FEDERAL REGISTER

Vol. 80 Monday,

No. 220 November 16, 2015

Book 1 of 2 Books

Pages 70669–71386

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 80 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 80, No. 220
Monday, November 16, 2015

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 906

[Doc. No. AMS–FV–15–0035; FV15–906–1 IR]

Oranges and Grapefruit Grown in Lower Rio Grande Valley in Texas; Decreased Assessment Rate

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Interim rule with request for comments.

SUMMARY: This rule implements a recommendation from the Texas Valley Citrus Committee (Committee) for a decrease in the assessment rate established for the 2015–16 and subsequent fiscal periods from $0.11 to $0.08 per 7/10-bushel carton or equivalent of oranges and grapefruit handled under the marketing order (order). The Committee locally administers the order, and is comprised of producers and handlers of oranges and grapefruit operating within the area of production. Assessments upon orange and grapefruit handlers are used by the Committee to fund reasonable and necessary expenses of the program. The fiscal period begins August 1 and ends July 31. The assessment rate will remain in effect indefinitely unless modified, suspended, or terminated.

DATES: Effective November 17, 2015. Comments received by January 15, 2016, will be considered prior to issuance of a final rule.

ADDRESSES: Interested persons are invited to submit written comments concerning this rule. Comments must be sent to the Docket Clerk, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW., STOP 0237, Washington, DC 20250–0237; Fax: (202) 720–8938; or Internet: *http://www.regulations.gov.* Comments should reference the document number and the date and page number of this issue of the **Federal Register** and will be available for public inspection in the Office of the Docket Clerk during regular business hours, or can be viewed at: *http://www.regulations.gov.* All comments submitted in response to this rule will be included in the record and will be made available to the public. Please be advised that the identity of the individuals or entities submitting the comments will be made public on the internet at the address provided above.

FOR FURTHER INFORMATION CONTACT: Abigail Campos, Marketing Specialist, or Christian D. Nissen, Regional Director, Southeast Marketing Field Office, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA; Telephone: (863) 324–3375, Fax: (863) 291–8614, or Email: *Abigail.Campos@ams.usda.gov* or *Christian.Nissen@ams.usda.gov.*

Small businesses may request information on complying with this regulation by contacting Jeffrey Smutny, Marketing Order and Agreement Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW., STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: *Jeffrey.Smutny@ams.usda.gov.*

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Agreement and Order No. 906, as amended (7 CFR part 906), regulating the handling of oranges and grapefruit grown in the Lower Rio Grande Valley in Texas, hereinafter referred to as the ''order.'' The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the ''Act.''

The Department of Agriculture (USDA) is issuing this rule in conformance with Executive Orders 12866, 13563, and 13175.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. Under the marketing order now in effect, orange and grapefruit handlers are subject to assessments. Funds to administer the order are derived from such assessments. It is intended that the assessment rate as issued herein will be applicable to all assessable oranges and grapefruit beginning August, 1, 2015, and continue until amended, suspended, or terminated.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with USDA a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This rule decreases the assessment rate established for the Committee for the 2015–16 and subsequent fiscal periods from $0.11 to $0.08 per 7/10-bushel carton or equivalent of oranges and grapefruit handled.

The Texas orange and grapefruit marketing order provides authority for the Committee, with the approval of USDA, to formulate an annual budget of expenses and collect assessments from handlers to administer the program. The members of the Committee are producers and handlers of Texas oranges and grapefruit. They are familiar with the Committee's needs and with the costs for goods and services in their local area and are thus in a position to formulate an appropriate budget and assessment rate. The assessment rate is formulated and discussed in a public meeting. Thus, all directly affected persons have an opportunity to participate and provide input.

For the 2014–15 and subsequent fiscal periods, the Committee recommended, and USDA approved, an assessment rate that would continue in effect from fiscal period to fiscal period unless modified, suspended, or terminated by USDA upon recommendation and information submitted by the Committee or other information available to USDA.

The Committee met on June 24, 2015, and unanimously recommended 2015–16 expenditures of $701,148 and an assessment rate of $0.08 per 7/10-bushel carton or equivalent of oranges and

grapefruit. In comparison, last year's budgeted expenditures were $809,500. The assessment rate of $0.08 is $0.03 lower than the rate currently in effect. The recommended 2015–16 expenditures include decreases in educational outreach and compliance, which were reduced by approximately $100,000. The Committee considered proposed expenses and recommended decreasing the assessment rate to more closely align assessment income to the lower budget.

The major expenditures recommended by the Committee for the 2015–16 year include $600,248 for the Mexican fruit fly control program, $77,200 for management and compliance, and $23,700 for operating expenses. Budgeted expenses for these items in 2014–15 were $503,000, $175,000, and $21,500, respectively.

The assessment rate recommended by the Committee was derived by dividing anticipated expenses by expected shipments of Texas oranges and grapefruit. Orange and grapefruit shipments for the 2015–16 year are estimated at 8 million 7/10-bushel cartons or equivalent, which should provide $640,000 in assessment income. Income derived from handler assessments, along with interest income and funds from the Committee's authorized reserve, will be adequate to cover budgeted expenses. Income in the reserve (currently around $230,000) will be kept within the maximum permitted by the order (approximately one fiscal period's expenses as stated in § 906.35).

The assessment rate established in this rule will continue in effect indefinitely unless modified, suspended, or terminated by USDA upon recommendation and information submitted by the Committee or other available information.

Although this assessment rate is effective for an indefinite period, the Committee will continue to meet prior to or during each fiscal period to recommend a budget of expenses and consider recommendations for modification of the assessment rate. The dates and times of Committee meetings are available from the Committee or USDA. Committee meetings are open to the public and interested persons may express their views at these meetings. USDA will evaluate Committee recommendations and other available information to determine whether modification of the assessment rate is needed. Further rulemaking will be undertaken as necessary. The Committee's 2015–16 budget and those for subsequent fiscal periods will be reviewed and, as appropriate, approved by USDA.

Initial Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 170 producers of oranges and grapefruit in the production area and 13 handlers subject to regulation under the marketing order. Small agricultural producers are defined by the Small Business Administration as those having annual receipts less than $750,000, and small agricultural service firms are defined as those whose annual receipts are less than $7,000,000 (13 CFR 121.201).

According to Committee data and information from the National Agricultural Statistics Service, the weighted average grower price for Texas citrus during the 2013–14 season was around $13.89 per box and total shipments were near 7.4 million boxes. Using the weighted average price and shipment information, and assuming a normal distribution, the majority of growers would have annual receipts of less than $750,000. In addition, based on available information, the majority of handlers have annual receipts of less than $7,000,000 and could be considered small businesses under SBA's definition. Thus, the majority of Texas citrus producers and handlers may be classified as small entities.

This rule decreases the assessment rate established for the Committee and collected from handlers for the 2015–16 and subsequent fiscal periods from $0.11 to $0.08 per 7/10-bushel carton or equivalent of Texas citrus. The Committee unanimously recommended 2015–16 expenditures of $701,148 and an assessment rate of $0.08 per 7/10-bushel carton or equivalent handled. The assessment rate of $0.08 is $0.03 lower than the 2014–2015 rate. The quantity of assessable oranges and grapefruit for the 2015–16 fiscal period is estimated at 8 million 7/10-bushel cartons or equivalent. Thus, the $0.08 rate should provide $640,000 in assessment income. Income derived from handler assessments along with interest income and funds from Committee's authorized reserve, will be adequate to cover budgeted expenses.

The major expenditures recommended by the Committee for the 2015–16 year include $600,248 for the Mexican fruit fly control program, $77,200 for management and compliance, and $23,700 for operating expenses. Budgeted expenses for these items in 2014–15 were $503,000, $175,000, and $21,500, respectively.

The recommended 2015–16 expenditures include decreases in the amount budgeted for educational outreach and compliance. The Committee considered proposed expenses and recommended decreasing the assessment rate to more closely align assessment income to the lower budget.

Prior to arriving at this budget and assessment rate, the Committee considered information from various sources, such as the Committee's Budget and Personnel Committee and the Market Development Committee. Alternative expenditure levels were discussed by these groups, based upon the relative value of various activities to the Texas citrus industry. Based on estimated shipments, the recommended assessment rate of $0.08 should provide $640,000 in assessment income. The Committee determined that the assessment revenue, along with funds from reserves and interest income, would be adequate to cover budgeted expenses for the 2015–16 fiscal period.

A review of historical information and preliminary information pertaining to the upcoming fiscal period indicates that the average grower price for the 2015–16 season could be around $13.00 per 7/10-bushel carton or equivalent of oranges and grapefruit. Therefore, the estimated assessment revenue for the 2015–16 fiscal period, as a percentage of total grower revenue would be around 0.6 percent.

This action decreases the assessment obligation imposed on handlers. Assessments are applied uniformly on all handlers, and decreasing the assessment rate reduces the burden on handlers.

The Committee's meeting was widely publicized throughout the Texas citrus industry and all interested persons were invited to attend the meeting and participate in Committee deliberations on all issues. Like all Committee meetings, the June 24, 2015, meeting was a public meeting. All entities, both large and small, were able to express views on this issue. Interested persons are invited to submit comments on this interim rule, including the regulatory

and informational impacts of this action on small businesses.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the order's information collection requirements have been previously approved by the Office of Management and Budget (OMB) and assigned OMB No. 0581–0189 Generic Fruit Crops. No changes in those requirements are necessary as a result of this action. Should any changes become necessary, they would be submitted to OMB for approval.

This action imposes no additional reporting or recordkeeping requirements on either small or large Texas orange and grapefruit handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this rule.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: *http://www.ams.usda.gov/MarketingOrdersSmallBusinessGuide.* Any questions about the compliance guide should be sent to Jeffrey Smutny at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

After consideration of all relevant material presented, including the information and recommendation submitted by the Committee and other available information, it is hereby found that this rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it is also found and determined upon good cause that it is impracticable, unnecessary, and contrary to the public interest to give preliminary notice prior to putting this rule into effect, and that good cause exists for not postponing the effective date of this rule until 30 days after publication in the **Federal Register** because: (1) The 2015–16 fiscal period began on August, 1, 2015, and the marketing order requires that the rate of assessment for each fiscal period apply to all assessable oranges and grapefruit handled during such fiscal period; (2) this action decreases the assessment rate for assessable oranges and grapefruit grown in Texas beginning with the 2015–16 fiscal period; (3) handlers are aware of this action which was recommended by the Committee at a public meeting and is similar to other assessment rate actions issued in past years; and (4) this interim rule provides a 60-day comment period, and all comments timely received will be considered prior to finalization of this rule.

List of Subjects in 7 CFR Part 906

Grapefruit, Marketing agreements, Oranges, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 906 is amended as follows:

PART 906—ORANGES AND GRAPEFRUIT GROWN IN LOWER RIO GRANDE VALLEY IN TEXAS

■ 1. The authority citation for 7 CFR part 906 continues to read as follows:

Authority: 7 U.S.C. 601–674.

■ 2. Section 906.235 is revised to read as follows:

§ 906.235 Assessment rate.

On and after August, 1, 2015, an assessment rate of $0.08 per 7/10-bushel carton or equivalent is established for oranges and grapefruit grown in the Lower Rio Grande Valley in Texas.

Dated: November 9, 2015.

Rex A. Barnes,

Associate Administrator, Agricultural Marketing Service.

BILLING CODE P

FEDERAL RESERVE SYSTEM

12 CFR Parts 208, 217, 225, and 252

[Regulations H, Q, Y, and YY; Docket Nos. R–1442 and R–1492]

RIN 7100 AE–87

Regulatory Capital Rules; Enhanced Prudential Standards for Bank Holding Companies and Foreign Banking Organizations; Correction

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Final rule; correcting amendment.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) published a final rule in the **Federal Register** on October 11, 2013 (78 FR 62018) regarding Regulatory Capital Rules and another final rule on October 27, 2014 (79 FR 64025) regarding Capital Plan and Stress Test Rules. This publication removes certain expired transitional requirements in Regulations H and Y, resolves certain citation errors, replaces a wrongly duplicated paragraph in Regulation Q, and corrects a typographical error in Regulation YY.

DATES: The corrections are effective November 16, 2015, except that instructions 10.b and 10.f amending 12 CFR 208.43 are effective January 1, 2018.

FOR FURTHER INFORMATION CONTACT: Benjamin McDonough, Special Counsel, (202) 452–2036, Julie Anthony, Counsel, (202) 475–6682, or Mark Buresh, Senior Attorney, (202) 452–5270, Legal Division, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW., Washington, DC 20551. Telecommunications Device for the Deaf (TDD) users may contact (202) 263–4869.

SUPPLEMENTARY INFORMATION: The Board is correcting errors in and deleting certain expired transitional requirements from the final rule that was published in the **Federal Register** on October 11, 2013 (78 FR 62018). These revisions will remove text or footnotes in 12 CFR parts 208 and 225 describing certain transitional requirements that have expired, correct citations in 12 CFR 217.2 and 12 CFR 217.202(b)(10), and remove and replace a wrongly duplicated paragraph in 12 CFR 217.300(c)(3). The Board is also correcting a typographical error in the final rule that was published in the **Federal Register** on October 27, 2014 (79 FR 64025), which caused the unintended deletion of § 252.153(e)(2)–(5).

For the reasons set forth in the preamble, chapter II of title 12 of the Code of Federal Regulations is amended as follows:

PART 208—MEMBERSHIP OF STATE BANKING INSTITUTIONS IN THE FEDERAL RESERVE SYSTEM

■ 1. The authority citation for part 208 continues to read as follows:

Authority: 12 U.S.C. 24, 36, 92a, 93a, 248(a), 248(c), 321–338a, 371d, 461, 481–486, 601, 611, 1814, 1816, 1818, 1820(d)(9), 1833(j), 1828(o), 1831, 1831o, 1831p–1, 1831r–1, 1831w, 1831x, 1835a, 1882, 2901–2907, 3105, 3310, 3331–3351, 3353, and 3905–3909; 15 U.S.C. 78b, 78l(b), 78l(i), 780–4(c)(5), 78q, 78q–1, 78w, 1681s, 1681w, 6801 and 6805; 31 U.S.C. 5318; 42 U.S.C. 4012a, 4104b, 4106, and 412

§ 208.2 [Amended]

■ 2. In § 208.2, remove footnote 2.

§ 208.3 [Amended]

■ 3. In § 208.3, redesignate footnote 3 as footnote 2.

§ 208.4 [Amended]

■ 4. In § 208.4, remove footnotes 4 and 5.

§ 208.5 [Amended]

■ 5. In § 208.5, redesignate footnote 6 as footnote 3 and footnote 7 as footnote 4.

§ 208.21 [Amended]

■ 6. In § 208.21, redesignate footnote 8 as footnote 5.

§ 208.24 [Amended]

■ 7. In § 208.24, redesignate footnote 9 as footnote 6.

■ 8. In § 208.40, revise paragraph (e) to read as follows:

§ 208.40 Authority, purpose, scope, other supervisory authority, and disclosure of capital categories.

* * * * *

(e) *Timing.* The calculation of the definitions of common equity tier 1 capital, the common equity tier 1 risk-based capital ratio, the leverage ratio, the supplementary leverage ratio, tangible equity, tier 1 capital, the tier 1 risk-based capital ratio, total assets, total leverage exposure, the total risk-based capital ratio, and total risk-weighted assets under this subpart is subject to the timing provisions at 12 CFR 217.1(f) and the transitions at 12 CFR part 217, subpart G.

* * * * *

§ 208.41 [Amended]

■ 9. In § 208.41, remove footnotes 10, 11, 12, 13, 14, and 15.

■ 10. In § 208.43:

■ a. Revise paragraph (a);

■ b. Effective January 1, 2018, paragraph (a)(2)(iv)(C) as added on May 1, 2014 (79 FR 24540), and further amended on August 14, 2015 (80 FR 49102), is redesignated as paragraph (a)(4)(iii).

■ c. Remove paragraph (b);

■ d. Redesignate paragraphs (c) and (d) as paragraphs (b) and (c).

■ e. Revise the introductory text of newly redesignated paragraph (b); and

■ f. Effective January 1, 2018, paragraph (c)(1)(iv) as revised on May 1, 2014 (79 FR 24540), and further amended on August 14, 2015 (80 FR 49102), is redesignated as paragraph (b)(1)(iv).

The revisions read as follows:

§ 208.43 Capital measures and capital category definitions.

(a) *Capital measures.* For purposes of section 38 and this subpart, the relevant capital measures are:

(1) Total Risk-Based Capital Measure: The total risk-based capital ratio;

(2) Tier 1 Risk-Based Capital Measure: The tier 1 risk-based capital ratio;

(3) Common Equity Tier 1 Capital Measure: The common equity tier 1 risk-based capital ratio; and

(4) Leverage Measure:

(i) The leverage ratio; and

(ii) With respect to an advanced approaches bank, on January 1, 2018, and thereafter, the supplementary leverage ratio.

* * * * *

(b) *Capital categories applicable to all member banks.* For purposes of section 38 and this subpart, a member bank is deemed to be:

* * * * *

§ 208.102 [Amended]

■ 11. In § 208.102, redesignate footnote 16 as footnote 7.

§ 208.111 [Amended]

■ 12. In § 208.111, redesignate footnote 17 as footnote 8 and footnote 18 as footnote 9.

PART 217—CAPITAL ADEQUACY OF BANK HOLDING COMPANIES, SAVINGS AND LOAN HOLDING COMPANIES, AND STATE MEMBER BANKS (REGULATION Q)

■ 13. The authority citation for part 217 continues to read as follows:

Authority: 12 U.S.C. 248(a), 321–338a, 481–486, 1462a, 1467a, 1818, 1828, 1831n, 1831o, 1831p–l, 1831w, 1835, 1844(b), 1851, 3904, 3906–3909, 4808, 5365, 5368, 5371.

■ 14. In § 217.2, in the definition of ''covered savings and loan holding company'', revise paragraph (1) to read as follows:

§ 217.2 Definitions

* * * * *

Covered savings and loan holding company * * *

(1) A top-tier savings and loan holding company that is:

(i) An institution that meets the requirements of section 10(c)(9)(C) of HOLA (12 U.S.C. 1467a(c)(9)(C)); and

(ii) As of June 30 of the previous calendar year, derived 50 percent or more of its total consolidated assets or 50 percent of its total revenues on an enterprise-wide basis (as calculated under GAAP) from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act of 1956 (12 U.S.C. 1843(k));

* * * * *

§ 217.202 [Amended]

■ 15. In § 217.202(b), in paragraph (10)(ii) of the definition of ''securitization'', remove ''[12 CFR 208.34 (Board), 12 CFR 9.18 (OCC)]'' and add in its place ''12 CFR 208.34.''

■ 16. In § 217.300, revise paragraph (c)(3) to read as follows:

§ 217.300 Transitions.

* * * * *

(c) * * *

(3) *Depository institution holding companies under $15 billion and 2010 MHCs.* (i) Non-qualifying capital instruments issued by depository institution holding companies under $15 billion and 2010 MHCs prior to May 19, 2010, may be included in additional tier 1 or tier 2 capital if the instrument was included in tier 1 or tier 2 capital, respectively, as of January 1, 2014.

(ii) Non-qualifying capital instruments includable in tier 1 capital are subject to a limit of 25 percent of tier 1 capital elements, excluding any nonqualifying capital instruments and after applying all regulatory capital deductions and adjustments to tier 1 capital.

(iii) Non-qualifying capital instruments that are not included in tier 1 as a result of the limitation in paragraph (c)(3)(ii) of this section are includable in tier 2 capital.

* * * * *

PART 225—BANK HOLDING COMPANIES AND CHANGE IN BANK CONTROL (REGULATION Y)

■ 17. The authority citation for part 225 continues to read as follows:

Authority: 12 U.S.C. 1844(b), 3106 and 3108, 1817(j)(13), 1818(b), 1831i, 1972, 3310, 3331–3351 and 3353; 12 U.S.C. 3901, *et seq.;* and 12 U.S.C. 1841, *et seq.*

§ 225.2 [Amended]

■ 18. In § 225.2(r)(1), remove footnotes 3 and 4.

§ 225.4 [Amended]

■ 19. In § 225.4, remove footnote 1.

§ 225.12 [Amended]

■ 20. In § 225.12:
■ a. Remove footnote 1;
■ b. Redesignate footnote 2 as footnote 1.

§ 225.22 [Amended]

■ 21. In § 225.22, remove footnote 1.

§ 225.172 [Amended]

■ 22. In § 225.172, remove footnote 1.

PART 252—ENHANCED PRUDENTIAL STANDARDS (REGULATION YY)

■ 23. The authority citation for part 252 continues to read as follows:

Authority: 12 U.S.C. 321–338a, 1467a(g), 1818, 1831p–1, 1844(b), 1844(c), 5361, 5365, 5366.

■ 24. In § 252.153, add paragraphs (e)(2) through (5) to read as follows:

§ 252.153 U.S. intermediate holding company requirement for foreign banking organizations with U.S. non-branch assets of $50 billion or more.

* * * * *

(e) * * *

(2) *Capital requirements for a U.S. intermediate holding company*—(i) *Risk-based capital and leverage requirements.* (A) A U.S. intermediate holding company must calculate and meet all applicable capital adequacy standards set forth in 12 CFR part 217, other than subpart E of 12 CFR part 217, and comply with all restrictions associated with applicable capital buffers, in the same manner as a bank holding company.

(B) A U.S. intermediate holding company may choose to comply with subpart E of 12 CFR part 217.

(C) Notwithstanding 12 CFR 217.100(b), if a bank holding company is a subsidiary of a foreign banking organization that is subject to this section and the bank holding company is subject to subpart E of 12 CFR part 217, the bank holding company, with the Board's prior written approval, may elect not to comply with subpart E of 12 CFR part 217.

(ii) *Capital planning.* A U.S. intermediate holding company must comply with § 225.8 of Regulation Y in the same manner as a bank holding company.

(3) *Risk management and risk committee requirements*—(i) *General.* A U.S. intermediate holding company must establish and maintain a risk committee that approves and periodically reviews the risk management policies and oversees the risk-management framework of the U.S. intermediate holding company. The risk committee must be a committee of the board of directors of the U.S. intermediate holding company (or equivalent thereof). The risk committee may also serve as the U.S. risk committee for the combined U.S. operations required pursuant to § 252.155(a).

(ii) *Risk-management framework.* The U.S. intermediate holding company's risk-management framework must be commensurate with the structure, risk profile, complexity, activities, and size of the U.S. intermediate holding company and consistent with the risk management policies for the combined U.S. operations of the foreign banking organization. The framework must include:

(A) Policies and procedures establishing risk-management governance, risk-management procedures, and risk-control infrastructure for the U.S. intermediate holding company; and

(B) Processes and systems for implementing and monitoring compliance with such policies and procedures, including:

(*1*) Processes and systems for identifying and reporting risks and risk-management deficiencies at the U.S. intermediate holding company, including regarding emerging risks and ensuring effective and timely implementation of actions to address emerging risks and risk-management deficiencies;

(*2*) Processes and systems for establishing managerial and employee responsibility for risk management of the U.S. intermediate holding company;

(*3*) Processes and systems for ensuring the independence of the risk-management function of the U.S. intermediate holding company; and

(*4*) Processes and systems to integrate risk management and associated controls with management goals and the compensation structure of the U.S. intermediate holding company.

(iii) *Corporate governance requirements.* The risk committee of the U.S. intermediate holding company must meet at least quarterly and otherwise as needed, and must fully document and maintain records of its proceedings, including risk-management decisions.

(iv) *Minimum member requirements.* The risk committee must:

(A) Include at least one member having experience in identifying, assessing, and managing risk exposures of large, complex financial firms; and

(B) Have at least one member who:

(*1*) Is not an officer or employee of the foreign banking organization or its affiliates and has not been an officer or employee of the foreign banking organization or its affiliates during the previous three years; and

(*2*) Is not a member of the immediate family, as defined in § 225.41(b)(3) of the Board's Regulation Y (12 CFR 225.41(b)(3)), of a person who is, or has been within the last three years, an executive officer, as defined in § 215.2(e)(1) of the Board's Regulation O (12 CFR 215.2(e)(1)) of the foreign banking organization or its affiliates.

(v) The U.S. intermediate holding company must take appropriate measures to ensure that it implements the risk management policies for the U.S. intermediate holding company and it provides sufficient information to the U.S. risk committee to enable the U.S. risk committee to carry out the responsibilities of this subpart.

(4) *Liquidity requirements.* A U.S. intermediate holding company must comply with the liquidity risk-management requirements in § 252.156 and conduct liquidity stress tests and hold a liquidity buffer pursuant to § 252.157.

(5) *Stress test requirements.* A U.S. intermediate holding company must comply with the requirements of subparts E and F of this part in the same manner as a bank holding company.

* * * * *

By order of the Board of Governors of the Federal Reserve System, November 2, 2015.

Robert deV. Frierson,

Secretary of the Board.

[FR Doc. 2015–28294 Filed 11–13–15; 8:45 am]

BILLING CODE 6210–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 95

[Docket No. 31048; Amdt. No. 523]

IFR Altitudes; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts miscellaneous amendments to the required IFR (instrument flight rules) altitudes and changeover points for certain Federal airways, jet routes, or direct routes for which a minimum or maximum en route authorized IFR altitude is prescribed. This regulatory action is needed because of changes occurring in the National Airspace System. These changes are designed to provide for the safe and efficient use of the navigable airspace under instrument conditions in the affected areas.

DATES: *Effective:* 0901 UTC, December 10, 2015.

FOR FURTHER INFORMATION CONTACT: Richard A. Dunham, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd. Oklahoma City, OK. 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK. 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This amendment to part 95 of the Federal Aviation Regulations (14 CFR part 95) amends, suspends, or revokes IFR altitudes governing the operation of all aircraft in flight over a specified route or any portion of that route, as well as the changeover points (COPs) for Federal airways, jet routes, or direct routes as prescribed in part 95.

The Rule

The specified IFR altitudes, when used in conjunction with the prescribed changeover points for those routes, ensure navigation aid coverage that is adequate for safe flight operations and free of frequency interference. The reasons and circumstances that create the need for this amendment involve matters of flight safety and operational efficiency in the National Airspace System, are related to published aeronautical charts that are essential to the user, and provide for the safe and efficient use of the navigable airspace. In addition, those various reasons or circumstances require making this amendment effective before the next scheduled charting and publication date of the flight information to assure its timely availability to the user. The effective date of this amendment reflects those considerations. In view of the close and immediate relationship between these regulatory changes and safety in air commerce, I find that notice and public procedure before adopting this amendment are impracticable and contrary to the public interest and that good cause exists for making the amendment effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 95

Airspace Navigation (air).

Issued in Washington, DC, on November 6, 2015.

John Duncan,

Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, part 95 of the Federal Aviation Regulations (14 CFR part 95) is amended as follows effective at 0901 UTC, December 10, 2015.

PART 95 [AMENDED]

■ 1. The authority citation for part 95 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44719, 44721.

■ 2. Part 95 is amended to read as follows:

[Docket No. 140613501–5956–03]

RIN 0694–AG13

Export Administration Regulations: Removal of Special Comprehensive License Provisions

AGENCY: Bureau of Industry and Security, Commerce.

ACTION: Final rule; correcting amendment.

SUMMARY: The Bureau of Industry and Security (BIS) publishes this final rule to amend the Export Administration Regulations (EAR) Supplement that lists ''Information Collection Requirements Under the Paperwork Reduction Act: OMB Control Numbers'' to remove certain citations related to Special Comprehensive Licenses listed under Collection number 0607–0152. This final rule is precipitated by an error contained in a final rule published on August 26, 2015 that resulted in the retention of these citations. This action will ensure the accurate and complete implementation of the purposes of the August 26, 2015 final rule: To remove all Special Comprehensive License provisions and related provisions from the EAR.

DATES: This rule is effective November 16, 2015.

FOR FURTHER INFORMATION CONTACT: Thomas Andrukonis, Director, Export Management and Compliance, Office of Exporter Services, Bureau of Industry and Security, by telephone at (202) 482–6396 or by email at *Thomas.Andrukonis@bis.doc.gov.*

SUPPLEMENTARY INFORMATION: On August 26, 2015, the Bureau of Industry and Security (BIS) published the final rule ''Export Administration Regulations: Removal of Special Comprehensive License Provisions'' (80 FR 51725), effective September 25, 2015. In that rule, BIS amended the Export Administration Regulations (EAR) by removing the Special Comprehensive License (SCL) provisions and made conforming amendments.

The August 26 rule included amendatory instructions to revise or remove certain Collection numbers in Supplement No. 1 to part 730 (Information Collection Requirements Under the Paperwork Reduction Act: OMB Control Numbers). However, the amendatory instruction erroneously identified Collection number ''0607–0152'' as Collection number ''0694–0152,'' and as a result, the entry for Collection number 0607–0152 was not amended. In this final rule, BIS amends the Supplement by revising Collection number ''0607–0152'' to remove references to ''§§ 752.7(b) and 752.15(a)'' under the ''Reference in the EAR'' Column as originally intended. This correction will ensure the accurate and complete implementation of the purposes of the August 26, 2015 final rule: To remove all the SCL provisions and related provisions from the EAR.

Although the Export Administration Act expired on August 20, 2001, the President, through Executive Order 13222 of August 17, 2001, 3 CFR, 2001 Comp., p. 783 (2002), as amended by Executive Order 13637 of March 8, 2013, 78 FR 16129 (March 13, 2013) and as extended by the Notice of August 7, 2015, 80 FR 48233 (August 11, 2015), has continued the Export Administration Regulations in effect under the International Emergency Economic Powers Act. BIS continues to carry out the provisions of the Export Administration Act, as appropriate and to the extent permitted by law, pursuant to Executive Order 13222 as amended by Executive Order 13637.

Rulemaking Requirements

1. Executive Orders 13563 and 12866 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. This rule has been determined to be a not significant regulatory action for purposes of Executive Order 12866.

2. This rule does not contain an information collection subject to the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

3. This rule does not contain policies with Federalism implications as that term is defined under Executive Order 13132.

4. The provisions of the Administrative Procedure Act (5 U.S.C. 553) requiring notice of proposed

rulemaking and the opportunity for public participation are waived for good cause because they are unnecessary and contrary to the public interest. (See 5 U.S.C. 553(b)(B)). The changes contained in this rule are technical corrections of a previously published final rule. This rule is necessary to prevent confusion caused by the continued inclusion in Supplement No. 1 to part 730 of references to the sections of the EAR that were removed by the August 26, 2015 rule. Collection number, ''0607–0152,'' needs to be revised for purposes of removing all the SCL provisions from the EAR. Therefore, this change is essential to ensure the accurate and complete implementation of the changes intended by the August 26, 2015 final rule.

The provision of the Administrative Procedure Act (5 U.S.C. 553) requiring a 30-day delay in effectiveness is also waived for good cause. (5 U.S.C. 553(d)(3)). The correction contained in this final rule is merely a technical correction necessitated by a typographical error in a previously published rule, for which a notice, comment and delay were completed. The revisions made in this rule are technical corrections which should be in place as soon as possible to avoid confusion caused by the incorrect inclusion of references to sections of the EAR removed by the August 26, 2015 rule in OMB Collection number 0607–0152 in Supplement No. 1 to part 730. This change is necessary to ensure immediate, accurate and complete implementation of the purposes of the August 26, 2015 final rule.

Further, no other law requires that a notice of proposed rulemaking and an opportunity for public comment be given for this final rule. Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule under the Administrative Procedure Act or by any other law, the analytical requirements of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) are not applicable. Therefore, this regulation is issued in final form.

List of Subjects in CFR Part 730

Administrative practice and procedure, Advisory committees, Exports, Reporting and recordkeeping requirements, Strategic and critical materials.

For the reasons stated in the preamble, part 730 of the Export Administration Regulations (15 CFR parts 730–774) is amended as follows:

PART 730—[AMENDED]

■ 1. The authority citation for 15 CFR part 730 continues to read as follows:

Authority: 50 U.S.C. app. 2401 *et seq.;* 50 U.S.C. 1701 *et seq.;* 10 U.S.C. 7420; 10 U.S.C. 7430(e); 22 U.S.C. 287c; 22 U.S.C. 2151 note; 22 U.S.C. 3201 *et seq.;* 22 U.S.C. 6004; 30 U.S.C. 185(s), 185(u); 42 U.S.C. 2139a; 42 U.S.C. 6212; 43 U.S.C. 1354; 15 U.S.C. 1824a; 50 U.S.C. app. 5; 22 U.S.C. 7201 *et seq.;* 22 U.S.C. 7210; E.O. 11912, 41 FR 15825, 3 CFR, 1976 Comp., p. 114; E.O. 12002, 42 FR 35623, 3 CFR, 1977 Comp., p. 133; E.O. 12058, 43 FR 20947, 3 CFR, 1978 Comp., p. 179; E.O. 12214, 45 FR 29783, 3 CFR, 1980 Comp., p. 256; E.O. 12851, 58 FR 33181, 3 CFR, 1993 Comp., p. 608; E.O. 12854, 58 FR 36587, 3 CFR, 1993 Comp., p. 179; E.O. 12918, 59 FR 28205, 3 CFR, 1994 Comp., p. 899; E.O. 12938, 59 FR 59099, 3 CFR, 1994 Comp., p. 950; E.O. 12947, 60 FR 5079, 3 CFR, 1995 Comp., p. 356; E.O. 12981, 60 FR 62981, 3 CFR, 1995 Comp., p. 419; E.O. 13020, 61 FR 54079, 3 CFR, 1996 Comp., p. 219; E.O. 13026, 61 FR 58767, 3 CFR, 1996 Comp., p. 228; E.O. 13099, 63 FR 45167, 3 CFR, 1998 Comp., p. 208; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783; E.O. 13224, 66 FR 49079, 3 CFR, 2001 Comp., p. 786; E.O. 13338, 69 FR 26751, 3 CFR, 2004 Comp., p 168; E.O. 13637 of March 8, 2013, 78 FR 16129 (March 13, 2013); Notice of September 17, 2014, 79 FR 56475 (September 19, 2014); Notice of November 7, 2014, 79 FR 67035 (November 12, 2014); Notice of January 21, 2015, 80 FR 3461 (January 22, 2015); Notice of May 6, 2015, 80 FR 26815 (May 8, 2015); Notice of August 7, 2015, 80 FR 48233 (August 11, 2015); Notice of September 18, 2015, 80 FR 57281 (September 22, 2015).

Supplement No. 1 to Part 730—[Amended]

■ 2. Supplement No. 1 to part 730 is amended by revising the entry for Collection number ''0607–0152'' to read as follows:

RIN 0694–AG70

Amendment to the Export Administration Regulations to Add XBS Epoxy System to the List of 0Y521 Series; Technical Amendment to Update Other 0Y521 Items

AGENCY: Bureau of Industry and Security, Commerce.

ACTION: Interim final rule with request for comments.

SUMMARY: In this interim final rule, the Bureau of Industry and Security (BIS) amends the Export Administration Regulations (EAR) to make certain items subject to the EAR and to impose on those items a license requirement for export and reexport to all destinations, except Canada. Specifically, this rule classifies the specified XBS Epoxy System under Export Control Classification Number (ECCN) 0C521 on the Commerce Control List (CCL). As described in the final rule that established the 0Y521 series and that

was published in the **Federal Register** on April 13, 2012, items are added to the 0Y521 series upon a determination by the Department of Commerce, with the concurrence of the Departments of Defense and State, that the items should be controlled for export because the items provide at least a significant military or intelligence advantage to the United States or foreign policy reasons justify control. The items identified in this rule are controlled for regional stability (RS) Column 1 reasons. The only license exception available for these items is for exports, reexports, and transfers (in-country) made by or consigned to a department or agency of the U.S. Government. In this rule, BIS also removes technology and software related to aircraft wing folding systems.

DATES: This rule is effective November 16, 2015. Comments must be received by January 15, 2016. Comments requested on the addition of the 0C521 item only.

ADDRESSES: You may submit comments by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* The identification number for this rulemaking is BIS–2015–0043.
- *By email directly to: publiccomments@bis.doc.gov.* Include RIN 0694–AG70 in the subject line.
- By mail or delivery to Regulatory Policy Division, Bureau of Industry and Security, U.S. Department of Commerce, Room 2099B, 14th Street and Pennsylvania Avenue NW., Washington, DC 20230. Refer to RIN 0694–AG70.

FOR FURTHER INFORMATION CONTACT: Michael Rithmire, Electronics and Materials Division, Office of National Security and Technology Transfer Controls by phone at (202) 482–6105 or by email at *Michael.Rithmire@bis.doc.gov.*

SUPPLEMENTARY INFORMATION:

Background

BIS established the ECCN 0Y521 series to identify items that warrant control on the CCL but are not yet identified in an existing ECCN (77 FR 22191, April 13, 2012). Items are added to the ECCN 0Y521 series by the Department of Commerce, with the concurrence of the Departments of Defense and State, upon a determination that an item should be controlled because it provides at least a significant military or intelligence advantage to the United States or because foreign policy reasons justify such control. The ECCN 0Y521 series is a temporary holding classification with a limitation that while an item is temporarily classified under ECCN 0Y521, the U.S. Government works to adopt a control through the relevant multilateral regime(s), to determine an appropriate longer-term control over the item, or that the item does not warrant control on the CCL.

Items classified under ECCN 0Y521, including the item identified in this interim final rule as an 0C521 item, remain so-classified for one year from the date a final rule identifying the item is published in the **Federal Register** amending the EAR, unless the item is re-classified under a different ECCN, under an EAR99 designation, or the 0Y521 classification is extended. During this time, the U.S. Government determines whether it is appropriate to submit a proposed control to the applicable export control regime (*e.g.,* the Wassenaar Arrangement) for potential multilateral control, with the understanding that multilateral controls are preferable when practical. An item's ECCN 0Y521 classification may be extended for two one-year periods to provide time for the U.S. Government and multilateral regime(s) to reach agreement on controls for the item, and provided that the U.S. Government has submitted a proposal to obtain multilateral controls over the item. Further extension beyond three years may occur only if the Under Secretary for Industry and Security makes a determination that such extension is in the national security or foreign policy interests of the United States. An extension or re-extension, including a determination by the Under Secretary for Industry and Security, will be published in the **Federal Register**.

License Requirements, Policies and Exceptions

The license requirements and policies for the ECCN 0Y521 series appear in § 742.6(a)(7) of the EAR. ECCN 0Y521 items are subject to a nearly worldwide license requirement (*i.e.,* for every country except Canada) with a case-by-case license review policy, through regional stability (RS Column 1) controls. The description and status of ECCN 0Y521 items appear in Supplement No. 5 to part 774 of the EAR, along with any item-specific license exceptions, where applicable. Unless otherwise indicated, License Exception GOV is the only license exception available and is applicable to all ECCN 0Y521 series items, including those items identified in this document, if the item is within the scope of § 740.11(b)(2)(ii) (Exports, reexports, and transfers (in-country) made by or consigned to a department or agency of the U.S. Government), as provided in § 740.2(a)(14).

Addition of ECCN 0C521 Item: XBS Epoxy System

In this rule, BIS amends the EAR to make the specified XBS Epoxy System subject to the EAR and impose a license requirement on the item. This item is being added to the 0Y521 series pursuant to a determination by the Department of Commerce, with the concurrence of the Departments of State and Defense, that the item should be controlled because it provides a significant military or intelligence advantage to the United States or because foreign policy reasons justify such controls. The specified XBS Epoxy System is classified under ECCN 0C521 No. 1. The control, which appears in the table found in Supplement No. 5 to part 774 of the EAR, covers an Epoxy system designed to obfuscate critical technology components against X-ray and terahertz microscopy imaging attempts.

License Applications for the New ECCN 0C521 Item

License applications for this item may be submitted through SNAP–R in accordance with § 748.6 of the EAR. Exporters are directed to include detailed descriptions and technical specifications with the license application, and identify the item as 0C521.

Technical Amendment: Removal of No. 3 0D521 and No. 2 0E521 Items, Aircraft Wing Folding Systems, From Supplement No. 5 to Part 774

In this rule, BIS also removes references to aircraft wing folding systems ''software'' and related ''technology'' listed, prior to this rule, as entries No. 3 0D521 and No. 2 0E521, respectively, in Supplement No. 5 to part 774. The references to these items are obsolete because, in accordance with procedure established in the April 13, 2012, final rule, the U.S. Government adopted a control through the relevant multilateral regime(s), which determined an appropriate longer-term control over the item. The wing fold system ''software'' is now controlled by ECCN 9D001, and the ''technology'' is controlled by ECCN 9E003.j on the CCL. A final rule published in the **Federal Register** May 21, 2015 (80 FR 29431), and which went into effect the same day, implemented the 2014 Wassenaar Plenary Agreements by establishing new controls on the items, rendering their 0Y521 status obsolete. BIS is not soliciting public comments on the removal provisions.

The rule is being issued in interim final form because while the

government believes that it is in the national security interests of the United States to immediately implement these controls, it also wants to provide the interested public with an opportunity to comment on the new controls of the XBS Epoxy System. Comments may be submitted in accordance with the **DATES** and **ADDRESSES** sections of this rule.

Export Administration Act

Although the Export Administration Act expired on August 20, 2001, the President, through Executive Order 13222 of August 17, 2001, 3 CFR, 2001 Comp., p. 783 (2002), as amended by Executive Order 13637 of March 8, 2013, 78 FR 16129 (March 13, 2013) and as extended by the Notice of August 7, 2015, 80 FR 48233 (August 11, 2015), has continued the Export Administration Regulations in effect under the International Emergency Economic Powers Act. BIS continues to carry out the provisions of the Export Administration Act, as appropriate and to the extent permitted by law, pursuant to Executive Order 13222 as amended by Executive Order 13637.

Rulemaking Requirements

1. Executive Orders 13563 and 12866 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distribute impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has been determined to be not significant for purposes of Executive Order 12866.

2. Notwithstanding any other provision of law, no person is required to respond to, nor is subject to a penalty for failure to comply with, a collection of information, subject to the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) (PRA), unless that collection of information displays a currently valid OMB control number. This rule affects two approved collections: (1) The Simplified Network Application Processing + System (control number 0694–0088), which carries a burden hour estimate of 43.8 minutes, including the time necessary to submit license applications, among other things, as well as miscellaneous and other recordkeeping activities that account for 12 minutes per submission; and (2) License Exceptions and Exclusions (0694–0137). With these initial 0Y521 series items, BIS does not believe that this rule will materially increase the number of submissions under these collections.

3. This rule does not contain policies with Federalism implications as that term is defined under E.O. 13132.

4. The provisions of the Administrative Procedure Act (5 U.S.C. 553) requiring prior notice, the opportunity for public comment and a delay in effective date are inapplicable because this regulation involves a military or foreign affairs function of the United States (*See* 5 U.S.C. 553(a)(1)). BIS, with the concurrence of the U.S. Departments of Defense and State, is implementing this rule because the item identified for the ECCN 0Y521 series in this rule provide a significant military or intelligence advantage to the United States. Immediate imposition of a license requirement is necessary to effect the national security and foreign policy goals of this rule. Immediate implementation will allow BIS to prevent exports of these items to users and for uses that pose a national security threat to the United States or its allies. If BIS delayed this rule to allow for prior notice and opportunity for public comment, the resulting delay in implementation would afford an opportunity for the export of these items to users and uses that pose such a national security threat, thereby undermining the purpose of the rule. In addition, if parties receive notice of the U.S. Government's intention to control these items under 0Y521 once a final rule was published, they might have an incentive to either accelerate orders of these items or attempt to have the items exported prior to the imposition of the control. In addition, prior notice and opportunity for public comment is unnecessary for the amendment to remove references to wing folding technology and software. The removal of the references updates Supplement No. 5 to part 774 and ensures that it accurately reflects the legal status of those items now classified under other ECCNs under the EAR. This amendment also serves to avoid confusing readers about the items' current status.

Further, BIS finds good cause to waive the 30-day delay in effectiveness under 5 U.S.C. 553(d)(3). Immediate implementation of these changes will allow BIS to prevent exports of these items to users and for uses that pose a national security threat to the United States or its allies. If BIS delayed this rule to allow for a 30-day delay in effectiveness, the resulting delay in implementation would afford an opportunity for the export of these items to users and uses that pose such a national security threat, thereby undermining the purpose of the rule. BIS also finds good cause to waive the 30-delay in effectiveness for the implementation of the amendment to remove items because the amendment will assist in clarifying the current status of the wing folding technology and software, eliminating any possible confusion. Furthermore, the amendment is not a substantive change. Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule by 5 U.S.C. 553, or by any other law, the analytical requirements of the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.,* are not applicable. Accordingly, no regulatory flexibility analysis is required and none has been prepared. Although notice and opportunity for comment are not required, BIS is issuing this rule as an interim final rule with a request for comments. All comments must be in writing and submitted via one or more of the methods listed under the **ADDRESSES** caption to this document. All comments (including any personal identifiable information) will be available for public inspection and copying. Those wishing to comment anonymously may do so by submitting their comment via regulations.gov and leaving the fields for identifying information blank.

List of Subjects in 15 CFR Part 774

Exports, Reporting and recordkeeping requirements.

Accordingly, part 774 of the Export Administration Regulations (15 CFR parts 730–774) is amended as follows:

PART 774—[AMENDED]

■ 1. The authority citation for part 774 continues to read as follows:

Authority: 50 U.S.C. app. 2401 *et seq.;* 50 U.S.C. 1701 *et seq.;* 10 U.S.C. 7420; 10 U.S.C. 7430(e); 22 U.S.C. 287c, 22 U.S.C. 3201 *et seq.;* 22 U.S.C. 6004; 30 U.S.C. 185(s), 185(u); 42 U.S.C. 2139a; 42 U.S.C. 6212; 43 U.S.C. 1354; 15 U.S.C. 1824a; 50 U.S.C. app. 5; 22 U.S.C. 7201 *et seq.;* 22 U.S.C. 7210; E.O. 13026, 61 FR 58767, 3 CFR, 1996 Comp., p. 228; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783; Notice of August 7, 2015, 80 FR 48233 (August 11, 2015).

■ 2. Supplement No. 5 to part 774 is revised to read as follows:

SUPPLEMENT NO. 5 TO PART 774—ITEMS CLASSIFIED UNDER ECCNS 0A521, 0B521, 0C521, 0D521 AND 0E521

The following table lists items subject to the EAR that are not listed elsewhere in the CCL, but which the Department of Commerce, with the concurrence of the Departments of Defense and State, has

identified warrant control for export or reexport because the items provide at least a significant military or intelligence advantage to the United States or for foreign policy reasons.

Item descriptor. *Note:* The description must match by model number or a broader descriptor that does not necessarily need to be company specific	Date of initial or subsequent BIS classification (ID = initial date; SD = subsequent date)	Date when the item will be designated EAR99, unless reclassified in another ECCN or the 0Y521 classification is reissued	Item-specific license exception eligibility

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 25

[Docket No. FDA–2013–N–1282]

National Environmental Policy Act; Environmental Assessments for Tobacco Products; Categorical Exclusions; Correction

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule; correction.

SUMMARY: The Food and Drug Administration (FDA or we) is correcting the preamble to a final rule that appeared in the **Federal Register** of September 24, 2015. This final rule provided FDA with categorical exclusions from the requirement to prepare environmental assessments for certain actions regarding the marketing of tobacco products under the Family Smoking Prevention and Tobacco Control Act (Tobacco Control Act). The final rule also included amendments to certain environmental impact regulations to include tobacco products, where appropriate, in light of its authority under the Tobacco Control Act.

The document published with technical errors in reference numbers cited in the document. This document corrects those errors. We are placing a corrected copy of the rule in the docket.

DATES: Effective on November 16, 2015.

FOR FURTHER INFORMATION CONTACT: Katherine Collins, Center for Tobacco Products, Food and Drug Administration, Document Control Center, Bldg. 71, Rm. G335, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 877–287–1373, *CTP Regulations@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: FDA is correcting the preamble to the September 24, 2015 (80 FR 57531), final rule entitled, ''National Environmental Policy Act; Environmental Assessments for Tobacco Products; Categorical Exclusions.'' The document published with three technical errors in reference numbers cited in the document. This document corrects those errors. We are correcting reference 2 and adding new reference 3. We are also placing a corrected copy of the rule in the docket.

In FR Doc. 2015–24219, appearing on page 57531 in the **Federal Register** of Thursday, September 24, 2015 (80 FR 57531), FDA is making the following corrections:

1. On page 57533, in the second column, under the Response for Comment 1, add ''(Ref. 3)'' at the end of the second sentence.

2. On page 57535, in the first column, under section IX, ''2. Statement of RADM David Ashley, Ph.D. and Hoshing Chang, Ph.D., 'Impact of Tobacco Products on the Environment.' '' is corrected to read ''2. 'Final Regulatory Impact Analysis,' Food and Drug Administration, available at *http://www.fda.gov/AboutFDA/ReportsManualsForms/Reports/EconomicAnalyses/default.htm.*'

3. On page 57535, in the first column, under section IX, add ''3. Statement of RADM David Ashley, Ph.D. and Hoshing Chang, Ph.D., 'Impact of Tobacco Products on the Environment.'

Dated: November 9, 2015.

Leslie Kux,

Associate Commissioner for Policy.

Transitional Amendments To Satisfy the Market Rate of Return Rules for Hybrid Retirement Plans

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations that provide guidance regarding certain amendments to applicable defined benefit plans. Applicable defined benefit plans are defined benefit plans that use a lump sum-based benefit formula, including cash balance plans and pension equity plans, as well as other plans that have formulas with an effect similar to a lump sum-based benefit formula. These final regulations relate to previously issued final regulations that specify permitted interest crediting rates for purposes of the requirement that an applicable defined benefit plan not provide for interest credits (or equivalent amounts) at an effective rate that is greater than a market rate of return. These final regulations permit a plan sponsor of an applicable defined benefit plan that does not comply with the market rate of return requirement to amend the plan in order to change to an interest crediting rate that is permitted under the previously issued final hybrid plan regulations without violating the anti-cutback rules of section 411(d)(6). These regulations affect sponsors, administrators, participants, and beneficiaries of these plans.

DATES: *Effective Date:* These regulations are effective on November 16, 2015.

Applicability Date: These regulations generally apply to plan amendments made on or after September 18, 2014 (or an earlier date as elected by the taxpayer). These regulations cease to apply for amendments made on or after the first day of the first plan year that begins on or after January 1, 2017 (or, for collectively bargained plans, on or after a later date specified in the regulations).

FOR FURTHER INFORMATION CONTACT: Neil S. Sandhu or Linda S.F. Marshall at (202) 317–6700 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

This document contains amendments to the Income Tax Regulations (26 CFR part 1) under sections 411(a)(13) and 411(b)(5) of the Internal Revenue Code (Code).

Generally, a defined benefit pension plan must satisfy the minimum vesting standards of section 411(a) and the accrual requirements of section 411(b) in order to be qualified under section 401(a) of the Code. Sections 411(a)(13) and 411(b)(5), which modify the minimum vesting standards of section 411(a) and the accrual requirements of section 411(b), were added to the Code by section 701(b) of the Pension Protection Act of 2006, Public Law 109–280 (120 Stat. 780 (2006)) (PPA '06). Sections 411(a)(13) and 411(b)(5) and certain related effective date provisions were subsequently amended by the Worker, Retiree, and Employer Recovery Act of 2008, Public Law 110–458 (122 Stat. 5092 (2008)) (WRERA '08).

Under section 411(b)(5)(B)(i), a statutory hybrid plan is treated as failing to satisfy the requirements of section 411(b)(1)(H) (which provides that the rate of an employee's benefit accrual must not be reduced because of the attainment of any age) if the terms of the plan provide any interest credit (or an equivalent amount) for any plan year at a rate that is in excess of a market rate of return. Section 411(b)(5)(B)(i) is generally effective for plan years beginning after December 31, 2007.

Section 411(d)(6) provides generally that a plan does not satisfy section 411 if an amendment to the plan decreases a participant's accrued benefit. For this purpose, a plan amendment that has the effect of eliminating or reducing an early retirement benefit or a retirement-type subsidy or eliminating an optional form of benefit with respect to benefits attributable to service before the amendment is treated as reducing accrued benefits.

Sections 204(b)(5)(B)(i) and 204(g) of the Employee Retirement Income Security Act of 1974, Public Law 93–406 (88 Stat. 829 (1974)), as amended (ERISA), contain rules that are parallel to sections 411(b)(5)(B)(i) and 411(d)(6), respectively. Under section 101 of Reorganization Plan No. 4 of 1978 (43 FR 47713), the Secretary of the Treasury has interpretive jurisdiction over the subject matter addressed in these final regulations for purposes of ERISA, as well as the Code. Thus, these final regulations apply for purposes of sections 411(b)(5)(B)(i) and 411(d)(6) of the Code, as well as for purposes of sections 204(b)(5)(B)(i) and 204(g) of ERISA.

Section 1.411(d)–4, A–2(b)(1), of the Income Tax Regulations provides, in part, that the Commissioner may, consistent with the provisions of § 1.411(d)–4, provide for the elimination or reduction of section 411(d)(6) protected benefits that have already accrued to the extent that such elimination or reduction is necessary to permit compliance with other requirements of section 401(a). The Commissioner may exercise this authority only through the publication of revenue rulings, notices, and other documents of general applicability.

Section 1.411(d)–4, A–2(b)(2)(i), provides that a plan may be amended to eliminate or reduce a section 411(d)(6) protected benefit, within the meaning of § 1.411(d)–4, A–1, if the following three requirements are met: The amendment constitutes timely compliance with a change in law affecting plan qualification; there is an exercise of section 7805(b) relief by the Commissioner; and the elimination or reduction of the section 411(d)(6) protected benefit is made only to the extent necessary to enable the plan to continue to satisfy the requirements for qualified plans.

Final regulations (TD 9505) (2010 final hybrid plan regulations) were published by the Treasury Department and the IRS in the **Federal Register** on October 19, 2010 (75 FR 64123). Additional final regulations (TD 9693) (2014 final hybrid plan regulations) were published by the Treasury Department and the IRS in the **Federal Register** on September 19, 2014 (79 FR 56442) (collectively, the 2010 and 2014 final hybrid plan regulations are referred to herein as the final hybrid plan regulations). The final hybrid plan regulations provide, effective for plan years that begin on or after January 1, 2016, a list of interest crediting rates

and combinations of rates that satisfy the requirement of section 411(b)(5)(B)(i) that a plan not provide an effective rate of return in excess of a market rate of return, while not permitting other rates. The provisions that provide for a list of rates are set forth at § 1.411(b)(5)–1(d)(1)(iii), (d)(1)(vi), and (d)(6)(i).

Interest crediting rates can be broadly characterized as either investment-based rates or rates that are not investment-based rates. An investment-based rate is a rate of return provided by actual investments, taking into account the return attributable to any change in the value of the underlying investments. A rate of return that is based on the rate of return for an index that measures the change in the value of investments can also be considered to be an investment-based rate. Rates that are not investment-based rates are either fixed rates of interest or bond-based rates (such as yields to maturity of bonds).

Section 1.411(b)(5)–1(d)(3) and (d)(4) sets forth permitted rates that are not investment-based rates, such as the third segment rate described in section 417(e)(3)(D) or 430(h)(2)(C)(iii), the yield on 30-year Treasury Constant Maturities, and a fixed 6 percent rate of interest. Section 1.411(b)(5)–1(d)(5) sets forth permitted investment-based rates, such as the rate of return on certain regulated investment companies (RICs), as defined in section 851, and the rate of return on plan assets. As provided in § 1.411(b)(5)–1(d)(6), certain annual (or more frequent) floors are permitted in combination with the bond-based rates and cumulative floors (in excess of the cumulative zero floor required under section 411(b)(5)(i)(II)) are permitted in combination with either the bond-based rates or the investment-based rates.

Section 1.411(b)(5)–1(e)(3) provides that the right to future interest credits determined in the manner specified under the plan and not conditioned on future service is a factor that is used to determine the participant's accrued benefit for purposes of section 411(d)(6). Accordingly, section 411(d)(6) protection applies not only to interest credits that have already been credited but also to future interest credits that are not conditioned on future service.

Proposed hybrid plan transition regulations (REG–111839–13) (2014 proposed regulations) were published by the Treasury Department and the IRS in the **Federal Register** on September 19, 2014 (79 FR 56305). The 2014 proposed regulations would permit an amendment to change the interest crediting rate under a hybrid plan from a rate not on the list to a rate on the list of interest crediting rates and combinations of rates that satisfy the requirement of section 411(b)(5)(B)(i) for plan years that begin on or after January 1, 2016.

Written comments in response to the 2014 proposed regulations were received, and a public hearing was held on January 9, 2015. After consideration of the comments received, the provisions in the 2014 proposed regulations are adopted by this Treasury decision, subject to a number of changes that are summarized in this preamble.

Explanation of Provisions

A number of commenters requested that the regulations provide for sufficient time for plan sponsors to implement amendments pursuant to these regulations to change a plan's interest crediting rate to a permissible rate. In addition, these commenters pointed out that these amendments are often interrelated with amendments required to comply with the 2014 final hybrid plan regulations, and that plan sponsors often consider and implement all of the required amendments at the same time. In response to these comments, these final regulations delay the applicability date of certain provisions under sections 411(a)(13) and 411(b)(5) in the final hybrid plan regulations, including those provisions that provide a list of interest crediting rates and combinations of rates that satisfy the requirement of section 411(b)(5)(B)(i) that the plan not provide an effective rate of return in excess of a market rate of return. Under these regulations, these provisions are generally effective for plan years that begin on or after January 1, 2017.

Prior to the first day of the first plan year that begins on or after January 1, 2017, a plan that uses an interest crediting rate that is not permitted under the final hybrid plan regulations must be amended to change to an interest crediting rate that is permitted under those regulations. Although a plan is permitted to be amended to change the interest crediting rate with respect to benefits that have not yet accrued, an amendment that reduces the interest crediting rate with respect to benefits that have already accrued would ordinarily be impermissible under section 411(d)(6).

In order to resolve the conflict between the market rate of return rules of section 411(b)(5)(B)(i) and the anti-cutback rules of section 411(d)(6), these regulations permit a plan with a noncompliant interest crediting rate to be amended with respect to benefits that have already accrued so that its interest crediting rate complies with the market rate of return rules. If the applicable requirements of these regulations are satisfied, such an amendment is permitted with respect to benefits that have already accrued, but only with respect to interest credits that are credited for interest crediting periods that begin on or after the later of the effective date of the amendment or the date the amendment is adopted (the applicable amendment date within the meaning of § 1.411(d)–3(g)(4)).[1] To qualify for this treatment, the amendment must be adopted prior to and effective no later than the applicability date of the regulatory market rate of return rules (generally, the first day of the first plan year that begins on or after January 1, 2017, with a delayed applicability date for collectively bargained plans).

Like the 2014 proposed regulations, these regulations permit amendments that bring the plan into compliance by changing the specific feature that causes the plan's interest crediting rate to be noncompliant, while not changing other features of the existing rate. If the noncompliant interest crediting rate has more than one noncompliant feature, then each noncompliant feature must be addressed separately in the prescribed manner. Examples are included to illustrate the application of these rules.

The standard in these final regulations for resolving this conflict between section 411(d)(6) and section 411(b)(5)(B)(i) is generally comparable to the standard under the rules of § 1.411(d)–4, A–2(b)(1) and (b)(2)(i) with respect to the Commissioner's exercise of authority to resolve a conflict between section 411(d)(6) and another qualification requirement under section 401(a). The Treasury Department and the IRS believe this approach is the most appropriate manner to resolve the conflict between the market rate of return rules of section 411(b)(5)(B)(i) and the anti-cutback rules of section 411(d)(6).[2]

If a noncompliant rate involves one or more variable rates or a variable rate together with a fixed rate, it is not

[1] Thus, these regulations do not permit a reduction in the hypothetical account balance as of the applicable amendment date.

[2] A plan may have been amended to change its interest crediting rate under the rules of section 1107 of PPA '06. Section 1107 of PPA '06 provided relief from the requirements of section 411(d)(6) for amendments made pursuant to a change in law under PPA '06 if the amendment was adopted by the last day of the first plan year that began on or after January 1, 2009 (or 2011, in the case of a governmental plan as defined in section 414(d)). If an interest crediting rate adopted under the rules of section 1107 of PPA '06 is not permitted under the final hybrid plan regulations, then these final regulations permit a subsequent amendment to change the rate to a rate permitted under the final hybrid plan regulations.

always readily apparent which specific feature or component rate causes the rate to be noncompliant. In addition, if either the existing rate or any of the potential corrections involves variable components, it is impossible to determine with certainty at the time of amendment the single amendment that in all cases that will result in the least reduction to the participant's accrued benefit as of the participant's annuity starting date. Thus, in response to a number of comments on the 2014 proposed regulations that more flexibility to amend noncompliant features be provided, the final regulations in many cases permit a plan sponsor to choose one of two or more alternative amendments in order to bring a plan into compliance.

A number of commenters specifically requested that the rules in the transition regulations permit any noncompliant bond-based rate to be capped at the third segment rate. The Treasury Department and the IRS agree that this is an appropriate approach. Accordingly, an additional option has been added in each case involving bond-based rates so that any noncompliant variable rate that is not an investment-based rate (including the greater of two or more non-investment based variable rates) may be capped at the third segment rate. If this approach is used, the third segment rate cap would have to satisfy the rules that apply to the use of the third segment rate as an interest crediting rate. Thus, the cap could be any of the third segment rates that may be used as an interest crediting rate and the cap would have to use a permissible lookback month and stability period. Note, however, that if any noncompliant composite rate is limited so that it does not exceed a third segment rate cap, that limit would also apply with respect to any annual fixed minimum rate that is part of the noncompliant composite rate. Therefore, the annual interest crediting rate (taking into account the cap) could be lower than the otherwise applicable fixed minimum rate.[3]

A special rule has been added to the regulations to clarify that an amendment to correct a noncompliant feature that provides for a greater interest crediting rate than the specific amendment set forth in the regulations also does not violate section 411(d)(6). Thus, for example, in any case in which it is permissible to address a noncompliant rate by capping the rate at the third segment rate, it would also be permissible to address the noncompliant rate simply by switching to the third segment rate. Similarly, an amendment to switch to the third segment rate together with a permitted fixed minimum rate would be permissible.

These final regulations also provide flexibility with respect to noncompliant investment-based rates. In particular, if a plan credits interest using a noncompliant investment-based rate and there is no permitted investment-based rate with similar risk and return characteristics as the plan's impermissible rate, then, as an alternative to the specified corrective amendment that was in the proposed regulations, an amendment to switch to the third segment rate with a 4 percent fixed minimum rate is permitted. The regulations also clarify the specified corrective amendment that was in the proposed regulations by providing that it is permissible in such a case to switch to a permitted investment-based rate that is otherwise similar to the plan's impermissible investment-based rate but without the risk and return characteristics of the impermissible rate that caused it to be impermissible (generally requiring the use of a rate that is less volatile than the plan's impermissible investment-based rate but is otherwise similar to that rate).

The preamble to the 2014 final hybrid plan regulations contained a discussion of statutory hybrid plans that permit participants to choose from among a menu of hypothetical investment options. Because of the significant concerns relating to the use of these plan designs, the Treasury Department and the IRS continue to study the issues raised in the preamble to the 2014 final hybrid plan regulations related to these plans, and it is possible that the Treasury Department and the IRS will conclude that such plan designs are not permitted. Nevertheless, the Treasury Department and the IRS understand that some of these plans contain one or more hypothetical investment options that provide for a rate of return that is not permitted under the final hybrid plan regulations. A special rule is included in these regulations in order to address the noncompliance that results from the availability of at least one hypothetical investment option that provides for an impermissible rate of return. This special rule provides that the rules of these final regulations may be applied separately to correct each impermissible hypothetical investment option. Alternatively, with respect to such a plan that permitted a participant to choose an interest crediting rate from among a menu of hypothetical investment options on September 18, 2014, pursuant to plan provisions that were adopted on or before September 18, 2014, this special rule provides that the entire menu of investment options may be treated as an impermissible investment-based rate for which there is no permitted investment-based rate with similar risk and return characteristics (so that the rule of § 1.411(b)(5)–1(e)(3)(vi)(C)(*7*) does not apply). As a result, plans described in the preceding sentence may be amended to eliminate a participant's ability to choose an interest crediting rate from among a menu of hypothetical investment options in accordance with § 1.411(b)(5)–1(e)(3)(vi)(C)(*9*). The inclusion of this special rule with respect to plan designs that permit participant direction of interest crediting rates is merely intended to address the noncompliance that results from the availability of a hypothetical investment option that provides for an impermissible rate of return, and should not be construed to create any inference as to the permissibility of these plan designs in general.

The preamble to the 2014 proposed regulations specifically requested comments as to an amendment to bring a plan into compliance if the plan credits interest using a composite rate that is an investment-based rate of return with an impermissible annual (or more frequent) fixed or variable rate. Many commenters requested flexibility to choose among options in such a case because there is no single correction that is the best correction for all cases. The Treasury Department and the IRS agree that, for this type of interest crediting rate, no single correction method is the most appropriate method for all cases. Therefore, the final regulations provide that it is permissible either to eliminate the fixed minimum rate (or any variable non-investment based rate) and eliminate any reduction to the investment-based rate, or to switch to the third segment rate (preserving any fixed minimum rate to the maximum extent permitted).

In response to comments inquiring about the treatment of plans that provide for a cumulative floor (such as, for example, in order to comply with section 411(d)(6) in connection with a prior amendment to change the plan's interest crediting rate on accrued pay credits), the regulations provide for a special rule that applies with respect to a participant under a plan that takes into account a minimum rate of return that applies less frequently than annually or that determines the participant's benefit as of the annuity

[3] This limitation on an otherwise applicable minimum rate may have implications for plans that require an annual minimum rate in order to satisfy the anti-backloading rules of section 411(b)(1).

starting date as the benefit provided by the greatest of two or more account balances and that minimum rate or benefit based on two or more account balances does not satisfy the market rate of return rules. If this rule applies, the plan must be amended to provide that the benefit for a participant is based solely on the benefit (and the associated interest crediting rate with respect to that benefit) that is greatest for that participant as of the applicable amendment date for the amendment adopted pursuant to these regulations. In addition, the plan must be further amended pursuant to the other rules in these regulations if the remaining interest crediting rate does not satisfy the market rate of return rules.

In response to comments as to the permissibility of rounding interest crediting rates and the need for the regulations to provide section 411(d)(6) relief for plans that use an impermissible rounding rule, the regulations provide for a rounding rule and also provide for section 411(d)(6) relief for transitional amendments to comply with this rounding rule. Under the rounding rule, a plan is not treated as failing to meet the requirement that a plan not credit interest at a rate that exceeds a market rate of return merely because the plan determines interest credits for an interest crediting period by rounding the calculated interest rate or rate of return. Under this rule, an annual rate may be rounded to the nearest multiple of 25 basis points (or a smaller rounding interval). If a plan provides for the crediting of interest more frequently than annually, then the rounding interval must not exceed a pro-rata portion of 25 basis points. Notwithstanding the preceding sentence, a plan is permitted to round to the nearest basis point regardless of the length of the interest crediting period.

Several commenters identified the need for section 411(d)(6) relief for plans that provide for rules that apply upon plan termination that do not comply with the plan termination rules in the final hybrid plan regulations. In response to these comments, the regulations provide for section 411(d)(6) relief for transitional amendments made to enable a plan to comply with the plan termination rules in the final hybrid plan regulations.

In response to the comment request included in the 2014 proposed regulations with respect to all aspects of those proposed rules, the Department of Treasury and the IRS received a number of comments with respect to provisions of the 2014 final hybrid plan regulations instead of the 2014 proposed regulations. These final regulations delay the applicability date of certain provisions in the 2014 final hybrid plan regulations (and provide for a special delayed applicability date for collectively bargained plans), but do not otherwise address comments on provisions of the 2014 final hybrid plan regulations.[4]

Effective/Applicability Dates

These regulations generally apply to plan amendments made on or after September 18, 2014 (or an earlier date as elected by the taxpayer), and they do not apply for amendments made on or after the first day of the first plan year that begins on or after January 1, 2017. However, for collectively bargained plans, these regulations continue to apply for amendments made before the first day of the first plan year that begins on or after January 1, 2019, unless the last collective bargaining agreement ratified on or before November 13, 2015 expires before January 1, 2019, in which case these regulations cease to apply to amendments made on or after the first day of the first plan year that begins on or after the later of the date on which the last applicable collective bargaining agreement expires or January 1, 2017.

Special Analyses

Certain IRS regulations, including this one, are exempt from the requirements of Executive Order 12866, as supplemented and reaffirmed by Executive Order 13563. Therefore, a regulatory impact assessment is not required. It also has been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) does not apply to these regulations, and because these regulations do not impose a collection of information on small entities, the Regulatory Flexibility Act (5 U.S.C. chapter 6) does not apply. Pursuant to section 7805(f) of the Code, the notice of proposed rulemaking preceding these regulations was submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Drafting Information

The principal authors of these regulations are Neil S. Sandhu and Linda S.F. Marshall, Office of Associate Chief Counsel (Tax Exempt and Government Entities). However, other personnel from the IRS and the Treasury Department participated in the development of these regulations.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

§ 1.411(a)(13)–1 [Amended]

■ **Par. 2.** For each entry listed in the ''Location'' column, remove the language in the ''Remove'' column and add the language in the ''Add'' column in its place.

Location	Remove	Add
§ 1.411(a)(13)–1(d)(3)(i), third sentence.	for plan years that begin on or after January 1, 2016	for plan years described in paragraph (e)(2)(ii)(A) or (e)(2)(ii)(B) of this section, as applicable.
§ 1.411(a)(13)–1(d)(3)(i), fifth and sixth sentences.	for plan years that begin on or after January 1, 2016	for plan years described in paragraph (e)(2)(ii)(A) or (e)(2)(ii)(B) of this section (as applicable).
§ 1.411(a)(13)–1(d)(4)(ii)(A), second sentence.	for plan years that begin on or after January 1, 2016	for plan years described in paragraph (e)(2)(ii)(A) or (e)(2)(ii)(B) of this section (as applicable).
§ 1.411(a)(13)–1(d)(4)(ii)(C), second sentence.	For plan years that begin on or after January 1, 2016 ..	For plan years described in paragraph (e)(2)(ii)(A) or (e)(2)(ii)(B) of this section (as applicable).

[4] Proposed regulations (REG–132554–08) under sections 411(a)(13), 411(b)(1), and 411(b)(5) (2010 proposed hybrid plan regulations) were published by the Treasury Department and the IRS in the **Federal Register** on October 19, 2010 (75 FR 64197). The Treasury Department and the IRS received written comments on the 2010 proposed hybrid plan regulations, and a public hearing was held on January 26, 2011. The 2014 final hybrid plan regulations, which finalized the 2010 proposed hybrid plan regulations, took into account the comments received prior to publication of the 2014 final hybrid plan regulations.

■ **Par. 3.** Section 1.411(a)(13)–1 is amended by revising paragraph (e)(2)(ii) to read as follows:

§ 1.411(a)(13)–1 Statutory hybrid plans.

(e) * * *

(2) * * *

(ii) *Special effective date*—(A) *In general.* Except as otherwise provided in this paragraph (e)(2)(ii), paragraphs (b)(2), (3), and (4) of this section apply to plan years that begin on or after January 1, 2017.

(B) *Collectively bargained plans.* In the case of a plan maintained pursuant to one or more collective bargaining agreements between employee representatives and one or more employers ratified on or before November 13, 2015, that constitutes a collectively bargained plan under the rules of § 1.436–1(a)(5)(ii)(B), paragraphs (b)(2), (3), and (4) of this section apply to plan years that begin on or after the later of—

(*1*) January 1, 2017; and

(*2*) The earlier of—

(*i*) January 1, 2019; and

(*ii*) The date on which the last of those collective bargaining agreements terminates (determined without regard to any extension thereof on or after November 13, 2015).

* * * * *

§ 1.411(b)(5)–1 [Amended]

■ **Par. 4.** For each entry listed in the ''Location'' column, remove the language in the ''Remove'' column and add the language in the ''Add'' column in its place.

Location	Remove	Add
§ 1.411(b)(5)–1(b)(1)(ii)(F) ...	For plan years that begin on or after January 1, 2016 ..	For plan years described in paragraph (f)(2)(i)(B)(*1*) or (f)(2)(i)(B)(*3*) of this section (as applicable).
§ 1.411(b)(5)–1(b)(1)(iii), third sentence.	for plan years that begin on or after January 1, 2016	for plan years described in paragraph (f)(2)(i)(B)(*1*) or (f)(2)(i)(B)(*3*) of this section (as applicable).
§ 1.411(b)(5)–1(b)(2)(i), third sentence.	for plan years that begin on or after January 1, 2016	for plan years described in paragraph (f)(2)(i)(B)(*1*) or (f)(2)(i)(B)(*3*) of this section, as applicable.
§ 1.411(b)(5)–1(e)(2)(ii)(B)(*1*), second sentence.	the first plan year that begins on or after January 1, 2016.	the first plan year described in paragraph (f)(2)(i)(B)(*1*) or (f)(2)(i)(B)(*3*) of this section (as applicable).
§ 1.411(b)(5)–1(e)(3)(ii)(D) ...	For plan years that begin on or after January 1, 2016 ..	For plan years described in paragraph (f)(2)(i)(B)(*1*) or (f)(2)(i)(B)(*3*) of this section (as applicable).

■ **Par. 5.** Section 1.411(b)(5)–1 is amended by:

■ 1. Adding a new sentence between the second and third sentences of paragraph (d)(1)(iv)(A);

■ 2. Adding paragraph (d)(1)(iv)(E);

■ 3. Adding paragraphs (e)(3)(vi) and (vii); and

■ 4. Revising paragraph (f)(2)(i)(B).

The additions and revisions read as follows:

§ 1.411(b)(5)–1 Reduction in rate of benefit accrual under a defined benefit plan.

* * * * *

(d) * * *

(1) * * *

(iv) * * *

(A) * * * In addition, a plan is permitted to round the calculated interest rate or rate of return in accordance with paragraph (d)(1)(iv)(E) of this section.

* * * * *

(E) *Rounding of interest crediting rate.* A plan is not treated as failing to meet the requirements of this paragraph (d) merely because the plan determines interest credits for an interest crediting period by rounding the calculated interest rate or rate of return in accordance with this paragraph (d)(1)(iv)(E). An annual rate may be rounded to the nearest multiple of 25 basis points (or a smaller rounding interval). If a plan provides for the crediting of interest more frequently than annually, then the rounding interval must not exceed a pro-rata portion of 25 basis points. Notwithstanding the preceding sentence, a plan is permitted to round to the nearest basis point regardless of the length of the interest crediting period.

* * * * *

(e) * * *

(3) * * *

(vi) *Transitional amendments needed to satisfy the market rate of return rules*—(A) *In general.* Notwithstanding the requirements of section 411(d)(6), if the requirements set forth in this paragraph (e)(3)(vi) are satisfied, a plan may be amended to change its interest crediting rate with respect to benefits that have already accrued in order to comply with the requirements of section 411(b)(5)(B)(i) and paragraph (d) of this section. A plan amendment is eligible for the treatment provided under this paragraph (e)(3)(vi)(A) to the extent that the amendment modifies an interest crediting rate that does not satisfy the requirements of section 411(b)(5)(B)(i) and paragraph (d) of this section in the manner specified in paragraph (e)(3)(vi)(C) of this section.

(B) *Rules of application*—(*1*) *Multiple noncompliant features.* If a plan's interest crediting rate has more than one noncompliant feature as described in paragraph (e)(3)(vi)(C) of this section, then each noncompliant feature must be addressed separately in the manner specified in paragraph (e)(3)(vi)(C) of this section.

(*2*) *Definition of investment-based rate.* The application of the rules of paragraph (e)(3)(vi)(C) of this section to an interest crediting rate depends on whether the interest crediting rate is an investment-based rate. For purposes of this paragraph (e)(3)(vi), an investment-based rate is a rate based on either a rate of return provided by actual investments (taking into account the return attributable to any change in the value of the underlying investments) or a rate of return for an index that measures the change in the value of investments. A rate is an investment-based rate even if it is based only in part on a rate described in the preceding sentence.

(*3*) *Timing rules for permitted amendments.* The rules under this paragraph (e)(3)(vi) apply only to a plan amendment that is adopted prior to and effective no later than the first day of the first plan year described in paragraph (f)(2)(i)(B)(*1*) or (f)(2)(i)(B)(*3*) of this section, as applicable. In addition, the rules under this paragraph (e)(3)(vi) apply to a plan amendment only with respect to interest credits that are credited for interest crediting periods that begin on or after the applicable amendment date (within the meaning of § 1.411(d)–3(g)(4)).

(*4*) *Amendments that provide for greater interest crediting rates.* If a plan is amended in accordance with paragraphs (e)(3)(vi)(C)(*1*) through (*10*) of this section to switch from a noncompliant rate to a compliant rate and is subsequently amended to switch to a second compliant rate that can

never be less than the first compliant rate, then the second amendment does not violate section 411(d)(6). If, instead, the plan is amended to switch from the noncompliant rate to the second compliant rate in a single amendment, that amendment also does not violate section 411(d)(6). For example, if it is permitted under paragraph (e)(3)(vi)(C) of this section to first amend the plan to credit interest using the lesser of the current rate and a rate described in paragraph (d)(3) of this section, it is then permissible to amend the plan to credit interest using that rate described in paragraph (d)(3) of this section. In such a case, it is also permissible to amend the plan to switch from the current rate to a rate described in paragraph (d)(3) of this section in a single amendment.

(*5*) *Cumulative floors, including floors resulting from a prior change in rates with section 411(d)(6) protection.* This paragraph (e)(3)(vi)(B)(*5*) applies to a plan that takes into account a minimum rate of return that applies less frequently than annually. This paragraph (e)(3)(vi)(B)(*5*) also applies to a plan that determines the participant's benefit as of the annuity starting date as the benefit provided by the greatest of two or more account balances (for example, in order to comply with section 411(d)(6) in connection with a prior amendment to change the plan's interest crediting rate). In either case, this paragraph (e)(3)(vi)(B)(*5*) applies with respect to a participant only if the requirements of paragraph (d)(6) of this section are not satisfied with respect to that participant. If this paragraph (e)(3)(vi)(B)(*5*) applies with respect to a participant, the plan must be amended to provide that the benefit for the participant is based solely on the benefit (and the associated interest crediting rate with respect to that benefit) that is greatest for that participant as of the applicable amendment date for the amendment made pursuant to this paragraph (e)(3)(vi). In addition, the plan must be further amended pursuant to the other rules in this paragraph (e)(3)(vi) if the remaining interest crediting rate does not satisfy the requirements of paragraph (d) of this section.

(*6*) *Plans that permit participant direction of interest crediting rates.* This paragraph (e)(3)(vi)(B)(*6*) applies in the case in which a plan permits a participant to choose an interest crediting rate from among a menu of hypothetical investment options and at least one of those hypothetical investment options provides for an interest crediting rate that is not permitted under paragraph (d) of this section (so that the plan fails to satisfy the requirements of paragraph (d) of this section). In such a case, the rules of this paragraph (e)(3)(vi) may be applied separately to correct each impermissible investment option. Alternatively, with respect to such a plan that permitted a participant to choose an interest crediting rate from among a menu of hypothetical investment options on September 18, 2014, pursuant to plan provisions that were adopted on or before September 18, 2014, the entire menu of investment options may be treated as an impermissible investment-based rate for which there is no permitted investment-based rate with similar risk and return characteristics (so that the rule of paragraph (e)(3)(vi)(C)(*7*) of this section does not apply). As a result, plans described in the preceding sentence may be amended to eliminate a participant's ability to choose an interest crediting rate from among a menu of hypothetical investment options in accordance with paragraph (e)(3)(vi)(C)(*9*) of this section.

(C) *Noncompliant feature and amendment to bring plan into compliance*—(*1*) *Timing or other rules related to determining interest credits not satisfied.* If a plan has an underlying interest rate that generally satisfies the rules of paragraph (d) of this section but that does not satisfy the rules relating to how interest credits are determined and credited as set forth in paragraph (d)(1)(iv) of this section, then the plan must be amended either—

(*i*) To correct the aspect of the plan's interest crediting rate that fails to comply with the rules of paragraph (d)(1)(iv) of this section with respect to its underlying interest crediting rate; or

(*ii*) If the plan's interest crediting rate is a variable rate that is not an investment-based rate of return, to provide that the plan's interest crediting rate is the lesser of that variable rate and a rate described in paragraph (d)(3) of this section that satisfies the rules of paragraph (d)(1)(iv) of this section.

(*2*) *Fixed rate in excess of 6 percent.* If a plan's interest crediting rate is a fixed rate in excess of the rate described in paragraph (d)(4)(v) of this section, then the plan must be amended to reduce the interest crediting rate to an annual interest crediting rate of 6 percent.

(*3*) *Bond-based rate with margin exceeding maximum permitted margin.* If a plan's interest crediting rate is a noncompliant rate that consists of an underlying rate described in paragraph (d)(3) or (d)(4) of this section except that the plan applies a margin that exceeds the maximum permitted margin under paragraph (d)(3) or (d)(4) of this section to the underlying rate, then the plan must be amended either—

(*i*) To reduce the margin to the maximum permitted margin for the underlying rate used by the plan; or

(*ii*) To provide that the plan's interest crediting rate is the lesser of the plan's noncompliant rate and a rate described in paragraph (d)(3) of this section (together with any fixed minimum rate that was part of the noncompliant rate, reduced to the extent necessary to comply with paragraph (d)(6)(ii) of this section).

(*4*) *Bond-based rate with fixed minimum rate applied on an annual or more frequent basis in excess of the highest permitted fixed minimum rate.* If a plan's interest crediting rate is a composite rate that consists of a variable rate described in paragraph (d)(3) or (d)(4) of this section in combination with a fixed minimum rate in excess of the highest permitted fixed minimum rate under paragraph (d)(6)(ii)(A)(*2*) or (B)(*2*) of this section (as applicable), then the plan must be amended in one of the following manners:

(*i*) To reduce the fixed minimum rate to the highest permitted fixed minimum rate that may be used in combination with the plan's variable rate;

(*ii*) To credit interest using an annual interest crediting rate of 6 percent; or

(*iii*) To provide that the plan's interest crediting rate is the lesser of the plan's noncompliant composite rate and a rate described in paragraph (d)(3) of this section (together with a fixed minimum rate of 4 percent).

(*5*) *Greatest of two or more variable bond-based rates.* If a plan's interest crediting rate is a composite rate that is the greatest of two or more variable rates described in paragraph (d)(3) or (d)(4) of this section, then the plan must be amended to provide for an interest crediting rate that is the lesser of the composite rate and a rate described in paragraph (d)(3) of this section.

(*6*) *Other impermissible bond-based rates.* If, after application of the rules of paragraphs (e)(3)(vi)(C)(*1*) through (*5*) of this section, a plan's interest crediting rate is a variable rate that is not an investment-based rate of return and is not described in paragraph (d)(3) or (d)(4) of this section, then the plan must be amended either—

(*i*) To provide for an interest crediting rate based on a variable rate described in paragraph (d)(3) or (d)(4) of this section that has similar duration and quality characteristics as the plan's variable rate, if such a rate can be selected; or

(*ii*) To provide for an interest crediting rate that is the lesser of the plan's

variable rate and a rate described in paragraph (d)(3) of this section.

(*7*) *Impermissible investment-based rate that can be replaced with a permissible rate that has similar risk and return characteristics.* If a plan's interest crediting rate is an investment-based rate of return that is not described in paragraph (d)(5) of this section and a permitted investment-based rate described in paragraph (d)(5)(ii)(A), (d)(5)(ii)(B), or (d)(5)(iv) of this section that has similar risk and return characteristics as the plan's impermissible investment-based rate can be selected, then the plan must be amended to provide for an interest crediting rate based on such a permitted investment-based rate.

(*8*) *Investment-based rate with an annual or more frequent minimum rate that is either a fixed rate or a non-investment based variable rate.* If a plan's interest crediting rate is an investment-based rate of return that would be described in paragraph (d)(5) of this section except that the plan uses an annual or more frequent minimum rate that is either a fixed rate or a non-investment based variable rate in conjunction with the investment-based rate, then the plan must be amended either—

(*i*) To credit interest using that investment-based rate of return described in paragraph (d)(5) of this section without the minimum rate and eliminating any reduction (or other adjustment) to the investment-based rate; or

(*ii*) To provide that the plan's interest crediting rate is a rate described in paragraph (d)(3) of this section (together with any fixed minimum rate, reduced to the extent necessary to comply with paragraph (d)(6)(ii) of this section).

(*9*) *Other impermissible investment-based rates.* If, after application of the rules of paragraphs (e)(3)(vi)(C)(*1*), (*7*), and (*8*) of this section, a plan's interest crediting rate is an investment-based rate that is not described in paragraph (d)(5) of this section, then the plan must be amended either—

(*i*) To provide for an interest crediting rate that is an investment-based rate that is described in paragraph (d)(5) of this section and that is otherwise similar to the plan's impermissible investment-based rate but without the risk and return characteristics of the impermissible investment-based rate that caused it to be impermissible (generally requiring the use of a rate that is less volatile than the plan's impermissible investment-based rate but is otherwise similar to that rate); or

(*ii*) To provide that the plan's interest crediting rate is a rate described in paragraph (d)(3) of this section with a fixed minimum rate of 4 percent.

(D) *Examples.* The following examples illustrate the application of the rules of this paragraph (e)(3)(vi). Each plan has a plan year that is the calendar year, and all amendments are adopted on October 1, 2016, and become effective for interest crediting periods beginning on or after January 1, 2017. Except as otherwise provided, the interest crediting rate under the plan satisfies the timing and other rules related to crediting interest under paragraph (d)(1)(iv) of this section.

Example 1. (i) *Facts.* A plan determines interest credits for a plan year using the average yield on 30-year Treasury Constant Maturities for the last week of the preceding plan year (which is an impermissible lookback period for this purpose pursuant to paragraph (d)(1)(iv)(B) of this section because it is not a month).

(ii) *Conclusion.* Pursuant to paragraph (e)(3)(vi)(C)(*1*) of this section, the plan must be amended in one of two manners. It may be amended to determine interest credits for a plan year using the average yield on 30-year Treasury Constant Maturities for a lookback month that complies with the requirements of paragraph (d)(1)(iv)(B) of this section. Alternatively, the plan may be amended to cap the existing rate so that it cannot exceed a third segment rate described in paragraph (d)(3) of this section for a period that complies with the requirements of paragraph (d)(1)(iv)(B) of this section.

Example 2. (i) *Facts.* A plan determines interest credits for a plan year using the average yield on 30-year Treasury Constant Maturities for the last week of the preceding plan year, plus 50 basis points.

(ii) *Conclusion.* Pursuant to paragraph (e)(3)(vi)(B)(*1*) of this section, the plan must be amended to correct both the impermissible lookback period and the excess margin. Accordingly, pursuant to paragraph (e)(3)(vi)(C)(*1*) and (*3*) of this section, the plan may be amended to determine interest credits for a plan year using the average yield on 30-year Treasury Constant Maturities (with no margin) for a period that complies with the requirements of paragraph (d)(1)(iv)(B) of this section. Alternatively, the plan may be amended to cap the existing rate so that it cannot exceed a third segment rate described in paragraph (d)(3) of this section for a period that complies with the requirements of paragraph (d)(1)(iv)(B) of this section.

Example 3. (i) *Facts.* A plan credits interest for a plan year using the rate of return on plan assets for the preceding plan year.

(ii) *Conclusion.* Pursuant to paragraph (e)(3)(vi)(C)(*1*) of this section, the plan must be amended to determine interest credits for each plan year using the rate of return on plan assets for that plan year.

Example 4. (i) *Facts.* A plan credits interest using the average yield on 30-year Treasury Constant Maturities for December of the preceding plan year with a minimum rate of 5.5 percent per year.

(ii) *Conclusion.* Pursuant to paragraph (e)(3)(vi)(C)(*4*) of this section, the plan must be amended to change the plan's interest crediting rate. The new interest crediting rate under the plan may be the average yield on 30-year Treasury Constant Maturities for December of the preceding plan year with a minimum rate of 5 percent per year. Alternatively, the new interest crediting rate under the plan may be an annual interest crediting rate of 6 percent. As another alternative, the existing noncompliant composite rate may be capped so that it cannot exceed a third segment rate described in paragraph (d)(3) of this section, with a minimum rate of 4 percent as a floor on the entire resulting rate.

Example 5. (i) *Facts.* A plan credits interest using the greater of the unadjusted yield on 30-year Treasury Constant Maturities and the yield on 1-year Treasury Constant Maturities plus 100 basis points.

(ii) *Conclusion.* Pursuant to paragraph (e)(3)(vi)(C)(*5*) of this section, the plan must be amended to cap the existing composite ''greater-of'' rate so that the composite rate cannot exceed a third segment rate described in paragraph (d)(3) of this section.

Example 6. (i) *Facts.* A plan credits interest using a broad-based index that measures the yield to maturity on a group of intermediate-term investment grade corporate bonds.

(ii) *Conclusion.* Pursuant to paragraph (e)(3)(vi)(C)(*6*) of this section, the plan must be amended in one of two manners. The plan may be amended to credit interest using a second segment rate described in paragraph (d)(4)(iv) of this section. Alternatively, the plan may be amended to cap the existing rate so that it cannot exceed a third segment rate described in paragraph (d)(3) of this section.

Example 7. (i) *Facts.* A plan credits interest using the rate of return for a broad-based index that measures the yield to maturity on a group of short-term non-investment grade corporate bonds.

(ii) *Conclusion.* Pursuant to paragraph (e)(3)(vi)(C)(*6*)(*ii*) of this section, the plan must be amended to cap the existing rate so that it cannot exceed a third segment rate described in paragraph (d)(3) of this section.

Example 8. (i) *Facts.* A plan credits interest using the rate of return for the S&P 500 index. To bring the plan into compliance with the market rate of return rules, the plan sponsor amends the plan to credit interest based on the rate of return on a RIC that is designed to track the rate of return on the S&P 500 index.

(ii) *Conclusion.* The amendment satisfies the rule of paragraph (e)(3)(vi)(C)(*7*) of this section.

Example 9. (i) *Facts.* A plan credits interest based on the rate of return on a collective trust that holds a portfolio of equity investments, which provides a rate of return that is reasonably expected to be not significantly more volatile than the broad U.S. equities market or a similarly broad international equities market. To bring the plan into compliance with the market rate of return rules, the plan sponsor amends the plan to credit interest based on the actual rate of return on the assets within a specified subset of the plan's assets that is invested in the collective trust and that satisfies the requirements of paragraph (d)(5)(ii)(B) of this section.

(ii) *Conclusion.* The amendment satisfies the rule of paragraph (e)(3)(vi)(C)(*7*) of this section.

Example 10. (i) *Facts.* A plan credits interest for a plan year using the rate of return on a RIC that has most of its investments concentrated in the semiconductor industry.

(ii) *Conclusion.* Pursuant to paragraph (e)(3)(vi)(C)(*9*) of this section, the plan must be amended in one of two manners. The plan may be amended to provide for an interest crediting rate that is an investment-based rate that is described in paragraph (d)(5) of this section and that is similar to the plan's impermissible investment-based rate except to the extent that the risk and return characteristics of the impermissible investment-based rate caused it to be impermissible. Thus, the plan may be amended to provide for an interest crediting rate based on the rate of return on a RIC that is invested in a broader sector of the market than the semiconductor industry (such as the overall technology sector of the market), provided that the sector in which the RIC is invested is broad enough that the volatility requirements of paragraph (d)(5)(iv) of this section are satisfied. Alternatively, the plan may be amended to provide that the plan's interest crediting rate is a third segment rate described in paragraph (d)(3) of this section with a fixed minimum rate of 4 percent.

Example 11. (i) *Facts.* A plan was amended in 2014 to change its interest crediting rate for all interest crediting periods after the applicable amendment date of the amendment. The amendment changed the rate from the yield on 30-year Treasury Constant Maturities to the rate of return on aggregate plan assets under paragraph (d)(5)(ii)(A) of this section. The amendment also provided for section 411(d)(6) protection with respect to the account balance as of the applicable amendment date (by providing that the account balance after the applicable amendment date will never be smaller than the account balance as of the applicable amendment date credited with interest using the yield on 30-year Treasury Constant Maturities).

(ii) *Conclusions.* (A) *Participants benefiting under the plan.* With respect to those participants who were benefiting under the plan as of the applicable amendment date of the amendment described in paragraph (i) of this *Example 11,* the requirements of paragraph (e)(3)(iii) of this section (which provides a special market rate of return rule to permit certain changes in rates for participants benefiting under the plan) are satisfied. Accordingly, no amendment is required under this paragraph (e)(3)(vi) with respect to those participants.

(B) *Participants not benefiting under the plan.* With respect to those participants who were not benefiting under the plan as of the applicable amendment date of the amendment described in paragraph (i) of this *Example 11,* the requirements of paragraph (e)(3)(iii) of this section are not satisfied and, accordingly, the ''greater-of'' rate resulting from the section 411(d)(6) protection does not satisfy the requirements of paragraph (d)(6) of this section. As a result, pursuant to paragraph (e)(3)(vi)(B)(*5*) of this section, it must be determined on a participant-by-participant basis which account balance provides the benefit that is greater as of the applicable amendment date for the amendment made pursuant to this paragraph (e)(3)(iv) (the transitional amendment). If, as of the applicable amendment date for the transitional amendment, the account balance credited with interest after the change in rates using the yield on 30-year Treasury Constant Maturities is greater, then the plan must be amended to provide that the participant's benefit is based solely on that account balance credited with interest using the yield on 30-year Treasury Constant Maturities. On the other hand, if, as of the applicable amendment date for the transitional amendment, the account balance using the rate of return on aggregate plan assets is greater, then the plan must be amended to provide that the participant's benefit is based solely on that account balance credited with interest at the rate of return on aggregate plan assets.

(vii) *Plan termination amendments.* A plan amendment with an applicable amendment date on or before the first day of the first plan year described in paragraph (f)(2)(i)(B)(*1*) or (*3*) of this section (as applicable) is not treated as reducing accrued benefits in violation of section 411(d)(6) merely because the amendment changes the rules that apply upon plan termination in order to satisfy the requirements of paragraph (e)(2) of this section.

* * * * *

(f) * * *

(2) * * *

(i) * * *

(B) *Special effective date*—(*1*) *In general.* Except as otherwise provided in this paragraph (f)(2)(i)(B), paragraphs (d)(1)(iii), (d)(1)(iv)(D) and (E), (d)(1)(vi), (d)(2)(ii) and (v), (d)(5)(ii)(B), (d)(5)(iv), (d)(6), (e)(2), (e)(3)(iii), (iv) and (v), and (e)(4) of this section apply to plan years that begin on or after January 1, 2017 (or an earlier date as elected by the taxpayer).

(*2*) *Transitional amendments.* Paragraphs (e)(3)(vi) and (vii) of this section apply to plan amendments made on or after September 18, 2014 (or an earlier date as elected by the taxpayer).

(*3*) *Collectively bargained plans.* In the case of a plan maintained pursuant to one or more collective bargaining agreements between employee representatives and one or more employers ratified on or before November 13, 2015, that constitutes a collectively bargained plan under the rules of § 1.436–1(a)(5)(ii)(B), the paragraphs referenced in paragraph (f)(2)(i)(B)(*1*) of this section apply to plan years that begin on or after the later of—

(*i*) January 1, 2017; and

(*ii*) The earlier of January 1, 2019; and the date on which the last of those collective bargaining agreements terminates (determined without regard to any extension thereof on or after November 13, 2015).

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2015–0994]

RIN 1625–AA00

Safety Zone; Unknown Substance in the Vicinity of Kelley's Island Shoal, Lake Erie; Kelley's Island, OH

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone in the waters of the Lake Erie in the vicinity of Kelley's Island Shoal, OH. This zone is intended to restrict vessels from a portion of Lake Erie due to the presence of an unknown substance emanating from an unknown vessel. This temporary safety zone is necessary to protect people and vessels from the hazards associated with this event.

DATES: This rule is effective without actual notice from November 16, 2015 until 8 p.m. November 24, 2015. For the purposes of enforcement, actual notice will be used from 2 p.m. October 25, 2015, until November 16, 2015.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket USCG–2015–0994 and are available online by going to *www.regulations.gov,* type the docket number in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rulemaking. They are also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary final rule, contact or email LT Jennifer Disco, U.S. Coast Guard Marine Safety Unit Toledo, telephone (419) 418–6000, email *Jennifer.M.Disco@USCG.MIL.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

COTP Captain of the Port
DHS Department of Homeland Security
E.O. Executive Order
NAD 83 North American Datum of 1983

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency, for good cause, finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because doing so would be impracticable. The Coast Guard received notification of the unknown substance emanating from an unknown vessel on the evening of October 23, 2015. Thus, waiting for a notice and comment period to run would inhibit the Coast Guard from protecting the public and vessels from the possible hazards associated with this unknown substance.

Under 5 U.S.C. 553(d)(3), The Coast Guard finds that good cause exists for making this temporary rule effective less than 30 days after publication in the **Federal Register**. For the same reasons discussed in the preceding paragraph, waiting for a 30 day notice period to run would be impracticable and contrary to the public interest.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 1231, 33 CFR 1.05–1 and 160.5; and Department of Homeland Security Delegation No. 0170.1. The Captain of the Port Detroit (COTP) has determined that a temporary safety zone is necessary to ensure the safety of vessels from the unknown hazards associated with this substance. Such hazards include the possibility of an inhalation hazard that may cause death or serious bodily harm.

Establishing a safety zone to control vessel movements around the location of the unknown substance will help ensure the safety of persons and property during assessment and response activities and help minimize the associated risks. Therefore, this rule will remain in place for the time stated herein but will be canceled if response activities cease before 24 November 2015.

IV. Discussion of Rule

This rule establishes a safety zone from 2 p.m. on October 25, 2015 until 8 p.m. on November 24, 2015. The safety zone will encompass all U.S. navigable waters of Lake Erie within a 1000 foot radius of 41°38′21″ N., 82°29′35″ W. (NAD 83).

Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the COTP or a designated representative. Vessel operators must contact the COTP or his on-scene representative to obtain permission to transit through this safety zone. The COTP or his on-scene representative may be contacted via VHF Channel 16.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on these statutes and executive orders.

A. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of E.O. 12866, Regulatory Planning and Review, as supplemented by E.O. 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of E.O. 12866 or under section 1 of E.O. 13563. The Office of Management and Budget has not reviewed it under those Orders.

We conclude that this rule is not a significant regulatory action because we anticipate that it will have minimal impact on the economy, will not interfere with other agencies, will not adversely alter the budget of any grant or loan recipients, and will not raise any novel legal or policy issues. The safety zone created by this rule will be relatively small and enforced for a relatively short duration, and it is designed to minimize the impact on navigation. Moreover, under certain conditions, vessels may still transit through the safety zone when permitted by the COTP.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule would not have a significant economic impact on a substantial number of small entities.

This rule will affect the following entities, some of which might be small entities: The owners or operators of vessels intending to transit or anchor in designated portions of Lake Erie from 2 p.m. on October 25, 2015 until 8 p.m. on November 24, 2015.

This safety zone will not have a significant economic impact on a substantial number of small entities for the reasons cited in the *Regulatory Planning and Review* section. Additionally, before the enforcement of the zone, Coast Guard Sector Detroit will issue a local Broadcast Notice to Mariners so vessel owners and operators can plan accordingly.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule so that they can better evaluate its effects on them. If this rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above. The Coast Guard will not retaliate against entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Tribal Implications

A rule has implications for federalism under E.O. 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and determined that this rule does not have implications for federalism.

Also, this rule does not have tribal implications under E.O. 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct

effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule involves the establishment of a safety zone and is therefore categorically excluded from further review under paragraph 34(g) of Figure 2–1 of the Commandant Instruction. An environmental analysis checklist supporting this determination and a Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

H. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under E.O. 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

I. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of E.O. 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

J. Protection of Children

We have analyzed this rule under E.O. 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

K. Energy Effects

This action is not a ''significant energy action'' under E.O. 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

List of Subjects in 33 CFR Part 165

Harbors, Marine Safety, Navigation (water), Reporting and record keeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T09–0994 to read as follows:

§ 165.T09–0994 Safety Zone; Unknown Substance in the Vicinity of Kelley's Island Shoal, Lake Erie; Kelley's Island, OH.

(a) *Location.* The following area is a temporary safety zone: Unknown substance from an unknown vessel in the vicinity of Kelley's Island Shoal, Lake Erie; Kelley's Island, OH. The safety zone will encompass all U.S. navigable waters of Lake Erie within a 1000 foot radius of 41°38′21″ N, 82°29′35″ W. All coordinates are North American Datum 1983 (NAD 83).

(b) *Enforcement period.* The safety zone described in paragraph (a) of this section will be enforced from 2 p.m. on October 25, 2015 until 8 p.m. on November 24, 2015.

(c) *Regulations.* (1) In accordance with the general regulations in § 165.23, entry into, transiting, or anchoring within these safety zone is prohibited unless authorized by the Captain of the Port, Sector Detroit (COTP) or his designated on-scene representative.

(2) The safety zone is closed to all vessel traffic, except as may be permitted by the COTP, via the Command Center, or his designated on-scene representative.

(3) The ''on-scene representative'' of the COTP is any Coast Guard commissioned, warrant or petty officer or a Federal, State, or local law enforcement officer designated by or assisting the COTP to act on his behalf.

(4) Vessel operators must contact the COTP via the Command Center to obtain permission to enter or operate within the safety zone. The COTP may be contacted via VHF Channel 16 or at 313–568–9560. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the COTP, via the Sector Command Center or his on-scene representative.

Dated: October 25, 2015.

Scott B. Lemasters,

Captain, U.S. Coast Guard, Captain of the Port Detroit.

[FR Doc. 2015–29171 Filed 11–13–15; 8:45 am]

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2014–0256; FRL–9936–77–Region 9]

Approval and Promulgation of Implementation Plans; Arizona; Phased Discontinuation of Stage II Vapor Recovery Program

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve a state implementation plan (SIP) revision from the Arizona Department of Environmental Quality related to the removal of ''Stage II'' vapor recovery equipment at gasoline dispensing facilities in the Phoenix-Mesa area. Specifically, the EPA is approving a SIP revision that eliminates the requirement to install and operate such equipment at new gasoline dispensing facilities, and that provides for the phased removal of such equipment at existing gasoline dispensing facilities from October 2016 through September 2018. The EPA has

previously determined that onboard refueling vapor recovery is in widespread use nationally and waived the stage II vapor recovery requirement. The EPA is approving this SIP revision because the resultant short-term incremental increase in emissions would not interfere with attainment or maintenance of the national ambient air quality standards or any other requirement of the Clean Air Act and because it would avoid longer-term increases in emissions due to the incompatibilities between onboard refueling vapor recovery equipment on motor vehicles and the predominant type of stage II vapor recovery equipment installed at existing gasoline dispensing facilities in the Phoenix-Mesa area.

DATES: This final rule is effective on December 16, 2015.

ADDRESSES: The EPA has established docket number EPA–R09–OAR–2014–0256 for this action. The index to the docket is available electronically at *www.regulations.gov* and in hard copy at EPA Region IX, 75 Hawthorne Street, San Francisco, California. While all documents in the docket are listed in the index, some information may be publicly available only at the hard copy location (*e.g.,* copyrighted material), and some may not be publicly available in either location (*e.g.,* Confidential Business Information). To inspect the hard copy materials, please schedule an appointment during normal business hours with the contact listed in the **FOR FURTHER INFORMATION CONTACT** section.

VI. Statutory and Executive Order Reviews

I. Background for Final Rule

On September 2, 2015 (80 FR 53086), we proposed this action and provided for a 30-day comment period. On that same date, we issued a direct final rule (80 FR 53001) taking final action effective November 2, 2015 but indicated that, if we received adverse comments by the end of the comment period, we would publish a withdrawal of the direct final rule in the **Federal Register** prior to the effective date informing the public that the direct final rule will not take effect.

We received timely adverse comments, and on October 27, 2015 (80 FR 65660), we withdrew the direct final rule. In today's action, we provide our responses to the public comments and take final action based on the proposal published on September 2, 2015.

II. Summary of Proposed Action

In our September 2, 2015 proposed rule (80 FR 53086), we directed commenters to the direct final rule for a detailed rationale for the proposed approval of the SIP revision. As such, the following paragraphs summarize the background information and evaluation included in the direct final rule also published on September 2, 2015 (80 FR 53001).

Under the Clean Air Act (CAA or ''Act''), the EPA has promulgated national ambient air quality standards (NAAQS or ''standards'') for certain pervasive air pollutants. The NAAQS are concentration levels the attainment and maintenance of which EPA has determined to be requisite to protect public health (*i.e.,* the ''primary'' NAAQS) and welfare (*i.e.,* the ''secondary'' NAAQS). Under the CAA, states are required to develop and submit plans, referred to as state implementation plans (SIPs) to implement, maintain, and enforce the NAAQS.[1]

Ozone is one of the air pollutants for which the EPA has established NAAQS.[2] The original NAAQS for ozone was 0.12 parts per million (ppm), 1-hour average (''1-hour ozone standard'').[3] In 1997, we revised the ozone NAAQS, setting it at 0.08 ppm averaged over an 8-hour timeframe (referred to herein as the ''1997 8-hour ozone standard'') (62 FR 33856, July 18, 1997), and in 2008, we lowered the 8-hour ozone standard to 0.075 ppm (''2008 8-hour ozone standard'') (73 FR 16436, March 27, 2008). The 1-hour ozone standard and the 1997 8-hour ozone standard have now been revoked. See 69 FR 23951 (April 30, 2004) and 80 FR 12264 (March 6, 2015). Since publication of the direct final rule, the EPA has lowered the ozone standard further, to a level of 0.070 ppm, eight-hour average (''2015 8-hour ozone standard''). 80 FR 65292 (October 26, 2015).

Under the CAA, the EPA is also responsible for designating areas of the country as attainment, nonattainment, or unclassifiable for the various NAAQS. We classified the ''Phoenix metropolitan area,'' defined by the Maricopa Association of Governments' (MAGs') urban planning area boundary (but later revised to exclude the Gila River Indian Community, as a ''Moderate,'' and later ''Serious,'' nonattainment area for the 1-hour ozone standard. We have designated a larger geographic area, referred to as the ''Phoenix-Mesa'' area,[4] as a ''Marginal'' nonattainment area for the 1997 8-hour ozone standard and 2008 8-hour ozone standard. While we have redesignated the Phoenix metropolitan area, and the Phoenix-Mesa area as ''attainment,'' for the 1-hour and 1997 8-hour ozone standards, respectively, the Phoenix-Mesa area remains ''Marginal'' nonattainment for the 2008 ozone standard. More recently, we proposed to reclassify the Phoenix-Mesa area as ''Moderate'' ozone nonattainment for the 2008 8-hour ozone standard based on ambient data showing that the area did not attain the standard by the applicable attainment date (*i.e.,* July 20, 2015) for such areas. 80 FR 51992 (August 27, 2015). The EPA has not yet issued area designations for the 2015 8-hour ozone standard.

States with ''nonattainment'' areas are required to submit revisions to their SIPs that include a control strategy necessary to demonstrate how the area will attain the NAAQS. As ''Moderate,'' and later ''Serious,'' nonattainment for the 1-hour ozone standard, the State of Arizona was required under CAA section 182(b)(3) to submit a SIP revision that requires the use of ''Stage II'' vapor recovery systems at gasoline dispensing facilities (GDFs) located within the Phoenix metropolitan area.[5]

[1] Under Arizona law, the Arizona Department of Environmental Quality (ADEQ) is responsible for adopting and submitting the Arizona SIP and SIP revisions. Within the Maricopa County portion of the Phoenix-Mesa area, the Maricopa Association of Governments (MAG) is responsible for developing regional ozone air quality plans.

[2] Ground-level ozone is an oxidant that is formed from photochemical reactions in the atmosphere between volatile organic compounds (VOC) and oxides of nitrogen (NO_X) in the presence of sunlight. These two pollutants, referred to as ozone precursors, are emitted by many types of pollution sources including on-road motor vehicles (cars, trucks, and buses), nonroad vehicles and engines, power plants and industrial facilities, and smaller area sources such as lawn and garden equipment and paints.

[3] See 44 FR 8202 (February 8, 1979).

[4] The Phoenix-Mesa 1997 8-hour ozone nonattainment area covers a much larger portion of Maricopa County than the Phoenix metropolitan 1-hour ozone area and also includes the Apache Junction portion of Pinal County. The precise boundaries of the Phoenix-Mesa 1997 8-hour ozone nonattainment area and the Phoenix metropolitan 1-hour ozone nonattainment are found in 40 CFR 81.303.

[5] Gasoline dispensing pump vapor control devices, commonly referred to as ''Stage II'' vapor recovery, are systems that control VOC vapor

In response to this requirement, the State of Arizona promulgated and submitted certain statutes and regulations that require use of Stage II vapor recovery systems in the Phoenix metropolitan area, and later extended the requirements to a larger geographic area referred to as ''Area A.'' [6] The EPA approved the state's Stage-II-related statutes and regulations as a revision to the Arizona SIP. See 59 FR 54521 (November 1, 1994) and 77 FR 35279 (June 13, 2012).

The 1990 amended CAA anticipates that, over time, Stage II vapor recovery requirements at GDFs would be replaced by ''onboard refueling vapor recovery'' (ORVR) systems that the EPA was to establish for new motor vehicles under CAA section 202(a)(6). ORVR consists of an activated carbon canister installed in a motor vehicle. The carbon canister captures gasoline vapors during refueling. There the vapors are captured by the activated carbon in the canister. When the engine is started, the vapors are drawn off of the activated carbon and into the engine where they are burned as fuel. In 1994, the EPA promulgated its ORVR standards,[7] with a minimum 95% vapor capture efficiency, which fully applied to all new light duty vehicles by 2000. The ORVR requirements were phased in to apply to heavier classes of vehicles as well—reaching full effect for all new vehicles with a gross vehicle weight rating of up to 10,000 pounds by 2006.

Recognizing that, over time, the number of vehicles with ORVR as a percentage of the overall motor vehicle fleet would increase with the turnover of older models not equipped with ORVR with newer models equipped with ORVR, CAA section 202(a)(6) permits the EPA to promulgate a determination that ORVR is in ''widespread use'' throughout the motor vehicle fleet and to revise or waive Stage II vapor recovery requirements for Serious, Severe and Extreme ozone nonattainment areas. The EPA made the determination that ORVR systems are in ''widespread use'' in the nation's motor vehicle fleet in 2012. 77 FR 28772, May 16, 2012; and 40 CFR 51.126. In the wake of the EPA's ''widespread use'' determination, states, such as Arizona, that were required to implement Stage II vapor recovery programs under CAA section 182(b)(3) are now permitted to remove the requirement from their SIPs under certain circumstances.

On August 7, 2012, the EPA released its ''Guidance on Removing Stage II Gasoline Vapor Control Programs from State Implementation Plans and Assessing Comparable Measures'' [8] (''Stage II Guidance'') to aid in the development of SIP revisions to remove Stage II controls from GDFs. The EPA's Stage II Guidance projects that, by 2015, over 84% of all the gasoline dispensed in the nation will be dispensed to ORVR-equipped motor vehicles.[9] As such, Stage II and ORVR have become largely redundant technologies, and Stage II control systems are achieving an ever-declining emissions benefit as more ORVR-equipped vehicle continue to enter the on-road motor vehicle fleet. In addition, the EPA's Stage II Guidance recognizes that, in areas where certain types of vacuum-assist Stage II control systems are used, the limited compatibility between ORVR and some configurations of this Stage II hardware may ultimately result in an area-wide emissions disbenefit. The disbenefit can result when the Stage II controls pull air into the underground tank instead of gasoline vapors when both vacuum-assist Stage II controls and ORVR are active during refueling. This increases the pressure in the underground tank and can cause venting of excess emissions into the air. The Phoenix-Mesa ozone nonattainment area is an area where the vast majority of Stage II systems that have been installed use vacuum assist technologies.[10]

In light of EPA's national ''widespread use'' determination allowing states to revise their SIPs to remove Stage II vapor recovery requirements and the potential for a disbenefit from continuation of the Stage II vapor recovery program, MAG developed emissions estimates based on information from the EPA's Stage II guidance and based on Phoenix-area-specific motor vehicle fleet data to determine the impact of continuation of the program and the impact of the phased removal of Stage II vapor recovery in the Phoenix-Mesa area. The emissions estimates demonstrated that the emissions reduction benefit from the Stage II vapor recovery program would continue to provide marginal but diminishing emissions reductions through 2017 and that the disbenefit from continuation of the Stage II vapor recovery program would begin in 2018 and increase in the years thereafter. See table 1 on page 53005 of the direct final rule.

In response to these findings, the Arizona Legislature adopted changes in the specific statutory provisions establishing the Stage II vapor recovery program to eliminate the requirement to install Stage II equipment at new GDFs and to provide for a phased decommissioning process to remove Stage II equipment at existing GDFs beginning in October 2016 and ending in September 2018.[11]

Subsequent to legislative action, on September 2, 2014, ADEQ submitted a SIP revision, titled ''MAG State Implementation Plan Revision for the Removal of Stage II Vapor Recovery Controls in the Maricopa Eight-Hour Ozone Nonattainment Area'' (''Stage II Vapor Recovery SIP Revision'' or ''SIP Revision''), including the statutory revisions and related emissions impact documentation.

After review of the SIP Revision, on September 2, 2015 (80 FR 53086), the EPA proposed approval based on the following conclusions:

- ADEQ has met the procedural requirements for SIP revisions under section 110(l);
- Pursuant to the EPA's determination of ''widespread use'' (of ORVR systems in the motor vehicle fleet), states are allowed to rescind Stage II vapor recovery control requirements in their SIPs if doing so is consistent with the general SIP revision requirements of CAA section 110(l) and section 193;
- CAA section 193 does not apply to this particular SIP revision because the Stage II vapor recovery controls were not in effect prior to the 1990 CAA Amendments;
- MAG's year-by-year estimates of areawide VOC emissions with and

releases during the refueling of motor vehicles. This process takes the vapors normally emitted directly into the atmosphere when pumping gas and recycles them back into the underground fuel storage tank, preventing them from polluting the air.

[6] ''Area A'' is defined in Arizona Revised Statutes (ARS) section 49–541, and it includes all of the Phoenix metropolitan 1-hour ozone nonattainment area plus additional areas in Maricopa County to the north, east, and west, as well as small portions of Yavapai County and Pinal County. Area A roughly approximates the boundaries of the Phoenix-Mesa area designated by the EPA for the 1997 8-hour ozone standard.

[7] See 59 FR 16262 (April 6, 1994).

[8] ''Guidance on Removing Stage II Gasoline Vapor Control Programs from State Implementation Plans and Assessing Comparable Measures,'' EPA Office of Air Quality Planning and Standards, August 7, 2012.

[9] See Table A–1 of the Stage II Guidance.

[10] Table A–6 of the EPA's Stage II Guidance cites the percentages of State/Area GDF using vacuum assist Stage II technology. The listed percentage for the Phoenix-Mesa area is 85%.

[11] Effective for State law purposes upon the Governor's signature (*i.e.,* on April 22, 2014), House Bill (HB) 2128 (in relevant part) amends Arizona Revised Statutes (ARS) sections 41–2131 (''Definitions''), 41–2132 (''Stage I vapor recovery systems''), 41–2133 (''Compliance schedules''), and adds new section 41–2135 (''Stage II vapor recovery systems''). The new section ARS 41–2135 retains the existing Stage II control requirements for existing GDFs and establishes a phased decommissioning process to remove Stage II controls beginning October 1, 2016 and ending September 30, 2018.

without the SIP Revision reflect reasonable methods and assumptions, and provide a reasonable basis upon which to evaluate the ozone impacts of the SIP Revision;

• MAG's emissions estimates conclude that the temporary emissions increases due to the SIP Revision (relative to the scenario in which Stage II requirements remain fully implemented) will occur during years 2014 through 2017 and will range from 0.015 metric tons per day (mtpd) to 0.031 mtpd, and that beginning in 2018 and increasing in magnitude thereafter, the SIP Revision will result in fewer VOC emissions than would otherwise have occurred if Stage II requirements were to remain fully implemented in the Phoenix-Mesa area (due to the incompatibility of ORVR-equipped vehicles and vacuum-assist Stage II technologies);

• The temporary increases in VOC emissions during years 2014 through 2017 due to the SIP Revision would represent an approximate 0.002 percent to 0.005 percent increase in the overall VOC emissions inventory in the Phoenix-Mesa area; [12] and

• The SIP Revision would not interfere with reasonable further progress or attainment of the ozone NAAQS for the purposes of CAA section 110(l) because: (1) The increases in VOC emissions from 2014 through 2017 would have negligible impacts on ozone concentrations in the area; (2) the schedule for the phase-out of Stage II controls under the SIP Revision will maintain most of the emissions reductions benefits associated with Stage II control through 2017; (3) the scheduled phase-out will reduce the emissions increase (due to ORVR and Stage II incompatibilities) that would otherwise be expected in 2018 but would not entirely avoid an emissions increase in that year because some existing GDFs will not yet have removed Stage II controls by the beginning of the 2018 ozone season; and (4) the phase-out of Stage II controls by the end of the 2018 ozone season will support longer-term regional efforts to attain or maintain the ozone standards in the Phoenix-Mesa area.

For further information about the SIP Revision and our corresponding evaluation, please see the direct final rule (80 FR 53001, September 2, 2015).

[12] The EPA-approved MAG Eight-Hour Ozone Maintenance Plan anticipates VOC emissions between 653.9 mtpd (June ozone episode, 2005) and 659.0 mtpd (June ozone episode, 2015) during the relevant period. See our proposed approval of the maintenance plan and redesignation request at 79 FR 16734, at 16744 (March 26, 2014).

III. Public Comments and EPA Responses

In response to September 2, 2015 proposed rule, we received four comments. In the following paragraphs, we provide our responses to these comments.

Comment #1: While supportive of our proposed action, a commenter suggests that the EPA eliminate the Arizona vehicle inspection and maintenance (VEI) program as well.

Response #1: The State of Arizona's VEI program is an approved element of the Arizona SIP. A state may submit revisions to its SIP, but such revisions do not become effective until the EPA approves them under section 110(k) of the CAA. No VEI SIP revision submittal is pending at this time. If the State of Arizona were to submit a revision to the SIP-approved VEI program, or rescission of the program, the EPA is authorized to approve such a revision only if such revision were consistent with all CAA requirements such as section 110(l), which prohibits the EPA from approving a SIP revision if the revision would interfere with any applicable requirement concerning reasonable further progress towards, and attainment of, the NAAQS.

Comment #2: A commenter was not opposed to the removal of Stage II vapor recovery equipment at GDFs so long as the fuel pump dispensing nozzle is properly covered to capture vapors during refueling.

Response #2: We disagree that such covers are necessary to capture vapors during refueling with ORVR-equipped motor vehicles. While Stage II vapor recovery systems rely upon a rubber boot around the nozzle to create a seal between the nozzle and the vehicle, ORVR prevents vapors from escaping during refueling by employing a seal in the fill pipe. In most instances, these seals are created by the incoming gasoline backing slightly near the bottom of the fill pipe. When the engine is started, the vapors are purged from the activated carbon canister and into the engine where they are burned as fuel. See 77 FR 28772 at 28774 (May 16, 2012). Because ORVR uses a seal within the fill pipe of the vehicle, a rubber boot or cover is not required to prevent vapors from escaping during refueling.

Comment #3: A commenter objects to our proposal, and asks the EPA to reconsider its proposed approval of the SIP revision, contending that the revision will cause adverse effects particularly in the summer months. This commenter also questions whether there would be any benefit from the revision and asks the EPA to identify to whom the revision applies.

Response #3: We recognize that the Stage II vapor recovery controls have provided significant reductions of VOC emissions in the Phoenix-Mesa area since they were implemented in the mid-1990s. These controls have done so by taking the vapors normally emitted directly into the atmosphere when pumping gas and recycling them back into the underground fuel storage tank, preventing them from polluting the air. However, as discussed in more detail in the direct final rule at 80 FR 53002 and 52003 (September 2, 2015), the 1990 amended CAA anticipated that, over time, Stage II vapor recovery requirements at gasoline stations would be replaced by ORVR systems installed on motor vehicles, and authorized the EPA to revise or waive Stage II vapor recovery requirements for ozone nonattainment areas, including such areas as the Phoenix-Mesa area, once the EPA determines that ORVR is in ''widespread use'' throughout the motor vehicle fleet. The EPA published its ''widespread use'' determination in 2012 at 77 FR 28772 (May 16, 2012), and as a result, the Stage II vapor recovery controls are no longer required in ozone nonattainment areas.

Moreover, as described further in our direct final rule at 53004, with certain types of vacuum-assist Stage II control systems, the limited compatibility between ORVR and some configurations of this Stage II hardware may ultimately result in an area-wide emissions disbenefit. This is because the Stage II controls pull air into the underground tank instead of gasoline vapors when both vacuum-assist Stage II control and ORVR are active during refueling, increasing the pressure in the underground tank and causing venting of excess emission into the air. The Phoenix-Mesa ozone nonattainament area is an area where the vast majority of Stage II systems that have been installed use vacuum assist technologies, and MAG has estimated that 2018 is the first year in which the disbenefit from implementation of Stage II controls would occur if Stage II control requirements were to remain in place given the motor vehicle fleet in the Phoenix-Mesa area. The disbenefit (*i.e.,* the increase in emissions if Stage II control were to be retained) grows quickly after that year as shown in table 1 of our direct final rule at 53005.

Thus, from the perspective of summertime ozone conditions in the Phoenix-Mesa area, the issue is not whether to remove the Stage II vapor recovery equipment but when and how. The state has submitted a SIP revision

that eliminates the requirement for installation of Stage II vapor recovery equipment at new GDFs, and that establishes a phased decommissioning process to remove Stage II controls at existing GDFs over a two-year period beginning October 1, 2016 and ending September 30, 2018. As explained on page 53003 of the direct final rule, the two-year period for decommissioning is based on the expectation of the Arizona Department of Weights and Measures of the time necessary to safely decommission Stage II controls at the over 1,000 existing GDFs in the Phoenix-Mesa area. Decommissioning is expected to be spread evenly over each of the 24 months from October 2016 through September 2018 and to occur for existing GDFs during the month when the annual scheduled Stage II control test would have occurred.

We believe that the two-year decommissioning process established by the state minimizes the temporary adverse effect of increased VOC emissions (*i.e.,* from foregone emissions reductions from elimination of the Stage II requirement at new GDFs and the phase-out of Stage II equipment at existing GDFs) while avoiding the longer-term adverse impact due to the disbenefit associated with retaining the Stage II vapor recovery controls. As noted on page 53005 of the direct final rule, the temporary adverse effect during years 2014 through 2017 would represent an approximate 0.002 percent to 0.005 percent increase in the overall VOC emission inventory in the Phoenix-Mesa area. Based on the small magnitude of this impact, its temporary nature, and the avoidance of the long-term disbenefit, we have concluded that the SIP revision would not interfere with attainment or maintenance of the ozone NAAQS in the Phoenix-Mesa area.

Comment #4: A commenter objects to our proposal, stating that it does not take into account those individuals who are chemically sensitive to vapors and would be harmed if the SIP revision were to be approved. This commenter also noted that there are communities where most of the drivers operate older vehicles and that those living in such areas would be at higher risk than those in areas where the vehicle models are newer, and suggested that the EPA defer the approval of the Stage II vapor recovery phase-out for a couple of years to allow for a greater percentage of ORVR-equipped vehicles to replace the older vehicles without ORVR.

Response #4: The commenter is correct that, in reviewing the Stage II SIP Revision, the EPA did not take into account the particular sensitivities of individuals to gasoline vapors or the percentage of ORVR-equipped vehicles refueling at individual GDFs in the Phoenix-Mesa area. Our role in a reviewing SIP revision is to approve state choices, provided that they meet the criteria of the CAA. None of the applicable CAA criteria calls for evaluating the sensitivities of individuals to gasoline vapors nor do the criteria require a GDF-specific ORVR evaluation.

Rather, as described on pages 53004 and 53004 of the direct final rule, we evaluated the SIP revision for compliance with CAA section 110(l), which prohibits the EPA from approving a SIP revision if that revision would interfere with any applicable requirement concerning reasonable further progress towards, or attainment of, any of the NAAQS, or any applicable requirement of the CAA. In this instance, because the Stage II SIP revision would affect VOC emissions, and because VOC is a precursor to ozone, we focused on ozone NAAQS impacts. Ozone is a regional pollutant and thus our evaluation of the SIP revision is appropriately based on area-wide VOC emissions estimates and considers those emissions in the context of regional, not local, ozone concentrations.

Lastly, deferral by the EPA of action on the Stage II SIP revision is not appropriate because CAA section 110(k)(2) establishes a deadline of at most 18 months from the date a SIP revision is submitted for the EPA to take final action. Moreover, we have concluded that the two-year decommissioning process established by the state would minimize the temporary adverse impact on regional VOC emissions while avoiding the longer term disbenefit associated with implementation of Stage II vapor recovery controls at GDFs in the Phoenix-Mesa area. Deferral by the state of the two-year decommissioning process would be less advantageous from a regional ozone perspective because it would only serve to lengthen the period in which the area would experience the disbenefit from Stage II vapor recovery due to the increasing percentage of motor vehicles with ORVR and accompanying incompatibilities with the Stage II vapor recovery equipment.

IV. Final Action

Under CAA section 110(k) and for the reasons set forth in our September 2, 2015 direct final rule and summarized above, the EPA is taking final action to approve the Stage II Vapor Recovery SIP Revision submitted by ADEQ on September 2, 2014 to provide for the phased removal of ''Stage II'' vapor recovery equipment at GDFs in the Phoenix-Mesa area. Specifically, the EPA is approving a SIP revision that eliminates the requirement to install and operate such equipment at new GDFs, and that provides for the phased removal of such equipment at existing GDFs from October 2016 through September 2018.

The EPA is approving this SIP revision because Stage II vapor recovery controls are no longer a SIP requirement under CAA section 182(b)(3) due to EPA's ''widespread use determination'' for ORVR. Additionally, we are approving this SIP revision because the temporary incremental increase in VOC emissions from 2014 through 2017 would not interfere with reasonable further progress toward, or attainment of, any of the NAAQS, and because this SIP revision avoids the longer-term VOC emissions increases associated with continued implementation of Stage II controls in the Phoenix-Mesa area. As part of this final action, the EPA is approving the specific statutory provisions that provide for the phase-out of Stage II controls in Area A, *i.e.,* sections 5 through 8, and 10 through 12 of House Bill 2128, amending ARS sections 41–2131, 41–2132, 41–2133 and adding section 41–2135.[13]

V. Incorporation by Reference

In this rule, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of certain sections of House Bill 2128 amending various sections of the Arizona Revised Statutes related to stage II vapor recovery systems in Area A, effective April 22, 2014, as described in the amendments to 40 CFR part 52 set forth below. The EPA has made, and will continue to make, these documents generally available electronically through *www.regulations.gov* and/or in hard copy at the appropriate EPA office (see the **ADDRESSES** section of this preamble for more information).

[13] Approval of these statutory provisions as revisions to the Arizona SIP supersedes the following existing SIP provisions in the Arizona SIP: ARS section 41–2131, as approved at 77 FR 35279 (June 13, 2012); ARS section 41–2132, as approved at 77 FR 35279 (June 13, 2012); and ARS section 41–2133, as approved at 77 FR 35279 (June 13, 2012). As noted previously, ''Area A'' is roughly the same geographic area as the Phoenix-Mesa 8-hour ozone nonattainment area.

VI. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), nor will it impose substantial direct costs on tribal governments or preempt tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 15, 2016. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: October 28, 2015.

Jared Blumenfeld,

Regional Administrator, Region IX.

Chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart D—Arizona

■ 2. Section 52.120 is amended by adding paragraph (c)(171) to read as follows:

§ 52.120 Identification of plan.

* * * * *

(c) * * *

(171) The following plan was submitted on September 2, 2014 by the Governor's designee.

(i) Incorporation by reference.

(A) Arizona Department of Environmental Quality.

(*1*) House Bill 2128, effective April 22, 2014, excluding sections 1 through 4, and 9 (including the text that appears in all capital letters and excluding the text that appears in strikethrough).

(ii) Additional materials.

(A) Arizona Department of Environmental Quality.

(*1*) *MAG 2014 State Implementation Plan Revision for the Removal of Stage II Vapor Recovery Controls in the Maricopa Eight-Hour Ozone Nonattainment Area* (August 2014), adopted by the Regional Council of the Maricopa Association of Governments on August 27, 2014, excluding appendix A, exhibit 2 (''Arizona Revised Statutes Listed in Table 1–1'').

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 62

[EPA–R05–OAR–2015–0701; FRL–9936–96–Region 5]

Air Plan Approval; Michigan; Sewage Sludge Incinerators State Plan and Small Municipal Waste Combustors Negative Declaration for Designated Facilities and Pollutants

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving Michigan's State Plan to control air pollutants from ''Sewage Sludge Incinerators'' (SSI). The Michigan Department of Environmental Quality (MDEQ) submitted the State Plan on September 21, 2015. The State Plan is consistent with the Emission Guidelines (EGs) promulgated by EPA on March 21, 2011. This approval means that EPA finds that the State Plan meets applicable Clean Air Act (Act) requirements for subject SSI units. Once effective, this approval also makes the State Plan Federally enforceable. EPA is also notifying the public that we have received from Michigan a negative declaration for Small Municipal Waste Combustors (SMWC). The MDEQ submitted its negative declaration on

July 27, 2015. MDEQ notified EPA in its negative declaration letter that there are no SMWC units subject to the requirements of the Act currently operating in Michigan.

DATES: This direct final rule will be effective January 15, 2016, unless EPA receives adverse comments by December 16, 2015. If adverse comments are received, EPA will publish a timely withdrawal of the direct final rule in the **Federal Register** informing the public that the rule will not take effect, and will respond to all comments in a final action based upon the associated proposal.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2015–0701, by one of the following methods:

1. *www.regulations.gov:* Follow the on-line instructions for submitting comments.
2. *Email: nwia.jacqueline@epa.gov.*
3. *Fax:* (312) 692–2566.
4. *Mail:* Jacqueline Nwia, Acting Chief, Toxics and Global Atmosphere Section, Air Toxics and Assessment Branch (AT–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.
5. *Hand Delivery:* Jacqueline Nwia, Acting Chief, Toxics and Global Atmosphere Section, Air Toxics and Assessment Branch (AT–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604. Such deliveries are only accepted during the Regional Office normal hours of operation, and special arrangements should be made for deliveries of boxed information. The Regional Office official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m. excluding Federal holidays.

Instructions: Direct your comments to Docket ID No. EPA–R05–OAR–2015–0701. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *www.regulations.gov* or email. The *www.regulations.gov* Web site is an ''anonymous access'' system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *www.regulations.gov* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should not contain special characters or any form of encryption, and should be free of any defects or viruses.

Docket: All documents in the docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This Facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays. We recommend that you telephone Margaret Sieffert, Environmental Engineer, at (312) 353–1151 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Margaret Sieffert, Environmental Engineer, Environmental Protection Agency, Region 5, 77 West Jackson Boulevard (AT–18J), Chicago, Illinois 60604, (312) 353–1151, *sieffert.margaret@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA. This **SUPPLEMENTARY INFORMATION** section is arranged as follows:

I. Background
II. What does the State Plan contain?
III. Does the state plan meet the EPA requirements?
IV. What action is EPA taking?
V. Statutory and Executive Order Reviews

I. Background

Section 111(d) of the Act requires that EPA develop regulations providing that states must submit to EPA plans establishing standards of performance for certain existing sources of pollutants when a standard of performance would apply to the existing source if it were a new source, and if the pollutants are noncriteria pollutants (*i.e.,* pollutants for which there is no national ambient air quality standard) and are not on a list published under section 108 of the Act or emitted from a source category regulated under section 112 of the Act. Section 129 of the Act and 40 CFR part 60, subpart B apply the section 111(d) requirements to existing solid waste combustors, including SSIs and SMWCs, and provide that EPA should include, as part of the performance standards, emissions guidelines (EGs) that include the plan elements required by section 129.

EPA promulgated new source performance standards and EGs for SMWCs on December 6, 2000, (64 FR 76349, 65 FR 76377). The standards and EGs are codified at 40 CFR part 60, subparts AAAA and BBBB, respectively. Thus, states were required to develop plans for existing SMWCs, pursuant to sections 111(d) and 129 of the Act and 40 CFR part 60, subpart B.

EPA promulgated new source performance standards and EGs for SSIs on March 21, 2011, (76 FR 15372). The standards and EGs are codified at 40 CFR part 60, subparts LLLL and MMMM, respectively. Thus, states were required to develop plans for existing SSIs, pursuant to sections 111(d) and 129 of the Act and 40 CFR part 60, subpart B.

A SMWC unit is defined in 40 CFR 60.1550, as any device that has the capacity to combust at least 35 tons per day of municipal solid waste but no more than 250 tons per day of municipal solid waste or refuse derived fuel. The designated facilities to which the EGs apply are existing SMWC units that commenced construction on or before August 30, 1999.

A SSI unit is defined in 40 CFR 60.5250 as any device that combusts sewage sludge for the purpose of reducing the volume of the sewage sludge by removing combustible matter. The designated facilities to which the EGs apply are existing SSI units that commenced construction on or before October 14, 2010. 40 CFR 60.5060.

Under section 129(b)(2) of the Act and the EGs at 40 CFR part 60, subpart MMMM, States with SSIs must submit to EPA plans that implement the EGs. The plans, which must be at least as protective as the EGs, become Federally enforceable when EPA approves them. 42 U.S.C. 7411(d)(2). If the state fails to submit a satisfactory plan, the Administrator must promulgate a Federal plan for implementation and enforcement. *Id.*

40 CFR part 60, subpart B contains general provisions applicable to the adoption and submittal of state plans for

subject facilities under sections 111(d) and 129 (111(d)/129 plan). 40 CFR part 62, subpart A provides the procedural framework for the submission of the plans. However, 40 CFR 60.23(b) and 62.06 provide that, if there are no existing sources of the designated pollutant in a state, the state may submit a letter of certification to that effect (*i.e.,* a negative declaration) in lieu of a plan. The negative declaration exempts the state from the provisions of 40 CFR part 60, subpart B that require the submittal of a 111(d)/129 plan.

On September 21, 2015, MDEQ submitted its SSI State Plan. The State's final rule became effective on May 20, 2015. The public hearing for the State Plan was on August 19, 2015. The plan includes State rule R 336.1972, ''Emission standards for existing sewage sludge incineration units,'' and R 336.1902 ''Adoption of standards by reference,'' which contain emission standards for existing SSI.

On July 27, 2015, MDEQ submitted its SMWC negative declaration, in which it certifies that there are no SMWC units currently operating in Michigan.

II. What does the state plan contain?

The State SSI plan submittal is based on the Federal SSI EGs. As set forth in section 129 of the Act and in 40 CFR part 60, subparts B and MMMM, the State Plan addresses the nine minimum required elements, as follows:

1. An inventory of affected SSI units, including those that have ceased operation but have not been dismantled. Michigan has provided this along with the shutdown notices for four facilities and the operating permits for the remaining three affected facilities in Michigan.

2. An inventory of the emissions from affected SSI units. Michigan has provided this.

3. Compliance schedules for each affected SSI unit. Michigan has provided a compliance schedule with a compliance date of March 21, 2016.

4. Emission limits, emission standards, operator training and qualification requirements and operating limits for affected SSI units that are at least as protective as the EGs. Michigan has provided this.

5. Performance testing, recordkeeping and reporting and requirements. Michigan has provided this.

6. Certification that the hearing on the state plan was held, a list of witnesses and their organizational affiliations, if any, appearing at the hearing, and a brief written summary of each presentation or written submission. Michigan has provided the required certification and other information, including a summary of the one comment it received.

7. A provision for State progress reports to EPA. Michigan has stated that it will submit an annual report that will include updates to the inventory, removing sources that have shut down, adding any new sources, and identifying any sources that have met increments of progress. The annual report will also include any enforcement activities initiated against designated facilities and submission of technical reports on all performance testing on designated facilities, including updated emissions inventories.

8. Identification of enforceable state mechanisms that the State selected for implementing the EGs. Michigan has provided a detailed list which identified the enforceable mechanisms.

9. A demonstration of the State's legal authority to carry out the SSI State Plan. Michigan has provided a detailed list which demonstrated that it has such legal authority. This includes the legal authority to incorporate by reference federal emission guidelines provisions, as confirmed by a Michigan Attorney General's Opinion letter dated May 27, 2015.

III. Does the State Plan meet the EPA requirements?

EPA evaluated the SSI State Plan and related information submitted by Michigan for consistency with the Act, EPA regulations and policy. For the reasons discussed above, EPA has determined that the State Plan meets all applicable requirements and, therefore, is approvable.

IV. What action is EPA taking?

EPA is approving the State Plan which Michigan submitted on September 21, 2015, for the control of emissions from existing SSI sources in the State. EPA is also providing the public with notice of, and amending 40 CFR part 62 to reflect, EPA's receipt of Michigan's negative declaration for SMWC facilities.

The EPA Administrator continues to retain authority for several tasks, as provided in 40 CFR 60.5050 and as stated in the cover letter of the State Plan.

EPA is publishing this approval action without prior proposal because the Agency views this as a non-controversial action and anticipates no adverse comments. However, in the proposed rules section of this **Federal Register** publication, EPA is publishing a separate document that will serve as the proposal to approve the State Plan in the event adverse written comments are filed. This rule will be effective January 15, 2016 without further notice unless we receive relevant adverse written comments by December 16, 2015. If we receive such comments, we will withdraw this action before the effective date by publishing a subsequent document that will withdraw the final action. We will then address all public comments received in a subsequent final rule based on the proposed action. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule, and if that provision can be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. If we do not receive any comments, this action will be effective January 15, 2016.

V. Statutory and Executive Order Reviews

A. General Requirements

This action is not a ''significant regulatory action'' under the terms of Executive Order 12866 (58 FR 51735, October 4, 1993) and therefore is not subject to review by the Office of Management and Budget under Executive Orders 12866 and 13563 (76 FR 3821, January 21, 2011). For this reason, this action is also not subject to Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001). This action merely approves state law as meeting Federal requirements and merely notifies the public of EPA receipt of a negative declaration from an air pollution control agency without any existing SMWC units in its state. This action imposes no requirements beyond those imposed by the state. Accordingly, the Administrator certifies that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). Because this rule approves pre-existing requirements under state law and does not impose any additional enforceable duty beyond that required by state law, it does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). This rule is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian

country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). This action also does not have Federalism implications because it does not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999). This action merely approves a state rule implementing a Federal requirement, and does not alter the relationship or the distribution of power and responsibilities established in the Act. This rule also is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it approves a state rule implementing a Federal standard.

In reviewing section 111(d)/129 plan submissions, EPA's role is to approve State choices, provided that they meet the criteria of the Act. With regard to negative declarations for designated facilities received by EPA from states, EPA's role is to notify the public of the receipt of such negative declarations and revise 40 CFR part 62 accordingly. In this context, in the absence of a prior existing requirement for the State to use voluntary consensus standards (VCS), EPA has no authority to disapprove a section 111(d)/129 plan submission or negative declaration for failure to use VCS. It would thus be inconsistent with applicable law for EPA, when it reviews a section 111(d)/129 plan or negative declaration submission, to use VCS in place of a section 111(d)/129 plan or negative declaration submission that otherwise satisfies the provisions of the Act. Thus, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. This rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

B. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

C. Petitions for Judicial Review

Under Section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 15, 2016. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action approving Michigan's section 111(d)/129 plan for SSI sources or negative declaration for SMWC units may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2)).

List of Subjects in 40 CFR Part 62

Environmental protection, Administrative practice and procedure, Air pollution control, Intergovernmental relations, Reporting and recordkeeping requirements, Sewage sludge incinerators, Small municipal waste combustors.

Dated: October 29, 2015.

Susan Hedman,

Regional Administrator, Region 5.

40 CFR part 62 is amended as follows:

PART 62—APPROVAL AND PROMULGATION OF STATE PLANS FOR DESIGNATED FACILITIES AND POLLUTANTS

■ 1. The authority citation for part 62 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart X—Michigan

■ 2. Add two undesignated center headings and §§ 62.5620, 62.5621, 62.5622, and 62.5630 to subpart X to read as follows:

Control of Air Emissions From Sewage Sludge Incinerators

§ 62.5620 Identification of plan.

On September 21, 2015, Michigan submitted a State Plan for implementing the emission guidelines for Sewage Sludge Incinerators (SSI). The enforceable mechanism for this State Plan is a State rule codified in R 336.1972, ''Emission standards for existing sewage sludge incineration units,'' and R 336.1902 ''Adoption of standards by reference.'' The State's final rule became effective on May 20, 2015.

§ 62.5621 Identification of sources.

The Michigan State Plan for existing Sewage Sludge Incinerators (SSI) applies to all SSIs for which construction commenced on or before October 14, 2010 or for which a modification was commenced on or before September 21, 2011 primarily to comply with this rule.

§ 62.5622 Effective date.

The Federal effective date of the Michigan State Plan for existing Sewage Sludge Incinerators is January 15, 2016.

Control of Air Emissions From Small Municipal Waste Combustors

§ 62.5630 Identification of plan—negative declaration.

On July 27,2015, the Michigan Department of Environmental Quality submitted a negative declaration letter to EPA certifying that there are no existing Small Municipal Waste Combustors (SMWC) units in the State of Michigan subject to the emissions guidelines at 40 CFR part 60, subpart BBBB.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2015–0421; FRL–9936–25]

Tamarind Seed Gum, 2-Hydroxypropyl Ether Polymer; Tolerance Exemption

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a tolerance for residues of tamarind seed gum, 2-hydroxypropyl ether polymer (CAS Reg. No. 68551–04–2) when used as an inert ingredient in a pesticide chemical formulation. Lamberti USA, Incorporated submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting an exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of tamarind seed gum, 2-hydroxypropyl ether polymer on food or feed commodities.

DATES: This regulation is effective November 16, 2015. Objections and requests for hearings must be received on or before January 15, 2016, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2015–0421, is available at *http://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805. Please review the visitor instructions and additional information about the docket available at *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Susan Lewis, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; main telephone number: (703) 305–7090; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 180 through the Government Printing Office's e-CFR site at *http://www.ecfr.gov/cgi-bin/text-idx?&c=ecfr&tpl=/ecfrbrowse/Title40/40tab_02.tpl.*

C. Can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2015–0421 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing, and must be received by the Hearing Clerk on or before January 15, 2016. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2015–0421, by one of the following methods.

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *http://www.epa.gov/dockets/contacts.html.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *http://www.epa.gov/dockets.*

II. Background and Statutory Findings

In the **Federal Register** of August 26, 2015 (80 FR 51759) (FRL–9931–74), EPA issued a document pursuant to FFDCA section 408, 21 U.S.C. 346a, announcing the receipt of a pesticide petition (PP IN–10807) filed by Lamberti USA, Incorporated, 161 Washington Street Eight Tower Bridge, Suite 1000 Conshohocken, PA 19428. The petition requested that 40 CFR 180.960 be amended by establishing an exemption from the requirement of a tolerance for residues of tamarind seed gum, 2-hydroxypropyl ether polymers (CAS Reg. No. 68551–04–2). That document included a summary of the petition prepared by the petitioner and solicited comments on the petitioner's request. The Agency did not receive any comments.

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the exemption is ''safe.'' Section 408(c)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and use in residential settings, but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing an exemption from the requirement of a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . .'' and specifies factors EPA is to consider in establishing an exemption.

III. Risk Assessment and Statutory Findings

EPA establishes exemptions from the requirement of a tolerance only in those cases where it can be shown that the risks from aggregate exposure to pesticide chemical residues under reasonably foreseeable circumstances will pose no appreciable risks to human health. In order to determine the risks from aggregate exposure to pesticide inert ingredients, the Agency considers the toxicity of the inert in conjunction with possible exposure to residues of the inert ingredient through food, drinking water, and through other exposures that occur as a result of pesticide use in residential settings. If EPA is able to determine that a finite tolerance is not necessary to ensure that there is a reasonable certainty that no harm will result from aggregate exposure to the inert ingredient, an exemption from the requirement of a tolerance may be established.

Consistent with FFDCA section 408(b)(2)(D), EPA has reviewed the available scientific data and other relevant information in support of this

action and considered its validity, completeness and reliability and the relationship of this information to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. In the case of certain chemical substances that are defined as polymers, the Agency has established a set of criteria to identify categories of polymers expected to present minimal or no risk. The definition of a polymer is given in 40 CFR 723.250(b) and the exclusion criteria for identifying these low-risk polymers are described in 40 CFR 723.250(d). Tamarind seed gum, 2-hydroxypropyl ether polymers conforms to the definition of a polymer given in 40 CFR 723.250(b) and meets the following criteria that are used to identify low-risk polymers.

1. The polymer is not a cationic polymer nor is it reasonably anticipated to become a cationic polymer in a natural aquatic environment.

2. The polymer does contain as an integral part of its composition the atomic elements carbon, hydrogen, and oxygen.

3. The polymer does not contain as an integral part of its composition, except as impurities, any element other than those listed in 40 CFR 723.250(d)(2)(ii).

4. The polymer is neither designed nor can it be reasonably anticipated to substantially degrade, decompose, or depolymerize.

5. The polymer is manufactured or imported from monomers and/or reactants that are already included on the TSCA Chemical Substance Inventory or manufactured under an applicable TSCA section 5 exemption.

6. The polymer is not a water absorbing polymer with a number average molecular weight (MW) greater than or equal to 10,000 daltons.

7. The polymer does not contain certain perfluoroalkyl moieties consisting of a CF3- or longer chain length as specified in 40 CFR 723.250(d)(6).

Additionally, the polymer also meets as required the following exemption criteria specified in 40 CFR 723.250(e).

8. The polymer's minimum number average MW is greater than or equal to 10,000 daltons. The polymer contains less than 2% oligomeric material below MW 500 and less than 5% oligomeric material below MW 1,000.

Thus, tamarind seed gum, 2-hydroxypropyl ether polymer meets the criteria for a polymer to be considered low risk under 40 CFR 723.250. Based on its conformance to the criteria in this unit, no mammalian toxicity is anticipated from dietary, inhalation, or dermal exposure to tamarind seed gum, 2-hydroxypropyl ether polymer.

IV. Aggregate Exposures

For the purposes of assessing potential exposure under this exemption, EPA considered that tamarind seed gum, 2-hydroxypropyl ether polymer could be present in all raw and processed agricultural commodities and drinking water, and that non-occupational non-dietary exposure was possible. The number average MW of tamarind seed gum, 2-hydroxypropyl ether polymer is 10,000 daltons. Generally, a polymer of this size would be poorly absorbed through the intact gastrointestinal tract or through intact human skin. Since tamarind seed gum, 2-hydroxypropyl ether polymer conform to the criteria that identify a low-risk polymer, there are no concerns for risks associated with any potential exposure scenarios that are reasonably foreseeable. The Agency has determined that a tolerance is not necessary to protect the public health.

