. It is available at reasonable cost, does not have collateral adverse non-air quality health or environmental impacts, and does not have adverse energy implications.

The proposed BSER was a highly efficient newly constructed steam generating EGU implementing partial CCS to an emission standard of 1,100 lb CO_2/MWh-g. The final BSER is a highly efficient SCPC EGU implementing partial CCS to achieve an emission standard of 1,400 lb CO_2/MWh-g. In both cases, the EPA specified that the BSER includes a ''highly efficient'' new EGU implementing partial CCS. This assumes that a new project developer will construct the most efficient generating technology available—*i.e.,* a supercritical or ultra-supercritical utility boiler—that will inherently generate lower volumes of uncontrolled CO_2 per MWh. See Section V.J below. A well performing and highly efficient new SCPC EGU will need to implement lower levels of partial CCS in order to meet the final standard of 1,400 lb CO_2/MWh-g than a less efficient new steam generating EGU. The construction of highly efficient steam generating EGUs—as opposed to less efficient units such as a subcritical utility boiler—will result in lower overall costs from decreased fuel consumption and the need for lower levels of required partial CCS to meet the final standard.

3. Consideration of Projects Receiving Funding Under the EPAct05

As noted in Section III.H.3.g above, the EPA's determination of the BSER here includes review of recently constructed facilities and those planned or under construction to evaluate the control technologies being used and considered. Some of the projects discussed in the January 2014 proposal, and discussed here in this preamble, received or are receiving financial assistance under the EPAct05 (P.L. 109–58). This assistance may include financial assistance from the Department of Energy (DOE), as well as receipt of the federal tax credit for investment in clean coal technology under IRC Section 48A.

As noted above, the EPA interprets these provisions as allowing consideration of EPAct05 facilities provided that such information is not the sole basis for the BSER determination, and particularly so in circumstances like those here, where the information is corroborative but the essential information justifying the determinations comes from facilities and other sources of information with no nexus with EPAct05 assistance. In the discussion below, the EPA explains its reliance on other information in making the BSER determination for new fossil fuel-fired steam generating units. The EPA notes that information from facilities that did not receive any DOE assistance, and did not receive the federal tax credit, is sufficient by itself to support its BSER determination.

D. Post-Combustion Carbon Capture

In this section, we describe a variety of facts that support our conclusion that the technical feasibility of post-combustion carbon capture is adequately demonstrated. First, we describe the technology of post-combustion capture. We then describe EGUs that have previously utilized or are currently utilizing post-combustion carbon capture technology. This discussion is complemented by later sections that explain and justify our conclusions that the technical feasibility of other aspects of partial CCS are adequately demonstrated—namely, the transportation and carbon storage (see Sections V.M. and N). Further, the conclusions of this section are reinforced by the discussion in Section V.F. below, in which we identify commercial vendors that offer carbon capture technology and offer performance guarantees, and discuss industry and technology developers' public pronouncements of their confidence in the feasibility and availability of CCS technologies.

1. Post-Combustion Carbon Capture—How it Works

Post-combustion capture processes remove CO_2 from the exhaust gas of a combustion system—such as a utility boiler. It is referred to as ''post-combustion capture'' because the CO_2 is the product of the combustion of the primary fuel and the capture takes place after the combustion of that fuel. The exhaust gases from most combustion processes are at atmospheric pressure and are moved through the flue gas system by fans. The concentration of CO_2 in most combustion flue gas streams is somewhat dilute.[185] Most post-combustion capture systems utilize liquid solvents [186] that separate the CO_2 from the flue gas in CO_2 scrubber systems. Because the flue gas is at atmospheric pressure and is somewhat dilute, the solvents used for post-combustion capture are ones that separate the CO_2 using chemical absorption (or chemisorption). Amine-based solvents [187] are the most commonly used in post-combustion capture systems. In a chemisorption-based separation process, the flue gas is processed through the CO_2 scrubber and the CO_2 is absorbed by the liquid solvent and then released by heating to form a high purity CO_2 stream. This heating step is referred to as ''solvent regeneration'' and is responsible for much of the ''energy penalty'' of the capture system. Steam from the boiler (or potentially from another external source) that would otherwise be used to generate electricity is instead used in the solvent regeneration process. The development of advanced solvents—those that are chemically stable, have high CO_2 absorption capacities, and have low regeneration energy requirements—is an active area of research. Many post-combustion solvents will also selectively remove other acidic gases such as SO_2 and hydrochloric acid (HCl), which can result in degradation of the solvent. For that reason, the CO_2 scrubber systems are normally installed downstream of other pollutant control devices (*e.g.,* particulate matter and flue gas desulfurization controls) and in some cases, the acidic gases will need to be scrubbed to very low levels prior to the flue gas entering the CO_2 capture system. See also RIA chapter 5 (quantifying SO_2 reductions resulting from this scrubbing process).

Additional information on post-combustion carbon capture—including process diagrams—can be found in a summary technical support document.[188]

2. Post-Combustion Carbon Capture Projects That Have Not Received DOE Assistance Through the EPAct05 or Tax Credits Under IRC Section 48A

a. Boundary Dam Unit #3

SaskPower's Boundary Dam CCS Project in Estevan, a city in Saskatchewan, Canada, is the world's first commercial-scale fully integrated post-combustion CCS project at a coal-fired power plant. The project fully integrates the rebuilt 110 MW coal-fired Unit #3 with a CO_2 capture system using Shell Cansolv amine-based solvent to capture 90 percent of its CO_2 emissions. The facility, which utilizes local Saskatchewan lignite, began operations in October 2014 and accounts of the system's performance describe it as working even ''better than expected.'' [189] [190] The plant started by capturing roughly 75 percent of CO_2 from the plant emissions and its operators plan to increase the capture percentage as they optimize the equipment to reach full capacity. Initial indications are that the facility is producing more power than predicted and that the energy penalty (parasitic load—the energy needed to regenerate the CO_2 capture solvent) is much lower than initially predicted.[191] Water use at the facility is consistent with levels that were predicted.[192] The total project costs—for the power plant and the carbon capture plant—was $1.467B (CAD).[193] The CO_2 from the capture system is more than 99.999 percent pure with only trace levels of N_2 in the product stream.[194] This purity is food-grade quality CO_2 and is a clear indication that the system is working well. The captured CO_2 is transported by pipeline to nearby oil fields in southern Saskatchewan where it is being used for EOR operations. Any captured CO_2 that is not used for EOR operations will be stored in nearby deep brine-filled sandstone formations. Thus, the Boundary Dam Unit #3 project is demonstrating CO_2 post-combustion capture, CO_2 compression and transport, and CO_2 injection for both EOR and geologic storage. The CCS system is fully integrated with the electricity production of the plant.

Some commenters noted that, at 110 MW, the Boundary Dam Unit #3 is a relatively small coal-fired utility boiler and thus, in the commenters' view, does not demonstrate that such a system could be utilized at a much larger utility coal-fired boiler. However, there is nothing to indicate that the post-combustion system used at Boundary Dam could not be scaled-up for use at a larger utility boiler. In fact, the carbon capture system at Boundary Dam #3 is designed and constructed to implement ''full CCS''—that is to capture more than 90 percent of the CO_2 produced from the subcritical unit. A similarly-sized capture system—with no need for further scale-up—could be used to treat a slip-stream of a much larger

[185] The typical concentration of CO_2 in the flue gas of a coal-fired utility boiler is roughly around 15 volume percent.

[186] A *solvent* is a substance (usually a liquid) that dissolves a *solute* (a chemically different liquid, solid or gas), resulting in a solution.

[187] Amines are derivatives of ammonia (NH_3) where one or more hydrogen atoms have been replaced by hydrocarbon groups.

[188] Technical Support Document—''Literature Survey of Carbon Capture Technology'', available in the rulemaking docket (Docket ID: EPA–HQ–OAR–2013–0495).

[189] ''[W]e are achieving better than expected'' operation out of the plant, SaskPower's Mike Marsh said April 8, 2015 in Washington, DC, summarizing the status of the first-of-a-kind plant in Saskatchewan, Canada, known as Boundary Dam Unit 3. Marsh spoke at a meeting of the National Coal Council, which advises the Energy Department on coal-related topics. From ''Bolstering EPA's NSPS, Canadian CCS Plant Working 'Better Than Expected' '', Climate Daily News, Inside EPA/climate (April 08, 2015); *www.insideepa.com* (subscription required).

[190] ''CCS performance data exceeding expectations at world-first Boundary Dam Power Station Unit #3'', *http://www.saskpowerccs.com/newsandmedia/latest-news/ccs-performance-data-exceeding-expectations/.*

[191] Correspondence between Mike Monea (SaskPower) and Nick Hutson (EPA), February 20, 2015.

[192] 30 percent of the water used for cooling comes from the recycled or reclaimed water from the process itself; namely, water in the coal is reclaimed.

[193] About $1.2B USD; roughly $700M (USD) for the carbon capture system, which was on budget.

[194] ''Boundary Dam—The Future is Here'', plenary presentation by Mike Monea at the 12th International Conference on Greenhouse Gas Technologies (GHGT–12), Austin, TX (October 2014).

supercritical utility boiler (a new unit of approximately 500 to 600 MW) in order to meet the final standard of performance of 1,400 lb CO_2/MWh-g, which would only require partial CCS on the order of approximately 16 to 23 percent (depending on the coal used).

A ''slip-stream'' is a portion of the flue gas stream that can be treated separately from the bulk exhaust gas. It is not an uncommon configuration for the flue gas from a coal-fired boiler to be separated into two or more streams and treated separately in different control equipment before being recombined to exit from a common stack.[195] A slip-stream configuration is often used to treat a smaller portion of the bulk flue gas stream as a way of testing or demonstrating a control device or measurement technology. For implementation of post-combustion partial carbon capture, a portion of the bulk flue gas stream would be treated separately to capture approximately 90 percent of the CO_2 from that smaller slip-stream of the flue gas. For example, in order to capture 20 percent of the CO_2 produced by a coal-fired utility boiler, an operator would treat approximately 25 percent of the bulk flue gas stream (rather than treating the entire stream). Approximately 90 percent of the CO_2 would be captured from the slip-stream gas, resulting in an overall capture of about 20 percent.

In its study on the cost and performance of a range of carbon capture rates, the DOE/NETL determined that the slip-stream approach was the most economical for carbon capture of less than 90 percent of the total CO_2.[196] The advantage of the slip-stream approach is that the capture system will be sized to treat a lower volume of flue gas flow, which reduces the size of the CO_2 absorption columns, induced draft fans, and other equipment, leading to lower capital and operating costs.

The carbon capture system at Boundary Dam does not utilize the slip-stream configuration because it was designed to achieve more than 90 percent capture rates from the 110 MW facility. However, the same carbon capture equipment could be used to treat approximately 50 percent of the flue gas from a 220 MW facility—or 20 percent of the flue gas from a 550 MW facility. Thus, the equipment that is currently working very well (in fact, ''better than expected'') at the Boundary Dam plant can be utilized for partial carbon capture at a much larger coal-fired unit without the need for further scale-up.

The experience at Boundary Dam is directly transferrable to other types of post-combustion sources, including those using different boiler types and those burning different coal types. There is nothing to suggest that the Shell CanSolv process would not work with other coal types and indeed, the latest NETL cost estimates assume that the capture technology would be used in a new unit using bituminous coal.[197] The EPA is unaware of any reasons why the Boundary Dam technology would not be transferrable to another utility boiler at a different location at a different elevation or climate because the control technology is not climate or elevation-dependent.

Commenters also noted that the Boundary Dam Unit #3 project received financial assistance from both the Canadian federal government and from the Saskatchewan provincial government. But the availability of—or the lack of—external financial assistance does not affect the technical feasibility of the technology. Commenters further characterized Boundary Dam as a ''demonstration project''. These descriptors are beside the point. Regardless of what the project is called or how it was financed, the project clearly shows the technical feasibility of full-scale, fully integrated implementation of available post-combustion CCS technology, which in this case also appears to be commercially viable.

The EPA notes that, although there is ample additional information corroborating that post-combustion CCS is technically feasible, which we describe below, the performance at Boundary Dam Unit #3 alone would be sufficient to support that conclusion. *Essex Chemical Corp.,* 486 F. 2d at 436 (test results from single facility demonstrates achievability of standard of performance). As mentioned above, the post-combustion capture technology used at Boundary Dam is transferrable to all other types of utility boilers.

b. AES Warrior Run and Shady Point

AES's coal-fired Warrior Run (Cumberland, MD) and Shady Point (Panama, OK) plants are both circulating fluidized bed (CFB) coal-fired power plants with carbon capture amine scrubbers developed by ABB/Lummus. The scrubbers were designed to process a slip-stream of each plant's flue gas. At the 180 MW Warrior Run Plant, a plant that burns bituminous coal, approximately 10 percent of the plant's CO_2 emissions (about 110,000 metric tons of CO_2 per year) has been captured since 2000 and sold to the food and beverage industry. At the 320 MW Shady Point Plant, a plant that burns a blend of bituminous and subbituminous coals, CO_2 from an approximate 5 percent slip-stream (about 66,000 metric tons of CO_2 per year) has been captured since 2001. The captured CO_2 from the Shady Point Plant is also sold for use in the food processing industry.[198] While these projects do not demonstrate the CO_2 storage component of CCS, they clearly demonstrate the technical viability of partial CO_2 capture. The capture of CO_2 from a slip-stream of the bulk flue gas, as described earlier, is the most economical method for capturing less than 90 percent of the CO_2. The amounts of partial capture that these sources have demonstrated—up to 10 percent—is reasonably similar to the level, at 16 to 23 percent, that the EPA predicts would be needed by a new highly efficient steam utility boiler to meet the final standard of performance. These facilities, which have been operating for multiple years, clearly show the technical feasibility of post-combustion carbon capture.

c. Searles Valley Minerals

Since 1978, the Searles Valley Minerals soda ash plant in Trona, CA has used post-combustion amine scrubbing to capture approximately 270,000 metric tons of CO_2 per year from the flue gas of a coal-fired power plant that generates steam and power for on-site use. The captured CO_2 is used for the carbonation of brine in the process of producing soda ash.[199] Again, while the captured CO_2 is not

[195] See Figure 1A from *Atmospheric Environment,* 43, 3974 (2009), for an example of this type of configuration.

[196] ''Cost and Performance of PC and IGCC for a Range of Carbon Capture'', Rev 1 (2013), DOE/NETL–2011/1498 p. 2 (''A literature search was conducted to verify that <90 percent CO_2 capture is most economical using a 'slip-stream' (or bypass) approach. Indeed, the slip-stream approach is more cost-effective for <90 percent CO_2 capture than removing reduced CO_2 fractions from the entire flue gas stream, according to multiple peer-reviewed studies.'' See also id. at 19, 21, 77, and 478 (documenting further that treating a slip-stream is the most economical approach).

[197] In fact, in ''Cost and Performance Baseline for Fossil Energy Plants Volume 1a: Bituminous Coal (PC) and Natural Gas to Electricity Revision 3'', DOE/NETL–2015/1723 (July 2015), Exh.2–3 the Shell Cansolv process is used as the capture process for a new SCPC unit using bituminous coal rather than the subcritical PC unit at Boundary Dam that uses Canadian lignite. The study evidently assumes that the CanSolv process can be used effectively for bituminous coal since this type of coal is assumed for cost estimation purposes.

[198] Dooley, J. J., et al. (2009). ''An Assessment of the Commercial Availability of Carbon Dioxide Capture and Storage Technologies as of June 2009''. U.S. DOE, Pacific Northwest National Laboratory, under Contract DE–AC05–76RL01830.

[199] IEA (2009), World Energy Outlook 2009, OECD/IEA, Paris.

sequestered, this project clearly demonstrates the technical feasibility of the amine scrubbing system for CO_2 capture from a coal-fired power plant.[200] The fact that this system is an industrial coal-fired power plant rather than a utility coal-fired power plant is irrelevant as they both serve a similar purpose—the production of electricity.

Each of these processes indicate a willingness of industry to utilize available post-combustion technology for capture of CO_2 for commercial purposes. Not one of the CO_2 capture systems at Warrior Run, Shady Point, or Searles Valley was installed for regulatory purposes or as government-funded demonstration projects. They were installed to capture CO_2 for commercial use. The fact that the captured CO_2 was utilized rather than being stored is of no consequence in the consideration of the technical feasibility of post-combustion CO_2 capture technology. These commercial operations have helped to improve the performance of scrubbing systems that are available today. For example, the heat duty (*i.e.,* the energy needed to remove the CO_2) has been reduced by about 5 times from the amine process originally used at the Searles Valley facility. The amine scrubbing process used at Boundary Dam is equally efficient, and the amine scrubbing system to be used at the Petra Nova WA Parish project (Thompsons, TX) is projected to be as well.[201]

3. Post-Combustion Carbon Capture Projects That Received DOE Assistance Through the EPAct05, but Did Not Receive Tax Credits Under IRC Section 48A

The EPA considers the experiences from the CCS projects described above, coupled with evidence that the design of CCS is well accepted (also described above) and the strong support that CCS has received from vendors and others (described below) to adequately demonstrate that post-combustion partial CCS is technically feasible. The EPA finds that additional projects, described next, provide more support for that conclusion. These projects received funding under EPAct05 from the Department of Energy, but that does not disqualify them from being considered. See Section III.H.3 above.

a. Petra Nova WA Parish Project

Petra Nova, a joint venture between NRG Energy Inc. and JX Nippon Oil & Gas Exploration, is constructing a commercial-scale post-combustion carbon capture project at Unit #8 of NRG's WA Parish generating station southwest of Houston, Texas. The project is designed to utilize partial CCS by capturing approximately 90 percent of the CO_2 from a 240 MW slip-stream of the 610 MW WA Parish facility. The project is expected to be operational in 2016 and thus does not yet directly demonstrate the technical feasibility or performance of the MHI amine scrubbing system. However, this project is a clear indication that the developers have confidence in the technical feasibility of the post-combustion carbon capture system.

The project was originally envisioned as a 60 MW slip-stream demonstration and received DOE Clean Coal Power Initiative (CCPI) funding (as provided in EPAct05) on that basis. The developers later expanded the project to the larger 240 MW slip-stream because of the need to capture greater volumes of CO_2 for EOR operations. No additional DOE or other federal funding was obtained for the expansion from a 60 MW slip-stream to a 240 MW slip-stream.[202]

At 240 MW, the Petra Nova project will be the largest post-combustion carbon capture system installed on an existing coal-fueled power plant. The project will use for EOR or will sequester 1.6 million tons of captured CO_2 each year. The project is expected to be operational in 2016.

In 2014 project materials,[203] the project developer NRG recognized the importance of CCS technology by noting:

> The technology has the potential to enhance the long-term viability and sustainability of coal-fueled power plants across the U.S. and around the world. . . . Post-combustion carbon capture is essential so that we can use coal to sustain our energy ecosystem while we begin reducing our carbon footprint.

According to NRG, the Petra Nova Carbon Capture Project will utilize ''a proven carbon capture process,'' jointly developed by Mitsubishi Heavy Industries, Ltd. (MHI) and the Kansai Electric Power Co., that uses a high-performance solvent for CO_2 absorption and desorption.[204] In using the MHI high-performance solvent, the Petra Nova project will benefit from pilot-scale testing of this solvent at Alabama Power's Plant Barry and at other installations. WA Parish Unit #8 came on-line in 1982 and is thus an existing source that will not be subject to final standards of performance issued in this action. However, because it will be capturing roughly 35 percent of the CO_2 generated by the facility, its emissions will be below the final new source emission limitation of 1,400 lb CO_2/MWh-g.[205]

The captured CO_2 from the WA Parish CO_2 Capture Project will be used in EOR operations at mature oil fields in the Gulf Coast region. Using EOR at Hilcorp's West Ranch Oil Field, the production is expected to be boosted from around 500 barrels per day to approximately 15,000 barrels per day. Thus the project will utilize all aspects of CCS by capturing CO_2 at the large coal-fired power plant, compressing the CO_2, transporting it by pipeline to the EOR operations, and injecting it for EOR and eventual geologic storage.

The carbon capture system at WA Parish will utilize a slip-stream configuration. However, as noted, the system is designed to capture roughly 35 percent of the CO_2 from WA Parish Unit #8 (90 percent of the CO_2 from the 240 MW slip-stream from the 610 MW unit). A carbon capture system of the same size as that used at WA Parish could be used to treat a 240 MW slip-stream from a 1,000 MW unit in order to meet the final standard of performance of 1,400 lb CO_2/MWh-g.

Again, the experience at the WA Parish Unit #8 project will be directly transferable to post-combustion capture at a new utility boiler, even though WA Parish Unit #8 is an existing source that has been in operation for over 30 years. In fact, retrofit of such technology at an existing unit can be more challenging than incorporating the technology into the design of a new facility. The

[200] Moreover, the final rule allows alternative means of storage of captured CO_2 based on a case-by-case demonstration of efficacy. See Section V.M.4 below.

[201] The heat duty for the amine scrubbing process used at Searles Valley in the mid-70's was about 12 MJ/mt CO_2 removed as compared to a heat duty of about 2.5 MJ/mt CO_2 removed for the amine processes used at Boundary Dam and to be used at WA Parish. ''From Lubbock, TX to Thompsons, TX—Amine Scrubbing for Commercial CO_2 Capture from Power Plants'', plenary address by Prof. Gary Rochelle at the 12th International Conference on Greenhouse Gas Technology (GHGT–12), Austin, TX (October 2014).

[202] Thus, even if the project received DOE assistance for the initial 60 MW design, the expansion of the project from 60 MW to 240 MW should not be considered a DOE-assisted project. In any case, as described above, even without consideration of this facility at all, other information adequately demonstrates the technical feasibility of post-combustion CCS.

[203] WA Parish CO_2 Capture Project Fact Sheet; available at *www.nrg.com/documents/business/pla-2014-petranova-waparish-factsheet.pdf* (2014).

[204] The WA Parish project (described earlier) will utilize the KM–CDR Process®, which was jointly developed by MHI and the Kansai Electric Power Co., Inc. and uses the proprietary KS–1™ high-performance solvent for the CO_2 absorption and desorption.

[205] Using emissions data reported to the Acid Rain Program, the EPA estimates that the CO_2 emissions from the WA Parish Unit #8 will be 1,250–1,300 lb CO_2/MWh-g during operations with the post-combustion capture system.

experience will be directly transferrable to other types of post-combustion sources including those using different boiler types and those burning different coals. The amine scrubbing and associated systems are not boiler type- or coal-specific. The EPA is unaware of any reasons that the technology utilized at the WA Parish plant would not be transferrable to another utility boiler at a different location at a different elevation or climate, given that the technology is not dependent on either climate or topography.

b. AEP/Alstom Mountaineer Project

In September 2009, AEP began a pilot-scale CCS demonstration at its Mountaineer Plant in New Haven, WV. The Mountaineer Plant is a very large (1,300 MW) coal-fired unit that was retrofitted with Alstom's patented chilled ammonia CO_2 capture technology on a 20 MWe slip-stream of the plant's exhaust flue gas. In May 2011, Alstom Power announced the successful operation of the chilled ammonia CCS validation project. The demonstration achieved capture rates from 75 percent (design value) to as high as 90 percent, and produced CO_2 at a purity of greater than 99 percent, with energy penalties within a few percent of predictions. The facility reported robust steady-state operation during all modes of power plant operation, including load changes, and saw an availability of the CCS system of greater than 90 percent.[206]

AEP, with assistance from the DOE, had planned to expand the slip-stream demonstration to a commercial scale, fully integrated demonstration at the Mountaineer facility. The commercial-scale system was designed to capture at least 90 percent of the CO_2 from 235 MW of the plant's 1,300 MW total capacity. Plans were for the project to be completed in four phases, with the system to begin commercial operation in 2015. However, in July 2011, AEP announced that it would terminate its cooperative agreement with the DOE and place its plans to advance CO_2 capture and storage technology to commercial scale on hold. AEP cited the uncertain status of U.S. climate policy as a contributor to its decision, but did not express doubts about the feasibility of the technology. See Section V.L below.

AEP also prepared a Front End Engineering & Design (FEED) Report,[207] explaining in detail how its pilot-scale work could be scaled up to successful full-scale operation, and to accommodate the operating needs of a full-scale EGU, including reliable generating capacity capable of cycling up and down to accommodate consumer demand. Recommended design changes to accomplish the desired scaling included detailed flue gas specifications, ranges for temperature, moisture and SO_2 content; careful scrutiny of makeup water composition and temperature; quality and quantity of available steam to accommodate heat cycle based on unit load changes; and detailed scrutiny of material and energy balances.[208] See Section V.G.3 below, addressing in more detail the record support for how CCS technology can be scaled up to commercial size in both pre- and post-combustion applications.

c. Southern Company/MHI Plant Barry

In June 2011, Southern Company and Mitsubishi Heavy Industries (MHI) launched operations at a 25 MW coal-fired carbon capture facility at Alabama Power's Plant Barry. The facility, which completed the initial demonstration phase, captured approximately 165,000 metric tons of CO_2 annually at a CO_2 capture rate of over 90 percent. The facility employed the KM CDR Process, which uses a proprietary high performing solvent[209] for CO_2 absorption and desorption that was jointly developed by MHI and Japanese utility Kansai Electric Power Co. The captured CO_2 has been transported via pipeline approximately 12 miles to the Citronelle oil field where it is injected into the Paluxy formation, a saline reservoir, for storage.[210]

Project participants have reported that ''[t]he plant performance was stable at the full load condition with CO_2 capture rate of 500 TPD at 90 percent CO_2 removal and lower steam consumption than conventional capture processes.''[211]

E. Pre-Combustion Carbon Capture

As described earlier, the EPA does not find that IGCC technology—either alone or implementing partial CCS—is part of the BSER for newly constructed steam generating EGUs. However, as noted, there may be specific circumstances and business plans—such as co-production of chemicals or fertilizers, or capture of CO_2 for use in EOR operations—that encourage greater CO_2 emission reductions than are required by this standard. In this section, we describe and justify our conclusion that the technical feasibility of pre-combustion carbon capture is adequately demonstrated, indicating that this could be a viable alternative compliance pathway. First, we explain the technology of pre-combustion capture. We then describe EGUs that have previously utilized or are currently utilizing pre-combustion carbon capture technology. This discussion is complemented by other sections that conclude the technical feasibility of other aspects of partial CCS are adequately demonstrated—namely, post-combustion carbon capture (Section V.D) and sequestration (Sections V.M and V.N). Further, this section's conclusions are reinforced by Section V.F, in which we identify commercial vendors that offer CCS performance guarantees as well as developers that have publicly stated their confidence in CCS technologies.

1. Pre-Combustion Carbon Capture—How It Works

Pre-combustion capture systems are typically used with IGCC processes. In a gasification system, the fuel (usually coal or petroleum coke) is heated with water and oxygen in an oxygen-lean environment. The coal (carbon), water and oxygen react to form primarily a mixture of hydrogen (H_2) and carbon monoxide (CO) known as synthesis gas or syngas according to the following high temperature reaction:

$$3C + H_2O + O_2 \rightarrow H_2 + 3CO$$

In an IGCC system, the resulting syngas, after removal of the impurities, can be combusted using a conventional combustion turbine in a combined cycle configuration (*i.e.,* a combustion turbine combined with a HRSG and steam turbine). The gasification process also typically produces some amount of CO_2[212] as a by-product along with other

[206] *http://www.alstom.com/press-centre/2011/5/alstom-announces-sucessful-results-of-mountaineer-carbon-capture-and-sequestration-ccs-project/.*

[207] ''CCS front end engineering & design report: American Electric Power Mountaineer CCS II Project. Phase 1'', pp 10–11; available at: *http://www.globalccsinstitute.com/publications/aep-mountaineer-ii-project-front-end-engineering-and-design-feed-report.*

[208] Id. at 11. The EPA does not view this information as being affected by the constraints in EPAct05. The information does not relate to use of technology, level of emission reduction by reason of use of technology, achievement of emission reduction by demonstration of technology, or demonstration of a level of performance. The FEED study rather explains engineering challenges which would remain at full scale and how those challenges can be addressed.

[209] This is the same carbon capture system that is being utilized at the Petra Nova project at the NRG WA Parish plant.

[210] Ivie, M.A. et al.; ''Project Status and Research Plans of 500 TPD CO_2 Capture and Sequestration Demonstration at Alabama Power's Plant Barry'', *Energy Procedia* 37, 6335 (2013).

[211] Id.

[212] The amount of CO_2 in syngas depends upon the specific gasifier technology used, the operating conditions, and the fuel used; but is typically less

gases (*e.g.,* H_2S) and inorganic materials originating from the coal (*e.g.,* minerals, ash). The amount of CO_2 in the syngas can be increased by ''shifting'' the composition via the catalytic water-gas shift (WGS) reaction. This process involves the catalytic reaction of steam (''water'') with CO (''gas'') to form H_2 and CO_2 according to the following catalytic reaction:

$$CO + H_2O \rightarrow CO_2 + H_2$$

An emission standard that requires partial capture of CO_2 from the syngas could be met by adjusting the level of CO_2 in the syngas stream by controlling the level of syngas ''shift'' prior to treatment in the pre-combustion acid gas treatment system. If a high level of CO_2 capture is required, then multi-stage WGS reactors will be needed and an advanced hydrogen turbine will likely be needed to combust the resulting hydrogen-rich syngas.

Most syngas streams are at higher pressure and can contain higher concentrations of CO_2 (especially if shifted to enrich the concentration). As such, the pre-combustion capture systems can utilize physical absorption (physisorption) solvents rather than the chemical absorptions solvents described earlier. Physical absorption has the benefit of relying on weak intermolecular interactions and, as a result, the absorbed CO_2 can often be released (desorbed) by reducing the pressure rather than by adding heat. Pre-combustion capture systems have been used widely in industrial processes such as natural gas processing.

Additional information on pre-combustion carbon capture can be found in a summary technical support document.[213]

2. Pre-Combustion Carbon Capture Projects That Have Not Received DOE Assistance Through EPAct05 or Tax Credits Under IRC Section 48A

a. Dakota Gasification Great Plains Synfuels Plant

Each day, the Dakota Gasification Great Plains Synfuels Plant uses approximately 18,000 tons of North Dakota lignite in a coal gasification process that produces syngas (a mixture of CO, CO_2, and H_2), which is then converted to methane gas (synthetic natural gas) using a methanation process. Each day, the process produces an average of 145 million cubic feet of synthetic natural gas that is ultimately transported for use in home heating and electricity generation.[214]

Capture of CO_2 from the facility began in 2000. The Synfuels Plant, using a pre-combustion Rectisol® process, captures about 3 million tons of CO_2 per year—more CO_2 from coal conversion than any facility in the world, and is a participant in the world's largest carbon sequestration project. On average about 8,000 metric tons per day of captured CO_2 from the facility is sent through a 205-mile pipeline to oil fields in Saskatchewan, Canada, where it is used for EOR operations that result in permanent CO_2 geologic storage. The geologic sequestration of CO_2 in the oil reservoir is monitored by the International Energy Agency (IEA) Weyburn CO_2 Monitoring and Storage Project.

Several commenters to the January 2014 proposal argued that the Great Plains Synfuels facility is not an EGU, that it operates as a chemical plant, and that its experience is not translatable to an IGCC using pre-combustion carbon capture technology. The commenters noted that the Dakota facility can be operated nearly continuously without the need to adjust operations to meet cyclic electricity generation demands. In the January 2014 proposal, the EPA had noted that, while the facility is not an EGU, it has significant similarities to an IGCC and the implementation of the pre-combustion capture technology would be similar enough for comparison. See 79 FR at 1435–36 and n. 11. We continue to hold this view.

As explained above, in an IGCC gasification system, coal (or petroleum coke) is gasified to produce a synthesis gas comprised of primarily CO, H_2, and some amount of CO_2 (depending on the gasifier and the specific operating conditions). A water-gas-shift reaction using water (H_2O, steam) is then used to shift the syngas to CO_2 and H_2. The more the syngas is ''shifted,'' the more enriched it becomes in H_2. In an IGCC, power can be generated by directly combusting the un-shifted syngas in a conventional combustion turbine. If the syngas is shifted such that the resulting syngas is highly enriched in H_2, then a special, advanced hydrogen turbine is needed. If CO_2 is to be captured, then the syngas would need to be shifted either fully or partially, depending upon the level of capture required.[215]

The Dakota Gasification process bears essential similarities to the just-described IGCC gasification system. As with the IGCC gasification system, the Dakota Gasification facility gasifies coal (lignite) to produce a syngas which is then shifted to increase the concentration of CO_2 and to produce the desired ratio of CO and H_2. As with the IGCC gasification system, the CO_2 is then removed in a pre-combustion capture system, and the syngas that results is made further use of. For present purposes, only the manner in which the syngas is used distinguishes the IGCC gasification system from the Dakota Gasification facility. In the IGCC process, the syngas is combusted. In the Dakota Gasification facility, the syngas is processed through a catalytic methanation process where the CO and H_2 react to produce CH_4 (methane, synthetic natural gas) and water. Importantly, the CO_2 capture system that is used in the Dakota Gasification facility can readily be used in an IGCC EGU. There is no indication that the RECTISOL® process (or other similar physical gas removal systems) is not feasible for an IGCC EGU. In confirmation, according to product literature, RECTISOL®, which was independently developed by Linde and Lurgi, is frequently used to purify shifted, partially shifted or un-shifted gas from the gasification of coal, lignite, and residual oil.[216]

b. International Projects

There are some international projects that are in various stages of development that indicate confidence by developers in the technical feasibility of pre-combustion carbon capture. Summit Carbon Capture, LLC is developing the Caledonia Clean Energy Project, a proposed 570-megawatt IGCC plant with 90 percent CO_2 capture that would be built in Scotland, U.K. Captured CO_2 from the plant will be transported via on-shore and sub-sea pipeline for sequestration in a saline formation in the North Sea. The U.K. Department of Energy & Climate Change (DECC) recently announced funding to allow for feasibility studies for this plant.[217] Commercial operation is expected in 2017.[218]

The China Huaneng Group—with multiple collaborators, including Peabody Energy, the world's largest private sector coal company—is building the 400 MW GreenGen IGCC

than 20 volume percent (*http://www.netl.doe.gov/research/coal/energy-systems/gasification/gasifipedia/syngas-composition*).

[217] *http://www.downstreambusiness.com/item/Summit-Power-Wins-Funding-Studies-Proposed-IGCC-CCS-Project_140878.*

[218] *http://www.summitpower.com/projects/carbon-capture/.*

facility in Tianjin City, China. The goal is to complete the power plant before 2020. Over 80 percent of the CO_2 will be separated using pre-combustion capture technology. The captured CO_2 will be used for EOR operations.[219]

Vattenfall and Nuon's pilot project in Bugennum, The Netherlands involves carbon capture from coal- and biomass-fired IGCC plants. It has operated since 2011.[220]

Approximately 100 tons of CO_2 per day are captured from a coal- and petcoke-fired IGCC plant in Puertollano, Spain. The facility began operating in 2010.[221]

Emirates Steel Industries is expected to capture approximately 0.8Mt of CO_2 per year from a steel-production facility in the United Arab Emirates. Full-scale operations are scheduled to begin by 2016.[222]

The Uthmaniyah CO_2 EOR Demonstration Project in Saudi Arabia will capture 0.8 Mt of CO_2 from a natural gas processing plant over three years. It is expected to begin operating in 2015.[223]

The experience of the Dakota Gasification facility, coupled with the descriptions of the technology in the literature, the statements from vendors, and the experience of facilities internationally, are sufficient to support our determination that the technical feasibility of CCS for an IGCC facility is adequately demonstrated. The experience of additional facilities, described next, provides additional support.

3. Pre-Combustion Carbon Capture Projects That Have Received DOE Assistance Through EPAct05, but Did Not Receive Tax Credits Under IRC Section 48A

a. Coffeyville Fertilizer

Coffeyville Resources Nitrogen Fertilizers, LLC, owns and operates a nitrogen fertilizer facility in Coffeyville, Kansas. The plant began operation in 2000 and is the only one in North America using a petroleum coke-based fertilizer production process. The petroleum coke is generated at an oil refinery adjacent to the plant. The petroleum coke is gasified to produce a hydrogen rich synthetic gas, from which ammonia and urea ammonium nitrate fertilizers are subsequently synthesized.

As a by-product of manufacturing fertilizers, the plant also produces significant amounts of CO_2. In March 2011, Chaparral Energy announced a long-term agreement for the purchase of captured CO_2 which is transported 68 miles via CO_2 pipeline for use in EOR operations in Osage County, OK. Injection at the site started in 2013.

At least one commenter suggested that the cost and complexity of carbon capture from these and other industrial projects was significantly decreased because the sources already separate CO_2 as part of their normal operations. The EPA finds this argument unconvincing. The Coffeyville process involves gasification of a solid fossil fuel (pet coke), shifting the resulting syngas stream, and separation of the resulting CO_2 using a pre-combustion carbon capture system. These are the same, or very similar, processes that are used in an IGCC EGU. The argument is even less convincing when considering that the Coffeyville Fertilizer process uses the Selexol™ pre-combustion capture process—the same process that Mississippi Power described as having been ''in commercial use in the chemical industry for decades'' and is expected by Mississippi Power to ''pose little technology risk'' when used at the Kemper IGCC EGU.

4. Pre-Combustion Carbon Capture Projects That Have Received DOE Assistance Through EPAct05 and Tax Credits Under IRC Section 48A

a. Kemper County Energy Facility

Southern Company's subsidiary Mississippi Power has constructed the Kemper County Energy Facility in Kemper County, MS. This is a 582 MW IGCC plant that will utilize local Mississippi lignite and includes a pre-combustion carbon capture system to reduce CO_2 emissions by approximately 65 percent. The pre-combustion solvent, Selexol™ has also been used extensively for acid gas removal (including for CO_2 removal) in various processes. In filings with the Mississippi Public Service Commission for the Kemper project, Mississippi described the carbon capture system:

> The Kemper County IGCC Project will capture and compress approximately 65% of the Plant's CO_2 [. . .] a process referred to as Selexol™ is applied to remove the CO_2 such that it is suitable for compression and delivery to the sequestration and EOR process. [. . .] *The carbon capture equipment and processes proposed in this project have been in commercial use in the chemical industry for decades and pose little technology risk.* (emphasis added)[224]

Thus, Mississippi Power believes that, because the Selexol™ process has been in commercial use in the chemical industry for decades, it is well proven, and will pose little technical risk when used in the Kemper IGCC EGU.

b. Texas Clean Energy Project and Hydrogen Energy California Project

The Texas Clean Energy Project (TCEP), a 400 MW IGCC facility located near Odessa, Texas will capture 90 percent of its CO_2, which is approximately 3 million metric tons annually. The captured CO_2 will be used for EOR in the West Texas Permian Basin. Additionally, the plant will produce urea and smaller quantities of commercial-grade sulfuric acid, argon, and inert slag, all of which will also be marketed. Summit has announced that they expect to commence construction on the project in 2015.[225] The facility will utilize the Linde Rectisol® gas cleanup process to capture carbon dioxide[226]—the same process that has been deployed for decades, including at the Dakota Gasification facility, a clear indication of the developer's confidence in that technology and further evidence that the Dakota Gasification carbon capture technology is transferable to EGUs.

F. Vendor Guarantees, Industry Statements, Academic Literature, and Commercial Availability

In this section, we describe additional information that supports our determination that CCS is adequately demonstrated to be technically feasible. This includes performance guarantees from vendors, public statements from industry officials, and review of the literature.

1. Performance Guarantees

The D.C. Circuit made clear in its first cases concerning CAA section 111 standards, and has affirmed since then,

[224] Mississippi Power Company, Kemper County IGCC Certificate Filing, Updated Design, Description and Cost of Kemper IGCC Project, Mississippi Public Service Commission (MPSC) DOCKET NO. 2009–UA–0014, filed December 7, 2009.

[225] ''Odessa coal-to-gas power plant to break ground this year'', Houston Chronicle (April 1, 2015).

[226] *http://www.texascleanenergyproject.com/project/.*

that performance guarantees from vendors are an important basis for supporting a determination that pollution technology is adequately demonstrated to be technically feasible. In 1973, in *Essex Chem. Corp.* v. *Ruckelshaus,* 486 F.2d 427, 440 (D.C. Cir. 1973), the Court upheld standards of performance for coal-fired steam generators based on ''prototype testing data and full-scale control systems, considerations of available fuel supplies, literature sources, and *documentation of manufacturer guarantees and expectations*'' (emphasis supplied)).[227] Subsequently, in *Sierra Club* v. *Costle,* the Court noted, in upholding the standard: ''we find it informative that the vendors of FGD equipment corroborate the achievability of the standard.'' [228]

Linde and BASF offer performance guarantees for carbon capture technology. The two companies are jointly marketing new, advanced technology for capturing CO_2 from low pressure gas streams in power or chemical plants. In product literature,[229] they note that Linde will provide a turn-key carbon capture plant using a scrubbing process and solvents developed by BASF, one of the world's leading technical suppliers for gas treatment. They further note that:

> The captured carbon dioxide can be used commercially for example for EOR (enhanced oil recovery) or as a building block for the production of urea. Alternatively it can be stored underground as a carbon abatement measure. [. . .] The PCC (Post-Combustion Capture) technology *is now commercially available* for lignite and hard coal fired power plant [. . .] applications.
>
> The alliance between Linde, a world-leading gases and engineering company and BASF, the chemical company, offers great benefits [. . .] Complete capture plants including CO_2 compression and drying . . . Proven and tested processes *including guarantee . . .* Synergies between process, engineering, construction and operation . . . Optimized total and operational costs for the owner. (emphasis added)

In addition, other well-established companies that either offer technologies that are actively marketed for CO_2 capture from fossil fuel-fired power plants or that develop those power plants, have publicly expressed confidence in the technical feasibility of carbon capture. For example, Fluor has developed patented CO_2 recovery technologies to help its clients reduce GHG emissions. The Fluor product literature [230] specifically points to the Econamine FG Plus℠ (EFG+) process, which uses an amine solvent to capture and produce food grade CO_2 from post-combustion sources. The literature further notes that EFG+ is also used for carbon capture and sequestration projects, that the proprietary technology provides a proven, cost-effective process for the removal of CO_2 from power plant flue gas streams, and that the process can be customized to meet a power plant's unique site requirements, flue gas conditions, and operating parameters.

Fluor has also published an article titled ''Commercially Available CO_2 Capture Technology'' in which it describes the EFG+ technology.[231] The article notes, ''Technology for the removal of carbon dioxide (CO_2) from flue gas streams has been around for quite some time. The technology was developed not to address the GHG effect but to provide an economic source of CO_2 for use in enhanced oil recovery and industrial purposes, such as in the beverage industry.''

Mitshubishi Heavy Industries (MHI) offers a CO_2 capture system that uses a proprietary energy-efficient CO_2 absorbent called KS–1™. Compared with the conventional monoethanolamine (MEA)-based absorbent, KS–1™ solvent requires less solvent circulation to capture the CO_2 and less energy to recover the captured CO_2.

In addition, Shell has developed the CANSOLV CO_2 Capture System, which Shell describes in its product literature [232] as a world leading amine based CO_2 capture technology that is ideal for use in fossil fuel-fired power plants where enormous amounts of CO_2 are generated. The company also notes that the technology can help refiners, utilities, and other industries lower their carbon intensity and meet stringent GHG abatement regulations by removing CO_2 from their exhaust streams, with the added benefit of simultaneously lowering SO_2 and NO_2 emissions.

At least one commenter suggested that it is unlikely that any vendor is willing or able to provide guarantees of the performance of the system as a whole, arguing that this shows the system isn't adequately demonstrated.[233] However, this suggestion is inconsistent with the performance guarantees offered for other air pollution control equipment. Particulate matter (PM) is controlled in the flue gas stream of a coal-fired power plant using fabric filters or electrostatic precipitators (ESP). The captured PM is then moved using PM/ash handling systems and is then transported for storage or re-use. It is unlikely that a fabric filter or ESP vendor would provide a performance guarantee for ''the system as a whole.'' Similarly, a wet-FGD scrubber vendor would not be expected to provide a performance guarantee for handling, transportation, and re-use of scrubber solids for gypsum wallboard manufacturing. CO_2 capture, transportation, and storage should, similarly, not be viewed as a single technology. Rather, these should be viewed as components of an overall system of emission reduction. Different companies will have expertise in each of these components, but it is unlikely that a single technology vendor would provide a guarantee for ''the system as a whole.''

2. Academic and Other Literature

Climate change mitigation options—including CCS—are the subject of great academic interest, and there is a large body of academic literature on these options and their technical feasibility. In addition, other research organizations (*e.g.,* U.S. national laboratories and others) have also published studies on these subjects that demonstrate the availability of these technologies. A compendium of relevant literature is provided in a Technical Support Document available in the rulemaking docket.[234]

3. Additional Statements by Technology Developers

The discussion above of vendor guarantees, positive statements by industry officials, and the academic literature supports the EPA's determination that partial CCS is adequately demonstrated to be

[227] *See* also *Portland Cement Ass'n* v. *Ruckelshaus,* 486 F.2d 375, 401–02 (D.C. Cir. 1973) (''It would have been entirely appropriate if the Administrator had justified the standards . . . on testimony from experts and vendors made part of the record.'').

[228] *Sierra Club* v. *Costle,* 657 F.2d 298, 364 (D.C. Cir. 1981). *See* also *National Petrochem & Refiners Assn* v. *EPA,* 287 F. 3d 1130, 1137 (D.C. Cir. 2002) (noting that vendor guarantees are an indicia of availability and achievability of a technology-based standard since, notwithstanding a desire to promote sales, ''a manufacturer would risk a considerable loss of reputation if its technology could not fulfill a mandate that it had persuaded EPA to adopt'').

[233] Comments of Murray Energy, p. 73, (Docket entry: EPA–HQ–OAR–2013–0495–10046).

[234] Technical Support Document—''Literature Survey of Carbon Capture Technology'', available in the rulemaking docket (Docket ID: EPA–HQ–OAR–2013–0495).

technically feasible. Industry officials have made additional positive statements in conjunction with facilities that received DOE assistance under EPAct05 or the IRC Section 48A tax credit. These statements provide further, although not necessary, support.

For example, Southern Company's Mississippi Power has stated that, because the Selexol™ process has been used in industry for decades, the technical risk of its use at the Kemper IGCC facility is minimized. For example:

The carbon capture process being utilized for the Kemper County IGCC is a commercial technology referred to as Selexol™. The Selexol™ process is a commercial technology that uses proprietary solvents, but is based on a technology and principles that have been in commercial use in the chemical industry for over 40 years. Thus, the risk associated with the design and operation of the carbon capture equipment incorporated into the Plant's design is manageable.[235]

And . . .

The carbon capture equipment and processes proposed in this project have been in commercial use in the chemical industry for decades and pose little technology risk.[236]

Similarly, in an AEP Second Quarter 2011 Earnings Conference Call, Chairman and CEO Mike Morris said of the Mountaineer CCS project:

We are encouraged by what we saw, we're clearly impressed with what we learned, and we feel that we have demonstrated to a certainty that the carbon capture and storage is in fact viable technology for the United States and quite honestly for the rest of the world going forward.[237]

Some commenters have claimed that CCS technology is not technically feasible, and some further assert that vendors do not offer performance guarantees. For example, Alstom commented:

The EPA referenced projects fail to meet the 'technically feasible' criteria. These technologies are not operating at significant scale at any site as of the rule publication. We do not support mandating technology based on proposed projects (many of which may never be built).[238]

As discussed above, vendors do in fact offer performance guarantees. We further note that, as noted above, Boundary Dam Unit #3 is a full-scale project that is successfully implementing full CCS with post-combustion capture, and Dakota Gasification is likewise a full-scale commercial operation that is successfully implementing pre-combustion CCS technology. Moreover, as we explain above, this technology and performance is transferable to the steam electric generating sector. In addition, as noted above, technology providers and technology end users have expressed confidence in the availability and performance of CCS technology.[239]

G. Response to Key Comments on the Adequacy of the Technical Feasibility Demonstration

1. Commercial Availability

Some commenters asserted that CCS cannot be considered the BSER because it is not commercially available. There is no requirement, as part of the BSER determination, that the EPA finds that the technology in question is ''commercially available.'' As we described in the January 2014 proposal, the D.C. Circuit has explained that a standard of performance is ''achievable'' if a technology or other system of emission reduction can reasonably be projected to be available to new sources at the time they are constructed that will allow them to meet the standard, and that there is no requirement that the technology ''must be in routine use somewhere.'' See *Portland Cement* v. *Ruckelshaus,* 486 F. 2d at 391; 79 FR 1463. In any case, as discussed above, CCS technology is available through vendors who provide performance guarantees, which indicates that in fact, CCS is commercially available, which adds to the evidence that the technology is adequately demonstrated to be technically feasible. In sum, ''[t]he capture and CO_2 compression technologies have commercial operating experience with demonstrated ability for high reliability.'' [240]

2. Must a technology or system of emission reduction be in full-scale use to be considered demonstrated?

Commenters maintained that the EPA can only show that a BSER is ''adequately demonstrated'' using operating data from the technology or system of emission reduction itself. This is mistaken. Since the very inception of the CAA section 111 program, courts have noted that ''[i]t would have been entirely appropriate if the Administrator had justified the standard, not on the basis of tests on existing sources or old test data in the literature, but on extrapolations from this data, on a reasoned basis responsive to comments, and on testimony from experts and vendors . . . .'' *Portland Cement* v. *Ruckelshaus,* 486 F. 2d at 401–02.[241]

In a related argument, other commenters stated that a system cannot be adequately demonstrated unless all of its component parts are operating together.[242] Courts have, in fact, accepted that the EPA can legitimately infer that a technology is demonstrated as a whole based on operation of component parts which have not, as yet, been fully integrated. *Sur Contra la Contaminacion* v. *EPA,* 202 F. 3d 443, 448 (1st Cir. 2000); *Native Village of Point Hope v Salazar* 680 F. 3d 1123, 1133 (9th Cir. 2012). Moreover, all components of CCS are fully integrated at Boundary Dam: Post-combustion full CCS is being utilized at a steam electric fossil fuel-fired plant, with captured carbon being transported via dedicated pipeline to both sequestration and EOR sites. All components are likewise demonstrated for pre-combustion CCS at the Dakota Gasification facility, except that the facility does not generate electricity, a distinction without a difference for this purpose (see Section V.E.2.a above).

The short of it is that the ''EPA does have authority to hold the industry to a standard of improved design and

[236] Mississippi Power Company, Kemper County IGCC Certificate Filing, Updated Design, Description and Cost of Kemper IGCC Project, Mississippi Public Service Commission (MPSC) DOCKET NO. 2009–UA–0014, filed December 7, 2009.

[237] American Electric Power Co Inc AEP Q2 2011 Earnings Call Transcript, Morningstar, *http://www.morningstar.com/earnings/28688913-american-electric-power-co-incaep-q2–2011-earnings-call-transcript.aspx.*

[238] Alstom Comments, p. 3 (Docket entry: EPA–HQ–OAR–2013–0495–9033).

[239] We note that before filing comments for this rule asserting that CCS is not technically feasible, Alstom issued public statements that, like the other industry officials quoted above, affirmed that CCS is technically feasible. According to an Alstom Power press release, Alstom President Phillipe Joubert, referencing results from an internal Alstom study, stated at an industry meeting: ''We can now be confident that carbon capture technology (CCS) works and that it is cost-effective''. *http://www.alstom.com/press-centre/2011/6/2011-06-16-CCS-cost-competiveness/.*

[240] ''Cost and Performance Baseline for Fossil Energy Plants Volume 1a: Bituminous Coal (PC) and Natural Gas to Electricity Revision 3'', DOE/NETL–2015/1723 (July 2015) at p. 36.

[241] More recently, the D.C. Circuit stated:

Our prior decisions relating to technology-forcing standards are no bar to this conclusion. We recognize here, as we have recognized in the past, that an agency may base a standard or mandate on future technology when there exists a rational connection between the regulatory target and the presumed innovation.

API v. *EPA,* 706 F. 3d at 480 (D.C. Cir. 2013) (citing the section 111 case *Sierra Club* v. *Costle,* 657 F. 2d at 364). The Senate Report to the original section 111 likewise makes clear that it was not intended that the technology ''must be in actual routine use somewhere.'' Rather, the question was whether the technology would be available for installation in new plants. S. Rep. No. 91–1196, 91st Cong., 2d Sess. 16 (1970).

[242] See, *e.g.,* Comments of UARG p. 5 (Docket entry: EPA–HQ–OAR–2013–0495–9666).

operational advances, so long as there is substantial evidence that such improvements are feasible and will produce the improved performance necessary to meet the standard.'' *Sierra Club,* 657 F. 2d at 364. The EPA's task is to ''identify the major steps necessary for development of the device, and give plausible reasons for its belief that the industry will be able to solve those problems in the time remaining''. *API* v. *EPA,* 706 F. 3d at 480 (quoting *NRDC* v. *EPA,* 655 F. 2d 318, 333 (D.C. Cir. 1981), and citing *Sierra Club* for this proposition).

3. Scalability of Pilot and Demonstration Projects

Commenters maintained that the EPA had no basis for maintaining that pilot and demonstration plant operations showed that CCS was adequately demonstrated. This is mistaken. In a 1981 decision, *Sierra Club* v. *Costle,* the D.C. Circuit explained that data from pilot-scale, or less than full-scale operation, can be shown to reasonably demonstrate performance at full-scale operation, although it is incumbent on the EPA to explain the necessary steps involved in scaling up a technology and how any obstacles may reasonably be surmounted when doing so.[243] The EPA has done so here.

Most obviously, the final standard reflects experience of full-scale operation of post-combustion carbon capture. Pre-combustion carbon capture is likewise demonstrated at full-scale. Second, the record explains in detail how CCS can be implemented at full-scale. The NETL cost and performance reports, indeed, contain hundreds of pages of detailed, documented explanation of how CCS can be implemented at full-scale for both utility boiler and IGCC facilities. See, for example, the detailed description of the following systems projected to be needed for a new supercritical PC boiler to capture CO_2: Coal and sorbent receiving and storage, steam generator and ancillaries, NO_X control system, particulate control, flue gas desulfurization, flue gas system, CO_2 recovery facility, steam turbine generator system, balance of plant, and accessory electric plant, and instrumentation and control systems.[244]

It is important to note that, while some commenters challenged the EPA's use of costs in the DOE/NETL cost and performance reports, commenters did not challenge the technical methodology in the work.

In addition, the AEP FEED study indicates how the development scale post-combustion CCS could be successfully scaled up to full-scale operation. See Section V.D.3.b above.

Tenaska Trailblazer Partners, LLC also prepared a FEED study[245] for the carbon capture portion of the previously proposed Trailblazer Energy Center, a 760 MW SCPC EGU that was proposed to include 85 to 90 percent CO_2 post-combustion capture. Tenaska selected the Fluor Econamine FG Plus℠ technology and contracted Fluor to conduct the FEED study. One of the goals of the FEED study was to ''[c]onfirm that scale up to a large commercial size is achievable.'' Tenaska ultimately concluded that the study had achieved its objectives resulting in ''[c]onfirmation that the technology can be scaled up to constructable design at commercial size through (1) process and discipline engineering design and CFD (computational fluid dynamics) analysis, (2) 3D model development, and (3) receipt of firm price quotes for large equipment.''

Much has been written about the complexities of adding CCS systems to fossil fuel-fired power plants. Some of these statements come from high government officials. Some commenters argued that the EPA minimized—or even ignored—these publically voiced concerns in the discussion presented in the January 2014 proposal. On the contrary, the EPA has not minimized or ignored these complexities, but it is important to realize that most of these statements come in a different context: Namely, implementing full CCS, or retrofitting CCS onto existing power plants. For example, in the Final Report of the President's CCS Task Force, it was noted that ''integration of CCS technologies with the power cycle at generating plants can present significant cost and operating issues that will need to be addressed to facilitate widespread, cost-effective deployment of CO_2 capture.''[246] This statement—and most of the statements in this vein—are in reference to implementation of full CCS systems that capture more than 90 percent of the CO_2 and many reference widespread implementation of such technology. The EPA has addressed the concerns regarding ''significant cost'' by finalizing a standard that relies on partial CCS which we show, in this preamble and in the supporting record, can be implemented at a reasonable, non-exorbitant cost. The Boundary Dam facility, in particular, demonstrates that the complexities of implementing CCS—even full CCS—can be overcome.

Concerns regarding ''operating issues'' are also often associated with implementation of full CCS—and often with implementation of full CCS as a retrofit to an existing source. Implementation of CCS at some existing sources may be challenging because of space limitations. That should not be an issue for a new facility because the developer will need to ensure that adequate space is available during the design of the facility. Constructing CCS technology at an existing facility can be challenging even if there is adequate space because the positioning of the equipment may be awkward when it must be constructed to fit with the existing equipment at the plant. Some commenters noted the challenges of diverting steam from the plant's steam cycle. Again, that is primarily an issue with full CCS implementation as a retrofit to an existing source. Consideration of steam requirements for solvent regeneration can be factored into the design of a new facility. We also note that issues of integration with the plant's steam cycle are less challenging when implementing partial CCS.

Some commenters noted conclusions and statements from the CCS Task Force report as contradictory to the EPA's determination of that partial CCS is technically feasible and adequately demonstrated. However, the EPA mentioned in the January 2014

[243] *Sierra Club* v. *Costle,* 657 F. 2d 298, 341 n.157 and 380–84 (D.C. Cir. 1981). See also *Essex Chemical Corp.* v. EPA, 486 F. 2d at 440 (upholding achievability of standard of performance for coal-burning steam generating plants which hadn't been achieved in full-scale performance based in part on ''prototype testing data'' which, along with vendor guarantees, indicated that the promulgated standard was achievable); *Weyerhaeuser* v. *Costle,* 590 F. 2d 1054 n. 170 (D.C. Cir. 1978) (use of pilot plant information to justify technology-based standard for Best Available Technology Economically Achievable under section 304 of the Clean Water Act); *FMC Corp.* v. *Train,* 539 F. 2d 973, 983–84 (4th Cir. 1976)(same).

[245] Final front-end engineering design (FEED) study report'', available at: *www.globalccsinstitute.com/publications/tenaska-trailblazer-front-end-engineering-design-feed-study.*

[246] Report of the Interagency Task Force on Carbon Capture and Storage (August 2010), page 28. See also DOE Carbon Capture Web site: ''First generation CO_2 capture technologies are currently being used in various industrial applications. However, in their current state of development, these technologies are not ready for implementation on coal-based power plants because they have not been demonstrated at appropriate scale, requisite approximately one-third of the plant's steam power to operate, and are cost prohibitive.'' (Dec 2010); and Testimony of Dr. S. Julio Friedmann, Deputy Asst. Secretary of Energy for Clean Coal, U.S. Dept. of Energy, before the Subcommittee on Oversight and Investigations Committee on Energy and Commerce (Feb. 11, 2014): CCS technologies at new coal-fired plants would result in ''something like a 70 to 80 percent increase on the wholesale price of electricity.''

proposal, and we emphasize again here, that the Task Force was charged with proposing a plan to overcome the barriers to the widespread, cost-effective deployment of CCS by 2020. Implicit in all of the conclusions, recommendations, and statements of that final report is a goal of widespread implementation of full CCS—including retrofits of existing sources. This final action does not require—nor does it envision—the near term widespread implementation of full CCS. On the contrary, as we have noted several times in this preamble, the EPA and others predict that very few, if any, new coal-fired steam generating EGUs will be built in the near term.

Thus, the EPA has provided an ample record supporting its finding that partial CCS is feasible at full-scale. As in *Sierra Club,* the EPA has presented evidence from full-scale operation, smaller scale installations, and reasonable, corroborated technical explanations of how the BSER can be successfully operated at full scale. See 657 F. 2d at 380, 382. Indeed, the EPA has more evidence here, as the baghouse standard in *Sierra Club* was justified based largely on less-than-full-scale operation. See 657 F.2d at 380 (there was only ''limited data from one full scale commercial sized operation''), 376 (''the baghouses surveyed were installed at small plants''), and 341 n.157; see also Section V.L, explaining why CCS is a more developed technology than FGD scrubbers were at the inception of the 1971 NSPS for this industry.

H. Consideration of Costs

CAA section 111(a) defines ''standard of performance'' as an emission standard that reflects the best system of emission reduction that is adequately demonstrated, ''taking into account [among other things] the cost of achieving such reduction.'' Based on consideration of relevant cost metrics in the context of current market conditions, the EPA concludes that the costs associated with the final standard are reasonable.

In reaching this determination, the EPA considered a host of different cost metrics, each of which illuminated a particular aspect of cost consideration, and each of which demonstrated that the costs of the final standard are reasonable. The EPA evaluated capital costs on a per-plant basis, responding to public comment that noted the particular significance of capital costs for coal-fired EGUs. As in the proposal, the EPA also considered how the standard would affect the LCOE for individual affected EGUs as well as national, overall cost impacts of the standard. The EPA found that the anticipated cost impacts are similar to those in other promulgated NSPS—including for this industry—that have been upheld by the D.C. Circuit. The costs are also comparable to those of other base load technologies that might be selected on comparable energy portfolio diversity grounds. Finally, the EPA does not anticipate any significant overall nationwide costs or cost impacts on consumers because projected new generating capacity is expected to meet the standards even in the baseline. Accordingly, after considering costs from a range of different perspectives, the EPA concludes that the costs of the final standard are reasonable.

1. Rationale at Proposal

At proposal, the EPA evaluated the costs of new coal-fired EGUs implementing full (90 percent) and partial CCS. The EPA compared the predicted LCOE of those units against the LCOE of other new dispatchable technologies often considered for new base load power with fuel diversity, primarily including a new nuclear plant, as well as a new biomass-fired EGU. See 79 FR at 1475–78. The levelized cost for a new steam EGU implementing full CCS was higher than that of the other non-NGCC dispatchable technologies, and we did not propose to identify a new steam EGU implementing full CCS as BSER on that basis. Id. at 1477. The EPA proposed that a standard of performance of 1,100 lb CO_2/MWh-g, reflecting a new steam EGU implementing partial CCS, could be achieved at reasonable cost based on a comparison of the projected LCOE associated with achieving this standard with the alternative dispatchable technologies just mentioned. In the January 2014 proposal, the EPA used LCOE projections for new fossil fuel-fired EGUs from a series of studies conducted by the DOE NETL. These studies—the ''cost and performance studies''—detail expected costs and performance for a range of technology options both with and without CCS.[247] The EPA used LCOE projections for non-fossil dispatchable generation—specifically nuclear and biomass—from the EIA AEO 2013. See 79 FR 1435.

In addition, the EPA proposed that the costs to implement partial CCS were reasonable because a segment of the industry was already accommodating them. *Id.* at 1478. The EPA also considered anticipated decreases in the cost of CCS technologies, the availability of government tax benefits, loan guarantees, and direct expenditures, and the opportunity to generate income from sale of captured CO_2 for EOR. *Id.* at 1478–80. The EPA noted that the proposed standard was not expected to lead to any significant overall costs or effects on electricity prices. *Id.* at 1480–81. The EPA also acknowledged the overall market context, noting that fossil steam EGUs, even without any type of CCS, are significantly more expensive than new natural gas-fired electricity generation, but that some electricity suppliers might include new coal-fired generating sources in their generation portfolio, and would pay a premium to do so. *Id.* at 1478.

2. Brief Summary of Cost Considerations Under CAA Section 111

As explained above, CAA section 111(a) directs the EPA to ''tak[e] into account the cost'' of achieving reductions in determining if a particular system of emission reduction is the best that is adequately demonstrated. The statute does not provide further guidance on how costs should be considered, thus affording the EPA considerable discretion in choosing a means of cost consideration. In addition, it should be noted that in evaluating the reasonableness of costs, the D.C. Circuit has upheld application of a variety of metrics, such as the amount of control costs or product price increases. See Section III.H.3.(b).(1) above.

Following the directive of CAA section 111(a) and applicable precedent, the EPA evaluated relevant metrics and context in considering the reasonableness of the regulation's costs. The EPA's findings demonstrate that the costs of the selected final standard are reasonable.

3. Current Context

The EIA projects that few new coal-fired EGUs will be constructed over the coming decade and that those that are built will apply CCS, reflecting the broad consensus of government, academic, and industry forecasters.[248]

[247] For the cost estimates in the January 2014 proposal, the EPA used costs for new SCPC and IGCC units utilizing bituminous coal from the reports ''Cost and Performance Baseline for Fossil Energy Plants Volume 1: Bituminous Coal and Natural Gas to Electricity'', Revision 2, Report DOE/NETL–2010/1397 (November 2010) and ''Cost and Performance of PC and IGCC Plants for a Range of Carbon Dioxide Capture'', DOE/NETL–2011/1498, May 27, 2011. Additional cost and performance information can be found in additional volumes that are available at *http://www.netl.doe.gov/research/energy-analysis/energy-baseline-studies.*

[248] Even in its sensitivity analysis that assumes higher natural gas prices and electricity demand, EIA does not project any additional coal beyond its

The primary reasons for this projected trend include low electricity demand growth, highly competitive natural gas prices, and increases in the supply of renewable energy. In particular, U.S. electricity demand growth has followed a downward sloping trend for decades with future growth expected to remain very low.[249] Furthermore, the EPA projects that, for any new fossil fuel-fired electricity generating capacity that is constructed through 2030, natural gas will be the overwhelming fuel of choice.[250] See RIA chapter 4.

The EIA's projection is confirmed by an examination of Integrated Resource Plans (IRPs) contained in a TSD in the docket for this rulemaking. IRPs are used by utilities to plan operations and investments in both owned generation and power purchase agreements over long time horizons. Though IRPs do not demonstrate a utility's intent to pursue a particular generation technology, they do indicate the types of new generating technologies that a utility would consider for new generating capacity. The EPA's survey of recent IRPs demonstrates that across the nation, utilities are not actively considering constructing new coal-fired generation without CCS in the near term.

Accordingly, construction of new uncontrolled coal-fired generating capacity is not anticipated in the near term, even in the absence of the standards of performance we are finalizing in this rule, except perhaps in certain limited circumstances.

In particular, commenters suggested that some developers might choose to build a new coal-fired EGU, despite its not being cost competitive, in order to achieve or maintain ''fuel diversity.'' Fuel diversity could provide important value by serving as a hedge against the possibility that future natural gas prices will far exceed projected levels.

Public announcements, including IRPs, confirm that utilities are interested in technologies that could provide or preserve fuel diversity within generating fleets. The Integrated Resource Plan TSD [251] notes examples where the goal of fuel diversity was considered in IRPs; in many cases, these plans considered new generation that would not rely on natural gas. In particular, several utilities that considered fuel diversity in developing their IRPs included new nuclear generation as a potential future generation strategy.

In addition, the EPA recognizes that there may be interest in constructing a new combined-purpose coal-fired facility that would generate power as well as produce chemicals or CO_2 for use in EOR projects. These facilities would similarly provide additional value due to the revenue streams from saleable chemical products or CO_2.[252]

As demonstrated below, the agency carefully considered the reasonableness of costs in identifying a standard that allows a path forward for such projects and rejects more stringent options that would impose potentially excessive costs. In fact, based on this careful consideration of costs, the EPA is finalizing a substantially lower cost standard than the one we proposed. At the same time, we note the unusual circumstances presented here, where the record, and indeed simple consideration of electricity market economics, demonstrates that non-economic factors such as fuel diversity are likely to drive any construction of new coal-fired generation. See also RIA chapter 4 (documenting that electric power companies will choose to build new EGUs that comply with the regulatory requirements of this rule even in its absence, primarily NGCC units, because of existing and expected market conditions). Under these circumstances, the EPA's consideration of costs takes into account that higher costs can be viewed as reasonable when costs are not a paramount factor in new coal capacity decisions. At the same time, the EPA acknowledges and agrees with the public comments that such an argument, left unconstrained, could justify any standard and obviate all cost considerations.[253] The EPA has reasonably cabined its consideration of costs by examining costs for comparable non-NGCC base load dispatchable technologies, as well as by considering capital costs and other cost metrics.[254] This cost-reasonable standard will preserve the opportunity for such projects while driving new technology deployment.[255]

4. Consideration of Capital Costs

As noted above, CAA section 111 does not mandate any particular method for evaluating costs, leaving the EPA with significant discretion as to how to do so. One method is to consider the incremental capital costs required for a unit to achieve the standard of performance.

The EPA included information on capital cost at proposal and, as discussed further below, the LCOE metric relied upon at proposal and in this final rulemaking incorporates and fully reflects capital costs.[256] Nonetheless, extensive comment from industry representatives and others noted persuasively that fossil-steam units are very capital-intensive projects and recommended that a separate metric, solely of capital costs, be considered by the EPA in evaluating the final standard's costs. Accordingly, the EPA has considered the final standard's impact on the capital costs of new fossil-steam generation. The EPA has determined that the incremental capital costs of the final standard are reasonable because they are comparable to those in prior regulations and to industry experience, and because the fossil steam electric power industry has been shown to be able to successfully absorb capital costs of this magnitude in the past.

Prior new source performance standards for new fossil steam generation units have had significant—yet manageable—impacts on the capital costs of construction. The EPA estimated that the costs for the 1971 NSPS for coal-fired EGUs were $19M for a 600 MW plant, consisting of $3.6M for particulate matter controls, $14.4M for sulfur dioxide controls, and $1M for nitrogen oxides controls, representing a 15.8 percent increase in capital costs

reference case until 2023, in a case where power companies assume no GHGs emission limitations, and until 2024 in a case where power companies do assume GHGs emission limitations. EIA, ''Annual Energy Outlook 2015,'' DOE/EIA–0383(2015), April 2015, ''[v]ery little unplanned coal-fired capacity is added across all the AEO 2015 cases'', p. 26.

[249] EIA, ''Annual Energy Outlook 2015,'' DOE/EIA–0383(2015), April 2015, p. 8.

[250] Integrated Planning Model (IPM) run by the EPA (v. 5.15) Base Case, available at *www.epa.gov/airmarkets/powersectormodeling.html*.

[251] Technical Support Document—''Review of Electric Utility Integrated Resource Plans'' (May 2015), available in the rulemaking docket EPA–HQ–OAR–2013–0495.

[252] The EPA may, of course, consider revenues generated as a result of application of pollution control measures in assessing the costs of a best system of emission reduction. See *New York* v. *Reilly,* 969 F.2d 1147, 1150–52 (D.C. Cir. 1992).

[253] See, *e.g.,* Comments of Murray Energy, pp. 79–80 (Docket entry: EPA–HQ–OAR–2013–0495–10046).

[254] Indeed, the EPA is not only adopting a standard predicated on a lower rate of carbon capture than proposed, but also rejecting full CCS for reasons of cost. See Section V.P below. Thus, although the EPA has reasonably taken into account the current economic posture of the industry whereby new capacity is not cost-competitive and so would be added for non-economic reasons, it is not using that fact to negate consideration of cost here. See also Section V.I.4 below responding to comments that the incremental cost of partial CCS could prove the difference between constructing and not constructing new coal capacity.