V. Cumulative Effects From Substances With a Common Mechanism of Toxicity

Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity.''

EPA has not found tamarind seed gum, 2-hydroxypropyl ether polymer to share a common mechanism of toxicity with any other substances, and tamarind seed gum, 2-hydroxypropyl ether polymer does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has assumed that tamarind seed gum, 2-hydroxypropyl ether polymer does not have a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA's Web site at *http://www.epa.gov/pesticides/cumulative.*

VI. Additional Safety Factor for the Protection of Infants and Children

Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the data base unless EPA concludes that a different margin of safety will be safe for infants and children. Due to the expected low toxicity of tamarind seed gum, 2-hydroxypropyl ether polymer, EPA has not used a safety factor analysis to assess the risk. For the same reasons the additional tenfold safety factor is unnecessary.

VII. Determination of Safety

Based on the conformance to the criteria used to identify a low-risk polymer, EPA concludes that there is a reasonable certainty of no harm to the U.S. population, including infants and children, from aggregate exposure to residues of tamarind seed gum, 2-hydroxypropyl ether polymer.

VIII. Other Considerations

A. Existing Exemptions From a Tolerance

There are no existing tolerance exemptions for tamarind seed gum, 2-hydroxypropyl ether polymer.

B. Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation.

C. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). The Codex Alimentarius is a joint United Nations Food and Agriculture Organization/World Health Organization food standards program, and it is recognized as an international food safety standards-setting organization in trade agreements to which the United States is a party. EPA may establish a tolerance that is different from a Codex MRL; however, FFDCA section 408(b)(4) requires that EPA explain the reasons for departing from the Codex level.

The Codex has not established a MRL for tamarind seed gum, 2-hydroxypropyl ether polymer.

IX. Conclusion

Accordingly, EPA finds that exempting residues of tamarind seed gum, 2-hydroxypropyl ether polymer from the requirement of a tolerance will be safe.

X. Statutory and Executive Order Reviews

This action establishes a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or tribal governments, on the relationship between the national government and the States or tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

XI. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: November 5, 2015.

G. Jeffrey Herndon,

Director, Registration Division, Office of Pesticide Programs.

Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. In § 180.960, add alphabetically the polymer in the table to read as follows:

§ 180.960 Polymers; exemptions from the requirement of a tolerance.

Endangered and Threatened Wildlife and Plants; Removal of the Delmarva Peninsula Fox Squirrel From the List of Endangered and Threatened Wildlife

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The best available scientific and commercial data indicate that the Delmarva Peninsula fox squirrel (*Sciurus niger cinereus*) has recovered. Therefore, under the authority of the Endangered Species Act of 1973, as amended (Act), we, the U.S. Fish and Wildlife Service (Service), remove the Delmarva Peninsula fox squirrel (commonly called the Delmarva fox squirrel) from the Federal List of Endangered and Threatened Wildlife (List). This determination is based on a thorough review of all available information, which indicates that the subspecies is now sufficiently abundant and well distributed to withstand foreseeable threats and no longer meets the definition of an endangered or threatened species under the Act.

This rule removes the Delmarva fox squirrel from the List throughout its range, including the experimental population designated for Assawoman Wildlife Management Area in Delaware. It also announces the availability of a post-delisting monitoring plan for the subspecies.

DATES: This rule is effective December 16, 2015.

ADDRESSES: This final rule and the post-delisting monitoring plan are available on the Internet at *http://www.regulations.gov* under Docket No. FWS–R5–ES–2014–0021. Comments and materials received, as well as supporting documentation used in rule preparation, will be available for public inspection, by appointment, during normal business hours at: U.S. Fish and Wildlife Service, Chesapeake Bay Field Office, 177 Admiral Cochrane Drive, Annapolis, MD 21401; and on the Chesapeake Bay Field Office Web site at: *http://www.fws.gov/chesapeakebay/.*

FOR FURTHER INFORMATION CONTACT: Field Office Supervisor, Genevieve LaRouche, by telephone at 410–573–4573; or Cherry Keller, Wildlife Biologist, at 410–573–4532, or by email

at *cherry_keller@fws.gov.* Written questions or requests for additional information may also be directed to: Delmarva fox squirrel QUESTIONS, at the street address listed under **ADDRESSES.** Individuals who are hearing-impaired or speech-impaired may call the Federal Relay Service at 1–800–877–8337 for TTY assistance.

SUPPLEMENTARY INFORMATION:

Background

Previous Federal Action

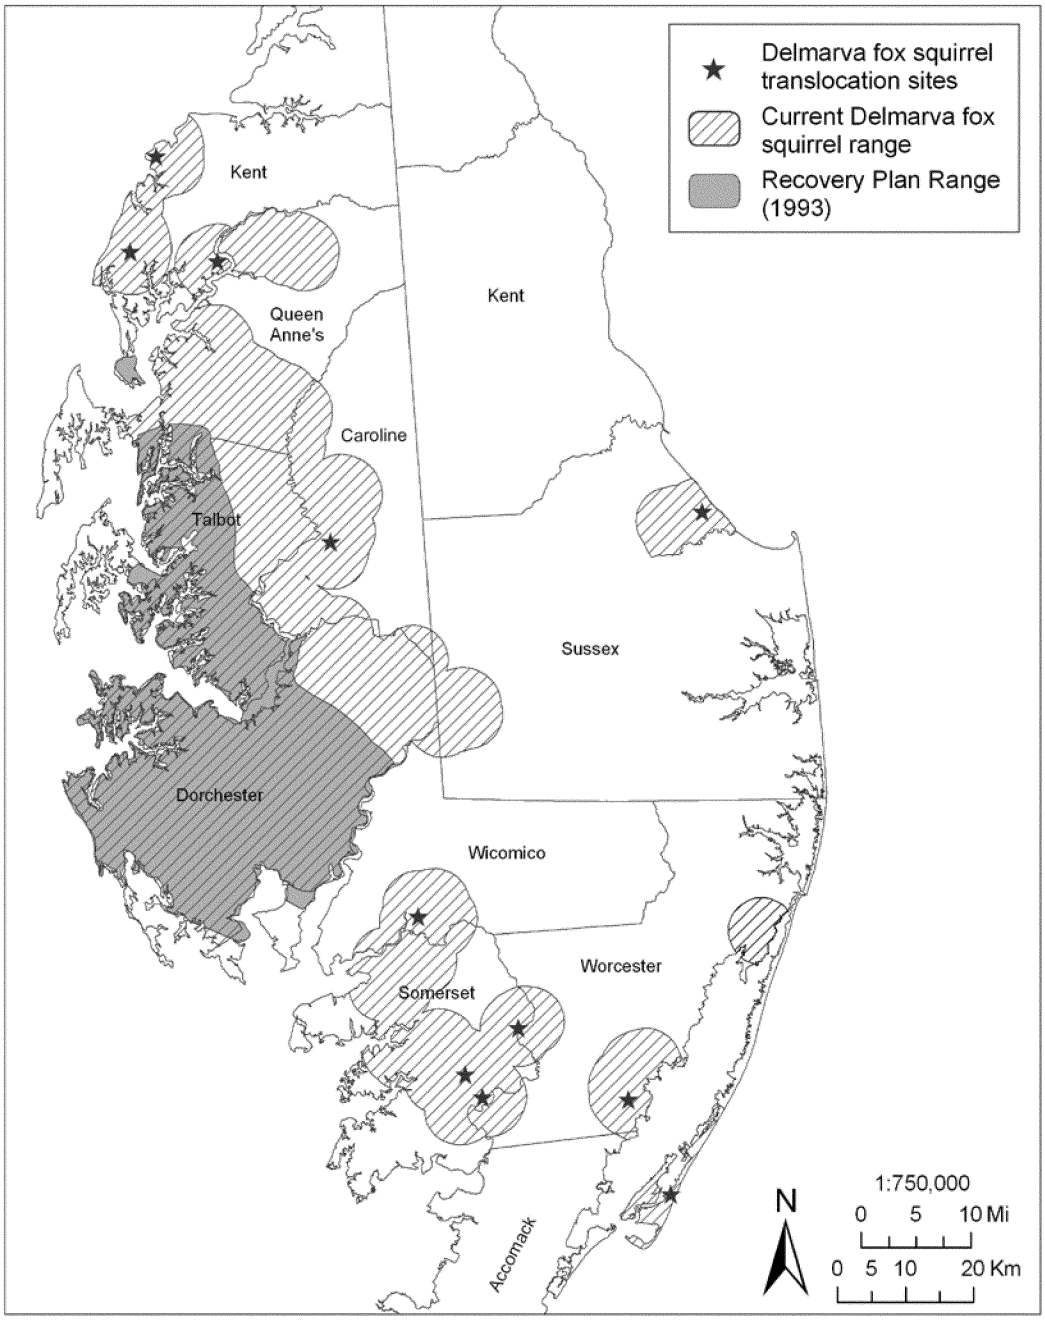
On September 23, 2014, the Service published a proposed rule (79 FR 56686) to remove the Delmarva Peninsula fox squirrel, commonly called and hereafter referred to as the Delmarva fox squirrel (DFS), from the List of Endangered and Threatened Wildlife (List). In the proposed rule, we solicited information and comments from the public and scientific experts for 60 days, ending November 24, 2014. Later in this document, we discuss comments we received. For more information on previous Federal actions concerning the Delmarva fox squirrel, refer to the proposed rule available at *http://www.regulations.gov* under Docket No. FWS–R5–ES–2014–0021.

Species Information

The Delmarva fox squirrel (*Sciurus niger cinereus*), a subspecies of the eastern fox squirrel (*Sciurus niger*) found only on the Delmarva Peninsula, is located between the Chesapeake Bay and the Atlantic Ocean in portions of Maryland, Delaware, and Virginia. The DFS is a large, silver-gray tree squirrel with white underparts and a wide tail. It inhabits mature forests of mixed hardwoods and pines within the agricultural landscapes of the Delmarva Peninsula and is not typically found in suburban settings. The DFS is also associated with forests that have a relatively open understory (Dueser et al. 1988, entire; Dueser 2000, entire) or where understory shrubs are clumped, leaving other open spaces (Morris 2006, p. 37). While these squirrels need mature forest for both feeding and denning, they can travel and forage in other areas, including clearcuts, young forests, and agricultural fields.

As a member of the Order Rodentia, the DFS has a life history with good potential for population increase. For example, females breed at 1 year of age, litter sizes range from two to four young, some females have potential for two litters in 1 year, and lifespans can reach 6 to 7 years in the wild. Den sites are frequently found in tree cavities, but leaf nests may also be used. Home ranges of the DFS vary considerably but are typically 12 to 16 hectares (ha) (30 to 40 acres (ac)), and individual home ranges overlap (Flyger and Smith 1980; entire, Paglione 1996; entire, Pednault-Willett 2002, p. 109). Densities range from 0.36 to 1.29 DFS per ha (0.15 to 0.5 DFS per ac), averaging 0.82 DFS per ha (0.33 DFS per ac) (Paglione 1996, p. 28; Pednault-Willett 2002, pp. 85–104).

Historically, this subspecies had a patchy distribution throughout most of the Delmarva Peninsula and into southern Pennsylvania, but by the time of its listing in 1967 (32 FR 4001; March 11, 1967), remnant populations occurred in only four Maryland counties (Taylor 1976, entire); this range contraction was most likely caused by land use changes and hunting. When the subspecies was listed, its distribution had been reduced to only 10 percent of the Delmarva Peninsula. After listing, the hunting season for this subspecies was closed, and recovery efforts focused on expanding the squirrel's distribution through translocations. In addition, new populations have been discovered since the time of listing (particularly since more intensive search efforts were initiated), and there are now many more areas of forest known to be occupied by the DFS.



The squirrel's current occupied range is defined as the area within 4.8 kilometers (km) (3 miles (mi)) of credible DFS sightings. As of the 2012 status review for the DFS, this covered 28 percent of the Delmarva Peninsula, including 10 of the 14 peninsular counties (8 counties in Maryland and 1 each in Delaware and Virginia) and 54,543 ha (134,778 ac) of occupied forest (USFWS 2012, based on 2010 data). Since that time, new sightings have continued to occur and an updated overview of its range as of 2013 is provided below in Table 1. An additional population discovered in Worcester County, Maryland, is the first population found there that was not a result of a translocation. Figure 1 shows range changes between the time of the 1993 recovery plan and the present decade.

TABLE 1—KNOWN OCCUPIED RANGE OF THE DFS, 1970 TO 2013

Summary of Changes From the Proposed Rule

We have not made any substantive changes in this final rule based on the comments that we received during the public comment period on the September 23, 2014, proposed rule (79 FR 56686), but we have added or corrected text to clarify the information that was presented. This information and other clarifications have been incorporated into this final rule as discussed below in Summary of Comments and Recommendations.

Summary of Comments and Recommendations

In the proposed rule published on September 23, 2014 (79 FR 56686), we requested that all interested parties submit written comments on the proposal by November 24, 2014. We also solicited peer review of the scientific basis for the proposal (see *Peer Review Comments,* below), and contacted appropriate Federal and State agencies, scientific experts and organizations, and other interested parties and invited them to comment on the proposal. Newspaper notices inviting general public comment were published in the Baltimore Sun, placed on Service Web sites, and advertised by other online media outlets (*e.g., http://www.wboc.com/story/26574688/*

maryland-state-officials-set-to-discuss-delmarva-peninsula-fox-squirrel). We did not receive any requests for a public hearing.

During the public comment period for the proposed rule, we received a total of 129 comment letters. Of these, 74 provided substantive comments that we address below, including one letter from the State of Maryland and comments from two peer reviewers. Both peer reviewers asked for additional detail on the life history of this subspecies, which we have provided in the supplemental documents that can be found at *http://www.regulations.gov* under Docket No. FWS–R5–ES–2014–0021. All substantive information provided during the review period either has been incorporated directly into this final determination or into the supplemental documents, or is addressed below.

Comments From States

(1) Comment: The State of Maryland's Department of Natural Resources (DNR) was supportive of the proposed rule and concurred with our findings. The DNR added that it would continue to provide protection to the DFS under the authority of Maryland's Nongame and Endangered Species Conservation Act, although likely not at the endangered level. The DNR also stated that the post-delisting monitoring plan proposed by the Service was adequate to document expansion or contraction of the range of the DFS and that the agency would participate in the monitoring effort.

Our Response: We are in agreement with the DNR and appreciate its commitment to continued conservation.

Public Comments

(2) Comment: Several commenters expressed concern that the DFS would be hunted after delisting, and that populations would then decline and might require relisting.

Our Response: As explained in the proposed rule and supplementary documents (see Post-delisting Monitoring Plan, appendices D through F), after delisting, the State of Maryland intends to keep the DFS on the State list of endangered and threatened species as a Species of Conservation Concern; this status does not allow a hunting season. This intention is reinforced by the State of Maryland's comment letter reiterating that the subspecies will remain State-listed as described above.

The State of Delaware also intends to keep this subspecies on its State list of endangered and threatened species, and no hunting of the DFS will be allowed after delisting. The State has written a management plan for the DFS (DNREC 2014) that calls for adding two additional DFS populations in the State, likely through translocations.

In the State of Virginia, all DFSs are currently on the Chincoteague National Wildlife Refuge, where they will not be hunted. The State has evaluated locations for potential translocations of DFSs in the future, but any future translocated populations are not expected to be subject to hunting. Enhancement of DFS populations in Virginia would be primarily aimed at restoring the native fauna of Virginia.

(3) Comment: Several commenters stated that the occupancy of 28 percent of the historical range was insufficient to warrant delisting.

Our Response: The Act is legislation intended to prevent extinction of native species and does not describe recovery in terms of the proportion of a historical range that is occupied by a species. We do take into account in our listing and delisting determinations the effects that loss of historical range may have on the current and future viability of a species. As explained in our significant portion of the range (SPR) final policy (79 FR 37578; July 1, 2014), we have concluded that this consideration is sufficient to account for the effects of loss of historical range when evaluating the current status of a species. The purposes of the Act, stated in section 2, are to provide a means to conserve the ecosystems upon which endangered species and threatened species depend and to provide a program for the conservation of endangered species and threatened species. The Act itself does not contain the phrase ''historical range,'' nor does it ever allude to restoration throughout the entire historical range as a conservation purpose.

Some concerns about the current range of the DFS likely stem from a frequently quoted reason for listing, ''the species was listed because it declined to 10 percent of its historical range'' (USFWS 1993, p. 1). However, the substantial population decline as evidenced by that range decline is the actual reason for the listing. In 1944, the DFS was found in seven counties (Dozier and Hall 1944), but by 1967, it was known to occur in only four counties; thus, the decline would have been apparent and reasonably concerning to many biologists at the time of listing.

(4) Comment: Several commenters stated that the total number of animals in the rangewide population did not appear to be large enough to warrant delisting and expressed a concern that the population would decline again after delisting.

Our Response: As described in the proposed rule, the best estimate of the rangewide number of the DFS at the time of the 2012 status review was 22,368 (USFWS 2012, p. 20), which we can approximate as 20,000. However, the critical question with regard to the listing status of the subspecies is not a specified number of individuals; rather, it is the level of extinction risk, indicating whether the subspecies meets the definition of endangered or threatened. To address this question, we conducted a population viability analysis (PVA) for the DFS (Hilderbrand et al. 2007, entire), which enabled us to evaluate how the foreseeable threats may affect the probability of extinction of DFS subpopulations (USFWS 2012, pp. 18–21, 23–44).

The Hilderbrand et al. (2007) PVA model indicates that a population of 130 animals would have a 95 percent chance of persisting for 100 years. This threshold, also called a minimum viable population (MVP), provides a useful benchmark of extinction risk. It should not be mistaken for a recovery goal but is, rather, a population size with an associated extinction risk based on the life history of the DFS before assessing additional threats. This PVA includes variations in adult and juvenile survival, the number of young produced per year, and variability in environmental effects.

Using this model, we estimate that the known occupied forest within the range of the DFS contains a total population that is 171 times the MVP and that, even under the worst-case scenarios for threats, including inundation of areas up to 0.6 meters (m) (2 feet (ft)) above sea level due to sea level rise, we would still have a total population that is 145 times the MVP. Further, our analysis indicates that the rangewide population would comprise at least 15 subpopulations broadly distributed across the Delmarva Peninsula. After considering the conservation imperatives of habitat availability, habitat connectivity, population resiliency and redundancy, and genetic and/or ecological representation, we concluded that the risk of extinction is low, even under a worst-case scenario, and that the current population is sufficiently abundant and well distributed to withstand foreseeable threats.

(5) Comment: Several commenters stated that sea level rise was a great concern, and that threats from climate change and sea level rise have not been eliminated.

Our Response: We agree that climate change and sea level rise trends are continuing; nonetheless, the pertinent

question is whether these factors are likely to threaten the DFS with extinction or with endangerment in the foreseeable future. We analyzed the impact of sea level rise and associated habitat loss on the DFS using a worst-case scenario of 0.6 m (2 ft) of inundation within 40 years. As stated in our response to Comment 4, we evaluated this factor along with a number of other factors with the potential to affect the long-term viability of DFS subpopulations (noting that various conditions can occur on the landscape and threaten some species and not others depending on the abundance, distribution, and life history of the species). After considering habitat availability and connectivity, as well as population resiliency, redundancy, and representation, we conclude that the risk of extinction is low even under the worst-case sea level rise scenario (see Summary of Factors Affecting the Species, *Factor A*), given projected population levels and distribution, and the ability of the DFS to colonize unoccupied habitat as described in the September 23, 2014, proposed rule (79 FR 56686) and 2012 status review (USFWS 2012).

(6) Comment: One commenter expressed two concerns regarding DFS movements in response to sea-level rise: First, during sea level rise, individual animals would not be able to move inland because DFSs prefer moving on the ground and would be unable to move across habitat that became flooded. Second, with the occurrence of sea-level rise and the associated loss of habitat, populations would not be able to shift inland over time.

Our Response: DFSs have always been abundant in southern Dorchester County, where forests are frequently flooded in the spring and are often exposed to high tidal surges. Further, DFSs have been observed moving across marshlands to other woodlands (L. Miranda 2010 and C. Keller pers. comm. 2009) and moving through flooded woodlands on logs and hummocks as well as through the trees (C. Bocetti pers. comm. 2015). In these same areas, marked animals have been documented to move 4 km (2.5 mi) and return within a season, despite intervening streams and associated marshlands 100 m (328 ft) wide or greater (C. Bocetti pers. comm. 2015). Typical home ranges are about 16.2 ha (40 ac) in size and generally include forested wetlands, indicating that DFSs already inhabit forests that experience periodic flooding.

Sea level rise is likely to result in more frequent flooding and storm and tidal surges, with gradual deterioration of habitat at the shoreline edges. It is therefore likely that individual animals will need to shift their home range inland and that the overall population will shift inland as well. The ability of DFSs to shift their home ranges in response to habitat change has already been demonstrated as individual animals moved to new areas following clearcuts in portions of their home ranges (Paglione 1996); we note that clearcutting is a more rapid and dramatic habitat alteration than would be expected from flooding or storm surges.

In terms of available habitat for the DFS to move into following storm events and/or sea level rise, we evaluated the rangewide availability and connectivity of forest patches in the 2012 status review (USFWS 2012) by mapping the connectivity of forest patches relative to dispersal of DFS subpopulations (USFWS 2012, figures 9 and 10). After quantitative analysis of habitat that could be lost due to sea level rise and development (USFWS 2012, table 7), we concluded that even if all potentially affected habitat was lost immediately, remaining DFS populations would still be sufficiently abundant and well distributed to alleviate the risk of extinction.

With regard to the connectivity needed to allow DFSs to move to more upland habitats, we recognize that sea-level rise can widen rivers and increase obstacles to DFS movement, especially from west to east in southern Dorchester County. However, even with maximum projected inundation, DFSs could disperse from southern Dorchester without crossing streams. In addition, southern Dorchester County would still contain about 2,400 to 3,200 ha (6,000 to 8,000 ac) of suitable occupied habitat, supporting at least six times the MVP. Given this, we predict long-term population viability in these areas of Dorchester County.

(7) Comment: One commenter stated that the DFS should not be delisted because it has not met all of the recovery criteria contained in the most recent DFS recovery plan (USFWS 1993). In particular, the commenter contended that our analysis of recovery criterion 6 does not adequately support our conclusion that this criterion has been met.

Our Response: We will respond first to the issue of whether recovery criteria must be met in order to delist a species, and second to the issue of whether criterion 6 has been met.

Notwithstanding our conclusion that the recovery criteria for the DFS, as required under section 4(f) of the Act, have been met, this is not the requisite analysis for determining the appropriate listing status of the species. Rather, listing determinations must be made in accordance with sections 4(a)(1) and 4(b) of the Act. Section 4(a)(1) requires that the Secretary determine whether a species is endangered or threatened because of one or more of five threat factors, while section 4(b) requires that the determination be made ''solely on the basis of the best scientific and commercial data available.'' Thus, any determination to delist a species must be based on the best information available at the time of the determination and the results of the five-factor analysis, notwithstanding any information in the recovery plan.

Although meeting recovery criteria is not essential for determining a species' listing status, our most recent status review (USFWS 2012) led us to the conclusion that all recovery criteria for the DFS, including criterion 6, have been met. Criterion 6 states that ''mechanisms that ensure perpetuation of suitable habitat at a level sufficient to allow for desired distribution [must be] in place and implemented within all counties in which the species occurs.'' Our analysis showed that there are many State and Federal laws and land protection programs in place that actively protect land at the present time and will continue to do so into the future. A detailed table and map of the land protected by these programs in each county is provided for each county in the 2012 status review (USFWS 2012, table 5 and figure 7). These protective mechanisms are also presented in our analysis of Factor D (USFWS 2012, pp. 38–39), with a detailed description of each program provided in appendix D of the same document. These data clearly portray the adequacy of these regulatory mechanisms.

(8) Comment: One commenter stated we had not adequately addressed the future of the translocated population of the DFS at Chincoteague National Wildlife Refuge (NWR) due to the projections in sea level rise.

Our Response: We agree with the commenter that this coastal population of the DFS, inhabiting Assateague Island, a barrier island, is vulnerable to reduced habitat and isolation from sea level rise, and we discussed this situation in the September 23, 2014, proposed rule (79 FR 56686). We also discuss it below, under Factor A: *Loss of forest habitat from sea level rise,* where we note that although the island's beaches, marshes, and shorelines are vulnerable to sea level rise, most of the forest habitat occupied by the DFS is above the 0.6 m (2 ft) inundation worst-case scenario. Even so, Refuge managers

are aware of the risks of sea level rise and are actively exploring management responses to this factor. As stated in the proposed rule: ''Sea level rise is expected to cause severe losses to beach and tidal flat habitat but currently upland habitat would only be reduced by 4 to 8 percent (National Wildlife Federation 2008, p. 69). [Chincoteague's] Comprehensive Conservation Plan [CCP] commits to continued forest management to maintain suitable habitat for Delmarva fox squirrels and continued monitoring of Delmarva fox squirrel populations.'' The draft CCP is available at: *http://www.fws.gov/nwrs/threecolumn.aspx?id=2147550165.*

We consider it highly likely that a DFS population will persist on Chincoteague NWR for the foreseeable future, although there may be a shift in the habitats that are occupied. Nonetheless, even if the Chincoteague population were to be lost, this would not cause a rangewide risk of extinction (USFWS 2012, table 7).

(9) Comment: One commenter stated, ''In its 2007 and 2012 status reviews, the Service concluded that these recovery criteria were not based on the best available science and did not represent the most up-to-date information on the biology of the DFS. And the Service also concluded in these status reviews that the recovery criteria did not specifically address all of the five threat-based listing factors.''

Our Response: The commenter may be referring to sections 2.2.2.1 and 2.2.2.2 of the referenced status reviews (USFWS 2007, p. 3; USFWS 2012, p. 5):

''*2.2.2.1 Do the recovery criteria reflect the best available and most up-to-date information on the biology of the species and its habitat?* No. More recent information on the squirrel's distribution, subpopulation delineation, and population persistence is not reflected in the 1993 recovery criteria. Nonetheless, these criteria continue to act as generally appropriate measures of recovery.

2.2.2.2 Are all of the relevant listing factors addressed in the recovery criteria? No. None of the recovery criteria specifically addresses any of the five listing factors, although habitat-related threats are alluded to. The criteria evaluate the biological status of the species.''

These statements are intended to convey that although new information had become available since 1993, the recovery criteria were still considered adequate for assessing DFS recovery progress. With regard to criteria addressing the five listing factors, the lack of specific threats-based criteria is typical of recovery plans at that time and does not preclude a separate five-factor analysis (see Comment 7, above). Significantly, since the two status reviews analyze both the recovery criteria and the five listing factors, each review constitutes a complete assessment of the status of the species (USFWS 2007; USFWS 2012). Overall, the two status reviews and the September 23, 2014, proposed rule (79 FR 56686) are based on the best available information on the biology of the DFS and the threats to its long-term viability.

(10) Comment: One commenter noted that the population data in the 2012 status review were the same as those in the 2007 review and suggested that this showed there was no increase in the population or range between those two time periods. The commenter further suggested that there was a decrease in DFS-occupied forest between 2007 and 2012. The commenter stated that despite the information for the two status reviews being essentially the same, different conclusions were reached.

Our Response: It is not clear how the commenter's interpretation of the data in the two reviews was made. Both the September 23, 2014, proposed rule (79 FR 56686 Table 1) and the 2012 status review (Chart 2) clearly show an increase in the area of occupied forest from 51,975 ha (128,434 ac) in 2005, to 54,543 ha (134,778 ac) by 2010; a map illustrating the changes in the range between the two reviews is also provided (USFWS 2012, figure 3). Since 2010, we have continued to document new areas of occupied forest and provide an updated number of 55,589 ha (137,363 ac) as of 2013 (79 FR 56686, September 23, 2014, Table 1).

The rangewide population estimates in the 2007 and 2012 reviews differ only slightly (19,265 versus 22,368 animals, respectively), but as described in the 2012 review, the two estimates were based on different survey methods. Light detection and ranging (LiDAR) data, which allow us to distinguish between mature forests and other forested areas, were not available for the 2007 status review. We were able to use a more refined and conservative approach in the 2012 review and estimated the rangewide population using only occupied mature forest. Both estimates are intended to provide a general measure of the rangewide population size (USFWS 2007, p. 8; USFWS 2012 p. 20).

It should also be noted that in the 2007 review, we concluded that DFS recovery was imminent. We indicated that a final listing recommendation was pending while we obtained and analyzed LiDAR data, and that, if new information continued to support our finding that DFS habitat availability and connectivity were likely to persist over the foreseeable future, we would recommend initiation of delisting when the LiDAR analysis was completed (USFWS 2007, p. 27).

(11) Comment: One commenter was concerned because 9 of 22 subpopulations (40 percent) appear to be vulnerable to extirpation.

Our Response: This concern does not take into account the relative size of these subpopulations. As described in the 2012 status review (USFWS 2012, p. 42, figure 5 and table 7), there is a higher vulnerability to extirpation for 9 smaller subpopulations, but the vast majority (95 percent) of DFSs occurs in 11 large, secure subpopulations. This provides a solid indication of continued persistence and growth of the rangewide population. Most of the smaller populations originated as translocations, which have become well established and have contributed to the expanded distribution of the subspecies. Further, as shown by the 2007 population viability analysis (Hilderbrand et. al 2007), if one or more small populations blink out, the rangewide population is still not vulnerable to extinction; even accounting for all projected losses from sea level rise and development, the rangewide population will still be 145 times the MVP, indicating long-term viability.

Peer Review Comments

In accordance with our peer review policy published on July 1, 1994 (59 FR 34270), we solicited expert opinion from five independent scientists with expertise that included familiarity with the DFS and its habitat, biological needs, and threats. We received responses from two of the peer reviewers.

We reviewed comments received from the peer reviewers for substantive issues and new information regarding the status of the DFS. The peer reviewers generally concurred with our methods and conclusions and considered the scientific information to be correct and the analyses to be sound. However, both reviewers identified parts of the document that could be strengthened. Peer reviewer comments are addressed below and incorporated as appropriate into the final rule or supplemental documents, available at *http://www.regulations.gov* under Docket No. FWS–R5–ES–2014–0021.

(12) Peer Review Comment: Both reviewers asked for more detail to be provided on life history of the subspecies.

Our Response: We have added more life-history information in a supplemental document for the final rule, particularly life history related to reproduction, litter size, and survival. The supplemental document is available at *http://www.regulations.gov* under Docket No. FWS–R5–ES–2014–0021.

(13) Peer Review Comment: One reviewer asked for clarification on the length of time that agreements preventing development on private lands would continue.

Our Response: The private lands we consider protected from development have easements that extend in perpetuity, and this has been added to the text of this rule.

(14) Peer Review Comment: Both reviewers thought that the rate of future development might be underestimated and suggested possibly using zoning or projected road development as additional sources of information.

Our Response: We consider the analysis of future development conducted by the Maryland Department of Planning to be the best available source of information on development trends insofar as this office has both the responsibility for tracking such information and the requisite expertise to make trend projections. The September 23, 2014, proposed rule (79 FR 56686) and 2012 status review (USFWS 2012) used data from Maryland's 2008 planning report (Maryland Department of Planning 2008a), as this was the most current information at the time; the same trends and areas of expected development are also mapped in a more recent planning document (Maryland Department of Planning 2011a). The data continue to show that the eastern shore of Maryland is far more rural, with less development and more protected lands, than elsewhere in Maryland. Thus, the most recent information continues to support the past and future trends used in our previous analysis.

Consideration of zoning was not included in our analysis specifically because zoning restrictions can be changed, making projections based on this source of information less certain. Further, we took a cautious approach in considering future development by projecting complete loss of any DFS-occupied habitat within a ''Smart Growth'' area that was not otherwise protected. (''Smart Growth'' is a theory of land development that concentrates new development and redevelopment in areas that have existing or planned infrastructure to avoid sprawl.) Currently, DFSs inhabit blocks of forest within the Smart Growth areas of both Cambridge and Easton in Maryland. Although limited monitoring shows that DFSs have been persisting in these woodlands over many years and may be able to continue doing so in the future, our analysis assumes loss based on lack of ensured habitat protection.

(15) Peer Review Comment: One peer review comment referred to the possibility of residential development causing problems because of the presence of free-ranging dogs that may pursue the DFS.

Our Response: We agree that this can be a problem in some situations, and although all counties within the current range of the DFS have regulations that require dogs to be on a leash, at heel, or directly beside the owner, enforcing these regulations can be difficult. Further, as noted in the status review (USFWS 2012, p. 27), the presence of dogs may be one reason DFSs do not inhabit residential developments. Despite these concerns, we do not consider free-roaming dogs to be a threat that would result in population-level effects, either individually or in combination with other possible risks, to this subspecies, as effects are highly localized and regulations do exist to enable management of this issue.

(16) Peer Review Comment: Both peer reviewers raised a concern regarding the commitment to monitoring of the DFS after delisting and questioned whether there would be long-term funds, time, and available personnel to carry out the monitoring work described in the post-delisting monitoring plan.

Our Response: We agree that sustaining monitoring efforts can be challenging and subject to competing priorities. Nonetheless, we have designed the post-delisting monitoring strategy to fit into current work plans and are seeking additional ways in which this effort can be incorporated into other monitoring work conducted by the States. For example, the hunt clubs leasing the Maryland State Chesapeake Forest lands are now asked to report sightings or camera shots which have already provided DFS records, and we are working with the States on other opportunities to invite hunters to report DFS sightings. We also anticipate that DFS-occupied sites managed by conservation groups will be monitored as part of their management efforts; sightings of DFSs are often reported by those who live or work on these properties. Overall, recording these sightings will enhance our ability to conduct widespread monitoring of the DFS.

Recovery

Section 4(f) of the Act directs us to develop and implement recovery plans for the conservation and survival of endangered and threatened species unless we determine that such a plan will not promote the conservation of the species. Recovery plans are not regulatory documents and are instead intended to establish goals for long-term conservation of a listed species; define criteria that are designed to indicate when the threats facing a species have been removed or reduced to such an extent that the species may no longer need the protections of the Act; and provide guidance to our Federal, State, and other governmental and nongovernmental partners on methods to minimize threats to listed species. There are many paths to accomplishing recovery of a species, and recovery may be achieved without all criteria being fully met. For example, one or more criteria may have been exceeded while other criteria may not have been accomplished, yet the Service may judge that, overall, the threats have been minimized sufficiently, and that the species is robust enough to reclassify or delist the species. In other cases, recovery opportunities may have been recognized that were not known at the time the recovery plan was finalized. These opportunities may be used instead of methods identified in the recovery plan.

Likewise, information on the species that was not known at the time of the recovery plan may become available. The new information may change the extent that criteria need to be met for recognizing recovery of the species. Recovery of species is a dynamic process requiring adaptive management that may, or may not, fully follow the guidance provided in a recovery plan.

Despite the guidance provided by recovery plans, determinations to remove species from the List must be made in accordance with sections 4(a)(1) and 4(b) of the Act. Section 4(a)(1) requires that the Secretary determine if a species is endangered or threatened because of one or more of five threat factors. Section 4(b) of the Act requires that the determination be made ''solely on the basis of the best scientific and commercial data available.''

Although recovery criteria, as mentioned above, help guide recovery efforts and should always be consulted when considering a change in the status of a listed species, the ultimate determination of whether to reclassify or delist a species must be made in accordance with statutory standards, and recovery criteria can neither substitute for nor pre-empt section 4(a)(1) requirements. Ultimately, a decision to remove a species from the

List is made when the best available data show that the species is no longer an endangered species or a threatened species, regardless of how closely this information conforms to the information and criteria in the recovery plan.

The most recent DFS recovery plan was approved by the Service on June 8, 1993 (USFWS 1993, entire), and updated on October 31, 2003 (USFWS 2003, entire). The plan states that ''the long-range objective of the DFS recovery program is to restore this endangered species to a secure status within its former range.'' The plan provides three criteria for reclassifying the DFS from endangered to threatened status. It then provides four additional criteria to be considered in conjunction with the first three for delisting the DFS.

Recovery Criteria

A discussion of the extent to which each recovery criterion has been met is provided in the proposed rule (79 FR 56686; September 23, 2014). This discussion is summarized below.

Criterion 1: Ecological requirements and distribution within the remaining natural range are understood sufficiently to permit effective management. A considerable body of new information has been amassed regarding the DFS' distribution and ecological requirements, and we thus conclude that this recovery criterion has been met. The six key contributions to our understanding of the DFS are summarized below.

(1) DFS range and distribution: The geographic information system (GIS) maintained for the DFS documents a significant increase in the area occupied by the DFS since the 1993 recovery plan was issued (see Figure 1, above). Records of DFS sightings by knowledgeable observers and, in particular, the use of trap and camera surveys have greatly improved our ability to determine which forest tracts are occupied by the DFS and monitor continued presence.

(2) Population persistence: Persistence of DFS populations over the recovery period has been evaluated through comparison of occupancy over time, including a survey conducted in 1971 and repeated in 2001, and a second analysis comparing occupancy from 1990 through 2010 (Table 2). These studies are summarized in the proposed rule (79 FR 56686; September 23, 2014) and status review (USFWS 2012, pp. 15–17).

TABLE 2—DFS OCCUPANCY OF 275 FORESTED TRACTS (41,733 ha or 103,125 ac) IN MARYLAND, 1990 COMPARED TO 2010

Occupancy change from 1990 to 2010	Area of forest	Number of forest tracts	Percent of the original 41,733 ha (103,125 ac) in each occupancy status
Persistence	38,130 ha (94,221 ac)	181	91
Extirpations	499 ha (1,233 ac)	7	1
Uncertain	3,104 ha (7,671 ac)	87	8
Discoveries or colonizations	13,042 ha (32,227 ac)	250	

As indicated in Table 2, DFSs continued to persist in the vast majority of woodlots where they were known to occur in 1990, and their presence was newly documented in an additional 13,042 ha (32,227 ac) in all three States through 2010 (USFWS 2012, p. 8). Although some of these discoveries are likely to be occurrences that were previously present but undetected, anecdotal information indicates that several new localities represent true range expansion (see, for example, USFWS 2012, figure 4). Using the 2010 figures for occupied forest in all three States, as well as maps of mature forest and density estimates of the DFS available from various studies, we estimate that the total population of the DFS is now about 20,000 animals across an expanded range (USFWS 2012, p. 21).

(3) Population viability: A DFS population viability analysis (PVA) developed by Hilderbrand et al. (2007, entire) modeled the extinction probabilities of different-sized populations and determined that a population with 65 females, or 130 animals total, had a 95 percent chance of persisting for 100 years. This value, also called a minimum viable population (MVP), was used to gauge extinction risk by projecting how many populations of this size are likely to remain present in a given portion of the current DFS range (USFWS 2012, pp. 18–20; also see *Public Comments,* above).

The PVA also estimated that 75 percent of a given DFS population would have the ability to disperse to areas within 4 km (2.5 mi) (Hilderbrand et al. 2007, p. 73), and thus animals in forested tracts within this distance would be likely to interbreed; these interbreeding groups are defined as subpopulations. The analysis indicated that approximately 85 percent of DFSs are found in four large, narrowly separated subpopulations that could expand to become even more connected. Each of these subpopulations contains populations estimated to be several times the MVP minimum and have a high likelihood of population persistence. Overall, the rangewide population, estimated at between 17,000 and 20,000 animals, contains more than 100 times the MVP.

(4) Effects of timber harvest: Two major studies of the effects of timber harvest on the DFS (Paglione 1996, entire; Bocetti and Pattee 2003, entire) suggest that the subspecies is fairly tolerant of timber harvest, although specific impacts depend on the size, location, and landscape context of the harvest. Small clearcuts within a surrounding forest showed relatively little impact on the DFS, with individual squirrels shifting their home ranges into adjacent habitat, whereas harvest of more isolated forest peninsulas forced DFSs to move greater distances (Paglione 1996). Findings from the long-term Bocetti and Pattee (2003) study lead to the general conclusion that the DFS can tolerate timber harvests and can continue to occupy forested mosaics of mature and regenerating stands. In addition, both studies suggest that the DFS has high site fidelity and tends to shift home ranges rather than abandon a site in response to disturbance.

(5) Habitat availability: An analysis of LiDAR data provided by the State of Maryland enabled an inventory of mature forest suitable for the DFS throughout most of the squirrel's range (USFWS 2012, Appendix E). As of 2004, LiDAR mapping had identified 175,656

ha (434,056 ac) of mature forest in the eight Maryland counties occupied by DFSs (55 percent of all forest was considered mature), with 17 percent currently occupied and thus over 80 percent of mature forest available for expansion (USFWS 2012, table 4).

Although the amount and location of mature forest will change over time with timber harvest and forest growth, these data provide good baseline information about the availability and distribution of suitable habitat. Mature forest is often found in riparian zones (USFWS 2012, figure 8) that can provide connected habitat for DFS dispersal and colonization of new areas. LiDAR mapping also showed large tracts of mature forest distributed in upland areas throughout the Maryland portion of the subspecies' range. Given that most DFS populations occur in Maryland and, further, that unoccupied but suitable habitat is found both along the coast and inland elsewhere on the Delmarva Peninsula, we can infer from this habitat inventory that there is ample unoccupied mature forest to enable further expansion of the DFS' rangewide population.

(6) Habitat connectivity: Lookingbill et al. (2010, entire) conducted a GIS analysis of the connectivity between 400-ha (175-ac) forest patches on the Delmarva Peninsula (although the DFS is not a forest interior obligate and does not require forest blocks this large). Study results show high connectivity of forest blocks in the southern Maryland portion of the squirrel's range, indicating few obstacles to DFS dispersal throughout this area. Two major forest corridors were identified for DFS dispersal out of Dorchester County, Maryland, one of which is already occupied by the DFS (a third dispersal corridor not identified by the model is also DFS-occupied). Observations of DFS movement through a wide range of habitats, in conjunction with the results of this connectivity model and the map of LiDAR-defined mature forests, indicate that there is sufficient habitat availability and connectivity for further DFS range expansion.

Criterion 2: Benchmark populations are shown to be stable or expanding based on at least 5 years of data. Criterion 2 was intended to measure overall DFS population trends using monitoring data from seven benchmark populations. Although a slightly different set of eight benchmark sites was ultimately monitored, analysis of the resulting data (Dueser 1999, entire) showed that the benchmark sites were stable over a 5- to 7-year period, and benchmark monitoring was concluded.

We also have collected data to better understand rangewide population trends. The distribution data that document an expanded range and population persistence within that range as described under criterion 1, above, are much better indicators of DFS recovery. Although DFS populations in isolated areas (such as on small islands) are vulnerable to extirpation, all available population data for the DFS indicate that the range has expanded and populations are persisting within the range, and that this recovery criterion has been met.

Criterion 3: Ten translocated colonies are successfully established throughout the historical range. This criterion requires that at least 10 new DFS colonies must show evidence of presence for at least 5 to 8 years after release, demonstrating the ability of the DFS to colonize new sites, whether naturally or through management.

Post-release trapping results (Therres and Willey 2002, entire), along with more recent trapping and camera surveys, indicate continued presence of 11 of 16 translocated colonies (69 percent) for more than 20 years (USFWS 2012, table 1, p. 83). Further, in several of these areas, DFSs have dispersed well beyond the initial release site.

This success rate is higher than is typically found for similar translocation efforts for other endangered species (see Fischer and Lindenmayer 2000, p. 5), although the success rate is generally higher for mammals and wild source populations (Wolf et al. 1996, p. 1146). Further, despite some initial concerns about the genetic diversity of the translocated populations, subsequent analysis indicated that their genetic diversity was comparable to that of their source populations (Lance et al. 2003, entire). These data indicate that this criterion has been met.

Criterion 4: Five additional (post-1990) colonies are established outside of the remaining natural range. Criterion 4 requires discovery or establishment of colonies outside the range known at the time of the 1993 recovery plan, thus addressing the threat of range contraction and providing for additional population redundancy as one component of long-term species viability.

By 2007, eight new populations had been identified that did not result from translocations (USFWS 2007, figure 2), expanding the range toward the east. Notably, a colony discovered in Sussex County, Delaware, represents the first population found in that State since the time of listing that was not a result of a translocation. Since 2007, additional occupied forest has been discovered between some of these new populations, thus improving their long-term likelihood of survival (USFWS 2012, figure 3). We therefore conclude that this recovery criterion has been met.

Criterion 5: Periodic monitoring shows that translocated populations have persisted over the recovery period. Criterion 5 requires the continued presence of at least 80 percent of translocated populations, with at least 75 percent of these populations shown to be stable or improving. All successfully established translocated populations have persisted over the full period of recovery and have either become more abundant on their release sites or have expanded or shifted into new areas, as shown by trapping efforts (Therres and Willey 2002, entire), and, more recently, both trapping and/or camera surveys (USFWS 2012, table 1). Overall, the continued presence and growth of DFS populations at translocation sites show that this recovery criterion has been met.

Criterion 6: Mechanisms that ensure perpetuation of suitable habitat at a level sufficient to allow for desired distribution are in place and implemented within all counties in which the species occurs. Several well-established programs protect DFS habitat from development in perpetuity (Rural Legacy, Maryland Environmental Trust, Maryland Agricultural Programs, etc.). These programs, along with State and Federal ownership, protect an estimated 15,994 ha (39,524 ac; 29 percent) of DFS-occupied forest throughout the subspecies' current range (USFWS 2012, table 3). In addition, several State laws and regulatory programs will continue to protect forest habitat (USFWS 2012, appendix D). In Delaware and Virginia, the DFS occurs primarily on Federal and State land; the sole Virginia population was established on Chincoteague NWR and is completely protected from residential development or commercial timber harvest. Overall, we conclude that this recovery criterion has been met.

Criterion 7: Mechanisms are in place and implemented to ensure protection of new populations, to allow for expansion, and to provide inter-population corridors to permit gene flow among populations. As discussed under recovery criterion 1, LiDAR data indicate that mature forest blocks connected by riparian corridors are scattered throughout the Delmarva Peninsula. Further, Lookingbill et al. (2010, entire) indicate that these connected blocks constitute a good network of forest to allow for dispersing DFSs. Given ample opportunities for

dispersal, and the fact that many of these corridors are protected by State regulatory mechanisms (as discussed under *The Inadequacy of Existing Regulatory Mechanisms,* below), we conclude this recovery criterion has been met.

Summary of Factors Affecting the Species

Overview

Section 4 of the Act and its implementing regulations (50 CFR part 424) set forth the procedures for listing species, reclassifying species, or removing species from listed status. ''Species'' is defined in section 3 of the Act as any species or subspecies of fish or wildlife or plants, and any distinct vertebrate population segment of fish or wildlife that interbreeds when mature (16 U.S.C. 1532(16)). A species may be determined to be an endangered or threatened species based on one or more factors described in section 4(a)(1) of the Act: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence.

We must consider these same factors in delisting a species, and we must show that the best available scientific and commercial data indicate that the species is neither endangered nor threatened because: (1) It is extinct; (2) it has recovered and is no longer endangered or threatened (as is the case with the DFS); and/or (3) the original scientific data used at the time of listing classification were in error (50 CFR 424.11(d)). Determining whether a species is recovered requires evaluation of both the threats currently facing the species and the threats that are reasonably likely to affect the species in the foreseeable future following delisting and removal or reduction of the Act's protections.

A species is endangered for purposes of the Act if it is in danger of extinction throughout all or a significant portion of its range (SPR) and is threatened if it is likely to become endangered within the foreseeable future throughout all or a significant portion of its range. The word ''range'' in these definitions refers to the range in which the species currently exists. Although the term ''foreseeable future'' is left undefined, for the purposes of this rule, we regard foreseeable future as the extent to which, given available data, we can reasonably anticipate events or effects, or extrapolate threat trends, such that reliable predictions can be made concerning the future status of the DFS. In conducting this analysis, our general approach was to review past threat trends and the DFS' response, followed by a prediction of future trends. With some exceptions, we used a time frame of approximately 40 years for both past and future trend analyses; this time period also allowed use of available data to make more reliable projections despite the inherent uncertainties attached to predicting the future.

In the following five-factor analysis, we evaluate the status of the DFS throughout its entire range. We then address the question of whether the DFS is endangered or threatened in any significant portion of its range. Note that information discussed in detail in the September 23, 2014, proposed rule (79 FR 56686) and/or the 2012 status review (USFWS 2012, pp. 26–44) is summarized for each factor below.

Factor A. The Present or Threatened Destruction, Modification, or Curtailment of Its Habitat or Range

Here we considered habitat changes caused by residential development, sea level rise, and commercial timber harvest, as well as the habitat-related effects on DFS population and rangewide viability, with the exception of development or timber harvest effects on the population on Chincoteague NWR, as it is completely protected from these activities; we did, however, address the impact of sea level rise on this population.

Habitat Loss Due to Development

The Delmarva Peninsula is basically a rural landscape, but the human population has increased since the DFS was listed, as shown by Maryland Department of Planning data discussed in the September 23, 2014, proposed rule (79 FR 56686) (see Maryland Department of Planning 2008a, 2008b, and 2011b). Despite the past—and continuing—growth, the majority of the Delmarva Peninsula's land base remains rural, with approximately 47 percent agricultural land, 36 percent forest, 9 percent wetlands, and only 7 percent developed land (USFWS 2012, table 2).

Further, since listing, a variety of State laws and programs have been put in place to counteract the rate of development across the State (USFWS 2012, appendix D), including the Maryland Forest Conservation Act and Maryland Critical Area Law. In addition, the Maryland Environmental Trust, Maryland Agricultural Land Protection Fund, and Maryland Rural Legacy Program used easements to permanently protect about 3,642 ha per year (9,000 ac per year) of private lands between 2000 and 2008, enhancing protection of DFS habitat (USFWS 2012, chart 4).

Overall, approximately 30 percent of DFS-occupied forest lands, widely distributed across the subspecies' range, is protected from development (USFWS 2012, table 5). Additional acres of protected forest outside the current range of the DFS provide areas for further expansion (USFWS 2012, figure 7). Overall, the 15,995 ha (39,524 ac) of occupied forest protected from development could support a DFS population 45 times the MVP (based on Hilderbrand et al. 2007, entire). However, because 70 percent of DFS-occupied forest occurs on private land that remains legally unprotected from development, future losses from development are likely.

We assessed the potential threat of DFS habitat loss stemming from future development by overlaying the acres of existing occupied forest with areas projected to be lost to development, including: (1) Smart Growth areas (excluding the acres that are protected by easement), (2) areas where development projects are already planned, and (3) areas that are projected to be lost by 2030 if Smart Growth policies are not implemented (USFWS 2012, figure 11). Overall, 3 percent (2,283 ha or 5,643 ac) of the forest area currently occupied by the DFS is anticipated to be lost to development by 2030. This relatively low rate of projected loss can be attributed to the likelihood that most future development on the Delmarva Peninsula will occur outside the current range of the DFS. Future development within the current range is expected to primarily affect two small, isolated DFS subpopulations where extirpation is already probable. Together these subpopulations constitute less than 0.5 percent of the total viable population; thus, their loss would have a negligible effect on the rangewide extinction risk for the DFS. Although information on development projections past 2030 is not available at this time, we consider it likely that development on the Delmarva Peninsula will continue to be concentrated near large towns outside the range of the DFS, with some scattered development within the subspecies' range.

Conversely, we also anticipate continued expansion of DFS populations, including expansion onto Chesapeake Forest lands (which are now owned and managed by the State of Maryland), noting that some occupancy on these lands has already

occurred. The anticipated discovery of additional occupied forest areas may further offset projected loss of occupied forest due to development, resulting in little change to the overall area of the distribution. Discovery of additional occupied forest has occurred at the rate of 763 ha per year (1,887 ac per year) over the past 10 years. Even if we discover new occupied forest at half that rate, the anticipated net loss of occupied habitat from development would be offset by known occupied habitat in 6 years. With the continued protection of forest lands provided by State laws and programs, we do not expect habitat loss from development to substantially elevate the risk of the DFS' extinction.

Loss of Forest Habitat From Sea Level Rise

The Delmarva Peninsula is a low-lying landform, and sea level rise in the Chesapeake Bay can flood and kill shoreline forests that provide habitat for the DFS. However, the DFS does not occur exclusively in coastal habitats, which moderates its vulnerability to this threat, and GIS analysis indicates that over 80 percent of the current range would remain even after a projected inundation of coastal areas by 0.61 m (2 ft); see the discussion below.

Regarding sea level rise in the past, the forces of land subsidence and sea level rise have resulted in a long history of island loss and formation in the Chesapeake Bay. In the last century, these forces combined to produce a relative sea level rise in the Chesapeake Bay region of approximately 0.3 m (1 ft) per 100 years (National Wildlife Federation 2008, p. 2).

Loss of some forest areas in southern Dorchester County, Maryland, is already apparent at the lowest elevations where trees have been killed by saltwater intrusion from recent hurricanes. Although we cannot precisely estimate how much occupied habitat has been lost in the past 40 years, LiDAR analysis of forest height and canopy cover has identified at least 68 ha (170 ac) at the edge of coastal marshes that are now standing dead trees.

Hurricanes contribute to forest loss as sea levels rise, with saltwater moving farther into forested areas during associated storm surges. However, hurricanes and intense storms have always been part of the weather in this region, and there is no evidence that they pose a problem *per se* for the DFS. For instance, in October 2012, cameras placed in woods to monitor DFSs near the Atlantic coast recorded DFSs onsite after superstorm Sandy passed through, indicating survival through the storm. Although direct loss of trees used by the DFS may have occurred in the past, the major effect of hurricanes has been the additional push of saltwater into more upland areas, killing coastal forest trees.

In terms of future effects of sea level rise and climate change, sea level rise in the Chesapeake Bay is certain to continue, and the rate of change is likely to be even higher than in the past (National Wildlife Federation 2008, pp. 16–17; Sallenger et al. 2012, entire; Boesch et al. 2013, entire). To determine the extent of DFS-occupied forest that may be lost through the combined effects of sea level rise and subsidence (*i.e.,* relative sea level rise), we used a 0.61-m (2-ft) inundation scenario. A rise in sea level of this magnitude is predicted to occur by about 2050 under a worst-case scenario (Boesch et al. 2013, p. 15).

Our GIS analysis, in which we overlaid this inundation scenario with DFS-occupied forest, indicated that the most severe effects of sea level rise on the DFS by 2050 will be seen in the southwestern portion of Dorchester County, Maryland (USFWS 2012, figure 12). Here, 9,332 ha (23,060 ac) of currently occupied forest would either be lost or remain only on isolated islands (USFWS 2012, figure 12). In addition, 4,409 ha (10,897 ac) of habitat along the remaining southern edge of the county would eventually deteriorate, causing DFSs to move inland. The ability of DFSs to move into connected habitat likely reduces the effects on this subspecies due to forest losses at the coastal marsh fringe; we nonetheless recognize this as habitat loss. Other projected forest losses include scattered patches throughout the range, including some losses in the range of the Chincoteague population (USFWS 2012, figure 12).

Even if the predicted habitat losses from sea level rise in southwestern Dorchester County were to occur immediately, the area's remaining 23,632 ha (58,398 ac) of occupied habitat would continue to support a highly abundant DFS population with a negligible risk of extinction. Moreover, the habitat in the northeastern portion of this area is connected to existing occupied forest farther inland (USFWS 2012, figure 9) into which DFSs could move. In particular, a large tract of State-owned forest that will soon become sufficiently mature to allow for DFS expansion connects the Dorchester DFS subpopulation to forest tracts in Caroline and Sussex Counties (USFWS 2012, figure 10). Although sea level rise may cause streams and rivers to widen and pose more of a barrier in the future, forested corridors will still be available to provide DFSs with access to habitat in the inland portions of Dorchester County.

Given our current understanding of DFS habitat use, dispersal, and population dynamics, the expected DFS response to deterioration of coastal woodlands from sea level rise is the gradual movement of some DFSs to more inland areas. The DFS is known to travel across areas of marsh and can move at least 40 to 50 m (131 to 164 ft) between forested islands and may also move across frozen marsh in the winter. We acknowledge that despite the squirrel's ability to move, isolation and loss of some individuals is likely to occur. Nonetheless, we conclude that habitat loss due to sea level rise will not be a limiting factor to the future viability of this subspecies.

The 0.61-m (2-ft) inundation scenario does not play out the same in parts of the range outside southwestern Dorchester County. In the series of small peninsulas in northwestern Dorchester County called the ''neck region,'' this scenario results in shrinkage of available habitat but does not create islands, and leaves habitat for the DFS to move into (USFWS 2012, figure 12). This is also the case in other portions of the squirrel's range near the Chesapeake Bay and the Atlantic Coast. Some additional small areas of occupied habitat may be lost, but the gradual loss can be accommodated by shifts in DFS home ranges to adjacent but currently unoccupied habitat.

The most coastal population of the DFS is a translocated population introduced in 1968 to Chincoteague NWR, a barrier island in Virginia that could be severely affected by sea level rise (National Wildlife Federation 2008, p. 69). The refuge's draft Comprehensive Conservation Plan (available at *http://www.fws.gov/nwrs/threecolumn.aspx?id=2147550165*) addresses this issue, and the refuge may consider future land acquisitions on the Delmarva Peninsula mainland. Chincoteague NWR will continue to manage for the DFS into the future whether or not the subspecies remains listed. In addition, translocations of DFSs to areas outside refuge boundaries at some point in the future are possible.

It is not clear how climate change effects may alter the nature of the forests of the Delmarva Peninsula. However, as the DFS occurs in pine, hardwood, and mixed hardwood forests, with a preference for mixed forests with diverse tree species, any effects on the species composition of these forests are unlikely to become a significant threat for the squirrel.

Overall, DFS distribution has increased in the past 40 years even with

some sea level rise occurring. In the next 40 years under a worst-case scenario, we predict some deterioration of forests in certain areas along the Chesapeake Bay and the Atlantic Coast (USFWS 2012, figure 12), but we also anticipate population expansion and shifts in DFS home ranges into suitable but currently unoccupied habitat available in the interior of the Delmarva Peninsula. Although some concern has been expressed about the likelihood of such expansion (*e.g.,* by the Center for Biological Diversity 2013), the analysis of habitat suitability, connectivity, and the range expansion documented in the last 15 years provides a rational basis for this expectation. Thus, available data indicate that loss of habitat due to climate change and sea level rise does not pose an extinction risk to the DFS.

Combined Effects of Development and Sea Level Rise

Having determined that neither development nor sea level alone threatens the DFS with rangewide extinction, we conducted a spatial analysis to examine how these most pervasive stressors might interact (USFWS 2012, figure 5 and table 7).

As of 2010, 54,429 ha (134,496 ac) of habitat supported 22 DFS subpopulations, (USFWS 2012, table 7), and 95 percent of the occupied forest contains the 11 largest subpopulations, which are highly likely to remain demographically viable. Even with projected losses from both development and sea level rise, and not accounting for potential discovery of additional occupied habitat, over 95 percent of the DFS-occupied forest would continue to support these most viable subpopulations. Thus, the combined effects of these threats do not pose an extinction risk to the DFS.

Loss of Mature Forest From Timber Harvest

Unlike development and sea level rise, timber harvest does not result in permanent loss of habitat. Further, as noted under *Recovery Criteria,* above, DFSs are resilient to timber harvests when there is adjacent habitat into which they can move. Thus, the major habitat concerns related to timber harvests are (1) the prevalence of short-rotation timber harvests, where trees are harvested before they mature enough to become DFS habitat; and (2) harvest rates that exceed growth rates and result in a continual decline of mature forest.

Short-rotation pine forestry involves harvesting stands at approximately 25 years of age for pulp and other fiber products, precluding their suitability as DFS habitat. In the past, two large corporations managed for short-rotation pine on the Delmarva Peninsula; however, these industries have effectively left the Peninsula. In 1999, the State of Maryland acquired 23,471 ha (58,000 ac) of these lands, collectively administered as the Chesapeake Forest Lands and comprising scattered parcels throughout the southern four Maryland counties (USFWS 2012, figure 13). Another 4,202 ha (10,384 ac) of forest land previously owned and managed for short-rotation pine are now owned by the State of Delaware. All these lands will now be protected from development and managed for sustainable sawtimber harvest and wildlife habitat objectives. Moreover, DFS management has been integrated into the Sustainable Forest Management Plan for Chesapeake Forest Lands prepared by Maryland's Department of Natural Resources (Maryland DNR 2013, pp. 92–96), which identifies a total of 17,618 ha (43,535 ac) as DFS Core Areas and DFS Future Core Areas. Overall, these land acquisitions represent a future of protected forest areas managed for sawtimber where the DFS can survive and grow in numbers, substantially removing the threat posed by short-rotation pine management on the lower Delmarva Peninsula.

Harvest rate estimates for both the 2007 and 2012 status review (USFWS 2007, pp. 17–20; USFWS 2012, table 6) indicated that harvests in more recent years have been substantially less than in previous years (generally prior to 2005) (USFWS 2012, table 6). For instance, in the four southern Maryland counties, the average annual harvest dropped from approximately 1,050 ha (2,594 ac) prior to 2005, to approximately 303 ha (749 ac) since then. The average size of harvested stands in these counties has also decreased, from an average of 22 ha (54 ac) to an average of 15 ha (36 ac). This is also the case in Delaware; in Sussex County, the annual harvest rate in the last 4 years was half of what was generally harvested between 1998 and 2005, with the same holding true for the size of individual harvest areas.

Among other reasons for these reductions, economic pressures have resulted in the closure of several sawmills on the Delmarva Peninsula. The market for timber has declined dramatically, with low prices acting as a disincentive to harvesting. As discussed below, reduced harvest levels are likely to continue in the future.

Although it is very difficult to predict future market forces, trends in fragmentation and parcelization in the Chesapeake Bay region (Sprague et al. 2006, pp. 22–24) suggest that future timber harvests might remain smaller in size and occur less frequently. Parcelization is the subdivision of large blocks of land into multiple ownerships, with a consequent tendency to shift from forest management to management for aesthetics and wildlife values. In Maryland, 45 percent of woodland owners own less than 20 ha (50 ac) of woods (U.S. Department of Agriculture, 2012). Given general sizes of timber harvests, these woodlands may be too small for future harvests and are more likely to be managed for aesthetics and wildlife.

This ownership pattern also reflects the gentrification of the eastern shore of Maryland, with landowners becoming less likely to be farmers or foresters and more likely to be commuters or retirees who do not use their properties for income. This trend is expected to continue into the future (see *http://www.mdp.state.md.us/msdc/S3_Projection.shtml*), with a concomitant reduction in total acres harvested.

Overall, the forest land transfers in Maryland and Delaware, in conjunction with available data on harvest rates across the range of the squirrel, suggest that timber harvest does not pose an extinction risk for the DFS.

Factor A Summary

The current range of the DFS spans coastal and interior areas of the Delmarva Peninsula where DFSs inhabit diverse wetland and upland forest types, suggesting that DFS populations will continue to remain resilient to a variety of habitat-related effects. Further, the distribution of these habitats provides for redundancy of populations, which reduces the risk of catastrophic loss. We recognize that habitat losses may occur in some areas, primarily from residential development and sea level rise, but we expect the DFS population to remain at or above recovered levels, and, moreover, we do not expect such habitat losses to prevent overall expansion of the range in the future.

Factor B. Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

Overhunting has been posited as a factor in the original decline of this subspecies. Squirrel hunting was common in the early and middle decades of the 20th century, and hunting of the DFS in small, isolated woodlots or narrow riparian corridors could have resulted in local extirpations. Taylor (1976, p. 51) noted that the DFS remained present on large agricultural estates where hunting was not allowed, suggesting that these areas

may have provided a network of refugia for the DFS.

By 1972, hunting of DFS was banned through state regulations. Removal of hunting pressure may have been one factor in the renewed population growth and expansion of the squirrel's range to its current extent. Coincidentally, squirrel hunting has declined in popularity in recent decades; nationwide, squirrel hunting declined by about 40 percent between 1991 and 2001, and by an additional 20% between 2001 and 2011 (DOI 1991 p. 70; DOI 2001, p. 57; DOI 2011, p. 60). Recent records of squirrel hunters specifically are not available for Maryland but the number of small game hunters in Maryland (pursuing squirrels, rabbits and/or quail) declined from 64,000 to 35,000 between 1991 and 2011 (DOI 1991, p. 113; DOI 2011, p. 102). Hunting gray squirrels will continue to some extent, and though some hunters may mistake DFS for gray squirrels, this is likely a rare situation that has not prevented the DFS from expanding over the last 40 years.

Regarding hunting in the future, discussions with our State partners indicate that DFS management after delisting would be conducted very cautiously and that a hunting season would not be initiated in the immediate future. We recognize that a restricted hunt could be conducted at sites where DFSs are abundant without causing a population decline, and that State management agencies have the capability to implement careful hunting restrictions and population management; the reopening of the black bear (*Ursus americanus*) hunt in Maryland is a good example of a carefully and successfully managed hunt (Maryland Department of Natural Resources 2012, entire).

We nonetheless foresee only limited individual interest in reinitiating a DFS hunt, coupled with strong public attitudes against hunting DFSs and, more generally, recreational hunting (Duda and Jones 2008, p. 183). Given public sentiment, the declining interest in squirrel hunting, and the restrictions that we expect would be imposed on a renewed hunting program, hunting is highly unlikely to pose an extinction risk to the DFS in the foreseeable future.

Factor C. Disease or Predation

Each of these types of threat is summarized below.

Disease

Reports of disease in the DFS are uncommon. Although other subspecies of eastern fox squirrels are known to carry diseases such as mange and rabies, there is no documentation of these diseases in the DFS, and there is no evidence or suspicion of disease-related declines in any local population (USFWS 2012, pp. 37–38).

Although the advent of white-nose syndrome affecting bats (Blehert et al. 2009, entire) and chytrid fungus affecting amphibians (Daszak et al. 1999, entire) demonstrates the uncertainty surrounding novel disease events, the life-history traits of the DFS tend to make them less susceptible to these types of epizootics. Delmarva fox squirrels do not congregate in large numbers where disease can easily spread through a population. Further, the DFS is patchily distributed across its range, which makes it more difficult for disease to spread across populations, and DFSs are not migratory and do not inhabit the types of environment (as with aquatic species) where pathogens can readily disperse.

Overall, there currently is no evidence of disease-related declines or any indication that DFSs are particularly susceptible to disease outbreaks, and we conclude that disease is neither a current nor a future extinction risk for this subspecies.

Predation

Predators of the DFS include the red fox (*Vulpes vulpes*), gray fox (*Urocyon cinereoargenteus*), red-tailed hawk (*Buteo jamaicensis*), bald eagle (*Haliaeetus leucocephalus*), and possibly domestic pets and feral animals.

Changes in numbers of certain predators may cause some fluctuations in DFS numbers at a site (for instance, a DFS population may decline when red fox numbers increase), but these types of events are sporadic and localized. Conversely, although bald eagle numbers have dramatically increased in the Chesapeake Bay region over the past 40 years and eagles have been known to take DFSs, they still prey primarily on fish. And while feral dogs and cats may occasionally take DFSs, such predation is not a rangewide threat. The DFS population has increased over the last 40 years despite ongoing predation, and we conclude that predation at these levels is not a current or future extinction risk for this subspecies.

Factor D. The Inadequacy of Existing Regulatory Mechanisms

Several laws established in Maryland over the past 40 years provide substantial protections for DFS habitat (USFWS 2012, appendix D). The Maryland Critical Areas Act of 1984 designates all areas within 304.8 m (1,000 ft) of high tide as Critical Areas and, as amended, prohibits development and forest clearing within 60.96 m (200 ft) of streams and the Chesapeake Bay. These areas serve as both breeding habitat and dispersal corridors for DFSs. The Maryland Forest Conservation Act of 1991 requires that when a forested area is cleared and converted to other land uses, other forest areas must be protected in perpetuity or, alternatively, replanted to offset these losses. Additionally, the State-implemented portions of the Clean Water Act (33 U.S.C. 1251 *et seq.*) provide rangewide protection to the many forested wetlands where DFSs occur.

Several State programs in Maryland, including its Agricultural Land Protection Fund, Environmental Trust, and Rural Legacy Program, encourage voluntary conservation easements that protect lands from development. Collectively, these programs now protect 79,066 ha (195,377 ac) of private lands within the DFS' range. Similar programs in Delaware protect an additional 12,677 ha (31,327 ac) in Sussex County (USFWS 2012, table 3).

Although in Delaware and Virginia the DFS occurs primarily on Federal and State lands, regulatory protections affecting private lands allow for continued DFS range expansion. For example, Delaware's Agricultural Land Protection Program and Forest Legacy Program now protect more than 12,677 ha (31,327 ac) in Sussex County, much of which is or could be occupied by the DFS. The Virginia DFS population is completely protected on Chincoteague NWR. If needed, State-owned lands or private lands, or both, protected by land trusts would provide suitable habitat for future translocations.

Overall, many State laws and programs that protect the DFS and its habitat have been enacted or strengthened in the last 40 years, and it is likely that this State protection will continue. Currently, these regulatory mechanisms, together with other factors that address population and habitat trends, have substantially reduced threats to the DFS. We thus conclude that existing regulatory mechanisms are adequate in terms of reducing extinction risks for the DFS.

Factor E. Other Natural or Manmade Factors Affecting Its Continued Existence

The level of risk posed by each of the following factors is assessed below.

Forest Pest Infestations

Forest pest infestations can affect forest health and its ability to provide suitable habitat for the DFS. Gypsy moth

(*Lymantria dispar*) outbreaks can decimate mature forest stands, although the affected stands will eventually regenerate. Monitoring outbreaks and spraying for gypsy moth control appear to have reduced this threat within the current range of the DFS, as infestations in the last several years have diminished in acreage (Maryland Department of Agriculture Forest Health Highlights 2007, 2008, 2009; entire).

Southern pine bark beetle (*Dendroctonus frontalis*) infestations can also decimate mature forest stands within the range of the DFS. Although beetle outbreaks necessitated salvage cuts for a total of 809 ha (2,000 ac) scattered across the southern counties in Maryland in the early 1990s, monitoring and control efforts appear to have reduced this threat as well.

Overall, an analysis of forest pests in the Chesapeake Bay watershed found that most areas on the Eastern Shore where DFSs occur have a relatively low likelihood of insect infestations, with 3.8 to 10 percent of this area considered to be at risk (Sprague et al. 2006, p. 87). Although emergence of new forest pests is to be expected, Maryland's Forest Health Monitoring Program conducts surveys to map and report forest pest problems (Maryland Department of Agriculture, Forest Pest Management, 2012, entire). Forest pest outbreaks are likely to recur and may increase if the climate warms as projected; however, this threat appears to be localized and sporadic and, with existing programs to monitor and treat forest pest outbreaks, we conclude that this is not an extinction risk factor for the DFS.

Vehicle Strikes

Vehicle strikes are a relatively common source of DFS mortality. Similarly to other species, the probability of DFSs being hit by vehicles is dependent on the DFS' density and proximity of roads to habitat. Vehicle strikes of DFSs tend to be reported more frequently in areas where DFSs are abundant, even if traffic levels are relatively low (*e.g.,* Dorchester County). The conscientious reporting and collecting of DFSs killed on roads at the Blackwater and Chincoteague NWRs, where the DFS is very abundant, likely results in a more complete count of vehicle strikes than elsewhere. Vehicle strikes occur regularly at both refuges, yet DFSs remain abundant in both places and have expanded their occupancy at Chincoteague NWR.

Overall, most DFS populations across the subspecies' range continue to remain stable or are increasing in numbers despite these localized events, and we conclude that vehicle strikes alone are not a pervasive threat or extinction factor for this subspecies.

Overall Summary of Factors A Through E

A summary of the five-factor analysis discussed above is provided in Table 3. Based on our analysis, we conclude that no single factor or combination of factors poses a risk of extinction to the DFS now or in the foreseeable future.

TABLE 3—SUMMARY OF FIVE-FACTOR ANALYSIS UNDER THE ACT FOR DFS

Factor	Past trends	Foreseeable trends	Does factor pose an extinction risk?
Habitat loss from development.	In the past 40 years, development increased from 3 to 8 percent of the land area in the Maryland range of the DFS; development also increased in Sussex County, Delaware. Some habitat has been lost, but most development occurs near existing towns where DFSs are not as prevalent, and development often occurs on agricultural rather than forest land.	Development is projected to increase to 14 percent of the land area in the Maryland and Delaware portions of DFS' range. Although most development will occur near urban areas where DFSs do not occur, 3 to 4 percent of total DFS occupied habitat is expected to be affected. While these losses may cause some small subpopulations to disappear, most occupied habitat will remain available. Despite the projected development, DFS distribution is expected to continue to expand.	No.
Habitat loss from sea level rise.	In the past, loss of occupied habitat due to inundation and saltwater intrusion has occurred in southern Dorchester County, although the acreage is not known. Sea level rise has occurred in the past at the rate of 3.5 millimeters (mm) per year (about 1 ft per 100 years).	Under an extreme scenario of 0.61-m (2-ft) inundation in 40 years, considerable acreage will be lost or isolated in southwestern Dorchester County. However, even if this loss were to occur immediately, the Dorchester County subpopulation would remain over 70 times larger than the MVP. It would thus continue to be the largest subpopulation, and given a 40-year time frame for reaching this level of inundation, is very likely to remain viable over the long term.	No.
Habitat loss from timber harvest.	Sawtimber harvest has occurred throughout the Delmarva Peninsula. Past harvest rates appear to have been sustainable, as DFSs have remained present across the range.	Recent declines in timber harvests, along with mill closings, may reduce the harvest rate for some time. Increasing parcelization of land will further reduce opportunities for large-scale timber production. Gentrification of the Eastern Shore is shifting public values for forest management from timber production to management for aesthetics and wildlife. Thus, future timber harvest rates are not expected to exceed past harvest rates.	No.

TABLE 3—SUMMARY OF FIVE-FACTOR ANALYSIS UNDER THE ACT FOR DFS—Continued

Factor	Past trends	Foreseeable trends	Does factor pose an extinction risk?
Habitat loss from short-rotation pine management.	In the past, short-rotation pine harvests occurred on approximately 68,000 ac of the forest lands in the Maryland and Delaware portions of the DFS' range. These acres were typically harvested before they were mature enough to become DFS habitat.	Since 1999, these lands have been acquired by the States of Maryland and Delaware and are now managed for sawtimber, which will provide suitable DFS habitat. Thus, 58,000 ac of land in Maryland and 10,000 ac in Delaware are protected from development and managed for sawtimber, enabling future use by the DFS that was previously precluded.	No.
Overutilization	Hunting seasons have been closed since 1972 ...	Hunting seasons are likely to remain closed into the foreseeable future. If opened, DFS hunts would be limited and carefully managed. Interest in squirrel hunting has declined significantly, and public attitudes toward hunting have changed to primarily support hunting of those species viewed as needing population management, such as deer.	No.
Disease or predation	Disease and predation have not been significant threats for this subspecies in the past 40 years.	These threats are not expected to increase, and the expanding distribution of the DFS lessens the potential impacts that disease and predation could have on this subspecies.	No.
Inadequacy of regulatory mechanisms.	Several new Maryland laws have appeared in the last 40 years to help conserve forest areas that support the DFS. DFS occurrences in Delaware and Virginia are almost exclusively on protected lands.	In the next 40 years, forest conservation measures are expected to continue, and the programs that have begun in Maryland are expected to continue or increase as they have in the past. Easement programs that protect private lands from development have begun in Delaware and Virginia and are expected to increase in the future as well.	No.
Other natural or man-made factors.	Forest pests and vehicle strikes have occurred in the past 40 years to some extent but have not limited the expansion of the DFS' distribution.	Forest pests and vehicle strikes are likely to continue to some extent, but neither factor has limited growth of the subpopulations in the past, nor are they expected to do so in the future. As DFS populations increase in density, vehicle strikes could increase, as the probability of a strike is primarily a function of animal abundance.	No.

Determination

We have carefully assessed the best scientific and commercial information available regarding past, present, and future threats to the long-term viability of the DFS. The current range of the DFS spans the northern and southern portions of the Delmarva Peninsula, comprising all three States, and extends from coastal areas to the interior of the Delmarva Peninsula. The DFS inhabits a variety of forest types, from hardwood-dominated to pine-dominated forests and from wetland to upland forests, indicating an underlying genetic variability or behavioral plasticity that should enhance the subspecies' ability to adapt to changing environmental conditions. Its relatively wide distribution also provides redundancy of occupied forest across the landscape, which further reduces extinction risk, and its continued occupancy of woodlots over the past 20 to 30 years and the success of translocation efforts indicate considerable resilience to stochastic events. We thus expect the rangewide population of the DFS not only to remain at recovery levels but to grow and continue to occupy the full complement of landscapes and forest types on the Delmarva Peninsula.

The Act defines ''endangered species'' as any species that is ''in danger of extinction throughout all or a significant portion of its range,'' and ''threatened species'' as any species that is ''likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.'' The term ''species'' includes ''any subspecies of fish or wildlife or plants, and any distinct population segment [DPS] of any species of vertebrate fish or wildlife which interbreeds when mature.'' As a subspecies, the DFS has both met the recovery criteria we consider for delisting, and the analysis of existing and potential risks shows that the range and distribution of the subspecies is sufficient to withstand all foreseeable threats to its long-term viability. Thus, after assessing the best available information, we have determined that the DFS is no longer in danger of extinction throughout all of its range, nor is it likely to become threatened with endangerment in the foreseeable future.

Significant Portion of the Range Analysis

Overview

Having determined the status of the DFS throughout all of its range, we next examine whether the subspecies is in danger of extinction in a significant portion of its range. Under the Act and our implementing regulations, a species may warrant listing if it is in danger of extinction or likely to become so throughout all or a significant portion of its range, as stated above. We published a final policy interpreting the phrase ''significant portion of its range'' (79 FR 37578; July 1, 2014). This policy states that: (1) If a species is found to be endangered or threatened throughout a significant portion of its range, the entire species is listed as an endangered species or a threatened species,

respectively, and the Act's protections apply to all individuals of the species wherever found; (2) a portion of the range of a species is ''significant'' if the species is not currently endangered or threatened throughout all of its range, but the portion's contribution to the viability of the species is so important that, without the members in that portion, the species would be in danger of extinction or likely to become so in the foreseeable future throughout all of its range; (3) the range of a species is considered to be the general geographical area within which that species can be found at the time we make any particular status determination; and (4) if a vertebrate species is endangered or threatened throughout an SPR, and if it can also be shown the population in that significant portion is a valid DPS, we will list the DPS rather than the entire taxonomic species or subspecies.

The SPR policy is applied to all status determinations, including analyses for the purposes of making listing, delisting, and reclassification determinations. The procedure for analyzing whether any portion is an SPR is similar, regardless of the type of status determination we are making. The first step in our analysis of the status of a species is to determine its status throughout all of its range. If we determine that the species is in danger of extinction, or likely to become so in the foreseeable future, throughout all of its range, we list the species as an endangered (or threatened) species and no SPR analysis will be required. If the species is neither in danger of extinction, nor likely to become so, throughout all of its range, we determine whether the species is in danger of extinction or likely to become so throughout a significant portion of its range. If it is, we list the species as an endangered species or a threatened species, respectively; if it is not, we conclude that listing of the species is not warranted.

When we conduct an SPR analysis, we first identify any portions of the species' range that warrant further consideration. The range of a species can theoretically be divided into portions in an infinite number of ways. However, there is no purpose to analyzing portions of the range that are not reasonably likely to be both significant and endangered or threatened. To identify only those portions that warrant further consideration, we determine whether there is substantial information indicating that (1) the portions may be significant and (2) the species may be in danger of extinction in those portions or likely to become so within the foreseeable future. We emphasize that answering these questions in the affirmative is not a determination that the species is endangered or threatened throughout a significant portion of its range—rather, it is a step in determining whether a more detailed analysis of the issue is required. In practice, a key part of this analysis is whether the threats are geographically concentrated in some way. If the threats to the species are affecting it uniformly throughout its range, no portion is likely to warrant further consideration. Moreover, if any concentration of threats apply only to portions of the range that clearly do not meet the biologically based definition of ''significant'' (*i.e.,* the loss of that portion clearly would not be expected to increase the vulnerability to extinction of the entire species), those portions will not warrant further consideration.

If we identify any portions that may be both (1) significant and (2) endangered or threatened, we engage in a more detailed analysis to determine whether these standards are indeed met. The identification of an SPR does not create a presumption, prejudgment, or other determination as to whether the species in that identified SPR is endangered or threatened. We must go through a separate analysis to determine whether the species is endangered or threatened in the SPR. To determine whether a species is endangered or threatened throughout an SPR, we will use the same standards and methodology that we use to determine if a species is endangered or threatened throughout its range.

Depending on the biology of the species, its range, and the threats it faces, it may be more efficient to address the ''significant'' question first, or the status question first. Thus, if we determine that a portion of the range is not ''significant,'' we do not need to determine whether the species is endangered or threatened there. Conversely, if we determine that the species is not endangered or threatened in a portion of its range, we do not need to determine if that portion is ''significant.''

SPR Analysis for DFS

Having determined that the DFS does not meet the definition of endangered or threatened throughout its range, we considered whether there are any significant portions of its range in which it is in danger of extinction or likely to become so. The full discussion regarding this analysis, summarized here, is provided in the September 23, 2014, proposed rule (79 FR 56686).

Applying the process described above, we evaluated the range of the DFS to determine if any area could be considered a significant portion of its range. Based on examination of the relevant information on the biology and life history of the DFS, we determined that there are no separate areas of the range that are significantly different from others or that are likely to be of greater biological or conservation importance than any other areas. We next examined whether any threats are geographically concentrated in some way that would indicate the subspecies could be in danger of extinction, or likely to become so, in that area. Through our review of threats to the subspecies, we identified some areas where DFSs are likely to be extirpated, including areas in Queen Anne's County, Maryland, where DFS distribution is scattered and relatively isolated by roads and water, and where future development is anticipated. We thus considered whether this area in the northern portion of the range may warrant further consideration as a significant portion of its range.

The forest area currently occupied by DFSs that is projected to be lost to development by 2030 would affect two small populations in Queen Anne's County that together constitute less than 0.5 percent of the rangewide population; however, five large DFS subpopulations are expected to remain viable across the northern portion of the current range. Additionally, Queen Anne's County's landscape does not represent a unique habitat type or ecological setting for the subspecies. Thus, the areas expected to be lost due to development would not appreciably reduce the long-term viability of the subpopulation in the northern portion of the range, much less imperil the DFS in the remainder of its range. Therefore, we have determined that this portion of the DFS' range does not meet the definition of SPR under the 2014 policy.

We also anticipate loss of DFS-occupied forests from sea level rise in Dorchester County, Maryland, on the southwestern periphery of the habitat supporting the largest subpopulation of DFS. However, these losses do not threaten either the subpopulation or the subspecies with a risk of extinction, as there is ample unoccupied and sufficiently connected habitat for displaced squirrels to colonize; this is bolstered by their ability to readily colonize new areas evidenced by successful expansion of DFS translocations. In addition, we anticipate the continued presence of mixed pine/hardwood forests adjacent to marsh and open water in Dorchester

County and do not anticipate losses of any unique habitats. Therefore, losses due to sea level rise in this portion of the range would not appreciably reduce the long-term viability of the subpopulation, much less cause the subspecies in the remainder of its range to be in danger of extinction or likely to become so. We thus conclude the portion of the range that is expected to be lost from sea level rise does not meet the policy's definition of an SPR.

These are the only two portions of the range that we identified as meriting analysis as to their significance and level of endangerment in conformance with the 2014 SPR policy. Finding that the potential losses in small areas of Queen Anne's County would not cause cascading vulnerability and do not constitute unique areas that are not represented elsewhere in the subspecies' range, and finding that loss of areas in Dorchester County to sea level rise would not diminish the continued viability of the Dorchester subpopulation or cause the remainder of the subspecies to be in danger of extinction or likely to become so, we do not consider this subspecies to be endangered or threatened in any significant portion of its range. Further, having not found the basis for an SPR determination on grounds of either significance or threat, we also find that a DPS analysis is not warranted.

Summary

The subspecies' current and projected resiliency, redundancy, and representation should enable it to remain at recovered population levels throughout all of its range, and even expand its range, over the foreseeable future. Having assessed the best scientific and commercial data available and determined that the DFS is no longer endangered or threatened throughout all or a significant portion of its range and is not it likely to become so in the foreseeable future, we are removing this subspecies from the List under the Act.

Future Conservation Measures

Section 4(g)(1) of the Act requires us, in cooperation with the States, to implement a monitoring program for not less than 5 years for all species that have been recovered and delisted. The purpose of post-delisting monitoring (PDM) is to verify that a species remains secure from risk of extinction after the protections of the Act are removed by developing a program that detects the failure of any delisted species to sustain itself. If, at any time during the monitoring period, data indicate that protective status under the Act should be reinstated, we can initiate listing procedures, including, if appropriate, emergency listing under section 4(b)(7) of the Act.

This rule announces availability of the final PDM plan for the DFS. Public and peer review comments on the draft PDM plan have been addressed in the body of the plan and are summarized in the plan's appendix. The plan can be accessed at: *http://www.regulations.gov* under Docket No. FWS–R5–ES–2014–0021. It is also posted on the Service's national Web site (*http://endangered.fws.gov*) and the Chesapeake Bay Field Office's Web site (*http://www.fws.gov/chesapeakebay*). A summary of the PDM plan is provided below.

Post-Delisting Monitoring Plan Overview

The PDM plan for the DFS builds upon and continues the research conducted while the DFS was listed. In general, the plan directs the Service and State natural resource agencies to (1) continue to map all DFS sightings and occupied forest to delineate the distribution and range, and (2) assess the occupancy of DFS in a sample of forest tracts to estimate the relative persistence of DFS populations versus extirpations across the range.

The PDM plan identifies measurable management thresholds and responses for detecting and reacting to significant changes in the DFS's protected habitat, distribution, and ability to remain at recovered population levels. If declines are detected equaling or exceeding these thresholds, the Service, along with other post-delisting monitoring participants, will investigate causes, including consideration of habitat changes, stochastic events, or any other significant evidence. Results will be used to determine if the DFS warrants expanded monitoring, additional research, additional habitat protection, or resumption of Federal protection under the Act.

Effects of This Rule

This final rule revises 50 CFR 17.11(h) to remove the Delmarva Peninsula fox squirrel from the List of Endangered and Threatened Wildlife (List). It also revises 50 CFR 17.11(h) and 50 CFR 17.84(a) to remove the listing and regulations, respectively, for the nonessential experimental population of Delmarva Peninsula fox squirrels at Assawoman Wildlife Management Area in Sussex County, Delaware. The prohibitions and conservation measures provided by the Act, particularly through sections 7 and 9, no longer apply to this subspecies. Federal agencies are no longer required to consult with the Service under section 7 of the Act in the event that activities they authorize, fund, or carry out may affect the DFS. The take exceptions identified in 50 CFR 17.84(a)(2) for the experimental population of the DFS are also removed. There is no critical habitat designated for the DFS.

Required Determinations

National Environmental Policy Act

We have determined that environmental assessments and environmental impact statements, as defined under the authority of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), need not be prepared in connection with regulations pursuant to section 4(a) of the Act. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244).

Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994, ''Government-to-Government Relations with Native American Tribal Governments'' (59 FR 22951), Executive Order 13175, and the Department of the Interior's manual at 512 DM 2, we readily acknowledge our tribal trust responsibilities. We have determined that there are no tribal lands affected by this rule.

References Cited

A complete list of all references cited in this final rule is available at *http://www.regulations.gov,* or upon request from the Chesapeake Bay Field Office (see **ADDRESSES**).

Regulation Promulgation

Accordingly, we amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—ENDANGERED AND THREATENED WILDLIFE AND PLANTS

■ 1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 1531–1544; 4201–4245, unless otherwise noted.

§ 17.11—[Amended]

■ 2. Amend § 17.11(h) by removing both entries for ''Squirrel, Delmarva Peninsula fox'' under MAMMALS from the List of Endangered and Threatened Wildlife.

§ 17.84—[Amended]

■ 3. Amend § 17.84 by removing and reserving paragraph (a).

Dated: October 23, 2015.

James W. Kurth,

Acting Director, U.S. Fish and Wildlife Service.

[FR Doc. 2015–28742 Filed 11–13–15; 8:45 am]

BILLING CODE 4333–15–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 141021887–5172–02]

RIN 0648–XE312

Fisheries of the Exclusive Economic Zone Off Alaska; Yellowfin Sole for Vessels Participating in the BSAI Trawl Limited Access Fishery in the Bering Sea and Aleutian Islands Management Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting directed fishing for yellowfin sole in the Bering Sea and Aleutian Islands management area (BSAI) for vessels participating in the BSAI trawl limited access fishery. This action is necessary to prevent exceeding the 2015 allocation of yellowfin sole total allowable catch for vessels participating in the BSAI trawl limited access fishery in the BSAI.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), November 11, 2015, through 2400 hrs, A.l.t., December 31, 2015.

FOR FURTHER INFORMATION CONTACT: Steve Whitney, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2015 allocation of yellowfin sole total allowable catch for vessels participating in the BSAI trawl limited access fishery in the BSAI is 16,165 metric tons (mt) as established by the final 2015 and 2016 harvest specifications for groundfish in the BSAI (80 FR 11919, March 5, 2015). In accordance with § 679.20(d)(1)(i), the Administrator, Alaska Region, NMFS (Regional Administrator), has determined that the 2015 allocation of yellowfin sole total allowable catch for vessels participating in the BSAI trawl limited access fishery in the BSAI will soon be reached. Therefore, the Regional Administrator is establishing a directed fishing allowance of 16,065 mt, and is setting aside the remaining 100 mt as incidental catch. In accordance with § 679.20(d)(1)(iii), the Regional Administrator finds that this directed fishing allowance has been reached. Consequently, NMFS is prohibiting directed fishing for yellowfin sole for vessels participating in the BSAI trawl limited access fishery in the BSAI.

After the effective date of this closure the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the closure of directed fishing for yellowfin sole by vessels fishing in the BSAI trawl limited access fishery in the BSAI. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of November 9, 2015.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: November 9, 2015.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Monday, November 16, 2015

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

9 CFR Parts 54 and 79

[Docket No. APHIS–2007–0127]

Scrapie in Sheep and Goats

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Proposed rule; reopening of comment period.

SUMMARY: We are reopening the comment period for our proposed rule that would revise completely the scrapie regulations, which concern the risk groups and categories established for individual animals and for flocks, the use of genetic testing as a means of assigning risk levels to animals, movement restrictions for animals found to be genetically less susceptible or resistant to scrapie, and recordkeeping requirements. This action will allow interested persons additional time to prepare and submit comments.

DATES: The comment period for the proposed rule published on September 10, 2015 (80 FR 54660–54692) is reopened. We will consider all comments that we receive on or before December 9, 2015.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov/#!docketDetail;D=APHIS-2007-0127.*
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2007–0127, Regulatory Analysis and Development, PPD, APHIS, Station 3A–03.8, 4700 River Road Unit 118, Riverdale, MD 20737–1238.

Supporting documents and any comments we receive on this docket may be viewed at *http://www.regulations.gov/#!docketDetail;D=APHIS-2007-0127* or in our reading room, which is located in Room 1141 of the USDA South Building, 14th Street and Independence Avenue SW., Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799–7039 before coming.

FOR FURTHER INFORMATION CONTACT: Dr. Diane Sutton, National Scrapie Program Coordinator, Sheep, Goat, Cervid & Equine Health Center, Surveillance, Preparedness and Response Services, VS, APHIS, 4700 River Road, Unit 43, Riverdale, MD 20737–1235; (301) 851–3509.

SUPPLEMENTARY INFORMATION: On September 10, 2015, we published in the **Federal Register** (80 FR 54660–54692, Docket No. APHIS–2007–0127) a proposal to revise completely the scrapie regulations in 9 CFR parts 54 and 79, which concern the risk groups and categories established for individual animals and for flocks, the use of genetic testing as a means of assigning risk levels to animals, movement restrictions for animals found to be genetically less susceptible or resistant to scrapie, and recordkeeping requirements.

Comments on the proposed rule were required to be received on or before November 9, 2015. We are reopening the comment period on Docket No. APHIS–2007–0127 for an additional 30 days until December 9, 2015. We will also consider all comments received between November 9, 2015, and the date of this notice. This action will allow interested persons additional time to prepare and submit comments.

Authority: 7 U.S.C. 8301–8317; 7 CFR 2.22, 2.80, and 371.4.

Done in Washington, DC, this 9th day of November 2015.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R10–OAR–2015–0398: FRL–9937–11–Region 10]

Approval of Regional Haze BART Alternative Measure: Washington

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a Best Available Retrofit Technology (BART) alternative measure for the BP Cherry Point Refinery located near Ferndale, Washington. The BART alternative measure increases the oxides of nitrogen (NO_X) emission limit from the R–1 HC Reactor Heater (R–1 Heater), a BART-eligible source currently subject to BART emission limits on NO_X. To offset the increase in NO_X emissions from this emission unit, the NO_X emission limits on the 1st Stage Hydrocracker Fractionator Reboiler (R–1 Reboiler), also a BART-eligible source subject to BART emission limits on NO_X, will be reduced. The net effect of these changes is a decrease of 10.4 tons per year (tpy) of allowable NO_X emissions from sources subject to BART at the BP Cherry Point Refinery.

DATES: Comments must be received on or before December 16, 2015.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R10–OAR–2015–0398, by one of the following methods:

- *www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *Email: R10-Public_Comments@epa.gov.*
- *Mail:* Steve Body, EPA Region 10, Office of Air, Waste and Toxics (AWT–150), 1200 Sixth Avenue, Suite 900, Seattle, WA 98101.
- *Hand Delivery/Courier:* EPA Region 10, 1200 Sixth Avenue, Suite 900, Seattle, WA 98101. Attention: Steve Body, Office of Air, Waste and Toxics, AWT–150. Such deliveries are only accepted during normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–R10–OAR–2015–

0398. The EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information the disclosure of which is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *www.regulations.gov* or email. The *www.regulations.gov* Web site is an ''anonymous access'' system, which means the EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to the EPA without going through *www.regulations.gov* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, the EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If the EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, the EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information, the disclosure of which is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy during normal business hours at the Office of Air, Waste and Toxics, EPA Region 10, 1200 Sixth Avenue, Seattle WA, 98101.

FOR FURTHER INFORMATION CONTACT: Steve Body at (206) 553–0782, *body.steve@epa.gov,* or the above EPA, Region 10 address.

SUPPLEMENTARY INFORMATION: Throughout this document, wherever ''we'', ''us'' or ''our'' are used, it is intended to refer to the EPA.

VI. Incorporation by Reference
VII. Statutory and Executive Order Reviews

I. Background

In the Clean Air Act (CAA) Amendments of 1977, Congress established a program to protect and improve visibility in the Nation's national parks and wilderness areas. See CAA section 169A. Congress amended the visibility provisions in the CAA in 1990 to focus attention on the problem of regional haze. See CAA section 169B. The EPA promulgated regional haze regulations (RHR) in 1999 to implement sections 169A and 169B of the CAA. These regulations require states to develop and implement plans to ensure reasonable progress toward improving visibility in mandatory Class I Federal areas 1 [1] (Class I areas). See 64 FR 35714 (July 1, 1999); sec also 70 FR 39104 (July 6, 2005) and 71 FR 60612 (October 13, 2006).

Regional haze is impairment of visual range or colorization caused by air pollution, principally fine particulate, produced by numerous sources and activities, located across a broad regional area. The sources include but are not limited to, major and minor stationary sources, mobile sources, and area sources including non-anthropogenic sources. These sources and activities may emit fine particles ($PM_{2.5}$) (*e.g.,* sulfates, nitrates, organic carbon, elemental carbon, and soil dust), and their precursors (*e.g.,* sulfur dioxide (SO_2), NO_X, and in some cases, ammonia and volatile organic compounds). Fine particulate can also cause serious health effects and mortality in humans, and contributes to environmental effects such as acid deposition and eutrophication. See 64 FR at 35715. Data from the existing visibility monitoring network, the ''Interagency Monitoring of Protected Visual Environments'' (IMPROVE) monitoring network, show that visibility impairment caused by air pollution occurs virtually all the time in most national parks and wilderness areas. The average visual range in many Class I areas in the western United States is 100–150 kilometers, or about one-half to two-thirds the visual range that would exist without manmade air pollution.[2] Visibility impairment also varies day-to-day and by season depending on variations in meteorology and emission rates. The deciview (dv) is the metric by which visibility is measured in the regional haze program. A change of 1 dv is generally considered the change in visual range that the human eye can perceive.

The RHR requires each state's regional haze implementation plan to contain emission limitations representing BART and schedules for compliance with BART for each source subject to BART, unless the state demonstrates that an emissions trading program or other alternative measure will achieve greater reasonable progress toward natural visibility conditions.

II. Regional Haze Rule Provisions for BART Alternative Measures

The RHR contains provisions whereby a state may choose to implement an alternative measure as an alternative to BART if the state can demonstrate that the alternative measure achieves greater reasonable progress toward achieving natural visibility conditions than would be achieved through the installation, operation and maintenance of BART. The requirements for alternative measures are established at 40 CFR 51.308(e)(2). As explained in the RHR, the state must demonstrate that all necessary emission reductions will take place during the first long term strategy period (*i.e.,* by 2018) and that the emissions reductions resulting from the alternative measure will be surplus to those reductions resulting from measures adopted to meet requirements of the CAA as of the baseline date of the SIP. See 40 CFR 51.308(e)(2)(iii) and (iv). Sources subject to BART must be in compliance with the BART emission limitations as expeditiously as practical but no later than 5 years after EPA approves the implementation plan revision. See 40 CFR 51.308(e)(1)(iv).

III. Washington's State Implementation Plan Revision Submittal

On December 22, 2010, Washington submitted to the EPA for approval a

[1] Areas designated as mandatory Class I Federal areas consist of national parks exceeding 6000 acres, wilderness areas and national memorial parks exceeding 5000 acres, and all international parks that were in existence on August 7, 1977. 42 U.S.C. 7472(a). In accordance with section 169A of the CAA, the EPA, in consultation with the Department of Interior, promulgated a list of 156 areas where visibility is identified as an important value. 44 FR 69122 (November 30, 1979). The extent of a mandatory Class I area includes subsequent changes in boundaries, such as park expansions. 42 U.S.C. 7472(a). Although states and tribes may designate as Class I additional areas which they consider to have visibility as an important value, the requirements of the visibility program set forth in section 169A of the CAA apply only to ''mandatory Class I Federal areas.'' Each mandatory Class I Federal area is the responsibility of a ''Federal Land Manager.'' 42 U.S.C. 7602(i). When we use the term ''Class I area'' in this action, we mean a ''mandatory Class I Federal area.''

[2] 64 FR at 35715.

Regional Haze State Implementation Plan (2010 RH SIP) to meet the requirements of 40 CFR 51.308. The SIP submittal covers the planning period of 2008 through 2018 and, among the other required elements, includes a BART determination for the BP Cherry Point Refinery located near Ferndale Washington. On June 11, 2014, the EPA approved certain BART-related provisions of Washington's 2010 RH SIP, including the final BART determination for the BP Cherry Point Refinery. See 79 FR 33438. That approval incorporated by reference specified conditions of Administrative Order No. 7836 issued by Washington to BP Cherry Point Refinery on July 7, 2010 (Original BART Order). See 40 CFR 52.2470(d).

On May 8, 2015, the State submitted a revision to the 2010 RH SIP that includes a BART alternative measure for the BP Cherry Point Refinery. This BART alternative measure is contained in Administrative Order 7836, Revision 2-Inclusion of BART Alternative, dated May 13, 2015 (Revision 2). The BART alternative measure would revise the BART emission limits in Conditions 2.6.1.2 and 2.7.1 of the original BART Order that apply to the R1-Heater and R1-Boiler, respectively, and are currently incorporated by reference into the Federally-approved SIP for Washington. The current Federally-approved Condition 2.6.1.2 limits NO_X emissions from the R1-Heater to 3.6 pounds per hour (lb/hr) based on a 24-hour rolling average. Condition 2.5.1.2 of Revision 2 increases the NO_X emission limit on the R1-Heater to 4.9 lb/hr based on a 24-hour rolling average.

To offset the NO_X emissions increase at the R1-Heater, Revision 2 contains a BART alternative measure. Revision 2 decreases the NO_X emission limits for the R1-Boiler associated with the hydrocracker to reflect the installation of ultra-low NO_X burners that were installed after Washington's submission of the 2010 RH SIP. Condition 2.7.1 of the original BART Order currently approved in the SIP limits NO_X emissions from the R1-Boiler to 0.07 pounds per million British thermal units (lb/MMBtu) and 56.2 tpy. Condition 2.6.2 of Revision 2 reduces these limits to 0.05 lb/MMBtu and 9.9 lb/hr.

Revision 2 also: (1) Adds language clarifying that when an emission unit subject to BART is decommissioned and permanently taken out of service, the BART emission limits no longer apply to that unit and, (2) allows the State to revise the monitoring, recordkeeping, and reporting requirements through issuance of a regulatory order, rather than through a revision of the BART order, provided the revised monitoring, recordkeeping, and reporting provide equal or better information on the compliance status of the emission unit in question.[3]

IV. The EPA's Evaluation of SIP Revision Submittal

A. BART Alternative Measure

The EPA evaluated the emission reductions associated with the BART alternative measure. The BART alternative measure revises the 24-hour maximum mass emission limit for the R–1 Heater, but does not revise the concentration limit for this unit. The concentration limit remains 26 parts per million by volume, dry basis, corrected to 7 percent oxygen, based on a 24-hour rolling average. However, Washington requests approval to revise the Federally-approved NO_X BART mass emission limit on the R1–Heater from 3.6 lb/hr to 4.9 lb/hr of NO_X, reflecting an increase in operation of the burners from 88 mmBTU/hr to 120 mmBTU/hr. This change results in an increase in the hourly average mass emission limit from the R–1 Heater of 1.3 lb/hr of NO_X. The increase in annual emissions is 5.7 tons of NO_X per year.

The increase in the allowable mass NO_X emissions from the R–1 Heater is offset by a decrease in the emission limit for the R–1 Reboiler. This decrease results from the installation of ultra-low NO_X burners on the R–1 Reboiler. The emission limit is reduced from the current 0.07 lb/MMBtu and 12.8 lb/hr to 0.05 lb/MMBtu and 9.9 lb/hr. The net emission reduction in allowable NO_X emissions as a result of the BART alternative measure is 1.6 lb/hr, on a 24-hour rolling average. These emission reductions are not otherwise required by the CAA as of the baseline date of Washington's regional haze SIP and thus may be considered surplus.

These are emission reductions that are achieved at the same location and for the same visibility impairing pollutant, NO_X. Thus, because the BART alternative measure in Washington's submission results in a greater emissions reduction than BART, the BART alternative measure is deemed to achieve greater reasonable progress. See 40 CFR 51.308(e)(3). With reduced NO_X emissions, reduced visibility impairment from the formation of secondary nitrate would be expected.

The EPA believes the BART alternative measure submitted by Washington as a SIP revision meets the requirements of 40 CFR 51.308(e)(2) and proposes to approve it.

B. Decommissioned BART Units

Condition 9 of Revision 2 is a new provision that states the BART requirements for an emission unit specifically listed in Revision 2 do not apply after the BP Cherry Point Refinery has certified in writing to Washington and the local air pollution authority that the named BART emission unit ''has been permanently taken out of service and dismantled.'' The State explains in its submittal that any replacement unit would be subject to new source review and would not be subject to BART. Ecology's SIP meets the requirements for new source review under 40 CFR 51.307 and will ensure that new subject sources will not have an adverse impact on visibility and will be consistent with making reasonable further progress towards the national visibility goal, as applicable. See WAC 173–400–117.

Although not a BART requirement on the BP Cherry Point Refinery, this condition results in a clear statement that BART requirements no longer apply to an emission unit once subject to BART that has been permanently taken out of service and dismantled. The EPA therefore proposes to approve Condition 9.

C. Revisions to Monitoring, Recordkeeping, and Reporting

As discussed above, Revision 2 includes a provision authorizing the State to revise the monitoring, recordkeeping, and reporting requirements in Revision 2 in a regulatory order. See Revision 2, Condition 10. Washington explains that any revised monitoring, recordkeeping, and reporting requirements approved by the State under Condition 10 will need to be submitted to, and approved by, the EPA as a SIP revision in order to become the applicable federally-enforceable monitoring, recordkeeping, and reporting requirements. Thus, in the interim, both sets of monitoring, recordkeeping, and reporting requirements apply to the source and must be included in the Title V permit. The EPA agrees with this assessment.

[3] Between issuing the original BART Order that was incorporated into the SIP and submission of BART Order Revision 2, Washington issued BP a BART Order Revision 1 in May 2013 (Revision 1). Revision 1 removed from the Original BART Order the conditions for Boilers #6 and #7, two units that were not BART-eligible. Boilers #6 and #7 replaced Boilers #1 and #3 that were subject to BART. This action resulted in a renumbering of conditions in the order. The original BART Order required that Boilers #1 and #3 be decommissioned by no later than March 27, 2010. Boilers #6 and #7 were subject to New Source Review and are not subject to BART. The Conditions in the Original BART Order applicable to Boilers #6 and #7 were not incorporated into the SIP, see 79 FR 33440, and Revision 1 was not submitted by Washington to the EPA as a SIP revision.

The EPA has a longstanding interpretation of the CAA that prohibits ''director's discretion'' provisions in SIPs if they provide unbounded discretion to allow what would amount to a case-specific revision of the SIP without meeting the statutory requirements of the CAA for SIP revisions. See 80 FR 33840, 22874–75 (June 12, 2015); see also 40 CFR 52.2476 (specifically providing that any change of a provision to the Washington SIP must be submitted by the State for approval by the EPA in accordance with 40 CFR 51.104). Accordingly, the EPA is proposing to not approve Condition 10.

V. The EPA's Proposed Action

The EPA proposes to approve the BART alternative measure for the BP Cherry Point Refinery located near Ferndale, Washington by incorporating by reference the conditions of Revision 2 identified below. The EPA proposes to remove the BP Cherry Point Refinery, BART Compliance Order No. 7836 currently in the Federally approved SIP at 40 CFR 52.2470(d) and replace it with provisions of the BP Cherry Point Refinery, BART Compliance Order No. 7836 Revision 2. The EPA is also proposing to approve new Condition 9 of the BART Compliance Order 7836 Revision 2 relating to decommissioned units. The conditions of the BP BART Compliance Order Revision 2 that are proposed for incorporation by reference are:

Condition 1: 1.1, 1.1.1, 1.2, 1.2.1, 1.2.2;

Condition 2: 2.1, 2.1.1, 2.1.2, 2.1.3, 2.1.4, 2.1.5, 2.2, 2.2.1, 2.2.2, 2.3, 2.3.1, 2.3.2, 2.4, 2.4.1, 2.4.2, 2.4.2.1, 2.5, 2.5.1, 2.5.1.1, 2.5.1.2, 2.5.2, 2.5.3, 2.5.4, 2.6, 2.6.1, 2.6.2, 2.6.3, 2.7, 2.7.1, 2.7.2, 2.7.3, 2.7.4, 2.8, 2.8.1, 2.8.2, 2.8.3, 2.8.4, 2.8.5, 2.8.6;

Condition 3, 3.1, 3.1.1, 3.1.2, 3.2, 3.2.1, 3.2.2, 3.2.3, 3.2.4;

Condition 4, 4.1, 4.1.1, 4.1.1.1, 4.1.1.2, 4.1.1.3, 4.1.1.4;

Condition 5, 5.1, 5.2;

Condition 6, 6.1, 6.2, 6.3;

Condition 7; and

Condition 9.

VI. Incorporation by Reference

In accordance with requirements of 1 CFR 51.5, the EPA is proposing to revise our incorporation by reference located in 40 CFR 52.2470(d)—''EPA-Approved State Source-Specific Requirements—Washington'' to reflect the proposed approval of the BART alternative measure for the BP Cherry Point Refinery and the provision relating to decommissioned units. Due to the fact that the conditions in the original BART Order were renumbered in Revision 1, which was not submitted as a SIP revision, the EPA is proposing to remove the original IBR entry for ''BP Cherry Point Refinery'' in its entirety and incorporate in its place the specified conditions of Revision 2 included in the docket for this action. The end result is that all of the conditions in the Original BART order remain in the SIP (but with different numbers) except as discussed above with respect to the BART alternative measure and the addition of Condition 9. The EPA has made, and will continue to make, these documents generally available electronically through *www.regulations.gov* and/or in hard copy at the appropriate EPA office (see the **ADDRESSES** section of this preamble for more information).

VII. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because it will not impose substantial direct costs on tribal governments or preempt tribal law. The SIP is not approved to apply in Indian reservations in the State or to any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: November 3, 2015.

Dennis J. McLerran,

Regional Administrator.

[FR Doc. 2015–29175 Filed 11–13–15; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R07–OAR–2015–0710; FRL–9937–09–Region 7]

Approval of Air Quality State Implementation Plans (SIP); State of Nebraska; Infrastructure SIP Requirements for the 2008 Ozone National Ambient Air Quality Standard in Regards to Section 110(a)(2)(D)(i)(I)—Prongs 1 and 2

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve elements of a State Implementation Plan (SIP) submission from the State of Nebraska addressing the applicable requirements of Clean Air Act (CAA) section 110 for the 2008 National Ambient Air Quality Standards (NAAQS) for Ozone (O_3). CAA section 110 requires that each state adopt and submit a SIP to support implementation, maintenance, and enforcement of each

new or revised NAAQS promulgated by EPA. These SIPs are commonly referred to as ''infrastructure'' SIPs. The infrastructure requirements are designed to ensure that the structural components of each state's air quality management program are adequate to meet the state's responsibilities under the CAA.

Specifically, EPA is proposing to approve Nebraska's SIP as it relates to section 110 (a)(2)(D)(i)(I) prongs 1 and 2, for the 2008 O_3 NAAQS.

DATES: Comments must be received on or before December 16, 2015.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R07–OAR–2015–0710, to *http://www.regulations.gov.* Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from Regulations.gov. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets.*

Publicly available docket materials are available either electronically in *www.regulations.gov* or at the Environmental Protection Agency, Air Planning and Development Branch, 11201 Renner Boulevard, Lenexa, Kansas 66219. The Regional Office's official hours of business are Monday through Friday, 8:00 a.m. to 4:30 p.m., excluding legal holidays. The interested persons wanting to examine these documents should make an appointment with the office at least 24 hours in advance.

FOR FURTHER INFORMATION CONTACT: Mr. Gregory Crable, Air Planning and Development Branch, U.S. Environmental Protection Agency, Region 7, 11201 Renner Boulevard, Lenexa, KS 66219; *telephone number:* (913) 551–7391; *fax number:* (913) 551–7065; *email address: crable.gregory@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we refer to EPA. This section provides additional information by addressing the following questions:

I. What is a section 110(a)(1) and (2) infrastructure SIP?
II. What are the applicable elements under sections 110(a)(1) and (2)?
III. What is EPA's approach to the review of infrastructure SIP submissions?
IV. What is EPA's evaluation of how the state addressed the relevant elements of sections 110(a)(1) and (2)?
V. What action is EPA proposing?
VI. Statutory and Executive Order Review

I. What is a section 110(a)(1) and (2) infrastructure SIP?

Section 110(a)(1) of the CAA requires, in part, that states make a SIP submission to EPA to implement, maintain and enforce each of the NAAQS promulgated by EPA after reasonable notice and public hearings. Section 110(a)(2) includes a list of specific elements that such infrastructure SIP submissions must address. SIPs meeting the requirements of sections 110(a)(1) and (2) are to be submitted by states within three years after promulgation of a new or revised NAAQS. These SIP submissions are commonly referred to as ''infrastructure'' SIPs.

II. What are the applicable elements under sections 110(a)(1) and (2)?

On March 12, 2008, EPA promulgated a revised NAAQS for ozone based on 8-hour average concentrations. The level of the 2008 8-hour ozone NAAQS (hereafter the 2008 O_3 NAAQS) was revised from 0.08 parts per million (ppm) to 0.075 ppm (73 FR 16436).

For the 2008 O_3 NAAQS, states typically have met many of the basic program elements required in section 110(a)(2) through provisions adopted in earlier SIP submissions in connection with previous NAAQS. Nevertheless, pursuant to section 110(a)(1), states must review and revise, as appropriate, their existing SIPs to ensure that the SIPs are adequate to address the 2008 O_3 NAAQS. To assist states in meeting this statutory requirement, EPA issued guidance on September 13, 2013 (2013 Guidance), addressing the infrastructure SIP elements required to be addressed under section 110 (a)(1) and (2) for the 2008 O_3 NAAQS.[1] In a previous final rulemaking (80 FR 55266, September 15, 2015) EPA addressed elements (A through C), (D)(i)(II), and (E through M). As discussed in that notice, EPA planned to take separate action on section 110(a)(2)(D)(i)(I)—prongs 1 and 2 on a timeline consistent with a deadline agreed to by the parties and entered by the court in *Sierra Club* v. *McCarthy* 4:14–cv–05091–YGR (N.D. Cal. May 15, 2015). In this action, EPA proposes action that, if finalized, fulfills that commitment to take final action as to Nebraska's SIP submission addressing section 110(a)(2)(D)(i)(I).

[1] Stephen D. Page, Director, Air Quality Policy Division, Office of Air Quality Planning and Standards, ''Guidance on Infrastructure State Implementation Plan (SIP) Elements Under Clean Air Act Sections 110(a)(1) and 110(a)(2),'' Memorandum to EPA Regional Air Division Directors, Regions I–X, September 13, 2013.

III. What is EPA's approach to the review of infrastructure SIP submissions?

EPA is acting upon the February 11, 2013, SIP submission from Nebraska that addresses the infrastructure requirements of CAA sections 110(a)(1) and 110(a)(2) for the 2008 O_3 NAAQS. The requirement for states to make a SIP submission of this type arises out of CAA section 110(a)(1). Pursuant to section 110(a)(1), states must make SIP submissions ''within 3 years (or such shorter period as the Administrator may prescribe) after the promulgation of a national primary ambient air quality standard (or any revision thereof),'' and these SIP submissions are to provide for the ''implementation, maintenance, and enforcement'' of such NAAQS. The statute directly imposes on states the duty to make these SIP submissions, and the requirement to make the submissions is not conditioned upon EPA taking any action other than promulgating a new or revised NAAQS. Section 110(a)(2) includes a list of specific elements that ''[e]ach such plan'' submission must address.

EPA has historically referred to these SIP submissions made for the purpose of satisfying the requirements of CAA sections 110(a)(1) and 110(a)(2) as ''infrastructure SIP'' submissions. Although the term ''infrastructure SIP'' does not appear in the CAA, EPA uses the term to distinguish this particular type of SIP submission from submissions that are intended to satisfy other SIP requirements under the CAA, such as ''nonattainment SIP'' or ''attainment plan SIP'' submissions to address the nonattainment planning requirements of part D of title I of the CAA, ''regional haze SIP'' submissions required by EPA rule to address the visibility protection requirements of CAA section 169A, and nonattainment new source review permit program submissions to address the permit requirements of CAA, title I, part D.

Section 110(a)(1) addresses the timing and general requirements for

infrastructure SIP submissions, and section 110(a)(2) provides more details concerning the required contents of these submissions. The list of required elements provided in section 110(a)(2) contains a wide variety of disparate provisions, some of which pertain to required legal authority, some of which pertain to required substantive program provisions, and some of which pertain to requirements for both authority and substantive program provisions.[2] EPA therefore believes that while the timing requirement in section 110(a)(1) is unambiguous, some of the other statutory provisions are ambiguous. In particular, EPA believes that the list of required elements for infrastructure SIP submissions provided in section 110(a)(2) contains ambiguities concerning what is required for inclusion in an infrastructure SIP submission.

The following examples of ambiguities illustrate the need for EPA to interpret some section 110(a)(1) and section 110(a)(2) requirements with respect to infrastructure SIP submissions for a given new or revised NAAQS. One example of ambiguity is that section 110(a)(2) requires that ''each'' SIP submission must meet the list of requirements therein, while EPA has long noted that this literal reading of the statute is internally inconsistent and would create a conflict with the nonattainment provisions in part D of title I of the Act, which specifically address nonattainment SIP requirements.[3] Section 110(a)(2)(I) pertains to nonattainment SIP requirements and part D addresses when attainment plan SIP submissions to address nonattainment area requirements are due. For example, section 172(b) requires EPA to establish a schedule for submission of such plans for certain pollutants when the Administrator promulgates the designation of an area as nonattainment, and section 107(d)(1)(B) allows up to two years, or in some cases three years, for such designations to be promulgated.[4] This ambiguity illustrates that rather than apply all the stated requirements of section 110(a)(2) in a strict literal sense, EPA must determine which provisions of section 110(a)(2) are applicable for a particular infrastructure SIP submission.

Another example of ambiguity within sections 110(a)(1) and 110(a)(2) with respect to infrastructure SIPs pertains to whether states must meet all of the infrastructure SIP requirements in a single SIP submission, and whether EPA must act upon such SIP submission in a single action. Although section 110(a)(1) directs states to submit ''a plan'' to meet these requirements, EPA interprets the CAA to allow states to make multiple SIP submissions separately addressing infrastructure SIP elements for the same NAAQS. If states elect to make such multiple SIP submissions to meet the infrastructure SIP requirements, EPA can elect to act on such submissions either individually or in a larger combined action.[5] Similarly, EPA interprets the CAA to allow it to take action on the individual parts of one larger, comprehensive infrastructure SIP submission for a given NAAQS without concurrent action on the entire submission. For example, EPA has sometimes elected to act at different times on various elements and sub-elements of the same infrastructure SIP submission.[6]

Ambiguities within sections 110(a)(1) and 110(a)(2) may also arise with respect to infrastructure SIP submission requirements for different NAAQS. Thus, EPA notes that not every element of section 110(a)(2) would be relevant, or as relevant, or relevant in the same way, for each new or revised NAAQS. The states' attendant infrastructure SIP submissions for each NAAQS therefore could be different. For example, the monitoring requirements that a state might need to meet in its infrastructure SIP submission for purposes of section 110(a)(2)(B) could be very different for different pollutants, for example, because the content and scope of a state's infrastructure SIP submission to meet this element might be very different for an entirely new NAAQS than for a minor revision to an existing NAAQS.[7]

EPA notes that interpretation of section 110(a)(2) is also necessary when EPA reviews other types of SIP submissions required under the CAA. Therefore, as with infrastructure SIP submissions, EPA also has to identify and interpret the relevant elements of section 110(a)(2) that logically apply to these other types of SIP submissions. For example, section 172(c)(7) requires that attainment plan SIP submissions required by part D have to meet the ''applicable requirements'' of section 110(a)(2). Thus, for example, attainment plan SIP submissions must meet the requirements of section 110(a)(2)(A) regarding enforceable emission limits and control measures and section 110(a)(2)(E)(i) regarding air agency resources and authority. By contrast, it is clear that attainment plan SIP submissions required by part D would not need to meet the portion of section 110(a)(2)(C) that pertains to the PSD program required in part C of title I of the CAA, because PSD does not apply to a pollutant for which an area is designated nonattainment and thus subject to part D planning requirements. As this example illustrates, each type of SIP submission may implicate some elements of section 110(a)(2) but not others.

Given the potential for ambiguity in some of the statutory language of section 110(a)(1) and section 110(a)(2), EPA believes that it is appropriate to interpret the ambiguous portions of section 110(a)(1) and section 110(a)(2) in the context of acting on a particular SIP submission. In other words, EPA assumes that Congress could not have

[2] For example: Section 110(a)(2)(E)(i) provides that states must provide assurances that they have adequate legal authority under state and local law to carry out the SIP; section 110(a)(2)(C) provides that states must have a SIP-approved program to address certain sources as required by part C of title I of the CAA; and section 110(a)(2)(G) provides that states must have legal authority to address emergencies as well as contingency plans that are triggered in the event of such emergencies.

[3] See, *e.g.,* ''Rule To Reduce Interstate Transport of Fine Particulate Matter and Ozone (Clean Air Interstate Rule); Revisions to Acid Rain Program; Revisions to the NO_X SIP Call; Final Rule,'' 70 FR 25162, at 25163–65 (May 12, 2005) (explaining relationship between timing requirement of section 110(a)(2)(D) versus section 110(a)(2)(I)).

[4] EPA notes that this ambiguity within section 110(a)(2) is heightened by the fact that various subparts of part D set specific dates for submission of certain types of SIP submissions in designated nonattainment areas for various pollutants. Note, *e.g.*, that section 182(a)(1) provides specific dates for submission of emissions inventories for the ozone NAAQS. Some of these specific dates are necessarily later than three years after promulgation of the new or revised NAAQS.

[5] See, *e.g.,* ''Approval and Promulgation of Implementation Plans; New Mexico; Revisions to the New Source Review (NSR) State Implementation Plan (SIP); Prevention of Significant Deterioration (PSD) and Nonattainment New Source Review (NNSR) Permitting,'' 78 FR 4339 (January 22, 2013) (EPA's final action approving the structural PSD elements of the New Mexico SIP submitted by the State separately to meet the requirements of EPA's 2008 $PM_{2.5}$ NSR rule), and ''Approval and Promulgation of Air Quality Implementation Plans; New Mexico; Infrastructure and Interstate Transport Requirements for the 2006 $PM_{2.5}$ NAAQS,'' (78 FR 4337) (January 22, 2013) (EPA's final action on the infrastructure SIP for the 2006 $PM_{2.5}$ NAAQS).

[6] On December 14, 2007, the State of Tennessee, through the Tennessee Department of Environment and Conservation, made a SIP revision to EPA demonstrating that the State meets the requirements of sections 110(a)(1) and (2). EPA proposed action for infrastructure SIP elements (C) and (J) on January 23, 2012 (77 FR 3213) and took final action on March 14, 2012 (77 FR 14976). On April 16, 2012 (77 FR 22533) and July 23, 2012 (77 FR 42997), EPA took separate proposed and final actions on all other section 110(a)(2) infrastructure SIP elements of Tennessee's December 14, 2007, submittal.

[7] For example, implementation of the 1997 $PM_{2.5}$ NAAQS required the deployment of a system of new monitors to measure ambient levels of that new indicator species for the new NAAQS.

intended that each and every SIP submission, regardless of the NAAQS in question or the history of SIP development for the relevant pollutant, would meet each of the requirements, or meet each of them in the same way. Therefore, EPA has adopted an approach under which it reviews infrastructure SIP submissions against the list of elements in section 110(a)(2), but only to the extent each element applies for that particular NAAQS.

Historically, EPA has elected to use guidance documents to make recommendations to states for infrastructure SIPs, in some cases conveying needed interpretations on newly arising issues and in some cases conveying interpretations that have already been developed and applied to individual SIP submissions for particular elements.[8] EPA most recently issued guidance for infrastructure SIPs on September 13, 2013 (2013 Guidance).[9] EPA developed the 2013 Guidance document to provide states with up-to-date guidance for infrastructure SIPs for any new or revised NAAQS. Within the 2013 guidance, EPA describes the duty of states to make infrastructure SIP submissions to meet basic structural SIP requirements within three years of promulgation of a new or revised NAAQS. EPA also made recommendations about many specific subsections of section 110(a)(2) that are relevant in the context of infrastructure SIP submissions.[10] The guidance also discusses the substantively important issues that are germane to certain subsections of section 110(a)(2). Significantly, EPA interprets sections 110(a)(1) and 110(a)(2) such that infrastructure SIP submissions need to address certain issues and need not address others. Accordingly, EPA reviews each infrastructure SIP submission for compliance with the applicable statutory provisions of section 110(a)(2), as appropriate.

As an example, section 110(a)(2)(E)(ii) is a required element of section 110(a)(2) for infrastructure SIP submissions. Under this element, a state must meet the substantive requirements of section 128, which pertain to state boards that approve permits or enforcement orders and heads of executive agencies with similar powers. Thus, EPA reviews infrastructure SIP submissions to ensure that the state's SIP appropriately addresses the requirements of section 110(a)(2)(E)(ii) and section 128. The 2013 Guidance explains EPA's interpretation that there may be a variety of ways by which states can appropriately address these substantive statutory requirements, depending on the structure of an individual state's permitting or enforcement program (*e.g.*, whether permits and enforcement orders are approved by a multi-member board or by a head of an executive agency). However they are addressed by the state, the substantive requirements of section 128 are necessarily included in EPA's evaluation of infrastructure SIP submissions because section 110(a)(2)(E)(ii) explicitly requires that the state satisfy the provisions of section 128.

As another example, EPA's review of infrastructure SIP submissions with respect to the PSD program requirements in sections 110(a)(2)(C), (D)(i)(II), and (J) focuses upon the structural PSD program requirements contained in part C and EPA's PSD regulations. Structural PSD program requirements include provisions necessary for the PSD program to address all regulated sources and New Source Review (NSR) pollutants, including greenhouse gases (GHGs). By contrast, structural PSD program requirements do not include provisions that are not required under EPA's regulations at 40 CFR 51.166 but are merely available as an option for the state, such as the option to provide grandfathering of complete permit applications with respect to the 2012 $PM_{2.5}$ NAAQS. Accordingly, the latter optional provisions are types of provisions EPA considers irrelevant in the context of an infrastructure SIP action.

For other section 110(a)(2) elements, however, EPA's review of a state's infrastructure SIP submission focuses on assuring that the state's SIP meets basic structural requirements. For example, section 110(a)(2)(C) includes, *inter alia*, the requirement that states have a program to regulate minor new sources. Thus, EPA evaluates whether the state has an EPA-approved minor NSR program and whether the program addresses the pollutants relevant to that NAAQS. In the context of acting on an infrastructure SIP submission, however, EPA does not think it is necessary to conduct a review of each and every provision of a state's existing minor source program (*i.e.*, already in the existing SIP) for compliance with the requirements of the CAA and EPA's regulations that pertain to such programs.

With respect to certain other issues, EPA does not believe that an action on a state's infrastructure SIP submission is necessarily the appropriate type of action in which to address possible deficiencies in a state's existing SIP. These issues include: (i) Existing provisions related to excess emissions from sources during periods of startup, shutdown, or malfunction that may be contrary to the CAA and EPA's policies addressing such excess emissions (''SSM''); (ii) existing provisions related to ''director's variance'' or ''director's discretion'' that may be contrary to the CAA because they purport to allow revisions to SIP-approved emissions limits while limiting public process or not requiring further approval by EPA; and (iii) existing provisions for PSD programs that may be inconsistent with current requirements of EPA's ''Final NSR Improvement Rule,'' 67 FR 80186 (December 31, 2002), as amended by 72 FR 32526 (June 13, 2007) (''NSR Reform''). Thus, EPA believes it may approve an infrastructure SIP submission without scrutinizing the totality of the existing SIP for such potentially deficient provisions and may approve the submission even if it is aware of such existing provisions.[11] It is important to note that EPA's approval of a state's infrastructure SIP submission should not be construed as explicit or implicit re-approval of any existing potentially deficient provisions that relate to the three specific issues just described.

EPA's approach to review of infrastructure SIP submissions is to identify the CAA requirements that are

[8] EPA notes, however, that nothing in the CAA requires EPA to provide guidance or to promulgate regulations for infrastructure SIP submissions. The CAA directly applies to states and requires the submission of infrastructure SIP submissions, regardless of whether or not EPA provides guidance or regulations pertaining to such submissions. EPA elects to issue such guidance in order to assist states, as appropriate.

[9] ''Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and 110(a)(2),'' Memorandum from Stephen D. Page, September 13, 2013.

[10] EPA's September 13, 2013, guidance did not make recommendations with respect to infrastructure SIP submissions to address section 110(a)(2)(D)(i)(I). EPA issued the guidance shortly after the U.S. Supreme Court agreed to review the D.C. Circuit decision in *EME Homer City*, 696 F.3d 7 (D.C. Cir. 2012) which had interpreted the requirements of section 110(a)(2)(D)(i)(I). In light of the uncertainty created by this litigation (which culminated in the Supreme Court's April 29, 2014 decision at 134 SCt. 1584), EPA elected not to provide additional guidance on the requirements of section 110(a)(2)(D)(i)(I) at that time. As the guidance is neither binding nor required by statute, whether EPA elects to provide guidance on a particular section has no impact on a state's CAA obligations.

[11] By contrast, EPA notes that if a state were to include a new provision in an infrastructure SIP submission that contained a legal deficiency, such as a new exemption for excess emissions during SSM events, then EPA would need to evaluate that provision for compliance against the rubric of applicable CAA requirements in the context of the action on the infrastructure SIP.

logically applicable to that submission. EPA believes that this approach to the review of a particular infrastructure SIP submission is appropriate, because it would not be reasonable to read the general requirements of section 110(a)(1) and the list of elements in section 110(a)(2) as requiring review of each and every provision of a state's existing SIP against all requirements in the CAA and EPA regulations merely for purposes of assuring that the state in question has the basic structural elements for a functioning SIP for a new or revised NAAQS. Because SIPs have grown by accretion over the decades as statutory and regulatory requirements under the CAA have evolved, they may include some outmoded provisions and historical artifacts. These provisions, while not fully up to date, nevertheless may not pose a significant problem for the purposes of ''implementation, maintenance, and enforcement'' of a new or revised NAAQS when EPA evaluates adequacy of the infrastructure SIP submission. EPA believes that a better approach is for states and EPA to focus attention on those elements of section 110(a)(2) of the CAA most likely to warrant a specific SIP revision due to the promulgation of a new or revised NAAQS or other factors.

For example, EPA's 2013 Guidance gives simpler recommendations with respect to carbon monoxide than other NAAQS pollutants to meet the visibility requirements of section 110(a)(2)(D)(i)(II), because carbon monoxide does not affect visibility. As a result, an infrastructure SIP submission for any future new or revised NAAQS for carbon monoxide need only state this fact in order to address the visibility prong of section 110(a)(2)(D)(i)(II).

Finally, EPA believes that its approach with respect to infrastructure SIP requirements is based on a reasonable reading of sections 110(a)(1) and 110(a)(2) because the CAA provides other avenues and mechanisms to address specific substantive deficiencies in existing SIPs. These other statutory tools allow EPA to take appropriately tailored action, depending upon the nature and severity of the alleged SIP deficiency. Section 110(k)(5) authorizes EPA to issue a ''SIP call'' whenever the Agency determines that a state's SIP is substantially inadequate to attain or maintain the NAAQS, to mitigate interstate transport, or to otherwise comply with the CAA.[12] Section 110(k)(6) authorizes EPA to correct errors in past actions, such as past approvals of SIP submissions.[13] Significantly, EPA's determination that an action on a state's infrastructure SIP submission is not the appropriate time and place to address all potential existing SIP deficiencies does not preclude EPA's subsequent reliance on provisions in section 110(a)(2) as part of the basis for action to correct those deficiencies at a later time. For example, although it may not be appropriate to require a state to eliminate all existing inappropriate director's discretion provisions in the course of acting on an infrastructure SIP submission, EPA believes that section 110(a)(2)(A) may be among the statutory bases that EPA relies upon in the course of addressing such deficiency in a subsequent action.[14]

IV. What is EPA's evaluation of how the state addressed the relevant elements of sections 110(a)(1) and (2)?

EPA Region 7 received Nebraska's infrastructure SIP submission for the 2008 O_3 standard on February 11, 2013. The SIP submission became complete as a matter of law on August 11, 2013. EPA has reviewed Nebraska's infrastructure SIP submission and the applicable statutory and regulatory authorities and provisions referenced in those submissions or referenced in Nebraska's SIP. EPA has previously approved sections 110(a)(2)(A), (B), (C), (D)(i)(II)— prong 3, (D)(ii), (E), (F), (G), (H), (J), (K), (L), and (M); did not propose any action on section 110(a)(2)(I)— Nonattainment Area Plan or Plan Revisions under part D; and disapproved 110(a)(2)(D)(i)(II)— prong 4, as it relates to the protection of visibility (80 FR 55266, September 15, 2015). EPA also stated that it would take action on section 110(a)(2)(D)(i)(I)— prongs 1 and 2 at a later time (80 FR 35290). A discussion of that action follows.

On March 12, 2008, the EPA revised the levels of the primary and secondary 8-hour ozone standards from 0.08 parts per million (ppm) to 0.075 ppm (73 FR 16436). The CAA requires states to submit, within three years after promulgation of a new or revised standard, SIPs meeting the applicable ''infrastructure'' elements of sections 110(a)(1) and (2). One of these applicable infrastructure elements, CAA section 110(a)(2)(D)(i), requires SIPs to contain ''good neighbor'' provisions to prohibit certain adverse air quality effects on neighboring states due to interstate transport of pollution. There are four sub-elements (or prongs) within CAA section 110(a)(2)(D)(i). This action addresses the first two sub-elements of the good neighbor provisions, at CAA section 110(a)(2)(D)(i)(I). These sub-elements require that each SIP for a new or revised standard contain adequate provisions to prohibit any source or other type of emissions activity within the state from emitting air pollutants that will ''contribute significantly to nonattainment'' or ''interfere with maintenance'' of the applicable air quality standard in any other state. We note that the EPA has addressed the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) for the eastern portion of the United States in several past regulatory actions.[15] We most recently promulgated the Cross-State Air Pollution Rule (CSAPR), which addressed CAA section 110(a)(2)(D)(i)(I) in the eastern portion of the United States.[16] CSAPR addressed multiple national ambient air quality standards, but did not address the 2008 8-hour ozone standard.[17]

In CSAPR, the EPA used detailed air quality analyses to determine whether an eastern state's contribution to downwind air quality problems was at or above specific thresholds. If a state's contribution did not exceed the specified air quality screening threshold, the state was not considered ''linked'' to identified downwind nonattainment and maintenance receptors and was therefore not considered to significantly contribute or interfere with maintenance of the standard in those downwind areas. If a state exceeded that threshold, the state's

[12] For example, EPA issued a SIP call to Utah to address specific existing SIP deficiencies related to the treatment of excess emissions during SSM events. See ''Finding of Substantial Inadequacy of Implementation Plan; Call for Utah State Implementation Plan Revisions,'' 74 FR 21639 (April 18, 2011).

[13] EPA has used this authority to correct errors in past actions on SIP submissions related to PSD programs. See ''Limitation of Approval of Prevention of Significant Deterioration Provisions Concerning Greenhouse Gas Emitting-Sources in State Implementation Plans; Final Rule,'' 75 FR 82536 (December 30, 2010). EPA has previously used its authority under CAA section 110(k)(6) to remove numerous other SIP provisions that the Agency determined it had approved in error. See, *e.g.*, 61 FR 38664 (July 25, 1996) and 62 FR 34641 (June 27, 1997) (corrections to American Samoa, Arizona, California, Hawaii, and Nevada SIPs); 69 FR 67062 (November 16, 2004) (corrections to California SIP); and 74 FR 57051 (November 3, 2009) (corrections to Arizona and Nevada SIPs).

[14] See, *e.g.*, EPA's disapproval of a SIP submission from Colorado on the grounds that it would have included a director's discretion provision inconsistent with CAA requirements, including section 110(a)(2)(A). See, *e.g.*, 75 FR 42342 at 42344 (July 21, 2010) (proposed disapproval of director's discretion provisions); 76 FR 4540 (January 26, 2011) (final disapproval of such provisions).

[15] NO_X SIP Call, 63 FR 57371 (October 27, 1998); Clean Air Interstate Rule (CAIR), 70 FR 25172 (May 12, 2005); Cross-State Air Pollution Rule (CSAPR), 76 FR 48208 (August 8, 2011).

[16] 76 FR 48208.

[17] CSAPR addressed the 1997 8-hour ozone, and the 1997 and 2006 fine particulate matter NAAQS.

emissions were further evaluated, taking into account both air quality and cost considerations, to determine what, if any, emissions reductions might be necessary. For the reasons stated below, we believe it is appropriate to use the same approach we used in CSAPR to establish an air quality screening threshold for the evaluation of interstate transport requirements for the 2008 ozone standard.

In CSAPR, the EPA proposed an air quality screening threshold of one percent of the applicable NAAQS and requested comment on whether one percent was appropriate.[18] The EPA evaluated the comments received and ultimately determined that one percent was an appropriately low threshold because there were important, even if relatively small, contributions to identified nonattainment and maintenance receptors from multiple upwind states. In response to commenters who advocated a higher or lower threshold than one percent, the EPA compiled the contribution modeling results for CSAPR to analyze the impact of different possible thresholds for the eastern United States. The EPA's analysis showed that the one-percent threshold captures a high percentage of the total pollution transport affecting downwind states, while the use of higher thresholds would exclude increasingly larger percentages of total transport. For example, at a five percent threshold, the majority of interstate pollution transport affecting downwind receptors would be excluded.[19] In addition, the EPA determined that it was important to use a relatively lower one-percent threshold because there are adverse health impacts associated with ambient ozone even at low levels.[20] The EPA also determined that a lower threshold such as 0.5 percent would result in relatively modest increases in the overall percentages of fine particulate matter and ozone pollution transport captured relative to the amounts captured at the one-percent level. The EPA determined that a ''0.5 percent threshold could lead to emission reduction responsibilities in additional states that individually have a very small impact on those receptors—an indicator that emission controls in those states are likely to have a smaller air quality impact at the downwind receptor. We are not convinced that selecting a threshold below one percent is necessary or desirable.'' [21]

In the final CSAPR, the EPA determined that one percent was a reasonable choice considering the combined downwind impact of multiple upwind states in the eastern United States, the health effects of low levels of fine particulate matter and ozone pollution, and the EPA's previous use of a one-percent threshold in CAIR. The EPA used a single ''bright line'' air quality threshold equal to one percent of the 1997 8-hour ozone standard, or 0.08 ppm.[22] The projected contribution from each state was averaged over multiple days with projected high modeled ozone, and then compared to the one-percent threshold. We concluded that this approach for setting and applying the air quality threshold for ozone was appropriate because it provided a robust metric, was consistent with the approach for fine particulate matter used in CSAPR, and because it took into account, and would be applicable to, any future ozone standards below 0.08 ppm.[23]

On August 4, 2015, the EPA issued a Notice of Data Availability (NODA) containing air quality modeling data that applies the CSAPR approach to contribution projections for the year 2017 for the 2008 8-hour ozone NAAQS.[24] The moderate area attainment date for the 2008 ozone standard is July 11, 2018. In order to demonstrate attainment by this attainment deadline, states will use 2015 through 2017 ambient ozone data. Therefore, 2017 is an appropriate future year to model for the purpose of examining interstate transport for the 2008 ozone NAAQS. The EPA used photochemical air quality modeling to project ozone concentrations at air quality monitoring sites to 2017 and estimated state-by-state ozone contributions to those 2017 concentrations. This modeling used the Comprehensive Air Quality Model with Extensions (CAMx version 6.11) to model the 2011 base year, and the 2017 future base case emissions scenarios to identify projected nonattainment and maintenance sites with respect to the 2008 ozone NAAQS in 2017. The EPA used nationwide state-level ozone source apportionment modeling (CAMx Ozone Source Apportionment Technology/Anthropogenic Precursor Culpability Analysis technique) to quantify the contribution of 2017 base case NO_X and VOC emissions from all sources in each state to the 2017 projected receptors. The air quality model runs were performed for a modeling domain that covers the 48 contiguous United States and adjacent portions of Canada and Mexico. The NODA and the supporting technical support documents have been included in the docket for this SIP action.

The modeling data released in the NODA on July 23, 2015, is the most up-to-date information the EPA has developed to inform our analysis of upwind state linkages to downwind air quality problems. For purposes of evaluating Nebraska's interstate transport SIP with respect to the 2008 8-hour ozone standard, the EPA is proposing that states whose contributions are less than one percent to downwind nonattainment and maintenance receptors are considered non-significant. The modeling indicates that Nebraska's largest contribution to any projected downwind nonattainment site is 0.51 ppb and Nebraska's largest contribution to any projected downwind maintenance-only site is 0.36 ppb. 80 FR 46271.[25] These values are below the one percent screening threshold of 0.75 ppb, and therefore there are no identified linkages between Nebraska and 2017 downwind projected nonattainment and maintenance sites. Note that the EPA has not done an assessment to determine the applicability for the use of the one percent screening threshold for western states that contribute above the one percent threshold. There may be additional considerations that may impact regulatory decisions regarding ''potential'' linkages in the West identified by the modeling.

The State of Nebraska submitted a SIP on February 11, 2013. The SIP states that Nebraska does not contribute significantly to nonattainment in, or interfere with maintenance by, any other state with regards to the 2008 O_3 NAAQS. To support this conclusion, Nebraska cited modeling that EPA conducted for purposes of evaluating upwind contributions to downwind air quality in the CSAPR rulemaking. *See* 76 FR 48244 (Federal Implementation Plans: Interstate Transport of Fine Particulate Matter and Ozone and Correction of SIP Approvals; Final Rule). Nebraska noted EPA's statement in that action, that states ''which

[24] *See* 80 FR 46271 (August 4, 2015) (Notice of Availability of the Environmental protection Agency's Updated Ozone Transport Modeling Data for the 2008 Ozone National Ambient Air Quality Standard (NAAQS)).

[25] Largest Ozone Contributions From Each State to Downwind 2017 Projected Nonattainment and to 2017 Projected Maintenance-only sites, specific to the state of Nebraska are found in Table 3 at 80 FR 46277.

contribute 0.8 ppb or more to 8-hour ozone nonattainment or maintenance in another state are identified as states with contributions to downwind attainment and maintenance sites large enough to warrant further analysis.'' Nebraska noted that 0.8 ppb cutoff equates to a one percent threshold, which was the threshold EPA used in that rulemaking for the previous 1997 ozone NAAQS. According to Nebraska, the rule stands for the proposition that ''states whose contributions are below these thresholds do not significantly contribute or interfere with maintenance of the relevant NAAQS.'' Nebraska noted that, pursuant to the modeling discussed in that rule (76 FR 48245), Nebraska's largest downwind contribution to any identified nonattainment or maintenance receptors for ozone was 0.2 ppb. Nebraska concluded that because this modeling contribution represents far less than one percent of the 2008 ozone NAAQS at issue here, it ''does not have any obligations'' to reduce emissions to address interstate transport as to that standard.

The EPA notes that the modeling Nebraska relies upon was conducted by EPA in 2011, for purposes of evaluating upwind state contributions and downwind air quality problems as to a prior, less-stringent ozone NAAQS, and that the modeling evaluated a 2012 compliance year. Accordingly, the fact that this modeling showed downwind contribution less than one percent of the 2008 ozone NAAQS is not necessarily dispositive of Nebraska's obligations under section 110(a)(2)(D)(i)(I).[26] However, as discussed above, the EPA has conducted more updated modeling subsequent to the state's SIP submission that confirms the underlying conclusion of our 2011 modeling, and of Nebraska's SIP submission.

Based on the modeling data and the information and analysis provided in Nebraska's SIP, EPA is proposing to approve Nebraska's interstate transport SIP for purposes of meeting the CAA section 110(a)(2)(D)(i)(I) requirements as to the 2008 ozone standard. The EPA's modeling confirms the results of the State's analysis: Nebraska does not significantly contribute to nonattainment or interfere with maintenance of the 2008 ozone standard in any other state.

V. What action is EPA proposing?

Based upon review of the state's infrastructure SIP submission for the 2008 O_3 NAAQS, with respect to the requirements of section 110(a)(2)(D(i)(I)—prongs 1 and 2, and relevant statutory and regulatory authorities and provisions referenced in these submissions or referenced in Nebraska's SIP, EPA is proposing to approve this element of the February 11, 2013 SIP submission.

We are hereby soliciting comment on this proposed action. Final rulemaking will occur after consideration of any comments.

VI. Statutory and Executive Order Review

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a ''significant regulatory action'' under the terms of Executive Order 12866 (58 FR 51735, October 4, 1993) and is therefore not subject to review under Executive Orders 12866 and 13563 (76 FR 3821, January 21, 2011).
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

The SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Statutory Authority

The statutory authority for this action is provided by section 110 of the CAA, as amended (42 U.S.C. 7410).

[26] Nebraska's SIP submission appears to rely on EPA's 2011 air quality modeling because at that time, the D.C. Circuit's decision in *EME Homer City Generation, L.P.* v. *EPA* held that EPA must first quantify each state's transport obligation before states had an obligation to make a SIP submission. *See* 696 F.3d 7 (D.C. Cir. 2012). Accordingly, Nebraska cites a November 19, 2012, memorandum from Assistant Administrator Gina McCarthy, which describes the D.C. Circuit's holding that ''a SIP cannot be deemed deficient for failing to meet the good neighbor obligation before the EPA quantifies that obligation.'' *See* Memo at 2, *available at http://www3.epa.gov/airtransport/pdfs/CSAPR_Memo_to_Regions.pdf.* The memorandum also communicated the Agency's intentions to ''act in accordance with the [D.C. Circuit] decision during the pendency of the appeal,'' *id.,* but on appeal the Supreme Court reversed that holding. *See EPA* v. *EME Homer City Gen.,* 134 S. Ct. 1584, 1609–10 (2014).

Air Plan Approval; Michigan; Sewage Sludge Incinerators State Plan and Small Municipal Waste Combustors Negative Declaration for Designated Facilities and Pollutants

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve

Michigan's State Plan to control air pollutants from Sewage Sludge Incinerators (SSI). The Michigan Department of Environmental Quality submitted the State Plan on September 21, 2015, following the required public process. The State Plan is consistent with the Emission Guidelines promulgated by EPA on March 21, 2011. This approval means that EPA finds that the State Plan meets applicable Clean Air Act requirements for subject SSI units. Once effective, this approval also makes the State Plan Federally enforceable. EPA is also announcing that we have received from Michigan a negative declaration for Small Municipal Waste Combustors (SMWC). The Michigan Department of Environmental Quality submitted on July 27, 2015 a negative declaration certifying that there are no SMWC units currently operating in the state of Michigan.

DATES: Comments must be received on or before December 16, 2015.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2015–0071, by one of the following methods:

1. *www.regulations.gov:* Follow the on-line instructions for submitting comments.
2. *Email: nwia.jacqueline@epa.gov.*
3. *Fax:* (312) 692–2566.
4. *Mail:* Jacqueline Nwia, Acting Chief, Toxics and Global Atmosphere Section, Air Toxics and Assessment Branch (AT–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.
5. *Hand Delivery:* Jacqueline Nwia, Acting Chief, Toxics and Global Atmosphere Section, Air Toxics and Assessment Branch (AT–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604. Such deliveries are only accepted during the Regional Office normal hours of operation, and special arrangements should be made for deliveries of boxed information. The Regional Office official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m. excluding Federal holidays.

Please see the direct final rule which is located in the Rules section of this **Federal Register** for detailed instructions on how to submit comments.