[255] In this rulemaking, our determination that the costs are reasonable means that the costs meet the cost standard in the case law no matter how that standard is articulated, that is, whether the cost standard is articulated through the terms that the case law uses, *e.g.,* ''exorbitant,'' ''excessive,'' etc., or through the term we use for convenience, ''reasonableness.''

[256] See RIA chapter 4.5.4 and Fig. 4–3; see also ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (July 2015) p. 17.

above the $120M cost of the plant. See 1972 Supplemental Statement, 37 FR 5767, 5769 (March 21, 1972). The D.C. Circuit upheld the EPA's determination that the costs associated with the final 1971 standard were reasonable, concluding that the EPA had properly taken costs into consideration. *Essex Cement* v. *EPA,* 486 F. 2d at 440.

In reviewing the 1978 NSPS for coal-fired EGUs, the D.C. Circuit recognized that ''EPA estimates that utilities will have to spend tens of billions of dollars by 1995 on pollution control under the new NSPS'' and that ''[c]onsumers will ultimately bear these costs.'' *Sierra Club,* 657 F.2d at 314. The court nonetheless upheld the EPA's determination that the standard was reasonable. *Id.* at 410.

The cost and investment impacts of the 1978 NSPS on electric utilities were subsequently evaluated in a 1982 Congressional Budget Office (CBO) retrospective study.[257] The CBO study highlighted that installation of scrubbers—capital intensive pollution control equipment that had ''in effect'' been mandated by the 1978 NSPS—increased capital costs for new EGUs by 10 to as much as 20 percent.[258] The study further noted that air pollution control requirements in general had led to an estimated 37.5 to 45 percent increase in capital costs for coal-fired power plant installation between 1971 and 1980.[259]

The study retrospectively confirmed the EPA's conclusion that imposition of these costs was reasonable, finding that ''utilities with commitments to pollution control tend to fare no better and no worse than all electric utilities in general.'' [260] In assessing the capital cost impacts of the suite of 1970s EPA air pollution standards, the report concluded that ''though controlling emissions is indeed costly, it has not played a major role in impairing the utilities' financial position, and is not likely to do so in the future.'' [261]

In NSPS standards for other sectors, the EPA's determination that capital cost increases were reasonable has similarly been upheld. In *Portland Cement Association,* the D.C. Circuit upheld the EPA's consideration of costs for a standard of performance that would increase capital costs by about 12 percent, although the rule was remanded due to an unrelated procedural issue. 486 F.2d at 387–88. Reviewing the EPA's final rule after remand, the court again upheld the standards and the EPA's consideration of costs, noting that ''[t]he industry has not shown inability to adjust itself in a healthy economic fashion to the end sought by the Act as represented by the standards prescribed.'' *Portland Cement* v. *Ruckelshaus,* 513 F. 2d 506, 508 (D.C. Cir. 1975).

The capital cost impacts incurred under these prior standards are comparable in magnitude on an individual unit basis to those projected for the present standard. We predict that the incremental costs of control for a new highly efficient SCPC unit to meet the final emission limitation of 1,400 lb CO_2/MWh-g would be an increase of 21–22 percent for capital costs. See Table 7 below.[262 263]

TABLE 7—COMPARISON OF ESTIMATED CAPITAL COSTS FOR A NEW SCPC AND A NEW SCPC MEETING THE FINAL STANDARD OF PERFORMANCE [264]

	Total overnight cost (2011$/kW)	Total as-spent capital (2011$/kW)
SCPC—no CCS	2,507	2,842
SCPC—partial CCS (1,400 lb CO_2/MWh-g)	3,042	3,458
Incremental cost increase	21.3%	21.7%

By comparison, a SCPC that co-fires with natural gas to meet the final standard of 1,400 lb CO_2/MWh-g would not result in an increase in capital cost over the uncontrolled SCPC. A compliant IGCC unit co-firing natural gas is predicted to have Total Overnight Cost of $3,036/kW—an approximately 21.1 percent increase in capital over the uncontrolled SCPC unit.

5. Consideration of Costs Based on Levelized Cost of Electricity

As in the proposal, the EPA also considered the reasonableness of costs by evaluating the LCOE associated with the final standard. The LCOE is a commonly used economic metric that takes into account all costs to construct and operate a new power plant over an assumed time period and an assumed capacity factor. The LCOE is a summary metric, which expresses the full cost of generating electricity on a per unit basis (*i.e.,* megawatt-hours). Levelized costs are often used to compare the cost of different potential generating sources. While capital cost is a useful and relevant metric for capital-intensive fossil-steam units, the LCOE can serve as a useful complement because it takes into account all specified costs (operation and maintenance, fuel—as well as capital costs), over the whole lifetime of the project.

As previously mentioned, at proposal the EPA relied on LCOE projections for fossil fuel-fired EGUs (with and without CCS) from DOE/NETL reports detailing the results of studies evaluating the costs and performance of such units. For non-fossil dispatchable generating sources, the EPA relied on LCOE projections from EIA AEO 2013. For this final action, the EPA is relying on updated costs from the same sources. The NETL has provided updated cost and performance information in recently published revisions of reports used in the January 2014 proposal.[265] The updated SCPC cases in the reports include up-to-date cost and performance information from recent vendor quotes

[260] *Id.* at xvi.

[261] *Id.*

[262] We explain at Section V.I.2 and 3 below the reasonableness of the EPA's cost projections here.

[263] We estimate that a new SCPC EGU using low rank coal (subbituminous coal or dried lignite) would incur a capital cost increase of 23 percent to meet the final standard. See ''Achievability of the Standard for Newly Constructed Steam Generating EGUs'' technical support document available in the rulemaking docket.

[264] Exhibit A–3 (p. 18); ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015).

[265] ''Cost and Performance Baseline for Fossil Energy Plants: Volume 1a'' Bituminous Coal (PC) and Natural Gas to Electricity, Revision 3, U.S. DOE NETL report (2015) and ''Cost and Performance Baseline for Fossil Energy Plants: Volume 1b: Bituminous Coal (IGCC) to Electricity, Revision 2—Year Dollar Update, U.S. DOE NETL report (2015). Both reports are available at *www.netl.doe.gov/research/energy-analysis/energy-baseline-studies.*

and implementation of the Shell Cansolv post-combustion capture process—the process that is currently being utilized at the Boundary Dam #3 facility. The IGCC cost and performance results in the updated reports utilize vendor quotes from the previous report; the costs are adjusted from $2007 to $2011. Important also to note is that DOE/NETL utilized conventional financing for cases without CCS and utilized high-risk financial assumptions for cases that include CCS.[266]

Using information from those reports, the DOE/NETL prepared a separate report summarizing a study that evaluated the cost and performance of various plants designed to meet a range of CO_2 emissions by varying the CO_2 capture rate (*i.e.,* the level of partial capture).[267] The EIA also updated LCOE projections from AEO 2013 to AEO 2014 and again in AEO 2015. Those are discussed in more detail in Section V.I.2.b and d. In evaluating costs for the final standards in this action, the EPA relied primarily on the updated NETL LCOE projections for new fossil fuel-fired EGUs provided in the reports described above and on the LCOE projections for non-fossil, dispatchable generating options from the EIA's AEO 2015.[268] Here, the EPA compared the LCOE of the final standard to the LCOE of analogous potential sources of intermediate and base load power. This comparison demonstrated that the LCOE for a fossil steam unit with partial CCS is within the range of the LCOE of comparable alternative non-NGCC generation sources. In particular, nuclear and biomass generation, which similarly provide both base load power and fuel diversity, have comparable LCOE. The EPA concludes that an evaluation of the LCOE also demonstrates that the costs of the final standard are reasonable.

a. Calculation of the LCOE

The LCOE of a power plant source is calculated with the expected lifetime and average capacity factor, and represents the average cost of producing a megawatt-hour (MWh) of electricity over the expected lifetime of the asset.

The LCOE incorporates all specified costs, and therefore is dependent on the project's capital costs, the fixed and variable operating and maintenance (O&M) costs, the fuel costs, the costs to finance the project, and finally on the assumed capacity factor.[269] The relative contribution of each of these inputs to LCOE will vary among the generating technologies. For example, the LCOE for a new supercritical PC plant or a new IGCC plant is influenced more by the capital costs (and thus the financing assumptions) and less on fuel costs than a comparably sized new NGCC facility which would require less capital investment but would be more influenced by assumed fuel costs.

b. Use of the LCOE

The utility industry and electricity sector regulators often use levelized costs as a summary measure for comparing the cost of different potential generating sources. Use of the LCOE as a comparison measure is appropriate where the facilities being compared would serve load in a similar manner.

The value of generation, as reflected in the wholesale electricity price, can vary seasonally and over the course of a day. In addition, electricity generation technologies differ on dimensions other than just cost, such as ramping efficiency, intermittency, or uncertainty in future fuel costs. These other factors are also important in determining the value of a particular generation technology to a firm, and accordingly cost comparisons between two different technologies are most appropriate and insightful when the technologies align along these other dimensions. Isolating a comparison of technologies based on their LCOE is appropriate when they can be assumed to provide similar services and similar values of electricity generated.

As we indicated in the proposal, we evaluated publicly available IRPs and other available information (such as public announcements) to determine the types of technologies that utilities are considering as options for new generating capacity.[270] In the near future, the largest sources of new fossil fuel-fired power generation are expected to be new NGCC units. But the IRPs also suggested that utilities are interested in a range of technologies that can be used to provide or preserve fuel diversity within the utilities' respective generating fleets.[271] [272] The options for

[266] Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015) p. 18.

[267] ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015). Available at *http://www.netl.doe.gov/research/energy-analysis/energy-baseline-studies.*

[268] *http://www.eia.gov/forecasts/aeo/electricity_generation.cfm.*

[269] See, *e.g.* ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015) at p. 17.

[270] See also discussion at V.C.3 above. The IRPs do not provide an indication of the utility's intention to pursue a particular generation technology. However, the IRPs do provide an indication of the types of new generating technologies that the utility would consider for new generating capacity.

[271] See, *e.g.* the 2014 IRP of Dominion Virginia Power:

With those factors in mind, the 2014 Plan presents two paths forward for resource expansion: a Base Plan, designed using least-cost planning methods and consistent with the requirements of Rule R8–60 for utility plans to provide ''reliable electric utility service at least cost over the planning period;'' and a Fuel Diversity Plan, which includes a broader array of low or zero-emissions options. While the Fuel 2 Diversity Plan currently represents a higher cost option at today's current and projected commodity prices, its resource mix provides the important benefits of greater fuel diversity and lower carbon intensity. Therefore, the Company will continue reasonable development of the more diverse and lower carbon intensive options in the Fuel Diversity Plan and will be ready to implement them as conditions warrant. . . . The Fuel Diversity Plan places a greater reliance on generation sources with little or no carbon emissions and is less reliant on natural gas. While following the resource expansion scenario in the least-cost Base Plan, the Company will continue evaluation and reasonable development efforts for the following projects identified in the Fuel Diversity Plan. These include:

Continued development of a third nuclear reactor at North Anna Power Station, using reactor technology supplied by GE-Hitachi Nuclear Energy Americas LLC. While the Company has made no final commitment to building this unit, it recognizes the many operational and environmental benefits of nuclear power and continues to actively develop the project. Our customers have benefitted from the existing nuclear fleet for many years now, and they will continue to benefit from the existing fleet for many years in the future. A final decision on construction of North Anna Unit 3 will not be made until after the Company receives a Combined Operating License or COL from the U.S. Nuclear Regulatory Commission, now expected in 2016. The Fuel Diversity Plan includes the addition of North Anna Unit 3's 1,453 megawatts of zero-emissions generation by 2028. If constructed, the project would provide a dramatic boost to the regional economy.

Additional reliance on renewable energy, including 247 megawatts of onshore wind capacity at sites in western Virginia and a 12 megawatt offshore wind demonstration project by 2018.

An additional 559 megawatts of nameplate solar capacity, including several new Company-owned photovoltaic CPV) installations. Solar PV costs have declined significantly in recent years, making utility-scale solar much more cost-effective than distributed solar, and continuing technological development, in which the Company is participating, may allow it to become a more cost-effective source of intermittent generation in the future.cover letter for 2014 IRP—*https://www.dom.com/library/domcom/pdfs/corporate/integrated-resource-planning/va-irp-2014.pdf.*

[272] Another example are the recent statements of officials of Tri-State Generation and Transmission, available at *http://www.wyofile.com/coal-power/*, including:

''We are considering nuclear, coal and natural gas,'' said Ken Anderson, general manager of Tri-State at a conference in October [2010], a position that Tri-State representatives say remains. ''We will pick our technology once policy certainty comes about,'' he added. . . . Longer-term forecasts are based on assumptions that may or may not prove well-founded. Because of this uncertainty, Tri-State believes it must retain options for all fuels and technologies.

''We will not take anything off the table,'' [Tri-State spokesman Lee] Boughey said. That includes coal. ''Coal is an affordable and plentiful resource, but it does come with challenges—and we are

Continued

dispatchable generation that can provide intermediate or base-load power and fuel diversity would include new fossil steam units, new nuclear power, and biomass-fired generation.

Thus, in both the proposal and in this final rule, the EPA is comparing the LCOE of technologies that would be reasonably anticipated to be designed, constructed, and operated for a similar purpose—that is, to provide dispatchable base load power that provides fuel diversity by relying on a fuel source other than natural gas. In contrast, it may not be appropriate to compare the LCOE for a base load coal-fired plant with that of a peaking natural gas-fired simple cycle turbine. Similarly, it may not be appropriate to compare LCOE for dispatchable technologies (*i.e.,* generating sources that can be ramped up or down as needed, *e.g.,* coal-fired units, NGCC units, nuclear) with that of non-dispatchable technologies (*i.e.,* generating sources that cannot be reliably ramped up or down to meet demand, *e.g.,* wind, solar.)

c. Reasonableness of Costs Based on LCOE

An examination of the LCOE of analogous sources of base load, dispatchable power shows that the final standard's LCOE is comparable to that of other sources, as shown in Table 8 below. As mentioned earlier and discussed in further detail below, these estimates rely most heavily on DOE/NETL cost projections for fossil fuel generating technologies and on the updated EIA AEO 2015 for non-fossil generation technologies. Recent estimates from Lazard [273] [274] are also provided for nuclear and biomass generation options.

TABLE 8—PREDICTED COST AND CO_2 EMISSION LEVELS FOR A RANGE OF POTENTIAL NEW GENERATION TECHNOLOGIES [275]

New generation technology	Emission lb CO_2/MWh-g	LCOE* $/MWh
SCPC—no CCS (bit)	1,620	76–95
SCPC—no CCS (low rank)	1,740	75–94
SCPC + ~16% partial CCS (bit)	1,400	92–117
SCPC + ~23% partial CCS (low rank)	1,400	95–121
Nuclear (EIA)	0	87–115
Nuclear (Lazard)	0	92–132
Biomass (EIA) [276]	—	94–113
Biomass (Lazard)	—	87–116
IGCC	1,430	94–120
NGCC	1,000	** 52–86

* The LCOE ranges presented in Table 8 include an uncertainty of −15%/+30% on capital costs for SCPC and IGCC cases and an uncertainty of −10%/+30% on capital costs for nuclear and biomass cases from EIA. This reflects information provided by EIA. Nuclear staff experts expect that nuclear plants currently under construction would not have capital costs under estimates and that one could expect to see a 30% "upside" variation in capital cost. There is also insufficient market data to get a good statistical range of potential capital cost variation (*i.e.* only 2 plants under construction, neither complete). The nuclear cost estimates from Lazard likewise reflect the range of expected nuclear costs. LCOE estimates displayed in this table for SCPC units with partial CCS as well as for IGCC units use a higher financing cost rate in comparison to the SCPC unit without capture.[277]

** This range represents a natural gas price from $5/MMBtu to $10/MMBtu.

As shown in Table 8, we project that the LCOE for new fossil steam capacity meeting the final 1,400 lb CO_2/MWh-g standard to be substantially similar to that for a new nuclear unit, the principal other alternative to natural gas to provide new base load power. This is the case for new units firing bituminous and subbituminous coals and dried lignite. This is another demonstration that the costs of the final standard are reasonable because nuclear and fossil steam generation each would serve an analogous role in adding dispatchable base load generation diversity—or at least non-NGCC alternatives—to a power provider's portfolio; hence, they are reasonably viewed as comparable alternatives.[278]

As previously mentioned, the DOE/NETL assumed conventional financing

looking to different technology that can address some of those challenges while continuing to provide a reliable and affordable power supply,'' Boughey said. ''Some critics believe we shouldn't be looking at resource options that include coal, and even nuclear technology,'' Boughey added. ''We believe it would be irresponsible not to consider these fuels or technologies as part of an affordable, reliable and responsible resource portfolio.''

[273] Lazard's Levelized Cost of Energy Analysis—Version 8.0; September 2014; available at: *http://www.lazard.com/media/1777/levelized_cost_of_energy_-_version_80.pdf* and in the rulemaking docket.

[274] Lazard is one of the world's preeminent financial advisory and asset management firms. Lazard's Global Power, Energy & Infrastructure Group serves private and public sector clients with advisory services regarding M&A, financing, and other strategic matters. The group is active in all areas of the traditional and alternative energy industries, including regulated utilities, independent power producers, advanced transportation technologies, renewable energy technologies, meters, smart grid and energy efficiency technologies, and infrastructure. *http://www.marketwatch.com/story/lazard-releases-new-levelized-cost-of-energy-analysis-2014-09-18.*

[275] LCOE cost estimates for SCPC and IGCC cases come from ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'' DOE/NETL–2015/1720 (June 22, 2015). Cost and performance for low rank SCPC is adapted from ''Cost and Performance Baseline for Fossil Energy Plants Volume 3 Executive Summary: Low Rank Coal and Natural Gas to Electricity'', DOE/NETL–2010/1399 (September 2011). LCOE cost estimates for nuclear and biomass are derived from ''Levelized Cost and Levelized Avoided Cost of New Generation Resources in the Annual Energy Outlook 2015'', June 2015, *www.eia.gov/forecasts/aeo/pdf/electricity_generation.pdf.* LCOE cost estimates for NGCC technology are EPA estimates based on a range of potential natural gas prices.

[276] Table 8 includes LCOE figures for biomass-fired generation, a potential sources of dispatchable base load power that is not fueled by natural gas. The EPA includes this information for completeness, while noting that biomass-fired units in operation in the U.S. are smaller scale and thus are not as robust analogues as nuclear power. CO_2 emissions are not provided for biomass units because different biomass feedstocks have different net CO_2 emissions; therefore a single emission rate is not appropriate to show in Table 8.

[277] ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015) at p. 18.

[278] LCOE comparisons of reasonably available compliance alternatives—IGCC with natural gas co-firing, and SCPC with natural gas co-firing—are found below in Table 9. As shown there, these alternatives are either lower cost than SCPC with partial CCS, or of comparable cost.

for cases without CCS and assumed high-risk financing for cases with some level of CCS. Specifically a high-risk financial structure resulting in a capital charge factor (CCF) of 0.124 is used in the study to evaluate the costs of all cases with CO_2 capture (non-capture case uses a conventional financial structure with a CCF of 0.116).[279] As a comparison of how this affects the resulting DOE/NETL costs, a new SCPC utilizing 16 percent partial CCS is projected to have an LCOE of $99/MWh (including transportation and storage costs; does not include the range for uncertainty). That projected LCOE includes the ''high risk financial assumptions''. If the LCOE for that unit were to be calculated using the ''conventional financing assumptions'', the resulting LCOE would be $94/MWh.

This approach is in contrast to that taken by the EIA which applies a 3-percentage-point cost of capital premium (the 'climate uncertainty adder') to non-capture coal plants to reflect the market reaction to potential future GHG regulation.

Under current and anticipated market conditions, power providers that are considering costs alone in choosing a fuel source for new intermediate or base load generation will choose natural gas because of its competitive current and projected price. However, as noted in Section V.H.3, public IRPs indicate that utilities are considering and selecting technologies that could provide or preserve fuel diversity within generating fleets. For example, utilities have been willing to pay a premium for nuclear power in certain circumstances, as indicated by the recent new constructions of nuclear facilities and by IRPs that include new nuclear generation in their plans. In general, fossil steam and nuclear generation each can provide dispatchable, base load power while also maintaining or increasing fuel diversity.[280] Utilities may be willing to pay a premium for these generation sources because they could serve as a hedge against the possibility that future natural gas prices will far exceed projected levels. Accordingly, the LCOE analysis demonstrates that the final standard's costs are in line with power sources that provide analogous services—dispatchable base load power and fuel diversity.

We further note a number of conservative elements of the costs we used in making this comparison. In particular, these estimates include the highest value in the projected range of potential costs for partial CCS. They do not reflect revenues which can be generated by selling captured CO_2 for enhanced oil recovery, and reflect the costs of partial CCS rather than potentially less expensive alternative compliance paths such as a utility boiler co-firing with natural gas. See also V.H.7 and 8 below.

6. Overall Costs and Economic Impacts

As noted above, an assessment of national costs is also an appropriate means of evaluating the reasonableness of costs under CAA section 111. See *Sierra Club,* 657 F.2d at 330.

The EPA considered the regulation's overall costs and economic impacts as part of its RIA. The RIA demonstrates that these costs would be negligible and that the effects on electricity rates and other market indicators would similarly be minimal.

These results are driven by the existing market context for fossil-steam generation. Even in the absence of the standards of performance for newly constructed EGUs, substantial new construction of uncontrolled fossil steam units is not anticipated under existing prevailing and anticipated future economic conditions. Modeling projections from government, industry, and academia anticipate that few new fossil steam EGUs will be constructed over the coming decade and that those that are built would have CCS.[281] Instead, EIA data shows that natural gas is likely to be the most widely-used fossil fuel for new construction of electric generating capacity in the near future.[282] Of the coal-fired units moving forward at various advanced stages of construction and development—Southern Company's Kemper County Energy Facility and Summit Power's Texas Clean Energy Project (TCEP)—each will deploy IGCC with some level of CCS. The primary reasons for this rate of current and projected future development of new coal projects include highly competitive natural gas prices, lower electricity demand, and increases in the supply of renewable energy.

In its RIA, the EPA considered the overall costs of this regulation in the context of these prevailing market trends. Because of the expectation of no new fossil steam generation, the RIA projects that this final rule will result in negligible costs overall on owners and operators of newly constructed EGUs by 2022.[283] More broadly, this regulation is not expected to have significant effects on fuel markets, electricity prices, or the economy as a whole, as described in detail in Chapter 4 of the RIA.

In comparison, courts have upheld past regulations that imposed substantial overall costs in order to protect against uncontrolled emissions. As noted above, in *Sierra Club* v. *Costle,* the D.C. Circuit upheld a standard of performance that imposed costly controls on SO_2 emissions from new coal-fired power plants. 657 F.2d at 410. These standards had implications for the economy ''at the local and national levels,'' as ''EPA estimates that utilities will have to spend tens of billions of dollars by 1995 on pollution control under the new NSPS.'' *Id.* at 314. Further, the court acknowledged that ''[c]onsumers will ultimately bear these costs, both directly in the form of residential utility bills, and indirectly in the form of higher consumer prices due to increased energy costs,'' before concluding that the costs were reasonable. *Id.*

The projected total incremental capital costs associated with the standard we are finalizing in this rule are dramatically lower than was the case for this prior standard, as well as other prior standards summarized previously. For example, when the standard at issue in *Sierra Club* was upheld, the industry was expected to build, and did build, dozens of plants ultimately meeting the standards—at a projected incremental cost of tens of billions of dollars.[284] Here, by contrast, few if any fossil steam EGUs are projected to be built in the foreseeable future, indicating that the total incremental costs are likely to be considerably more modest.

Commenters stated that the cost provision in CAA section 111(a)(1) does not authorize the EPA to consider the nationwide costs of a system of emission reduction in lieu of considering the cost impacts for individual new plants. In this rule, we

[279] ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015) at p. 7.

[280] As another example, San Antonio customers will benefit from low-carbon power from the Texas Clean Energy Project. CPS Energy CEO Doyle Deneby said in a news release: ''*Adding clean coal to our portfolio dovetails with our strategy to diversify and reduce the carbon intensity of the power we supply to our customers.*'' *www.bizjournals.com/sanantonio/news/2014/10/06/cps-energy-strikes-new-deal-to-buy-power-from.html.*

[281] RIA chapter 4. For example, even in the EIA's sensitivity analysis that assumes higher natural gas prices and electricity demand, the EIA does not project any additional coal beyond its reference case until 2023, in a case where power companies assume no GHGs emission limitations, and until 2024 in a case where power companies do assume GHGs emission limitations. AEO 2015.

[282] Annual Energy Outlook 2010, 2011, 2012, 2013, 2014 and 2015.

[283] Conditions in the analysis year of 2022 are represented by a model year of 2020.

[284] *Sierra Club,* 657 F.2d at 314.

are considering both sets of costs and, in fact, we are not identifying full CCS as the BSER primarily for reasons of its cost to individual sources. At the same time, total projected costs are relevant in assessing the overall reasonableness of costs associated with a standard. Our analysis demonstrates that the impacts on the industry as a whole are negligible, and are certainly not greater than ''what the industry could bear and survive.'' [285] These facts support the EPA's overall conclusion that the costs of the standard are reasonable.

However, as noted earlier, for a variety of reasons, some companies may consider coal-fired steam generating units that the modeling does not anticipate. Thus, in Chapter 5 of the RIA, we also present an analysis of the project-level costs of a newly constructed coal-fired steam generating unit with partial CCS that meets the requirements of this final rule alongside the project-level costs of a newly constructed coal-fired unit without CCS. This analysis in RIA chapter 5 indicates that the quantified benefits of the standards of performance would exceed their costs under a range of assumptions.

As required under Executive Order 12866, the EPA conducts benefit-cost analyses for major Clean Air Act rules, and has done so here. While such analysis can help to inform policy decisions, as permissible and appropriate under governing statutory provisions, the EPA does not use a benefit-cost test (*i.e.,* a determination of whether monetized benefits exceed costs) as the sole or primary decision tool when required to consider costs or to determine whether to issue regulations under the Clean Air Act, and is not doing so here.[286] Nonetheless, as just noted, the RIA analysis shows that the standard of performance has net quantified benefits under a range of assumptions.

7. Opportunities to Further Reduce Compliance Costs

While the EPA believes, as detailed above, that there is sufficient evidence to show that the final standards of performance for new steam generating units can be met at a reasonable cost, we also note that there are potential opportunities to further reduce compliance costs. We believe that, in most cases, the actual costs will be less than those presented earlier.

As explained in more detail in the following subsection, a new utility boiler can meet the final standard of performance by co-firing with natural gas. Some project developers may choose to utilize natural gas co-firing as a means of delaying, rather than avoiding, implementation of partial CCS. Developers can also choose to install IGCC with a small amount of natural gas co-firing at costs within the range of SCPC with partial CCS, although slightly higher.

The EPA also notes that new units that capture CO_2 will likely be built in areas where there are opportunities to sell the captured CO_2 for some useful purpose prior to (or concomitant with) permanent storage. The DOE refers to this as ''carbon capture, utilization and storage'' or CCUS. In particular, the ability to sell captured CO_2 for use in enhanced oil recovery operations offers the most opportunity to reduce costs. In this regard, the newly-operating Boundary Dam facility is selling captured CO_2 for EOR. The Kemper facility likewise plans to do so.[287]

In some instances, the costs of CCS may be defrayed by grants or other benefits provided by federal or state governments. The need for subsidies to support emerging energy systems and new control technologies is not unusual. Each of the major types of energy used to generate electricity has been or is currently being supported by some type of government subsidy such as tax benefits, loan guarantees, low-cost leases, or direct expenditures for some aspect of development and utilization, ranging from exploration to control installation. This is true for fossil fuel-fired, as well as nuclear-, geothermal-, wind-, and solar-generated electricity. As stated earlier, the EPA considers the costs of partial CCS at a level to meet the final standard of performance to be reasonable even without considering these opportunities to further reduce implementation and compliance costs. We did not in the proposal—and we do not here in this final action—rely on any cost reduction opportunities to justify the costs of meeting the standard as reasonable, but again note the conservative assumptions embodied in our assessment of compliance costs.

a. Cost and Feasibility of Natural Gas Co-firing as an Alternative Compliance Pathway

Although the EPA has determined that implementation of partial CCS at an emission limitation of 1,400 lb CO_2/MWh-g is the BSER for newly constructed fossil fuel-fired steam generating EGUs, we also note that operators can consider the use of natural gas co-firing to achieve the final emission limitation, likely at a lower cost.

At the final emissions limitation of 1,400 lb CO_2/MWh-g a new supercritical PC or supercritical CFB can meet the standard by co-firing with natural gas at levels up to approximately 40 percent (heat input basis) and could potentially avoid (or delay) installation and use of partial CCS altogether.

Natural gas co-firing has long been recognized as an option for coal-fired boilers to reduce emissions of criteria and hazardous air pollutants. EPRI sponsored a study to assess both technical and economic issues associated with natural gas co-firing in coal-fired boilers.[288] They determined that the largest number of applications and the longest experience time is with natural gas reburning and with supplemental gas firing. Natural gas reburning has been used primarily as a NO_X control technology. It is implemented by introducing natural gas (up to 20 percent total fuel heat input) in a secondary combustion zone (called the ''reburn zone'') downstream of the primary combustion zone in the boiler. Injecting the natural gas creates a fuel-rich zone where NO_X formed in the main combustion zone is reduced to nitrogen and water vapor.

Higher levels of natural gas co-firing can be met by utilizing supplemental gas co-firing (either alone or along with natural gas reburning). This involves the simultaneous firing of natural gas and pulverized coal in a boiler's primary combustion zone. Others have also evaluated configurations that would allow coal-fired units to utilize natural gas.[289] [290]

[285] *Portland Cement Ass'n,* 513 F.2d at 508.

[286] See Memorandum ''Consideration of Costs and Benefits under the Clean Air Act'' available in the rulemaking dockets, EPA–HQ–OAR–2013–0495 (new sources) and EPA–OAR–HQ–2013–0603 (modified and reconstructed sources).

[287] The EPA is referring to the Kemper facility here as an example of how costs can be defrayed, not for use of technology or level of emission reduction achieved. The EPA therefore does not believe that the EPAct05 prevents reference to the fact that Kemper plans to sell captured carbon.

[288] Gas Cofiring Assessment for Coal Fired Utility Boilers; Final Report, August 2000; EPRI Technical Report available at *www.epri.com.*

[289] Many of the studies evaluated opportunities to use natural gas reburn, natural gas co-firing and other configurations in existing coal-fired boilers. Those conclusions would also be applicable for new coal-fired boilers.

[290] ''Dual Fuel Firing—The New Future for the Aging U.S. Based Coal-Fired Boilers'', presented by Riley Power, Inc. at 37th International Technical Conference on Clean Coal and Fuel Systems June 2012 Clearwater, FL, available at *http://www.babcockpower.com/pdf/RPI-TP-0228.pdf.*

A 2013 article entitled ''Utility Options for Leveraging Natural Gas'' [291] noted that:

Utility owners of coal-fired power stations that wish to balance their exposure to coal-fired generation with additional natural gas-fired generation have several options to consider. The four most practical options are co-firing coal and gas in the same boiler, converting the coal-fired boiler to gas-only operation, repowering the coal plant with natural gas-fired combustion turbines, or replacing the coal plant with a combined cycle plant. [. . .] Co-firing is the lowest-risk option for substituting gas use for coal.

The EPA examined compliance costs for a new steam generating unit to meet the final standard of performance using natural gas co-firing and compared those costs to the estimated costs of meeting the final standards using partial CCS. Those costs are provided below in Table 9.

TABLE 9—PREDICTED COSTS TO MEET THE FINAL STANDARD USING NATURAL GAS CO-FIRING [292]

New generation technology	Emission lb CO_2/MWh-g	LCOE $/ MWh
SCPC—no CCS	1,620	82
SCPC + ~16% partial CCS	1,400	99
SCPC + ~34% NG co-fire	1,400	92
IGCC—no CCS	1,434	103
IGCC + ~6% NG co-fire	1,400	105
NGCC*	1,000	60

*The generation cost using NG co-fire and NGCC assume a natural gas price of $6.19/mmBtu.

The EPA thus again notes that the cost assumptions it is making in its BSER determination are conservative. That is, by costing partial CCS as BSER, the EPA may be overestimating actual compliance costs since there exist other less expensive means of meeting the promulgated standard.[293]

Notwithstanding that costs for a SCPC to meet the standard would be lower if it co-fired with natural gas, we have not identified that compliance alternative as BSER because we believe that new coal-fired steam electric generating capacity would be built to provide fuel diversity, and burning substantial amounts of natural gas would be contrary to that objective. In addition, this choice would not promote use of advanced pollution control technology. New IGCC has costs which are comparable to SCPC, as does IGCC with natural gas co-firing,[294] but we are choosing not to identify it as BSER for reasons stated at Sections V.C.2 and V.P: use of IGCC does not advance emission control beyond current levels of performance for sources which may choose to utilize IGCC technology. Nonetheless, use of IGCC remains a viable, demonstrated compliance option to meet the 1,400 lb CO_2/MWh-g standard of performance, and is available at reasonable cost and (as shown at Section V.P below) without significant adverse non-air quality impacts or energy implications.

Costs are Reasonably Expected To Decrease Over Time

The EPA reasonably expects that the costs of CCS will decrease over time as the technology becomes more widely deployed. Although, for the reasons that have been noted, we consider the current costs of CCS to be reasonable, the projected decrease in those costs further supports their reasonableness. The D.C. Circuit case law that authorizes determining the ''best'' available technology on the basis of reasonable future projections supports taking into account projected cost reductions as a way to support the reasonableness of the costs.

We expect the costs of CCS technologies to decrease for several reasons. We expect that significant additional knowledge will be gained from deployment and operation of the new coal-fired generation facilities that are either operating or are nearing completion. These would include the Boundary Dam Unit #3 facility, the Petra Nova WA Parish project, and the Kemper County IGCC facility. The operators of the Boundary Dam Unit #3 are considering construction of additional CCS units and have projected that the next units could be constructed at a cost of at least 30 percent less than that at Unit #3.[295] These savings primarily come from application of lessons learned from the Unit #3 design and construction.

To facilitate the transfer of the technology and to accelerate development of carbon capture technology, SaskPower has created the CCS Global Consortium.[296] This consortium provides SaskPower the opportunity to share the knowledge and experience from the Boundary Dam Unit #3 facility with global energy leaders, technology developers, and project developers. SaskPower, in partnership with Mitsubishi and Hitachi, is also helping to advance CCS knowledge and technology development through the creation of the Shand Carbon Capture Test Facility (CCTF).[297] The test facility will provide technology developers with an opportunity to test new and emerging carbon capture systems for controlling carbon emissions from coal-fired power plants.

The DOE also sponsors testing at the National Carbon Capture Center (NCCC). The NCCC—located at Southern Company's Plant Gaston in Wilsonville, AL—provides first-class facilities to test new capture technologies for extended periods under commercially representative conditions with coal-derived flue gas and syngas.[298]

[291] Utility Options for Leveraging Natural Gas, 10/01/2013 article in *Power.* Available at *http://www.powermag.com/utility-options-for-leveraging-natural-gas/.*

[292] Costs and emissions for cases that do not utilize natural gas co-firing are from ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015). Costs and emissions for natural gas co-fired cases are EPA estimates.