FOR FURTHER INFORMATION CONTACT: Margaret Sieffert, Environmental Engineer, Environmental Protection Agency, Region 5, 77 West Jackson Boulevard (AT–18J), Chicago, Illinois 60604, (312) 353–1151, *sieffert.margaret@epa.gov.*

SUPPLEMENTARY INFORMATION: In the Rules section of this **Federal Register**, EPA is approving through a direct final rulemaking Michigan's State Plan for control of air pollutants from SSI sources, and is amending 40 CFR part 62 to reflect the State's submittal of the negative declaration as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this rule, no further activity is contemplated. If EPA receives adverse comments, we will withdraw the direct final rule and will address all public comments in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule, and if that provision can be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. For additional information, see the direct final rule which is located in the Rules section of this **Federal Register**.

Dated: October 29, 2015.

Susan Hedman,

Regional Administrator, Region 5.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

45 CFR Part 1329

RIN 0985–AA10

Independent Living Services and Centers for Independent Living

AGENCY: Administration for Community Living, HHS.

ACTION: Proposed rule.

SUMMARY: This proposed rule would implement the Workforce Innovation and Opportunity Act enacted on July 22, 2014 and reflects the transfer of Independent Living Services and Centers for Independent Living programs from the Department of Education to the Department of Health and Human Services. The previous regulations were issued by the Department of Education. This proposed rule will consolidate the Independent Living (IL) regulations into a single part, align the regulations with the current statute and HHS policies, and will provide guidance to IL grantees.

DATES: Comments are due on or before January 15, 2016.

ADDRESSES: You may submit comments in one of following ways (no duplicates, please): Written comments may be submitted through any of the methods specified below. Please do not submit duplicate comments.

- *Federal eRulemaking Portal:* You may (and we encourage you to) submit electronic comments on this regulation at *http://www.regulations.gov.* Follow the instructions under the ''submit a comment'' tab. Attachments should be in Microsoft Word, WordPerfect, or Excel; however, we prefer Microsoft Word.
- *Regular, Express, or Overnight Mail:* You may mail written comments to the following address ONLY: Administration for Community Living, Attention: IL NPRM, U.S. Department of Health and Human Services, Washington, DC 20201. Please allow sufficient time for mailed comments to be received before the close of the comment period.
- *Individuals with a Disability:* We will provide an appropriate accommodation, including alternative formats, upon request. To make such a request, please contact Marlina Moses-Gaither, (202) 357–3552 (Voice) or at *marlina.moses-gaither@acl.hhs.gov.*

FOR FURTHER INFORMATION CONTACT: Molly Burgdorf, Administration for Community Living, telephone (202) 357–3411 (Voice). This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

I. Workforce Innovation and Opportunity Act of 2014

The Workforce Innovation and Opportunity Act (''WIOA,'' Pub. L. 113–128), signed into law on July 22, 2014, included significant changes to title VII of the Rehabilitation Act of 1973. WIOA transfers the Independent Living Services and Centers for Independent Living programs authorized under chapter 1, title VII of the Rehabilitation Act of 1973 (Rehabilitation Act or Act), as amended by WIOA (Pub. L. 113–128) from the Rehabilitation Services Administration (RSA), U.S. Department of Education (ED), to the Administration for Community Living (ACL), U.S. Department of Health and Human Services (HHS). WIOA also transferred the National Institute on Disability, Independent Living, and Rehabilitation Research, and the Assistive Technology Act programs to ACL.

Background

ACL was established as an Operating Division within HHS in 2012. ACL focuses on the shared interests of both older adults and people with disabilities, while acknowledging and continuing to address the unique needs and differences across the populations served. As an agency, we strive to ensure that all Americans, regardless of age or disability, can make their own choices and live, learn and work in their communities with the services and supports they need to be fully participating and contributing members of society. The transferred Independent Living (IL) programs make important contributions to the work of ACL in unique ways, and they also align with the mission of ACL to maximize the independence, well-being and health of individuals with disabilities across the lifespan, and their families and caregivers.

As part of the transfer, the Administrator of ACL (Administrator) is issuing new regulations for the programs that implement changes made by WIOA in accordance with section 12 of the Rehabilitation Act, as amended, 29 U.S.C. 709(e), and section 491(f) of WIOA, 42 U.S.C. 3515e(f). This notice of proposed rulemaking applies to the Independent Living programs. It proposes new regulations that implement the transition of the Independent Living programs, including the Independent Living Services and the Centers for Independent Living, to ACL. While the proposed regulations retain many of the provisions in the Department of Education regulations, they also include new provisions to implement changes made to the programs by WIOA and to replace references to Department of Education procedures and regulations with references to procedures and regulations applicable to Department of Health and Human Services programs. Existing Department of Education Independent Living program regulations found at 34 CFR parts 364, 365, and 366 remain in effect until such time as the proposed HHS regulations become final.

Programs Amended by WIOA

Overview of the Independent Living Program

Independent Living (IL) empowers individuals with disabilities to live independently in their communities assisted by two federal programs: Independent Living Services (ILS) and Centers for Independent Living (referred to as CILs or Centers).

Independent Living Services

Authorized under Title VII, chapter 1, part B of the Rehabilitation Act, as amended by WIOA, the Independent Living Services (ILS) Program provides formula grants, based primarily on population, to States for the purpose of funding, directly and/or through grant or contractual arrangements a number of activities. These activities include:

1. Supporting the operation of Statewide Independent Living Councils (SILCs);
2. Providing IL services to individuals with significant disabilities, particularly those in unserved areas of the State;
3. Demonstrating ways to expand and improve IL services;
4. Supporting the operation of CILs that comply with the standards and assurances of section 725;
5. Increasing the capacity of public or nonprofit organizations and other entities to develop comprehensive approaches or systems for providing IL services;
6. Conducting studies and analyses, developing model policies and procedures, and presenting information, approaches, strategies, findings, conclusions, and recommendations to federal, State and local policymakers to enhance IL services;
7. Training service providers and individuals with disabilities on the IL philosophy; and
8. Providing outreach to populations that are unserved or underserved by IL programs, including minority groups and urban and rural populations.

To be eligible for financial assistance, States are required to establish and maintain a SILC and to submit an approvable State Plan for Independent Living (SPIL) jointly developed by the chairperson of the SILC and the directors of the Centers for Independent Living, with input from individuals with disabilities and other stakeholders throughout the State. The SPIL must be signed by the SILC chairperson acting on behalf of and at the direction of the SILC, the director of the designated State entity (DSE), and not less than 51 percent of the directors of CILs in the State.

Centers for Independent Living

Authorized under title VII, chapter 1, part C of the Rehabilitation Act, as amended by WIOA, the Centers for Independent Living Program provides grants to consumer-controlled, community-based, cross-disability, nonresidential, private nonprofit agencies for the provision of an array of IL services to individuals with significant disabilities. At a minimum, Centers funded by the program are required to provide the following five IL core services:

1. Information and referral;
2. IL skills training;
3. Peer counseling;
4. Individual and systems advocacy; and
5. Services that facilitate transition from nursing homes and other institutions to home and community based residences with the necessary supports and services, provide assistance to those at risk of entering institutions, and facilitate transition of youth to postsecondary life.

Centers also may provide, among others: Services related to securing housing or shelter; personal assistance services; transportation, including referral and assistance, mobility training, rehabilitation technology; and other services consistent with 29 U.S.C. 705(18), including those necessary to improve the ability of individuals with significant disabilities to function independently in the family or community and/or to continue in employment. The Rehabilitation Act establishes a set of activities along with standards and assurances that must be met by the Centers. To continue receiving CIL program funding, eligible Centers must demonstrate minimum compliance with the following evaluation standards: Promotion of the IL philosophy; provision of IL services on a cross-disability basis; support for the development and achievement of IL goals chosen by the consumer; efforts to increase the availability of quality community options for IL; provision of IL core services; resource development activities to secure other funding sources; and community capacity-building activities. Centers' levels of compliance with the standards are assessed based on compliance indicators.

A population-based formula determines the total funding available for discretionary grants to Centers in each State. Subject to the availability of appropriations as required by statute, ACL provides continuation funding to existing Centers at the same level of funding they received the prior fiscal year, including a cost-of-living increase, as long as they meet the standards and assurances, or are taking appropriate action to address identified deficiencies though a corrective action plan. Funding for new Centers in a State is awarded on a competitive basis, based on the State's priority designation of unserved or underserved areas in the SPIL and the availability of sufficient additional funds within the State. There are currently 354 Centers for

Independent Living that receive direct grants from the federal government.[1]

Statewide Independent Living Councils

As discussed above, a State must establish and maintain a Statewide Independent Living Council (referred to as a SILC or Council) in order to be eligible for IL and CIL funding. Although SILCs are not funded directly by the federal government, they are an important partner in implementing the ILS and CIL programs in a State. The SILCs are composed of a majority of people with disabilities and include other independent living stakeholders. SILC members are generally appointed by the Governor of the State, except in the case of a State that, under State law, vests authority for the administration of the activities carried out under the IL programs in an entity other than the Governor (such as one or more houses of the State legislature or an independent board), the chief officer of that entity would appoint SILC members. The chairperson of the SILC, and the directors of the Centers for Independent Living in the State jointly develop the State Plan for Independent Living (referred to as SPIL or State plan) after receiving public input from individuals with disabilities and other stakeholders throughout the State. The SILC monitors, reviews and evaluates the implementation of the SPIL.

A SPIL has already been approved in each State through fiscal year 2016. The law remains unchanged that the SPIL continues to govern the provision of IL services in the State. Each State is expected to continue its support, including specified obligations, under the approved SPIL. Any amendments to the SPIL, reflecting either a change based on the WIOA amendments or any material change in State law, organization, policy or agency operations that affect the administration of the SPIL, must be developed and signed in accordance with section 704(a)(2) of the Rehabilitation Act, as amended. SPIL amendments must be submitted by the State to ACL for approval.

Indicators of Minimum Compliance

WIOA requires ACL to publish minimum compliance indicators for CILs and SILCs before July 22, 2015. (See section 706(b) of the Rehabilitation Act, 29 U.S.C. 796d–1(b), as amended.) Section 706(c) of the Rehabilitation Act continues to require compliance reviews of CILs funded under section 722 and reviews of State entities funded under section 723 of the Rehabilitation Act. Until the new minimum compliance indicators are published, the IL staff at ACL will continue to conduct compliance reviews and make final decisions on any proposed corrective actions and/or technical assistance related to compliance reviews, in accordance with current compliance indicators. Grantees must also continue to submit annual performance reports (referred to as the 704 Report). ACL is in the process of reviewing related instruments and instructions in light of changes under WIOA. Proposed changes and new indicators will be published in the **Federal Register** in accordance with the requirements of the Paperwork Reduction Act of 1995, 44 U.S.C. chapter 35.

Overview of Key Statutory Changes Made by WIOA

As previously discussed, WIOA transferred the Independent Living Programs to ACL and created a new Independent Living Administration within the agency, adding section 701A of the Rehabilitation Act, 29 U.S.C. 796–1. WIOA also made a number of other changes. WIOA amended section 702 of the Act, 29 U.S.C. 796a, to insert the definition of Administrator as the Administrator of the Administration for Community Living in the U.S. Department of Health and Human Services. The responsibilities of the Administrator are set forth in amended section 706, 29 U.S.C. 796d–1.

New section 702 of the Act also amended the definition of a CIL and requires that CILs provide, at a minimum, independent living core services for individuals with significant disabilities, regardless of age or income.

WIOA amended section 7(17) of the Act, to add a new fifth core service to the definition of independent living core services. Other relevant amendments to the definition section include the addition of a new section 7(42), definition of youth with a disability.

WIOA also amends section 704 of the Act, 42 U.S.C. 796c, which describes requirements for the State Plan. The law now requires that the SPIL be developed jointly by the chairperson of the Statewide Independent Living Council (SILC) and the directors of the Centers for Independent Living, after receiving public input from individuals with disabilities and other stakeholders throughout the State. The SPIL is to be signed by the SILC chairperson acting for and at the direction of the SILC, the director of the designated State entity (DSE), and not less than 51 percent of the CILs in the state. The law also requires that the SPIL address working relationships and collaboration between CILs and other entities performing similar work. Finally, the SPIL is required to describe strategies for providing independent living services on a statewide basis, to the greatest extent possible.

As part of the amendments to section 704 of the Act, the DSE is responsible to receive, account for and distribute funds based on the SPIL, provide administrative support for programs under Title VII B, maintain records, and provide information or assurances to the Administrator. Section 704(c)(5) adds a cap of 5 percent of the funds received by the State for any fiscal year under Independent Living Services that the DSE may retain to perform these services.

WIOA made several amendments to section 705 of the Act, 29 U.S.C. 796d, regarding the Statewide Independent Living Council. Amended section 705 (b)(2) requires that voting members of the SILC include, in a state in which one or more CILs are run by, or in conjunction with, the governing bodies of American Indian tribes located on Federal or State reservations, at least one representative of the director of such Centers. It also removes the term limit for a CIL director appointed to the SILC if there is only one CIL within the State. Amended section 705(c)(2) permits the SILC to engage in new activities in addition to the original duties outlined in section 705(c)(1). However, the amended section 705(c) also provides that the SILC may not provide independent living services directly to individuals with significant disabilities or manage such services. The SILC may work with CILs to coordinate services with public and private entities in order to improve services provided to individuals with disabilities, and may now also conduct resource development activities. SILCs must prepare a resource plan in conjunction with the designated State entity.

WIOA requires that between 1.8 percent and 2 percent of funds be set aside for technical assistance and training for SILCs. The law also amends section 713 of the Act, 29 U.S.C. 796e–2, to provide that States may not use more than 30 percent of the funds received under chapter 1, part B, of the Rehabilitation Act for the SILC resource plan unless the State plan specifies a greater percentage is needed.

Finally, WIOA modifies section 706(c) of the Act, 29 U.S.C. 796d–1(c) to eliminate the requirement that

[1] In many States there are additional CILs that receive State funding or federal IL funding administered by the State agencies.

compliance reviews of CILs be conducted randomly.

Overview of Regulatory Changes

U.S. Department of Education (ED) regulations governing the Independent Living Program are found at 34 CFR parts 364, 365, and 366. Part 364 sets forth regulations addressing State Independent Living Services and Centers for Independent Living: General Provisions; part 365 sets forth regulations addressing State Independent Living Services; and part 366 sets forth regulations addressing Centers for Independent Living. ACL proposes to consolidate the IL regulations into one new part, 45 CFR part 1329. We further propose to eliminate regulations applicable specifically to ED processes, as well as to eliminate duplicative language or language no longer applicable in the existing ED regulations. We propose to eliminate regulatory language that does not add further interpretation to the statutory language. Unless otherwise noted, the proposed changes in in this notice of proposed rulemaking represent changes to implement WIOA, including the transfer of the programs from ED to HHS.

45 CFR Part 1329

Subpart A

We propose to create a Subpart A of the new 45 CFR part 1329 that will address General Provisions for the IL programs.

Proposed § 1329.1 sets out the programs covered by the new Part. Proposed § 1329.2 sets out their purpose as defined in Section 701 of the Act, 29 U.S.C. 796.

In considering the purpose of the Act and the changes made under WIOA, we wish to highlight ACL's interpretation that the IL programs promote a philosophy of person-centeredness in keeping with the mission of ACL and with the policy of the Department of Health and Human Services. On June 6, 2014, HHS issued guidance on implementing Section 2402(a) of the Affordable Care Act. Section 2402(a) of the Affordable Care Act requires the Secretary to ensure all States receiving federal funds develop service systems that are responsive to the needs and choices of beneficiaries receiving home and community-based long-term services (HCBS), maximize independence and self-direction, provide support coordination to assist with a community-supported life, and achieve a more consistent and coordinated approach to the administration of policies and procedures across public programs providing HCBS. Because so much of the work done by IL programs involves these same principles, we believe it is important to clarify that the June 2014 guidance, including person-centered planning requirements,[2] applies to IL programs.

Proposed § 1329.3 replaces the ED regulations specified in 34 CFR 364.3 with references to other HHS regulations that govern the activities of the Independent Living programs.

Proposed § 1329.4 is the Definitions section.

Sec. 1329.4 Definitions

Proposed § 1329.4 defines terms used in the regulations. We propose to include statutory definitions when we believe the terms to be significant enough to warrant repetition in the regulations. We propose to incorporate some definitions from the existing ED regulations at 34 CFR 364.4. We propose modifications to other definitions to reflect WIOA changes or to modernize the terms.

a. Definition of Independent Living Core Services

ACL proposes to amend the existing regulatory definition of independent living core services by adding the new fifth core service to the previous definition. The four original core services are information and referral services; independent living skills training; peer counseling, including cross-disability peer counseling; individual and systems advocacy.

The new fifth core service has three components, each of which must be met to fulfill the fifth core service. It requires CILs to (1) facilitate the transition of individuals with significant disabilities from nursing homes and other institutions to home and community-based residences, with the requisite supports and services; (2) provide assistance to individuals with significant disabilities who are at risk of entering institutions so that the individuals remain in the community; and (3) facilitate the transition of youth who are individuals with significant disabilities, who were eligible for individualized education programs (IEPs) under Section 614(d) of the Individuals with Disabilities Education Act, and who have completed their secondary education or otherwise left school to postsecondary life.

We recognize that the fifth core service of promoting full access to community living and postsecondary life is an important addition to the core services. We acknowledge that through various Medicaid and State-specific programs, including partnerships with other programs administered by ACL, many CILs have experience and existing services consistent with one or more of the three components. To achieve the right balance between clarity and flexibility in implementing the new core service, ACL is considering the appropriate level of detail. We invite comment on whether the proposed language is sufficiently specific, or if more information is needed to successfully implement this new requirement. Under our proposed approach, we have chosen not to define the terms ''institution,'' ''home and community-based residences,'' and ''at risk of institutionalization'' at this time. We propose, however, to define ''youth with a significant disability'' and related terms around youth transition to postsecondary education.

In considering whether to define the term ''institution,'' we looked at a variety of existing Medicare and Medicaid definitions, including the definitions at Sections 1819(a) and 1862(e)(1) of the Social Security Act, and 42 CFR 416.201, 441.301(c)(5), and 441.710(a)(2). These definitions include hospitals, skilled nursing facilities, Medicaid nursing facilities, and Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IID) services. They also include a definition consistent with settings that are not ''community based'' for Section 1915(c) home and community based waivers and for Section 1915(i) State plan home and community based services. We are concerned, however, that defining ''institution'' based on the Medicare and Medicaid model may not be broad enough to encompass all institutions with which CILs may work, including juvenile detention centers, jails and prisons. We seek public comment on whether to include a definition and, if so, the suitability of applying Medicare and Medicaid definitions to the fifth core service.

We also considered definitions of ''home and community-based residences'' and ''at risk'' of institutionalization. We determined not to define these terms at this time, but

[2] Person-centered planning is a process directed by the person with long-term services and supports needs. The person-centered planning approach identifies the person's strengths, goals, preferences, needs (*e.g.* medical and home and community-based services), and desired outcomes. The role of agency workers (*e.g.,* options counselors, support brokers, social workers and others) in the process is to enable and assist people in identifying and accessing a unique mix of paid and unpaid services to meet their needs, and provide support during planning. Person-centered planning is consistent with the independent living philosophy, including consumer control and self-determination, in order to maximize independence.

request comment on whether and how ''home and community-based residences'' and ''at risk'' of institutionalization should be defined for purposes of the fifth core service. We are specifically interested in learning how CILs that are already transitioning individuals with disabilities to the community and/or doing work to avoid the institutionalization of people with significant disabilities currently define ''transition'' from institutions to the community, and people who are ''at risk of entering institutions.'' To maintain the consumer-directed purpose of the programs, ACL also invites comments on the effectiveness and limitations of including the issue of being ''at risk'' as a part of CIL consumers self-disclosing their needs in the intake process.

CILs that provide youth transition services to a broader group of youth with significant disabilities beyond the populations covered under the youth transition prong of the new fifth core service (in Section (17)(E)(iii) of the Act) have the option of continuing to do so, but such services would be included as IL services, rather than as ''core services'' for purposes of the 704 report, and provision of those services would not satisfy the core services requirement. ACL proposes to define a youth with a significant disability as an individual with a significant disability who (i) is not younger than 14 years of age; and (ii) is not older than 24 years of age. This definition is based on the definition of ''individual with a significant disability'' in Section 7(21), 29 U.S.C. 705(21) and ''youth with a disability'' in Section 7(42) of the Act, 29 U.S.C. 705(42).

We further propose to define the term ''completed their secondary education'' to mean that an eligible youth has received a diploma; has received a certificate of completion for high school or other equivalent document marking the completion of participation in high school; has reached age 18, even if he or she is still receiving services in accordance with an individualized education program developed under the IDEA; or has exceeded the age of eligibility for IDEA services.[3] Similarly, we propose a broad interpretation of ''otherwise left school.'' For example, ''otherwise left school'' could mean that the youth has dropped out of school; taken a leave of absence from secondary school for health or disciplinary reasons; or did not graduate but is no longer attending classes at a secondary school. We request comments on this interpretation.

b. Definition of Other Terms in Proposed § 1329.4

We propose a definition of ''*Administrative support services*'' provided by the designated State entity under Part B, to Part C CILs administered by the State under Section 723 of the Act, with some examples. We request comments on this definition.

We proposed to incorporate the definition of ''*Administrator*'' at Section 702(1) of the Act, 29 U.S.C. 796a(1).

We propose to define *''Advocacy*'' consistent with the definition in the existing regulations, 34 CFR 364.4. Individual and system advocacy remain integral elements of promoting independent living according to the purpose of the law. The term includes providing assistance and/or representation in obtaining access to benefits, rights, services, and programs to which a consumer or group of consumers may be entitled. We invite comment on the definition. Grantees should continue to present information in a balanced and non-partisan manner that is consistent with the principles of the Rehabilitation Act and in accordance with relevant federal and State laws and the restrictions and exceptions in the Uniform Guidance, including 2 CFR 200.450, and other applicable requirements.

We propose to incorporate the existing definition of ''*Attendant care services*'' in 34 CFR 364.4.

We propose to add to the existing definition of *''Center for independent living*'' in 34 CFR 364.4 that the array of independent living services provided includes, at a minimum, the independent living core services defined in Section 7(17) of the Act. A ''Center'' that receives assistance under the Act must meet all of the requirements of Section 725 (b) and (c) of the Act, 29 U.S.C. 796f–4(b) and (c), the standards and assurances for Centers for Independent Living.

We propose to add to the statutory definition of *''Consumer control*'' at Section 702 of the Act, 29 U.S.C. 796a(3), that control is vested in individuals with disabilities, including those who are or who have been recipients of IL services.

We propose to add to the existing definition of ''*Cross-disability*'' at 34 CFR 364.4 that the CIL provide services to individuals representing a range of significant disabilities, including individuals who are members of unserved or underserved populations.

We propose to define *''Designated State entity (DSE)*'' based on Section 704 of the Act, 29 U.S.C. 796c(c).

We propose to incorporate the statutory definition of ''*Eligible agency,*'' Section 726 of the Act, 29 U.S.C. 796f–5.

We propose to incorporate the statutory definition of ''*Independent living services,*'' from Section 7(18) of the Act, 29 U.S.C. 705(18).

We propose to define ''*Individual with a disability*'' using the language of 42 U.S.C. 12102 as specified in Section 7(20)(B) of the Act, 29 U.S.C. 705(20)(B).

We propose to incorporate the statutory definition of ''*Individual with a significant disability*'' in Section 7(21)(B) of the Act, 29 U.S.C. 705(21)(B).

We propose to add a definition of ''*Majority*'' to clarify that a majority means more than 50 percent. This definition applies to the SILC member and voting member qualifications, 29 U.S.C. 796d(4)(A)(iv) and (B), and the required assurances relating to the CIL Board & CIL staff, 29 U.S.C. 796f–4(C)(2) and (6), among other provisions. This addition is intended to help clarify statutory requirements, particularly those related to establishing consumer control.

We propose to define *''Minority group*'' to mean American Indian, Alaskan Native, Asian American, Black or African American (not of Hispanic origin), Hispanic or Latino (including persons of Mexican, Puerto Rican, Cuban, and Central or South American origin), and Native Hawaiian or other Pacific Islander, based on the Office of Management and Budget Standards for the Classification of Federal Data on Race and Ethnicity (62 FR 58782 (Oct. 30, 1997)), considered in conjunction with the definition for minority in National Science Foundation regulations, 34 CFR part 637 and with the Centers for Disease Control and Prevention's Office of Minority Health's definitions.

We propose to incorporate the existing definition of ''*Nonresidential*'' at 34 CFR 364.4.

We propose to incorporate the existing definition of ''*Peer relationships*'' at 34 CFR 364.4.

We propose to incorporate the existing definition of ''*Peer role models*'' at 34 CFR 364.4.

We propose to add to the statutory definition of ''*Personal assistance services*'' in Section 7(28) of the Act, 29 U.S.C. 705(28), examples of what might constitute personal assistance services. We also propose to add that such services may be paid or unpaid.

[3] The fifth core independent living service to facilitate the transition of youth who are individuals with significant disabilities requires that they ''. . . were eligible for individualized education programs under section 614(d) of the Individuals with Disabilities Education Act (20 U.S.C. 1414(d) . . .'' under Section 7 of the Act, 29 U.S.C. 705(17)(E)(iii).

We propose a definition of ''*Service provider*'' based on the existing definition in 34 CFR 364.4. We further propose to modify the definition to reflect the WIOA changes by removing references to a designated State unit and adding a designated State entity (DSE).

We propose to incorporate the statutory definition of ''*State*'' Section 7(34) of the Act, 29 U.S.C. 705(34).

We propose to define ''*State plan*'' by reference to Section 704 of the Act, 29 U.S.C. 796c.

We propose to define ''*Unserved and underserved*'' groups or populations to include populations such as individuals with significant disabilities who are from racial and ethnic minority backgrounds, disadvantaged individuals, individuals with limited English proficiency, and individuals from underserved geographic areas (rural or urban). This definition is based on the statutory requirement in Section 704(l) of the Act, 29 U.S.C. 796c(l), to provide outreach to ''populations that are unserved or underserved by programs . . . including minority groups and urban and rural populations.'' We further base the definition on the Congressional findings on traditionally underserved populations set forth in Section 21 of the Act, 29 U.S.C. 718. We recognize that unserved and underserved groups or populations will vary by service area. For example, in some service areas unserved and underserved groups may include people with disabilities from the gay, lesbian, bisexual and transgender communities.

We propose to define *''Youth with a significant disability*'' consistent with the definition of ''individual with a significant disability'' in Section 7(21)(B), 29 U.S.C. 705(21)(B) and ''youth with a disability'' in Section 7(42)(A), 29 U.S.C. 705(42)(A), and with the definition of ''*individual with a disability*'' in § 1329.4.

Sec. 1329.5 Indicators of Minimum Compliance

Section 706 of the Act, 29 U.S.C. 796d–1, discusses the responsibilities of the Administrator with regard to oversight of the IL programs. Specifically, WIOA requires the development and publication of indicators of minimum compliance for CILs, consistent with the standards set forth in Section 725 of the Act, 29 U.S.C. 796f-4, and indicators of minimum compliance for SILCs. WIOA did not amend Section 706(c), which requires annual compliance reviews of 15 percent of CILs and, to the extent necessary to determine compliance with the requirements of Section 723(f) and (g) of the Act, 29 U.S.C. 796f–2, one-third of designated State entities. WIOA deleted the requirement that the CILs and State entities reviewed be chosen on a random basis and we propose to amend the regulations accordingly. We invite comment on the criteria and selection process for compliance reviews going forward, given this change.

ACL proposes to require Centers to demonstrate minimum compliance consistent with Section 725, for the following: Promotion of the IL philosophy; provision of IL services on a cross-disability basis; support for the development and achievement of IL goals chosen by the consumer; efforts to increase the availability of quality community options for IL; provision of IL core services; resource development activities to secure other funding sources; and community capacity-building activities. ACL will continue to monitor programs based on the standards and indicators set forth in the statute as we re-evaluate and develop protocols that meet the requirements of the Act.

Sec. 1329.6 Reporting

In addition to compliance reviews, each CIL and State is required to file an annual performance report, known as the 704 Report, which describes its work and how the CIL or State is meeting the goals and requirements of the Act. This requirement is set forth in proposed § 1329.6. ACL is currently in the process of reviewing the 704 reports. However, for this year, CILs and States are expected to complete the 704 instrument that they have used in the past. We will issue guidance as to how the reports are to be filed. We are considering changes to the 704 Report for future years. The 704 Reports are subject to the Paperwork Reduction Act of 1995 (PRA), and interested stakeholders will have an opportunity to comment on any future revisions to the report through the PRA clearance process.

Sec. 1329.7 Enforcement and Appeals Process

The existing IL regulations at 34 CFR 366.39 through 366.46, include an enforcement and appeals process for the CILs funded under Part C of Chapter 1 of Title VII of the Rehabilitation Act. There is no corresponding process in the existing ED independent living regulations for the designated State entities administering Part B funds in accordance with the State Plan, as authorized by Part B of Chapter 1 of Title VII. In determining the appropriate approach for enforcement and appeals, ACL reviewed the existing Department of Education regulations and the regulations applicable to ACL programs funded under the Older Americans Act (OAA), 45 CFR part 1321, and the Developmental Disabilities and Bill of Rights Act (DD Act) regulations, 45 CFR part 1385. The NPRM proposes to utilize a version of the process from the existing IL regulations modified to account for the new administrative structure of the programs. This approach, intended to create a uniform, clear and relatively simple process, best meets the needs of the CILs, has the advantage of offering a procedure that is familiar to the programs, and is not as intricate, formal or lengthy as those in current ACL rules.

Under the proposed rule, if the Director of the Independent Living Administration (ILA) determines that a Center is not in compliance with the standards and assurances of a grant received from ACL, the Director notifies the Center that the Center is out of compliance and may be subject to enforcement action, including termination of funds. ACL will continue to make reasonable efforts to work with the Center to provide technical assistance in accordance with the procedures in the Notice of Award terms and conditions and any applicable subsequent guidance, to correct any deficiencies and to resolve compliance concerns before taking enforcement action. ACL also proposes a two-step preliminary appeals process where there is the imminent threat of termination or withholding of funds: First to the Director of the Independent Living Administration and then to the Administrator of ACL.

The proposed rule requires a Center found out of compliance to develop a corrective action plan. ACL could provide technical assistance in developing and implementing the corrective action plan and would monitor its implementation. If the Center fails to submit an approvable plan or ACL determines that the Center is otherwise out of compliance, even with the plan, the Administrator may take steps to enforce the corrective action plan or to terminate funding. If the determination by the Administrator is a type of determination described in 45 CFR part 16, Appendix A, Paragraph C, subparagraphs (a)(1)–(4), it would be subject to review by the Departmental Appeals Board (DAB).[4] These

[4] 45 CFR part 16 refers to Procedures of the Departmental Grant Appeals Board, which is currently known within the U.S. Dep't of Health and Human Services as the Departmental Appeals Board (DAB).

determinations are: (1) A disallowance or other determination denying payment of an amount claimed under an award, or requiring return or set-off of funds already received; (2) a termination for failure to comply with the terms of an award; (3) a denial of a noncompeting continuation award under the project period system of funding where the denial is for failure to comply with the terms of a previous award; and (4) a voiding (a decision that an award is invalid because it was not authorized by statute or regulation or because it was fraudulently obtained). Under 45 CFR 16.3, the Center would have 30 days from receipt of notice of that determination in which to file a notice of appeal with the DAB.

We include the enforcement and appeals process in the General Provisions part of these proposed regulations because we propose a parallel process for the Part B grants. We also propose a two-step preliminary appeals process for the Part B grants where there is the imminent threat of termination or withholding of funds, first to the Director of the ILA and then to the Administrator of ACL. We believe such a process is necessary because there may be situations in which a State is out of compliance with the requirements of its grant or of these regulations. For example, Section 704 of the Rehabilitation Act requires that, ''[t]o be eligible to receive financial assistance . . . , a State shall submit to the Administrator, and obtain approval of, a State plan developed and signed in accordance with [Section 704] . . . .'' WIOA added the requirement that the State plan (SPIL) must be signed by not less than 51 percent of the CILs in the State. If a State submits a SPIL that does not comply with the 51 percent signature requirement, ACL wants to ensure that a process exists whereby ACL can provide technical assistance to the State to help bring it into compliance.

As indicated above, ACL may not provide any funds to a State that does not have an approved plan. ACL will work with States to resolve issues that may result in the disallowance or denial of funding. However, should these efforts be unsuccessful, we believe the State should have an appeals process through which it may appeal a decision to disallow or deny funds that would otherwise be provided to a State in accordance with an approved plan.

Because we intend to create a uniform process for Part B and Part C grants, we also propose in these regulations to allow a State to file an appeal with the DAB concerning the four types of determinations set forth in 45 CFR part 16, appendix A, paragraph C, subparagraphs (a)(1) through (4). We further propose that the procedures in 45 CFR part 16 apply to appeals by a State.

We solicit comments about our proposed process and whether additional details need to be included in regulation. As indicated, we intend to utilize technical assistance to help resolve issues before they reach the appeals stage, and are interested in the role that other informal types of dispute resolution and mediation might play in compliance and enforcement, and how such dispute resolution and mediations might be conducted. We note that mediation is already included as an option for determinations that are appealed to the DAB, 45 CFR 16.18.

Because the processes we propose are new, particularly with regard to Part B funds, we are considering the issuance of sub-regulatory guidance to provide additional detail. Such an approach provides ACL and stakeholders with the opportunity to determine the processes that allow Centers and States to come into compliance quickly, while giving ACL the authority to take enforcement actions if the need arises.

Subpart B Independent Living Services

Proposed Subpart B of proposed 45 CFR part 1329 sets forth requirements for the designated State entity (DSE), the Statewide Independent Living Council (SILC), and the State Plan for Independent Living (SPIL). It incorporates some of the regulatory language from 34 CFR part 364 and Part 365. ACL proposes to simplify language and processes, to eliminate duplication of language specified in the Act, and to implement and clarify changes made by WIOA.

Proposed § 1329.10 discusses the authorized use of funds for independent living (IL) services as set forth in the Act. WIOA amended Section 713(b)(1) of the Act to add that a State may use funds to provide independent living services to individuals with significant disabilities, ''particularly those in unserved areas of the State.'' This section includes the new statutory requirement that that States may not use more than 30 percent of the funds received under Chapter 1, Part B, of the Rehabilitation Act for the SILC resource plan unless the approved State plan specifies a greater percentage is needed. This new requirement is also reflected in § 1329.15(c)(3). We propose to add the phrase ''particularly to those in unserved areas of the State'' to the previous regulatory language at 34 CFR part 365.

In proposed § 1329.11 we describe the designated State entity (DSE) as the entity identified by the State and named in the State plan. We propose that the DSE must submit to the Administrator and receive approval of a State plan in order to receive funding under the Act.

Proposed § 1329.12 defines the role of the DSE as those services identified in Sections 704(c)(1) through (5) of the Act. These services were unchanged by WIOA. However, WIOA added Section 704(c)(5), stipulating that the DSE may not retain ''more than five (5) percent of the funds received by the State for any fiscal year under Subpart 2 for the performance of the services outlined in paragraphs (1) through (4).'' We propose in § 1329.12 that the 5 percent administrative cap apply only to the Part B funds allocated to the State and to the State's required 10 percent Part B match. We further propose that the five (5) percent cap not apply to program income funds, including, but not limited to, payments provided to a State from the Social Security Administration for assisting Social Security beneficiaries and recipients to achieve employment outcomes.

In implementing the new requirement, the proposed language in the rule adopts an interpretation that the ''funds received by the State'' include the Part B and State matching funds only, rather than applying the 5 percent cap on administrative funds allocated to the DSE to all federal funds, and other program income, supporting the Independent Living Services program. The cap limits the funds a DSE can retain for administrative purposes in order to ensure that the Part B (State Independent Living) funds are primarily used to support the State's independent living programs and give the SILC sufficient resources to carry out required duties. We think it is consistent with the administrative cap requirement that the required State match be treated on an equal basis with the Part B funds received under this section. This creates consistency in accounting for funds that are inextricably linked to the funds provided under the Part B program, and should be treated the same way as the federal award of Part B funds. However, because program income funds are ''received by the State'' through means other than an appropriation under Part B, we believe those funds should be treated differently and should not be included in the administrative cap.

Proposed § 1329.13 references the allotment of funds for IL services in accordance with statutory provisions. It also proposes that if a State plan designates more than one entity to administer the State plan, including a

State agency or unit of a State agency to administer IL services to individuals who are blind, then it is up to the State to determine and specify how the State's allotment will be distributed between the multiple entities, consistent with the State plan. We ask for comments on the likelihood of a State continuing to or deciding to designate more than one entity to share in the allotment.

Proposed § 1329.13(d) implements new Section 711A of the Act, which was added by WIOA. WIOA requires the Administrator to reserve between 1.8 percent and 2 percent of Part B appropriated funds to provide for training and technical assistance to SILCs. The proposed regulation authorizes the technical assistance to be provided directly or through grants, contracts, or cooperative agreements in accordance with Section 711A. ACL intends to provide further information about SILC technical assistance and training in any funding vehicle which makes funds available under Section 711A.

Proposed § 1329.14 describes the requirements for the establishment and maintenance of a Statewide Independent Living Council (SILC). We propose that a State must establish a SILC that meets the requirements of Section 705 of the Act, including composition and appointment of members, in order to receive funding.

WIOA made a number of amendments to the composition of the SILC. WIOA removes the requirement for a director of a project carried out under Section 121 (the American Indian Vocational Rehabilitation Services Program) to be a required SILC member. WIOA added the requirement that, in States with one or more CILs run by or in conjunction with the governing bodies of American Indian tribes located on Federal or State reservations, at least one representative of the directors of such Centers serve as a voting member of the SILC. We ask for comments whether additional directions are needed to implement this provision consistent with the definition of a Center in Section 702 of the Act. For example, we seek information about what types of CIL-Tribal relationships currently exist that would meet this definition, and to what extent might the current CIL-Tribal relationships meet the requirement of CILs ''run by'' or ''run in conjunction with'' the governing bodies of American Indian tribes located on Federal or State reservations.

In proposed § 1329.14(b), ACL proposes to further strengthen the independence of the SILC by requiring that the SILC be independent of and autonomous from the DSE and all other State agencies.

Proposed § 1329.15 describes the duties of the SILC with reference to Section 705 of the Act and incorporates several changes made by WIOA. We propose to clarify in § 1329.15(b) that the SILC may provide contact information for the nearest appropriate CIL, and that sharing of such information does not constitute the direct provision of independent living services. WIOA amended Section 713 of the Act to add new language that limits the share of Part B funds that may be provided to the SILC resource plan. We propose in § 1329.15(c) to incorporate and clarify this change.

The resource plan, as required under Section 705(e) of the Act, is a document that is separate from the SPIL and that describes how resources necessary and sufficient to carry out the functions of the SILC, will be made available. The WIOA amendment to Section 713 provides that not more than 30 percent of the funds allocated to the State may be used for the resource plan, unless the SPIL specifies that a greater percentage is needed.

Because Section 713 refers to funds received under Part B, we propose to include the State's required 10 percent Part B match in calculating the 30 percent cap to provide the resources in its resource plan.[5] The cap on Part B funds being used for the resource plan ensures that there are sufficient financial resources remaining so that the State may achieve the goals and objectives for Part B funding identified in the SPIL. The State match of the Part B funds is included in the calculation of the 30 percent amount, because the Part B funds are not available in the absence of the State match. Treating the State match as part of the 30 percent also creates efficiency and consistency of accounting within the programs regarding treatment of the Part B State match. In addition, it aligns with current practice in other ACL-administered grants, such as the Alzheimer's Disease Supportive Services Program, which include the State match in calculating the caps for administrative costs and the set asides for services required under the Public Health Services Act.

The proposed regulation states that the percentage allocated to the resource plan in each State is based on the amount of Part B funds actually needed (*i.e.,* ''necessary and sufficient'') by each SILC to fulfill its statutory duties and authorities, rather than an expectation that 30 percent is automatically the baseline. Under WIOA, 30 percent is the ceiling, unless the SPIL explicitly authorizes additional funding, and SILCs are not guaranteed the 30 percent. The language authorizing up to 30 percent of Part B funds to be used for the SILC resource plan will not automatically result in a greater share to be allocated to the SILCs, though it may present an opportunity for an increase. The actual percentage received will result from negotiations among the SILC and DSEs as mandated under the law, and, as indicated, may exceed 30 percent if the State specifies that a greater percentage is needed in the approved SPIL. These changes in the law should allow States the flexibility to choose an approach that works best for the IL network in the State.

We have not defined what is meant by funds necessary and sufficient to carry out the functions of the SILC. We seek comments on whether a definition is necessary, including the process for making that determination.

Proposed § 1329.15(d) requires the SILC, as appropriate, to coordinate activities with other entities in the State that provide services similar to or complementary to independent living services. ACL recognizes that many SILCs, as well as many CILs, already coordinate activities with other entities, including Area Agencies on Aging, Protection and Advocacy programs, Long-Term Care Ombudsman Programs, Aging and Disability Resource Centers, and other organizations funded by ACL, other federal agencies, and States. Some SILCs may choose to coordinate with private entities providing similar services. We have chosen not to include a list of all such entities so as to provide SILCs with the maximum flexibility to work with entities in their state to serve individuals with significant disabilities.

Proposed § 1329.16 describes the authorities of the SILC to conduct discretionary activities as described in the State Plan. The proposed rule requires coordination with the CILs. Again, we have chosen not to define how a SILC should engage in coordination, recognizing that such efforts depend on the needs and requirements in each State.

Proposed § 1329.17 sets forth the requirements for the State Plan for

[5] The proposed regulation concerns the Part B funds, to which the ''30 percent'' specifically applies. Many SILCs receive Part B funds and/or Vocational Rehabilitation program Innovation and Expansion (I&E) funds, Social Security reimbursement funds, other federal funds, State matching funds or other public or private funds. Conversely, in several States SILCs receive no Part B funds at all, but are funded instead through I&E funds, primarily, and possibly other non-Part B federal and non-federal funds as well. Of the 32 states/territories that reported using I&E funds towards their SILC Resource Plan in the FY14–16 SPILs, 13 of these funded their SILC Resource Plan entirely with I&E.

Independent Living (SPIL). The SPIL is a plan that identifies activities to achieve the State's specified independent living objectives and reflects the State's commitment to comply with applicable statutory and regulatory requirements. Each State must have a SPIL approved by the Administrator in order to receive both CIL and ILS program funds under the Act, and each SPIL must be reviewed ''not less than once every three years,'' Under Sec. 704(a)(3) of the Act.[6] WIOA did not change the requirement that each SPIL be reviewed not less than once every three years. We propose that the State must submit the SPIL in the form, manner and time frame determined by the Administrator in accordance with Section 704.

WIOA changed the requirements for joint development of the State Plan, and we propose to implement the new requirements in the proposed regulations. Section 704(a)(2) of the Act, 29 U.S.C. 796c(a)(2), was amended to require that the State plan be developed jointly by the chairperson of the SILC and the directors of the Centers for Independent Living in the State, after receiving public input from individuals with disabilities and other stakeholders throughout the State. While WIOA eliminated the required role of the designated State entity (formerly the designated State unit) in development of the State plan, it does not preclude DSE input in the development of the SPIL in collaboration with the SILC and CILs, and ACL would encourage such input. Proposed § 1329.17(d) makes this change.

WIOA also amended Section 704(a)(2) to require that the SPIL be signed by the chairperson of the SILC acting on behalf of and at the direction of the Council; the director of the DSE; and by not less than 51 percent of the directors of the Centers for Independent Living in that State. We propose in § 1329.17(d)(2)(iii), and (iv) to define a CIL for purposes of signing the SPIL as any consumer-controlled, community-based, cross-disability, nonresidential, private nonprofit agency for individuals with significant disabilities, regardless of funding source, that is designed and operated within a local community by individuals with disabilities; and provides an array of IL services, including, at a minimum, independent living core services and complies with the standards set out in Section 725(b) and provides and complies with the assurances in Section 725(c) of the Act and § 1329.5 of these regulations. We seek comments on this approach.

[6] 29 U.S.C. 796c(a)(3).

On a related issue regarding what type of entity constitutes a CIL for SPIL signature purposes, proposed § 1329.17(d)(2)(iii) counts the ''legal entity'' that may receive more than one grant as the entity included in determining the 51 percent, rather than looking at individual grants. For example, an agency that receives multiple Part C grant awards serving different geographical locations and operated by one governing board and that has one director would constitute a single CIL for SPIL signature purposes, rather than labeling each Part C grant awarded to that agency a stand-alone Center for Independent Living. ACL's intent is that the proposed change will add clarity and simplify the signature process. We seek comments on this proposal as well, including whether this change should be implemented and the problems, if any, this interpretation would create. If the proposed language should be implemented in this instance, should it also be applied more broadly across the IL programs? What are the possible implications for the 704 Reporting process?

Additional proposed regulatory language related to the SPIL in proposed § 1329.17 primarily mirrors Section 704 of the Act and existing regulatory language in 34 CFR part 364, with technical changes, and requirements for effective communication and access for individuals with disabilities, as required under existing law, including Section 504 of the Rehabilitation Act and the Americans with Disabilities Act as amended.

Subpart C—Centers for Independent Living

Subpart C of part 1329 of the regulations concerns the Centers for Independent Living. The proposed regulations are derived from and consolidate existing regulations in 34 CFR part 366. ACL proposes to simplify language and processes and to eliminate duplication of language. We invite comment on the need for additional clarity in these regulatory sections.

Proposed § 1329.20 refers to the definition of a CIL and eligible agency in § 1329.4 of the regulations, and includes Rehabilitation Act citations regarding the Part C allotment to States and the funding formula to CILs.

Proposed § 1329.21 outlines the conditions CILs which currently receive Part C funds have to meet in order to receive continuation funding. It also addresses continuation funding requirements for States that receive Part C funds under Section 723 (currently, Minnesota and Massachusetts) and Section 724 (currently American Samoa) of the Act.

Proposed § 1329.22 discusses competitive awards to new Centers for Independent Living in accordance with the requirements of Sections 722(d) of the Act, 29 U.S.C. 796f–1, 796f–2. It stipulates that such awards are provided to the most qualified applicant based on the selection criteria established by the Administrator consistent with Section 722(d) of the Act; subject to the availability of funds; and in accordance with the order of priorities in Section 722(e) of the Act and the State Plan's design for statewide network of Centers.

Proposed § 1329.23 addresses the periodic reviews of CILs to verify compliance with the standards and assurances in Section 725(b) and (c) of the Act and the grant terms and conditions, in accordance with Sections 706(c), 722(g) and 723(g) of the Act and guidance set forth by the Administrator.

Proposed § 1329.24 sets forth the requirement that the Administrator reserve between 1.8 percent and 2 percent of appropriated funds to provide, either directly or through grants, contracts, or cooperative agreements, training and technical assistance to CILs. The proposed regulation states that the training and technical assistance shall be in accordance with Section 721(b) of the Act. ACL intends to provide further guidance in any funding opportunity announcement related to training and technical assistance for CILs.

II. Regulatory Impact Analysis

A. Executive Order 12866

Executive Order 12866 requires that regulations be drafted to ensure that they are consistent with the priorities and principles set forth in Executive Order 12866. The Department has determined that this rule is consistent with these priorities and principles. Executive Order 12866 encourages agencies, as appropriate, to provide the public with meaningful participation in the regulatory process. The rule implements the Workforce Innovation and Opportunity Act enacted on July 22, 2014. In developing the final rule, we will consider input received from the public, including stakeholders.

B. Regulatory Flexibility Analysis

The Secretary certifies under 5 U.S.C. 605(b), the Regulatory Flexibility Act (Pub. L. 96–354), that this regulation will not have a significant economic impact on a substantial number of small entities. The small entities that would be affected by these proposed regulations are States and Centers

receiving Federal funds under these programs. However, the regulations would not have a significant economic impact on States or Centers affected because the regulations would not impose excessive regulatory burdens or require unnecessary Federal supervision. The proposed regulations would implement statutory changes that impose new requirements to ensure the proper expenditure of program funds.

The ILS Program provides formula grants to States for the purpose of funding a number of activities, directly and/or through grant or contractual arrangements. To be eligible for financial assistance, States are required to establish a designated State entity, State Independent Living Council and to submit an approvable three-year State Plan for Independent Living (SPIL) jointly developed by the chairperson of the SILC and the directors of the CILs in the State and signed by the chairperson of the SILC, not less than 51 percent of the directors of the CILs in the state, and the director of the designated State entity (DSE). The signature requirement of not less than 51 percent of CIL directors is a new requirement under WIOA. While this requirement does increase the amount of time a State may need to prepare an approvable SPIL, the statute provides no flexibility in implementing the new requirement. We are not able to estimate the amount of additional time the 51 percent signatory requirement will add to the SPIL development and approval process at the State level given that this is a new requirement. We are soliciting comments from affected States on this issue.

The CILs program provides grants to consumer-controlled, community-based, cross-disability, nonresidential, private nonprofit agencies for the provision of IL services to individuals with significant disabilities. WIOA expanded the previous definition of core IL services, specified in Section 7(17) of the Act, to include a fifth core service. Specifically, Centers funded by the program must now provide services that facilitate transition from nursing homes and other institutions to the community, provide assistance to those at risk of entering institutions, and facilitate transition of youth to postsecondary life. Currently there are 354 CILs that receive federal funding under this program.

WIOA did not include any additional funding for the provision of this new fifth core service, but rather assumed that CILs would reallocate existing grant money to ensure the appropriate provision of all services required under Title VII of the Rehabilitation Act. Since successful transition is a process that requires sustained efforts and supports over a long-term period, and the CILs were aware of the changes under the law before officially tracking these efforts as core services, we do not currently have a clear picture of the impact of the changes under WIOA on the programs, though we are applying the closest applicable data to the estimates in this analysis. We hope to conduct a more throughout analysis when we are able to collect updated data and specifically request comments on the impact of the change.

Analysis of Fiscal Year (FY) 2014 data available in the required annual performance reports (704 Report) indicates that CILs are providing services that are same or similar to the new fifth core service to one or more consumers. For purposes of this analysis, we looked at three specific categories of data currently captured in the 704 Annual Performance Report that we believe most accurately match the three components of the fifth core service.[7] We believe that the ''Relocation from a Nursing Home or Institution'' category matches the first component of the new fifth core service: Facilitate transitions from nursing homes and other institutions to the community. We believe that the ''Community-Based Living'' category matches the second component of the new fifth core service: Provide assistance to those at risk of entering institutions. We believe the ''Youth/Transition Services'' category captures some relevant information for the third component of the new fifth core service: Facilitate transition of youth to postsecondary life. For FY 2014, 281 CILs report nursing home transition goals established for at least one consumer, 343 CILS report community-based living goals established for at least one consumer, and 224 CILs report youth transition services provided to at least one consumer under the ''Youth/Transition Services'' category of the 704 Annual Performance Report.

5th Core service	704 Annual performance report category	Percentage of CILs *	Number of CILS
Facilitate Transitions from Nursing Homes and Other Institutions to the Community.	Relocation from a Nursing Home or Institution	83	281
Provide Assistance to those at risk of entering institutions.	Community-Based Living	99	343
Facilitate Transition of Youth to Postsecondary Life	Youth/Transition Services	66	224

* Percentage of CILs reporting a goal set for at least one consumer. The Youth/Transition Services sub-category represents the percentage of CILs reporting service provision to at least one consumer.

Based on this analysis, we believe that many CILs currently have staff capable of providing the new fifth core service. However, due to the lack of additional funding, compliance with this statutory change may require CILs to re-examine their individual budgets, staffing plans, and consumer needs in order to reallocate funding to ensure the appropriate provisions of services as required by the Rehabilitation Act. We estimate that this analysis will require approximately 10–15 hours of time for each CIL director. We proposed to use the upper end of the time estimate (15 hours) for purposes of estimating the total impact of this statutory requirement. Therefore, we estimate the amount of compliance analysis time for CIL directors to total 5,310 hours.

To estimate the average hourly wage for a CIL director, we examined data compiled by the IL Net (a collaborative project of Independent Living Research Utilization (ILRU), the National Council on Independent Living (NCIL), and the Association of Programs for Rural Independent Living (APRIL)) and Bureau of Labor Statistics (BLS) data. According to a 2003 National Survey of Salaries and Work Experience of Center for Independent Living Directors, compiled by IL Net, the most common annual salary range for CIL directors in 2002 was between $41,000 and $45,000. This equates to an average hourly salary

[7] The current 704 Report was not designed to incorporate the fifth core service, so current data roughly corresponds with the categories.

range of $19.71 to $21.63. The Bureau of Labor Statistics (BLS) provided more recent salary information. According to 2012 BLS data, the average hourly wage for a social and community manager (a BLS occupational classification for managers who coordinate and supervise social service programs) was $28.83. We propose using the more recent BLS data to calculate the total estimated impact of this statutory requirement. In order to estimate the benefits and overhead associated with this hourly wage, we assume that these costs equal 100 percent of pre-tax wages, for a total hourly cost of $57.66. Therefore, we estimate the total dollar impact of this additional CIL director time to be $306,174.60.

As noted previously, we have interpreted recent 704 Reports as indicating that many CILs currently have staff capable of providing the new fifth core service. However, as shown in the table above, a substantial number of CILs do not yet provide the newly required services and therefore would potentially incur costs in order to comply with this proposed rule.[8] We would welcome comments from CILs as to their cost estimates of providing the statutorily-required fifth core service, so as to better inform our budgeting assumptions going forward.

WIOA continues to require annual onsite compliance reviews of at least 15 percent of CILs that receive funding under section 722 of the Act and at least one-third of designated state units that receive funds under section 723 of the Act. The only change made by WIOA was to eliminate the requirement that CILs subject to compliance reviews be selected randomly. ACL is not proposing any changes to the compliance review process in this regulation. We do not anticipate any additional burden on grantees as a result of the compliance and review process, including the development of additional corrective action plans in response to such reviews. While ACL is proposing to establish a new appeals process for States where there is the imminent threat of termination or withholding of funds, we anticipate that the process will be utilized infrequently based on past experience of the Independent Living Services programs. The process is designed to provide additional protection against the termination of funding. Therefore, we do not expect that funds will be terminated more or less frequently.

The allocation of 1.8 to 2 percent of Part B funds to training and technical assistance for SILCs is a new requirement under WIOA. We have limited available data regarding the impact on programs of this provision and therefore request comment on this aspect of the analysis.

The 5 percent administrative cap on the DSE and 30 percent ceiling on the SILC resource plan (absent a different amount with justification in the SPIL) are also new statutory requirements. The NPRM adopts a narrow interpretation of the 5 percent administrative cap, limiting its application to ''Part B'' funds only, rather than applying the 5 percent cap on administrative funds allocated to the DSE to all federal funds supporting the Independent Living Services. Additional funding sources include Social Security reimbursements, Vocational Rehabilitation program Innovation and Expansion (I&E) funds, and other public or private funds. The NPRM avoids a broader application of the cap in an attempt to avoid creating too great a disincentive to State agencies to serve as DSEs, given the more limited role of the DSEs in decision-making (as they no longer have a statutory role in the development of the SPIL). Our intent is to effectuate the limitation as required under the law, while helping ensure retention of DSEs for the Part B programs. We request comment on the impacts of this and other potential approaches.

C. Alternative Approaches

Although we believe that the approach of the proposed rule best serves the purposes of the law, we considered a regulatory scheme requiring an alternative treatment of the Part B State matching funds. In the proposed rule, funds used to meet the required 10 percent state match are treated the same as funds ''received by the State'' under Part B.

To better understand the implications of this decision, consider the five percent administrative cap on the DSE's use of Part B funds for administrative purposes in § 1329.12(a)(5), for example. The proposed regulatory language mandates that WIOA's 5 percent cap on funds for DSE administrative expenses applies only to the Part B funds allocated to the State and to the State's required 10 percent Part B match. It does not apply to other program funds, including, but not limited to, payments provided to a State from the Social Security Administration for assisting Social Security beneficiaries and recipients to achieve employment outcomes, any other federal funds, or to other funds allocated by the State for IL purposes. Treating the issue in this way makes more Part B funds available for IL services and SPIL activities, while retaining sufficient funds to permit the DSE to accomplish its responsibilities and oversight requirements for ILS program funds under the law. One key advantage of this approach is minimizing disruptions to the ILS program from potential DSE decisions to relinquish the program due to insufficient resources to fulfill the WIOA-related fiscal oversight/administrative support responsibilities. For context, on average, 10–15 percent of DSE funding was spent on administrative costs prior to WIOA, though this must be considered along with the more limited role the DSE now plays under the law as amended.

A narrower interpretation of this provision would be to apply it to Part B funds only, without the state match. Not only would this approach severely limit the funds available for fulfillment of DSE responsibilities under the law, it would also create some potential accounting burdens for programs, as State funds provided as a result of the ILS program's State matching requirement have traditionally been treated similarly to Federal Part B funds. It would also be inconsistent with prior accounting practices regarding the 10% State match for Part B funding, which existed prior to WIOA.

The broadest interpretation would include all federal funds supporting the ILS program, including Social Security reimbursements and Innovation and Expansion funds from the Title I (Vocational Rehabilitation) program in the cap, which would broaden the pot of monies allocated for administrative costs of the DSE, which on its face seems counter to the change in the law capping the available percentage for these purposes at a relatively low amount.

D. Paperwork Reduction Act of 1995

The Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.,* requires certain actions before an agency can adopt or revise a collection of information. Under the PRA, we are required to provide notice in the **Federal Register** and solicit public comment before an information collection request is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, Section

[8] Costs of new actions are included in a regulatory impact analysis even when budgets or grant amounts do not change. If CILs are reallocating grant funds to these newly required services, then they are doing some other worthwhile activity to a lesser extent, and the value of that alternative activity represents the opportunity cost of the new requirements.

3506(c)(2)(A) of the PRA requires that we solicit comments on new or revised information collections, which in the case of this rule, includes the new SPIL development requirements. The law is also intended to ensure that stakeholders can fully analyze the impact of the rule, which includes the associated reporting burden. We are not introducing any new information collections in this proposed rule however, it does revise process requirements. As discussed earlier, WIOA changed the requirements regarding SPIL development and who must sign the SPIL.

This NPRM makes no revisions to the 704 reporting instruments, the Section 704 Annual Performance Report (Parts I and II). ACL is currently convening workgroups to recommend and implement changes to the 704 reporting instruments. These changes will be subject to the public comment process under the PRA before they are finalized.

1. State Plans for Independent Living (SPIL)

The SPIL encompasses the activities planned by the State to achieve its specified independent living objectives and reflects the State's commitment to comply with all applicable statutory and regulatory requirements during the three years covered by the plan. A SPIL has already been approved in each State through fiscal year 2016. (State Plan for Independent Living and Center for Independent Living Programs, OMB Control Number 1820–0527.) The law remains unchanged that the SPIL continues to govern the provision of IL services in the State. Each State is expected to continue its support, including specified obligations, for an approved SPIL. Any amendments to the SPIL, reflecting either a change based on the WIOA amendments or any material change in State law, organization, policy, or agency operations that affect the administration of the SPIL, must be developed in accordance with Section 704(a)(2) of the Rehabilitation Act, as amended. SPIL amendments must be submitted by the State to ACL for approval.

WIOA changed the content of the SPIL to the extent that the SPIL must describe how the State will provide independent living services that promote full access to community life for individuals with significant disabilities and describe strategies for providing independent living services on a statewide basis, to the greatest extent possible. The SPIL must also include a justification for any funding allocation of Part B funds above 30% for the SILC's resource plan. We solicit comments on any information we should consider regarding the potential impact of these changes.

We anticipate that such changes may, on average, increase the amount of time to develop the SPIL by five (5) hours. There are 57 SPILs, one for each state, the District of Columbia, and the six territories. Assuming the same hourly cost of $57.66 discussed in the Regulatory Impact Analysis above, we therefore estimate the cost of the changes to be $16,433.1 (57 SPILs × $57.66/hour × 5 hours). We solicit comments on any information we should consider regarding the potential impact of these changes.

2. 704 Reporting Requirements

The Section 704 Annual Performance Report (Parts I and II) are the reporting instruments used to collect information required by the Act, as amended by WIOA, related to the use of Part B and Part C funds. Sections 704(m)(4)(D), 706(d), 704(c)(3) and (4), and 725(c) of the Rehabilitation Act, as amended, and these proposed regulations require CILs and DSEs to submit an annual performance report (704 report) to ACL to receive funding. This proposed regulation simply transfers the statutorily required annual reporting from the Department of Education Regulations to the Department of Health and Human Services (HHS) regulations. No additional reporting requirements are being added to the current OMB approved 704 report at this time. (Section 704 Annual Performance Report (Parts I and II), OMB Control Number 1820–0606).

Prior to WIOA, an effort was underway to make formal changes to the 704 reporting instruments. The passage of WIOA in July 2014 put those efforts on hold until late 2014. ACL is currently convening workgroups to recommend and implement changes to the 704 reporting instruments, and these changes will be subject to the public comment process under the PRA before they are finalized. Key steps in ACL's current and projected timeline on the process include an external workgroup webinar, held April 1, 2015, to share the status of 704 revision efforts and invite feedback on specific issues. It is ACL's goal to publish the revised reporting instruments for comment in **Federal Register** in April 2016. According to this projected timeline, in October 2017, programs will begin collecting information for the FY 18 reporting period using the new 704 reporting instruments. In December 2018, the FY18 704 reports reflecting the new reporting requirements will be due.

Updating the 704 reporting instruments (Parts I and II) will require changes to include the new fifth core service under WIOA. We propose definitions for some of the terms in the fifth core service in this NPRM, and request comments on other areas that need more detail, as well as the burdens on programs of implementing this required core service. Assuming revised 704 reports include reporting on the new fifth core service, we estimate that providing the information will take approximately 1 hour per 704 Report. We estimate the total number of 704 Reports filed annually to be 412.[9] Assuming the same hourly cost of $57.66 discussed in the regulatory impact analysis above, we estimate the cost of the changes to be $23,755.92. In summary, future proposed changes to the Section 704 Annual Performance Report (Parts I and II) will be published in the **Federal Register** in accordance with the requirements of the PRA. However, we seek comments now on these estimates.

Section 706 of the Rehabilitation Act continues to require reviews of CILs funded under Section 722 and reviews of state entities funded under Section 723 of the Rehabilitation Act. Therefore, ACL will continue to conduct compliance reviews and make final decisions on any proposed corrective actions and/or technical assistance related to compliance reviews of a CIL's grants.

In Section 706(b), 29 U.S.C. 796d–1(b), WIOA requires the Administrator to develop and publish in the **Federal Register** new indicators of minimum compliance for Statewide Independent Living Councils. The SILC Standards and Indicators of minimum compliance are currently under development. It is ACL's goal to share a draft for informal stakeholder review by January 2016. The CIL indicators of minimum compliance (consistent with the standards set forth in Section 725) are awaiting the addition of the fifth core service, which requires input in response to this proposed rule.

E. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (Unfunded Mandates Act) requires that a covered agency prepare a budgetary impact statement before promulgating a rule that includes any Federal mandate that may result in expenditures by State, local, or Tribal governments, in the

[9] *See,* 79 FR 23960 (April 29, 2014); information collection approved June 4, 2014 through June 30, 2017. *http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201404-1820-001.*

aggregate, or by the private sector, of $100 million, adjusted for inflation, or more in any one year.

If a covered agency must prepare a budgetary impact statement, Section 205 further requires that it select the most cost-effective and least burdensome alternatives that achieves the objectives of the rule and is consistent with the statutory requirements. In addition, Section 203 requires a plan for informing and advising any small government entities that may be significantly or uniquely impacted by a rule.

ACL has determined that this rulemaking does not result in the expenditure by State, local, and Tribal governments in the aggregate, or by the private sector of more than $100 million in any one year. The total FY 2015 budget for the Independent Living Services and Centers for Independent Living programs authorized under Chapter 1, Title VII of the Rehabilitation Act of 1973 (Rehabilitation Act or Act), as amended by WIOA (Pub. L. 113–128) is $101,183,000. We do not anticipate that the rule will impact the majority of the budget for these programs.

F. Congressional Review

This proposed rule is not a major rule as defined in 5 U.S.C. 804(2).

G. Assessment of Federal Regulations and Policies on Families

Section 654 of the Treasury and General Government Appropriations Act of 1999 requires Federal agencies to determine whether a policy or regulation may affect family well-being. If the agency's conclusion is affirmative, then the agency must prepare an impact assessment addressing seven criteria specified in the law. These proposed regulations do not have an impact on family well-being as defined in the legislation.

H. Executive Order 13132

Executive Order 13132 on ''federalism'' was signed August 4, 1999. The purposes of the Order are: ''. . . to guarantee the division of governmental responsibilities between the national government and the States that was intended by the Framers of the Constitution, to ensure that the principles of federalism established by the Framers guide the executive departments and agencies in the formulation and implementation of policies, and to further the policies of the Unfunded Mandates Reform Act . . .''

The Department certifies that this rule does not have a substantial direct effect on States, on the relationship between the Federal government and the States, or on the distribution of power and responsibilities among the various levels of government.

ACL is not aware of any specific State laws that would be preempted by the adoption of the regulation.

List of Subjects in 45 CFR 1329

Centers for independent living, Compliance, Enforcement and appeals, Independent living services, Persons with disabilities, Reporting.

Dated: June 24, 2015.

Kathy Greenlee,

Administrator, Administration for Community Living.

Approved: July 17, 2015.

Sylvia M. Burwell,

Secretary, Department of Health and Human Services.

Regulatory Language

For the reasons discussed in the preamble, the Administration for Community Living, Department of Health and Human Services, proposes to add part 1329 to title 45, chapter XIII, subchapter C, of the Code of Federal Regulations to read as follows:

PART 1329—STATE INDEPENDENT LIVING SERVICES AND CENTERS FOR INDEPENDENT LIVING

Subpart A—General Provisions

Sec.

1329.1 Programs covered.
1329.2 Purpose.
1329.3 Applicability of other regulations.
1329.4 Definitions.
1329.5 Indicators of minimum compliance.
1329.6 Reporting.
1329.7 Enforcement and appeals procedures.

Subpart B—Independent Living Services

1329.10 Authorized use of funds for Independent Living Services.
1329.11 DSE eligibility and application.
1329.12 Role of the designated State entity.
1329.13 Allotment of Federal funds for State independent living (IL) services.
1329.14 Establishment of SILC.
1329.15 Duties of the SILC.
1329.16 Authorities of the SILC.
1329.17 General requirements for a State plan.

Subpart C—Centers for Independent Living Program

1329.20 Centers for Independent Living (CIL) program.
1329.21 Continuation awards to entities eligible for assistance under the CIL program.
1329.22 Competitive awards to new Centers for Independent Living.
1329.23 Compliance reviews.
1329.24 Training and technical assistance to Centers for Independent Living.

Authority: 29 U.S.C. 709; 42 U.S.C. 3515e.

Subpart A—General Provisions

§ 1329.1 Programs covered.

This part includes general requirements applicable to the conduct of the following programs authorized under title VII, chapter 1 of the Rehabilitation Act of 1973, as amended:

(a) Independent Living Services (ILS), title VII, chapter 1, part B (29 U.S.C. 796e to 796e–3).

(b) The Centers for Independent Living (CIL), title VII, chapter 1, part C (29 U.S.C. 796f to 796f–6).

§ 1329.2 Purpose.

The purpose of title VII of the Act is to promote a philosophy of independent living (IL), including a philosophy of consumer control, peer support, self-help, self-determination, equal access, and individual and system advocacy, in order to maximize the leadership, empowerment, independence, and productivity of individuals with disabilities, and to promote the integration and full inclusion of individuals with disabilities into the mainstream of American society by:

(a) Providing financial assistance to States for providing, expanding, and improving the provision of IL services;

(b) Providing financial assistance to develop and support statewide networks of Centers for Independent Living (Centers or CILs)

(c) Providing financial assistance to States, with the goal of improving the independence of individuals with disabilities, for improving working relationships among—

(1) State Independent Living Services;

(2) Centers for Independent Living;

(3) Statewide Independent Living Councils (SILCs or Councils) established under section 705 of the Act (29 U.S.C. 796d);

(4) State vocational rehabilitation (VR) programs receiving assistance under Title 1 of the Act;

(5) State programs of supported employment services receiving assistance under Title VI of the Act;

(6) Client assistance programs (CAPs) receiving assistance under section 112 of the Act (29 U.S.C. 732);

(7) Programs funded under other titles of the Act;

(8) Programs funded under other Federal laws; and

(9) Programs funded through non-Federal sources with the goal of improving the independence of individuals with disabilities.

§ 1329.3 Applicability of other regulations.

Several other regulations apply to all activities under this part. These include but are not limited to:

(a) 45 CFR part 16—Procedures of the Departmental Grant Appeals Board.

(b) 45 CFR part 46—Protection of Human Subjects.

(c) 45 CFR part 75—Uniform Administrative Requirements, Cost Principles, and Audit Requirements for HHS Award.

(d) 45 CFR part 80—Nondiscrimination under Programs Receiving Federal Assistance through the Department of Health and Human Services—Effectuation of title VI of the Civil Rights Act of 1964.

(e) 45 CFR part 81—Practice and Procedures—Practice and Procedure for Hearings under Part 80 of this title.

(f) 45 CFR part 84—Nondiscrimination on the Basis of Handicap in Programs and Activities Receiving Federal Financial Assistance.

(g) 45 CFR part 86—Nondiscrimination on the Basis of Sex in Education Programs and Activities Receiving or Benefiting from Federal Financial Assistance.

(h) 45 CFR part 91—Nondiscrimination on the Basis of Age in Programs or Activities Receiving Federal Financial Assistance from HHS.

(i) 45 CFR part 93—New restrictions on Lobbying.

(j) 2 CFR part 376—Nonprocurement Debarment and Suspension

(k) 2 CFR part 382—Requirements for Drug-Free Workplace (Financial Assistance)

§ 1329.4 Definitions.

For the purposes of this part, the following definitions apply:

Act means the Rehabilitation Act of 1973 (29 U.S.C. 701 *et seq.*), as amended. *Part B* refers to part B of chapter 1 of title VII of the Act (29 U.S.C. 796e to 7963–3). *Part C* refers to part C of chapter 1 of title VII, of the Act (29 U.S.C. 796f to 796f–6).

Administrative support services means services and supports provided by the designated State entity under Part B, and to Part C CILs administered by the State under section 723 of the Act in support of the goals, objectives and related activities under an approved State Plan for Independent Living (SPIL). Such support includes any costs associated with contracts and subgrants including fiscal and programmatic oversight, among other services.

Administrator means the Administrator of the Administration for Community Living (ACL) of the Department of Health and Human Services.

Advocacy means pleading an individual's cause or speaking or writing in support of an individual. To the extent permitted by State law or the rules of the agency before which an individual is appearing, a non-lawyer may engage in advocacy on behalf of another individual. Advocacy may—

(1) Involve representing an individual—

(i) Before private entities or organizations, government agencies (whether State, local, or Federal), or in a court of law (whether State or Federal); or

(ii) In negotiations or mediation, in formal or informal administrative proceedings before government agencies (whether State, local, or Federal), or in legal proceedings in a court of law; and

(2) Be on behalf of—

(i) A single individual, in which case it is individual advocacy;

(ii) A group or class of individuals, in which case it is *systems advocacy;* or

(iii) Oneself, in which case it is *self advocacy.*

Attendant care means a personal assistance service provided to an individual with significant disabilities in performing a variety of tasks required to meet essential personal needs in areas such as bathing, communicating, cooking, dressing, eating, homemaking, toileting, and transportation.

Center for independent living (''*Center*'') means a consumer-controlled, community-based, cross-disability, nonresidential, private nonprofit agency for individuals with significant disabilities (regardless of age or income) that—

(1) Is designed and operated within a local community by individuals with disabilities;

(2) Provides an array of IL services as defined in section 7(18) of the Act, including, at a minimum, independent living core services as defined in section 7(17); and

(3) Complies with the standards set out in Section 725(b) and provides and complies with the assurances in section 725(c) of the Act and § 1329.5 of these regulations.

Completed their secondary education means, with respect to the Independent Living Core Services that facilitate the transition of youth who are individuals with significant disabilities in section 7(17)(e)(iii) of the Act, that an eligible youth has received a diploma; has received a certificate of completion for high school or other equivalent document marking the completion of participation in high school; has reached age 18, even if he or she is still receiving services in accordance with an individualized education program developed under the IDEA; or has exceeded the age of eligibility for services under IDEA.

Consumer control means, with respect to a Center or eligible agency, that the Center or eligible agency vests power and authority in individuals with disabilities, including individuals who are or have been recipients of IL services, in terms of the management, staffing, decision making, operation, and provision of services.

Cross-disability means, with respect to services provided by a Center, that a Center provides services to individuals with all different types of significant disabilities, including individuals with significant disabilities who are members of unserved or underserved populations by programs under Title VII. Eligibility for services shall be determined by the Center, and shall not be based on the presence of any one or more specific significant disabilities.

Designated State entity (DSE) is the State agency designated in the State Plan for Independent Living (SPIL) that acts on behalf of the state to provide the functions described in title VII, chapter 1 of the Act.

Eligible agency means a consumer-controlled, community-based, cross-disability, nonresidential, private, nonprofit agency.

Independent living core services mean, for purposes of services that are supported under the ILS or CIL programs—

(1) Information and referral services;

(2) Independent Living skills training;

(3) Peer counseling, including cross-disability peer counseling;

(4) Individual and systems advocacy;

(5) Services that—

(i) Facilitate the transition of individuals with significant disabilities from nursing homes and other institutions to home and community-based residences, with the requisite supports and services;

(ii) Provide assistance to individuals with significant disabilities who are at risk of entering institutions so that the individuals may remain in the community; and

(iii) Facilitate the transition of youth who are individuals with significant disabilities, who were eligible for individualized education programs under section 614(d) of the Individuals with Disabilities Education Act (20 U.S.C. 1414(d)), and who have completed their secondary education or otherwise left school, to postsecondary life.

Independent living service includes the independent living core services and such other services as described in section 7(18) of the Act.

Individual with a disability means an individual who—

(1) Has a physical or mental impairment that substantially limits one or more major life activities of such individual;

(2) Has a record of such an impairment; or

(3) Is regarded as having such an impairment, as described in section 3(3) of the Americans with Disabilities Act of 1990 (42 U.S.C. 12102(3)).

Individual with a significant disability means an individual with a severe physical or mental impairment whose ability to function independently in the family or community or whose ability to obtain, maintain, or advance in employment is substantially limited and for whom the delivery of independent living services will improve the ability to function, continue functioning, or move toward functioning independently in the family or community or to continue in employment, respectively.

Majority means more than 50 percent.

Minority group means American Indian, Alaskan Native, Asian American, Black or African American (not of Hispanic origin), Hispanic or Latino (including persons of Mexican, Puerto Rican, Cuban, and Central or South American origin), and Native Hawaiian or other Pacific Islander.

Nonresidential means, with respect to a Center, that the Center does not operate or manage housing or shelter for individuals as an IL service on either a temporary or long-term basis unless the housing or shelter is—

(1) Incidental to the overall operation of the Center;

(2) Necessary so that the individual may receive an IL service; and

(3) Limited to a period not to exceed eight weeks during any six-month period.

Peer relationships mean relationships involving mutual support and assistance among individuals with significant disabilities who are actively pursuing IL goals.

Peer role models mean individuals with significant disabilities whose achievements can serve as a positive example for other individuals with significant disabilities.

Personal assistance services mean a range of services, paid or unpaid, provided by one or more persons, designed to assist an individual with a disability to perform daily living activities on or off the job that the individual would typically perform if the individual did not have a disability. These services must be designed to increase the individual's control in life and ability to perform everyday activities on or off the job and include but are not limited to: Getting up and ready for work or going out into the community (including bathing and dressing), cooking, cleaning or running errands.

Service provider means a Center for Independent Living that receives financial assistance under Part B or C of chapter 1 of title VII of the Act; a designated State entity (DSE) that directly provides IL services to individuals with significant disabilities; or any other entity or individual that provides IL services under a grant or contract from the DSE pursuant to section 704(f) of the Act.

State includes, in addition to each of the several States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

State plan means the State Plan for Independent Living (SPIL) required under Section 704 of the Act.

Unserved and underserved groups or populations include populations such as individuals from racial and ethnic minority backgrounds, disadvantaged individuals, individuals with limited English proficiency, and individuals from underserved geographic areas (rural or urban).

Youth with a significant disability means an individual with a significant disability who-

(1) Is not younger than 14 years of age; and

(2) Is not older than 24 years of age.

§ 1329.5 Indicators of minimum compliance.

To be eligible to receive funds under this part, a Center must comply with the standards in section 725(b) and assurances in section 725(c) of the Act, with the indicators of minimum compliance established by the Administrator in accordance with section 706 of the Act, and the requirements contained in the terms and conditions of the grant award.

§ 1329.6 Reporting.

(a) The Center must submit a performance report in a manner and at a time described by the Administrator, consistent with section 704(m)(4)(D) of the Act, 29 U.S.C. 796c(m)(4)(d).

(b) The DSE must submit a report in a manner and at a time described by the Administrator, consistent with section 704(c)(4) of the Act, 29 U.S.C. 796c(c)(4).

(c) The Administrator may require such other reports as deemed necessary to carry out the responsibilities set forth in section 706 of the Act, 29 U.S.C. 796d–1.

§ 1329.7 Enforcement and appeals procedures.

(a) *Process for Centers for Independent Living.* (1) If the Director of the Independent Living Administration (Director) determines that any Center receiving funds under this part, other than a Center that is provided Part C funding by the State under section 723 of the Act, is not in compliance with the standards and assurances in section 725 (b) and (c) of the Act and of this part, the Director must provide notice to the Center pursuant to guidance determined by the Administrator.

(2) The Director may offer technical assistance to the Center to develop a corrective action plan or to take such other steps as are necessary to come into comply with the standards and assurances.

(3) The Center may request a preliminary appeal to the Director in a form and manner determined by the Administrator. The Director shall review the appeal request and provide written notice of the determination within a timely manner.

(4) Where there is an imminent threat of termination or withholding of funds, the Center may appeal an unfavorable decision by the Director to the Administrator within a time and manner established by the Administrator. The Administrator shall review the appeal request and provide written notice of the determination within a timely manner.

(5) The Administrator may take steps to enforce a corrective action plan or to terminate funding if the Administrator determines that the Center remains out of compliance.

(6) Written notice of the determination by the Administrator shall constitute a final determination for purposes of 45 CFR part 16. A Center that receives such notice, which would result in termination or withholding of funds, may appeal to the Departmental Appeals Board pursuant to the provisions of 45 CFR part 16.

(7) A Center that is administered by the State under Section 723 of the Act must first exhaust any State process before going through the process described in paragraphs (a)(1) through (6) of this section.

(b) *Process for States.* (1) If the Director of the Independent Living Administration determines that a State is out of compliance with sections 704, 705, 713 or other pertinent sections of the Act, the Director must provide notice to the State pursuant to guidance determined by the Administrator.

(2) The Director may offer technical assistance to the State to develop a corrective action plan or to take such

other steps as are necessary to ensure that the State comes in to compliance.

(3) Where there is an imminent threat of termination or withholding of funds, the State may seek an appeal consistent with the steps set forth in paragraphs (a)(3) and (4) of this section.

(4) The Administrator may take steps to enforce statutory or regulatory requirements or to terminate funding if the Administrator determines that the State remains out of compliance.

(5) Written notice of the determination by the Administrator shall constitute a final determination for purposes of 45 CFR part 16 with regard to the types of determinations set forth in 45 CFR part 16, appendix A, section C, paragraphs (a)(1) through (4). A State that receives such notice that would result in termination or withholding of funds may appeal to the Departmental Appeals Board pursuant to the provisions of 45 CFR part 16.

Subpart B—Independent Living Services

§ 1329.10 Authorized use of funds for Independent Living Services.

(a) The State, after reserving funds under section 13(d) for SILC training and technical assistance:

(1) May use funds received under this part to support the SILC resource plan described in section 705(e) of the Act but may not use more than 30 percent of the funds unless an approved SPIL so specifies pursuant to § 1329.15(c);

(2) May retain funds under section 704(c)(5) of the Act; and

(3) Shall distribute the remainder of the funds received under this part in a manner consistent with the approved State plan for the activities described in paragraph (b) of this section.

(b) The State may use the remainder of the funds described in paragraph (a)(3) of this section to—

(1) Provide to individuals with significant disabilities the independent living (IL) services required by section 704(e) of the Act, particularly those in unserved areas of the State;

(2) Demonstrate ways to expand and improve IL services;

(3) Support the operation of Centers for Independent Living (Centers) that are in compliance with the standards and assurances in section 725 (b) and (c) of the Act;

(4) Support activities to increase the capacities of public or nonprofit agencies and organizations and other entities to develop comprehensive approaches or systems for providing IL services;

(5) Conduct studies and analyses, gather information, develop model policies and procedures, and present information, approaches, strategies, findings, conclusions, and recommendations to Federal, State, and local policy makers in order to enhance IL services for individuals with significant disabilities;

(6) Train individuals with disabilities and individuals providing services to individuals with disabilities, and other persons regarding the IL philosophy; and

(7) Provide outreach to populations that are unserved or underserved by programs under title VII of the Act, including minority groups and urban and rural populations.

§ 1329.11 DSE eligibility and application.

(a) Any designated State entity (DSE) identified by the State pursuant to section 704(c) is eligible to apply for assistance under this part in accordance with section 704 of the Act, 29 U.S.C. 796c.

(b) To receive financial assistance under Parts B and C of chapter 1 of title VII, a State shall submit to the Administrator and obtain approval of a State plan that meets the requirements of section 704 of the Act, 29 U.S.C. 796c.

(c) Allotments to states are determined in accordance with section 711 of the Act, 29 U.S.C. 796e.

§ 1329.12 Role of the designated State entity.

(a) A DSE that applies for and receives assistance must:

(1) Receive, account for, and disburse funds received by the State under Part B and Part C in a State under section 723 of the Act based on the state plan;

(2) Provide administrative support services for a program under Part B and for CILs under Part C when administered by the State under section 723 of the Act, 29 U.S.C. 796f–2;

(3) Keep such records and afford such access to such records as the Administrator finds to be necessary with respect to the programs;

(4) Submit such additional information or provide such assurances as the Administrator may require with respect to the programs; and

(5) Retain not more than 5 percent of the funds received by the State for any fiscal year under Part B, for the performance of the services outlined in paragraphs (a)(1) through (4) of this section. For purposes of these regulations, the 5 percent cap on funds for administrative expenses applies only to the Part B funds allocated to the State and to the State's required 10 percent Part B match. It does not apply to other program income funds, including, but not limited to, payments provided to a State from the Social Security Administration for assisting Social Security beneficiaries and recipients to achieve employment outcomes, any other federal funds, or to other funds allocated by the State for IL purposes.

(b) The DSE must also carry out its other responsibilities under the Act, including, but not limited to, arranging for the delivery of IL services under Part B of the Act, and for the necessary and sufficient resources needed by the SILC to fulfill its statutory duties and authorities, as authorized in the approved State Plan.

(c) Fiscal and accounting requirements: The DSE must adopt fiscal control and fund accounting procedures as may be necessary to ensure the proper disbursement of and accounting for federal funds provided to CILs, SILCs, and/or other services providers under the ILS program. The DSE must comply with all applicable federal and state laws and regulations, including those in 45 CFR parts 75.

§ 1329.13 Allotment of Federal funds for State independent living (IL) services.

(a) The allotment of Federal funds for State IL services for each State is computed in accordance with the requirements of section 711(a)(1) of the Act.

(b) Notwithstanding paragraph (a) of this section, the allotment of Federal funds for Guam, American Samoa, the United States Virgin Islands, and the Commonwealth of the Northern Mariana Islands is computed in accordance with section 711(a)(2) of the Act.

(c) If the State plan designates a State agency or unit of a State agency to administer the part of the plan under which State IL services are provided for individuals who are blind and a separate or different State agency or unit of a State agency to administer the rest of the plan, the division of the State's allotment between these two units is a matter for State determination, consistent with the State plan.

(d) The Administrator shall reserve between 1.8 percent and 2 percent of appropriated funds to provide, either directly or through grants, contracts, or cooperative agreements, training and technical assistance to SILCs. Training and technical assistance funds shall be administered in accordance with section 711A of the Act.

§ 1329.14 Establishment of a SILC.

(a) To be eligible to receive assistance under this part, each state shall establish and maintain a SILC that meets the requirements of section 705 of

the Act, including composition and appointment of members.

(b) The SILC shall not be established as an entity within a State agency, including the DSE. The SILC shall be independent of and autonomous from the DSE and all other State agencies.

§ 1329.15 Duties of the SILC.

(a) The duties of the SILC are those set forth in section 705(c), (d), and (e) of the Act.

(1) The SILC shall develop of the SPIL in accordance with guidelines developed by the Administrator.

(2) The SILC shall monitor, review and evaluate the implementation of the SPIL on a regular basis as determined by the SILC and set forth in the SPIL.

(3) The SILC shall meet regularly, and ensure that such meetings are open to the public and sufficient advance notice of such meetings is provided;

(4) The SILC shall submit to the Administrator such periodic reports as the Administrator may reasonably request, and keep such records, and afford such access to such records, as the Administrator finds necessary to verify the information in such reports; and

(5) The SILC shall, as appropriate, coordinate activities with other entities in the State that provide services similar to or complementary to independent living services, such as entities that facilitate the provision of or provide long-term community-based services and supports.

(b) In carrying out the duties under this section, the SILC may provide contact information for the nearest appropriate CIL. Sharing of such information shall not constitute the direct provision of independent living services as defined in section 705(c)(3) of the Act.

(c) The SILC, in conjunction with the DSE, shall prepare a plan for the provision of resources, including staff and personnel that are necessary and sufficient to carry out the functions of the SILC.

(1) The resource plan amount shall be commensurate, to the extent possible, with the estimated costs related to SILC fulfilment of its duties and authorities consistent with the approved State Plan.

(2) Such resources may consist of Part B funds, State matching funds, Innovation and Expansion (I & E) funds authorized by 29 U.S.C. 721(a)(18), and other public and private sources.

(3) In accordance with § 1329.10(a)(1), no more than 30 percent of the State's allocation of Part B and Part B State matching funds may be used to fund the resource plan, unless the approved SPIL provides that more than 30 percent is needed and justifies the greater percentage.

(4) No conditions or requirements may be included in the SILC's resource plan that may compromise the independence of the SILC.

(5) The SILC is responsible for the proper expenditure of funds and use of resources that it receives under the resource plan.

(6) A description of the SILC's resource plan must be included in the State plan.

(d) As appropriate, the SILC shall coordinate activities with other entities in the State that provide services similar to or complementary to independent living services, such as entities that facilitate the provision of or provide long-term community-based services and supports, to better serve individuals with significant disabilities and help achieve the purpose of section 701 of the Act.

(e) The SILC shall, consistent with State law, supervise and evaluate its staff and other personnel as may be necessary to carry out its functions under this section.

§ 1329.16 Authorities of the SILC.

(a) The SILC may conduct the following discretionary activities, as authorized and described in the approved State Plan:

(1) Work with Centers for Independent Living to coordinate services with public and private entities to improve services provided to individuals with disabilities;

(2) Conduct resource development activities to support the activities described in the approved SPIL and/or to support the provision of independent living services by Centers for Independent Living; and

(3) Perform such other functions, consistent with the purpose of this part and comparable to other functions described in section 705(c) of the Act, as the Council determines to be appropriate and authorized in the approved SPIL.

(b) In undertaking the foregoing duties and authorities, the SILC shall:

(1) Coordinate with the CILs in order to avoid conflicting or overlapping activities within the CILs' established service areas;

(2) Not engage in activities that constitute the direct provision of IL services to individuals, including the IL core services; and

(3) Comply with Federal prohibitions against lobbying.

§ 1329.17 General requirements for a State plan.

(a) The State may use funds received under Part B to support the Independent Living Services program and to meet its obligation under the Act, including the section 704(e) requirements that apply to the provision of independent living services. The State plan must stipulate that the State will provide IL services, directly and/or through grants and contracts, with Federal, State or other funds, and must describe how and to whom those funds will be disbursed for this purpose.

(b) In order to receive financial assistance under this part, a State shall submit to the Administrator a State plan for independent living.

(1) The State plan must contain, in the form prescribed by the Administrator, the information set forth in section 704 of the Act, including designation of an Agency to serve as the designated State entity, and such other information requested by the Administrator.

(2) The State plan must contain the assurances set forth in section 704(m) of the Act.

(3) The State plan must be signed in accordance with the provisions of this part.

(4) The State plan must be submitted 90 days before the completion date of the proceeding plan, and otherwise in the time frame and manner prescribed by the Administrator.

(5) The State plan must be approved by the Administrator.

(c) The State plan must cover a period of not more than three years and must be amended whenever necessary to reflect any material change in State law, organization, policy, or agency operations that affects the administration of the State plan.

(d) The State plan must be jointly—

(1) Developed by the chairperson of the SILC, and the directors of the CILs, after receiving public input from individuals with disabilities and other stakeholders throughout the State; and

(2) Signed by the—

(i) Chairperson of the SILC, acting on behalf of and at the direction of the SILC;

(ii) The director of the DSE; and

(iii) Not less than 51 percent of the directors of the CILs in the State. For purposes of this provision, if a legal entity that constitutes the ''CIL'' has multiple Part C grants considered as separate Centers for all other purposes, for SPIL signature purposes, it is only considered as one Center.

(e) In States where DSE duties are shared with a separate State agency authorized to administer vocational rehabilitation (VR) services for individuals who are blind, the State plan must be signed by the:

(1) Director of the DSE;

(2) Director of the separate State agency authorized to provide VR services for individuals who are blind;

(3) Chairperson of the SILC, acting on behalf of and at the direction of the SILC; and

(4) Not less than 51 percent of the directors of the CILs in the State.

(f) Periodic review and revision. The State plan must provide for the review and revision of the plan, not less than once every three years, to ensure the existence of appropriate planning, financial support and coordination, and other assistance to meet the requirements of section 704(a) of the Act.

(g) *Public input.* (1) The public, including people with disabilities and other stakeholders throughout the State, must have an opportunity to comment on the State plan prior to its submission to the Administrator and on any revisions to the approved State plan. Meeting this standard for public input from individuals with disabilities requires providing reasonable modifications in policies, practices, or procedures; effective communication and appropriate auxiliary aids and services for individuals with disabilities, which may include the provision of qualified interpreters and information in alternate formats, free of charge.

(2) The requirement in paragraph (g)(1) of this section may be met by holding public meetings before a preliminary draft State plan is prepared or by providing a preliminary draft State plan for comment at the public meetings, as appropriate.

(3) To meet the public input standard of paragraph (g) of this section, a public meeting requires:

(i) Accessible, appropriate and sufficient notice provided at least 30 days prior to the public meeting through various media available to the general public, such as Web sites, newspapers and public service announcements, and through specific contacts with appropriate constituency groups.

(ii) All notices, including notices published on a Web site, and other written materials provided at or prior to public meetings must be available upon request in accessible formats.

(h) The State plan must identify those provisions that are State-imposed requirements. For purposes of this section, a State-imposed requirement includes any State law, regulation, rule, or policy relating to the DSE's administration or operation of IL programs under Title VII of the Act, including any rule or policy implementing any Federal law, regulation, or guideline that is beyond what would be required to comply with the regulations in this part.

(i) The State plan must address how the specific requirements in the Act and in paragraph (g) of this section will be met.

Subpart C—Centers for Independent Living Program

§ 1329.20 Centers for Independent Living (CIL) program.

State allotments of Part C, funds shall be based on section 721(c) of the Act, and distributed to Centers within the State in accordance with the order of priorities in sections 722(e) and 723(e) of the Act.

§ 1329.21 Continuation awards to entities eligible for assistance under the CIL program.

(a) In any State in which the Administrator has approved the State plan required by section 704 of the Act, an eligible agency funded under Part C in fiscal year 2015 may receive a continuation award in FY 2016 or a succeeding fiscal year if the Center has—

(1) Complied during the previous project year with the standards and assurances in section 725 of the Act and the terms and conditions of its grant; and

(2) Submitted an approvable annual performance report demonstrating that the Center meets the indicators of minimum compliance referenced in in § 1329.5.

(b) If an eligible agency administers more than one Part C grant, each of the Center grants must meet the requirements of paragraph (a) of this section to receive a continuation award.

(c) A designated State entity (DSE) that operated a Center in accordance with section 724(a) of the Act in fiscal year (FY) 2015 is eligible to continue receiving assistance under this part in FY 2016 or a succeeding fiscal year if, for the fiscal year for which assistance is sought—

(1) No nonprofit private agency submits and obtains approval of an acceptable application under section 722 or 723 of the Act to operate a Center for that fiscal year before a date specified by the Administrator; or

(2) After funding all applications so submitted and approved, the Administrator determines that funds remain available to provide that assistance.

(d) A Center operated by the DSE under section 724(a) of the Act must comply with paragraphs (a), (b), and (c) of this section to receive continuation funding, except for the requirement that the Center be a private nonprofit agency.

(e) A designated State entity that administered Part C funds and awarded grants directly to Centers within the State under section 723 of the Act in fiscal year (FY) 2015 is eligible to continue receiving assistance under section 723 in FY 2016 or a succeeding fiscal year if the Administrator determines that the amount of State funding earmarked by the State to support the general operation of Centers during the preceding fiscal year equaled or exceeded the amount of federal funds allotted to the State under section 721(c) of the Act for that fiscal year.

(f) A DSE may apply to administer Part C funds under section 723 in the time and in the manner that the Administrator may require, consistent with section 723(a)(1)(A) of the Act.

(g) Grants awarded by the DSE under section 723 of the Act are subject to the requirements of paragraphs (a) and (b) of this section and the order of priorities in section 723(e) of the Act, unless the DSE and the SILC jointly agree on another order of priorities.

§ 1329.22 Competitive awards to new Centers for Independent Living.

(a) Subject to the availability of funds and in accordance with the order of priorities in section 722(e) of the Act and the State Plan's design for the statewide network of Centers, an eligible agency may receive Part C funding as a new Center for Independent Living in a State, if the eligible agency:

(1) Submits to the Administrator an application at the time and manner required in the funding opportunity announcement (FOA) issued by the Administrator which contains the information and meets the selection criteria established by the Administrator in accordance with section 722(d) of the Act;

(2) Proposes to serve a geographic area that has been designated as a priority unserved or underserved in the State Plan for Independent Living and that is not served by an existing Part C-funded Center; and

(3) Is determined by the Administrator to be the most qualified applicant to serve the designated priority area consistent with the State plan setting forth the design of the State for establishing a statewide network of Centers for independent living.

(b) An existing Part C-funded Center may apply to serve the designated unserved or underserved areas if it proposes the establishment of a separate and complete Center (except that the governing board of the existing center may serve as the governing board of the new Center) at a different geographical

location, consistent with the requirements in the FOA.

(c) An eligible agency located in a bordering State may be eligible for a new CIL award if the Administrator determines, based on the submitted application, that the agency:

(1) Is the most qualified applicant meeting the requirements in paragraphs (a) and (b) of this section; and

(2) Has the expertise and resources necessary to serve individuals with significant disabilities who reside in the bordering State, in accordance with the requirements of the Act and these regulations.

(d) If there are insufficient funds under the State's allotment to fund a new Center, the Administrator may—

(1) Use the excess funds in the State to assist existing Centers consistent with the State plan; or

(2) Reallot these funds in accordance with section 721(d) of the Act.

§ 1329.23 Compliance reviews.

(a) Centers receiving Part C funding shall be subject to periodic reviews, including on-site reviews, in accordance with sections 706(c), 722(g), and 723(g) of the Act and guidance set forth by the Administrator, to verify compliance with the standards and assurances in section 725(b) and (c) of the Act and the grant terms and conditions. The Administrator shall annually conduct reviews of at least 15 percent of the Centers.

(b) A copy of each review under this section shall be provided, in the case of section 723(g), by the director of the DSE to the Administrator and to the SILC, and in the case of section 722(g), by the Administrator to the SILC and the DSE.

§ 1329.24 Training and technical assistance to Centers for Independent Living.

The Administrator shall reserve between 1.8% and 2% of appropriated funds to provide training and technical assistance to Centers through grants, contracts or cooperative agreements, consistent with section 721(b) of the Act. The training and technical assistance funds shall be administered in accordance with section 721(b) of the Act.

DEPARTMENT OF AGRICULTURE

Food Safety and Inspection Service

[Docket Number FSIS–2013–0029]

RIN 0583–AD39

Availability of FSIS Compliance Guidelines for Allergens and Ingredients of Public Health Concern: Identification, Prevention and Control, and Declaration Through Labeling

AGENCY: Food Safety and Inspection Service, USDA.

ACTION: Notice of availability.

SUMMARY: The Food Safety and Inspection Service (FSIS) is announcing the availability of an updated version of the Agency's compliance guidelines for controlling hazards posed by allergens and other ingredients of public health concern. The guidelines provide recommendations for identifying hazards when conducting a hazard analysis and for preventing and controlling hazards through a hazard analysis and critical control point (HACCP) plan or Sanitation standard operating procedures (SOPs) or other prerequisite programs with respect to these substances.

ADDRESSES: A downloadable version of the revised compliance guide is available to view and print at [*http://www.fsis.usda.gov/wps/wcm/connect/f9cbb0e9-6b4d-4132-ae27-53e0b52e840e/Allergens-Ingredients.pdf?MOD=AJPERES*]. No hard copies of the compliance guidelines have been published.

FOR FURTHER INFORMATION CONTACT: For further information contact Daniel Engeljohn, Assistant Administrator, Office of Policy and Program Development, FSIS, U.S. Department of Agriculture, 1400 Independence Avenue SW., Washington, DC 20250–3700, (202) 205–0495.

SUPPLEMENTARY INFORMATION:

Background

On April 21, 2014, FSIS published a **Federal Register** notice (79 FR 22083) announcing the availability of and opportunity to comment on Agency guidance on allergens and other ingredients of public health concern. FSIS explained that in recent years (2008-2012), there had been a sustained increase in the number of recalls of FSIS-regulated product that contained undeclared allergens, and that these recalls were preventable as many had been the result of ingredient changes, product changes, products in the wrong package, or products with misprinted labels. The Agency also explained that the consumption of meat and poultry products containing ingredients of public health concern, such as undeclared allergens, may result in adverse health outcomes for certain individuals.

The Agency explained that it was issuing the guidelines to provide meat and poultry establishments with recommendations on how to identify hazards with respect to allergens and other ingredients of public health concern when conducting their hazard analysis, how to prevent and control these hazards through HACCP plans, Sanitation SOPs, or other prerequisite programs, and how to properly declare allergens in product. The guidelines also provided information on proper procedures for processing, handling, storing, and labeling a product with an allergenic ingredient or ingredient of public health concern.

In addition, the Agency explained that the guidelines represent the best practice recommendations of FSIS, based on scientific and practical considerations, and that the recommendations are not requirements. FSIS said that by following the guidelines, establishments would be likely to ensure that product labels declare all ingredients, as required in the regulations, and that the product would not contain undeclared allergens or other undeclared ingredients. FSIS recommended that establishments consider incorporating the guidelines in their HACCP plan or Sanitation SOPs or other prerequisite programs.

Updated Guidelines:

FSIS has updated the guidelines to include numbered appendices for diagrams, checklists, and supplemental information to simplify locating these references. In response to the comments discussed below, FSIS updated the guidelines by:

- Clarifying, on pages 2 and 4, that the focus of the document is on FSIS-regulated establishments, state-regulated establishments, and operations where all or part of the premises meet the ''food processing plant'' definition, as defined in the Food and Drug Administration's (FDA) ''2013 Food Code'';
- clarifying, in Section 1.2, page 5, that sulfur-based preservatives (sulfites), lactose, FD&C Yellow 5 (Tartrazine), gluten, and monosodium glutamate (MSG) are ingredients of concern that may result in adverse reactions in certain susceptible individuals, yet they are not considered allergens;
- revising the ''What is a letter of guarantee (LOG)?'' box on page 8, and adding a paragraph on page 9 to clarify and describe a LOG, the difference between a LOG and a Certificate of Analysis (COA), and the communication and coordination between an establishment and its suppliers that FSIS recommends when an establishment relies on LOGs;
- adding ''Allergenic Ingredients and Foods,'' a listing of allergenic ingredients and foods that may contain allergenic ingredients, as a resource (Appendix 6);
- adding ''Tips for Avoiding Your Allergen,'' published by Food Allergy Research and Education (FARE) to the ''References and Resources'' section (Appendix 7); and
- adding FSIS Directive 8080.1, ''Recall of Meat and Poultry Products,'' to the ''References and Resources'' section (Appendix 7).

In addition, in Section 2.1, FSIS edited the text to emphasize the purpose of a hazard analysis and a hazard identification. Under Section 2.3, FSIS edited the third paragraph to delete that an establishment include storage in its HACCP system because that guidance is included in the first paragraph of this section. Also, in Section 2.3, FSIS added the recommendation that an establishment conduct simulations with inaccurate product labels to test system, checklists, and procedures as a step to prevent mislabeling during packing, labeling, and storage of the final product.

Comments and Responses

FSIS received a total of seven comments in response to the April 2014 **Federal Register** notice and guidelines. The commenters included consumer and trade organizations, individuals, and a professional organization. The comments and the Agency's responses are discussed below.

Comment: A professional organization recommended that FSIS modify the introductory sections of the document to clarify that the compliance guidelines were developed for a processing setting.

Response: FSIS has modified the introductory sections of the guidelines to clarify that the emphasis of the document is on FSIS-regulated establishments, state-regulated establishments, and operations where all or part of the premises meet the food processing plant definition as defined in the FDA ''2013 Food Code,'' available online at (*http://www.fda.gov/downloads/Food/GuidanceRegulation/RetailFoodProtection/FoodCode/UCM374510.pdf*).

Comment: An individual commented that Attachment 3 to FSIS Notice 29–13, ''Allergenic Ingredients and Foods,'' is very useful, especially to very small meat and poultry establishments, including those that are dual jurisdiction processing establishments, and that it should be included in the compliance guidelines.

Response: The attachment, entitled, ''Allergenic Ingredients and Foods,'' is based on ''Tips for Avoiding Your Allergen,'' published by Food Allergy Research and Education (FARE). FSIS Notice 29–13 was issued in April 2013 and is now expired. FSIS agrees that the attachment provides useful information and has included it in the guidelines as Appendix 7.

Comment: A consumer group recommended clarifying that some of the ingredients listed under Section 1.2 are not allergens, and that monosodium glutamate (MSG) should not be included because research has not confirmed that it causes adverse reactions.

Response: The list of ingredients in Section 1.2 has been modified to clarify that sulfur-based preservatives (sulfites), lactose, FD&C Yellow 5 (Tartrazine), gluten, and monosodium glutamate (MSG) are ingredients that may result in an adverse reaction in certain susceptible individuals, yet they are not considered allergens. FSIS is concerned about all foods or food ingredients that may cause adverse health effects. Therefore, MSG remains an ingredient of public health concern.

Comment: A trade group recommended that, to ensure that industry is aware of the recommendations in the compliance guide, FSIS provide outreach to the meat and poultry industry.

Response: FSIS intends to provide outreach to the meat and poultry industry on the compliance guidelines by conducting web-based (webinar) sessions for industry and announcing he compliance guide recommendations on the FSIS Small Plant News Web page at *http://www.fsis.usda.gov/wps/portal/fsis/newsroom/meetings/newsletters/small-plant-news/small-plant-news.*

Comment: One commenter requested that FSIS require the listing of all spices by name on product labels. The commenter stated that spice allergies are significant health concerns and that food labels need to specifically list all spices in the product. The commenter was specifically concerned with the labeling of garlic.

Response: The Federal Meat Inspection Act (FMIA) and the Poultry Products Inspection Act (PPIA) require the listing of the common or usual name of ingredients on product labels, except that spices and flavorings may be designated as ''spices'' and ''flavorings,'' without naming each ingredient. Therefore, FSIS does not have the legal authority to require the listing of each spice or flavoring. The term ''spice'' is defined in the FSIS labeling regulations (9 CFR 317.2(f)(1)(i)(A) and 381.118(c)(1)) to mean any aromatic vegetable substance in the whole, broken or ground form, with the exceptions of onions, garlic and celery, whose primary function in food is seasoning rather than nutritional, and from which no portion of any volatile oil or other flavoring principle has been removed. In addition, the terms ''natural flavor,'' ''natural flavoring,'' ''flavor,'' or ''flavoring'' may be used to designate spices as well as powdered garlic, powdered onion, or celery powder, specifically. If whole or broken garlic is used in the formulation of the product, it would need to be declared in the list of ingredients.

Comment: Two trade organizations commented that throughout the guidelines, the focus was on the ''Big Eight'' allergens with little discussion of the ingredients of concern that may cause adverse reactions in susceptible individuals. The commenters recommended that a list of ingredients of public health concern be created in collaboration with the National Institute of Allergy and Infectious Diseases or similarly informed entity.

Response: FSIS is concerned about all foods or food ingredients that may cause adverse health effects. These include the ''Big Eight'' ingredients as well as other ingredients of concern. As discussed above, FSIS has modified the list of ingredients in Section 1.2 to clarify that sulfur-based preservatives (sulfites), lactose, FD&C Yellow 5 (Tartrazine), gluten, and monosodium glutamate (MSG) are ingredients of concern that may cause adverse reactions in certain susceptible individuals. However, FSIS has not established a list of all ingredients to which consumers have reported adverse reactions. Establishments are required to be aware of the ingredients they are using in the production of their products and to determine whether the ingredients may trigger food sensitivities. They need to employ the necessary in-plant controls to prevent cross-contact and assure accurate label declarations.

In addition, FSIS Directive 8080.1, ''Recall of Meat and Poultry Products,'' lists factors considered by the FSIS Recall Committee when evaluating the public health significance of an undeclared ingredient in a meat or poultry product. The directive lists the questions and other factors that the Agency considers. Although the Directive provides instructions to FSIS personnel, the questions that the FSIS recall committee considers will be helpful to industry also. Therefore, the Directive has been added to the ''References and Resources'' section (Appendix 7).

Comment: A trade organization recommended that the list of undeclared allergen recalls include the corrective actions taken to ensure that allergens appear on the label.

Response: FSIS agrees that providing undeclared allergen corrective action scenarios could be a useful mechanism to ensure that allergens appear on the label. ''Allergen Scenarios and Possible Prevention Measures,'' Appendix 5 of the compliance guidelines, is based on historical recalls, giving some insight into the possible preventive measures that would have prevented the undeclared allergen.

Comment: Two trade organizations commented that requiring establishments to review ingredient lists on a continuous basis, especially when an establishment has changed suppliers, or the supplier has modified the ingredient formula, would create unjustified increases in manufacturing cost. They additionally commented that a review of letters of guarantee should not to be confused with certificates of analysis.

Response: FSIS has edited the ''What is a letter of guarantee (LOG)'' box on page 8 of the guidelines, as well as the description of recommendations on page 9 to clarify what are Letters of

Guarantee. As mentioned above, establishments are required to be aware of the ingredients they are using in the production of their products and to determine whether they have considered and employed the necessary in-plant controls to prevent cross-contact and assure accurate label declarations. LOGs are a means to prevent the possible inclusion in the product of an allergen that is not declared on the product label. If a LOG is only a general statement, the establishment should consider initiating a dialogue with its suppliers to ensure the establishment understands ingredient information or to recommend that more specific information be included in LOGs. However, these are guidelines, and FSIS is not establishing any new requirements.

Comment: Two trade organizations commented that if the Agency is suggesting that testing is the only way to meet the guidelines, the guidelines are regulatory requirements that should follow proper rulemaking procedures. The commenters stated that examples of cleaning controls and procedures of sanitation verification should be provided in the guidelines. They also recommended that testing ingredients should only be done in cooperation and knowledge of the supplier to ensure that related product is properly held.

Response: Because some FSIS-regulated establishments conduct testing for allergens in their products, page 12 of the guidelines includes information about the test kits and the use of reference laboratories. As stated in the guidelines, allergen testing may be considered to verify and document sanitation effectiveness. As also noted in the guidelines, testing is not the only way to demonstrate that allergens are not presented on a production line, on equipment, or in product, Section 2.2 specifically addresses sanitation. Therefore, testing is not required, and the guidelines do not represent regulatory requirements.

When establishments conduct allergen testing of ingredients, FSIS encourages communication with the supplier. Also, FSIS recommends that establishments hold or control product tested for allergens until they receive results, although doing so is not required. Establishments should design their food safety system within their available resources to take all necessary and practical steps to ensure that only safe product enters commerce.

Comment: Two trade organizations commented that proper labeling and packaging of products constitutes product separation. They stated that recommending unrealistic definitions of separation would be an unwarranted expense that would not effectively correct the cause of allergen recalls.

Response: Properly labeling and packaging products is essential and required by FSIS regulations and authorizing statues. As an additional preventive measure, as stated in the guidance, establishments should consider whether the identification and separation of products would effectively prevent employees from selecting the wrong ingredient during formulation, the wrong label, or the wrong product.

Comment: Two trade organizations commented that the compliance guideline establishes regulatory requirements. They recommended that the document more clearly state that the practices in the compliance guidelines are neither regulatory requirements nor the only way to control and prevent undeclared allergens in the production process.

Response: The compliance guidelines are intended to inform industry about effective and innovative methods to address the problem of undeclared allergens and ingredients of public health concern. The document does not establish any new requirements that industry must follow, but rather it is intended to assist establishments in meeting the existing FSIS labeling and HACCP regulations.

The compliance guidelines provide recommendations, not requirements, to establishments for identifying hazards when conducting a hazard analysis and for preventing and controlling hazards with respect to allergens and other ingredients of public health concern through the implementation of HACCP plans, sanitation SOPs, or other prerequisite programs. The guidelines were edited to clarify that the document consists of recommendations, not requirements.

Additional Public Notification

Public awareness of all segments of rulemaking and policy development is important. Consequently, FSIS will announce this **Federal Register** publication on-line through the FSIS Web page located at: *http://www.fsis.usda.gov/federal-register*.

FSIS also will make copies of this publication available through the FSIS Constituent Update, which is used to provide information regarding FSIS policies, procedures, regulations, **Federal Register** notices, FSIS public meetings, and other types of information that could affect or would be of interest to our constituents and stakeholders. The Update is available on the FSIS Web page. Through the Web page, FSIS is able to provide information to a much broader, more diverse audience. In addition, FSIS offers an email subscription service which provides automatic and customized access to selected food safety news and information. This service is available at: *http://www.fsis.usda.gov/subscribe.* Options range from recalls to export information, regulations, directives, and notices. Customers can add or delete subscriptions themselves, and have the option to password protect their accounts.

USDA Non-Discrimination Statement

No agency, officer, or employee of the USDA shall, on the grounds of race, color, national origin, religion, sex, gender identity, sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, or political beliefs, exclude from participation in, deny the benefits of, or subject to discrimination any person in the United States under any program or activity conducted by the USDA.

How To File a Complaint of Discrimination

To file a complaint of discrimination, complete the USDA Program Discrimination Complaint Form, which may be accessed online at *http://www.ocio.usda.gov/sites/default/files/docs/2012/Complain_combined_6_8_12.pdf*, or write a letter signed by you or your authorized representative.

Send your completed complaint form or letter to USDA by mail, fax, or email:

Mail

U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue SW., Washington, DC 20250–9410.

Fax

(202) 690–7442

Email

program.intake@usda.gov

Persons with disabilities who require alternative means for communication (Braille, large print, audiotape, etc.), should contact USDA's TARGET Center at (202) 720–2600 (voice and TDD).

Done, at Washington, DC, on: November 9, 2015.

Alfred V. Almanza,

Acting Administrator.

BILLING CODE 3410–DM–P

DEPARTMENT OF AGRICULTURE

Forest Service

Yakutat Resource Advisory Committee

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Yakutat Resource Advisory Committee (RAC) will meet in Yakutat, Alaska. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with Title II of the Act. RAC information can be found at the following Web site *http://cloudapps-usda-gov.force.com/FSSRS/RAC_Page?id=001t0000002JcvkAAC.*

DATES: The meeting will be held December 10 & 11, 2015 from 6 p.m. to 8 p.m.

All RAC meetings are subject to cancellation. For status of meeting prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**: Lee A. Benson, District Ranger and Designated Federal Official, Yakutat Ranger District, (907) 784–3359.

ADDRESSES: The meeting will be held at the Kwaan Conference Room, 712 Ocean Cape Drive, Yakutat, Alaska. Send written comments to Lee A. Benson, c/o Forest Service, USDA, P.O. Box 327, Yakutat, AK 99689, electronically to *labenson@fs.fed.us,* or via facsimile to 907–784–3457.

Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION**. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at the Yakutat Ranger District Office. Please call ahead to facilitate entry into the building.

FOR FURTHER INFORMATION CONTACT: Lee A. Benson, District Ranger by phone at (907) 784–3359 or via email at *labenson@fs.fed.us.*

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to: Review current and completed projects. We will also review proposals submitted for 2016 and 2017 project years.

The meeting is open to the public. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should request in writing by December 2, 2015 to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. Written comments and requests for time to make oral comments must be sent to Lee A. Benson, District Ranger, P.O. Box 327, Yakutat, AK 99689 by email to *labenson@fs.fed.us,* or via facsimile to (907) 784–3457.

Meeting Accommodations: If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices or other reasonable accommodation for access to the facility or proceedings by contacting the person listed in the section titled **FOR FURTHER INFORMATION CONTACT**. All reasonable accommodation requests are managed on a case by case basis.

Dated: November 3, 2015.

Lee A. Benson,

District Ranger.

DEPARTMENT OF AGRICULTURE

Forest Service

Deschutes Provincial Advisory Committee

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Deschutes Provincial Advisory Committee (PAC) will meet in Bend, Oregon. The committee is authorized pursuant to the implementation of E–19 of the Record of Decision and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to provide advice and make recommendations to promote a better integration of forest management activities between Federal and non-Federal entities to ensure that such activities are complementary. PAC information can be found at the following Web site: *http://www.fs.usda.gov/detail/deschutes/workingtogether/advisorycommittees.*

DATES: The meeting will be held on December 15, 2015, from 9:00 a.m. to 3:00 p.m.

All PAC meetings are subject to cancellation. For status of meeting prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

ADDRESSES: The meeting will be held at the Deschutes National Forest Headquarters Office, Ponderosa Conference Room, 63095 Deschutes Market Road, Bend, Oregon.

Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION**. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at Deschutes National Forest Headquarters Office. Please call ahead to facilitate entry into the building.

FOR FURTHER INFORMATION CONTACT: Beth Peer, PAC Coordinator, by phone at 541–383–4769 or via email at *bpeer@fs.fed.us.*

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to:

1. Review past work of sustainable recreation working group;
2. Determine primary elements of a sustainable recreation focus item;
3. Presentation of recent scientific findings concerning fire history in mixed conifer forests in central Oregon; and
4. Plan potential field trips for coming year.

The meeting is open to the public. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should request in writing by December 1, 2015, to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. Written comments and requests for time to make oral comments must be sent to Beth Peer, Deschutes PAC Coordinator, 63095 Deschutes Market Road, Bend, Oregon, 97701; by email to *bpeer@fs.fed.us,* or via facsimile to 541–383–4755.

Meeting Accommodations: If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices or other reasonable accommodation for access to the facility or proceedings by

contacting the person listed in the section titled **FOR FURTHER INFORMATION CONTACT.** All reasonable accommodation requests are managed on a case by case basis.

John P. Allen,

Forest Supervisor, Deschutes National Forest.

BILLING CODE 3411–15–P

DEPARTMENT OF COMMERCE

Census Bureau

Generic Clearance for Questionnaire Pretesting Research

AGENCY: U.S. Census Bureau, Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: To ensure consideration, written comments must be submitted on or before January 15, 2016.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *jjessup@doc.gov*).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Jennifer Hunter Childs, U.S. Census Bureau, 4600 Silver Hill Road, Washington, DC 20233–9150, (202) 603–4827 (or via the Internet at *jennifer.hunter.childs@census.gov*).

SUPPLEMENTARY INFORMATION:

I. Abstract

The Census Bureau plans to request an extension of the current OMB approval to conduct a variety of small-scale questionnaire pretesting activities under this generic clearance. A block of hours will be dedicated to these activities for each of the next three years. OMB will be informed in writing of the purpose and scope of each of these activities, as well as the time frame and the number of burden hours used. The number of hours used will not exceed the number set aside for this purpose.

This research program will be used by the Census Bureau and survey sponsors to improve questionnaires and procedures, reduce respondent burden, and ultimately increase the quality of data collected in the Census Bureau censuses and surveys. The clearance will be used to conduct pretesting of decennial, demographic, and economic census and survey questionnaires prior to fielding them. Pretesting activities will involve one of the following methods for identifying measurement problems with the questionnaire or survey procedure: Cognitive interviews, focus groups, respondent debriefing, behavior coding of respondent/interviewer interaction, and split panel tests.

II. Method of Collection

Any of the following methods may be used: Mail, telephone, face-to-face; paper-and-pencil, CATI, CAPI, Internet, or IVR.

III. Data

OMB Control Number: 0607–0725.

Form Number: Various.

Type of Review: Regular submission.

Affected Public: Individuals or households, businesses or other for profit, farms.

Estimated Number of Respondents: 5,500 per year.

Estimated Time per Response: 1 hour.

Estimated Total Annual Burden Hours: 5,500 hours annually.

Estimated Total Annual Cost to Public: There is no cost to the respondent other than time to answer the information request.

Respondents Obligation: Voluntary.

Legal Authority: Data collection for this project is authorized under the authorizing legislation for the questionnaire being tested. This may be Title 13, Sections 131, 141, 161, 181, 182, 193, and 301 for Census Bureau-sponsored surveys, and Title 13 and 15 for surveys sponsored by other Federal agencies. We do not now know what other titles will be referenced, since we do not know what survey questionnaires will be pretested during the course of the clearance.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: November 10, 2015.

Glenna Mickelson,

Management Analyst, Office of the Chief Information Officer.

BILLING CODE 3510–07–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[B–75–2015]

Foreign-Trade Zone (FTZ) 76—Bridgeport, Connecticut; Notification of Proposed Production Activity; MannKind Corporation (Inhalable Insulin); Danbury, Connecticut

MannKind Corporation (MannKind), an operator of FTZ 76, submitted a notification of proposed production activity to the FTZ Board for its facilities in Danbury, Connecticut, within FTZ 76. The notification conforming to the requirements of the regulations of the FTZ Board (15 CFR 400.22) was received on October 29, 2015.

A separate application for subzone designation at the MannKind facilities was submitted and will be processed under Section 400.31 of the FTZ Board's regulations (Doc. S–147–2015). The facilities are used for the production of inhalable insulin. Pursuant to 15 CFR 400.14(b), FTZ activity would be limited to the specific foreign-status material and specific finished product described in the submitted notification (as described below) and subsequently authorized by the FTZ Board.

Production under FTZ procedures could exempt MannKind from customs duty payments on the foreign-status ingredient used in export production. On its domestic sales, MannKind would be able to choose the duty rate during customs entry procedures that applies to inhalable insulin (duty-free) for the foreign-status ingredient, fumaryl diketopiperazone (duty rate—6.5%). Customs duties also could possibly be deferred or reduced on foreign-status production equipment.

Public comment is invited from interested parties. Submissions shall be addressed to the FTZ Board's Executive Secretary at the address below. The closing period for their receipt is December 28, 2015.

A copy of the notification will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230–0002, and in the ''Reading Room'' section of the FTZ Board's Web site, which is accessible via *www.trade.gov/ftz.*

For further information, contact Diane Finver at *Diane.Finver@trade.gov* or (202) 482–1367.

Dated: November 9, 2015.

Elizabeth Whiteman,

Acting Executive Secretary.

Foreign-Trade Zones Board

[B–45–2015]

Foreign-Trade Zone (FTZ) 277—Western Maricopa County, Arizona; Authorization of Production Activity; The Cookson Company, Inc. (Rolling Steel Doors); Goodyear, Arizona

On July 13, 2015, The Cookson Company, Inc. submitted a notification of proposed production activity to the Foreign-Trade Zones (FTZ) Board for its facility within FTZ 277—Site 11, in Goodyear, Arizona.

The notification was processed in accordance with the regulations of the FTZ Board (15 CFR part 400), including notice in the **Federal Register** inviting public comment (80 FR 42789, July 20, 2015). The FTZ Board has determined that no further review of the activity is warranted at this time. The production activity described in the notification is authorized, subject to the FTZ Act and the FTZ Board's regulations, including Section 400.14.

Dated: November 10, 2015.

Elizabeth Whiteman,

Acting Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[S–151–2015]

Foreign-Trade Zone 119—Minneapolis/St. Paul, Minnesota; Application for Subzone; CNH Industrial America LLC; Benson, Minnesota

An application has been submitted to the Foreign-Trade Zones (FTZ) Board by the Greater Metropolitan Area Foreign Trade Zone Commission, grantee of FTZ 119, requesting subzone status for the facilities of CNH Industrial America LLC in Benson, Minnesota. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the FTZ Board (15 CFR part 400). It was formally docketed on November 9, 2015.

The proposed subzone would consist of the following sites: *Site 1* (25.26 acres)—Benson Plant, 260 Highway 12 SE., Benson; *Site 2* (4.01 acres)—Benson Plant Warehouse, 140 30th Avenue SE., Benson; and, *Site 3* (1.47 acres)—Benson Northstar, 2200 Tatges Avenue, Benson. The proposed subzone would be subject to the existing activation limit of FTZ 119. A notification of proposed production activity has been submitted and is being processed under 15 CFR 400.37 (Doc. B–61–2015).

In accordance with the FTZ Board's regulations, Camille Evans of the FTZ Staff is designated examiner to review the application and make recommendations to the Executive Secretary.

Public comment is invited from interested parties. Submissions shall be addressed to the FTZ Board's Executive Secretary at the address below. The closing period for their receipt is December 28, 2015. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to January 11, 2016.

A copy of the application will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230–0002, and in the ''Reading Room'' section of the FTZ Board's Web site, which is accessible via *www.trade.gov/ftz.*

For further information, contact Camille Evans at *Camille.Evans@trade.gov* or (202) 482–2350.

Dated: November 9, 2015.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

[Docket No. 151022984–5984–01]

Impact of the Implementation of the Chemical Weapons Convention (CWC) on Legitimate Commercial Chemical, Biotechnology, and Pharmaceutical Activities Involving ''Schedule 1'' Chemicals (Including Schedule 1 Chemicals Produced as Intermediates) Through Calendar Year 2015

AGENCY: Bureau of Industry and Security, Commerce.

ACTION: Notice of inquiry.

SUMMARY: The Bureau of Industry and Security (BIS) is seeking public comments on the impact that implementation of the Chemical Weapons Convention (CWC), through the Chemical Weapons Convention Implementation Act (CWCIA) and the Chemical Weapons Convention Regulations (CWCR), has had on commercial activities involving ''Schedule 1'' chemicals during calendar year 2015. The purpose of this notice of inquiry is to collect information to assist BIS in its preparation of the annual certification to the Congress on whether the legitimate commercial activities and interests of chemical, biotechnology, and pharmaceutical firms are being harmed by such implementation. This certification is required under Condition 9 of Senate Resolution 75, April 24, 1997, in which the Senate gave its advice and consent to the ratification of the CWC.

DATES: Comments must be received by December 16, 2015.

ADDRESSES: You may submit comments by any of the following methods (please refer to RIN 0694–XC028 in all comments and in the subject line of email comments):

- *Federal rulemaking portal (http://www.regulations.gov)*—you can find this notice by searching on its regulations.gov docket number, which is BIS–2015–0039;
- *Email: willard.fisher@bis.doc.gov*—include the phrase ''Schedule 1 Notice of Inquiry'' in the subject line;
- *Fax:* (202) 482–3355 (Attn: Willard Fisher);
- By mail or delivery to Regulatory Policy Division, Bureau of Industry and

Security, U.S. Department of Commerce, Room 2099B, 14th Street and Pennsylvania Avenue NW., Washington, DC 20230.

FOR FURTHER INFORMATION CONTACT: For questions on the Chemical Weapons Convention requirements for ''Schedule 1'' chemicals, contact Douglas Brown, Treaty Compliance Division, Office of Nonproliferation and Treaty Compliance, Bureau of Industry and Security, U.S. Department of Commerce, Phone: (202) 482–1001. For questions on the submission of comments, contact Willard Fisher, Regulatory Policy Division, Office of Exporter Services, Bureau of Industry and Security, U.S. Department of Commerce, Phone: (202) 482–2440.

SUPPLEMENTARY INFORMATION:

Background

In providing its advice and consent to the ratification of the Convention on the Prohibition of the Development, Production, Stockpiling, and Use of Chemical Weapons and Their Destruction, commonly called the Chemical Weapons Convention (CWC or ''the Convention''), the Senate included, in Senate Resolution 75 (S. Res. 75, April 24, 1997), several conditions to its ratification. Condition 9, titled ''Protection of Advanced Biotechnology,'' calls for the President to certify to Congress on an annual basis that ''the legitimate commercial activities and interests of chemical, biotechnology, and pharmaceutical firms in the United States are not being significantly harmed by the limitations of the Convention on access to, and production of, those chemicals and toxins listed in Schedule 1.'' On July 8, 2004, President Bush, by Executive Order 13346, delegated his authority to make the annual certification to the Secretary of Commerce.

The CWC is an international arms control treaty that contains certain verification provisions. In order to implement these verification provisions, the CWC established the Organization for the Prohibition of Chemical Weapons (OPCW). The CWC imposes certain obligations on countries that have ratified the Convention (*i.e.*, States Parties), among which are the enactment of legislation to prohibit the production, storage, and use of chemical weapons, and the establishment of a National Authority to serve as the national focal point for effective liaison with the OPCW and other States Parties in order to achieve the object and purpose of the Convention and the implementation of its provisions. The CWC also requires each State Party to implement a comprehensive data declaration and inspection regime to provide transparency and to verify that both the public and private sectors of the State Party are not engaged in activities prohibited under the CWC.

''Schedule 1'' chemicals consist of those toxic chemicals and precursors set forth in the CWC ''Annex on Chemicals'' and in Supplement No. 1 to part 712 of the Chemical Weapons Convention Regulations (CWCR) (15 CFR parts 710–722). The CWC identified these toxic chemicals and precursors as posing a high risk to the object and purpose of the Convention.

The CWC (Part VI of the ''Verification Annex'') restricts the production of ''Schedule 1'' chemicals for protective purposes to two facilities per State Party: A single small-scale facility (SSSF) and a facility for production in quantities not exceeding 10 kg per year. The CWC Article-by-Article Analysis submitted to the Senate in Treaty Doc. 103–21 defined the term ''protective purposes'' to mean ''used for determining the adequacy of defense equipment and measures.'' Consistent with this definition and as authorized by Presidential Decision Directive (PDD) 70 (December 17, 1999), which specifies agency and departmental responsibilities as part of the U.S. implementation of the CWC, the Department of Defense (DOD) was assigned the responsibility to operate these two facilities. Although this assignment of responsibility to DOD under PDD–70 effectively precluded commercial production of ''Schedule 1'' chemicals for protective purposes in the United States, it did not establish any limitations on ''Schedule 1'' chemical activities that are not prohibited by the CWC. However, DOD does maintain strict controls on ''Schedule 1'' chemicals produced at its facilities in order to ensure accountability for such chemicals, as well as their proper use, consistent with the object and purpose of the Convention.

The provisions of the CWC that affect commercial activities involving ''Schedule 1'' chemicals are implemented in the CWCR (see 15 CFR 712) and in the Export Administration Regulations (EAR) (see 15 CFR 742.18 and 15 CFR 745), both of which are administered by the Bureau of Industry and Security (BIS). Pursuant to CWC requirements, the CWCR restrict commercial production of ''Schedule 1'' chemicals to research, medical, or pharmaceutical purposes (the CWCR prohibit commercial production of ''Schedule 1'' chemicals for ''protective purposes'' because such production is effectively precluded per PDD–70, as described above—see 15 CFR 712.2(a)). The CWCR also contain other requirements and prohibitions that apply to ''Schedule 1'' chemicals and/or ''Schedule 1'' facilities. Specifically, the CWCR:

(1) Prohibit the import of ''Schedule 1'' chemicals from States not Party to the Convention (15 CFR 712.2(b));

(2) Require annual declarations by certain facilities engaged in the production of ''Schedule 1'' chemicals in excess of 100 grams aggregate per calendar year (*i.e.*, declared ''Schedule 1'' facilities) for purposes not prohibited by the Convention (15 CFR 712.5(a)(1) and (a)(2));

(3) Provide for government approval of ''declared Schedule 1'' facilities (15 CFR 712.5(f));

(4) Provide that ''declared Schedule 1'' facilities are subject to initial and routine inspection by the Organization for the Prohibition of Chemical Weapons (15 CFR 712.5(e) and 716.1(b)(1));

(5) Require 200 days advance notification of establishment of new ''Schedule 1'' production facilities producing greater than 100 grams aggregate of ''Schedule 1'' chemicals per calendar year (15 CFR 712.4);

(6) Require advance notification and annual reporting of all imports and exports of ''Schedule 1'' chemicals to, or from, other States Parties to the Convention (15 CFR 712.6, 742.18(a)(1) and 745.1); and

(7) Prohibit the export of ''Schedule 1'' chemicals to States not Party to the Convention (15 CFR 742.18(a)(1) and (b)(1)(ii)).

For purposes of the CWCR (see 15 CFR 710.1), ''production of a Schedule 1 chemical'' means the formation of ''Schedule 1'' chemicals through chemical synthesis, as well as processing to extract and isolate ''Schedule 1'' chemicals produced biologically. Such production is understood, for CWCR declaration purposes, to include intermediates, by-products, or waste products that are produced and consumed within a defined chemical manufacturing sequence, where such intermediates, by-products, or waste products are chemically stable and therefore exist for a sufficient time to make isolation from the manufacturing stream possible, but where, under normal or design operating conditions, isolation does not occur.

Request for Comments

In order to assist in determining whether the legitimate commercial activities and interests of chemical, biotechnology, and pharmaceutical

firms in the United States are significantly harmed by the limitations of the Convention on access to, and production of, ''Schedule 1'' chemicals as described in this notice, BIS is seeking public comments on any effects that implementation of the Chemical Weapons Convention, through the Chemical Weapons Convention Implementation Act and the Chemical Weapons Convention Regulations, has had on commercial activities involving ''Schedule 1'' chemicals during calendar year 2015. To allow BIS to properly evaluate the significance of any harm to commercial activities involving ''Schedule 1'' chemicals, public comments submitted in response to this notice of inquiry should include both a quantitative and qualitative assessment of the impact of the CWC on such activities.

Submission of Comments

All comments must be submitted to one of the addresses indicated in this notice. The Department requires that all comments be submitted in written form.

The Department encourages interested persons who wish to comment to do so at the earliest possible time. The period for submission of comments will close on December 16, 2015. The Department will consider all comments received before the close of the comment period. Comments received after the end of the comment period will be considered if possible, but their consideration cannot be assured. The Department will not accept comments accompanied by a request that a part or all of the material be treated confidentially because of its business proprietary nature or for any other reason. The Department will return such comments and materials to the persons submitting the comments and will not consider them. All comments submitted in response to this notice will be a matter of public record and will be available for public inspection and copying.

The Office of Administration, Bureau of Industry and Security, U.S. Department of Commerce, displays public comments on the BIS Freedom of Information Act (FOIA) Web site at *http://www.bis.doc.gov/foia.* This office does not maintain a separate public inspection facility. If you have technical difficulties accessing this Web site, please call BIS's Office of Administration, at (202) 482–1093, for assistance.

Dated: November 6, 2015.

Kevin J. Wolf,

Assistant Secretary for Export Administration.

BILLING CODE 3510–33–P

DEPARTMENT OF COMMERCE

International Trade Administration

President's Export Council; Meeting of the President's Export Council

AGENCY: International Trade Administration, U.S. Department of Commerce.

ACTION: Notice of an open meeting.

SUMMARY: The President's Export Council (Council) will hold a meeting to deliberate on recommendations related to promoting the expansion of U.S. exports. Topics may include: The Administration's trade agenda, Safe Harbor, infrastructure investment, workforce readiness, access to capital for microbusinesses and SMEs, and export control reform. The final agenda will be posted at least one week in advance of the meeting on the President's Export Council Web site at *http://trade.gov/pec.*

DATES: December 3, 2015 at 9:30 a.m. (ET).

ADDRESSES: The President's Export Council meeting will be broadcast via live webcast on the Internet at *http://whitehouse.gov/live.*

FOR FURTHER INFORMATION CONTACT: Tricia Van Orden, Executive Secretary, President's Export Council, Room 4043, 1401 Constitution Avenue NW., Washington, DC 20230, telephone: 202–482–5876, email: *tricia.vanorden@trade.gov.*

Press inquiries should be directed to the International Trade Administration's Office of Public Affairs, telephone: 202–482–3809.

SUPPLEMENTARY INFORMATION:

Background: The President's Export Council was first established by Executive Order on December 20, 1973 to advise the President on matters relating to U.S. export trade and to report to the President on its activities and recommendations for expanding U.S. exports. The President's Export Council was renewed most recently by Executive Order 13708 of September 30, 2015, for the two-year period ending September 30, 2017. This Committee is established in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. App.

Public Submissions: The public is invited to submit written statements to the President's Export Council. Statements must be received by 5:00 p.m. ET on December 1, 2015 by either of the following methods:

a. Electronic Submissions

Submit statements electronically to Tricia Van Orden, Executive Secretary, President's Export Council via email: *tricia.vanorden@trade.gov.*

b. Paper Submissions

Send paper statements to Tricia Van Orden, Executive Secretary, President's Export Council, Room 4043, 1401 Constitution Avenue NW., Washington, DC 20230.

Statements will be posted on the President's Export Council Web site (*http://trade.gov/pec*) without change, including any business or personal information provided such as names, addresses, email addresses, or telephone numbers. All statements received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. You should submit only information that you wish to make publicly available.

Meeting minutes: Copies of the Council's meeting minutes will be available within ninety (90) days of the meeting.

Dated: November 9, 2015.

Tricia Van Orden,

Executive Secretary. President's Export Council.

Polyethylene Terephthalate Film, Sheet, and Strip From the People's Republic of China: Final Results of Administrative Review; 2013–2014

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On August 12, 2015, the Department of Commerce (the ''Department'') published the preliminary results and partial rescission of the 2013–2014 administrative review of the antidumping duty order on polyethylene terephthalate film, sheet, and strip (''PET film'') from the People's Republic of China (''PRC''), in accordance with section 751(a)(1)(B) of

the Tariff Act of 1930, as amended (''the Act'').[1] The period of review (''POR'') is November 1, 2013, through October 31, 2014. This review was initiated with respect to four companies. After rescinding the review with respect to three of the four companies, one company, Shaoxing Xiangyu Green Packing Co., Ltd. (''Green Packing''), remains under review. The Department invited interested parties to comment on the *Preliminary Results.* No parties commented. Our final results remain unchanged from the *Preliminary Results.*

DATES: *Effective Date:* November 16, 2015.

FOR FURTHER INFORMATION CONTACT: Jonathan Hill, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–3518.

SUPPLEMENTARY INFORMATION:

Background

On August 12, 2015, the Department published the *Preliminary Results.* We invited interested parties to submit comments on the *Preliminary Results,* but no comments were received.

Scope of the Order

The products covered by the order are all gauges of raw, pre-treated, or primed PET film, whether extruded or co-extruded. Excluded are metalized films and other finished films that have had at least one of their surfaces modified by the application of a performance-enhancing resinous or inorganic layer more than 0.00001 inches thick. Also excluded is roller transport cleaning film which has at least one of its surfaces modified by application of 0.5 micrometers of SBR latex. Tracing and drafting film is also excluded. PET film is classifiable under subheading 3920.62.00.90 of the Harmonized Tariff Schedule of the United States (''HTSUS''). While HTSUS subheadings are provided for convenience and customs purposes, our written description of the scope of the order is dispositive.

Separate Rates

In the *Preliminary Results,* we determined that because Green Packing did not provide separate rate information, it did not establish its eligibility for separate rate status. Accordingly, the Department preliminarily determined that Green Packing is part of the PRC-wide entity, and determined a rate consistent with the Department's current practice regarding conditional review of the PRC-wide entity.[2]

No party commented on the *Preliminary Results.* For these final results, the Department continues to find that Green Packing is part of the PRC-wide entity.

Final Results of Review

The Department determines that Green Packing is part of the PRC-wide entity.

Assessment

The Department will determine, and CBP shall assess, antidumping duties on all appropriate entries covered by this review.[3] The Department intends to issue assessment instructions to CBP 15 days after the date of publication of these final results of review. The Department intends to instruct CBP to liquidate entries of subject merchandise from Green Packing at the PRC-wide rate of 76.72 percent.

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the final results of this administrative review for all shipments of the subject merchandise from the PRC entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) For previously investigated or reviewed PRC and non-PRC exporters which are not under review in this segment of the proceeding but which have separate rates, the cash deposit rate will continue to be the exporter-specific rate published for the most recent period; (2) for all PRC exporters of subject merchandise that have not been found to be entitled to a separate rate, including Green Packing, the cash deposit rate will be the PRC-wide rate of 76.72 percent; and (3) for all non-PRC exporters of subject merchandise which have not received their own rate, the cash deposit rate will be the rate applicable to the PRC exporter(s) that supplied that non-PRC exporter. These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers Regarding the Reimbursement of Duties

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in the Department's presumption that reimbursement of antidumping duties has occurred and the subsequent assessment of doubled antidumping duties.

Notification to Interested Parties

This notice also serves as a reminder to parties subject to the administrative protective order (''APO'') of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely notification of the destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

We are issuing and publishing these results and this notice in accordance with sections 751(a)(1) and 777(i) of the Act.

Dated: November 9, 2015.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

[1] *See Polyethylene Terephthalate Film, Sheet, and Strip From the People's Republic of China: Preliminary Results of Antidumping Administrative Review; 2013–2014,* 80 FR 48293 (August 12, 2015) (''*Preliminary Results*'').

[2] *See Preliminary Results* and accompanying Decision Memorandum at 4. *See also Antidumping Proceedings: Announcement of Change in Department Practice for Respondent Selection in Antidumping Duty Proceedings and Conditional Review of the Nonmarket Economy Entity in NME Antidumping Duty Proceedings,* 78 FR 65963, 65970 (November 4, 2013). Under this practice, the PRC-wide entity will not be under review unless a party specifically requests, or the Department self-initiates, a review of the entity. Because no party requested a review of the PRC-wide entity, the entity is not under review and the entity's rate is not subject to change.

Hydrofluorocarbon Blends and Components Thereof From the People's Republic of China: Postponement of Preliminary Determination of Antidumping Duty Investigation

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

DATES: *Effective date:* November 16, 2015.

FOR FURTHER INFORMATION CONTACT: Dennis McClure or Elizabeth Eastwood at (202) 482–5973 and (202) 482–3874, respectively; AD/CVD Operations, Enforcement and Compliance, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

Background

On July 22, 2015, the Department of Commerce (the Department) published a notice of initiation of antidumping duty investigation of hydrofluorocarbon blends and components thereof from the People's Republic of China.[1] The notice of initiation stated that the Department, in accordance with section 733(b)(1)(A) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.205(b)(1), would issue its preliminary determination for this investigation, unless postponed, no later than 140 days after the date of the initiation. The preliminary determination of this antidumping duty investigation is currently due no later than December 2, 2015.

Period of Investigation

The period of investigation is October 1, 2014, through March 31, 2015.

Postponement of Preliminary Determination

Section 733(c)(1)(A) of the Act permits the Department to postpone the time limit for the preliminary determination if it receives a timely request from the petitioner for postponement. The Department may postpone the preliminary determination under section 733(c)(1) of the Act no later than the 190th day after the date on which the administering authority initiates an investigation.

On October 28, 2015, American HFC Coalition and its individual members,[2] as well as District Lodge 154 of the International Association of Machinists and Aerospace Workers (collectively, the petitioners), made a timely request pursuant to section 733(c)(1) of the Act and 19 CFR 351.205(e) for postponement of the preliminary determination in this investigation. The petitioners requested a 50-day postponement of the preliminary determination in order to allow the petitioners additional time to review and comment on the questionnaire responses submitted in this case, as well as to consider the Department's recent inclusion of Mexico and Romania on the list of potential surrogate countries. The petitioners submitted a request for postponement of the preliminary determination more than 25 days before the scheduled date of the preliminary determination.[3]

Because the petitioners' request was timely and provided reasons for the request, and since the Department finds no compelling reasons to deny the request, the Department is postponing the deadline for the preliminary determination in accordance with section 733(c)(1)(A) of the Act and 19 CFR 351.205(b)(2) and (e) by 50 days to January 21, 2016. The deadline for the final determination will continue to be 75 days after the date of the preliminary determination unless postponed at a later date.

This notice is issued and published pursuant to section 733(c)(2) of the Act and 19 CFR 351.205(f)(1).

Dated: November 4, 2015.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Multilayered Wood Flooring From the People's Republic of China: Final Results of Changed Circumstances Review

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On September 24, 2015, the Department of Commerce (the ''Department'') published its preliminary results of a changed circumstances review [1] of the antidumping duty (''AD'') order on multilayered wood flooring (''MLWF'') from the People's Republic of China (''PRC'').[2] The Department preliminarily determined that Sino-Maple (JiangSu) Co., Ltd. (''Sino-Maple'') is the successor-in-interest to Jiafeng Wood (Suzhou) Co., Ltd. (''Jiafeng'') for purposes of the AD order on MLWF from the PRC and, as such, is entitled to Jiafeng's cash deposit rate with respect to entries of subject merchandise. We invited interested parties to comment on the *Preliminary Results.* As no parties submitted comments, and there is no other information or evidence on the record calling into question our *Preliminary Results,* the Department is making no changes to the *Preliminary Results.*

DATES: *Effective Date:* November 16, 2015.

FOR FURTHER INFORMATION CONTACT: Krisha Hill, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–4037.

SUPPLEMENTARY INFORMATION:

Background

On March 13, 2015, the Department of Commerce (the ''Department'') initiated a changed circumstance review to determine whether Sino-Maple, an exporter of subject merchandise to the United States, is the successor-in-interest to Jiafeng for purposes of the AD order on MLWF from the PRC.[3] On September 24, 2015, the Department made a preliminary finding that Sino-Maple is the successor-in-interest to Jiafeng, and is entitled to Jiafeng's cash deposit rate with respect to entries of merchandise subject to the AD order on MLWF from the PRC.[4] We also provided interested parties 30 days from the date of publication of the *Preliminary Results* to submit case briefs in accordance with 19 CFR 351.309(c)(1)(ii). No interested parties submitted case briefs or requested a hearing. On October 19, 2015, the Department issued to interested parties draft customs instructions and solicited comments.[5] No comments were received.

Scope of the Order

Multilayered wood flooring is composed of an assembly of two or

[2] *See Multilayered Wood Flooring From the People's Republic of China: Amended Final Determination of Sales at Less Than Fair Value and Antidumping Duty Order,* 76 FR 76690 (December 8, 2011).

[3] *See Initiation of Antidumping Duty Changed Circumstances Review: Multilayered Wood Flooring From the People's Republic of China,* 80 FR 13328 (March 13, 2015) (''*Initiation Notice*'').

[4] *See Preliminary Results,* 80 FR at 57576.

[5] *See* Memorandum to the File from Krisha Hill, International Trade Compliance Analyst, regarding ''Changed Circumstances Review of Sino-Maple (JiangSu) Co., Ltd: Multilayered Wood Flooring from the People's Republic of China: Draft Customs Instructions,'' dated October 19, 2015.

more layers or plies of wood veneer(s) in combination with a core. The several layers, along with the core, are glued or otherwise bonded together to form a final assembled product. Multilayered wood flooring is often referred to by other terms, *e.g.,* ''engineered wood flooring'' or ''plywood flooring.'' Regardless of the particular terminology, all products that meet the description set forth herein are intended for inclusion within the definition of subject merchandise.

All multilayered wood flooring is included within the definition of subject merchandise, without regard to: Dimension (overall thickness, thickness of face ply, thickness of back ply, thickness of core, and thickness of inner plies; width; and length); wood species used for the face, back and inner veneers; core composition; and face grade. Multilayered wood flooring included within the definition of subject merchandise may be unfinished (*i.e.,* without a finally finished surface to protect the face veneer from wear and tear) or ''prefinished'' (*i.e.,* a coating applied to the face veneer, including, but not exclusively, oil or oil-modified or water-based polyurethanes, ultra-violet light cured polyurethanes, wax, epoxy-ester finishes, moisture-cured urethanes and acid-curing formaldehyde finishes). The veneers may be also soaked in an acrylic-impregnated finish. All multilayered wood flooring is included within the definition of subject merchandise regardless of whether the face (or back) of the product is smooth, wire brushed, distressed by any method or multiple methods, or hand-scraped. In addition, all multilayered wood flooring is included within the definition of subject merchandise regardless of whether or not it is manufactured with any interlocking or connecting mechanism (for example, tongue-and-groove construction or locking joints). All multilayered wood flooring is included within the definition of the subject merchandise regardless of whether the product meets a particular industry or similar standard.

The core of multilayered wood flooring may be composed of a range of materials, including but not limited to hardwood or softwood veneer, particleboard, medium-density fiberboard, high-density fiberboard (''HDF''), stone and/or plastic composite, or strips of lumber placed edge-to-edge.

Multilayered wood flooring products generally, but not exclusively, may be in the form of a strip, plank, or other geometrical patterns (*e.g.,* circular, hexagonal). All multilayered wood flooring products are included within this definition regardless of the actual or nominal dimensions or form of the product. Specifically excluded from the scope are cork flooring and bamboo flooring, regardless of whether any of the sub-surface layers of either flooring are made from wood. Also excluded is laminate flooring. Laminate flooring consists of a top wear layer sheet not made of wood, a decorative paper layer, a core-layer of HDF, and a stabilizing bottom layer.