[293] Certain commenters argued that the proposed standard essentially mandated a sole method of compliance, and hence constituted a work practice for purposes of section 111(h) of the Act. These commenters argued further that the EPA had failed to justify the proposal under the section 111(h) criteria. The EPA disagrees with the premise of these comments, but, in any case, there are clearly multiple compliance paths available for achieving the final standard.

[294] IGCC units already have combined cycle capacity, and so can be readily operated in whole or in part using natural gas as a fuel. Indeed, both the Edwardsport and Kemper IGCC facilities have operated at times by firing exclusively natural gas.

[297] *www.saskpowerccs.com/ccs-projects/shand-carbon-capture-test-facility/.*

[298] *www.nationalcarboncapturecenter.com/index.html.*

We expect continued additional cost reductions to come from knowledge gained from continued operation of non-power sector industrial projects which, as we have discussed, are informative in transferring the technology to power sector applications. We expect the on-going research and development efforts—such as those sponsored by the DOE/NETL.

Significant reductions in the cost of CO_2 capture would be consistent with overall experience with the cost of pollution control technology. Reductions in the cost of air pollution control technologies as a result of learning-by-doing, reductions in financial premiums related to risk, research and development investments, and other factors have been observed over the decades.

c. Opportunities To Reduce Cost Through Sales of Captured CO_2

Geologic storage options include use of CO_2 in EOR operations, which is the injection of fluids into a reservoir after production yields have decreased from primary production in order to increase oil production efficiency. CO_2-EOR has been successfully used for decades at many production fields throughout the U.S. to increase oil recovery. The use of CO_2 for EOR can significantly lower the net cost of implementing CCS. The opportunity to sell the captured CO_2 for EOR, rather than paying directly for its long-term storage, improves the overall economics of the new generating unit. According to the International Energy Agency (IEA), of the CCS projects under construction or at an advanced stage of planning, 70 percent intend to use captured CO_2 to improve recovery of oil in mature fields.[299] See also Section V.M.3 below.

I. Key Comments Regarding the EPA's Consideration of Costs

In its consideration of the costs associated with the final standard, the EPA considered a range of different cost metrics, each with its individual strengths and weaknesses. As discussed above, each metric supports the EPA's conclusion that the costs of the final standard are reasonable.

In this section, we review the comments received on assessing cost reasonableness and specific cost metrics. We explain how these comments informed our consideration of different metrics and cost reasonableness in general.

1. Use of LCOE as a Cost Metric

As noted, CAA section 111(a) directs the EPA to consider ''cost'' in determining if the BSER is adequately demonstrated. It does not provide further guidance as to how costs are to be considered, thus affording the EPA considerable discretion to choose a reasonable means of cost consideration. See, *e.g. Lignite Energy Council* v. *EPA,* 198 F. 3d at 933. Certain commenters nonetheless argued that LCOE was an impermissible metric because it does not measure the cost of achieving the emission reduction, but rather measures the impact on the product produced by the entity subject to the standard.[300] The EPA does not agree that its authority is so limited. Indeed, in the first decided case under section 111, the D.C. Circuit, in holding that the EPA's consideration of costs was reasonable, specifically noted the EPA's examination of the impact of the standards on the regulated source category's product in comparison to competitive products. *Portland Cement Ass'n* v. *EPA,* 486 F. 2d at 388 (''costs of control equipment could be passed on without substantially affecting competition with construction substitutes such as steel, asphalt, and aluminum'').

Commenters also argued that the choice of LCOE as a cost metric masked consideration of the considerable capital costs associated with CCS. The EPA disagrees with this contention. The LCOE does not mask consideration of capital costs. Rather, as explained at V.H.5 above, LCOE is a summary metric that expresses the full cost (*e.g.,* capital, O&M, fuel) of generating electricity and therefore provides a useful summary metric of costs per unit of production (*i.e.,* megawatt-hours). Provided that those megawatt-hours provide similar electricity services and align on dimensions other than just cost, then the LCOE provides a useful comparison of which technologies are least cost.

The EPA certainly does not minimize that project developers must take capital costs into consideration, and as discussed in Section V.H.4 above, the EPA accordingly has considered direct capital costs here as part of its assessment and found those costs to be reasonable. In addition, the EPA notes that its comparison of the marginal impacts from an individual illustrative facility's compliance with the standard, discussed in detail above and in the RIA Chapter 5, took into account the marginal capital costs that would be incurred by an individual facility.

According to EIA,[301] capital costs represent approximately 63 percent of the LCOE for a new coal-fired SCPC plant; approximately 66 percent of the LCOE for a new IGCC plant; approximately 74 percent of the LCOE for a new nuclear plant; and only about 22 percent of the LCOE for a new NGCC unit. The LCOE of a new NGCC unit is much more strongly affected by fuel costs (natural gas). As we have discussed in detail in this preamble, in the preamble for the January 2014 proposal, and in associated technical support documents, the power sector has moved toward increased use of natural gas for a variety of reasons. If capital was the only cost that utilities and project developers considered, then they would almost certainly always choose to build a new NGCC unit. However, a variety of factors can be involved in selecting a generation source beyond capital costs. Accordingly, in considering cost reasonableness the EPA considered metrics that encompassed other costs as well as the value of fuel and fleet diversity.

Some commenters maintained that even if LCOE was a proper cost metric, the comparison with the costs of a new nuclear power plant is improper because nuclear itself is a highly expensive technology. The EPA disagrees. The comparison is appropriate and valid because, as discussed at V.H.3 above, under current and foreseeable economic conditions affecting the cost of new fossil steam generation and new nuclear generation relative to the cost of new natural gas generation, neither new nuclear power nor fossil steam generation are competitive with new natural gas if evaluated on the basis of LCOE alone. Nonetheless, both are important potential alternatives to natural gas power for those interested in dispatchable base load power that maintains or increases fuel diversity. As shown in a survey of recent IRP filings in the docket[302] and Section II.C.5 above, several utilities are considering new nuclear power as a potential generation option. Because both fossil steam and nuclear generation serve a comparable role of offering a diverse source of base load power generation, the EPA concludes that the comparison of their LCOE is a valid approach to evaluating cost reasonableness.

2. Use of Cost Estimates From DOE/NETL and DOE/EIA

In the January 2014 proposal, the EPA relied mostly on the cost projections for new fossil fuel-fired generating sources that were informed by cost studies conducted by DOE/NETL. The EPA relied on the EIA's AEO 2013 projections for non-fossil based generating sources (*i.e.,* nuclear, renewables, etc.). For this final rule, the EPA continues to rely most heavily on DOE/NETL cost projections for fossil fuel generating technologies and on the updated DOE/EIA AEO 2014 for nuclear and other base load non-fossil generation technologies.

a. DOE/NETL Cost and Performance Studies

The DOE/NETL ''Cost and Performance Baselines for Fossil Energy Plants'' are a series of studies conducted by NETL to establish estimates for the cost and performance of combustion and gasification based power plants with and without CO_2 capture and storage.[303] The studies evaluate numerous technology configurations utilizing different coal ranks and natural gas.

The EPA relied on those sources because the NETL studies are the most comprehensive and transparent of the available cost studies and NETL has a reputation in the power sector industry for producing high quality, reliable work.[304] The NETL studies were extensively peer reviewed.[305] The EPA Science Advisory Board Work Group considering the adequacy of the peer review noted the EPA staff's statement that ''the NETL studies were all peer reviewed under DOE peer review protocols'', further noted the EPA staff's statement that ''the different levels of review of these DOE documents met the requirements to support the analyses as defined by the EPA Peer Review Handbook,'' and concluded that ''peer review on the DOE documents'' was conducted ''at a level required by agency guidance.'' [306]

The cost estimates were indicated by DOE/NETL to carry an accuracy of −15 percent to +30 percent on the capital costs, consistent with a AACE Class 4 cost estimate—*i.e.,* a ''feasibility study'' level of design engineering.[307] The DOE/NETL further notes that ''The value of the study lies not in the absolute accuracy of the individual case results but in the fact that all cases were evaluated under the same set of technical and economic assumptions. This consistency of approach allows meaningful comparisons among the cases evaluated.'' [308]

For the final standard, the EPA made particular use of the most recent NETL cost estimates for post-combustion CCS, which reflect up-to-date vendor quotes and incorporate the post-combustion capture technology—the Shell Cansolv amine-based process—that is being utilized at the Boundary Dam Unit #3 facility.[309] The EPA used this latest version of the NETL studies not only to assure that it considers the most up-to-date information but also to address public comments criticizing the proposal for relying on out-of-date cost information.

b. Other Studies That Corroborate NETL Cost Estimates

A variety of government, industry and academic groups routinely conduct studies to estimate costs of new generating technologies. These studies use techno-economic models to predict the cost to build a new generating facility at some point in the future. These studies often use levelized cost of electricity (LCOE) to summarize costs and to compare the competiveness of the different generating technologies.

A variety of groups have recently published LCOE estimates for new dispatchable generating technologies. Those are shown below in Table 10. The table shows LCOE projections from the EPA's January 2014 proposal, from studies conducted by the Electric Power Research Institute (EPRI),[310] by the DOE's Energy Information Administration (EIA) in their 2015 Annual Energy Outlook (AEO 2015), by the DOE's National Energy Technology Laboratory (NETL), and by researchers from the Department of Engineering and Public Policy at the Carnegie Mellon University (CMU) in Pittsburgh, PA.

The Global CCS Institute [311] has recently published a report that examines costs of major low and zero emissions technologies currently available for power generation and compares the predicted LCOEs of those technologies. Importantly, the analysis presented in the report uses cost and performance data from several recent studies, and applies a common methodology and economic parameters to derive comparable lifetime costs. Analysis and findings in the paper reflect costs specific to the U.S.

The fact that these various groups have conducted independent studies and that the results of those independent studies are reasonably consistent with the estimates of DOE/NETL are further indications that the DOE/NETL cost estimates are reasonable.

[303] *http://www.netl.doe.gov/research/energy-analysis/energy-baseline-studies.*

[304] The NETL costs and studies are often cited in academic and other publications.

[305] The initial NETL study ''Cost and Performance Baseline for Fossil Energy Plants, Vol. 1: Bituminous Coal and Natural Gas to Electricity'' (2006) was subject to peer review by industry experts, academia, and government research and regulatory agencies. Subsequent iterations of the study were not further peer reviewed because the modeling procedures used in the cost estimation were not revised.

[306] Letter from James Mihelcic, Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science to Members of the Chartered SAB and SAB Liaisons (page 3, Jan. 24, 2014). *http://yosemite.epa.gov/sab/sabproduct.nsf/F43D89070E89893485257C5A007AF573/$File/SAB+work+grp+memo+w+attach+20140107.pdf.* The SAB's statement that these guidance documents ''require'' any specific peer review is an overstatement, since guidance documents, by definition, do not mandate any specific course of action.

TABLE 10—SELECTION OF LEVELIZED COST OF ELECTRICITY (LCOE) PROJECTIONS

New generation technology	Lazard [312] $2014/MWh	EPRI [313] $2011/MWh	AEO2015 [314] $2013/MWh*	DOE/NETL [315] $2011/MWh*	CMU [316] $2010/MWh	GCCSI [317]** $2014/MWh
SCPC—no CCS	66	62–77	95	76–95	59	78
SCPC—full CCS	151	102–137	—	140–176	—	115–160
SCPC—16% CCS	—	—	—	92–117	—	—
Nuclear***	92–132	85–97	87–115	—	—	86–102
Biomass	87–116	90–155	94–113	—	—	123–137
IGCC	102	82–96	116	94–120	—	—
IGCC—full CCS	171	105–136	144	142–178	—	—
NGCC	61—87	33—65	73	58	63	60

* EIA, in cost projections for SCPC and IGCC with no CCS, includes a climate uncertainty adder (CUA), which is a 3-percentage point increase in the cost of capital. In contrast, DOE/NETL utilized conventional financing for cases without CCS and utilized high-risk financial assumptions for cases that include CCS.

** The Global CCS Institute provided range for coal with full CCS (shown as ''CCS(coal)'' in Figure 5.2 of the referenced report) reflects a combination of costs for both PC and IGCC coal plants.

*** EIA AEO assumes use of Westinghouse AP1000 technology. Other groups assume a wider range of technology options.

The LCOE values from the Lazard, EPRI, and NETL studies are presented as a range. The EPRI costs incorporate uncertainty reflecting the range of inputs (*i.e.,* capital costs, fuel costs, fixed and variable O&M, etc.). The NETL costs are indicated to carry an accuracy of −15 percent to + 30 percent, consistent with a ''feasibility study'' level of design. The range in Table 10 is the NETL projected costs with the −15 percent to +30 percent uncertainty on the capital costs. Overall, as can be seen from the results in Table 10, the range of LCOE estimates from the different groups are in reasonable agreement with the DOE/NETL estimates most often representing the most conservative of the estimates shown.

The EIA cost estimates include a climate uncertainty adder (CUA)—represented by a three percent increase to the weighted average cost of capital—to certain coal-fired capacity types. The EIA developed the CUA to address inconsistencies between power sector modeling absent GHG regulation and the widespread use of a cost of CO_2 emissions in power sector resource planning. The CUA reflects the additional planning cost typically assigned by project developers and utilities to GHG-intensive projects in a context of climate uncertainty. The EPA believes the CUA is consistent with the industry's planning and evaluation framework (demonstrable through IRPs and PUC orders) and is therefore pertinent when evaluating the cost competitiveness of alternative generating technologies. The EPA believes the CUA is relevant in considering the range of costs that power companies are willing to pay for generation alternatives to natural gas.

c. Industry Information That Corroborates NETL Cost Estimates

Information from vendors of CCS technology also supports the reliability of the cost estimates the EPA is using here.[318] Specifically, the EPA had conversations with representatives from Summit Carbon Capture, LLC regarding available cost information. Cost estimates provided by another leading provider of CCS technology likewise are consistent (indeed, somewhat less than) the estimates the EPA is using for purposes of cost analysis in the rule.

Summit Carbon Capture's primary business is large-scale carbon capture from power and other industrial projects and use of the captured CO_2 for EOR.[319] Summit is actively working with several different technology companies offering CO_2 capture systems, including the leading equipment manufacturers for fossil fuel power production equipment. Their current projects include the 400 MW IGCC Texas Clean Energy Project and the Caledonia Clean Energy Project—a new project underway in the United Kingdom—and a variety of other projects under development which are not yet public.

Summit is also interested in potentially retrofitting CCS onto existing coal-fired plants for the purpose of capturing CO_2 for sale to EOR markets. Summit provided the EPA with copies of slides from a presentation that it has used in different public forums.[320] The presentation focused on costs to retrofit available carbon capture equipment at an existing PC power plant that is ideally located to take advantage of opportunities to sell captured CO_2 for use in EOR operations. Summit received proprietary costing information from numerous technology providers and that information, along with other publically available information, was used to develop their cost predictions.[321] Though the primary focus of their effort was to examine costs associated with retrofitting CCS to an existing coal fired power plant, Summit Power also calculated costs for several new generation scenarios—including the cost of a new NGCC, a new SCPC, a new SCPC with full CCS, and a new SCPC with partial CCS at 50 percent. The costs are reasonably consistent with costs predicted by NETL, EIA, EPRI and others. The company ultimately concluded that ''in a world of uncertain gas prices, falling CO_2 capture

[320] ''Coal's Role in a Low Carbon Energy Environment'', presented at 2015 Euromoney Power & Renewables Conference, remarks by Jeffrey Brown (amended to address EPA questions on the original). Available in the rulemaking docket.

[321] No proprietary or business confidential information was shared with the EPA. No specific vendors were mentioned by name during discussions with Summit Power. Summit also used available DOE/NETL and EIA cost information.

equipment prices, improving CCS process efficiency, and possible compliance costs . . . existing coal plants retrofitted with available CCS equipment can be cost competitive with development of new NGCC generation.'' [322]

In June 2012, Alstom Power released a report entitled ''Cost assessment of fossil power plants equipped with CCS under typical scenarios''.[323] The study examined costs for a new coal-fired power plant implementing post-combustion CCS (full CCS) in Europe, in North America, and in Asia. The results for the North American case—along with similar cost estimates from Summit—are shown in Table 11 below. The DOE/NETL estimated costs are also included for comparison. The results show predicted costs for a new SCPC ranging from $53/MWh to $82/MWh and costs to implement full CCS ranging from $97/MWh to $143/MWh. Costs to implement varying levels of partial CCS are also provided for comparison. The industry cost estimates are on the lower end of the range of costs predicted from other techno-economic studies (see Table 11 below) and, like those economic studies, are affected by the specific assumptions. As with the techo-economic studies presented earlier in Table 10, there is relatively good agreement among these projected costs and the DOE/NETL costs. There is relatively good agreement in the incremental levelized cost to implement full CCS on the new SCPC units (ranging from 74 to 85 percent) and to implement 50 percent CCS on the new SCPC unit (from 41 to 45 percent increase). These industry estimates are also lower than the DOE/NETL estimates for both full and 50 percent partial CCS (with the incremental cost percentage for full CCS being almost identical), providing further support for the reasonableness of the EPA using the NETL cost estimates here.

TABLE 11—INDUSTRY LCOE ESTIMATES FOR IMPLEMENTATION OF POST-COMBUSTION CCS [324]

	Summit $/MWh	Alstom $/MWh*	DOE/NETL $/MWh
SCPC	64.5	52.6	82.3
SCPC + full CCS	117.6	97.4	152.4
Full CCS incremental cost, %	82.3%	85.0%	85.2%
SCPC + 50% CCS	91.1	—	123.6
50% CCS incremental cost, %	41.2%	—	50.1%
SCPC + 35% CCS	—	—	114.7
SCPC + 16% CCS	—	—	100.5
NGCC**	47.7	35.0	**52.0

* Costs are from Figure 2 in the referenced Alstom report (North American case); costs are presented as €/MWh in the report. The costs were converted to $/MWh assuming a conversion rate of 1 USD = 0.76 € (in 2012).

** NGCC cost is estimated by the EPA using NETL information. Assumed natural gas prices = Summit ($4/mmBtu); Astom ($3.9/mmBtu); EPA ($5.00/mmBtu).

The EPA notes that in its public comments, Alstom maintained that ''no CCS projects that would [sic] be considered cost competitive in today's energy economy.'' [325] As explained above, no steam electric EGU would be cost competitive even without CCS—and that is substantiated in the projected costs presented above in Table 11 where NGCC is consistently the most economic new generation option when compared to the other listed technologies. Alstom does not explain (or address) why the cost premium for partial CCS would be a decisive deterrent for capacity that would otherwise be constructed. More important, Alstom does not challenge the specific cost estimates used by the EPA at proposal, nor disavow its own estimates of CCS costs (which are even less) which it is publically disseminating in the marketplace. See also Section V.F.3 above, quoting Alstom's press release stating unequivocally that ''CCS works and is cost-effective''. The EPA reasonably is relying on the specific Alstom estimates which it is using for its own commercial purposes, and not on the generalized concerns presented in its public comments.

d. Use of Cost Information From EIA Annual Energy Outlook (AEO)

For the January 2014 proposal the EPA chose to rely on the EIA AEO 2013 cost projections for non-fossil based generation. The AEO presents long-term annual projections of energy supply, demand, and prices focused on U.S. energy markets. The predictions are based on results from EIA's National Energy Modeling System (NEMS). The AEO costs are updated annually, they are highly scrutinized, and they are widely used by those involved in the energy sector.

In the January 2014 proposal, the EPA presented LCOE costs for new non-fossil dispatchable generation (see 77 FR 1477, Table 7) from the AEO 2013. Those costs were updated as part of the AEO 2015 release. The estimated cost for all of these technologies decreased from AEO 2013 to AEO 2014 and AEO 2015. This was due to changes in the interest rates that resulted in lower financing costs relative to those used the AEO 2013.[326] The EIA commissioned a comprehensive update of its capital cost assumptions for all generation technologies in 2013. Fuel cost and

[322] Others have come to similar conclusions—that retrofit of CCS technology at existing coal-fired power plants can be feasible—*e.g.,* ''The results indicate that for about 60 gigawatts of the existing coal-fired capacity, the implementation of partial CO_2 capture appears feasible, though its cost is highly dependent on the unit characteristics and fuel prices.'' (Zhai, H.; Ou, Y.; Rubin, E.S.; ''Opportunities for Decarbonizing Existing U.S. Coal-fired Plants via CO_2 Capture, Utilization, and Storage'', accepted for publication in *Env. Sci & Tech.* (2015).

[323] Leandri, J., Skea, A., Bohtz, C., Heinz, G.; ''Cost assessment of fossil power plants equipped with CCS under typical scenarios'', Alstom Power, June 2012. Available in the rulemaking docket: EPA–HQ–OAR–2013–0495.

[324] Note that in other tables in this preamble, the EPA has presented LCOE values from the DOE/NETL work as a range in order to incorporate the uncertainty on the capital costs. The range is not present here for easy comparison with the industry costs which were not provided as a range. The full range of DOE/NETL costs for each of the cases presented can be found in Exhibit A–3 in ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015), p. 18.

[325] Alstom Comment p. 3 (Docket entry: EPA–HQ–OAR–2013–0495–9033). The comment also urged the EPA to evaluate costs without considering EOR opportunities (which in fact is our methodology, albeit a conservative one), and without considering possible subsidies. Id. The LCOE and capital cost estimates above are direct cost comparisons, again consistent with the commenter's position.

[326] *www.eia.gov/oiaf/beck_plantcosts/pdf/updatedplantcosts.pdf.*

financial assumptions are updated for each edition of the Annual Energy Outlook.

e. Accounting for Uncertainty of Projected Costs

As previously mentioned, the projected costs are dependent upon a range of assumptions including the projected capital costs, the cost of financing the project, the fixed and variable O&M costs, the projected fuel costs, and incorporation of any incentives such as tax credits or favorable financing that may be available to the project developer. There are also regional or geographic differences that affect the final cost of a project. The LCOE projections in this final action are not intended to provide an absolute cost for a new project using any of these respective technologies. Large construction projects—as these would be—would be subjected to detailed cost analyses that would take into consideration site-specific information and specific design details in order to determine the project costs.

The DOE/NETL noted that the cost estimates from their studies carry an accuracy in the range of −15 percent to +30 percent, which is consistent with a ''feasibility study'' level of design. They also noted that the value of the studies lies ''not in the absolute accuracy of the individual case results but in the fact that all cases were evaluated under the same set of technical and economic assumptions. This consistency of approach allows meaningful comparisons among the cases evaluated.''

The EIA AEO 2015 presented LCOE costs as a single point estimate representing average nationwide costs and separately as a range to represent the regional variation in costs. In order to compare the fossil fuel generation technologies from the NETL studies with the cost projections for non-fossil dispatchable technologies from EIA AEO 2015, we assume that the EIA studies would carry a similar level of uncertainty (*i.e.,* +30 percent) and we present the AEO 2015 projected costs as the average nationwide LCOE with a range of −10 percent to +30 percent to account for uncertainty.[327] The EIA does not provide uncertainty estimates in the AEO cost projections. However, nuclear experts from EIA staff have indicated to the EPA that a range of uncertainty of −10 percent to +30 percent on the capital component of the LCOE can be expected based on market uncertainties. Specifically, these staff experts expect that nuclear plants currently under construction would not have capital costs under estimates and that one could expect to see a 30 percent ''upside'' variation in capital cost. There is also insufficient market data to get a good statistical range of potential capital cost variation (*i.e.,* only two plants under construction, neither complete). This is reasonably consistent with estimates for nuclear costs estimated by Lazard (see Table 8 above) which likewise reflect a similar level of cost uncertainty. The Lazard nuclear costs show a range of projected levelized capital cost from $73/MWh to $110/MWh—a range of 50 percent, very similar to the 40 percent range (*i.e.,* −10 percent to +30 percent) suggested by EIA nuclear experts. The Global CCS Institute, in its most recent cost update, also provides nuclear costs as a range from $86/MWh to $102/MWh.[328]

3. Use of Costs From Current Projects

Although we are relying on cost estimates drawn from techno-economic models, we recognize that there are a few steam electric plants that include CCS that have been built, or are being constructed. Some information about the costs (or cost-to-date) for these projects is known. We discuss in this section the costs at facilities which have installed or are installing CCS, why the EPA does not consider those costs to be reasonably predictive of the costs of the next new plants to be built, and why the EPA considers that the next new plants will have lower costs along the lines predicted by NETL.[329]

The Boundary Dam Unit #3 facility utilizing post-combustion capture from Shell Cansolv is now operational. Petra Nova, a joint venture between NRG Energy Inc. and JX Nippon Oil & Gas Exploration, is currently constructing a post-combustion capture system at NRG's WA Parish generating station near Houston, TX. The post-combustion capture system will utilize MHI amine-based solvents and is currently being constructed with plans to initiate operation in 2016.[330]

Construction on Mississippi Power's Kemper County Energy Center IGCC facility is now nearly complete. The combined cycle portion of the facility has been generating power using natural gas. The gasification portion of the facility and the carbon capture system are undergoing system checks and training to enable commercial operations using a UOP Selexol™ pre-combustion capture system in early 2016.[331]

Another full-scale project, the Summit Power Texas Clean Energy Project has not commenced construction but remains a viable project. Several other full-scale projects have been proposed and have progressed through the early stages of design, but have been cancelled or postponed for a variety of reasons.

Some cost information is also available for small demonstration projects—including those that have been supported by USDOE research programs. These projects would include Alabama Power's demonstration project at Plant Barry and the AEP/Alstom demonstration at Plant Mountaineer.

Many commenters felt that the EPA should rely on those high costs when considering whether the costs are reasonable. The costs from these large-scale projects appear to be consistently higher than those projected by techno-economic models. However, the costs from these full-scale projects represent first-of-a-kind (FOAK) costs and, it is reasonable to expect these costs to come down to the level projected in the NETL and other techno-economic studies for the next new projects that are built—which are the sources that would be subject to this standard.

Significant reductions in the cost of CO_2 capture would be consistent with overall experience with the cost of pollution control technology. A significant body of literature suggests

[327] EIA does not provided uncertainty estimates in the AEO cost projections. However, EIA staff have indicated to the EPA that a range of uncertainty of −10%/+30% on the capital component of the LCOE can be expected based on market uncertainties. See memorandum ''Range of uncertainty for AEO nuclear costs'' available in the rulemaking docket, EPA–HQ–OAR–2013–0495.

[328] ''The Costs of CCS and other Low-Carbon Technologies—2015 update'' July 2015, Global CCS Institute, Available at: *http://hub.globalccsinstitute.com/sites/default/files/publications/195008/costs-ccs-other-low-carbon-technologies-2015-update.pdf.*

[329] The EPA notes that two of these facilities, Kemper and TCEP, received both assistance from DOE under EPAct05 and the IRC section 48A tax credit; and that the AEP Mountaineer pilot project received assistance from DOE under EPAct05. Under the most extreme interpretations of those provisions offered by commenters, the EPA would be precluded from any consideration of any information from those sources, including cost information, in showing whether a system of emission reduction is adequately demonstrated. We note, however, that many of these same commenters urged consideration of the cost information from these sources. In fact, the EPA is not relying on information about the costs of these sources to determine the BSER or the standards of performance in this rulemaking, and the EPA is discussing the cost information here to explain why not. Accordingly, this discussion of cost information from these sources is not precluded by the EPAct05 and IRC section 48A provisions and, even if it is precluded, that would have no impact on the EPA's determination of the BSER and the standards of performance in this rule.

[330] *http://www.nrg.com/sustainability/strategy/enhance-generation/carbon-capture/wa-parish-ccs-project/.*

[331] *http://www.mississippipower.com/about-energy/plants/kemper-county-energy-facility/facts.*

that the per-unit cost of producing or using a given technology declines as experience with that technology increases over time, and this has certainly been the case with air pollution control technologies. Reductions in the cost of air pollution control technologies as a result of learning-by-doing, research and development investments, and other factors have been observed over the decades. We expect that the costs of capture technology will follow this pattern.

The NETL cost estimates reasonably account for this documented phenomenon. Specifically, ''[I]n all cases, the report intends to represent the next commercial offering, and relies on vendor cost estimates for component technologies. It also applies process contingencies at the appropriate subsystem levels in an attempt to account for expected but undefined costs (a challenge for emerging technologies).'' [332]

Commenters argued that the next plants to be built would still reflect first-of-a-kind costs, pointing to the newness of the technology and the lack of operating experience, *i.e.* the alleged absence of learning by doing. The EPA disagrees. In addition to operating experience from operating and partially constructed CCS projects, substantial research efforts are underway providing a further knowledge base to reduce CO_2 capture costs and to improve performance.

The DOE/NETL sponsors an extensive research, development and demonstration program that is focused on developing advanced technology options that will dramatically lower the cost of capturing CO_2 from fossil fuel energy plants compared to currently available capture technologies. The large-scale CO_2 capture demonstrations that are currently planned and in some cases underway, under DOE's initiatives, as well as other domestic and international projects, will generate operational knowledge and enable continued commercialization and deployment of these technologies. Gas absorption processes using chemical solvents, such as amines, to separate CO_2 from other gases have been in use since the 1930s in the natural gas industry and to produce food and chemical grade CO_2. The advancement of amine-based solvents is an example of technology development that has improved the cost and performance of CO_2 capture. Most single component amine systems are not practical in a flue gas environment as the amine will rapidly degrade in the presence of oxygen and other contaminants. The Fluor Econamine FG process, the process modeled in the NETL cost study for the SCPC cases, uses a monoethanolamine (MEA) formulation specially designed to recover CO_2 and contains a corrosion inhibitor that allows the use of less expensive, conventional materials of construction. Other commercially available processes use sterically hindered amine formulations (for example, the Mitsubishi Heavy Industries KS–1 solvent) which are less susceptible to degradation and corrosion issues.

The DOE/NETL and private industry are continuing to sponsor research on advanced solvents (including new classes of amines) to improve the CO_2 capture performance and reduce costs.

As noted in Section V.H.7.d above, SaskPower has created the CCS Global Consortium to facilitate further knowledge regarding, and use of, carbon capture technology.[333] This consortium provides SaskPower the opportunity to share its knowledge and experience with global energy leaders, technology developers, and project developers. SaskPower, in partnership with Mitsubishi and Hitachi, is also helping to advance CCS knowledge and technology through the creation of the Shand Carbon Capture Test Facility (CCTF).[334] The test facility will provide technology developers with an opportunity to test new and emerging carbon capture systems for controlling carbon emissions from coal-fired power plants.

We also note certain features of the commercial plants already built that suggest that their costs are uniquely high, and otherwise not fairly comparable to the costs of plants meeting the NSPS using the BSER. Most obviously, many of these projects involve deeper capture than the partial CCS that the EPA assumes in this final action. In addition, cost overruns at the Kemper facility, mentioned repeatedly in the public comments, resulted in major part from highly idiosyncratic circumstances, and are related to the cost of the IGCC system, not to the cost of CCS.[335] The EPA does not believe that these unusual circumstances are a reasonable basis for assessing costs of either CCS or IGCC here.

4. Cost Competitiveness of New Coal Units

As the EPA noted, all indications suggest that very few new coal-fired power plants will be constructed in the foreseeable future. Although a small number of new coal-fired power plants have been built recently, the industry generally is not building these kinds of power plants at present and is not expected to do so for the foreseeable future. The reasons include the current economic environment and improved energy efficiency, which has led to lower electricity demand, and competitive current and projected natural gas prices. On average, the cost of generation from a new NGCC power plant is expected to be lower than the cost of generation from a new coal-fired power plant, and the EPA has concluded that, even in the absence of the requirements of this final rule, very few new coal-fired power plants will be built in the near term.

Some commenters, however, disagreed with this conclusion. They contended instead that it is the CCS-based NSPS that would preclude such new generation. However, as the EPA has discussed, there is considerable evidence that utilities and project developers are moving away—or have already moved away—from a long term dependence on coal-fired generating sources. A review of publicly available integrated resource plans show that many utilities are not considering construction of new coal-fired sources without CCS. See Section V. H.3 above. Few new coal-fired generating sources have commenced construction in the past 5 years and, of the projects that are currently in the development phase, the EPA is only aware of projects that will include CCS in the design. As we have noted in this preamble, the bulk of new

[335] See Independent Monitor's Prudency Evaluation Report for the Kemper County IGCC Project (prepared for Mississippi Public Utilities Staff), available at *www.psc.state.ms.us/InsiteConnect/InSiteView.aspx?model=INSITE_CONNECT&queue=CTS_ARCHIVEQ&docid=328417* (''Report''). As documented in this Report, costs escalated significantly because the developers adopted a ''compressed schedule'' in an attempt to obtain the IRC 48A tax credit, resulting in ''engineering and design changes which are a normal result of detailed engineering and design . . . occurring at the same time as, rather than ahead of, construction activities'', which did not allow for proper sequencing during construction. This '' 'just-in-time' approach to engineering and procurement (meaning that the engineering was often completed shortly before material procurement and construction activities) resulted in a greater number of construction work-arounds, congestion of construction craft labor in the field, inefficiencies and additional steps that became necessary during construction to cope with this just-in-time engineering, procurement and construction approach.'' Report, p. 6. Ironically, work was still completed too late to obtain the tax credit. Id. p. 15.

generation that has been added recently has been either natural gas-fired or renewable sources. Overall, the EPA remains convinced that the energy sector modeling is reflecting the realities of the market in predicting very few new coal-fired power plants in the near future—even in the absence of these final standards.

In addition, we note that the Administration's CCS Task Force report recognized that CCS would not become more widely available without the advent of a regulatory framework that promoted CCS or provided a strong price signal for CO_2. In this regard, we note American Electric Power's statements regarding the need for federal requirement for GHG control to aid in cost recovery for CCS projects, to attract other investment partners, and thereby promote advancement and deployment of CCS technology: ''as a regulated utility, it is impossible to gain regulatory approval to recover our share of the costs for validating and deploying the technology without federal requirements to reduce greenhouse gas emissions already in place. The uncertainty also makes it difficult to attract partners to help fund the industry's share''.[336] Indeed, AEP has stated that CCS is important for the very future of the industry: ''AEP still believes the advancement of CCS is critical for the sustainability of coal-fired generation.'' [337] This final rule's action is an important component in developing that needed regulatory framework.

5. Accuracy of Cost Estimates for Transportation and Geologic Sequestration

The EPA's estimates of costs take into account the transport of CO_2 and sequestration of captured CO_2. Estimates of transport and sequestration costs—approximately $5–$15 per ton of CO_2—are based on DOE NETL studies and are also consistent with other published studies.[338] For transport, costs reflect pipeline capital costs, related capital expenditures, and O&M costs. Sequestration cost estimates reflect the cost of site screening and evaluation, the cost of injection wells, the cost of injection equipment, operation and maintenance costs, pore volume acquisition expense, and long term liability protection. These sequestration costs reflect the regulatory requirements of the Underground Injection Control Class VI program and GHGRP subpart RR for geologic sequestration of CO_2 in deep saline formations, which are discussed further in Sections V. M. and N below.[339]

Based on DOE/NETL studies, the EPA estimated that the total CO_2 transportation, storage, and monitoring (TSM) cost associated with EGU CCS would comprise less than 5.5 percent of the total cost of electricity in all capture cases modeled—approximately $5–$15 per ton of CO_2.[340] The range of TSM costs the EPA relied on are broadly consistent with estimates provided by the Global Carbon Capture and Storage Institute as well.[341] Some commenters suggested that the EPA underestimated the costs associated with transporting captured CO_2 from an EGU to a sequestration site.[342] Specifically, commenters suggested that the EPA's estimated costs for constructing pipelines were lower than costs based on actual industry experience. Commenters also opined that the EPA's assumed length of pipeline needed between the EGU and the sequestration site is not reasonable and that the DOE/NETL study upon which the EPA relied does not account for CO_2 transport costs when EOR is not available.

The EPA believes its estimates of transportation and sequestration costs are reasonable. First, the EPA in fact includes cost estimates for CO_2 transport when EOR opportunities are not available—consistent with its overall conservative cost methodology of assuming no revenues from sale of captured CO_2. Specifically, the EPA estimates transport, storage and monitoring (TSM) costs of $5–$15 per ton of CO_2 for non-EOR applications.[343] This estimate is reflected in the LCOE comparative costs.[344]

The EPA also carefully reviewed the assumptions on which the transport cost estimates are based and continues to find them reasonable. The NETL studies referenced in Section V.I.2 above based transport costs on a generic 100 km (62 mi) pipeline and a generic 80 kilometer pipeline.[345] At least one study estimated that of the 500 largest point sources of CO_2 in the United States, 95 percent are within 50 miles of a potential storage reservoir.[346] As a point of reference, the longest CO_2 pipeline in the United States is 502 miles.[347] For new sources, pipeline distance and costs can be factored into siting and, as discussed in Section V.M, there is widespread availability of geologic formations for geologic sequestration (GS). Moreover, data from the Pipeline and Hazardous Materials Safety Administration show that in 2013 there were 5,195 miles of CO_2 pipelines operating in the United States. This represents a seven percent increase in CO_2 pipeline miles over the previous year and a 38 percent increase in CO_2 pipeline miles since 2004. For the reasons outlined above, the EPA believes its estimates have a reasoned basis. See also Section V.M below further discussing the current availability of CO_2 pipelines.

With respect to sequestration, certain commenters argued that the EPA's cost analysis failed to account for many contingencies and uncertainties (surface and sub-surface property rights in particular), ignored the costs of GHGRP subpart RR, and also was not representative of the costs associated with specific GS site characterization, development, and operation/injection of monitoring wells. Commenter American Electric Power (AEP) referred to its own

experience with the Mountaineer demonstration project. AEP noted that although this project was not full scale, finding a suitable repository, notwithstanding a generally favorable geologic area, proved difficult. The company referred to its estimated cost of expanding the existing Mountaineer plant to a larger scale project, particularly the cost of site characterization and well construction.[348]

The EPA's cost estimates account for the requirements of the Underground Injection Control Class VI program, and GHGRP subpart RR, among them site screening and evaluation costs, costs for injection wells and equipment, O&M costs, and monitoring costs. The estimated sequestration costs include operational and post-injection site care monitoring, which are components of the UIC Class VI requirements, and also reflect costs for sub-surface pore volume property rights acquisition.[349] These estimates are consistent with the costs presented in the study *CO_2 Storage and Sink Enhancements: Developing Comparable Economics,* which incorporates the costs associated with site evaluation, well drilling, and the capital equipment required for transporting and injecting CO_2.[350] [351] Monitoring costs were evaluated based on the methodology set forth in the International Energy Agency Greenhouse Gas R&D Programme's *Overview of Monitoring Projects for Geologic Storage Projects* report.[352]

The EPA's cost estimates for sequestration thus cover all aspects commenters claimed the EPA disregarded. The EPA believes that the use of costs and scenarios presented in the studies referenced are representative for purposes of the cost analysis. The NETL cost estimates upon which the EPA's costs draw directly from the UIC Class VI economic impact analysis.[353] That analysis is based on estimated characteristics for a representative group of projects over a 50-year period of analysis, as well as industry averages for several cost components and sub-components. The EPA also made reasonable assumptions regarding the assumed injection site: A deep saline formation with typical characteristics (*e.g.,* representative depth and pressure).[354]

With respect to AEP's experience with the Mountaineer demonstration project, sequestration siting issues are of course site-specific, and raise individual issues. For this reason, it is inappropriate to generalize from a particular individual experience. In this regard, as explained in Section V.N below, the construction permits issued by the EPA to-date under the Underground Injection Control Class VI regulations required far fewer wells for site characterization and monitoring than AEP found to be necessary at its Mountaineer site. Moreover, notwithstanding difficulties, the company was able to successfully drill and complete wells, and safely inject captured CO_2. The company also indicated it fully expected to be able to do so at full scale and explained how.[355] For discussion of 40 CFR part 98, subpart RR (the GHGRP requirements for geologic sequestration), including costs associated with compliance with those requirements, see Section V.N below.

J. Achievability of the Final Standards

The EPA finds the final standard of 1,400 lb CO_2/MWh-g to be achievable over a wide range of variable conditions that are reasonably likely to occur when the system is properly designed and operated. As discussed elsewhere, the final standard reflects the degree of emission limitation achievable through the application of the BSER which we have determined to be a highly efficient SCPC implementing partial CCS at a level sufficient to achieve the final standard—for such a unit utilizing bituminous coal that would be approximately 16 percent. In determining the predicted cost and performance of such a system, the EPA utilized information contained in updated DOE/NETL studies that assumed use of bituminous coal and an 85 percent capacity factor. Here we examine the effects of deviating from those assumed operational parameters on the achievability of the final standard of performance.[356] This is in keeping with the requirement that a standard of performance must be achievable accounting for all normal operating variability when a control system is properly designed, maintained, and operated. See Section III.H.1.c above.

1. Operational Fluctuations, Start-Ups, Shutdowns, and Malfunctions

Importantly, compliance with the standard must be demonstrated over a 12-operating-month average. The total CO_2 emissions (pounds of CO_2) over 12 operational months are summed and divided by the total gross output (in megawatt-hours) over the same 12 operational months. Such a compliance averaging period is very forgiving of short-term excursions that can be associated with non-routine events such as start-ups, shutdowns, and malfunctions. A new fossil fuel-fired steam generating EGU—if constructed—would, most likely, be built to serve base load power demand and would not be expected to routinely start-up or shutdown or ramp its capacity factor in order to follow load demand. Thus, planned start-up and shutdown events would only be expected to occur a few times during the course of a 12-operating-month compliance period. Malfunctions are unplanned and unpredictable events and emission excursions can happen at or around the time of the equipment malfunction. But a malfunctioning EGU that cannot be operated properly should be shut down until the malfunctioning equipment can be addressed and the EGU can be restarted to operate properly.

The post-combustion capture systems that have been utilized have proven to be reliable. The Boundary Dam facility has been operating full CCS successfully at commercial scale since October 2014. As described earlier, in evaluating results from the Mountaineer slip-

stream demonstration, AEP and Alstom reported robust steady-state operation during all modes of power plant operation including load changes, and saw an availability of the CCS system of greater than 90 percent.[357]

2. Variations in Coal Type

The use of specific coal types can affect the amount of CO_2 that is emitted from a new coal-fired power plant. As previously discussed, the EPA utilized studies by the DOE/NETL to predict the cost and performance of new steam generating units. Based on those reports, the EPA predicts that a new SCPC burning low rank coal (subbituminous coal or dried lignite) would have an uncontrolled emission rate about 7 percent higher than a similar unit firing typical bituminous coal.[358] The EPA predicts that such a highly efficient new SCPC utilizing subbituminous coal or dried lignite would need to capture approximately 23 percent of the CO_2. The EPA also believes that it is technically feasible to do so, although additional cost would be entailed. The EPA has evaluated those costs and finds them to remain reasonable.[359] As shown in Table 8 above, the predicted cost remains within the estimated range for the other principal base load, dispatchable non-NGCC alternative technologies. Estimated capital cost using these coal types would also be somewhat higher, an estimated 23 percent increase.[360] The EPA finds these increases to be reasonable because, as discussed earlier, the costs are reasonably consistent with capital cost increases in previous NSPS. See Section V.H.4 above.

K. Emission Reductions Utilizing Partial CCS

Although the definition of ''standard of performance'' does not by its terms identify the amount of emissions from the category of sources and the amount of emission reductions achieved as factors the EPA must consider in determining the ''best system of emission reduction,'' the D.C. Circuit has stated that the EPA must do so. See *Sierra Club* v. *Costle,* 657 F.2d at 326 (''we can think of no sensible interpretation of the statutory words ''best . . . system'' which would not incorporate the amount of air pollution as a relevant factor to be weighed when determining the optimal standard for controlling . . . emissions'').[361] This is consistent with the Court's statements in *Essex Chemical Corp.* v. *Ruckelshaus,* 486 F.2d at 437 that it is necessary to ''[k]eep[] in mind Congress' intent that new plants be controlled to the 'maximum practicable degree' ''.

The final standard of performance will result in meaningful and significant emission reductions of GHG emissions from a new coal-fired steam generating unit. The EPA estimates that a new highly efficient 500 MW coal-fired SCPC meeting the final standard of 1,400 lb CO_2/MWh-g will emit about 354,000 fewer metric tons of CO_2 each year than that new highly efficient unit would have emitted otherwise. That is equivalent to taking about 75,000 vehicles off the road each year[362] and will result in over 14,000,000 fewer metric tons of CO_2 in a 40-year operating life. To emphasize the importance of constructing a highly efficient SCPC unit that includes partial CCS—the highly efficient 500 MW coal-fired SCPC with partial CCS would emit about 675,000 fewer metric tons of CO_2 each year than that from a new, less efficient coal-fired utility boiler with an assumed emission of 1,800 lb CO_2/MWh-g.

For comparison, see Table 12 below which provides the amount of CO_2 emissions captured each year by other CCS projects. These result show that, even though the emission reductions are significant, they are reasonably within the range of emission reductions that are currently being achieved now in existing facilities. For comparison, approximately 60,000,000 metric tons of CO_2 were supplied to U.S. EOR operations in 2013.[363]

TABLE 12—ANNUAL METRIC TONS OF CO_2 CAPTURED (OR PREDICTED TO CAPTURE) FROM CCS PROJECTS AND FROM A MODEL 500 MW PLANT MEETING THE FINAL STANDARD.

Project	CO_2 captured tonnes/year
AES Shady Point	66,000
AES Warrior Run	110,000
Southern Company Plant Barry	165,000
Searles Valley Minerals	270,000
New 500 MW SCPC EGU (1,400 lb CO_2/MWh-g)	354,000
Coffeyville Fertilizer	700,000
Boundary Dam #3	1,000,000
Petra Nova/NRG WA Parish	1,400,000
Dakota Gasification	3,000,000

[357] *http://www.alstom.com/press-centre/2011/5/alstom-announces-sucessful-results-of-mountaineer-carbon-capture-and-sequestration-ccs-project/.* The Boundary Dam facility likewise is operating reliably (see Section V.D.3.a above). See also ''Cost and Performance Baseline for Fossil Energy Plants Volume 1a: Bituminous Coal (PC) and Natural Gas to Electricity, Revision 3'', DOE/NETL–2015/1723 (July 2015) at p. 36 (''[t]he capture and CO_2 compression technologies have commercial operating experience with demonstrated ability for high reliability'').

[358] For additional detail, see the Technical Support Document (TSD)—''Achievability of the Standard for Newly Constructed Steam Generating EGUs''—available in the rulemaking docket.

[359] The cost of the lignite drying equipment is assumed to be low compared to the cost of the carbon capture equipment. Further, pre-drying of the lignite reduces fuel, auxiliary power consumption and other O&M costs. *www.iea-coal.org.uk/documents/83436/9095/Techno-economics-of-modern-pre-drying-technologies-for-lignite-fired-power-plants,-CCC/241.*

[360] Note that the 23 percent increase in expected capital costs and the 23 percent CO_2 capture needed to meet the final standard are coincidental and are not correlated.

[361] *Sierra Club* v. *Costle,* 657 F.2d 298 (D.C. Cir. 1981) was governed by the 1977 CAAA version of the definition of ''standard of performance,'' which revised the phrase ''best system'' to read, ''best technological system.'' The 1990 CAAA deleted ''technological,'' and thereby returned the phrase to how it read under the 1970 CAAA. The *Sierra Club* v. *Costle's* interpretation of this phrase to require consideration of the amount of air emissions remains valid for the phrase ''best system.''

[362] Using U.S. EPA Office of Transportation and Air Quality (OTAQ) estimate of average vehicle emissions of 4.7 tonnes/year.

[363] Greenhouse Gas Reporting Program, data reported as of August 18, 2014.

L. Further Development and Deployment of CCS Technology

Researchers at Carnegie Mellon University (CMU) have studied the history and the technological response to environmental regulations.[364] By examining U.S. research funding and patenting activity over the past century, the CMU researchers found that promulgation of national policy requiring large reductions in power-plant emissions resulted in a significant upswing in inventive activity to develop technologies to reduce those emissions. The researchers found that, following the 1970 Clean Air Act, there was a 10-fold increase in patenting activity directed at improving the SO_2 scrubbers that were needed to comply with stringent federal and state-level standards.

Much like carbon capture scrubbers today, the technology to capture and remove SO_2 from power plant flue gases was new to the industry and was not yet widely deployed at large coal-burning plants when the EPA first promulgated the 1971 standards.

Many of the early Flue Gas Desulfurization (FGD) units did not perform well, as the technology at that time was poorly understood and there was little or no prior experience on coal-fired power plants. In contrast, amine-based capture systems have a much longer history of reliable use at coal-fired plants and other industrial sources. There is also a better understanding of the amine process chemistry and overall process design—and project developers have much sophisticated analytical tools available today than in the 1970s during the development of FGD scrubber technologies.

While R&D efforts were essential to achieving improvements in FGD scrubber technology—and are also very important to improving carbon capture technologies, the influence of regulatory actions that establish commercial markets for advanced technologies cannot be minimized. The existence of national government regulation for SO_2 emissions control stimulated innovation, as shown by the patent analysis following initial SO_2 regulatory requirements for EGU emissions. The study author further found that regulatory stringency appears to be particularly important as a driver of innovation, both in terms of inventive activity and in terms of the communication processes involved in knowledge transfer and diffusion. Further, as electric power generation doubled, the operating and maintenance costs of FGD systems decline to 83 percent of their original level. This finding, which is very much in line with progress ratios determined in other industries, shows that quantifiable technological improvements can be shown to occur solely on the basis of the experience of operating an environmental control technology forced into being by government actions.

M. Technical and Geographic Aspects of Disposition of Captured CO_2

In the following sections of the preamble, we discuss issues associated with the disposition of captured CO_2: the ''S''—sequestration—in CCS. In this section, we review the existing processes, technologies, and geologic conditions that enable successful geologic sequestration (GS). In Section V.N., we discuss in detail the comprehensive, in-place regulatory structure that is currently available to oversee GS projects and assure their safety and effectiveness. Together, these discussions demonstrate that the technical feasibility of GS, another key component of a partial CCS unit, is adequately demonstrated. Sequestration is already well proven. CO_2 has been retained underground for eons in geologic (natural) repositories and the mechanisms by which CO_2 is trapped underground are well understood. The physical and chemical trapping mechanisms, along with the regulatory requirements and safeguards of the Underground Injection Control Program and complementary monitoring and reporting requirements of the GHGRP, together ensure that sequestered CO_2 will remain secure and provide the monitoring to identify and address potential leakage using Safe Drinking Water Act (SDWA) and CAA authorities (see Section V.N of this preamble).[365]

1. Geologic and Geographic Considerations for GS

Geologic sequestration (*i.e.,* long-term containment of a CO_2 stream in subsurface geologic formations) is technically feasible and available throughout most of the United States. GS is based on a demonstrated understanding of the processes that affect CO_2 fate in the subsurface; these processes can vary regionally as the subsurface geology changes. GS occurs through a combination of mechanisms including: (1) Structural and stratigraphic trapping (generally trapping below a low permeability confining layer); (2) residual CO_2 trapping (retention as an immobile phase trapped in the pore spaces of the geologic formation); (3) solubility trapping (dissolution in the in situ formation fluids); (4) mineral trapping (reaction with the minerals in the geologic formation and confining layer to produce carbonate minerals); and (5) preferential adsorption trapping (adsorption onto organic matter in coal and shale).[366] These mechanisms are functions of the physical and chemical properties of CO_2 and the geologic formations into which the CO_2 stream is injected. Subsurface formations suitable for GS of CO_2 captured from affected EGUs are geographically widespread throughout most parts of the United States.

Storage security is expected to increase over time through post-closure, resulting in a decrease in potential risks.[367] This expectation is based in part on a technical understanding of the variety of trapping mechanisms that work to reduce CO_2 mobility over time.[368] In addition, site characterization, site operations, and monitoring strategies can work in combination to promote storage security.

[367] Report of the Interagency Task Force on Carbon Capture and Storage (August 2010), page 47.

[368] See, *e.g.,* Intergovernmental Panel on Climate Change. (2005). Special Report on Carbon Dioxide Capture and Storage.

The effectiveness of long-term trapping of CO_2 has been demonstrated by natural analogs in a range of geologic settings where CO_2 has remained trapped for millions of years.[369] For example, CO_2 has been trapped for more than 65 million years in the Jackson Dome, located near Jackson, Mississippi.[370] Other examples of natural CO_2 sources include Bravo Dome and McElmo Dome in Colorado and New Mexico, respectively. These natural storage sites are themselves capable of holding volumes of CO_2 that are larger than the volume of CO_2 expected to be captured from a fossil fuel-fired EGU. In 2010, the Department of Energy (DOE) estimated current CO_2 reserves of 594 million metric tons at Jackson Dome, 424 million metric tons at Bravo Dome, and 530 million metric tons at McElmo Dome.[371]

GS is feasible in different types of geologic formations including deep saline formations (formations with high salinity formation fluids) or in oil and gas formations, such as where injected CO_2 increases oil production efficiency through a process referred to as enhanced oil recovery (EOR). Both deep saline and oil and gas formation types are widely available in the United States. The geographic availability of deep saline formations and EOR is shown in Figure 1 below.[372] As shown in the figure, there are 39 states for which onshore and offshore deep saline formation storage capacity has been identified.[373] EOR operations are currently being conducted in 12 states. An additional 17 states have geology that is amenable to EOR operations. Figure 1 also shows areas that are within 100 kilometers (62 miles) of where storage capacity has been identified.[374] There are 10 states with operating CO_2 pipelines and 18 states that are within 100 kilometers (62 miles) of an active EOR location.

CO_2 may also be used for other types of enhanced recovery, such as for natural gas production. Reservoirs such as unmineable coal seams also offer the potential for geologic storage.[375] Enhanced coalbed methane recovery is the process of injecting and storing CO_2 in unmineable coal seams to enhance methane recovery. These operations take advantage of the preferential chemical affinity of coal for CO_2 relative to the methane that is naturally found on the surfaces of coal. When CO_2 is injected, it is adsorbed to the coal surface and releases methane that can then be captured and produced. This process effectively ''locks'' the CO_2 to the coal, where it remains stored. DOE has identified over 54 billion metric tons of potential CO_2 storage capacity in unmineable coal across 21 states.[376] The availability of unmineable coal seams is shown in Figure 1 below.

As discussed below in Section M.7, a few states do not have geologic conditions suitable for GS, or may not be located in proximity to these areas. However, in some cases, demand in those states can be served by coal-fired power plants located in areas suitable for GS, and in other cases, coal-fired power plants are unlikely to be built in those areas for other reasons, such as the lack of available coal or state law prohibitions and restrictions against coal-fired power plants.[377]

[372] A color version of the figure, which readers may find easier to view, can be found in the technical support document on geographic availability in the rulemaking docket.

[373] Alaska is not shown in Figure 1; it has deep saline formation storage capacity, geology amenable to EOR operations, and potential GS capacity in unmineable coal seams.

[374] The distance of 100 kilometers reflects assumptions in DOE–NETL cost estimates which the EPA used for cost estimation purposes. See ''Carbon Dioxide and Transport and Storage Costs in NETL Studies'', DOE/NETL–2014/1653 (May 2014).

[375] Other types of opportunities include organic shales and basalt.

[376] The United States 2012 Carbon Utilization and Storage Atlas, Fourth Edition, U.S. Department of Energy, Office of Fossil Energy, National Energy Technology Laboratory (NETL).

[377] Similarly, as discussed below, the U.S. territories lack available coal, do not currently have coal-fired power plants, and, as a result, are not expected to see new coal-fired power plants. Hawaii is not expected to constructed new coal plants as it intends to utilize 100 percent renewable energy sources by 2050.

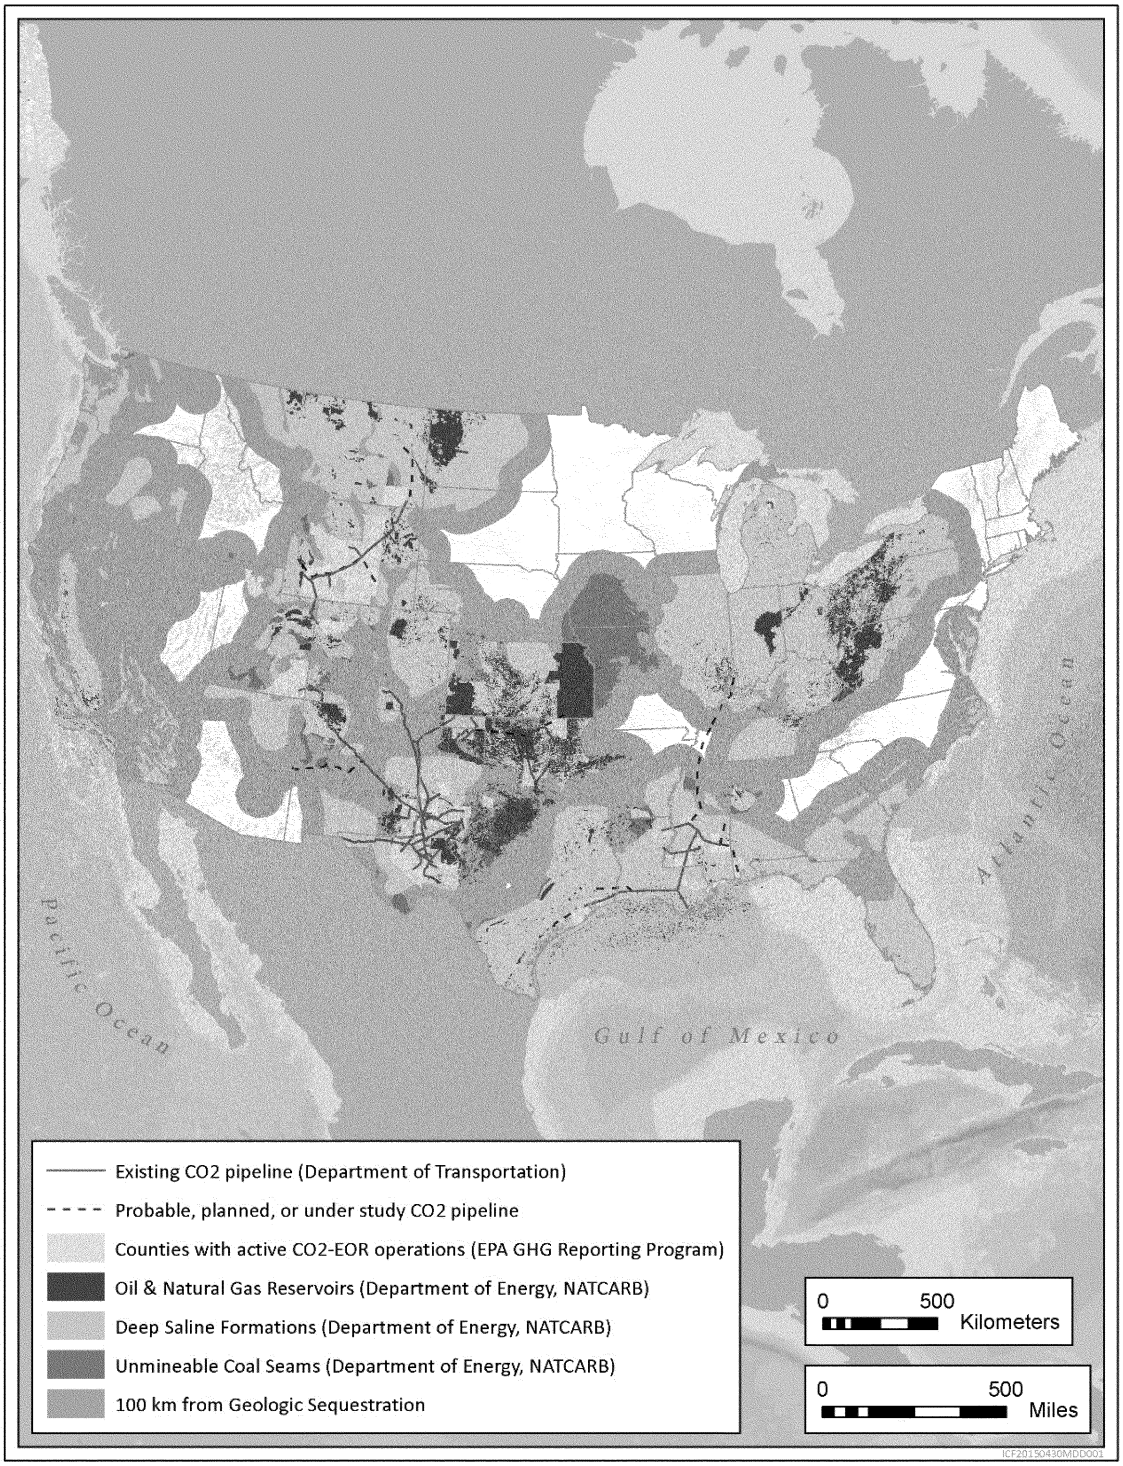

Figure 1: Geologic Sequestration in the Continental United States

Figure 2 – Electrical Transmission Lines across the Continental United States[378]

2. Availability of Geologic Sequestration in Deep Saline Formations

The DOE and the United States Geological Survey (USGS) have independently conducted preliminary analyses of the availability and potential CO_2 sequestration capacity of deep saline formations in the United States. DOE estimates are compiled by the DOE's National Carbon Sequestration Database and Geographic Information System (NATCARB) using volumetric models and published in a Carbon Utilization and Storage Atlas.[379] DOE estimates that areas of the United States

[378] Ventyx Velocity Suite Online. April 2015.

[379] The United States 2012 Carbon Utilization and Storage Atlas, Fourth Edition, U.S. Department of Energy, Office of Fossil Energy, National Energy Technology Laboratory (NETL).

with appropriate geology have a sequestration potential of at least 2,035 billion metric tons of CO_2 in deep saline formations. According to DOE and as noted above, at least 39 states have geologic characteristics that are amenable to deep saline GS in either onshore or offshore locations. In 2013, the USGS completed its evaluation of the technically accessible GS resources for CO_2 in U.S. onshore areas and state waters using probabilistic assessment.[380] The USGS estimates a mean of 3,000 billion metric tons of subsurface CO_2 sequestration potential, including saline and oil and gas reservoirs, across the basins studied in the United States.

The DOE has created a network of seven Regional Carbon Sequestration Partnerships (RCSPs) to deploy large-scale field projects in different geologic settings across the country to demonstrate that GS can be achieved safely, permanently, and economically at large scales. Collectively, the seven RCSPs represent regions encompassing 97 percent of coal-fired CO_2 emissions, 97 percent of industrial CO_2 emissions, 96 percent of the total land mass, and essentially all the geologic sequestration sites in the United States potentially available for GS.[381] The seven partnerships include more than 400 organizations spanning 43 states (and four Canadian provinces).[382] RCSP project objectives are to inject at least one million metric tons of CO_2. In April 2015, DOE announced that CCS projects supported by the department have safely and permanently stored 10 million metric tons of CO_2.[383]

Eight RCSP ''Development Phase'' projects have been initiated and five of the eight projects are injecting or have completed CO_2 injection into deep saline formations. Three of these projects have already injected more than one million metric tons each, and one, the Cranfield Site, injected over eight million metric tons of CO_2 between 2009 and 2013.[384] Various types of technologies for monitoring CO_2 in the subsurface and air have been employed at these projects, such as seismic methods (crosswell seismic, 3–D and 4–D seismic, and vertical seismic profiling), atmospheric CO_2 monitoring, soil gas sampling, well and formation pressure monitoring, and surface and ground water monitoring.[385] No CO_2 leakage has been reported from these sites, which further supports the availability of effective GS.

3. Availability of CO_2 Storage via EOR

Although the determination that the BSER is adequately demonstrated and the regulatory impact analysis for this rule relies on GS in deep saline formations, the EPA also recognizes the potential for securely sequestering CO_2 via EOR.

EOR is a technique that is used to increase the production of oil. Approaches used for EOR include steam injection, injection of specific fluids such as surfactants and polymers, and gas injection including nitrogen and CO_2. EOR using CO_2, sometimes referred to as ''CO_2 flooding'' or CO_2-EOR, involves injecting CO_2 into an oil reservoir to help mobilize the remaining oil to make it more amenable for recovery. The crude oil and CO_2 mixture is then recovered and sent to a separator where the crude oil is separated from the gaseous hydrocarbons, native formation fluids, and CO_2. The gaseous CO_2-rich stream then is typically dehydrated, purified to remove hydrocarbons, re-compressed, and re-injected into the reservoir to further enhance oil recovery. Not all of the CO_2 injected into the oil reservoir is recovered and re-injected. As the CO_2 moves from the injection point to the production well, some of the CO_2 becomes trapped in the small pores of the rock, or is dissolved in the oil and water that is not recovered. The CO_2 that remains in the reservoir is not mobile and becomes sequestered.

The amount of CO_2 used in an EOR project depends on the volume and injectivity of the reservoir that is being flooded and the length of time the EOR project has been in operation. Initially, all of the injected CO_2 is newly received. As discussed above, as the project matures, some CO_2 is recovered with the oil and the recovered CO_2 is separated from the oil and recycled so that it can be re-injected into the reservoir in addition to new CO_2 that is received. If an EOR operator will not require the full volume of CO_2 available from an EGU, the EGU has other options such as sending the CO_2 to other EOR operators, or sending it to deep saline formation GS facilities.

CO_2 used for EOR may come from anthropogenic or natural sources. The source of the CO_2 does not impact the effectiveness of the EOR operation. CO_2 capture, treatment and processing steps provide a concentrated stream of CO_2 in order to meet the needs of the intended end use. CO_2 pipeline specifications of the U.S. Department of Transportation Pipeline Hazardous Materials Safety Administration found at 49 CFR part 195 (Transportation of Hazardous Liquids by Pipeline) apply regardless of the source of the CO_2 and take into account CO_2 composition, impurities, and phase behavior. Additionally, EOR operators and transport companies have specifications related to the composition of the CO_2 stream. The regulatory requirements and company specifications ensure EOR operators receive a known and consistent CO_2 stream.

EOR has been successfully used at numerous production fields throughout the United States to increase oil recovery. The oil industry in the United States has over 40 years of experience with EOR. An oil industry study in 2014 identified more than 125 EOR projects in 98 fields in the United States.[386] More than half of the projects evaluated in the study have been in operation for more than 10 years, and many have been in operation for more than 30 years. This experience provides a strong foundation for demonstrating successful CO_2 injection and monitoring technologies, which are needed for safe and secure GS (see Section N below) that can be used for deployment of CCS across geographically diverse areas.

Currently, 12 states have active EOR operations and most have developed an extensive CO_2 infrastructure, including pipelines, to support the continued operation and growth of EOR. An additional 18 states are within 100 kilometers (62 miles) of current EOR operations. See Figure 1 above. The vast majority of EOR is conducted in oil reservoirs in the Permian Basin, which extends through southwest Texas and southeast New Mexico. States where EOR is utilized include Alabama, Colorado, Louisiana, Michigan,

[386] Koottungal, Leena, 2014, 2014 Worldwide EOR Survey, Oil & Gas Journal, Volume 112, Issue 4, April 7, 2014 (corrected tables appear in Volume 112, Issue 5, May 5, 2014).

Mississippi, New Mexico, Oklahoma, Texas, Utah, and Wyoming. Several commenters raised concerns about the volume of CO_2 used in EOR projects relative to the scale of EGU emissions and the demand for CO_2 for EOR projects. At the project level, the volume of CO_2 already injected for EOR and the duration of operations are of similar magnitude to the duration and volume of CO_2 expected to be captured from fossil fuel-fired EGUs. The volume of CO_2 used in EOR operations can be large (*e.g.,* 55 million tons of CO_2 were stored in the SACROC unit in the Permian Basin over 35 years), and operations at a single oil field may last for decades, injecting into multiple parts of the field.[387] According to data reported to the EPA's GHGRP, approximately 60 million metric tons of CO_2 were supplied to EOR in the United States in 2013.[388] Approximately 70 percent of this total CO_2 supplied was produced from natural (geologic) CO_2 sources and approximately 30 percent was captured from anthropogenic sources.[389]

A DOE-sponsored study has analyzed the geographic availability of applying EOR in 11 major oil producing regions of the United States and found that there is an opportunity to significantly increase the application of EOR to areas outside of current operations.[390] DOE-sponsored geologic and engineering analyses show that expanding EOR operations into areas additional to the capacity already identified and applying new methods and techniques over the next 20 years could utilize 18 billion metric tons of anthropogenic CO_2 and increase total oil production by 67 billion barrels. The study found that one of the limitations to expanding CO_2 use in EOR is the lack of availability of CO_2 in areas where reservoirs are most amenable to CO_2 flooding.[391] DOE's Carbon Utilization and Storage Atlas identifies 29 states with oil reservoirs amenable to EOR, 12 of which currently have active EOR operations. A comparison of the current states with EOR operations and the states with potential for EOR shows that an opportunity exists to expand the use of EOR to regions outside of current areas. The availability of anthropogenic CO_2 in areas outside of current sources could drive new EOR projects by making more CO_2 locally available.

Some commenters raised concerns that data are extremely limited on the extent to which EOR operations permanently sequester CO_2, and the efficacy of long term storage, or that the EOR industry does not have the requisite experience with and technical knowledge of long-term CO_2 sequestration. The EPA disagrees with these commenters. Several EOR sites, which have been operated for years to decades, have been studied to evaluate the viability of safe and secure long-term sequestration of injected CO_2. Examples are identified below.

CO_2 has been injected in the SACROC Unit in the Permian basin since 1972 for EOR purposes. One study evaluated a portion of this project, and estimated that the injection operations resulted in final sequestration of about 55 million tons of CO_2.[392] This study used modeling and simulations, along with collection and analysis of seismic surveys, and well logging data, to evaluate the ongoing and potential CO_2 trapping occurring through various mechanisms. The monitoring at this site demonstrated that CO_2 can become trapped in geologic formations. In a separate study in the SACROC Unit, the Texas Bureau of Economic Geology conducted an extensive groundwater sampling program to look for evidence of CO_2 leakage in the shallow freshwater aquifers. No evidence of leakage was detected.[393]

The International Energy Agency Greenhouse Gas Programme conducted an extensive monitoring program at the Weyburn oil field in Saskatchewan between 2000 and 2010 (the site receiving CO_2 captured by the Dakota Gasification synfuel plant discussed in Section V.E.2.a above). During that time over 16 million metric tons of CO_2 were safely sequestered as evidenced by soil gas surveys, shallow groundwater monitoring, seismic surveys and wellbore integrity testing. An extensive shallow groundwater monitoring program revealed no significant changes in water chemistry that could be attributed to CO_2 storage operations.[394] The International Energy Agency Greenhouse Gas Programme developed a best practices manual for CO_2 monitoring at EOR sites based on the comprehensive analysis of surface and subsurface monitoring methods applied over the 10 years.[395]

The Texas Bureau of Economic Geology also has been testing a wide range of surface and subsurface monitoring tools and approaches to document sequestration efficiency and sequestration permanence at the Cranfield oilfield in Mississippi (see Section L.1 above).[396] As part of a DOE Southeast Regional Carbon Sequestration Partnership study, Denbury Resources injected CO_2 into a depleted oil and gas reservoir at a rate greater than 1.2 million tons/year. Texas Bureau of Economic Geology is currently evaluating the results of several monitoring techniques employed at the Cranfield project and preliminary findings indicate no impact to groundwater.[397] The project also demonstrates the availability and effectiveness of many different monitoring techniques for tracking CO_2 underground and detecting CO_2 leakage to ensure CO_2 remains safely sequestered.