Imports of the subject merchandise are provided for under the following subheadings of the Harmonized Tariff Schedule of the United States (''HTSUS''): 4412.31.0520; 4412.31.0540; 4412.31.0560; 4412.31.2510; 4412.31.2520; 4412.31.3175; 4412.31.4040; 4412.31.4050; 4412.31.4060; 4412.31.4070; 4412.31.4075; 4412.31.4080; 4412.31.5125; 4412.31.5135; 4412.31.5155; 4412.31.5165; 4412.31.5175; 4412.31.6000; 4412.31.9100; 4412.32.0520; 4412.32.0540; 4412.32.0560; 4412.32.0565; 4412.32.0570; 4412.32.2510; 4412.32.2520; 4412.32.2525; 4412.32.2530; 4412.32.3125; 4412.32.3135; 4412.32.3155; 4412.32.3165; 4412.32.3175; 4412.32.3185; 4412.32.5600; 4412.39.1000; 4412.39.3000; 4412.39.4011; 4412.39.4012; 4412.39.4019; 4412.39.4031; 4412.39.4032; 4412.39.4039; 4412.39.4051; 4412.39.4052; 4412.39.4059; 4412.39.4061; 4412.39.4062; 4412.39.4069; 4412.39.5010; 4412.39.5030; 4412.39.5050; 4412.94.1030; 4412.94.1050; 4412.94.3105; 4412.94.3111; 4412.94.3121; 4412.94.3131; 4412.94.3141; 4412.94.3160; 4412.94.3171; 4412.94.4100; 4412.94.5100; 4412.94.6000; 4412.94.7000; 4412.94.8000; 4412.94.9000; 4412.94.9500; 4412.99.0600; 4412.99.1020; 4412.99.1030; 4412.99.1040; 4412.99.3110; 4412.99.3120; 4412.99.3130; 4412.99.3140; 4412.99.3150; 4412.99.3160; 4412.99.3170; 4412.99.4100; 4412.99.5100; 4412.99.5105; 4412.99.5115; 4412.99.5710; 4412.99.6000; 4412.99.7000; 4412.99.8000; 4412.99.9000; 4412.99.9500; 4418.71.2000; 4418.71.9000; 4418.72.2000; 4418.72.9500; and 9801.00.2500.

While HTSUS subheadings are provided for convenience and customs purposes, the written description of the subject merchandise is dispositive.

Final Results of Changed Circumstances Review

Because no party submitted a case brief in response to the Department's *Preliminary Results,* and because the record contains no other information or evidence that calls into question the *Preliminary Results,* the Department continues to find that Sino-Maple is the successor-in-interest to Jiafeng, and is entitled to Jiafeng's cash deposit rate with respect to entries of merchandise subject to the AD order on MLWF from the PRC.[6]

Instructions to U.S. Customs and Border Protection

Based on these final results, we will instruct U.S. Customs and Border Protection to collect estimated ADs for all shipments of subject merchandise exported by Sino-Maple and entered, or withdrawn from warehouse, for consumption on or after the publication date of this notice in the **Federal Register** at the current AD cash deposit rate for Jiafeng (*i.e.,* 13.74 percent). This cash deposit requirement shall remain in effect until further notice.

Notification to Interested Parties

This notice serves as a final reminder to parties subject to administrative protective order (''APO'') of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

We are issuing and publishing this final results notice in accordance with sections 751(b) and 777(i) of the Tariff Act of 1930, as amended, and 19 CFR 351.216.

Dated: November 9, 2015.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Circular Welded Carbon Quality Steel Pipe From the People's Republic of China: Notice of Court Decision Not in Harmony With Final Determination and Amended Final Determination Under Section 129 of the Uruguay Round Agreements Act

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On October 22, 2015, the United States Court of International Trade (CIT or Court) issued final judgment in *Wheatland Tube Company* v. *United States,* Consol. Court No. 12–00296, affirming the Department of Commerce's (the Department) final results of redetermination pursuant to court remand. Consistent with the decision of the United States Court of Appeals for the Federal Circuit (CAFC) in *Timken Co.* v. *United States,* 893 F.2d 337 (Fed. Cir. 1990) (*Timken*), as clarified by *Diamond Sawblades Mfrs. Coalition* v. *United States,* 626 F.3d 1374 (Fed. Cir. 2010) (*Diamond Sawblades*), the Department is notifying the public that the final judgment in this case is not in harmony with the Department's implemented final determination in a proceeding conducted under section 129 of the Uruguay Round Agreements Act (Section 129) related to the Department's final affirmative determination in the antidumping duty (AD) investigation of circular welded carbon quality steel pipe (CWP) from the People's Republic of China (the PRC) for the period October 1, 2006, through March 31, 2007.[1] The Department is amending its implemented Final Section 129 Determination with regard to granting adjustments to the AD cash deposit rates.

DATES: *Effective Date:* November 2, 2015

FOR FURTHER INFORMATION CONTACT: Cara Lofaro, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–5720.

SUPPLEMENTARY INFORMATION:

Background

On July 22, 2008, the Department published AD and countervailing duty (CVD) orders on CWP imports from the PRC.[2] The Government of the People's Republic of China challenged the CWP orders and three other sets of simultaneously imposed AD and CVD orders before the Dispute Settlement Body of the World Trade Organization (WTO). The WTO Appellate Body, in March 2011, found that the United States had acted inconsistently with its international obligations in several respects, including the potential imposition of overlapping remedies, or so-called ''double remedies.'' [3] The U.S. Trade Representative then announced the United States' intention to comply with the WTO's rulings and recommendations, and the Department initiated a Section 129 proceeding.[4]

On July 31, 2012, the Department issued its Final Section 129 Determination. In that determination, the Department found that an adjustment was warranted to the AD rates on CWP imports from the PRC to account for remedies that overlap those imposed by the CVD order.[5] As a result, the Department reduced the applicable AD rate for separate rate companies from 69.2 percent to 45.35 percent and reduced the PRC-wide entity AD rate from 85.55 percent to 68.24 percent.[6] The Department published a notice implementing the Final Section 129 Determination on August 30, 2012.[7] Various parties challenged the Department's Final Section 129 Determination at the CIT.

Following the final disposition of litigation related to the Final Section 129 Determination regarding the CVD investigation of CWP from the PRC, in which the Department found no basis for making an adjustment to the companion AD rates under Section 777(A)(f) of the Tariff Act of 1930, as amended (the Act),[8] the CIT granted the Department's request for a voluntary remand in the litigation challenging the Final Section 129 Determination regarding the AD investigation of CWP from the PRC.[9] On October 8, 2015, the Department issued its Final Remand Redetermination regarding the AD investigation of CWP from the PRC, in which it amended its Final Section 129 Determination regarding the AD investigation and denied the adjustment to the AD cash deposit rates granted to respondents in the Final Section 129 Determination.[10] On October 22, 2015, the CIT sustained the Department's Final Remand Redetermination.[11]

Timken Notice

In its decision in *Timken,* 893 F.2d at 341, as clarified by *Diamond Sawblades,* the CAFC held that, pursuant to section 516A(e) of the Act, the Department must publish a notice of a court decision that is not ''in harmony'' with a Department determination and must suspend liquidation of entries pending a ''conclusive'' court decision. The CIT's October 22, 2015, judgment affirming the Final Remand Redetermination constitutes a final court decision that is not in harmony with the Department's Final Section 129 Determination. This notice is published in fulfillment of publication requirements of *Timken.*

Amended Final Determination

Because there is now a final court decision with respect to the Department's Final Section 129 Determination regarding the AD investigation of CWP from the PRC, the Department is amending the Final Section 129 Determination, as implemented, regarding an adjustment to the AD cash deposit rates. The revised AD cash deposit rates are as follows:

Unless the applicable cash deposit rates have been superseded by cash deposit rates calculated in an intervening administrative review of the AD order on CWP from the PRC, the Department will instruct U.S. Customs and Border Protection to require a cash deposit for estimated AD duties at the rate noted above for each specified exporter and producer combination, for entries of subject merchandise, entered or withdrawn from warehouse, for consumption, on or after November 2, 2015.

This notice is issued and published in accordance with sections 516A(e) and 777(i)(1) of the Act and section 129(c)(2)(A) of the Uruguay Round Agreements Act.

Dated: November 5, 2015.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XC554

Marine Mammals; File No. 17952

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of permit amendment.

SUMMARY: Notice is hereby given that a major amendment to Permit No. 17952–01 has been issued to Daniel P. Costa, Ph.D., Department of Biology and Institute of Marine Sciences, University of California, Santa Cruz, CA 95064.

ADDRESSES: The permit amendment and related documents are available for review upon written request or by appointment in the Permits and Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; phone (301) 427–8401; fax (301) 713–0376.

FOR FURTHER INFORMATION CONTACT: Amy Sloan or Rosa L. González, (301) 427–8401.

SUPPLEMENTARY INFORMATION: On August 17, 2015, notice was published in the **Federal Register** (80 FR 49210) that a request for an amendment to Permit No. 17952–01 to conduct research on California sea lions (*Zalophus californianus*) had been submitted by the above-named applicant. The

requested permit amendment has been issued under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), and the regulations governing the taking and importing of marine mammals (50 CFR part 216).

Permit No. 17952 authorized long-term research on California sea lions to study their foraging, diving, energetics, food habits, and at sea distribution through capture, sampling, and tagging California sea lions throughout their U.S. range (California, Oregon and Washington). The permit also authorized harassment of California sea lions, harbor seals (*Phoca vitulina*), and northern elephant seals (*Mirounga angustirostris*) incidental to research activities, unintentional mortalities of California sea lions, and import and export of pinniped samples. A minor amendment (Permit No. 17952–01) included attachment of cameras to instrumentation deployed on sea lions and intubation during gas anesthesia.

Permit No. 17952–02, issued on September 30, 2015, includes authorization to (1) add remote darting as an approved capture method with use of various sedative drugs for adult and juvenile California sea lions, (2) increase incidental harassment takes of non-target California sea lions, (3) include incidental harassment takes for the Eastern stock of Steller sea lions (*Eumetopias jubatus*), and (4) include takes for capture and disentanglement of California sea lions. The authorized takes are delineated in the amendment application and amended permit and are authorized for the duration of the permit. The permit expires June 7, 2018.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), a final determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Dated: October 29, 2015.

Julia Harrison,

Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XC014

Marine Mammals; File No. 17670

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of permit amendment.

SUMMARY: Notice is hereby given that a major amendment to Permit No. 17670–02 has been issued to NMFS Northeast Fisheries Science Center, 166 Water Street, Woods Hole, MA 02543 (Responsible Party: William Karp, Ph.D.).

ADDRESSES: The permit amendment and related documents are available for review upon written request or by appointment in the Permits and Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; phone (301) 427–8401; fax (301) 713–0376.

FOR FURTHER INFORMATION CONTACT: Amy Sloan or Rosa L. González, (301) 427–8401.

SUPPLEMENTARY INFORMATION: On July 10, 2015, notice was published in the **Federal Register** (80 FR 39749) that a request for an amendment Permit No. 17670–02 to conduct research on gray (*Halichoerus grypus*), harbor (*Phoca vitulina*), harp (*Pagophilus groenlandicus*), and hooded (*Cystophora cristata*) seals had been submitted by the above-named applicant. The requested permit amendment has been issued under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), and the regulations governing the taking and importing of marine mammals (50 CFR part 216).

Permit No. 17670–00 authorized takes of gray, harbor, harp, and hooded seals in waters within or proximal to the U.S. EEZ from North Carolina northward to Maine, during conduct of stock assessment research, including estimation of distribution and abundance, determination of stock structure, habitat requirements, foraging ecology, health assessment and effects of natural and anthropogenic factors. Types of take include harassment during shipboard, skiff, and aircraft transect and photo-identification surveys, and scat collection; and, capture with tissue sampling and instrument or tag attachment. A limited number of research-related mortality is also allowed, as well as world-wide import and export of pinniped samples. A minor amendment (Permit No. 17670–01) authorized sampling of pinniped carcasses aboard commercial fishing vessels. An additional minor amendment (Permit No. 17670–02) authorized nail clipping and fecal loop sampling during permitted captures.

Permit No. 17670–03, issued September 28, 2015, includes authorization to increase the number and frequency of gray and harbor seal harassment and capture takes annually during research, add use of unmanned aircraft systems to survey seals, increase the number of biopsy samples taken (from one to two), increase the number of gray and harbor seal samples imported/exported annually, and allow euthanasia in the event sick or injured seals are inadvertently captured. The permit expires April 30, 2018.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), a final determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Dated: October 29, 2015.

DEPARTMENT OF COMMERCE

National Telecommunications and Information Administration

Multistakeholder Process To Promote Collaboration on Vulnerability Research Disclosure

AGENCY: National Telecommunications and Information Administration, U.S. Department of Commerce.

ACTION: Notice of open meeting.

SUMMARY: The National Telecommunications and Information Administration (NTIA) will convene a meeting of a multistakeholder process concerning the collaboration between security researchers and software and system developers and owners to address security vulnerability disclosure on December 2, 2015.

DATES: The meeting will be held on December 2, 2015 from 10:30 a.m. to 4:30 p.m., Eastern Time. See Supplementary Information for details.

ADDRESSES: The meeting will be held at the 20 F Street NW Conference Center, 20 F Street NW., Washington, DC 20001.

FOR FURTHER INFORMATION CONTACT: Allan Friedman, National Telecommunications and Information Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW., Room 4725, Washington, DC 20230; telephone (202) 482–4281; email; *afriedman@ntia.doc.gov*. Please direct media inquiries to NTIA's Office of Public Affairs, (202) 482–7002; email *press@ntia.doc.gov*.

SUPPLEMENTARY INFORMATION:

Background: On March 19, 2015, the National Telecommunications and Information Administration, working with the Department of Commerce's Internet Policy Task Force (IPTF), issued a Request for Comment to ''identify substantive cybersecurity issues that affect the digital ecosystem and digital economic growth where broad consensus, coordinated action, and the development of best practices could substantially improve security for organizations and consumers.'' [1] This Request built on earlier work from the Department, including the 2011 Green Paper *Cybersecurity, Innovation, and the Internet Economy,*[2] as well as comments the Department had received on related issues.[3] On July 9, 2015, after reviewing the comments, NTIA announced that the first issue to be addressed would be ''collaboration on vulnerability research disclosure,'' [4] and subsequently announced that the first meeting of a multistakeholder process on this topic would be held on September 29, 2015.[5]

Matters to Be Considered: The December 2, 2015 meeting is a continuation of a series of NTIA-convened multistakeholder discussions concerning collaboration on vulnerability disclosure. Stakeholders will engage in an open, transparent, consensus-driven process to develop voluntary principles guiding the collaboration between vendors and researchers about vulnerability information. The December 2, 2015 meeting will build on stakeholders' previous work. More information about stakeholders' work is available at: *http://www.ntia.doc.gov/other-publication/2015/multistakeholder-process-cybersecurity-vulnerabilities.*

Time and Date: NTIA will convene a meeting of the multistakeholder process to promote collaboration on vulnerability research disclosure on December 2, 2015, from 10:30 a.m. to 4:30 p.m., Eastern Time. The meeting date and time are subject to change. Please refer to NTIA's Web site, *http://www.ntia.doc.gov/other-publication/2015/multistakeholder-process-cybersecurity-vulnerabilities,* for the most current information.

Place: The meeting will be held at 20 F Street NW Conference Center, 20 F Street NW., Washington, DC 20001. The location of the meeting is subject to change. Please refer to NTIA's Web site, *http://www.ntia.doc.gov/other-publication/2015/multistakeholder-process-cybersecurity-vulnerabilities,* for the most current information.

Other Information: The meeting is open to the public and the press. The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to John Verdi at (202) 482–8238 or *jverdi@ntia.doc.gov* at least seven (7) business days prior to the meeting. The meeting will also be webcast. Requests for real-time captioning of the webcast or other auxiliary aids should be directed to Allan Friedman at (202) 482–4281 or *afriedman@ntia.doc.gov* at least seven (7) business days prior to the meeting. There will be an opportunity for stakeholders viewing the webcast to participate remotely in the meeting through a moderated conference bridge, including polling functionality. Access details for the meeting are subject to change. Please refer to NTIA's Web site, *http://www.ntia.doc.gov/other-publication/2015/multistakeholder-process-cybersecurity-vulnerabilities,* for the most current information.

Dated: November 10, 2015.

Kathy D. Smith,

Chief Counsel, National Telecommunications and Information Administration.

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed additions to the Procurement List.

SUMMARY: The Committee is proposing to add products to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: *Comments must be received on or before:* December 16, 2015.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov*.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice will be required to procure the products listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

The following products are proposed for addition to the Procurement List for production by the nonprofit agencies listed:

Product Name(s)—NSN(s): Coat, Army Combat Uniform, Permethrin, Unisex, OCP 2015
8415–01–623–5052—XS–XXS
8415–01–623–5162—XS–XS
8415–01–623–5165—XS–S
8415–01–623–5166—XS–R
8415–01–623–5169—XS–L
8415–01–623–5170—XS–XL
8415–01–623–5172—S–XXS
8415–01–623–5174—S–XS

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Addition and Deletion

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Addition to and deletion from the Procurement List.

SUMMARY: This action adds a service to the Procurement List that will be provided by nonprofit agency employing persons who are blind or have other severe disabilities, and deletes a service from the Procurement List previously furnished by such agency.

DATES: *Effective Date:* 12/16/2015.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION:

Addition

On 10/2/2015 (80 FR 59740–59741), the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed addition to the Procurement List.

After consideration of the material presented to it concerning capability of qualified nonprofit agency to provide the service and impact of the additions on the current or most recent contractors, the Committee has determined that the service listed below is suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organization that will furnish the service to the Government.

2. The action will result in authorizing small entities to furnish the service to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the service proposed for addition to the Procurement List.

End of Certification

Accordingly, the following service is added to the Procurement List:

Service

Service Type: Landscaping Service
Service is Mandatory for: GSA PBS Region 1, John F. Kennedy Federal Building, 25 New Sudbury Street, Boston, MA
Mandatory Source of Supply: Work, Incorporated, Dorchester, MA
Contracting Activity: GSA/Public Buildings Service, Boston, MA

Deletion

On 10/2/2015 (80 FR 59740–59741), the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed deletion from the Procurement List.

After consideration of the relevant matter presented, the Committee has determined that the service listed below is no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action may result in authorizing small entities to furnish the service to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the service deleted from the Procurement List.

End of Certification

Accordingly, the following service is deleted from the Procurement List:

Service

Service Type: Custodial Service
Service is Mandatory for: Isle Royale National Park & Ranger III Vessel, 800 East Lakeshore Drive, Houghton, MI
Mandatory Source of Supply: Goodwill Industries of Northern Wisconsin & Upper Michigan, Inc., Marinette, WI
Contracting Activity: National Park Service, MWR Regional Contracting, Omaha, NE

Barry S. Lineback,

Director, Business Operations.

BILLING CODE 6353–01–P

CONSUMER PRODUCT SAFETY COMMISSION

[Docket No. CPSC–2010–0038]

Agency Information Collection Activities; Proposed Collection; Comment Request; Third Party Testing of Children's Products

AGENCY: Consumer Product Safety Commission.

ACTION: Notice.

SUMMARY: As required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Consumer Product Safety Commission (''CPSC'' or ''Commission'') requests comments on a proposed extension of approval of a collection of information for Third Party Testing of Children's Products, approved previously under OMB Control No. 3041–0159. The Commission will consider all comments received in response to this notice before requesting an extension of this collection of information from the Office of Management and Budget (''OMB'').

DATES: Submit written or electronic comments on the collection of information by January 15, 2016.

ADDRESSES: You may submit comments, identified by Docket No. CPSC–2010–0038, by any of the following methods:

Electronic Submissions: Submit electronic comments to the Federal eRulemaking Portal at: *http://www.regulations.gov*. Follow the instructions for submitting comments. The Commission does not accept comments submitted by electronic mail (email), except through *www.regulations.gov*. The Commission encourages you to submit electronic comments by using the Federal eRulemaking Portal, as described above.

Written Submissions: Submit written submissions by mail/hand delivery/courier to: Office of the Secretary, Consumer Product Safety Commission, Room 820, 4330 East West Highway, Bethesda, MD 20814; telephone (301) 504–7923.

Instructions: All submissions received must include the agency name and docket number for this notice. All comments received may be posted without change, including any personal identifiers, contact information, or other personal information provided, to: *http://www.regulations.gov*. Do not submit confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public. If furnished at all, such information should be submitted in writing.

Docket: For access to the docket to read background documents or comments received, go to: *http://www.regulations.gov,* and insert the docket number CPSC–2010–0038, into the ''Search'' box, and follow the prompts.

FOR FURTHER INFORMATION CONTACT: Robert H. Squibb, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; (301) 504–7815, or by email to: *rsquibb@cpsc.gov*.

SUPPLEMENTARY INFORMATION: CPSC seeks to renew the following currently approved collection of information:

Title: Third Party Testing of Children's Products.

OMB Number: 3041–0159.

Type of Review: Renewal of collection for third party testing of children's products and inclusion of the previously approved burden for marking and labeling of durable infant and toddler products into this collection of information.

General Description of Collection

Testing and Certification: On November 8, 2011, the Commission issued two rules for implementing third party testing and certification of children's products, as required by section 14 of the Consumer Product Safety Act (''CPSA''):

- *Testing and Labeling Pertaining to Product Certification* (76 FR 69482, codified at 16 CFR part 1107; ''the testing rule''); and
- *Conditions and Requirements for Relying on Component Part Testing or Certification, or Another Party's Finished Product Testing or Certification to Meet Testing and Certification Requirements* (76 FR 69547, codified at 16 CFR part 1109; ''the component part rule'').

The testing rule establishes requirements for manufacturers to conduct initial third party testing and certification of children's products, testing when there has been a material change in the product, continuing testing (periodic testing), and guarding against undue influence. A final rule on *Representative Samples for Periodic Testing of Children's Products* (77 FR 72205, Dec. 5, 2012) amended the testing rule to require that representative samples be selected for periodic testing of children's products.

The component part rule is a companion to the testing rule that is intended to reduce third party testing burdens by providing all parties involved in the required testing and certifying of children's products the flexibility to conduct or rely upon testing where it is the easiest and least expensive. Certification of a children's product can be based upon one or more of the following: (a) Component part testing; (b) component part certification; (c) another party's finished product testing; or (d) another party's finished product certification.

Records required by the testing rule and the rule on selecting representative samples appear in 16 CFR 1107.26. Required records include a certificate, and records documenting third party testing and related sampling plans. These requirements largely overlap the recordkeeping requirements in the component part rule, codified at 16 CFR 1109.5(g). Duplicate recordkeeping is not required; records need to be created and maintained only once to meet the applicable recordkeeping requirements. The component part rule also requires records that enable tracing a product or component back to the entity that had a product tested for compliance, and also requires attestations of due care to ensure test result integrity.

Section 104 Rules: The Commission has issued 14 rules for durable infant and toddler products under section 104 of the Consumer Product Safety Improvement Act of 2008 (''CPSIA'') (''section 104 rules''). Section 104 rules issued to date appear in Table 1. Each section 104 rule contains requirements for marking, labeling, and instructional literature:

- Each product and the shipping container must have a permanent label or marking that identifies the name and address (city, state, and zip code) of the manufacturer, distributor, or seller.
- A permanent code mark or other product identification shall be provided on the infant carrier and its package or shipping container, if multiple packaging is used. The code will identify the date (month and year) of manufacture and permit future identification of any given model.

Each standard also requires products to include easy-to-read and understand instructions regarding assembly, maintenance, cleaning, use, and adjustments, where applicable.

OMB has assigned control numbers for the estimated burden to comply with marking and labeling requirements in each section 104 rule. With this renewal, CPSC is moving the marking and labeling burden requirements for section 104 rules into the collection of information for Third Party Testing of Children's Products. The paperwork burdens associated with the section 104 rules are appropriately included in the collection for Third Party Testing of Children's Products because all of the section 104 products are also required to be third party tested. Having all of the burden hours under one collection for children's products provides one OMB control number and eases the administrative burden of renewing multiple collections. CPSC will discontinue using the OMB control numbers currently assigned to individual section 104 rules. The discontinued OMB control numbers are listed in Table 1.

Frequency of Response: On occasion.

Affected Public: Manufacturers and importers of children's products subject to a children's product safety rule.

Estimated Number of Respondents

Testing and Certification: CPSC reviewed every category in the NAICS and selected categories that included firms that could manufacture or sell any consumer product that could be covered by a consumer product safety rule. Using data from the U.S. Census Bureau, we determined that there were approximately 34,000 manufacturers, about 77,000 wholesalers, and about

133,000 retailers in these categories. However, these categories also include many non-children's products, which are not covered by any children's product safety rules. Therefore, these numbers would constitute an overestimate of the number of firms that are subject to the recordkeeping requirements.

Section 104 Rules: Table 1 summarizes the durable infant and toddler products subject to the marking and labeling requirements being moved into OMB control number 3041–0159.

TABLE 1—ESTIMATED BURDEN FOR MARKING AND LABELING IN SECTION 104 RULES

Total Burden Hours					3,378

Estimated Time per Response

Testing and Certification: Based on comments received during rulemaking for the testing rule, we estimate recordkeeping for approximately 300,000 non-apparel children's products per year, with an average of 5 hours of recordkeeping burden associated with each product. We also estimate recordkeeping for approximately 1.3 million children's apparel and footwear products per year, with an average of 3 hours of recordkeeping burden associated with each product. Manufacturers that are required to conduct periodic testing have an additional recordkeeping burden estimated at 4 hours per representative sampling plan.

Section 104 Rules: Each section 104 rule contains a similar analysis for marking and labeling that estimates the time to make any necessary changes to marking and labeling requirements at one hour per model.

Total Estimated Annual Burden

Testing and Certification: The total estimated annual burden for recordkeeping associated with the testing rule is 5.4 million hours (300,000 non-apparel children's products × 5 hours per non-apparel children's product + 1,300,000 children's apparel products × 3 hours per children's apparel product = 1.5 million hours + 3.9 million hours, or a total of 5.4 million hours).

Representative Sampling Plans for Periodic Testing: We estimate that if each product line averages 50 individual models or styles, then a total of 32,000 individual representative sampling plans (1.6 million children's products ÷ 50 models or styles) would need to be developed and documented. This would require 128,000 hours (32,000 plans × 4 hours per plan). If each product line averages 10 individual models or styles, then a total of 160,000 different representative sampling plans (1.6 million children's products ÷ 10 models or styles) would need to be documented. This would require 640,000 hours (160,000 plans × 4 hours per plan). Accordingly, the requirement to document the basis for selecting representative samples could increase the estimated annual burden by up to 640,000 hours.

Component Part Testing: The component part rule shifts some testing costs and some recordkeeping costs to component part and finished product suppliers because some testing will be performed by these parties rather than by the finished product certifiers (manufacturers and importers). Even if a finished product certifier can rely entirely on component part and finished product suppliers for all required testing, however, the finished product supplier will still have some recordkeeping burden to create and maintain a finished product certificate. Therefore, although the component part testing rule may reduce the total cost of the testing required by the testing and certification rule, the rule increases the estimated annual recordkeeping burden for those who choose to use component part testing.

Because we do not know how many companies participate in component part testing and supply test reports or certifications to other certifiers in the supply chain, we have no concrete data to estimate the recordkeeping and third party disclosure requirements in the component part rule. Likewise, no clear method exists for estimating the number of finished product certifiers who conduct their own component part testing. In the component part rulemaking, we suggested that the recordkeeping burden for the

component part testing rule could amount to 10 percent of the burden estimated for the testing and labeling rule. 76 FR 69546, 69579 (Nov. 8, 2011). Currently, we have no basis to change this estimate.

In addition to recordkeeping, the component part rule requires third party disclosure of test reports and certificates, if any, to a certifier who intends to rely on such documents to issue its own certificate. Without data, allocation of burden estimation between the recordkeeping and third party disclosure requirements is difficult. However, based on our previous analysis, we continue to estimate that creating and maintaining records accounts for approximately 90 percent of the burden, while the third party disclosure burden is much less, perhaps approximately 10 percent. Therefore, if we continue to use the estimate that component part testing will amount to about 10 percent of the burden estimated for the testing rule, then the hour burden of the component part rule is estimated to be about 540,000 hours total annually (10% of 5.4 million hours); allocating 486,000 hours for recordkeeping and 54,000 hours for third party disclosure.

Section 104 Rules: The burden for marking and labeling for each section 104 rule is provided in Table 1. The estimated total number of respondent hours is 3,378.

Request for Comments

The Commission solicits written comments from all interested persons about the proposed renewal of this collection of information. The Commission specifically solicits information relevant to the following topics:

—Whether the collection of information described above is necessary for the proper performance of the Commission's functions, including whether the information would have practical utility;

—Whether the estimated burden of the proposed collection of information is accurate;

—Whether the quality, utility, and clarity of the information to be collected could be enhanced; and

—Whether the burden imposed by the collection of information could be minimized by use of automated, electronic or other technological collection techniques, or other forms of information technology.

Dated: November 9, 2015.

Todd A. Stevenson,

Secretary, Consumer Product Safety Commission.

BILLING CODE 6355–01–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID DoD–2015–OS–0127]

Privacy Act of 1974; System of Records

AGENCY: Office of the Secretary of Defense, DoD.

ACTION: Notice to alter a System of Records.

SUMMARY: The Office of the Secretary of Defense proposes to alter a new system of records, DHRA 10 DoD, entitled ''Defense Sexual Assault Advocate Certification Program'' to track the certification of SARC and SAPR VAs. Information will be used to review, process, and report on the status of SARC and SAPR VA certification to Congress.

DATES: Comments will be accepted on or before December 16, 2015. This proposed action will be effective the day following the end of the comment period unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

* *Federal Rulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

* *Mail:* Department of Defense, Office of the Deputy Chief Management Officer, Directorate of Oversight and Compliance, Regulatory and Audit Matters Office, 9010 Defense Pentagon, Washington, DC 20301–9010.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Ms. Cindy Allard, Chief, OSD/JS Privacy Office, Freedom of Information Directorate, Washington Headquarters Service, 1155 Defense Pentagon, Washington, DC 20301–1155, or by phone at (571) 372–0461.

SUPPLEMENTARY INFORMATION: The Office of the Secretary of Defense notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the address in **FOR FURTHER INFORMATION CONTACT** or at *http://dpcld.defense.gov/.* The proposed system report, as required by 5 U.S.C. 552a(r) of the Privacy Act of 1974, as amended, was submitted on November 4, 2015, to the House Committee on Oversight and Government Reform, the Senate Committee on Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A–130, ''Federal Agency Responsibilities for Maintaining Records About Individuals,'' dated February 8, 1996 (February 20, 1996, 61 FR 6427).

Dated: November 10, 2015.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DHRA 10 DoD

SYSTEM NAME:

Defense Sexual Assault Advocate Certification Program (July 11, 2012, 77 FR 40861).

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Delete entry and replace with ''In addition to those disclosures generally permitted in accordance with 5 U.S.C. 552a(b) of the Privacy Act of 1974, as amended, the records contained herein may specifically be disclosed outside the DoD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

To the Department of Justice Office for Victims of Crime and Training Technical Assistance Center for the purpose of verifying certified SARCs and SAPR VAs for participation in Advance Military Sexual Assault Advocate Training.

LAW ENFORCEMENT ROUTINE USE:

If a system of records maintained by a DoD Component to carry out its functions indicates a violation or potential violation of law, whether civil, criminal, or regulatory in nature, and whether arising by general statute or by regulation, rule, or order issued pursuant thereto, the relevant records in the system of records may be referred, as a routine use, to the agency concerned, whether federal, state, local, or foreign, charged with the responsibility of investigating or prosecuting such violation or charged with enforcing or implementing the statute, rule, regulation, or order issued pursuant thereto.

DISCLOSURE WHEN REQUESTING INFORMATION ROUTINE USE:

A record from a system of records maintained by a DoD Component may be disclosed as a routine use to a federal, state, or local agency maintaining civil, criminal, or other relevant enforcement information or other pertinent information, such as current licenses, if necessary to obtain information relevant to a DoD Component decision concerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant, or other benefit.

DISCLOSURE OF REQUESTED INFORMATION ROUTINE USE:

A record from a system of records maintained by a DoD Component may be disclosed to a federal agency, in response to its request, in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

CONGRESSIONAL INQUIRIES DISCLOSURE ROUTINE USE:

Disclosure from a system of records maintained by a DoD Component may be made to a congressional office from the record of an individual in response to an inquiry from the congressional office made at the request of that individual.

DISCLOSURE TO THE OFFICE OF PERSONNEL MANAGEMENT ROUTINE USE:

A record from a system of records subject to the Privacy Act and maintained by a DoD Component may be disclosed to the Office of Personnel Management (OPM) concerning information on pay and leave, benefits, retirement deduction, and any other information necessary for the OPM to carry out its legally authorized government-wide personnel management functions and studies.

DISCLOSURE OF INFORMATION TO THE NATIONAL ARCHIVES AND RECORDS ADMINISTRATION ROUTINE USE:

A record from a system of records maintained by a DoD Component may be disclosed as a routine use to the National Archives and Records Administration for the purpose of records management inspections conducted under authority of 44 U.S.C. 2904 and 2906.

DISCLOSURE TO THE MERIT SYSTEMS PROTECTION BOARD ROUTINE USE:

A record from a system of records maintained by a DoD Component may be disclosed as a routine use to the Merit Systems Protection Board, including the Office of the Special Counsel for the purpose of litigation, including administrative proceedings, appeals, special studies of the civil service and other merit systems, review of OPM or component rules and regulations, investigation of alleged or possible prohibited personnel practices; including administrative proceedings involving any individual subject of a DoD investigation, and such other functions, promulgated in 5 U.S.C. 1205 and 1206, or as may be authorized by law.

DATA BREACH REMEDIATION PURPOSES ROUTINE USE:

A record from a system of records maintained by a Component may be disclosed to appropriate agencies, entities, and persons when (1) The Component suspects or has confirmed that the security or confidentiality of the information in the system of records has been compromised; (2) the Component has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Component or another agency or entity) that rely upon the compromised information; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Components efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

The DoD Blanket Routine Uses set forth at the beginning of the Office of the Secretary of Defense (OSD) compilation of systems of records notices may apply to this system. The complete list of DoD blanket routine uses can be found Online at: *http://dpclo.defense.gov/Privacy/SORNsIndex/BlanketRoutineUses.aspx.''*

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Delete entry and replace with ''Paper file folders and electronic storage media.''

RETRIEVABILITY:

Delete entry and replace with ''First and last name and/or D–SAACP ID number.''

SAFEGUARDS:

Delete entry and replace with ''Records are maintained in a controlled

facility that employs physical restrictions such as double locks and is accessible only to authorized persons who hold key fobs. Access to electronic data files in the system is role-based, restricted to essential personnel only, and requires the use of a password. The data server is locked in a windowless room with restricted access. Data is encrypted, and backup data is also encrypted and removed to an off-site secure location for storage. Paper files are stored in a locked filing cabinet in a locked room in the controlled facility. System access to case files will be limited to computers within a closed network, not connected to the internet or other servers.''

RETENTION AND DISPOSAL:

Delete entry and replace with ''Temporary, Destroy when 5 years old.''

SYSTEM MANAGER(S) AND ADDRESS:

Delete entry and replace with ''Sexual Assault Prevention and Response Office, ATTN: D–SAACP Manager, 4800 Mark Center Drive, Alexandria, VA 22350–1500.''

NOTIFICATION PROCEDURE:

Delete entry and replace with ''Individuals seeking to determine whether information about themselves is contained in this system of records should address written inquiries to the Sexual Assault Prevention and Response Office, ATTN: D–SAACP Manager, 4800 Mark Center Drive, Alexandria, VA 22350–1500.

Signed, written requests should contain first and last name and/or D–SAACP ID number.''

RECORD ACCESS PROCEDURES:

Delete entry and replace with ''Individuals seeking access to records about themselves contained in this system should address written inquiries to the OSD/Joint Staff Freedom of Information Act, Requester Service Center, Office of Freedom of Information, 1155 Defense Pentagon, Washington, DC 20301–1155.

Signed, written requests should contain first and last name, D–SAACP ID number, and the name and number of this system of records notice.''

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2015–OS–0125]

Privacy Act of 1974; System of Records

AGENCY: National Guard Bureau, DoD.

ACTION: Notice to add a new System of Records.

SUMMARY: The National Guard Bureau proposes to add a new system of records INGB 009, entitled ''National Guard Family Program Volunteers,'' to document and manage volunteer activities including recruitment, training, recognition and support for eligible individuals who donate their services to the National Guard Family Program.

DATES: Comments will be accepted on or before December 16, 2015. This proposed action will be effective the day following the end of the comment period unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

* *Federal Rulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

* *Mail:* Department of Defense, Office of the Deputy Chief Management Officer, Directorate of Oversight and Compliance, Regulatory and Audit Matters Office, 9010 Defense Pentagon, Washington, DC 20301–9010.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Ms. Jennifer Nikolaisen, 111 South George Mason Drive, AH2, Arlington, VA 22204–1373 or telephone: (703) 601–6884.

SUPPLEMENTARY INFORMATION: The National Guard Bureau notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the address in **FOR FURTHER INFORMATION CONTACT** or from the Defense Privacy and Civil Liberties Division Web site at *http://dpcld.defense.gov/.*

The proposed system report, as required by 5 U.S.C. 552a(r) of the Privacy Act of 1974, as amended, was submitted on October 23, 2015, to the House Committee on Oversight and Government Reform, the Senate Committee on Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A–130, ''Federal Agency Responsibilities for Maintaining Records About Individuals,'' dated February 8, 1996 (February 20, 1996, 61 FR 6427).

Dated: November 10, 2015.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

INGB 009

SYSTEM NAME:

National Guard Family Program Volunteers.

SYSTEM LOCATION:

National Guard Bureau (NGB) Family Program, 111 South George Mason Drive, Arlington Hall 2, Arlington, VA 22204–1373.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Any individual that volunteers to participate in the National Guard Family Program.

CATEGORIES OF RECORDS IN THE SYSTEM:

Individual's name, mailing address, email address, telephone numbers, DoD ID Number, date of birth, gender, qualifications/skills, interests, program surveys, recommendation letters, volunteer awards, volunteer hours, volunteer services provided, start and completion date of volunteer service, volunteer training and incidental reimbursement expenses, sponsor name, background suitability check determination and completion date, employment and education information.

For individuals under the age of 18 the following additional data may be in the record: Parental consent letter, report card, medication dispensation permission, health history including allergies, dietary restrictions, emergency contact information, signatures authorizing program/training participation and emergency treatment.

Note: This system of records contains individually identifiable health information. The DoD Health Information Privacy Regulation (DoD 6025.18–R) issued pursuant to the Health Insurance Portability and Accountability Act of 1996, applies to most such health information. DoD 6025.18–R may place additional procedural requirements on the uses

and disclosures of such information beyond those found in the Privacy Act of 1974 or mentioned in this system of records notice.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

10 U.S.C. 10502, Chief of the National Guard Bureau: Appointment; adviser on National Guard matters; grade; succession; 10 U.S.C. 10503, Functions of National Guard Bureau: Charter; 10 U.S.C. 1588, Authority to accept certain voluntary services; DoDD 5105.77, National Guard Bureau (NGB); DoD Instruction 1100.21, Voluntary Services in the Department of Defense; and National Guard Regulation 600–12/Air National Guard Instruction 36–3009, National Guard Family Program.

PURPOSE(S):

To document and manage volunteer activities including recruitment, training, recognition and support for eligible individuals who donate their services to the National Guard Family Program.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM INCLUDING CATEGORIES OF USERS AND THE PURPOSE OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act of 1974, as amended, the records contained therein may specifically be disclosed outside the DoD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

The DoD Blanket Routine Uses set forth at the beginning of the National Guard Bureau's compilation of systems of records notices may apply to this system. The complete list of DoD blanket routine uses can be found online at: *http://dpcld.defense.gov/Privacy/SORNsIndex/BlanketRoutineUses.aspx.*

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Paper files and electronic storage media.

RETRIEVABILITY:

Records are retrieved by the full name of volunteer in Joint Service Support (JSS).

SAFEGUARDS:

Records are maintained in monitored or controlled areas accessible only to authorized personnel. Electronic records are protected by software programs that are password protected or restricted from access through use of the Common Access Card (CAC) by National Guard personnel that have a need-to-know in the performance of their official duties.

RETENTION AND DISPOSAL:

Disposition pending (treat as permanent until the National Archives and Records Administration has approved the retention and disposal schedule).

SYSTEM MANAGER(S) AND ADDRESS:

National Guard Bureau (NGB) Family Program, 111 South George Mason Drive, Arlington Hall 2, Arlington, VA 22204–1373.

NOTIFICATION PROCEDURE:

Individuals seeking to determine whether this system of records contains information about themselves should address written inquiries to National Guard Bureau (NGB), Manpower and Personnel Directorate (J1), Family Programs; 111 South George Mason Drive, Arlington Hall 2, Arlington, VA 22204–1373.

Written requests must include the individual's DoD ID number or their name and date of birth, and full mailing address to receive a response.

In addition, the requester must provide a notarized statement or an unsworn declaration made in accordance with 28 U.S.C. 1746, in the following format:

If executed outside the United States: 'I declare (or certify, verify, or state) under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Executed on (date). (Signature)'.

If executed within the United States, its territories, possessions, or commonwealths: 'I declare (or certify, verify, or state) under penalty of perjury that the foregoing is true and correct. Executed on (date). (Signature)'.

RECORD ACCESS PROCEDURES:

Individuals seeking access to information about themselves contained in this system of records should address written inquiries to National Guard Bureau (NGB), Manpower and Personnel Directorate (J1), Family Programs; 111 South George Mason Drive, Arlington Hall 2, Arlington, VA 22204–1373.

Written requests must include the individual's DoD ID number or their name and date of birth, and full mailing address to receive a response.

In addition, the requester must provide a notarized statement or an unsworn declaration made in accordance with 28 U.S.C. 1746, in the following format:

If executed outside the United States: 'I declare (or certify, verify, or state) under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Executed on (date). (Signature)'.

If executed within the United States, its territories, possessions, or commonwealths: 'I declare (or certify, verify, or state) under penalty of perjury that the foregoing is true and correct. Executed on (date). (Signature)'.

CONTESTING RECORDS PROCEDURES:

The National Guard Bureau's rules for accessing records, and for contesting contents, and appealing initial agency determinations are published at 32 CFR part 329 or may be obtained from the system manager.

RECORD SOURCE CATEGORIES:

Information is collected directly from the individual when registering as a volunteer.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

[FR Doc. 2015–28920 Filed 11–13–15; 8:45 am]

BILLING CODE 5001–06–P

DEPARTMENT OF EDUCATION

Privacy Act of 1974; Computer Matching Program Between the Department of Education and the Department of Justice

AGENCY: Department of Education.

ACTION: Notice.

SUMMARY: This document provides notice of the continuation of a computer matching program between the Department of Education and the Department of Justice. The continuation is effective on the date in paragraph 5.

SUPPLEMENTARY INFORMATION: Section 421(a)(1) of the Controlled Substances Act (21 U.S.C. 862(a)(1)) includes provisions regarding the judicial denial of Federal benefits. Section 421 of the Controlled Substances Act, which was originally enacted as section 5301 of the Anti-Drug Abuse Act of 1988, and which was amended and redesignated as section 421 of the Controlled Substances Act by section 1002(d) of the Crime Control Act of 1990, Public Law 101–647 (hereinafter referred to as ''section 5301''), authorizes Federal and State judges to deny certain Federal benefits (including student financial assistance under title IV of the Higher Education Act of 1965, as amended (HEA)) to individuals convicted of drug trafficking or possession of a controlled substance.

In order to ensure that HEA student financial assistance is not awarded to individuals subject to denial of benefits under court orders issued pursuant to section 5301, the Department of Justice and the Department of Education

implemented a computer matching program. The 18-month computer matching agreement (CMA) was recertified for an additional 12 months on December 20, 2014. The 12-month recertification of the CMA will automatically expire on December 19, 2015.

For the purpose of ensuring that HEA student financial assistance is not awarded to individuals denied benefits by court orders issued under the Denial of Federal Benefits Program, the Department of Education must continue to obtain from the Department of Justice identifying information regarding individuals who are the subject of section 5301 denial of benefits court orders. The purpose of this notice is to announce the continued operation of the computer matching program and to provide certain required information concerning the computer matching program.

In accordance with the Privacy Act of 1974 (5 U.S.C. 552a), as amended by the Computer Matching and Privacy Protection Act of 1988 (Pub. L. 100–503), the Office of Management and Budget (OMB) Guidelines on the Conduct of Matching Programs (54 FR 25818, June 19, 1989), and OMB Circular A–130, the following information is provided:

1. *Names of Participating Agencies.*

The Department of Education (ED) and the Department of Justice (DOJ).

2. *Purpose of the Match.*

The purpose of this matching program is to ensure that the requirements of section 421 of the Controlled Substances Act (originally enacted as section 5301 of the Anti-Drug Abuse Act of 1988, Pub. L. 100–690, 21 U.S.C. 853a, which was amended and redesignated as section 421 of the Controlled Substances Act by section 1002(d) of the Crime Control Act of 1990, Pub. L. 101–647) (hereinafter referred to as ''section 5301'') are met.

DOJ is the lead contact agency for information related to section 5301 violations and, as such, provides this data to ED. ED seeks access to the information contained in the DOJ Denial of Federal Benefits Clearinghouse System (DEBARS) database that is authorized under section 5301 for the purpose of ensuring that HEA student financial assistance is not awarded to individuals subject to denial of benefits under court orders issued pursuant to the Denial of Federal Benefits Program.

3. *Authority for Conducting the Matching Program.*

Under section 5301, ED must deny Federal benefits to any individual upon whom a Federal or State court order has imposed a penalty denying eligibility for those benefits. Student financial assistance under the HEA is a Federal benefit and under section 5301, ED must, in order to meet its obligations under the HEA, have access to information about individuals who have been declared ineligible under section 5301.

While DOJ provides information under section 5301 about individuals who are ineligible for Federal benefits to the General Services Administration (GSA) for inclusion in GSA's List of Parties Excluded from Federal Procurement and Nonprocurement Programs, DOJ and ED have determined that matching against the DOJ database is more efficient and effective than matching against the GSA List. The DOJ database has specific information about the HEA programs for which individuals are ineligible, as well as the expiration of the debarment period, making the DOJ database more complete than the GSA List. Both of these elements are essential for a successful match.

4. *Categories of Records and Individuals Covered by the Match.*

ED receives data from the DOJ DEBARS system that is used to match title IV, HEA applicant data in ED's Central Processing System (Federal Student Aid Application File (18–11–01)). ED will use the Social Security number (SSN), date of birth, and the first two letters of an applicant's last name for the match.

The DOJ DEBARS system contains the names, SSNs, dates of birth, and other identifying information regarding individuals convicted of Federal or State offenses involving drug trafficking or possession of a controlled substance who have been denied Federal benefits by Federal or State courts. This system of records also contains information concerning the specific program or programs for which benefits have been denied, as well as the duration of the period of ineligibility. DOJ will make available for the matching program the records of only those individuals who have been denied Federal benefits under one or more of the title IV, HEA programs.

5. *Effective Dates of the Matching Program.*

The matching program will be effective on the latest of the following three dates: (A) December 20, 2015; (B) thirty (30) days after notice of the matching program has been published in the **Federal Register**; or (C) forty (40) days after a report concerning the matching program has been transmitted to OMB and transmitted to Congress along with a copy of this agreement, unless OMB waives 10 days of this 40-day period for compelling reasons, in which case, 30 days after transmission of the report to OMB and Congress.

The matching program will continue for 18 months after the effective date of the CMA and may be extended for an additional 12 months thereafter, if the conditions specified in 5 U.S.C. 552a(o)(2)(D) have been met.

6. *Address for Receipt of Public Comments or Inquiries.*

Individuals wishing to comment on this matching program or obtain additional information about the program, including requesting a copy of the computer matching agreement between ED and DOJ, may contact Marya Dennis, Management and Program Analyst, U.S. Department of Education, Federal Student Aid, Union Center Plaza, 830 First Street NE., Washington, DC 20202–5454. Telephone: (202) 377–3385.

Accessible Format: If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service, toll free, at 1–800–877–8339.

Individuals with disabilities can obtain this document in an accessible format (*e.g.,* braille, large print, audiotape, or compact disc) by contacting the contact person listed in the preceding paragraph.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register,** in text or Adobe Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Authority: 5 U.S.C. 552a; 21 U.S.C. 862(a)(1).

James W. Runcie,

Chief Operating Officer Federal Student Aid.

[FR Doc. 2015–29170 Filed 11–13–15; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Bonneville Power Administration

Melvin R. Sampson Hatchery, Yakima Basin Coho Project

AGENCY: Bonneville Power Administration (BPA), Department of Energy (DOE).

ACTION: Notice of Intent to prepare an Environmental Impact Statement (EIS) and notice of floodplain and wetlands assessment.

SUMMARY: In accordance with the National Environmental Policy Act (NEPA), BPA intends to prepare an EIS to determine whether to fund the Confederated Tribes of the Yakama Nation's proposal to construct and operate a hatchery for coho salmon in the upper Yakima basin.

The Melvin R. Sampson Hatchery would involve construction of a hatchery on 50 acres of land owned by the Yakama Nation in Kittitas County, Washington. Hatchery operations would include collection of adult coho for broodstock at the existing Roza and Sunnyside dams, incubation and rearing of up to 200,000 juvenile coho salmon, and release of smolts into the Yakima and Naches rivers.

Coho were extirpated from the Yakima basin by the early 1980s. The proposal would augment anadromous fish populations available for harvest and aid natural spawning of coho in the Yakima basin.

With this Notice of Intent, BPA is initiating the public scoping process for the EIS. BPA is requesting comments about potential environmental impacts that should be considered as an EIS is prepared.

In accordance with DOE floodplain and wetland regulations, BPA will analyze impacts to floodplain and wetlands as well as measures to avoid or minimize potential effects. The assessment will be included in the EIS.

DATES: Written comments are due to the address below no later than January 4, 2016. Comments may also be made at the scoping meeting to be held on December 9, 2015 at the addresses below.

ADDRESSES: Comments on the proposed scope of the Draft EIS and requests to be placed on the project mailing list may be mailed by letter to Bonneville Power Administration, Public Affairs Office—DKE–7, P.O. Box 3621, Portland, OR 97208–3621, or sent by fax to 503–230–4019. You may also call BPA's toll-free comment hotline at 1–800–622–4519 and leave a message (please include the name of the project), or submit comments online at *www.bpa.gov/comment*. All comments received will be accessible from the project Web site at *www.bpa.gov/goto/MelvinSampsonHatchery*.

On Wednesday, December 9, 2015, a scoping meeting will be held from 6:00 p.m. to 8:00 p.m. at the Hal Holmes Community Center, 209 N. Ruby Street, Ellensburg, Washington 98926. At this informal open-house meeting, BPA will provide project information and maps and will make members of the project team available to answer questions and accept verbal and written comments.

FOR FURTHER INFORMATION CONTACT: Dave Goodman, Environmental Protection Specialist, Bonneville Power Administration, KEC–4, P.O. Box 3621, Portland, OR 97208–3621; toll-free telephone 1–800–282–3713; direct telephone 503–230–4764; or email *jdgoodman@bpa.gov*. Additional information can be found at the project Web site: *www.bpa.gov/goto/MelvinSampsonHatchery*.

SUPPLEMENTARY INFORMATION: BPA's funding of the Yakama Nation's project would support efforts to protect, mitigate, and enhance fish and wildlife affected by the development and operation of the Federal Columbia River Power System in the mainstem Columbia River and its tributaries under the Pacific Northwest Electric Power Planning and Conservation Act of 1980 (Act) (16 U.S.C. 839b(h)(10)). The Act requires BPA to fund fish and wildlife protection, mitigation, and enhancement actions consistent with the Northwest Power and Conservation Council's (Council) Fish and Wildlife Program and the purposes of the Act. Under this program, the Council makes recommendations to BPA concerning which fish and wildlife projects to fund. This project was recommended to BPA by the Council. In addition to its responsibilities under the Act, on May 2, 2008, BPA, the Bureau of Reclamation, and the U.S. Army Corps of Engineers signed the 2008 Columbia Basin Fish Accords Memorandum of Agreement with the Yakama Nation. The agreement includes funding for this hatchery project, subject to compliance with NEPA and other environmental review requirements. The project is a component of the Yakima-Klickitat Fisheries Project EIS, which was completed in 1996. The proposal is also consistent with the policy direction in BPA's Fish and Wildlife Implementation Plan, which calls for protecting weak stocks while sustaining overall populations of fish for their economic and cultural value, including long-term harvest opportunities.

The hatchery would be located approximately 5 miles northwest of Ellensburg, WA, between Interstate 90 and Highway 10. Construction of the hatchery would include a 28,000-square-foot hatchery and administration building, an adult holding and spawning facility, intake screens and a pump station to provide water from an existing irrigation canal, three new groundwater wells and acquisition of water rights, a new centralized degassing head box for groundwater treatment and supply, a waste treatment pond, and two 2,000-square-foot residences for hatchery staff.

The proposed hatchery would produce up to 200,000 yearling coho smolts. Project operations would include collection of broodstock from the Roza Dam in Kittitas County, Washington and the Sunnyside Dam in Yakima County, Washington. Fish would be acclimated at existing acclimation sites adjacent to release locations and released into the tributaries and mainstem reaches of the upper Yakima and Naches rivers. Fish would be 100 percent coded wire-tagged and different wire tag codes would be used to distinguish release locations.

BPA will be the lead agency for preparation of the EIS. Cooperating agencies for the EIS may be identified as the proposed project proceeds through the NEPA process.

Alternatives Proposed for Consideration: In the EIS, BPA is considering two alternatives: To fund the proposed hatchery and a no action alternative of not funding the proposal. Other viable alternatives brought forth through the scoping process may also be evaluated in the EIS.

Public Participation and Identification of Environmental Issues: The potential environmental issues identified so far for this project include effects of hatchery operations on water quality; the risk of competition between increasing numbers of coho and Endangered Species Act-listed fish such as bull trout; potential effects on soil, aesthetics, water quality, and climate change due to the construction of permanent facilities; and the social, cultural, and economic effects of project construction and operations, as well as harvest.

BPA has established a 30-day scoping period during which affected landowners, concerned citizens, special interest groups, local governments, and any other interested parties are invited to comment on the scope of the proposed EIS. Scoping will help BPA ensure that a full range of issues related to this proposal are addressed in the EIS, and will help to identify significant

or potentially significant impacts that may result from the proposed project.

When completed, the Draft EIS will be circulated for review and comment, and BPA will hold at least one public comment meeting for the Draft EIS. BPA will consider and respond in the Final EIS to comments received on the Draft EIS. BPA's subsequent decision will be documented in a Record of Decision.

Maps and further information are available from BPA at the address above.

Issued in Portland, Oregon on November 4, 2015.

Elliot E. Mainzer,

Administrator and Chief Executive Officer.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP16–12–000]

Tennessee Gas Pipeline Company, L.L.C.; Notice of Application

Take notice that on October 26, 2015, Tennessee Gas Pipeline Company, L.L.C. (Tennessee), 1001 Louisiana Street, Houston, Texas 77002, filed an application pursuant to section 7(c) of the Natural Gas Act (NGA) requesting authorization to construct and operate its Southwest Louisiana Supply Project to provide 295,000 dekatherms per day of incremental capacity to serve Mitsubishi Corporation and MMGS, Inc. Specifically, Tennessee proposes to construct (i) approximately 2.4 miles of 30-inch-diameter pipeline lateral in Madison Parish, Louisiana; (ii) approximately 1.4 miles of 30-inch-diameter pipeline lateral in Richland and Franklin Parishes, Louisiana; (iii) five meter stations to allow Tennessee to receive gas on its existing 800 Line from five interconnecting pipelines; (iv) one new compressor station in Franklin Parish, Louisiana; and (v) to replace a turbine engine at an existing compressor station in Rapides Parish, Louisiana. Tennessee estimates the cost of the Project to be $170,453,208, all as more fully set forth in the application which is on file with the Commission and open to public inspection. The filing is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

Any questions concerning this application may be directed to Patrick Stewart, Senior Counsel, Tennessee Gas Pipeline Company, L.L.C., 1001 Louisiana Street, Houston, Texas 77002, by telephone at (713) 369–8765, by facsimile at (713) 420–1601, or by email at *Patrick_Stewart@kindermorgan.com.*

Pursuant to section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice, the Commission staff will either: Complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit five copies of filings made in the proceeding with the Commission and must mail a copy to the applicant and to every other party. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commenters will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commenters will not be required to serve copies of filed documents on all other parties. However, the non-party commenters will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and five copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

Comment Date: 5:00 p.m. Eastern Time on November 30, 2015.

Dated: November 9, 2015.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP16–14–000]

Columbia Gas Transmission, LLC; Notice of Request Under Blanket Authorization

Take notice that on November 2, 2015, Columbia Gas Transmission, LLC (Columbia), pursuant to its blanket certificate authorization granted in

Docket No. CP83–76–000,[1] filed an application in accordance to sections 157.205, 157.208, and 157.216(b) of the Commission's Regulations under the Natural Gas Act (NGA) as amended, requesting authority to abandon and construct certain pipeline facilities located in Fairfield County, Ohio. The proposed abandonment and construction are parts of Columbia's comprehensive modernization program to address its aging infrastructure, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Columbia proposes to abandon in-place, as well as replaces a portion of Line G that was originally constructed in 1902, and to abandon in-place Line G–137. These sections of Line G and Line G–137 pipelines consist of 13.57 miles and 1.31 miles, respectively, of 4-, 6-, and 8-inch diameter bare steel pipe. The existing pipelines will be abandoned in-place without earth disturbance and Columbia will retain the easement rights. Also, a 5,000 foot section at the end of Line G from Pleasantville valve to the Gatherco point of receipt will be replaced with a 4-inch diameter plastic pipe to maintain service from Gatherco. The new 4-inch diameter plastic Line G pipeline will be installed within Columbia's existing right-of-way at a 15-foot offset to the east of the existing Line G pipeline. The reduction in pipeline diameter will have no adverse impact on Columbia's ability to meet operational needs and firm commitment on this pipeline. The proposed abandonment will have no impact on the services presently provided by Columbia. Continuity of service to the affected consumers will be maintained by converting them to an alternate energy source. Columbia does not propose abandonment of any tariff-based interstate gas transportation service when it abandons the proposed facilities.

Any questions concerning this application may be directed to Tyler R. Brown, Senior Counsel, Columbia Gas Transmission, LLC, 5151 San Felipe, Suite 2500, Houston, Texas 77056, or by phone at (713) 386–3797.

This filing is available for review at the Commission or may be viewed on the Commission's Web site at *http://www.ferc.gov,* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number filed to access the document. For assistance, please contact FERC Online Support at FERC *OnlineSupport@ferc.gov* or call toll-free at (866) 206–3676, or, for TTY, contact (202) 502–8659. Comments, protests and interventions may be filed electronically via the Internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site under the ''e-Filing'' link. The Commission strongly encourages interveners to file electronically.

Pursuant to section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice, the Commission staff will either: Complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Any person or the Commission's staff may, within 60 days after issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to Section 157.205 of the regulations under the NGA (18 CFR 157.205), a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the allowed time for filing a protest, the instant request shall be treated as an application for authorization pursuant to Section 7 of the NGA.

Dated: November 9, 2015.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Petition for Enforcement

Allco Renewable Energy Limited	Docket Nos. EL16–11–000
Allco Finance Limited	QF14–109–001
	QF14–114–001
	QF14–115–001
	QF14–116–001
	QF15–117–001

Take notice that on November 9, 2015, Allco Renewable Energy Limited and Allco Finance Limited (collectively, ALLCO) filed a Petition for Enforcement, pursuant to section 210(h)(2)(B) of the Public Utility Regulatory Policies Act of 1978 (PURPA), requesting that the Federal Energy Regulatory Commission (Commission) exercise its authority and initiate enforcement action against the Connecticut Department of Energy and Environmental Protection and the Connecticut Public Utilities Regulatory Authority (collectively, the Connecticut Agencies) to remedy the Connecticut Agencies' implementation of PURPA. ALLCO asserts that the Connecticut Agencies' implementation is improper and outside the confines of PURPA, all as more fully explained in the petition.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

[1] 22 FERC ¶ 62,029 (1983).

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). Consolidated Irrigation Company; Notice of Surrender of Preliminary Permit

Take notice that Consolidated Irrigation Company (Consolidated), permittee for the proposed Consolidated Irrigation Glendale Conduit Hydro Project No. 14443 has requested that its preliminary permit be withdrawn from consideration. The permit was issued on October 3, 2013, and would have expired on September 30, 2016.[1] The project would have been located on Mink Creek canal and Cub River canal near the city of Preston in Franklin County, Idaho.

The preliminary permit for Project No. 14443 will remain in effect until the close of business, December 9, 2015. But, if the Commission is closed on this day, then the permit remains in effect until the close of business on the next day in which the Commission is open.[2] New applications for this site may not be submitted until after the permit surrender is effective.

[Docket No. CP15–557–000]

Total Peaking Services, LLC; Notice of Intent To Prepare an Environmental Assessment for the Proposed Vaporization Capacity Increase and Bog Compressor Project, and Request for Comments on Environmental Issues

November 9, 2015.

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental assessment (EA) that will discuss the environmental impacts of the Vaporization Capacity Increase and BOG Compressor Project (Project) involving construction and operation of facilities by Total Peaking Services, LLC (Total Peaking) in Milford, Connecticut. The Commission will use this EA in its decision-making process to determine whether the Project is in the public convenience and necessity.

This notice announces the opening of the scoping process the Commission will use to gather input from the public and interested agencies on the Project. You can make a difference by providing us with your specific comments or concerns about the Project. Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. Your input will help the Commission staff determine what issues they need to evaluate in the EA. To ensure that your comments are timely and properly recorded, please send your comments so that the Commission receives them in Washington, DC on or before December 9, 2015.

If you sent comments on this Project to the Commission before the opening of this docket on September 22, 2015, you will need to file those comments in Docket No. CP15–557–000 to ensure they are considered as part of this proceeding.

This notice is being sent to the Commission's current environmental mailing list for this Project. State and local government representatives should notify their constituents of this proposed Project and encourage them to comment on their areas of concern.

Total Peaking provided affected landowners with a fact sheet prepared by the FERC entitled ''An Interstate Natural Gas Facility On My Land? What Do I Need To Know?'' This fact sheet addresses a number of typically asked questions, including how to participate in the Commission's proceedings. It is also available for viewing on the FERC Web site (*www.ferc.gov*).

Public Participation

For your convenience, there are three methods you can use to submit your comments to the Commission. The Commission encourages electronic filing of comments and has expert staff available to assist you at (202) 502–8258 or *efiling@ferc.gov.* Please carefully follow these instructions so that your comments are properly recorded.

(1) You can file your comments electronically using the *eComment* feature on the Commission's Web site (*www.ferc.gov*) under the link to *Documents and Filings.* This is an easy method for submitting brief, text-only comments on a project;

(2) You can file your comments electronically by using the *eFiling* feature on the Commission's Web site (*www.ferc.gov*) under the link to *Documents and Filings.* With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''*eRegister.*'' If you are filing a comment on a particular project, please select ''Comment on a Filing'' as the filing type; or

(3) You can file a paper copy of your comments by mailing them to the following address. Be sure to reference the Project docket number (CP15–557–000) with your submission: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Room 1A, Washington, DC 20426.

Summary of the Proposed Project

Total Peaking proposes to modify its existing liquefied natural gas peak shaving facility [1] in Milford, Connecticut to increase the vaporization send out capabilities from 90 million standard cubic feet per day (MMscf/d) to 105 MMscf/d. According to Total Peaking, the Project would meet its future system needs and projected peak day requirements.

The Project would consist of the following modifications:

[1] Peak shaving facilities liquefy and store natural gas during warmer months for vaporization and injection into natural gas pipelines during peak conditions such as cold weather.

• Installation of two new vaporizers and removal of three existing vaporizers;
• installation of an additional boiloff gas (BOG) compressor;
• installation of a 1,500 kilovolt-ampere transformer and three new 400 kilowatt emergency generators to replace the existing transformer and emergency generator; and
• installation of a new 4,160 volt electric interconnection service line to provide the LNG facility with additional electricity to operate the new vaporization equipment.

The general location of the Project facilities is shown in appendix 1.[2]

Land Requirements for Construction

Construction of the proposed facilities would occur entirely within the fence line of the existing facility on paved and graveled areas. The construction would disturb about 0.44 acres of land within the approximately 24-acre facility site. Permanent operation of the Project's facilities would require about 0.18 acres.

The EA Process

The National Environmental Policy Act (NEPA) requires the Commission to take into account the environmental impacts that could result from an action whenever it considers the issuance of a Certificate of Public Convenience and Necessity. NEPA also requires us [3] to discover and address concerns the public may have about proposals. This process is referred to as ''scoping.'' The main goal of the scoping process is to focus the analysis in the EA on the important environmental issues. By this notice, the Commission requests public comments on the scope of the issues to address in the EA. We will consider all filed comments during the preparation of the EA.

In the EA we will discuss impacts that could occur as a result of the construction and operation of the proposed Project under these general headings:
• Geology and soils;
• land use;
• water resources, fisheries, and wetlands;
• cultural resources;
• vegetation and wildlife;
• air quality and noise;
• endangered and threatened species;
• public safety; and
• cumulative impacts

We will also evaluate reasonable alternatives to the proposed Project or portions of the Project, and make recommendations on how to lessen or avoid impacts on the various resource areas.

The EA will present our independent analysis of the issues. The EA will be available in the public record through eLibrary. Depending on the comments received during the scoping process, we may also publish and distribute the EA to the public for an allotted comment period. We will consider all comments on the EA before making our recommendations to the Commission. To ensure we have the opportunity to consider and address your comments, please carefully follow the instructions in the Public Participation section, beginning on page 2.

With this notice, we are asking agencies with jurisdiction by law and/or special expertise with respect to the environmental issues of this Project to formally cooperate with us in the preparation of the EA.[4] Agencies that would like to request cooperating agency status should follow the instructions for filing comments provided under the Public Participation section of this notice.

Consultations Under Section 106 of the National Historic Preservation Act

In accordance with the Advisory Council on Historic Preservation's implementing regulations for section 106 of the National Historic Preservation Act, we are using this notice to initiate consultation with the applicable State Historic Preservation Office (SHPO), and to solicit their views and those of other government agencies, interested Indian tribes, and the public on the Project's potential effects on historic properties.[5] We will define the Project-specific Area of Potential Effects (APE) in consultation with the SHPO as the Project develops. On natural gas facility projects, the APE at a minimum encompasses all areas subject to ground disturbance (examples include construction right-of-way, contractor/pipe storage yards, compressor stations, and access roads). Our EA for this Project will document our findings on the impacts on historic properties and summarize the status of consultations under section 106.

Environmental Mailing List

The environmental mailing list includes: Federal, state, and local government representatives and agencies; elected officials; Native American Tribes; other interested parties; and local libraries and newspapers. This list also includes all affected landowners (as defined in the Commission's regulations) who are potential right-of-way grantors, whose property may be used temporarily for Project purposes, or who own homes within certain distances of aboveground facilities, and anyone who submits comments on the Project. We will update the environmental mailing list as the analysis proceeds to ensure that we send the information related to this environmental review to all individuals, organizations, and government entities interested in and/or potentially affected by the proposed Project.

If we publish and distribute the EA, copies will be sent to the environmental mailing list for public review and comment. If you would prefer to receive a paper copy of the document instead of the CD version or would like to remove your name from the mailing list, please return the attached Information Request (appendix 2).

Becoming an Intervenor

In addition to involvement in the EA scoping process, you may want to become an ''intervenor'' which is an official party to the Commission's proceeding. Intervenors play a more formal role in the process and are able to file briefs, appear at hearings, and be heard by the courts if they choose to appeal the Commission's final ruling. An intervenor formally participates in the proceeding by filing a request to intervene. Instructions for becoming an intervenor are in the ''Document-less Intervention Guide'' under the ''e-filing'' link on the Commission's Web site. Motions to intervene are more fully described at *http://www.ferc.gov/resources/guides/how-to/intervene.asp.*

Additional Information

Additional information about the Project is available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC Web site at *www.ferc.gov* using the ''eLibrary'' link. Click on the eLibrary link, click on ''General Search'' and enter the docket number, excluding the last three digits in the Docket Number

[2] The appendices referenced in this notice will not appear in the **Federal Register**. Copies of appendices were sent to all those receiving this notice in the mail and are available at *www.ferc.gov* using the link called ''eLibrary'' or from the Commission's Public Reference Room, 888 First Street NE., Washington, DC 20426, or call (202) 502–8371. For instructions on connecting to eLibrary, refer to the last page of this notice.

[3] ''We,'' ''us,'' and ''our'' refer to the environmental staff of the Commission's Office of Energy Projects.

[4] The Council on Environmental Quality regulations addressing cooperating agency responsibilities are at Title 40, Code of Federal Regulations, Part 1501.6.

[5] The Advisory Council on Historic Preservation's regulations are at Title 36, Code of Federal Regulations, Part 800. Those regulations define historic properties as any prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the National Register of Historic Places.

field (*i.e.,* CP15–557). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FercOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to *www.ferc.gov/docs-filing/esubscription.asp.*

Finally, public meetings or site visits will be posted on the Commission's calendar located at *www.ferc.gov/EventCalendar/EventsList.aspx* along with other related information.

[Docket No. OR16–3–000]

Oryx Southern Delaware Oil Gathering and Transport LLC; Notice of Petition for Declaratory Order

Take notice that on November 3, 2015, pursuant to Rule 207(a)(2) of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR 385.207(a)(2) (2015), Oryx Southern Delaware Gathering and Transport LLC, filed a petition for a declaratory order seeking order approving general rate structure and terms of service for new crude oil pipeline from Permian Basin receipt points to delivery points in Crane and Midland, Texas, all as more fully explained in the petition.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. Anyone filing a motion to intervene or protest must serve a copy of that document on the Petitioner.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

This filing is accessible online at *http://www.ferc.gov,* using the ''eLibrary'' link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an ''eSubscription'' link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov,* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Comment Date: 5:00 p.m. Eastern time on December 3, 2015.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

[Project No. 14723–000]

Jordan Whittaker; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On October 29, 2015, Jordan Whittaker filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Oxbow Hydroelectric Project (Oxbow Project or project) to be located on Clear and Tenmile Creeks, tributaries to Eighteenmile Creek and the Lemhi River, near Leadore in Lemhi County, Idaho. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would utilize two existing diversions on Clear and Tenmile Creeks and would use irrigation water that currently flows from approximately March to October within the existing Clear and Tenmile Creeks irrigation canals. The project would consist of the following: (1) Reconstruction of the two existing diversions to include flow control gates, pipeline intakes, and fish screens; (2) two new plastic or steel, buried penstocks to replace or supplement the existing irrigation canals, depending on available flows, including a 7.7-mile-long, 24-inch-diameter Clear Creek penstock, and a 6.7-mile-long, 21-inch diameter Tenmile Creek penstock; (3) a new 20-foot by 40-foot powerhouse containing a single Pelton turbine and generator with a generating capacity of 1,400 kilowatts; (4) a new 4-foot by 4-foot concrete splitter box where water would exit the powerhouse into the Tenmile canal, with gates, as needed, to segregate irrigation water; (5) a new 7.7-mile-long, 12.5-kilovolt (kV) transmission line from the powerhouse to an existing 69 kV transmission line at the point of interconnection near the town of Leadore; and (6) appurtenant facilities.

Applicant Contact: Mr. Jordan Whittaker, 270 Cold Springs Road, Leadore, Idaho 83464; phone: (208) 768–2058.

FERC Contact: Ken Wilcox; phone: (202) 502–6835.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 Days from the issuance of this notice. Competing applications and notices of intent must meet the requirements of 18 CFR 4.36.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, notices of intent, and competing applications using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. The first page of any filing should include docket number P–14723–000.

More information about this project, including a copy of the application, can be viewed or printed on the ''eLibrary'' link of Commission's Web site at *http://www.ferc.gov/docs-filing/elibrary.asp.* Enter the docket number (P–14723) in the docket number field to access the document. For assistance, contact FERC Online Support.

Dated: November 9, 2015.

Blackstone Hydro, Inc.; Notice of Intent To File License Application, Filing of Pre-Application Document, Approving Use of the Traditional Licensing Process

a. *Type of Filing:* Notice of Intent to File License Application and Request to Use the Traditional Licensing Process.

b. *Project No.:* 3023–012.

c. *Date Filed:* September 16, 2015.

d. *Submitted By:* Blackstone Hydro, Inc.

e. *Name of Project:* Tupperware Hydroelectric Project.

f. *Location:* On the Blackstone River in Providence County, Rhode Island and Worcester County, Massachusetts. No federal lands are occupied by the project works or located within the project boundary.

g. *Filed Pursuant to:* 18 CFR 5.3 of the Commission's regulations.

h. Potential *Applicant Contact:* Lewis C. Loon, Blackstone Hydro, Inc., 37 Alfred Plourde Parkway, Suite 2, Lewiston, ME 04240; (207) 786–8834; or by email at *Lewis.Loon@kruger.com.*

i. *FERC Contact:* Amy Chang at (202) 502–8250; or email at *amy.chang@ferc.gov.*

j. Blackstone Hydro, Inc. (Blackstone Hydro) filed its request to use the Traditional Licensing Process on September 16, 2015. Blackstone Hydro provided public notice of its request on September 15 and 16, 2015. In a letter dated November 9, 2015, the Director of the Division of Hydropower Licensing approved Blackstone Hydro request to use the Traditional Licensing Process.

k. With this notice, we are initiating informal consultation with the U.S. Fish and Wildlife Service and NOAA Fisheries under section 7 of the Endangered Species Act and the joint agency regulations thereunder at 50 CFR, Part 402. We are also initiating consultation with the Massachusetts and Rhode Island State Historic Preservation Officers, as required by section 106, National Historic Preservation Act, and the implementing regulations of the Advisory Council on Historic Preservation at 36 CFR 800.2.

l. With this notice, we are designating Blackstone Hydro as the Commission's non-federal representative for carrying out informal consultation pursuant to section 7 of the Endangered Species Act and consultation pursuant to section 106 of the National Historic Preservation Act.

m. Blackstone Hydro filed a Pre-Application Document (PAD; including a proposed process plan and schedule) with the Commission, pursuant to 18 CFR 5.6 of the Commission's regulations.

n. A copy of the PAD is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site (*http://www.ferc.gov*), using the ''eLibrary'' link. [Project No. 13318–003]

Swan Lake North Hydro LLC; Notice of Application Tendered for Filing With the Commission and Soliciting Additional Study Requests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Unconstructed major project.

b. *Project No.:* 13318–003.

c. *Date filed:* October 28, 2015.

d. *Applicant:* Swan Lake North Hydro LLC.

e. *Name of Project:* Swan Lake North Pumped Storage Hydroelectric Project.

f. *Location:* Approximately 11 miles northeast of the City of Klamath Falls, Klamath County, Oregon. The proposed project boundary would include about 730 acres of federal land managed by the U.S. Bureau of Land Management.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. §§ 791(a)–825(r).

h. *Applicant Contact:* Joe Eberhardt, EDF-Renewable Energy, 1000 SW Broadway Ave., Ste. 1800, Portland, OR 97205; Phone: (503) 889–3838.

i. *FERC Contact:* Dianne Rodman, *dianne.rodman@ferc.gov;* phone: (202) 502–6077.

j. *Cooperating agencies:* Federal, state, local, and tribal agencies with jurisdiction and/or special expertise with respect to environmental issues that wish to cooperate in the preparation of the environmental document should follow the instructions for filing such requests described in item l below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of the environmental document cannot also intervene. *See,* 94 FERC ¶ 61,076 (2001).

k. Pursuant to section 4.32(b)(7) of 18 CFR of the Commission's regulations, if any resource agency, Indian Tribe, or person believes that an additional scientific study should be conducted in order to form an adequate factual basis for a complete analysis of the application on its merit, the resource agency, Indian Tribe, or person must file a request for a study with the Commission not later than 60 days from the date of filing of the application, and serve a copy of the request on the applicant.

l. *Deadline for filing additional study requests and requests for cooperating agency status:* December 27, 2015.

The Commission strongly encourages electronic filing. Please file additional study requests and requests for cooperating agency status using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. The first page of any filing should include docket number P–13318–003.

m. The application is not ready for environmental analysis at this time.

n. The proposed project would be a closed-loop system using groundwater for initial fill and consist of the following new facilities: (1) A 7,972–foot-long earthen embankment forming a geomembrane-lined upper reservoir with a surface area of 64.21 acres and a storage capacity of 2,568 acre-feet at a maximum surface elevation of 6,135 feet above mean sea level (msl); (2) a 8,003-foot-long earthen embankment forming a geomembrane-lined lower reservoir with a surface area of 60.14 acres and a storage capacity of 3,206 acre-feet at a maximum surface elevation of 4,457 feet msl; (3) a 500-foot-long, rip-rap lined trapezoidal spillway built into the crest of each embankment; (4) a 0.5-percent slope perforated polyvinyl chloride tube of varying diameter and accompanying optical fiber drainage system designed to detect, collect, and monitor water leakage from the reservoirs; (5) a 25-inch-diameter bottom outlet with manual valve for gravitational dewatering of the lower reservoir; (6) an upper intake consisting of a bell mouth, 38.6-foot-wide by 29.8-foot-long inclined screen, head gate, and 13.8-foot-diameter foundational steel pipe; (7) a 36.5-foot-diameter, 9,655-foot-long steel high-pressure penstock from the upper reservoir to the powerhouse that is predominantly above ground with a 14-foot-long buried segment; (8) three 9.8-foot-diameter, 1,430-foot-long steel low-pressure penstocks from the lower reservoir to the powerhouse that are predominantly above ground with a 78-foot-long buried segment; (9) a partially-buried powerhouse with three 131.1-megawatt (MW) reversible pump-turbine units with a total installed capacity of 393.3 MW; (10) a 32.8 mile, 230-kilovolt above-ground transmission line interconnecting to an existing non-project substation; (11) approximately 10.7 miles of improved project access road; (12) approximately 3.4 miles of new permanent project access road; (13) approximately 8.3 miles of temporary project access road; and (14) appurtenant facilities. The project would generate about 1,187 gigawatt-hours annually.

o. A copy of the application is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support. A copy is also available for inspection and reproduction at the address in item h above.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

p. *Procedural schedule:* The application will be processed according to the following preliminary Hydro Licensing Schedule. Revisions to the schedule will be made as appropriate.

Issue Notice of Acceptance—March 2016
Issue Scoping Document 1 for comments—April 2016
Comments on Scoping Document 1—June 2016
Issue Scoping Document 2—July 2016
Issue notice of ready for environmental analysis—July 2016
Commission issues draft EIS—December 2017
Comments on draft EIS—February 2017
Commission issues final EIS—June 2017

Dated: November 9, 2015.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC16–29–000.

Applicants: Holtwood, LLC, BIF III Holtwood LLC.

Description: Joint Application of Holtwood, LLC *et al.* for Authorization under Section 203 of the FPA and Request for Limited Waivers.

Filed Date: 11/6/15.

Accession Number: 20151106–5197.

Comments Due: 5 p.m. ET 11/27/15.

Docket Numbers: EC16–30–000.

Applicants: Talen Ironwood, LLC, Talen Energy Marketing, LLC, TransCanada Facility USA, Inc., TransCanada Power Marketing, Ltd.

Description: Joint Application of Talen Ironwood, LLC *et al.* for Authorization of Disposition of Jurisdictional Facilities under Section 203 of the FPA and Requests for Waivers.

Filed Date: 11/6/15.

Accession Number: 20151106–5198.

Comments Due: 5 p.m. ET 11/27/15.

Take notice that the Commission received the following exempt wholesale generator filings:

Docket Numbers: EG16–19–000.

Applicants: BIF III Holtwood LLC.

Description: Notice of Self-Certification of Exempt Wholesale Generator Status of BIF III Holtwood LLC.

Filed Date: 11/6/15.
Accession Number: 20151106–5169.
Comments Due: 5 p.m. ET 11/27/15.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER10–1790–012; ER10–2596–005; ER10–276–003; ER11–3325–004.
Applicants: BP Energy Company, Fowler Ridge II Wind Farm LLC, Rolling Thunder I Power Partners, LLC, Whiting Clean Energy, Inc.
Description: Supplement to June 26, 2015 Updated Market Power Analysis for Central Region of BP Energy Company, *et al.*
Filed Date: 11/6/15.
Accession Number: 20151106–5186.
Comments Due: 5 p.m. ET 11/27/15.
Docket Numbers: ER16–287–000.
Applicants: BIF III Holtwood LLC.
Description: Baseline eTariff Filing: BIF III Holtwood LLC MBR Application to be effective 11/9/2015.
Filed Date: 11/6/15.
Accession Number: 20151106–5139.
Comments Due: 5 p.m. ET 11/27/15.
Docket Numbers: ER16–288–000.
Applicants: Entergy Services, Inc.
Description: § 205(d) Rate Filing: Entergy Services, Inc., Amended Service Agreements to be effective 11/8/2015.
Filed Date: 11/6/15.
Accession Number: 20151106–5141.
Comments Due: 5 p.m. ET 11/27/15.
Docket Numbers: ER16–289–000.
Applicants: Pacific Gas and Electric Company.
Description: § 205(d) Rate Filing: COTP CIRS Appendix F Update to be effective 1/6/2016.
Filed Date: 11/6/15.
Accession Number: 20151106–5142.
Comments Due: 5 p.m. ET 11/27/15.
Docket Numbers: ER16–290–000.
Applicants: Mesquite Solar 1, LLC.
Description: § 205(d) Rate Filing: Mesquite Solar 1, LLC Assignment, Co-Tenancy and Shared Facilities Agreement to be effective 11/20/2015.
Filed Date: 11/6/15.
Accession Number: 20151106–5143.
Comments Due: 5 p.m. ET 11/27/15.
Docket Numbers: ER16–291–000.
Applicants: Arizona Public Service Company.
Description: Notice of Cancellation of Rate Schedule No. 25 of Arizona Public Service Company.
Filed Date: 11/6/15.
Accession Number: 20151106–5185.
Comments Due: 5 p.m. ET 11/27/15.
Docket Numbers: ER16–292–000.
Applicants: Northern Virginia Electric Cooperative, Inc.
Description: Notice of Cancellation of Rate Schedule No. 1 of Northern Virginia Electric Cooperative, Inc.
Filed Date: 11/6/15.
Accession Number: 20151106–5195.
Comments Due: 5 p.m. ET 11/27/15.

Take notice that the Commission received the following land acquisition reports:

Docket Numbers: LA15–3–000.

Applicants: Cimarron Windpower II, LLC, CinCap V, LLC, Conetoe II Solar, LLC, Duke Energy Beckjord, LLC, Duke Energy Beckjord Storage, LLC, Duke Energy Carolinas, LLC, Duke Energy Commercial Enterprises, Inc., Duke Energy Florida, LLC, Duke Energy Indiana, Inc., Duke Energy Kentucky, Inc., Duke Energy Ohio, Inc., Duke Energy Piketon, LLC, Duke Energy Progress, LLC, Duke Energy Renewable Services, LLC, Happy Jack Windpower, LLC, Ironwood Windpower, LLC, Kit Carson Windpower, LLC, Laurel Hill Wind Energy, LLC, North Allegheny Wind, LLC, Silver Sage Windpower, LLC, Three Buttes Windpower, LLC, Top of the World Wind Energy, LLC, Seville Solar One LLC, Seville Solar Two, LLC, Tallbear Seville LLC.

Description: Quarterly Land Acquisition Report of the Duke Energy MBR Affiliates.

Filed Date: 11/6/15.

Accession Number: 20151106–5154.

Comments Due: 5 p.m. ET 11/27/15.

The filings are accessible in the Commission's eLibrary system by clicking on the links or querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf*. For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: November 9, 2015.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OAR–2015–0216; FRL–9937–13–OAR]

Release of Draft Control Techniques Guidelines for the Oil and Natural Gas Industry

AGENCY: Environmental Protection Agency (EPA).

ACTION: Extension of comment period.

SUMMARY: On September 18, 2015, the Environmental Protection Agency (EPA) announced the availability of a draft Control Techniques Guidelines (CTG) document titled, ''Release of Draft Control Techniques Guidelines for the Oil and Natural Gas Industry.'' The EPA is extending the comment period on the notice of availability of the draft CTG document that was scheduled to close on November 17, 2015. The EPA has received several letters from trade and business organizations, states and tribes requesting additional time to review and comment on the notice of availability of the draft CTG document.

DATES: The public comment period for notice of availability of the CTG document published in the **Federal Register** on September 18, 2015 (80 FR 56577), is being extended. Written comments must be received on or before December 4, 2015.

ADDRESSES: The EPA has established a docket for the draft CTG document (available at *http://www.regulations.gov*). For the notice of availability titled, ''Release of Draft Control Techniques Guidelines for the Oil and Natural Gas Industry,'' the Docket ID No. is EPA–HQ–OAR–2015–0216. Information on this document is posted at *http://www.epa.gov/airquality/oilandgas/actions.html*. Submit your comments, identified by the appropriate Docket ID, to the *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or withdrawn. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. If you need to include CBI as part of your comment, please visit *http://www.epa.gov/dockets/comments.html* for instructions. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include

discussion of all points you wish to make.

For additional submission methods, the full EPA public comment policy, and general guidance on making effective comments, please visit *http://www.epa.gov/dockets/comments.html*.

FOR FURTHER INFORMATION CONTACT: For additional information on this action, contact Cheryl Vetter, Office of Air Quality Planning and Standards, Environmental Protection Agency (C504–03), Research Triangle Park, North Carolina 27711; telephone number (919) 541–4391; fax number (919) 541–5509; email address: *vetter.cheryl@epa.gov*.

SUPPLEMENTARY INFORMATION: After considering the requests to extend the public comment period received from various trade and business organizations, states and tribes, the EPA has decided to extend the public comment period until December 4, 2015. This extension will ensure that the public has additional time to comment on the draft CTG document.

Dated: November 10, 2015.

Mary E. Henigin,

Acting Director, Office of Air Quality Planning and Standards.

[FR Doc. 2015–29174 Filed 11–13–15; 8:45 am]

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0016]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before January 15, 2016. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov*.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control No.: 3060–0016.

Title: FCC Form 2100, Application for Media Bureau Audio and Video Service Authorization, Schedule C (Former FCC Form 346); Sections 74.793(d) and 74.787; LPTV Out-of-Core Digital Displacement Application; Section 73.3700(g)(1)–(3), Post-Incentive Auction Licensing and Operations

Form No.: FCC Form 2100, Schedule C.

Type of Review: Revision of a currently approved information collection.

Respondents: Business or other for-profit entities; Not for profit institutions; State, local or Tribal government.

Number of Respondents and Responses: 4,250 respondents and 4,250 responses.

Estimated Time per Response: 2.5–7 hours (total of 9.5 hours).

Frequency of Response: One-time reporting requirement; on occasion reporting requirement; third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this collection is contained in Section 154(i), 303, 307, 308 and 309 of the Communications Act of 1934, as amended.

Total Annual Burden: 40,375 hours.

Annual Cost Burden: $23,579,000.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Needs and Uses: The collection is being made to the Office of Management (OMB) for the approval of information collection requirements contained in the Commission's Incentive Auction Order, FCC 14–50, which adopted rules for holding an Incentive Auction, as required by the Middle Class Tax Relief and Job Creation Act of 2012 (Spectrum Act). The information gathered in this collection will be used to allow Low Power television stations and TV Translator stations that are displaced as a result of the Federal Communications Commission's Incentive Auction to submit an application for displacement relief during a restricted filing window. Form 2100, Schedule C is also used to apply for authority to construct or make changes to a Low Power Television, TV Translator or TV Booster broadcast station.

Federal Communications Commission.

Gloria J. Miles,

Federal Register Liaison Officer, Office of the Secretary.

FEDERAL RESERVE SYSTEM

[Docket No. OP–1522]

Federal Reserve Bank Services

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Notice.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) has approved the private sector adjustment factor (PSAF) for 2016 of $13.1 million and the 2016 fee schedules for Federal Reserve priced services and electronic access. These actions were taken in accordance with the Monetary Control Act of 1980, which requires that, over the long run, fees for Federal Reserve priced services be established on the basis of all direct and indirect costs, including the PSAF.

DATES: The new fee schedules become effective January 1, 2016.

FOR FURTHER INFORMATION CONTACT: For questions regarding the fee schedules: Susan V. Foley, Senior Associate Director, (202) 452–3596; Slavea A. Assenova, Financial Services Analyst, (202) 452–2087, Division of Reserve Bank Operations and Payment Systems. For questions regarding the PSAF: Gregory L. Evans, Deputy Associate Director, (202) 452–3945; Lawrence Mize, Deputy Associate Director, (202) 452–5232; Manuel Garcia, Senior Financial Analyst, (202) 452–3480, Division of Reserve Bank Operations and Payment Systems. For users of Telecommunications Device for the Deaf (TDD) *only,* please call (202) 263–4869. Copies of the 2016 fee schedules for the check service are available from the Board, the Federal Reserve Banks, or the Reserve Banks' financial services Web site at *www.frbservices.org.*

SUPPLEMENTARY INFORMATION:

I. Private Sector Adjustment Factor, Priced Services Cost Recovery, and Overview of 2016 Price Changes

A. Overview—Each year, as required by the Monetary Control Act of 1980, the Reserve Banks set fees for priced services provided to depository institutions. These fees are set to recover, over the long run, all direct and indirect costs and imputed costs, including financing costs, taxes, and certain other expenses, as well as the return on equity (profit) that would have been earned if a private business firm provided the services. The imputed costs and imputed profit are collectively referred to as the PSAF. From 2005 through 2014, the Reserve Banks recovered 102.9 percent of their total expenses (including imputed costs) and targeted after-tax profits or return on equity (ROE) for providing priced services.[1]

Table 1 summarizes 2014 actual, 2015 estimated, and 2016 budgeted cost-recovery rates for all priced services. Cost recovery is estimated to be 104.1 percent in 2015 and budgeted to be 101.9 percent in 2016.

TABLE 1—AGGREGATE PRICED SERVICES PRO FORMA COST AND REVENUE PERFORMANCE [a]

[Dollars in millions]

Year	Revenue	Total expense	Net income	Targeted ROE	Recovery rate after targeted ROE [1/(2+4)]
	1 [b]	2 [c]	3	4 [d]	5 [e]
2014 (actual)	433.1	418.7	14.5	5.5	102.1%
2015 (estimate)	427.1	404.6	22.6	5.6	104.1%
2016 (budget)	426.9	414.9	12.0	4.1	101.9%

[a] Calculations in this table and subsequent pro forma cost and revenue tables may be affected by rounding.

[b] Revenue includes imputed income on investments when equity is imputed at a level that meets minimum capital requirements and, when combined with liabilities, exceeds total assets (attachment 1).

[c] The calculation of total expense includes operating, imputed, and other expenses. Imputed and other expenses include taxes, Board of Governors' priced services expenses, the cost of float, and interest on imputed debt, if any. Credits or debits related to the accounting for pension plans under FAS 158 [ASC 715] are also included.

[d] Targeted ROE is the after-tax ROE included in the PSAF.

[e] The recovery rates in this and subsequent tables do not reflect the unamortized gains or losses that must be recognized in accordance with FAS 158 [ASC 715]. Future gains or losses, and their effect on cost recovery, cannot be projected.

Table 2 provides an overview of cost-recovery performance for the ten-year period from 2005 to 2014, 2014 actual, 2015 budget, 2015 estimate, and 2016 budget by priced service.

[1] The ten-year recovery rate is based on the pro forma income statement for Federal Reserve priced services published in the Board's *Annual Report.* Effective December 31, 2006, the Reserve Banks implemented Statement of Financial Accounting Standards (SFAS) No. 158: *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans* [Accounting Standards Codification (ASC) 715 *Compensation—Retirement Benefits*], which resulted in recognizing a cumulative reduction in equity related to the priced services' benefit plans. Including this cumulative reduction in equity from 2005 to 2014 results in cost recovery of 95.1 percent for the ten-year period. This measure of long-run cost recovery is also published in the Board's *Annual Report.*

TABLE 2—PRICED SERVICES COST RECOVERY

[Percent]

Priced service	2005–2014	2014 actual	2015 budget [a]	2015 estimate	2016 budget [b]
All services	102.9	102.1	102.0	104.1	101.9
Check	103.7	115.6	105.2	110.1	106.7
FedACH	100.0	86.7	100.4	100.0	99.0
Fedwire Funds and NSS	101.9	103.2	100.7	100.7	100.0
Fedwire Securities	102.3	104.1	97.5	105.7	98.7

[a] The 2015 budget figures reflect the final budgets as approved by the Board in December 2014.
[b] The 2016 budget figures reflect preliminary budget information from the Reserve Bank. The Reserve Banks will submit final budget data to the Board in November 2015, for Board consideration in December 2015.

1. *2015 Estimated Performance*—The Reserve Banks estimate that they will recover 104.1 percent of the costs of providing priced services in 2015, including total expense and targeted ROE, compared with a 2015 budgeted recovery rate of 102.0 percent, as shown in table 2. Overall, the Reserve Banks estimate that they will fully recover actual and imputed costs and earn net income of $22.6 million, compared with the targeted ROE of $5.6 million. The Reserve Banks estimate that all services will achieve full cost recovery, despite higher-than-budgeted pension expenses. Greater-than-expected check volume processed by the Reserve Banks has been the single most significant factor influencing priced services cost recovery.

2. *2016 Private-Sector Adjustment Factor*—The 2016 PSAF for Reserve Bank priced services is $13.1 million. This amount represents a decrease of $4.9 million from the 2015 PSAF of $18.0 million. This decrease is primarily the result of a reduction in the assets to be financed on the imputed priced-services balance sheet and an associated decline in the cost of debt and equity.

3. *2016 Projected Performance*—The Reserve Banks project a priced services cost-recovery rate of 101.9 percent in 2016, with net income of $12.0 million, compared with a targeted ROE of $4.1 million. The Reserve Banks project that the check service and the Fedwire® Funds and National Settlement Service will fully recover their costs; however, the Reserve Banks project that the FedACH® Service and the Fedwire Securities Service will not achieve full cost recovery because of investment costs associated with multiyear technology initiatives to modernize their processing platforms.[2] These investments are expected to enhance efficiency, the overall quality of operations, and the Reserve Banks' ability to offer additional services to depository institutions.

The primary risks to the Reserve Banks' ability to achieve their targeted cost-recovery rates are unanticipated volume and revenue reductions and the potential for cost overruns with the technology modernization initiatives. In light of these risks, the Reserve Banks will continue to refine their business and operational strategies to manage operating costs, to increase product revenue, and to capitalize on efficiencies gained from technology initiatives.

4. *2016 Pricing*—The following summarizes the Reserve Banks' changes in fee schedules for priced services in 2016:

Check

• The Reserve Banks will increase the per-item fee for FedReturn® items that are qualified to the Reserve Bank in instances in which the bank of first deposit cannot be identified from $8 to $15.

• The Reserve Banks will increase the fees for traditional paper check forward and return collection deposits. The Reserve Banks will increase the per-item fee for paper forward deposits from $2.00 to $2.50 and the per-item fee for each unencoded item from $1.00 to $1.50.[3] The Reserve Banks will increase the per-item fee for paper return-collection deposits from $5.00 to $5.50 and the per-item fee for unqualified paper returns from $7.00 to $7.50. The Reserve Banks will discontinue image retrievals by fax for both incoming and outgoing retrievals within FedImage® Services.[4]

• The Reserve Banks will introduce Select Mixed Level 3 to the Select Mixed image cash letter (ICL) product.[5] The new level will have a daily fee of $3,000 and per-item fees from $0.002 to $0.350.

• The Reserve Banks will eliminate the FedForward® Fine Sort (ICL) product in January 2017 as part of the Reserve Banks' effort to reflect today's electronic check processing environment in their check fee schedule.[6] To encourage depositors to shift volume from the fine-sort products to mixed deposit options in advance of this elimination, the Reserve Banks will increase the FedForward Fine Sort ICL product per-item fees at the 9 p.m., 1 a.m., and 5 a.m. deadlines by $0.002, $0.004, and $0.006, respectively.[7] The Reserve Banks will increase the FedForward Deferred Fine Sort ICL product per-item fees at the 1 a.m., 5

[2] The Reserve Banks have been engaged in a multiyear technology initiative to modernize the FedACH processing platform by migrating the service from a mainframe system to a distributed computing environment. In late 2013, the Reserve Banks conducted an assessment focused on the viability and cost-effectiveness of the program. As a result, the Reserve Banks in 2014 suspended the program and began to investigate the use of other technology solutions. In 2015, the Reserve Banks evaluated alternative processing solutions, including commercially available options.

[3] Unencoded items are those items deposited without encoding of certain elements, such as amount, added to the magnetic ink character recognition (MICR) line.

[4] FedImage Services offer depository institutions products for the capture, archive, and retrieval of check images. A current list of services can be found at *https://www.frbservices.org/serviceofferings/check/fed_image_services.html.*

[5] A current list of Select Mixed endpoints can be found at *https://www.frbservices.org/servicefees/check21_endpoint_listing.html.*

[6] In a paper check processing environment, the fine sort product allowed the Reserve Banks to gain efficiencies because the checks did not require processing on reader-sorters. In today's electronic check processing environment, all image cash letters are processed through the Reserve Banks' electronic system in the same manner, and the Reserve Banks do not gain any efficiencies by having the depositing bank fine sort electronic checks prior to deposit.

[7] All times are stated in the Eastern Time zone (ET).

Depository institutions may deposit image cash letters using nine deposit options within the FedForward product line; the options vary in price structure and funds availability. The Reserve Banks offer customers the option of sending FedForward ICLs for items drawn on specific endpoints in a separate cash letter, which combines a high fixed fee with a lower variable fee. All eligible items in the cash letter receive immediate availability, while ineligible items receive deferred availability of the next business day. A current list of FedForward deposit options can be found at *https://www.frbservices.org/servicefees/check_services_2015.html.*

a.m., and 10 a.m. deadlines by $0.004, $0.006, and $0.008, respectively.

• In addition to the above changes, the Reserve Banks plan to announce further modifications to the check fee schedule during 2016 that reflect the efficiencies of today's electronic check processing environment. The new schedule may include elimination of certain sorted deposit options and modifications to the current endpoint-based tiered pricing structure.

FedACH

• The Reserve Banks will increase the minimum monthly fee for forward origination from $35 to $45.[8]

• The Reserve Banks will increase the minimum monthly fee for receipt from $25 to $35.[9]

• The Reserve Banks will eliminate the large file and small file per-item fees and introduce a single base fee of $0.0032 for all origination files. The Reserve Banks will provide a discount of $0.0005 for origination volume between 750,000 to 1,500,000 items per month and $0.0007 for origination volume greater than 1,500,000 items per month.

• The Reserve Banks will lower the top-tier volume origination discount level based on monthly receipt volume from 17,500,000 to 15,000,000 items per month, while maintaining the current discount amounts.[10]

• The Reserve Banks will increase the forward item receipt fee from $0.0025 to $0.0032 per item, while keeping the return item receipt fee at $0.0075 per item.

• The Reserve Banks will change the volume-based receipt discount structure to encourage additional receipt volume. The changes will include a decrease in the first volume-based discount by 250,000 items per month to 750,001 items a month, the introduction of a new volume-based discount tier for volume between 1,500,001 and 2,500,000 items per month, and an increase for all existing volume-based receipt discounts by $0.0007.[11]

• The Reserve Banks will implement a $20 monthly billing discount for any customer that pays the origination minimum fee, subscribes to a FedLine Web® Plus or higher package, and subscribes to either FedACH RDFI Alert, FedACH Risk® Origination Monitoring, or FedPayments® Reporter. In addition to the above changes, the Reserve Banks plan to reassess the FedGlobal® ACH fee schedule during 2016.

Fedwire Funds and National Settlement

• The Reserve Banks will increase the Tier 1 per-item pre-incentive fee from $0.73 to $0.79 per transaction, increase the Tier 3 per-item pre-incentive fee from $0.150 to $0.155 per transaction, and leave Tier 2 per-item pre-incentive fees unchanged.[12]

• The Reserve Banks will increase the surcharge for offline transactions from $50 to $55. The Reserve Banks will increase the monthly participation fee from $90 to $95.

Fedwire Securities and National Settlement Services

• The Reserve Banks will keep prices at existing levels for the priced Fedwire Securities and National Settlement Services.

FedLine® Access Solutions

• The Reserve Banks will increase the fee for the FedLine Exchange℠ subscriber pack by $5 per month.[13] The Reserve Banks will keep all other existing FedLine fees unchanged.

• The Reserve Banks will introduce a 256K/T1 legacy router surcharge of $5,000 per month to encourage customers to migrate to more efficient access solutions.[14]

• The Reserve Banks will introduce a fee for customers that choose to implement FedLine using a customized (nonstandard) router setup. The fee will vary from $2,500 to $5,000 based on the complexity of the setup.

• The Reserve Banks will include two virtual private network (VPN) devices in the FedLine Direct® Premier package (rather than one) to align better with the FedLine Advantage® Premier package.

• Depository institutions with more than 250 Fedwire transactions per month, or more than one routing number, will only have access to the FedPayments Manager Import/Export (FPM) tool via FedLine Advantage Premier.[15] Affected customers will experience a fee increase ranging from $15 to $75 per month to upgrade to FedLine Advantage Premier.

5. *2016 Price Index*—Figure 1 compares indexes of fees for the Reserve Banks' priced services with the GDP price index.[16] The price index for Reserve Bank priced services is projected to increase approximately 1 percent in 2016 from the 2015 level. The price index for Check 21 services is projected to increase less than 1 percent. The price index for the FedACH Service is projected to decrease nearly 1 percent. The price index for the Fedwire Funds and National Settlement Services is projected to increase approximately 5 percent. The price index for the Fedwire Securities Services is projected to decrease nearly 1 percent. For the period 2006 to 2015, the price index for total priced services is expected to decrease 26 percent.

BILLING CODE 6210–01–P

[8] Any originating depository financial institution (ODFI) incurring less than $45 for the following fees will be charged the difference to reach the minimum: Forward value and nonvalue item origination fees, FedGlobal ACH origination surcharges, and FedACH SameDay forward origination surcharges.

[9] Any receiving depository financial institution (RDFI) originating forward value and nonvalue items below the minimum level and incurring less than $35 in receipt fees will be charged the difference to reach the minimum based on origination. RDFIs not originating forward value and nonvalue items will incur the $35 minimum monthly fee for receipt.

[10] Origination discounts apply only to those items received by FedACH receiving points and are available only to Premium Receivers.

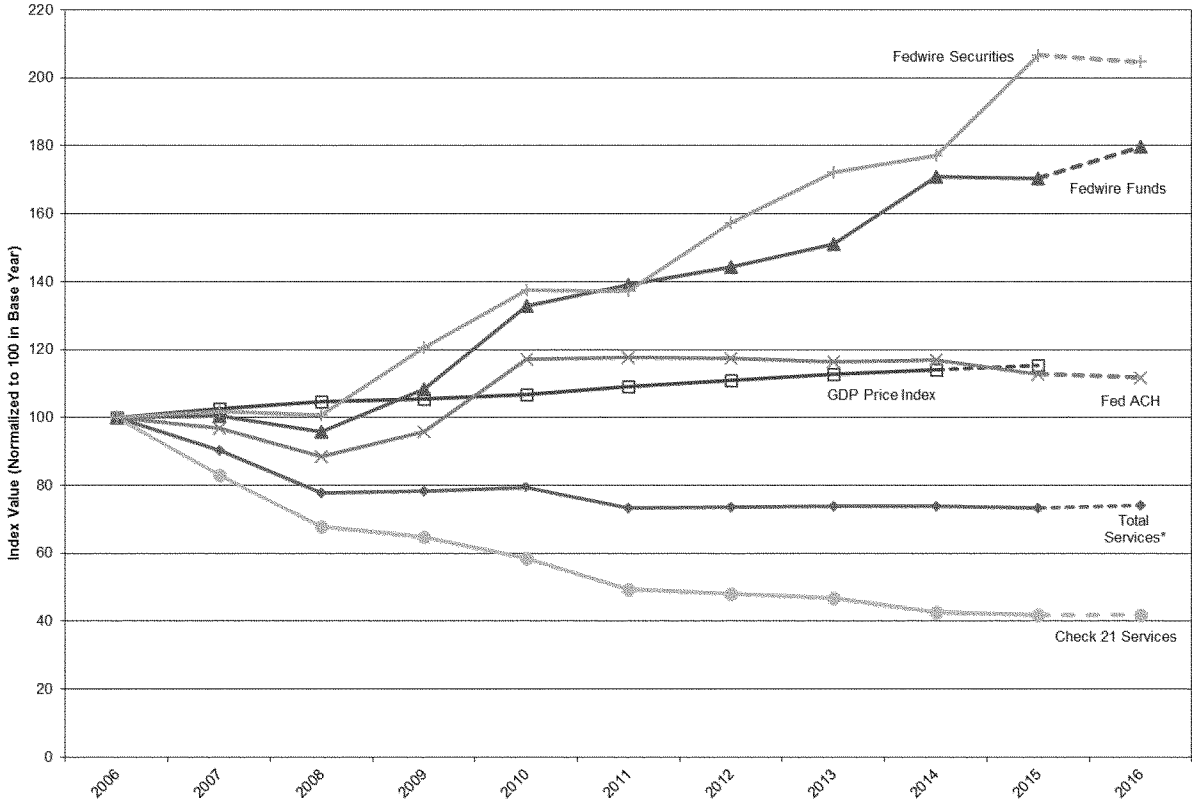
[11] Premium Receivers (institutions receiving a certain portion of volume through FedACH) with volume greater than 1,500,000 items a month will receive the increased discount for all items received.

[12] The per-item pre-incentive fee is the fee that the Reserve Banks charge for transfers that do not qualify for incentive discounts. The Tier 1 per-item pre-incentive fee applies to the first 14,000 transfers, the Tier 2 per-item pre-incentive fee applies to the next 76,000 transfers, and the Tier 3 per-item pre-incentive fee applies to any additional transfers. The Reserve Banks apply an 80 percent incentive discount to transfers over 60 percent of a customer's historic benchmark volume.

[13] FedLine packages do not include user subscriptions for priced services. Depository institutions that wish to access priced services must purchase user subscriptions in packs of five (5-packs).

[14] The $5,000 per month surcharge will be effective July 1, 2016. The price will increase to $10,000 per month on September 1, 2016 and $20,000 per month on November 1, 2016.

[15] These customers are generally large institutions that may benefit from the expanded suite of services included in the FedLine Advantage Premier package. For example, large customers may benefit from the enhanced contingency preparedness solutions (such as a secondary VPN device) that are included in FedLine Premier packages.



FedComplete Plus customers with more than 250 Fedwire transactions per month that use the FPM tool will also be transferred to FedComplete Premier packages with the associated fee increase because FedComplete Plus packages incorporate FedLine Advantage Plus. The transfer will affect about 10 current FedCompelete customers.

[16] For the period 2006 to 2014, the GDP price index increased 15 percent.

FIGURE 1

2016 Price Index

PRICE INDEXES FOR FEDERAL RESERVE PRICED SERVICES

* Total Services excludes legacy paper services which now have minimal volume and are expected to generate less than $9 million in revenue in 2016.

BILLING CODE 6210–01–C

B. Private Sector Adjustment Factor—The imputed debt financing costs, targeted ROE, and effective tax rate are based on a U.S. publicly traded firm market model.[17] The method for calculating the financing costs in the PSAF requires determining the appropriate imputed levels of debt and equity and then applying the applicable financing rates. In this process, a pro forma balance sheet using estimated assets and liabilities associated with the Reserve Banks' priced services is developed, and the remaining elements that would exist are imputed as if these priced services were provided by a private business firm. The same generally accepted accounting principles that apply to commercial-entity financial statements apply to the relevant elements in the priced services pro forma financial statements.

The portion of Federal Reserve assets that will be used to provide priced services during the coming year is determined using information about actual assets and projected disposals and acquisitions. The priced portion of these assets is determined based on the allocation of depreciation and amortization expenses of each asset class. The priced portion of actual Federal Reserve liabilities consists of postemployment and postretirement benefits, accounts payable, and other liabilities. The priced portion of the actual net pension asset or liability is also included on the balance sheet.[18]

The equity financing rate is the targeted ROE produced by the capital asset pricing model (CAPM). In the CAPM, the required rate of return on a firm's equity is equal to the return on a risk-free asset plus a market risk premium. The risk-free rate is based on the three-month Treasury bill; the beta is assumed to be equal to 1.0, which approximates the risk of the market as a whole; and the market risk premium is based on the monthly returns in excess of the risk-free rate over the most recent 40 years. The resulting ROE reflects the return a shareholder would expect when investing in a private business firm.

For simplicity, given that federal corporate income tax rates are graduated, state income tax rates vary, and various credits and deductions can apply, an actual income tax expense is not explicitly calculated for Reserve Bank priced services. Instead, the Board targets a pretax ROE that would provide sufficient income to fulfill the priced services' imputed income tax obligations. To the extent that performance results are greater or less than the targeted ROE, income taxes are adjusted using the effective tax rate.

[17] Data for U.S. publicly traded firms is from the Standard and Poor's Compustat® database. This database contains information on more than 6,000 U.S. publicly traded firms, which approximates the entirety of the U.S. market.

[18] The pension assets are netted with the pension liabilities and reported as a net asset or net liability as required by ASC 715 *Compensation—Retirement Benefits.*

Capital structure. The capital structure is imputed based on the imputed funding need (assets less liabilities), subject to minimum equity constraints. Short-term debt is imputed to fund the imputed short-term funding need. Long-term debt and equity are imputed to meet the priced services long-term funding need at a ratio based on the capital structure of the U.S. publicly traded firm market. The level of equity must meet the minimum equity constraints, which follow the FDIC requirements for a well-capitalized institution. The priced services must maintain equity of at least 5 percent of total assets and 10 percent of risk-weighted assets.[19] Any equity imputed that exceeds the amount needed to fund the priced services' assets and meet the minimum equity constraints is offset by a reduction in imputed long-term debt. When imputed equity is larger than what can be offset by imputed debt, the excess is imputed as investments in Treasury securities; income imputed on these investments reduces the PSAF.

Application of the Payment System Risk (PSR) Policy to the Fedwire Services. The Board's PSR policy reflects the new international standards for financial market infrastructures (FMIs) developed by the Committee on Payment and Settlement Systems and the Technical Committee of the International Organization of Securities Commissions in the *Principles for Financial Market Infrastructures.* The revised policy retains the expectation that the Fedwire Services meet or exceed the applicable risk-management standards. Principle 15 states that an FMI should identify, monitor, and manage general business risk and hold sufficient liquid net assets funded by equity to cover potential general business losses so that it can continue operations and services as a going concern if those losses materialize. Further, liquid net assets should at all times be sufficient to ensure a recovery or orderly wind-down of critical operations and services. The Fedwire Services do not face the risk that a business shock would cause the service to wind down in a disorderly manner and disrupt the stability of the financial system. In order to foster competition with private-sector FMIs, however, the Reserve Banks' priced services will hold six months of the Fedwire Funds Service's current operating expenses as liquid financial assets and equity on the pro forma balance sheet.[20] Current operating expenses are defined as normal business operating expenses on the income statement less depreciation, amortization, taxes, and interest on debt. The Fedwire Funds Service's six months of current operating expenses are computed based on its preliminary 2016 budget at $53.8 million. In 2016, $51.1 million of equity was imputed to meet the FDIC capital requirements; however, an additional $2.7 million of equity was imputed to meet the PSR policy requirement. The additional equity is solely allocated to Fedwire Funds Service.

Effective tax rate. Like the imputed capital structure, the effective tax rate is calculated based on data from U.S. publicly traded firms. The tax rate is the mean of the weighted average rates of the U.S. publicly traded firm market over the past 5 years.

Debt and equity financing. The imputed short- and long-term debt financing rates are derived from the nonfinancial commercial paper rates from the Federal Reserve Board's H.15 Selected Interest Rates release (AA and A2/P2) and the annual Merrill Lynch Corporate & High Yield Index rate, respectively. The rates for debt and equity financing are applied to the priced services estimated imputed short-term debt, long-term debt, and equity needed to finance short- and long-term assets and meet equity requirements.

The decrease in the 2016 PSAF is primarily due to lower financing costs as a result of fewer priced services assets to be financed than in 2015. Debt and equity financing rates declined and less debt and equity was imputed to fund priced services assets.

Projected 2016 Federal Reserve priced-services assets, reflected in table 3, have decreased $486.3 million from 2015. This reduction is primarily due to a $589.0 million decrease in the balance of imputed investments in federal funds, driven by recent changes in the PSR policy resulting in a decrease in daily float balances and a corresponding effect on imputed investments. The reduction is offset by an increase of $170.0 million from 2015 in items in process of collection. As shown in table 3, imputed equity for 2016 is $53.8 million, a decrease of $18.1 million from the equity imputed for 2015. In accordance with FAS 158 [ASC 715], this amount includes an accumulated other comprehensive loss of $666.1 million.

Table 4 reflects the portion of short- and long-term assets that must be financed with actual or imputed liabilities and equity. Debt and equity imputed to fund the 2016 priced services assets within the observed market leverage ratio produced an equity level that did not meet the FDIC minimum equity requirements. As a result, additional equity was imputed to meet the FDIC requirements, and imputed long-term debt was reduced. The ratio of capital to risk-weighted assets exceeds the required 10 percent of risk-weighted assets and equity exceeds 5 percent of total assets (table 6). In 2015, long-term debt and equity was imputed to meet the asset funding requirements and reflects the leverage ratio observed in the market; additional equity of $7.6 million was required (table 5) to meet the market leverage ratio.

Table 5 shows the derivation of the 2016 and 2015 PSAF. Financing costs for 2016 are $6.1 million lower than in 2015. In addition to the decline in the levels of debt and equity mentioned above, the cost of equity declined 3 basis points. The reduced equity balance and the lower cost of equity result in a pretax ROE that is $2.0 million lower than the 2015 pretax ROE. Imputed sales taxes declined to $2.8 million in 2016 from $3.3 million in 2015. The priced services portion of the Board's expenses increased $1.7 million to $5.0 million in 2016 from $3.3 million in 2015. The effective income tax rate used in 2016 decreased to 21.6 percent from 22.4 percent in 2015.

[19] The FDIC rule, which was adopted as final on April 8, 2014, requires that well-capitalized institutions meet or exceed the following standards: (1) Total capital to risk-weighted assets ratio of at least 10 percent, (2) tier 1 capital to risk-weighted assets ratio of at least 8 percent, (3) common equity tier 1 capital to risk-weighted assets ratio of at least 6.5 percent, and (4) a leverage ratio (tier 1 capital to total assets) of at least 5 percent. Because all of the Federal Reserve priced services' equity on the pro forma balance sheet qualifies as tier 1 capital, only requirements 1 and 4 are binding. The FDIC rule can be located at *https://www.fdic.gov/news/board/2014/2014-04-08_notice_dis_c_fr.pdf.*

[20] This requirement does not apply to the Fedwire Securities Service. There are no competitors to the Fedwire Securities Service that will face such a requirement, and imposing such a requirement when pricing securities services could artificially increase the cost of these services.

TABLE 3—COMPARISON OF PRO FORMA BALANCE SHEETS FOR BUDGETED FEDERAL RESERVE PRICED SERVICES

[Millions of dollars—projected average for year]

	2016	2015	Change
Short-term assets:			
Receivables	$35.6	$34.5	$1.0
Materials and supplies	0.5	0.6	(0.1)

TABLE 4—IMPUTED FUNDING FOR PRICED-SERVICES ASSETS

[Millions of dollars]

	2016	2015
A. Short-term asset financing		
Short-term assets to be financed:		
Receivables	$35.6	$34.5
Materials and supplies	0.5	0.6
Prepaid expenses	10.2	11.0
Total short-term assets to be financed	46.2	46.2
Short-term payables	27.2	27.6
Net short-term assets to be financed	19.0	18.5

[21] Credit float, which represents the difference between items in process of collection and deferred credit items, occurs when the Reserve Banks debit the paying bank for transactions prior to providing credit to the depositing bank. Float is directly estimated at the service level.

[22] Consistent with the Board's PSR policy, the Reserve Banks' priced services will hold six months of the Fedwire Funds Service's current operating expenses as liquid net financial assets and equity on the pro forma balance sheet. Six months of the Fedwire Funds Service's projected current operating expenses is $53.8 million. In 2016, $51.1 million of equity was imputed to meet the regulatory capital requirements; however, an additional $2.7 million of equity was imputed to meet the PSR policy requirement.

[23] Includes the allocation of Board of Governors assets to priced services of $1.3 and $0.7 million for 2016 and 2015, respectively.

[24] Includes the allocation of Board of Governors liabilities to priced services of $0.6 million for 2016 and 2015.

[25] Includes an accumulated other comprehensive loss of $666.1 million for 2016 and $523.7 million for 2015, which reflects the ongoing amortization of the accumulated loss in accordance with FAS 158 [ASC 715]. Future gains or losses, and their effects on the pro forma balance sheet, cannot be projected. See table 5 for calculation of required imputed equity amount.

TABLE 4—IMPUTED FUNDING FOR PRICED-SERVICES ASSETS—Continued

TABLE 5—DERIVATION OF THE 2016 AND 2015 PSAF—Continued

[Dollars in millions]

	2016		2015	
	Debt	Equity	Debt	Equity
F. Tax rates		21.6%		22.4%

[27] If minimum equity constraints are not met after imputing equity based on the capital structure observed in the market, additional equity is imputed to meet these constraints. The long-term funding need was met by imputing long-term debt and equity based on the capital structure observed in the market (see tables 4 and 6). In 2016, the amount of imputed equity exceeded the minimum equity requirements for risk-weighted assets.

[28] Equity adjustment offsets due to a shift of long-term debt funding to equity in order to meet FDIC capital requirements for well-capitalized institutions.

[29] Additional equity in excess of that needed to fund priced services assets is offset by an asset balance of imputed investments in treasury securities.

[30] Imputed short-term debt and long-term debt are computed at table 4.

[31] The 2016 ROE is equal to a risk-free rate plus a risk premium (beta * market risk premium). The 2016 after-tax CAPM ROE is calculated as 0.03% + (1.0 * 7.62%) = 7.65%. Using a tax rate of 21.6%, the after-tax ROE is converted into a pretax ROE, which results in a pretax ROE of (7.65%/(1–21.6%)) = 9.76%. Calculations may be affected by rounding.

TABLE 6—COMPUTATION OF 2016 CAPITAL ADEQUACY FOR FEDERAL RESERVE PRICED SERVICES

[Dollars in millions]

	Assets	Risk weight	Weighted assets
Imputed investments:			
1-Year Treasury securities [32]	$55.8		
Federal funds [33]	11.0	0.2	2.2
Total imputed investments	66.8		2.2
Receivables	$35.6	0.2	$7.1
Materials and supplies	0.5	1.0	0.5
Prepaid expenses	10.2	1.0	10.2
Items in process of collection	321.0	0.2	64.2
Premises	111.0	1.0	111.0
Furniture and equipment	38.5	1.0	38.5
Leasehold improvements and long-term prepayments	89.5	1.0	89.5
Pension asset		1.0	
Deferred tax asset	187.9	1.0	187.9
Total	860.9		511.0
Imputed equity	$53.8		
Capital to risk-weighted assets	10.5%		
Capital to total assets	6.2%		

[32] If minimum equity constraints are not met after imputing equity based on all other financial statement components, additional equity is imputed to meet these constraints. Additional equity imputed to meet minimum equity requirements is invested solely in Treasury securities. The imputed investments are similar to those for which rates are available on the Federal Reserve's H.15 statistical release, which can be located at *http://www.federalreserve.gov/releases/h15/data.htm.*

[33] The investments are imputed based on the amounts arising from the collection of items prior to providing credit according to established availability schedules.

C. *Check Service*—Table 7 shows the 2014 actual, 2015 estimated, and 2016 budgeted cost-recovery performance for the commercial check service.

TABLE 7—CHECK SERVICE PRO FORMA COST AND REVENUE PERFORMANCE

[Dollars in millions]

Year	Revenue	Total expense	Net income (ROE)	Targeted ROE	Recovery rate after targeted ROE [1/(2 + 4)]
	1	2	3	4	5
2014 (actual)	174.7	149.3	25.4	1.8	115.6%
2015 (estimate)	159.3	142.7	16.5	2.0	110.1
2016 (budget)	149.9	139.1	10.7	1.3	106.7

1. *2015 Estimate*—The Reserve Banks estimate that the check service will recover 110.1 percent of total expenses and targeted ROE, compared with a 2015 final budgeted recovery rate of 105.2 percent. Greater-than-expected check volumes processed by the Reserve Banks and lower-than-expected costs have influenced significantly the check services cost recovery.

The decline in Reserve Bank check volume, which is attributable to the decline in the number of checks written generally, was not as great as anticipated.[34] Through August, total forward check volume is 4.6 percent lower and total return check volume is 11.9 percent lower-than for the same period last year. For full-year 2015, the Reserve Banks estimate that their total forward check volume will decline 5.6 percent (compared with a budgeted decline of nearly 7 percent) and their total return check volume will decline 11.6 percent (compared with a budgeted decline of about 14 percent) from 2014 levels.[35]

2. *2016 Pricing*—The Reserve Banks expect the check service to recover 106.7 percent of total expenses and targeted ROE in 2016. The Reserve Banks project revenue to be $149.9 million, a decline of 5.9 percent from the 2015 estimate. This decline is driven largely by projected reductions in both forward check and return check volume. The Reserve Banks estimate that total Reserve Bank forward check volumes will decline 6.2 percent, to 5.1 billion, and return check volumes will decline 12.7 percent to 28.5 million in 2016. Total expenses for the check service are projected to be $139.1 million, a decline of 2.5 percent from 2015.[36]

The Reserve Banks will increase the per-item fee for FedReturn items that are qualified to the Reserve Bank in instances in which the bank of first deposit cannot be identified from $8 to $15.

The Reserve Banks will increase the fees for traditional paper check forward and return collection deposits. The Reserve Banks will increase the per-item fee for paper forward deposits from $2.00 to $2.50 and the per-item fee for each unencoded item from $1.00 to $1.50.[37] The Reserve Banks will increase the per-item fee for paper return collection deposits from $5.00 to $5.50 as well as the per-item fee for unqualified paper returns from $7.00 to $7.50. The Reserve Banks will discontinue image retrievals by fax for both incoming and outgoing retrievals within FedImage Services.[38]

The Reserve Banks will introduce Select Mixed Level 3 tier to the Select Mixed image cash letter (ICL) product.[39] The new level will have a daily fee of $3,000 and per-item fees from $0.002 to $0.350, as seen in table 8.

TABLE 8—FEDFORWARD SELECT MIXED IMAGE CASH LETTER [a] [b]

Deadline	5 a.m.			12 p.m.		
	Level 1	Level 2	Level 3	Level 1	Level 2	Level 3
Daily fixed fee	$2,200.00	$900.00	$3,000.00	$2,200.00	$900.00	$3,000.00
Cash letter surcharge	.....	.....	.....	25.00	25.00	25.00
Tier 1	0.0020	0.0020	0.0020	0.0020	0.0020	0.0020
Tier 2	0.0040	0.0060	0.0040	0.0040	0.0060	0.0040
Tier 3	0.0060	0.0080	0.0060	0.0060	0.0080	0.0060
Tier 4	.....	.....	0.0130	.....	.....	0.0130
Tier 5	.....	.....	0.0220	.....	.....	0.0220
Tier 6	.....	.....	0.1000	.....	.....	0.3500
Non-eligible endpoints	0.1000	0.1000	N/A	0.3500	0.3500	N/A

[a] All deadlines are Monday through Friday.
[b] A current list of FedForward endpoint tier listings can be found at *http://www.frbservices.org/servicefees/check21_endpoint_listing.html.*

The Reserve Banks will eliminate the FedForward Fine Sort ICL product in January 2017 as part of the Reserve Banks effort to reflect today's electronic check processing environment in their check fee schedule.[40] To encourage depositors to shift volume from the fine-sort products to mixed deposit options in advance of this elimination, the Reserve Banks will increase the FedForward Fine Sort ICL product per-item fees at the 9 p.m., 1 a.m., and 5 a.m. deadlines by $0.002, $0.004, and $0.006, an average increase of 22.7 percent.[41] The Reserve Banks will increase the FedForward Deferred Fine Sort ICL product per-item fees at the 1 a.m., 5 a.m., and 10 a.m. deadlines by $0.004, $0.006, and $0.008, an average increase of 48.8 percent. The per item fees for each deadline are listed in table 9.

[34] The greater-than-expected check volume is attributed to the retention of current customers through continued enhancements of two FedForward product offerings: select mixed and premium mixed.

[35] Total Reserve Bank forward check volumes are expected to drop from 5.7 billion in 2014 to 5.4 billion in 2015. Total Reserve Bank return check volumes are expected to drop from roughly 36.5 million in 2014 to 32.3 million in 2015.

[36] The reduction in check costs is driven in part by lower pension costs in 2016.

[37] Unencoded items are those items deposited without encoding of certain elements, such as amount, added to the MICR line.

[38] FedImage Services offer depository institutions products for the capture, archive, and retrieval of check images. A current list of services can be found at *https://www.frbservices.org/serviceofferings/check/fed_image_services.html.*

[39] A current list of Select Mixed endpoints can be found at *https://www.frbservices.org/servicefees/check21_endpoint_listing.html.*

[40] In a paper check processing environment, the fine sort product allowed the Reserve Banks to gain efficiencies because the checks did not require processing on reader-sorters. In today's electronic check processing environment, all image cash letters are processed through the Reserve Banks' electronic system in the same manner, and the Reserve Banks do not gain any efficiencies by having the depositing bank fine sort electronic checks prior to deposit.

[41] All times are stated in the eastern time zone (ET).

Depository institutions may deposit image cash letters using nine deposit options within the FedForward product line; the options vary in price structure and funds availability. The Reserve Banks offer customers the option of sending FedForward ICLs for items drawn on specific endpoints in a separate cash letter, which combines a high fixed fee with a lower variable fee. All eligible items in the cash letter receive immediate availability, while ineligible items receive deferred availability of the next business day. A current list of FedForward deposit options can be found at *https://www.frbservices.org/servicefees/check_services_2015.html.*

TABLE 9

Tier 4	0.0320	0.0350	0.0380

[a] All deadlines are Monday through Friday.
[b] A current list of FedForward endpoint tier listings can be found at *http://www.frbservices.org/servicefees/check21_endpoint_listing.html.*

The Reserve Banks estimate that the price changes will result in a 0.5 percent average price increase for check customers. In addition to the above changes, the Reserve Banks plan to announce further modifications to the check fee schedule during 2016 that reflect the efficiencies of today's electronic check processing environment. The new schedule may include elimination of certain sorted deposit options and modifications to the current endpoint-based tiered pricing structure.

Risks to the Reserve Banks' ability to achieve budgeted 2016 cost recovery for the check service include lower-than-expected check volume due to reductions in check writing overall and competition from correspondent banks, aggregators, and direct exchanges, which will result in lower-than-anticipated revenue.

D. *FedACH Service*—Table 10 shows the 2014 actual, 2015 estimate, and 2016 budgeted cost-recovery performance for the commercial FedACH service.

TABLE 10—FEDACH SERVICE PRO FORMA COST AND REVENUE PERFORMANCE

[Dollars in millions]

Year	Revenue	Total expense	Net income (ROE)	Targeted ROE	Recovery rate after targeted ROE [1/(2 + 4)]
	1	2	3	4	5
2014 (actual)	124.4	141.4	−17.0	2.0	86.7%
2015 (estimate)	125.5	123.7	1.8	1.7	100.0
2016 (budget)	129.8	129.9	−0.0	1.2	99.0

1. *2015 Estimate*—The Reserve Banks estimate that the FedACH service will recover 100.0 percent of total expenses and targeted ROE, compared with a 2015 final budgeted recovery rate of 100.4 percent.[42] Through August, FedACH commercial origination and receipt volume was 5.1 percent higher-than the same period last year. For full-year 2015 the Reserve Banks estimate that FedACH commercial origination and receipt volume will increase 5.5 percent, compared with a budgeted increase of 3.5 percent.

2. *2016 Pricing*—The Reserve Banks expect the FedACH service to recover 99.0 percent of total expenses and targeted ROE in 2016. FedACH commercial origination and receipt volume is projected to grow 4.5 percent contributing to an increase of $4.4 million in total revenue from the 2015 estimate. Total expenses are budgeted to increase $7.2 million from 2015 budgeted expenses of $122.6 million, primarily because of costs associated with the development of a new FedACH technology platform.

The Reserve Banks will increase the minimum monthly fee for forward origination from $35 to $45 and the minimum monthly fee for receipt from $25 to $35.[43]

The Reserve Banks will eliminate large- and small-file per-item origination fees and introduce a single base fee of $0.0032 for all origination files with a discount of $0.0005 for origination volume between 750,000 to 1,500,000

[42] The Reserve Banks have been engaged in a multiyear technology initiative to modernize the FedACH processing platform by migrating the service from a mainframe system to a distributed computing environment. In late 2013, the Reserve Banks conducted an assessment focused on the viability and cost-effectiveness of the program. As a result, the Reserve Banks in 2014 suspended the program and began to investigate the use of other technology solutions. In 2015, the Reserve Banks evaluated alternative processing solutions, including commercially available options.

[43] Any originating depository financial institution (ODFI) incurring less than $45 for the following fees will be charged the difference to reach the minimum: Forward value and nonvalue item origination fees, FedGlobal ACH origination surcharges, and FedACH SameDay forward origination surcharges.

Any receiving depository financial institution (RDFI) originating forward value and nonvalue items below the minimum level and incurring less than $35 in receipt fees will be charged the difference to reach the minimum based on origination. RDFIs not originating forward value and nonvalue items will incur the $35 minimum monthly fee for receipt.

items per month and $0.0007 for origination volume greater than 1,500,000 items per month. The Reserve Banks will lower the top-tier volume origination discount level based on monthly receipt volume from 17,500,000 to 15,000,000 items per month, while maintaining the current discount amounts.[44]

The Reserve Banks will increase the forward item receipt fee from $0.0025 to $0.0032 per item, while keeping the return item receipt fee at $0.0075 per item. The Reserve Banks will change the volume-based receipt discount structure to encourage additional receipt volume. The changes will include a decrease in the first volume-based discount by 250,000 items per month to 750,001 items a month, the introduction of a new volume-based discount tier for volume between 1,500,001 and 2,500,000 items per month, and an increase for all existing volume-based receipt discounts by $0.0007 as seen in table 11.

Table 11

FedACH Service Volume-Based Receipt Discounts [a]

Volume	Non-Premium Receivers	Premium Receivers Level 1 [b]	Premium Receivers Level 2 [c]
Less than 750,000	$0.0000	$0.0000	$0.0000
750,001 to 1,500,000	$0.0014	$0.0014	$0.0014
1,500,001 to 2,500,000	$0.0014	$0.0014	$0.0014
2,500,0001 to 12,500,000	$0.0014	$0.0015	$0.0016
More than 12,500,000	$0.0016	$0.0017	$0.0018

[a] Shaded cells reflect volume levels where discounting applies to all items, including items below the volume amount listed. Nonshaded cells receive discounts only on the volume amounts listed.
[b] Level 1 Premium Receivers are those that receive at least 90 percent of FedACH-originated items through FedACH.
[c] Level 2 Premium Receivers are those that receive at least 90 percent all items through FedACH.

The Reserve Banks will implement a $20 monthly billing discount for any customer that pays the origination minimum fee, subscribes to a FedLine Web Plus or higher package, and subscribes to either FedACH RDFI Alert, FedACH Risk Origination Monitoring, or FedPayments Reporter.

The Reserve Banks estimate that the price changes will result in a 6.5 percent average price increase for FedACH customers. In addition to the above changes, the Reserve Banks plan to reassess the FedGlobal ACH fee schedule during 2016.

The primary risks to the Reserve Banks' ability to achieve budgeted 2016 cost recovery for the FedACH service are cost overruns associated with unanticipated problems related to efforts to modernize the FedACH processing platform and higher-than-expected support and overhead costs. Other risks include lower-than-expected volume and associated revenue due to unanticipated mergers and acquisitions and loss of market share due to direct exchanges and a shift of volume to the private-sector operator.

E. *Fedwire Funds and National Settlement Services*—Table 12 shows the 2014 actual, 2015 estimate, and 2016 budgeted cost-recovery performance for the Fedwire Funds and National Settlement Services.

Table 12—Fedwire Funds and National Settlement Services Pro Forma Cost and Revenue Performance

[Dollars in millions]

Year	Revenue	Total expense	Net income (ROE) [1–2]	Targeted ROE	Recovery rate after targeted ROE [1/(2 + 4)]
	1	2	3	4	5
2014 (actual)	110.1	105.2	4.8	1.4	103.2%
2015 (estimate)	115.1	112.7	2.4	1.6	100.7
2016 (budget)	121.4	120.1	1.3	1.3	100.0

1. *2015 Estimate*—The Reserve Banks estimate that the Fedwire Funds and National Settlement Services will recover 100.7 percent of total expenses and targeted ROE, equal to the final budgeted recovery rate. Through August, Fedwire Funds Service online volume was 6.9 percent higher than for the same period last year. For full-year 2015, the Reserve Banks estimate Fedwire Funds Service online volume to increase 4.0 percent from 2014 levels, compared with the 3.2 percent volume decrease that had been budgeted. The Reserve Banks do not expect the strong volume growth in late 2014 and early 2015 to continue at that level through year-end. Through August, National Settlement Service settlement file volume was 7.1 percent lower than for the same period last year, and settlement entry volume was 19.3 percent lower. For the full year, the Reserve Banks estimate that settlement file volume will decrease 5.9 percent (compared with a 1 percent budgeted decrease) and settlement entry volume

[44] Origination discounts apply only to those items received by FedACH receiving points and are available only to Premium Receivers (institutions receiving a certain portion of volume through FedACH).

will decrease 15.6 percent from 2014 levels (compared with a budgeted 7.2 percent decrease).

2. *2016 Pricing*—The Reserve Banks expect the Fedwire Funds Service to recover 100.0 percent of total expenses and targeted ROE. Revenue is projected to be $121.4 million, an increase of 5.5 percent from the 2015 estimate. The Reserve Banks project total expenses to be $7.4 million higher than the 2015 estimate. The Reserve Banks expect volume to grow 1.5 percent in 2016.

The Reserve Banks will adjust the incentive pricing fees for the Fedwire Funds Service by increasing the Tier 1 per item pre-incentive fee (the fee before volume discounts are applied) from $0.73 to $0.79 and increasing the Tier 3 per item pre-incentive fee from $0.150 to $0.155. The Reserve Banks will keep the Tier 2 per-item pre-incentive fee unchanged.[45]

The Reserve Banks will increase the surcharge for offline transactions from $50 to $55. In addition, the Reserve Banks will increase the monthly participation fee from $90 to $95.

The Reserve Banks estimate that the price changes will result in a 5.8 percent average price increase for Fedwire Funds customers.

The Reserve Banks will not change National Settlement Service fees for 2016. The Reserve Banks' Fedwire Funds and National Settlement Services fees are consistent with their multiyear strategy to minimize pricing volatility while undertaking ongoing technology upgrades and projects to further strengthen operational resiliency. The Reserve Banks recently completed a significant milestone in the Fedwire Funds portion of its modernization initiative by migrating its back-end settlement system from a mainframe to a distributed platform, although key work to complete the initiative remains in progress.

The primary risk to the Reserve Banks' ability to achieve budgeted 2016 cost recovery for these services is cost overruns from unanticipated problems with completing the final stages of complex technology programs.

F. *Fedwire Securities Service*—Table 13 shows the 2014 actual, 2015 estimate, and 2016 budgeted cost recovery performance for the Fedwire Securities Service.[46]

TABLE 13—FEDWIRE SECURITIES SERVICE PRO FORMA COST AND REVENUE PERFORMANCE

[Dollars in millions]

Year	Revenue	Total expense	Net income (ROE) [1–2]	Targeted ROE	Recovery rate after targeted ROE [1/(2 + 4)]
	1	2	3	4	5
2014 (actual)	24.0	22.7	1.2	0.3	104.1%
2015 (estimate)	27.3	25.5	1.8	0.4	105.7
2016 (budget)	25.8	25.9	−0.1	0.2	98.7

1. *2015 Estimate*—The Reserve Banks estimate that the Fedwire Securities Service will recover 105.7 percent of total expenses and targeted ROE, compared with a 2015 final budgeted recovery rate of 97.5 percent. The higher-than-expected cost recovery is primarily due to not spending contingency funds that were budgeted for the Fedwire Modernization Program. Increased revenues generated from higher-than-expected volumes from online agency transfers and account maintenance also increased cost recovery.

Through August, Fedwire Securities Service online volume was 8.0 percent lower than during the same period last year. For full-year 2015, the Reserve Banks estimate Fedwire Securities Service online volume will decline 5.4 percent from 2014 levels, compared with a budgeted decline of 12.9 percent. The higher-than-expected online agency transfer volume resulted from the continued low interest-rate environment, which has supported mortgage underwriting activity and mortgage-backed securities issuance, and is generally associated with increased online agency transfer activity over the Fedwire Securities Service. Through August, account maintenance volume was 9.1 percent lower than during the same period last year. For the full year, the Reserve Banks estimate that account maintenance volume will decline 8.4 percent over 2014 levels, compared with a budgeted decline of 14.1 percent. The higher account maintenance volume is the result of conservative estimates for customer account closures that have not materialized.

2. *2016 Pricing*—The Reserve Banks expect the Fedwire Securities Service to recover 98.7 percent of total expenses and targeted ROE in 2016. The Reserve Banks project that 2016 revenue will decrease by $1.5 million and expenses will increase by $0.4 million, compared with 2015 estimates.

The Reserve Banks project that online transfer activity will decline 7.7 percent in 2016, the number of accounts maintained will decrease 8.5 percent, and the number of agency securities maintained will decrease 3.3 percent.[47] The projected decline in account maintenance activity reflects customer closures of empty accounts to avoid unnecessary expenses and increased competition in collateral management services.[48] The Reserve Banks project a decrease in online transfers as gradually increasing interest rates lead to less

[45] The per-item pre-incentive fee is the fee that the Reserve Banks charge for transfers that do not qualify for incentive discounts. The Tier 1 per-item pre-incentive fee applies to the first 14,000 transfers, the Tier 2 per-item pre-incentive fee applies to the next 76,000 transfers, and the Tier 3 per-item pre-incentive fee applies to any additional transfers. The Reserve Banks apply an 80 percent incentive discount to transfers over 60 percent of a customer's its historic benchmark volume.

[46] The Reserve Banks provide transfer services for securities issued by the U.S. Treasury, federal government agencies, government-sponsored enterprises, and certain international institutions. The priced component of this service, reflected in this memorandum, consists of revenues, expenses, and volumes associated with the transfer of all non-Treasury securities. For Treasury securities, the U.S. Treasury assesses fees for the securities transfer component of the service. The Reserve Banks assess a fee for the funds settlement component of a Treasury securities transfer; this component is not treated as a priced service.

[47] The online transfer fee, monthly account maintenance fee, and monthly issue maintenance fee accounted for approximately 92 percent of total Fedwire Securities Service revenue through June 2015.

[48] Specifically, collateral management services refers to the Fedwire Securities Joint Custody Service, which facilitates the collateralization of deposits made by a government entity, through the pledging of book-entry securities by its depository institution. Approximately 72 percent of Fedwire Securities priced accounts are collateral accounts related to the Joint Custody Service.

mortgage refinancing, and, in turn, reduce issuances of mortgage-backed securities. The reduction in agency debt issuance reflects a reduction in government-sponsored enterprise portfolios, as required by the U.S. Treasury and the Federal Housing Finance Agency, leading to a reduced funding need for new debt issuance.[49] New settlement logic introduced by the Fixed Income Clearing Corporation in late 2015 is also expected to reduce the number of agency debt transfers over the Fedwire Securities Service.[50]

Expenses are budgeted to remain approximately the same as 2015 estimates, reflecting higher expected operating costs offset by increased reimbursements from Treasury for fiscal agency services.[51] Higher operating costs in 2016 reflect the full-year impact of the completion of a multiyear technology modernization initiative and the advancement of new initiatives to improve resiliency and operational functionality.

The Reserve Banks will not change priced Fedwire Securities Service fees for 2016.

The primary risk to the Reserve Banks' ability to achieve budgeted 2016 cost recovery for these services is cost overruns and schedule delays from unanticipated problems with managing complex technology upgrades.

G. *FedLine Access*—The Reserve Banks charge fees for the electronic connections that depository institutions use to access priced services and allocate the costs and revenue associated with this electronic access to the various priced services. There are currently five FedLine channels through which customers can access the Reserve Banks' priced services: FedMail®, FedLine Web, FedLine Advantage, FedLine Command®, and FedLine Direct.[52] The Reserve Banks package these channels into nine FedLine packages, described below, that are supplemented by a number of premium (or à la carte) access and accounting information options. In addition, the Reserve Banks offer FedComplete® packages, which are bundled offerings of a FedLine Advantage connection and a fixed number of FedACH, Fedwire Funds, and Check 21-enabled services.

Six attended access packages offer access to critical payment and information services via a web-based interface. The FedLine Exchange package provides access to basic information services via email, while two FedLine Web packages offer an email option plus online attended access to a range of services, including cash services, FedACH information services, and check services. Three FedLine Advantage packages expand upon the FedLine Web packages and offer attended access to critical transactional services: FedACH, Fedwire Funds, and Fedwire Securities.

Three unattended access packages are computer-to-computer, IP-based interfaces designed for medium- to high-volume customers. The FedLine Command package offers an unattended connection to FedACH, as well as most accounting information services. The two remaining options are FedLine Direct packages, which allow for unattended connections at one of two connection speeds to FedACH, Fedwire Funds, and Fedwire Securities transactional and information services and to most accounting information services.[53]

For the 2016 FedLine fees, the Reserve Banks will make a minor adjustment to existing fees—a $5-per-month increase for the FedLine Exchange subscriber pack—keeping the remaining existing FedLine fees unchanged.[54] As in previous years, the Reserve Banks will introduce new fees on outdated legacy services in 2016. In particular, the Reserve Banks will implement a $5,000-per-month surcharge for 256K/T1 legacy routers to encourage customers to migrate to more efficient access solutions.[55] The Reserve Banks will also introduce a new custom implementation fee in 2016 for institutions that request tailored FedLine Direct or WAN router setups. The fee, which will vary from $2,500 to $5,000 based on the complexity of the setup, is intended to help the Reserve Banks recover costs that result from nonstandard installations.

In addition, the Reserve Banks will make two structural changes to existing FedLine packages. First, the Reserve Banks will include two Virtual Private Network (VPN) devices in the FedLine Direct Premier package (rather than one) to help ensure consistency across existing Premier level FedLine packages. Second, the Reserve Banks will modify the availability of the FedPayments Manager Import/Export (FPM) tool within the FedLine Advantage Plus and Premier packages based on Fedwire volume thresholds. In particular, depository institutions with more than 250 Fedwire transactions per month, or more than one routing number, will only have access to the FPM tool via FedLine Advantage Premier. Affected customers will experience a fee increase ranging from $15 to $75 per month to upgrade to FedLine Advantage Premier.[56] Customers that wish to maintain their FedLine Advantage Plus package will be able to do so by removing the FPM tool from their subscription.

The Reserve Banks estimate that the price changes will result in a 1.5 percent average price increase for FedLine customers.

II. Analysis of Competitive Effect

All operational and legal changes considered by the Board that have a substantial effect on payment system participants are subject to the competitive impact analysis described in the March 1990 policy ''The Federal Reserve in the Payments System.'' [57] Under this policy, the Board assesses whether proposed changes would have a direct and material adverse effect on the ability of other service providers to compete effectively with the Federal Reserve in providing similar services because of differing legal powers or

[49] Government sponsored enterprises are reducing their retained portfolio by 15 percent annually through 2018, as mandated by the Senior Preferred Stock Purchase Agreements, until each portfolio reaches a target level of $250 billion. Further information on these agreements can be found at: *http://www.fhfa.gov/Conservatorship/Pages/Senior-Preferred-Stock-Purchase-Agreements.aspx.*

[50] Information on the new settlement logic can be found at *http://www.dtcc.com/~/media/Files/pdf/2015/6/22/GOV045-15.pdf.*

[51] Treasury reimbursement is calculated by multiplying costs by the ratio of Treasury to agency transfers. In 2015, Treasury projects its transfer volume will increase 7.0 percent, while the Reserve Banks expect agency transfers to decrease. Therefore, the higher projected ratio of Treasury to agency transfers will result in Treasury reimbursing a higher portion of total costs.

[52] FedMail, FedLine Web, FedLine Advantage, FedLine Command, and FedLine Direct are registered trademarks of the Federal Reserve Banks.

[53] None of the FedLine packages offer an unattended connection to check services. The Reserve Banks offer an unattended check product, Check 21 Large File Delivery, outside of the FedLine suite that allows a depository institution to upload and download check image cash letters automatically via a direct network connection to the Reserve Banks.

[54] FedLine packages do not include user subscriptions for priced services. Depository institutions that wish to access priced services must purchase user subscriptions in packs of five (5-packs).

[55] The $5,000 per month surcharge will be effective July 1, 2016. The price will increase to $10,000 per month on September 1, 2016 and $20,000 per month on November 1, 2016.

[56] The $75 fee increase is the difference in pricing between the corresponding Plus and Premier packages. Affected customers that currently subscribe to the $60-per-month a la carte option for a secondary VPN device will experience only a $15 fee increase because a secondary VPN device is included in Premier packages. Affected customers include FedComplete Plus subscribers with more than 250 Fedwire transactions per month, or more than one routing number, that use the FPM tool because FedComplete Plus packages include a subscription to FedLine Advantage Plus.

[57] Federal Reserve Regulatory Service (FRRS) 9–1558.

constraints or because of a dominant market position deriving from such legal differences. If any proposed changes create such an effect, the Board must further evaluate the changes to assess whether the benefits associated with the changes—such as contributions to payment system efficiency, payment system integrity, or other Board objectives—can be achieved while minimizing the adverse effect on competition.

The 2016 fees, fee structures, and changes in service will not have a direct and material adverse effect on the ability of other service providers to compete effectively with the Reserve Banks in providing similar services.[58] The changes should permit the Reserve Banks to earn a ROE that is comparable to overall market returns and provide for full cost recovery over the long run.

III. 2016 Fee Schedules

FedACH Service 2016 Fee Schedule

[Effective January 1, 2016. **Bold indicates changes from 2015 prices.**]

	Fee

Return item[65]	0.0075 discount.
Addenda record (forward/return)[65]	0.0015 discount.
Monthly FedACH Risk® Management fees[70]	
Risk Origination Monitoring Service/RDFI Alert Service package pricing	
For up to 5 criteria sets	35.00.
For 6 through 11 criteria sets	70.00.
For 12 through 23 criteria sets	125.00.

[58] Certain correspondent banks believe that the FedForward Fine Sort ICL product, which the Reserve Banks will eliminate in January 2017, enables them to compete more effectively with the Reserve Banks in the collection of checks destined to paying banks with which the correspondent banks do not have electronic presentment agreements. Paying banks, however, may not have an incentive to accept electronic presentment unless the correspondent bank makes a decision to present checks directly and provides the paying bank the choice of receiving presentments in paper or electronic form (as the Reserve Banks do). We do not believe that the elimination of the product will have a direct and material adverse effect on the ability of such service providers to compete effectively with the Reserve Banks in providing similar services due to legal differences.