As discussed in Section M.1 above and as shown in Figure 1, the United States has widespread potential for storage, including in deep saline formations and oil and gas formations. However, some commenters maintained that the EPA's information regarding availability of GS sites is overly general and ignores important individual considerations. A number of commenters, for example, maintained that site conditions often make monitoring difficult or impossible, so

that sites are not available as a practical matter.[398] Commenter American Electric Power pointed to its own experience in siting monitoring wells for its pilot plant Mountaineer CCS project, which involved protracted time and expense to eventually site monitoring wells.[399] Other commenters noted significant geographic disparity in GS site availability, claiming absence of sites in southeastern areas of the country.[400]

Project- and site-specific factors do influence where CO_2 can be safely sequestered. However, as outlined above, there is widespread potential for GS in the United States. If an area does not have a suitable GS site, EGUs can either transport CO_2 to GS sites via CO_2 pipelines (see Section M.5 below), or they may choose to locate their units closer to GS sites and provide electric power to customers through transmission lines (see Figure 2 and Section M.7). In addition, there are alternative means of complying with the final standards of performance that do not necessitate use of partial CCS, so any siting difficulties based on lack of a CO_2 repository would be obviated. See *Portland Cement Ass'n* v. *EPA,* 665 F. 3d 177, 191 (D.C. Cir. 2011), holding that the EPA could adopt section 111 standards of performance based on the performance of a kiln type that kilns of older design would have great difficulty satisfying, since, among other things, there were alternative methods of compliance available should a new kiln of this older design be built.

4. Alternatives to Geologic Sequestration

Potential alternatives to sequestering CO_2 in geologic formations are emerging. These relatively new potential alternatives may offer the opportunity to offset the cost of CO_2 capture. For example, captured anthropogenic CO_2 may be stored in solid carbonate materials such as precipitated calcium carbonate (PCC) or magnesium or calcium carbonate, bauxite residue carbonation, and certain types of cement through mineralization. PCC is produced through a chemical reaction process that utilizes calcium oxide (quicklime), water, and CO_2. Likewise, the combination of magnesium oxide and CO_2 results in a precipitation reaction where the CO_2 becomes mineralized. The carbonate materials produced can be tailored to optimize performance in specific industrial and commercial applications. These carbonate materials have been used in the construction industry and, more recently and innovatively, in cement production processes to replace Portland cement.

The Skyonics Skymine project, which opened its demonstration project in October 2014, is an example of captured CO_2 being used in the production of carbonate products. This plant converts CO_2 into commercial products. It captures over 75,000 tons of CO_2 annually from a San Antonio, Texas, cement plant and converts the CO_2 into other products, including sodium carbonate, sodium bicarbonate, hydrochloric acid and bleach.[401]

A few commenters suggested that CO_2 utilization technologies alternative to GS are being commercialized, and that these should be included as compliance options for this rule. The rule generally requires that captured CO_2 be either injected on-site for geologic sequestration or transferred offsite to a facility reporting under 40 CFR subpart RR. The EPA does not believe that the emerging technologies just discussed are sufficiently advanced to unqualifiedly structure this final rule to allow for their use. Nor are there plenary systems of regulatory control and GHG reporting for these approaches, as there are for geologic sequestration. Nonetheless, as stated above, these technologies not only show promise, but could potentially be demonstrated to show permanent storage of CO_2.

In the January 2014 proposal, the EPA noted that it would need to adopt a mechanism to evaluate these alternative technologies before any could be used in lieu of geologic sequestration. 79 FR at 1484. The EPA is establishing such a mechanism in this final rule. See § 60.5555(g). The rule provides for a case-by-case adjudication by the EPA of applications seeking to demonstrate to the EPA that a non-geologic sequestration technology would result in permanent confinement of captured CO_2 from an affected EGU. The criteria to be addressed in the application, and evaluated by the EPA, are drawn from CAA section 111(j), which provides an analogous mechanism for case-by-case approval of innovative technological systems of continuous emission reduction which have not been adequately demonstrated. Applicants would need to demonstrate that the proposed technology would operate effectively, and that captured CO_2 would be permanently stored. Applicants must also demonstrate that the proposed technology will not cause or contribute to an unreasonable risk to public health, welfare or safety. In evaluating applications, the EPA may conduct tests itself or require the applicant to conduct testing in support of its application. Any application would be publicly noticed, and the EPA would solicit comment on the application and on intended action the EPA might take. The EPA could also provide a conditional approval of an application on operating results from a proscribed period. The EPA could also terminate an approval, including a termination based on operating results calling into question a technology's effectiveness.

As noted at proposal, given the unlikelihood of new coal-fired EGUs being constructed, the EPA does not expect there to be many (if any) applications for use of non-geologic sequestration technology. 79 FR at 1484.

5. Availability of Existing or Planned CO_2 Pipelines

CO_2 pipelines are the most economical and efficient method of transporting large quantities of CO_2.[402] CO_2 has been transported via pipelines in the United States for nearly 40 years. Over this time, the design, construction, operation, and safety requirements for CO_2 pipelines have been proven, and the U.S. CO_2 pipeline network has been safely used and expanded. The Pipeline and Hazardous Materials Safety Administration (PHMSA) reported that in 2013 there were 5,195 miles of CO_2 pipelines operating in the United States. This represents a seven percent increase in CO_2 pipeline miles over the previous year and a 38 percent increase in CO_2 pipeline miles since 2004.[403]

Some commenters argued that the existing CO_2 pipeline capacity is not adequate and that CO_2 pipelines are not available in a majority of the United States.

The EPA does not agree. The CO_2 pipeline network in the United States has almost doubled in the past ten years in order to meet growing demands for CO_2 for EOR. CO_2 transport companies have recently proposed initiatives to expand the CO_2 pipeline network. Several hundred miles of dedicated CO_2 pipeline are under construction, planned, or proposed, including

projects in Colorado, Louisiana, Montana, New Mexico, Texas, and Wyoming.

Examples are identified below.

Kinder Morgan has reported several proposed pipeline projects including the proposed expansion of the existing Cortez CO_2 pipeline, crossing Colorado, New Mexico, and Texas, to increase the CO_2 transport capacity from 1.35 billion cubic feet per day (Bcf/d) to 1.7 Bcf/d, to support the expansion of CO_2 production capacity at the McElmo Dome production facility in Colorado. The Cortez pipeline expansion is expected to be placed into service in 2015.[404]

Denbury reported that the company utilized approximately 70 million cubic feet per day of anthropogenic CO_2 in 2013 and that an additional approximately 115 million cubic feet per day of anthropogenic CO_2 may be utilized in the future from currently planned or future construction of facilities and associated pipelines in the Gulf Coast region.[405] Denbury also initiated transport of CO_2 from a Wyoming natural gas processing plant in 2013 and reported transporting approximately 22 million cubic feet per day of CO_2 in 2013 from that plant alone.[406]

Denbury completed the final section of the 325-mile Green Pipeline for transporting CO_2 from Donaldsonville, Louisiana, to EOR oil fields in Texas.[407] Denbury completed construction and commenced operation of the 232-mile Greencore Pipeline in 2013; the Greencore pipeline transports CO_2 to EOR fields in Wyoming and Montana.[408]

A project being constructed by NRG and JX Nippon Oil & Gas Exploration (Petra Nova) would capture CO_2 from a power plant in Fort Bend County, Texas for transport to EOR sites in Jackson County, Texas through an 82-mile CO_2 pipeline.[409] The project is anticipated to commence operation in 2016.[410]

Some commenters suggested that there may be challenges associated with the safety of transporting supercritical CO_2 over long distances, or that the EPA did not adequately consider the potential non-air environmental impacts of the construction of CO_2 pipelines.

The EPA has carefully evaluated the safety of pipelines used to transport captured CO_2 and determined that pipelines can indeed convey captured CO_2 to sequestration sites with certainty and provide full protection of human health and the environment. 76 FR at 48082–83 (Aug. 8, 2011); 79 FR 352, 354 (Jan. 3, 2014). Existing and new CO_2 pipelines are comprehensively regulated by the Department of Transportation's Pipeline Hazardous Material Safety Administration. The regulations govern pipeline design, construction, operation and maintenance, and emergency response planning. See generally 49 CFR 195.2. Additional regulations address pipeline integrity management by requiring heightened scrutiny to assure the quality of pipeline integrity in areas with a higher potential for adverse consequences. See 49 CFR 195.450 and 195.452. On-site pipelines are not subject to the Department of Transportation standards, but rather adhere to the Pressure Piping standards of the American Society of Mechanical Engineers (ASME B31), which the EPA has found would ensure that piping and associated equipment meet certain quality and safety criteria sufficient to prevent releases of CO_2, such that certain additional requirements were not necessary (See 79 FR 358–59 (Jan. 3, 2014)).[411] These existing controls over CO_2 pipelines assure protective management, guard against releases, and assure that captured CO_2 will be securely conveyed to a sequestration site.

6. States With Emission Standards That Would Require CCS

Several states have established emission performance standards or other measures to limit emissions of GHGs from new EGUs that are comparable to or more stringent than the final standard in this rulemaking. For example, in September 2006, California Governor Schwarzenegger signed into law Senate Bill 1368. The law limits long-term investments in base load generation by the state's utilities to power plants that meet an emissions performance standard jointly established by the California Energy Commission and the California Public Utilities Commission. The Energy Commission has designed regulations that establish a standard for new and existing base load generation owned by, or under long-term contract to publicly owned utilities, of 1,100 lb CO_2/MWh.

In May 2007, Washington Governor Gregoire signed Substitute Senate Bill 6001, which established statewide GHG emissions reduction goals, and imposed an emission standard that applies to any base load electric generation that commenced operation after June 1, 2008 and is located in Washington, whether or not that generation serves load located within the state. Base load generation facilities must initially comply with an emission limit of 1,100 lb CO_2/MWh.

In July 2009, Oregon Governor Kulongoski signed Senate Bill 101, which mandated that facilities generating base load electricity, whether gas- or coal-fired, must have emissions equal to or less than 1,100 lb CO_2/MWh, and prohibited utilities from entering into long-term purchase agreements for base load electricity with out-of-state facilities that do not meet that standard.

In 2012 New York established emission standards of CO_2 at 925 lb CO_2/MWh for new and expanded base load fossil fuel-fired plants.

In May 2007, Montana Governor Schweitzer signed House Bill 25, adopting a CO_2 emissions performance standard for EGUs in the state. House Bill 25 prohibits the state Public Utility Commission from approving new EGUs primarily fueled by coal unless a minimum of 50 percent of the CO_2 produced by the facility is captured and sequestered.

On January 12, 2009, Illinois Governor Blagojevich signed Senate Bill 1987, the Clean Coal Portfolio Standard Law. The legislation establishes emission standards for new power plants that use coal as their primary feedstock. From 2009–2015, new coal-fueled power plants must capture and store 50 percent of the carbon emissions that the facility would otherwise emit; from 2016–2017, 70 percent must be captured and stored; and after 2017, 90 percent must be captured and stored.

7. Coal-by-Wire

In addition, as discussed in the proposal, electricity demand in states

that may not have geologic sequestration sites may be served by coal-fired electricity generation built in nearby areas with geologic sequestration, and this electricity can be delivered through transmission lines. This method, known as ''coal-by-wire,'' has long been used in the electricity sector because siting a coal-fired power plant near the coal mine and transmitting the generation long distances to the load area is generally less expensive than siting the plant near the load area and shipping the coal long distances.

For example, we noted in the proposal that there are many examples where coal-fired power generated in one state is used to supply electricity in other states. In the proposal we specifically noted that historically nearly 40 percent of the power for the City of Los Angeles was provided from two coal-fired power plants located in Arizona and Utah and Idaho Power, which serves customers in Idaho and Eastern Oregon, meets its demand in part from coal-fired power plants located in Wyoming and Nevada. 79 FR at 1478.

In the Technical Support Document on Geographic Availability (Geographic Availability TSD), we explore in greater detail the issue of coal-by-wire and the ability of demand in areas without geologic sequestration to be served by coal generation located in areas that have access to geologic sequestration. Figure 1 of this preamble (a color version of which is provided as Figure 1 of the Geographic Availability TSD) depicts areas of the country with: (1) existing CO_2 pipeline; (2) probable, planned, or under study CO_2 pipeline; (3) counties with active CO_2-EOR operations; (4) oil and natural gas reservoirs; (5) deep saline formations; (6) unmineable coal seams; and (7) areas 100 kilometers from geologic sequestration. As demonstrated by Figure 1, the vast majority of the country has existing or planned CO_2 pipeline, active CO_2-EOR operations, the necessary geology for CO_2 storage, or is within 100 kilometers of areas with geologic sequestration.[412] A review of Figure 1 indicates limited areas that do not fall into these categories.

As an initial matter, we note that the data included in Figure 1 is a conservative outlook of potential areas available for the development of CO_2 storage in that we include only areas that have been assessed to date. Portions of the United States—such as the State of Minnesota—have not yet been assessed and thus are depicted as not having geological formations suitable for CO_2 storage, even though assessment could in fact reveal additional formations.[413]

As one considers the areas on the map depicted in Figure 1 that fall outside of the above enumerated categories, in many instances, we find areas with low population density, areas that are already served by transmission lines that could deliver coal-by-wire, and/or areas that have made policy or other decisions not to pursue a resource mix that includes coal. In many of these areas, utilities, electric cooperatives, and municipalities have a history of joint ownership of coal-fired generation outside the region or contracting with coal and other generation in outside areas to meet their demand. Some of the relevant areas are in RTOs[414] which engage in planning across the RTO, balancing supply and demand in real time throughout the RTO. Accordingly, generating resources in one part of the RTO such as a coal generator can serve load in other parts of the RTO, as well as load outside of the RTO. As we consider each of these geographic areas in the Geographic Availability TSD, we make key points as to why this final rule does not negatively impact the ability of these regions to access new coal generation to the extent that coal is needed to supply demand and/or those regions want to include new coal-fired generation in their resource mix.

N. Final Requirements for Disposition of Captured CO_2

This section discusses the different regulatory components, already in place, that assure the safety and effectiveness of GS. This section, by demonstrating that GS is already covered by an effective regulatory structure, complements the analysis of the technical feasibility of GS contained in Sec. V.M. Together, these sections affirm that the technical feasibility of GS is adequately demonstrated.

In 2010, the EPA finalized an effective and coherent regulatory framework to ensure the long-term, secure and safe storage of large volumes of CO_2. The EPA developed these Underground Injection Control (UIC) Class VI well regulations under authority of the Safe Drinking Water Act (SDWA) to facilitate injection of CO_2 for GS, while protecting human health and the environment by ensuring the protection of underground sources of drinking water (USDWs). The Class VI regulations are built upon 35 years of federal experience regulating underground injection wells, and many additional years of state UIC program expertise. The EPA and states have decades of UIC experience with the Class II program, which provides a regulatory framework for the protection of USDWs for CO_2 injected for purposes of EOR.

In addition, to complement both the Class VI and Class II rules, the EPA used CAA authority to develop air-side monitoring and reporting requirements for CO_2 capture, underground injection, and geologic sequestration through the GHGRP. Information collected under the GHGRP provides a transparent means for the EPA and the public to continue to evaluate the effectiveness of GS.

As explained below, these requirements help ensure that sequestered CO_2 will remain in place, and, using SDWA and CAA authorities, provide the monitoring mechanisms to identify and address potential leakage. We note the near consensus in the public responses to the Class VI rulemaking that saline and oil and gas reservoirs provide ready means for secure GS of CO_2.[415]

1. Requirements for UIC Class VI and Class II Wells

Under SDWA, the EPA developed the UIC Program to regulate the underground injection of fluids in a manner that ensures protection of USDWs. UIC regulations establish six different well classes that manage a range of injectates (*e.g.,* industrial and municipal wastes; fluids associated with oil and gas activities; solution mining fluids; and CO_2 for geologic sequestration) and which accommodate varying geologic, hydrogeological, and other conditions. The standards apply to injection into any type of formation that meets the rule's rigorous criteria, and so apply not only to injection into deep

[412] The NETL cost estimates for CO_2 transport assume a pipeline of 100 kilometers. NETL (2015) at p. 44.

[413] The data in Figure 1 is based on estimates compiled by the DOE's National Carbon Sequestration Database and Geographic Information System (NATCARB) and published in the United States 2012 Carbon Utilization and Storage Atlas, Fourth Edition. As discussed in the TSD, deep saline formation potential was not assessed for Alaska, Connecticut, Hawaii, Massachusetts, Nevada, Rhode Island, and Vermont. Oil and gas storage potential was not assessed for Alaska, Washington, Nevada, and Oregon. Unmineable coal seams were not assessed for Nevada, Oregon, California, Idaho, and New York. We are assuming for purposes of our analysis here that they do not have storage potential in those formations.

[414] In this discussion, we use the term RTO to indicate both ISOs and RTOs.

[415] In that rulemaking, we stated that ''most commenters encouraged the EPA not to automatically exclude any potential injection formations for GS at this stage of deployment.'' We added that commenters suggested, in particular, ''that there is sufficient technical basis and scientific evidence to allow GS in depleted oil and gas reservoirs and in saline formations, noting that there is consensus on how to inject into these formation types.'' 75 FR at 77252 (Dec. 10, 2010).

saline formations, but also can apply to injection into unmineable coal seams and other formations. See 75 FR 77256 (Dec. 10, 2010).

The EPA's UIC regulations define the term USDWs to include current and future sources of drinking water and aquifers that contain a sufficient quantity of ground water to supply a public water system, where formation fluids either are currently being used for human consumption or that contain less than 10,000 ppm total dissolved solids.[416] UIC requirements have been in place for over three decades and have been used by the EPA and states to manage hundreds of thousands of injection wells nationwide.

a. Class VI Requirements

In 2010, the EPA established a new class of well, Class VI. Class VI wells are used to inject CO_2 into the subsurface for the purpose of long-term sequestration. See 75 FR 77230 (Dec. 10, 2010). This rule accounts for the unique nature of CO_2 injection for large-scale GS. Specifically, the EPA addressed the unique characteristics of CO_2 injection for GS including the large CO_2 injection volumes anticipated at GS projects, relative buoyancy of CO_2, its mobility within subsurface geologic formations, and its corrosivity in the presence of water. The UIC Class VI rule was developed to facilitate GS and ensure protection of USDWs from the particular risks that may be posed by large scale CO_2 injection for purposes of long-term GS. The Class VI rule establishes technical requirements for the permitting, geologic site characterization, area of review (*i.e.,* the project area) and corrective action, well construction, operation, mechanical integrity testing, monitoring, well plugging, post-injection site care, site closure, and financial responsibility for the purpose of protecting USDWs.[417] Notably:

Site characterization includes assessment of the geologic, hydrogeologic, geochemical, and geomechanical properties of a proposed GS site to ensure that Class VI wells are sited in appropriate locations and CO_2 streams are injected into suitable formations with a confining zone or zones free of transmissive faults or fractures to ensure USDW protection.[418] [419] Site characterization is designed to eliminate unacceptable sites that may pose risks to USDWs. Generally, injection of CO_2 for GS should occur beneath the lowermost formation containing a USDW.[420] To increase the availability of Class VI sites in geographic areas with very deep USDWs, waivers from the injection depth requirements may be sought where owners or operators can demonstrate USDW protection.[421]

Owners or operators of Class VI wells must delineate the project area of review using computational modeling that accounts for the physical and chemical properties of the injected CO_2 and displaced fluids and is based on an iterative process of available site characterization, monitoring, and operational data.[422] Within the area of review, owners or operators must identify and evaluate all artificial penetrations to identify those that need corrective action to prevent the movement of CO_2 or other fluids into or between USDWs.[423] [424] Due to the potentially large size of the area of review for Class VI wells, corrective actions may be conducted on a phased basis during the lifetime of the project.[425] Periodic reevaluation of the area of review is required and enables owners or operators to incorporate previously collected monitoring and operational data to verify that the CO_2 plume and the associated area of elevated pressure are moving as predicted within the subsurface.[426]

Well construction must use materials that can withstand contact with CO_2 over the operational and post-injection life of the project.[427] These requirements address the unique physical characteristics of CO_2, including its buoyancy relative to other fluids in the subsurface and its potential corrosivity in the presence of water.

Requirements for operation of Class VI injection wells account for the unique conditions that will occur during large-scale GS including buoyancy, corrosivity, and high sustained pressures over long periods of operation.[428] [429]

Owners or operators of Class VI wells must develop and implement a comprehensive testing and monitoring plan for their projects that includes injectate analysis, mechanical integrity testing, corrosion monitoring, ground water and geochemical monitoring, pressure fall-off testing, CO_2 plume and pressure front monitoring and tracking, and, at the discretion of the Class VI director, surface air and/or soil gas monitoring.[430] Owners and operators must periodically review the testing and monitoring plan to incorporate operational and monitoring data and the most recent area of review reevaluation.[431] Robust monitoring of the CO_2 stream, injection pressures, integrity of the injection well, ground water quality and geochemistry, and monitoring of the CO_2 plume and position of the pressure front throughout injection will ensure protection of USDWs from endangerment, preserve water quality, and allow for timely detection of any leakage of CO_2 or displaced formation fluids.

Although subsurface monitoring is the primary and effective means of determining if there are any risks to a USDW, the Class VI rule also authorizes the UIC Program Director to require surface air and/or soil gas monitoring on a site-specific basis. For example, the Class VI Director may require surface air/soil gas monitoring of the flux of CO_2 out of the subsurface, with elevation of CO_2 levels above background serving as

[416] 40 CFR 144.3.

[417] The Class VI rule rests on a robust technical and scientific foundation, reflecting scientific oversight and peer review. In developing these Class VI rules, the EPA engaged with the SAB, providing detailed information on key issues relating to geologic sequestration—including monitoring schemes; methods to predict and verify capacity, injectivity, and effectiveness of subsurface CO_2 storage; and characterization and management of risks associated with plume migration and pressure increases in the subsurface. See: *http://yosemite.epa.gov/sab/sabproduct.nsf/0/AD09B42B75D9E36D85257704004882CF?OpenDocument.* In addition, the EPA developed a peer reviewed Vulnerability Evaluation Framework, which served as a technical support document for both the Class VI and Subpart RR rules. See: *http://www.epa.gov/climatechange/Downloads/ghgemissions/VEF-Technical_Document_072408.pdf.* In the section 111(b) rulemaking here, the SAB Work Group, in a letter endorsed by the full SAB Committee, found that ''while the scientific and technical basis for carbon storage provisions is new and emerging science, the agency is using the best available science and has conducted peer review at a level required by agency guidance.'' Memorandum of Jan. 7, 2014, from SAB Work Group Chair to Members of the Chartered SAB and SAB Liaisons, p. 3. The letter was subsequently endorsed by the full SAB. Work Group Letter of Jan. 24, 2014, as edited by the full Committee.

[431] 40 CFR 146.90(j).

an indicator of potential leakage and USDW endangerment.[432]

Class VI well owners or operators must develop and update a site-specific, comprehensive emergency and remedial response plan that describes actions to be taken (*e.g.,* cease injection) to address potential events that may cause endangerment to a USDW during the construction, operation, and post-injection site care periods of the project.[433]

Financial responsibility demonstrations are required to ensure that funds will be available for all area of review corrective action, injection well plugging, post-injection site care, site closure, and emergency and remedial response.[434]

Following cessation of injection, the operator must conduct comprehensive post-injection site care activities to show the position of the CO_2 plume and the associated area of elevated pressure to demonstrate that neither poses an endangerment to USDWs.[435] The injection well also must be plugged, and following a demonstration of non-endangerment of USDWs by the Class VI owner or operator, the site must be closed.[436 437] The default duration for the post-injection site care period is 50 years, with flexibility for demonstrating that an alternative period is appropriate if it ensures non-endangerment of USDWs.[438] Following successful closure, the facility property deed must record that the underlying land is used for GS.[439]

The EPA has completed technical guidance documents on Class VI well site characterization, area of review and corrective action, well testing and monitoring, project plan development, well construction, and financial responsibility.[440 441 442 443 444 445] The EPA has also issued guidance documents on transitioning Class II wells to Class VI wells; well plugging, post-injection site care, and site closure; and recordkeeping, reporting, and data management.[446 447 448 449]

To inform the development of the UIC Class VI rule, the EPA solicited stakeholder input and reviewed ongoing domestic and international GS research, demonstration, and deployment projects. The EPA also leveraged injection experience of the UIC Program, such as injection via Class II wells for EOR. A description of the work conducted by the EPA in support of the UIC Class VI rule can be found in the preamble for the final rule (see 75 FR 77230 and 77237–240(December 10, 2010)).

The EPA has issued Class VI permits for six wells under two projects. In September 2014, a UIC Class VI injection well permit (to construct) was issued by the EPA to Archer Daniels Midland for an ethanol facility in Decatur, Illinois. The goal of the project is to demonstrate the ability of the Mount Simon geologic formation, a deep saline formation, to accept and retain industrial scale volumes of CO_2 for permanent GS. The permitted well has a projected operational period of five years, during which time 5.5 million metric tons of CO_2 will be injected into an area of review with a radius of approximately 2 miles.[450] Following the operational period, Archer Daniels Midland plans a post-injection site care period of ten years.[451] In September 2014, the EPA also issued four Class VI injection well permits (to construct) to the FutureGen Industrial Alliance project in Jacksonville, Illinois, which proposed to capture CO_2 emissions from a coal-fired power plant in Meredosia, Illinois and transport the CO_2 by pipeline approximately 30 miles to the deep saline GS site.[452] The Alliance proposed to inject a total of 22 million metric tons of CO_2 into an area of review with a radius of approximately 24 miles over the 20-year life of the project, with a post-injection site care period of fifty years.[453]

Both permit applicants addressed siting and operational aspects of GS (including issues relating to volumes of the CO_2 and nature of the CO_2 injectate), and included monitoring that helps provide assurance that CO_2 will not migrate to shallower formations. The permits were based on findings that regional and local features at the site allow the site to receive injected CO_2 in specified amounts without buildup of pressure which would create faults or fractures, and further, that monitoring provides early warning of any changes to groundwater or CO_2 leakage.[454]

The permitting of these projects illustrates that permit applicants were able to address perceived challenges to issuance of Class VI permits. These permits demonstrate that these projects are capable of safely and securely sequestering large volumes of CO_2—including from steam generating units—for long-term storage since the EPA would not otherwise have issued the permits.

b. Class II Requirements

As explained in Section M.3 above, CO_2 has been injected into the subsurface via injection wells for EOR, boosting production efficiency by re-pressurizing oil and gas reservoirs and increasing the mobility of oil. There are decades of industry experience in operating EOR projects. The CO_2 injection wells used for EOR are regulated through the UIC Class II program.[455] CO_2 storage associated with Class II wells is a common occurrence and CO_2 can be safely stored where injected through Class II-permitted wells for the purpose of enhanced oil or gas-related recovery.

UIC Class II regulations issued under section 1421 of SDWA provide minimum federal requirements for site characterization, area of review, well construction (*e.g.,* casing and cementing), well operation (*e.g.,* injection pressure), injectate sampling, mechanical integrity testing, plugging and abandonment, financial responsibility, and reporting. Class II wells must undergo periodic mechanical integrity testing which will detect well construction and operational

conditions that could lead to loss of injectate and migration into USDWs.

Section 1425 of SDWA allows states to demonstrate that their program is effective in preventing endangerment of USDWs. These programs must include permitting, inspection, monitoring, record-keeping, and reporting components.

2. Relevant Requirements of the GHGRP

The GHGRP requires reporting of facility-level GHG data and other relevant information from large sources and suppliers in the United States. The final rules under 40 CFR part 60 specifically require that if an affected EGU captures CO_2 to meet the applicable emissions limit, the EGU must report in accordance with 40 CFR part 98, subpart PP (Suppliers of Carbon Dioxide) and the captured CO_2 must be injected at a facility or facilities that reports in accordance with 40 CFR part 98, subpart RR (Geologic Sequestration of Carbon Dioxide). See § 60.5555(f). Taken together, these requirements ensure that the amount of captured and sequestered CO_2 will be tracked as appropriate at project- and national-levels, and that the status of the CO_2 in its sequestration site will be monitored, including air-side monitoring and reporting.

Specifically, subpart PP provides requirements to account for CO_2 supplied to the economy. This subpart requires affected facilities with production process units that capture a CO_2 stream for purposes of supplying CO_2 for commercial applications or that capture and maintain custody of a CO_2 stream in order to sequester or otherwise inject it underground to report the mass of CO_2 captured and supplied to the economy.[456] CO_2 suppliers are required to report the annual quantity of CO_2 transferred offsite and its end use, including GS.[457]

This rule finalizes amendments to subpart PP reporting requirements, specifically requiring that the following pieces of information be reported: (1) the electronic GHG Reporting Tool identification (e–GGRT ID) of the EGU facility from which CO_2 was captured, and (2) the e–GGRT ID(s) for, and mass of CO_2 transferred to, each GS site reporting under subpart RR.[458]

As noted, this final rule also requires that any affected EGU unit that captures CO_2 to meet the applicable emissions limit must transfer the captured CO_2 to a facility that reports under GHGRP subpart RR. In order to provide clarity on this requirement, the EPA reworded the proposed language under § 60.5555(f) to use the phrase ''If your affected unit captures CO_2'' in place of the phrase ''If your affected unit employs geologic sequestration''. This revision is not a change from the EPA's initial intent.

Reporting under subpart RR is required for all facilities that have received a Class VI UIC permit for injection of CO_2.[459] Subpart RR requires facilities meeting the source category definition (40 CFR 98.440) for any well or group of wells to report basic information on the mass of CO_2 received for injection; develop and implement an EPA-approved monitoring, reporting, and verification (MRV) plan; report the mass of CO_2 sequestered using a mass balance approach; and report annual monitoring activities.[460] [461] [462] [463] Although deep subsurface monitoring is the primary and effective means of determining if there are any leaks to a USDW, the monitoring employed under a subpart RR MRV Plan can be utilized, if required by the UIC Program Director, to further ensure protection of USDWs.[464] The subpart RR MRV plan includes five major components:

A delineation of monitoring areas based on the CO_2 plume location. Monitoring may be phased in over time.[465]

An identification and evaluation of the potential surface leakage pathways and an assessment of the likelihood, magnitude, and timing, of surface leakage of CO_2 through these pathways. The monitoring program will be designed to address the risks identified.[466]

A strategy for detecting and quantifying any surface leakage of CO_2 in the event leakage occurs. Multiple monitoring methods and accounting techniques can be used to address changes in plume size and risks over time.[467]

An approach for establishing the expected baselines for monitoring CO_2 surface leakage. Baseline data represent pre-injection site conditions and are used to identify potential anomalies in monitoring data.[468]

A summary of considerations made to calculate site-specific variables for the mass balance equation. Site-specific variables may include calculating CO_2 emissions from equipment leaks and vented emissions of CO_2 from surface equipment, and considerations for calculating CO_2 from produced fluids.[469]

Subpart RR provides a nationally consistent mass balance framework for reporting the mass of CO_2 that is sequestered. Certain monitoring and operational data for a GS site is required to be reported to the EPA annually. More information on the MRV plan and annual reporting is available in the subpart RR final rule (75 FR 75065; December 1, 2010) and its associated technical support document.[470]

Under this final rule, any well receiving CO_2 captured from an affected EGU, be it a Class VI or Class II well, must report under subpart RR.[471] As explained below in Section V.N.5.a, a Class II well's UIC regulatory status does not change because it receives such CO_2. Nor does it change by virtue of reporting under subpart RR.

3. UIC and GHGRP Rules Provide Assurance To Prevent, Monitor, and Address Releases of Sequestered CO_2 to Air

Together the requirements of the UIC and GHGRP programs help ensure that sequestered CO_2 will remain secure, and provide the monitoring mechanisms to identify and address potential leakage using SDWA and CAA authorities. The EPA designed the GHGRP subpart RR requirements for GS with consideration of UIC requirements. The monitoring required by GHGRP subpart RR is complementary to and builds on UIC monitoring and testing requirements. 75 FR 77263. Although the regulations for Class VI and Class II injection wells are designed to ensure protection of USDWs from endangerment the practical effect of these complementary technical requirements, as explained below, is that they also prevent releases of CO_2 to the atmosphere.

The UIC and GHGRP programs are built upon an understanding of the mechanisms by which CO_2 is retained in geologic formations, which are well understood and proven.

Structural and stratigraphic trapping is a physical trapping mechanism that occurs when the CO_2 reaches a stratigraphic zone with low permeability (*i.e.,* geologic confining

system) that prevents further upward migration.

Residual trapping is a physical trapping mechanism that occurs as residual CO_2 is immobilized in formation pore spaces as disconnected droplets or bubbles at the trailing edge of the plume due to capillary forces.

Adsorption trapping is another physical trapping mechanism that occurs when CO_2 molecules attach to the surfaces of coal and certain organic rich shales, displacing other molecules such as methane.

Solubility trapping is a geochemical trapping mechanism where a portion of the CO_2 from the pure fluid phase dissolves into native ground water and hydrocarbons.

Mineral trapping is a geochemical trapping mechanism that occurs when chemical reactions between the dissolved CO_2 and minerals in the formation lead to the precipitation of solid carbonate minerals.

a. Class VI Wells

As just discussed in Section V.N.1, the UIC Class VI rule provides a framework to ensure the safety of underground injection of CO_2 such that USDWs are not endangered. As explained below, protection against releases to USDWs likewise assures against releases to ambient air. Through the injection well permit application process, the Class VI permit applicant (*i.e.,* a prospective Class VI well owner or operator) must demonstrate that the injected CO_2 will be trapped and retained in the geologic formation, and not migrate out of the injection zone or the approved project area (*i.e.,* the area of review). To assure that CO_2 is confined within the injection zone, major components to be considered and included in Class VI permits are site characterization, area of review delineation and corrective action, well construction and operation, testing and monitoring, financial responsibility, post-injection site care, well plugging, emergency and remedial response, and site closure as described in Section V.N.1.

Site characterization provides the foundation for successful GS projects. It includes evaluation of the chemical and physical mechanisms that will occur in the subsurface to immobilize and securely store the CO_2 within the injection zone over the long-term (see above). Site characterization requires a detailed assessment of the geologic, hydrogeologic, geochemical, and geomechanical properties of the proposed GS site to ensure that wells are sited in suitable locations.[472] Data and information collected during site characterization are used in the development of injection well construction and operating plans; provide inputs for modeling the extent of the injected CO_2 plume and related pressure front; and establish baseline information to which geochemical, geophysical, and hydrogeologic site monitoring data collected over the life of the injection project can be compared.

The Class VI rules contain rigorous subsurface monitoring requirements to assure that the chosen site is functioning as characterized. This subsurface monitoring should detect leakage of CO_2 before CO_2 would reach the atmosphere. For example, when USDWs are present, they are generally located above the injection zone. If CO_2 were to reach a USDW prior to being released to the atmosphere, the presence of CO_2 or geochemical changes that would be caused by CO_2 migration into unauthorized zones would be detected by a UIC Class VI monitoring program that is approved and periodically evaluated/adjusted based on permit conditions.

Likewise, UIC Class VI mechanical integrity testing requirements are designed to confirm that a well maintains internal and external mechanical integrity. Continuous monitoring of the internal mechanical integrity of Class VI wells ensures that injection wells maintain integrity and serves as a way to detect problems with the well system. Mechanical integrity testing provides an early indication of potential issues that could lead to CO_2 leakage from the confining zone, providing assurance and verification that CO_2 will not reach the atmosphere.

Further assurance is provided by the regulatory requirement that injection must cease if there is evidence that the injected CO_2 and/or associated pressure front may cause endangerment to a USDW.[473] Once the anomalous operating conditions are verified, the cessation of injection, as required by UIC permits, will minimize any risk of release to air.

Following cessation of injection, the operator must conduct comprehensive post-injection site care to show the position of the CO_2 plume and the associated area of elevated pressure to demonstrate that neither poses an endangerment to USDWs—also having the practical effect of preventing releases of CO_2 to the atmosphere. Post-injection site care includes appropriate monitoring and other needed actions (including corrective action). The default duration for the post-injection site care period is 50 years, with flexibility for demonstrating that an alternative period is appropriate if it ensures non-endangerment of USDWs.

As the EPA has found, the UIC Class VI injection well requirements protect against releases from all exposure pathways. Specifically, the EPA stated that the Class VI rules ''[are] specifically designed to ensure that the CO_2 (and any incidental associated substances derived from the source materials and the capture process) will be isolated within the injection zone.'' The EPA further stated that ''[t]he EPA concluded that the elimination of exposure routes through these requirements, which are implemented through a SDWA UIC permit, will ensure protection of human health and the environment. . .''.[474]

GHGRP subpart RR complements these UIC Class VI requirements. Requirements under the UIC program are focused on demonstrating that USDWs are not endangered as a result of CO_2 injection into the subsurface, while requirements under the GHGRP through subpart RR enable accounting for CO_2 that is geologically sequestered. A methodology to account for potential leakage is developed as part of the subpart RR MRV plan (see Section V.N.2). The MRV plan submitted for subpart RR may describe (or provide by reference to the UIC permit) the relevant elements of the UIC permit (*e.g.* assessment of leakage pathways in the monitoring area) and how those elements satisfy the subpart RR requirements. The MRV plan required under subpart RR may rely upon the knowledge of the subsurface location of CO_2 and site characteristics that are developed in the permit application process, and operational monitoring results for UIC Class VI permitted wells.

In summary, there are well-recognized physical mechanisms for storing CO_2 securely. The comprehensive and rigorous site characterization requirements of the Class VI rules assure that sites with these properties are selected. Subsurface monitoring serves to assure that the sequestration site operates as intended, and this monitoring continues through a post-closure period. Although release of CO_2 to air is unlikely and should be detected prior to release by subsurface monitoring, the subpart RR air-side monitoring and reporting regime

[472] 40 CFR 146.82(a) and (c).

[473] 40 CFR 146.94(b).

[474] 79 FR at 353 (January 3, 2014) (Final Hazardous Waste Management System: Conditional Exclusion for Carbon Dioxide (CO_2) Streams in Geologic Sequestration Activities under subtitle C of RCRA). See Section N.5.c below.

provides back up assurance that sequestered CO_2 has not been released to the atmosphere.

b. Class II Wells

The Class II rules likewise are designed to protect USDWs during EOR operation, including the injection of CO_2 for EOR. For example, UIC Class II minimum federal requirements promulgated under SDWA address site characterization, area of review, well construction (*e.g.,* casing and cementing), well operation (*e.g.,* injection pressure), injectate sampling, mechanical integrity testing, plugging and abandonment, financial responsibility, and reporting. Class II wells must undergo periodic mechanical integrity testing which will detect well construction and operational conditions that could lead to loss of injectate and migration into USDWs. The establishment of maximum injection pressures, designed to ensure that the pressure in the injection zone during injection does not initiate new fractures or propagate existing fractures in the confining zone, prevents injection from causing the movement of fluids into an underground source of drinking water. The safeguards that protect USDWs also serve as an early warning mechanism for releases of CO_2 to the atmosphere.

CO_2 injected via Class II wells becomes sequestered by the trapping mechanisms described above in this Section V.N.3. As with Class VI wells, for Class II wells that report under subpart RR, there is monitoring to evaluate whether CO_2 used for EOR will remain safely in place both during and after the injection period. Subpart RR provides a CO_2 accounting framework that will enable the EPA to assess both the project-level and national efficacy of geologic sequestration to determine whether additional requirements are necessary and, if so, inform the design of such regulations.

c. Response to Comments

Commenters maintained that GS was not demonstrated for CO_2 captured from EGUs. In addition, commenters noted that the volumes of captured CO_2 would be considerably larger than from existing GS sites, and could quadruple amounts injected into Class II EOR wells. In addition to volumes of CO_2 to be injected, commenters opined on the possibility of sporadic CO_2 supply due to the nature of EGU operation.[475]

The EPA does not agree. CO_2 capture from EGUs is demonstrated as discussed in Sections V.D and V.E. As discussed below, the volumes of CO_2 are comparable to the amounts that have been injected at large scale commercial operations. The EPA also disagrees that the volume of CO_2 would quadruple amounts injected into Class II EOR wells because CO_2 may be sequestered in deep saline formations, which have widespread geographic availability (see Section M.1). The BSER determination and regulatory impact analysis for this rule relies on GS in deep saline formations.[476] However, the EPA also recognizes the potential for sequestering CO_2 via EOR and allows the use of EOR as a compliance option. According to data reported to the GHGRP, approximately 60 million metric tons of CO_2 were supplied to EOR in the United States in 2013.[477] Approximately 70 percent of total CO_2 supplied in the United States was produced from geologic (natural) CO_2 sources and approximately 30 percent was captured from anthropogenic sources. CO_2 pipeline systems, such as those serving the Permian Basin, have multiple sources of CO_2 that serve to levelize the pipeline supply, thus minimizing the effect of supply on the EOR operator.

GS of anthropogenic CO_2 in deep saline formations is demonstrated. First, as explained above, the EPA has issued construction permits under the Class VI program. It would not have done so, and under the regulations cannot have done so, without demonstrations that CO_2 would be securely confined. One of these projects was for a steam generating EGU.

Second, international experience with large scale commercial GS projects has demonstrated through extensive monitoring programs that large volumes of CO_2 can be safely injected and securely sequestered for long periods of time at volumes and rates consistent with those expected under this rule. This experience has also demonstrated the value and efficacy of monitoring programs to determine the location of CO_2 in the subsurface and detect potential leakage through the presence of CO_2 in the shallow subsurface, near surface and air.

The Sleipner CO_2 Storage Project is located at an offshore gas field in the North Sea where CO_2 must be removed from the natural gas in order to meet customer requirements and reduce costs. The project began injecting CO_2 into the deep subsurface in 1996. The single offshore injection well injects approximately 1 million metric tons per year into a thick, permeable sandstone above the gas producing zone. Approximately 15 million metric tons of CO_2 have been injected since inception. Many US and international organizations have conducted monitoring at Sleipner. The location and dimensions of the CO_2 plume have been measured numerous times using 3-dimensional seismic monitoring since the 1994 pre-injection survey. The monitoring data have demonstrated that although the plume is behaving differently than initially modeled due to thin layers of impermeable shale that were not initially identified in the reservoir model, the CO_2 remains trapped in the injection zone. Numerous other techniques have been successfully used to monitor CO_2 storage at Sleipner. The research and monitoring at Sleipner demonstrates the value of a comprehensive approach to site characterization, computational modeling and monitoring, as is required under UIC Class VI rules. The experience at Sleipner demonstrates that large volumes of CO_2, of the same order of magnitude expected for an EGU, can be safely injected and stored in saline reservoirs over an extended period.

Snøhvit is another large offshore CO_2 storage project, located at a gas field in the Barents Sea. Like Sleipner the natural gas must be treated to reduce high levels of CO_2 to meet processing standards and reduce costs. Gas is transported via pipeline 95 miles to a gas processing and liquefied natural gas plant and the CO_2 is piped back offshore for injection. Approximately 0.7 million metric tons per year CO_2 are injected into permeable sandstone below the gas reservoir. Between 2008 and 2011, the operator observed pressure increases in the injection formation (Tubaen Formation) greater than expected and conducted time lapse seismic surveys and studies of the injection zone and concluded that the pressure increase was mainly caused by a limited storage capacity in the formation.[478] In 2011,

[475] See, *e.g.* Comments of Southern Company, p. 41 (Docket entry: EPA–HQ–OAR–2013–0495–10095).

[476] The EPA anticipates EOR projects may be early GS projects because these formations have been previously well characterized for hydrocarbon recovery, likely already have suitable infrastructure (*e.g.,* wells, pipelines, etc.), and have an associated economic benefit of oil production.

[477] Greenhouse Gas Reporting Program, data reported as of August 18, 2014.

[478] Grude, S. M. Landrøa, and J. Dvorkinb, 2014, Pressure effects caused by CO_2 injection in the Tubåen Fm., the Snøhvit field. International Journal of Greenhouse Gas Control 27 (2014) 178–187. Commenters argued that the project had failed to sequester CO_2, referring to the initial cessation of injection. See, *e.g.* Comments of UARG p. 56 (Docket entry: EPA–HQ–OAR–2013–0495–9666). In fact, injection resumed successfully, as described in the text above.

the injection well was modified and injection was initiated in a second interval (Stø Formation) in the field to increase the storage capacity. Approximately 3 million metric tons of CO_2 have been injected since 2008. Monitoring demonstrates that no leakage has occurred, again demonstrating that large volumes of CO_2, of the same order of magnitude expected for an EGU, can be safely injected and stored in deep saline formations over an extended period.

As discussed above in Sections V.E.2.a and M, CO_2 from the Great Plains Synfuels plant in North Dakota has been injected into the Weyburn oil field in Saskatchewan Canada since 2000. Over that time period the project has injected more than 16 million metric tons of CO_2. It is anticipated that approximately 40 million metric tons of CO_2 will be permanently sequestered over the lifespan of the project. Extensive monitoring by U.S. and international partners has demonstrated that no leakage has occurred. The sources of CO_2 for EOR may vary (*e.g.,* industrial processes, power generation); however, this does not impact the effectiveness of EOR operations (see Section V.M.3).

CO_2 used for EOR may come from anthropogenic or natural sources. The source of the CO_2 does not impact the effectiveness of the EOR operation. CO_2 capture, treatment and processing steps provide a concentrated stream of CO_2 in order to meet the needs of the intended end use. CO_2 pipeline specifications of the U.S. Department of Transportation Pipeline Hazardous Materials Safety Administration found at 49 CFR part 195 (Transportation of Hazardous Liquids by Pipeline) apply regardless of the source of the CO_2 and take into account CO_2 composition, impurities, and phase behavior. Additionally, EOR operators and transport companies have specifications to ensure related to the composition of CO_2. These requirements and specifications ensure EOR operators receive a known and consistent CO_2 stream.

At the In Salah CO_2 storage project in Algeria, CO_2 is removed from natural gas produced at three nearby gas fields in order to meet export quality specification. The CO_2 is transported by pipeline approximately 3 miles to the injection site. Three horizontal wells are used to inject the CO_2 into the down-dip aquifer leg of the gas reservoir approximately 6,200 feet deep. Between 2004 and 2011 over 3.8 million metric tons of CO_2 were stored. Injection rates in 2010 and 2011 were approximately 1 million metric tons per year. Storage integrity has been monitored by several U.S. and international organizations and the monitoring program has employed a wide range of geophysical and geochemical methods, including time lapse seismic, microseismic, wellhead sampling, tracers, down-hole logging, core analysis, surface gas monitoring, groundwater aquifer monitoring and satellite data. The data have been used to support periodic risk assessments during the operational phase of the project. In 2010 new data from seismic, satellite and geomechanical models were used to inform the risk assessment and led to the decision to reduce CO_2 injection pressures due to risk of vertical leakage into the lower caprock, and risk of loss of well integrity. The caprock at the site consisted of main caprock units, providing the primary seal, and lower caprock units, providing additional buffers. There was no leakage from the well or through the caprock, but the risk analysis identified an increased risk of leakage, therefore, the aforementioned precautions were taken. Additional analysis of the reservoir, seismic and geomechanical data led to the decision to suspend CO_2 injection in June 2011. No leakage has occurred and the injected CO_2 remains safely stored in the subsurface. The decision to proceed with safe shutdown of injection resulted from the analysis of seismic and geomechanical data to identify and respond to storage site risk. The In Salah project demonstrates the value of developing an integrated and comprehensive set of baseline site data prior to the start of injection, and the importance of regular review of monitoring data. Commenters also noted that the data collection and analysis had proven effective at preventing any release of sequestered CO_2 to either underground drinking water sources or to the atmosphere.[479]

These projects demonstrate that sequestration of CO_2 captured from industrial operations has been successfully conducted on a large scale and over relatively long periods of time. The volumes of captured CO_2 are within the same order of magnitude as that expected from EGUs. Even though potentially adverse conditions were identified at some projects (In Salah and Snøhvit), there were no releases to air and the monitoring systems were effective in identifying the issues in a timely manner, and these issues were addressed effectively. In each case, the site-specific characteristics were evaluated on a case-by-case basis to select a site where the geologic conditions are suitable to ensure long-term, safe storage of CO_2. Each project was designed to address the site-specific characteristics and operated to successfully inject CO_2 for safe storage.

4. Must the standard of performance for CO_2 include CAA requirements on the sequestration site?

One commenter maintained as a matter of law that a standard predicated on use of CCS is not a ''system of emission reduction'', and therefore is not a ''standard of performance'' within the meaning of section 111 (a)(1) of the Act. The commenter argued that the standard does not require sequestration of captured CO_2 but only capture, so that no emission reductions are associated with the standard. A gloss on this argument is that there are no enforceable requirements for the captured CO_2 (''[t]he fate of that [captured] CO_2 is something that the proposed standard does not proscribe with enforceable requirements''). The commenter further argues that a ''system of emission reduction'' under section 111 must be ''designed into the new source *itself''* so that off-site underground sequestration of captured CO_2 emissions ''could never satisfy the statutory requirements governing a 'standard of performance''' (emphasis original).[480]

The EPA disagrees with both the legal and factual assertions in this comment. As to the legal point, the commenter fails to distinguish capture and sequestration of carbon from every other section 111 standard which is predicated on capture of a pollutant. Indeed, all emission standards not predicated on outright pollutant destruction involve capture of the pollutant and its subsequent disposition in the capturing medium. Thus, metals are captured in devices like baghouses or scrubbers, leaving a solid waste or wastewater to be managed. Gases can be captured with activated carbon or under pressure, again requiring further management of the captured pollutant(s). The EPA is required to consider these potential implications in promulgating an NSPS. See section 111(a)(1) (in promulgating a standard of performance under section 111, the EPA must ''tak[e] into account . . . any nonair quality health and environmental

[479] ''It is important to note that although the In Salah project is no longer injecting CO_2, the CCS community still views this early saline project as a success because the monitoring program served its intended purpose. That is, the monitoring methods deployed at this site informed the operator of a potential problem, leading to a shutdown of CO_2 injection before the Caprock was breached.'' Comment of EPRI, p. 14 Docket entry: EPA–HQ–OAR–2013–0495–8925).

[480] Comments of UARG, pp. 37–38 (Docket entry: EPA–HQ–OAR–2013–0495–9666).

impact''). The EPA thus considers such issues as solid waste and wastewater generation as part of determining if a system of emission reduction is ''best'' and ''adequately demonstrated'' under section 111. See Section V.O below (discussion of this rule's potential cross-media impacts).

The further comment that the standard is arbitrary because it fails to impose any requirements on the captured CO_2 is misplaced. The commenter mischaracterizes the standard as requiring capture only. The BSER is not just capturing a certain amount of CO_2, but sequestering it. Sequestration can occur either on-site or off-site. Sequestration sites receiving and injecting the captured CO_2 are required to obtain UIC permits and report under subpart RR of the GHGRP. They must conduct comprehensive monitoring as part of these obligations. Although the NSPS does not impose regulatory requirements on the transportation pipeline or the sequestration site, such requirements already exist under other regulatory programs of the Department of Transportation and the EPA. In particular, the EPA is reasonably relying on the already-adopted, and very rigorous, Class VI well requirements in combination with the subpart RR requirements to provide secure sequestration of captured CO_2. The EPA has also considered carefully the requirements and operating history of the Class II requirements for EOR wells, which, in combination with the subpart RR requirements, ensure protection of USDWs from endangerment, provide the monitoring mechanisms to identify and address potential leakage using SDWA and CAA authorities, and have the practical effect of preventing releases of CO_2 to the atmosphere. This is analogous to the many section 111 standards of performance for metals which result in a captured air pollution control residue to be disposed of pursuant to waste management requirements of the rules implementing the Resource Conservation and Recovery Act. It is also analogous to the many section 111 standards of performance for metals or organics captured in wet air pollution control systems resulting in wastewater discharged to a navigable water where pollutant loadings are controlled under rules implementing the Clean Water Act. Again, these are non-air environmental impacts for which the EPA must account in establishing a section 111(a) standard. The EPA has reasonably done so here based on the regulatory regimes of the Class VI and Class II UIC requirements in combination with the monitoring regime of the subpart RR reporting rules, as well as the CO_2 pipeline standards of the Department of Transportation.

In this regard, the EPA notes that at proposal it acknowledged the possibility ''that there can be downstream losses of CO_2 after capture, for example during transportation, injection or storage.'' 79 FR at 1484. Given the rigorous substantive requirements and the monitoring required by the Class VI rules, the complementary monitoring regime of the subpart RR MRV plan and reporting rules, as well as the regulatory requirements for Class II wells, any such losses would be de minimis. Indeed, the same commenter maintained that the monitoring requirements of the Class VI rule are overly stringent and that a 50-year post-injection site care period is unnecessarily long.[481] As it happens, as noted above, the Class VI rules allow for an alternative post-injection site care period based on a site-specific demonstration. See 40 CFR 146.93(b).

The EPA addresses this comment in more detail in Chapter 2 of the Response-to-Comment Document.

5. Other Perceived Obstacles to Geologic Sequestration

a. Class II to Class VI transition

A number of commenters maintained that the Class VI rules could effectively force all Class II wells to transition to Class VI wells if they inject anthropogenic CO_2, and further maintained that, as a practical matter, this would render EOR unavailable for such CO_2. The EPA disagrees with these comments. Injection of anthropogenic CO_2 into Class II wells does not force transition of these wells to Class VI wells—not during the well's active operation and not when EOR operations cease. We recognize the widespread use of EOR and the expectation that injected CO_2 can remain underground. The EPA issued a memorandum to its regional offices on April 23, 2015 reflecting these principles: [482]

Geologic storage of CO_2 can continue to be permitted under the UIC Class II program.

Use of anthropogenic CO_2 in EOR operations does not necessitate a Class VI permit.

Class VI site closure requirements are not required for Class II CO_2 injection operations.

EOR operations that are focused on oil or gas production will be managed under the Class II program. If oil or gas recovery is no longer a significant aspect of a Class II permitted EOR operation, the key factor in determining the potential need to transition an EOR operation from Class II to Class VI is increased risk to USDWs related to significant storage of CO_2 in the reservoir, where the regulatory tools of the Class II program cannot successfully manage the risk.[483]

b. GHGRP Subpart RR

A number of commenters maintained that no EOR operator would accept captured carbon from an EGU due to the reporting and other regulatory burdens imposed by the monitoring requirements of GHGRP subpart RR.[484] They noted that preparing a subpart RR MRV plan could cost upwards of $100,000 which would be cost prohibitive given other available sources of CO_2.

The EPA disagrees with this comment in several respects. First, the BSER determination and regulatory impact analysis for this rule relies on GS in deep saline formations, not on EOR. However, the EPA also recognizes the potential for sequestering CO_2 via EOR, but disagrees that subpart RR requirements effectively preclude or substantially inhibit the use of EOR.

The cost of compliance with subpart RR is not significant enough to offset the potential revenue for the EOR operator from the sale of produced oil for CCS projects that are reliant on EOR. First, the costs associated with subpart RR are relatively modest, especially in comparison with revenues from an EOR field. In the economic impact analysis for subpart RR, the EPA estimated that an EOR project with a Class II permit would incur a first year cost of up to $147,030 to develop an MRV plan, and an annual cost of $27,787 to maintain the plan; the EPA estimated annual reporting and recordkeeping costs at $13,262 per year.[485] Monitoring costs

[481] Comments of UARG, p. 63 (Docket entry: EPA–HQ–OAR–2013–0495–9666).

[482] ''Key Principles in EPA's Underground Injection Control Program Class VI Rule Related to Transition of Class II Enhanced Oil Recovery or Gas Recovery Wells to Class VI'', April 23, 2015. Available at: *http://water.epa.gov/type/groundwater/uic/class6/upload/class2eorclass6memo.pdf*.

[483] In this regard, the Class VI rules provide that, owners or operators that are injecting carbon dioxide for the primary purpose of long-term storage into an oil and gas reservoir must apply for and obtain a Class VI geologic sequestration permit when there is an increased risk to USDWs compared to Class II operations. 40 CFR 144.19.

[484] See *e.g.,* comments of UARG, p, 63 (Docket entry: EPA–HQ–OAR–2013–0495–9666); Southern Co., p. 37 (Docket entry: EPA–HQ–OAR–2013–0495–10095); American Petroleum Institute pp. 40–50 Docket entry: EPA–HQ–OAR–2013–0495–10098).

[485] Subpart RR costs are presented in 2008 US dollars.

are estimated to range from $0.02 per metric ton (base case scenario) to approximately $2 per metric ton of CO_2 (high scenario). Using a range of scenarios (that included high end estimates), these subpart RR costs are approximately three to four percent of estimated revenues for an average EOR field, indicating that the costs can readily be absorbed. 75 FR 75073.

Furthermore, there is a demand for new CO_2 by EOR operators, even beyond current natural sources of CO_2. For example, in an April 2014 study, DOE concluded that future development of EOR will need to rely on captured CO_2.[486] Thus, the argument that EOR operators will obtain CO_2 from other sources without triggering subpart RR responsibilities, which assumes adequate supplies of CO_2 from other sources, lacks foundation. In addition, the Internal Revenue Code section 45Q provides a tax credit for CO_2 sequestration which is far greater than subpart RR costs.[487] In sum, the cost of complying with subpart RR requirements, including the cost of MRV, is not significant enough to deter EOR operators from purchasing EGU captured CO_2.

The EPA addresses these comments in more detail in the Response to Comment Document.

c. Conditional exclusion for geologic sequestration of CO2 streams under the Resource Conservation and Recovery Act (RCRA)

Certain commenters voiced concerns that regulatory requirements for hazardous wastes might apply to captured CO_2 and these requirements might be inconsistent with, or otherwise impede, GS of captured CO_2 from EGUs. The EPA has acted to remove any such (highly conjectural) uncertainty. The Resource Conservation and Recovery Act (RCRA) authorizes the EPA to regulate the management of hazardous wastes. In particular, RCRA Subtitle C authorizes a cradle to grave regulatory program for wastes identified as hazardous, whether specifically listed as hazardous or whether the waste fails certain tests of hazardous characteristics. The EPA currently has little information to conclude that CO_2 streams (defined in the RCRA exclusion rule as including incidental associated substances derived from the source materials and the capture process, and any substances added to the stream to enable or improve the injection process) might be identified as ''hazardous wastes'' subject to RCRA Subtitle C regulation.[488] Nevertheless, to reduce potential uncertainty regarding the regulatory status of CO_2 streams under RCRA Subtitle C, and in order to facilitate the deployment of geologic sequestration, the EPA recently concluded a rulemaking to exclude certain CO_2 streams from the RCRA definition of hazardous waste.[489] In that rulemaking, the EPA determined that if any such CO_2 streams would be hazardous wastes, further RCRA regulation is unnecessary to protect human health and the environment provided certain conditions are met. Specifically, the rule conditionally excludes from Subtitle C regulations CO_2 streams if they are (1) transported in compliance with U.S. Department of Transportation or state requirements; (2) injected in compliance with UIC Class VI requirements (summarized above); (3) no other hazardous wastes are mixed with or co-injected with the CO_2 stream; and (4) generators (*e.g.,* emission sources) and Class VI well owners or operators sign certification statements. See 40 CFR 261.4(h)).[490] The D.C. Circuit recently dismissed all challenges to this rule in *Carbon Sequestration Council and Southern Company Services* v. *EPA,* No. 787 F. 3d 1129 (D.C. Cir. 2015).

d. Other perceived uncertainties

Other commenters claimed that various legal uncertainties preclude a finding that geologic sequestration of CO_2 from EGUs can be considered to be adequately demonstrated. Many of the issues referred to in comments relate to property rights: issues of ownership of pore space, relationship of sequestration to ownership of mineral rights, issues of dealing with multiple landowners, lack of state law frameworks, or competing, inconsistent state laws.[491] Other commenters noted the lack of long-term liability insurance, and noted uncertainties regarding long-term liability generally.[492]

An IPCC special report on CCS found that with an appropriate site selection, a monitoring program, a regulatory system, and the appropriate use of remediation methods, the risks of GS would be comparable to risks of current activities, such as EOR, acid gas injection and underground natural gas storage.[493] Furthermore, an interagency CCS task force examined GS-related legal issues thoroughly and concluded that early CCS projects can proceed under the existing legal framework with respect to issues such as property rights and liability.[494] As noted earlier, both the Archer Daniels Midland (ADM) and FutureGen projects addressed siting and operational aspects of GS (including issues relating to volumes of the CO_2 and the nature of the CO_2 injectate) in their permit applications. The fact that these applicants pursued permits indicates that they regarded any potential property rights issues as resolvable.

Commenter American Electric Power (AEP) referred to its own experience with the Mountaineer demonstration project. AEP noted that although this project was not full scale, finding a suitable repository, notwithstanding a generally favorable geologic area, proved difficult. The company referred to years spent in site characterization and digging multiple wells.[495] Other commenters noted more generally that site characterization issues can be time-consuming and difficult, and quoted

[486] ''Near Term Projections of CO_2 Utilization for Enhanced Oil Recovery''. DOE/NETL–2014/1648. April 2014.

[487] *http://www.irs.gov/irb/2009-44_IRB/ar11.html.* The section 45Q tax credit for calendar year 2015 is $10.92 per metric ton of qualified CO_2 that is captured and used in a qualified EOR project and $21.85 per metric ton of qualified CO_2 that is captured and used in a qualified non-EOR GS project. *http://www.irs.gov/irb/2015-26_IRB/ar14.html.*

[488] No hazardous waste listings apply to CO_2 streams. Therefore, a CO_2 stream could be identified (*i.e.* defined) as a hazardous waste only if it exhibits one or more of the hazardous characteristics. 79 FR 355 (Jan 3. 2014).

[489] 79 FR 350 (Jan. 3, 2014).

[490] The EPA made clear in the final conditional exclusion that that rule does not address, and is not intended to affect the RCRA regulatory status of CO_2 streams that are injected into wells other than Class VI. However, the EPA noted in the preamble to the final rule that (based on the limited information provided in public comments) should CO_2 be used for its intended purpose as it is injected into UIC Class II wells for the purpose of EOR/EGR (enhanced oil recovery/enhanced gas recovery), it is the EPA's expectation that such an injection process would not generally be a waste management activity. 79 FR 355. The EPA encouraged persons to consult with the appropriate regulatory authority to address any fact-specific questions that they may have regarding the status of CO_2 in situations that are beyond the scope of that rule. *Id.* Moreover, use of anthropogenic CO_2 for EOR is long-standing and has flourished in all of the years that EPA's subtitle C regulations (which among other things, define what a solid waste is for purposes of those regulations) have been in place. The RCRA subtitle C regulatory program consequently has not been an impediment to use of anthropogenic CO_2 for EOR.

studies suggesting that it could take 5 years to obtain a Class VI permit.[496]

The EPA agrees that robust site characterization and selection is important to ensuring capacity needs are met and that the sequestered CO_2 is safely stored. Efforts to characterize geologic formations suitable for GS have been underway at DOE through the RCSPs since 2003 (see Section V.M). Additionally, since 2007, the USGS has been assessing U.S. geologic storage resources for CO_2. As noted earlier, DOE, in partnership with researchers, universities, and organizations across the country, is demonstrating that GS can be achieved safely, permanently, and economically at large scales, and projects supported by the department have safely and permanently stored 10 million metric tons of CO_2.

In the time since the commenter submitted comments several Class VI permits have been issued by the EPA. These projects demonstrate that a GS site permit applicant could potentially prepare and obtain a UIC permit concurrent with permits required for an EGU. With respect to AEP's experience with the Mountaineer demonstration project, notwithstanding difficulties, the company was able to successfully dig wells, and safely inject captured CO_2. Moreover, the company indicated it fully expected to be able to do so at full scale and explained how.[497] The EPA notes further that a monitoring program and its associated infrastructure (*e.g.,* monitoring wells) and costs will be dependent on site-specific characteristics, such as CO_2 injection rate and volume, geology, the presence of artificial penetrations, among other factors. It is thus not appropriate to generalize from AEP's experience, and assume that other sites will require the same number of wells for site characterization or injection. In this regard, we note that the ADM and FutureGen construction permits for Class VI wells involved far fewer injection wells than AEP references.[498] See also discussion of this issue in Section V.I.5 above.

O. Non-air Quality Impacts and Energy Requirements

As part of the determination that SCPC with partial CCS is the best system of emission reduction adequately demonstrated, the EPA has given careful consideration to non-air quality health and environmental impacts and energy requirements, as required by CAA section 111 (a). We have also considered those factors for alternative potential compliance paths to assure that the standard does not have unintended adverse health, environmental or energy-related consequences. The EPA finds that neither the BSER, nor the possible alternative compliance pathways, would have adverse consequences from either a non-air quality impact or energy requirement perspective.

1. Transport and Sequestration of Captured CO_2

As just discussed in detail, the EPA finds that the Class VI and II rules, as complemented by the subpart RR GHGRP reporting and monitoring requirements, amply safeguard against potential of injected CO_2 to degrade underground sources of drinking water and amply protect against any releases of sequestered CO_2 to the atmosphere. The EPA likewise finds that the plenary regulatory controls on CO_2 pipelines assure that CO_2 can be safely conveyed without environmental release, and that these rules, plus the complementary tracking and reporting rules in subpart RR, assure that captured CO_2 will be properly tracked and conveyed to a sequestration site.

2. Water Use Impacts

Commenters claimed that the EPA ignored the negative environmental impacts of the use of CCS for the mitigation of CO_2 emissions from fossil fuel-fired steam generating EGUs. In particular, commenters noted that the use of CCS will increase the water usage at units that implement CCS to meet the proposed standard of performance. At least one commenter claimed that addition of an amine-based CCS system would double the consumptive water use of a power plant, which would be unacceptable, especially in drought-ridden states and in the arid west and referenced a study in the scientific literature as support.[499] The commenter also references a DOE/NETL report that likewise notes significant increases in the amount of cooling and process water required with the use of carbon capture technology.[500] However, those studies discuss increased water use for cases where full CCS (90 percent or greater capture) is implemented. As we discussed in both the proposal and in this preamble, the EPA does not find that highly efficient new generation technology implementing full CCS is the BSER for new steam generating EGUs.

The EPA examined water use predicted from the updated DOE/NETL studies in order to determine the magnitude of increased water usage for a new SCPC implementing partial CCS to meet the final standard of 1,400 lb CO_2/MWh-g. The predicted water consumption for varying levels of partial and full CCS are provided in Table 13. The results show that a new SCPC unit that implements 16 percent partial CCS to meet the final standard would see an increase in water consumption (the difference between the predicted water withdraw and discharge) of about 6.4 percent compared to an SCPC with no CCS and the same net power output. By comparison, a unit implementing 35 percent CCS to meet the proposed emission limitation of 1,100 lb CO_2/MWh-g would see an increase in water consumption of 16.0 percent and a new unit implementing full (90 percent) CCS would see an increase of almost 50 percent.

TABLE 13—PREDICTED WATER CONSUMPTION WITH IMPLEMENTATION OF VARIOUS LEVELS OF PARTIAL CCS [501]

Technology	Raw water consumption, gpm	Increase compared to SCPC, %
SCPC	4,095	—

TABLE 13—PREDICTED WATER CONSUMPTION WITH IMPLEMENTATION OF VARIOUS LEVELS OF PARTIAL CCS [501]—Continued

Technology	Raw water consumption, gpm	Increase compared to SCPC, %
SCPC + 16% CCS	4,359	6.4
SCPC + 35% CCS	4,751	16.0
SCPC + 90% CCS	6,069	48.2
IGCC*	3,334	−18.6
IGCC + 90% CCS*	4,815	17.6

* The IGCC results presented in the DOE/NETL report are for an IGCC with net output of 622 MWe and an IGCC with full CCS with net output of 543 MWe. The water consumption for each was normalized to 550 MWe to be consistent with the SPCP cases.

Similar to other air pollution controls—such as a wet flue gas desulfurization scrubber—utilization of post-combustion amine-based capture systems results in increased consumption of water. However, by finalizing a standard that is less stringent than the proposed limitation and by rejecting full CCS as the BSER, the EPA has reduced the increased amount of water needed as compared to a similar unit without CCS. Further, the EPA notes that there are additional opportunities to minimize the water usage at such a facility. For example, the SaskPower Boundary Dam Unit #3 post-combustion capture project captures water from the coal and from the combustion process and recycles the captured water in the process, resulting in decreased need for withdrawal of fresh water.

The EPA also examined the predicted water usage for a new IGCC and for a new IGCC implementing 90 percent CCS. The predicted water consumption for the new IGCC unit is nearly 20 percent less than that predicted for the new SCPC unit without CCS (and almost 25 percent less than the SCPC unit meeting the final standard). The EPA rejected new IGCC implementing full CCS as BSER because the predicted costs were significantly more than alternative technologies. The EPA also does not find that a new IGCC EGU is part of the final BSER (for reasons discussed in Section V.P). However, the EPA does note that IGCC is a viable alternative compliance option and, as shown here, would result in less water consumption than a compliant SCPC EGU. The EPA also notes that predicted water consumption at a new NGCC unit would be less than half that for a new SCPC EGU with the same net output.[502]

3. Energy Requirements

The EPA also examined the expected impacts on energy requirements for a new unit meeting the final promulgated standard and finds impacts to be minimal. Specifically, the EPA examined the increased auxiliary load or parasitic energy requirements of a system implementing CCS. The EPA examined the predicted auxiliary power demand from the updated DOE/NETL studies in order to determine the increased energy requirement for a new SCPC implementing partial CCS to meet the final standard of 1,400 lb CO_2/MWh-g. The predicted gross power output, the auxiliary power demand, and the parasitic power demand (percent of gross output) are provided in Table 14 for varying levels of partial and full CCS.

TABLE 14—PREDICTED PARASITIC POWER DEMAND WITH IMPLEMENTATION OF VARIOUS LEVELS OF PARTIAL CCS [503]

Generation technology	Gross power output, MWe	Auxiliary power, MWe	Parasitic demand (%)
SCPC	580	30	5.2
SCPC + 16% CCS	599	38	6.3
SCPC + 35% CCS	603	53	8.8
SCPC + 90% CCS	642	91	14.2
IGCC	748	126	16.8
IGCC + 90% CCS	734	191	26.0
CCS	734	191	26.0

The auxiliary power demand is the amount of the gross power output that is utilized within the facility rather than used to produce electricity for sale to the grid. The parasitic power demand (or parasitic load) is the percentage of the gross power output that is needed to meet the auxiliary power demand.[504] In an SCPC EGU without CCS, the auxiliary power is used to primarily to operate fans, motors, pumps, etc. associated with operation of the facility and the associated pollution control equipment. When carbon capture equipment is incorporated, additional power is needed to operate associated equipment, and steam is need to regenerate the capture solvents (*i.e.,* the solvents are heated to release the captured CO_2).