[59] Any ODFI incurring less than $45 in forward value and nonvalue item origination fees will be charged a variable amount to reach the minimum.

[60] Any RDFI not originating forward value and nonvalue items and incurring less than $35 in receipt fees will be charged a variable amount to reach the minimum.

[61] The fee includes the item and addenda fees in addition to the conversion fee.

[62] The fee includes the item and addenda fees in addition to the conversion fee. Reserve Banks also assess a $30 fee for every government paper return/NOC they process.

[63] Origination discounts based on monthly volume apply only to those items received by FedACH receiving points and are available only to Premium Receivers (institutions receiving volume above a specified threshold through FedACH).

[64] RDFI originating and receiving items on the same RTN.

[65] This per-item discount is a reduction to the standard receipt fees listed in this fee schedule.

FEDACH SERVICE 2016 FEE SCHEDULE—Continued

[Effective January 1, 2016. **Bold indicates changes from 2015 prices.**]

FEDWIRE FUNDS AND NATIONAL SETTLEMENT SERVICES 2016 FEE SCHEDULE

[Effective January 1, 2016. **Bold indicates changes from 2015 prices**.]

Fedwire Funds Service	
Monthly Participation Fee	**$95.00**
Basic volume-based pre-incentive transfer fee (originations and receipts)—per transfer for:	
the first 14,000 transfers per month	**0.79**
additional transfers up to 90,000 per month	0.24
every transfer over 90,000 per month	**0.155**
Volume-based transfer fee with the incentive discount (originations and receipts)—per eligible transfer for:[81]	
the first 14,000 transfers per month	**0.158**
additional transfers up to 90,000 per month	0.048
every transfer over 90,000 per month	**0.031**
Surcharge for Off-line Transfers (Originations and Receipts)	**55.00**
Surcharge for End-of-Day Transfer Originations[82]	0.26
Monthly FedPayments Manager import/export fee[83]	50.00
Surcharge for high-value payments:	
>$10 million	0.14
>$100 million	0.36
Surcharge for Payment Notification:	
Origination Surcharge[84]	0.20
Receipt Volume[85]	N/A
National Settlement Service	
Basic	
Settlement Entry Fee	1.50
Settlement File Fee	30.00
Surcharge for Off-line File Origination[86]	45.00
Minimum Monthly Fee (account maintenance)[87]	60.00
Special Settlement Arrangements (fee per day)[88]	150.00

[66] Receipt volumes at these levels qualify for the waterfall discount which includes all FedACH receipt items.

[67] This monthly billing discount is available for any customer that (1) pays the FedACH minimum monthly fee; (2) purchases a FedLine Web Plus or higher package; and (3) subscribes to either FedACH RDFI Alert, FedACH Risk Origination Monitoring, or FedPayments Reporter.

[68] This per-item surcharge is in addition to the standard origination fees listed in the origination and receipt fee schedule.

[69] This per-item discount is a reduction to the standard origination fees listed in the origination and receipt fee schedule.

[70] Criteria may be set for both the origination monitoring service and the RDFI alert service. Subscribers with no criteria set up will be assessed the $45 monthly package fee.

[71] Standard reports include Customer Transaction Activity, Death Notification, International (IAT), Notification of Change, Payment Data Information File, Remittance Advice Detail, Remittance Advice Summary, Return Item, Return Ratio, Social Security Beneficiary, and Originator Setup Reports.

[72] ACH volume summary by SEC code reports generated on demand are subject to a $1.00 per report surcharge.

[73] Premier reports generated on demand are subject to the package/tiered fees plus a surcharge.

[74] The account servicing fee applies to routing numbers that have received or originated FedACH transactions. Institutions that receive only U.S. government transactions through the Reserve Banks or that elect to use a private sector operator exclusively are not assessed this fee.

[75] The FedACH settlement fee is applied to any routing number with activity during a month, including institutions that elect to use a private sector operator exclusively but also have items routed to or from customers that access the ACH network through FedACH. This fee does not apply to routing numbers that use the Reserve Banks for only U.S. government transactions.

[76] The notification of change fee will be assessed only when automated NOCs are generated.

[77] Limited services are offered in contingency situations.

[78] The international fees and surcharges vary from country to country as these are negotiated with each international gateway operator.

[79] This per-item surcharge is in addition to the standard domestic origination and input file processing fees.

[80] This per-item surcharge is in addition to the standard domestic receipt fees.

[81] The incentive discounts apply to the volume that exceeds 60 percent of a customer's historic benchmark volume. Historic benchmark volume is based on a customer's average daily activity over the previous five calendar years. If a customer has fewer than five full calendar years of previous activity, its historic benchmark volume is based on its daily activity for as many full calendar years of data as are available. If a customer has less than one year of past activity, then the customer qualifies automatically for incentive discounts for the year. The applicable incentive discounts are as follows: $0.632 for transfers up to 14,000; $0.192 for transfers 14,001 to 90,000; and $0.124 for transfers over 90,000.

[82] This surcharge applies to originators of transfers that are processed by the Reserve Banks after 5:00 p.m. ET.

[83] This fee is charged to any Fedwire Funds participant that originates a transfer message via the FedPayments Manager (FPM) Funds tool and has the import/export processing option setting active at any point during the month.

[84] Payment Notification and End-of-Day Origination surcharges apply to each Fedwire funds transfer message.

[85] Provided on billing statement for informational purposes only.

[86] Off-line files will be accepted only on an exception basis when a settlement agent's primary and backup means of transmitting settlement files are both unavailable. For information, contact the NSS Central Service Support Staff at (800) 758–9403.

[87] This minimum monthly charge is only assessed if total settlement charges during a calendar month are less than $60.

[88] Special settlement arrangements use Fedwire Funds transfers to effect settlement. Participants in

FEDWIRE SECURITIES SERVICE 2016 FEE SCHEDULE (NON-TREASURY SECURITIES)

FEDERAL TRADE COMMISSION

Granting of Request for Early Termination of the Waiting Period Under the Premerger Notification Rules

Section 7A of the Clayton Act, 15 U.S.C. § 18a, as added by Title II of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Federal Trade Commission and the Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requires that notice of this action be published in the **Federal Register**.

The following transactions were granted early termination—on the dates indicated—of the waiting period provided by law and the premerger notification rules. The listing for each transaction includes the transaction number and the parties to the transaction. The grants were made by the Federal Trade Commission and the Assistant Attorney General for the Antitrust Division of the Department of Justice. Neither agency intends to take any action with respect to these proposed acquisitions during the applicable waiting period.

[Notice–CECANF–2015–09; Docket No. 2015–0004; Sequence No. 9]

Commission To Eliminate Child Abuse and Neglect Fatalities; Announcement of Meetings

AGENCY: Commission to Eliminate Child Abuse and Neglect Fatalities, GSA.

ACTION: Meetings Notice.

SUMMARY: The Commission to Eliminate Child Abuse and Neglect Fatalities (CECANF), a Federal Advisory Committee established by the Protect Our Kids Act of 2012, will hold a meeting open to the public on Monday, December 7, 2015 and Tuesday, December 8, 2015 in Herndon, Virginia.

DATES: *Meeting Dates:* The meeting will be held on Monday, December 7, 2015, from 9:00 a.m. to 5:00 p.m., Eastern Standard Time (EST), and Tuesday, December 8, 2015, from 9:00 a.m. to 12:00 p.m., Eastern Standard Time (EST).

Comment due date: All comments must be received by midnight on Wednesday, December 2, 2015, to be addressed during the meeting.

ADDRESSES: CECANF will convene its meeting at the Hilton Washington Dulles, 13869 Park Center Drive, Herndon, Virginia 20171. This site is accessible to individuals with disabilities. The meeting also will be made available via teleconference.

Submit comments identified by ''Notice–CECANF–2015–09'' by either of the following methods:

- Regulations.gov: *http://www.regulations.gov.*

Submit comments via the Federal eRulemaking portal by searching for ''Notice–CECANF–2015–09.'' Select the link ''Comment Now'' that corresponds with ''Notice–CECANF–2015–09.'' Follow the instructions provided on the screen. Please include your name, organization name (if any), and ''Notice–CECANF–2015–09'' on your attached document.

- Mail: U.S. General Services Administration, 1800 F Street NW., Room 7003D, Washington, DC 20405, Attention: Tom Hodnett (CD) for CECANF.

Instructions: Please submit comments only and cite ''Notice–CECANF–2015–09'' in all correspondence related to this notice. All comments received will be posted without change to *http://www.regulations.gov,* including any personal and/or business confidential information provided. To confirm

receipt of your comment(s), please check *http://www.regulations.gov,* approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT: Visit the CECANF Web site at *https://eliminatechildabusefatalities.sites.usa.gov/* or contact Patricia Brincefield, Communications Director, at 202–818–9596, U.S. General Services Administration, 1800 F Street NW., Room 7003D, Washington, DC 20405, Attention: Tom Hodnett (CD) for CECANF.

SUPPLEMENTARY INFORMATION:

Background: CECANF was established to develop a national strategy and recommendations for reducing fatalities resulting from child abuse and neglect.

Agenda: Commission members will continue discussing the work plans of the Commission subcommittees, the information that they have obtained to date, and emerging recommendations.

Attendance at the Meeting: Individuals interested in attending the meeting in person or participating by webinar and teleconference must register in advance. To register to attend in person or by webinar/phone, please go to *http://meetingtomorrow.com/webcast/CECANF* and follow the prompts. Once you register, you will receive a confirmation email with the teleconference number. Detailed meeting minutes will be posted within 90 days of the meeting. Members of the public will not have the opportunity to ask questions or otherwise participate in the meeting.

However, members of the public wishing to comment should follow the steps detailed under the heading **ADDRESSES** in this publication or contact us via the CECANF Web site at *https://eliminatechildabusefatalities.sites.usa.gov/contact-us/*.

Dated: November 9, 2015.

Karen White,

Executive Assistant.

Medicare Program; CY 2016 Part A Premiums for the Uninsured Aged and for Certain Disabled Individuals Who Have Exhausted Other Entitlement

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice.

SUMMARY: This annual notice announces Medicare's Hospital Insurance (Part A) premium for uninsured enrollees in calendar year (CY) 2016. This premium is paid by enrollees age 65 and over who are not otherwise eligible for benefits under Medicare Part A (hereafter known as the ''uninsured aged'') and by certain disabled individuals who have exhausted other entitlement. The monthly Part A premium for the 12 months beginning January 1, 2016, for these individuals will be $411. The premium for certain other individuals as described in this notice will be $226.

DATES: *Effective Date:* This notice is effective on January 1, 2016.

FOR FURTHER INFORMATION CONTACT: Clare McFarland, (410) 786–6390.

SUPPLEMENTARY INFORMATION:

I. Background

Section 1818 of the Social Security Act (the Act) provides for voluntary enrollment in the Medicare Hospital Insurance Program (Medicare Part A), subject to payment of a monthly premium, of certain persons aged 65 and older who are uninsured under the Old-Age, Survivors, and Disability Insurance (OASDI) program or the Railroad Retirement Act and do not otherwise meet the requirements for entitlement to Medicare Part A. These ''uninsured aged'' individuals are uninsured under the OASDI program or the Railroad Retirement Act, because they do not have 40 quarters of coverage under Title II of the Act (or are/were not married to someone who did). (Persons insured under the OASDI program or the Railroad Retirement Act and certain others do not have to pay premiums for Medicare Part A.)

Section 1818A of the Act provides for voluntary enrollment in Medicare Part A, subject to payment of a monthly premium for certain disabled individuals who have exhausted other entitlement. These are individuals who were entitled to coverage due to a disabling impairment under section 226(b) of the Act, but who are no longer entitled to disability benefits and free Medicare Part A coverage because they have gone back to work and their earnings exceed the statutorily defined ''substantial gainful activity'' amount (section 223(d)(4) of the Act).

Section 1818A(d)(2) of the Act specifies that the provisions relating to premiums under section 1818(d) through section 1818(f) of the Act for the aged will also apply to certain disabled individuals as described above.

Section 1818(d)(1) of the Act requires us to estimate, on an average per capita basis, the amount to be paid from the Federal Hospital Insurance Trust Fund for services incurred in the upcoming calendar year (CY) (including the associated administrative costs) on behalf of individuals aged 65 and over who will be entitled to benefits under Medicare Part A. We must then determine the monthly actuarial rate for the following year (the per capita amount estimated above divided by 12) and publish the dollar amount for the monthly premium in the succeeding CY. If the premium is not a multiple of $1, the premium is rounded to the nearest multiple of $1 (or, if it is a multiple of 50 cents but not of $1, it is rounded to the next highest $1).

Section 13508 of the Omnibus Budget Reconciliation Act of 1993 (Pub. L. 103–66) amended section 1818(d) of the Act to provide for a reduction in the premium amount for certain voluntary enrollees (section 1818 and section 1818A of the Act). The reduction applies to an individual who is eligible to buy into the Medicare Part A program and who, as of the last day of the previous month:

- Had at least 30 quarters of coverage under Title II of the Act;
- Was married, and had been married for the previous 1-year period, to a person who had at least 30 quarters of coverage;
- Had been married to a person for at least 1 year at the time of the person's death if, at the time of death, the person had at least 30 quarters of coverage; or
- Is divorced from a person and had been married to the person for at least 10 years at the time of the divorce if, at the time of the divorce, the person had at least 30 quarters of coverage.

Section 1818(d)(4)(A) of the Act specifies that the premium that these individuals will pay for CY 2016 will be equal to the premium for uninsured aged enrollees reduced by 45 percent.

II. Monthly Premium Amount for CY 2016

The monthly premium for the uninsured aged and certain disabled individuals who have exhausted other entitlement for the 12 months beginning January 1, 2016, is $411.

The monthly premium for the individuals eligible under section 1818(d)(4)(B) of the Act, and therefore, subject to the 45 percent reduction in the monthly premium, is $226.

III. Monthly Premium Rate Calculation

As discussed in section I of this notice, the monthly Medicare Part A premium is equal to the estimated monthly actuarial rate for CY 2016 rounded to the nearest multiple of $1 and equals one-twelfth of the average per capita amount, which is determined by projecting the number of Medicare Part A enrollees aged 65 years and over as well as the benefits and administrative costs that will be incurred on their behalf.

The steps involved in projecting these future costs to the Federal Hospital Insurance Trust Fund are:

- Establishing the present cost of services furnished to beneficiaries, by type of service, to serve as a projection base;
- Projecting increases in payment amounts for each of the service types; and
- Projecting increases in administrative costs.

We base our projections for CY 2016 on—(1) current historical data; and (2) projection assumptions derived from current law and the Mid-Session Review of the President's Fiscal Year 2016 Budget.

We estimate that in CY 2016, 47,251,107 people aged 65 years and over will be entitled to benefits (without premium payment) and that they will incur about $233.221 billion in benefits and related administrative costs. Thus, the estimated monthly average per capita amount is $411.31 and the monthly premium is $411. Subsequently, the full monthly premium reduced by 45 percent is $226.

IV. Costs to Beneficiaries

The CY 2016 premium of $411 is approximately 1 percent higher than the CY 2015 premium of $407. We estimate that approximately 652,000 enrollees will voluntarily enroll in Medicare Part A, by paying the full premium. Furthermore, the CY 2016 reduced premium of $226 is approximately 0.9 percent higher than the CY 2015 premium of $224. We estimate an additional 61,000 enrollees will pay the reduced premium. Therefore, we estimate that the total aggregate cost to enrollees paying these premiums in CY 2016, compared to the amount that they paid in CY 2015, will be about $32 million.

V. Waiver of Proposed Notice and Comment Period

We use general notices, rather than notice and comment rulemaking procedures, to make announcements such as this premium notice. In doing so, we acknowledge that, under the Administrative Procedure Act (APA), interpretive rules, general statements of policy, and rules of agency organization, procedure, or practice are excepted from the requirements of notice and comment rulemaking. The agency may also waive notice and comment if there is ''good cause,'' as defined by the statute. We considered publishing a proposed notice to provide a period for public comment. However, under the APA, we may waive that procedure if we find good cause that prior notice and comment are impracticable, unnecessary, or contrary to the public interest.

We are not using notice and comment rulemaking in this notification of Medicare Part A premiums for CY 2016 as that procedure is unnecessary because of the lack of discretion in the statutory formula that is used to calculate the premium and the solely ministerial function that this notice serves. The APA permits agencies to waive notice and comment rulemaking when notice and public comment thereon are unnecessary. On this basis, we waive publication of a proposed notice and a solicitation of public comments.

VI. Collection of Information Requirements

This document does not impose information collection requirements, that is, reporting, recordkeeping or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

VII. Regulatory Impact Analysis

A. Statement of Need

Section 1818(d) of the Act requires the Secretary of the Department of Health and Human Services (the Secretary) during September of each year to determine and publish the amount to be paid, on an average per capita basis, from the Federal Hospital Insurance Trust Fund for services incurred in the impending calendar year (CY) (including the associated administrative costs) on behalf of individuals aged 65 and over who will be entitled to benefits under Medicare Part A.

B. Overall Impact

We have examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. Part I, Ch. 8).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major notices with economically significant effects ($100 million or more in any 1 year). As stated in section IV of this notice, we estimate that the overall effect of the changes in the Part A premium will be a cost to voluntary enrollees (section 1818 and section 1818A of the Act) of about $32 million. As a result, this notice is non-economically significant under section 3(f)(1) of Executive Order 12866 and is not a major action under the Congressional Review Act. In accordance with the provisions of Executive Order 12866, this notice was reviewed by the Office of Management and Budget.

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of less than $7.5 million to $38.5 million in any 1 year (for details, see the Small Business Administration's Web site at *http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf*).

Individuals and states are not included in the definition of a small

entity. As discussed above, this annual notice announces Medicare's Hospital Insurance (Part A) premium for uninsured enrollees in calendar year (CY) 2016. As a result, we are not preparing an analysis for the RFA because the Secretary has determined that this notice will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. As discussed above, we are not preparing an analysis for section 1102(b) of the Act, because the Secretary has determined that this notice will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2015, that threshold is approximately $144 million. This notice does not impose mandates that will have a consequential effect of $144 million or more on state, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. Since this notice does not impose any costs on state or local governments, the requirements of Executive Order 13132 are not applicable.

Dated: November 6, 2015.

Andrew M. Slavitt,

Acting Administrator, Centers for Medicare & Medicaid Services.

[Document Identifiers: CMS–3427]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services.

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by January 15, 2016.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to *http://www.regulations.gov*. Follow the instructions for ''Comment or Submission'' or ''More Search Options'' to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number _____, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' Web site address at *http://www.cms.hhs.gov/PaperworkReductionActof1995*.

2. Email your request, including your address, phone number, OMB number, and CMS document identifier, to *Paperwork@cms.hhs.gov*.

3. Call the Reports Clearance Office at (410) 786–1326.

FOR FURTHER INFORMATION CONTACT: Reports Clearance Office at (410) 786–1326.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–3427 End Stage Renal Disease Application and Survey and Certification Report

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Reinstatement with change of a previously approved collection; *Title of Information Collection:* End Stage Renal Disease Application and Survey and Certification Report; *Use:* Part I of this form is a facility identification and screening measurement used to initiate the certification and recertification of ESRD facilities. Part II is completed by the Medicare/Medicaid State survey agency to determine facility compliance with ESRD conditions for coverage.

Form Number: CMS–3427 (OMB control number: 0938–0360); *Frequency:* Every three years; *Affected Public:* Private sector (Business or other for-profit and Not-for profit institutions); *Number of Respondents:* 6,138; *Total Annual Responses:* 2,046; *Total Annual Hours:* 682. (For policy questions regarding this collection contact Judith Kari at 410–786–6829)

Dated: November 10, 2015.

Medicare Program; CY 2016 Inpatient Hospital Deductible and Hospital and Extended Care Services Coinsurance Amounts

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice.

SUMMARY: This notice announces the inpatient hospital deductible and the hospital and extended care services coinsurance amounts for services furnished in calendar year (CY) 2016 under Medicare's Hospital Insurance Program (Medicare Part A). The Medicare statute specifies the formulae used to determine these amounts. For CY 2016, the inpatient hospital deductible will be $1,288. The daily coinsurance amounts for CY 2016 will be: (1) $322 for the 61st through 90th day of hospitalization in a benefit period; (2) $644 for lifetime reserve days; and (3) $161.00 for the 21st through 100th day of extended care services in a skilled nursing facility in a benefit period.

DATES: *Effective Date:* This notice is effective on January 1, 2016.

FOR FURTHER INFORMATION CONTACT: Clare McFarland, (410) 786–6390 for general information. Gregory J. Savord, (410) 786–1521 for case-mix analysis.

SUPPLEMENTARY INFORMATION:

I. Background

Section 1813 of the Social Security Act (the Act) provides for an inpatient hospital deductible to be subtracted from the amount payable by Medicare for inpatient hospital services furnished to a beneficiary. It also provides for certain coinsurance amounts to be subtracted from the amounts payable by Medicare for inpatient hospital and extended care services. Section 1813(b)(2) of the Act requires us to determine and publish each year the amount of the inpatient hospital deductible and the hospital and extended care services coinsurance amounts applicable for services furnished in the following calendar year (CY).

II. Computing the Inpatient Hospital Deductible for CY 2016

Section 1813(b) of the Act prescribes the method for computing the amount of the inpatient hospital deductible. The inpatient hospital deductible is an amount equal to the inpatient hospital deductible for the preceding CY, adjusted by our best estimate of the payment-weighted average of the applicable percentage increases (as defined in section 1886(b)(3)(B) of the Act) used for updating the payment rates to hospitals for discharges in the fiscal year (FY) that begins on October 1 of the same preceding CY, and adjusted to reflect changes in real case-mix. The adjustment to reflect real case-mix is determined on the basis of the most recent case-mix data available. The amount determined under this formula is rounded to the nearest multiple of $4 (or, if midway between two multiples of $4, to the next higher multiple of $4).

Under section 1886(b)(3)(B)(i)(XX) of the Act, the percentage increase used to update the payment rates for FY 2016 for hospitals paid under the inpatient prospective payment system is the market basket percentage increase, otherwise known as the market basket update, reduced by 0.2 percentage points (see section 1886(b)(3)(B)(xii)(IV) of the Act), and an adjustment based on changes in the economy-wide productivity (the multifactor productivity (MFP) adjustment) (see section 1886(b)(3)(B)(xi)(II) of the Act). Under section 1886(b)(3)(B)(viii) of the Act, for fiscal year 2016, the applicable percentage increase for hospitals that do not submit quality data as specified by the Secretary of the Department of Health and Human Services (the Secretary) is reduced by one quarter of the market basket update. We are estimating that after accounting for those hospitals receiving the lower market basket update in the payment-weighted average update, the calculated deductible will not be affected, since the majority of hospitals submit quality data and receive the full market basket update. Section 1886(b)(3)(B)(ix) of the Act requires that any hospital that is not a meaningful electronic health record (EHR) user (as defined in section 1886(n)(3) of the Act) will have three-quarters of the market basket update reduced by 33⅓ percent for FY 2015, 66⅔ percent for FY 2016, and 100 percent for FY 2017 and each subsequent fiscal year. We are estimating that after accounting for these hospitals receiving the lower market basket update, the calculated deductible will not be affected, since the majority of hospitals are meaningful EHR users and are expected to receive the full market basket update.

Under section 1886(b)(3)(B)(ii)(VIII) of the Act, the percentage increase used to update the payment rates for FY 2016 for hospitals excluded from the inpatient prospective payment system is as follows:

- The percentage increase for long term care hospitals is the market basket percentage increase reduced by 0.2 percentage points and the MFP adjustment (*see* sections 1886(m)(3)(A) and 1886(m)(4)(E) of the Act).
- The percentage increase for inpatient rehabilitation facilities is the market basket percentage increase reduced by 0.2 percentage points and the MFP adjustment (*see* sections 1886(j)(3)(C) and 1886(j)(3)(D)(iv) of the Act).
- The percentage increase used to update the payment rate for inpatient psychiatric facilities is the market basket percentage increase reduced by 0.2 percentage points and the MFP adjustment (see sections 1886(s)(2)(A)(i), 1886(s)(2)(A)(ii), and 1886(s)(3)(D) of the Act).

The Inpatient Prospective Payment System market basket percentage increase for 2016 is 2.4 percent and the MFP adjustment is 0.5 percent, as announced in the final rule that appeared in the **Federal Register** on August 17, 2015 entitled, ''Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System Policy Changes and Fiscal Year 2016 Rates'' (80 FR 49510). Therefore, the percentage increase for hospitals paid under the inpatient prospective payment system that submit quality data and are meaningful EHR users is 1.7 percent (that is, the FY 2016 market basket update of 2.4 percent less the MFP adjustment of 0.5 percentage point and less 0.2 percentage point). The average payment percentage increase for hospitals excluded from the inpatient prospective payment system is 1.82 percent. Weighting these percentages in accordance with payment volume, our best estimate of

the payment-weighted average of the increases in the payment rates for FY 2016 is 1.72 percent.

To develop the adjustment to reflect changes in real case-mix, we first calculated an average case-mix for each hospital that reflects the relative costliness of that hospital's mix of cases compared to those of other hospitals. We then computed the change in average case-mix for hospitals paid under the Medicare prospective payment system in FY 2015 compared to FY 2014. (We excluded from this calculation hospitals whose payments are not based on the inpatient prospective payment system because their payments are based on alternate prospective payment systems or reasonable costs.) We used Medicare bills from prospective payment hospitals that we received as of July 2015. These bills represent a total of about 7.6 million Medicare discharges for FY 2015 and provide the most recent case-mix data available at this time. Based on these bills, the change in average case-mix in FY 2015 is 0.21 percent. Based on these bills and past experience, we expect the overall case mix change to be 0.5 percent as the year progresses and more FY 2015 data become available.

Section 1813 of the Act requires that the inpatient hospital deductible be adjusted only by that portion of the case-mix change that is determined to be real. Real case-mix is that portion of case-mix that is due to changes in the mix of cases in the hospital and not due to coding optimization. We expect that all of the change in average case-mix will be real and estimate that this change will be 0.5 percent.

Thus as stated above, the estimate of the payment-weighted average of the applicable percentage increases used for updating the payment rates is 1.72 percent, and the real case-mix adjustment factor for the deductible is 0.5 percent. Therefore, using the statutory formula as stated in section 1813(b) of the Act, we calculate the inpatient hospital deductible for services furnished in CY 2016 to be $1,288. This deductible amount is determined by multiplying $1,260 (the inpatient hospital deductible for CY 2015 (79 FR 49854)) by the payment-weighted average increase in the payment rates of 1.0172 multiplied by the increase in real case-mix of 1.005, which equals $1,288.08 and is rounded to $1,288.

III. Computing the Inpatient Hospital and Extended Care Services Coinsurance Amounts for CY 2016

The coinsurance amounts provided for in section 1813 of the Act are defined as fixed percentages of the inpatient hospital deductible for services furnished in the same CY. The increase in the deductible generates increases in the coinsurance amounts. For inpatient hospital and extended care services furnished in CY 2016, in accordance with the fixed percentages defined in the law, the daily coinsurance for the 61st through 90th day of hospitalization in a benefit period will be $322 (one-fourth of the inpatient hospital deductible as stated in section 1813(a)(1)(A) of the Act); the daily coinsurance for lifetime reserve days will be $644 (one-half of the inpatient hospital deductible as stated in section 1813(a)(1)(B) of the Act); and the daily coinsurance for the 21st through 100th day of extended care services in a skilled nursing facility in a benefit period will be $161 (one-eighth of the inpatient hospital deductible as stated in section 1813(a)(3) of the Act).

IV. Cost to Medicare Beneficiaries

Table 1 below summarizes the deductible and coinsurance amounts for CYs 2015 and 2016, as well as the number of each that is estimated to be paid.

TABLE 1—PART A DEDUCTIBLE AND COINSURANCE AMOUNTS FOR CALENDAR YEARS 2015 AND 2016 TYPE OF COST SHARING

	Value		Number paid (in millions)	
	2015	2016	2015	2016
Inpatient hospital deductible	$1260	$1288	7.73	7.75
Daily coinsurance for 61st–90th Day	315	322	1.83	1.83
Daily coinsurance for lifetime reserve days	630	644	0.89	0.89
SNF coinsurance	157.50	161	41.47	42.67

The estimated total increase in costs to beneficiaries is about $610 million (rounded to the nearest $10 million) due to: (1) The increase in the deductible and coinsurance amounts, and (2) the increase in the number of deductibles and daily coinsurance amounts paid. We determine the increase in cost to beneficiaries by calculating the difference between the 2015 and 2016 deductible and coinsurance amounts multiplied by the increase in the number of deductible and coinsurance amounts paid.

V. Waiver of Proposed Notice and Comment Period

Section 1813(b)(2) of the Act requires publication of the inpatient hospital deductible and all coinsurance amounts—the hospital and extended care services coinsurance amounts—between September 1 and September 15 of the year preceding the year to which they will apply. These amounts are determined according to the statute as discussed above. As has been our custom, we use general notices, rather than notice and comment rulemaking procedures, to make the announcements. In doing so, we acknowledge that under the Administrative Procedure Act (APA), interpretive rules, general statements of policy, and rules of agency organization, procedure, or practice are excepted from the requirements of notice and comment rulemaking.

We considered publishing a proposed notice to provide a period for public comment. However, we may waive that procedure if we find good cause that prior notice and comment are impracticable, unnecessary, or contrary to the public interest. We find that the procedure for notice and comment is unnecessary here, because the formulae used to calculate the inpatient hospital deductible and hospital and extended care services coinsurance amounts are statutorily directed, and we can exercise no discretion in following the formulae. Moreover, the statute establishes the time period for which the deductible and coinsurance amounts will apply and delaying publication would be contrary to the public interest.

Therefore, we find good cause to waive publication of a proposed notice and solicitation of public comments.

VI. Collection of Information Requirements

This document does not impose information collection requirements, that is, reporting, recordkeeping or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

VII. Regulatory Impact Analysis

A. Statement of Need

Section 1813(b)(2) of the Act requires the Secretary to publish, between September 1 and September 15 of each year, the amounts of the inpatient hospital deductible and hospital and extended care services coinsurance applicable for services furnished in the following calendar year (CY).

B. Overall Impact

We have examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C., Part I, Ch. 8).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major notices with economically significant effects ($100 million or more in any 1 year). As stated in section IV of this notice, we estimate that the total increase in costs to beneficiaries associated with this notice is about $610 million due to: (1) The increase in the deductible and coinsurance amounts, and (2) the increase in the number of deductibles and daily coinsurance amounts paid. As a result, this notice is economically significant under section 3(f)(1) of Executive Order 12866 and is a major action under the Congressional Review Act. In accordance with the provisions of Executive Order 12866, this notice was reviewed by the Office of Management and Budget.

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of less than $7.5 million to $38.5 million in any 1 year (for details, see the Small Business Administration's Web site at *http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf*). Individuals and states are not included in the definition of a small entity. As discussed above, this annual notice announces the inpatient hospital deductible and the hospital and extended care services coinsurance amounts for services furnished in CY 2016 under Medicare's Hospital Insurance Program (Medicare Part A). As a result, we are not preparing an analysis for the RFA because the Secretary has determined that this notice will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. As discussed above, we are not preparing an analysis for section 1102(b) of the Act because the Secretary has determined that this notice will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. For 2015, that threshold accounting for inflation is approximately $144 million. This notice does not impose mandates that will have a consequential effect of $144 million or more on state, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. Since this notice does not impose any costs on state or local governments, preempt state law, or have Federalism implications, the requirements of Executive Order 13132 are not applicable.

Dated: November 6, 2015.

Andrew M. Slavitt,

Acting Administrator, Centers for Medicare & Medicaid Services.

Dated: November 9, 2015.

Sylvia M. Burwell,

Secretary, Department of Health and Human Services.

Agency Information Collection Activities: Submission for OMB Review; Comment Request

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information

technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by December 16, 2015.

ADDRESSES: When commenting on the proposed information collections, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be received by the OMB desk officer via one of the following transmissions: OMB, Office of Information and Regulatory Affairs, Attention: CMS Desk Officer, Fax Number: (202) 395–5806 *OR* Email: *OIRA_submission@omb.eop.gov.*

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' Web site address at *http://www.cms.hhs.gov/PaperworkReductionActof1995.*

2. Email your request, including your address, phone number, OMB number, and CMS document identifier, to *Paperwork@cms.hhs.gov.*

3. Call the Reports Clearance Office at (410) 786–1326.

FOR FURTHER INFORMATION CONTACT: Reports Clearance Office at (410) 786–1326.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires federal agencies to publish a 30-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection Request:* Extension without change of a currently approved collection; *Title of Information Collection:* Statement of Deficiencies and Plan of Correction Supporting Regulations; *Use:* Section 1864(a) of the Social Security Act requires that the Secretary use state survey agencies to conduct surveys to determine whether health care facilities meet Medicare and Clinical Laboratory Improvement Amendments participation requirements. The Form CMS–2567 is the means by which the survey findings are documented. This section of the law further requires that compliance findings resulting from these surveys be made available to the public within 90 days of such surveys. The Form CMS–2567 is the vehicle for this disclosure. The form is also used by health care facilities to document their plan of correction and by CMS, the states, facilities, purchasers, consumers, advocacy groups, and the public as a source of information about quality of care and facility compliance. The regulations at 42 CFR 488.18 require that state survey agencies document all deficiency findings on a statement of deficiencies and plan of correction, which is the CMS–2567. Sections 488.26 and 488.28 further delineate how compliance findings must be recorded and that CMS prescribed forms must be used. *Form Number:* CMS–2567 (OMB Control Number: 0938–0391); *Frequency:* Yearly and occasionally; *Affected Public:* Private Sector (Business or other for-profit and Not-for-profit institutions); *Number of Respondents:* 64,500; *Total Annual Responses:* 64,500; *Total Annual Hours:* 128,083. (For policy questions regarding this collection contact Karen Tritz at 410–786–8021.)

2. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* Monthly File of Medicaid/Medicare Dual Eligible Enrollees; *Use:* The monthly data file is provided to CMS by states on dually eligible Medicaid and Medicare beneficiaries, listing the individuals on the Medicaid eligibility file, their Medicare status and other information needed to establish subsidy level, such as income and institutional status. The file is used to count the exact number of individuals who should be included in the phased-down state contribution calculation that month. We merge the data with other data files and establishes Part D enrollment for those individuals on the file. The file may be used by CMS partners to obtain accurate counts of duals on a current basis. *Form Number:* CMS–10143 (OMB Control Number: 0938–0958); *Frequency:* Monthly; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 51; *Total Annual Responses:* 612; *Total Annual Hours:* 6,120. Medicare Program; Medicare Part B Monthly Actuarial Rates, Premium Rate, and Annual Deductible Beginning January 1, 2016

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice.

SUMMARY: This notice announces the monthly actuarial rates for aged (age 65 and over) and disabled (under age 65) beneficiaries enrolled in Part B of the Medicare Supplementary Medical Insurance (SMI) program beginning January 1, 2016. In addition, this notice announces the monthly premium for aged and disabled beneficiaries, the deductible for 2016, the income-related monthly adjustment amounts to be paid by beneficiaries with modified adjusted gross income above certain threshold amounts, and the transfer amount equal to the reduction in premiums payable as a result of amendments made by the Bipartisan Budget Act of 2015. The monthly actuarial rates for 2016 are $237.60 for aged enrollees and $282.60 for disabled enrollees. The standard monthly Part B premium rate for all enrollees for 2016 is $121.80, which is equal to 50 percent of the monthly actuarial rate for aged enrollees (or approximately 25 percent of the expected average total cost of Part B coverage for aged enrollees) plus $3.00. (The 2015 standard premium rate was $104.90.) The Part B deductible for 2016 is $166.00 for all Part B beneficiaries. If a beneficiary has to pay an income-related monthly adjustment, they will have to pay a total monthly premium of about 35, 50, 65, or 80 percent of the total cost of Part B coverage plus $4.20, $6.00, $7.80, or $9.60. Section 1844(d) of the Social Security Act, as added by section 601(b) of the Bipartisan Budget Act of 2015, provides for a transfer from the general fund to the Part B account

of the SMI Trust Fund. This transfer of $7,440,648,000 consists of $5,237,880,000 in reduced premium revenue for enrollees age 65 and older, and $2,202,768,000 in reduced premium revenue for enrollees under age 65.

DATES: *Effective Date:* January 1, 2016.

SUPPLEMENTARY INFORMATION:

I. Background

Part B is the voluntary portion of the Medicare program that pays all or part of the costs for physicians' services, outpatient hospital services, certain home health services, services furnished by rural health clinics, ambulatory surgical centers, comprehensive outpatient rehabilitation facilities, and certain other medical and health services not covered by Medicare Part A, Hospital Insurance. Medicare Part B is available to individuals who are entitled to Medicare Part A, as well as to U.S. residents who have attained age 65 and are citizens, and aliens who were lawfully admitted for permanent residence and have resided in the United States for 5 consecutive years. Part B requires enrollment and payment of monthly premiums, as described in 42 CFR part 407, subpart B, and part 408, respectively. The premiums paid by (or on behalf of) all enrollees fund approximately one-fourth of the total incurred costs, and transfers from the general fund of the Treasury pay approximately three-fourths of these costs.

The Secretary of the Department of Health and Human Services (the Secretary) is required by section 1839 of the Social Security Act (the Act) to announce the Part B monthly actuarial rates for aged and disabled beneficiaries as well as the monthly Part B premium. The Part B annual deductible is included because its determination is directly linked to the aged actuarial rate.

The monthly actuarial rates for aged and disabled enrollees are used to determine the correct amount of general revenue financing per beneficiary each month. These amounts, according to actuarial estimates, will equal, respectively, one-half of the expected average monthly cost of Part B for each aged enrollee (age 65 or over) and one-half of the expected average monthly cost of Part B for each disabled enrollee (under age 65).

The Part B deductible to be paid by enrollees is also announced. Prior to the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), the Part B deductible was set in statute. After setting the 2005 deductible amount at $110, section 629 of the MMA (amending section 1833(b) of the Act) requires that the Part B deductible be indexed beginning in 2006. The inflation factor to be used each year is the annual percentage increase in the Part B actuarial rate for enrollees age 65 and over. Specifically, the 2016 Part B deductible is calculated by multiplying the 2015 deductible by the ratio of the 2016 aged actuarial rate to the 2015 aged actuarial rate. The amount determined under this formula is then rounded to the nearest $1.

The monthly Part B premium rate to be paid by aged and disabled enrollees is also announced. (Although the costs to the program per disabled enrollee are different than for the aged, the statute provides that they pay the same premium amount.) Beginning with the passage of section 203 of the Social Security Amendments of 1972 (Pub. L. 92–603), the premium rate, which was determined on a fiscal year basis, was limited to the lesser of the actuarial rate for aged enrollees, or the current monthly premium rate increased by the same percentage as the most recent general increase in monthly Title II social security benefits.

However, the passage of section 124 of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) (Pub. L. 97–248) suspended this premium determination process. Section 124 of TEFRA changed the premium basis to 50 percent of the monthly actuarial rate for aged enrollees (that is, 25 percent of program costs for aged enrollees). Section 606 of the Social Security Amendments of 1983 (Pub. L. 98–21), section 2302 of the Deficit Reduction Act of 1984 (DEFRA 84) (Pub. L. 98–369), section 9313 of the Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA 85) (Pub. L. 99–272), section 4080 of the Omnibus Budget Reconciliation Act of 1987 (OBRA 87) (Pub. L. 100–203), and section 6301 of the Omnibus Budget Reconciliation Act of 1989 (OBRA 89) (Pub. L. 101–239) extended the provision that the premium be based on 50 percent of the monthly actuarial rate for aged enrollees (that is, 25 percent of program costs for aged enrollees). This extension expired at the end of 1990.

The premium rate for 1991 through 1995 was legislated by section 1839(e)(1)(B) of the Act, as added by section 4301 of the Omnibus Budget Reconciliation Act of 1990 (OBRA 90) (Pub. L. 101–508). In January 1996, the premium determination basis would have reverted to the method established by the 1972 Social Security Act Amendments. However, section 13571 of the Omnibus Budget Reconciliation Act of 1993 (OBRA 93) (Pub. L. 103–66) changed the premium basis to 50 percent of the monthly actuarial rate for aged enrollees (that is, 25 percent of program costs for aged enrollees) for 1996 through 1998.

Section 4571 of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33) permanently extended the provision that the premium be based on 50 percent of the monthly actuarial rate for aged enrollees (that is, 25 percent of program costs for aged enrollees).

The BBA included a further provision affecting the calculation of the Part B actuarial rates and premiums for 1998 through 2003. Section 4611 of the BBA modified the home health benefit payable under Part A for individuals enrolled in Part B. Under this section, beginning in 1998, expenditures for home health services not considered ''post-institutional'' are payable under Part B rather than Part A. However, section 4611(e)(1) of the BBA required that there be a transition from 1998 through 2002 for the aggregate amount of the expenditures transferred from Part A to Part B. Section 4611(e)(2) of the BBA also provided a specific yearly proportion for the transferred funds. The proportions were 1/6 for 1998, 1/3 for 1999, 1/2 for 2000, 2/3 for 2001, and 5/6 for 2002. For the purpose of determining the correct amount of financing from general revenues of the Federal Government, it was necessary to include only these transitional amounts in the monthly actuarial rates for both aged and disabled enrollees, rather than the total cost of the home health services being transferred.

Section 4611(e)(3) of the BBA also specified, for the purpose of determining the premium, that the monthly actuarial rate for enrollees age 65 and over be computed as though the transition would occur for 1998 through 2003 and that 1/7 of the cost be transferred in 1998, 2/7 in 1999, 3/7 in 2000, 4/7 in 2001, 5/7 in 2002, and 6/7 in 2003. Therefore, the transition period for incorporating this home health transfer into the premium was 7 years while the transition period for including these services in the actuarial rate was 6 years.

Section 811 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (Pub. L. 108–173, also known as the Medicare Modernization Act, or MMA), which amended section 1839 of the Act, requires that, starting on January 1, 2007, the Part B premium a beneficiary pays each month be based on their annual income. Specifically, if a beneficiary's ''modified adjusted gross

income'' is greater than the legislated threshold amounts (for 2016, $85,000 for a beneficiary filing an individual income tax return, and $170,000 for a beneficiary filing a joint tax return) the beneficiary is responsible for a larger portion of the estimated total cost of Part B benefit coverage. In addition to the standard 25 percent premium, these beneficiaries now have to pay an income-related monthly adjustment amount. The MMA made no change to the actuarial rate calculation, and the standard premium, which will continue to be paid by beneficiaries whose modified adjusted gross income is below the applicable thresholds, still represents 25 percent of the estimated total cost to the program of Part B coverage for an aged enrollee. However, depending on income and tax filing status, a beneficiary can now be responsible for 35, 50, 65, or 80 percent of the estimated total cost of Part B coverage, rather than 25 percent. (For 2018 and subsequent years, the income thresholds are lower for the two highest income ranges, as a result of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10).) The end result of the higher premium is that the Part B premium subsidy is reduced and less general revenue financing is required for beneficiaries with higher income because they are paying a larger share of the total cost with their premium. That is, the premium subsidy continues to be approximately 75 percent for beneficiaries with income below the applicable income thresholds, but will be reduced for beneficiaries with income above these thresholds. The MMA specified that there be a 5-year transition to full implementation of this provision. However, section 5111 of the Deficit Reduction Act of 2005 (DRA) (Pub. L. 109–171) modified the transition to a 3-year period.

Section 4732(c) of the BBA added section 1933(c) of the Act, which required the Secretary to allocate money from the Part B trust fund to the State Medicaid programs for the purpose of providing Medicare Part B premium assistance from 1998 through 2002 for the low-income Medicaid beneficiaries who qualify under section 1933 of the Act. This allocation, while not a benefit expenditure, was an expenditure of the trust fund and was included in calculating the Part B actuarial rates through 2002. For 2003 through 2015, the expenditure was made from the trust fund because the allocation was temporarily extended. However, because the extension occurred after the financing was determined, the allocation was not included in the calculation of the financing rates for these years. Section 211 of MACRA permanently extended this expenditure, which is included in the calculation of the Part B actuarial rates for 2016 and subsequent years.

Another provision affecting the calculation of the Part B premium is section 1839(f) of the Act, as amended by section 211 of the Medicare Catastrophic Coverage Act of 1988 (MCCA 88) (Pub. L. 100–360). (The Medicare Catastrophic Coverage Repeal Act of 1989 (Pub. L. 101–234) did not repeal the revisions to section 1839(f) of the Act made by MCCA 88.) Section 1839(f) of the Act, referred to as the ''hold-harmless'' provision, provides that if an individual is entitled to benefits under section 202 or 223 of the Act (the Old-Age and Survivors Insurance Benefit and the Disability Insurance Benefit, respectively) and has the Part B premium deducted from these benefit payments, the premium increase will be reduced, if necessary, to avoid causing a decrease in the individual's net monthly payment. This decrease in payment occurs if the increase in the individual's social security benefit due to the cost-of-living adjustment under section 215(i) of the Act is less than the increase in the premium. Specifically, the reduction in the premium amount applies if the individual is entitled to benefits under section 202 or 223 of the Act for November and December of a particular year and the individual's Part B premiums for December and the following January are deducted from the respective month's section 202 or 223 benefits. The ''hold-harmless'' provision does not apply to beneficiaries who are required to pay an income-related monthly adjustment amount.

A check for benefits under section 202 or 223 of the Act is received in the month following the month for which the benefits are due. The Part B premium that is deducted from a particular check is the Part B payment for the month in which the check is received. Therefore, a benefit check for November is not received until December, but has December's Part B premium deducted from it.

Generally, if a beneficiary qualifies for hold-harmless protection, the reduced premium for the individual for that January and for each of the succeeding 11 months is the greater of either—

- The monthly premium for January reduced as necessary to make the December monthly benefits, after the deduction of the Part B premium for January, at least equal to the preceding November's monthly benefits, after the deduction of the Part B premium for December; or
- The monthly premium for that individual for that December.

In determining the premium limitations under section 1839(f) of the Act, the monthly benefits to which an individual is entitled under section 202 or 223 of the Act do not include retroactive adjustments or payments and deductions on account of work. Also, once the monthly premium amount is established under section 1839(f) of the Act, it will not be changed during the year even if there are retroactive adjustments or payments and deductions on account of work that apply to the individual's monthly benefits.

Individuals who have enrolled in Part B late or who have re-enrolled after the termination of a coverage period are subject to an increased premium under section 1839(b) of the Act. The increase is a percentage of the premium and is based on the new premium rate before any reductions under section 1839(f) of the Act are made.

For 2016, social security benefits will receive no cost-of-living adjustment under section 215(i) of the Act. As a result, the majority of Part B enrollees can pay no increase in their monthly premium. The Bipartisan Budget Act of 2015 helps to ensure the financial adequacy of the Part B account of the SMI Trust Fund without transferring the financial burden of the entire increase in 2016 premium requirements to the minority of enrollees who are not held harmless.

Section 1839 of the Social Security Act, as amended by section 601(a) of the Bipartisan Budget Act of 2015 (Pub. L. 114–74), specifies that the 2016 actuarial rate for enrollees age 65 and older be determined as if the hold-harmless provision does not apply. The premium revenue that is lost by using the resulting lower premium (excluding the foregone income-related premium revenue) is to be replaced by a transfer of general revenue from the Treasury, which will be repaid over time to the general fund. The transfer amount will be $7,440,648,000, consisting of $5,237,880,000 for the lost aged premium revenue and $2,202,768,000 for the lost disabled premium revenue.

Starting in 2016, in order to repay the balance due (which is to include the transfer amount and the foregone income-related premium revenue), the Part B premium otherwise determined will be increased by $3.00. These repayment amounts will be added to the Part B premium otherwise determined each year and paid back to the general fund of the Treasury.

High-income enrollees will pay an additional $1.20, $3.00, $4.80, or $6.60 as part of the income-related monthly adjustment amount (IRMAA) premium dollars, which reduce (dollar for dollar) the amount of general revenue received by Part B from the general fund of the Treasury. Because of this general revenue offset, the repayment IRMAA premium dollars are not included in the direct repayments made to the general fund of the Treasury from Part B in order to avoid a double repayment. (Only the $3.00 monthly repayment amounts are included in the direct repayments).

These repayment amounts will continue until the total amount collected is equal to the beginning balance due. (In the final year of the repayment, the additional amounts may be modified in order to avoid an overpayment.) The repayment amounts (excluding the repayment amounts for high-income enrollees) are subject to the hold harmless provision. The beginning balance due is $9,066,409,000, consisting of the transfer amount plus $1,625,761,000 in foregone income-related premium revenue.

II. Provisions of the Notice

A. Notice of Medicare Part B Monthly Actuarial Rates, Monthly Premium Rates, Annual Deductible, and Transfer Amount

The Medicare Part B monthly actuarial rates applicable for 2016 are $237.60 for enrollees age 65 and over and $282.60 for disabled enrollees under age 65. In section II.B. of this notice, we present the actuarial assumptions and bases from which these rates are derived. The Part B standard monthly premium rate for all enrollees for 2016 is $121.80. The following are the 2016 Part B monthly premium rates to be paid by beneficiaries who file an individual tax return (including those who are single, head of household, qualifying widow(er) with dependent child, or married filing separately who lived apart from their spouse for the entire taxable year), or a joint tax return.

Beneficiaries who file an individual tax return with income:	Beneficiaries who file a joint tax return with income:	Income-related monthly adjustment amount	Total monthly premium amount
Less than or equal to $85,000	Less than or equal to $170,000	$0.00	$121.80
Greater than $85,000 and less than or equal to $107,000.	Greater than $170,000 and less than or equal to $214,000.	48.70	170.50
Greater than $107,000 and less than or equal to $160,000.	Greater than $214,000 and less than or equal to $320,000.	121.80	243.60
Greater than $160,000 and less than or equal to $214,000.	Greater than $320,000 and less than or equal to $428,000.	194.90	316.70
Greater than $214,000	Greater than $428,000	268.00	389.80

In addition, the monthly premium rates to be paid by beneficiaries who are married and lived with their spouse at any time during the taxable year, but file a separate tax return from their spouse, are as follows:

Beneficiaries who are married and lived with their spouse at any time during the year, but file a separate tax return from their spouse:	Income-related monthly adjustment amount	Total monthly premium amount
Less than or equal to $85,000	$0.00	$121.80
Greater than $85,000 and less than or equal to $129,000	194.90	316.70
Greater than $129,000	268.00	389.80

The Part B annual deductible for 2016 is $166.00 for all beneficiaries.

The transfer amount is the estimate by the Chief Actuary of the aggregate reduction in premiums payable, separately for enrollees age 65 and older and for enrollees under age 65, as a result of the amendments made by the Bipartisan Budget Act of 2015 (excluding the reduction in the income-related monthly adjustment amounts). The 2016 actuarial rate for enrollees age 65 and older is $237.60, and the actuarial rate portion of the 2016 premium is $118.80. If the only change to the 2016 actuarial rate for enrollees age 65 and older was the absence of the Bipartisan Budget Act amendments, then the 2016 actuarial rate for enrollees age 65 and older would be $318.00, and the actuarial rate portion of the 2016 premium would be $159.00.

The reduction in premiums payable as a result of the Bipartisan Budget Act amendments is estimated separately for—(1) enrollees held harmless; (2) enrollees not held harmless who are age 65 or older; and (3) enrollees not held harmless who are under age 65. All enrollees that are subject to the hold harmless provision will have no reduction in their premiums payable in 2016 as a result of these amendments. (The 2016 monthly premium for enrollees subject to the hold harmless provision in 2016 will be the same as their 2015 monthly premium.) An estimated 11.8 million enrollees age 65 and older (with 10.8 million enrollee years of premium payments) will not be held harmless and will have a reduction in monthly premiums payable from $159.00 to $118.80. Based on this difference in premiums payable and adjusting for the additional premiums payable by individuals subject to the late enrollment penalty (assuming a historical average penalty), the transfer amount for enrollees age 65 and older is $5,237,880,000. An estimated 4.9 million enrollees under age 65 (with 4.6 million enrollee years of premium payments) will not be held harmless and will have a reduction in monthly premiums payable from $159.00 to $118.80. Based on this difference in premiums payable and adjusting for the additional premiums payable by individuals subject to the late enrollment penalty (assuming a historical average penalty), the transfer amount for enrollees under age 65 is $2,202,768,000. The total transfer amount will be $7,440,648,000.

B. Statement of Actuarial Assumptions and Bases Employed in Determining the Monthly Actuarial Rates and the Monthly Premium Rate for Part B Beginning January 2016

Except where noted, the actuarial assumptions and bases used to determine the monthly actuarial rates and the monthly premium rates for Part B are established by the Centers for Medicare & Medicaid Services Office of the Actuary. The estimates underlying these determinations are prepared by actuaries meeting the qualification standards and following the actuarial standards of practice established by the Actuarial Standards Board.

1. Actuarial Status of the Part B Account in the Supplementary Medical Insurance Trust Fund

Under section 1839 of the Act, the starting point for determining the standard monthly premium is the amount that would be necessary to finance Part B on an incurred basis. This is the amount of income that would be sufficient to pay for services furnished during that year (including associated administrative costs) even though payment for some of these services will not be made until after the close of the year. The portion of income required to cover benefits not paid until after the close of the year is added to the trust fund and used when needed.

The premium rates are established prospectively and are, therefore, subject to projection error. Additionally, legislation enacted after the financing was established, but effective for the period in which the financing is set, may affect program costs. As a result, the income to the program may not equal incurred costs. Therefore, trust fund assets must be maintained at a level that is adequate to cover an appropriate degree of variation between actual and projected costs, and the amount of incurred, but unpaid, expenses. Numerous factors determine what level of assets is appropriate to cover variation between actual and projected costs. The three most important of these factors are the: (1) Difference from prior years between the actual performance of the program and estimates made at the time financing was established; (2) likelihood and potential magnitude of expenditure changes resulting from enactment of legislation affecting Part B costs in a year subsequent to the establishment of financing for that year; and (3) expected relationship between incurred and cash expenditures. These factors are analyzed on an ongoing basis, as the trends can vary over time.

Table 1 summarizes the estimated actuarial status of the trust fund as of the end of the financing period for 2014 and 2015.

TABLE 1—ESTIMATED ACTUARIAL STATUS OF THE PART B ACCOUNT IN THE SUPPLEMENTARY MEDICAL INSURANCE TRUST FUND AS OF THE END OF THE FINANCING PERIOD

Financing period ending	Assets ($ in millions)	Liabilities ($ in millions)	Assets less liabilities ($ in millions)
December 31, 2014	68,074	23,716	44,358
December 31, 2015	58,261	23,292	34,969

2. Monthly Actuarial Rate for Enrollees Age 65 and Older

The monthly actuarial rate for enrollees age 65 and older is one-half of the sum of monthly amounts for: (1) The projected cost of benefits; and (2) administrative expenses for each enrollee age 65 and older, after adjustments to this sum to allow for interest earnings on assets in the trust fund and an adequate contingency margin. The contingency margin is an amount appropriate to provide for possible variation between actual and projected costs and to amortize any surplus assets or unfunded liabilities.

The monthly actuarial rate for enrollees age 65 and older for 2016 is determined by first establishing per-enrollee cost by type of service from program data through 2015 and then projecting these costs for subsequent years. The projection factors used for financing periods from January 1, 2013 through December 31, 2016 are shown in Table 2.

As indicated in Table 3, the projected per-enrollee amount required to pay for one-half of the total of benefits and administrative costs for enrollees age 65 and over for 2016 is $227.86. Based on current estimates, the assets at the end of 2015 are not sufficient to cover the amount of incurred, but unpaid, expenses and to provide for a significant degree of variation between actual and projected costs. Thus, a positive contingency margin is needed to increase assets to a more appropriate level. The monthly actuarial rate of $237.60 provides an adjustment of $11.61 for a contingency margin (determined as if the hold harmless provision did not apply for 2016, as required by the Bipartisan Budget Act of 2015) and −$1.87 for interest earnings.

Two other factors affect the contingency margin for 2016. Starting in 2011, manufacturers and importers of brand-name prescription drugs have paid a fee that is allocated to the Part B account of the SMI trust. For 2016, the total of these brand-name drug fees is estimated to be $3.0 billion. The contingency margin has been reduced to account for this additional revenue.

Another factor impacting the contingency margin comes from the requirement that certain payment incentives, to encourage the development and use of health information technology (HIT) by Medicare physicians, are to be excluded from the premium determination. HIT positive incentive payments or penalties will be directly offset through transfers with the general fund of the Treasury. The monthly actuarial rate includes an adjustment of −$0.36 for HIT positive incentive payments in 2016.

The traditional goal for the Part B reserve has been that assets minus liabilities at the end of a year should represent between 15 and 20 percent of the following year's total incurred expenditures. To accomplish this goal, a 17 percent reserve ratio has been the normal target used to calculate the Part B premium.

The contingency margin included in establishing the 2016 actuarial rate of $237.60 per month for aged beneficiaries, as announced in this notice, is projected to fully restore the Part B assets under the projection assumptions listed in Table 2.

3. Monthly Actuarial Rate for Disabled Enrollees

Disabled enrollees are those persons under age 65 who are enrolled in Part B because of entitlement to Social Security disability benefits for more than 24 months or because of entitlement to Medicare under the end-stage renal disease (ESRD) program. Projected monthly costs for disabled enrollees (other than those with ESRD)

are prepared in a fashion parallel to the projection for the aged using appropriate actuarial assumptions (see Table 2). Costs for the ESRD program are projected differently because of the different nature of services offered by the program.

As shown in Table 4, the projected per-enrollee amount required to pay for one-half of the total of benefits and administrative costs for disabled enrollees for 2016 is $272.94. The monthly actuarial rate of $282.60 also provides an adjustment of −$2.86 for interest earnings and $12.52 for a contingency margin, reflecting the same factors described previously for the aged actuarial rate at magnitudes appropriate to the disabled rate determination. Based on current estimates, the assets associated with the disabled Medicare beneficiaries at the end of 2015 are not sufficient to cover the amount of incurred, but unpaid, expenses and to provide for a significant degree of variation between actual and projected costs. Thus, a positive contingency margin is needed to increase assets to an appropriate level.

The actuarial rate of $282.60 per month for disabled beneficiaries, as announced in this notice for 2016, reflects the combined net effect of the factors described previously for aged beneficiaries and the projection assumptions listed in Table 2.

4. Sensitivity Testing

Several factors contribute to uncertainty about future trends in medical care costs. It is appropriate to test the adequacy of the rates using alternative cost growth rate assumptions. The results of those assumptions are shown in Table 5. One set represents increases that are higher and, therefore, more pessimistic than the current estimate. The other set represents increases that are lower and, therefore, more optimistic than the current estimate. The values for the alternative assumptions were determined from a statistical analysis of the historical variation in the respective increase factors.

As indicated in Table 5, the monthly actuarial rates would result in an excess of assets over liabilities of $53,052 million by the end of December 2016 under the cost growth rate assumptions shown in Table 2 and assuming that the provisions of current law are fully implemented. This amounts to 17.0 percent of the estimated total incurred expenditures for the following year.

Assumptions that are somewhat more pessimistic (and that therefore test the adequacy of the assets to accommodate projection errors) produce a surplus of $8,962 million by the end of December 2016 under current law, which amounts to 2.5 percent of the estimated total incurred expenditures for the following year. Under fairly optimistic assumptions, the monthly actuarial rates would result in a surplus of $94,727 million by the end of December 2016, or 34.9 percent of the estimated total incurred expenditures for the following year.

The sensitivity analysis indicates that the premium and general revenue financing established for 2016, together with existing Part B account assets would be adequate to cover estimated Part B costs for 2016 under current law, even if actual costs prove to be somewhat greater than expected.

5. Premium Rates and Deductible

As determined in accordance with section 1839 of the Act, listed are the 2016 Part B monthly premium rates to be paid by beneficiaries who file an individual tax return (including those who are single, head of household, qualifying widow(er) with dependent child, or married filing separately who lived apart from their spouse for the entire taxable year), or a joint tax return.

Beneficiaries who file an individual tax return with income:	Beneficiaries who file a joint tax return with income:	Income-related monthly adjustment amount	Total monthly premium amount
Less than or equal to $85,000	Less than or equal to $170,000	$0.00	$121.80
Greater than $85,000 and less than or equal to $107,000.	Greater than $170,000 and less than or equal to $214,000.	48.70	170.50
Greater than $107,000 and less than or equal to $160,000.	Greater than $214,000 and less than or equal to $320,000.	121.80	243.60
Greater than $160,000 and less than or equal to $214,000.	Greater than $320,000 and less than or equal to $428,000.	194.90	316.70
Greater than $214,000	Greater than $428,000	268.00	389.80

In addition, the monthly premium rates to be paid by beneficiaries who are married and lived with their spouse at any time during the taxable year, but file a separate tax return from their spouse, are listed as follows:

Beneficiaries who are married and lived with their spouse at any time during the year, but file a separate tax return from their spouse:	Income-related monthly adjustment amount	Total monthly premium amount
Less than or equal to $85,000	$0.00	$121.80
Greater than $85,000 and less than or equal to $129,000	194.90	316.70
Greater than $129,000	268.00	389.80

TABLE 5—ACTUARIAL STATUS OF THE PART B ACCOUNT IN THE SMI TRUST FUND UNDER THREE SETS OF ASSUMPTIONS FOR FINANCING PERIODS THROUGH DECEMBER 31, 2016

As of December 31,	2014	2015	2016
Actuarial status (in $ millions):			
Assets	68,074	58,261	76,806
Liabilities	23,716	23,292	23,754
Assets less liabilities	44,358	34,969	53,052
Ratio (in percent) [1]	15.9	11.9	17.0
Low cost projection:			
Actuarial status (in $ millions):			
Assets	68,0741	73,027	117,319
Liabilities	23,716	21,651	22,592
Assets less liabilities	44,358	51,376	94,727
Ratio (in percent) [1]	16.9	19.3	34.9
High cost projection:			
Actuarial status (in $ millions):			
Assets	68,074	43,044	34,020
Liabilities	23,716	24,982	25,058
Assets less liabilities	44,358	18,062	8,962
Ratio (in percent) [1]	15.0	5.6	2.5

[1] Ratio of assets less liabilities at the end of the year to the total incurred expenditures during the following year, expressed as a percent.

III. Collection of Information Requirements

This document does not impose information collection requirements, that is, reporting, recordkeeping or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

IV. Regulatory Impact Analysis

A. Statement of Need

Section 1839 of the Act requires us to annually announce (that is by September 30th of each year) the Part B monthly actuarial rates for aged and disabled beneficiaries as well as the monthly Part B premium. We also announce the Part B annual deductible because its determination is directly linked to the aged actuarial rate.

B. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Public Law 96–354), section 1102(b) of the Social Security Act, section 202 of the

Unfunded Mandates Reform Act of 1995 (March 22, 1995, Public Law 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major notices with economically significant effects ($100 million or more in any 1 year). For 2016 approximately 70 percent of Part B enrollees will be held harmless and pay no increase in their Part B premium, but the standard Part B premium rate, the Part B income-related premium rates, and the Part B deductible are higher than the respective amounts for 2015 and have an annual effect on the economy of $100 million or more. As a result, this notice is economically significant under section 3(f)(1) of Executive Order 12866 and is a major action as defined under the Congressional Review Act (5 U.S.C. 804(2)).

As discussed earlier, this notice announces that the monthly actuarial rates applicable for 2016 are $237.60 for enrollees age 65 and over and $282.60 for disabled enrollees under age 65. It also announces the 2016 monthly Part B premium rates to be paid by beneficiaries who file an individual tax return (including those who are single, head of household, qualifying widow(er) with a dependent child, or married filing separately who lived apart from their spouse for the entire taxable year), or a joint tax return.

Beneficiaries who file an individual tax return with income:	Beneficiaries who file a joint tax return with income:	Income-related monthly adjustment amount	Total monthly premium amount
Less than or equal to $85,000	Less than or equal to $170,000	$0.00	$121.80
Greater than $85,000 and less than or equal to $107,000.	Greater than $170,000 and less than or equal to $214,000.	48.70	170.50
Greater than $107,000 and less than or equal to $160,000.	Greater than $214,000 and less than or equal to $320,000.	121.80	243.60
Greater than $160,000 and less than or equal to $214,000.	Greater than $320,000 and less than or equal to $428,000.	194.90	316.70
Greater than $214,000	Greater than $428,000	268.00	389.80

In addition, the monthly premium rates to be paid by beneficiaries who are married and lived with their spouse at any time during the taxable year, but file a separate tax return from their spouse, are also announced and listed in the following chart:

Beneficiaries who are married and lived with their spouse at any time during the year, but file a separate tax return from their spouse:	Income-related monthly adjustment amount	Total monthly premium amount
Less than or equal to $85,000	$0.00	$121.80
Greater than $85,000 and less than or equal to $129,000	194.90	316.70
Greater than $129,000	268.00	389.80

The RFA requires agencies to analyze options for regulatory relief of small businesses, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Individuals and States are not included in the definition of a small entity. This notice announces the monthly actuarial rates for aged (age 65 and over) and disabled (under 65) beneficiaries enrolled in Part B of the Medicare SMI program beginning January 1, 2016. Also, this notice announces the monthly premium for aged and disabled beneficiaries as well as the income-related monthly adjustment amounts to be paid by beneficiaries with modified adjusted gross income above certain threshold amounts. As a result, we are not preparing an analysis for the RFA because the Secretary has determined that this notice will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 100 beds. As we discussed previously, we are not preparing an analysis for section 1102(b) of the Act because the Secretary has determined that this notice will not have a significant effect on a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1-year of $100 million in 1995 dollars, updated annually for inflation. In 2015, that threshold is approximately $144 million. Part B enrollees who are also enrolled in Medicaid have their monthly Part B premiums paid by Medicaid. The 2016 premium increase is estimated to be a cost to the state Medicaid programs that is less than $144 million per state. This notice does not impose mandates that will have a consequential effect of $144 million or more on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it publishes a proposed rule (and subsequent final rule) that imposes substantial direct compliance costs on State and local governments, preempts State law, or otherwise has

Federalism implications. We have determined that this notice does not significantly affect the rights, roles, and responsibilities of States. Accordingly, the requirements of Executive Order 13132 do not apply to this notice.

In accordance with the provisions of Executive Order 12866, this notice was reviewed by the Office of Management and Budget.

V. Waiver of Proposed Notice

The Medicare statute requires the publication of the monthly actuarial rates and the Part B premium amounts in September. We ordinarily use general notices, rather than notice and comment rulemaking procedures, to make such announcements. In doing so, we note that, under the Administrative Procedure Act, interpretive rules, general statements of policy, and rules of agency organization, procedure, or practice are excepted from the requirements of notice and comment rulemaking.

We considered publishing a proposed notice to provide a period for public comment. However, we may waive that procedure if we find, for good cause, that prior notice and comment are impracticable, unnecessary, or contrary to the public interest. The statute establishes the time period for which the premium rates will apply, and delaying publication of the Part B premium rate such that it would not be published before that time would be contrary to the public interest. Moreover, we find that notice and comment are unnecessary because the formulas used to calculate the Part B premiums are statutorily directed. Therefore, we find good cause to waive publication of a proposed notice and solicitation of public comments.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2015–N–3972]

Eighth Annual Sentinel Initiative; Public Workshop; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public workshop; request for comments.

SUMMARY: The Food and Drug Administration (FDA) is announcing a public workshop entitled ''Eighth Annual Sentinel Initiative Public Workshop.'' Convened by the Center for Health Policy at the Brookings Institution and supported by a cooperative agreement with FDA, this 1-day workshop will bring the stakeholder community together to discuss a variety of topics on active medical product surveillance. Topics will include an update on the state of FDA's Sentinel Initiative, including an overview of the transition from the Mini-Sentinel pilot to the full Sentinel System, and key activities and uses of the Sentinel System accomplished in 2015. In addition, panelists will discuss the future of the Sentinel System and opportunities to expand its medical product surveillance capabilities. This workshop will also engage stakeholders to discuss current and emerging Sentinel projects.

DATES: The public workshop will be held on February 3, 2016, from 9 a.m. to 4 p.m., Eastern Standard Time (EST).

Location: The public workshop will be held at the Renaissance Washington, DC Dupont Circle Hotel, 1143 New Hampshire Ave. NW., Washington, DC 20037. For additional travel and hotel information, please refer to *http://www.eventbrite.com/e/sentinel-public-event-2016-tickets-19294863456.* (FDA has verified the Web site addresses throughout this notice, but FDA is not responsible for subsequent changes to the Web sites after this document publishes in the **Federal Register**.)

There will also be a live webcast for those unable to attend the meeting in person (see *Streaming Webcast of the Public Workshop*).

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- Federal eRulemaking Portal: *http://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *http://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *http://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- Mail/Hand delivery/Courier (for written/paper submissions): Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2015–N–3972 for ''Eighth Annual Sentinel Initiative; Public Workshop.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *http://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the

claimed confidential information redacted/blacked out, will be available for public viewing and posted on *http://www.regulations.gov.* Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *http://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR MORE INFORMATION CONTACT: Carlos Bell, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 4343, Silver Spring, MD 20993–0002, 301–796–3714, FAX: 301–796–9832, email: *SentinelInitiative@fda.hhs.gov.*

Registration: To attend the public workshop, you must register before February 3, 2016, by visiting *http://www.eventbrite.com/e/sentinel-public-event-2016-tickets-19294863456.* You may also register for the live webcast by visiting this Web page. There will be no onsite registration. When registering, please provide the following information: Your name, title, company or organization (if applicable), postal address, telephone number, and email address. Those without Internet access should contact Carlos Bell to register (see **FOR MORE INFORMATION CONTACT**). There is no registration fee for the public workshop. However, registration will be on a first-come, first-served basis because seating is limited. Therefore, early registration is recommended. A 1-hour lunch break is scheduled, but food will not be provided. There are multiple restaurants within walking distance of the Renaissance Washington, DC Dupont Circle Hotel.

If you need special accommodations due to a disability, please contact Joanna Klatzman at the Brookings Institution (phone: 813–586–1201, email: *jklatzman@brookings.edu*) at least 7 days in advance.

Streaming Webcast of the Public Workshop: This public workshop will also be webcast (archived video footage will be available following the workshop). Persons interested in viewing the live webcast must register online by February 2, 2016, at 5 p.m. EST. Early registration is recommended because webcast connections are limited. Organizations are requested to register all participants but to view using one connection per location whenever possible. Webcast participants will be sent technical system requirements in advance of the event. Prior to joining the streaming webcast of the public workshop, it is recommended that you review these technical system requirements.

Meeting Materials: All event materials will be available to registered attendees via email before the workshop at the Eventbrite Web site at *http://www.eventbrite.com/e/sentinel-public-event-2016-tickets-19294863456.*

Transcripts: Please be advised that transcripts will not be available.

Dated: November 9, 2015.

Leslie Kux,

Associate Commissioner for Policy.

Food and Drug Administration

[Docket No. FDA–2015–N–0986]

Center for Devices and Radiological Health: Experiential Learning Program; General Training Program

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA), Center for Devices and Radiological Health (CDRH or Center) is announcing the 2015 Experiential Learning Program (ELP) General Training Program. This training component is intended to provide CDRH staff with an opportunity to understand the policies, laboratory practices, and challenges faced in broader disciplines that impact the device development life cycle. The purpose of this document is to invite medical device industry, academia, and health care facilities to request to participate in this formal training program for FDA's medical device review staff, or to contact CDRH for more information regarding the ELP General Training Program.

DATES: Submit either an electronic or written request for participation in the ELP General Training Program by December 16, 2015.

ADDRESSES: Submit either electronic requests to *http://www.regulations.gov* or written requests to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852. Identify proposals with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Latonya Powell, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 32, Rm. 5232, Silver Spring, MD 20993–0002, 301–796–6965, FAX: 301–827–3079, *Latonya.powell@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

CDRH is responsible for helping to ensure the safety and effectiveness of medical devices marketed in the United States. Furthermore, CDRH assures that patients and providers have timely and continued access to high-quality, safe, and effective medical devices. In support of this mission, the Center launched various training and development initiatives to enhance performance of its staff involved in regulatory review and in the premarket review process. One of these initiatives, the ELP Pilot, was launched in 2012 and fully implemented on April 2, 2013 (78 FR 19711).

CDRH is committed to advancing regulatory science; providing industry with predictable, consistent, transparent, and efficient regulatory pathways; and helping to ensure consumer confidence in medical devices marketed in the United States and throughout the world. The ELP General Training Program component is intended to provide CDRH staff with an opportunity to understand the policies, laboratory practices, and challenges faced in broader disciplines that impact the device development life cycle. This component is a collaborative effort to enhance communication and facilitate the premarket review process. Furthermore, CDRH is committed to understanding current industry practices, innovative technologies, regulatory impacts, and regulatory needs.

These formal training visits are not intended for FDA to inspect, assess,

judge, or perform a regulatory function (*e.g.*, compliance inspection), but rather, they are an opportunity to provide CDRH review staff a better understanding of the products they review. Through this notice, CDRH is formally requesting participation from companies, academia, and clinical facilities, including those that have previously participated in the ELP or other FDA site visit programs.

II. CDRH ELP General Training Program

A. Areas of Interest

In this training program, groups of CDRH staff will observe operations at research, manufacturing, academia, and health care facilities. The focus areas and specific areas of interest for visits may include the following:

TABLE 1—AREAS OF INTEREST—OFFICE OF DEVICE EVALUATION

Focus area	Specific areas of interest
Biocompatibility testing	Decision making process for biocompatibility evaluation and test selection (if needed); considerations for use of animal testing vs. in vitro testing; sample preparation of nanoscale, bioabsorbable, and in situ polymerized materials; evaluation of color additives.
Combination products	Devices coated with drug(s) or biologic(s); drug/biologic delivery products.
Emerging manufacturing methods	3-D printing; additive manufacturing; additional or unique validation and verification activities.
Management of clinical trials for medical devices.	Conducting clinical trials, overcoming common obstacles to starting and completing clinical trials, and interacting with various other stakeholders; preparing applications to request approval to conduct Investigational Device Exemption (IDE) clinical studies and responding to feedback received from FDA.
Reprocessing and sterilization	Reprocessing challenges in clinical environment, including techniques for understanding and incorporating these challenges from the clinical environment to labeling and validation studies; techniques for validating cleaning, disinfection, or sterilization instructions; challenges in validating cleaning, disinfection, or sterilization instructions; simulated use testing, particularly for validating sterilization methods and instructions; unique sterilization methods (*e.g.*, use of flexible bags, mixed sterilants sound waves, ultraviolet light, microwave radiation).

TABLE 2—AREAS OF INTEREST—OFFICE OF IN VITRO DIAGNOSTIC DEVICES AND RADIOLOGICAL HEALTH

Focus area	Specific areas of interest
Manufacturing of in vitro diagnostic devices.	Pre-analytical devices (*i.e.*, blood tubes), pathogen collection devices, micro collection/transport devices; general reagents, manual reagents; general assays, common point-of-care devices.
Instrument training of medical devices (manufacturer or clinical laboratory).	Hands-on instrument and system training; clinical implication of common laboratory testing; hands on familiarization of medical imaging equipment in a hospital setting.
Quality system in manufacturing environments based on 21 CFR part 820.	Observation of implemented quality systems practices based on current Good Manufacturing Practices; the manufacturing of medical imaging or therapeutic radiology technologies.

B. Site Selection

CDRH will be responsible for CDRH staff travel expenses associated with the site visits. CDRH will not provide funds to support the training provided by the site to this ELP General Training Program. Selection of potential facilities will be based on CDRH's priorities for staff training and resources available to fund this program. In addition to logistical and other resource factors, all sites must have a successful compliance record with FDA or another Agency with which FDA has a memorandum of understanding. If a site visit involves a visit to a separate physical location of another firm under contract with the site, that firm must agree to participate in the ELP General Training program and must also have a satisfactory compliance history.

III. Request To Participate

Submit proposals for participation with the docket number found in the brackets in the heading of this document. Received requests may be seen in the Division of Dockets Management (see **ADDRESSES**) between 9 a.m. and 4 p.m., Monday through Friday.

The proposal should include a description of your facility relative to focus areas described in tables 1 or 2. Please include the Area of Interest (see tables 1 or 2) that the site visit will demonstrate to CDRH staff, a contact person, site visit location(s), length of site visit, proposed dates, and maximum number of CDRH staff that can be accommodated during a site visit. Proposals submitted without this minimum information will not be considered. In addition, please include an agenda outlining the proposed training for the site visit. A sample request and agenda are available on the ELP Web site at *http://www.fda.gov/downloads/ScienceResearch/ScienceCareerOpportunities/UCM392988.pdf* and *http://www.fda.gov/scienceresearch/sciencecareeropportunities/ucm380676.htm.*

Dated: November 5, 2015.

Leslie Kux,

Associate Commissioner for Policy.

[FR Doc. 2015–28857 Filed 11–13–15; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–1977–N–0356 (Formerly 77N–0240); DESI 1786]

Drugs for Human Use; Drug Efficacy Study Implementation; Nitroglycerin Transdermal Systems; Withdrawal of Hearing Request; Withdrawal of Applications; Final Resolution of Hearing Requests Regarding Transdermal Systems Under Docket

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing that all outstanding hearing requests regarding nitroglycerin drug

products in transdermal systems under Docket No. FDA–1977–N–0356 (formerly 77N–0240) (DESI 1786) have been withdrawn. Therefore, shipment in interstate commerce of any nitroglycerin drug product in a transdermal system identified in this docket, or any identical, related, or similar (IRS) product, that is not the subject of an approved new drug application (NDA) or abbreviated new drug application (ANDA) is unlawful as of the effective date of this notice.

DATES: *Effective Date:* This notice is effective November 16, 2015.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- Federal eRulemaking Portal: *http://www.regulations.gov*. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *http://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *http://www.regulations.gov*.
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- Mail/Hand delivery/Courier (for written/paper submissions): Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–1977–N–0356 for ''Drugs for Human Use; Drug Efficacy Study Implementation; Nitroglycerin Transdermal Systems; Withdrawal of Hearing Request; Withdrawal of Applications; Final Resolution of Hearing Requests Regarding Transdermal Systems Under Docket.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *http://www.regulations.gov* or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *http://www.regulations.gov*. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *http://www.fda.gov/regulatoryinformation/dockets/default.htm*.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *http://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Barbara Wise, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 5160, Silver Spring, MD 20993–0002, 301–796–2089, email: *Barbara.Wise@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION:

I. Background

When enacted in 1938, the Federal Food, Drug, and Cosmetic Act (the FD&C Act) required that ''new drugs'' (21 U.S.C. 321(p)) be approved for safety by FDA before they could legally be sold in interstate commerce. Between 1938 and 1962, if a drug obtained approval, FDA considered drugs that were IRS (see 21 CFR 310.6(b)(1)) to the approved drug to be covered by that approval, and allowed those IRS drugs to be marketed without independent approval.

In 1962, Congress amended the FD&C Act to require that new drugs be proven effective for their labeled indications, as well as safe, in order to obtain FDA approval. This amendment also required FDA to conduct a retrospective evaluation of the effectiveness of the drug products that FDA had approved as safe between 1938 and 1962. FDA contracted with the National Academy of Science/National Research Council (NAS/NRC) to make an initial evaluation of the effectiveness of over 3,400 products that had been approved only for safety between 1938 and 1962. The NAS/NRC reports for these drug products were submitted to FDA in the late 1960s and early 1970s. The Agency reviewed and reevaluated the reports and published its findings in **Federal Register** notices. FDA's administrative implementation of the NAS/NRC reports was called the Drug Efficacy Study Implementation (DESI). DESI covered the approximately 3,400 products specifically reviewed by the NAS/NRC, as well as the even larger number of IRS products that entered the market without FDA approval.

All drugs reviewed under DESI are ''new drugs'' under the FD&C Act. If FDA's final DESI determination classifies a drug product as lacking substantial evidence of effectiveness for one or more indications, that drug product and those IRS to it may no longer be marketed for such indications and are subject to enforcement action as unapproved new drugs. If FDA's final DESI determination classifies the drug product as effective for one or more of its labeled indications, the drug can be marketed for such indications, provided it is the subject of an application approved for safety and effectiveness. Sponsors of drug products that have been found to be effective for one or more indications through the DESI process may rely on FDA's effectiveness

determinations, but typically must update their labeling to conform to the indication(s) found to be effective by FDA and include any additional safety information required by FDA. Those drug products with NDAs approved before 1962 for safety therefore require approved supplements to their original applications if one or more indications are found to be effective under DESI; IRS drug products require an approved NDA or ANDA, as appropriate. Furthermore, labeling for drug products classified as effective may contain only those indications for which the review found the product effective unless the firm marketing the product has received an approval for the additional indication(s).

II. Final Resolution of Hearing Requests Regarding Nitroglycerin Transdermal Systems Under Docket No. FDA–1977–N–0356 (formerly 77N–0240); DESI 1786

In a **Federal Register** notice published in February 1972, FDA announced its evaluation of reports received from NAS/NRC regarding certain single-entity coronary vasodilators, including controlled-release nitroglycerin tablets, for indications relating to the management, prophylaxis, and treatment of angina attacks (37 FR 4001, February 25, 1972). In a **Federal Register** notice published in December 1972, FDA temporarily exempted specified single-entity coronary vasodilators covered by DESI from the time limits established for completing DESI (37 FR 26623 at 26624, December 14, 1972). The December 1972 notice did not initially include controlled-release forms of the drugs, but a notice published in July 1973 allowed the case-by-case addition of controlled-release dosage forms, pending the completion of scientific studies that showed a drug was released in a defined manner which would permit well-controlled clinical trials to determine effectiveness (38 FR 18477, 18478, July 11, 1973; corrected by 38 FR 19920, July 25, 1973).

The December 1972 notice was amended again in August 1977, to announce the addition of controlled-release forms of specified coronary vasodilators, and the availability of guidelines and methods for determining the bioavailability of coronary vasodilators (42 FR 43127, August 26, 1977). The August 1977 notice specifically added nitroglycerin (topical ointment forms, conventional oral forms, and controlled release forms) to the list of drugs allowed to remain on the market while efficacy studies were conducted (42 FR 43127 at 43128). The December 1972 notice was further amended in October 1977, to extend the deadlines for submission of data and applications required for the coronary vasodilator products, and to announce the availability of guidelines for alternative methods of determining bioavailability for these products (42 FR 56156, October 21, 1977). Controlled-release transdermal nitroglycerin patches were included among the types of drugs permitted to remain on the market pending completion of efficacy studies based on their similarity to nitroglycerin ointment products (58 FR 38129 at 38130, July 15, 1993).

In July 1993, FDA revoked the temporary exemption for single-entity coronary vasodilator products containing nitroglycerin in a transdermal delivery system, which had allowed the products to stay on the market beyond the time limit scheduled for the implementation of DESI (58 FR 38129). FDA found the products to be effective for prevention of angina pectoris caused by coronary artery disease, and required sponsors to submit bioavailability/bioequivalence studies within 1 year (see 58 FR 38129 at 38130 to 38131). In March 1999, FDA reclassified one NDA and five ANDAs for nitroglycerin transdermal systems to lacking substantial evidence of effectiveness, based on the sponsors' failure to submit the required bioavailability/bioequivalence data (64 FR 14451, March 25, 1999). In the March 1999 notice, FDA proposed to withdraw approval of the applications and offered an opportunity for a hearing on the proposal to withdraw the applications.

In response to the March 1999 notice, Schwarz Pharma, Inc. (Schwarz Pharma), now a subsidiary of UCB, S.A., which was the sponsor of two of the five ANDAs, and Hercon Laboratories Corp. (Hercon), which was the sponsor of the remaining three ANDAs, requested hearings.[1] G.D. Searle & Co., which was the sponsor of the identified NDA, did not submit a hearing request.

At the request of Hercon, in the **Federal Register** of March 4, 2005 (70 FR 10651 at 10656), FDA withdrew approval of Hercon's three ANDAs that were the subject of the 1999 notice of opportunity for a hearing. On January 10, 2011, FDA sent a letter to Hercon to determine whether it remained interested in pursuing its hearing request. On February 9, 2011, Hercon responded by withdrawing its hearing request. On July 17, 2002, Schwarz Pharma withdrew its hearing request and requested withdrawal of its ANDAs that were the subject of the 1999 notice of opportunity for a hearing.

There are no longer outstanding hearing requests for nitroglycerin drug products in transdermal systems under this docket. Therefore, as proposed in the March 1999 notice of opportunity for hearing, FDA finds that the following applications lack substantial evidence of effectiveness and hereby withdraws approval of the applications under section 505(e) of the FD&C Act (21 U.S.C. 355): ANDA 88–727, DEPONIT (release rate of 0.2 mg of nitroglycerin per hour), held by Schwarz Pharma; ANDA 89–022, DEPONIT (release rate of 0.4 mg of nitroglycerin per hour), held by Schwarz Pharma; and NDA 20–146, NITRODISC, held by G.D. Searle & Co. Shipment in interstate commerce of any nitroglycerin drug product in a transdermal system identified in this docket, or any IRS product, that is not the subject of an approved NDA or ANDA is unlawful as of the effective date of this notice (see **DATES**). Any person who wishes to determine whether a specific product is covered by this notice should write to Barbara Wise at the Center for Drug Evaluation and Research (see **FOR FURTHER INFORMATION CONTACT**). Firms should be aware that, after the effective date of this notice (see **DATES**), FDA intends to take enforcement action without further notice against any firm that manufactures or ships in interstate commerce any unapproved product covered by this notice.

III. Discontinued Products

Firms must notify the Agency of certain product discontinuations in writing under section 506C(a) of the FD&C Act (21 U.S.C. 356c). See *http://www.fda.gov/Drugs/DrugSafety/DrugShortages/ucm142398.htm.* Some firms may have previously discontinued manufacturing or distributing products covered by this notice without discontinuing the listing as required under section 510(j) of the FD&C Act (21 U.S.C. 360(j)). Other firms may discontinue manufacturing or distributing listed products in response to this notice. All firms are required to electronically update the listing of their products under section 510(j) of the FD&C Act to reflect discontinuation of unapproved products covered by this notice (21 CFR 207.21(b)). Questions on electronic drug listing updates should be sent to *eDRLS@fda.hhs.gov.* In addition to the required update, firms can also notify the Agency of product discontinuation by sending a letter, signed by the firm's chief executive officer and fully identifying the

[1] The March 1999 notice incorrectly referred to Hercon as ''Hercon Pharmaceutical Company, Inc.''

discontinued product(s), including the product NDC number(s), and stating that the manufacturing and/or distribution of the product(s) have been discontinued. The letter should be sent electronically to Barbara Wise (see **FOR FURTHER INFORMATION CONTACT**). FDA plans to rely on its existing records, including its drug listing records, the results of any future inspections, or other available information, when it targets violative products for enforcement action.

IV. Reformulated Products

FDA cautions firms against reformulating products into unapproved new drugs and marketing under the same name or substantially the same name (including a new name that contains the old name). Reformulated products marketed under a name previously identified with a different active ingredient or combinations of active ingredients have the potential to confuse health care practitioners and harm patients.

[Docket No. FDA–2015–N–0001]

Gastroenterology and Urology Devices Panel of the Medical Devices Advisory Committee; Amendment of Notice

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is canceling the November 18, 2015, session and postponing the November 19, 2015, session of the Gastroenterology and Urology Devices Panel meeting. The meeting was announced in the **Federal Register** of October 7, 2015 (80 FR 60686). The November 19, 2015, session has been postponed due to the cancellation of the November 18, 2015, meeting. Future meeting dates will be announced in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Patricio Garcia, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 1535, Silver Spring MD 20993–0002, *patricio.garcia@fda.hhs.gov,* 301–796–6875, or FDA Advisory Committee Information Line, 1–800–741–8138 (301–443–0572 in the Washington DC area), and follow the prompts to the desired center or product area. Please call the Information Line for up-to-date information on this meeting.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2009–N–0394]

Request for Nominations for Voting Members on a Public Advisory Committee; Tobacco Products Scientific Advisory Committee

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is requesting nominations for voting members to serve on the Tobacco Products Scientific Advisory Committee, Office of Science, Center for Tobacco Products.

FDA seeks to include the views of women and men, members of all racial and ethnic groups, and individuals with and without disabilities on its advisory committees and, therefore encourages nominations of appropriately qualified candidates from these groups.

DATES: Nominations received on or before January 15, 2016 will be given first consideration for membership on the Tobacco Products Scientific Advisory Committee. Nominations received after January 15, 2016 will be considered for nomination to the committee as later vacancies occur.

ADDRESSES: All nominations for membership should be sent electronically by logging into the FDA Advisory Committee Membership Nomination Portal: *http://www.accessdata.fda.gov/scripts/FACTRSPortal/FACTRS/index.cfm* or by mail to Advisory Committee Oversight and Management Staff, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 32, Rm. 5103, Silver Spring, MD 20993–0002.

FOR FURTHER INFORMATION CONTACT: Regarding all nomination questions for membership, the primary contact is:

Caryn Cohen, Office of Science, Center for Tobacco Products, Food and Drug Administration, Center for Tobacco Products, Document Control Center, Building 71, Rm. G335, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 1–877–287–1373 (choose Option 5), FAX: 240–276–3655, *TPSAC@fda.hhs.gov*.

Information about becoming a member on an FDA advisory committee can also be obtained by visiting FDA's Web site by using the following link: *http://www.fda.gov/AdvisoryCommittees/default.htm.*

SUPPLEMENTARY INFORMATION: FDA is requesting nominations for voting members on the Tobacco Products Scientific Advisory Committee.

I. General Description of the Committee Duties

The Tobacco Products Scientific Advisory Committee (the Committee) advises the Commissioner of Food and Drugs (the Commissioner) or designee in discharging responsibilities related to the regulation of tobacco products. The Committee reviews and evaluates safety, dependence, and health issues relating to tobacco products and provides appropriate advice, information, and recommendations to the Commissioner.

II. Criteria for Voting Members

The Committee consists of 12 members including the Chair. Members and the Chair are selected by the Commissioner or designee from among individuals knowledgeable in the fields of medicine, medical ethics, science, or technology involving the manufacture, evaluation, or use of tobacco products. Almost all non-Federal members of this committee serve as Special Government Employees. Members will be invited to serve for terms of up to 4 years. The Committee includes nine technically qualified voting members, selected by the Commissioner or designee. The nine voting members include seven members who are physicians, dentists, scientists, or health care professionals practicing in the area of oncology, pulmonology, cardiology, toxicology, pharmacology, addiction, or any other relevant specialty. The nine voting members also include one member who is an officer or employee of a state or local government or of the Federal Government, and one member who is a representative of the general public.

III. Nomination Procedures

Any interested person may nominate one or more qualified individuals for membership on the advisory committee. Self-nominations are also accepted. Nominations must include a current, complete résumé or curriculum vitae for each nominee, including current business address and/or home address, telephone number, and email address if available. Nominations must also

specify the advisory committee for which the nominee is recommended. Nominations must also acknowledge that the nominee is aware of the nomination unless self-nominated. FDA will ask potential candidates to provide detailed information concerning such matters related to financial holdings, employment, and research grants and/or contracts to permit evaluation of possible sources of conflicts of interest.

This notice is issued under the Federal Advisory Committee Act (5 U.S.C. app. 2) and 21 CFR part 14, relating to advisory committees.

Dated: November 9, 2015.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Submission to OMB for Review and Approval; Public Comment Request

AGENCY: Health Resources and Services Administration, HHS.

ACTION: Notice.

SUMMARY: In compliance with Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the Health Resources and Services Administration (HRSA) has submitted an Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and approval. Comments submitted during the first public review of this ICR will be provided to OMB. OMB will accept further comments from the public during the review and approval period.

DATES: Comments on this ICR should be received no later than December 16, 2015.

ADDRESSES: Submit your comments, including the Information Collection Request Title, to the desk officer for HRSA, either by email to *OIRA_submission@omb.eop.gov* or by fax to 202–395–5806.

FOR FURTHER INFORMATION CONTACT: To request a copy of the clearance requests submitted to OMB for review, email the HRSA Information Collection Clearance Officer at *paperwork@hrsa.gov* or call (301) 443–1984.

SUPPLEMENTARY INFORMATION:

Information Collection Request Title: National Health Service Corps Scholar/Students to Service Travel Worksheet.

OMB No. 0915–0278—Extension.

Abstract: Clinicians participating in the HRSA National Health Service Corps (NHSC) Scholarship Program and the Students to Service (S2S) Loan Repayment Program use the online Travel Request Worksheet to receive travel funds from the federal government to visit eligible NHSC sites to which they may be assigned in accordance with the Public Health Service Act (PHSA), section 331(c)(1).

The travel approval process is initiated when an NHSC scholar or S2S participant notifies the NHSC of an impending interview at one or more NHSC-approved practice sites. The Travel Request Worksheet is also used to initiate the relocation process after an NHSC scholar or S2S participant has successfully been matched to an approved practice site in accordance with the PHSA, section 331(c)(3). Upon receipt of the Travel Request Worksheet, the NHSC will review and approve or disapprove the request and promptly notify the scholar or S2S participant, and the NHSC logistics contractor regarding travel arrangements and authorization of the funding for the site visit or relocation.

Need and Proposed Use of the Information: This information will facilitate NHSC scholar and S2S clinicians' receipt of federal travel funds that are used to visit high-need NHSC sites. The Travel Request Worksheet is also used to initiate the relocation process after an NHSC scholar or S2S participant has successfully been matched to an approved practice site. This information will be used by the NHSC in order to make travel arrangements for NHSC scholar and S2S clinicians to potential practice sites and to assist them in relocation arrangements once clinicians have secured employment at one of these sites.

Likely Respondents: Clinicians participating in the National Health Service Corps Scholarship Program and the Students to Service Loan Repayment Program

Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN-HOURS

Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours
Travel Request Worksheet	250	2	500	.0667	33
Total	250	2	500	.0667	33

Jackie Painter,

BILLING CODE 4165–15–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

The National Advisory Council on the National Health Service Corps; Notice for Request for Nominations

SUMMARY: The Health Resources and Services Administration (HRSA) is requesting nominations to fill vacancies on The National Advisory Council on the National Health Service Corps (hereafter referred to as NACNHSC). The NACNHSC was established under 42 U.S.C. 254j (Section 337 of the Public Health Service Act), as amended by Section 10501 of the Affordable Care Act. The NAC is governed by provisions of 92 (5 U.S.C. App. 2), also known as the Federal Advisory Committee Act, which sets forth standards for the formation and use of advisory committees.

DATES: The agency will receive nominations on a continuous basis.

ADDRESSES: All nominations should be submitted to Regina Wilson, Advisory Council Operations, Bureau of Health Workforce, HRSA, 11w45c, 5600 Fishers Lane, Rockville, Maryland 20857. Mail delivery should be addressed to Regina Wilson, Advisory Council Operations, Bureau of Health Workforce, HRSA, at the above address, or via email to: *RWilson@hrsa.gov*.

FOR FURTHER INFORMATION CONTACT: CAPT Shari Campbell, Designated Federal Official, National Advisory Council on National Health Service Corps at (301) 594–4251 or email *scampbell@hrsa.gov.* A copy of the current committee membership, charter and reports can be obtained by accessing the *http://nhsc.hrsa.gov/corpsexperience/aboutus/nationaladvisorycouncil/index.html*.

SUPPLEMENTARY INFORMATION: The NACNHSC is a group of health care providers and health care site administrators who are experts in the issues that communities with a shortage of primary care professionals face in meeting their health care needs. The NACNHSC is committed to effectively implementing its mandate to advise the Secretary of the Department of Health and Human Services (HHS) and, by designation, the Administrator of the Health Resources and Services Administration (HRSA).

The NACNHSC consists of 15 members who are Special Government Employees. Responsibilities of the Council include: (1) Serving as a forum to identify the priorities for the NHSC and bring forward and anticipate future program issues and concerns through ongoing communication with program staff, professional organizations, communities and program participants; (2) functioning as a sounding board for proposed policy changes by utilizing the varying levels of expertise represented on the Council to advise on specific program areas; (3) developing and distributing white papers and briefs that clearly state issues and/or concerns relating to the NHSC with specific recommendations for necessary policy revisions.

Specifically, HRSA is requesting nominations for voting members of the NACNHSC representing primary care, dental health, and mental health that demonstrate the following areas of expertise: (1) Working with underserved populations; (2) health care policy, recruitment and retention; (3) site administration; (4) customer service; (5) marketing; (6) organizational partnerships; (7) research; (8) and clinical practice. We are looking for nominees that either currently hold or have previously filled a role as site administrators, physicians, dentists, mid-level professionals (*i.e.*, nurses, physician assistants), mental or behavioral health professionals, and National Health Service Corps scholars or loan repayors.

The Department of Health and Human Services (HHS) will consider nominations of all qualified individuals with the areas of subject matter expertise noted above. Individuals may nominate themselves or other individuals, and professional associations and organizations may nominate one or more qualified persons for membership. Nominations shall state that the nominee is willing to serve as a member of the NACNHSC and appears to have no conflict of interest that would preclude the NACNHSC membership. Potential candidates will be asked to provide detailed information concerning financial interests, consultancies, research grants, and/or contracts that might be affected by recommendations of the NACNHSC to permit evaluation of possible sources of conflicts of interest.

A nomination package should include the following information for each nominee:

(1) A letter of nomination stating the name, affiliation, and contact information for the nominee, the basis for the nomination (*i.e.*, what specific attributes, perspectives, and/or skills does the individual possess that would benefit the workings of the NACNHSC); (2) a biographical sketch of the nominee and a copy of his/her curriculum vitae; and (3) the name, address, daytime telephone number, and email address at which the nominator can be contacted. Nominations will be considered as vacancies occur on the NACNHSC. Nominations should be updated and resubmitted every 3 years to continue to be considered for committee vacancies.

HHS strives to ensure that the membership of HHS federal advisory committees is balanced in terms of points of view represented and the committee's function. Every effort is made to ensure that the views of women, all ethnic and racial groups, and people with disabilities are represented on HHS federal advisory committees. The Department also encourages geographic diversity in the composition of the committee. The Department encourages nominations of qualified candidates from all groups and locations. Appointment to the NACNHSC shall be made without discrimination on the basis of age, race, ethnicity, gender, sexual orientation, disability, and cultural, religious, or socioeconomic status.

Jackie Painter,

Director, Division of the Executive Secretariat.

BILLING CODE 4165–15–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting of the Secretary's Advisory Committee on Human Research Protections

AGENCY: Office of the Secretary, Office of the Assistant Secretary for Health, Department of Health and Human Services.

ACTION: Notice.

SUMMARY: Pursuant to Section 10(a) of the Federal Advisory Committee Act, U.S.C. Appendix 2, notice is hereby given that the Secretary's Advisory Committee on Human Research Protections (SACHRP) will hold a meeting that will be open to the public. Information about SACHRP and the full meeting agenda will be posted on the SACHRP Web site at: *http://www.dhhs.gov/ohrp/sachrp/mtgings/index.html*.

DATES: The meeting will be held on Thursday, December 3, 2015, from 8:30 a.m. until 5:00 p.m. and Friday, December 4, 2015, from 8:30 a.m. until 4:30 p.m.

ADDRESSES: Fishers Lane Conference Center, Terrace Level, 5635 Fishers Lane, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Julia Gorey, J.D., Executive Secretary, SACHRP, or Jerry Menikoff, M.D., J.D., Director, Office for Human Research Protections (OHRP); U.S. Department of Health and Human Services, 1101 Wootton Parkway, Suite 200, Rockville, Maryland 20852; telephone: 240–453–8141; fax: 240–453–6909; email address: *SACHRP@hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the authority of 42 U.S.C. 217a, Section 222 of the Public Health Service Act, as amended, SACHRP was established to provide expert advice and recommendations to the Secretary of Health and Human Services, through the Assistant Secretary for Health, on issues and topics pertaining to or associated with the protection of human research subjects.

The meeting will open to the public at 8:30 a.m., on Thursday, December 3, followed by opening remarks from Dr. Jerry Menikoff, OHRP Director, and Dr. Jeffrey Botkin, SACHRP Chair. The Committee will hear the Subpart A Subcommittee (SAS) and Subcommittee on Harmonization (SOH) reports on the recent Notice of Proposed Rulemaking (NPRM) entitled Federal Policy for the Protection of Human Subjects (80 FR 53933, Sep. 8, 2015). Both days will be devoted to the discussion of the NPRM.

SAS was established by SACHRP in October 2006 and is charged with developing recommendations for consideration by SACHRP regarding the application of subpart A of 45 CFR part 46 in the current research environment.

SOH was established by SACHRP at its July 2009 meeting and charged with identifying and prioritizing areas in which regulations and/or guidelines for human subjects research adopted by various agencies or offices within HHS would benefit from harmonization, consistency, clarity, simplification and/or coordination.

The meeting will adjourn at 4:30 p.m. on December 4, 2015. Time for public comment sessions will be allotted both days.

Public attendance at the meeting is limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify one of the designated SACHRP points of contact at the address/phone number listed above at least one week prior to the meeting. Pre-registration is required for participation in the on-site public comment session; individuals may pre-register the day of the meeting. Individuals who would like to submit written statements as public comment should email or fax their comments to SACHRP at *SACHRP@hhs.gov* at least five business days prior to the meeting. Public comment should be relevant to agenda topics being discussed.

Dated: November 9, 2015.

Julia Gorey,

Executive Secretary, Secretary's Advisory Committee on Human Research Protections.

[FR Doc. 2015–29001 Filed 11–13–15; 8:45 am]

BILLING CODE 4150–36–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Diabetes and Digestive and Kidney Diseases; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of Diabetes and Digestive and Kidney Diseases Special Emphasis Panel, PAR–13–266-Biomarkers for Kidney and Liver Diseases (R01).

Date: February 4, 2016.

Time: 11:00 a.m. to 1:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Two Democracy Plaza, 6707 Democracy Boulevard, Bethesda, MD 20892, (Telephone Conference Call).

Contact Person: Najma Begum, Ph.D., Scientific Review Officer, Review Branch, DEA, NIDDK, National Institutes of Health, Room 749, 6707 Democracy Boulevard, Bethesda, MD 20892–5452, (301) 594–8894, *begumn@niddk.nih.gov*.

Name of Committee: National Institute of Diabetes and Digestive and Kidney Diseases Special Emphasis Panel, Fatty Liver Ancillary Studies.

Date: December 7, 2015.

Time: 10:00 a.m. to 12:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6100 Executive Boulevard, Rockville, MD 20852, (Telephone Conference Call).

Contact Person: Robert Wellner, Ph.D., Scientific Review Officer, Review Branch, DEA, NIDDK, National Institutes of Health, Room 706, 6707 Democracy Boulevard, Bethesda, MD 20892–5452, 301–594–4721, *rw175w@nih.gov*.

Name of Committee: National Institute of Diabetes and Digestive and Kidney Diseases Special Emphasis Panel, R01 Diabetes Ancillary Study.

Date: December 8, 2015.

Time: 5:00 p.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6100 Executive Boulevard, Rockville, MD 20852, (Telephone Conference Call).

Contact Person: Robert Wellner, Ph.D., Scientific Review Officer, Review Branch, DEA, NIDDK, National Institutes of Health, Room 706, 6707 Democracy Boulevard, Bethesda, MD 20892–5452, 301–594–4721, *rw175w@nih.gov*.

Name of Committee: National Institute of Diabetes and Digestive and Kidney Diseases Special Emphasis Panel, T1D Ancillary Studies.

Date: December 11, 2015.

Time: 10:00 a.m. to 12:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6100 Executive Boulevard, Rockville, MD 20852, (Telephone Conference Call).

Contact Person: Carol J. Goter-Robinson, Ph.D., Scientific Review Officer, Review Branch, DEA, NIDDK, National Institutes of Health, Room 748, 6707 Democracy Boulevard, Bethesda, MD 20892–5452, (301) 594–7791, *goterrobinsonc@extra.niddk.nih.gov*.

Submission for OMB Review; 30-Day Comment Request Scientific Information Reporting System (SIRS) NIGMS

SUMMARY: Under the provisions of Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request for review and approval of the information collection listed below. This proposed information collection was previously published in the **Federal Register** on August 23, 2015, page 48549 and allowed 60-days for public comment. One public comment was received. The purpose of this notice is to allow an additional 30 days for public comment. The National Institute of General Medical Sciences (NIGMS), National Institutes of Health, may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Direct Comments To OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, *OIRA_submission@omb.eop.gov* or by fax to 202–395–6974, Attention: NIH Desk Officer.

Comment Due Date: Comments regarding this information collection are best assured of having their full effect if received within 30-days of the date of this publication.

FOR FURTHER INFORMATION CONTACT: To obtain a copy of the data collection plans and instruments or request more information on the proposed project contact: Dr. W. Fred Taylor Ph.D., Branch Chief, Capacity-Building Branch (CBB), Division of Training, Workforce Development, and Diversity (TWD), NIGMS, NIH, 45 Center Drive, Room 2AS43S, Bethesda MD 20892, or call non-toll-free number (301) 435–0760 or Email your request, including your address to: *taylorwf@mail.nih.gov.* Formal requests for additional plans and instruments must be requested in writing.

Proposed Collection: Scientific Information Reporting System (SIRS), 0925-In Use Without OMB Control Number, National Institute of General Medical Sciences (NIGMS), National Institutes of Health (NIH).

Need and Use of Information Collection: The SIRS is an online data collection system whose purpose is to obtain supplemental information to the annual Research Performance Progress Report (RPPR) submitted by grantees of the Institutional Development Award (IDeA) Program and the Native American Research Center for Health (NARCH) Program. The SIRS will collect program-specific data not requested in the RPPR data collection system. The IDeA Program is a congressionally mandated, long-term interventional program administered by NIGMS aimed at developing and/or enhancing the biomedical research competitiveness of States and Jurisdictions that lag in NIH funding. The NARCH Program is an interagency initiative that provides support to American Indian and Alaska Native (AI/AN) tribes and organizations for conducting research in their communities in order to address health disparities, and to develop a cadre of competitive AI/AN scientists and health professionals. The data collected by SIRS will provide valuable information for the following purposes: (1) Evaluation of progress by individual grantees towards achieving grantee-designated and program-specified goals and objectives, (2) evaluation of the overall program for effectiveness, efficiency, and impact in building biomedical research capacity and capability, and (3) analysis of outcome measures to determine need for refinements and/or adjustments of different program features including but not limited to initiatives and eligibility criteria. Data collected from SIRS will be used for various regular or *ad hoc* reporting requests from interested stakeholders that include members of Congress, state and local officials, other federal agencies, professional societies, media, and other parties.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 613.

ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Respondents	Number of respondents	Number of responses per respondent	Average burden hours per response	Total annual burden hours
SIRS	Principal Investigators, COBRE Phase I	37	1	3.5	130
SIRS	Principal Investigators, COBRE Phase II	36	1	3.5	126
SIRS	Principal Investigators, COBRE Phase III	35	1	3.5	122
SIRS	Principal Investigators, INBRE	24	1	5.5	132
SIRS	Principal Investigators, IDeA–CTR	5	1	3.5	18
SIRS	Principal Investigators, NARCH	19	1	4.5	85

Dated: November 10, 2015.

Tammy Dean-Maxwell,

Project Clearance Branch Liaison, NIGMS, NIH.

National Institutes of Health

Notice of Opportunity for Public Comment on the Dietary Supplement Label Database

SUMMARY: This document, originally published on October 29, 2015 (80 FR 66549), has been amended to extend the comment receipt date to December 31, 2015. The Office of Dietary Supplements (ODS) at the National Institutes of Health, in partnership with the National Library of Medicine (NLM), has developed a Dietary Supplement Label Database (DSLD) that is compiling all information from the labels of dietary supplements marketed in the United States. ODS welcomes comments about features to add and functionality improvements to make so the DSLD may become a more useful tool to users.

A federal stakeholder panel for the DSLD will consider all comments received. The ODS requests input from academic researchers, government agencies, the dietary supplement industry, and other interested parties, including consumers. The DSLD can be accessed online at *http://dsld.nlm.nih.gov.*

DATES: To ensure full consideration, all comments must be received by 11:59 p.m. EST, December 31, 2015.

ADDRESSES: Interested individuals and organizations should submit their responses to *ODS@nih.gov.*

FOR FURTHER INFORMATION CONTACT: Richard Bailen MBA, MHA, Office of Dietary Supplements, National Institutes of Health, 6100 Executive Boulevard, Room 3B01, Bethesda, MD 20892–7517, Phone: 301–435–2920, Fax: 301–480–1845, Email: *ODS@nih.gov.*

SUPPLEMENTARY INFORMATION: The DSLD is a free resource that captures all information present on dietary supplement labels as provided by the seller, including contents, ingredient amounts, and any health-related product statements, claims, and cautions. It also provides a downloadable photo of each label. Users can search for and organize this information in various ways. Research scientists, for example, could use the DSLD to determine total nutrient intakes from food and supplements in populations they study. Health care providers can learn the content of products their patients are taking. Consumers might use the DSLD to search for and compare products of interest.

The DSLD currently contains 50,000 labels, and it is expected to grow rapidly over the next three years to include most of the estimated 75,000+ dietary supplement products sold to American consumers. The DSLD is updated regularly to include any formulation changes and label information in a product. It also includes the labels of products that have been discontinued and are no longer sold. More information about the DSLD and its current capabilities is available at *http://www.dsld.nlm.nih.gov* and at Dwyer *et al.,* 2014.[1]

ODS would like to receive ideas and suggestions for how the DSLD might evolve. What features might be added, improved, or enhanced—for example, in capabilities related to search, sorting, organization, and downloading of information—that would make it a more valuable tool for users?

Dated: November 5, 2015.

Lawrence A. Tabak,

Deputy Director, National Institutes of Health.

Prospective Grant of Exclusive License: Development of Cripto-1 Point of Care (POC) Tests and Kits for the Detection of Cancer

AGENCY: National Institutes of Health, Public Health Service, HHS.

ACTION: Notice.

SUMMARY: This notice, in accordance with 35 U.S.C. 209 and 37 CFR part 404, that the National Cancer Institute, National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an exclusive patent license to practice the inventions embodied in the following U.S. Patents and Patent Applications to Beacon Biomedical, Inc. (''Beacon'') located in Scottsdale, AZ, USA. A notice was previously published on December 6, 2013 in Volume 78, Number 235 for a period of thirty (30) days. Herein, the National Cancer Institute, National Institutes of Health, Department of Health and Human Services, is proposing a modification to the contents of the previous notice regarding the following intellectual property:

U.S. Provisional Patent Application No. 60/264,643 filed January 26, 2001 entitled ''Detection and Quantification of Cripto-1'' [HHS Ref. No. E–290–2000/0–US–01];

PCT Application No. PCT/US02/02225 filed January 23, 2002 entitled ''Detection and Quantification of Cripto-1'' [HHS Ref. No. E–290–2000/0–PCT–02];
U.S. Patent No. 7,078,176 issued July 18, 2006 entitled ''Detection and Quantification of Cripto-1'' [HHS Ref. No. E–290–2000/0–US–03];
Canada Patent No. 2,434,694 issued September 18, 2012 entitled ''Detection and Quantification of Cripto-1'' [HHS Ref. No. E–290–2000/0–CA–04];
Australian Patent No. 2002236871 issued April 12, 2007 entitled ''Detection and Quantification of Cripto-1'' [HHS Ref. No. E–290–2000/0–AU–05];
Europe Patent No. 1370869 issued December 27, 2006 entitled ''Detection and Quantification of Cripto-1'' [HHS Ref. No. E–290–2000/0–EP–06] and validated in Germany [HHS Ref. No. E–290–2000/0–DE–08], France [HHS Ref. No. E–290–2000/0–FR–09], Italy [HHS Ref. No. E–290–2000/0–IT–10], Spain [HHS Ref. No. E–290–2000/0–ES–12], Ireland [HHS Ref. No. E–290–2000/0–IE–12], Great Britain [HHS Ref. No. E–290–2000/0–GB–13] and Switzerland [HHS Ref. No. E–290–2000/0–CH–14];
Japan Patent No. 3821779 issued June 30, 2006 entitled ''Detection and Quantification of Cripto-1'' [HHS Ref. No. E–290–2000/0–JP–07].

The patent rights in these inventions have been assigned to the government of the United States of America.

The prospective exclusive license territory may be worldwide and the field of use may be limited to the use of the Licensed Patent Rights to make, use and sell FDA approved and 510(k) cleared, or foreign equivalent, Point of Care (POC) tests, services and kits for the purpose of disease state recognition, detection, diagnosis, monitoring, association and risk-stratification of cancer.

DATES: Only written comments and/or applications for a license which are received by the NCI Technology Transfer Center on or before December 1, 2015 will be considered.

ADDRESSES: Requests for copies of the patent application, inquiries, and comments relating to the contemplated exclusive license should be directed to: Rose Freel, Ph.D. Licensing and Patenting Manager, Technology Transfer Center, National Cancer Institute, 8490 Progress Drive, Riverside 5, Suite 400, Frederick, MD 21702; Telephone: (301) 624–1257; Email: *rose.freel@nih.gov*.

SUPPLEMENTARY INFORMATION: Cripto-1 (Cr-1) is a member of the epidermal growth factor (EGF)-related families of peptides and is involved in the development and progression of various human carcinomas. In particular, Cr-1 overexpression has been detected in 50–90% of carcinomas of the colon, pancreas, stomach, gallbladder, breast, lung, endometrium and cervix. Current methodologies of cancer detection, *e.g.* immunohistochemistry, can be time consuming, inconvenient and oftentimes, inaccurate, and therefore, a need exists for more efficient, reliable and less time consuming methods of detection. The invention relates to such a method of detection. This test could be used to more effectively screen and perhaps stage cancers. Additionally, should particular tumor cells, *e.g.* breast tumor cells, express a sufficiently high level of Cr-1, it may be possible to use the disclosed assay to detect and measure Cr-1 in human serum and/or plasma and possibly other physiological fluids.

The previous notice published on December 6, 2013 contemplated the prospective grant of an exclusive license in a field of use that was limited to the use of the Licensed Patent Rights to develop FDA approved and/or 510K cleared Point of Care (POC) tests and kits for the purpose of disease state recognition, detection, diagnosis, monitoring, association and risk-stratification of colon and rectal cancer, breast cancer, and lung cancer. This notice serves to modify the prospective grant that may be limited to field of use as described in the Summary above.

The prospective exclusive license will be royalty bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR part 404. The prospective exclusive license may be granted unless within fifteen (15) days from the date of this published notice, the NCI receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

Applications for a license in the field of use filed in response to this notice will be treated as objections to the grant of the contemplated exclusive license. Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: November 9, 2015.

Richard U. Rodriguez,

Associate Director, Technology Transfer Center, National Cancer Institute.

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Tribal consultation meetings.

SUMMARY: The Bureau of Indian Education (BIE) will be conducting three consultation sessions to obtain oral and written comments on issues concerning the Johnson O'Malley (JOM) program. The sessions continue the previous dialogues conducted by the Bureau of Indian Affairs (BIA) and BIE in 2012 and 2015.

DATES: See the **SUPPLEMENTARY INFORMATION** section of this document for the dates of Tribal consultation sessions. We will consider all comments received by January 15, 2016, 4:30 p.m. EST.

ADDRESSES: See the **SUPPLEMENTARY INFORMATION** section of this document for the location of these Tribal consultation sessions. Submit comments by mail or hand-deliver written comments to Ms. Jennifer L. Davis, Program Analyst-JOM, Bureau of Indian Education, 1951 Constitution Avenue NW., Mail Stop Room 312A–SIB Washington, DC 20245; facsimile to (202) 273–0030; or email to *JOMComments@bia.gov.*

FOR FURTHER INFORMATION CONTACT: Ms. Jennifer L. Davis, Program Analyst-JOM, telephone (202) 208–4397.

SUPPLEMENTARY INFORMATION: As required by 25 U.S.C. 2011(b), the purpose of this consultation is to provide Indian Tribes, school boards, parents, Indian organizations and other interested parties with an opportunity to comment on issues raised during previous consultation sessions and future plans for the JOM program. The topics for the JOM Tribal Consultation are use of the 2014 JOM student count and the JOM funding methodology for 2015, 2016, and thereafter. The issues will be described in more detail in a Tribal consultation booklet issued by the BIE before the consultation sessions.

Tribal consultation sessions will be held on the following dates at the following location:

Date	Time	Location
Tuesday, December 15, 2015	1 p.m.–4 p.m. (Eastern Standard Time).	Webinar/Teleconference. 1951 Constitution Ave. NW., South Interior Building, Room 304, Washington, DC 20240. Telephone Call-in #: 877–601–5705. Passcode: 2686962. Webinar Conference Access: URL: *https://www.mymeetings.com/nc/join/.* Conference number: PW5872129. Audience passcode: 2686962. Participants can join the event directly at: *https://www.mymeetings.com/nc/join.php?i=PW5872129&p=2686962&t=c.* Local Contact: Jennifer Davis. Phone: (202) 208–4397
Wednesday, December 16, 2015 ...	1 p.m.–4 p.m. (Eastern Standard Time).	Webinar/Teleconference. 1951 Constitution Ave. NW., South Interior Building, Room 304, Washington, DC 20240. Telephone Call-in #: 877–601–5705. Passcode: 2686962. Webinar Conference Access: URL: *https://www.mymeetings.com/nc/join/.* Conference number: PW5872131. Audience passcode: 2686962. BILLING CODE 4337–15–P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–IMR–GRTE–19244; PX. PD202594I.00.1]

Moose-Wilson Corridor Comprehensive Management Plan, Draft Environmental Impact Statement, Grand Teton National Park, Wyoming

AGENCY: National Park Service, Interior.

ACTION: Notice of availability.

SUMMARY: The National Park Service announces the availability of the Draft Environmental Impact Statement for the Moose-Wilson Corridor Comprehensive Management Plan, Grand Teton National Park, Wyoming. The Draft Environmental Impact Statement analyzes four alternatives for future management of the corridor. Alternative C has been identified as the NPS preferred alternative.

DATES: The National Park Service will accept comments from the public through January 15, 2016. In addition, a public meeting will be conducted in the Jackson, Wyoming, area in the fall of 2015. Please check local newspapers and the Web site below for additional information.

ADDRESSES: Information will be available for public review and comment online at *http://parkplanning.nps.gov/MooseWilson,* at the Grand Teton National Park Headquarters Building, 1 Teton Park Road, Moose, Wyoming, and at the Reference Desk of the Teton County Library, 125 Virginian Lane, Jackson, Wyoming.

FOR FURTHER INFORMATION CONTACT: David Vela, Superintendent, Grand Teton National Park, P.O. Drawer 170, Moose, Wyoming 83012–0170, (307) 739–3411, *GRTE_Superintendent@nps.gov,* or Daniel Noon, Chief of Planning and Environmental Compliance, P.O. Drawer 170, Moose, Wyoming 83012–0170, (307) 739–3465, *Daniel_Noon@nps.gov.*

SUPPLEMENTARY INFORMATION: In recent years, the Moose-Wilson corridor in Grand Teton National Park has experienced changes in ecological conditions, development patterns, and use by visitors and local residents. As a result, the National Park Service is conducting a comprehensive planning and environmental impact process to determine how best to protect park resources and values while providing appropriate opportunities for visitor

use, experience, and enjoyment of the corridor. The draft plan: (1) Identifies management strategies to address natural and cultural resource protection; (2) proposes management strategies to address visitor safety concerns and conflicts with wildlife; (3) addresses vehicle/bicycle management related to road use, trailhead parking areas and pullouts; (4) identifies management strategies related to the operation of facilities within the corridor; (5) considers if a multi-use pathway should be provided along Moose-Wilson Road; and (6) examines specific road realignment and paving options for the Moose-Wilson and Death Canyon Roads. Four management alternatives, Alternatives A through D, are analyzed in the Draft Environmental Impact Statement. Alternative A, the no-action alternative, would continue current management practices related to resources, visitor use, park operations, and maintenance of facilities within the Moose-Wilson corridor. Alternative B emphasizes managing the corridor as a visitor destination. Reduced crowding on Moose-Wilson Road and at destinations within the corridor would provide visitors an opportunity for self-discovery. Existing developed areas and facilities would be maintained where appropriate and removed or relocated in some areas to protect natural and cultural resources. Alternative C, the NPS preferred alternative, emphasizes the conservation legacy stories within the corridor. The intensity and timing of visitor use would be managed to effectively provide high quality visitor opportunities by reducing high traffic volumes and congestion. Development within the corridor would generally be maintained within the existing development footprint. Alternative D would enhance recreational opportunities with additional amenities. This alternative would integrate the Moose-Wilson corridor with the region's larger recreational network, and would enhance the recreational scenic driving experience by reducing high traffic volumes and congestion.

You are encouraged to comment on the draft plan via the Internet at *http://parkplanning.nps.gov/MooseWilson.* You may also mail comments to the Superintendent's Office, Attention: Moose-Wilson EIS, P.O. Drawer 170, Moose, Wyoming 83012–0170. You may also hand-deliver comments to the Grand Teton National Park Headquarters at Moose, Wyoming.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: October 22, 2015.

Sue E. Masica,

Regional Director, Intermountain Region, National Park Service.

[FR Doc. 2015–28016 Filed 11–13–15; 8:45 am]

BILLING CODE 4312–CB–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–513 and 731–TA–1249 (Final)]

Sugar From Mexico

Determinations

On the basis of the record [1] developed in the subject investigations, the United States International Trade Commission (''Commission'') determines, pursuant to the Tariff Act of 1930 (''the Act''), that an industry in the United States is materially injured by reason of imports of sugar from Mexico, provided for in statistical subheadings 1701.12.1000, 1701.12.5000, 1701.13.1000, 1701.13.5000, 1701.14.1000, 1701.14.5000, 1701.91.1000, 1701.91.3000, 1701.99.1010, 1701.99.1025, 1701.99.1050, 1701.99.5010, 1701.99.5025, 1701.99.5050, 1702.90.4000 and 1703.10.3000 of the Harmonized Tariff Schedule of the United States, that have been found by the Department of Commerce (''Commerce'') to be sold in the United States at less than fair value (''LTFV''), and to be subsidized by the government of Mexico.[2]

Background

The Commission, pursuant to sections 705(b) and 735(b) of the Act (19 U.S.C. 1671d(b) and 19 U.S.C. 1673d(b)), instituted these investigations effective March 28, 2014, following receipt of a petition filed with the Commission and Commerce by the American Sugar Coalition and its members: American Sugar Cane League, Thibodaux, LA; American Sugarbeet Growers Association, Washington, DC; American Sugar Refining, Inc., West Palm Beach, FL; Florida Sugar Cane League, Washington, DC; Hawaiian Commercial and Sugar Company, Puunene, HI; Rio Grande Valley Sugar Growers, Inc., Santa Rosa, TX; Sugar Cane Growers Cooperative of Florida, Belle Glade, FL; and United States Beet Sugar Association, Washington, DC. The final phase of the investigations was scheduled by the Commission following notification of preliminary determinations by Commerce that imports of sugar from Mexico were subsidized within the meaning of section 703(b) of the Act (19 U.S.C. 1671b(b)) and dumped within the meaning of 733(b) of the Act (19 U.S.C. 1673b(b)). Notice of the scheduling of the final phase of the Commission's investigations and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** on December 18, 2014 (79 FR 75591). On December 19, 2014, the Department of Commerce suspended the antidumping and countervailing duty investigations on sugar from Mexico (79 FR 78039, 78044, December 29, 2014). Subsequently, Commerce received timely requests to continue the antidumping and countervailing duty investigations on sugar from Mexico and resumed its investigations on May 4, 2015 (80 FR 25278). The Commission, therefore, revised its schedule to conform with Commerce's new schedule (80 FR 28009, May 15, 2015). The hearing was held in Washington, DC, on September 16, 2015, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission made these determinations pursuant to sections 705(b) and 735(b) of the Tariff Act of 1930 (19 U.S.C. 1671d(b) and 19 U.S.C. 1673d(b)). It completed and filed its determinations in these investigations on November 6, 2015. The views of the Commission are contained in USITC Publication 4577 (November 2015), entitled *Sugar from Mexico: Investigation Nos. 701–TA–513 and 731–TA–1249 (Final).*

By order of the Commission.

Issued: November 9, 2015.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

[1] The record is defined in sec. 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

[2] All six Commissioners voted in the affirmative.

INTERNATIONAL TRADE COMMISSION

[USITC SE–15–039]

Sunshine Act Meeting

AGENCY HOLDING THE MEETING: United States International Trade Commission.

TIME AND DATE: November 18, 2015 at 11:00 a.m.

PLACE: Room 101, 500 E Street SW., Washington, DC 20436, Telephone: (202) 205–2000.

STATUS: Open to the public

MATTERS TO BE CONSIDERED:

1. Agendas for future meetings: None.
2. Minutes.
3. Ratification List.
4. Vote in Inv. No. 701–TA–530 (Final) (Supercalendered Paper from Canada). The Commission is currently scheduled to complete and file its determination and views of the Commission on December 1, 2015.
5. Vote in Inv. Nos. 701–TA–473 and 731–TA–1173 (Review) (Potassium Phosphate Salts from China). The Commission is currently scheduled to complete and file its determinations and views of the Commission on December 4, 2015.
6. Outstanding action jackets: None.

In accordance with Commission policy, subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

Issued: November 12, 2015.

By order of the Commission.

William R. Bishop,

Supervisory Hearings and Information Officer.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–929]

Certain Beverage Brewing Capsules, Components Thereof, and Products Containing the Same; Commission Determination To Review in Part a Final Initial Determination Finding No Violation; Schedule for Briefing on the Issues Under Review and on Remedy, the Public Interest, and Bonding

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined to review in part a final initial determination (''ID'') issued by the presiding administrative law judge (''ALJ''), finding no violation of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337.

FOR FURTHER INFORMATION CONTACT: Robert Needham, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 708–5468. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server (*http://www.usitc.gov*). The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on September 9, 2014, based on a complaint filed by Adrian Rivera of Whittier, California, and Adrian Rivera Maynez Enterprises, Inc., of Santa Fe Springs, California (together, ''ARM''). 79 FR 53445–46. The complaint alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain beverage brewing capsules, components thereof, and products containing the same that infringe claims 5–8 and 18–20 of U.S. Patent No. 8,720,320 (''the '320 patent''). *Id.* at 53445. The Commission's notice of investigation named as respondents Solofill LLC of Houston, Texas (''Solofill''); DongGuan Hai Rui Precision Mould Co., Ltd. of Dong Guan City, China (''DongGuan''); Eko Brands, LLC (''Eko Brands''), of Woodinville, Washington; Evermuch Technology Co., Ltd., of Hong Kong, China and Ever Much Company Ltd. of Shenzhen, China (together, ''Evermuch''); Melitta USA, Inc. (''Melitta''), of North Clearwater, Florida; LBP Mfg., Inc. of Cicero, Illinois and LBP Packaging (Shenzhen) Co. Ltd. of Shenzhen, China (together, ''LBP''); Spark Innovators Corp. (''Spark''), of Fairfield, New Jersey; B. Marlboros International Ltd. (HK) (''B. Marlboros'') of Hong Kong, China; and Amazon.com, Inc. (''Amazon'') of Seattle, Washington. The Office of Unfair Import Investigations was also named as a party to the investigation. *Id.*

The Commission terminated the investigation with respect to Melitta, Spark, LBP, and B. Marlboros based on the entry of consent orders and terminated the investigation with respect to Amazon based on a settlement agreement. Notice (Dec. 18, 2014); Notice (Jan. 13, 2015); Notice (Mar. 27, 2015); Notice (Apr. 10, 2015). The Commission also found Eko Brands and Evermuch in default for failing to respond to the complaint and notice of investigation. Notice (May 18, 2015). Accordingly, Solofill and DongGuan (together, ''Respondents'') were the only respondents actively participating in the investigation at the time of the issuance of the final ID.

On September 4, 2015, the ALJ issued his final ID finding no violation of section 337. The ID found that ARM had established every element for finding a violation of section 337 except for infringement. The ID found that Respondents were not liable for direct infringement because direct infringement required the combination of Respondents' products with a third-party single serve beverage brewer, and that Respondents were not liable for induced or contributory infringement because they did not have pre-suit knowledge of the '320 patent. The ID did find that Respondents' products directly infringed when combined with a third-party single serve coffee brewer, that the asserted claims have not been shown invalid by clear and convincing evidence, and that ARM satisfied both the technical and economic prongs of the domestic industry requirement. The ALJ also issued his recommendation on remedy and bonding along with his ID.

On September 21, 2015, Complainants petitioned for review of the ID's findings that Respondents were not liable for induced and contributory infringement because of a lack of pre-suit knowledge, and Respondents petitioned for review of several of the ID's findings. On September 29, 2015, the parties opposed each other's petitions, and the Commission Investigative Attorney opposed both petitions.

Having examined the record of this investigation, including the ALJ's final ID, the petitions for review, and the responses thereto, the Commission has determined to review the final ID in part. Specifically the Commission has determined to review the following: (1) The ID's findings on the construction, infringement, and technical prong of the domestic industry requirement for the limitation ''a needle-like structure,

disposed below the base''; (2) the ID's findings on induced and contributory infringement; (3) the ID's findings that the asserted claims are not invalid for a lack of written description, as anticipated by Beaulieu and the APA, or as obvious; and (4) the ID's findings on the economic prong of the domestic industry requirement. The Commission has determined not to review the remaining findings in the ID.

In connection with its review, the Commission is interested in briefing only on the following issue:

The Commission recently determined that the ''knowledge of the patent'' element for contributory infringement can be satisfied through service of a section 337 complaint. *See* Commission Opinion in *Certain Television Sets, Television Receives, Television Tuners, and Components Thereof,* Inv. No. 337–TA–910, at 41–43 (public version dated Oct. 30, 2015). Please explain how that determination impacts the issues of contributory and induced infringement in this investigation.

The parties have been invited to brief only the discrete issue described above, with reference to the applicable law and evidentiary record. The parties are not to brief other issues on review, which are adequately presented in the parties' existing filings.

In connection with the final disposition of this investigation, the Commission may (1) issue an order that could result in the exclusion of the subject articles from entry into the United States, and/or (2) issue a cease and desist order that could result in the respondent being required to cease and desist from engaging in unfair acts in the importation and sale of such articles. Accordingly, the Commission is interested in receiving written submissions that address the form of remedy, if any, that should be ordered. If a party seeks exclusion of an article from entry into the United States for purposes other than entry for consumption, the party should so indicate and provide information establishing that activities involving other types of entry either are adversely affecting it or likely to do so. For background, *see Certain Devices for Connecting Computers via Telephone Lines,* Inv. No. 337–TA–360, USITC Pub. No. 2843 (December 1994) (Commission Opinion).

If the Commission contemplates some form of remedy, it must consider the effects of that remedy upon the public interest. The factors the Commission will consider include the effect that an exclusion order and/or a cease and desist order would have on (1) the public health and welfare, (2) competitive conditions in the U.S. economy, (3) U.S. production of articles that are like or directly competitive with those that are subject to investigation, and (4) U.S. consumers. The Commission is therefore interested in receiving written submissions that address the aforementioned public interest factors in the context of this investigation.

If the Commission orders some form of remedy, the U.S. Trade Representative, as delegated by the President, has 60 days to approve or disapprove the Commission's action. *See* Presidential Memorandum of July 21, 2005, 70 FR 43251 (July 26, 2005). During this period, the subject articles would be entitled to enter the United States under bond, in an amount determined by the Commission and prescribed by the Secretary of the Treasury. The Commission is therefore interested in receiving submissions concerning the amount of the bond that should be imposed if a remedy is ordered.

Written Submissions: The parties to the investigation are requested to file written submissions on the issue identified in this notice. Parties to the investigation, interested government agencies, and any other interested parties are encouraged to file written submissions on the issues of remedy, the public interest, and bonding. Such submissions should address the recommended determination by the ALJ on remedy and bonding. The complainants and the Commission Investigative Attorney are also requested to submit proposed remedial orders for the Commission's consideration. The complainants are additionally requested to state the date that the '320 patent expires, the HTSUS numbers under which the accused products are imported, and to supply a list of known importers of the products at issue. The entirety of the parties' written submissions must not exceed 50 pages, and must be filed no later than close of business on November 20, 2015. Reply submissions must not exceed 25 pages, and must be filed no later than the close of business on December 1, 2015. No further submissions on these issues will be permitted unless otherwise ordered by the Commission.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above and submit 8 true paper copies to the Office of the Secretary by noon the next day pursuant to § 210.4(f) of the Commission's Rules of Practice and Procedure (19 CFR 210.4(f)). Submissions should refer to the investigation number (''Inv. No. 337–TA–929'') in a prominent place on the cover page and/or the first page. (*See* Handbook for Electronic Filing Procedures, *http://www.usitc.gov/secretary/fed_reg_notices/rules/handbook_on_electronic_filing.pdf*). Persons with questions regarding filing should contact the Secretary (202–205–2000).

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. A redacted non-confidential version of the document must also be filed simultaneously with any confidential filing. All non-confidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: November 9, 2015.

Lisa R. Barton,

Secretary to the Commission.

DEPARTMENT OF JUSTICE

Antitrust Division

Notice Pursuant to the National Cooperative Research and Production Act of 1993—High Density Packaging User Group International, Inc.

Notice is hereby given that, on October 15, 2015, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), High Density Packaging User Group International, Inc. (''HDPUG'') has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Hangzhou H3C Technologies Co., Ltd., Hangzhou City, PEOPLE'S REPUBLIC

OF CHINA; Semi, San Jose, CA; UL LLC, San Jose, CA; I3 Electronics, Endicott, NY; and DuPont, Durham, NC, have been added as parties to this venture.

Also, Philips Medical, Murray Hill, NJ; Arlon LLC, Bear, DE; and Integral Technology, Lake Forrest, CA, have withdrawn as parties to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and HDPUG intends to file additional written notifications disclosing all changes in membership.

On September 14, 1994, HDPUG filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on March 23, 1995 (60 FR 15306).

The last notification was filed with the Department on February 23, 2015. A notice was published in the **Federal Register** pursuant to Section 6(b) of the Act on April 2, 2015 (80 FR 17785).

Notice Pursuant to the National Cooperative Research and Production Act of 1993—Silicon Integration Initiative, Inc.

Notice is hereby given that, on September 28, 2015, pursuant to section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), Silicon Integration Initiative, Inc. (''Si2'') filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Advanced Micro Devices, Sunnyvale, CA; The National Institute of Advanced Industrial Science and Technology (AIST), Tokyo, JAPAN; Altera, San Jose, CA; ams AG, Unterpremstaetten, AUSTRIA; AnaGlobe Technology, Inc., Hsinchu, TAIWAN; Analog Devices, Inc., Norwood, MA; ANSYS, Inc., Canonsburg, PA; ARM, Cambridge, UNITED KINGDOM; Atoptech, Inc., Santa Clara, CA; Aurrion, Inc., Santa Barbara, CA; Avago Technologies, Inc., San Jose, CA; AWR/National Instruments Corporation, Austin, TX; Berkeley Wireless Research Center, Berkley, CA; Blackcomb Design Automation, Inc., Vancouver, CANADA; Broadcom Corporation, Irvine, CA; Concept Engineering GmbH, Freiburg, GERMANY; Coupling Wave Solutions, Grenoble, FRANCE; Computer Simulation Technology (CST), Darmstadt, GERMANY; Denso, Kariya, JAPAN; Dolphin Integration, Grenoble, FRANCE; eASIC Corporation, Santa Clara, CA; EDXACT, Voiron, FRANCE; Entasys Design, Seoul, REPUBLIC OF KOREA; Fractal Technologies, Los Gatos, CA; Fraunhofer Institute for Integrated Circuits IIS, Dresden, GERMANY; GLOBALFOUNDRIES, Santa Clara, CA; Huada Empyrean Software Co. Ltd./ICScape, Beijing, PEOPLE'S REPUBLIC OF CHINA; IMEC, Leuven, BELGIUM; Infineon Technologies, Nuebiberg, GERMANY; Jedat, Tokyo, JAPAN; Kenji Morohashi, Yokohama, JAPAN; Keysight Technologies, Santa Rosa, CA; Lattice Semiconductor Limited, Portland, OR; Luceda N.V., Dendermonde, BELGIUM; Lumerical Solutions, Inc., Vancouver, CANADA; Marvell Semiconductor, Inc., Santa Clara, CA; MediaTek, Hsinchu, TAIWAN,; Micron Technology, Inc., Folsom, CA; Monozukuri S.p.A., Rome, ITALY; NXP Semiconductors, Eindhoven, THE NETHERLANDS; Oracle, Redwood City, CA; PDF Solutions, Inc., San Jose, CA; Peregrine Semiconductor Corporation, San Diego, CA; Phoenix Software, Enschede, THE NETHERLANDS; ProPlus Design Solutions, San Jose, CA; Pulsic Limited, Bristol, UNITED KINGDOM; Qorvo, Inc., Richardson, TX; Qualcomm, Inc., San Diego, CA; Raytheon Company, Waltham, MA; Robust Chip Inc., Pleasanton, CA; Sage Design Automation, Santa Clara, CA; Samsung Electronics Co., Ltd., Hwasung-City, REPUBLIC OF KOREA; Sandia National Laboratories, Albuquerque, NM; Silicon

Frontline Technology, Campbell, CA; SiConTech, Inc., Austin, TX; Silvaco, Inc., Santa Clara, CA; SK Hynix, Inc., Icheon-si, REPUBLIC OF KOREA; Sony, Tokyo, JAPAN; Spectral Design & Test, Inc., Somerville, NJ; Semiconductor Technology Academic Research (STARC), Yokohama, JAPAN; Synopsys, Inc., Mountain View, CA; Taiwan Semiconductor Manufacturing Company Limited (TSMC), Hsinchu, TAIWAN; Teklatech A/S, Copenhagen, DENMARK; Texas Instruments, Dallas, TX; Thales Group, Paris, FRANCE; Tool Corporation, Tokyo, JAPAN; Toshiba Corporation, Kawasaki, JAPAN; Tyndall National Institute, Cork City, IRELAND; United Microelectronics Corporation (UMC), Hsinchu City, TAIWAN; and Zuken, Inc., Yokohama, JAPAN, have been added as parties to this venture.

Also, Chipdata, Inc., Richardson, TX; Electronic Tools Co., Sonoma, CA; Ericsson, Stockholm, SWEDEN; Fujitsu Ltd., Sunnyvale, CA; Monterey Design Systems, Inc., Sunnyvale, CA; Multi-Gig Limited, Wellingborough, UNITED KINGDOM; Semiconductor Research Corporation (SRC), Research Triangle Park, NC; Motorola, Inc., Tempe, AZ; and Sagantec, Fremont, CA, have withdrawn as parties to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and Si2 intends to file additional written notifications disclosing all changes in membership.

On December 30, 1988, Si2 filed its original notification pursuant to section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to section 6(b) of the Act on March 13, 1989 (54 FR 10456).

The last notification was filed with the Department on July 30, 2003. A notice was published in the **Federal Register** pursuant to section 6(b) of the Act on August 29, 2003 (68 FR 52057).

DEPARTMENT OF JUSTICE

[OMB Number 1103–NEW]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Acquisition 360 Survey

AGENCY: Justice Management Division, Department of Justice.

ACTION: 30-day notice.

SUMMARY: The Department of Justice (DOJ), Justice Management Division will submit the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. This proposed information was previously published in the **Federal Register** at 80 *FR* 53891, on September 8, 2015, allowing for a 60 day comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until December 16, 2015.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Mr. Neil Ryder, Director, Internal Review and Evaluation, United States Department of Justice, Justice Management Division, Two Constitution Square, 145 N Street NE., Room 8W–222, Washington, DC 20530. Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20503 or sent to *OIRA_submissions@omb.eop.gov*.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of this information collection:

1 *Type of Information Collection:* New Collection.

2 *The Title of the Form/Collection:* Acquisition 360 Survey.

3 *The agency form number, if any, and the applicable component of the Department sponsoring the collection:*

Form number: None.

Component: Department of Justice, Justice Management Division.

4 *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Business or other for-profit.

Other: Not-for-profit institutions and Federal Government stakeholders

Abstract: The Department of Justice (DOJ) Senior Procurement Executive will use the information to help identify DOJ acquisition process improvements and increase customer satisfaction.

5 *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* An estimated 450 respondents will take 20 minutes to complete the survey.

6 *An estimate of the total public burden (in hours) associated with the collection:* The estimated annual public burden associated with this collection is 150 hours.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., Room 3E–405B, Washington, DC 20530.

Dated: November 10, 2015.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–NL–P

DEPARTMENT OF JUSTICE

[OMB Number 1105–0025]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Extension Without Change, of a Previously Approved Collection Federal Coal Lease Request

AGENCY: Antitrust Division, Department of Justice.

ACTION: 30-day notice.

SUMMARY: The Department of Justice (DOJ), Antitrust Division (ATR), will be submitting the following information collection request to the Office of

Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. This proposed information collection was previously published in the **Federal Register** at 80 FR 54594 on September 10, 2015, allowing for a 60 day comment period.

DATES: Comments are encouraged and will be accepted for 30 days until January 15, 2016.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Jill Ptacek, Attorney, Antitrust Division, United States Department of Justice, 450 Fifth Street NW., Suite 8000, Washington, DC 20530 (phone: 202–307–6607). Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20530 or sent to *OIRA_submissions@omb.eop.gov.*

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and

—Whether the agency's collection process minimizes the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of this information collection:

1 *Type of Information Collection:* Extension of a currently approved collection.

2 *The Title of the Form/Collection:* Federal Coal Lease Reserves.

3 *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* The form numbers are ATR–139 and ATR–140. The applicable component within the Department of Justice is the Antitrust Division.

4 *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Business or other for profit.

Other: None.

Abstract: The Department of Justice evaluates the competitive impact of issuances, transfers and exchanges of federal coal leases. These forms seek information regarding a prospective coal lessee's existing coal reserves. The Department uses this information to determine whether the issuance, transfer or exchange of the federal coal lease is consistent with the antitrust laws.

5 *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 20 respondents will complete each form, with each response taking approximately two hours.

6 *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated 40 annual burden hours associated with this collection, in total.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E.405B, Washington, DC 20530.

Dated: November 11, 2015.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

[FR Doc. 2015–28931 Filed 11–13–15; 8:45 am]

BILLING CODE 4410–11–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Amendment to Consent Decree Under the Comprehensive Environmental Repsonse, Compensation, and Liability Act

On November 5, 2015, the Department of Justice lodged a proposed Amendment to Consent Decree with the United States District Court for the Northern District of New York in the lawsuit entitled *United States of America* v. *Amphenol Corporation, et al.,* Civil Action No. 3:01–CV–0637. The caption is different from the caption in the original Consent Decree since companies have gone out of business, changed their names, etc.

The original Consent Decree, entered in 2001, resolved certain claims of the United States under Sections 106 and 107(a) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended (''CERCLA''), 42 U.S.C. 9606 and 9607(a), in connection with the performance of the remedial design and remedial action (''RD/RA'') selected for the Tri-Cities Barrel Superfund Site, located in the Town of Fenton, Broome County, New York (the ''Site''), by the United States Environmental Protection Agency (''EPA'') in a Record of Decision executed March 31, 2000, and the reimbursement of response costs. The original Consent Decree required the active remediation of the soils, sediments and groundwater at the Site, with the soils and sediment remediation having now been completed. The Amendment to the Consent Decree is made necessary because EPA in 2011 issued a ROD Amendment which changes the active groundwater remediation to Monitoring Natural Attenuation (MNA).

The publication of this notice opens a period for public comment on the Amendment to Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, John C. Cruden and should refer to *United States of America* v. *Amphenol Corporation, et al.,* D.J. Ref. No. 90–11–3–1514/1. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	*Send them to:*
By email	*pubcomment-ees.enrd@usdoj.gov.*
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, D.C. 20044–7611.

During the public comment period, the Amendment to Consent Decree may be examined and downloaded at this Justice Department Web site: *http://www.justice.gov/enrd/consent-decrees.* We will provide a paper copy of the Amendment to Consent Decree upon written request and payment of reproduction costs. Please mail your request and payment to:

Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Please enclose a check or money order for $17.13 (25 cents per page reproduction cost) payable to the United States Treasury, if you are requesting the new Appendices to the Amendment, or $5.63 if you are only requesting the Amendment to the Consent Decree.

Robert E. Maher Jr.,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

[FR Doc. 2015–28850 Filed 11–13–15; 8:45 am]

BILLING CODE 4410–15–P

DEPARTMENT OF LABOR

Employment and Training Administration

Labor Certification Process for the Temporary Employment of Aliens in Agriculture in the United States: Adverse Effect Wage Rate for Range Occupations Through 2016

AGENCY: Employment and Training Administration, Department of Labor.

ACTION: Notice.

SUMMARY: The Employment and Training Administration (ETA) of the Department of Labor (Department) is issuing this notice to announce the new Adverse Effect Wage Rate (AEWR) for the employment of temporary or seasonal nonimmigrant foreign workers (H–2A workers) to perform herding or production of livestock on the range.

AEWRs are the minimum wage rates the Department has determined must be offered and paid by employers to H–2A workers and workers in corresponding employment so that the wages of similarly employed U.S. workers will not be adversely affected. 20 CFR 655.100(b). In this notice, the Department announces the new AEWR for workers engaged in the herding or production of livestock on the range, as required by the methodology established in the *Temporary Agricultural Employment of H–2A Foreign Workers in the Herding or Production of Livestock on the Range in the United States,* 80 FR 62958, 63067–63068 (Oct. 16, 2015); 20 CFR 655.211.

DATES: *Effective Date:* This notice is effective November 16, 2015.

FOR FURTHER INFORMATION CONTACT: William W. Thompson, II, Acting Administrator, Office of Foreign Labor Certification, U.S. Department of Labor, Room C–4312, 200 Constitution Avenue NW., Washington, DC 20210. Telephone: 202–693–3010 (this is not a toll-free number). Individuals with hearing or speech impairments may access the telephone number above via TTY by calling the toll-free Federal Information Relay Service at 1–800–877–8339.

SUPPLEMENTARY INFORMATION: On October 16, 2015, the Department published regulations in the **Federal Register** establishing standards and procedures for employers seeking to hire foreign temporary agricultural workers for occupations involving the herding and production of livestock on the range. *Temporary Agricultural Employment of H–2A Foreign Workers in the Herding or Production of Livestock on the Range in the United States,* 80 FR 62958 (Oct. 16, 2015) (H–2A Herder Rule). Effective for all work performed on or after November 16, 2015, including for work certified under earlier special procedures, the H–2A Herder Rule requires employers to offer, advertise in recruitment and pay each worker employed under 20 CFR 655.200–655.235 a wage that is at least the highest of: (i) The monthly AEWR, (ii) the agreed-upon collective bargaining wage, or (iii) the applicable minimum wage imposed by Federal or State law or judicial action. 20 CFR 655.211(a)(1). Further, when the monthly AEWR is adjusted during a work contract, and is higher than both the agreed-upon collective bargaining wage and the applicable minimum wage imposed by Federal or State law or judicial action in effect at the time the work is performed, the employer must pay that adjusted monthly AEWR upon publication by the Department in the **Federal Register**. 20 CFR 655.211(a)(2).

As provided in 20 CFR 655.211(c) of the H–2A Herder Rule, the methodology for establishing the monthly AEWR for range occupations in all states is based on the current Federal minimum wage ($7.25/hour) multiplied by 48 hours per week, and then multiplied by 4.333 weeks per month. In applying the transition wage rate methodology set forth under 20 CFR 655.211(d)(1), the Department is setting the initial national monthly AEWR at 80 percent of the full wage calculated using the H–2A Herder Rule methodology. Thus, the national monthly AEWR rate for all range occupations in the H–2A program is calculated at ($7.25 \times 48 \times 4.333 \times .80$ = 1,206.31) or $1,206.31.[1]

Accordingly, any employer certified or seeking certification for range workers must pay each worker a wage that is at least the highest of the monthly AEWR of $1,206.31, the agreed-upon collective bargaining wage, or the applicable minimum wage imposed by Federal or State legislation or judicial action, effective immediately. Given the mid-month effective date of the new AEWR, the prorated amount due for employers obligated to pay the new AEWR for work performed for the portion of November following the effective date is $603.15.

Portia Wu,

Assistant Secretary, Employment and Training Administration.

[FR Doc. 2015–28934 Filed 11–13–15; 8:45 am]

BILLING CODE 4510–FP–P

[1] Because less than two months remain in 2015, and the AEWR for workers engaged in the herding or production of livestock on the range announced in this notice applies through calendar year 2016 under 20 CFR 655.211(d), a separate notice will not be issued for 2016. Beginning with 2017, an updated AEWR will be published annually.

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Disclosures for Participant Directed Individual Account Plans

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) is submitting the Employee Benefits Security Administration (EBSA) sponsored information collection request (ICR) titled, ''Disclosures for Participant Directed Individual Account Plans,'' to the Office of Management and Budget (OMB) for review and approval for continued use, without change, in accordance with the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.* Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before December 16, 2015.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov Web site at *http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201510-1210-009* (this link will only become active on the day following publication of this notice) or by contacting Michel Smyth by telephone at 202–693–4129, TTY 202–693–8064, (these are not toll-free numbers) or by email at *DOL_PRA_PUBLIC@dol.gov.*

Submit comments about this request by mail or courier to the Office of Information and Regulatory Affairs,

Attn: OMB Desk Officer for DOL–EBSA, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503; by Fax: 202–395–5806 (this is not a toll-free number); or by email: *OIRA_submission@omb.eop.gov.* Commenters are encouraged, but not required, to send a courtesy copy of any comments by mail or courier to the U.S. Department of Labor—OASAM, Office of the Chief Information Officer, Attn: Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW., Washington, DC 20210; or by email: *DOL_PRA_PUBLIC@dol.gov.*

FOR FURTHER INFORMATION CONTACT: Michel Smyth by telephone at 202–693–4129, TTY 202–693–8064, (these are not toll-free numbers) or by email at *DOL_PRA_PUBLIC@dol.gov.*

Authority: 44 U.S.C. 3507(a)(1)(D).

SUPPLEMENTARY INFORMATION: This ICR seeks to extend PRA authority for the Disclosures for Participant Directed Individual Account Plans information collection. Employee Retirement Income Security Act of 1974 (ERISA) section 404(c), 29 U.S.C. 1104(c), provides that, if an individual account pension plan permits a participant or beneficiary to exercise control over assets in his or her account and the participant or beneficiary in fact exercises such control (as determined under DOL regulations), the participant or beneficiary shall not be deemed to be a fiduciary by such exercise of control and no person otherwise a fiduciary to the plan shall be liable for any loss or breach that results solely from this exercise of control. Regulations 29 CFR 2550.404a–5 provides that, when a plan allocates investment responsibilities to participants or beneficiaries, the plan administrator must take action to ensure they are provided with sufficient information regarding the plan and its investment options, including fee and expense information, to make informed decisions with regard to the management of their individual accounts; therefore, the regulation requires a plan administrator to provide each participant or beneficiary with certain plan-related information and investment-related information. ERISA section 404 authorizes this information collection. *See* 29 U.S.C. 1104.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. *See* 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1210–0090.

OMB authorization for an ICR cannot be for more than three (3) years without renewal, and the current approval for this collection is scheduled to expire on November 30, 2015. The DOL seeks to extend PRA authorization for this information collection for three (3) more years, without any change to existing requirements. The DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. For additional substantive information about this ICR, see the related rulemaking notice published in the **Federal Register** on March 19, 2015 (80 FR 14301).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1210–0090. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Agency: DOL–EBSA.

Title of Collection: Disclosures for Participant Directed Individual Account Plans.

OMB Control Number: 1210–0090.

Affected Public: Private Sector—businesses or other for-profits.

Total Estimated Number of Respondents: 518,282.

Total Estimated Number of Responses: 713,900,000.

Total Estimated Annual Time Burden: 7,300,000 hours.

Total Estimated Annual Other Costs Burden: $274,000,000.

Dated: November 9, 2015.

Michel Smyth,

Departmental Clearance Officer.

BILLING CODE 4510–29–P

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice: 15–103]

Notice of Information Collection

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Notice of information collection.

SUMMARY: The National Aeronautics and Space Administration, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. 3506(c)(2)(A)).

DATES: All comments should be submitted within 30 calendar days from the date of this publication.

ADDRESSES: Interested persons are invited to submit written comments regarding the proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 7th Street NW., Washington, DC 20543. Attention: Desk Officer for NASA.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Ms. Frances Teel, NASA Clearance Officer, NASA Headquarters, 300 E Street SW., JF000, Washington, DC 20546, or *Frances.C.Teel@nasa.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The NASA Contractor Financial Management Reporting System is the basic financial medium for contractor reporting of estimated and incurred costs, providing essential data for projecting costs and hours to ensure that contractor performance is realistically planned and supported by dollar and labor resources. The data provided by

these reports is an integral part of the Agency's accrual accounting and cost based budgeting system. Respondents are reimbursed for associated cost to provide the information, per their negotiated contract price and associated terms of the contract. There are no ''total capital and start-up'' or ''total operation and maintenance and purchase of services'' costs associated since NASA policy requires that data reported is generated from the contractors' existing system. The contractors' internal management system shall be relied upon to the maximum extent possible.

Comments submitted in response to this notice will be summarized and included in the request for OMB approval of this information collection. They will also become a matter of public record.

II. Method of Collection

NASA collects this information electronically and that is the preferred manner, however information may also be collected via mail or fax.

III. Data

Title: NASA Contractor Financial Management Reports.

OMB Number: 2700–0003.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit, not-for-profit institutions.

Estimated number of respondents: 800.

Estimated Time per Response: 9 hrs.

Estimated Total Annual Burden Hours: 7,200.

Estimated Total Annual Cost: $0.

IV: Request for Comments

Comments are invited on: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of NASA, including whether the information collection has practical utility; (2) the accuracy of NASA's estimate of the burden (including hours and cost) of the proposed collection of information; (3) ways to minimize the burden of the collection of information on respondents.

Comments submitted in response to this notice will be summarized and included in the request for OMB approval of this information collection. They will also become a matter of public record.

Frances Teel,

NASA PRA Clearance Officer.

BILLING CODE 7510–13–P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Arts

Arts Advisory Panel Meetings

AGENCY: National Endowment for the Arts, National Foundation on the Arts and Humanities.

ACTION: Notice of meetings.

SUMMARY: Pursuant to the Federal Advisory Committee Act, as amended, notice is hereby given that 20 meetings of the Arts Advisory Panel to the National Council on the Arts will be held by teleconference.

DATES: All meetings are Eastern time and ending times are approximate:

Arts Education (review of applications): This meeting will be closed.

Date and time: December 3, 2015; 1:30 p.m. to 3:30 p.m.

Local Arts Agencies (review of applications): This meeting will be closed.

Date and time: December 3, 2015; 1:00 p.m. to 3:00 p.m.

Local Arts Agencies (review of applications): This meeting will be closed.

Date and time: December 3, 2015; 3:30 p.m. to 5:30 p.m.

Arts Education (review of applications): This meeting will be closed.

Date and time: December 4, 2015; 1:30 p.m. to 3:30 p.m.

Presenting and Multidisciplinary Works (review of applications): This meeting will be closed.

Date and time: December 7, 2015; 2:00 p.m. to 4:00 p.m.

Museums (review of applications): This meeting will be closed.

Date and time: December 8, 2015; 11:30 a.m. to 1:30 p.m.

Museums (review of applications): This meeting will be closed.

Date and time: December 8, 2015; 2:30 p.m. to 4:30 p.m.

Opera (review of applications): This meeting will be closed.

Date and time: December 8, 2015; 12:00 p.m. to 2:00 p.m.

Opera (review of applications): This meeting will be closed.

Date and time: December 8, 2015; 3:00 p.m. to 5:00 p.m.

Presenting and Multidisciplinary Works (review of applications): This meeting will be closed.

Date and time: December 8, 2015; 2 p.m. to 4 p.m.

Arts Education (review of applications): This meeting will be closed.

Date and time: December 9, 2015; 1:30 p.m. to 3:30 p.m.

Literature (review of applications): This meeting will be closed.

Date and time: December 9, 2015; 3:00 p.m. to 5:00 p.m.

Presenting and Multidisciplinary Works (review of applications): This meeting will be closed.

Date and time: December 9, 2015; 2:00 p.m. to 4:00 p.m.

Literature (review of applications): This meeting will be closed.

Date and time: December 10, 2015; 3:00 p.m. to 5:00 p.m.

Museums (review of applications): This meeting will be closed.

Date and time: December 10, 2015; 11:30 a.m. to 1:30 p.m.

Museums (review of applications): This meeting will be closed.

Date and time: December 10, 2015; 2:30 a.m. to 4:30 p.m.

Presenting and Multidisciplinary Works (review of applications): This meeting will be closed.

Date and time: December 10, 2015; 2:00 p.m. to 4:00 p.m.

Folk and Traditional Arts (review of applications): This meeting will be closed.

Date and time: December 15, 2015; 2:00 p.m. to 4:00 p.m.

Arts Education (review of applications): This meeting will be closed.

Date and time: December 17, 2015; 1:30 p.m. to 3:30 p.m.

Folk and Traditional Arts (review of applications): This meeting will be closed.

Date and time: December 17, 2015; 2:00 p.m. to 4:00 p.m.

ADDRESSES: National Endowment for the Arts, Constitution Center, 400 7th St. SW., Washington, DC, 20506.

FOR FURTHER INFORMATION CONTACT: Further information with reference to these meetings can be obtained from Ms. Kathy Plowitz-Worden, Office of Guidelines & Panel Operations, National Endowment for the Arts, Washington, DC, 20506; *plowitzk@arts.gov,* or call 202/682–5691.

SUPPLEMENTARY INFORMATION: The closed portions of meetings are for the purpose of Panel review, discussion, evaluation, and recommendations on financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including information given in confidence to the agency. In accordance with the determination of the Chairman of February 15, 2012, these sessions will be closed to the public pursuant to subsection (c)(6) of section 552b of title 5, United States Code.

Dated: November 9, 2015.

Kathy Plowitz-Worden,

Panel Coordinator, National Endowment for the Arts.

[FR Doc. 2015–28852 Filed 11–13–15; 8:45 am]

BILLING CODE 7537–01–P

NATIONAL SCIENCE FOUNDATION

Proposal Review Panel for Computing and Communication Foundations; Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub., L. 92–463, as amended), the National Science Foundation announces the following meeting:

Name: Proposal Panel Review for Science and Technology Centers—Integrative Partnerships (#1192) Site Visit.

Date/Time: December 7, 2015, 6:30 p.m.–8:30 p.m.; December 8, 2015, 8:00 a.m.–8:00 p.m.; December 9, 2015, 8:30 a.m.–3:00 p.m.

Place: Purdue University, West Lafayette, IN 47907.

Type of Meeting: Part-Open.

Contact Person: John Cozzens, National Science Foundation, 4201 Wilson Boulevard, Room 1115, Arlington, VA 22230. Telephone: (703) 292–8910.

Purpose of Meeting: To assess the progress of the STC Award: 0939370 ''Emerging Frontiers of Science of Information: the Science and the Technology of Intelligence'', and to provide advise and recommendations concerning further NSF support for the Center.

Agenda: CSol Purdue Site Visit

Monday, December 7, 2015, 6:30 p.m. to 8:30 p.m.: Closed; Site Team and NSF Staff meets to discuss Site Visit materials, review process and charge.

Tuesday, December 8, 2015, 8:00 a.m. to 1:00 p.m.: Open; Presentations by Awardee Institution, faculty staff and students, to Site Team and NSF Staff; Discussions, question and answer sessions.

1:00 p.m.–8:00 p.m.: Closed; Draft report on education and research activities.

Wednesday, December 9, 2015, 8:30 a.m.–noon: Open; Response presentations by Site Team and NSF Staff Awardee Institution faculty staff; Discussions, question and answer sessions.

Noon to 3:00 p.m.: Closed; Complete written site visit report with preliminary recommendations.

Reason for Closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information; financial data, such as salaries; and personal information concerning individuals associated with the proposals. These matters are exempt under 5 U.S.C. 552b(c), (4) and (6) of the Government in the Sunshine Act.

Dated: November 10, 2015.

Crystal Robinson,

Committee Management Officer.

[FR Doc. 2015–29165 Filed 11–13–15; 8:45 am]

BILLING CODE 7555–01–P

NATIONAL SCIENCE FOUNDATION

Business and Operations Advisory Committee; Notice of Meeting

In accordance with Federal Advisory Committee Act (Pub. L. 92–463, as amended), the National Science Foundation announces the following meeting:

Name: Business and Operations Advisory Committee (9556).

Date/Time: December 8, 2015; 1:00 p.m. to 5:45 p.m. (EST).

December 9, 2015; 8:45 a.m. to 12:00 p.m. (EST).

Place: National Science Foundation, 4201 Wilson Boulevard, Arlington, Virginia 22230; Stafford I, Room 1235

Type of Meeting: PART–OPEN.

Contact Person: Joan Miller, National Science Foundation, 4201 Wilson Boulevard, Arlington, VA 22230 (703) 292–8200.

Purpose of Meeting: To provide advice concerning issues related to the oversight, integrity, development and enhancement of NSF's business operations.

Agenda:

December 8, 2015.

1:00 p.m.–4:30 p.m., OPEN—Welcome/Introductions; BFA/OIRM Updates; NSF Headquarters Relocation Update; Modernizing the Workforce—IT—Driven Change Management; Records Management/Digitization.

4:30 p.m.–5:45 p.m. CLOSED—Briefing on the National Academy of Public Administration Study of NSF's Use of Cooperative Agreements to Support Large Scale Investments in Science and Technology.

December 9, 2015

8:45 a.m.–12:00 p.m. OPEN—Preparation for discussion with NSF Director and Chief Operating Officer; Discussion with NSF Director and Chief Operating Officer; Presidential Transitions: What Agencies Can Do to Prepare; Meeting Wrap-Up.

Reason for Closing: This session of the meeting is closed to the public in accordance with the provisions of 5 U.S.C. 552b(c), (4) and (6) of the Government in the Sunshine Act.

Dated: November 10, 2015.

Crystal Robinson,

Committee Management Officer.

[FR Doc. 2015–29164 Filed 11–13–15; 8:45 am]

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2015–0020]

Sodium Iodide–131 Patient Release Information Collection

AGENCY: Nuclear Regulatory Commission.

ACTION: Request for information.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is requesting information from the general public on a number of issues associated with medical treatment of patients with sodium iodide I–131 (hereafter referred to as I–131). Specifically, the NRC would like input on patient concerns about medical treatment involving the use of I–131, information that physicians use to make decisions on when it is safe to release I–131 patients based on radiation exposure concerns, radiation safety information used by I–131 patients after their release, and the availability of a radiation safety informational guidance brochure for I–131 patients that can be distributed nationwide. The information collected will be used to develop a Web site to provide patients with clear and consistent information about radioactive iodine treatments and to revise NRC patient release guidance.

DATES: Submit information and comments by February 16, 2016. Information and comments received after this date will be considered if it is practical to do so, but the NRC is able to assure consideration only for information and comments received on or before this date.

ADDRESSES: You may submit information and comments by any of the following methods (unless this document describes a different method for submitting information and comments on a specific subject):

- Federal Rulemaking Web site: Go to *http://www.regulations.gov* and search for Docket ID NRC–2015–0020. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: *Carol.Gallagher@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- Mail information and comments to: Cindy Bladey, Office of Administration,

Mail Stop: OWFN–12–H08, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

For additional direction on obtaining and submitting information and comments, see ''Obtaining and Submitting Information and Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Donna-Beth Howe, Ph.D., Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–7848; email: *Donna-Beth.Howe@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining and Submitting Information and Comments

A. Obtaining Information

Please refer to Docket ID NRC–2015–0020 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

- Federal rulemaking Web site: Go to *http://www.regulations.gov* and search for Docket ID NRC–2015–0020.
- NRC's Agencywide Documents Access and Management System (ADAMS): You may obtain publicly-available documents online in the ADAMS Public Documents collection at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''ADAMS Public Documents'' and then select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in the **SUPPLEMENTARY INFORMATION** section.
- NRC's PDR: You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

B. Submitting Information and Comments

Please include Docket ID NRC–2015–0020 in your submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your submission. The NRC will post all submissions at *http://www.regulations.gov* as well as enter the submissions into ADAMS. The NRC does not routinely edit submissions to remove identifying or contact information.

If you are requesting or aggregating information from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their submission. Your request should state that the NRC does not routinely edit submissions to remove such information before making the submissions available to the public or entering the submission into ADAMS.

II. Background

In a March 10, 2014, memorandum to the Commission (COMAMM–14–0001/COMWDM–14–0001, ''Background and Proposed Direction to NRC Staff to Verify Assumptions Made Concerning Patient Release Guidance'' (see *http://www.nrc.gov/reading-rm/doc-collections/commission/comm-secy/2014/2014-0001comamm-0001-comwdm.pdf*), NRC Chairman MacFarlane and Commissioner Magwood brought into question whether patients receiving I–131 treatments are given consistent and useful information from medical facilities and whether patients can correctly follow those instructions. Anecdotal data from patients and patient advocacy groups indicated that while instructions are provided, the quality of the instructions varies significantly, and that some patients are provided with instructions that the patient and the medical facility know will be impractical to follow.

In the Staff Requirements Memorandum to COMAMM–14–0001/COMWDM–14–0001 (see *http://www.nrc.gov/reading-rm/doc-collections/commission/comm-secy/2014/2014-0001comamm-0001-comwdmsrm.pdf*), the Commission, among other things, directed the NRC staff to develop a Web site that provides patients with clear and concise information and links to relevant medical and patient advocacy Web sites about I–131 treatments, to revise NRC guidance to specify guidelines for patient instructions and information including a voluntary model patient/licensee acknowledgement form documenting the patient/licensee dialog leading to the licensee's decision of when to safely release the patient from its control based on radiation exposure concerns, and to develop a standard set of guidelines that licensees can use to provide instructions to released I–131 patients. The Commission also directed the NRC staff to consider whether the guidance information provided to the patients can be made into an NRC brochure, or whether a medical organization already has, or would produce, a brochure for nationwide distribution.

The NRC is interested in obtaining input from as many stakeholders as possible, including the NRC's Advisory Committee on the Medical Use of Isotopes, professional organizations, physicians, patients, patient advocacy groups, licensees, Agreement States, and other interested individuals. The focus of this information gathering effort is to obtain: Information that patients believe will help them understand the I–131 treatment (also referred to as Radioactive Iodine (RAI)) procedures, the physician's or licensee's best practices when making informed decisions on releasing RAI treatment patients, and information provided to patients on how to reduce radiation doses to others. The NRC is also interested in learning if patient advocacy, medical professional organizations, licensees, or other individuals have brochures that already contain the information requested.

III. Requested Information and Comments

A. Web Site Information

The NRC is considering establishing a Web site that provides potential patients with information on RAI treatment procedures so that patients will understand the reason for the procedures, the process, and how to reduce radiation exposure to others. Some of this is medical information that is outside the NRC's field of expertise. The NRC would like to be able to provide links to other sites providing this medical information. The NRC may develop the basic radiation safety information itself, but could provide links if established sites already have this information.

The NRC is also seeking input from patients, patient advocacy groups, and other interested individuals to articulate concerns that may not be included in the topics identified in this section.

If you have, or know of, a Web site that that can be used to explain the disease and treatment process, and addresses one or more of the following topics, please provide the link to the NRC.

- What is radioactivity?
- What is radioactive iodine (RAI)?
- RAI treatment:
- Any explanation of how radiation is used in the treatment should include clear information that the patient will receive radioactive material, emit radiation, retain radioactive material, and release radioactive material.

- Preparing for RAI treatment.
- What to expect before and after receiving the treatment.
- Side effects of RAI treatment.
- Basic radiation safety:
- Appropriate venues for recovery after release.
- Precautions to take after receiving treatment.
- Risks to others, to include risks to young children and pregnant women.
- Expected general behaviors after release.

When identifying a Web site, indicate the topic it addresses and provide a link to that specific information on the topic.

B. Patient/Licensee Acknowledgement Form and Best Practices in Making Informed Decisions on Releasing Patients Treated With I–131 Based on Radiation Exposure Considerations

The NRC is looking for best practices used by individual physicians and licensees that focus on enhancing the ability to make informed radiation safety decisions on the release of individual patients from their radiation safety control under the patient release criteria in the NRC's medical use regulations. The NRC expects the physician (licensee) to have a dialog with the patient that will ultimately lead to an informed decision on when the patient should be released from its radiation safety control based on radiation exposure considerations (this includes immediate or delayed release, in addition to hospitalization). The NRC is also interested in knowing whether a patient/licensee acknowledgment form documenting this dialog exists and is part of the physicians' best practices. The NRC believes this dialog would include some or all of the following:

- The patient's ability to understand the language of the physician (licensee) or need for an interpreter that understands the procedure.
- The need for a family member or another support person present to facilitate better retention of information.
- A discussion with the patient to determine suitability for release.
- Description of the patient's transportation from the medical facility to home.
- Discussion of the patient's normal daily behavior and patterns, including but not limited to:
- The patient's normal/routine social interactions.
- The patient's normal/routine working environment and tasks.
- The patient's normal/routine living arrangements.
- The planned changes to the patient's normal/routine behaviors during the treatment period (have friend or family member accompany the patient or spend time with patient, change in living arrangements, etc.).
- Financial considerations that will affect the patient's preference on early or delayed release.
- Discussion to evaluate patient's ability to understand and follow instructions.
- Discussion to evaluate of patient's willingness to follow instructions.
- Discussion to evaluate the level of disruption to patient routine lifestyle, if released, and the ability of the patient to make and follow the changes, if released.

If you have a policy or procedure that provides you with the confidence that you are releasing the patient at the appropriate time, please describe your policy or provide your procedure. If the policy or procedure includes a patient/licensee acknowledgement form, or if you have a stand-alone form, documenting the patient/licensee discussion, please provide it. The policy, procedure, or form could include some of the topics listed but may include others. Indicate when this type of discussion with the patients takes place (*e.g.,* when the patient is referred for the procedure, before administration, after administration, etc.). Does the timing of this discussion allow the patient enough time to make different living, working, or transportation arrangements or for the medical facility to make delayed release (may include hospitalization) arrangements? Please describe how your best practices are used in the decision making process.

The NRC would also like input from the patient's or other interested individual's perspective of the optimal time for the discussion to take place so that both the patient and the medical facility have confidence the release decision is appropriate. How much time is needed to allow patients to make different living, working, transportation arrangements? The NRC is also seeking input from patients, patient advocacy groups, and other interested individuals to articulate other topics that should be included in the discussion.

C. Guidance for Released Patients

The Commission directed the NRC staff to develop standardized guidance for licensees to provide to their patients that would help to reduce the variability of instructions provided to patients and eliminate some of the uncertainty regarding the type of information that is provided to the patient. While the NRC currently prefers to develop performance based guidance (articulating objectives but not telling licensees how to reach those objectives), prescriptive guidance (*i.e.,* very detailed and specific) may be necessary to reduce uncertainty and provide confidence that regulatory requirements are met. If the standardized guidance is performance-based, it would need to provide individual patients with the ''tools'' needed to follow the objectives in the guidance and protect others.

If you have guidance documents that you believe provide clear instructions to released patients, please provide a copy to the NRC. If your guidance includes topics not addressed below, indicate why you think each is an important topic to include. If it does not address one of the topics and you believe that topic is not needed, describe why it is not needed.

- What ''tools'' (or methods/means) can the patient use to protect others once released?
- Are both oral and written information presented in the patient's native language and presented in a manner understandable to both the patient and physician (licensee)?
- Does the medical facility/licensee have access to an interpreting service to make sure that oral and written information and instructions are understood?
- How are instructions personalized to the individual patient?
- Does the medical facility explain how to limit the exposures to others (especially to young children and pregnant women)?
- Arrangements for protecting others once arriving at home.
- Informed how long special care must be exercised.
- Are actions described that the patient can take to minimize the exposure of people both inside and outside the home?
- Do transportation instructions from the medical facility to home match the patient's plans?
- Are discussions held on managing biological wastes and trash in accordance with NRC, state, and local requirements?
- Are discussions held to identify whom to contact in the event that questions arise during the recovery period?
- Are discussions held on where to go for emergency care?

The NRC is also seeking input from patients, patient advocacy groups, and other interested individuals to articulate topics that should be included in the instructions provided to released patients. Further, when do you want to be provided with these instructions? Are the instructions provided in a manner that is easy to understand and

follow? What would have made the instructions better?

D. Brochure for Nationwide Use

The NRC is seeking identification of a brochure that you believe provides clear guidance on the release of patients treated with I–131. If you have or know of such a brochure please send the NRC a copy or a link to it. The intent is to identify a brochure that could be distributed nationwide.

IV. Paperwork Reduction Act Statement

This information request contains information collection requirements that are subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). These information collections were approved by the Office of Management and Budget (OMB), OMB control number 3150–0229, expiration date of October 31, 2018.

The burden to the public for these information collections is estimated to average 0.25 to 0.50 hours per response, including time for reviewing instructions, searching existing data sources, gathering data, performing necessary analyses, and completing and reviewing the information collection. This information collection request only information already possessed by the responder and does not request the responder develop any new data.

The NRC may not conduct or sponsor, and a person is not required to respond to, a request for information or an information collection requirement unless the requesting document displays a currently valid OMB control number.

Dated at Rockville, Maryland, this 5th day of November, 2015.

For the Nuclear Regulatory Commission.

Christian E. Einberg,

Acting Deputy Director, Division of Material Safety, State, Tribal and Rulemaking Programs, Office of Nuclear Material Safety and Safeguards.

[FR Doc. 2015–29027 Filed 11–13–15; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 40–38367, NRC–2015–0255]

Rare Element Resources, Inc.; Bear Lodge Project

AGENCY: Nuclear Regulatory Commission.

ACTION: License application; opportunity to request a hearing and petition for leave to intervene; order.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has received an application from Rare Element Resources, Inc., for a license to possess and use source material associated with its Bear Lodge Project. The Bear Lodge Project includes a mine in the Black Hills National Forest in Crook County, Wyoming for the purpose of extracting rare earth element ores, and a rare earth element processing plant in Weston County, Wyoming. In addition, the license application contains sensitive unclassified non-safeguards information (SUNSI).

DATES: A request for a hearing or petition for leave to intervene must be filed by January 15, 2016. Any potential party as defined in § 2.4 of title 10 of the *Code of Federal Regulations* (10 CFR), who believes access to SUNSI is necessary to respond to this notice must request document access by November 27, 2015.

ADDRESSES: Please refer to Docket ID NRC–2015–0255 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- Federal Rulemaking Web site: Go to *http://www.regulations.gov* and search for Docket ID NRC–2015–0255. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: *Carol.Gallagher@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- NRC's Agencywide Documents Access and Management System (ADAMS): You may obtain publicly-available documents online in the ADAMS Public Documents collection at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''*ADAMS Public Documents''* and then select ''*Begin Web-based ADAMS Search.*'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in the **SUPPLEMENTARY INFORMATION** section.
- NRC's PDR: You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: Kenneth Kalman, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–6664, email: *Kenneth.Kalman@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC has received, by letter dated May 4, 2015 (ADAMS Accession No. ML15132A726), an application from Rare Element Resources Inc., to possess and use up to 10 curies of unsealed, non-volatile thorium hydroxide and to possess and use unlimited quantities of unsealed, non-volatile source material in any bound form. The source material will be uranium and thorium in their natural isotopic abundance in concentrations greater than 0.05 percent by weight. The NRC staff will document its review of this license application in a safety evaluation report and an environmental assessment.

The license application is available in ADAMS under Accession No. ML15134A378. The NRC has identified the following documents as containing SUNSI and is withholding these documents from public disclosure pursuant to Section 304 of the National Historic Preservation Act of 1966, 54 U.S.C. 307103.

- ''Stand Alone Report 10, A Class III Cultural Resource Inventory of the Bear Lodge Project—Upton Plant Site.''
- The two Tribal reports referenced in Section 7.3, ''Historic, Scenic, and Cultural Resources,'' of the application.

II. Opportunity to Request a Hearing and Petition for Leave To Intervene

Within 60 days after the date of publication of this notice, any person(s) whose interest may be affected by this action may file a request for a hearing and a petition to intervene with respect to issuance of the amendment to the subject facility operating license or combined license. Requests for a hearing and a petition for leave to intervene shall be filed in accordance with the Commission's ''Agency Rules of Practice and Procedure'' in 10 CFR part 2. Interested person(s) should consult a current copy of 10 CFR 2.309, which is available at the NRC's PDR, located in One White Flint North, Room O1–F21 (first floor), 11555 Rockville Pike, Rockville, Maryland 20852. The NRC's regulations are accessible electronically from the NRC Library on the NRC's Web site at *http://www.nrc.gov/reading-rm/doc-collections/cfr/.* If a request for a hearing or petition for leave to intervene is filed within 60 days, the Commission or a presiding officer designated by the Commission or by the Chief Administrative Judge of the Atomic

Safety and Licensing Board Panel will rule on the request and/or petition. The Secretary or the Chief Administrative Judge of the Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.309, a petition for leave to intervene shall set forth, with particularity, the interest of the petitioner in the proceeding and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted, with particular reference to the following general requirements: (1) The name, address, and telephone number of the requestor or petitioner; (2) the nature of the requestor's/petitioner's right under the Act to be made a party to the proceeding; (3) the nature and extent of the requestor's/petitioner's property, financial, or other interest in the proceeding; and (4) the possible effect of any decision or order which may be entered in the proceeding on the requestor's/petitioner's interest. The petition must also set forth the specific contentions which the requestor/petitioner seeks to have litigated at the proceeding.

Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the requestor/petitioner shall provide a brief explanation of the bases for the contention and a concise statement of the alleged facts or expert opinion that support the contention and on which the requestor/petitioner intends to rely in proving the contention at the hearing. The requestor/petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the requestor/petitioner intends to rely to establish those facts or expert opinion. The petition must include sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the amendment under consideration. The contention must be one which, if proven, would entitle the requestor/petitioner to relief. A requestor/petitioner who fails to satisfy these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing with respect to resolution of that person's admitted contentions, including the opportunity to present evidence and to submit a cross-examination plan for cross-examination of witnesses, consistent with NRC regulations, policies, and procedures. The Atomic Safety and Licensing Board will set the time and place for any prehearing conferences and evidentiary hearings, and the appropriate notices will be provided.

Petitions for leave to intervene must be filed no later than 60 days from the date of publication of this notice. Requests for hearing, petitions for leave to intervene, and motions for leave to file new or amended contentions that are filed after the 60-day deadline will not be entertained absent a determination by the presiding officer that the filing demonstrates good cause by satisfying the three factors in 10 CFR 2.309(c)(1)(i)–(iii).

A State, local governmental body, Federally-recognized Indian tribe, or agency thereof, may submit a petition to the Commission to participate as a party under 10 CFR 2.309(h)(1). The petition should state the nature and extent of the petitioner's interest in the proceeding. The petition should be submitted to the Commission by January 15, 2016. The petition must be filed in accordance with the filing instructions in the ''Electronic Submissions (E-Filing)'' section of this document, and should meet the requirements for petitions for leave to intervene set forth in this section, except that under § 2.309(h)(2) a State, local governmental body, or Federally-recognized Indian tribe, or agency thereof does not need to address the standing requirements in 10 CFR 2.309(d) if the facility is located within its boundaries. A State, local governmental body, Federally-recognized Indian tribe, or agency thereof may also have the opportunity to participate under 10 CFR 2.315(c).

If a hearing is granted, any person who does not wish, or is not qualified, to become a party to the proceeding may, in the discretion of the presiding officer, be permitted to make a limited appearance pursuant to the provisions of 10 CFR 2.315(a). A person making a limited appearance may make an oral or written statement of position on the issues, but may not otherwise participate in the proceeding. A limited appearance may be made at any session of the hearing or at any prehearing conference, subject to the limits and conditions as may be imposed by the presiding officer. Persons desiring to make a limited appearance are requested to inform the Secretary of the Commission by January 15, 2016.

III. Electronic Submissions (E-Filing)

All documents filed in NRC adjudicatory proceedings, including a request for hearing, a petition for leave to intervene, any motion or other document filed in the proceeding prior to the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities participating under 10 CFR 2.315(c), must be filed in accordance with the NRC's E-Filing rule (72 FR 49139; August 28, 2007). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, at least ten 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at *hearing.docket@nrc.gov,* or by telephone at 301–415–1677, to request (1) a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign documents and access the E-Submittal server for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a request or petition for hearing (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals/getting-started.html.* System requirements for accessing the E-Submittal server are detailed in the NRC's ''Guidance for Electronic Submission,'' which is available on the agency's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.* Participants may attempt to use other software not listed on the Web site, but should note that the NRC's E-Filing system does not support unlisted software, and the NRC Meta System Help Desk will not be able to offer assistance in using unlisted software.

If a participant is electronically submitting a document to the NRC in accordance with the E-Filing rule, the

participant must file the document using the NRC's online, Web-based submission form. In order to serve documents through the Electronic Information Exchange System, users will be required to install a Web browser plug-in from the NRC's Web site. Further information on the Web-based submission form, including the installation of the Web browser plug-in, is available on the NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.*

Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit a request for hearing or petition for leave to intervene. Submissions should be in Portable Document Format (PDF) in accordance with NRC guidance available on the NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals.html.* A filing is considered complete at the time the documents are submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. Eastern Time on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document. The E-Filing system also distributes an email notice that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the documents on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before a hearing request/petition to intervene is filed so that they can obtain access to the document via the E-Filing system.

A person filing electronically using the NRC's adjudicatory E-Filing system may seek assistance by contacting the NRC Meta System Help Desk through the ''Contact Us'' link located on the NRC's public Web site at *http://www.nrc.gov/site-help/e-submittals.html,* by email to *MSHD.Resource@nrc.gov,* or by a toll-free call at 1–866–672–7640. The NRC Meta System Help Desk is available between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday, excluding government holidays.

Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, Sixteenth Floor, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852, Attention: Rulemaking and Adjudications Staff. Participants filing a document in this manner are responsible for serving the document on all other participants. Filing is considered complete by first-class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service upon depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket which is available to the public at *http://ehd1.nrc.gov/ehd/*, unless excluded pursuant to an order of the Commission, or the presiding officer. Participants are requested not to include personal privacy information, such as social security numbers, home addresses, or home phone numbers in their filings, unless an NRC regulation or other law requires submission of such information. However, in some instances, a request to intervene will require including information on local residence in order to demonstrate a proximity assertion of interest in the proceeding. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

Order Imposing Procedures for Access to Sensitive Unclassified Non-Safeguards Information for Contention Preparation

Rare Element Resources, Docket No. 040–38367, Bear Lodge Project, Crook and Weston Counties, Wyoming

A. This Order contains instructions regarding how potential parties to this proceeding may request access to documents containing SUNSI.

B. Within 10 days after publication of this notice of hearing and opportunity to petition for leave to intervene, any potential party who believes access to SUNSI is necessary to respond to this notice may request such access. A ''potential party'' is any person who intends to participate as a party by demonstrating standing and filing an admissible contention under 10 CFR 2.309. Requests for access to SUNSI submitted later than 10 days after publication of this notice will not be considered absent a showing of good cause for the late filing, addressing why the request could not have been filed earlier.

C. The requester shall submit a letter requesting permission to access SUNSI to the Office of the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemakings and Adjudications Staff, and provide a copy to the Associate General Counsel for Hearings, Enforcement and Administration, Office of the General Counsel, Washington, DC 20555–0001. The expedited delivery or courier mail address for both offices is: U.S. Nuclear Regulatory Commission, 11555 Rockville Pike, Rockville, Maryland 20852. The email address for the Office of the Secretary and the Office of the General Counsel are *Hearing.Docket@nrc.gov* and *OGCmailcenter@nrc.gov,* respectively.[1] The request must include the following information:

(1) A description of the licensing action with a citation to this **Federal Register** notice;

(2) The name and address of the potential party and a description of the potential party's particularized interest that could be harmed by the action identified in C.(1); and

(3) The identity of the individual or entity requesting access to SUNSI and the requester's basis for the need for the information in order to meaningfully participate in this adjudicatory proceeding. In particular, the request must explain why publicly-available versions of the information requested would not be sufficient to provide the basis and specificity for a proffered contention.

D. Based on an evaluation of the information submitted under paragraph C.(3) the NRC staff will determine within 10 days of receipt of the request whether:

(1) There is a reasonable basis to believe the petitioner is likely to

[1] While a request for hearing or petition to intervene in this proceeding must comply with the filing requirements of the NRC's ''E-Filing Rule,'' the initial request to access SUNSI under these procedures should be submitted as described in this paragraph.

establish standing to participate in this NRC proceeding; and

(2) The requestor has established a legitimate need for access to SUNSI.

E. If the NRC staff determines that the requestor satisfies both D.(1) and D.(2) above, the NRC staff will notify the requestor in writing that access to SUNSI has been granted. The written notification will contain instructions on how the requestor may obtain copies of the requested documents, and any other conditions that may apply to access to those documents. These conditions may include, but are not limited to, the signing of a Non-Disclosure Agreement or Affidavit, or Protective Order [2] setting forth terms and conditions to prevent the unauthorized or inadvertent disclosure of SUNSI by each individual who will be granted access to SUNSI.

F. Filing of Contentions. Any contentions in these proceedings that are based upon the information received as a result of the request made for SUNSI must be filed by the requestor no later than 25 days after the requestor is granted access to that information. However, if more than 25 days remain between the date the petitioner is granted access to the information and the deadline for filing all other contentions (as established in the notice of hearing or opportunity for hearing), the petitioner may file its SUNSI contentions by that later deadline. This provision does not extend the time for filing a request for a hearing and petition to intervene, which must comply with the requirements of 10 CFR 2.309.

G. Review of Denials of Access.

(1) If the request for access to SUNSI is denied by the NRC staff after a determination on standing and need for access, the NRC staff shall immediately notify the requestor in writing, briefly stating the reason or reasons for the denial.

(2) The requester may challenge the NRC staff's adverse determination by filing a challenge within 5 days of receipt of that determination with: (a) The presiding officer designated in this proceeding; (b) if no presiding officer has been appointed, the Chief Administrative Judge, or if he or she is unavailable, another administrative judge, or an administrative law judge with jurisdiction pursuant to 10 CFR 2.318(a); or (c) officer if that officer has been designated to rule on information access issues.

H. Review of Grants of Access. A party other than the requester may challenge an NRC staff determination granting access to SUNSI whose release would harm that party's interest independent of the proceeding. Such a challenge must be filed with the Chief Administrative Judge within 5 days of the notification by the NRC staff of its grant of access.

If challenges to the NRC staff determinations are filed, these procedures give way to the normal process for litigating disputes concerning access to information. The availability of interlocutory review by the Commission of orders ruling on such NRC staff determinations (whether granting or denying access) is governed by 10 CFR 2.311.[3]

I. The Commission expects that the NRC staff and presiding officers (and any other reviewing officers) will consider and resolve requests for access to SUNSI, and motions for protective orders, in a timely fashion in order to minimize any unnecessary delays in identifying those petitioners who have standing and who have propounded contentions meeting the specificity and basis requirements in 10 CFR part 2. Attachment 1 to the Order summarizes the general target schedule for processing and resolving requests under these procedures.

It is so ordered.

Dated at Rockville, Maryland, this 6th day of November, 2015.

For the Nuclear Regulatory Commission.

Annette L. Vietti-Cook,

Secretary of the Commission.

ATTACHMENT 1—General Target Schedule for Processing and Resolving Requests for Access to Sensitive Unclassified Non-Safeguards Information in this Proceeding

Day	Event/Activity
0	Publication of Federal Register notice of hearing and opportunity to petition for leave to intervene, including order with instructions for access requests.
10	Deadline for submitting requests for access to Sensitive Unclassified Non-Safeguards Information (SUNSI) with information: Supporting the standing of a potential party identified by name and address; describing the need for the information in order for the potential party to participate meaningfully in an adjudicatory proceeding.
60	Deadline for submitting petition for intervention containing: (i) Demonstration of standing; and (ii) all contentions whose formulation does not require access to SUNSI (+25 Answers to petition for intervention; +7 petitioner/requestor reply).
20	U.S. Nuclear Regulatory Commission (NRC) staff informs the requester of the staff's determination whether the request for access provides a reasonable basis to believe standing can be established and shows need for SUNSI. (NRC staff also informs any party to the proceeding whose interest independent of the proceeding would be harmed by the release of the information.) If NRC staff makes the finding of need for SUNSI and likelihood of standing, NRC staff begins document processing (preparation of redactions or review of redacted documents).
25	If NRC staff finds no ''need'' or no likelihood of standing, the deadline for petitioner/requester to file a motion seeking a ruling to reverse the NRC staff's denial of access; NRC staff files copy of access determination with the presiding officer (or Chief Administrative Judge or other designated officer, as appropriate). If NRC staff finds ''need'' for SUNSI, the deadline for any party to the proceeding whose interest independent of the proceeding would be harmed by the release of the information to file a motion seeking a ruling to reverse the NRC staff's grant of access.
30	Deadline for NRC staff reply to motions to reverse NRC staff determination(s).
40	(Receipt +30) If NRC staff finds standing and need for SUNSI, deadline for NRC staff to complete information processing and file motion for Protective Order and draft Non-Disclosure Affidavit. Deadline for applicant/licensee to file Non-Disclosure Agreement for SUNSI.
A	If access granted: Issuance of presiding officer or other designated officer decision on motion for protective order for access to sensitive information (including schedule for providing access and submission of contentions) or decision reversing a final adverse determination by the NRC staff.
A + 3	Deadline for filing executed Non-Disclosure Affidavits. Access provided to SUNSI consistent with decision issuing the protective order.

[2] Any motion for Protective Order or draft Non-Disclosure Affidavit or Agreement for SUNSI must be filed with the presiding officer or the Chief Administrative Judge if the presiding officer has not yet been designated, within 30 days of the deadline for the receipt of the written access request.

[3] Requesters should note that the filing requirements of the NRC's E-Filing Rule (72 FR 49139; August 28, 2007) apply to appeals of NRC staff determinations (because they must be served on a presiding officer or the Commission, as applicable), but not to the initial SUNSI request submitted to the NRC staff under these procedures.

Day	Event/Activity
A + 28	Deadline for submission of contentions whose development depends upon access to SUNSI. However, if more than 25 days remain between the petitioner's receipt of (or access to) the information and the deadline for filing all other contentions (as established in the notice of hearing or opportunity for hearing), the petitioner may file its SUNSI contentions by that later deadline.
A + 53	(Contention receipt +25) Answers to contentions whose development depends upon access to SUNSI.
A + 60	(Answer receipt +7) Petitioner/Intervenor reply to answers.
>A + 60 ..	Decision on contention admission.

[FR Doc. 2015–29031 Filed 11–13–15; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2012–0167]

Preparing and Reviewing Licensing Applications for Instrumentation and Control Systems for Non-Power Reactors

AGENCY: Nuclear Regulatory Commission.

ACTION: Draft NUREG; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is requesting public comment on draft Chapter 7, ''Instrumentation and Control Systems,'' which augments the following: (1) NUREG–1537, Part 1, ''Guidelines for Preparing and Reviewing Applications for the Licensing of Non-Power Reactors: Format and Content;'' and (2) NUREG–1537, Part 2, ''Guidelines for Preparing and Reviewing Applications for the Licensing of Non-Power Reactors: Standard Review Plan and Acceptance Criteria.'' This draft chapter of NUREG–1537 provides revised guidance for preparing and reviewing applications for instrumentation and control systems.

DATES: Submit comments by February 1, 2016. Comments received after this date will be considered, if it is practical to do so, but the Commission is able to ensure consideration only for comments received before this date.

ADDRESSES: You may submit comments by any of the following methods (unless this document describes a different method for submitting comments on a specific subject):

- *Federal Rulemaking Web site:* Go to *http://www.regulations.gov* and search for Docket ID NRC–2012–0167. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: *Carol.Gallagher@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* Cindy Bladey, Office of Administration, Mail Stop: O12–H08, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

For additional direction on accessing information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Duane A. Hardesty, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20005–0001; telephone: 301–415–3724; email: *Duane.Hardesty@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Accessing Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2012–0167 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document by any of the following methods:

- Federal Rulemaking Web site: Go to *http://www.regulations.gov* and search for Docket ID NRC–2012–0167.
- NRC's Agencywide Documents Access and Management System (ADAMS): You may obtain publicly-available documents online in the ADAMS Public Documents collection at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''ADAMS Public Documents'' and then select ''*Begin Web-based ADAMS Search.''* For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* The draft NUREG is located in ADAMS as follows: Part 1, Chapter 7 (ADAMS Accession No. ML15134A484) and Part 2, Chapter 7 (ADAMS Accession No. ML15134A486).
- NRC's PDR: You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

B. Submitting Comments

Please include Docket ID NRC–2012–0167 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC posts all comment submissions at *http://www.regulations.gov* as well as entering the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment submissions into ADAMS.

The NRC is issuing this notice to solicit public comment on draft Chapter 7, ''Instrumentation and Control System,'' which augments the following: (1) NUREG–1537, Part 1, ''Guidelines for Preparing and Reviewing Applications for the Licensing of Non-Power Reactors: Format and Content;'' and (2) NUREG–1537, Part 2, ''Guidelines for Preparing and Reviewing Applications for the Licensing of Non-Power Reactors: Standard Review Plan and Acceptance Criteria.'' After the NRC staff considers public comments, it will make a determination regarding issuance of the final NUREG.

Dated at Rockville, Maryland, this 9th day of November, 2015.

For the Nuclear Regulatory Commission.

Alexander Adams, Jr.,

Chief, Research and Test Reactors Licensing Branch, Division of Policy and Rulemaking, Office of Nuclear Reactor Regulation.

[FR Doc. 2015–29029 Filed 11–13–15; 8:45 am]

BILLING CODE 7590–01–P

POSTAL REGULATORY COMMISSION

[Docket No. CP2015–3; Order No. 2807]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning an amendment to Parcel Select Contract 8 negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* November 16, 2015.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov*. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. Notice of Filings
III. Ordering Paragraphs

I. Introduction

On November 6, 2015, the Postal Service filed notice that it has agreed to an Amendment to the existing Parcel Select Contract 8 negotiated service agreement approved in this docket.[1] In support of its Notice, the Postal Service includes a redacted copy of the Amendment and a certification of compliance with 39 U.S.C. 3633(a), as required by 39 CFR 3015.5.

The Postal Service also filed the unredacted Amendment and supporting financial information under seal. The Postal Service seeks to incorporate by reference the Application for Non-Public Treatment originally filed in this docket for the protection of information that it has filed under seal. *Id.*

The Amendment changes the prices offered to the customer under the existing contract. Notice at 1.

The Postal Service intends for the Amendment to become effective one business day after the date that the Commission completes its review of the Notice. *Id.* The Postal Service asserts that the Amendment will not impair the ability of the contract to comply with 39 U.S.C. 3633. Notice, Attachment B at 1.

II. Notice of Filings

The Commission invites comments on whether the changes presented in the Postal Service's Notice are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR 3015.5, and 39 CFR part 3020, subpart B. Comments are due no later than November 16, 2015. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Jennaca Upperman to represent the interests of the general public (Public Representative) in this docket.

III. Ordering Paragraphs

It is ordered:

1. The Commission reopens Docket No. CP2015–3 for consideration of matters raised by the Postal Service's Notice.

2. Pursuant to 39 U.S.C. 505, the Commission appoints Jennaca Upperman to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in this proceeding.

3. Comments are due no later than November 16, 2015.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Ruth Ann Abrams,

Acting Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76393; File No. SR–BATS–2015–57]

Self-Regulatory Organizations; BATS Exchange, Inc.; Notice of Withdrawal of a Proposed Rule Change, as Modified by Amendment No. 1 Thereto, To Adopt New Rule 8.17 To Provide a Process for an Expedited Suspension Proceeding and Rule 12.15 To Prohibit Layering and Spoofing on BATS Exchange, Inc.

November 9, 2015.

On July 30, 2015, BATS Exchange, Inc. (the ''Exchange'' or ''BATS'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 [1] and Rule 19b–4 thereunder,[2] a proposed rule change to adopt an expedited proceeding for issuing suspension orders, and if necessary, imposing other sanctions, to prohibit Exchange Members, or their clients, from engaging in trading activities that constitute continued layering or spoofing on the Exchange. On August 11, 2015, the Exchange filed Amendment No. 1 to the proposal.[3] The proposed rule change, as modified by Amendment No. 1, was published for comment in the **Federal Register** on August 19, 2015.[4] On September 23, 2015, the Commission extended the time period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change to November 17, 2015.[5] The Commission received six comment letters on the proposed rule change.[6] On November 6, 2015, BATS withdrew the proposed rule change (SR–BATS–2015–57).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[7]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76395; File No. SR–NYSEARCA–2015–106]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Adopt a Principles-Based Approach To Prohibit the Misuse of Material Nonpublic Information by Lead Market Makers (''LMMs'') by Deleting Rule 6.83

November 9, 2015.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (the ''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on October 28, 2015, NYSE Arca, Inc. (the ''Exchange'' or ''NYSE Arca'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to adopt a principles-based approach to prohibit the misuse of material nonpublic information by Lead Market Makers (''LMMs'') by deleting Rule 6.83. The text of the proposed rule change is available on the Exchange's Web site at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C.78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to adopt a principles-based approach to prohibit the misuse of material nonpublic information by LMMs by deleting Rule 6.83.

The Exchange believes that Rule 6.83 is no longer necessary because all OTP Holders and OTP Firms (collectively, ''OTPs''),[4] including LMMs, are subject to the Exchange's general principles-based requirements governing the protection against the misuse of material, non-public information, pursuant to Exchange Rule 11.3 (Prevention of the Misuse of Material, Nonpublic Information). This rule obviates the need for separately-prescribed requirements for a subset of market participants on the Exchange.

Background

The Exchange has two classes of registered market makers. Pursuant to Rule 6.32(a), a Market Maker is an individual who is registered with the Exchange for the purpose of making transactions as a dealer-specialist on the Floor of the Exchange or for the purpose of submitting quotes electronically and making transactions as a dealer-specialist through the NYSE Arca OX electronic trading system. As the rule further provides, a Market Maker registered on the Exchange will be either a Market Maker or a Lead Market Maker.[5]

Rule 6.82(c) specifies the obligations of LMMs, which, in addition to the Market Maker obligations of Rules 6.37 and 6.37A, must also honor guaranteed markets. The quoting obligations of all Market Makers, including LMMs, are set forth in Rule 6.37B. That rule sets forth the main difference between Market Makers and LMMs, namely that LMMs have a heightened quoting obligation as compared to Market Makers.[6] In addition to a heightened quoting obligation, pursuant to Rule 6.76A (Order Execution—OX), LMMs quoting at the NBBO are eligible to receive a guaranteed participation allocation in the execution of incoming bids and offers.[7]

Importantly, all Market Makers, including LMMs, have access to the same information in the Consolidated Book that is available to all other market participants. Moreover, none of the Exchange's Market Makers, including LMMs, have agency obligations to orders in the Exchange's Consolidated Book. As such, the key distinctions between Market Makers and LMMs are the quoting requirements set forth in Rule 6.37B and allocation guarantee for LMMs set forth in Rule 6.76A.

Notwithstanding that all Market Makers have access to the same Exchange trading information as all other market participants on the Exchange, the Exchange has specific rules governing how LMMs may operate. Rule 6.83 prohibits OTPs affiliated with an LMM from purchasing or selling any option to which the LMM is appointed, except to reduce or liquidate positions after appropriate identification and Trading Official approval of the transaction. The rule further provides an exemption from the prohibition for affiliated firms that implement specified Exchange-approved procedures to restrict the flow of material, non-public information. Rules 6.83(e)—(j) outline the ''Exemption Guidelines'' with which an affiliated firm must comply to obtain an exemption from the restriction in Rule 6.83. These specified ''Exemption Guidelines'' are meant to ensure that an LMM will not have access to material, non-public information possessed by its affiliated OTP(s), and that a firm will not misuse its affiliated LMM's material, non-public information.

Proposed Rule Change

The Exchange believes that the guidelines in Rule 6.83 for LMMs are no longer necessary and proposes to delete the Rule in its entirety. The Exchange believes that Rule 11.3, governing the misuse of material, non-public information, provides for an appropriate, principles-based approach to prevent the market abuses Rule 6.83 was designed to address. Specifically, Rule 11.3 requires every OTP to establish, maintain, and enforce written policies and procedures reasonably designed to prevent the misuse of material, non-public information by such OTP or associated persons. For

[4] An ''OTP'' is an Options Trading Permit issued by the Exchange for effecting approved securities transactions on the Exchange's Trading Facilities; OTP Holders and OTP Firms are natural persons or business entities, respectively, that have one or more OTP. *See* Rule 1.1(p)–(r).

[5] Unless specified, or unless the context requires otherwise, the term Market Maker refers to both Market Makers and Lead Market Maker. *See* Rule 6.32(a).

[6] *Compare* Rule 6.37B(b) (An LMM ''must provide continuous two-sided quotations throughout the trading day in its appointed issues for 90% of the time the Exchange is open for trading in each issue''[sic] *with* 6.37B(c) (''A Market Maker must provide continuous two-sided quotations throughout the trading day in its appointed issues for 60% of the time the Exchange is open for trading in each issue'').

[7] *See* Rule 6.76A(a)(1)(A).

purposes of this requirement, the misuse of material, non-public information includes, but is not limited to, the following:

(a) Trading in any securities issued by a corporation, or in any related securities or related options or other derivative securities, while in possession of material, non-public information concerning that issuer;

(b) trading in a security or related options or other derivative securities, while in possession of material, non-public information concerning imminent transactions in the security or related securities; or

(c) disclosing to another person or entity any material, non-public information involving a corporation whose shares are publicly traded or an imminent transaction in an underlying security or related securities for the purpose of facilitating the possible misuse of such material, non-public information.[8]

Because LMMs are already subject to the requirements of Rule 11.3, the Exchange does not believe that it is necessary to separately require specific limitations on dealings between LMMs and their affiliates. Deleting Rule 6.83 would provide LMMs with the flexibility to adapt their policies and procedures as appropriate to reflect changes to their business model, business activities, or the securities market in a manner similar to how Market Makers on the Exchange currently operate and consistent with Rule 11.3.

As noted above, LMMs are distinguished under Exchange rules from other types of Market Makers in that LMMs have heightened obligations and allocation guarantees. However, none of these heightened obligations provides different or greater access to nonpublic information than any other market participant on the Exchange.[9] Specifically, LMMs on the Exchange do not have access to trading information provided by the Exchange, either at, or prior to, the point of execution, that is not made available to all other market participants on the Exchange in a similar manner. Further, as noted above, LMMs on the Exchange do not have any agency responsibilities for orders in the Consolidated Book. Accordingly, because LMMs do not have any trading advantages at the Exchange due to their market role, the Exchange believes that they should be subject to the same rules regarding the protection against the misuse of material non-public information, which in this case, is existing Rule 11.3.[10]

The Exchange notes that even with this proposed rule change, pursuant to Rule 11.3, an LMM would still be obligated to ensure that its policies and procedures reflect the current state of its business and continue to be reasonably designed to achieve compliance with applicable federal securities law and regulations, and with applicable Exchange rules, including being reasonably designed to protect against the misuse of material, non-public information. While information barriers would not specifically be required under the proposal, Rule 11.3 already requires that an OTP consider its business model or business activities in structuring its policies and procedures, which may dictate that an information barrier or a functional separation be part of the appropriate set of policies and procedures that would be reasonably designed to achieve compliance with applicable securities law and regulations, and with applicable Exchange rules.

The Exchange is not proposing to change what is considered to be material, non-public information and, thus does not expect there to be any changes to the types of information that an affiliated brokerage business of an LMM could share with such LMM. In that regard, the proposed rule change will not permit the affiliates of LMMs to have access to any non-public order or quote information of the LMM, including hidden or undisplayed size or price information of such orders or quotes. Affiliates of LMMs would only have access to orders and quotes that are publicly available to all market participants. OTPs do not expect to receive any additional order or quote information as a result of this proposed rule change.

Further, the Exchange does not believe that there will be any material change to Market Maker information barriers as a result of removal of the Exchange's pre-approval requirements. In fact, the Exchange anticipates that eliminating the pre-approval requirement should facilitate implementation of changes to Market Maker information barriers as necessary to protect against the misuse of material, non-public information. The Exchange also suggests that the pre-approval requirement is unnecessary because LMMs do not have agency responsibilities to orders in the Consolidated Book, or time and place information advantages because of their market role. However, as is the case today with Market Makers, information barriers of new entrants would be subject to review as part of a new firm application. Moreover, the policies and procedures of market makers, including those relating to information barriers, would be subject to review by FINRA, on behalf of the Exchange, pursuant to a Regulatory Services Agreement.

The Exchange further notes that under Rule 11.3, an OTP would be able to structure its firm to provide for its options LMMs, or Market Makers, as applicable, to be structured with its equities and customer-facing businesses, provided that any such structuring would be done in a manner reasonably designed to protect against the misuse of material, non-public information. For example, pursuant to Rule 11.3, a Market Maker on the Exchange could be in the same independent trading unit, as defined in Rule 200(f) of Regulation SHO,[11] as an equities market maker and other trading desks within the firm, including options trading desks, so that the firm could share post-trade information to better manage its risk across related securities. The Exchange believes it is appropriate, and consistent with Rule 11.3 and Section 15(g) of the Act[12] for a firm to share options position and related hedging position information (*e.g.,* equities, futures, and foreign currency) within a firm to better manage risk on a firm-wide basis. The Exchange notes, however, that if so structured, a firm would need to have appropriate policies and procedures, including information barriers as applicable, to protect against the misuse of material non-public information, and specifically customer information, consistent with Rule 11.3.

The Exchange believes that the proposed reliance on the principles-based Rule 11.3 would help ensure that an OTP that operates an LMM would be required to protect against the misuse of any material non-public information. As noted above, Rule 11.3 already requires that firms refrain from trading while in possession of material non-public information concerning imminent transactions in the security or related

[8] *See* Commentary .01 to Rule 11.3.

[9] *See* Rules 6.37B and 6.76A.

[10] The Exchange notes that by deleting Rule 6.83, the Exchange would no longer require specific information barriers for LMMs or require pre-approval of any information barriers that an LMM would erect for purposes of protecting against the misuse of material non-public information. However, as is the case today with Market Makers, information barriers of new entrants, including new LMMs, would be subject to review as part of a new firm application. Moreover, the policies and procedures of LMMs, including those relating to information barriers, would be subject to review by FINRA, on behalf of the Exchange, pursuant to a Regulatory Services Agreement.

[11] 17 CFR part 242.200(f).

[12] 15 U.S.C. 78o(g).

product. The Exchange believes that moving to a principles-based approach rather than prescribing how and when to wall off an LMM from the rest of the firm would provide OTPs operating LMMs with appropriate tools to better manage risk across a firm, including integrating options positions with other positions of the firm or, as applicable, by the respective independent trading unit. Specifically, the Exchange believes that it is appropriate for risk management purposes for an OTP operating an LMM to be able to consider both options LMMs' traded positions for purposes of calculating net positions consistent with Rule 200 of Regulation SHO, calculating intra-day net capital positions, and managing risk both generally as well as in compliance with Rule 15c3–5 under the Act (the ''Market Access Rule'').[13] The Exchange notes that any risk management operations would need to operate consistent with the requirement to protect against the misuse of material non-public information.

The Exchange further notes that if LMMs are integrated with other market making operations, they would be subject to existing rules that prohibit OTPs from disadvantaging their customers or other market participants by improperly capitalizing on a member organization's access to the receipt of material, non-public information. As such, an OTP that integrates its LMM operations together with equity market making would need to protect customer information consistent with existing obligations to protect such information. The Exchange has rules prohibiting OTPs from disadvantaging their customers or other market participants by improperly capitalizing on the OTP's access to or receipt of material, non-public information. For example, Rule 11.18 requires OTPs to establish, maintain, enforce, and keep current a system of compliance and supervisory controls, reasonably designed to achieve compliance with applicable securities laws and Exchange rules. Additionally, Rule 6.49 prevents an OTP or person associated with an OTP, who has knowledge of an originating order, a solicited order, or a facilitation order, to enter, based on such knowledge, an order to buy or sell an option on the underlying securities of any option that is the subject of the order, an order to buy or sell the security underlying any option that is the subject of the order, or any order to buy or sell any related instrument unless certain circumstances are met.[14]

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act[15] in general, and furthers the objectives of Section 6(b)(5) of the Act[16] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change would remove impediments to and perfect the mechanism of a free and open market by adopting a principles-based approach to permit an OTP operating an LMM to maintain and enforce policies and procedures to, among other things, prohibit the misuse of material non-public information and eliminating restrictions on how an OTP structures it LMM operations. The Exchange notes that the proposed rule change is based on an approved rule of the Exchange to which LMMs are already subject—Rule 11.3—and harmonizes the rules governing LMMs and Market Makers. Moreover, OTPs operating LMMs would continue to be subject to federal and Exchange requirements for protecting material non-public order information.[17] The Exchange believes that the proposed rule change would remove impediments to and perfect the mechanism of a free and open market because it would harmonize the Exchange's approach to protecting against the misuse of material nonpublic information and no longer subject LMMs to additional requirements. The Exchange does not believes that the existing requirements applicable to LMMs are narrowly tailored to their respective roles because neither market participant has access to Exchange trading information in a manner different from any other market participant on the Exchange and they do not have agency responsibilities to the Consolidated Book.

The Exchange further believes the proposal is designed to prevent fraudulent and manipulative acts and practices and to promote just and equitable principles of trade because existing rules make clear to LMMs and OTPs the type of conduct that is prohibited by the Exchange. While the proposal eliminates requirements relating to the misuse of material non-public information, LMMs and OTPs would remain subject to existing Exchange rules requiring them to establish and maintain systems to supervise their activities, and to create, implement, and maintain written procedures that are reasonably designed to comply with applicable securities laws and Exchange rules, including the prohibition on the misuse of material, nonpublic information.

The Exchange notes that the proposed rule change would still require that OTPs operating LMMs maintain and enforce policies and procedures reasonably designed to ensure compliance with applicable federal securities laws and regulations and with Exchange rules. Even though there would no longer be pre-approval of LMM information barriers, any LMM written policies and procedures would continue to be subject to oversight by the Exchange and therefore the elimination of prescribed restrictions should not reduce the effectiveness of the Exchange rules to protect against the misuse of material non-public information. Rather, OTPs will be able to utilize a flexible, principles-based approach to modify their policies and procedures as appropriate to reflect changes to their business model, business activities, or to the securities market itself. Moreover, while specified information barriers may no longer be required, an OTP's business model or business activities may dictate that an information barrier or functional separation be part of the appropriate set of policies and procedures that would be reasonably designed to achieve compliance with applicable securities laws and regulations, and with applicable Exchange rules. The Exchange therefore believes that the proposed rule change will maintain the existing protection of investors and the public interest that is currently applicable to LMMs, while at the same time removing impediments to and perfecting a free and open market by moving to a principles-based approach to protect against the misuse of material non-public information.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[18] the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. To the contrary, the Exchange believes that the proposal will enhance competition by allowing Market Makers to comply with applicable Exchange

[13] 17 CFR part 240.15c3–5.

[14] *See* Rule 6.49(b).

[15] 15 U.S.C. 78f(b).

[16] 15 U.S.C. 78f(b)(5).

[17] *See* 15 U.S.C. 78o(g) and Rule 11.3.

[18] 15 U.S.C. 78f(b)(8).

rules in a manner best suited to their business models, business activities, and the securities markets, thus reducing regulatory burdens while still ensuring compliance with applicable securities laws and regulations and Exchange rules. The Exchange believes that the proposal will foster a fair and orderly marketplace without being overly burdensome upon Market Makers.

Moreover, the Exchange believes that the proposed rule change would eliminate a burden on competition for OTPs which currently exists as a result of disparate rule treatment between the options and equities markets regarding how to protect against the misuse of material non-public information. For those OTPs that are also members of equity exchanges, their respective equity market maker operations are now subject to a principles-based approach to protecting against the misuse of material non-public information.[19] The Exchange believes it would remove a burden on competition to enable OTPs to similarly apply a principles-based approach to protecting against the misuse of material nonpublic information in the options space. To this end, the Exchange notes that Rule 11.3 still requires an OTP that operates as a Market Maker on the Exchange, including an LMM, to evaluate its business to assure that its policies and procedures are reasonably designed to protect against the misuse of material nonpublic information. However, with this proposed rule change, an OTP that trades equities and options could look at its firm more holistically to structure its operations in a manner that provides it with better tools to manage its risks across multiple security classes, while at the same time protecting against the misuse of material non-public information.

[19] *See* Securities Exchange Act Release Nos. 60604 (Sept. 2, 2009), 76 FR 46272 (Sept. 8, 2009) (SR–NYSEArca–2009–78) (Order approving elimination of NYSE Arca rule that required market makers to establish and maintain specifically prescribed information barriers, including discussion of NYSE Arca and Nasdaq rules) (''Arca Approval Order''); 61574 (Feb. 23, 2010), 75 FR 9455 (Mar. 2, 2010) (SR–BATS–2010–003) (Order approving amendments to BATS Rule 5.5 to move to a principles-based approach to protecting against the misuse of material, non-public information, and noting that the proposed change is consistent with the approaches of NYSE Arca and Nasdaq) (''BATS Approval Order''); and 72534 (July 3, 2014), 79 FR 39440 (July 10, 2014), SR–NYSE–2014–12) (Order approving amendments to NYSE Rule 98 governing designated market makers to move to a principles-based approach to prohibit the misuse of material non-public information) (''NYSE Approval Order'').

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[20] and Rule 19b–4(f)(6) thereunder.[21] Because the proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[22] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEARCA–2015–106 on the subject line.

[20] 15 U.S.C. 78s(b)(3)(A)(iii).

[21] 17 CFR 240.19b–4(f)(6).

[22] 15 U.S.C. 78s(b)(2)(B).

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEARCA–2015–106. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549–1090, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing will also be available for inspection and copying at the NYSE's principal office and on its Internet Web site at *www.nyse.com.* All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEARCA–2015–106 and should be submitted on or before December 7,2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[23]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76392; File No. SR–MIAX–2015–62]

Self-Regulatory Organizations; Miami International Securities Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend MIAX Rule 521

November 9, 2015.

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 4, 2015, Miami International Securities Exchange LLC (''MIAX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend Rule 521, Nullification and Adjustment of Options Transactions Including Obvious Errors, to modify the amount to be charged to Members that appeal an Official ruling when the ruling is sustained and not overturned or modified, and to pass through other market center charges associated with obvious error determinations.

The text of the proposed rule change is available on the Exchange's Web site at *http://www.miaxoptions.com/filter/wotitle/rule_filing,* at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On May 7, 2015 the Exchange filed a proposed rule change to replace Exchange Rule 521 entitled ''Obvious and Catastrophic Errors'' with new Exchange Rule 521 entitled ''Nullification and Adjustment of Options Transactions Including Obvious Errors.'' Rule 521 became operative on May 8, 2015.[3] Rule 521 was amended in conjunction with amendments made by all U.S. options exchanges in order to harmonize their respective rules related to the adjustment and nullification of erroneous options transactions. The Exchange believes that Rule 521, together with comparable harmonized rules of the other U.S. options exchanges,[4] provides transparency and finality with respect to the adjustment and nullification of erroneous options transactions, achieving consistent results for participants across the options exchanges while maintaining a fair and orderly market, protecting investors and protecting the public interest.

The purpose of the proposed rule change is to further harmonize Rule 521 with the rules of other exchanges by modifying the amount to be charged to Members that appeal an Official ruling under Rule 521 if such ruling is sustained and not overturned or modified, and to permit the Exchange to pass along charges assessed by another market center in connection with Obvious Error and Catastrophic Error determination requests presented to that market center by the Exchange on a Member's behalf.

The Exchange proposes to amend Section (l)(2) of the Rule to charge $500.00 to MIAX Members that appeal an Official ruling when such ruling is sustained and not overturned or modified, and to add new language to permit the Exchange to pass along charges assessed by another market center in connection with Obvious Error and Catastrophic Error determination requests presented to that market center by the Exchange on a Member's behalf. Currently, the Exchange charges Members $250.00 in this circumstance. The Exchange proposes to increase this charge from $250.00 to $500.00.

2. Statutory Basis

The Exchange believes that its proposal to amend Rule 521 is consistent with Section 6(b) of the Act[5] in general, and furthers the objectives of Section 6(b)(4) of the Act[6] in particular, in that it provides for an equitable allocation of reasonable fees and other charges among Exchange members.

The $500.00 charge and the provision to pass through charges from other market centers proposed herein is just and equitable and not unfairly discriminatory because it would apply equally to all MIAX Members seeking review on appeal of Official rulings pursuant to Rule 521(l), and will not be assessed if the ruling giving rise to the appeal is modified or reversed. The $500.00 charge is consistent with the amount charged by other U.S. options exchanges for unsuccessful appeals under their obvious error rules.[7]

The provision to pass through charges from other market centers proposed herein is just and equitable and not unfairly discriminatory because it would apply equally to all MIAX Members requesting Obvious Error or Catastrophic Error determinations from other market centers through the Exchange. The pass through charge is also consistent with pass through charges charged by other U.S. options exchanges under their obvious error rules.[8] The Exchange believes that it will prevent fraudulent and manipulative practices, promote just and equitable principles of trade, and remove impediments to and perfect the mechanisms of a free and open market and a national market system by discouraging frivolous appeals of Official rulings made under Rule 521. Further, it will allow the Exchange to recoup its administrative costs associated with Rule 521 appeals, and provide additional resources to the Exchange to administer its regulatory functions, including appeals of Official rulings under Rule 521(l).

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposal will have any impact on

competition in that the $500.00 charge and the provision of pass through charges from other market centers proposed herein will apply equally to all MIAX Members submitting appeals pursuant to Rule 521(l).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[9] and Rule 19b–4(f)(2) [10] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–MIAX–2015–62 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–MIAX–2015–62. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–MIAX–2015–62, and should be submitted on or before December 7, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[11]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76394; File No. SR–BATS–2015–56]

Self-Regulatory Organizations; BATS Exchange, Inc.; Notice of Filing of Amendments Nos. 1 and 2 and Order Granting Accelerated Approval of a Proposed Rule Change to List and Trade Shares of the ProShares Managed Futures Strategy ETF of the ProShares Trust Under BATS Rule 14.11 on BATS Exchange, Inc.

November 9, 2015.

I. Introduction

On July 30, 2015, BATS Exchange, Inc. (''Exchange'' or ''BATS'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'' or ''Exchange Act'') [2] and Rule 19b–4 thereunder,[3] a proposed rule change to list and trade shares (''Shares'') of the ProShares Managed Futures Strategy ETF (''Fund'') of the ProShares Trust (''Trust'') under BATS Rule 14.11(i). The proposed rule change was published for comment in the **Federal Register** on August 17, 2015.[4] On August 19, 2015, the Exchange filed Amendment No. 1 to the proposed rule change, which replaced the proposed rule change in its entirety.[5] On September 4, 2015, the Exchange filed Amendment No. 2 to the proposed rule change, which replaced the proposed rule change in its entirety.[6] The Commission received no comments on the proposed rule change. The Commission is publishing this notice to solicit comments on Amendments Nos. 1 and 2 from interested persons, and is approving the proposed rule change, as modified by Amendments Nos. 1 and 2, on an accelerated basis.

II. Description of the Proposal

The Exchange proposes to list and trade the Shares under BATS Rule 14.11(i), which governs the listing and trading of Managed Fund Shares on the Exchange. The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange's existing rules governing the trading of equity securities.

The Shares will be offered by the Trust, which is established as a Delaware statutory trust. The Trust is registered with the Commission as an open-end investment company and has filed a registration statement on behalf of the Fund on Form N–1A (''Registration Statement'') with the Commission.[7] ProShare Advisors LLC is the investment adviser (''Adviser'') to the Fund. JPMorgan Chase Bank, National Association is the

[3] 17 CFR 240.19b–4.

[4] *See* Securities Exchange Act Release No. 75664 (August 11, 2015), 80 FR 49288.

[5] In Amendment No. 1, the Exchange supplemented the information that will be included in the Fund's Disclosed Portfolio, clarified the investments that the Fund may hold, clarified how certain of the Fund's assets will be valued in calculating the Fund's net asset value (''NAV''), and provided additional information regarding the availability of price information for the assets that the Fund may hold. All amendments to the proposed rule change are available at: *http://www.sec.gov/comments/sr-bats-2015–56/bats201556–1.pdf.*

[6] In Amendment No. 2, the Exchange modified the description of the swaps that the Fund may hold and the availability of intraday price information for assets that the Fund may hold.

[7] *See* Registration Statement on Form N–1A for the Trust, dated May 31, 2013 (File Nos. 333–98922 and 811–21114). *See also* Investment Company Act Release No. 30562 (June 18, 2013) (File No. 812–14041).

administrator, custodian, fund account agent, index receipt agent and transfer agent for the Trust. SEI Investments Distribution Co. serves as the distributor for the Trust. The Exchange represents that the Adviser is not a registered broker-dealer but is affiliated with a broker-dealer, and in the future may affiliate with other broker-dealers, and has implemented a fire wall with respect to such broker-dealer regarding access to information concerning the composition and/or changes to the Fund's portfolio.[8] The Exchange further represents that Adviser personnel who make decisions regarding the Fund's portfolio are subject to procedures designed to prevent the use and dissemination of material nonpublic information regarding the Fund's portfolio.[9]

The Exchange's Description of the Fund [10]

The Fund will generally seek exposure to the commodity and financial markets included in the S&P® Strategic Futures Index (''Index''),[11] but the Fund is not an index tracking ETF and will generally seek to enhance its performance by actively selecting investments for the Fund with varying maturities from the underlying components of the Index.

Under normal market conditions,[12] the Fund will invest at least 80% of its assets directly, or indirectly through ProShares Cayman Trust I (''Subsidiary''),[13] a wholly-owned subsidiary of the Fund, in the exchange-listed futures contracts included in the Index, which include commodity futures, currency futures, and U.S. Treasury futures (collectively, ''Futures Contracts''). The Fund may also invest in swaps [14] if the market for a specific Futures Contract experiences emergencies (*e.g.,* natural disaster, terrorist attack, or an act of God) or disruptions (*e.g.,* a trading halt or a flash crash) that would prevent the Fund from obtaining the appropriate amount of investment exposure to the affected Futures Contracts or other futures contracts directly.

The Fund may also invest up to 100% of its assets in cash or cash equivalents such as U.S. Treasury securities or other high credit quality short-term fixed-income or similar securities (including shares of money market funds, bank deposits, bank money market accounts, certain variable rate-demand notes, and repurchase agreements collateralized by government securities) for direct investment or as collateral for the Futures Contracts or swap agreements. The Fund will use the fixed-income securities as investments and to meet asset coverage tests resulting from the Subsidiary's derivative exposure on a day-to-day basis.

III. Discussion and Commission Findings

After careful review, the Commission finds that the Exchange's proposal to list and trade the Shares is consistent with the Exchange Act and the rules and regulations thereunder applicable to a national securities exchange.[15] In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(5) of the Exchange Act,[16] which requires, among other things, that the Exchange's rules be designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Commission also finds that the proposal to list and trade the Shares on the Exchange is consistent with Section 11A(a)(1)(C)(iii) of the Exchange Act,[17] which sets forth Congress' finding that it is in the public interest and appropriate for the protection of investors and the maintenance of fair and orderly markets to assure the availability to brokers, dealers and investors of information with respect to quotations for and transactions in securities. Quotation and last-sale information for the Shares will be available on the facilities of the Consolidated Tape Association (''CTA''). Information regarding market price and volume of the Shares will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services. The previous day's closing price and trading volume information for the Shares will be generally published daily in the print and online financial press. The Web site for the Fund will include a form of the prospectus for the Fund and additional data relating to NAV and other applicable quantitative information.

Intraday price quotations on repurchase agreements and U.S. Government securities of the type held by the Fund are available from major broker-dealer firms and from third-parties, which may provide prices free with a time delay, or ''live'' with a paid fee. Major broker-dealer firms will also provide intraday quotes on swaps of the type held by the Fund.[18] Pricing information related to money market fund shares will be available through issuer Web sites and publicly available quotation services.[19] For Futures Contracts, such intraday information is available directly from the applicable listing exchange. Intraday price information is also available through subscription services, such as Bloomberg and Thomson Reuters, which can be accessed by authorized participants and other investors.[20]

On each business day, before commencement of trading in Shares during Regular Trading Hours on the Exchange, the Fund will disclose on its

[8] *See* Amendment No. 2, *supra* note 6, at 29.

[9] *See id.* at 6; *see also* BATS Rule 14.11(i)(7). The Exchange also represents that in the event that (a) the Adviser becomes registered as a broker-dealer or newly affiliated with another broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer, it will implement a fire wall with respect to its relevant personnel or such broker-dealer affiliate, as applicable, regarding access to information concerning the composition and/or changes to the portfolio, and will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding such portfolio.

[10] The Commission notes that additional information regarding the Trust, the Fund, and the Shares, investment strategies, risks, NAV calculation, creation and redemption procedures, fees and expenses, portfolio holdings disclosure policies, distributions, and taxes, among other information, is included in the Amendment No. 2 and Registration Statement. *See supra* notes 6 and 8, respectively.

[11] The Index seeks to reflect trends (in either direction) in the commodity, foreign currency and fixed income markets by taking long or short positions in the related futures contracts.

[12] The term ''under normal market conditions'' includes, but is not limited to, the absence of extreme volatility or trading halts in the fixed income markets, futures markets or the financial markets generally; operational issues causing dissemination of inaccurate market information; or force majeure type events such as systems failure, natural or manmade disaster, act of God, armed conflict, act of terrorism, riot or labor disruption or any similar intervening circumstance.

[13] The Subsidiary will be advised by the Adviser and will have the same investment objective as the Fund. The Fund's investment in the Subsidiary is intended to provide the Fund with exposure to markets (in general, the commodity markets) within the limits of current federal income tax laws applicable to investment companies such as the Fund, which limit the ability of investment companies to invest directly in certain Futures Contracts. Generally, references to the Fund's investments may also be deemed to include the Fund's indirect investments through the Subsidiary. The Fund will invest up to 25% of its total assets in the Subsidiary.

[14] The Fund may invest in swap agreements whose value is derived from the level of the Benchmark, one or more Futures Contracts or from the reference assets underlying one or more of such Futures Contracts.

[15] In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[16] 15 U.S.C. 78f(b)(5).

[17] 15 U.S.C. 78k–1(a)(1)(C)(iii).

[19] *See id.*

[20] *See id.* at 31.

Web site the identities and quantities of the portfolio Futures Contracts and other assets (''Disclosed Portfolio'') held by the Fund that will form the basis for the Fund's calculation of NAV at the end of the business day.[21] In addition, for the Fund, an estimated value, defined in BATS Rule 14.11(i)(3)(C) as the ''Intraday Indicative Value,'' that reflects an estimated intraday value of the Fund's portfolio, will be disseminated. The Intraday Indicative Value will be based upon the current value for the components of the Disclosed Portfolio and will be updated and widely disseminated by one or more major market data vendors at least every 15 seconds during the Exchange's Regular Trading Hours.[22]

The Commission also believes that the proposal to list and trade the Shares is reasonably designed to promote fair disclosure of information that may be necessary to price the Shares appropriately and to prevent trading when a reasonable degree of transparency cannot be assured. The Commission notes that the Exchange will obtain a representation from the issuer of the Shares that the NAV per Share will be calculated daily and that the NAV and the Disclosed Portfolio will be made available to all market participants at the same time.[23] The Exchange will halt trading in the Shares under the conditions specified in BATS Rule 11.18. Trading may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. These may include: (1) The extent to which trading is not occurring in the Futures Contracts and other assets composing the Disclosed Portfolio of the Fund; or (2) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present. Trading in the Shares also will be subject to Rule 14.11(i)(4)(B)(iv), which sets forth circumstances under which Shares of the Fund may be halted. The Exchange prohibits the distribution of material non-public information by its employees. The Exchange represents that the Adviser is not a registered broker-dealer, but is affiliated with a broker-dealer, and in the future may affiliate with other broker-dealers, and has implemented a fire wall with respect to such broker-dealer regarding access to information concerning the composition and/or changes to the Fund's portfolio.[24] The Exchange further represents that Adviser personnel who make decisions regarding the Fund's portfolio are subject to procedures designed to prevent the use and dissemination of material nonpublic information regarding the Fund's portfolio.[25] In addition, the Commission notes that, consistent with BATS Rule 14.11(i)(4)(B)(ii)(b), the Reporting Authority, as defined in BATS Rule 14.11(i)(3)(D), must implement and maintain, or be subject to, procedures designed to prevent the use and dissemination of material, non-public information regarding the actual components of the portfolio. The Exchange may obtain information regarding trading in the Shares and the underlying shares in exchange traded equity securities via the Intermarket Surveillance Group (''ISG''), from other exchanges that are members or affiliates of the ISG, or with which the Exchange has entered into a comprehensive surveillance sharing agreement.[26] In addition, the Exchange is able to access, as needed, trade information for certain fixed income instruments reported to FINRA's Trade Reporting and Compliance Engine.

In support of this proposal, the Exchange has made the following representations:

(1) The Shares will be subject to BATS Rule 14.11(i), which sets forth the initial and continued listing criteria applicable to Managed Fund Shares.

(2) The Exchange has appropriate rules to facilitate transactions in the Shares during all trading sessions.

(3) Trading of the Shares through the Exchange will be subject to the Exchange's surveillance procedures for derivative products, including Managed Fund Shares, and that these procedures are adequate to properly monitor the trading of the Shares on the Exchange during all trading sessions and to deter and detect violations of Exchange rules and the applicable federal securities laws.

(4) Prior to the commencement of trading, the Exchange will inform its members in an Information Circular of the special characteristics and risks associated with trading the Shares. Specifically, the Information Circular will discuss the following: (a) The procedures for purchases and redemptions of Shares in Creation Units (and that Shares are not individually redeemable); (b) BATS Rule 3.7, which imposes suitability obligations on Exchange members with respect to recommending transactions in the Shares to customers; (c) how information regarding the Intraday Indicative Value is disseminated; (d) the risks involved in trading the Shares during the Pre-Opening [27] and After Hours Trading Sessions [28] when an updated Intraday Indicative Value will not be calculated or publicly disseminated; (e) the requirement that members deliver a prospectus to investors purchasing newly issued Shares prior to or concurrently with the confirmation of a transaction; and (f) trading information.

(5) For initial and/or continued listing, the Fund must be in compliance with Rule 10A–3 under the Act.[29]

(6) As it relates to futures contracts, all Futures Contracts in the Disclosed Portfolio for the Fund will trade on markets that are a member of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

(7) A minimum of 100,000 Shares will be outstanding at the commencement of trading on the Exchange.

This approval order is based on all of the Exchange's representations, including those set forth above and in the Notice. For the foregoing reasons, the Commission finds that the proposed rule change, as modified by Amendments Nos. 1 and 2, is consistent with Section 6(b)(5) of the Act [30] and the rules and regulations thereunder applicable to a national securities exchange.

IV. Solicitation of Comments on Amendments Nos. 1 and 2

Interested persons are invited to submit written data, views, and

[21] The Disclosed Portfolio will include, as applicable: ticker symbol or other identifier, a description of the holding, identity of the asset upon which the derivative is based, the strike price for any options, the quantity of each security or other asset held as measured by select metrics, maturity date, coupon rate, effective date, market value and percentage weight of the holding in the portfolio. The Web site and information will be publicly available at no charge. Under accounting procedures to be followed by the Fund, trades made on the prior business day (''T'') will be booked and reflected in NAV on the current business day (''T+1''). Accordingly, the Fund will be able to disclose at the beginning of the business day the portfolio that will form the basis for the NAV calculation at the end of the business day.

[22] It is the Exchange's current understanding that several major market data vendors display and/or make widely available Intraday Indicative Values published via the CTA or other data feeds. *See id.* at 24, n.20.

[23] *See id.* at 25.

[24] *See id.* at 29.

[25] *See id.* at 6.

[26] For a list of the current members of ISG, see *www.isgportal.org.* All of the Futures Contracts held by the Fund will trade on markets that are a member of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement. *See id.* at 27, n.22.

[27] The Pre-Opening Session is from 8:00 a.m. to 9:30 a.m. Eastern Time.

[28] The After Hours Trading Session is from 4:00 p.m. to 5:00 p.m. Eastern Time.

[29] *See* 17 CFR 240.10A–3.

[30] 15 U.S.C. 78f(b)(5).

arguments concerning whether Amendments Nos. 1 and 2 are consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–BATS–2015–56 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–BATS–2015–56. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–BATS–2015–56 and should be submitted on or before December 7, 2015.

V. Accelerated Approval of Proposed Rule Change as Modified by Amendments Nos. 1 and 2

The Commission finds good cause to approve the proposed rule change, as modified by Amendments Nos. 1 and 2, prior to the thirtieth day after the date of publication of notice in the **Federal Register**. No comments were received after publication of the Notice. Amendments Nos. 1 and 2 only supplement the proposed rule change by clarifying certain points and providing additional detail. Therefore, the Commission finds good cause, pursuant to Section 19(b)(2) of the Act,[31] to approve the proposed rule change, as modified by Amendments Nos. 1 and 2 on an accelerated basis.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Exchange Act,[32] that the proposed rule change (SR–BATS–2015–56), as modified by Amendment Nos. 1 and 2, is hereby approved on an accelerated basis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[33]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76400; File No. SR–NYSE–2015–56]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending Its Price List to Modify Certain Fees for Transactions that Remove Liquidity from the Exchange

November 9, 2015.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on November 2, 2015, New York Stock Exchange LLC (''NYSE'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend its Price List to modify certain fees for transactions that remove liquidity from the Exchange, effective November 2, 2015. The text of the proposed rule change is available on the Exchange's Web site at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Price List to increase certain fees that remove liquidity from the Exchange, effective November 2, 2015. The proposed change would only apply to transactions in securities priced $1.00 or more.

In particular, the Exchange currently charges $0.0027 per share for non-Floor broker transactions that remove liquidity from the Exchange, including those of Designated Market Makers (''DMM''). The Exchange proposes to increase this fee to $0.00275 per share.

Similarly, the Exchange currently charges $0.0027 per share for all Midpoint Passive Liquidity (''MPL'') Orders[4] that remove liquidity from the Exchange and are not designated with a Retail Modifier as defined in Rule 13. The Exchange proposes to increase the fee for executions of MPL Orders that remove liquidity from the NYSE to $0.00275 per share.

The Exchange currently charges $0.0024 per share or $0.0027 if an MPL Order for all other Floor broker transactions that remove liquidity from the Exchange. MPL orders designated with a Retail Modifier as defined in Rule 13 are not charged a fee. The Exchange proposes to increase the $0.0027 per share fee for Floor broker MPL Orders that take liquidity from the

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] MPL Order is defined in Rule 13 as an undisplayed limit order that automatically executes at the mid-point of the protected best bid or offer (''PBBO'').

NYSE to $0.00275 per share. The current $0.0024 per share fee for Floor broker transactions that take liquidity from the Exchange would remain unchanged.

The proposed change is not otherwise intended to address any other issues, and the Exchange is not aware of any problems that member organizations would have in complying with the proposed change.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[5] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[6] in particular, because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members, issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

The Exchange believes that the proposed fee increase for non-Floor broker transactions that remove liquidity is reasonable because non-Floor brokers would continue to receive credits for their transactions that provide liquidity on the Exchange, including (i) for member organizations that add liquidity that satisfies certain thresholds under the Tier Adding Credits, (ii) for DMMs under the DMM credits, and (iii) for MPL Orders under various pricing categories in the Price List. The resulting fee also is equitable and not unfairly discriminatory because it would continue to be consistent with, and in some cases lower than, the applicable rate on other marketplaces. For example, the standard fee for removing liquidity from NASDAQ in both NASDAQ-listed and NYSE-listed securities is $0.0030 per share, which is higher than the proposed $0.00275 per share fee.[7]

The Exchange believes that the proposed increase to the fee for executions of MPL Orders, including Floor broker MPL orders, that remove liquidity from the Exchange is reasonable because the charge would be the same as the $0.00275 per share fee proposed for all other non-Floor broker transactions that take liquidity from the NYSE. The proposed fee is also reasonable because it would be lower than the applicable rate on other marketplaces. For example, NASDAQ charges $0.0030 per share to execute against resting midpoint liquidity, which is greater than both the existing $0.0027 per share rate and the proposed $0.00275 per share rate that would apply to MPL Orders.[8]

The Exchange believes that the proposed fee increase for MPL Orders, including Floor broker MPL orders, that remove liquidity from the Exchange is equitable and not unfairly discriminatory because MPL Orders may provide opportunities for market participants to interact with orders priced at the midpoint of the PBBO, thus providing price improving liquidity to market participants and thereby increase the quality of order execution on the Exchange's market, which benefits all market participants. The Exchange also believes the proposed fee is equitable and not unfairly discriminatory because all market participants that use the MPL Order type will pay the same proposed fee.

The Exchange also believes it is equitable and not unfairly discriminatory to continue to charge Floor brokers that take liquidity a lower fee ($0.0024) than non-Floor brokers that take liquidity because Floor brokers have slower access to the Exchange (via handheld technology) than non-Floor brokers and are prohibited from routing directly to other market centers from handheld devices, which prevents them from accessing any associated pricing opportunities that might exist at those away markets.

Finally, the Exchange believes that it is subject to significant competitive forces, as described below in the Exchange's statement regarding the burden on competition.

For these reasons, the Exchange believes that the proposal is consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[9] the Exchange believes that the proposed rule change would not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, the Exchange believes that the proposed change would encourage the submission of additional liquidity to a public exchange, thereby promoting price discovery and transparency and enhancing order execution opportunities for member organizations. The Exchange believes that this could promote competition between the Exchange and other execution venues, including those that currently offer similar order types and comparable transaction pricing, by encouraging additional orders to be sent to the Exchange for execution.

Finally, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive or rebate opportunities available at other venues to be more favorable. In such an environment, the Exchange must continually adjust its fees and rebates to remain competitive with other exchanges and with alternative trading systems that have been exempted from compliance with the statutory standards applicable to exchanges. Because competitors are free to modify their own fees and credits in response, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which fee changes in this market may impose any burden on competition is extremely limited. As a result of all of these considerations, the Exchange does not believe that the proposed changes will impair the ability of member organizations or competing order execution venues to maintain their competitive standing in the financial markets.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A) [10] of the Act and subparagraph (f)(2) of Rule 19b–4 [11] thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the

Commission shall institute proceedings under Section 19(b)(2)(B) [12] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSE–2015–56 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSE–2015–56. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSE–2015–56 and should be submitted on or before December 7, 2015.[13]

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[File No. 500–1]

In the Matter of Tirex Corporation, Order of Suspension of Trading

November 12, 2015.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of The Tirex Corporation (''Tirex'') because it has not filed any periodic reports since it filed a Form 10–K for the period ended June 30, 2009 on March 1, 2011. Tirex is a Delaware corporation based in Wilton, Connecticut. Its securities are quoted on OTC Link (previously ''Pink Sheets''), operated by OTC Markets Group, Inc. under the ticker symbol ''TXMC.''

The Commission is of the opinion that the public interest and the protection of investors require a suspension of trading in the securities of the above-listed company.

Therefore, it is ordered, pursuant to Section 12(k) of the Securities Exchange Act of 1934, that trading in the securities of the above-listed company is suspended for the period from 9:30 a.m. EST on November 12, 2015, through 11:59 p.m. EST on November 25, 2015.

By the Commission.

Jill M. Peterson,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–76391; File No. SR–FINRA–2015–044]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Establish an Examination Fee for the Securities Trader Qualification Examination (Series 57)

November 9, 2015.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on October 29, 2015, Financial Industry Regulatory Authority, Inc. (''FINRA'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by FINRA. FINRA has designated the proposed rule change as ''establishing or changing a due, fee or other charge'' under Section 19(b)(3)(A)(ii) of the Act [3] and Rule 19b–4(f)(2) thereunder,[4] which renders the proposal effective upon receipt of this filing by the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

FINRA is proposing to amend Section 4(c) of Schedule A to the FINRA By-Laws to establish an examination fee for the Securities Trader qualification examination (Series 57).

The text of the proposed rule change is available on FINRA's Web site at *http://www.finra.org,* at the principal office of FINRA and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, FINRA included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. FINRA has prepared summaries, set forth in sections A, B,

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A)(ii).

[4] 17 CFR 240.19b–4(f)(2).

and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Background

The SEC recently approved amendments to FINRA rules to establish two new registration categories for associated persons who engage in the securities trading activities specified in NASD Rule 1032(f) and for principals who supervise such activities: (1) Securities Traders; and (2) Securities Trader Principals.[5] The Securities Trader registration category and associated examination (Series 57)[6] will replace the current Equity Trader registration category and associated examination (Series 55).[7] Further, unlike Equity Trader registration, there is no prerequisite registration requirement for Securities Trader registration.[8] To qualify for registration as a Securities Trader, an eligible candidate must only pass the Series 57 examination. In addition, to qualify for registration as a Securities Trader Principal, an associated person must be registered as a Securities Trader and pass the General Securities Principal qualification examination (Series 24).[9]

FINRA is expecting the national securities exchanges to also file amendments to their respective registration rules relating to securities trading activities to replace the Proprietary Trader qualification examination (Series 56) with the Series 57 examination.[10] In addition, the Series 57 examination will replace the Series 56 examination for those exchange registration categories, such as the Proprietary Trader Principal registration category, where the Series 56 examination is currently an acceptable prerequisite.

Proposal

FINRA currently administers examinations electronically through the PROCTOR® system [11] at testing centers operated by vendors under contract with FINRA. FINRA charges an examination fee to candidates for FINRA-sponsored and co-sponsored examinations to cover the development, maintenance and delivery of these examinations.[12] Consistent with this practice, FINRA is proposing to amend Section 4(c) of Schedule A to the FINRA By-Laws to establish a fee of $120 for the Series 57 examination.[13]

FINRA has filed the proposed rule change for immediate effectiveness. FINRA is expecting to implement the proposed rule change on January 4, 2016, which coincides with the anticipated implementation date for the Securities Trader registration category and examination program.

2. Statutory Basis

FINRA believes that the proposed rule change is consistent with the provisions of Section 15A(b)(5) of the Act,[14] which requires, among other things, that FINRA rules provide for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility or system that FINRA operates or controls.

FINRA believes that the proposed rule change constitutes an equitable allocation of fees as the examination fee will be used to cover FINRA's costs in developing, maintaining and delivering the examination and will be assessed only on those individuals who will take the Series 57 examination. FINRA further believes that the proposed fee for the Series 57 examination is reasonable because it is aligned with the overall cost associated with the Series 57 examination program. Accordingly, FINRA believes that the proposed fee for the Series 57 examination is equitably allocated and reasonable.

B. Self-Regulatory Organization's Statement on Burden on Competition

FINRA does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. FINRA believes that the establishment of the fee for the Series 57 examination will have a limited economic impact on the industry.

In proposing a fee of $120 for the Series 57 examination, FINRA applied the same criteria as it does for establishing the fees for other FINRA qualification examinations. The primary factors that FINRA considered include the number of test questions, test session time, staff effort associated with test development and delivery, corporate overhead and operational and technology costs associated with maintaining the PROCTOR system (*i.e.,* item banking, test authoring and test delivery). The proposed fee was also compared with the fees for qualification examinations with comparable test session times (*e.g.,* the Series 24 and Series 27 examinations [15]), because a primary cost of administering examinations is vendor fees.

Moreover, the proposed rule change will reduce the examination fees for the registration of associated persons who are required to be registered to engage in or supervise securities trading.

Economic Impact Assessment

The need for the rule and the regulatory objective are discussed previously.

• Economic Baseline

Currently, associated persons who engage in the securities trading activities specified under NASD Rule 1032(f) or who directly supervise such activities, including principals, are required to take and pass the Series 55 examination in combination with other examinations. As described above, the new registration categories of Securities Trader and Securities Trader Principal will allow such individuals to engage in

[5] *See* Securities Exchange Act Release No. 75783 (August 28, 2015), 80 FR 53369 (September 3, 2015) (Order Approving File No. SR–FINRA–2015–017).

[6] FINRA has filed the Series 57 examination program with the SEC for immediate effectiveness. *See* SR–FINRA–2015–042 (October 13, 2015) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Relating to the New Securities Trader Qualification Examination (Series 57)).

[7] The fee for the Series 55 examination is $110.

[8] Before registration as an Equity Trader may become effective, an associated person must be registered as either a General Securities Representative (Series 7) or Corporate Securities Representative (Series 62). The fee for the Series 7 examination is $305, and the fee for the Series 62 examination is $95.

[9] The fee for the Series 24 examination is $120.

[10] For instance, under the rules of the Chicago Board Options Exchange (CBOE), an individual trading permit holder or individual associated person who is engaged in proprietary trading, market-making or effecting transactions on behalf of a broker-dealer is required to register and qualify as a Proprietary Trader. *See* Interpretation and Policy .08(a)(1) to CBOE Rule 3.6A (Qualification and Registration of Trading Permit Holders and Associated Persons). To qualify as a Proprietary Trader under the CBOE rules, an individual must pass the Series 56 examination or be registered as a General Securities Representative. *See* Interpretation and Policy .08(b) to CBOE Rule 3.6A. FINRA administers the Series 56 examination on behalf of the national securities exchanges. The fee for the Series 56 examination is $195.

[11] PROCTOR is a computer system that is specifically designed for the administration and delivery of computer-based testing and training.

[12] Delivery costs vary based on the length of the examination because FINRA pays its delivery vendors an hourly rate for seat time at test delivery centers. The length of the Series 57 examination will be longer than the Series 55 examination as well as the Series 56 examination.

[13] Consequently, the total examination fee for associated persons registering as Securities Trader Principals will be $240, which includes the proposed fee for the Series 57 examination ($120) and the current fee for the Series 24 examination ($120).

[14] 15 U.S.C. 78*o*–3(b)(5).

[15] The Series 27 examination qualifies an associated person to function as a Financial and Operations Principal. The fee for the Series 27 examination is $120.

the same trading and supervisory activities by taking and passing fewer examinations. Specifically, individuals will no longer be required to take and pass a prerequisite examination, such as the Series 7 or Series 62 examination, to engage in or supervise securities trading. Thus, the proposed rule change will reduce the overall costs, including the cost of having to sit for additional examinations, on individuals who will engage in or supervise securities trading under the new categories, as well as the costs on their associated firms.

Based on a survey of Equity Traders, FINRA understands that some Equity Traders, albeit a limited number, currently engage in sales activities in addition to securities trading. Today, such individuals may engage in sales activities because, concurrent to registration as an Equity Trader, they are registered as either a General Securities Representative or Corporate Securities Representative. However, a newly-registered Securities Trader who will be engaging in sales activities in addition to securities trading must separately register in an appropriate sales-related registration category (*e.g.,* General Securities Representative or Corporate Securities Representative). As a result, such individuals may experience an increase in their total examination fees.

• Economic Impacts

The proposed rule change will reduce the examination fees for the registration of associated persons who are required to be registered to engage in or supervise securities trading. By way of example, the current examination fee for registering as an Equity Trader is $415 (for associated persons who take the Series 7 and 55 examinations) or $205 (for associated persons who take the Series 62 and 55 examinations). Under the proposed rule change, the examination fee for registering as a Securities Trader will be $120. Assuming a constant examination volume at the 2014 level, FINRA estimates that the aggregate cost savings will be approximately $188,000 per year for individuals who currently take the Series 7 and 55 examinations or Series 62 and 55 examinations to engage only in securities trading. In addition, the current examination fee for registering as a Proprietary Trader is $305 (for individuals who take the Series 7 examination) or $195 (for individuals who take the Series 56 examination). Assuming a constant volume at the 2014 level, FINRA estimates that the aggregate cost savings for individuals who currently take the Series 56 examination to engage in securities trading will be approximately $58,200 per year.[16]

As noted above, newly-registered persons who will engage in both sales and trading activities may experience an increase in their total examination fees. For instance, the examination fee for associated persons who will take the Series 7 and 57 examinations to engage in both sales and trading activities will be $425 compared to the current fee of $415 for associated persons who take the Series 7 and 55 examinations to engage in such activities.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [17] and paragraph (f)(2) of Rule 19b–4 thereunder.[18] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or

• Send an email to *rule-comments@sec.gov*. Please include File Number SR–FINRA–2015–044 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–FINRA–2015–044. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal offices of FINRA. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–FINRA–2015–044, and should be submitted on or before December 7, 2015.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[19]

Robert W. Errett,

Deputy Secretary.

[FR Doc. 2015–28860 Filed 11–13–15; 8:45 am]

SECURITIES AND EXCHANGE COMMISSION

[File No. 500–1]

In the Matter of Riverdale Mining Inc., and Tresoro Mining Corp., Order of Suspension of Trading

November 12, 2015.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of Riverdale Mining Inc. (CIK No. 1402357), a revoked Nevada corporation with its principal place of business listed as

Toronto, Ontario, Canada, with stock quoted on OTC Link (previously, ''Pink Sheets'') operated by OTC Markets Group, Inc. (''OTC Link'') under the ticker symbol RVDM, because it has not filed any periodic reports since the period ended December 31, 2012. On November 7, 2014, the Division of Corporation Finance sent Riverdale Mining a delinquency letter requesting compliance with their periodic filing obligations, but the letter was returned because of Riverdale Mining's failure to maintain a valid address on file with the Commission, as required by Commission rules (Rule 301 of Regulation S–T, 17 CFR 232.301 and Section 5.4 of EDGAR Filer Manual).

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of Tresoro Mining Corp. (CIK No. 1348788), a defaulted Nevada corporation with its principal place of business listed as Vancouver, British Columbia, Canada, with stock quoted on OTC Link under the ticker symbol TSOR, because it has not filed any periodic reports since the period ended November 30, 2012. On May 5, 2014, Tresoro Mining received a delinquency letter sent by the Division of Corporation Finance requesting compliance with their periodic filing obligations.

The Commission is of the opinion that the public interest and the protection of investors require a suspension of trading in the securities of the above-listed companies.

Therefore, it is ordered, pursuant to Section 12(k) of the Securities Exchange Act of 1934, that trading in the securities of the above-listed companies is suspended for the period from 9:30 a.m. EST on November 12, 2015, through 11:59 p.m. EST on November 25, 2015.

By the Commission.

Jill M. Peterson,

Assistant Secretary.

[FR Doc. 2015–29288 Filed 11–12–15; 4:15 pm]

BILLING CODE 8011–01–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2015–0115]

Petition for Waiver of Compliance

In accordance with part 211 of Title 49 Code of Federal Regulations (CFR), this document provides the public notice that by a document dated October 16, 2015, Kansas City Southern Railway (KCS) has petitioned the Federal Railroad Administration (FRA) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at CFR part 213. FRA assigned the petition Docket Number FRA–2015–0115.

Pursuant to 49 CFR 213.113(a), KCS requests a waiver from the accepted practice of stop/start rail testing to start a 3-year pilot test process of nonstop continuous testing. The projected starting date for implementing the test process would be November 1, 2015. The test process would occur on the main tracks between Kansas City, MO, and Heavener, OK, on the Pittsburgh Subdivision and the Heavener Subdivision. Once the two initial subdivisions are completed, KCS would like to expand the test process to include the Shreveport Subdivision in Shreveport, LA. KCS intends to test the subdivisions within a 30- to 45-day frequency.

For this pilot test, the process would be similar to the waiver granted to Union Pacific Railroad in Docket Number FRA–2015–0003. KCS would not have parallel or redundant stop/start testing on the segments being tested in a nonstop process. KCS will produce a bimonthly report for FRA's Rail and Infrastructure Integrity Division managers. This report would include the in-service rail failure ratios per 49 CFR part 213, a report on the miles tested, and the frequency of testing.

The nonstop continuous rail testing vehicle will be a self-propelled ultrasonic induction unit capable of testing at speeds up to 30 mph. The data will be analyzed from a remote location facility by experts with experience reviewing Rail Flaw Detection test data. The field verification of suspected defects will be conducted by qualified and certified test professionals with recordable field validation equipment, based on GPS location and known track features. KCS believes nonstop continuous rail testing will provide the capability to test track more quickly and frequently, and to minimize the risk of rail service failures.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at *www.regulations.gov* and in person at the U.S. Department of Transportation's (DOT) Docket Operations Facility, 1200 New Jersey Avenue SE., W12–140, Washington, DC 20590. The Docket Operations Facility is open from 9 a.m. to 5 p.m., Monday through Friday, except Federal Holidays.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- *Web site: http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* Docket Operations Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., W12–140, Washington, DC 20590.
- *Hand Delivery:* 1200 New Jersey Avenue SE., Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by December 16, 2015 will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable.

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.* See also *http://www.regulations.gov/#!privacyNotice* for the privacy notice of regulations.gov.

Issued in Washington, DC, on Monday, November 9, 2015.

Ron Hynes,

Director, Office of Technical Oversight.

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2015–0055]

Coordinated Remedy Order With Annex A; Coordinated Remedy Program Proceeding

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Coordinated Remedy Order.

DATES: *Effective date:* This Coordinated Remedy Order went into effect on November 3, 2015.

Order: This Coordinated Remedy Order (''Order'') is issued by the Administrator of the National Highway Traffic Safety Administration (''NHTSA''), an operating administration of the U.S. Department of Transportation. Pursuant to NHTSA's authority under the National Traffic and Motor Vehicle Safety Act of 1966, as amended and recodified (the ''Safety Act''), 49 U.S.C. 30101, *et seq.*, and specifically, 49 U.S.C. 30118–30120, 30120(a)(1), 30120(c)(2)–(3), 30166(b), 30166(c), 30166(e), 30166(g)(1), and 49 CFR 573.6, 573.14, this Coordinated Remedy Order establishes a Coordinated Remedy Program and sets forth the requirements and obligations of certain motor vehicle manufacturers [1] and TK Holdings, Inc., (''Takata'') in connection with the recall and remedy of certain types of Takata air bag inflators.

I. Nature of the Matter and Findings

1. On June 5, 2015, NHTSA opened the Coordinated Remedy Program Proceeding and public Docket Number NHTSA–2015–0055 to address the recalls of certain Takata air bag inflators, which together constitute the largest Safety Act recall in NHTSA's history and one of the largest consumer product recalls in United States history. *See Notice of Coordinated Remedy Program Proceeding for the Replacement of Certain Takata Air Bag Inflators*, 80 FR 32,197 (June 5, 2015). As of the date of this Order, the number of recalled air bag inflators (currently, approximately 23 million), impacted vehicles (currently, approximately 19 million), and affected vehicle manufacturers (currently, twelve), in combination with the potential for expansion of existing recalls and issuance of new recalls, and the remedy part supply challenges related to the existing recalls, presents an unprecedented level of complexity to the routine recall and remedy process. Given the potential severity of the harm to vehicle occupants when an inflator rupture occurs and the wide-spread exposure to the risk across a large vehicle population, the risk of harm presented by the defective Takata air bag inflators transcends the scope of the processes ordinarily followed in a recall under the Safety Act. Accordingly, for the reasons that follow, and upon consideration of the entire record in this proceeding, NHTSA now issues this Order.

Factual Background

2. An air bag inflator (''inflator'') is a component inside an air bag module that contains explosive materials [2] which, when ignited, rapidly release gases to inflate air bags that protect vehicle occupants in vehicle crashes. Because inflators must fit into small and unique spaces including vehicle steering wheels and front instrument panels (*i.e.*, dashboards), and because they must also satisfy specific performance requirements, inflators must meet exacting size and configuration requirements for each air bag module they are paired with and each vehicle in which they are installed. When functioning properly, air bag inflators are life-saving devices.

3. The first recall involving a rupturing Takata driver side frontal air bag inflator was initiated by Honda on November 11, 2008. At that time, the defect was thought to be the result of a specific manufacturing issue involving a propellant press at Takata's Moses Lake, Washington plant. Due to various purported discrepancies in Takata's record keeping for the affected parts, and changing theories as to the root cause of the defect, Honda expanded the scope of the recall several times between 2009 and 2011.

4. The first recall involving a rupturing Takata passenger side frontal air bag inflator was initiated by Takata on April 11, 2013, and involved BMW, Honda, Mazda, Nissan, and Toyota. At that time, the defect was thought by Takata to be the result of two specific manufacturing issues: (1) The possibility that the auto-reject function on a propellant press had been manually disabled, and (2) the possibility that certain propellant lots were exposed to uncontrolled moisture conditions at Takata's Monclova, Mexico plant. In 2013 and 2014, GM recalled vehicles to address separate manufacturing problems specific to a limited number of inflators Takata supplied only to GM.

5. Between August 2013 and April 2014, NHTSA received three Vehicle Owner Questionnaires (VOQs) that alleged air bag inflator ruptures in vehicles outside the scope of the prior driver side and passenger side frontal air bag inflator recalls. In late May 2014, Takata confirmed the three ruptures with NHTSA's Office of Defects Investigation (ODI), and notified ODI of an additional three ruptures (for a total of six rupture incidents between August 2013 and May 2014). All of these ruptures occurred in vehicles experiencing long-term exposure to hot and humid climate conditions in Florida and Puerto Rico.

6. On June 10, 2014, at NHTSA's urging, Takata and the affected vehicle manufacturers agreed to initiate various field actions in Florida, Hawaii, Puerto Rico, and the U.S. Virgin Islands. The data supporting these field actions indicated that certain Takata frontal air bag inflators in regions prone to consistent long-term [3] exposure to high absolute humidity (''HAH'') and high temperatures posed a safety risk. The field actions were designed to mitigate the demonstrated risks in the HAH region, to make inflators available for future testing, and to produce data to guide future actions.

7. On June 11, 2014, NHTSA opened a preliminary evaluation (PE14–016) to investigate the six identified rupture incidents involving driver side and passenger side frontal air bag inflators manufactured by Takata.

8. During the period of October through December 2014, at NHTSA's direction, field actions were converted to recalls and the recalls were expanded, though some recalls remained limited to certain regions with higher absolute humidity. Also during this period, NHTSA urged Takata and the affected vehicle manufacturers to, among other things, speed up the

[1] Currently, BMW of North America, LLC (''BMW''), FCA US, LLC (''FCA'') (formerly Chrysler), Daimler Trucks North America, LLC (''Daimler Trucks''), Daimler Vans USA, LLC (''Daimler Vans''), Ford Motor Company (''Ford''), General Motors, LLC (''GM''), American Honda Motor Company (''Honda''), Mazda North American Operations (''Mazda''), Mitsubishi Motors North America, Inc. (''Mitsubishi''), Nissan North America, Inc. (''Nissan''), Subaru of America, Inc. (''Subaru''), and Toyota Motor Engineering and Manufacturing (''Toyota''). In accordance with Paragraphs 45, 46, and 48 below, this list may expand at some future date to include other motor vehicle manufacturers who have sold or otherwise made available in the United States motor vehicles equipped with Takata air bag inflators containing phase-stabilized ammonium nitrate.

[2] More precisely, air bag inflators contain pyrotechnic propellants, stored high pressure gases, or a combination of the two. To aid the reader's understanding, by using more familiar terminology, this is described herein as an ''explosive.''

[3] Consistent long-term exposure means multiple years of mostly continuous exposure throughout the year. It is not seasonal exposure.

remedy programs by increasing the supply of remedy air bag inflators. NHTSA emphasized the need to promptly and effectively remedy the serious safety risk posed to consumers by the defective Takata air bag inflators. Further, as part of its ongoing investigation and oversight, NHTSA issued two Special Orders to Takata on October 30, and November 18, 2014, a Special Order to Honda on November 5, 2014, and General Orders to BMW, FCA, Ford, GM, Honda, Mazda, Mitsubishi, Nissan, Subaru, Toyota, and Takata on November 18, 2014. All these Special and General Orders were designed and issued by NHTSA to obtain additional data required to assess and mitigate the risk of harm to the motoring public.

9. On November 18, 2014, NHTSA demanded that the five vehicle manufacturers with affected driver side frontal air bag inflators expand their regional field actions and conduct nationwide actions. This decision was based on, among other things, NHTSA's evaluation of a driver side frontal air bag failure in a vehicle outside the existing regional recall area. In response, beginning in December 2014, BMW, FCA, Ford, Honda and Mazda initiated national service campaigns or safety improvement campaigns on vehicles with driver side frontal air bag inflators.

10. On November 26, 2014, NHTSA demanded that Takata submit Defect Information Reports (''DIRs'') of driver side frontal air bag inflators. While Takata declined to do so in a December 2, 2014 response, NHTSA continued to insist that Takata accept responsibility for the rupturing air bag inflators and file DIRs.

11. On February 24, 2015, NHTSA upgraded PE14–016 to an engineering analysis (EA15–001).

12. On May 18, 2015, after NHTSA's consistent demands, and pursuant to its legal obligations under the Safety Act, 49 U.S.C. 30118(c)(1) and 49 CFR 573.6(c), Takata filed four DIRs with NHTSA (15E–040, 15E–041, 15E–042, 15E–043) (''Takata DIRs''). In the Takata DIRs, Takata admitted that certain types of air bag inflators manufactured by Takata with a phase-stabilized ammonium nitrate-based propellant (specifically, the PSDI, PSDI–4, PSDI–4K, SPI, PSPI and PSPI–L) contain defects constituting an unreasonable risk to safety.

13. Between May 13, 2015 and June 24, 2015, BMW, FCA, Daimler Trucks,[4] Daimler Vans, Ford, GM, Honda, Mazda, Mitsubishi, Nissan, Subaru, and Toyota (the ''Initial Vehicle Manufacturers'') each filed DIRs with NHTSA for vehicles containing the air bag inflators covered by the Takata DIRs (the ''Inflator Recalls'').

14. As part of the Coordinated Remedy Program Proceeding, launched on June 5, 2015, NHTSA sought information from each of the Initial Vehicle Manufacturers, Takata, and other major inflator suppliers[5] (the ''Suppliers''). As an initial matter, this included gathering data from the Initial Vehicle Manufacturers, Takata, and the other Suppliers through correspondence, and a Special Order to Takata, sent on June 18 and 19, 2015.[6] Thereafter, each of these companies provided answers responsive to NHTSA's correspondence, which were available in the public docket.

15. Among other things, NHTSA engaged in numerous teleconferences and in-person meetings with the Suppliers to enhance NHTSA's understanding of, among other things, each Supplier's current production capacities, capabilities or plans for increasing production, existing contractual obligations, and product reliability. NHTSA also engaged in teleconferences and in-person meetings with the Initial Vehicle Manufacturers to enhance NHTSA's understanding of, among other things, each Vehicle Manufacturer's anticipated timelines for receipt of replacement air bag units, anticipated timelines for remedy program launch and completion, number of impacted vehicles, number of replacement air bag units needed, and plans and efforts for promptly conducting recall remedies and effectively reaching consumers.

16. On September 22, 2015, NHTSA gathered supplemental data from additional vehicle manufacturers that NHTSA had learned were supplied with Takata air bag inflators containing phase-stabilized ammonium nitrate (''PSAN'')[7] not covered by the Takata DIRs (collectively, the ''Potential Expansion Vehicle Manufacturers''). Thereafter, each of these companies provided public comments to the docket responsive to the questions and issues raised in NHTSA's correspondence.

17. On September 23 and 24, 2015, NHTSA convened problem-solving meetings with the Initial Vehicle Manufacturers to examine aggregate data and engage in a collaborative risk analysis to aid NHTSA in developing a principled, rational, risk-mitigation based approach for the prioritization and phasing of recall plans. Factors considered included those currently associated with a higher risk of inflator rupture, specifically: age of the inflator (with older inflators presenting a greater risk); geographic location of vehicles with the recalled inflators (with HAH areas presenting a greater risk); position of the inflator in the vehicle (with the driver side frontal air bag inflator presenting a greater risk of serious injury or death when a rupture occurs); and the presence of recalled inflators in both the driver and passenger side airbag modules. During the meetings, the Initial Vehicle Manufacturers provided input on factors supporting a technically supported risk-assessment methodology for the Inflator Recalls. Following the meeting, each Initial Vehicle Manufacturer submitted a vehicle prioritization list that applied these factors, and other factors specific to their products, that prioritized vehicles into three risk categories. NHTSA analyzed these submissions and determined that the Initial Vehicle Manufacturers generally identified reasonable and appropriate priority groups based on the evidence known at this time.

18. Throughout this process, the public has been able to engage in this dialogue through submissions to the public Docket, NHTSA–2015–0055. In addition to the actions set forth above, NHTSA reviewed and considered all public comments to the docket.

19. While Takata is a manufacturer of air bag inflators, other Suppliers also manufacture inflators, some of which closely match the performance requirements of the original Takata inflator and thus can be modified and safely installed in Takata air bag modules for use as remedy parts for the

[4] Daimler Trucks' remedy program of approximately 2,500 vehicles is being conducted in cooperation with FCA.

[5] ARC Automotive, Inc. (''ARC''), Autoliv Americas (''Autoliv''), Key Safety Systems (''Key Safety''), Toyoda Gosei North America Corporation (''Toyoda''), Daicel Safety Systems America, LLC (''Daicel''), and TRW Automotive (''TRW'') which has subsequently become ZF TRW (''ZF TRW'').

[6] The correspondence sent to Takata and each of the Suppliers and Initial Vehicle Manufacturers, and their responses, are available for inspection in public Docket Number NHTSA–2015–0055. Given NHTSA's ongoing investigation into the defective Takata air bag inflators under EA15–001, the correspondence sent to Takata was in the form of a Special Order, with a cover letter. As with the other industry responses to the correspondence of June 18–19, Takata's response to the Special Order was made publicly available as a comment to the Docket.

[7] Correspondence was sent to Jaguar Land Rover North America, LLC (''Jaguar''); Mercedes-Benz US, LLC (''Mercedes-Benz''); Spartan Motors, Inc. (''Spartan''); Suzuki Motor of America, Inc. (''Suzuki''); Tesla Motors, Inc. (''Tesla''); Volkswagen Group of America, Inc. (''Volkswagen''); and Volvo Trucks NA (''Volvo''). The correspondence to each of these vehicle manufacturers, and their responses, are available for public inspection in public Docket Number NHTSA–2015–0055.

Inflator Recalls. This is significant because Takata alone does not have sufficient manufacturing capacity to produce remedy inflators for the Initial Vehicle Manufacturers within an adequate timeframe. According to Takata, it was capable of manufacturing approximately 85,000 replacement kits per week as of October 30, 2014. Takata's production capacity increased to 91,000 replacement kits per week by December 1, 2014, and to 122,000 replacement kits per week by January 26, 2015. By July 2015, Takata reported to NHTSA that, in May 2015, it had produced approximately 730,000 remedy inflators and 1,167,000 remedy kits, which included inflators obtained from other Suppliers. Takata further reported that these numbers were expected to reach 850,000 remedy inflators and 1,900,000 remedy kits produced per month, including inflators obtained from other Suppliers, by October 2015. Takata also reported that, as of June 2015, it had produced a total of approximately 8,900,000 replacement inflators. However, this production is not all directed to the U.S. market; it also serves the global market requiring replacement air bag inflators. Even at the increased rate of nearly 850,000 remedy inflators per month by October 2015, if working alone it would take Takata at least twenty-seven (27) months to produce enough remedy inflators for the Inflator Recalls, assuming all of that production went solely to the United States market.

20. Further, some of the Takata driver inflators, sometimes referred to as containing propellant in the shape of a ''batwing,'' have been used as interim replacement parts that will degrade if continuously exposed to long-term to HAH conditions, and are themselves subject to recall. These inflators will not be used as a final remedy of driver side frontal air bags. Further, Takata's passenger side frontal air bag inflators subject to the Inflator Recalls have not previously been recalled for vehicles later than model year 2008.

21. The Initial Vehicle Manufacturers recognized the need to increase the remedy parts supply in order to have sufficient remedy parts available. To do so, they were required find alternative suppliers to meet their demands for remedy air bag inflator parts. The Initial Vehicle Manufacturers found that necessary alternative supply source in other inflator suppliers, specifically, Autoliv, Daicel, and ZF TRW (collectively, the ''Alternative Inflator Suppliers'').

22. According to Takata, in October 2015, the Alternative Inflator Suppliers were scheduled to provide over 1.9 million remedy inflator parts per month for installation in remedy air bag kits. This totaled approximately seventy percent (70%) of the 2.8 million remedy inflator kits produced by Takata that month for global demand. Nonetheless, the sheer volume of remedy parts required across the vehicle manufacturing industry, for both U.S. and foreign markets, has created challenges for the Initial Vehicle Manufacturers in obtaining sufficient remedy parts to remedy all of the recalled inflators within a reasonable time.

23. Despite the efforts of each of the Initial Vehicle Manufacturers to procure remedy parts in a timely fashion, some vehicle manufacturers will not be able to obtain sufficient remedy parts to launch their remedy programs, in part or in full, until late 2015 or early 2016, more than six (6) months after filing their initial DIRs in regard to the Inflator Recalls.

24. Further, pursuant to a November 3, 2015 Consent Order to Takata (''November 2015 Takata Consent Order''), additional Takata air bag inflators not previously subject to a recall may need to be replaced. This would cause the Potential Expansion Vehicle Manufacturers to join the existing field of Initial Vehicle Manufacturers (collectively, the ''Vehicle Manufacturers'') in need of remedy air bag inflator parts.

25. Each time Takata air bag inflator recalls are issued under the November 2015 Takata Consent Order, or current recalls are expanded, similar challenges will arise for the Vehicle Manufacturers regarding supply chain and the need for risk-assessments based on principled rationales that utilize the most-current available science and data.

26. Throughout this sequence of events, Takata has conducted inflator testing in an effort to determine the ''root cause'' of the inflator ruptures and, by testing modules recovered from vehicles that have been remedied, to determine which inflators posed the greatest risk of rupture. While production issues at Takata manufacturing plants in Monclova, Mexico and Moses Lake, Washington, were identified early on as the purported root cause in some rupture incidents, those theories (even if correct) do not account for the ongoing issues with inflator rupture. For example, inflators installed in vehicles spending many consecutive years of their service lives in hot and humid climates have also ruptured even though they appear to have been manufactured within Takata's specifications. While Takata now believes that the ruptures are related to long-term exposure to HAH conditions, their root cause testing has not produced any conclusive answers regarding why the inflators rupture.

27. Moreover, Takata has been unable to provide a definitive explanation for other inflators rupturing, including the rupture of an SSI–20 side air bag inflator on June 7, 2015, in a Volkswagen vehicle involved in a crash, or the rupture of a PSDI–X inflator during Takata's testing of an air bag module on September 29, 2015 with a resulting recall by Honda. Takata has also been unable to definitively explain the October 2015, rupture of an SSI–20 inflator during Takata quality control testing. It therefore appears to the agency that Takata continues to have ongoing quality control issues with the volatile, explosive compound it has chosen as the propellant for most of its air bag inflators: PSAN.

28. While the ultimate responsibility for determining root cause rests squarely with Takata, testing has also been conducted by NHTSA and third parties in an effort to establish the root cause of the defect and to verify the results of Takata's testing of inflators returned from the field. NHTSA has conducted testing through Battelle Memorial Institute, 3D Engineering Solutions, and the Transportation Research Center of Ohio, testing organizations located in Ohio, to verify Takata's test results and examine the root cause of the defect. Testing has also been undertaken by the Independent Testing Coalition (''ITC''), which is comprised of BMW, FCA, Ford, GM, Honda, Mazda, Mitsubishi, Nissan, Subaru, and Toyota. Orbital ATK, a testing company located in Utah, has commenced testing on behalf of the ITC, and hopes to conclude root cause analysis in 2016. Multiple individual vehicle manufacturers have also conducted testing in efforts to confirm Takata's results or establish root cause for the defect. While this multitude of independent testing efforts have largely confirmed the observations made and patterns identified from Takata's test results, none of these efforts has identified any specific root cause(s) for the propellant failures and inflator ruptures. While progress is being made, it is unknown when, or if, root cause will ever be definitively determined.

29. Without a conclusive determination of root cause, the source of the problems with certain Takata inflators remains unknown. What is known, however, is that the propellant in inflators covered by the Inflator Recalls and the recalls within the scope of this Order have, at various rates of frequency, a propensity to ignite and/or

burn in an unexpected way that may cause the pressure inside the inflator to increase too quickly, causing the inflator to rupture. That rupture causes the metal canister of the inflator to break away in hot, shrapnel-like fragments, which shoot out of the air bag into the passenger cabin and towards the driver or any occupants who are nearby.

30. As of October 30, 2015, there have been 99 confirmed incidents in the United States where a ruptured Takata air bag inflator allegedly caused death or injury. Many of these incidents resulted in serious injury to vehicle occupants. In seven of the incidents, the vehicle's driver died as a result of injuries sustained from the rupture of the air bag inflator. In other incidents, vehicle occupants suffered injuries including cuts or lacerations to the face or neck, broken or fractured facial bones, loss of eyesight, and broken teeth. The risk of these tragic consequences is greatest for individuals sitting in the driver seat, where one in ten individuals' whose air bag inflator ruptured has died.

Findings

Based upon the agency's analysis and judgment, and upon consideration of the entire record, NHTSA finds that:

31. (1) There is a risk of serious injury or death if the remedy program of each of the Initial Vehicle Manufacturers is not accelerated; (2) acceleration of each Initial Vehicle Manufacturer's remedy program can be reasonably achieved by expanding the sources of replacement parts; and (3) each Initial Vehicle Manufacturer's remedy program is not likely to be capable of completion within a reasonable time without acceleration.

32. Each air bag inflator with the capacity to rupture, as the recalled Takata inflators do, presents an unreasonable risk of serious injury or death. Seven individuals have already been killed in the United States alone, with at least 92 more injured. Since the propensity for rupture increases with the age of the inflator, and increases even more when the vehicle has been exposed to consistent long-term HAH conditions, the risk for injurious or lethal rupture increases with each passing day. While each of the Initial Vehicle Manufacturers has made efforts towards the remedy of these defective air bag inflators, acceleration and coordination of the inflator remedy programs is necessary to reduce this risk to public safety. Acceleration and coordination will enable vehicle manufacturers to establish priorities based on principled rationales for risk-assessment, coordinate on safety-focused efforts to successfully complete their respective remedy programs, and allow for the organization and prioritization of remedy parts, if and as needed, with NHTSA's oversight.

33. Acceleration of the inflator remedy programs can be reasonably achieved by, among other things, expanding the sources of replacement parts. This acceleration can be accomplished in part by a vehicle manufacturer contracting with any of the Alternative Inflator Suppliers for remedy parts as Takata cannot manufacture sufficient remedy parts in a reasonable time for the estimated 23 million inflators in the U.S. market alone that require remedy under the Inflator Recalls.

34. In light of all the circumstances, including the safety risk discussed above, the Initial Vehicle Manufacturers' recall remedy programs are not likely capable of completion within a reasonable amount of time without acceleration of each remedy program. It is critical to the timely completion of each remedy program that the Initial Vehicle Manufacturers obtain remedy inflators from sources other than Takata. Takata's inflator production for October 2015 will make up only around thirty percent (30%) of the remedy inflators produced that month. Further, Takata's ability to supply remedy parts going forward may decrease, such that other Suppliers will need to fill the resulting void.

35. Pursuant to the conditions for expansion of the recalls in the Takata DIRs for Recall Nos. 15E–042 and 15E–043, Paragraphs 27–30 of the November 2015 Takata Consent Order, and as otherwise agreed by Takata, and after consultation throughout this Coordinated Remedy Program Proceeding with Takata and all of the vehicle manufacturers affected by said Recalls, NHTSA further finds that continued testing and analysis of Takata air bag inflators is necessary. If circumstances warrant the issuance of an Order expanding the production or geographic scope of the Inflator Recalls, the agency will do so in accordance with the November 2015 Takata Consent Order.

36. The issuance of this Coordinated Remedy Order is an appropriate exercise of NHTSA's authority under the Safety Act, 49 U.S.C. § 30101, *et seq.,* as delegated by the Secretary of Transportation, 49 CFR §§ 1.95, 501.2(a)(1), to inspect and investigate, 49 U.S.C. § 30166(b)(1), to ensure that defective vehicles and equipment are recalled and remedied and that owners are notified of a defect and how to have the defect remedied, 49 U.S.C. §§ 30118–30120, to ensure the adequacy of the remedy, including through acceleration of the remedy program, 49 U.S.C. § 30120(c), to require vehicle manufacturers and equipment manufacturers to keep records and make reports, 49 U.S.C. § 30166(e), and to require any person to file reports or answers to specific questions, 49 U.S.C. § 30166(g).

37. This Coordinated Remedy Order, developed after taking into account the input and concerns of each of the Vehicle Manufacturers, Suppliers, Takata, other interested parties and the public, will reduce the risk of serious injury or death to the motoring public and enable the Initial Vehicle Manufacturers and Takata to implement, and complete, the necessary remedy programs on an accelerated basis.

Accordingly, it is hereby *ordered* by NHTSA as follows:

II. Terms of the Coordinated Remedy Order

Priority Groups and Target Recall Program Completion Deadlines for the Coordinated Remedy Program

38. Each Initial Vehicle Manufacturer has previously submitted to NHTSA a vehicle prioritization plan based on a risk-assessment that takes into account the primary factors related to Takata inflator rupture, as currently known and understood, and other factors specific to that vehicle manufacturer's products. The primary factors utilized by all of the Initial Vehicle Manufacturers are: (1) Age of the inflator (with older presenting a greater risk of rupture); (2) geographic location of the inflator (with continuous long-term exposure to high absolute humidity [''HAH''] areas,[8] as defined by each vehicle manufacturer, presenting a greater risk of rupture); and (3) location of the Takata inflator in the vehicle (with both driver side and passenger side frontal air bag inflators in the same vehicle presenting the greatest risk of rupture,[9] and driver side only

[8] Each vehicle manufacturer has defined an HAH region for its vehicle prioritization and recall remedy program, resulting in slight variations as to which states and territories are included in the HAH area. However, all of the prioritizations include in the HAH area vehicles that were originally sold, or ever registered, in Alabama, Florida, Georgia, Hawaii, Louisiana, Mississippi, Texas, Puerto Rico, American Samoa, Guam, Saipan, and the U.S. Virgin Islands. None of the slight variations impact the risk mitigation established through this Order.

[9] All recalled Takata inflators have previously been determined to pose an unreasonable risk of death or serious injury in a crash, as established in the filing of each of the many DIRs for the recalled inflators. Comparative statements of risk in the priority groups are provided to explain relative risk among the inflators, all of which pose an

Continued

presenting an elevated risk of rupture, resulting in serious injury or death). In order to timely and adequately complete its remedy program, each Initial Vehicle Manufacturer shall, pursuant to 49 U.S.C. 30120(a)(1) and (c), carry out its remedy program in accordance with its prioritization plan as submitted to NHTSA. A complete listing of the vehicles in each priority group (''Priority Group'') developed using the above risk factors is attached hereto as Annex A,[10] and is hereby incorporated by reference as if fully set forth herein. The Priority Groups are as follows:

a. Priority Group 1

Vehicles in Priority Group 1 are equipped with Takata inflators that pose the highest risk of rupture and thus the highest risk of injury or death to the vehicle occupants. Generally, Priority Group 1 vehicles are currently model year 2008 and earlier, and have spent time [11] in the HAH region, and have either a recalled driver side inflator or *both* recalled driver side and passenger side inflators in the same vehicle.

b. Priority Group 2

Vehicles in Priority Group 2 are equipped with Takata inflators that pose an intermediate risk of rupture; that is, a lower risk of rupture and resulting injury or death to vehicle occupants than the inflators and vehicles in Priority Group 1, but a higher likelihood of rupture and injury or death than vehicles in Priority Groups 3 and 4. Generally, Priority Group 2 includes: (1) All remaining vehicles with recalled *driver* side inflators (this includes, vehicles 2009 and newer, and/or vehicles with recalled driver inflators only that have not spent time in the HAH region), and; (2) vehicles with certain recalled passenger inflator types that have a higher rupture frequency and that have also spent time in the HAH region.

c. Priority Group 3

Vehicles in Priority Group 3 are equipped with Takata inflators that pose an unreasonable risk of serious injury or death to vehicle occupants and should be remedied as soon as possible following the remedy of the highest risk vehicles in Priority Groups 1 and 2. The likelihood of these inflators rupturing is lower than Priority Groups 1 and 2. Generally, Priority Group 3 includes the remaining vehicles, specifically, vehicles that are model year 2009 and later and either: (1) Are outside the HAH region and contain only a passenger side inflator, or; (2) are in the HAH region and contain a specific passenger side inflator type with a lower rupture rate (the PSPI type) than other passenger side inflator types.

d. Priority Group 4

Some Initial Vehicle Manufacturers are replacing recalled inflators with newly manufactured ''like-for-like'' inflators while they work towards an alternative, final remedy. Vehicles in Priority Group 4 include those vehicles with driver side frontal air bag inflators that have received, or will receive, an ''interim remedy,'' meaning they have been, or will be, remedied with a Takata inflator that has been recalled, and will require a second remedy once the final remedy is available.[12] Once repaired with the interim remedy, these vehicles are at the lowest risk of an inflator rupture because the inflator is new and has not yet been subject to long-term continuous exposure to HAH conditions. Unless specifically added at a later date to a higher Priority Group for re-remedy by their vehicle manufacturer, all remaining vehicles requiring a second, final, remedy of the inflator(s) are included in Priority Group 4.

39. Pursuant to their obligations to remedy a defect within a reasonable time, as set forth in 49 U.S.C. § 30120(a)(1) and § 30120(c)(2), each Initial Vehicle Manufacturer shall acquire a sufficient supply of remedy parts to enable it to provide remedy parts, in a manner consistent with customary business practices, upon demand to dealers within their dealer network by the timelines set forth in this Paragraph. Each Initial Vehicle Manufacturer shall ensure that it has a sufficient supply of remedy parts on the following schedule:

Priority group	Sufficient supply timelines
Priority Group 1	March 31, 2016.
Priority Group 2	September 30, 2016.
Priority Group 3	December 31, 2016.

40. Further pursuant to their obligations to remedy a defect within a reasonable time, as set forth in 49 U.S.C. § 30120(a)(1) and § 30120(c)(2), each Initial Vehicle Manufacturer shall implement and execute its recall remedy program pursuant to the Safety Act with the target deadline to complete the recall remedy program for all vehicles in Priority Groups 1 through 3 of December 31, 2017, and a target deadline to remedy all vehicles in Priority Group 4 of December 31, 2019, as shown below:

Priority group	Remedy completion target deadline
Priority Group 1	December 31, 2017.
Priority Group 2	December 31, 2017.
Priority Group 3	December 31, 2017.
Priority Group 4	December 31, 2019.

Remedy Completion Maximization Efforts

41. Pursuant to 49 U.S.C. 30166(e), within 90 days of this Order, a vehicle manufacturer recalling inflators subject to this Order shall provide to NHTSA and the Monitor (as set forth at Paragraph 44 below), a written recall engagement process or plan for maximizing remedy completion rates for all vehicles covered by the Inflator Recalls. Such a process or plan shall, at a minimum, include but not be limited to the methodology and techniques presented at the Retooling Recalls Workshop [13] held by NHTSA on April 28, 2015, at the U.S. Department of Transportation Headquarters.

42. Pursuant to 49 U.S.C. 30166(e), a vehicle manufacturer recalling inflators subject to this Order shall, upon request, provide to NHTSA and the Monitor any and all information demonstrating the reasonableness of the efforts made by that vehicle manufacturer to maximize remedy completion rates.

43. The facts relating to supply, demand, and root cause may change during this Coordinated Remedy Program. Pursuant to Paragraph 32 of the November 2015 Takata Consent Order, Takata shall continue to cooperate with NHTSA in all ways to coordinate and accelerate remedy programs, and to adequately remedy the air bag inflators covered by the Inflator Recalls.

Monitor

44. Pursuant to Paragraphs 35 through 46 of the November 2015 Takata

unreasonable risk of death or serious injury in a crash.

[10] Because information about the risk factors may change throughout this Coordinated Remedy Program, these prioritizations are subject to change by a vehicle manufacturer, with NHTSA's oversight of the recall program including vehicle prioritization.

[11] While continuous long-term exposure to HAH is an identified risk factor, the Priority Groups take this into account by including in the risk-assessment vehicles originally sold or ever registered in the HAH region. Vehicle manufacturers are able to obtain registration information and have used that data in formulating their risk-assessment based Priority Groups.

[12] NHTSA has entered into Remedy Agreements with BMW and Mazda, which can be found in the investigation file for EA15–001 on *www.safercar.gov.*

[13] Each of the Initial Vehicle Manufacturers, other than Daimler Vans, registered to attend this Workshop. Presentations from the Workshop are available at: *http://www.nhtsa.gov/nhtsa/symposiums/april2015/index.html#.*

Consent Order, Takata has agreed to retain, at its sole cost and expense, an independent monitor (the ''Monitor''). The Monitor's authority includes, among other things, certain monitoring, review and assessment of progress of the Coordinated Remedy Program and of compliance with this Order. The powers, rights and responsibilities of the Monitor are set forth more fully in the November 2015 Takata Consent Order, which are hereby incorporated by reference as if fully set forth herein.

a. The Monitor shall have the authority to take such reasonable steps, in the Monitor's view, as are necessary to be fully informed about the operations of the Coordinated Remedy Program and this Order.

b. It is expected that the Monitor will develop and implement written procedures and may make additional recommendations aimed at enhancing the Coordinated Remedy Program and ensuring that all Coordinated Remedy Program deadlines, including those in this Order, are met.

c. The Monitor is not intended to supplant NHTSA's authority over decisions related to the Coordinated Remedy Program, this Order, motor vehicle safety, or otherwise. If the Monitor identifies a problem or issue, the Monitor shall make appropriate recommendations to NHTSA and provide all supporting information, including information contrary to the Monitor's recommendation, to enable NHTSA to make an informed decision on that recommendation.

d. Takata and Vehicle Manufacturers, along with all of their respective officers, directors, employees, agents, and consultants, shall have an affirmative duty to cooperate with and assist the Monitor in connection with the Coordinated Remedy Program and this Order.

Potential Future Recalls

45. The provisions of the November 2015 Takata Consent Order regarding future recalls and possible future recalls, contained at Paragraphs 29–30 of that document, are hereby incorporated by reference into this Order. Accordingly, any future recall(s) of Takata inflators pursuant to, or contemplated by, Paragraphs 29–30 of that Order shall become part of the Coordinated Remedy Program established herein.

46. Upon Takata's filing of a DIR pursuant to 49 CFR § 573, the affected vehicle manufacturer(s) shall timely file a DIR. Upon the filing of such DIRs NHTSA may, pursuant to 49 U.S.C. §§ 30118–30119, 49 U.S.C. § 30120(c), 49 CFR § 573.14, and 49 U.S.C. § 30166(b), (c), and (e), convene a meeting with the affected vehicle manufacturers to take place within forty-five (45) days of Takata's DIR filing, at an appropriate location within the United States, as determined by NHTSA, to address issues related to the Coordinated Remedy Program including, but not limited to, establishing a risk-assessment framework for the prioritization of vehicles and/or phasing of remedy programs, as appropriate. Any such prioritizations shall be made publicly available, and shall be annexed to this Order, in a format similar to the Priority Group lists in Annex A of this Order.

Record Keeping & Reports

47. Pursuant to 49 U.S.C. § 30166(b), (c), (e), and (g), in carrying out any recall remedy program covered by this Order, each affected vehicle manufacturer and Takata shall make any report, submit any information, and accommodate any inspection and/or investigation, as requested by NHTSA or the Monitor.

Miscellaneous

48. NHTSA may, after consultation with affected vehicle manufacturers, and/or Takata, or upon a recommendation of the Monitor, modify or amend provisions of this Order to, among other things: account for and timely respond to newly obtained facts, scientific data, changed circumstances, and/or other relevant information that may become available throughout the term of the Coordinated Remedy Program. This includes but is not limited to, changes to the Priority Groups contained in Annex A; allowing for reasonable extensions of time for the timelines contained in Paragraphs 39 and 40; facilitating further recalls as contemplated by Paragraphs 45 and 46; or for any other purpose arising under, or in connection with, the Coordinated Remedy Program and/or this Coordinated Remedy Order.

49. This Coordinated Remedy Order shall become effective upon issuance by the NHTSA Administrator. In the event of a breach of, or failure to perform, any term of this Order by Takata or any vehicle manufacturer, NHTSA may pursue any and all appropriate remedies, including, but not limited to, actions compelling specific performance of the terms of this Order, and/or commencing litigation to enforce this Order in any United States District Court.

50. This Coordinated Remedy Order shall not be construed to create rights in, or grant any cause of action to, any third party not subject to this Order.

51. In carrying out the directives of this Coordinated Remedy Order, vehicle manufacturers and vehicle equipment manufacturers (*i.e.* suppliers) shall not engage in any conduct prohibited under the antitrust laws, or other applicable law.

It is so ordered:

NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION, U.S. DEPARTMENT OF TRANSPORTATION

Dated: November 3, 2015.

Mark R. Rosekind,

Administrator.

ANNEX A

Coordinated Remedy Program Priority Groups

In the Priority Groups listed below, the area of high absolute humidity (''HAH'') is defined by each vehicle manufacturer individually, but in all instances includes vehicles originally sold or ever registered in Alabama, Florida, Georgia, Hawaii, Louisiana, Mississippi, Texas, Puerto Rico, American Samoa, Guam, Saipan, and the U.S. Virgin Islands. In limited instances, parts for some HAH recalls are currently only available to a limited area within the HAH with the highest risk of rupture. ''Non-HAH'' means any vehicle that has not been identified by the vehicle manufacturer as having been originally sold or ever registered in the HAH region, as defined by the vehicle manufacturer.

PRIORITY GROUP 1

BMW:		
2002–2006	BMW	3 Series, M3 (HAH)
Daimler Vans USA:		
2007–2008	Freightliner	Sprinter (HAH)
2007–2008	Dodge	Sprinter (HAH)
Daimler Truck North America-DTNA:		

2008–2009	Sterling	Bullet (HAH and non-HAH)
FCA:		
2006–2008	Chrysler	300, 300C, SRT8 (HAH)
2005	Chrysler	300, 300C, SRT8 (HAH and non-HAH)
2008	Dodge	Challenger (HAH)
2006–2008	Dodge	Charger (HAH)
2005	Dodge	Dakota (HAH)
2004–2005	Dodge	Durango (HAH)
2006–2008	Dodge	Magnum (HAH)
2005	Dodge	Magnum (HAH and non-HAH)
2004–2005	Dodge	Ram 1500, 2500, 3500 Pickup (HAH)
Ford:		
2005–2006	Ford	GT (HAH)
2005–2008	Ford	Mustang (HAH)
2004–2005	Ford	Ranger (HAH)
GM:		
2003–2007	Pontiac	Vibe (HAH)
2005	GM-Saab	9–2X (HAH)

Priority Group 1 continued . . .
Priority Group 1 continued from prior page . . .

Honda:		
2003	Acura	3.2CL (HAH and non-HAH)
2002–2003	Acura	3.2TL (HAH and non-HAH)
2001–2003	Honda	Accord (HAH and non-HAH)
2001–2003	Honda	Civic (HAH and non-HAH)
2004–2005	Honda	Civic (HAH)
2003–2005	Honda	Civic IMA-Hybrid (HAH)
2003	Honda	Civic IMA-Hybrid (non-HAH)
2002	Honda	CR–V (HAH and non-HAH)
2003–2004	Honda	CR–V (HAH)
2003–2006	Honda	Element (HAH)
2002	Honda	Odyssey (HAH)
2003	Honda	Pilot (HAH and non-HAH)
2004–2005	Honda	Pilot (HAH)
2006	Honda	Ridgeline (HAH)
Mazda:		
2003–2008	Mazda	Mazda6 (HAH)
2004–2008	Mazda	RX8 (HAH)
2006–2007	Mazda	Speed6 (HAH)
Mitsubishi:		
2004–2006	Mitsubishi	Lancer and Lancer Evolution (HAH)
2004	Mitsubishi	Lancer Sportback (HAH)
2006–2009	Mitsubishi	Raider (HAH)
Nissan:		
2002–2003	Infiniti	QX4 (HAH)
2002–2004	Nissan	Pathfinder (HAH)
2002–2004	Nissan	Sentra (HAH)
Subaru:		
2004–2005	Subaru	Impreza/WRX/STI (HAH)
2005	Subaru	Legacy, Outback (HAH)
Toyota:		
2007	Lexus	SC430 (HAH)
2003–2007	Toyota	Corolla (HAH)
2003–2007	Toyota	Matrix (HAH)
2005–2007	Toyota	Sequoia (HAH)
2003–2004	Toyota	Tundra (HAH)
2005–2006	Toyota	Tundra (non-HAH)

PRIORITY GROUP 2

BMW:		
2000–2001	BMW	3 Series (HAH)

[FR Doc. 2015–28924 Filed 11–13–15; 8:45 am]

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–RSPA 2000–7486; PDs 8(R)–11(R)]

Hazardous Materials: California and Los Angeles County Requirements Applicable to the On-Site Handling and Transportation of Hazardous Materials

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: Decision on petitions for reconsideration of administrative determinations of preemption.

Petitioners: Hasa, Inc., National Propane Gas Association, National Tank Truck Carriers, Inc., Pioneer Chlor Alkali Company, Inc., The Society of the Plastics Industry, Inc.

State and Local Laws Affected: California Health & Safety Code (CHSC), Chapter 6.95, Los Angeles County Code (LACoC), Titles 2 and 32.

Mode Affected: Rail.