The results in Table 14 show that a new SCPC unit without CCS can expect a parasitic power demand of about 5.2 percent. A new SCPC unit meeting the

[501] Exhibits A–1 and A–2 at p. 16–17 from ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 22, 2015).

[502] The EPA also finds that the standards would not result in any significant impact on solid waste generation or management. See Section XIII.D below.

[503] Exhibits A–1 and A–2 at p. 16–17 from ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015).

[504] Note that this auxiliary power demand is not necessarily met from power or steam generated from the EGU. External sources can also be utilized for this purpose.

final standard of performance by implementing 16 percent partial CCS will see a parasitic power demand of about 6.3 percent, which is not a significant increase in energy requirement. Of course, new SCPC EGUs that implement higher levels of CCS will expect higher amounts of parasitic power demand. As shown in Table 14, a new SCPC EGU implementing full CCS would expect to utilize over 14 percent of its gross power output to operate the facility and the carbon capture system. But, the EPA does not find that a new SCPC implementing full CCS is the BSER for new fossil-fired steam generating units. See Section V.P.2 below.

The EPA also notes that there is on-going research sponsored by DOE/NETL and others to further reduce the energy requirements of the carbon capture systems. Progress is being made. As was mentioned previously, the heat duty (the energy required to regenerate the capture solvent) for the amine scrubbing process used at the Searles Valley facility in the mid-70's was about 12 MJ/mt CO_2 removed as compared to a heat duty of about 2.5 MJ/mt CO_2 removed for the amine processes used at Boundary Dam and for the amine system that will be used at the WA Parish facility.[505]

The EPA also examined the predicted parasitic power demand for a new IGCC and for a new IGCC implementing 90 percent CCS. As we have noted elsewhere, the auxiliary power demand for a new IGCC unit is more than that for that of a new SCPC. As one can see in Table 14, a new IGCC unit can expect to see a nearly 17 percent parasitic power demand; and a new IGCC unit implementing full CCS would expect a parasitic power demand of nearly 30 percent. Of course, the EPA rejected new IGCC implementing full CCS as BSER because of the potentially unreasonable costs. The EPA also does not find that a new IGCC EGU is part of the final BSER (for reasons discussed elsewhere in Section V.P.1 below). However, as we have noted, the EPA does find IGCC to be a viable alternative compliance option. Utilities and project developers should consider the increased auxiliary power demand for an IGCC when considering their options for new power generation. The EPA also notes that the predicted parasitic load for a new NGCC unit would be about 2 percent—less than half that for a new SCPC EGU with the same net output.[506]

With respect to potential nationwide impacts on energy requirements, as described above in Section V.H.3 and more extensively in the RIA chapter 4, the EPA reasonably projects that no new non-compliant fossil-fuel fired steam electric capacity will be constructed through 2022 (the end of the 8 year review cycle for NSPS). It is possible, as described earlier, that some new sources could be built to preserve fuel diversity, but even so, the number of such sources would be small and therefore would not significantly impact national energy requirements (assuming that such sources would not already be reflected in the baseline conditions just noted).

P. Options That Were Considered by the EPA but Were Ultimately Not Determined To Be the BSER

In light of the comments received, the EPA re-examined several alternative systems of emission reduction and reaffirms in this rulemaking our proposed determination that those alternatives do not represent the ''best'' system of emission reduction when compared against the other available emission reduction options. These are described below. See also Section IV.B.1 above.

1. Highly Efficient Generation Technology (*e.g.,* Supercritical or Ultra-supercritical Boilers)

In the January 2014 proposal, we considered whether 'Highly Efficient New Generation without CCS Technology' should constitute the BSER for new steam generating units. 79 FR at 1468–69. The discussion focused on the performance of highly efficient generation technology (that does not include any implementation of CCS), such as a supercritical[507] pulverized coal (SCPC) or a supercritical CFB boiler, or a modern, well-performing IGCC unit.

All these options are technically feasible—there are numerous examples of each operating in the U.S. and worldwide. However, we do not find them to qualify as the best system for reduction of CO_2 emissions for the following reasons:

a. Lack of Significant CO_2 Reductions When Compared to Business as Usual

At the outset, we reviewed the emission rates of efficient PC and CFB units. According to the DOE/NETL estimates, a newly constructed subcritical PC unit firing bituminous coal would emit approximately 1,800 lb CO_2/MWh-g,[508] a new highly efficient SCPC unit using bituminous coal would emit nearly 1,720 lb CO_2/MWh-g, and a new IGCC unit would emit about 1,430 lb CO_2/MWh-g.[509] [510] Emissions from comparable sources utilizing sub-bituminous coal or lignite will have somewhat higher CO_2 emissions.[511]

Some commenters noted that new coal-fired plants utilizing supercritical boiler design or IGCC would provide substantial emission reductions compared to the emissions from the existing subcritical coal plants that are currently in wide use in the power sector. However, most of the recent new power sector projects using solid fossil fuel (coal or petroleum coke) as the primary fuel—both those that have been constructed and those that have been proposed—are supercritical boilers and IGCC units. About 60 percent of new coal-fired utility boiler capacity that has come on-line since 2005 was supercritical and of the new capacity that came on-line since 2010, about 70 percent was supercritical. No new coal-fired utility boilers began operation in either 2013 or 2014. Coal-fired power plants that have come on-line most recently include AEP's John W. Turk, Jr. Power Plant, which is a 600 MW ultra-supercritical[512] PC (USCPC) facility located in the southwest corner of Arkansas, and Duke Energy's Edwardsport plant, which is a 618 MW

[505] ''From Lubbock, TX to Thompsons, TX—Amine Scrubbing for Commercial CO_2 Capture from Power Plants'', plenary address by Prof. Gary Rochelle at the 12th International Conference on Greenhouse Gas Technology (GHGT–12), Austin, TX (October 2014).

[506] The EPA also finds that the standards would not result in any significant impact on solid waste generation or management. See Section XII.D below.

[507] Subcritical coal-fired boilers are designed and operated with a steam cycle below the critical point of water. Supercritical coal-fired boilers are designed and operated with a steam cycle above the critical point of water. Increasing the steam pressure and temperature increases the amount of energy within the steam, so that more energy can be extracted by the steam turbine, which in turn leads to increased efficiency and lower emissions.

[508] Exhibit ES–2 from ''Cost and Performance Baseline for Fossil Energy Plants Volume 1: Bituminous Coal and Natural Gas to Electricity'', Revision 2, Report DOE/NETL–2010/1397 (November 2010).

[509] ''Cost and Performance Baseline for Fossil Energy Plants Supplement: Sensitivity to CO_2 Capture Rate in Coal-Fired Power Plants'', DOE/NETL–2015/1720 (June 2015); SCPC rates come from Exhibit A–2 and IGCC rates come from Exhibit A–4.

[510] The comparable emissions on a net basis are: subcritical PC—1,890 lb CO_2/MWh-n; SCPC–1,705 lb CO_2/MWh-n; and IGCC—1,724 lb CO_2/MWh-n. (See same references as for gross emissions provided in the text).

[511] Exhibit ES–2 from ''Cost and Performance Baseline for Fossil Energy Plants Volume 3b: Low Rank Coal to Electricity: Combustion Cases'', Report DOE/NETL–2010/1463 (March 2011).

[512] Ultra-supercritical (U.S.C.) and advanced ultra-supercritical (A–U.S.C.) are terms often used to designate a coal-fired power plant design with steam conditions well above the critical point.

''CCS ready'' [513] IGCC unit located in Knox County, Indiana. Both of those facilities came on-line in 2012. It is likely that the units that initiated operation in 2010 or later were conceived of, planned, designed, and permitted well before 2010—likely in the early 2000s. Thus, it seems clear that the power sector had already, at that point, transitioned to the selection of supercritical boiler technology as ''business as usual'' for new coal-fired power plants. Since that time, there have been other coal-fired power plants that have been proposed and almost all of them have been either supercritical boiler designs or IGCC units. In Table 1 of the Technical Support Document *Fossil Fuel-Fired Boiler and IGCC EGU Projects Under Development: Status and Approach* [514] for the January 2014 proposal, the EPA listed the development status of ''potential transitional sources'' (*i.e.,* projects that had been proposed and had received Prevention of Significant Deterioration (PSD) preconstruction permits as of April 13, 2012). Of the 16 proposed EGU projects in Table 1—most of which have been cancelled or converted to or replaced with NGCC projects—the majority (nine) are either supercritical PC or IGCC designs. Five of the proposed projects were CFB designs with only one being a subcritical PC design.

The EPA is aware of only one new coal-fired power plant that is actively in the construction phase. That plant is Mississippi Power's Kemper County Energy Facility in Kemper County, MS—an IGCC unit that plans to begin operations in 2016 and will implement partial CCS to capture approximately 65 percent of the available CO_2, which will be sold for use in EOR operations.

Considering the direction that the power sector has been taking and the changes that it is undergoing, identifying a new supercritical unit as the BSER and requiring an emission limitation based on the performance of such units thus would provide few, if any, additional CO_2 emission reductions beyond the sector's ''business as usual''. As noted, for the most part, new sources are already designed to achieve at least that emission limitation. This criterion does not itself eliminate supercritical technology from consideration as BSER. However, existing technologies must be considered in the context of the range of technically feasible technologies and, as we discuss elsewhere in this final preamble, partial CCS can achieve emission limitations beyond business as usual and do so at a reasonable cost.

The EPA also considered IGCC technology and whether it represents the BSER for new power plants utilizing coal or other solid fossil fuels. IGCC units, on a gross-output basis, have inherently lower CO_2 emission rates when compared to similarly-sized SCPC units. However, the net emission rates and overall emissions to the atmosphere (*i.e.,* tons of CO_2 per year) tend to be more similar (though still somewhat lower) for new IGCC units when compared to new SCPC units with the same electrical output. Therefore an emission limitation based on the expected performance of a new IGCC unit would result in some CO_2 emission reductions from the segment of the industry that would otherwise construct new PC units, but not from the segment of the industry that would already construct new IGCC units. A gross-output-based emission limitation consistent with the expected performance of a new IGCC unit would still require some additional control, such as partial CCS, on a new supercritical boiler.

As is shown in Section V.J and H, additional emission reductions beyond those that would result from an emission standard based on a new SCPC boiler or even a new IGCC unit as the BSER can be achieved at a reasonable cost. Because practicable emission controls are available that are of reasonable cost at the source level and that will have little cost and energy impact at the national level, the EPA is according significant weight to the factor of amount of emissions reductions in determining the BSER. As discussed above, the D.C. Circuit has emphasized this factor in describing the purpose of CAA section 111 as to achieve ''as much [emission reduction] as practicable.'' [515]

b. Lack of Incentive for Technological Innovation

As discussed above, the EPA is justifying its identification of the BSER based on its weighing of the factors explicitly identified in CAA section 111(a)(1), including the amount of the emission reduction. Under the D.C. Circuit case law, encouraging the development and implementation of advanced control technology must also be considered (and, in any case, may reasonably be considered; see Section V.H.3.d above). Consideration of this factor confirms the EPA's decision not to identify highly efficient generation technology (without CCS) as the BSER. At present, CCS technologies are the most promising options to achieve significant reductions in CO_2 emissions from newly constructed fossil fuel-fired steam generating units. CCS technology is also now a viable retrofit option for some modified, reconstructed and existing sources—depending upon the configuration, location and age of those sources. As CCS technologies are deployed and used more there is an expectation that, based on previous experience with advanced technologies, the performance will improve and the implementation costs will decline. The improved performance and lower costs will provide additional incentive for further implementation in the future.

The Intergovernmental Panel on Climate Change (IPCC) recently released its Fifth Assessment report, [516] which recognizes that widespread deployment of CCS is crucial to reach the long term climate goals. The authors of the report used models to predict the likelihood of stabilizing the atmospheric concentration of CO_2 at 450 ppm by 2050 with or without carbon capture and storage (CCS). They found that several of the models were not able to reach this goal without CCS, which underlines the importance of deploying and further developing CCS on a large scale.

American Electric Power (AEP), in an evaluation of lessons learned from the Phase 1 of its Mountaineer CCS project, wrote: ''AEP still believes the advancement of CCS is critical for the sustainability of coal-fired generation.'' [517]

Some commenters felt that the proposed standard of performance for new steam generating units, based on implementation of partial CCS at an emission rate of 1,100 lb/MWh-g, would not serve to promote the increased deployment and implementation of CCS. The commenters argued that such a standard could instead have the unintended result of discouraging the further development of advanced coal generating technologies such as ultra-supercritical boilers and improved IGCC designs.

Commenters further argued that such a standard will stifle further

[513] A ''CCS ready'' facility is one that is designed such that the CCS equipment can be more easily added at a later time.

development of CCS technologies. Commenters felt that the standard would effectively deter the construction of new coal-fired generation—and, if there is no new coal-fired generation, then there will be no implementation of CCS technology and, therefore, no need for continued research and development of CCS technologies. They argued, in fact, that the best way to promote the development of CCS was to set a standard that did not rely on it.

The EPA does not agree with these arguments and, in particular, does not see how a standard that is not predicated on performance of an advanced control technology would serve to promote development and deployment of that advanced control technology. On the contrary, the history of regulatory actions has shown that emission standards that are based on performance of advanced control equipment lead to increased use of that control equipment, and that the absence of a requirement stifles technology development.

There is a dramatic instance of this paradigm presented in the present record. In 2011, AEP deferred construction of a large-scale CCS retrofit demonstration project on one of its coal-fired power plants because the state's utility regulators would not approve cost recovery for CCS investments without a regulatory requirement to reduce CO_2 emissions. AEP's chairman was explicit on this point, stating in a July 17, 2011 press release announcing the deferral:

We are placing the project on hold until economic and policy conditions create a viable path forward . . . We are clearly in a classic 'which comes first?' situation. The commercialization of this technology is vital if owners of coal-fueled generation are to comply with potential future climate regulations without prematurely retiring efficient, cost-effective generating capacity. But as a regulated utility, it is impossible to gain regulatory approval to recover our share of the costs for validating and deploying the technology without federal requirements to reduce greenhouse gas emissions already in place. The uncertainty also makes it difficult to attract partners to help fund the industry's share.[518]

Some commenters also argued that the incremental cost associated with including CCS at the proposed level would prevent new coal-fired units from being built. Instead, they advocated for a standard based on most efficient technology (supercritical) coupled with government subsidies to advance and promote CCS technology. The final standard is less stringent than that proposed, and can be met at a lower cost than the proposed standard, and as explained above in Section V.H, the EPA has carefully evaluated those costs and finds them to be reasonable. Further, the record and current economic conditions (fuel costs, renewables, demand growth, etc.) show that non-economic factors such as a desire for fuel diversity will likely drive future development of any new coal-fired EGUs. For this reason, the EPA does not find the commenters' bare assertions that the incremental cost of CCS (particularly as reasonably modulated for this final standard) would make the difference between constructing and not constructing new coal capacity to be persuasive. Rather, a cost-reasonable standard reflecting use of the new technology is what will drive new technology deployment.

The EPA expects that it is unlikely that a new IGCC unit would install partial CCS to meet the final standard unless the facility is built to take advantage of EOR opportunities or to operate as a poly-generation facility (*i.e.,* to co-produce power along with chemicals or other products). For new IGCC units, the final standard of performance can be met by co-firing a small amount of natural gas. Some commenters argued that IGCC is an advanced technology that, like CCS, should be promoted. The EPA agrees. IGCC is a low-emitting, versatile technology that can be used for purposes beyond just power production (as mentioned just above). Commenters further argued that a requirement to include partial CCS (at a level to meet the proposed standard of performance) would serve to deter—rather than promote—more installation of IGCC technology. We disagree with a similar argument that commenters make with respect to partial CCS for post-combustion facilities, but our final standard moots that argument for IGCC facilities because the final emission limitation of 1,400 lb CO_2/MWh-g will not itself deter installation of IGCC technology, by the terms of the commenters' own argument.

2. ''Full'' Carbon Capture and Storage (*i.e.,* 90 Percent Capture)

We also reconsidered whether the emission limitation for new coal-fired EGUs should be based on the performance of full implementation of CCS technology. For a newly constructed utility boiler, this would mean that a post-combustion capture system would be used to treat the entire flue gas stream to achieve an approximately 90 percent reduction in CO_2 emissions. For a newly constructed IGCC unit, a pre-combustion capture system would be used to capture CO_2 from a fully shifted gasification syngas stream to achieve an approximately 90 percent reduction in CO_2 emissions.

In the proposal for newly constructed sources, we found that ''full CCS'' would certainly result in significant CO_2 reductions from any new source implementing the technology. However, we also found that the costs associated with implementation, on either a new utility boiler system or a new IGCC unit, are predicted to substantially exceed the costs for other dispatchable non-NGCC generating options that are being considered by utilities and project developers (*e.g.,* new nuclear plants and new biomass-fired units). See 79 FR at 1477. This remains the case, and indeed, the difference between cost of full capture and new nuclear technology is estimated to be even greater than at proposal. The EPA thus is not selecting full capture CCS as BSER.

Q. Summary

The EPA finds that the best system of emission reduction adequately demonstrated is a highly efficient supercritical pulverized coal boiler using post-combustion partial CCS so that CO_2 is captured, compressed and safely stored over the long-term. Properly designed, operated, and maintained, this best system can achieve a standard of performance of 1,400 lb CO_2/MWh-g, an emission limitation that is achievable over the 12-operating-month compliance period considering usual operating variability (including use of different coal types, periods of startup and shutdown, and malfunction conditions). This standard of performance is technically feasible, given that the BSER technology is already operating reliably in full-scale commercial application. The technology adds cost to a new facility which the EPA has evaluated and finds to be reasonable because the costs are in the same range as those for new nuclear generating capacity—a competing non-NGCC, dispatchable technology that utilities and project developers are also considering for base load application. The EPA has also considered capital cost increases associated with use of post-combustion partial CCS at the level needed to meet the final standard and found them to be reasonable, and within the range of capital cost increases for this industry in prior NSPS which have been adjudicated as reasonable. The EPA's consideration of costs is also informed by its judgment that new coal-

[518] *http://www.aep.com/newsroom/newsreleases/?id=1704.*

fired capacity would be constructed not as the most economic option, but for such purposes as preserving fuel diversity in an energy portfolio, and so would not be cost competitive with natural gas-fired capacity, so that some additional cost premium may therefore be reasonable. The EPA has carefully evaluated the non-air quality health and environmental impacts of the final standard and found them to be reasonable: CO_2 pipelines and CO_2 sequestration via deep well injection are subject already to rigorous control under established regulatory programs which assure prevention of environmental release during transport and storage. In addition, water use associated with use of partial CCS at the level to meet the final standard is acceptable, and use of the technology does not impose significant burdens on energy requirements at either the plant or national level. The 1,400 lb CO_2/MWh-g standard reflecting performance of the BSER may be achieved without geographic constraint, both because geologic sequestration and EOR capacity are widely available and accessible, and also because alternative compliance pathways are available in the unusual circumstance where a new coal-fired plant is sited in an area without such access, that area has not already limited construction of new coal-fired capacity in some way, and the area cannot be serviced by coal-by-wire. Accordingly, the EPA finds that the promulgated standard of performance for new fossil fuel-fired steam electric generating units satisfies the requirements of CAA section 111(a).

VI. Rationale for Final Standards for Modified Fossil Fuel-Fired Electric Utility Steam Generating Units

The EPA has determined that, as proposed, the BSER for steam generating units that trigger the modification provisions is each affected unit's own best potential performance as determined by that unit's historical performance. The final standards of performance are similar to those proposed in the June 2014 proposal. Differences between the proposed standards and the final standards issued in this action reflect responses to comments received on the proposal. Those changes are described below.

As noted previously, the EPA is issuing final emission standards only for affected modified steam generating units that conduct modifications resulting in a hourly increase in CO_2 emissions (mass per hour) of more than 10 percent (''large'' modifications). The EPA is continuing to review the appropriate standards for modified sources that conduct modifications resulting in a hourly increase in CO_2 emissions (mass per hour) of less than or equal to 10 percent (''small'' modifications), is not issuing final standards for those sources in this action, and is withdrawing the proposed standards for those sources. See Section XV below.

A. Rationale for Final Applicability Criteria for Modified Steam Generating Units

Final applicability criteria for modified steam generating EGUs include those discussed earlier in Section III.A.1 (General Applicability) and Section III.A.3 (Applicability Specific to Modified Sources).

CAA section 111(a)(4) defines a ''modification'' as ''any physical change in, or change in the method of operation of, a stationary source'' that either ''increases the amount of any air pollutant emitted by such source or . . . results in the emission of any air pollutant not previously emitted.'' Certain types of physical or operational changes are exempt from consideration as a modification. Those are described in 40 CFR 60.2, 60.14(e). To be clear, our action in this final rule, and the discussion below, does not change anything concerning what constitutes or does not constitute a modification under the CAA or the EPA's regulations.[519]

A modified steam generating unit is a source that fits the definition and applicability criteria of a fossil fuel-fired steam generating unit and that commences a qualifying modification on or after June 18, 2014 (the publication date of the proposed modification standards). 79 FR 34960.

For the reasons discussed below, the EPA in this final action is finalizing requirements only for steam generating units that conduct modifications resulting in an increase in hourly CO_2 emissions (mass per hour) of more than 10 percent as compared to the source's highest hourly emission during the previous five years. With respect to modifications with smaller increases in CO_2 emissions (specifically, steam generating units that conduct modifications resulting in an increase in hourly CO_2 emissions (mass per hour) of 10 percent or less compared to the source's highest hourly emission during the previous 5 years), the EPA is not finalizing any standard or other requirements, and is withdrawing the June 2014 proposal with respect to these sources (see Section XV below).

[519] CAA section 111(a)(4); See also 40 CFR 60.14 concerning what constitutes a modification, how to determine the emission rate, how to determine an emission increase, and specific actions that are not, by themselves, considered modifications.

The effect of the EPA's deferral on setting standards for sources undertaking modifications resulting in smaller increases in CO_2 emissions and the withdrawal of the June 2014 proposal with respect to such sources is that such sources will continue to be existing sources and subject to requirements under section 111(d). This is because an existing source does not always become a new source when it modifies. Under the definition of ''new source'' in section 111(a)(2), an existing source only becomes a new source if it modifies after the publication of proposed or final regulations that will be applicable to it. Thus, if an existing source modifies at a time that there is no promulgated final standard or pending proposed standard that will be applicable to it as a modified ''new'' source, that source is not a new source and continues to be an existing source. Here, because the EPA is not finalizing standards for sources undertaking modifications resulting in smaller increases in CO_2 emissions and is withdrawing the proposal with respect to such sources, these sources do not fall within the definition of ''new source'' in section 111(a)(2) and continue to be an ''existing source'' as defined in section 111(a)(6). See Section XV below.

As we discussed in the June 2014 proposal, the EPA has historically been notified of only a limited number of NSPS modifications[520] involving fossil steam generating units and therefore predicted that very few of these units would trigger the modification provisions and be subject to the proposed standards. Given the limited information that we have about past modifications, the agency has concluded that it lacks sufficient information to establish standards of performance for all types of modifications at steam generating units at this time. Instead, the EPA has determined that it is appropriate to establish standards of performance at this time for larger modifications, such as major facility upgrades involving, for example, the refurbishing or replacement of steam turbines and other equipment upgrades that result in substantial increases in a unit's hourly CO_2 emissions rate. The agency has determined, based on its review of public comments and other publicly available information, that it has adequate information regarding the types of modifications that could result in large increases in hourly CO_2 emissions, as well as on the types of

[520] NSPS modifications resulting in increases in hourly emissions of criteria pollutants.

measures available to control emissions from sources that undergo such modifications, and on the costs and effectiveness of such control measures, upon which to establish standards of performance for modifications with large emissions increases at this time.

In establishing standards of performance at this time for modifications with large emissions increases, but not for those with small increases, the EPA is exercising its policy discretion to promulgate regulatory requirements in a sequential fashion for classes of modifications within a source category, accounting for the information available to the agency, while also focusing initially on those modifications with the greatest potential environmental impact. This approach is consistent with the case law that authorizes agencies to establish a regulatory framework in an incremental fashion, that is, a step at a time.[521]

To be clear, the EPA is not reaching a final decision as to whether it will regulate modifications with smaller increases, or even that such modifications should be subject to different requirements than we are finalizing in this rule for the modifications with larger increases. We have made no decisions and this matter is not concluded. We plan to continue to gather information, consider the options for modifications with smaller increases, and, in the future, develop a proposal for these modifications or otherwise take appropriate steps.

As a means of determining the proper threshold between the larger and smaller increases in CO_2 emissions, the EPA examined changes in CO_2 emissions that may result from large, capital-intensive projects, such as major facility upgrades involving the refurbishing or replacement of steam turbines and other equipment upgrades that would significantly increase a unit's capacity to burn more fossil fuel, thereby resulting in large emissions increases. Major upgrades such as these could increase a steam generating unit's hourly CO_2 emissions by well over 10 percent.[522]

An example of such major upgrade would be work performed at AmerenUE's Labadie Plant, a facility with four 600–MW (nominal) coal-fired units located 35 miles west of St. Louis. In the early 2000s, plant staff conducted process improvements that raised maximum unit capacity by nearly 10 percent (from 580 MW to 630 MW).[523] Those changes included boiler improvements necessitated by its switch from bituminous to subbituminous coal,[524] installation of low-NO_X burners, an overfire air system, and advanced computer controls. One of the performance gains came from upgrading all four steam turbines, which AmerenUE chose to replace as modules allowing engineers more freedom to maximize performance unconstrained by the units' existing outer casing.

Another example is the refurbishment of the 2,100 MW Eskom Arnot coal-fired power plant in South Africa with a resulting increase in its power output by 300 MW to 2,400 MW—an increase in capacity of 14 percent.[525] For each of the plant's six steam generating units, the company conducted a complete retrofit of the high pressure and intermediate pressure steam turbines, a capacity upgrade of the low pressure steam turbine, and the replacement and upgrade of associated turbine side pumps and auxiliaries. In addition, major upgrades to the boiler plant were conducted, including supply of new pressure part components, new burners, and modification to other equipment such as the coal mills and classifiers, fans, and heaters. Other examples are provided in a technical memo available in the rulemaking docket.[526]

The EPA does not intend to imply that these specific projects would have resulted in an increase in hourly CO_2 emissions of greater than 10 percent. Capacity increases are often the result of efficient improvements or are accompanied by other facility improvements that can offset emissions increases due to increased fuel input capacity. However, these examples are intended to show the types of large, more capital intensive projects that can potentially result in increases in hourly emissions of CO_2 of at least 10 percent.

The EPA believes that it is reasonable to set the threshold between ''large'' modifications and ''small'' modifications at 10 percent, a level commensurate with the magnitude of the emissions increases that could result from the types of projects described above, and we are issuing a final standard of performance for those sources that conduct modifications resulting in hourly CO_2 emission increases that exceed that threshold. We are not issuing standards of performance for those sources that conduct modifications resulting in an hourly increase of CO_2 emissions of less than or equal to 10 percent.

Therefore, the EPA is withdrawing the proposed standards for those sources that conduct modifications resulting in a hourly increase in CO_2 emissions (mass per hour) of less than or equal to ten percent and is not issuing final standards for those sources at this time. See Section XV below. Utilities, states and others should be aware that the differentiation between modifications with larger and smaller increases in CO_2 emissions only applies to sources covered under 40 CFR part 60, subpart TTTT, *i.e.,* it is only applicable to CO_2 emissions from fossil fuel-fired steam generating units. There is no similar provision for criteria pollutants or for other source categories. Utilities, states and others should also be aware that the distinction between large and small modifications only applies to NSPS modifications. Sources undertaking modifications may still be subject to requirements of New Source Review under CAA Title I part C or D (which have different standards for modifications than the NSPS and require a case-by-case analysis) or other CAA requirements.

The EPA notes that some commenters expressed concern that a number of existing fossil steam generating units, in order to fulfill requirements of an approved CAA section 111(d) plan, may pursue actions that involve physical or operational changes that result in some increase in their CO_2 emissions on an hourly basis, and thus constitute

[521] As the U.S. Supreme Court recently stated in *Massachusetts* v. *EPA,* 549 U.S. 497, 524 (2007): '' 'Agencies, like legislatures, do not generally resolve massive problems in one fell regulatory swoop;' '' and instead they may permissibly implement such regulatory programs over time, '' 'refining their preferred approach as circumstances change and as they develop a more nuanced understanding of how best to proceed.' '' *See Grand Canyon Air Tour Coalition* v. *F.A.A.,* 154 F.3d 455 (D.C. Cir. 1998), *City of Las Vegas* v. *Lujan,* 891 F.2d 927, 935 (D.C. modifications. Some commenters suggested that the EPA should exempt projects undertaken specifically for the purpose of complying with CAA section 111(d).

The EPA does not have sufficient information at this time to predict the full array of actions that existing steam generating units may undertake in response to applicable requirements under an approved CAA section 111(d) plan, or which, if any, of these actions may result in increases in CO_2 hourly emissions. Nevertheless, the EPA expects that, to the extent actions undertaken by existing steam generating units in response to 111(d) requirements trigger modifications, the magnitude of the increases in hourly CO_2 emissions associated with such modifications would generally be smaller and would therefore generally not subject such modifications to the standards of performance that the EPA is finalizing in this rule for modified steam generating units with larger increases in hourly CO_2 emissions.

B. Identification of the Best System of Emission Reduction

The EPA has determined that, as was proposed, the BSER for steam generating units that trigger the modification provisions is the affected EGU's own best potential performance as determined by that source's historical performance.

The EPA proposed that the BSER for modified steam generating EGUs is each unit's own best potential performance based on a combination of best operating practices and equipment upgrades. Specifically, the EPA co-proposed two alternative standards for modified utility steam generating units. In the first co-proposed alternative, modified steam generating EGUs would be subject to a single emission standard determined by the affected EGU's best demonstrated historical performance (in the years from 2002 to the time of the modification) with an additional 2 percent emission reduction. The EPA proposed that the standard could be met through a combination of best operating practices and equipment upgrades. To account for facilities that have already implemented best practices and equipment upgrades, the proposal also specified that modified facilities would not have to meet an emission standard more stringent than the corresponding standard for reconstructed EGUs.

The EPA also co-proposed that the specific standard for modified sources would be dependent on the timing of the modification. We proposed that sources that modify prior to becoming subject to a CAA section 111(d) plan would be required to meet the same standard described in the first co-proposal—that is, the modified source would be required to meet a unit-specific emission limit determined by the affected EGU's best demonstrated historical performance (in the years from 2002 to the time of the modification) with an additional 2 percent emission reduction (based on equipment upgrades). We also proposed that sources that modify after becoming subject to a CAA section 111(d) plan would be required to meet a unit-specific emission limit that would be determined by the CAA section 111(d) implementing authority and would be based on the source's expected performance after implementation of identified unit-specific energy efficiency improvement opportunities.

The final standards in this action do not depend upon when the modification commences (as long as it commences after June 8, 2014). The EPA received comments on the June 2014 proposal that called into question the need to differentiate the standard based on when the modification was undertaken. Further, commenters noted that the proposed requirements for sources modifying after becoming subject to a CAA section 111(d) plan, which were based on energy efficiency improvement opportunities were vague and that standard setting under CAA section 111(b) is a federal duty and would require notice-and-comment rulemaking. The EPA considered those comments and has determined that we agree that there is no need for subcategories based on the timing of the modification.

C. BSER Criteria

1. Technical Feasibility

The EPA based technical feasibility of the unit-specific efficiency improvement on analyses done to support heat rate improvement for the proposed CAA section 111(d) emission guidelines (Clean Power Plan). That work was summarized in Chapter 2 of the TSD, ''GHG Abatement Measures''.[527] In response to comments on the proposed Clean Power Plan, the approach was adjusted, as described in the final CAA section 111(d) emission guidelines. As with proposed actions, the EPA is basing technical feasibility for final standards for modified source efficiency improvements on the analyses for heat rate improvements for the CAA 111(d) final rule.

[527] Technical Support Documents ''GHG Abatement Measures'' (proposal) and ''GHG Mitigation Measures'' (final) available in the rulemaking docket EPA–HQ–OAR–2013–0495.

2. Cost

Any efficiency improvement made by EGUs for the purpose of reducing CO_2 emissions will also reduce the amount of fuel that EGUs consume to produce the same electricity output. The cost attributable to CO_2 emission reductions, therefore, is the net cost of achieving heat rate improvements after any savings from reduced fuel expenses. As summarized below, we estimate that, on average, the savings in fuel cost associated with a 4 percent heat rate improvement would be sufficient to cover much of the associated costs, and thus that the net costs of heat rate improvements associated with reducing CO_2 emissions from affected EGUs are relatively low.

We recognize that our cost analysis just described will represent the costs for some EGUs better than others because of differences in EGUs' individual circumstances. We further recognize that reduced generation from coal-fired EGUs will tend to reduce the fuel savings associated with heat rate improvements, thereby raising the effective cost of achieving the CO_2 emission reductions from the heat rate improvements. Nevertheless, we still expect that the majority of the investment required to capture the technical potential for CO_2 emission reductions from heat rate improvements would be offset by fuel savings, and that the net costs of implementing heat rate improvements as an approach to reducing CO_2 emissions from modified fossil fuel-fired EGUs are reasonable. The EPA further notes that the types of large, more capital intensive projects that may trigger the ''larger modifications'' threshold (*i.e.,* result in an hourly increase in CO_2 emissions of more than 10 percent) often are undertaken in order to increase the capacity of the source but also to improve the heat rate or efficiency of the unit.

3. Emission Reductions

This approach would achieve reasonable reductions in CO_2 emissions from the affected modified units as those units will be required to meet an emission standard that is consistent with more efficient operation. In light of the limited opportunities for emission reductions from retrofits, these reductions are adequate.

4. Promotion of Technology and Other Systems of Emission Reduction

As noted previously, the case law makes clear that the EPA is to consider the effect of its selection of the BSER on technological innovation or development, but that the EPA also has the authority to weigh this factor, along with the various other factors. With the selection of emissions controls, modified sources face inherent constraints that newly constructed greenfield and even reconstructed sources do not; as a result, modified sources present different, and in some ways more limited, opportunities for technological innovation or development. In this case, the standards promote technological development by promoting further development and market penetration of equipment upgrades and process changes that improve plant efficiency.

VII. Rationale for Final Standards for Reconstructed Fossil Fuel-Fired Electric Utility Steam Generating Units

A. Rationale for Final Applicability Criteria for Reconstructed Sources

The applicability rationale for reconstructed utility steam generating units is the same as for newly constructed utility steam generating units. We are finalizing the same general criteria and not amending the reconstruction provisions included in the general provisions.

B. Identification of the Best System of Emission Reduction

In the proposal, the EPA evaluated seven different control technology configurations to determine the BSER for reconstructed fossil fuel-fired boiler and IGCC EGUs: (1) The use of partial CCS, (2) conversion to (or co-firing with) natural gas, (3) the use of CHP, (4) hybrid power plants, (5) reductions in generation associated with dispatch changes, renewable generation, and demand side energy efficiency, (6) efficiency improvements achieved through the use of the most efficient generation technology, and (7) efficiency improvements achieved through a combination of best operating practices and equipment upgrades.