SUMMARY: Federal hazardous material transportation law does not preempt California and Los Angeles County requirements on (1) the unloading of hazardous materials from rail tank cars by a consignee and (2) the consignee's on-site storage of hazardous materials following delivery of the hazardous materials to their destination and departure of the carrier from the consignee's premises or private track adjacent to the consignee's premises.

FOR FURTHER INFORMATION CONTACT: Vincent Lopez or Joseph Solomey, Office of Chief Counsel (PHC–10), Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC 20590–0001 (Tel. No. 202–366–4400).

SUPPLEMENTARY INFORMATION:

I. Background

This is a decision on petitions for reconsideration of PHMSA's determinations of preemption regarding certain of the State of California and Los Angeles County requirements applicable to unloading of hazardous materials from rail tank cars and the on-site storage of hazardous materials in rail tank cars or after unloading. The filing of these petitions for reconsideration rendered PHMSA's determinations of preemption non-final. With this decision on the petitions for reconsideration, the determinations of preemption that PHMSA was asked to reconsider become final.

A. Preemption Determinations (PDs) Nos. 8(R)–11(R)

In PDs Nos. 8(R)–11(R), published in the **Federal Register** on February 15, 1995 (60 FR 8774), PHMSA [1] considered certain requirements of the State of California and Los Angeles County applicable to unloading of hazardous materials from rail tank cars and the on-site storage of hazardous materials in rail tank cars or after unloading. In these determinations, PHMSA responded to applications by the Swimming Pool Chemical Manufacturers Association (SPCMA) and one of its members, Hasa, Inc. (Hasa), questioning whether Federal hazardous material transportation law, 49 U.S.C. 5101 *et seq.,* preempts the definition or classification of compressed gases and cryogenic fluids in the Uniform Fire Code (adopted in Title 32 of the Los Angeles County Code [LACoC]) and requirements on:

- Permits to store, transport, or handle these materials;
- unloading and storage of these materials, including the design and construction of tanks and containers;
- markings on containers of cryogenic liquids;

[1] Effective February 20, 2005, PHMSA was created to further the ''highest degree of safety in pipeline transportation and hazardous materials transportation,'' and the Secretary of Transportation redelegated hazardous materials safety functions from the Research and Special Programs Administration (RSPA) to PHMSA's Administrator. 49 U.S.C 108, as amended by the Norman Y. Mineta Research and Special Programs Improvement Act (Pub. L. 108–426, § 2, 118 Stat. 2423 (Nov. 30, 2004)), and 49 CFR 1.97(b), as redesignated at 77 FR 49964, 4987 (Aug. 17, 2012). For convenience, this decision refers to ''PHMSA'' in discussing actions taken by RSPA before February 20, 2005.

• placards and equipment on vehicles used to transport cryogenic liquids; and

• the fees in Title 2 of LACoC on ''handlers'' of hazardous materials.

SPCMA also challenged the definitions of ''handle'' and ''storage'' in Chapter 6.95 of the California Health and Safety Code (CHSC), which make substantive requirements in Chapter 6.95 applicable to on-site handling and storage of hazardous materials in rail tank cars at SPCMA members' facilities.[2]

In PDs 8(R)–11(R), PHMSA discussed its responsibility under 49 U.S.C. 5103(b) to ''prescribe regulations for the safe transportation of hazardous material in intrastate, interstate and foreign commerce,''[3] and the definition of ''transportation'' in former 49 U.S.C. 5102(12) as ''the movement of property and any loading, unloading, or storage incidental to the movement.''[4] 60 FR at 8777. PHMSA stated that ''Federal hazmat law and the HMR do not apply to the movement of hazardous material exclusively at a consignee's facility.'' *Id.* However,

• ''Unloading that is incidental to transportation includes consignee unloading of tank cars containing hazardous materials,'' and must be performed in accordance with 49 CFR 174.67. *Id.*

• ''Storage that is incidental to transportation includes storage by a carrier that may occur between the time a hazardous material is offered for transportation to a carrier and the time it reaches its intended destination and is accepted by the consignee,'' and is governed by requirements in 49 CFR 174.204(a)(2), but ''consignor and consignee storage of hazardous materials is not incidental to transportation in commerce.'' 60 FR at 8778.

• Other Federal agencies, including the Environmental Protection Agency (EPA) and the Department of Labor's Occupational Safety and Health Administration (OSHA) also regulate hazardous materials ''to ensure that they are not unintentionally or unlawfully released into the environment'' and ''to ensure worker safety'' in the workplace. *Id.*

PHMSA found there was insufficient information to make a determination whether four specific requirements were preempted and that Federal hazardous material transportation law preempts only the following specific provisions challenged in the applications of SPCMA and Hasa:

• The prohibition in Title 32 LACoC 79.809(c) against allowing a tank car to remain on a siding at point of delivery for more than 24 hours while connected for transfer operations, because tank car unloading requirements in 49 CFR 174.67 did not limit the amount of time a tank car may remain on a siding at a point of delivery while connected for transfer operations. 60 FR at 8788.

• The requirement in Title 32 LACoC 79.809(f) for in-person attendance of a tank car during unloading, because Los Angeles County did not recognize the authority granted to Hasa in former DOT exemption E 10552 for the use of electronic surveillance to monitor tank car unloading, under certain conditions and restrictions. 60 FR at 8789.

• The fees imposed on ''handlers'' of hazardous materials under Title 2 LACoC 2.20.140, 2.20.150, 2.20.160 and 2.20.170 to the extent that these fees applied to tank car unloading activities, because the fees collected were not being used for purposes related to hazardous materials transportation. 60 FR at 8784.

B. Petitions for Reconsideration; Initiation of Rulemaking

Within the 20-day time period provided in 49 CFR 107.211(a), petitions for reconsideration of PHMSA's determinations in PDs 8(R)–11(R) were submitted by Hasa, The Chlorine Institute and the American Chemistry Council (ACC),[5] National Propane Gas Association (NPGA), National Tank Truck Carriers, Inc. (NTTC), Pioneer Chlor Alkali Company, Inc., and The Society of the Plastics Industry, Inc. In general, all of these petitioners disagreed with PHMSA's finding that ''Federal hazmat law and the HMR do not apply to a consignee's transportation of hazardous materials solely within the gates of a private manufacturing facility.'' 60 FR at 8785. Hasa asked ''who regulates what and when?'' It stated that regulation of railroad tank cars ''while loading, unloading, and incidental storage occurs, by the State of California, the County of Los Angeles, and other local governmental agencies as well as by Federal requirements . . . is likely to be uneven, contradictory, confusing, and provide a lack of uniformity.''

In their jointly-filed petition, The Chlorine Institute and ACC asserted that, because ''49 CFR parts 174 and 177 set forth detailed regulations for the loading and unloading of hazardous materials on private property, loading and unloading on private property are held to be in commerce even though they clearly cannot be accomplished in commerce as that term is being construed by [PHMSA].'' These petitioners referred to other Federal statutes which apply to transportation-related activities on private property; they stated that the environmental statutes administered by EPA, which authorize State and local requirements, ''do not regulate the on-site transportation, handling or storage of hazardous materials.'' They also stated that PHMSA should resolve any ambiguity in a State or local law ''against the enforcing entity,'' and that a State or local requirement ''must be held to be preempted'' whenever its enforcement could create a conflict with a requirement in the HMR.

The Society of the Plastics Industry stated that it concurred with and supported the petition for reconsideration filed by The Chlorine Institute and ACC. It asserted that the decisions in PDs 8(R)–11(R) ignore ''the fact that the HMTA applies to loading and unloading, activities which occur within plant gates'' and also ''the 'stream of commerce' decisions adopted under the Interstate Commerce Act.''

NTTC expressed agreement with the position that the HMR do not apply to a hazardous material which ''has been removed from specification packaging . . . and not reloaded into another specification container or package.'' NTTC stated that the definition of ''commerce'' in Federal hazardous material transportation law ''embraces both 'transportation' and [that] which affects . . . transportation.'' NTTC also stated that the decisions in PDs 8(R)–11(R) were in conflict with prior interpretations that the HMR apply to representations that a packaging complies with a specification marking, ''regulations regarding the removal of placards from cargo tanks (prior to such being cleaned, purged and/or laden with another product),'' and enforcement actions against carriers who failed to report an unintentional release of hazardous materials during loading or

[2] CHSC Chapter 6.95 requires plans for emergency response and/or risk prevention, and these requirements are implemented at the local level—in this case, by Los Angeles County in LACoC Titles 2 and 32.

[3] In 2002, Congress amended this mandate to direct DOT to ''prescribe regulations for the safe transportation, including security, of hazardous material in intrastate, interstate, and foreign commerce.'' Homeland Security Act of 2002, Public Law 107–296 § 1711(a), 116 Stat. 2319 (Nov. 25, 2002).

[4] In 2005, this paragraph was redesignated § 5102(13). Hazardous Materials Transportation Safety and Security Reauthorization Act of 2005 (Title VII of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users), Public Law 109–59 § 7102(8), 119 Stat. 1893 (Aug. 10, 2005).

[5] ACC was formerly known as the Chemical Manufacturers Association. For consistency, this decision refers to ''ACC'' throughout.

unloading, ''which invariably occur on private property.''

Pioneer Chlor Alkali Company addressed ''a loaded tank car on the receiver's property'' which it stated, prior to PHMSA's decisions, meant that ''the car is under Federal Jurisdiction from the time it is loaded, while it is being transported, held/stored, and up to the time it is unloaded.'' It stated that the ''change'' in PDs 8(R)–11(R) ''is not in the best interest of the general public,'' because, instead of ''one set of uniformly applied rules/regulations,'' there would be ''one set of rules/regulations covering the car at the loading point, another set (Federal) while it is in the so called 'Commerce' area and another third set at the unloading point.''

SPCMA and NPGA submitted further comments in support of the petitions for reconsideration. SPCMA stated that State and local regulations are likely to vary from place to place, so that hazardous materials ''will be subject to different—and without doubt conflicting—requirements throughout the journey'' from one place to another in commerce. NPGA stated that the decisions in PDs 8(R)–11(R) open up the possibility of ''a plethora of local regulations governing the loading and unloading operations that are already subject to DOT regulation.''

Additional comments on the petitions for reconsideration were submitted by the California Office of Emergency Services (OES), the Contra Costa County Health Services Department (Contra Costa County), and the Association of Waste Hazardous Materials Transporters (AWHMT). OES stated that the California regulatory scheme was aimed at facilities, not transporters, and does not apply to transportation or incidental activities regulated under Federal hazardous material transportation law or the HMR. It stated that the California statutes and implementing local regulations relate to emergency response planning and do not prohibit storage of hazardous materials; rather these provisions merely define ''storage'' and when compliance with the State law is triggered. OES argued that there is no evidence of any ''obstacle'' to accomplishing and carrying out the Federal hazardous material transportation law and the HMR, and that it is irrelevant how other Federal laws and the Commerce Clause have been interpreted. Contra Costa County indicated its concurrence with the OES comments and referred to a July 1993 incident involving the release of sulfur trioxide at Richmond, California, when the company allegedly failed to train its personnel, report the quantity of materials present, or implement a risk management and prevention program under CHSC Chapter 6.95.

AWHMT recommended that PHMSA delay taking action on the petitions for reconsideration and open a rulemaking docket with notice and opportunity for public comment and participation by EPA and OSHA. AWHMT stated that further clarification was needed ''on a number of points, not necessarily relevant to the fact-specific situation presented in PDs 8(R)–11(R),'' because ''there is no bright line that distinguishes the moment materials are placed in or out of transportation at consignee/consignor facilities.''

On July 24, 1996, PHMSA published a notice in the **Federal Register** announcing that it was deferring action on the petitions for reconsideration ''until the agency can complete a rulemaking, RSPA Docket HM–223, which focuses on numerous issues that are raised in the petitions for rulemaking.'' 61 FR 38513.[6] Over the next three years, PHMSA issued an advance notice of proposed rulemaking (ANPRM) (61 FR 39522 [July 29, 1996]); held public meetings in Atlanta, Sacramento, and Philadelphia; published further notices of the issues to be discussed at the public meetings (61 FR 49723 [Sept. 23, 1996], 61 FR 53483 [Oct. 11, 1996]); and issued a supplemental ANPRM (64 FR 22718 [Apr. 27, 1999]).

On August 20, 1999, The Chlorine Institute and ACC submitted a petition to ''supplement the record and for discharge'' of their March 1995 petition to PHMSA for reconsideration of the determinations in PDs 8(R)–11(R). They provided a recently-issued interpretation by EPA on the applicability of the Clean Air Act, which these petitioners contended ''is at odds'' with findings in PDs 8(R)–11(R), and stated that ''there is every reason to discharge the Petition for Reconsideration and finally decide this matter.'' In its October 19, 1999 letter, PHMSA advised these parties that it was granting their request to supplement the record in this proceeding and it had placed the August 20, 1999 petition in the docket of both the HM–223 rulemaking and the preemption proceeding. PHMSA also stated that it was denying their request to ''discharge'' the March 1995 petition for reconsideration ''pending completion of the HM–223 rulemaking,'' and that, after completion of the HM–223 rulemaking, PHMSA would reopen the docket in the preemption proceeding ''so that all participants in that proceeding may supplement the record if they wish,'' before acting on the petitions for reconsideration.

In June 2000, The Chlorine Institute and ACC formally withdrew their joint petition for reconsideration of PDs 8(R)–11(R) and filed a complaint in the United States District Court for the District of Columbia asking the court to ''reverse the holdings in the preemption determinations'' and ''such other and further relief as may be proper.'' *The Chlorine Institute, et al.* v. *U.S. Department of Transportation,* C.A. No. 00–1312 (WBB) (DDC). That complaint was dismissed on May 7, 2002, on the ground that these claims were not ripe for judicial review. The court noted that PHMSA had published a notice of proposed rulemaking (NPRM) in Docket HM–223 in the **Federal Register** on June 14, 2001 (66 FR 32420), and that it was not clear that the 1995 determinations in PDs 8(R)–11(R) reflected PHMSA's ''current position. Therefore, the Court would be in the unenviable position of having to enter its judgment on an issue that has not yet been decided by the Agency that has the expertise to make a more informed decision regarding this important issue of national policy.''

C. PHMSA's HM–223 Final Rules

After considering the extensive comments to the July 24, 1996 ANPRM, including the comments at the three public meetings, and the comments submitted in response to the April 1999 supplemental ANPRM and the June 2001 NPRM, PHMSA issued a final rule in its HM–223 rulemaking on October 30, 2003 (68 FR 61906). On April 15, 2005, PHMSA published in the **Federal Register** (70 FR 20018) amendments and corrections to its October 30, 2003 final rule in response to administrative appeals filed by fourteen companies and industry associations.[7]

In those final rules, PHMSA amended the HMR to define several terms including ''pre-transportation function,'' ''transportation,'' ''loading incidental to movement,'' ''unloading incidental to movement,'' ''storage incidental to movement,'' and ''transloading.'' 68 FR at 61907, 61940–41; 70 FR at 20021, 20033–34. PHMSA made clear that storage of hazardous materials ''at its final destination as shown on a shipping document'' is not ''storage incidental to movement'' of the materials, and

[6] This rulemaking was assigned Docket No. RSPA–1998–4952 on the Federal eRulemaking Portal at *http://www.regulations.gov.*

[7] Five additional industry associations submitted administrative appeals of PHMSA's October 30, 2003 final rule in HM–223, but withdrew those appeals and, with five other associations, filed a petition for judicial review of the HM–223 final rules.

unloading of hazardous materials after the materials have been delivered to the consignee and the carrier has departed from the consignee's facility or premises is not ''incidental to movement'' of the materials. 70 FR at 20033–34.

PHMSA amended 49 CFR 171.1 to list examples of regulated and non-regulated functions and to ''indicate that facilities at which functions are performed in accordance with the HMR may be subject to applicable standards and regulations of other Federal agencies or to applicable state or local governmental laws and regulations (except to the extent that such non-Federal requirements may be preempted under Federal hazmat law).'' 68 FR at 61907; *see also id.* at 61937–39, and 70 FR at 20021, 20032–33. With respect to rail tank car unloading, PHMSA added a new paragraph 49 CFR 173.31(g) to set forth requirements to ''assure that a tank car that is being loaded or unloaded does not inadvertently enter transportation or endanger transportation personnel (*i.e.,* posting warning signs, setting brakes, blocking wheels) are regulated under the HMR.'' 68 FR at 61931, 61941. PHMSA also revised 49 CFR 174.67 to set forth the requirements applicable to transloading operations, and clarified that ''storage of hazardous materials at transloading facilities is storage incidental to movement and subject to regulations applicable to such storage under the HMR. 70 FR at 20020; *see also id.* at 20034; 68 FR at 61931, 61941–42. Otherwise however, ''[u]nloading of rail tank cars by consignees after delivery by the carrier is not regulated under the HMR,'' and ''unloading of rail cars at a facility after delivery by and departure of the rail carrier is subject to OSHA regulations applicable to worker protection and safety.'' *Id.* at 61931.

PHMSA also specifically noted that ''DOT specification packagings, such as rail tank cars, cargo tank motor vehicles, and cylinders, are subject to DOT regulation at all times that the packaging is marked to indicate that it conforms to the applicable specification requirements.'' 70 FR at 20024. Moreover, under the HM–223 final rules, the HMR continue to apply ''to pre-transportation functions, such as filling a rail tank car and preparing shipping papers.'' *Id.* at 20025. However, Federal hazardous materials transportation law does not preclude other Federal agencies or their state counterparts from regulating workers at a facility where hazardous materials are prepared for transportation or stored incidental to movement, so long as the other Federal or non-Federal requirements governing transportation of hazardous materials are not specifically displaced or preempted. *See id.* at 20028–29. PHMSA noted that a non-Federal safety regulation affecting the transportation of hazardous materials may be preempted under the Commerce Clause of the Constitution or 49 U.S.C. 5125; 49 U.S.C. 20106 (regarding rail transportation); or 49 U.S.C. 31141 (regarding motor vehicle transportation). *Id.* at 20024, 20025.

Ten industry associations petitioned the United States Court of Appeals for the District of Columbia for review of PHMSA's October 30, 2003 and April 15, 2005 final rules. *American Chemistry Council, et al.* v. *Department of Transportation,* Nos. 03–1456, 05–1191. Five additional associations were permitted to intervene in support of the petitioners. At oral argument on March 20, 2006, the Court questioned whether these associations had ''standing'' to assert that PHMSA should be required to apply the Federal hazardous material transportation law and the HMR to unloading and storage of hazardous materials on a consignee's private property, after delivery of the materials to their final destination and departure of the carrier. Following the submission of supplemental briefs, the Court found that neither the petitioners nor intervenors had shown that PHMSA's failure to assert authority to regulate consignee unloading and storage had caused a likely actual or imminent injury to these associations. 468 F.3d 810 (D.C. Cir. 2006). The Court found that the petitioners had not shown that:

- The costs of complying with local requirements are ''fairly traceable'' to the HM–223 final rules or that, if the HM–223 final rules had not been issued, the local requirements would likely be preempted under 49 U.S.C. 5125. *Id.* at 817–18.

- They would suffer an actual or imminent injury because of an alleged ''gap'' or ''void'' in Federal, State, or local safety requirements governing the unloading of hazardous materials by a consignee. *Id.*

The Court also found that the intervenors had not provided evidence to show that ''there are inconsistent state and local regulations which a properly-issued Final Rule would have preempted'' or ''that they face increased liability risks associated with gaps in federal oversight over the safe and secure transportation of hazardous materials.'' *Id.* at 821. On February 15, 2007, the Court denied rehearing *en banc. Id.* at 810.

D. PHMSA's Further Examination of Loading and Unloading of Bulk Shipments of Hazardous Materials

PHMSA specifically recognized in PDs 8(R)–11(R) that OSHA and EPA also regulate activities involving hazardous materials ''to ensure that they are not unintentionally or intentionally released into the environment'' and ''to ensure worker safety'' in the workplace. 60 FR at 8778. In HM–223, PHMSA provided in 49 CFR 171.1(e) that: ''Each facility at which pre-transportation or transportation functions are performed in accordance with the HMR may be subject to applicable standards and regulations of other Federal agencies.'' 68 FR at 61938. PHMSA explained in the preamble to its October 30, 2003 final rule that ''unloading of rail cars at a facility after delivery by and departure of the rail carrier is subject to OSHA regulations applicable to worker protection and safety.'' *Id.* at 61931.

Nonetheless, concerns continued to be raised as to whether further Federal requirements or guidance are necessary to address the loading and unloading of shipments of hazardous materials in bulk packagings, such as rail tank cars and cargo tank motor vehicles. In recommendations I–02–1 & I–02–2, the National Transportation Safety Board had urged DOT, together with OSHA and EPA, to develop regulations ''that apply to the [certain aspects of] loading and unloading of railroad tank cars, highway cargo tanks, and other bulk containers'' and, separately in recommendation R–04–10, ''require safe operating procedures to be established before hazardous materials are heated in a railroad tank car for unloading.'' [8] In 2006, the U.S. Chemical and Safety Hazard Investigation Board (CSB) issued recommendation 2005–06 I–LA–R1 to ''Expand the scope of DOT regulatory coverage to include chlorine rail car unloading operations'' and provide specific requirements for ''remotely operated emergency isolation devices'' as part of a ''shutdown system . . . capable of stopping a chlorine release from both the rail car and the facility chlorine receiving equipment.'' [9]

During late 2006 and early 2007, PHMSA reviewed incident reports submitted during the prior decade in

[8] On November 29, 2013, the NTSB closed these three recommendations as ''Acceptable Alternative Action'' based upon the safety precautions and recommended guidance for persons responsible for unloding or transloading hazardous materials from rail tank cars, as set forth in PHMSA's July 12, 2013 safety advisory guidance. 78 FR 41853.

[9] On June 1, 2015, the CSB voted to designate this recommendation as ''Closed—No Longer Applicable'' because the board determined that the recommendation no longer applies to DOT.

accordance with the reporting requirements in 49 CFR 171.16 and concluded that ''roughly one quarter to one half of overall hazardous materials transportation incidents may be attributable to loading and unloading operations, particularly bulk packages.'' Notice of public workshop on loading/unloading practices, 72 FR 26864 (May 11, 2007). As later summarized in its notice requesting comments on ''Proposed Recommended Practices for Bulk Loading and Unloading of Hazardous Materials in Transportation,'' 73 FR 916, 917 (Jan. 4, 2008):

- During 2004–06, ''hazardous materials shipments transported by highway and rail in bulk packagings were involved in approximately 9 out of 10 high consequence events.'' *Id.*
- ''Many of the identified causes of both en route and storage incidents can be attributed to loading and unloading operations (*i.e.,* overfilled, overpressurized, loose closure, component, or device, etc.).'' *Id.*

In the January 4, 2008 notice, PHMSA also discussed the public workshop which had been held on June 14, 2007, to discuss ''the risks associated with loading and unloading bulk materials and the range of actions that could be taken by the government and industry to address those risks.'' *Id.* at 919. The participants included ''[r]epresentatives from industry, federal agencies, state and local government, standards organizations, the emergency response community, employee groups, environmental and public interest organizations, and the public.'' *Id.* At this workshop, the Interested Parties Working Group, representing thirteen industry associations including ACC, The Chlorine Institute, and NTTC, presented ''a draft operating procedures document for the loading, unloading, and storage of hazardous materials in bulk packagings having a capacity of greater than 3,000 pounds.'' *Id.* Following the workshop, PHMSA received further comments and a petition from the Dangerous Goods Advisory Group to initiate a rulemaking to adopt ''operational procedures in the HMR applicable to loading, unloading and incidental storage of hazardous materials in bulk packagings.'' *Id.*

Thereafter, PHMSA proposed to amend the HMR to require each person who engages in loading or unloading cargo tanks to perform a risk assessment of the loading and unloading operations and develop and implement safe operating procedures based upon the results of a risk assessment. NPRM, ''Cargo Tank Motor Vehicle Loading and Unloading Operations,'' 76 FR 13313 (Mar. 11, 2011); extension of comment period, 76 FR 27300 (May 11, 2011).[10] In response, however, a number of commenters ''noted confusion about the applicability of the proposed rule,'' ''expressed concern over the possibility of duplication of efforts by facilities and carriers,'' ''questioned the intent of provisions for the maintenance and testing of transfer equipment,'' and ''strongly opposed'' the proposal of an ''annual evaluation of hazmat employees performing CTMV loading and unloading operations.'' PHMSA's ''Withdrawal of notice of proposed rulemaking,'' 79 FR 10461, 10463–64 (Feb. 25, 2014). After conducting a supplementary policy analysis, PHMSA ''concluded that adopting the regulations proposed under the NPRM is not the best course of action at this time.'' *Id.* at 10465. But instead would:

- Issue ''a guidance document for CTMV loading and unloading operations;''
- Implement ''an outreach campaign to educate the regulated community on current regulatory requirements and best safety practices; and''
- Conduct ''human factors research to examine human involvement in release of hazmat and to potentially use this to support further consideration of rulemaking to address CTMV loading and unloading operations.''

During the meantime, Congress considered but failed to adopt proposals to apply the HMR to the unloading of certain packagings containing hazardous materials after delivery to the consignee. *See* S. 1813 § 34007 (as passed by the Senate on March 14, 2012), and H.R. 7 § 9005 (as reported by the Transportation and Infrastructure Committee on February 13, 2012).

II. Discussion

In its February 15, 1995 decisions in PDs 8(R)–11(R), PHMSA considered and addressed the applicability of the HMR to unloading and storage of hazardous materials in rail tank cars at a consignee's facility after a tank car has been delivered by the rail carrier and the carrier has departed. At the conclusion of its ten-year HM–223 rulemaking, after considering the many comments submitted in that rulemaking by the parties petitioning for reconsideration of PDs 8(R)–11(R), PHMSA amended the ''applicability'' provisions in the HMR to clarify that the following activities or functions are not subject to the requirements of the HMR:

- ''Unloading of a hazardous material from a transport vehicle or bulk packaging performed by a person employed by or working under contract to the consignee following delivery of the hazardous material by the carrier to its destination and departure from the consignee's premises of the carrier's personnel or, in the case of a private carrier, departure of the driver from the unloading area.'' 49 CFR 171.1(d)(2).
- Storage of a freight container, transport vehicle, or package containing a hazardous material after its delivery to the destination indicated on a shipping document, package marking, or other medium, or, in the case of a rail car, storage of a rail car on private track.'' 49 CFR 171.1(d)(3).

Since issuance of PDs 8(R)–11(R), the issues relating to post-delivery unloading and storage have been exhaustively presented and considered in rulemaking proceedings and federal court litigation. Affirmance of the fundamental holdings in the initial preemption determinations is consistent with the clarifications in the HM–223 rulemaking with regard to the scope of the definition of ''transportation'' in Federal hazardous material transportation law and the applicability of the HMR. Moreover, it is unlikely that any further submissions on the petitions for reconsideration will contain any new information or arguments. Reopening the docket on those petitions for reconsideration, as PHMSA offered to do in 1999, is no longer warranted. The time has come to close the preemption proceeding and devote future efforts to actions to reduce the safety risks in activities involved in the loading and unloading of shipments of hazardous materials, as outlined in PHMSA's February 25, 2014 withdrawal of notice of proposed rulemaking. 79 FR at 10465.

III. Ruling

For all the reasons set forth above, PHMSA finds that that Federal hazardous material transportation law does not preempt California and Los Angeles County requirements on (1) the unloading of hazardous materials from rail tank cars by a consignee and (2) the consignee's on-site storage of hazardous materials following delivery of the hazardous materials to their destination and departure of the carrier from the consignee's premises or private track adjacent to the consignee's premises.

IV. Final Agency Action

In accordance with 49 CFR 107.211(d), this decision constitutes PHMSA's final agency action on the applications by SPCMA and Hasa for

[10] In the preamble to this NPRM, PHMSA stated that it was separately ''evaluating the safety issues associated with rail tank car loading and unloading operations and may propose regulatory changes if our safety analysis concludes that such action is warranted.'' *Id.* at 13314.

administrative determinations of preemption as to certain requirements in Chapter 6.95 of the California Health and Safety Code and Titles 2 and 32 of the Los Angeles County Code relating to unloading and storage of hazardous materials.

A person who is adversely affected or aggrieved by a preemption determination may file a petition for judicial review of that determination in the United States Court of Appeals for the District of Columbia or in the Court of Appeals for the United States for the circuit in which the petitioner resides or has its principal place of business, within 60 days after the determination becomes final. 49 U.S.C. 5127(a).

Issued in Washington, DC, on November 10, 2015.

Joseph Solomey,

Senior Assistant Chief Counsel.

BILLING CODE 4910–60–P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Agency Information Collection Activities: Information Collection Renewal; Submission for OMB Review; Market Risk

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Notice and request for comment.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on a continuing information collection, as required by the Paperwork Reduction Act of 1995 (PRA).

In accordance with the requirements of the PRA, the OCC may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The OCC is soliciting comment concerning the renewal of its information collection titled, ''Market Risk.'' The OCC also is giving notice that it has sent the collection to OMB for review.

DATES: You should submit written comments by: December 16, 2015.

ADDRESSES: Because paper mail in the Washington, DC area and at the OCC is subject to delay, commenters are encouraged to submit comments by email, if possible. Comments may be sent to: Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, Attention: 1557–0247, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219. In addition, comments may be sent by fax to (571) 465–4326 or by electronic mail to *prainfo@occ.treas.gov.* You may personally inspect and photocopy comments at the OCC, 400 7th Street SW., Washington, DC 20219. For security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling (202) 649–6700 or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597. Upon arrival, visitors will be required to present valid government-issued photo identification and submit to security screening in order to inspect and photocopy comments.

All comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

Additionally, please send a copy of your comments by mail to: OCC Desk Officer, 1557–0247, U.S. Office of Management and Budget, 725 17th Street NW., #10235, Washington, DC 20503, or by email to: oira *submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Shaquita Merritt, Clearance Officer, (202) 649–5490 or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 400 7th Street SW., Washington, DC 20219.

SUPPLEMENTARY INFORMATION: The OCC is requesting extension of OMB approval for this collection. There have been no changes to the requirements of the regulations.

Title: Market Risk.

OMB Control No.: 1557–0247.

Description: The Office of the Comptroller of the Currency's (OCC) market risk capital rules (12 CFR part 3, subpart F) capture positions for which the market risk capital rules are appropriate; reduce procyclicality in market risk capital requirements; enhance the rules' sensitivity to risks that are not adequately captured under the current regulatory measurement methodologies; and increase transparency through enhanced disclosures.

The information collection requirements are located at 12 CFR 3.203 through 3.212. The rules enhance risk sensitivity and include requirements for the public disclosure of certain qualitative and quantitative information about the market risk of national banks and Federal savings associations. The collection of information is necessary to ensure capital adequacy appropriate for the level of market risk.

Section 3.203 sets forth the requirements for applying the market risk framework. Section 3.203(a)(1) requires national banks and Federal savings associations to have clearly defined policies and procedures for determining which trading assets and trading liabilities are trading positions and specifies the factors a national bank or Federal savings association must take into account in drafting those policies and procedures. Section 3.203(a)(2) requires national banks and Federal savings associations to have clearly defined trading and hedging strategies for trading positions that are approved by senior management and specifies what the strategies must articulate. Section 3.203(b)(1) requires national banks and Federal savings associations to have clearly defined policies and procedures for actively managing all covered positions and specifies the minimum requirements for those policies and procedures. Sections 3.203(c)(4) through 3.203(c)(10) require the annual review of internal models and specify certain requirements for those models. Section 3.203(d) requires the internal audit group of a national bank or Federal savings association to prepare an annual report to the board of directors on the effectiveness of controls supporting the market risk measurement systems.

Section 3.204(b) requires national banks and Federal savings associations to conduct quarterly backtesting. Section 3.205(a)(5) requires institutions to demonstrate to the OCC the appropriateness of proxies used to capture risks within value-at-risk models. Section 3.205(c) requires institutions to develop, retain, and make available to the OCC value-at-risk and profit and loss information on sub-portfolios for two years. Section 3.206(b)(3) requires national banks and Federal savings associations to have policies and procedures that describe how they determine the period of significant financial stress used to calculate the institution's stressed value-at-risk models and to obtain prior OCC approval for any material changes to these policies and procedures.

Section 3.207(b)(1) details requirements applicable to a national bank or Federal savings association when the national bank or Federal savings association uses internal models

to measure the specific risk of certain covered positions. Section 3.208 requires national banks and Federal savings associations to obtain prior written OCC approval for incremental risk modeling. Section 3.209(a) requires prior OCC approval for the use of a comprehensive risk measure. Section 3.209(c)(2) requires national banks and Federal savings associations to retain and report the results of supervisory stress testing. Section 3.210(f)(2)(i) requires national banks and Federal savings associations to document an internal analysis of the risk characteristics of each securitization position in order to demonstrate an understanding of the position. Section 3.212 requires quarterly quantitative disclosures, annual qualitative disclosures, and a formal disclosure policy approved by the board of directors that addresses the approach for determining the market risk disclosures it makes.

Type of Review: Regular.

Affected Public: Businesses or other for-profit.

Number of Respondents: 13.

Estimated Burden per Respondent: 1,964 hours.

Total Estimated Annual Burden: 25,532 hours.

The OCC issued a notice for 60 days of comment on August 10, 2015, 80 FR 47987. No comments were received. Comments continue to be invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the OCC, including whether the information has practical utility;

(b) The accuracy of the OCC's estimate of the burden of the collection of information;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: November 9, 2015.

Mary H. Gottlieb,

Regulatory Specialist, Legislative and Regulatory Activities Division.

Agency Information Collection Activities: Information Collection Revision; Comment Request; Domestic First Lien Residential Mortgage Data

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Notice and request for comment.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on a revision to an information collection, as required by the Paperwork Reduction Act of 1995 (PRA).

Under the PRA, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of or revision to an existing collection of information, and to allow 60 days for public comment in response to the notice.

In accordance with the requirements of the PRA, the OCC may not conduct or sponsor, and a respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The OCC is soliciting comment concerning a revision to its information collection titled, ''Domestic First Lien Residential Mortgage Data.''

DATES: You should submit written comments by: January 15, 2016.

ADDRESSES: Because paper mail in the Washington, DC area and at the OCC is subject to delay, commenters are encouraged to submit comments by email, if possible. Comments may be sent to: Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, Attention: 1557–0331, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219. In addition, comments may be sent by fax to (571) 465–4326 or by electronic mail to *prainfo@occ.treas.gov.* You may personally inspect and photocopy comments at the OCC, 400 7th Street SW., Washington, DC 20219. For security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling (202) 649–6700 or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597. Upon arrival, visitors will be required to present valid government-issued photo identification and submit to security screening in order to inspect and photocopy comments.

All comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

FOR FURTHER INFORMATION CONTACT: Shaquita Merritt, Clearance Officer, (202) 649–5490 or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 400 7th Street SW., Washington, DC 20219.

SUPPLEMENTARY INFORMATION: The OCC is requesting OMB approval for the following information collection:

Title: Domestic First Lien Residential Mortgage Data.

OMB Control Number: 1557–0331.

Description:

Comprehensive mortgage data is vital to assessing and monitoring credit quality and loss mitigation activities in the residential mortgage market and the federal banking system. This data is important and necessary to support supervisory activities to ensure the safety and soundness of the federal banking system.

The Dodd-Frank Wall Street Reform and Regulatory Improvement Act of 2010 requires that this data be collected. 12 U.S.C. 1715z–25.

This data collection is being revised to include aggregate values to be calculated from data that is currently reported in loan level format. These aggregate values will be industry standard measures of portfolio performance, including but not limited to: Outstanding loan count and unpaid principal balance; delinquency and liquidation ratios; and the number of loss mitigation actions completed. Aggregate values generally will be reported at the total portfolio level, with some values also reported by portfolio segments including, but not limited to: borrower credit class and type and execution date of loss mitigation action.

The reported data items will still be calculated from loan level data that includes: Bankruptcy or foreclosure status; and other detailed loan information. Banks would not be required to report this data to the OCC monthly, but would be required to provide it upon OCC's request.

Type of Review: Regular review.

Affected Public: Businesses or other for-profit.

Burden Estimate:

Estimated Number of Respondents: 61.

Estimated Annual Responses per Respondent: 12 per year.

Estimated Burden per Response: 40 hours per month/per bank.

Estimated Total Annual Burden: 29,280 hours.

Comments submitted in response to this notice will be summarized and included in the request for OMB approval. All comments become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the OCC, including whether the information shall have practical utility;

(b) The accuracy of the OCC's estimate of the burden of the collection of information;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: November 9, 2015.

Stuart E. Feldstein,

Director, Legislative & Regulatory Activities Division.

BILLING CODE 4810–33–P

DEPARTMENT OF THE TREASURY

Fiscal Service

Bureau of the Fiscal Service

Fee Schedule for the Transfer of U.S. Treasury Book-Entry Securities Held on the National Book-Entry System

Authority: 31 CFR 357.45.

AGENCY: Bureau of the Fiscal Service, Fiscal Service, Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury (Treasury) is announcing a new fee schedule applicable to transfers of U.S. Treasury book-entry securities maintained on the National Book-Entry System (NBES) that occur on or after January 4, 2016.

DATES: Effective January 4, 2016.

FOR FURTHER INFORMATION CONTACT: Brandon Taylor or Janeene Wilson, Bureau of the Fiscal Service, 202–504–3550.

SUPPLEMENTARY INFORMATION: Treasury has established a fee structure for the transfer of Treasury book-entry securities maintained on NBES. Treasury reassesses this fee structure periodically based on its review of the latest book-entry costs and volumes.

For each transfer or reversal of Treasury securities sent or received on or after January 4, 2016, the basic fee will increase from $0.75 to $0.81. The Board of Governors of the Federal Reserve System (Federal Reserve) will maintain its fee for Federal Reserve funds movement at $0.11. The funds movement fee is not a Treasury fee, but is charged by the Federal Reserve for the cost of moving funds associated with the transfer of a Treasury book-entry security. The two fees will result in a combined fee of $0.92 for each transfer of Treasury book-entry securities. The surcharge for an off-line Treasury book-entry securities transfer will remain at $50.00. Off-line refers to the sending and receiving of transfer messages to or from a Federal Reserve Bank by means other than on-line access, such as by written, facsimile, or telephone voice instruction. The basic transfer fee assessed to both sends and receives is reflective of costs associated with the processing of securities transfers. The off-line surcharge reflects the additional processing costs associated with the manual processing of off-line securities transfers.

Treasury does not charge a fee for account maintenance, the stripping and reconstitution of Treasury securities, the wires associated with original issues, or interest and redemption payments. Treasury currently absorbs these costs.

The fees described in this notice apply only to the transfer of Treasury book-entry securities held on NBES. Information concerning fees for book-entry transfers of Government Agency securities, which are priced by the Federal Reserve, is set out in a separate **Federal Register** notice published by the Federal Reserve.

The following is the Treasury fee schedule that will take effect on January 4, 2016, for book-entry transfers on NBES:

TREASURY—NBES FEE SCHEDULE—EFFECTIVE JANUARY 4, 2016

[In dollars]

Transfer type	Basic fee	Off-line surcharge	Funds movement fee	Total fee
On-line transfer originated	0.81	N/A	0.11	0.92
On-line transfer received	0.81	N/A	0.11	0.92
On-line reversal transfer originated	0.81	N/A	0.11	0.92
On-line reversal transfer received	0.81	N/A	0.11	0.92
Off-line transfer originated	0.81	50.00	0.11	50.92
Off-line transfer received	0.81	50.00	0.11	50.92
Off-line account switch received	0.81	0.00	0.11	0.92
Off-line reversal transfer originated	0.81	50.00	0.11	50.92
Off-line reversal transfer received	0.81	50.00	0.11	50.92

Dated: October 22, 2015.

David A. Lebryk,

Fiscal Assistant Secretary.

BILLING CODE 4810–AS–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Form 8611

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed

and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13(44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Form 8611, Recapture of Low-Income Housing Credit.

DATES: Written comments should be received on or before January 15, 2016 to be assured of consideration.

ADDRESSES: Direct all written comments to Michael Joplin, Internal Revenue Service, room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Sara Covington at Internal Revenue Service, room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the internet at *Sara.L.Covington@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Recapture of Low-Income Housing Credit.

OMB Number: 1545–1035.

Form Number: 8611.

Abstract: IRC section 42 permits owners of residential rental projects providing low-income housing to claim a credit against their income tax. If the property is disposed of or if it fails to meet certain requirements over a 15-year compliance period and a bond is not posted, the owner must recapture on Form 8611 part of the credits taken in prior years.

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations and individuals.

Estimated Number of Respondents: 1,000.

Estimated Time Per Respondent: 7 hours, 50 minutes.

Estimated Total Annual Burden Hours: 7,842.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request For Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: November 2, 2015.

Michael Joplin,

Supervisory Tax Analyst.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Form 5304–SIMPLE, Form 5305–SIMPLE, and Notice 98–4

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Form 5304–SIMPLE, Savings Incentive Match Plan for Employees of Small Employers (SIMPLE)—Not for Use With a Designated Financial Institution; Form 5305–SIMPLE, Savings Incentive Match Plan for Employees of Small Employers (SIMPLE)—for Use With a Designated Financial Institution; Notice 98–4, Simple IRA Plan Guidance.

DATES: Written comments should be received on or before January 15, 2016 to be assured of consideration.

ADDRESSES: Direct all written comments to Michael Joplin, Internal Revenue Service, room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the forms, instructions, and notice should be directed to Sara Covington, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the internet at *Sara.L.Covington@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Form 5304–SIMPLE, Savings Incentive Match Plan for Employees of Small Employers (SIMPLE)—Not for Use With a Designated Financial Institution, Form 5305–SIMPLE; Savings Incentive Match Plan for Employees of Small Employers (SIMPLE)—for Use With a Designated Financial Institution; SIMPLE IRA Plan Guidance (Notice 98–4).

OMB Number: 1545–1502.

Form Number: Form 5304–SIMPLE, Form 5305–SIMPLE, and Notice 98–4.

Abstract: Form 5304–SIMPLE is a model SIMPLE IRA agreement that was created to be used by an employer to permit employees who are not using a designated financial institution to make salary reduction contributions to a SIMPLE IRA described in Internal Revenue Code section 408(p). Form 5305–SIMPLE is also a model SIMPLE IRA agreement, but it is for use with a designated financial institutions. Notice 98–4 provides guidance for employers and trustees regarding how they can comply with the requirements of Code section 408(p) in establishing and maintaining a SIMPLE IRA, including information regarding the notification and reporting requirements under Code section 408.

Current Actions: There are no changes for the forms at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations not-for-profit institutions, and individuals.

Estimated Number of Respondents: 600,000.

Estimated Time Per Respondent: 3 hours, 31 minutes.

Estimated Total Annual Burden Hours: 2,113,000.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request For Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record.

Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: November 6, 2015.

SUPPLEMENTARY INFORMATION:

Title: Gains and Losses From Section 1256 Contracts and Straddles.

OMB Number: 1545–0644.

Form Number: Form 6781.

Abstract: Form 6781 is used by taxpayers in computing their gains and losses on Internal Revenue Code section 1256 contracts under the marked-to-market rules and gains and losses under Code section 1092 from straddle positions. The data is used to verify that the tax reported accurately reflects any such gains and losses.

Current Actions: There is no change in the paperwork burden previously approved by OMB. This form is being submitted for renewal purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations and individuals.

Estimated Number of Respondents: 100,000.

Estimated Time per Respondent: 9 hours, 2 minutes.

Estimated Total Annual Burden Hours: 903,237.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. [CMS–1631–FC]

RIN 0938–AS40

Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2016

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule with comment period.

SUMMARY: This major final rule with comment period addresses changes to the physician fee schedule, and other Medicare Part B payment policies to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute.

DATES: *Effective date:* The provisions of this final rule with comment period are effective on January 1, 2016, except the definition of ''ownership or investment interest'' in § 411.362(a), which has an effective date of January 1, 2017.

Comment date: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on December 29, 2015. (See the **SUPPLEMENTARY INFORMATION** section of this final rule with comment period for a list of provisions open for comment.)

ADDRESSES: In commenting, please refer to file code CMS–1631–FC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *www.regulations.gov*. Follow the instructions for ''submitting a comment.''

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1631–FC, P.O. Box 8013, Baltimore, MD 21244–8013.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1631–FC, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments before the close of the comment period to either of the following addresses:

a. For delivery in Washington, DC—Centers for Medicare & Medicaid Services, Department of Health and Human Services, Room 445–G, Hubert H. Humphrey Building, 200 Independence Avenue SW., Washington, DC 20201.

(Because access to the interior of the Hubert H. Humphrey Building is not readily available to persons without federal government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. For delivery in Baltimore, MD—Centers for Medicare & Medicaid Services, Department of Health and Human Services, 7500 Security Boulevard, Baltimore, MD 21244–1850.

If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786–7195 in advance to schedule your arrival with one of our staff members.

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

Deborah Krauss, (410) 786–5264 and Alexandra Mugge, (410) 786–4457, for issues related to the physician quality reporting system and the merit-based incentive payment system.

Alexandra Mugge, (410) 786–4457, for issues related to EHR Incentive Program.

Sarah Arceo, (410) 786–2356 or Patrice Holtz, (410786–5663 for issues related to EHR Incentive Program-Comprehensive Primary Care (CPC) initiative and Medicare EHR Incentive Program aligned reporting.

Rabia Khan or Terri Postma, (410) 786–8084 or *ACO@cms.hhs.gov*, for issues related to Medicare Shared Savings Program.

Kimberly Spalding Bush, (410) 786–3232, or Sabrina Ahmed (410) 786–7499, for issues related to value-based Payment Modifier and Physician Feedback Program.

Frederick Grabau, (410) 786–0206, for issues related to changes to opt-out regulations.

Lisa Ohrin Wilson (410) 786–8852, or Matthew Edgar (410) 786–0698, for issues related to physician self-referral updates.

Christiane LaBonte, (410) 786–7234, for issues related to Comprehensive Primary Care (CPC) initiative.

JoAnna Baldwin (410) 786–7205, or Sarah Fulton (410) 786–2749, for issues

related to appropriate use criteria for advanced diagnostic imaging services.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: *http://www.regulations.gov.* Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1–800–743–3951.

Provisions open for comment: We will consider comments that are submitted as indicated above in the **DATES** and **ADDRESSES** sections on the following subject areas discussed in this final rule with comment period: Interim final work, practice expense (PE), and malpractice (MP) RVUs (including applicable work time, direct PE inputs, and MP crosswalks) for CY 2016; interim final new, revised, potentially misvalued HCPCS codes as indicated in the Preamble text and listed in Addendum C to this final rule with comment period; and the additions and deletions to the physician self-referral list of HCPCS/CPT codes found on tables 50 and 51.

Applicable Federal Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary and Background

A. Executive Summary

1. Purpose

This major final rule with comment period revises payment polices under the Medicare Physician Fee Schedule (PFS) and makes other policy changes related to Medicare Part B payment. These changes are applicable to services furnished in CY 2016.

2. Summary of the Major Provisions

The Social Security Act (the Act) requires us to establish payments under the PFS based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The Act requires that RVUs be established for three categories of resources: Work, practice expense (PE); and malpractice (MP) expense; and, that we establish by regulation each year's payment amounts for all physicians' services paid under the PFS, incorporating geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas. In this major final rule with comment period, we establish RVUs for CY 2016 for the PFS, and other Medicare Part B payment policies, to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. In addition, this final rule with comment period includes discussions and proposals regarding:

- Potentially Misvalued PFS Codes.
- Telehealth Services.
- Advance Care Planning.
- Establishing Values for New, Revised, and Misvalued Codes.
- Target for Relative Value Adjustments for Misvalued Services.
- Phase-in of Significant RVU Reductions.
- ''Incident to'' policy.
- Portable X-ray Transportation Fee.
- Updating the Ambulance Fee Schedule regulations.
- Changes in Geographic Area Delineations for Ambulance Payment.
- Chronic Care Management Services for RHCs and FQHCs.
- HCPCS Coding for RHCs.
- Payment to Grandfathered Tribal FQHCs that were Provider-Based Clinics on or before April 7, 2000.
- Payment for Biosimilars under Medicare Part B.
- Physician Compare Web site.
- Physician Quality Reporting System.
- Medicare Shared Savings Program.
- Electronic Health Record (EHR) Incentive Program.

• Value-Based Payment Modifier and the Physician Feedback Program.

3. Summary of Costs and Benefits

The Act requires that annual adjustments to PFS RVUs may not cause annual estimated expenditures to differ by more than $20 million from what they would have been had the adjustments not been made. If adjustments to RVUs would cause expenditures to change by more than $20 million, we must make adjustments to preserve budget neutrality. These adjustments can affect the distribution of Medicare expenditures across specialties. In addition, several changes in this final rule with comment period will affect the specialty distribution of Medicare expenditures. When considering the combined impact of work, PE, and MP RVU changes, the projected payment impacts are small for most specialties; however, the impact is larger for a few specialties.

We have determined that this major final rule with comment period is economically significant. For a detailed discussion of the economic impacts, see section VII. of this final rule with comment period.

B. Background

Since January 1, 1992, Medicare has paid for physicians' services under section 1848 of the Act, ''Payment for Physicians' Services.'' The system relies on national relative values that are established for work, PE, and MP, which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the RVUs into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101–239, enacted on December 19, 1989) (OBRA '89), and the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508, enacted on November 5, 1990) (OBRA '90). The final rule published on November 25, 1991 (56 FR 59502) set forth the first fee schedule used for payment for physicians' services.

We note that throughout this major final rule with comment period, unless otherwise noted, the term ''practitioner'' is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for services furnished to Medicare beneficiaries.

1. Development of the Relative Values

a. Work RVUs

The work RVUs established for the initial fee schedule, which was implemented on January 1, 1992, were developed with extensive input from the physician community. A research team at the Harvard School of Public Health developed the original work RVUs for most codes under a cooperative agreement with the Department of Health and Human Services (HHS). In constructing the code-specific vignettes used in determining the original physician work RVUs, Harvard worked with panels of experts, both inside and outside the federal government, and obtained input from numerous physician specialty groups.

As specified in section 1848(c)(1)(A) of the Act, the work component of physicians' services means the portion of the resources used in furnishing the service that reflects physician time and intensity. We establish work RVUs for new, revised and potentially misvalued codes based on our review of information that generally includes, but is not limited to, recommendations received from the American Medical Association/Specialty Society Relative Value Update Committee (RUC), the Health Care Professionals Advisory Committee (HCPAC), the Medicare Payment Advisory Commission (MedPAC), and other public commenters; medical literature and comparative databases; as well as a comparison of the work for other codes within the Medicare PFS, and consultation with other physicians and health care professionals within CMS and the federal government. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters, and the rationale for their recommendations.

b. Practice Expense RVUs

Initially, only the work RVUs were resource-based, and the PE and MP RVUs were based on average allowable charges. Section 121 of the Social Security Act Amendments of 1994 (Pub. L. 103–432, enacted on October 31, 1994), amended section 1848(c)(2)(C)(ii) of the Act and required us to develop resource-based PE RVUs for each physicians' service beginning in 1998. We were required to consider general categories of expenses (such as office rent and wages of personnel, but excluding malpractice expenses) comprising PEs. The PE RVUs continue to represent the portion of these resources involved in furnishing PFS services.

Originally, the resource-based method was to be used beginning in 1998, but section 4505(a) of the Balanced Budget Act of 1997 (Pub. L. 105–33, enacted on August 5, 1997) (BBA) delayed implementation of the resource-based PE RVU system until January 1, 1999. In addition, section 4505(b) of the BBA provided for a 4-year transition period from the charge-based PE RVUs to the resource-based PE RVUs.

We established the resource-based PE RVUs for each physicians' service in a final rule, published on November 2, 1998 (63 FR 58814), effective for services furnished in CY 1999. Based on the requirement to transition to a resource-based system for PE over a 4-year period, payment rates were not fully based upon resource-based PE RVUs until CY 2002. This resource-based system was based on two significant sources of actual PE data: the Clinical Practice Expert Panel (CPEP) data and the AMA's Socioeconomic Monitoring System (SMS) data. (These data sources are described in greater detail in the CY 2012 final rule with comment period (76 FR 73033).)

Separate PE RVUs are established for services furnished in facility settings, such as a hospital outpatient department (HOPD) or an ambulatory surgical center (ASC), and in nonfacility settings, such as a physician's office. The nonfacility RVUs reflect all of the direct and indirect PEs involved in furnishing a service described by a particular HCPCS code. The difference, if any, in these PE RVUs generally results in a higher payment in the nonfacility setting because in the facility settings some costs are borne by the facility. Medicare's payment to the facility (such as the outpatient prospective payment system (OPPS) payment to the HOPD) would reflect costs typically incurred by the facility. Thus, payment associated with those facility resources is not made under the PFS.

Section 212 of the Balanced Budget Refinement Act of 1999 (Pub. L. 106–113, enacted on November 29, 1999) (BBRA) directed the Secretary of Health and Human Services (the Secretary) to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. On May 3, 2000, we published the interim final rule (65 FR 25664) that set forth the criteria for the submission of these supplemental PE survey data. The criteria were modified in response to comments received, and published in the **Federal Register** (65 FR 65376) as part of a November 1, 2000 final rule. The PFS final rules published in 2001 and 2003, respectively, (66 FR 55246 and 68 FR 63196) extended the

period during which we would accept these supplemental data through March 1, 2005.

In the CY 2007 PFS final rule with comment period (71 FR 69624), we revised the methodology for calculating direct PE RVUs from the top-down to the bottom-up methodology beginning in CY 2007. We adopted a 4-year transition to the new PE RVUs. This transition was completed for CY 2010. In the CY 2010 PFS final rule with comment period, we updated the practice expense per hour (PE/HR) data that are used in the calculation of PE RVUs for most specialties (74 FR 61749). In CY 2010, we began a 4-year transition to the new PE RVUs using the updated PE/HR data, which was completed for CY 2013.

c. Malpractice RVUs

Section 4505(f) of the BBA amended section 1848(c) of the Act to require that we implement resource-based MP RVUs for services furnished on or after CY 2000. The resource-based MP RVUs were implemented in the PFS final rule with comment period published November 2, 1999 (64 FR 59380). The MP RVUs are based on commercial and physician-owned insurers' malpractice insurance premium data from all the states, the District of Columbia, and Puerto Rico. For more information on MP RVUs, see section II.B.2. of this final rule with comment period.

d. Refinements to the RVUs

Section 1848(c)(2)(B)(i) of the Act requires that we review RVUs no less often than every 5 years. Prior to CY 2013, we conducted periodic reviews of work RVUs and PE RVUs independently. We completed five-year reviews of work RVUs that were effective for calendar years 1997, 2002, 2007, and 2012.

Although refinements to the direct PE inputs initially relied heavily on input from the RUC Practice Expense Advisory Committee (PEAC), the shifts to the bottom-up PE methodology in CY 2007 and to the use of the updated PE/HR data in CY 2010 have resulted in significant refinements to the PE RVUs in recent years.

In the CY 2012 PFS final rule with comment period (76 FR 73057), we finalized a proposal to consolidate reviews of work and PE RVUs under section 1848(c)(2)(B) of the Act and reviews of potentially misvalued codes under section 1848(c)(2)(K) of the Act into one annual process.

In addition to the five-year reviews, beginning for CY 2009, CMS, and the RUC have identified and reviewed a number of potentially misvalued codes on an annual basis based on various identification screens. This annual review of work and PE RVUs for potentially misvalued codes was supplemented by the amendments to section 1848 of the Act, as enacted by section 3134 of the Affordable Care Act, which requires the agency to periodically identify, review and adjust values for potentially misvalued codes.

e. Application of Budget Neutrality to Adjustments of RVUs

As described in section VI.C. of this final rule with comment period, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs cause expenditures for the year to change by more than $20 million, we make adjustments to ensure that expenditures did not increase or decrease by more than $20 million.

2. Calculation of Payments Based on RVUs

To calculate the payment for each service, the components of the fee schedule (work, PE, and MP RVUs) are adjusted by geographic practice cost indices (GPCIs) to reflect the variations in the costs of furnishing the services. The GPCIs reflect the relative costs of work, PE, and MP in an area compared to the national average costs for each component.

We received several comments regarding GPCIs that are not within the scope of proposals in the CY 2016 PFS proposed rule. Many of these commenters requested adjustments to GPCI values for the Puerto Rico payment locality. These commenters contend that the data used to calculate GPCIs do not accurately reflect the cost of medical practice in Puerto Rico. We have addressed some of these issues in response to specific comments in prior rulemaking, such as the CY 2014 PFS final rule with comment period (78 FR 74380 through 74391), and will further take comments into account when we next propose to update GPCIs. However, we also note that we anticipate proposing updated GPCIs during CY 2017 rulemaking, and in the context of that update, we will consider the concerns expressed by commenters and others regarding the GPCIs for the Puerto Rico locality.

RVUs are converted to dollar amounts through the application of a CF, which is calculated based on a statutory formula by CMS's Office of the Actuary (OACT). The formula for calculating the Medicare fee schedule payment amount for a given service and fee schedule area can be expressed as:

Payment = [(RVU work × GPCI work) + (RVU PE × GPCI PE) + (RVU MP × GPCI MP)] × CF.

3. Separate Fee Schedule Methodology for Anesthesia Services

Section 1848(b)(2)(B) of the Act specifies that the fee schedule amounts for anesthesia services are to be based on a uniform relative value guide, with appropriate adjustment of an anesthesia conversion factor, in a manner to assure that fee schedule amounts for anesthesia services are consistent with those for other services of comparable value. Therefore, there is a separate fee schedule methodology for anesthesia services. Specifically, we establish a separate conversion factor for anesthesia services and we utilize the uniform relative value guide, or base units, as well as time units, to calculate the fee schedule amounts for anesthesia services. Since anesthesia services are not valued using RVUs, a separate methodology for locality adjustments is also necessary. This involves an adjustment to the national anesthesia CF for each payment locality.

4. Most Recent Changes to the Fee Schedule

Section 220(d) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93, enacted on April 1, 2014) added a new subparagraph (O) to section 1848(c)(2) of the Act to establish an annual target for reductions in PFS expenditures resulting from adjustments to relative values of misvalued codes. If the estimated net reduction in expenditures for a year is equal to or greater than the target for that year, the provision specifies that reduced expenditures attributable to such adjustments shall be redistributed in a budget-neutral manner within the PFS. The provision specifies that the amount by which such reduced expenditures exceed the target for a given year shall be treated as a reduction in expenditures for the subsequent year for purposes of determining whether the target for the subsequent year has been met. The provision also specifies that an amount equal to the difference between the target and the estimated net reduction in expenditures, called the target recapture amount, shall not be taken into account when applying the budget neutrality requirements specified in section 1848(c)(2)(B)(ii)(II) of the Act. The PAMA amendments originally made the target provisions applicable for CYs 2017 through 2020 and set the target for reduced expenditures at 0.5 percent of estimated expenditures under the PFS for each of those 4 years.

Subsequently, section 202 of the Achieving a Better Life Experience Act of 2014 (ABLE) (Division B of Pub. L. 113–295, enacted December 19, 2014) accelerated the application of the target, amending section 1848(c)(2)(O) of the Act to specify that target provisions apply for CYs 2016, 2017, and 2018; and setting a 1 percent target for reduced expenditures for CY 2016 and a 0.5 percent target for CYs 2017 and 2018. The implementation of the target legislation is discussed in section II.E. of this final rule with comment period.

Section 1848(c)(7) of the Act, as added by section 220(e) of the PAMA, specified that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. Section 220(e) of the PAMA required the phase-in of RVU reductions of 20 percent or more to begin for 2017. Section 1848(c)(7) of the Act was later amended by section 202 of the ABLE Act to require instead that the phase-in must begin in CY 2016. The implementation of the phase-in legislation is discussed in section II.F. of this final rule with comment period.

Section 218(a) of the PAMA added a new section 1834(p) of the Act. Section 1834(p) of the Act requires for certain computed tomography (CT) services reductions in payment for the technical component (TC) (and the TC of the global fee) of the PFS service and in the hospital OPPS payment (5 percent in 2016, and 15 percent in 2017 and subsequent years). The CT services that are subject to the payment reduction are services identified as of January 1, 2014 by HCPCS codes 70450–70498, 71250–71275, 72125–72133, 72191–72194, 73200–73206, 73700–73706, 74150–74178, 74261–74263, and 75571–75574, and succeeding codes, that are furnished using equipment that does not meet each of the attributes of the National Electrical Manufacturers Association (NEMA) Standard XR–29–2013, entitled ''Standard Attributes on CT Equipment Related to Dose Optimization and Management.'' The implementation of the amendments made by section 218(a) of the PAMA is discussed in section II.G. of this final rule with comment period.

The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted on April 16, 2015) makes several changes to the statute, including but not limited to:

(1) Repealing the sustainable growth rate (SGR) update methodology for physicians' services.

(2) Revising the PFS update for 2015 and subsequent years.

(3) Requiring that we establish a Merit-based Incentive Payment System (MIPS) under which MIPS eligible professionals (initially including physicians, physician assistants, nurse practitioners, clinical nurse specialists, and certified registered nurse anesthetists) receive annual payment adjustments (increases or decreases) based on their performance in a prior period. These and other MACRA provisions are discussions in various sections of this final rule with comment period. Please refer to the table of contents for the location of the various MACRA provision discussions.

II. Provisions of the Final Rule with Comment Period for PFS

A. Determination of Practice Expense (PE) Relative Value Units (RVUs)

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding malpractice expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service-specific PE RVUs. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the RUC and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the Five-Year Review of Work Relative Value Units under the PFS and Proposed Changes to the Practice Expense Methodology proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

Comment: Several commenters requested that CMS include pharmacists as active qualified health care providers for purposes of calculating physician PE direct costs. The commenters stated that there are a number of ongoing Center for Medicare and Medicaid Innovation (CMMI) initiatives in which pharmacists are making substantial contributions to redesigning healthcare delivery and financing. The commenters insisted that pharmacists need to be included in the calculation of direct PE expenses as an element of the clinical labor variable relating to physician services, to ensure optimal medication therapy outcomes for beneficiaries, and the absence of these pharmacists negatively impacts the health care system.

Response: The direct PE input database contains the service-level costs in clinical labor based on the typical service furnished to Medicare beneficiaries. Commenters did not suggest that the labor costs of pharmacists are a typical resource cost in furnishing any particular physicians' service. When such costs are typically incurred in furnishing such services, we do not have any standing policies that would prohibit the inclusion of the costs in the direct PE input database used to develop PE RVUs for individual services, to the extent that inclusion of such costs would not lead to duplicative payments. Therefore, we welcome more detailed information regarding the typical clinical labor costs involving pharmacists for particular PFS services. We note, however, that in many of the CMMI initiatives, payment is provided for care management and care coordination services, including services provided by pharmacists. As such, we encourage commenters to provide information about the inclusion of additional clinical labor costs for specific services described by HCPCS codes for which payment is made under the PFS, as opposed to clinical labor costs that may be typical only under certain initiatives.

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the practice expense per hour (PE/HR) by specialty that was obtained from the AMA's Socioeconomic Monitoring Surveys (SMS). The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of both physicians and nonphysician practitioners (NPPs) paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the MEI to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS-based PE/HR. We continue previous crosswalks for specialties that did not participate in the PPIS. However, beginning in CY 2010 we changed the PE/HR crosswalk for portable X-ray suppliers from radiology to IDTF, a more appropriate crosswalk because these specialties are more similar to each other for work time.

For registered dietician services, the resource-based PE RVUs have been calculated in accordance with the final policy that crosswalks the specialty to the ''All Physicians'' PE/HR data, as adopted in the CY 2010 PFS final rule with comment period (74 FR 61752) and discussed in more detail in the CY 2011 PFS final rule with comment period (75 FR 73183).

For CY 2016, we have incorporated the available utilization data for interventional cardiology, which became a recognized Medicare specialty during 2014. We proposed to use a proxy PE/HR value for interventional cardiology, as there are no PPIS data for this specialty, by crosswalking the PE/HR from Cardiology, since the specialties furnish similar services in the Medicare claims data. The change is reflected in the ''PE/HR'' file available on the CMS Web site under the supporting data files for the CY 2016 PFS proposed rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.*

Comment: One commenter expressed support for the new proposal to use a proxy PE per hour for interventional cardiology by crosswalking to the PE/HR for cardiology.

Response: We appreciate the commenter's support and are finalizing the crosswalk as proposed.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of $400 from our PE database and another service has a direct cost sum of $200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

Section II.A.2.b. of this final rule with comment period describes the current data sources for specialty-specific indirect costs used in our PE calculations. We allocated the indirect costs to the code level on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporated the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we used the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represented 25 percent of total costs for the specialties that furnished the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the

initial indirect allocator would equal 6.00, resulting in a total PE RVUs of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).

• Next, we added the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had work RVUs of 4.00 and the clinical labor portion of the direct PE RVUs was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.

• Next, we incorporated the specialty-specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(4) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a hospital or other facility setting, we establish two PE RVUs: facility; and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. Because in calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service in a facility, the facility PE RVUs are generally lower than the nonfacility PE RVUs. Medicare makes a separate payment to the facility for its costs of furnishing a service.

(5) Services With Technical Components (TCs) and Professional Components (PCs)

Diagnostic services are generally comprised of two components: a professional component (PC) and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a ''global'' service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(6) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746).

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty-specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service. Apply a scaling adjustment to the direct inputs.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. Under our current methodology, we first multiply the current year's conversion factor by the product of the current year's PE RVUs and utilization for each service to arrive at the aggregate pool of total PE costs (Step 2a). We then calculate the average direct percentage of the current pool of PE RVUs (using a weighted average of the survey data for the specialties that furnish each service (Step 2b).) We then multiply the result of 2a by the result of 2b to arrive at the aggregate pool of direct PE costs for the current year. For CY 2016, we proposed a technical improvement to step 2a of this calculation. In place of the step 2a calculation described above, we proposed to set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the proposed aggregate work RVUs. Historically, in allowing the current PE RVUs to determine the size of the base PE pool in the PE methodology, we have assumed that the relationship of PE RVUs to work RVUs is constant from year to year. Since this is not ordinarily the case, by not considering the proposed aggregate work RVUs in determining the size of the base PE pool, we have introduced some minor instability from year to year in the relative shares of work, PE, and MP RVUs. Although this modification would result in greater stability in the relationship among the work and PE RVU components in the aggregate, we do not anticipate it will affect the distribution of PE RVUs across specialties. The PE RVUs in addendum B of this final rule with comment period reflect this refinement to the PE methodology.

We did not receive any comments on this proposed refinement of the methodology. Therefore, we are finalizing this refinement as proposed.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling factor to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to an RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs, as long as the same CF is used in Step 2 and Step 5. Different CFs will result in different direct PE scaling factors, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling factors offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

Historically, we have used the specialties that furnish the service in the most recent full year of Medicare claims data (crosswalked to the current year set of codes) to determine which specialties furnish individual procedures. For example, for CY 2015 ratesetting, we used the mix of specialties that

furnished the services in the CY 2013 claims data to determine the specialty mix assigned to each code. Although we believe that there are clear advantages to using the most recent available data in making these determinations, we have also found that using a single year of data contributes to greater year-to-year instability in PE RVUs for individual codes and often creates extreme, annual fluctuations for low-volume services, as well as delayed fluctuations for some services described by new codes once claims data for those codes becomes available. We believe that using an average of the three most recent years of available data may increase stability of PE RVUs and mitigate code-level fluctuations for both the full range of PFS codes, and for new and low-volume codes in particular. Therefore, we proposed to refine this step of the PE methodology to use an average of the 3 most recent years of available Medicare claims data to determine the specialty mix assigned to each code. The PE RVUs in Addendum B of the CMS Web site reflect this refinement to the PE methodology.

Comment: We received several comments supporting this proposed refinement of the methodology. Several commenters also urged us to override the utilization data for low-volume codes using a recommended list of expected specialty or dominant specialty, consistent with our previous approach.

Response: We appreciate the support for the use of the 3-year average of claims utilization for purposes of determining the specialty mix for individual service. As we stated in our proposal, we believe that the 3-year average will mitigate the need to use dominant or expected specialty instead of the claims data. However, we also understand that the hypothesis will be tested as soon as a new year of claims data is incorporated into the PFS ratesetting methodology. Because we anticipate incorporating CY 2015 claims data for use in CY 2017 ratesetting, we believe that the proposed PE RVUs associated with the CY 2017 PFS proposed rule will provide the best opportunity to determine whether service-level overrides of claims data are necessary. Therefore, we are finalizing the policy as proposed for CY 2016 but will seek comment on the proposed CY 2017 PFS rates and whether or not the incorporation a new year of utilization data mitigates the need for service-level overrides. At that time, we would reconsider whether or not to use a claims-based approach (dominant specialty) or stakeholder-recommended approach (expected specialty) in the development of PE RVUs for low-volume codes.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: the direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(*Note:* For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs will be allocated using the work RVUs, and for the TC service, indirect PEs will be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.) For presentation purposes in the examples in Table 1, the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 2a (as calculated with the proposed change) by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty-specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty-specific indirect PE/HR data, calculate specialty-specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty-specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty-specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 6 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the results of Step 18 to the proposed aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs, consistent with the proposed changes in Steps 2 and 9. This final BN adjustment is required to redistribute RVUs from step 18 to all PE RVUs in the PFS, and because certain specialties are excluded from the PE RVU calculation for ratesetting purposes, but we note that all specialties are included for purposes of calculating the final BN adjustment. (See ''Specialties excluded from

ratesetting calculation'' later in this section.)

(e) Setup File Information

• *Specialties excluded from ratesetting calculation:* For the purposes of calculating the PE RVUs, we exclude certain specialties, such as certain nonphysician practitioners paid at a percentage of the PFS and low-volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 1.

TABLE 1—SPECIALTIES EXCLUDED FROM RATESETTING CALCULATION

Specialty code	Specialty description
49	Ambulatory surgical center.
50	Nurse practitioner.
51	Medical supply company with certified orthotist.
52	Medical supply company with certified prosthetist.
53	Medical supply company with certified prosthetist-orthotist.
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist.
56	Individual certified prosthetist.
57	Individual certified prosthetist-orthotist.
58	Medical supply company with registered pharmacist.
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies.
61	Voluntary health or charitable agencies.
73	Mass immunization roster biller.
74	Radiation therapy centers.
87	All other suppliers (e.g., drug and department stores).
88	Unknown supplier/provider specialty.
89	Certified clinical nurse specialist.
96	Optician.
97	Physician assistant.
A0	Hospital.
A1	SNF.
A2	Intermediate care nursing facility.
A3	Nursing facility, other.
A4	HHA.
A5	Pharmacy.
A6	Medical supply company with respiratory therapist.
A7	Department store.
B2	Pedorthic personnel.
B3	Medical supply company with pedorthic personnel.

• *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.

• *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.

• *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

• *Payment modifiers:* Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 2 details the manner in which the modifiers are applied.

TABLE 2—APPLICATION OF PAYMENT MODIFIERS TO UTILIZATION FILES

Modifier	Description	Volume adjustment	Time adjustment
80,81,82	Assistant at Surgery	16%	Intraoperative portion.
AS	Assistant at Surgery—Physician Assistant.	14% (85% * 16%)	Intraoperative portion.
50 or LT and RT	Bilateral Surgery	150%	150% of work time.
51	Multiple Procedure	50%	Intraoperative portion.
52	Reduced Services	50%	50%.

TABLE 2—APPLICATION OF PAYMENT MODIFIERS TO UTILIZATION FILES—Continued

Modifier	Description	Volume adjustment	Time adjustment
53	Discontinued Procedure	50%	50%.
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims.	Preoperative + Intraoperative portion.
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims.	Postoperative portion.
62	Co-surgeons	62.5%	50%.
66	Team Surgeons	33%	33%.

We also make adjustments to volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- *Work RVUs:* The setup file contains the work RVUs from this final rule with comment period.

The following is a summary of the comments we received regarding PE RVU methodology.

Comment: We received several comments in response to our proposal to use the 3 most recent years of Medicare claims data to determine the specialty mix assigned to each code. All commenters broadly supported the proposal to use a 3-year average to increase stability of PE RVUs and mitigate code-level fluctuations. Some commenters, including the RUC, also stated that for codes which are very low volume in the Medicare population, the dominant specialty(ies) should be assigned. These commenters stressed that CMS should continue to utilize the expertise of the RUC when making these assignments.

Response: For services that are newly created or very low volume, we will continue to explore different methods to ensure the utilization of the most accurate specialty mix.

(7) Equipment Cost per Minute

The equipment cost per minute is calculated as:

*(1/(minutes per year * usage)) * price * ((interest rate/(1 − (1/((1 + interest rate)− life of equipment)))) + maintenance)*

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally 150,000 minutes.
usage = variable, see discussion below.
price = price of the particular piece of equipment.
life of equipment = useful life of the particular piece of equipment.
maintenance = factor for maintenance; 0.05.
interest rate = variable, see discussion below.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act. We also direct the reader to section II.H.6.b of this final rule with comment period for a discussion of our change in the utilization rate assumption for the linear accelerator used in furnishing radiation treatment services.

Maintenance: This factor for maintenance was proposed and finalized during rulemaking for CY 1998 PFS (62 FR 33164). Several stakeholders have suggested that this maintenance factor assumption should be variable, similar to other assumptions in the equipment cost per minute calculation. In CY 2015 rulemaking, we solicited comments regarding the availability of reliable data on maintenance costs that vary for particular equipment items. We received several comments about variable maintenance costs, and in reviewing the information offered in those comments, it is clear that the relationship between maintenance costs and the price of equipment is not necessarily uniform across equipment. After reviewing the comments received, we have been unable to identify a systematic way of varying the maintenance cost assumption relative to the price or useful life of equipment. Therefore, to accommodate a variable, as opposed to a standard, maintenance rate within the equipment cost per minute calculation, we believe we would have to gather and maintain valid data on the maintenance costs for each equipment item in the direct PE input database, much like we do for price and useful life.

Given our longstanding difficulties in acquiring accurate pricing information for equipment items, we solicited comments on whether adding another item-specific financial variable for equipment costs will be likely to increase the accuracy of PE RVUs across the PFS. We noted that most of the information for maintenance costs we have received is for capital equipment, and for the most part, this information has been limited to single invoices. Like the invoices for the equipment items themselves, we do not believe that very small numbers of voluntarily submitted invoices are likely to reflect typical costs for all of the same reasons we have discussed in previous rulemaking. We noted that some commenters submitted high-level summary data from informal surveys but we currently have no means to validate that data. Therefore, we continue to seek a source of publicly available data on actual maintenance costs for medical equipment to improve the accuracy of the equipment costs used in developing PE RVUs.

Comment: Many commenters stated that the current 5 percent equipment maintenance factor does not account for expensive maintenance contracts on pieces of highly technical equipment. Most commenters were supportive of the idea of adding an item-specific maintenance variable for equipment costs, which they stated would likely increase the accuracy of the PE RVUs across the PFS. These commenters stated that specialty societies and other stakeholders should be allowed to provide documentation to CMS, as they

currently do for pricing new supplies and equipment, to apply for an increase in maintenance costs. Other commenters requested that if a fixed maintenance factor remains in place, it should be increased from 5 percent to 10 percent. One commenter expressed concern that CMS would entertain making a change in this aspect of the equipment cost per minute formula based on a few invoices when a change would impact every service in the fee schedule. The commenter expressed concerns with the possibility that CMS might adopt a variable maintenance factor based on the submission of individual invoices. Another commenter stated that without a systematic data collection methodology for determining maintenance factors, they had concerns that any invoices CMS received might not accurately capture the true costs of equipment maintenance.

Although most commenters were supportive of adopting a variable maintenance factor for equipment items, commenters also stated that they were unaware of any publicly available data source containing this information. One commenter agreed that there is no comprehensive data source for the maintenance information and therefore it would be difficult to implement a variable maintenance formula. Multiple other commenters concurred that they were unaware of any such public dataset. Several commenters encouraged CMS to work with stakeholders to define service contracts/maintenance contracts, collect data on their associated costs and update the equipment maintenance adjustment factor as necessary.

Response: We appreciate the submission of extensive comments regarding the subject of equipment maintenance factor. We agree with commenters that we do not believe the annual maintenance factor for all equipment is exactly 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also believe it likely overstates the maintenance costs for other equipment. However, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining maintenance factor, we do not believe that we have sufficient information at present to adopt a variable maintenance factor for equipment cost per minute pricing. While we believe that these costs ideally should be incorporated into the PE methodology, we also have serious concerns about the problems that result from incorporating anecdotal data based solely on voluntarily submitted pricing information. In establishing prices for equipment and supplies, in many cases we have found that the submitted invoices often overstate the costs for individual items relative to publically available prices. We believe that the incentives related to voluntarily submitted limited invoices for maintenance costs would likely produce information subject to similar limitations. However, in contrast to prices, where we have identified no feasible alternative, our alternative for determining maintenance rates is a long-established default maintenance rate. We also note that the amount of costs for maintenance under the current methodology is directly proportional to the equipment prices, largely determined by the voluntarily submitted invoices for particular equipment items. Therefore, we believe that absent an auditable, robust data source, using anecdotal data for maintenance costs is likely to compound the current problems of pricing equipment costs accurately, not increase accuracy.

We will continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

Interest Rate: In the CY 2013 final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation. The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The interest rates are listed in Table 3. (See 77 FR 68902 for a thorough discussion of this issue.) We did not propose any changes to these interest rates for CY 2016.

TABLE 3A—SBA MAXIMUM INTEREST RATES

Price	Useful life	Interest rate (%)
<$25K	<7 Years	7.50
$25K to $50K	<7 Years	6.50
>$50K	<7 Years	5.50
<$25K	7+ Years	8.00
$25K to $50K	7+ Years	7.00
>$50K	7+ Years	6.00

Notes: PE RVUs above (row 27), may not match Addendum B due to rounding.

The use of any particular conversion factor (CF) in the table to illustrate the PE Calculation has no effect on the resulting RVUs.

*The direct adj = [current pe rvus * CF * avg dir pct]/[sum direct inputs] = [step2]/[step3]; **The indirect adj =[current pe rvus * avg ind pct]/[sum of ind allocators]=[step9]/[step10].

c. Changes to Direct PE Inputs for Specific Services

This section focusses on specific PE inputs that we addressed in the proposed rule. The direct PE inputs are included in the CY 2016 direct PE input database, which is available on the CMS Web site under downloads for the CY 2016 PFS final rule with comment period at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

(1) PE Inputs for Digital Imaging Services

Prior to CY 2015 rulemaking, the RUC provided a recommendation regarding the PE inputs for digital imaging services. Specifically, the RUC recommended that we remove supply and equipment items associated with film technology from a list of codes since these items are no longer typical resource inputs. The RUC also recommended that the Picture Archiving and Communication System (PACS) equipment be included for these imaging services since these items are now typically used in furnishing imaging services. However, since we did not receive any invoices for the PACS system, we were unable to determine the appropriate pricing to use for the inputs. For CY 2015, we proposed, and finalized our proposal, to remove the film supply and equipment items, and to create a new equipment item as a proxy for the PACS workstation as a direct expense. We used the current price associated with ED021 (computer, desktop, w-monitor) to price the new item, ED050 (PACS Workstation Proxy), pending receipt of invoices to facilitate pricing specific to the PACS workstation.

Subsequent to establishing payment rates for CY 2015, we received information from several stakeholders regarding pricing for items related to the digital acquisition and storage of images. Some of these stakeholders submitted information that included prices for items clearly categorized as indirect costs within the established PE methodology and equivalent to the storage mechanisms for film. Additionally, some of the invoices we received included other products (like training and maintenance costs) in addition to the equipment items, and there was no distinction on these invoices between the prices for the equipment items themselves and the related services. However, we did receive invoices from one stakeholder that facilitated a proposed price update for the PACS workstation. Therefore, we proposed to update the price for the PACS workstation to $5,557 from the current price of $2,501 since the latter price was based on the proxy item and the former based on submitted invoices. The PE RVUs in Addendum B on the CMS Web site reflect the updated price.

In addition to the workstation used by the clinical staff acquiring the images and furnishing the TC of the services, a stakeholder also submitted more detailed information regarding a workstation used by the practitioner interpreting the image in furnishing the PC of many of these services.

As we stated in the CY 2015 final rule with comment period (79 FR 67563), we generally believe that workstations used by these practitioners are more accurately considered indirect costs associated with the PC of the service. However, we understand that the professional workstations for interpretation of digital images are similar in principle to some of the previous film inputs incorporated into the global and technical components of the codes. Given that many of these services are reported globally in the nonfacility setting, we believe it may be appropriate to include these costs as direct inputs for the associated HCPCS codes. Based on our established methodology, these costs would be incorporated into the PE RVUs of the global and technical component of the HCPCS code.

We solicited comments on whether including the professional workstation as a direct PE input for these codes would be appropriate, given that the resulting PE RVUs would be assigned to the global and technical components of the codes.

Comment: Many commenters supported the equipment price increase to $5,557 for the PACS workstation. Commenters stated that this is a more accurate amount than the current price of $2,501. However, many commenters, including the RUC, stated that this price did not capture the appropriate pricing for the PC of the PACS workstation. One commenter expressed concerns with the method that CMS employed to establish the proposed price for the PACS workstation, disregarded the invoices and accompanying explanations submitted by several stakeholders and instead relying on the information submitted by a single group.

Response: We acknowledge and appreciate that several stakeholders provided information intended to facilitate our pricing of the equipment related to PACS. However, much of that submitted information included costs that are considered indirect PE under the established methodology. We considered all of the submitted information and used the submitted prices that were consistent with the principles established under the PE methodology.

Comment: Many commenters, including the RUC, stated that the proposed price did not capture the appropriate pricing for the PC of the PACS workstation. Several commenters indicated that the professional workstation was a direct PE item due to the fact that it is used for individual studies (one at a time) in the non-facility setting, and its use involves a bi-directional exchange between a technologist and a radiologist while the TC is being provided. These commenters also suggested that the professional PACS workstation was a direct proxy for the film alternators, film processors, and view-boxes previously considered direct PE inputs for many of these services prior to the film to digital conversion. Several commenters suggested that the true cost of the PACS workstation was significantly higher than the proposed $5,557 due to these professional expenses.

Response: We appreciate the extensive feedback regarding the potential addition of a PC to the PACS workstation. We agree that the costs of the professional workstation may be analogous to costs previously incorporated as direct PE inputs for these services. Therefore, we are seeking comments and recommendations from stakeholders, including the RUC, regarding which codes would require the professional PACS workstation and for how many minutes the professional equipment workstation would be used relative to the work time or clinical labor tasks associated with individual codes. We would address any such recommendations in future rulemaking.

Comment: One commenter stated that the CMS' attempt to analogize elements of a PACS workstation to the historic inputs associated with film technology was inherently flawed. This commenter stated that CMS should not characterize critical elements of the PACS workstation as indirect costs because film technology is fundamentally distinct from digital technology. The commenter indicated that the PACS workstation requires specific software to function, and the costs associated with training, maintenance, and warranties for the PACS workstation have not been factored into the cost of the equipment. The commenter suggested that not including these as direct costs reflects a mistaken assumption that a PACS workstation has functionality for non-imaging services, such as patient

scheduling, billing, or electronic medical records capability.

Response: We believe that maintaining consistent treatment of PE costs is of central importance in the resource-based relative value system. Since the PE RVUs for individual services are relative to all other PFS services, we believe that we must categorize typical costs for individual services into the direct and indirect categories using the same definitions that apply to all PFS services. We believe it would be inconsistent with cost-based relative value principles to change the definition of those categories for particular procedures or tests, even when technology changes. Centralized record keeping systems, containing clinical or billing information are considered indirect expenses across the PFS. Due to technological changes, some of these systems are well-integrated into equipment items with clinical functionality, while others remain completely distinct. In pricing and categorizing these costs, we have aimed to separate these costs where possible and believe we have maintained relativity among PFS services to the greatest extent possible. We remind commenters that indirect PE RVUs are included for every nationally priced PFS service and that these RVUs contribute to payment for each and every service. We also note that over time, indirect costs change as direct costs change. For example, changes in technology might result in particular items using more or less office space, or using more or less electricity. We do not believe it would be appropriate to redefine indirect costs as direct costs whenever we have reason to believe that indirect costs have changed due to changes in technology. Instead, we acknowledge that indirect costs change over time for all those who are paid through the Medicare PFS, making it even more important to follow the established principles of relativity in establishing direct PE inputs.

After consideration of comments received, we are finalizing our proposal to update the price for the PACS workstation to $5,557 from the current price of $2,501.

As we noted in the proposed rule, one commenter expressed concern about the changes in direct PE inputs for CPT code 76377, (3D radiographic procedure with computerized image post-processing), that were proposed and finalized in CY 2015 rulemaking as part of the film to digital change. Based on a recommendation from the RUC, we removed the input called ''computer workstation, 3D reconstruction CT–MR'' from the direct PE input database and assigned the associated minutes to the proxy for the PACS workstation. Therefore, we sought comment from stakeholders, including the RUC, about whether or not the PACS workstation used in imaging codes is the same workstation that is used in the post-processing described by CPT code 76377, or if a more specific workstation should be incorporated in the direct PE input database.

Comment: Multiple commenters indicated that CPT code 76377 requires image post-processing on an independent workstation. Commenters stated that the ''computer workstation, 3D reconstruction CT–MR'' equipment (ED014), which was removed by the RUC from the equipment list for this procedure, is separate from the PACS workstation and performs a different function. The commenters requested that ED014 be restored to the equipment inputs for CPT code 76377 and assigned 38 minutes of equipment time. The commenters also suggested that the PACS workstation should remain as a separate direct PE expense as well, since there are additional PACS related activities specific to the 3–D images after they have been created on the computer workstation.

Response: We appreciate the additional information regarding the use of the 3D reconstruction computer workstation for CPT code 76377. After consideration of comments received, we agree that the ''computer workstation, 3D reconstruction CT–MR'' equipment (ED014) should be restored to the equipment list and assigned to CPT code 76377 with an equipment time of 38 minutes. However, we do not believe that the typical service for CPT code 76377 would also use the PACS workstation. Therefore, we substituted ED014 in place of the PACS workstation.

(2) Standardization of Clinical Labor Tasks

As we noted in PFS rulemaking for CY 2015, we continue to work on revisions to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the pre-service, service, and post-service periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this improvement would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information will facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It will also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to the use of physician pre-service time packages. We believe such standards will provide greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. For example, as medical practice and technologies change over time, changes in the standards could be updated at once for all codes with the applicable clinical labor tasks, instead of waiting for individual codes to be reviewed.

Although this work is not yet complete, we anticipate completing it in the near future. In the following paragraphs, we address a series of issues related to clinical labor tasks, particularly relevant to services currently being reviewed under the misvalued code initiative.

(a) Clinical Labor Tasks Associated With Digital Imaging

In PFS rulemaking for CY 2015, we noted that the RUC recommendation regarding inputs for digital imaging services indicated that, as each code is reviewed under the misvalued code initiative, the clinical labor tasks associated with digital technology (instead of film) would need to be addressed. When we reviewed that recommendation, we did not have the capability of assigning standard clinical labor times for the hundreds of individual codes since the direct PE input database did not previously allow for comprehensive adjustments for clinical labor times based on particular clinical labor tasks. Therefore, consistent with the recommendation, we proposed to remove film-based supply and equipment items but maintain clinical labor minutes that were assigned based on film technology.

As noted in the paragraphs above, we continue to improve the direct PE input database by specifying the minutes for each code associated with each clinical labor task. Once completed, this work would allow adjustments to be made to minutes assigned to particular clinical labor tasks related to digital technology, consistent with the changes that were made to individual supply and equipment items. In the meantime, we

believe it would be appropriate to establish standard times for clinical labor tasks associated with all digital imaging for purposes of reviewing individual services at present, and for possible broad-based standardization once the changes to the database facilitate our ability to adjust time for existing services. Therefore, we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology, which are listed in Table 5. We note that the application of any standardized times we adopt for clinical labor tasks to codes that are not being reviewed in this final rule would be considered for possible inclusion in future notice and comment rulemaking.

TABLE 5—CLINICAL LABOR TASKS ASSOCIATED WITH DIGITAL TECHNOLOGY

Clinical labor task	Typical minutes
Availability of prior images confirmed	2
Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist.	2
Technologist QC's* images in PACS, checking for all images, reformats, and dose page.	2
Review examination with interpreting MD	2
Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.	1

* This clinical labor task is listed as it appears on the ''PE worksheets.'' QC refers to quality control, which we understand to mean the verification of the image using the PACS workstation.

The following is a summary of the comments we received regarding whether these standard times accurately reflect the typical time it takes to perform these clinical labor tasks associated with digital imaging.

Comment: Many commenters supported CMS' efforts to recognize the advances in digital technology and take them into account through updated RVUs. Several commenters agreed that the clinical labor tasks outlined in Table 5 reflected the PE Subcommittee's film to digital workgroup recommendations. The commenters suggested that the staff types in the tasks should be made more generalized and less specific (such as technologist to clinical staff or radiologist to physician), and stated that specialty societies should be afforded the opportunity to request deviations (that is, increases) from the standard times.

Response: We believe that providing specific guidelines for the staff types associated with these tasks will aid in determining the most accurate value for each service. We also agree that specialties should be afforded the opportunity to request deviations from the standard times for unusual situations, when supported with the presentation of additional justification for the added time.

Comment: The RUC commented that it had not supported standard times for clinical staff activities related to digital imaging in the past, as the RUC had recommended that the specialties should have an opportunity to determine the appropriate inputs at the individual distinct service level and there was too much variability across imaging modalities to propose standards. While the RUC continued to hold to its previous position on this subject, it also agreed that four of the five clinical labor activities proposed by CMS in Table 5 are representative across imaging and could appropriately be used as standard times. The one exception was the clinical labor task ''Technologist QC's images in PACS, checking for all images, reformats, and dose page'', in which the RUC stated the number of minutes would vary significantly depending on the procedure in question. For example, a cardiac MR with hundreds of images would require more quality control time than a single view X-ray of the chest. The RUC recommended that this line item remain nonstandard, and that specialties should continue to have the opportunity to make a recommendation on the appropriate number of minutes based on clinical judgment.

Another commenter also supported standard clinical labor times for four out of the five tasks associated with digital technology, again excepting the activity ''Technologist QC's images in PACS, checking for all images, reformats, and dose page.'' This commenter stated that a survey of imaging providers had been conducted which suggested that the median time required to perform this clinical labor task was 10 minutes. The commenter stated that CMS did not have any data to support its belief in the standard time of 2 minutes, and recommended considering the commenter's data and information from other stakeholders regarding the appropriate standard minutes for the clinical labor tasks associated digital imaging.

Response: With regard to the activity ''Technologist QC's images in PACS, checking for all images, reformats, and dose page'', we agree that this task may require a variable length of time depending on the number of images to be reviewed. We believe that it may be appropriate to establish several different standard times for this clinical labor task for a low/medium/high quantity of images to be reviewed, in the same fashion that the clinical labor assigned to clean a surgical instrument package has two different standard times depending on the use of a basic pack (10 minutes) or a medium pack (30 minutes). We are interested in soliciting public comment and feedback on this subject, with the anticipation of including a proposal in next year's proposed rule.

After consideration of comments received, we are finalizing standard times for clinical labor tasks associated with digital imaging at 2 minutes for ''Availability of prior images confirmed'', 2 minutes for ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'', 2 minutes for ''Review examination with interpreting MD'', and 1 minute for ''Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.'' We are not finalizing a standard time for clinical labor task ''Technologist QC's images in PACS, checking for all images, reformats, and dose page'' at this time, pending consideration of any additional public comment and future rulemaking, as described above.

(b) Pathology Clinical Labor Tasks

As with the clinical labor tasks associated with digital imaging, many of the specialized clinical labor tasks associated with pathology services do not have consistent times across those

codes. In reviewing the recommendations for pathology services, we have not identified information that supports the judgment that the same tasks take significantly more or less time depending on the individual service for which they are performed, especially given the specificity with which they are described.

Therefore, we developed standard times that we have used in finalizing direct PE inputs. These times are based on our review and assessment of the current times included for these clinical labor tasks in the direct PE input database. We have listed these standard times in Table 6. For services reviewed for CY 2016, in cases where the RUC-recommended times differed from these standards, we have refined the time for those tasks to align with the values in Table 6. We solicited comments on whether these standard times accurately reflect the typical time it takes to perform these clinical labor tasks when furnishing pathology services.

TABLE 6—STANDARD TIMES FOR CLINICAL LABOR TASKS ASSOCIATED WITH PATHOLOGY SERVICES

Clinical labor task	Standard clinical labor time (minutes)
Accession specimen/prepare for examination	4
Assemble and deliver slides with paperwork to pathologists	0.5
Assemble other light microscopy slides, open nerve biopsy slides, and clinical history, and present to pathologist to prepare clinical pathologic interpretation	0.5
Assist pathologist with gross specimen examination	3
Clean room/equipment following procedure (including any equipment maintenance that must be done after the procedure)	1
Dispose of remaining specimens, spent chemicals/other consumables, and hazardous waste	1
Enter patient data, computational prep for antibody testing, generate and apply bar codes to slides, and enter data for automated slide stainer	1
Instrument start-up, quality control functions, calibration, centrifugation, maintaining specimen tracking, logs and labeling	13
Load specimen into flow cytometer, run specimen, monitor data acquisition and data modeling, and unload flow cytometer	7
Preparation: Labeling of blocks and containers and document location and processor used	0.5
Prepare automated stainer with solutions and load microscopic slides	4
Prepare specimen containers/preload fixative/label containers/distribute requisition form(s) to physician	0.5
Prepare, pack and transport specimens and records for in-house storage and external storage (where applicable)	1
Print out histograms, assemble materials with paperwork to pathologists. Review histograms and gating with pathologist	2
Receive phone call from referring laboratory/facility with scheduled procedure to arrange special delivery of specimen procurement kit, including muscle biopsy clamp as needed. Review with sender instructions for preservation of specimen integrity and return arrangements. Contact courier and arrange delivery to referring laboratory/facility	5
Register the patient in the information system, including all demographic and billing information	4
Stain air dried slides with modified Wright stain. Review slides for malignancy/high cellularity (cross contamination)	3

Comment: Many commenters stated that they did not support the standardization of clinical labor activities across pathology services. Commenters stated that a single standard time for each clinical labor task was infeasible due to the differences in batch size or number of blocks across different pathology procedures. Several commenters indicated that it may be possible to standardize across codes with the same batch sizes, and urged CMS to consider pathology-specific details, such as batch size and block number, in the creation of any future standard times for clinical labor tasks. One commenter stated that the CMS clinical labor times were uniformly too low, and that CMS did not provide enough information about how it arrived at these revised standard times. The commenter provided five examples of inadequate labor times, and stated that CMS should provide stakeholders with information about the source of its data and why it rejected the RUC recommendations for these clinical labor tasks.

Response: We appreciate the extensive feedback provided by commenters on the standard times for clinical labor tasks associated with pathology services. As we stated in the CY 2016 PFS proposed rule, we developed the proposed standard times based on our review and assessment of the current times included for these clinical labor tasks in the direct PE input database. We believe that clinical labor tasks with the same work description are comparable across different pathology procedures. We concur with commenters that accurate clinical labor times for pathology codes may be dependent on the number of blocks or batch size typically used for each individual service. However, we believe that it is possible to establish ''per block'' standards or standards varied by batch size assumptions for many clinical labor activities that will be comparable across a wide range of individual services. We have received detailed information regarding batch size and number of blocks during review of individual pathology services on an intermittent basis in the past. We request regular submission of these details on the PE worksheets as part of the review process for pathology procedures, as a means to assist in the determination of the most accurate direct PE inputs. Were we to receive this information as part of standard recommendations, we would include these assumptions as part of the information open for comment in proposed revaluations. We are also seeking comment regarding how to best establish clinical labor standards for pathology services on a ''per block'' or ''per batch size'' basis.

We also believe that many of the clinical labor activities that we discussed in Table 6 are tasks that do not depend on number of blocks or batch size. Clinical labor activities such as ''Clean room/equipment following procedure'' and ''Dispose of remaining specimens'' would typically remain standard across different services without varying by block number or batch size, with the understanding of occasional allowance for additional time for clinical labor tasks of unusual difficulty.

After consideration of comments received, we are finalizing standard times for clinical labor tasks associated with pathology services at 4 minutes for

''Accession specimen/prepare for examination'', 0.5 minutes for ''Assemble and deliver slides with paperwork to pathologists'', 0.5 minutes for ''Assemble other light microscopy slides, open nerve biopsy slides, and clinical history, and present to pathologist to prepare clinical pathologic interpretation'', 1 minute for ''Clean room/equipment following procedure'', 1 minute for ''Dispose of remaining specimens, spent chemicals/other consumables, and hazardous waste'', and 1 minute for ''Prepare, pack and transport specimens and records for in-house storage and external storage (where applicable).'' We do not believe these activities would be dependent on number of blocks or batch size, and we believe that these values accurately reflect the typical time it takes to perform these clinical labor tasks. For the rest of the clinical labor tasks associated with pathology services, we are interested in soliciting further public comment and feedback on this subject as part of this final rule with comment period, with the anticipation of including a proposal in next year's proposed rule.

(c) Clinical Labor Task: ''Complete Botox Log''

In the process of improving the level of detail in the direct PE input database by including the minutes assigned for each clinical labor task, we noticed that there are several codes with minutes assigned for the clinical labor task called ''complete botox log.'' We do not believe the completion of such a log is a direct resource cost of furnishing a medically reasonable and necessary physician's service for a Medicare beneficiary. Therefore, we proposed to eliminate the minutes assigned for the task ''complete botox log'' from the direct PE input database. The PE RVUs displayed in Addendum B on the CMS Web site were calculated with the modified inputs displayed in the CY 2016 direct PE input database.

The following is a summary of the comments we received regarding the clinical labor task ''complete botox log.''

Comment: Several commenters, including the RUC, did not agree with the proposal to eliminate the minutes associated with this clinical labor task. Commenters maintained that the clinical labor task of completing the botox log was a medically reasonable direct resource cost. One commenter stated that it was critical for clinical staff to maintain accurate bookkeeping of split botox vials, and that documentation must reflect the exact dosage of the drug given to patients and a statement that the unused portion of the drug was discarded.

Response: We continue to believe that the clinical labor assigned for the task ''complete botox log'' is a form of indirect PE that is not allocated to individual services. We believe that this is a quality control issue for clinical staff. Maintaining accurate administrative records, even for public safety, is not a task we generally allocate to individual services, instead we consider these costs as attributable across a range of services, and therefore, as an indirect PE. After consideration of comments received, we are finalizing the proposal to eliminate the minutes assigned for the task ''complete botox log'' from the direct PE input database.

(3) Clinical Labor Input Inconsistencies

Subsequent to the publication of the CY 2015 PFS final rule with comment period, stakeholders alerted us to several clerical inconsistencies in the clinical labor nonfacility intraservice time for several vertebroplasty codes with interim final values for CY 2015, based on our understanding of RUC recommended values. We proposed to correct these inconsistencies in the CY 2016 proposed direct PE input database to reflect the RUC recommended values, without refinement, as stated in the CY 2015 PFS final rule with comment period. The CY 2015 interim final direct PE inputs for these codes are displayed on the CMS Web site under downloads for the CY 2015 PFS final rule with comment period at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

For CY 2016, we proposed the following adjustments:

- For CPT codes 22510 (percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; cervicothoracic) and 22511 (percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; lumbosacral), a value of 45 minutes for labor code L041B (''Radiologic Technologist'') we proposed to assign for the ''assist physician'' task and a value of 5 minutes for labor code L037D (''RN/LPN/MTA'') for the ''Check dressings & wound/home care instructions/coordinate office visits/prescriptions'' task.
- For CPT code 22514 (percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device (*e.g.,* kyphoplasty), 1 vertebral body, unilateral or bilateral cannulation, inclusive of all imaging guidance; lumbar), we proposed to adjust the nonfacility intraservice time to 50 minutes for L041B, 50 minutes for L051A (''RN''), 38 minutes for a second L041B, and 12 minutes for L037D.

The PE RVUs displayed in Addendum B on the CMS Web site were calculated with the inputs displayed in the CY 2016 direct PE input database.

The following is a summary of the comments we received regarding clinical labor input inconsistencies.

Comment: Two commenters indicated that although they appreciated CMS' efforts to clean up errors in the direct PE database, they had specific concerns regarding the proposed changes. The commenters stated that for CPT code 22510, it appeared that the direct PE clinical time file had the second technologist listed at 90 minutes for the ''Assist physician'' task, not 45 minutes as recommended. The commenters indicated that CMS stated an intention to include 5 minutes for ''Check dressings & wound'' but this time did not appear to be included in the direct PE input labor file. The commenters also noted that the postoperative E/M visit for CPT code 22510 was also not listed in the CMS file.

The commenters stated that for CPT code 22511, the CMS direct PE labor file correctly included the 45 minutes of ''Assist physician'' time for the second technologist, however, the 5 minutes for the RN/LPN/MTA blend (L037D) to ''Check dressings & wound'' was still not included in the CMS file. The commenter indicated that the postoperative E/M visit was also not included for this code. The commenters also stated that for CPT code 22514, CMS was proposing to include the 5 minutes for ''Check dressings & wound'' in the intraservice time for this service. The commenters indicated that this did not appear to be consistent with how CMS was proposing to handle the same clinical labor task in the prior two codes discussed. The commenters requested that CMS outline specifically which line items (from the PE spreadsheet) it proposed to change and the effects these changes would have on the direct inputs for these three codes.

Response: We appreciate the detailed feedback from the commenters on the clinical labor inconsistencies in these three codes. We agree with the commenters that there were remaining clinical labor errors in these procedures beyond those detailed in the CY 2016 PFS proposed rule, and appreciate the opportunity to clarify the discrepancies

in clinical labor for these three procedures.

For CPT code 22510, we agree with the commenters that the clinical labor assigned to the RadTech (L041B) for ''Assist Physician'' was incorrectly listed twice in our direct PE input database. The clinical labor staff type was also incorrectly entered as L041C, which is priced at the same rate but refers to a second Radiologic Technologist for Vertebroplasty. We will remove the duplicative clinical labor and assign type L041B to the ''Assist Physician'' activity. We do not agree with the commenters that the time for clinical labor task ''Check dressings & wound'' was missing, as it is present in the database. We agree with the commenters that the clinical labor time for the office visit was missing from CPT code 22510, and we will add it to the direct PE database.

For CPT code 22511, the commenters are correct that the time for clinical labor task ''Assist physician'' was entered at the correct value of 45 minutes, and the 5 minutes of clinical labor for ''Check dressings & wound'' does not appear in the non-facility setting. This clinical labor time appears to have been incorrectly entered for the facility setting instead; we will remove this time and add it to its proper non-facility setting. We agree with the commenters that the clinical labor time for the office visit was again missing from CPT code 22511, and we will add it to the direct PE input database.

For CPT code 22514, the time for clinical labor task ''Assist physician'' has been refined to 50 minutes as detailed in the CY 2016 PFS proposed rule. We agree with the commenters that the 5 minutes of clinical labor time for ''Check dressings & wound'' is missing from the direct PE input database. We agree that the clinical labor for this activity should not be treated differently from the rest of the codes in the family, and therefore these 5 minutes are included in the direct PE input database. The postoperative office visit is included in the direct PE input database for CPT code 22514.

After consideration of comments received, we are finalizing our proposed changes to clinical labor along with the additional corrections described above.

(4) Freezer

We identified several pathology codes for which equipment minutes are assigned to the item EP110 ''Freezer.'' Minutes are only allocated to particular equipment items when those items cannot be used in conjunction with furnishing services to another patient at the same time. We do not believe that minutes should be allocated to items such as freezers since the storage of any particular specimen or item in a freezer for any given period of time would be unlikely to make the freezer unavailable for storing other specimens or items. Instead, we proposed to classify the freezer as an indirect cost because we believe that would be most consistent with the principles underlying the PE methodology since freezers can be used for many specimens at once. The PE RVUs displayed in Addendum B on the CMS Web site were calculated with the modified inputs displayed in the CY 2016 direct PE input database.

We did not receive comments on this proposal, and therefore, we are finalizing as proposed.

(5) Updates to Price for Existing Direct Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking beginning with the CY 2012 PFS proposed rule. During 2014, we received a request to update the price of supply item ''antigen, mite'' (SH006) from $4.10 per test to $59. In reviewing the request, it is evident that the requested price update does not apply to the SH006 item but instead represents a different item than the one currently included as an input in CPT code 86490 (skin test, coccidioidomycosis). Therefore, rather than changing the price for SH006 that is included in several codes, we proposed to create a new supply code for Spherusol, valued at $590 per 1 ml vial and $59 per test, and to include this new item as a supply for 86490 instead of the current input, SH006.

Comment: Several commenters strongly supported the CMS proposal to create a new supply code for Spherusol that reflects the current price for the antigen and to update the direct inputs for CPT code 86490 to include this item. However, commenters noted that the public use files included in the CY 2016 PFS proposed rule continue to reflect the prior supply code SH006 with a price of $4.10. Commenters asked whether this was a technical error and urged CMS to correct the input files to be consistent with the proposal described in the regulation preamble.

Response: We appreciate support for our proposal and acknowledge our inadvertent omission of this change in the proposed direct PE input database. After consideration of comments received, we are finalizing our proposal to create a supply item for Spherusol and it is included as a direct PE input for CPT code 86490.

We also received a request to update the price for EQ340 (Patient Worn Telemetry System) used only in CPT code 93229 (External mobile cardiovascular telemetry with electrocardiographic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ECG data storage (retrievable with query) with ECG triggered and patient selected events transmitted to a remote attended surveillance center for up to 30 days; technical support for connection and patient instructions for use, attended surveillance, analysis and transmission of daily and emergent data reports as prescribed by a physician or other qualified health care.) The requestor noted that we had previously proposed and finalized a policy to remove wireless communication and delivery costs related to the equipment item that had previously been included in the direct PE input database as supply items. The requestor asked that we alter the price of the equipment from $21,575 to $23,537 to account for the equipment costs specific to the patient-worn telemetry system.

In the proposed rule, we stated that we considered this request in the context of the unique nature of this particular equipment item. This equipment item is unique in several ways, including that it is used continuously 24 hours per day and 7 days per week for an individual patient over several weeks. It is also unique in that the equipment is primarily used outside of a healthcare setting. Within our current methodology, we currently account for these unique properties by calculating the per minute costs with different assumptions than those used for most other equipment by increasing the number of hours the equipment is available for use. Therefore, we also believe it would be appropriate to incorporate other unique aspects of the operating costs of this item in our calculation of the equipment cost per minute. We believe the requestor's suggestion to do so by increasing the price of the equipment is practicable and appropriate. Therefore, we proposed to change the price for EQ340 (Patient Worn Telemetry System) to $23,537. The PE RVUs displayed in Addendum B on the CMS Web site were calculated with the modified inputs displayed in the CY 2016 direct PE input database.

Comment: One commenter supported the CMS proposal regarding the Patient Worn Telemetry System (EQ340). The commenter agreed with the proposed increase in the price of the equipment

from $21,757 to $23,537, and the reason for this increase. We did not receive any comments opposing the proposal.

Response: After consideration of comments received, we are finalizing our proposal regarding the Patient Worn Telemetry System equipment.

For CY 2015, we received a request to update the price for supply item ''kit, HER–2/neu DNA Probe'' (SL196) from $105 to $144.50. Accordingly, in the CY 2015 proposed rule, we proposed to update the price to $144.50. In the CY 2015 final rule with comment period, we indicated that we obtained new information suggesting that further study of the price of this item was necessary before proceeding to update the input price. We obtained pricing information readily available on the Internet that indicated a price of $94 for this item for a particular hospital. Subsequent to the CY 2015 final rule with comment period, stakeholders requested that we use the updated price of $144.50. One stakeholder suggested that the price of $94 likely reflected discounts for volume purchases not received by the typical laboratory. We solicited comments on how to consider the higher-priced invoice, which is 53 percent higher than the price listed, relative to the price currently in the direct PE database. Specifically, we solicited information on the price of the disposable supply in the typical case of the service furnished to a Medicare beneficiary, including, based on data, whether the typical Medicare case is furnished by an entity likely to receive a volume discount.

Comment: Several commenters disagreed with the CMS proposal regarding the updated price for the supply item ''kit, HER–2/neu DNA Probe'' (SL196). One commenter stated that the price of $94 reflected a volume discount that could not be obtained by the typical provider. The lowered price referenced in the CY 2016 PFS proposed rule indicated that the purchaser may be receiving a competitive contractually arranged price. The commenter stated that the lowered price referenced is what might be expected to be acquired by the largest hospitals, which would be expected to buy supplies in greater volume than a small community hospital or mid-sized laboratory, and the price indicated does not reflect the prices for a laboratory of typical size.

Other commenters stated that they were unable to find this pricing information through publicly available sources, suggesting that it may not reflect typical transactions. The commenters also stated that it was unclear as to whether the proposed price referred to FDA-approved kits, which are more expensive than non-approved kits. The commenters further indicated that a number of new morphometric analysis, multiplex quantitative/semi-quantitative ISH tests are in use today with probe kit costs that are higher than those of HER–2/neu probe kits. The commenters suggested that CMS should adopt a weighted-average of the probe kit prices for the probe kits currently used to perform these procedures.

Response: Without robust, auditable information regarding the actual prices paid by a range of practitioners that would allow us to reasonably determine a recommended price to be typical, we believe that we should assume that the best publicly available price is typical. Generally speaking, we do not believe vendors are likely to allow public display of pricing that is not broadly available to potential customers since that would present significant competitive disadvantages in the market. Therefore, given the options between the best publicly available price or prices on invoices selected for the distinct purpose of pricing individual services, we believe the best publicly available price is more likely to be typical. Therefore, we are not making any changes to the price of this supply item at this time.

Comment: The RUC commented that in the CMS direct PE database the unit of measure for SL196 is listed as ''kit'', while on the submitted PE spreadsheet the unit is listed as ''kit assay.'' The RUC recommended that the unit of measure be changed to ''kit assay'' to correlate correctly with the cost shown in the database.

Response: We appreciate this additional information, and will change the unit of measure of SL196 to ''kit assay'' in the direct PE database.

Comment: Several commenters stated CMS's estimated per-minute labor cost inputs are too low for laboratory technicians (L033A), cytotechnologists (L045A) and histotechnologists (L037B). The commenters stated that the complexity of many laboratory services demands highly-skilled, highly-trained, certified, and experienced personnel who typically must be paid higher wages than the current rates provided by CMS. Commenters stated that CMS has underestimated the actual labor costs associated with the work that these more specialized laboratory personnel perform by 20 to 30 percent, after accounting for costs related to benefits, taxes, and training.

Response: The clinical labor costs per minute are based on data from the Bureau of Labor Statistics. We believe that it is important to update that information uniformly among clinical labor types and will consider updating the clinical labor costs per minute in the direct PE database in future rulemaking.

(6) Typical Supply and Equipment Inputs for Pathology Services

In reviewing public comments in response to the CY 2015 PFS final rule with comment period, we re-examined issues around the typical number of pathology tests furnished at once. In the CY 2013 final rule with comment period (77 FR 69074), we noted that the number of blocks assumed for a particular code significantly impacts the assumed clinical labor, supplies, and equipment for that service. We indicated that we had concerns that the assumed number of blocks was inaccurate, and that we sought corroborating, independent evidence that the number of blocks assumed in the current direct PE input recommendations is typical. We note that, given the high volume of many pathology services, these assumptions have a significant impact on the PE RVUs for all other PFS services. We refer readers to section II.H. where we detail our concerns about the lack of information regarding typical batch size and typical block size for many pathology services and solicit stakeholder input on approaches to obtaining accurate information that can facilitate our establishing payment rates that best reflect the relative resources involved in furnishing the typical service, for both pathology services in particular and more broadly for services across the PFS.

Comment: Several commenters addressed the number of blocks and batch size for prostate biopsies in particular. We direct readers to section II.H. of this final rule with comment period for a more detailed discussion of the resource costs for these services. We continue to seek stakeholder input regarding the best sources of information for typical number of blocks and batch sizes for pathology services.

d. Developing Nonfacility Rates

We noted that not all PFS services are priced in the nonfacility setting, but as medical practice changes, we routinely develop nonfacility prices for particular services when they can be furnished outside of a facility setting. We noted that the valuation of a service under the PFS in particular settings does not address whether those services are medically reasonable and necessary in the case of individual patients, including being furnished in a setting appropriate to the patient's medical needs and condition.

(1) Request for Information on Nonfacility Cataract Surgery

Cataract surgery generally has been performed in an ambulatory surgery center (ASC) or a hospital outpatient department (HOPD). We have not assigned nonfacility PE RVUs under the PFS for cataract surgery. According to Medicare claims data, there are a relatively small number of these services furnished in nonfacility settings. Except in unusual circumstances, anesthesia for cataract surgery is either local or topical/intracameral. Advancements in technology have significantly reduced operating time and improved both the safety of the procedure and patient outcomes. As discussed in the proposed rule, we believe that it now may be possible for cataract surgery to be furnished in an in-office surgical suite, especially for routine cases. Cataract surgery patients require a sterile surgical suite with certain equipment and supplies that we believe could be a part of a nonfacility-based setting that is properly constructed and maintained for appropriate infection prevention and control.

We also noted in the proposed rule that we believe there are potential advantages for all parties to furnishing appropriate cataract surgery cases in the nonfacility setting. Cataract surgery has been for many years the highest volume surgical procedure performed on Medicare beneficiaries. For beneficiaries, cataract surgery in the office setting might provide the additional convenience of receiving the preoperative, operative, and post-operative care in one location. It might also reduce delays associated with registration, processing, and discharge protocols associated with some facilities. Similarly, it might provide surgeons with greater flexibility in scheduling patients at an appropriate site of service depending on the individual patient's needs. For example, routine cases in patients with no comorbidities could be performed in the nonfacility surgical suite, while more complicated cases (for example, pseudoexfoliation) could be scheduled in the ASC or HOPD. In addition, furnishing cataract surgery in the nonfacility setting could result in lower Medicare expenditures for cataract surgery if the nonfacility payment rate were lower than the sum of the PFS facility payment rate and the payment to either the ASC or HOPD.

We solicited comments from ophthalmologists and other stakeholders on office-based surgical suite cataract surgery. In addition, we solicited comments from the RUC and other stakeholders on the direct PE inputs involved in furnishing cataract surgery in the nonfacility setting in conjunction with our consideration of information regarding the possibility of development of nonfacility cataract surgery PE RVUs.

We received 138 comments from stakeholders including professional medical societies, the RUC, ambulatory surgical centers (ASCs), practitioners, and the general public. The RUC deferred to the specialty societies regarding the appropriateness of performing these services in the nonfacility setting.

Comment: A few commenters suggested that development of PE RVUs would allow for greater flexibility regarding scheduling and location where services are performed. Commenters provided information about clinical considerations related to furnishing these services in a nonfacility setting, with many commenters citing safety concerns involved in furnishing cataract surgery in the office setting.

Response: We will use this information as we consider whether to proceed with development of nonfacility PE RVUs for cataract surgery.

(2) Direct PE Inputs for Functional Endoscopic Sinus Surgery Services

A stakeholder indicated that due to changes in technology and technique, several codes that describe endoscopic sinus surgeries can now be furnished in the nonfacility setting. According to Medicare claims data, there are a relatively small number of these services furnished in nonfacility settings. These CPT codes are 31254 (Nasal/sinus endoscopy, surgical; with ethmoidectomy, partial (anterior)), 31255 (Nasal/sinus endoscopy, surgical; with ethmoidectomy, total (anterior and posterior)), 31256 (Nasal/sinus endoscopy, surgical, with maxillary antrostomy), 31267 (Nasal/sinus endoscopy, surgical, with maxillary antrostomy; with removal of tissue from maxillary sinus), 31276 (Nasal/sinus endoscopy, surgical with frontal sinus exploration, with or without removal of tissue from frontal sinus), 31287 (Nasal/sinus endoscopy, surgical, with sphenoidotomy), and 31288 (Nasal/sinus endoscopy, surgical, with sphenoidotomy; with removal of tissue from the sphenoid sinus). We solicited input from stakeholders, including the RUC, about the appropriate direct PE inputs for these services.

We received 53 comments from stakeholders including specialty societies, device manufacturers, medical centers, and physician practices (otolaryngology, allergy, facial, and plastics specialists).

Comment: The RUC indicated an intention to review direct PE inputs at the January 2016 RUC meeting. One specialty society representing otolaryngology head and neck surgeons indicated that endoscopic sinus surgery services have been identified by the CPT/RUC workgroup for development of bundled codes for this code family and inputs will likely be reviewed as part of this process. Some commenters submitted information about their respective PEs related to CPT codes 31254, 31255, 31267, 31276, 31287, and 31288. Other commenters limited their comments to CPT codes 31254 and 31255, noting clinical concerns about performance of other sinus surgery procedures in the nonfacility setting. A few commenters did not support development of nonfacility direct PE RVUs for endoscopic sinus surgery due to clinical considerations such as patient safety, possible complications, use of anesthesia, and need for establishment of standards and oversight of in-office surgical suites.

Response: We appreciate the feedback we received from all commenters. We will use this information as we consider whether to proceed with development of nonfacility PE RVUs or functional endoscopic sinus surgery services.

B. Determination of Malpractice Relative Value Units (RVUs)

1. Overview

Section 1848(c) of the Act requires that each service paid under the PFS be composed of three components: Work, PE, and malpractice (MP) expense. As required by section 1848(c)(2)(C)(iii) of the Act, beginning in CY 2000, MP RVUs are resource based. Malpractice RVUs for new codes after 1991 were extrapolated from similar existing codes or as a percentage of the corresponding work RVU. Section 1848(c)(2)(B)(i) of the Act also requires that we review, and if necessary adjust, RVUs no less often than every 5 years. In the CY 2015 PFS final rule with comment period, we implemented the third review and update of MP RVUs. For a discussion of the third review and update of MP RVUs see the CY 2015 proposed rule (79 FR 40349 through 40355) and final rule with comment period (79 FR 67591 through 67596).

As explained in the CY 2011 PFS final rule with comment period (75 FR 73208), MP RVUs for new and revised codes effective before the next five-year review of MP RVUs were determined either by a direct crosswalk from a similar source code or by a modified

crosswalk to account for differences in work RVUs between the new/revised code and the source code. For the modified crosswalk approach, we adjust (or ''scale'') the MP RVU for the new/revised code to reflect the difference in work RVU between the source code and the new/revised work RVU (or, if greater, the clinical labor portion of the fully implemented PE RVU) for the new code. For example, if the proposed work RVU for a revised code is 10 percent higher than the work RVU for its source code, the MP RVU for the revised code would be increased by 10 percent over the source code MP RVU. Under this approach the same risk factor is applied for the new/revised code and source code, but the work RVU for the new/revised code is used to adjust the MP RVUs for risk.

For CY 2016, we proposed to continue our current approach for determining MP RVUs for new/revised codes. For the new and revised codes for which we proposed work RVUs and PE inputs, we also published the proposed MP crosswalks used to determine their MP RVUs. The MP crosswalks for those new and revised codes were subject to public comment and we are responding to comments and finalizing them in section II.H. of this CY 2016 PFS final rule with comment period. The MP crosswalks for new and revised codes with interim final values established in this CY 2016 final rule with comment period will be implemented for CY 2016 and subject to public comment. We will then respond to comments and finalize them in the CY 2017 PFS final rule with comment period.

2. Proposed Annual Update of MP RVUs

In the CY 2012 PFS final rule with comment period (76 FR 73057), we finalized a process to consolidate the five-year reviews of work and PE RVUs with our annual review of potentially misvalued codes. We discussed the exclusion of MP RVUs from this process at the time, and we stated that, since it is not feasible to obtain updated specialty level MP insurance premium data on an annual basis, we believe the comprehensive review of MP RVUs should continue to occur at 5-year intervals. In the CY 2015 PFS proposed rule (79 FR 40349 through 40355), we stated that there are two main aspects to the update of MP RVUs: (1) Recalculation of specialty risk factors based upon updated premium data; and (2) recalculation of service level RVUs based upon the mix of practitioners providing the service. In the CY 2015 PFS final rule with comment period (79 FR 67596), in response to several stakeholders' comments, we stated that we would address potential changes regarding the frequency of MP RVU updates in a future proposed rule. For CY 2016, we proposed to begin conducting annual MP RVU updates to reflect changes in the mix of practitioners providing services, and to adjust MP RVUs for risk. Under this approach, the specialty-specific risk factors would continue to be updated every 5 years using updated premium data, but would remain unchanged between the 5-year reviews. However, in an effort to ensure that MP RVUs are as current as possible, our proposal would involve recalibrating all MP RVUs on an annual basis to reflect the specialty mix based on updated Medicare claims data. Since under this proposal, we would be recalculating the MP RVUs annually, we also proposed to maintain the relative pool of MP RVUs from year to year; this will preserve the relative weight of MP RVUs to work and PE RVUs. We proposed to calculate the current pool of MP RVUs by using a process parallel to the one we use in calculating the pool of PE RVUs. (We direct the reader to section II.2.b.(6) for detailed description of that process, including a proposed technical revision that we are finalizing for 2016.) To determine the specialty mix assigned to each code, we also proposed to use the same process used in the PE methodology, described in section II.2.b.(6) of this final rule with comment period. We note that for CY 2016, we proposed and are finalizing a policy to modify the specialty mix assignment methodology to use an average of the 3 most recent years of available data instead of a single year of data. We anticipate that this change will increase the stability of PE and MP RVUs and mitigate code-level fluctuations for all services paid under the PFS, and for new and low-volume codes in particular. We also proposed to no longer apply the dominant specialty for low volume services, because the primary rationale for the policy has been mitigated by this proposed change in methodology. However, we did not propose to adjust the code-specific overrides established in prior rulemaking for codes where the claims data are inconsistent with a specialty that could be reasonably expected to furnish the service. We believe that these proposed changes serve to balance the advantages of using annually updated information with the need for year-to-year stability in values. We solicited comments on both aspects of the proposal: Updating the specialty mix for MP RVUs annually (while continuing to update specialty-specific risk factors every 5 years using updated premium data); and using the same process to determine the specialty mix assigned to each code as is used in the PE methodology, including the proposed modification to use the most recent 3 years of claims data. We also solicited comments on whether this approach will be helpful in addressing some of the concerns regarding the calculation of MP RVUs for services with low volume in the Medicare population, including the possibility of limiting our use of code-specific overrides of the claims data.

The following is a summary of the comments we received regarding our current approach for determining malpractice RVUs for new/revised codes.

Comment: Several commenters, including the RUC, generally supported CMS' proposal to update the MP RVUs on an annual basis. Commenters, including the RUC, stated a preference for the annual collection of professional liability insurance (PLI) premium data to insure the MP RVUs for every service is accurate, as opposed to only collecting these data every five years.

Response: We appreciate commenters' support of our proposal to update the MP RVUs on an annual basis. We also appreciate the comments from stakeholders regarding the frequency that we currently collect premium data. We will continue to consider the appropriate frequency for doing so, and we would address any potential changes in future rulemaking.

Comment: Commenters, including the RUC, support CMS's proposal to use the 3 most recent years of available data for the specialty mix assignment.

Response: We appreciate the commenters' support.

Comment: Commenters supported CMS' proposal to maintain the code-specific overrides established in previous rulemaking for codes where the claims data are inconsistent with a specialty that could be reasonably expected to furnish the service. Commenters also requested that CMS publish the list of overrides annually to receive stakeholder feedback related to necessary modification to the list, and in an effort to be as transparent as possible.

Response: We appreciate the comments and agree that we should increase the transparency regarding the list of services with MP RVU overrides. Publication of this list will also allow commenters to alert us to any discrepancies between MP RVUs developed annually under the new methodology and previously established overrides. Therefore, we have posted a public use file containing the overrides.

The file is available on the CMS Web site under the supporting data files for the CY 2016 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html*.

Comment: One commenter stated that CMS should be particularly mindful of using the specialty mix in the Medicare claims data for services with low Medicare volume but high volume in the United States health care system more generally, such as pediatric procedures; and that CMS' MP RVU methodology needs to differentiate between services that are truly low volume and those that occur frequently, but not among Medicare beneficiaries.

Response: We believe that the list of overrides we are making available as a public use file on the CMS Web site will help address the commenter's concern since the purpose of the code-specific overrides is to address circumstances where the claims data are inconsistent with the specialty that could be reasonably expected to furnish the service. We have previously accepted comment on services like those identified by the commenter and will continue to consider comments regarding the need to use overrides for particular services, especially for high volume services outside the Medicare population.

Comment: One commenter requested that CMS continue to use the dominant specialty for low volume codes.

Response: We acknowledge the concern about using the dominant specialty for low volume codes, and will continue to monitor the resulting RVUs to determine if adjustments become necessary. In general, we believe the 3-year average mitigates the need to apply the dominant specialty for low volume services. However, we have a long history of applying the dominant specialty for low volume services in instances where the specialty indicated by the claims data is inconsistent with the specialty that could be reasonably expected to furnish the service, and we are maintaining that practice.

Comment: Some commenters requested more information on how specialty impacts were determined. Two commenters expressed concerns about the estimated impact of the several proposed changes in the MP methodology on some specialties—particularly gastroenterology, colon and rectal surgery, and neurosurgery. Those commenters state that they appreciate the assertion that it may be difficult to obtain premium data for some specialties, such as neurosurgery, and state that CMS must thoroughly vet the methodology used by its contractor to determine MP premiums for such specialties. The commenters urge CMS to review the data, continue to try to obtain premium data in as many states as possible, and to share the data with the public for the agency and specialties to determine its accuracy.

Response: Specialty impacts are determined by comparing the estimated overall payment for each specialty that would result from the proposed RVUs and policies to the estimated overall payment for each specialty under the current year RVUs and policies, using the most recent year of available claims data as a constant. We note that for MP RVUs, there were several refinements that resulted in minor impacts to particular specialties, especially those at the higher end of specialty risk factors. We believe that these impacts are consistent with the general tendency of greater change in MP RVUs for specialties with risk factors of greater magnitude. We agree with the commenters regarding of the importance of making certain that the collection of premium data and the methodology of calculating MP RVUs are as accurate as possible. This is the reason we continue to examine the methodology and develop technical improvements such as the ones described in this section of the final rule. Additionally, we believe that annual calibration of MP RVUs will be likely to reduce the risk of irregularities, since we will regularly compare MP RVUs for individual codes and for specialties between consecutive years instead of only comparing MP RVUs update years.

After consideration of the public comments received, we are finalizing the policies as proposed. That is, we are finalizing the proposal to conduct annual MP RVU updates to reflect changes in the mix of practitioners providing services and to adjust MP RVUs for risk, and to modify the specialty mix assignment methodology to use an average of the 3 most recent years of available data instead of a single year. We note that we will continue to maintain the code-specific overrides where the claims data are inconsistent with a specialty that would reasonable be expected to furnish the services.

We also proposed an additional refinement in our process for assigning MP RVUs to individual codes. Historically, we have used a floor of 0.01 MP RVUs for all nationally-priced PFS codes. This means that even when the code-level calculation for the MP RVU falls below 0.005, we have rounded to 0.01. In general, we believe this approach accounts for the minimum MP costs associated with each service furnished to a Medicare beneficiary. However, in examining the calculation of MP RVUs, we do not believe that this floor should apply to add-on codes. Since add-on codes must be reported with another code, there is already an MP floor of 0.01 that applies to the base code, and therefore, to each individual service. By applying the floor to add-on codes, the current methodology practically creates a 0.02 floor for any service reported with one add-on code, and 0.03 for those with 2 add-on codes, etc. Therefore, we proposed to maintain the 0.01 MP RVU floor for all nationally-priced PFS services that are described by base codes, but not for add-on codes. We will continue to calculate, display, and make payments that include MP RVUs for add-on codes that are calculated to 0.01 or greater, including those that round to 0.01. We only proposed to allow the MP RVUs for add-on codes to round to 0.00 where the calculated MP RVU is less than 0.005.

Comment: Several commenters, including the RUC, opposed CMS' proposal to remove the MP RVU floor of 0.01 for add-on services. These commenters suggested that the incremental risk associated with performing an additional procedure is not mitigated by the risk inherent in the base procedure. Another commenter stated that each service should be considered separately for the purposes of calculating MP RVUs, and therefore, each service should be given the 0.01 floor regardless of base or add-on status.

Response: We appreciate commenters' feedback, but note that we do not believe the comments respond to the rationale for the proposed refinement. We agree that the incremental risk in procedures described by add-on codes is not mitigated by the risk inherent in the base procedure. That is why we did not propose to eliminate MP RVUs for add-on codes generally. Instead, we believe that when the incremental risk is calculated to be a number closer to 0.00 than 0.01, we do not believe that rounding such a number to 0.01 accurately reflects the risk of the service that is described by two codes (base code and add-on) relative to the risks associated with other PFS services. We continue to believe that this refinement is the most appropriate approach, since we would continue to account for the incremental risk associated with add-on codes without overestimating the risk in circumstances where the MP RVU falls below 0.005. Therefore, we are finalizing the policy as proposed.

3. MP RVU Update for Anesthesia Services

In the CY 2015 PFS proposed rule (79 FR 40354 through 40355), we did not include an adjustment under the anesthesia fee schedule to reflect updated MP premium information, and stated that we intended to propose an anesthesia adjustment for MP in the CY 2016 PFS proposed rule. We also solicited comments regarding how to best reflect updated MP premium amounts under the anesthesiology fee schedule.

As we previously explained, anesthesia services under the PFS are paid based upon a separate fee schedule, so routine updates must be calculated in a different way than those for services for which payment is calculated based upon work, PE, and MP RVUs. To apply budget neutrality and relativity updates to the anesthesiology fee schedule, we typically develop proxy RVUs for individual anesthesia services that are derived from the total portion of PFS payments made through the anesthesia fee schedule. We then update the proxy RVUs as we would the RVUs for other PFS services and adjust the anesthesia fee schedule conversion factor based on the differences between the original proxy RVUs and those adjusted for relativity and budget neutrality.

We believe that taking the same approach to update the anesthesia fee schedule based on new MP premium data is appropriate. However, because work RVUs are integral to the MP RVU methodology and anesthesia services do not have work RVUs, we decided to seek potential alternatives prior to implementing our approach in conjunction with the proposed CY 2015 MP RVUs based on updated premium data. One commenter supported the delay in proposing to update the MP for anesthesia at the same time as updating the rest of the PFS, and another commenter suggested using mean anesthesia MP premiums per provider over a 4- or 5-year period prorated by Medicare utilization to yield the MP expense for anesthesia services; no commenters offered alternatives to calculating updated MP for anesthesia services. The latter suggestion might apply more broadly to the MP methodology for the PFS and does not address the methodology as much as the data source.

We continue to believe that payment rates for anesthesia should reflect MP resource costs relative to the rest of the PFS, including updates to reflect changes over time. Therefore, for CY 2016, to appropriately update the MP resource costs for anesthesia, we proposed to make adjustments to the anesthesia conversion factor to reflect the updated premium information collected for the 5 year review. To determine the appropriate adjustment, we calculated imputed work RVUs and MP RVUs for the anesthesiology fee schedule services using the work, PE, and MP shares of the anesthesia fee schedule. Again, this is consistent with our longstanding approach to making annual adjustments to the PE and work RVU portions of the anesthesiology fee schedule. To reflect differences in the complexity and risk among the anesthesia fee schedule services, we multiplied the service-specific risk factor for each anesthesia fee schedule service by the CY 2016 imputed proxy work RVUs and used the product as the updated raw proxy MP RVUs for each anesthesia service for CY 2016. We then applied the same scaling adjustments to these raw proxy MP RVUs that we apply to the remainder of the PFS MP RVUs. Finally, we calculated the aggregate difference between the 2015 proxy MP RVUs and the proxy MP RVUs calculated for CY 2016. We then adjusted the portion of the anesthesia conversion factor attributable to MP proportionately; we refer the reader to section VI.C. of this final rule with comment period for the Anesthesia Fee Schedule Conversion Factors for CY 2016. We invited public comments regarding this proposal.

The following is a summary of the comments we received regarding this proposal.

Comment: We received few comments with regard to our proposal; commenters expressed appreciation that CMS recognized the unique aspects involved in updating the MP component associated with anesthesia services, and therefore, delayed the anesthesia MP update until the CY 2016 PFS.

Response: We appreciate the commenters' feedback, and we are finalizing the policy as proposed.

4. MP RVU Methodology Refinements

In the CY 2015 PFS final rule with comment period (79 FR 67591 through 67596), we finalized updated MP RVUs that were calculated based on updated MP premium data obtained from state insurance rate filings. The methodology used in calculating the finalized CY 2015 review and update of resource-based MP RVUs largely paralleled the process used in the CY 2010 update. We posted our contractor's report, ''Final Report on the CY 2015 Update of Malpractice RVUs'' on the CMS Web site. It is also located under the supporting documents section of the CY 2015 PFS final rule with comment period located at *http://www.cms.gov/PhysicianFeeSched/.* A more detailed explanation of the 2015 MP RVU update can be found in the CY 2015 PFS proposed rule (79 FR 40349 through 40355).

In the CY 2015 PFS proposed rule, we outlined the steps for calculating MP RVUs. In the process of calculating MP RVUs for purposes of the CY 2016 PFS proposed rule, we identified a necessary refinement to way we calculated Step 1, which involves computing a preliminary national average premium for each specialty, to align the calculations within the methodology to the calculations described within the aforementioned contractor's report. Specifically, in the calculation of the national premium for each specialty (refer to equations 2.3, 2.4, 2.5 in the aforementioned contractor's report), we calculate a weighted sum of premiums across areas and divide it by a weighted sum of MP GPCIs across areas. The calculation currently takes the ratio of sums, rather than the weighted average of the local premiums to the MP GPCI in that area. Instead, we proposed to update the calculation to use a price-adjusted premium (that is, the premium divided by the GPCI) in each area, and then taking a weighted average of those adjusted premiums. The CY 2016 PFS proposed rule MP RVUs were calculated in this manner.

Additionally, in the calculation of the national average premium for each specialty as discussed above, our current methodology used the total RVUs in each area as the weight in the numerator (that is, for premiums), and total MP RVUs as the weights in the denominator (that is, for the MP GPCIs). After further consideration, we believe that the use of these RVU weights is problematic. Use of weights that are central to the process at hand presents potential circularity since both weights incorporate MP RVUs as part of the computation to calculate MP RVUs. The use of different weights for the numerator and denominator introduces potential inconsistency. Instead, we believe that it would be better to use a different measure that is independent of MP RVUs and better represents the reason for weighting. Specifically, we proposed to use area population as a share of total U.S. population as the weight. The premium data are for all MP premium costs, not just those associated with Medicare patients, so we believe that the distribution of the population does a better job of capturing the role of each area's premium in the ''national'' premium for each specialty than our previous Medicare-specific measure.

Use of population weights also avoids the potential problems of circularity and inconsistency.

The CY 2016 PFS final MP RVUs, as displayed in Addendum B of this final rule with comment period, reflect MP RVUs calculated following our established methodology, with the inclusion of the proposals and refinements described above.

Comment: Commenters generally supported the technical changes to the MP RVU methodology and found them reasonable. One commenter stated that such refinements will increase stability of MP RVUs and does a better role of capturing the role of each local area's premium in the ''national'' premium for each specialty.

Response: We appreciate the commenters' support, and we are finalizing the policy as proposed.

Comment: One commenter stated that the MP RVU for cataract and other ophthalmic surgeries is deflated significantly because CMS assumes that optometry is providing the actual surgical portion of the procedure, when there is no state that allows optometrists to perform cataract surgery or any other major ophthalmic procedure. The commenter states that the clinical reality is that optometry is involved only during the pre- or post- procedure time period, and CMS should not allow optometric utilization of those codes with co-management modifiers to be included in the calculations for any major ophthalmic surgical procedures. The commenter suggested that if CMS does not agree to remove optometry from the calculation of MP RVUs for ophthalmic surgery, that CMS should use a much lower percentage of utilization to accurately reflect the true risk that optometrists encounter during this limited portion of the service. The commenter also disagreed that all providers who pay for malpractice insurance should have their premiums taken into consideration, and stated that when CMS looks at the dominant specialty for a given service, it must ensure that the claims reported—particularly by non-physician providers such as optometrists, are for the surgical portion of the procedure for which the MP RVU is being considered.

Response: We would clarify for the commenter that we apply the risk factor(s) of all specialties involved with furnishing services to calculate the service level risk factors for all PFS codes. Our methodology already accounts for codes with longer global periods or codes where two different practitioners report different parts of the service, weighing the volume differentially among the kinds of practitioners that report the service depending on which portion of the service each reports. We also remind commenters that, to determine the raw MP RVU for a given service, we consider the greater of the work RVU or clinical labor RVU for the service. Since the time and intensity of the pre-service and post-service period are incorporated into the work RVUs for these services and the work RVUs are used in the development of MP RVUs, we believe it is methodologically consistent to incorporate the portion of the overall services that is furnished by practitioners other than those that furnish the procedure itself in the calculation of MP RVUs. If we were to exclude the risk factors of some specialties that bill a specific code from the calculation of the service level risk factor, the resulting MP RVU would not reflect all utilization. Likewise, we also disagree with the suggestion that the pre- and post- utilization should be removed from determining MP RVUs for ophthalmic surgical services. The resources associated with pre- and post-operative periods for ophthalmic surgery are included in the total RVUs for the global surgical package. Accordingly, if we did not include the portion of utilization attributed to pre- and post-operative visits in the calculation of service level risk factors, the MP RVUs for global surgery would overstate the relative MP costs.

Comment: One commenter identified three low volume codes typically performed by cardiac surgery or thoracic surgery that have anomalous MP RVU values: CPT code 31766 (carinal reconstruction), the commenter requested that the MP risk factor associated with Thoracic surgery be assigned; CPT Code 33420 (valvotomy, mitral valve; closed heart), the commenter requests that the MP risk factor associated with Cardiac Surgery be assigned; and for 32654 (thorascoscopy, surgical; with control of traumatic hemorrhage), the commenter requests that the MP risk factor associated with Thoracic surgery be assigned.

Response: We agree with the commenters and have added these services to the list of those with specialty overrides for CY 2016. We hope to identify such anomalies more regularly in the future now that the public use file listing the overrides is available on the CMS Web site as indicated above.

5. CY 2016 Identification of Potentially Misvalued Services for Review

a. Public Nomination of Potentially Misvalued Codes

In the CY 2012 PFS final rule with comment period, we finalized a process for the public to nominate potentially misvalued codes (76 FR 73058). Members of the public including direct stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation during the 60-day public comment period following the release of the annual PFS final rule with comment period. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include, but is not limited to, the following:

- Documentation in the peer reviewed medical literature or other reliable data that there have been changes in work due to one or more of the following: Technique; knowledge and technology; patient population; site-of-service; length of hospital stay; and work time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed work, that is, diffusion of technology.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.
- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, Department of Veteran Affairs (VA) National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS) National Database, and the Physician Quality Reporting System (PQRS) databases).
- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

After we receive the nominated codes during the 60-day comment period following the release of the annual PFS final rule with comment period, we evaluate the supporting documentation and assess whether the nominated codes

appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate whether we are proposing each nominated code as a potentially misvalued code.

During the comment periods for the CY 2015 proposed rule and final rule with comment period, we received nominations and supporting documentation for three codes to be considered as potentially misvalued codes. We evaluated the supporting documentation for each nominated code to ascertain whether the submitted information demonstrated that the code should be proposed as potentially misvalued.

CPT code 36516 (Therapeutic apheresis; with extracorporeal selective adsorption or selective filtration and plasma reinfusion) was nominated for review as potentially misvalued. The nominator stated that CPT code 36516 is misvalued because of incorrect direct and indirect PE inputs and an incorrect work RVU. Specifically, the nominator stated that the direct supply costs failed to include an $18 disposable bag and the $37 cost for biohazard waste disposal of the post-treatment bag, and that the labor costs for nursing staff were inaccurate. The nominator also stated that the overhead expenses associated with this service were unrealistic and that the current work RVU undervalues a physician's time and expertise. Based on the requestor's comment, we proposed this code as a potentially misvalued code. We also noted that we established a policy in CY 2011 to consider biohazard bags as an indirect expense, and not as a direct PE input (75 FR 73192).

Comment: Several commenters stated that they do not believe CPT code 36516 is potentially misvalued because they found no indication that the clinical staff time, indirect expenses, or work was misvalued. All commenters requested that this code be removed from the potentially misvalued list.

Response: We appreciate the comments, but we believe that the nominator presented some concerns that may have merit, and review of the code is the best way to determine the validity of the concerns articulated by the original requestor. Therefore, we are adding CPT code 36516 to the list of potentially misvalued codes and anticipate reviewing recommendations from the RUC and other stakeholders.

CPT Codes 52441 (Cystourethroscopy with insertion of permanent adjustable transprostatic implant; single implant) and 52442 (Cystourethroscopy with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant) were nominated for review as potentially misvalued. The nominator stated that the costs of the direct PE inputs were inaccurate, including the cost of the implant. We proposed these services as potentially misvalued codes.

Comment: Some commenters disagreed that the commenter intended to nominate CPT codes 52441 and 52442 as potentially misvalued.

Response: After reviewing the original comment, we agree with these commenters' perspective that the intention was not to nominate the codes as potentially misvalued. Therefore, we are not finalizing our proposal to review these codes under the potentially misvalued code initiative.

b. Electronic Analysis of Implanted Neurostimulator (CPT Codes 95970–95982)

In the CY 2015 final rule with comment period (79 FR 67670), we reviewed and valued all of the inputs for the following CPT codes: 95971 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.,* rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); simple spinal cord, or peripheral (*i.e.,* peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming); 95972 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.,* rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex spinal cord, or peripheral (*i.e.,* peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, up to one hour); and 95973 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.,* rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex spinal cord, or peripheral (*i.e.,* peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, each additional 30 minutes after first hour (List separately in addition to code for primary procedure)). Due to significant time changes in the base codes, we believe the entire family detailed in Table 7 is potentially misvalued and should be reviewed in a manner consistent with our review of CPT codes 95971, 95972 and 95973.

TABLE 7—POTENTIALLY MISVALUED CODES IDENTIFIED IN THE ELECTRONIC ANALYSIS OF IMPLANTED NEUROSTIMULATOR FAMILY

HCPCS	Short descriptor
95970	Analyze neurostim no prog.
95974	Cranial neurostim complex.
95975	Cranial neurostim complex.
95978	Analyze neurostim brain/1h.
95979	Analyz neurostim brain addon.
95980	Io anal gast n-stim init.
95981	Io anal gast n-stim subsq.
95982	Io ga n-stim subsq w/reprog.

Comment: One commenter agreed with the review of CPT codes 95970–95982 as potentially misvalued services.

Response: We are adding CPT codes 95970–95982 to the list of potentially misvalued codes and anticipate reviewing recommendations from the AMA RUC and other stakeholders.

c. Review of High Expenditure Services Across Specialties With Medicare Allowed Charges of $10,000,000 or More

In the CY 2015 PFS rule, we proposed and finalized the high expenditure screen as a tool to identify potentially misvalued codes in the statutory category of ''codes that account for the majority of spending under the PFS.'' We also identified codes through this screen and proposed them as potentially misvalued in the CY 2015 PFS proposed rule (79 FR 40337–40338). However, given the resources required for the revaluation of codes with 10- and 90-day global periods, we did not finalize those codes as potentially misvalued codes in the CY 2015 PFS final rule with comment period. We stated that we would re-run the high expenditure screen at a future date, and subsequently propose the specific set of codes that meet the high expenditure criteria as potentially misvalued codes (79 FR 67578).

As detailed in the CY 2016 PFS proposed rule (80 FR 41706), we believed that our current resources will not necessitate further delay in proceeding with the high expenditure screen for CY 2016. Therefore, we re-ran the screen with the same criteria finalized in last year's final rule. However, in developing this CY 2016 proposed list, we also excluded all codes with 10- and 90-day global periods since we believe these codes should be reviewed as part of the global surgery revaluation described in section II.B.6. of this final rule with comment period.

We proposed 118 codes as potentially misvalued codes, identified using the high expenditure screen under the statutory category, ''codes that account for the majority of spending under the PFS.'' To develop the list, we followed the same approach taken last year except we excluded codes with 10- and 90-day global periods. Specifically, we identified the top 20 codes by specialty (using the specialties used in Table 64 in terms of allowed charges. As we did last year, we excluded codes that we have reviewed since CY 2010, those with fewer than $10 million in allowed charges, and those that described anesthesia or E/M services. We excluded E/M services from the list of proposed potentially misvalued codes for the same reasons that we excluded them in a similar review in CY 2012. These reasons were explained in the CY 2012 final rule with comment period (76 FR 73062 through 73065).

Comment: Some commenters did not believe that high expenditure/high volume was an appropriate criterion for us to use to identify the codes for the potentially misvalued codes initiative. These commenters stated that high expenditure is not an objective gauge of potential misvaluation. Additionally, commenters believed that selecting codes that have not been reviewed in the past 5 years insinuates that the delivery of these services and procedures has changed radically over that time span, which many doubted. Other commenters believed CMS should provide justification for the revaluation by providing evidence and/or data to show how the delivery of a service or procedure has changed within 5 years. While many disagreed with our use of the high expenditure screen, some commenters specifically suggested use of different types of screens; some of which would screen for services for which volume has increased a certain percentage over a set period or screen for changes in the predominate site of service.

Response: We appreciate commenters' perspective on the proposed list of potentially misvalued codes based on the high expenditure screen. It is clear that over time the resources involved in furnishing particular services can often change and, therefore, many services that have not recently been evaluated may become *potentially* misvalued. Under section 1848(c)(2)(B) of the Act, we are mandated to review relative values for codes for all physicians' services at least every 5 years. The purpose of specifically identifying potentially misvalued codes through particular screens established through rulemaking is to prioritize the review of individual codes since comprehensive, annual review of all codes for physicians' services is not practical and, due to the need to maintain relativity, changes in values for individual services can have an impact across the PFS. We identify *potentially* misvalued codes in order to prioritize review of subsets of PFS services. We prioritize review of individual services based on indications that a particular code is likely to be misvalued and on the impact that the potential misvaluation of the code would have on the valuation of PFS services broadly. Our high expenditure screen is largely intended to address the latter situation where improved valuation would have the most significant impact on the valuation of PFS services more broadly. This approach is also consistent with another category of codes identified for screening by statute: Codes with high PE relative value units. In proposing to prioritize this list of high expenditure codes, we stated that the reason we identified these codes is because they have significant impact on PFS payment on a specialty level and have not been recently reviewed.

Comment: A few commenters suggested that E/M services should not be exempt from review as potentially misvalued codes.

Response: In the CY 2012 final rule (76 FR 73063), we explained the concerns expressed by commenters that informed our decision to refrain from finalizing our proposal to review 91 E/M codes as potentially misvalued. We believe that those concerns remain valid. We also believe that it is best to exempt E/M codes from our review of potentially misvalued codes since we are continuously exploring valuations of E/M services, potential refinements to the PFS, and other options for policies that may contribute to improved valuation of E/M services.

Comment: Many commenters also stated that the review of codes over such a short time span puts significant burden on the specialty societies. Many commenters agreed that high expenditure codes should be reviewed on a periodic basis over multiple years. Some commenters specifically suggested that the periodic basis should be 10 years while others suggested delaying any review of the codes until after the misvalued code target has been met.

Response: Because of the concerns expressed by commenters about the burden associated with code reviews, we continue to believe that it is appropriate to prioritize review of codes to a manageable subset that also have a high impact on the PFS and work with the specialty society to spread review of the remaining codes identified as potentially misvalued over a reasonable timeframe. Therefore, we do not believe it would be appropriate to remove codes from the high expenditure list unless we find that we have reviewed both the work RVUs and direct PE inputs for the code during the specified time period.

Also, we believe that the resources involved in furnishing a service can evolve over time, including the time and technology used to furnish the service, and such efficiencies could easily develop in a time span as short as 5 years. As a result, we continue to believe that the review of these high expenditure codes is necessary to ensure that the services are appropriately valued. Additionally, not only do we believe that regular monitoring of codes with high impact on the PFS will produce a more accurate and equitable payment system, but we have a statutory obligation under

section 1848(c)(2)(B) of the Act to review code values at least every 5 years (although we do not always conduct a review that involves the AMA RUC). Therefore, we do not agree with the commenter that suggested that changes in technology and practice can be effectively accounted for through review of code values every 10 years.

Comment: Commenters stated that the following codes were reviewed since CY 2010 and, as a result, do not fit the criteria for the high expenditure screen and should be removed: CPT codes 51728 (Insertion of electronic device into bladder with voiding pressure studies), 51729 (Insertion of electronic device into bladder with voiding and bladder canal (urethra) pressure studies), 76536 (Ultrasound of head and neck), 78452 (Nuclear medicine study of vessels of heart using drugs or exercise multiple studies), 92557 (Air and bone conduction assessment of hearing loss and speech recognition), 92567 (Eardrum testing using ear probe), 93350 (Ultrasound examination of the heart performed during rest, exercise, and/or drug-induced stress with interpretation and report) and 94010 (Measurement and graphic recording of total and timed exhaled air capacity).

Response: We agree with commenters that the codes identified do not fit the criteria for review based on the high expenditure screen. Therefore, we are not proposing to review CPT codes 51728, 51729, 76536, 78452, 92557, 92567, 93350, and 94010 under the potentially misvalued code initiative.

Comment: Commenters believed that services that are add-ons to the excluded 10- and 90-day global services should be removed from the list of codes identified through the high expenditure screen in order to maintain relativity. The specific codes suggested for removal were: CPT codes 22614 (Fusion of spine bones, posterior or posterolateral approach); 22840 (Insertion of posterior spinal instrumentation at base of neck for stabilization, 1 interspace); 22842 (Insertion of posterior spinal instrumentation for spinal stabilization, 3 to 6 vertebral segments); 22845 (Insertion of anterior spinal instrumentation for spinal stabilization, 2 to 3 vertebral segments); and 33518 (Combined multiple vein and artery heart artery bypasses).

Response: We agree with the commenters that the codes identified should be removed from the list of codes identified for review through the high expenditure screen due to their relationship to the 10- and 90-day global services that were excluded from our screen. Although we agree that these codes should be removed from this screen, we think it is worthwhile to note that for similar reasons, we believe we should consider these and similar add-on codes in conjunction with efforts to improve the valuation and the global surgery packages as described in section II.B.6. of this final rule with comment period. Therefore, we are not including CPT codes 22614, 22840, 22842, 22845 on the list of codes identified for review through the high expenditure screen.

Comment: Commenters believed that CPT code 92002 (Eye and medical examination for diagnosis and treatment, new patient) is considered an ophthalmological evaluation and management (E/M) service and as a result, should be excluded for all the same reasons we excluded other E/M codes.

Response: We agree with commenters that CPT code 92002 is considered an E/M and, as a result, should be excluded from the screen as were other E/Ms. Therefore, we are not including CPT code 92002 on the list of codes identified for review through the high expenditure screen.

Comment: A few commenters requested that codes with a work RVU equal to 0.00 (CPT codes 51798 (Ultrasound measurement of bladder capacity after voiding), 88185 (Flow cytometry technique for DNA or cell analysis), 93296 (Remote evaluations of single, dual, or multiple lead pacemaker or cardioverter-defibrillator transmissions, technician review, support, and distribution of results up to 90 days), 96567 (Application of light to aid destruction of premalignant and/or malignant skin growths, each session), and 96910 (Skin application of tar and ultraviolet B or petrolatum and ultraviolet B)) or equal to 0.01 (CPT codes 95004 (Injection of allergenic extracts into skin, accessed through the skin)) be removed from the list of codes identified for review through the high expenditure screen. Commenters stated that historically, services with 0.00 work RVUs were excluded from screens and that re-reviewing a service with a 0.01 work RVU would most likely not lower the work component unless work was completely removed from the code.

Response: We continue to believe that codes with 0.00 work RVUs or very low work RVUs of 0.01, should still be reviewed and can still be considered potentially misvalued. As stated earlier, we do not believe it would be appropriate to remove codes from the high expenditure list unless we find that we have reviewed both the work RVUs and direct PE inputs. Therefore, we are maintaining CPT codes 51798, 88185, 93296, 96567, 96910 and 95004 as potentially misvalued codes and anticipate reviewing recommendations from the AMA RUC and other stakeholders.

Comment: Various commenters objected to the presence of individual codes that met the high expenditure screen criteria based on absence of clinical evidence that the individual services are misvalued.

Response: We reviewed each of these comments, and believe that these kinds of assessments are best addressed through the misvalued code review process. As we describe in this section, the criteria for many misvalued code screens, including this one, are designed to prioritize codes that may be misvalued not to identify codes that are misvalued. Therefore, we believe that supporting evidence for the accuracy of current values for particular codes is best considered as part of the review of individual codes through the misvalued code process.

Comment: Several commenters believed that codes that are currently scheduled to be considered by either the CPT Editorial Panel for new coding or the RUC for revised valuations (for work RVUs and/or PE inputs) at an upcoming meeting should be removed from the screen. Commenters also believed that it was best to allow these codes to go through the RUC code review process rather than identifying the codes as potentially misvalued through this screen.

Response: Although a number of codes have been or will be considered through the RUC review process, until we receive recommendations and review the codes for both work and direct PE inputs, we will continue to include these codes on the high expenditure list. We reiterate that we do not believe that the presence of a code on a misvalued code list signals that a particular code necessarily is misvalued. Instead, the lists are intended to prioritize codes to be reviewed under the misvalued code initiative. If any code on the list finalized here is already being reviewed by the RUC through its process, we will receive a recommendation regarding valuation for the code, and the presence or absence of the code in this particular list is immaterial. However, if subsequent to the removal of a code from the high expenditure code list, the RUC decides not to review the code, we would still want to consider the code as potentially misvalued based on its meeting the criteria established for the screen. Therefore, we do not agree that we should remove individual codes from a potentially misvalued code list because the RUC already anticipates

reviewing the code. However, we want to be clear that when we receive RUC recommendations regarding a code, we generally remove that code from misvalued code lists, regardless of whether or not the RUC reviewed the code on the basis of that particular screen.

Accordingly, we are finalizing the 103 codes in Table 8 as potentially misvalued services under the high expenditure screen and seek recommended values for these codes from the RUC and other interested stakeholders.

TABLE 8—LIST OF POTENTIALLY MISVALUED CODES IDENTIFIED THROUGH HIGH EXPENDITURE BY SPECIALTY SCREEN

HCPCS	Short descriptor
10022	Fna w/image.
11100	Biopsy skin lesion.
11101	Biopsy skin add-on.
11730	Removal of nail plate.
20550	Inj tendon sheath/ligament.
20552	Inj trigger point 1/2 muscl.
20553	Inject trigger points 3/>.
27370	Injection for knee x-ray.
29580	Application of paste boot.
31500	Insert emergency airway.
31575	Diagnostic laryngoscopy.
31579	Diagnostic laryngoscopy.
31600	Incision of windpipe.
36215	Place catheter in artery.
36556	Insert non-tunnel cv cath.
36569	Insert picc cath.
36620	Insertion catheter artery.
38221	Bone marrow biopsy.
51700	Irrigation of bladder.
51702	Insert temp bladder cath.
51720	Treatment of bladder lesion.
51784	Anal/urinary muscle study.
51798	Us urine capacity measure.
52000	Cystoscopy.
55700	Biopsy of prostate.
58558	Hysteroscopy biopsy.
67820	Revise eyelashes.
70491	Ct soft tissue neck w/dye.
70543	Mri orbt/fac/nck w/o & w/dye.

97530	Therapeutic activities.
97535	Self care mngment training.
G0283	Elec stim other than wound.

6. Valuing Services That Include Moderate Sedation as an Inherent Part of Furnishing the Procedure

The CPT manual includes more than 400 diagnostic and therapeutic procedures, listed in Appendix G, for which the CPT Editorial Committee has determined that moderate sedation is an inherent part of furnishing the procedure. For these diagnostic and therapeutic procedures, only the procedure code is reported by the practitioner who conducts the procedure, without separate billing by the same practitioner for anesthesia services, and, in developing RVUs for these services, we include the resource costs associated with moderate sedation in the valuation. To the extent that moderate sedation is inherent in the diagnostic or therapeutic service, we believe that the inclusion of moderate sedation in the valuation of the procedure is appropriate. In the CY 2015 PFS proposed rule (79 FR 40349), we noted that it appeared practice patterns for endoscopic procedures were changing, with anesthesia increasingly being separately reported for these procedures. Due to the changing nature of medical practice, we noted that we were considering establishing a uniform approach to valuation for all Appendix G services. We continue to seek an approach that is based on using the best available objective, broad-based information about the provision of moderate sedation, rather than merely addressing this issue on a code-by-code basis using RUC survey data when individual procedures are revalued. We sought public comment on approaches to address the appropriate valuation of these services given that moderate sedation is no longer inherent for many of these services. To the extent that Appendix G procedure code values are adjusted to no longer include moderate sedation, we requested suggestions as to how moderate sedation should be reported and valued, and how to remove from existing valuations the RVUs and inputs related to moderate sedation.

To establish an approach to valuation for all Appendix G services based on the best data about the provision of moderate sedation, we need to determine the extent to which each code may be misvalued. We know that there are standard packages for the direct PE inputs associated with moderate sedation, and we began to develop approaches to estimate how much of the work involved in these services is attributable to moderate sedation. However, we believe that we should seek input from the medical community prior to proposing changes in values for these services, given the different methodologies used to develop work RVUs for the hundreds of services in Appendix G. Therefore, in the CY 2016 PFS proposed rule, we solicited recommendations from the RUC and other interested stakeholders on the appropriate valuation of the work associated with moderate sedation before formally proposing an approach that allows Medicare to adjust payments based on the resource costs associated with the moderate sedation or anesthesia services that are being furnished.

The anesthesia procedure codes 00740 (Anesthesia for procedure on gastrointestinal tract using an endoscope) and 00810 (Anesthesia for procedure on lower intestine using an endoscope) are used for anesthesia furnished in conjunction with lower GI

procedures. In reviewing Medicare claims data, we noted that a separate anesthesia service is now reported more than 50 percent of the time that several types of colonoscopy procedures are reported. Given the significant change in the relative frequency with which anesthesia codes are reported with colonoscopy services, we believe the relative values of the anesthesia services should be re-examined. Therefore, in the CY 2016 PFS proposed rule, we proposed to identify CPT codes 00740 and 00810 as potentially misvalued. We welcomed comments on both of these issues.

Comment: Several commenters noted that they support CMS' decision to seek input from the medical community prior to proposing a method for reporting and valuing moderate sedation as well as adjusting existing valuations to remove these services. One commenter also encouraged CMS to seek and consider recommendations from societies that represent members who provide dialysis vascular access interventional care, such as the American Society of Diagnostic and Interventional Nephrology.

Response: We thank the commenters for their support. Through notice and comment rulemaking, we will review and consider any recommendations from the public, including those from any interested specialty societies.

Comment: In response to CMS' proposal to identify anesthesia procedure codes 00740 and 00810 as potentially misvalued, the RUC stated that the committee anticipated reviewing CPT codes 00740 and 00810 as potentially misvalued codes.

Response: We appreciate the RUC's responsiveness to the proposal.

Comment: One commenter disagreed that the increase in utilization of anesthesia is indicative of potential misvaluation of the codes in Appendix G. This commenter noted that the policy adopted by CMS in the CY 2015 final rule to eliminate cost-sharing for anesthesia furnished in conjunction with screening colonoscopies encourages patients to undergo these screenings. The commenter also noted that use of anesthesia with upper endoscopy procedures not only decreases patient discomfort, but also decreases complications and creates more optimal conditions for efficiency during the procedure as well as reduced recovery time as compared to the use of narcotics and sedative hypnotic agents. The commenter believes that this results in savings that offset the costs of anesthesia services. The commenter also expressed the view that the work involved in these services has not changed.

Response: We thank the commenters for their input. Since the pool of beneficiaries that receive anesthesia in conjunction with these Appendix G services has grown, we believe it is possible that the typical circumstances under which patients receive these services have changed since the services were last reviewed. Therefore, we continue to seek recommendations regarding appropriate approaches to valuation for these services.

Comment: A few commenters noted that there are a variety of services in Appendix G and stated their view that practitioners who furnish services for which there are claims data supporting the inherent nature of moderate sedation should not have to report moderate sedation separately, as they believe they would be faced with administrative burden and costs. They recommended that CMS conduct ongoing analysis of claims data to determine which codes may require unbundling of moderate sedation and to refer only those codes as potentially misvalued. One commenter noted that they opposed the use of any ''blanket approach'' to valuing moderate sedation such as removing the standard packages for the direct PE inputs associated with moderate sedation. The commenter recommended instead that we look at codes by family or specialty in order to ensure that reimbursements are fair and accurate. One commenter also noted the difference in the work involved with moderate sedation when it is furnished by the same physician who is furnishing the procedure compared with when it is furnished by another clinician, and requested that this be considered when valuing the moderate sedation services. Another commenter suggested that CMS create a modifier to be used by surgeons providing moderate sedation. They also suggested that CMS consider the expenses involved with using a registered nurse or CRNA, the medications and delivery systems, patient monitoring equipment, and lengthened postoperative recovery period when valuing moderate sedation services.

Response: We thank the commenters for their input. We will consider input from the medical community on this issue through evaluation of CPT coding changes and associated RUC recommendations, as well as feedback received through public comments, as we value these services through future notice and comment rulemaking.

7. Improving the Valuation and Coding of the Global Package

a. Proposed Transition of 10-Day and 90-Day Global Packages Into 0-Day Global Packages

In the CY 2015 PFS final rule (79 FR 67582 through 67591) we finalized a policy to transition all 10-day and 90-day global codes to 0-day global periods in order to improve the accuracy of valuation and payment for the various components of global surgical packages, including pre- and postoperative visits and the surgical procedure itself. Although in previous rulemaking we have marginally addressed some of the concerns we identified with global packages, we believe there is still a need to address other fundamental issues with the 10- and 90-day postoperative global packages. We believe it is critical that the RVUs we use to develop PFS payment rates reflect the most accurate resource costs associated with PFS services. We believe that valuing global codes that package services together without objective, auditable data on the resource costs associated with the components of the services contained in the packages may significantly skew relativity and create unwarranted payment disparities within PFS fee-for-service payment. We also believe that the resource-based valuation of individual physicians' services will continue to serve as a critical foundation for Medicare payment to physicians. Therefore, we believe it is critical that the RVUs under the PFS be based as closely and accurately as possible on the actual resources involved in furnishing the typical occurrence of specific services.

In the rulemaking for CY 2015, we stated our belief that transforming all 10- and 90-day global codes to 0-day global codes would:

- Increase the accuracy of PFS payment by setting payment rates for individual services based more closely upon the typical resources used in furnishing the procedures;
- Avoid potentially duplicative or unwarranted payments when a beneficiary receives postoperative care from a different practitioner during the global period;
- Eliminate disparities between the payment for E/M services in global periods and those furnished individually;
- Maintain the same-day packaging of pre- and postoperative physicians' services in the 0-day global code; and
- Facilitate availability of more accurate data for new payment models and quality research.

b. Impact of the Medicare Access and CHIP Reauthorization Act of 2015

The MACRA was enacted into law on April 16, 2015. Section 523 of the MACRA addresses payment for global surgical packages. Section 523(a) adds a new paragraph at section 1848(c)(8) of the Act. Section 1848(c)(8)(A)(i) of the Act prohibits the Secretary from implementing the policy established in the CY 2015 PFS final rule with comment period that would have transitioned all 10-day and 90-day global surgery packages to 0-day global periods. Section 1848(c)(8)(A)(ii) of the Act provides that nothing in the previous clause shall be construed to prevent the Secretary from revaluing misvalued codes for specific surgical services or assigning values to new or revised codes for surgical services.

Section 1848(c)(8)(B)(i) of the Act requires CMS to develop, through rulemaking, a process to gather information needed to value surgical services from a representative sample of physicians, and requires that the data collection shall begin no later than January 1, 2017. The collected information must include the number and level of medical visits furnished during the global period and other items and services related to the surgery, as appropriate. This information must be reported on claims at the end of the global period or in another manner specified by the Secretary. Section 1848(c)(8)(B)(ii) of the Act requires that, every 4 years, we must reassess the value of this collected information; and allows us to discontinue the collection if the Secretary determines that we have adequate information from other sources in order to accurately value global surgical services. Section 1848(c)(8)(B)(iii) of the Act specifies that the Inspector General will audit a sample of the collected information to verify its accuracy. Section 1848(c)(8)(C) of the Act requires that, beginning in CY 2019, we must use the information collected as appropriate, along with other available data, to improve the accuracy of valuation of surgical services under the PFS. Section 523(b) of the MACRA adds a new paragraph at section 1848(c)(9) of the Act that authorizes the Secretary, through rulemaking, to delay up to 5 percent of the PFS payment for services for which a physician is required to report information under section 1848(c)(8)(B)(i) of the Act until the required information is reported.

Since section 1848(c)(8)(B)(i) of the Act, as added by section 523(a) of the MACRA, requires us to use rulemaking to develop and implement the process to gather information needed to value surgical services no later than January 1, 2017, we sought input from stakeholders on various aspects of this task. We solicited comments from the public regarding the kinds of auditable, objective data (including the number and type of visits and other services furnished by the practitioner reporting the procedure code during the current postoperative periods) needed to increase the accuracy of the values for surgical services. We also solicited comment on the most efficient means of acquiring these data as accurately and efficiently as possible. For example, we sought information on the extent to which individual practitioners or practices may currently maintain their own data on services, including those furnished during the postoperative period, and how we might collect and objectively evaluate those data for use in increasing the accuracy of the values beginning in CY 2019.

We received many comments regarding the kinds of auditable, objective data needed to increase the accuracy of the values for surgical services and the most efficient means of acquiring these data. Commenters had several suggestions for the approach that CMS should take, including the following:

- Collect and examine large group practice data for CPT code 99024 (postoperative follow-up visit).
- Review Medicare Part A claims data to determine the length of stay of surgical services performed in the hospital facility setting.
- Prioritize services that the Agency has identified as high concern subjects.
- Review postoperative visit and length of stay data for outliers.

In general, commenters were supportive of the need to identify auditable, objective, representative data, but many were not able to identify a specific source for such data. We appreciate the comments we received and we will consider these suggestions for purposes of future rulemaking.

As noted above, section 1848(c)(8)(C) of the Act mandates that we use the collected data to improve the accuracy of valuation of surgery services beginning in 2019. We described in previous rulemaking (79 FR 67582 through 67591) the limitations and difficulties involved in the appropriate valuation of the global packages, especially when the values of the component services are not clear. We sought public comment on potential methods of valuing the individual components of the global surgical package, including the procedure itself, and the pre- and postoperative care, including the follow-up care during postoperative days. We were also interested in stakeholder input on what other items and services related to the surgery, aside from postoperative visits, are furnished to beneficiaries during postoperative care.

We received many comments regarding potential methods of valuing the individual components of the global surgical package, including the following:

- Use a measured approach to valuing the individual components of the global surgical package rather than implementing a blanket data collection policy.
- Examine and consider the level of the postoperative E/M visits, including differences between specialties.
- Consider the interaction between the valuing the global surgery package and the multiple procedure payment reduction (MPPR) policy.

We will consider these comments regarding the best means to develop and implement the process to gather information needed to value surgical services and will provide further opportunity for public comment through future rulemaking.

Comment: We received many comments expressing strong support for the CMS proposal to hold an open door forum or town hall meetings with the public.

Response: We appreciate the extensive comments we received from the public regarding the global surgical package. We have noted the positive feedback from commenters about holding potential open forums or town hall meetings to discuss this process. We will consider these comments regarding the best means to develop and implement the process to gather information needed to value surgical services as we develop proposals for inclusion in next year's PFS proposed rule.

C. Elimination of the Refinement Panel

1. Background

As discussed in the CY 1993 PFS final rule with comment period (57 FR 55938), we adopted a refinement panel process to assist us in reviewing the public comments on CPT codes with interim final work RVUs for a year and in developing final work RVUs for the subsequent year. We decided the panel would be composed of a multispecialty group of physicians who would review and discuss the work involved in each procedure under review, and then each panel member would individually rate the work of the procedure. We believed establishing the panel with a

multispecialty group would balance the interests of the specialty societies who commented on the work RVUs with the budgetary and redistributive effects that could occur if we accepted extensive increases in work RVUs across a broad range of services.

Following enactment of section 1848(c)(2)(K) of the Act, which required the Secretary periodically to identify and review potentially misvalued codes and make appropriate adjustments to the RVUs, we reassessed the refinement panel process. As detailed in the CY 2011 PFS final rule with comment period (75 FR 73306), we continued using the established refinement panel process with some modifications.

For CY 2015, in light of the changes we made to the process for valuing new, revised, and potentially misvalued codes (79 FR 67606), we reassessed the role that the refinement panel process plays in the code valuation process. We noted that the current refinement panel process is tied to the review of interim final values. It provides an opportunity for stakeholders to provide new clinical information that was not available at the time of the RUC valuation that might affect work RVU values that are adopted in the interim final value process. For CY 2015 interim final rates, we stated in the CY 2015 PFS final rule with comment period that we will use the refinement panel process as usual for these codes (79 FR 67609).

2. CY 2016 Refinement Panel Proposal

We proposed to permanently eliminate the refinement panel beginning in CY 2016, and instead, publish the proposed rates for all interim final codes in the PFS proposed rule for the subsequent year. For example, we would publish the proposed rates for all CY 2016 interim final codes in the CY 2017 PFS proposed rule. With the change in the process for valuing codes adopted in the CY 2015 final rule with comment period (79 FR 67606), proposed values for most codes that are being valued for CY 2016 were published in the CY 2016 PFS proposed rule. As explained in the CY 2015 final rule with comment period, a smaller number of codes being valued for CY 2016 will be published as interim final in the 2016 PFS final rule with comment period and be subject to comment. Under our proposal, we will evaluate the comments we receive on these code values, and both respond to these comments and propose values for these codes for CY 2017 in the CY 2017 PFS proposed rule. Therefore, stakeholders will have two opportunities to comment and to provide any new clinical information that was not available at the time of the RUC valuation that might affect work RVU values that are adopted on an interim final basis. We believe that this proposed process, which includes two opportunities for public notice and comment, offers stakeholders a better mechanism and ample opportunity for providing any additional data for our consideration, and discussing any concerns with our interim final values, than the current refinement process. It also provides greater transparency because comments on our rules are made available to the public at *http://www.regulations.gov.* We welcomed comments on this proposed change to eliminate the use of refinement panels in our process for establishing final values for interim final codes.

The following is a summary of the comments we received on this proposed change to eliminate the use of refinement panels in our process for establishing final values for interim final codes.

Comment: The majority of commenters, including the American Medical Association/Specialty Society Relative (Value) Update Committee, opposed the proposal to eliminate the refinement panel. Commenters expressed concern that the complete elimination of the refinement process decreases CMS's accountability to its stakeholders who do not agree with the Agency's decisions. They urged CMS to provide detailed guidance on how to seek a change in previously finalized RVUs including the process to initiate a meeting with CMS staff to share and discuss new information or clarify previously shared information, as well as any key timelines or dates that may impact CMS's ability to initiate a change in previously finalized RVUs. Commenters also urged CMS to maintain a transparent appeal process. Another stated that, as CY 2017 will be the first full year using the new process for establishing final values for interim final codes, it is possible that unforeseen needs for the continuation of the refinement panel could arise.

Several commenters agreed with the proposal to eliminate the refinement panel. One commenter supported the permanent elimination of the refinement panel since CMS's display of interim final values in the subsequent year's proposed rule will provide another opportunity for public input. Another believed the new process will provide more timely input on the codes and stated that publishing interim final values for these in the proposed rule versus the final rule should allow adequate time for public comment and for physicians to prepare for changes that would have an impact on their practices and patients. Another commenter welcomed the increased opportunity to review and comment on interim values, especially given that CMS has not been obligated to accept recommendations of the refinement panels and has frequently rejected those recommendations.

Response: We appreciate all of the comments on the proposal. We understand that commenters have an interest in a transparent process to review CMS's assignment of RVUs to individual PFS services. We also understand that some commenters believe that the purpose of the refinement panel process is to provide for reconsideration of the agency's previous decisions. However, the refinement panel was established to assist us in reviewing the public comments on CPT codes with interim final work RVUs and in balancing the interests of the specialty societies who commented on the work RVUs with the budgetary and redistributive effects that could occur if we accepted extensive increases in work RVUs across a broad range of services. Therefore, we do not believe that the refinement panel has generally served as the kind of ''appeals'' or reconsideration process that some stakeholders envision in their comments. We also have come to believe that the refinement panel is not achieving its intended purpose. Rather than providing us with additional information, balanced across specialty interests, to assist us in establishing work RVUs, the refinement panel process generally serves to rehash the issues raised and information already discussed at the RUC meetings and considered by CMS.

We also appreciate commenters' interest in CMS maintaining a transparent process with public accountability in establishing values for physicians' services. In contrast to the prior process of establishing interim final values and using a refinement panel process that generally is not observed by members of the public, we believe that the new process of proposing the majority of code values in the proposed rule and making sure that those proposed values are open for comment prior to their taking effect for payment inherently represents greater transparency and accountability. We will also continue to work towards greater transparency in describing in rulemaking how we develop our proposed values for individual codes. We believe that focusing our resources on notice and comment rulemaking would facilitate greater transparency.

Given that the timing for valuation of PFS services under the new process will in large part mitigate the need to establish values on an interim final basis and will provide two opportunities for notice and public comment, we do not believe that the refinement panel would necessarily provide value as an avenue for input, for either CMS or stakeholders, beyond that intrinsic in the notice and comment rulemaking process. However, we appreciate commenters' concerns that the new process has not been fully implemented and there may be unanticipated needs for additional input like the kind made available through the refinement panels. We agree that it may be advisable to preserve existing avenues for public input beyond the rulemaking process, like the refinement panel.

Therefore, after consideration of all of the comments and the issues described in this section, we are not finalizing our proposal to eliminate the refinement panel process at this time. Instead, we will retain the ability to convene refinement panels for codes with interim final values under circumstances where additional input provided by the panel is likely to add value as a supplement to notice and comment rulemaking. We will make the determination on whether to convene refinement panels on an annual basis, based on review of comments received on interim final values. We remind stakeholders that CY 2016 is the final year for which we anticipate establishing interim final values for existing services.

We also want to remind stakeholders that we have established an annual process for the public nomination of potentially misvalued codes. This process, described in the CY 2012 PFS final rule (76 FR 73058), provides an annual means for those who believe that values for individual services are inaccurate and should be readdressed through notice and comment rulemaking to bring those codes to our attention.

D. Improving Payment Accuracy for Primary Care and Care Management Services

In the CY 2016 PFS proposed rule, we sought public comment on a number of issues regarding payment for primary care and care coordination under the PFS. We are committed to supporting primary care, and we have increasingly recognized care management as one of the critical components of primary care that contributes to better health for individuals and reduced expenditure growth (77 FR 68978). Accordingly, we have prioritized the development and implementation of a series of initiatives designed to improve the accuracy of payment for, and encourage long-term investment in, care management services.

In addition to the Medicare Shared Savings Program, various demonstration initiatives including the Pioneer Accountable Care Organization (ACO) model, the patient-centered medical home model in the Multi-payer Advanced Primary Care Practice (MAPCP), the Federally Qualified Health Center (FQHC) Advanced Primary Care Practice demonstration and the Comprehensive Primary Care (CPC) initiative, among others (see the CY 2015 PFS final rule (79 FR 67715) for a discussion of these), we also have continued to explore potential refinements to the PFS that would appropriately value care management within Medicare's statutory structure for fee-for-service physician payment and quality reporting. The payment for some non-face-to-face care management services is bundled into the payment for face-to-face evaluation and management (E/M) visits. However, because the current E/M office/outpatient visit CPT codes were designed with an overall orientation toward episodic treatment, we have recognized that these E/M codes may not reflect all the services and resources involved with furnishing certain kinds of care, particularly comprehensive, coordinated care management for certain categories of beneficiaries.

Over several years, we have developed proposals and sought stakeholder input regarding potential PFS refinements to improve the accuracy of payment for care management services. For example, in the CY 2013 PFS final rule with comment period, we adopted a policy to pay separately for transitional care management (TCM) involving the transition of a beneficiary from care furnished by a treating physician during an inpatient stay to care furnished by the beneficiary's primary physician in the community (77 FR 68978 through 68993). In the CY 2014 PFS final rule with comment period, we finalized a policy, beginning in CY 2015 (78 FR 74414), to pay separately for chronic care management (CCM) services furnished to Medicare beneficiaries with two or more qualifying chronic conditions. We believe that these new separately billable codes more accurately describe, recognize, and make payment for non-face-to-face care management services furnished by practitioners and clinical staff to particular patient populations.

We view ongoing refinements to payment for care management services as part of a broader strategy to incorporate input and information gathered from research, initiatives, and demonstrations conducted by CMS and other public and private stakeholders, the work of all parties involved in the potentially misvalued code initiative, and, more generally, from the public at large. Based on input and information gathered from these sources, we are considering several potential refinements that would continue our efforts to improve the accuracy of PFS payments. In this section, we discuss our comment solicitation and the public comments we received regarding these potential refinements.

1. Improved Payment for the Professional Work of Care Management Services

Although both the TCM and CCM services describe certain aspects of professional work, some stakeholders have suggested that neither of these new sets of codes nor the inputs used in their valuations explicitly account for all of the services and resources associated with the more extensive cognitive work that primary care physicians and other practitioners perform in planning and thinking critically about the individual chronic care needs of particular subsets of Medicare beneficiaries. Commenters stated that the time and intensity of the cognitive efforts associated with such planning are in addition to the work typically required to supervise and manage the clinical staff associated with the current TCM and CCM codes. Similarly, we continue to receive requests from a few stakeholders for CMS to lead efforts to revise the current CPT E/M codes or construct a new set of E/M codes. The goal of such efforts would be to better describe and value the work (time and intensity) specific to primary care and other cognitive specialties in the context of complex care of patients relative to the time and intensity of the procedure-oriented care physicians and practitioners, who use the same codes to report E/M services. Some of these stakeholders have suggested that in current medical practice, many physicians, in addition to the time spent treating acute illnesses, spend substantial time working toward optimal outcomes for patients with chronic conditions and patients they treat episodically, which can involve additional work not reflected in the codes that describe E/M services since that work is not typical across the wide range of practitioners that report the same codes. According to these groups, this work involves

medication reconciliation, the assessment and integration of numerous data points, effective coordination of care among multiple other clinicians, collaboration with team members, continuous development and modification of care plans, patient or caregiver education, and the communication of test results.

We agree with stakeholders that it is important for Medicare to use codes that accurately describe the services furnished to Medicare beneficiaries and to accurately reflect the relative resources involved with furnishing those services. Therefore, in the CY 2016 PFS proposed rule we solicited public comments on ways to recognize the different resources (particularly in cognitive work) involved in delivering broad-based, ongoing treatment, beyond those resources already incorporated in the codes that describe the broader range of E/M services. The resource costs of this work may include the time and intensity related to the management of both long-term and, in some cases, episodic conditions. To appropriately recognize the different resource costs for this additional cognitive work within the structure of PFS resource-based payments, we were particularly interested in codes that could be used in addition to, not instead of, the current E/M codes.

In our comment solicitation, we stated that, in principle, these codes could be similar to the hundreds of existing add-on codes that describe additional resource costs, such as additional blocks or slides in pathology services, additional units of repair in dermatologic procedures, or additional complexity in psychotherapy services. For example, these codes might allow for the reporting of the additional time and intensity of the cognitive work often undertaken by primary care and other cognitive specialties in conjunction with an E/M service, much like add-on codes for certain procedures or diagnostic test describe the additional resources sometimes involved in furnishing those services. Similar to the CCM code, the codes might describe the increased resources used over a longer period of time than during one patient visit. For example, the add-on codes could describe the professional time in excess of 30 minutes and/or a certain set of furnished services, per one calendar month, for a single patient to coordinate care, provide patient or caregiver education, reconcile and manage medications, assess and integrate data, or develop and modify care plans. Such activity may be particularly relevant for the care of patients with multiple or complicated chronic or acute conditions, and should contribute to optimal patient outcomes including more coordinated, safer care.

Like CCM, we would require that the patient have an established relationship with the billing professional; and additionally, the use of an add-on code would require the extended professional resources to be reported with another separately payable service. However, in contrast to the CCM code, the new codes might be reported based on the resources involved in professional work, instead of the resource costs in terms of clinical staff time. The codes might also apply broadly to patients in a number of different circumstances, and would not necessarily make reporting the code(s) contingent on particular business models or technologies for medical practices. We stated that we were interested in stakeholder comments on the kinds of services that involve the type of cognitive work described above and whether or not the creation of particular codes might improve the accuracy of the relative values used for such services on the PFS. Finally, we were interested in receiving information from stakeholders on the overlap between the kinds of cognitive resource costs discussed above and those already accounted for through the currently payable codes that describe CCM and other care management services.

We strongly encouraged stakeholders to comment on this topic to assist us in developing potential proposals to address these issues through rulemaking in CY 2016 for implementation in CY 2017. We anticipated using an approach similar to our multi-year approach for implementing CCM and TCM services, to facilitate broader input from stakeholders regarding details of implementing such codes, including their structure and description, valuation, and any requirements for reporting.

Comment: We received many comments on these potential policy and coding refinements that will be useful in the development of potential future policy proposals. We note that the American Medical Association and others urged us to make separate Medicare payment for existing CPT codes that are not separately paid under the PFS, but that describe similar services and for which we have RUC-recommended values. These codes describe a broad range of services, some of which involve non face-to-face care management over a period of time.

Response: We will take the comments into consideration in developing any potential policy proposals in future PFS rulemaking.

2. Establishing Separate Payment for Collaborative Care

We believe that the care and management for Medicare beneficiaries with multiple chronic conditions, a particularly complicated disease or acute condition, or common behavioral health conditions often requires extensive discussion, information-sharing and planning between a primary care physician and a specialist (for example, with a neurologist for a patient with Alzheimer's disease plus other chronic diseases). We note that for CY 2014, CPT created four codes that describe interprofessional telephone/internet consultative services (CPT codes 99446–99449). Because Medicare includes payment for telephone consultations with or about a beneficiary as a part of other services furnished to the beneficiary, we currently do not make separate payment for these services. We note that such interprofessional consultative services are distinct from the face-to-face visits previously reported to Medicare using the consultation codes, and we refer the reader to the CY 2010 PFS final rule for information regarding Medicare payment policies for those services (74 FR 61767).

However, in considering how to improve the accuracy of our payments for care coordination, particularly for patients requiring more extensive care, in the CY 2016 PFS proposed rule we also sought comment on how Medicare might accurately account for the resource costs of a more robust interprofessional consultation within the current structure of PFS payment. For example, we were interested in stakeholders' perspectives regarding whether there are conditions under which it might be appropriate to make separate payment for services like those described by these CPT codes. We expressed interest in stakeholder input regarding the parameters of, and resources involved in, these collaborations between a specialist and primary care practitioner, especially in the context of the structure and valuation of current E/M services. In particular, we were interested in comments about how these collaborations could be distinguished from the kind of services included in other E/M services, how these services could be described if stakeholders believe the current CPT codes are not adequate, and how these services should be valued under the PFS. We also expressed interest in comments on whether we should tie those interprofessional consultations to a beneficiary encounter, and on

developing appropriate beneficiary protections to ensure that beneficiaries are fully aware of the involvement of the specialist in the beneficiary's care and the associated benefits of the collaboration between the primary care physician and the specialist physician prior to being billed for such services.

Additionally, we solicited comments on whether this kind of care might benefit from inclusion in a CMMI model that would allow Medicare to test its effectiveness with a waiver of beneficiary financial liability and/or variation of payment amounts for the consulting and the primary care practitioners. Without such protections, beneficiaries could be responsible for coinsurance for services of physicians whose role in the beneficiary's care is not necessarily understood by the beneficiary. Finally, we also solicited comments on key technology supports needed to support collaboration between specialist and primary care practitioners in support of high quality care management services, on whether we should consider including technology requirements as part of any proposed services, and on how such requirements could be implemented in a way that minimizes burden on providers. We encouraged stakeholders to comment on this topic to assist us in developing potential proposals to address these issues through rulemaking in CY 2016 for implementation in CY 2017. We anticipated using an approach similar to our multi-year approach for implementing CCM and TCM services, to facilitate broader input from stakeholders regarding details of implementing such codes, including their structure and description, valuation, and any requirements for reporting.

Comment: We received many comments on these potential policy and coding refinements that will be useful in the development of potential future policy proposals.

Response: We will take the comments into consideration in developing any potential policy proposals in future PFS rulemaking.

a. Collaborative Care Models for Beneficiaries With Common Behavioral Health Conditions

In recent years, many randomized controlled trials have established an evidence base for an approach to caring for patients with common behavioral health conditions called ''Collaborative Care.'' Collaborative care typically is provided by a primary care team, consisting of a primary care provider and a care manager, who works in collaboration with a psychiatric consultant, such as a psychiatrist. Care is directed by the primary care team and includes structured care management with regular assessments of clinical status using validated tools and modification of treatment as appropriate. The psychiatric consultant provides regular consultations to the primary care team to review the clinical status and care of patients and to make recommendations. Several resources have been published that describe collaborative care models in greater detail and assess their impact, including pieces from the University of Washington (*http://aims.uw.edu/*), the Institute for Clinical and Economic Review (*http://ctaf.org/reports/integration-behavioral-health-primary-care*), and the Cochrane Collaboration (*http://www.cochrane.org/CD006525/DEPRESSN_collaborative-care-for-people-with-depression-and-anxiety*).

Because this particular kind of collaborative care model has been tested and documented in medical literature, in the proposed rule, we were particularly interested in comments on how coding under the PFS might facilitate appropriate valuation of the services furnished under such a collaborative care model. As these kinds of collaborative models of care become more prevalent, we would evaluate potential refinements to the PFS to account for the provision of services through such a model. We solicited information to assist us in considering refinements to coding and payment to address this model in particular. We also sought comments on the potential application of the collaborative care model for other diagnoses and treatment modalities. For example, we solicited comments on how a code similar to the CCM code applicable to multiple diagnoses and treatment plans could be used to describe collaborative care services, as well as other interprofessional services, and could be appropriately valued and reported within the resource-based relative value PFS system, and how the resources involved in furnishing such services could be incorporated into the current set of PFS codes without overlap. We also requested input on whether requirements similar to those used for CCM services should apply to a new collaborative care code, and whether such a code could be reported in conjunction with CCM or other E/M services. For example, we might consider whether the code should describe a minimum amount of time spent by the psychiatric consultant for a particular patient per one calendar month and be complemented by either the CCM or other care management code to support the care management and primary care elements of the collaborative care model. As with our comment solicitation on interprofessional consultation, since the patient may not have direct contact with the psychiatric consultant we solicited comments on whether and, if so, how written consent for the non-face-to-face services should be required prior to practitioners reporting any new interprofessional consultation code or the care management code.

We also solicited comments on appropriate care delivery requirements for billing, the appropriateness of CCM technology requirements or other technology requirements for these services, necessary qualifications for psychiatric consultants, and whether or not there are particular conditions for which payment would be more appropriate than others; as well as how these services may interact with quality reporting, the resource inputs we might use to value the services under the PFS (specifically, work RVUs, time, and direct PE inputs), and whether or not separate codes should be developed for the psychiatric consultant and the care management components of the service.

In addition, we solicited comments on whether this kind of care model should be implemented through a CMMI model that would allow Medicare to test its effectiveness with a waiver of beneficiary financial liability and/or variation of payment methodology and amounts for the psychiatric consultant and the primary care physician. Again, we encouraged stakeholders to comment on this topic to assist us in developing potential proposals to address these issues through rulemaking in CY 2016 for implementation in CY 2017.

Comment: We received many positive comments regarding the possibility of implementing new payment codes that would allow more accurate reporting and payment when these services are furnished to Medicare beneficiaries.

Response: We appreciate commenters' interest in appropriate coding and payment for these services. We will take all comments into consideration as we consider the development of proposals in future rulemaking.

We took particular note that several commenters identified resource inputs CMS might use to value these services under the PFS, including defined time elements. As we consider those comments, we encourage stakeholders to consider whether there are alternatives to time elements that would account for the range in intensity of services delivered in accordance with beneficiary need. In addition, since the

collaborative care models described in the proposed rule include primary care-based care management, as well as psychiatric consulting, we encourage further input including comments on this final rule with comment period, from a broad group of stakeholders, including the community of primary care providers, who are critical in the successful provision of these Services.

3. CCM and TCM Services

a. Reducing Administrative Burden for CCM and TCM Services

In CY 2013, we implemented separate payment for TCM services under CPT codes 99495 and 99496, and in CY 2015, we implemented separate payment for CCM services under CPT code 99490. We established many service elements and billing requirements that the physician or nonphysician practitioner must satisfy to fully furnish these services and to report these codes (77 FR 68989, 79 FR 67728). Particularly because of the significant amount of non face-to-face work involved in CCM and TCM services, these elements and requirements were relatively extensive and generally exceeded those for other E/M and similar services. Since the implementation of these services, some practitioners have stated that the service elements and billing requirements are too burdensome, and suggested that they interfere with their ability to provide these care management services to their patients who could benefit from them. In light of this feedback from the physician and practitioner community, we solicited comments on steps that we could take to further improve beneficiary access to TCM and CCM services. Our aims in implementing separate payment for these services are that Medicare practitioners are paid appropriately for the services they furnish, and that beneficiaries receive comprehensive care management that benefits their long term health outcomes. However, we understand that excessive requirements on practitioners could possibly undermine the overall goals of the payment policies. In the CY 2016 PFS proposed rule, we solicited stakeholder input on how we could best balance access to these services and practitioner burdens such that Medicare beneficiaries may obtain the full benefit of these services.

b. Payment for CPT Codes Related to CCM Services

As we stated in the CY 2015 PFS final rule (79 FR 67719), we believe that Medicare beneficiaries with two or more chronic conditions as defined under the CCM code can benefit from the care management services described by that code, and we want to make this service available to all such beneficiaries. As with most services paid under the PFS, we recognized that furnishing CCM services to some beneficiaries will require more resources and some less; but we value and make payment based upon the typical service. Because CY 2015 is the first year for which we are making separate payment for CCM services, we sought information regarding the circumstances under which CCM services are furnished. This information would include the clinical status of the beneficiaries receiving the service and the resources involved in furnishing the service, such as the number of documented non-face-to-face minutes furnished by clinical staff in the months the code is reported. We were interested in examining such information to identify the range of minutes furnished over those months as well as the distribution of the number of minutes within the total volume of services. We also solicited objective data regarding the resource costs associated with furnishing the services described by this code. We stated that as we review that information, in addition to our own claims data, we would consider any changes in payment and coding that may be warranted in the coming years, including the possibility of establishing separate payment amounts and making Medicare payment for the related CPT codes, such as the complex care coordination codes, CPT codes 99487 and 99489.

Comment: We received several comments recommending various changes in the billing requirements for CCM and TCM services. Some commenters sought significant changes to the CCM scope of service elements, such as eliminating the requirement to use certified electronic health record technology (CEHRT); suspending the electronic care plan sharing requirement until such time that electronic health records (EHRs) have the ability to support such capabilities; or having CMS provide a model patient consent form. Other commenters recommended more minor changes such as clarifying the application of CCM rules regarding fax transmission from certified EHRs, and changing the reporting rules for TCM services (required date of service and when the claim can be submitted). Many commenters stated the current payment amounts are not adequate to cover the resources required to furnish CCM or TCM services and urged CMS to increase payments, for example by creating an add-on code to CPT code 99490, increasing the clinical labor PE input for CPT code 99490 to the RUC recommended 60 minutes, and/or paying separately for the complex CCM codes (CPT codes 99487 and 99489). Commenters also noted that since CY 2015 is the first year of separate payment for CCM, there is little utilization data available to assess average time spent in furnishing CCM services and similar issues. One commenter planned to share data with CMS next spring upon completion of a study on the cost and value associated with care management.

Response: We will take these comments into consideration in the development of potential proposals for future PFS rulemaking. We will develop subregulatory guidance clarifying the intersection of fax transmission and CEHRT for purposes of CCM billing. Regarding TCM services, we are adopting the commenters' suggestions that the required date of service reported on the claim be the date of the face-to-face visit, and to allow (but not require) submission of the claim when the face-to-face visit is completed, consistent with current policy governing the reporting of global surgery and other bundles of services under the PFS. We will revise the existing subregulatory guidance for TCM services accordingly.

E. Target for Relative Value Adjustments for Misvalued Services

Section 220(d) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93, enacted on April 1, 2014) added a new subparagraph at section 1848(c)(2)(O) of the Act to establish an annual target for reductions in PFS expenditures resulting from adjustments to relative values of misvalued codes. Under section 1848(c)(2)(O)(ii) of the Act, if the estimated net reduction in expenditures for a year as a result of adjustments to the relative values for misvalued codes is equal to or greater than the target for that year, reduced expenditures attributable to such adjustments shall be redistributed in a budget-neutral manner within the PFS in accordance with the existing budget neutrality requirement under section 1848(c)(2)(B)(ii)(II) of the Act. The provision also specifies that the amount by which such reduced expenditures exceeds the target for a given year shall be treated as a net reduction in expenditures for the succeeding year, for purposes of determining whether the target has been met for that subsequent year. Section 1848(c)(2)(O)(iv) of the Act defines a target recapture amount as the difference between the target for the year and the estimated net reduction in expenditures under the PFS resulting

from adjustments to RVUs for misvalued codes. Section 1848(c)(2)(O)(iii) of the Act specifies that, if the estimated net reduction in PFS expenditures for the year is less than the target for the year, an amount equal to the target recapture amount shall not be taken into account when applying the budget neutrality requirements specified in section 1848(c)(2)(B)(ii)(II) of the Act. Section 220(d) of the PAMA applies to calendar years (CYs) 2017 through 2020 and sets the target under section 1848(c)(2)(O)(v) of the Act at 0.5 percent of the estimated amount of expenditures under the PFS for each of those 4 years.

Section 202 of the Achieving a Better Life Experience Act of 2014 (ABLE) (Division B of Pub. L. 113–295, enacted December 19, 2014) amended section 1848(c)(2)(O) of the Act to accelerate the application of the PFS expenditure reduction target to CYs 2016, 2017, and 2018, and to set a 1 percent target for CY 2016 and 0.5 percent for CYs 2017 and 2018. As a result of these provisions, if the estimated net reduction for a given year is less than the target for that year, payments under the fee schedule will be reduced.

In the CY 2016 PFS proposed rule, we proposed a methodology to implement this statutory provision in a manner consistent with the broader statutory construct of the PFS. In developing this proposed methodology, we identified several aspects of our approach for which we specifically solicited comments. We organized this discussion by identifying and explaining these aspects in particular but we solicited comments on all aspects of our proposal.

1. Distinguishing ''Misvalued Code'' Adjustments From Other RVU Adjustments

The potentially misvalued code initiative has resulted in changes in PFS payments in several ways. First, potentially misvalued codes have been identified, reviewed, and revalued through notice and comment rulemaking. However, in many cases, the identification of particular codes as potentially misvalued has led to the review and revaluation of related codes, and frequently, to revisions to the underlying coding for large sets of related services. Similarly, the review of individual codes has initiated reviews and proposals to make broader adjustments to values for codes across the PFS, such as when the review of a series of imaging codes prompted a RUC recommendation and CMS updated the direct PE inputs for imaging services to assume digital instead of film costs. This change, originating through the misvalued code initiative, resulted in a significant reduction in RVUs for a large set of PFS services, even though the majority of affected codes were not initially identified through potentially misvalued code screens. Finally, due to both the relativity inherent in the PFS ratesetting process and the budget neutrality requirements specified in section 1848(c)(2)(B)(ii)(II) of the Act, adjustments to the RVUs for individual services necessarily result in the shifting of RVUs to broad sets of other services across the PFS.

To implement the PFS expenditure reduction target provisions under section 1848(c)(2)(O) of the Act, we must identify a subset of the adjustments in RVUs for a year to reflect an estimated ''net reduction'' in expenditures. Therefore, we dismissed the possibility of including all changes in RVUs for a year in calculating the estimated net reduction in PFS expenditures, even though we believe that the redistributions in RVUs to other services are an important aspect of the potentially misvalued code initiative. Conversely, we considered the possibility of limiting the calculation of the estimated net reduction in expenditures to reflect RVU adjustments made to the codes formally identified as ''potentially misvalued.'' We do not believe that calculation would reflect the significant changes in payments that have directly resulted from the review and revaluation of misvalued codes under section 1848(c)(2) of the Act. We further considered whether to include only those codes that underwent a comprehensive review (work and PE). As we previously have stated (76 FR 73057), we believe that a comprehensive review of the work and PE for each code leads to the more accurate assignment of RVUs and appropriate payments under the PFS than do fragmentary adjustments for only one component. However, if we calculated the net reduction in expenditures using revisions to RVUs only from comprehensive reviews, the calculation would not include changes in PE RVUs that result from proposals like the film-to-digital change for imaging services, which not only originated from the review of potentially misvalued codes, but substantially improved the accuracy of PFS payments faster and more efficiently than could have been done through the multiple-year process required to complete a comprehensive review of all imaging codes.

After considering these options, we believe that the best approach is to define the reduction in expenditures as a result of adjustments to RVUs for misvalued codes to include the estimated pool of all services with revised input values. This would limit the pool of RVU adjustments used to calculate the net reduction in expenditures to those for the services for which individual, comprehensive review or broader proposed adjustments have resulted in changes to service-level inputs of work RVUs, direct PE inputs, or MP RVUs, as well as services directly affected by changes to coding for related services. For example, coding changes in certain codes can sometimes necessitate revaluations for related codes that have not been reviewed as misvalued codes, because the coding changes have also affected the scope of the related services. This definition would incorporate all reduced expenditures from revaluations for services that are deliberately addressed as potentially misvalued codes, as well as those for services with broad-based adjustments like film-to-digital and services that are redefined through coding changes as a result of the review of misvalued codes.

Because the annual target is calculated by measuring changes from one year to the next, we also considered how to account for changes in values that are best measured over 3 years, instead of 2 years. Under our current process, the overall change in valuation for many misvalued codes is measured across values for 3 years: the original value in the first year, the interim final value in the second year, and the finalized value in the third year. As we describe in section II.H.2. of this final rule with comment period, our misvalued code process has been to establish interim final RVUs for the potentially misvalued, new, and revised codes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accept public comment about those valuations. For the final rule with comment period for the subsequent year, we consider and respond to public comments received on the interim final values, and make any appropriate adjustments to values based on those comments. However, the calculation of the target would only compare changes between 2 years and not among 3 years, so the contribution of a particular change towards the target for any single year would be measured against only the preceding year without regard to the overall change that takes place over 3 years.

For recent years, interim final values for misvalued codes (year 2) have generally reflected reductions relative to original values (year 1), and for most codes, the interim final values (year 2)

are maintained and finalized (year 3). However, when values for particular codes have changed between the interim final (year 2) and final values (year 3) based on public comment, the general tendency has been that codes increase in the final value (year 3) relative to the interim final value (year 2), even in cases where the final value (year 3) represents a decrease from the original value (year 1). Therefore, for these codes, the year 2 changes compared to year 1 would risk over-representing the overall reduction, while the year 3 to year 2 changes would represent an increase in value. If there were similar targets in every PFS year, and a similar number of misvalued code changes made on an interim final basis, the incongruence in measuring what is really a 3-year change in 2-year increments might not be particularly problematic since each year's calculation would presumably include a similar number of codes measured between years 1 and 2 and years 2 and 3.

However, including changes that take place over 3 years generates challenges in calculating the target for CY 2016 for two reasons. First, CY 2015 was the final full year of establishing interim final values for all new, revised, and potentially misvalued codes. Starting with this final rule with comment period, we are finalizing values for a significant portion of misvalued codes during one calendar year. Therefore, CY 2015 will include a significant number of services that would be measured between years 2 and 3 relative to the services measured between 1 and 2 years. Second, because there was no target for CY 2015, any reductions that occurred on an interim final basis for CY 2015 were not counted toward achievement of a target. If we were to include any upward adjustments made to these codes based on public comment as ''misvalued code'' changes for CY 2016, we would effectively be counting the service-level increases for 2016 (year 3) relative to 2015 (year 2) against achievement of the target without any consideration to the service-level changes relative to 2014 (year 1), even in cases where the overall change in valuation was negative.

Therefore, we proposed to exclude code-level input changes for CY 2015 interim final values from the calculation of the CY 2016 misvalued code target since the misvalued change occurred over multiple years, including years not applicable to the misvalued code target provision.

We note that the impact of interim final values in the calculation of targets for future years will be diminished as we transition to proposing values for almost all new, revised, and potentially misvalued codes in the proposed rule. We anticipate a smaller number of interim final values for CY 2016 relative to CY 2015. For calculation of the CY 2018 target, we anticipate almost no impact based on misvalued code adjustments that occur over multiple years.

The list of codes with changes for CY 2016 included under this definition of ''adjustments to RVUs for misvalued codes'' is available on the CMS Web site under downloads for the CY 2016 PFS final rule with comment period at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*.

The following is a summary of the comments we received regarding this aspect of the proposal to implement the statutory provision:

Comment: Several commenters, including the RUC, supported CMS' proposal to include all services that receive revised input values even if the specific codes were not identified on a misvalued services list for review; the commenters' stated that this is a reasonable and fair approach.

Response: We appreciate the commenters' feedback and support.

Comment: A few commenters stated that the selection of codes to be included for review beyond the codes identified by the screens should be determined by the pertinent specialty societies as they are the best determiners of which codes make up a family of codes. Another commenter stated that CMS should include the E/M services in the list of codes that are potentially misvalued.

Response: We note that the process for selection of codes to be reviewed as potentially misvalued is addressed in section II.H. of this final rule with comment period and has also been addressed in prior rulemaking. Our proposal to implement section 1848(c)(2)(O) of the Act does not address how codes are identified to be reviewed under the misvalued code initiative. Instead, it addresses how to identify the changes in expenditures that result from such reviews in the calculation of the target amount.

Comment: Several commenters, including the RUC, also supported CMS' proposal to exclude code level input changes for CY 2015 interim final values from the calculation of the target. The commenters concur that the year 2 and year 3 changes in values represent an incomplete picture of the redistributive effects for a particular year resulting from the review of the misvalued services, and the vast majority of redistribution happens between year 1 and year 2.

Response: We appreciate the commenters' support and feedback.

Comment: One commenter disagreed with CMS' proposal to exclude code-level input changes for 2015 interim final values stating that it means organized medicine does not get credit for any net decreases associated with such codes and is therefore being penalized. The commenter requested that CMS consider including 2015 interim final values in the calculation of the 2016 misvalued code target even though the misvalued change occurred over multiple years. Another commenter stated that the proposed net reduction in expenditures of 0.25 percent, as opposed to 1.00, means that the 0.75 percent difference will come from the conversion factor, and doing so would more than negate the 0.5 percent increase physicians were promised under MACRA, and therefore the commenter requested that CMS help mitigate this result by including 2015 interim final values in the calculation of the target.

Response: With regard to the commenters who disagreed with the exclusion of code-level input changes for 2015 interim final values, we cannot determine if the commenters intended to suggest that CMS was not including decreases that would help towards the achievement of the misvalued code target by excluding changes for 2015 interim final values, or that CMS should include the changes between years 1 and 3. As stated in the CY 2016 proposed rule (80 FR 41712 through 41713), when values for particular codes have changed between the interim final (year 2) and final values (year 3) based on public comment, the general tendency has been that code values increase in the final value (year 3) relative to the interim final value (year 2), even in cases where the final value (year 3) represents a decrease from the original value (year 1). Additionally, the statute requires comparison between 2 years, and therefore, we do not believe we have the authority to include changes between year 1 and year 3. Since our remaining options were to include changes between year 2 and year 3 which, as indicated above, generally results in an increase, or to exclude code-level input changes for CY 2015 interim final values, and the commenters express interest in moving closer to achievement of the target, we do not believe it would be in the commenters' interest to include the changes between years 2 and 3.

With regard to the commenter who stated that the net reduction in expenditures under the PFS if CMS does not achieve the target reduction would negate the 0.5 percent increase physicians were promised under MACRA, we note that both of these provisions continue to apply under current law.

Comment: Some commenters, including the RUC, suggested that CMS should be sure to include existing codes that are either being deleted or will have utilization changes as a result of the misvalued code project and/or the CPT Editorial Panel process. Another commenter stated that CMS was excluding existing codes with large volume changes, and recommended that such codes be included in the calculation of the target. Some commenters recommended that CMS conduct a procedure-to-procedure comparison and then calculate the net reduction in RVUs, including the values of new and deleted CPT codes prompted by the misvalued code initiative. The commenters stated that this is an area where the specialty societies and CMS need to work together to determine the comparisons for calculating the net reduction.

Response: We agree that changes in coding often contribute to improved valuation of PFS services. We note that we included these changes in our methodology in the proposed rule and explained that we would include services directly affected by changes to coding for related services. We did not propose to exclude existing codes with large volume changes; changes for such codes have been included. To clarify, we are including changes in values for any codes for which changes in coding or policies may result in differences in how a given service is reported from one year to the next. Under our current ratesetting methodologies, we already consider how coding revisions change the way services are reported from one year to the next. The crosswalk we use to incorporate such changes in our methodology is based on RUC and specialty society recommendations that explicitly address the kinds of procedure-to-procedure comparisons suggested by the commenter. This file is available in the ''downloads'' section of the PFS Web site at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html* under ''Analytic Crosswalk from CY 2015 to CY 2016.'' Since it reflects the best information available, we used the same crosswalk to account for coding changes in the calculation of the target. We also refer readers to the list of HCPCS defined as misvalued for purposes of the target which is available on the CMS Web site under downloads for the CY 2016 PFS final rule with comment period.

Comment: One commenter recommended that CMS include the review of all individual codes and broader adjustments across the PFS, as this would more accurately represent the total revaluations.

Response: As we explained in the proposed rule, our goal is to include the review of all individual codes and changes to inputs for additional codes where changes can be measured between two years. Because PFS payments are developed under the statutory requirements of relativity and budget neutrality, including all adjustments to all codes would necessarily result in a net of zero.

Comment: A few commenters raised objections to the statutory provision. For example, one commenter stated that the legislation is penalizing physicians and other healthcare professionals for already having taken on the task of identifying and revaluating potentially misvalued codes over the past 10 years. Other commenters stated that since the RUC and specialty societies have been addressing potentially misvalued codes since 2006, there should be a way to include revaluations made back to 2006 in the calculation of the target. Another commenter stated that CMS should hold primary care and E/M services harmless in this process, since these services are not over-valued but rather under-valued. One commenter requested more time to evaluate the proposed process to identify yearly targets, and encouraged CMS to work with the AMA to discuss this issue at future RUC Panel meetings prior to implementing the provision. One commenter requested that CMS review its approach to determine if there are other methods that will come closer to reaching the target. One commenter stated that this new requirement creates a potential incentive to target codes that offer the greatest likelihood of savings, not those that are actually misvalued.

Response: We appreciate the commenters' feedback and have considered these concerns to the extent possible in light of the requirements of section 1848(c)(2)(O) of the Act.

After consideration of the public comments received, we are finalizing the approach of defining the reduction in expenditures as a result of adjustments to RVUs for misvalued codes to include the estimated pool of all services with revised input values, including any codes for which changes in coding or policies might result in differences in how a given service is reported from one year to the next. We are also finalizing our proposal to exclude code-level input changes for CY 2015 interim final values from the calculation of the CY 2016 misvalued code target. After considering all comments, we continue to believe this approach is appropriate and compliant with statutory directives.

2. Calculating ''Net Reduction''

Once the RVU adjustments attributable to misvalued codes are identified, estimated net reductions in PFS expenditures resulting from those adjustments would be calculated by determining the sum of all decreases and offsetting them against any applicable increases in valuation within the changes that we defined as misvalued, as described above. Because section 1848(c)(2)(O)(i) of the Act only explicitly addresses reductions in expenditures, and we recognize that many stakeholders will want to maximize the overall magnitude of the measured reductions in order to prevent an overall reduction to the PFS conversion factor, we considered the possibility of ignoring the applicable increases in valuation in the calculation of net reduction. However, we believe that the requirement to calculate ''net'' reductions implies that we are to take into consideration both decreases and increases. Additionally, we believe this approach may be the only practical one due to the presence of new and deleted codes on an annual basis.

For example, a service that is described by a single code in a given year, like intensity-modulated radiation therapy (IMRT) treatment delivery, could be addressed as a misvalued service in a subsequent year through a coding revision that splits the service into two codes, ''simple'' and ''complex.'' If we counted only the reductions in RVUs, we would count only the change in value between the single code and the new code that describes the ''simple'' treatment delivery code. In this scenario, the change in value from the single code to the new ''complex'' treatment delivery code would be ignored, so that even if there were an increase in the payment for IMRT treatment delivery service(s) overall, the mere change in coding would contribute inappropriately to a ''net reduction in expenditures.'' Therefore, we proposed to net the increases and decreases in values for services, including those for which there are coding revisions, in calculating the estimated net reduction in expenditures as a result of adjustments to RVUs for misvalued codes.

The following is a summary of the comments we received regarding our proposal.

Comment: One commenter stated that the proposal for calculating net reduction is consistent with the plain reading of the statute.

Response: We appreciate the commenter's feedback and support.

Comment: Several commenters, including the RUC, requested that CMS use a more transparent process for calculation of the target, suggesting that the discussion in the CY 2016 PFS proposed rule was not sufficiently detailed to allow for replication by external stakeholders. Commenters requested that CMS provide a comprehensive methodological description of how CMS will calculate the target, including publication of dollar figure estimates, and information about individual service level estimated impacts on the net reduction. Commenters further requested that we provide the impact on the net reduction either per CPT code, or that we identify a family of services and publish a combined impact for that family. Another commenter expressed concern with how CMS will operationalize this policy, noting that the language in the CY 2016 PFS proposed rule did not outline where the adjustments would be made. The commenter further questioned how CMS planned to track the ''savings'' from the revaluation of services, and requested that CMS clarify how new technology will be handled, as well as new codes that are a restructuring of existing codes.

Response: We appreciate the commenters' feedback. In response to the request for greater transparency, we have posted a public use file that provides a comprehensive description of how the target is calculated as well as the estimated impact by code family on the CMS Web site under the supporting data files for the CY 2016 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html*.

In response to the commenter who asked for clarification on how new technology will be handled, we assume the commenter intends to ask about how new codes for new services would be addressed under our proposed methodology. Under our proposal, we would include adjustments to values for all deleted, new, and revised codes under our calculations of changes from one year to the next. We would also weight the changes in the values for those codes by the utilization for those services in order to calculate the net reduction in expenditures. If a new code describes a new service (new technology as opposed to recoding of an existing service), then there would be no utilization for that code in the calculation. Without utilization, the value for a new service would have no impact on the calculation of the target. In response to the commenter who expressed concern about how CMS would operationalize this policy, and stated that CMS did not explain where the adjustments would be, we note that if the estimated net reduction in expenditures is less than the target for the year, then there would be an overall reduction to the PFS conversion factor as described in section VI. of this final rule with comment period.

Comment: One commenter disagreed that all increases should be incorporated into the net reduction calculation and requested that CMS consider an approach that would maximize the overall magnitude of the measured reductions in order to prevent an overall reduction to the PFS conversion factor as a result of failure to achieve the target for reductions. Specifically, the commenter stated that codes identified as potentially misvalued for which there is compelling evidence based on the RUC recommendations to support an increase in RVUs based on a change in work should not be defined as misvalued for the purposes of calculating the target.

Response: We believe the requirement that we calculate the net reduction in expenditures indicates that we must account for adjustments in values including both increases and decreases and therefore, believe our proposal comports with the plain reading of the statute. We recognize that the RUC internal deliberations include rules that govern under what circumstances individual specialties can request that the RUC recommend CMS increase values for particular services. As observers to the RUC process, we appreciate having an understanding of these rules in the context of our review of RUC-recommended values. However, we do not believe that the internal RUC standards for developing recommendations are relevant in determining whether the statutory provision applies to adjustments to values for individual codes.

Comment: Some commenters requested that CMS review its administrative authority to achieve a target recapture amount in a selective manner, rather than by an across-the-board adjustment to the conversion factor. A commenter stated that codes already sustaining reductions in 2016, and consequently contributing to the target, should not be subjected to additional across-the-board cuts to achieve the statutory target.

Response: We do not believe that section 1848(c)(2)(O)(iii) of the Act provides us authority to insulate particular services from the effects of the budget neutrality adjustment for the target recapture amount that is required if the estimated net reduction in expenditures is less than the target for the year. The statute specifies that an amount equal to the target recapture amount is not to be taken into account in applying the PFS budget neutrality requirement under section 1848(c)(2)(B)(ii)(II) of the Act. This PFS budget neutrality adjustment has been in place since the outset of the PFS, and we have consistently interpreted and implemented it as an adjustment that is made across the entire PFS. Therefore, we do not believe we can apply the budget neutrality adjustments in a selective manner.

Comment: Several commenters, including the RUC, stated that when considering the net impact of service-level input changes in a given year, it is important for CMS to understand specific scenarios in which codes under review should not be included in the net reduction target calculation. The commenters requested that CMS not include particular payment initiatives, such as Advance Care Planning (ACP), in the target definition. Instead, since the payment rates for these services require budget neutrality and relativity adjustments to all other PFS services and these reductions are not otherwise accounted for in the target calculation, CMS should count the payments for ACP services as ''redistribution'' (or, in other words, reductions) from other services for CY 2016. Commenters urged CMS to use the same approach for care management services valued under the PFS in the future. Generally, the commenters stated that these and similar new codes could not possibly be misvalued and therefore, should not only be excluded from the target, but the reductions to other services due to separate payment for these services should be counted as net reductions toward achievement of the misvalued code target.

Response: Because we believe that all of our intended revaluations of services under the PFS are intended to improve the accuracy of the relative value units for PFS services, we do not believe we should exclude increases and decreases to particular services in the target calculation. Therefore, we do not agree with commenters' suggestions that codes describing one kind of service (e.g. care management) as opposed to another (for example, procedures or

diagnostic tests) should be excluded from the target under the statutory provision. Similarly, we do not agree that counting the relativity and budget neutrality redistributions that result from care management services as part of the net ''reduction'' would be consistent with a reasonable understanding of ''net reduction'' in allowed expenditures as a result of changes to misvalued codes.

However, in considering the points raised by commenters, we do agree that the increases in value for new codes like ACP or Chronic Care Management (CCM) are not the same as increases to other services. In general, new codes describe new services that would not have been reported with particular codes in the previous years or new codes describe existing services that were reported using other codes in the prior year. In other cases, however, new codes describe services that were previously included in the payment for other codes. When those services become separately payable through new codes, we generally make adjustments to other relevant codes to adjust for the value of the services that will be separately reported. In general, new codes describing care management services fall into this latter category, since the associated resource costs for these services were previously bundled into payment for other services. However, unlike many other PFS services, the resource costs for these kinds of services were bundled into a set of broadly reported E/M codes and services that include E/M visits. Since these codes are so broadly reported across nearly all PFS specialties, to the extent that it would be impracticable to make adjustments to individual codes, we have not made corresponding adjustments to E/M visits to account for the status of the new codes as separately billable. Instead, when unbundling new separately reported services such as these, we have allowed our general budget neutrality adjustment to account for these types of changes, since budget neutrality adjustments apply broadly to the full range of PFS services, including both codes that specifically describe E/M visits and those with E/M services as components of the service, such as all codes with global periods. In terms of calculating the net reduction in expenditures for purposes of section 1848(c)(2)(O)(i) of the Act, this means that the shift in payment to these new separately reportable services, unlike the adjustments to values for other new services, is not offset by adjustments to any other individual codes. Therefore, under the methodology we proposed, the increase in payment for these new separately reportable services would be counted in the net reduction calculations since the adjustments to values for these services are reflected in values for individual codes, but the corresponding decreases would not be counted, since the corresponding decreases are not attributable to any particular codes. Under the methodology we proposed, the change to make these types of codes separately reported would be counted against achievement of the target even though the increases in value for these codes are fully offset by budget-neutrality adjustments to all other PFS services.

As we have reflected on the comments and on this particular circumstance, we do not believe that the change to separate payment for these kinds of services should be counted as increases that are included in calculating the ''net reductions'' in expenditures attributable to adjustments for misvalued codes. Instead, we think that the adjustments to value these services should be considered in the context of the budget neutrality adjustments that are applied broadly to PFS services. This would be consistent with our treatment of the increase in values for other new codes since the reductions or deletion of predecessor codes are counted as offsets in our calculation. Since, under the established ratesetting methodology, the increases in new separately reportable services and the corresponding budget neutrality decreases fully offset one another and net to zero, we believe that the easiest way to account for the adjustments associated with valuing these services is to exclude altogether the changes for these types of codes from the list of codes included in the target. This will effectively make the creation and valuation of such codes neutral in the calculation of the misvalued code target.

After considering public comments, we are finalizing our policy as proposed with a modification to exclude from the calculation of the ''net reduction'' in expenditures changes in coding and valuation for services, such as ACP for CY 2016, that are newly reportable, but for which no corresponding reduction is made to existing codes and instead reductions are taken exclusively through a budget neutrality adjustment.

3. Measuring the Adjustments

The most straightforward method to estimating the net reduction in expenditures due to adjustments to RVUs for misvalued codes is to compare the total RVUs of the relevant set of codes (by volume) in the current year to the update year, and divide that by the total RVUs for all codes (by volume) for the current year. This approach had the advantage of being intuitive and readily replicable.

However, there are several issues related to the potential imprecision of this method. First, and most significantly, the code-level PE RVUs in the update year include either increases due to the redistribution of RVUs from other services or reductions due to increases in PE for other services. Second, because relativity for work RVUs is maintained through annual adjustments to the CF, the precise value of a work RVU in any given year is adjusted based on the total number of work RVUs in that year. Finally, relativity for the MP RVUs is maintained by both redistribution of MP RVUs and adjustments to the CF, when necessary (under our proposed methodology this is true annually; based on our established methodology the redistribution of the MP RVUs only takes place once every 5 years and the CF is adjusted otherwise). Therefore, to make a more precise assessment of the net reduction in expenditures that are the result of adjustments to the RVUs for misvalued codes, we would need to compare, for the included codes, the update year's total work RVUs (by volume), direct PE RVUs (by volume), indirect PE RVUs (by volume), and MP RVUs (by volume) to the same RVUs in the current year, prior to the application of any scaling factors or adjustments. This would make for a direct comparison between years.

However, this approach would mean that the calculation of the net reduction in expenditures would occur within various steps of the PFS ratesetting methodology. Although we believe that this approach would be transparent and external stakeholders could replicate this method, it might be difficult and time-consuming for stakeholders to do so. We also noted that when we modeled the interaction of the statutory phase-in requirement under section 220(e) of the PAMA and the calculation of the target using this approach during the development of this proposal, there were methodological challenges in making these calculations. When we simulated the two approaches using information from prior years, we found that both approaches generally resulted in similar estimated net reductions. After considering these options, we proposed to use the simpler approach of comparing the total RVUs (by volume) for the relevant set of codes in the current year to the update year, and divide that result by the total RVUs (by volume) for the current year. We solicited comments on whether

comparing the update year's work RVUs, direct PE RVUs, indirect PE RVUs, and MP RVUs for the relevant set of codes (by volume) prior to the application of any scaling factors or adjustments to those of the current year would be a preferable methodology for determining the estimated net reduction.

The following is a summary of the comments we received regarding our proposal.

Comment: A few commenters supported CMS' selection of the simpler formula to calculate the target over the more precise but more complex formula since it is simpler and easier to understand. One commenter stated that CMS did not indicate exactly how similar the two proposals are or which method estimated the larger reduction, and stated that CMS should make this information available in the final rule and consider revising the approach in CY 2017 rulemaking and use the method that results in the larger reduction.

Response: We do not agree that CMS should do both calculations and determine which to use based solely on which results in the higher amount. We note that the target for net reductions in expenditures from adjustments to values for misvalued codes is a multi-year provision and we believe neither of the two methodologies is assured to produce a consistently higher result from year to year. Since the majority of commenters agree that the more intuitive approach to estimating the net reduction in expenditures is preferable to the more precisely accurate approach, we are finalizing our approach as proposed.

Comment: One commenter requested that CMS count the full reduction in payment for codes subject to the phase-in required under section 1848(c)(7) of the Act as discussed in section II.F. of this final rule with comment period, toward the target in the first year. Another commenter stated that CMS used the fully reduced RVUs in calculating the target, not the first year phase-in RVUs, and therefore, CMS should include the full impact of the change in the equipment utilization rate for linear accelerators toward the target calculation. Similarly, the commenter requested that any future multi-year phase-in proposals should similarly be counted toward the target in the first year.

Response: The target provision requires the calculation of an estimated net reduction measure between 2 years of PFS expenditures. As we have detailed in the above paragraphs, we believe that under certain specific circumstances, changes should be excluded from that estimate; but we do not believe we can include changes that would occur in future years based solely on the rulemaking cycle during which policies are established. Therefore we will not count the full reduction in payment for codes that are subject to the phase-in toward the calculation of the net reduction in expenditures for the first year. With regard to the commenter that stated that CMS used the fully reduced RVUs in calculating the target, we note that we only used the first year phase-in RVUs and, for the reasons stated above, believe that we are limited to including only the changes in the immediate year in the calculation of the target.

After consideration of the public comments received, we are finalizing the policy to calculate the net reduction using the simpler method as proposed.

4. Target Achievement for CY 2016

We refer readers to the regulatory impact analysis section of this final rule with comment period for our final estimate of the net reduction in expenditures relative to the 1 percent target for CY 2016, and the resulting adjustment required to be made to the conversion factor. Additionally, we refer readers to the public use file that provides a comprehensive description of how the target is calculated as well as the estimated impact by code family on the CMS Web site under the supporting data files for the CY 2016 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html*.

F. Phase-In of Significant RVU Reductions

Section 1848(c)(7) of the Act, as added by section 220(e) of the PAMA, also specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased-in over a 2-year period. Although section 220(e) of the PAMA required the phase-in to begin for 2017, section 202 of the ABLE Act amended section 1848(c)(7) of the Act to require that the phase-in begin for CY 2016.

In the CY 2016 PFS proposed rule, we proposed a methodology to implement this statutory provision. In developing this methodology, we identified several aspects of our approach for which we specifically solicited comments, given the challenges inherent in implementing this provision in a manner consistent with the broader statutory construct of the PFS. We organized this discussion by identifying and explaining these aspects in particular but we solicited comments on all aspects of our proposal.

1. Identifying Services That Are Not New or Revised Codes

As described in this final rule with comment period, the statute specifies that services described by new or revised codes are not subject to the phase-in of RVUs. We believe this exclusion recognizes the reality that there is no practical way to phase-in changes to RVUs that occur as a result of a coding change for a particular service over 2 years because there is no relevant reference code or value on which to base the transition. To determine which services are described by new or revised codes for purposes of the phase-in provision, we proposed to apply the phase-in to all services that are described by the same, unrevised code in both the current and update year, and to exclude codes that describe different services in the current and update year. This approach excludes services described by new codes or existing codes for which the descriptors were altered substantially for the update year to change the services that are reported using the code. We also are excluding as new and revised codes those codes that describe a different set of services in the update year when compared to the current year by virtue of changes in other, related codes, or codes that are part of a family with significant coding revisions. For example, significant coding revisions within a family of codes can change the relationships among codes to the extent that it changes the way that all services in the group are reported, even if some individual codes retain the same number or, in some cases, the same descriptor. Excluding codes from the phase-in when there are significant revisions to the code family would also help to maintain the appropriate rank order among codes in the family, avoiding years for which RVU changes for some codes in a family are in transition while others were fully implemented. This application of the phase-in is also consistent with previous RVU transitions, especially for PE RVUs, for which we only applied transition values to those codes that described the same service in both the current and the update years. We also excluded from the phase-in as new and revised codes those codes with changes to the global period, since the code in the current year would not describe the

same units of service as the code in the update year.

We received few comments regarding this aspect of our proposal, and some of the comments suggested changes that would require changes to the statutory provision that requires the phase-in of significant changes in RVUs. The following is a summary of the comments that we received.

Comment: One commenter agreed with CMS' broad definition of new or revised.

Response: We appreciate the commenter's feedback and support.

Comment: One commenter did not agree that new and revised services should be excluded from the phase-in, and suggested that the phase-in be applied more broadly.

Response: Section 1848(c)(7) of the Act specifies that services described by new or revised codes are not subject to the phase-in of significant reductions in RVUs. Additionally, because RVUs are assigned to individual codes, we do not believe there would be a straightforward or transparent way to phase in reductions for services that are described by new or revised codes between the years for which a phase-in would apply.

Comment: One commenter urged CMS to include in the phase-in codes that had interim Final values for CY 2015 and have substantial reductions of 20 percent or greater as compared to the 2014 values.

Response: We do not believe it would be consistent with the statutory provision to phase in changes in values between 2015 and 2016 based on 2014 values. Section 1848(c)(7) of the Act, as amended, specifies that the phase-in of significant reductions in values begins for fee schedules established beginning with 2016.

Comment: One commenter stated that any code that has a decrease in value of over 20 percent due to repricing of expensive supplies (for example, over $500) should be excluded from the phase-in provision.

Response: We appreciate the commenter's feedback and understand the rationale for the request; however, we do not believe that we have the discretion to exempt codes from the phase-in, regardless of the reason for the reduction.

After consideration of the public comments received on this aspect of our proposal to implement the phase-in of significant changes in RVUs, we are finalizing the implementation of the phase-in for significant (20 percent or greater) reductions in RVUs as proposed.

2. Estimating the 20 Percent Threshold

Because the phase-in of significant reductions in RVUs falls within the budget neutrality requirements specified in section 1848(c)(2)(B)(ii)(II) of the Act, we proposed to estimate total RVUs for a service prior to the budget-neutrality redistributions that result from implementing phase-in values. We recognize that the result of this approach could mean that some codes may not qualify for the phase-in despite a reduction in RVUs that is ultimately slightly greater than 20 percent due to budget neutrality adjustments that are made after identifying the codes that meet the threshold in order to reflect the phase-in values for other codes. We believe the only alternative to this approach is not practicable, since it would be circular, resulting in cyclical iteration.

The following is a summary of the comments we received regarding this proposal.

Comment: One commenter supported CMS' proposal for estimating the 20 percent threshold.

Response: We appreciate the commenter's support.

Comment: Another commenter did not agree with the proposal to estimate total RVUs for a service prior to the budget-neutrality redistributions that result from implementing phase-in values. The commenter stated that the methodology should not give inequitable treatment to any particular specialty, and instead it should apply to all codes that are cut greater than 20 percent in the final analysis.

Response: We appreciate that our proposed methodology could, in the end, result in no phase-in for some codes that ultimately do have a 20 percent or greater reduction in value after application of required budget neutrality adjustment. However, we have no reason to believe that this situation, resulting from using initial unadjusted RVUs to identify significant RVU reductions, would disadvantage one specialty more than the next. Therefore, we also do not believe that our proposed approach is likely to result in unequitable treatment to any one specialty over another.

After consideration of the public comments received on this aspect of our proposal, we are finalizing without modification our proposal to identify significant reductions in RVUs based on a comparison of RVUs before application of budget neutrality adjustment.

3. RVUs in the First Year of the Phase-In

Section 1848(c)(7) of the Act states that the applicable adjustments in work, PE, and MP RVUs shall be phased-in over a 2-year period when the RVU reduction for a code is estimated to be equal to or greater than 20 percent. We believe that there are two reasonable ways to determine the portion of the reduction to be phase-in for the first year. Most recent RVU transitions have distributed the values evenly across several years. For example, for a 2-year transition we would estimate the fully implemented value and set a rate approximately 50 percent between the value for the current year and the value for the update year. We believe that this is the most intuitive approach to the phase-in and is likely the expectation for many stakeholders. However, we believe that the 50 percent phase-in in the first year has a significant drawback. For instance, since the statute establishes a 20 percent threshold as the trigger for phasing in the change in RVUs, under the 50 percent phase-in approach, a service that is estimated to be reduced by a total of 19 percent for an update year would be reduced by a full 19 percent in that update year, while a service that is estimated to be reduced by 20 percent in an update year would only be reduced 10 percent in that update year.

The logical alternative approach is to consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach would be to reduce the service by the maximum allowed amount (that is, 19 percent) in the first year, and then phase in the remainder of the reduction in the second year. Under this approach, the code that is reduced by 19 percent in a year and the code that would otherwise have been reduced by 20 percent would both be reduced by 19 percent in the first year, and the latter code would see an additional 1 percent reduction in the second year of the phase-in. For most services, this would likely mean that the majority of the reduction would take place in the first year of the phase-in. However, for services with the most drastic reductions (greater than 40 percent), the majority of the reduction would not take place in the first year of the phase-in.

After considering both of these options, we proposed to consider the 19 percent reduction as the maximum 1-year reduction and to phase-in any remaining reduction greater than 19 percent in the second year of the phase-in. We believe that this approach is

more equitable for codes with significant reductions but that are less than 20 percent. We solicited comments on this proposal.

The following is a summary of the comments we received regarding this proposal.

Comment: Several commenters supported CMS' proposal to consider the 19 percent reduction as the maximum 1-year reduction and to phase in any remaining reduction greater than 19 percent in the second year of the phase-in.

Response: We appreciate the commenters' feedback and support.

Comment: Several commenters did not support CMS' proposal, and instead stated that CMS should spread the transition evenly over both years—meaning a 50 percent phase-in for year one and year two. One commenter stated that this would lead to a more equitable payment system and allow physicians more time to make changes in their practices to accommodate for reductions. Another commenter acknowledged that codes with reductions that are less than 20 percent and not phased-in may experience greater reductions in the first year, however the commenter stated that a more gradual phase-in for practices facing steeper cuts should be the paramount principle for any policy to transition cuts at or greater than 20 percent.

Response: We have considered the comments and understand the commenters' concerns. We acknowledge some commenters' views that the gradual phase-in of reductions for services that would experience reductions above the threshold (20 percent) is an important principle in determining the best way to implement the phase-in provision. However, we note that the 19 percent reduction maximum also has the advantage of applying the most gradual reduction to services with the greatest reductions (greater than 40 percent). Furthermore, we remain concerned about several practical problems that could arise from utilizing the 50 percent approach. The first of these problems would occur whenever some codes within the same family of services would meet threshold reductions while others do not. For example if two codes in a four code family would be reduced by an estimated 20 percent while the other two were estimated to be reduced by 19 percent, then the first two would be reduced by 10 percent while the remaining two would be reduced by 19 percent. Such a scenario could easily create rank order anomalies within families of codes. The risks of such anomalies is associated with the financial incentives toward inaccurate downward coding that could not only jeopardize Medicare claims data as an accurate source of information, but more directly could have serious consequences within our ratesetting methodologies for both purposes of budget neutrality and for allocation of PE and MP RVUs. The second practical issue with the 50 percent approach would be that the impact of using the estimated reduction instead of the final reduction to determine whether or not particular codes qualify for the phase-in would be significant. Under the 19 percent approach, values for codes with reductions estimated to be very close to 19 percent would be similar regardless of whether or not we engage in various iterations of budget neutrality adjustments to determine whether or not the phase-in applies. Under the 50 percent approach, determinations that result from repeated iterations of ratesetting calculations and budget neutrality adjustments could decide significant changes in the rates for individual codes (up to 10 percent of the total payment.)

In order to avoid these circumstances and apply the most gradual phase-in possible to codes with the most significant reductions, we continue to believe that a 19 percent reduction as the maximum 1-year reduction is the better approach to determining the phase-in amount.

Comment: One commenter requested that the phase-in period be extended to a greater number of years when entire code groupings are impacted, and when multiple codes are identified within a code grouping and they significantly impact revenue to a specialist or specific provider.

Response: The statute specifies a 2-year phase-in period and does not provide authority to extend the phase-in period as described by the commenter.

After consideration of the comments, we are finalizing the policy to phase in 19 percent of the reduction in value in the first year, and the remainder of the reduction in the second year, as proposed.

4. Applicable Adjustments to RVUs

Section 1848(c)(7) of the Act provides that the applicable adjustments in work, PE, and MP RVUs be phased-in over 2 years for any service for which total RVUs would otherwise be decreased by an estimated amount equal to or greater than 20 percent as compared to the total RVUs for the previous year. However, for several thousand services, we develop separate RVUs for facility and nonfacility sites of service. For nearly one thousand other services, we develop separate RVUs for the professional and technical components of the service, and sum those RVUs for global billing. Therefore, for individual practitioners furnishing particular services to Medicare beneficiaries, the relevant changes in RVUs for a particular code are based on the total RVUs for a code for a particular setting (facility/nonfacility) or for a particular professional/technical (PC/TC) component. We believe the most straightforward and fair approach to addressing both the site of service differential and the codes with professional and technical components is to consider the RVUs for the different sites of service and components independently for purposes of identifying when and how the phase-in applies. We proposed, therefore, to estimate whether a particular code met the 20 percent threshold for change in total RVUs by taking into account the total RVUs that apply to a particular setting, or to a particular professional or technical component. This would mean that if the change in total facility RVUs for a code met the threshold, then that change would be phased in over 2 years, even if the change for the total nonfacility RVUs for the same code would not be phased in over 2 years. Similarly, if the change in the total RVUs for the technical component of a service meets the 20 percent threshold, then that change would be phased in over 2 years, even if the change for the professional component did not meet the threshold. (Because the global is the sum of the professional and technical components, the portion of the global attributable to the technical component would then be phased-in, while the portion attributable to the professional component would not be.)

However, we note that we create the site of service differential exclusively by developing independent PE RVUs for each service in the nonfacility and facility settings. That is, for these codes, we use the same work RVUs and MP RVUs in both settings and vary only the PE RVUs to implement the difference in resources depending on the setting. Similarly, we use the work RVUs assigned to the professional component codes as the work RVUs for the service when billed globally. Like the codes with the site of service differential, the PE RVUs for each component are developed independently. The resulting PE RVUs are then summed for use as the PE RVUs for the code, billed globally. Since variation of PE RVUs is the only constant across all individual codes,

codes with site of service differentials, and codes with professional and technical components, we are proposing to apply all adjustments for the phase-in to the PE RVUs.

We considered alternatives to this approach. For example, for codes with a site of service differential, we considered applying a phase-in for codes in both settings (and all components) whenever the total RVUs in either setting reached the 20 percent threshold. However, there are cases where the total RVUs for a code in one setting (or one component) may reach the 20 percent reduction threshold, while the total RVUs for the other setting (or other component) are increasing. In those cases, applying phase-in values for work or MP RVUs would mean applying an additional increase in total RVUs for particular services. We also considered implementing the phase-in of the RVUs for the component codes billed globally by comparing the global value in the prior year versus the global value in the current year and applying the phase-in to the global value for the current year and letting the results flow through to the PC and TC for each code, irrespective of their respective changes in value. Similarly, for the codes with site of service differentials, we considered developing an overall, blended set of overall PE RVUs using a weighted average of site of service volume in the Medicare claims data and then comparing that blended value in the prior year versus the blended value in the current year and applying the phase-in to the value for the current year before re-allocating the blended value to the respective PE RVUs in each setting, regardless of the changes in value for nonfacility or facility values. We did not pursue this approach for several reasons. First, the resulting phase-in amounts would not relate logically to the values paid to any individual practitioner, except those who bill the PC/TC codes globally. Second, the approach would be so administratively complicated that it would likely be difficult to replicate or predict.

Therefore, we have concluded that applying the adjustments to the PE RVUs for all individual codes in order to effect the appropriate phase-in amount is the most straightforward and fair approach to implementing the 2-year phase-in of significant reductions of total RVUs.

The following is a summary of the comments we received regarding this proposal.

Comment: One commenter requested that CMS confirm that it would apply all adjustments for the phase-in to the PE RVUs only in situations in which just one site of service, or just one component is subject to the phase-in. That is, if both sites of service or both components of a code were subject to the phase-in, then any adjustments would be applied to work and malpractice RVUs as well.

Response: As discussed in the proposal, all adjustments for the phase-in, including for codes with facility and nonfacility RVUs and PC/TC splits, will be applied to the PE RVUs only. We acknowledge that for some codes it would be hypothetically possible to phase in the reductions proportionally across all three RVU components. As we explained in the proposed rule, it would not be practical to do so for services with site of service differentials since each of the three RVU components represent a different proportion of overall nonfacility or facility RVUs. Therefore, we believe this alternative approach could only work for codes without site of service differentials and those without PC/TC splits, which represents a minority of PFS services. We believe that applying the phase-in for these large categories of codes differently than for the rest of PFS codes would be confusing to the public and make adjustments unpredictable since they would be based on whether or not the service priced in the opposite setting met the phase-in threshold. Furthermore, we remind commenters that because the work RVU is an important allocator of indirect PE in the established methodology, the overall payment impact of any changes in work RVUs is also automatically reflected in corresponding changes to the PE RVUs, whereas changes to direct PE inputs do not have a parallel impact on work RVUs. Therefore, even for individual codes for which it might be possible to establish phase-in values for work RVUs, the necessary adjustments would necessarily be weighted more heavily in PE RVUs.

Comment: With regard to CMS' proposal to consider the RVUs for different sites of service and components independently for the purposes of identifying when and how the phase-in applies, one commenter expressed concerns that the proposed approach ignores the spirit of section 220(e) of the PAMA to benefit physician practices by dampening the year to year impact of large payment reductions. The commenter stated that if CMS adjusts only the PE RVUs, then a large number of codes with greater than 20 percent work RVU reductions could be excluded. The commenter urged CMS to clarify its intent to dampen the effects of year to year reductions to both work RVUs and PE RVUs independently, even for codes with separate facility and non-facility PE RVUs.

Response: We appreciate the commenter's feedback and we acknowledge that our proposed approach would not dampen the year to year reductions in work RVUs. However, our approach would dampen the effect of any payment reductions for all codes, including those reductions that would result from reductions to work RVUs when such reductions contributed to an overall reduction of 20 percent or greater, consistent with the statutory provision. As a practical matter, we believe that practitioners reporting services furnished to Medicare beneficiaries and paid through the PFS would be paid very similar amounts regardless of which approach we implemented. We also note that the commenter did not provide any information that would help us to understand how the suggested phase-in could be applied to services with site of service differentials.

After consideration of the comments received, we are finalizing this aspect of the phase-in methodology as proposed.

The list of codes subject to the phase-in and the associated RVUs that result from this methodology are available on the CMS Web site under downloads for the CY 2016 PFS final rule with comment period at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

G. Changes for Computed Tomography (CT) Under the Protecting Access to Medicare Act of 2014 (PAMA)

Section 218(a)(1) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93) amended section 1834 of the Act by establishing a new subsection 1834(p). Effective for services furnished on or after January 1, 2016, new section 1834(p) of the Act reduces payment for the technical component (TC) of applicable CT services paid under the Medicare PFS and applicable CT services paid under the OPPS (a 5-percent reduction in 2016 and a 15-percent reduction in 2017 and subsequent years). The applicable CT services are identified by HCPCS codes 70450 through 70498; 71250 through 71275; 72125 through 72133; 72191 through 72194; 73200 through 73206; 73700 through 73706; 74150 through 74178; 74261 through 74263; and 75571 through 75574 (and any succeeding codes). As specified in section 1834(p)(4) of the Act, the reduction applies for applicable services furnished using equipment that does not meet

each of the attributes of the National Electrical Manufacturers Association (NEMA) Standard XR–29–2013, entitled ''Standard Attributes on CT Equipment Related to Dose Optimization and Management.'' Section 1834(p)(4) of the Act also specifies that the Secretary may apply successor standards through rulemaking.

Section 1834(p)(6)(A) of the Act requires that information be provided and attested to by a supplier and a hospital outpatient department that indicates whether an applicable CT service was furnished that was not consistent with the standard set forth in section 1834(p)(4) of the Act (currently the NEMA CT equipment standard) and that such information may be included on a claim and may be a modifier. Section 1834(p)(6)(A) of the Act also provides that such information must be verified, as appropriate, as part of the periodic accreditation of suppliers under section 1834(e) of the Act and hospitals under section 1865(a) of the Act. Section 218(a)(2) of the PAMA made a conforming amendment to section 1848 (c)(2)(B)(v) of the Act by adding a new subclause (VIII), which provides that, effective for fee schedules established beginning with 2016, reduced expenditures attributable to the application of the quality incentives for computed tomography under section 1834(p) of the Act shall not be taken into account for purposes of the budget neutrality calculation under the PFS.

To implement this provision, in the CY 2016 PFS proposed rule (80 FR 41716), we proposed to establish a new modifier to be used on claims that describes CT services furnished using equipment that does not meet each of the attributes of the NEMA Standard XR–29–2013. We proposed that, beginning January 1, 2016, hospitals and suppliers would be required to use this modifier on claims for CT scans described by any of the CPT codes identified in this section (and any successor codes) that are furnished on non-NEMA Standard XR–29–2013-compliant CT scans. We stated that the use of this proposed modifier would result in the applicable payment reduction for the CT service, as specified under section 1834(p) of the Act. We received the following comments on our proposal to require the modifier to be used on claims:

Many commenters endorsed the use of quality incentives to improve patient safety and optimize the use of radiation when providing CT diagnostic imaging services. Several commenters were supportive of the proposal to establish the modifier to identify CT services furnished using equipment that does not meet each of the attributes of the NEMA Standard XR–29–2013.

Comment: Several commenters requested that we delay implementation of section 1834(p) of the Act so that they have additional time to comply before the payment reduction becomes effective.

Response: The statute requires that we apply the payment adjustment for computed tomography services furnished on or after January 1, 2016. Given this language, we believe that we must implement this provision beginning January 1, 2016. Therefore, we are not delaying implementation of this provision. We note that the payment reduction for 2016 is 5 percent, and it then increases to 15 percent in subsequent years. Hospitals and suppliers that furnish services that do not meet the equipment standard as of January 1, 2016, will receive this 5 percent payment reduction during 2016, but will have an opportunity to upgrade their CT scanners before the larger payment adjustment that takes effect beginning in CY 2017.

Comment: One commenter cited section 1834 (p)(4) of the Act, which specifies that through rulemaking, the Secretary may apply successor standards for CT equipment. The commenter indicated that CMS should develop successor standards that exempt CT scans performed on cone beam CT (CBCT) scanners that are FDA cleared only for imaging of the head from the requirement for Automatic Exposure Control (AEC) capability. This request was based on the AEC capability being unavailable on CBCT scanners.

Response: Although we agree with the commenter that the Secretary has authority to apply successor standards for CT equipment through notice and comment rulemaking, we would like to gain some experience with the NEMA Standard XR–29–2013 before adopting a successor standard. Therefore, we are not adopting a successor standard to the NEMA Standard XR–29–2013 in this final rule with comment period, but may consider doing so in future rulemaking.

After consideration of the public comments we received, we are finalizing the establishment of new modifier, ''CT.'' This 2-digit modifier will be added to the HCPCS annual file as of January 1, 2016, with the label ''CT,'' and the long descriptor ''Computed tomography services furnished using equipment that does not meet each of the attributes of the National Electrical Manufacturers Association (NEMA) XR–29–2013 standard''.

Beginning January 1, 2016, hospitals and suppliers will be required to report the modifier ''CT'' on claims for CT scans described by any of the CPT codes identified in this section (and any successor codes) that are furnished on non-NEMA Standard XR–29–2013-compliant CT scanners. The use of this modifier will result in the applicable payment reduction for the CT service, as specified under section 1834(p) of the Act.

H. Valuation of Specific Codes

1. Background

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since inception of the PFS, it has also been a priority to revalue services regularly to assure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the five-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011. Under the five-year review process, revisions in RVUs were proposed in a proposed rule and finalized in a final rule. In addition to the five-year reviews, in each year beginning with CY 2009, CMS and the RUC have identified a number of potentially misvalued codes using various identification screens, as discussed in section II.B.5. of this final rule with comment period. Each year, when we received RUC recommendations, our process has been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accept public comment about those valuations.

For services furnished during the calendar year following the publication of interim final rates, we pay for services based upon the interim final values established in the final rule with comment period. In the final rule with comment period for the subsequent year, we consider and respond to public comments received on the interim final values, and make any appropriate adjustments to values based on those comments. We then typically finalize the values for the codes.

2. Process for Valuing New, Revised, and Potentially Misvalued Codes

In the CY 2015 PFS final rule with comment period, we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. CY 2016 represents a transition year for this new process. For CY 2016, we proposed new values in the CY 2016 proposed rule for the codes for which we received complete RUC recommendations by February 10, 2015. For recommendations regarding any new or revised codes received after the February 10, 2015 deadline, including updated recommendations for codes included in the CY 2016 proposed rule, we are establishing interim final values in this final rule with comment period, consistent with previous practice. In this final rule with comment period, we considered all comments received in response to proposed values for codes in our proposed rule, including alternative recommendations to those used in developing the proposed rule.

Beginning with valuations for CY 2017, the new process will be applicable to all codes. That is, beginning with rulemaking for CY 2017, we will propose values for the vast majority of new, revised, and potentially misvalued codes and consider public comments before establishing final values for the codes; use G-codes as necessary to facilitate continued payment for certain services for which we do not receive recommendations in time to propose values; and adopt interim final values in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

For CY 2016, we received RUC recommendations prior to February 10, 2015 for many new, revised and potentially misvalued codes and are establishing final values for those codes in this final rule with comment period. However, the RUC recommendations included CPT tracking codes instead of the actual 2016 CPT codes, which were first made available to the public subsequent to the publication of the CY 2016 proposed rule with comment period. Because CPT procedure codes are 5 alpha-numeric characters but CPT tracking codes typically have 6 or 7 alpha-numeric characters and CMS systems only utilize 5-character HCPCS codes, we developed and used alternative 5-character placeholder codes for use in the proposed rule. The final CPT codes are included and used for purposes of discussion in this final rule with comment period. Table 9 lists the CPT tracking codes, the CMS placeholder codes, and the final CPT codes for all new CPT codes included in the CY 2016 PFS proposed rule.

TABLE 9—2016 FINAL RULE HCPCS PLACEHOLDER TO CPT CODE NUMBERS

3. Methodology for Establishing Work RVUs

We conducted a review of each code identified in this section and reviewed the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our review of recommended work RVUs and time generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the Medicare PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assessed the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalk to key reference or similar codes, and magnitude estimation. More information on these issues is available in that rule. When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process. The building block methodology is used to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code.

Components used in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could be the CPT codes that make up the bundled code and the inputs associated with those codes. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, CMS has frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. Since the statute specifically defines the work component as the resources in time and intensity required in furnishing the service and the published literature on valuing work has recognized the key role of time in overall work, we have also refined the work RVUs for particular codes in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intra-service time.

Comment: Several commenters objected to CMS' use of these methodologies as unprecedented and invalid in the context of the development of PFS RVUs.

Response: We appreciate that many commenters, including the RUC, have maintained that magnitude estimation, informed by survey results, is the only appropriate method for valuation of PFS services. However, we have observed that the approaches used by the RUC in developing recommended work RVUs have resulted in recommended values that do not adequately address significant changes in assumptions regarding the amount of time required to furnish particular PFS services. Since section 1848(c)(1)(A) of the Act explicitly identifies time as one of the two kinds of resources that comprise the work component of PFS payment, we do not believe that our use of the above methodologies is inconsistent with the statutory requirements related to the maintenance of work RVUs, and we have regularly used these and other methodologies in developing values for PFS services. The PFS incorporates cross-specialty and cross-organ system relativity. Valuing services requires an assessment of relative value and takes into account the clinical intensity and time required to furnish a service. In selecting which methodological approach will best determine the appropriate value for a service, we consider the current and recommended work and time values, as well as the intensity of the service, all relative to other services. In our review of RUC-recommended values, we have noted that the RUC also uses a variety of methodologies to develop work RVUs for individual services, and subsequently validates the results of these approaches through magnitude estimation. We believe that our discrete use of methodologies that compare the time resources among PFS codes is fundamentally similar to that approach, but better facilitates our ability to identify the most accurate work RVU for individual services by explicitly considering the significance of time in the estimate of total work.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently there are six preservice time packages for services typically furnished in the facility setting, reflecting the different combinations of straightforward or difficult procedure, straightforward or difficult patient, and without or with sedation/anesthesia. Currently, there are three preservice time packages for services typically furnished in the nonfacility setting, reflecting procedures without and with sedation/anesthesia care.

We have developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an E/M service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. We believe that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes $\times$ 0.0224 IWPUT) if we do not believe the overlap in time has already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically provided on the same day as an E/M service.

Table 13 contains a list of codes for which we proposed work RVUs; this includes all RUC recommendations received by February 10, 2015. When the proposed work RVUs varied from those recommended by the RUC or for which we do not have RUC

recommendations, we address those codes in the portions of this section that are dedicated to particular codes. The work RVUs and other payment information for all CY 2016 payable codes are available in Addendum B. Addendum B is available on the CMS Web site under downloads for the CY 2016 PFS final rule with comment period at *http://www.cms.gov/physicianfeesched/downloads/.* The time values for all CY 2016 codes are listed in a file called ''CY 2016 PFS Work Time,'' available on the CMS Web site under downloads for the CY 2016 PFS final rule with comment period at *http://www.cms.gov/physicianfeesched/downloads/*.

4. Methodology for Establishing the Direct PE Inputs Used To Develop PE RVUs

a. Background

On an annual basis, the RUC provides CMS with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code-by-code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the Medicare PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of RUC-recommended direct PE inputs includes many refinements that are common across codes as well as refinements that are specific to particular services. Table 16 details our refinements of the RUC's direct PE recommendations at the code-specific level. In this final rule with comment period, we address several refinements that are common across codes, and refinements to particular codes are addressed in the portions of this section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is $0.32 or less, the refinement has no impact on the interim final PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. We also note that nearly half of the refinements listed in Table 14 result in changes under the $0.32 threshold and are unlikely to result in a change to the final RVUs.

We also note that the final direct PE inputs for CY 2016 are displayed in the final CY 2016 direct PE input database, available on the CMS Web site under the downloads for the CY 2016 final rule at *www.cms.gov/PhysicianFeeSched/.* The inputs displayed there have also been used in developing the CY 2016 PE RVUs as displayed in Addendum B of this final rule.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. Although the direct PE input recommendations generally correspond to the work time values associated with services, we believe that in some cases inadvertent discrepancies between work time values and direct PE inputs should be refined in the establishment of interim final direct PE inputs. In other cases, CMS refinement of RUC-recommended work times prompts necessary adjustments in the direct PE inputs.

We proposed to remove the 6 minutes of clinical labor time allotted to ''discharge management, same day (0.5 × 99238)'' in the facility setting from a number of procedures under review. We proposed to align the clinical labor for discharge day management to align the work time assigned in the work time file. We made these proposed refinements under the belief that we should not allocate clinical labor staff time for discharge day management if there is no discharge visit included in the procedure's global period.

Comment: Several commenters, including the RUC, disagreed with CMS and suggested that the clinical staff time in the facility setting may not conform with work time for discharge day management in a given code. Commenters stated that the work discharge time reflects the work involved in discharging from a facility setting. Therefore, if the service is typically performed in the nonfacility setting, the post-service time for a CPT code 99238 discharge visit would not be included. However, since the inputs for PE are differentiated by site of service, the time for discharge day might be included in the facility inputs, even if the service is infrequently provided in the facility setting overall. Although the commenters agreed that there should not be clinical staff time for discharge management assigned to 0-day global procedures, the commenters requested that this clinical staff time be restored for the nine 10-day global procedures under review. Commenters stressed that clinical staff must instruct the patient regarding home care prior to the post-operative visit and call in any necessary prescriptions. Commenters also requested that this clinical labor time be included as two, 3-minute phone calls under the task ''Conduct phone calls/call in prescriptions.''

Response: We understand and agree that when cases typically performed in the non-facility setting are performed in the facility setting, discharge day management may not be typical for the code overall even if discharge day management activities may be typical when the service is furnished in the facility setting. However, we also believe that if a patient's conditions are serious enough to warrant treatment in the facility setting, then it is likely that the patient will also be receiving additional services that already include the resource costs involved with clinical labor tasks associated with discharge day management. Therefore, we do not believe that it is appropriate to include the additional time for staff phone calls for these services generally furnished in the office setting.

We have thus far been addressing the subject of discharge day management on a code-by-code basis. Based on the comments received, we believe there is a need for a broader policy concerning the proper treatment of this issue. We will consider this subject for future rulemaking.

After consideration of the comments received, we are finalizing our current

refinements to discharge day management clinical labor time.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We continue to appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We have clarified this principle, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up post-operative visits included in the global period for a service, the equipment time would also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the pre-service or post-service tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a pre-service or post-service task related to the procedure. We also note that we believe these same assumptions would apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items. Some stakeholders have objected to this rationale for our refinement of equipment minutes on this basis and have reiterated these objections in comments regarding the proposed direct PE inputs. We are responding to these comments by referring the commenters to our extensive discussion in response to the same objections in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice period, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the ''PE worksheets.'' For most of these described tasks, there are a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, CMS staff reviews the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the pre-service clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

In general, clinical labor tasks fall into one of the categories on the PE worksheets. In cases where tasks cannot be attributed to an existing category, the tasks are labeled ''other clinical activity.'' We believe that continual addition of new and distinct clinical labor tasks each time a code is reviewed under the misvalued code initiative is likely to degrade relativity between newly reviewed services and those with already existing inputs. To mitigate the potential negative impact of these additions, we review these tasks to determine whether they are fully distinct from existing clinical labor tasks, typically included for other clinically similar services under the PFS, and thoroughly explained in the recommendation. For those tasks that do not meet these criteria, we do not accept these newly recommended clinical labor tasks; two examples of such tasks encountered during our review of the recommendations include ''Enter data into laboratory information system, multiparameter analyses and field data entry, complete quality assurance documentation'' and ''Consult with pathologist regarding representation needed, block selection and appropriate technique.''

In conducting our review of the RUC recommendations for CY 2016, we noted that several of the recommended times for clinical labor tasks associated with pathology services differed across codes, both within the CY 2016 recommendations and in comparison to codes currently in the direct PE database. We refer readers to Table 16 in section II.A.3. of this final rule with comment period for a discussion of these standards.

Comment: Several commenters stated that our standard clinical labor inputs for digital imaging inputs for many different codes do not reflect the accurate number of minutes associated with clinical labor tasks for individual services.

Response: In the CY 2015 PFS final rule with comment period (79 FR 67561), we finalized the transition from film-based to digital direct PE inputs for imaging services. In the CY 2016 PFS proposed rule, we sought comment on the appropriate values for the clinical labor tasks associated with digital imaging. Please see section II.B. of this rule for a discussion of those policies. We believe that adherence to these standards produces the most accurate estimate of the resource costs for these kinds of tasks and supports relativity within the development of PE RVUs. For these reasons, absent extenuating factors for specific codes, we are finalizing interim final direct PE inputs that adhere to these standards.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC recommendations include items that are not clinical labor, disposable supplies, or medical equipment that cannot be allocated to individual services or patients. Two examples of such items are ''emergency service container/safety kit'' and ''service contract.'' We have addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use these recommended items as direct PE inputs in the calculation of PE RVUs.

(5) Moderate Sedation Inputs

Over several rulemaking cycles, we have proposed and finalized a standard package of direct PE inputs for services where moderate sedation is considered inherent in the procedure (76 FR 73043 through 73049). Our CY 2016 proposed direct PE inputs conform to these policies. This includes not

incorporating the recommended power table (EF031) where it was included during the intraservice period, since a stretcher is the standard item in the moderate sedation package. These refinements are reflected in the final CY 2016 PFS direct PE input database and detailed in Table 16.

Comment: One commenter agreed with CMS' proposal to include the use of a stretcher in the standard moderate sedation package, and that the time allocated for the stretcher should be the entire post procedure recovery period. The commenter recommended that CMS work with the RUC and specialty groups before removing the power table input from the service period of any codes.

Response: We appreciate the commenter's support for the standard moderate sedation package, but we do not believe we should consult with the RUC prior to implementing the standards in developing or finalizing direct PE inputs. However, will consider the appropriate direct PE inputs for each code under review.

(6) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. Some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2016, we received invoices for several new supply and equipment items. We have accepted the majority of these items and added them to the direct PE input database. Tables 18 and 19 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.A. of this final rule with comment period, we encourage stakeholders to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encourage stakeholders to provide invoices or other information to improve the accuracy of pricing for these items in the direct PE database. We remind stakeholders that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 18 and 19 also include the number of invoices received as well as the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that stakeholders will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that stakeholders are more likely to have better pricing information for items used more frequently. We are concerned that a single invoice may not be reflective of typical costs and encourage stakeholders to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we have included the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the proposed PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

The following is a summary of the comments we received regarding new supply and equipment items.

Comment: Several commenters stated that they had concerns regarding the process of pricing new supply and equipment items for the PFS. The current process requires the submission of recently paid invoices for CMS to consider pricing a new direct PE item. The commenters asked CMS to develop a new pathway to submit pricing information that will protect physicians and vendors, since publishing copies of paid invoices, even when redacted, does not sufficiently protect private identities.

Response: We share commenters' concerns about protecting the privacy of practitioners and vendors during invoice submission. We welcome and will consider additional feedback and suggestions submitted by stakeholders regarding alternate avenues to provide updated pricing information for individual supplies and equipment.

Comment: A commenter stated that although the commenter understands that CMS cannot accurately value the typical cost of a supply or equipment if the agency is not provided with sufficient pricing information, they disagreed with CMS' decision to list the item in question in the direct PE database without assigning any value to it, as this can significantly affect the overall PE value for that service. The commenter requested that CMS highlight those cases where the price of a supply or equipment item is not being finalized due to inadequate documentation, so that there is an opportunity to provide additional resources that might assist in assigning an accurate value.

Response: We agree with the commenter that a lack of sufficient pricing information can often be problematic in assigning an accurate value to new supplies and equipment. Although we do not specifically identify all such items in the preamble to PFS rules, we note that stakeholders can easily identify items without prices in the direct PE input database files that are included as downloads with each PFS rule. We urge the public to submit a comment alerting us to items without a price that appear to be errors in the database. As detailed above, we also encourage the submission of invoices to help provide up-to-date, accurate pricing information for medical supplies and equipment.

Comment: A commenter wrote to express concern with the pricing of three supplies: Probe, radiofrequency, three array (StarBurstSDE) (SD109) from $1995 to $353.44; gas, helium (SD079) from 25 cents per cubic foot to one cent per cubic foot; and gas, argon (SD227) from 25 cents per cubic foot to less than one cent per cubic foot. The commenter added that there was no evidence that supported lower prices for these supplies, and urged CMS to retain the existing pricing for these supply items. The commenter stated that CMS' concerns regarding the price of these supplies were not addressed in the proposed rule, which did not allow opportunity for public comment.

Response: The prices of these three supplies were updated in response to invoices received during the previous calendar year. We appreciate the commenters' feedback and we recognize that it would have been easier for stakeholders to identify the prices had they been included on the Invoices

Received for Existing Direct PE Inputs table in the proposed rule. We believe that the commenter may have been mistaken about the pricing of supplies SD079 and SD227. Both of these supplies have increased in price, from 25 cents per cubic foot to 57 cents and 32 cents per cubic foot, respectively. Neither supply has been lowered in price to one cent per cubic foot. Absent better data sources, we continue to believe that the supply prices listed in the public use files for the CY 2016 PFS proposed rule are the most accurate values for these items.

Comment: Many commenters wrote to express their concern over the pricing of the radiofrequency generator (NEURO) (EQ214) equipment affecting CPT codes 41530, 43228, 43229, 43270, 64633, 64634, 64635 and 64636. Commenters indicated that the invoice for this new equipment item was submitted in relation to CPT code 41530, and the equipment is not the same radiofrequency generator used to perform the services described by CPT codes 64633, 64634, 64635 and 64636. Commenters requested that the equipment input represented in the invoice be assigned an equipment code separate from existing code EQ214 and that CMS maintain the current price of $32,900 for EQ214.

Response: We appreciate the additional information provided by commenters regarding the pricing of the radiofrequency generator equipment. After consideration of comments received, we will create a new equipment code for the radiofrequency generator described in the submitted invoice, and assign this equipment to CPT codes 41530, 43228, 43229, and 43270. For CPT codes 64633, 64634, 64635, and 64636, we will maintain the current price of $32,900 for EQ214 and maintain this equipment.

Comment: One commenter submitted additional invoices regarding the pricing of the PrePen (SH103) supply. The commenter requested that CMS update the price of the PrePen to $92 based on an average of the four invoices submitted.

Response: We appreciate the commenter's submission of additional pricing information regarding the PrePen supply. We note that three of the four submitted invoices reported a price of $86 for supply item ''PrePen'' (SH103); we believe that this represents the typical price of this supply.

Therefore, after consideration of the comments received, we are increasing the price of supply SH103 from $83 to $86.

(7) Service Period Clinical Labor Time in the Facility Setting

Several of the PE worksheets included in RUC recommendations contained clinical labor minutes assigned to the service period in the facility setting. Our proposed inputs did not include these minutes because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We received no general comments that addressed this issue; we will address code-specific refinements to clinical labor in the individual code sections.

(8) Duplicative Inputs

Several of the PE worksheets included in the RUC recommendations contained time for the equipment item ''xenon light source'' (EQ167). Because there appear to be two special light sources already present (the fiberoptic headlight and the endoscope itself) in the services for which this equipment item was recommended by the RUC, we did not propose to include the time for this equipment item from these services. In the proposed rule, we solicited comments on whether there is a rationale for including this additional light source as a direct PE input for these procedures.

The following is a summary of the comments we received.

Comment: One commenter stated that if CMS believes two light sources are duplicative for these procedures, the commenter recommended retaining input EQ167 and removing input EQ170 (the fiberoptic headlight), as the xenon light source is compatible with various items and can serve as the light source throughout the procedures.

Response: We appreciate the additional information from the commenter regarding the appropriate use of these two light sources.

After consideration of comments received, we are restoring input EQ167 and removing input EQ170 with the same number of equipment minutes for CPT codes 30300, 31295, 31296, 31297, and 92511.

(9) Identification of Database Errors

Several commenters identified possible errors in the direct PE database that did not apply to CPT codes under review. The following is a summary of the comments we received regarding potential database entry errors.

Comment: A commenter located a potential error for CPT code 33262 (Removal of implantable defibrillator pulse generator with replacement of implantable defibrillator pulse generator; single lead system) where the PE RVU dropped from 3.68 in 2015 to 2.35 in the CY 2016 PFS proposed rule. The commenter pointed out that no changes were made to the direct PE inputs for the code, and similar codes within the same family retained the same PE value. The commenter recommended that CMS review this PE RVU and make a correction in the final rule.

Response: For CPT code 33262, the pre-existing direct PE inputs for this code were inadvertently not included in the development of the CY 2016 PFS proposed direct PE input database . We believe this was the result of a data error, and therefore, we are restoring the direct PE inputs to this service.

Comment: One commenter indicated that the underlying line item direct inputs for a series of CPT codes were missing from the individual labor, equipment, and supply public use files. The commenter provided a list of the ten codes affected by this issue, and asked whether this was the result of a technical error.

Response: The ten codes in question were all procedures that the CPT Editorial Panel has assigned for deletion in CY 2016. These codes appeared in error in our public use files for the CY 2016 PFS proposed rule. We have identified the technical issue that was causing this error and corrected it in the CY 2016 final direct PE input database.

Comment: One commenter identified a group of codes where the calculated clinical labor costs (based on the underlying direct input labor file) differed from the CMS summary labor findings. The commenter asked if there were instances where CMS was applying different labor inputs from those published in the files released with the rule.

Response: We appreciate the commenter bringing this issue regarding conflicting information in the CY 2016 PFS proposed rule public use files to our attention. This discrepancy was caused by an error in the creation of the public use files that undercounted the number of clinical labor minutes assigned to the postoperative E/M visits assigned to codes with 10-day and 90-day global periods. This error did not affect the proposed rates in the proposed rule, only the displayed values in the ''labor task detail'' public use file. We have corrected this issue in the public use files for the CY 2016 final direct PE input database.

Comment: A commenter indicated that for several codes, the CMS file for work times did not appear to be updated

with the RUC-approved times. In particular, the pre-evaluation time and immediate post-service time appeared to be missing from the CMS file.

Response: These incorrect work times have been corrected in the CY 2016 final direct PE input database.

(10) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap

We note that services subject to the MPPR lists on diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services and therapy services, and the list of procedures that meet the definition of imaging under section 5102(b) of the DRA and are therefore subject to the OPPS cap for the upcoming calendar year are displayed in the public use files for the PFS proposed and final rules for each year. The public use files for CY 2016 are available on the CMS Web site under downloads for the CY 2016 PFS final rule with comment period at *http://www.cms.gov/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFSFederal-Regulation-Notices.html.*

5. Methodology for Establishing Malpractice RVUs

As discussed in section II.B. of this final rule with comment period, our malpractice methodology uses a crosswalk to establish risk factors for new services until utilization data becomes available. Table 10 lists the CY 2016 HCPCS codes and their respective source codes used to set the CY 2016 MP RVUs. The MP RVUs for these services are reflected in Addendum B on the CMS Web site at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/.*

a. Lower GI Endoscopy Services

CPT revised the lower gastrointestinal endoscopy code set for CY 2015 following identification of some of the codes as potentially misvalued and the affected specialty society's contention that this code set did not allow for accurate reporting of services based upon current medical practice. The RUC subsequently provided recommendations to us for valuing these services. In the CY 2015 PFS final rule with comment period, we delayed valuing the lower GI codes and indicated that we would propose values for these codes in the CY 2016 proposed rule, citing the new process for including proposed values for new, revised and potentially misvalued codes in the proposed rule as one of the reasons for the delay.

(1) Gastrointestinal (GI) Endoscopy (CPT Codes 43775, 44380–46607 and HCPCS Codes G0104, G0105, and G0121)

In the CY 2014 PFS final rule with comment period, we indicated that we used what we called an ''incremental difference methodology'' in valuing the upper GI codes for that year. We explained that the RUC made extensive use of a methodology that uses the incremental difference in codes to determine values for many of these services. This methodology uses a base code or other comparable code and considers what the difference should be between that code and another code by comparing the differentials to those for other sets of similar codes. As with the esophagoscopy subfamily, many of the procedures described within the colonoscopy subfamily have identical counterparts in the esophagogastroduodenoscopy (EGD) subfamily. For instance, the base colonoscopy CPT code 45378 is described as ''Colonoscopy, flexible; diagnostic, including collection of specimen(s) by brushing or washing when performed, (separate procedure).'' The base EGD CPT code 43235 is described as ''Esophagogastroduodenoscopy, flexible, transoral; diagnostic, with collection of specimen(s) by brushing or washing, when performed.'' In valuing other codes within both subfamilies, the RUC frequently used the difference between these two base codes as an increment for measuring the difference in work involved in doing a similar procedure utilizing colonoscopy versus utilizing EGD. For example, the EGD CPT code 43239 includes a biopsy in addition to the base diagnostic EGD CPT code 43235. The RUC valued this by adding the incremental difference in the base colonoscopy code over the base EGD CPT code to the value it recommended for the esophagoscopy biopsy, CPT code 43202. With some variations, the RUC used this incremental difference methodology extensively in valuing subfamilies of codes. In the CY 2016 PFS proposed rule, we made use of similar methodologies in establishing the proposed work RVUs for codes in this family.

We agreed with several of the RUC recommendations for codes in this family. Where we did not agree, we consistently applied the incremental difference methodology. Table 12 reflects how we applied this methodology and the values we proposed. To calculate the base RVU for the colonoscopy subfamily, we looked at the current intraservice time for CPT code 45378, which is 30 minutes, and the current work RVU, which is 3.69. The RUC recommended an intraservice time of 25 minutes and 3.36 RVUs. We then compared that service to the base EGD CPT code 43235 for which the RUC recommended a work RVU of 2.26, giving an increment between EGD and colonoscopy of 1.10 RVUs. We added that increment to our proposed work RVU for CPT code 43235 of 2.19 to arrive at our proposed work RVU for the base colonoscopy CPT code 45378 of 3.29. We used this value as the base code in the incremental methodology for establishing the proposed work RVU for the other base codes in the colonoscopy subfamilies which were then used to value the other codes in that subfamily.

Comment: Many commenters expressed concerns that the proposed values for the lower GI code set will hinder efforts to reduce the incidence of colorectal cancer through detection and treatment by limiting access to screenings. Comments stated,

''According to a poll of more than 550 gastroenterologists, more than half of the respondents plan to limit new Medicare patients if the proposed cuts are implemented; 55 percent plan to limit procedures to Medicare patients; and 15 percent are considering opting out of Medicare entirely. These findings suggest that GI physicians may not be able to maintain the current mix of Medicare patients and protect the financial viability of their practices.'' Some commenters specifically disagreed with CMS' methodology of applying an incremental difference between the base procedure for upper GI and lower GI, stating they believe that is a misapplication of the incremental approach and some noted that they believe that the upper and lower GI services are clinically distinct. Additionally, many commenters expressed disappointment that CMS did not consider the survey results, which they believe are the most reliable indicator of the work involved in colonoscopy. These commenters suggested that CMS adopt the RUC-recommended values for the lower GI code set. Additionally, the affected specialty societies suggested that we accept their original recommendations (a work RVU of 3.51 for the base colonoscopy code, CPT code 45378). Some commenters stated that new colorectal cancer screening protocols have resulted in increased work due to the attention required to identify and remove precancerous lesions.

Response: In developing the proposed work RVUs, we did consider the survey data. However, we considered the survey data in the context of the work RVUs for services within the broader endoscopy family. While we continue to believe that relativity among families of codes is important and view the upper and lower endoscopy codes as one code family, in the context of receiving many comments urging us to accept the RUC-recommended value for diagnostic colonoscopy (and thus the screening colonoscopy), we reconsidered the differences between the RUC-recommended value and our proposed RVUs. We do not believe the relatively small difference between these two values is itself likely to present significant issues in PFS relativity. Therefore, we agree with commenters that the RUC-recommended values generally reflect the work resources involved in furnishing the service and we are finalizing the RUC-recommended value of 3.36 RVUs for the base colonoscopy code, CPT code 45378, and are adjusting the valuation of all the other codes in the lower GI code set using that base with the incremental difference methodology. We also note that while we appreciate and share commenters' interest in maintaining beneficiaries' access to screening colonoscopies where appropriate under the current benefit, we believe that establishing RVUs that most accurately reflect the relative resource costs involved in furnishing services paid under the PFS is not only required by the statute, but also important to preserve and promote beneficiary access to all PFS services.

Comment: A few commenters requested that CMS delay finalizing values for the lower GI codes until codes that are used to report moderate sedation are separately valued, since implementation of those codes will require a methodology for removing the work RVUs for moderate sedation from the endoscopy codes.

Response: We will review and consider recommendations from the medical community about the work RVUs associated with moderate sedation and will address the valuation of moderation sedation separately. Since moderate sedation is a broad, cross-cutting issue that affects many specialties and code families, we do not believe that it is appropriate to delay finalizing values for all codes with moderate sedation, and therefore, will not do so for the GI codes.

Comment: A few commenters stated disagreement with CMS' proposed PE refinement to remove the mobile instrument table (EF027) from codes 45330 and 45331on the basis that the procedures do not include moderate sedation. The commenter noted that, ''while the mobile instrument table is part of the moderate sedation standard package and moderate sedation is not inherent in the procedure, it is still a necessary part of flexible sigmoidoscopy codes 45330 and 45331.''

Response: We agree with the commenter that the mobile instrument table is typically involved in furnishing these services, even though moderate sedation may not be inherent in the procedure. Therefore, we have included the mobile instrument table (EF027) in the direct PE input database for codes 45330 and 45331.

Comment: We received a comment on the proposed PE refinements made to CPT code 45330, stating that the RUC approved sterile water for CPT code 43450 instead of distilled water due to the risk of infections and potential for contamination. The commenter stated an expectation that all GI endoscopy codes that currently contain distilled water should be revised to include sterile water instead.

Response: We have considered the comment; however, we re-examined the RUC-recommended direct PE inputs, and we did not identify the sterile water as part of that recommendation. Additionally, the commenter did not provide a detailed rationale for the use of sterile water over distilled water. Therefore, for CY 2016, we are finalizing the inputs for code 45330 as proposed. However, we are seeking additional information regarding these inputs (including rationale and explanation for the use of the commenter's recommended inputs) and we will consider this issue for future rulemaking.

TABLE 12—APPLICATION OF THE INCREMENTAL DIFFERENCE METHODOLOGY

HCPCS	Descriptor	Current WRVU	RUC WRVU	Base procedure	Base RVU	Increment	Increment value	Proposed WRVU	Finalized WRVU (using 3.36 RVUs for the base)
44380	Ileoscopy, through stoma; diagnostic, including collection of specimen(s) by brushing or washing, when performed.	1.05	0.97	Colonoscopy	3.29	Colonoscopy to Ileoscopy.	−2.39	0.9	0.97

(2) Laparoscopic Sleeve Gastrectomy (CPT Code 43775)

Prior to CY 2013, CPT code 43775 described a non-covered service. For CY 2013, this service was covered as part of the bariatric surgery National Coverage Determination (NCD) and has been contractor-priced since 2013. In the CY 2016 PFS proposed rule, we proposed to establish national pricing for CPT code 43775. To establish a work RVU, we crosswalked the work RVUs for this code from CPT code 37217 (Transcatheter placement of an intravascular stent(s), intrathoracic common carotid artery or innominate artery by retrograde treatment, via open ipsilateral cervical carotid artery

exposure, including angioplasty, when performed, and radiological supervision and interpretation), due to their identical intraservice times, similar total times, and similar levels of intensity. Therefore, we proposed a work RVU of 20.38 for CPT code 43775.

Comment: Some commenters noted that CPT code 43775 was reviewed at the April 2009 RUC meeting and that the RUC submitted recommendations to CMS for CY 2010, including a recommendation of 21.40 work RVUs for CPT code 43775. The commenters stated that those recommendations are still valid and requested that CMS accept the RUC recommended work RVU of 21.40 for CPT code 43775.

Response: We thank the commenters for pointing out the previous RUC recommendations from April 2009. We continue to believe that the proposed work RVU is appropriate based on the reasons stated in the proposed rule, and therefore, for CY 2016, we are finalizing a work RVU of 20.38 for CPT code 43775.

Comment: A few commenters noted that they believe the crosswalk code used by CMS (CPT code 37217) does encourage relativity, but because it is an endovascular procedural code, does not accurately capture all aspects of a bariatric surgical patient in the pre-service, intra-service, or post-service periods. Commenters stated that they believed a comparison within the code family would provide an assessment that is more accurate. The commenters urged CMS to accept the previous valuation of 21.56.

Response: After consideration of the comments, we continue to believe that the proposed work RVU is appropriate based on the reasons stated in the proposed rule, and that it maintains relativity within its family of codes. Therefore, for CY 2016, we are finalizing a work RVU of 20.38 for CPT code 43775.

(3) Incomplete Colonoscopy (CPT codes 44388, 45378, G0105, and G0121)

Prior to CY 2015, according to CPT instruction, an incomplete colonoscopy was defined as a colonoscopy that did not evaluate the colon past the splenic flexure (the distal third of the colon). In accordance with that definition, the Medicare Claims Processing Manual (pub. 100–04, chapter 12, section 30.1.B., available at *http://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Internet-Only-Manuals-IOMs-Items*) states that physicians should report an incomplete colonoscopy with 45378 and append modifier -53, which is paid at the same rate as a sigmoidoscopy.

In CY 2015, the CPT instruction changed the definition of an incomplete colonoscopy to a colonoscopy that does not evaluate the entire colon. The 2015 CPT Manual states when performing a diagnostic or screening endoscopic procedure on a patient who is scheduled and prepared for a total colonoscopy, if the physician is unable to advance the colonoscope to the cecum or colon-small intestine anastomosis due to unforeseen circumstances, report 45378 (colonoscopy) or 44388 (colonoscopy through stoma) with modifier -53 and provide appropriate documentation.

Given that the new definition of an incomplete colonoscopy also includes colonoscopies where the colonoscope is advanced past the splenic flexure but not to the cecum, we proposed to establish new values for the incomplete colonoscopies, reported with the -53 modifier. At present, we crosswalk the RVUs for the incomplete colonoscopies from the values of the corresponding sigmoidoscopy. Given that the new CPT instructions will reduce the number of reported complete colonoscopies and increase the number of colonoscopies that proceeded further toward completion reported with the -53 modifier, we believe CPT code 45378 reported with the -53 modifier will now describe a more resource-intensive group of services than were previously reported. Therefore, we proposed to develop RVUs for these codes reported with the -53 modifier by using one-half the value of the inputs for the corresponding codes reported without the -53 modifier.

In addition to this change in input values, we also solicited comments on how to address the disparity of resource costs among the broader range of services now described by the colonoscopy codes billed with the -53 modifier. We believe that it may be appropriate for practitioners to report the sigmoidoscopy CPT code 45330 under circumstances when a beneficiary is scheduled and prepared for a total colonoscopy (diagnostic colonoscopy, screening colonoscopy or colonoscopy through stoma), but the practitioner is unable to advance the colonoscope beyond the splenic flexure. We solicited comments and recommendations on that possibility, as well as more generally, the typical resource costs of these incomplete colonoscopy services under CPT's new definition. Finally, we solicited information regarding the number of colonoscopies that will be considered incomplete under CPT's new definition relative to the old definition, as well as the number of incomplete colonoscopies where the practitioner is unable to advance the colonoscope beyond the splenic flexure. This information will help us determine whether or not differential payment is required, and if it is, how to make the appropriate utilization assumptions within our ratesetting process.

Comment: Some commenters agreed with the proposed policy of using the–53 modifier to identify the reduced work involved with an incomplete colonoscopy and a reimbursement that is 50 percent of the full procedure. However, some noted that instances where the cecum is not reached immediately would be associated with greater PE than sigmoidoscopy, noting that the endoscopist will have utilized a colonoscope for the procedure requiring greater work for staff to clean and also noted that the endoscopist will commonly obtain a pediatric endoscope to navigate the narrowed sigmoid. Commenters also stated that sigmoidoscopy is a procedure commonly performed without moderate sedation. One commenter recommended that CMS establish a new modifier for instances in which the colonoscope has passed beyond the splenic flexure but has not reached the cecum or small bowel—large bowel anastomosis due to inadequate preparation precluding high-quality examination of the lumen of the bowel or technical limitations that preclude the ability of the physician to safely complete the examination of the colon. The commenter also recommended that payment for the professional services for colonoscopy in these circumstances be adjusted to 75 percent of the payment for the colonoscopy procedure, noting that appending this new modifier to the professional services for the procedure would allow the same or other physician to bring the patient back for another colonoscopy examination within 2 months without triggering the frequency limitation under the Act, and that facility payment for the procedure would not be adjusted when this modifier is reported with codes 45378, G0105 or G0121.

Response: We appreciate the commenters' support for the proposed policy of using the–53 modifier. We also appreciate the additional feedback regarding the resource costs of incomplete colonoscopies and will consider whether further changes to valuation or the coding structure are necessary in future rulemaking.

(4) Malpractice (MP) Crosswalk

We examined the RUC-recommended MP crosswalk for this family of codes. The MP crosswalks are used to identify the presumed mix of specialties that

furnish particular services until there is Medicare claims data for the new codes. We direct the reader to section II.B.1. of this final rule with comment period for further explanation regarding these crosswalks. In reviewing the recommended MP crosswalks for CPT codes 43775, 44407, 44408, 46601, and 46607, we noted that the RUC-recommended MP crosswalk codes are inconsistent with our analysis of the specialties likely to furnish the service based on the description of the services and our review of the RUC-recommended utilization crosswalk. The inconsistency between the RUC-recommended MP and utilization crosswalks is not altogether unusual. However when there are discrepancies between the MP and utilization crosswalk recommendations, they generally reflect the RUC's expectation that due to changes in coding, there will be a different mix of specialties reporting a new code than might be reflected in the claims data for the code previously used to report that service. This often occurs when the new coding structure for a particular family of services is either more or less specific than the old set of codes. In most of these cases, we could identify a rationale for why the RUC-recommended MP crosswalks for these codes were likely to be more accurate than the RUC-recommended utilization crosswalk. But in the case of these codes, the reason for the discrepancies were neither apparent nor explained as part of the recommendation. Since the specialty mix in the claims data is used to determine the specialty mix for each HCPCS code for the purposes of calculating MP RVUs, and those data will be used to set the MP RVUs once it is available, we believe using a specialty mix derived from the claims data of the predecessor codes is more likely to be accurate than the RUC-recommended MP crosswalk as well as more likely to result in stable MP RVUs for these services over several years. Therefore, until claims data under the new set of codes are available, we proposed to use the specialty mix of the source code(s) in the RUC-recommended utilization crosswalk to calculate the malpractice risk factor for these services instead of the RUC-recommended MP crosswalk. Once claims data are available, those data will be incorporated into the calculation of MP RVUs for these services under the MP RVU methodology.

Comment: The RUC commented that they support CMS' decision to use the utilization crosswalk in determining the malpractice crosswalk for CPT code 43775 given that there are newer data since the RUC last reviewed this code in 2009. However, the RUC commented that it did not agree with this proposed decision for the other four services, CPT codes 44407, 44408, 46601, and 46607, stating that its MP crosswalks for these codes were based on the intended specialty mix.

Response: We continue to believe that the RUC-recommended MP crosswalk codes are inconsistent with our analysis of the specialties likely to furnish the service based on the description of the services and our review of the RUC recommended utilization crosswalk. Therefore, for CY 2016, we are finalizing these malpractice crosswalk codes as proposed.

b. Radiation Treatment and Related Image Guidance Services

For CY 2015, the CPT Editorial Panel revised the set of codes that describe radiation treatment delivery services based in part on the CMS identification of these services as potentially misvalued in CY 2012. We identified these codes as potentially misvalued under a screen called ''Services with Stand-Alone PE Procedure Time.'' We proposed this screen following our discovery of significant discrepancies between the RUC-recommended 60 minute procedure time assumptions for intensity modulated radiation therapy (IMRT) and information available to the public suggesting that the procedure typically took between 5 and 30 minutes per treatment.

The CPT Editorial Panel's revisions included the addition and deletion of several codes and the development of new guidelines and coding instructions. Four treatment delivery codes (77402, 77403, 77404, and 77406) were condensed into 77402 (Radiation Treatment Delivery, Simple), three treatment delivery codes (77407, 77408, 77409) were condensed into 77407 (Radiation treatment delivery, intermediate), and four treatment codes (77412, 77413, 77414, 77416) were condensed into 77412 (Radiation treatment delivery, complex). Intensity Modulated Radiation Therapy (IMRT) treatment delivery, previously reported under a single code, was split into two codes, 77385 (IMRT treatment delivery, simple) and 77386 (IMRT treatment delivery, complex). The CPT Editorial Panel also created a new image guidance code, 77387 (Guidance for localization of target volume for delivery of treatment, includes intrafraction tracking when performed) to replace 77014 (computed tomography guidance for placement of radiation therapy fields), 77421 (stereoscopic X-ray guidance for localization of target volume for the delivery of radiation therapy,) and 76950 (ultrasonic guidance for placement of radiation therapy fields) when any of these services were furnished in conjunction with radiation treatment delivery.

In response to stakeholder concerns regarding the magnitude of the coding changes and in light of the process changes we adopted for valuing new and revised codes, we did not implement interim final values for the new codes and delayed implementing the new code set until 2016. To address the valuation of the new code set through proposed rulemaking, and continue making payment based on the previous valuations even though CPT deleted the prior radiation treatment delivery codes for CY 2015, we created G-codes that mimic the predecessor CPT codes (79 FR 67667).

We proposed to establish values for the new codes based on RUC recommendations, subject to standard CMS refinements. We also note that because the invoices used to price the capital equipment included ''on-board imaging,'' and based on our review of the information used to price the equipment, we considered the costs of that equipment already to be reflected in the price per minute associated with the capital equipment. Therefore, we did not propose to include it as a separate item in the direct PE inputs for these codes, even though it appeared as a separate item on the PE worksheet included with the RUC recommendations for these codes. The proposed direct PE inputs for those codes were displayed the proposed direct PE input database available on the CMS Web site under the supporting data files for the CY 2016 PFS proposed rule with comment period at *http://www.cms.gov/PhysicianFeeSched/*. The RVUs that result from the use of these direct PE inputs (and work RVUs and work time, as applicable) were displayed in proposed rule Addendum B on the CMS Web site.

We received many comments regarding various aspects of our proposal to implement the new CPT codes for radiation treatment services based on our refinement of RUC-recommended input values. Some commenters addressed issues for which we explicitly sought comment, while several commenters brought other issues to our attention. We address these comments in the following paragraphs.

(1) Image Guidance Services

Under the previous CPT coding structure, image guidance was separately billable when furnished in

conjunction with the radiation treatment delivery services. The image guidance was reported using different CPT codes, depending on which image guidance modality was used. These codes were split into professional and/or technical components that allowed practitioners to report a single component or the global service. The professional component of each of these codes included the work of the physician furnishing the image guidance. CPT code 77014, used to report CT guidance, had a work RVU of 0.85; CPT code 77421, used to report stereotactic guidance, had a work RVU of 0.39, and CPT code 76950, used to report ultrasonic guidance, had a work RVU of 0.58. The technical component of these codes incorporated the resource costs of the image guidance capital equipment (such as CT, ultrasound, or stereotactic) and the clinical staff involved in furnishing the image guidance associated with the radiation treatment. When billed globally, the RVUs reflected the sum of the professional and technical components. In the revised coding structure, one new image guidance code is to be reported regardless of the modality used, and in developing its recommended values, the RUC assumed that CT guidance would be typical.

However, the 2013 Medicare claims data for separately reported image guidance indicated that stereotactic guidance for radiation treatment services was furnished more frequently than CT guidance. The RUC recommended a work RVU of 0.58 and associated work times of three pre-service minutes, 10 intraservice minutes, and three post-service minutes for image guidance CPT code 77387. We reviewed this recommendation considering the discrepancy between the modality the RUC assumed to be typical in the vignette and the modality typically reported in the Medicare claims data. Given that the recommended work RVU for the new single code is similar to the work RVUs of the predecessor codes, roughly prorated based on their distribution in Medicare claims data, we agree with the RUC-recommended work RVU for the service. However, the RUC also recommended an increase in overall work time associated with image guidance consistent with the survey data used to value the new services. If accurate, this increase in time and maintenance of total work would suggest a decrease in the overall intensity for image guidance relative to the current codes. We solicited comments as to the appropriate work time associated with CPT code 77387.

Comment: Commenters provided feedback that work time of 16 minutes is accurate for 77387, consistent with the RUC recommendation without explaining why the work time associated with image guidance has changed significantly.

Response: We appreciate that commenters responded to our solicitation but the commenters did not provide a rationale for why the recommended work time for the new code would be significantly different than the current work time for the most frequently reported predecessor code. Absent an explanation, we remain concerned that the aspects of the recommended values for the new single modality code were developed based on erroneous assumptions regarding what imaging modality is most frequently used to provide guidance for radiation treatment services.

Although CPT codes 77421 (stereotactic guidance) and 76950 (ultrasonic guidance) have been deleted, we note that CPT maintained CPT code 77014 (Computed tomography guidance for placement of radiation therapy fields). The RUC recommendation stated that the CPT editorial panel maintained CPT code 77014 based on concerns that without this option, some practitioners might have no valid CPT alternative than to use higher valued diagnostic CT codes when they used this CT guidance. The RUC recommendation also included a statement that utilization of this code was expected to drop to negligible levels in 2015, assuming that practitioners would use the new codes that are not differentiated based on imaging modality. Once all the new codes are implemented for Medicare, we anticipate that CPT and/or the RUC will address the continued use of 77014 and, if it continues to be part of the code set, provide recommendations as to the appropriate values given changes in utilization.

Comment: Several commenters stated that, while they believe that the volume for 77014 will fall to negligible levels, they support CMS' adoption of the decision to continue to monitor and review this code.

Response: We appreciate commenters support and the stakeholder interest in making certain that the codes accurately describe the services furnished to Medicare beneficiaries.

Regarding the reporting of the new image guidance codes, CPT guidance instructs that the technical portion of image guidance is now bundled into the IMRT and stereotactic radiation treatment delivery codes, but it is not bundled into the simple, intermediate, and complex radiation treatment delivery codes. CPT guidance states that the technical component of the image guidance code can be reported with CPT codes 77402, 77407, and 77412 (simple, intermediate, and complex radiation treatment) when furnished, which means that the technical component of the image guidance code should not be reported with the IMRT, stereotactic radiosurgery (SRS) or stereotactic body radiation therapy (SBRT) treatment delivery codes. The RUC recommendation, however, incorporated the same capital cost of image guidance equipment (a linear accelerator, or linac), for the conventional radiation treatment delivery codes and the the codes that describe IMRT treatment delivery services. The RUC explained that the older lower-dose external beam radiation machines are no longer manufactured and the image guidance technology is integrated into the single kind of linear accelerator used for all the radiation treatment services.

In reviewing the new code structure and the RUC recommendations for the proposed rule, we assumed that the CPT editorial panel did not foresee that the RUC would recommend that we develop PE RVUs for all the radiation treatment delivery codes based on the assumption that the same capital equipment is typically used in furnishing this range of external beam radiation treatments. Because the RUC recommendations incorporate the more extensive capital equipment in the lower dose treatment codes as well, a portion of the resource costs of the technical portion of imaging guidance are already allocated into the PE RVUs for all of the treatment delivery codes, not just the IMRT, SRS, and SBRT treatment delivery codes as CPT guidance would suggest.

In order to avoid incorporating the cost of this equipment into both the treatment delivery codes (CPT codes 77402, 77407, and 77412) and the technical component of the new imaging guidance code (CPT code 77387–TC), we considered valuing CPT code 77387 as a professional service only and not creating the professional/technical component splits envisioned by CPT. In the proposed rule we stated that in the context of the budget neutral PFS, incorporating a duplicative direct input with a cost of more than six dollars per minute would have significant impacts on the PE RVUs for all other services. However, we also noted that the RUC did not address this issue in its recommendation and proposed that not all of the recommended direct PE inputs for the

technical component of CPT code 77387 are capital equipment costs. Therefore, we proposed to allow for professional and technical component billing for these services, as reflected in CPT guidance, and to use the RUC-recommended direct PE inputs for these services (refined as described in Table 13 of the proposed rule (80 FR 41725–41764). We solicited comments on the technical component billing for image guidance in the context of the inclusion of a single linac and the RUC-recommended integration of imaging guidance technology for all external beam treatment codes.

Comment: Many commenters stated that it was necessary for CPT code 77387 to include both a technical and professional component because the current price of the linear accelerator used in radiation treatment delivery services does not include the additional costs of an integrated image guidance system. These commenters urged CMS to retain the technical and professional components for CPT code 77387 on the basis that there are equipment and labor costs associated with image guidance that are not reflected in a professional-only code.

Some other commenters were concerned that the new coding structure for image guidance did not accurately reflect the way that image guidance is typically furnished. These commenters stated that multiple modalities of image guidance can be used in a single procedure, and that this heterogeneity is not reflected through a single image guidance code.

Response: We appreciate that many commenters addressed the bundling in the new CPT codes of the technical component of image guidance for IMRT, SRS, and SBRT, but not for conventional radiation treatment delivery codes. However, in reviewing the comments, we did not identify any that address the fundamental issues we identified in the proposed rule. We understand that commenters generally agreed that image guidance was not necessarily typically used for conventional radiation treatment delivery services, so the related costs should not be embedded in the RVUs for the treatment delivery codes. We also understand that commenters recommended that we assume that image guidance costs, while integrated into the functionality of the linear accelerator, represent additional capital costs and should be used in the development of PE RVUs for these services. Despite these comments, we were unable to reconcile the inconsistencies and potential rank order anomalies associated with including the image guidance costs in the IMRT treatment delivery codes but not including the image guidance costs in the conventional radiation treatment delivery codes even though both use the same capital equipment. Based on the RUC recommendations and the information from the commenters, we understand that the same linear accelerator is typically used for all of these services, and that the image guidance is integrated into the only linear accelerator that is currently being manufactured and that, therefore, the image guidance costs should always be included in the RVUs for the IMRT treatment delivery codes. Based on these comments and the RUC-recommended values, it appears that when the same machine (with integrated image guidance) is used for intermediate and complex conventional treatment, the combination of the treatment costs and image guidance costs is significantly higher than the technical costs associated with IMRT treatment delivery furnished with image guidance. As a result, the PE RVUs for these services include higher overall payment for intermediate and complex conventional radiation treatment with imaging guidance than for simple IMRT treatment delivery with imaging guidance. After review of the comments, we continue to believe that this creates problematic rank order anomalies, both relative to the accuracy of the assumed costs and the financial incentives associated with Medicare paying more overall for conventional radiation treatment than for IMRT services.

Comment: Many commenters, including equipment manufacturers, suggested that linacs that include integrated image guidance are significantly more expensive than the $2.6 million CMS proposed in the direct practice expense input database. One commenter, a manufacturer of linear accelerators, submitted several invoices intended to indicate that the price of a new linear accelerator is significantly higher than the current price in the direct PE input database. This commenter suggested that this higher price was due in part to the integrated image guidance, inherent in all new linear accelerators. The commenter also submitted invoices intended to illustrate the price of upgrading an older linear accelerator with image guidance capability.

Response: We appreciate the submission of invoices that indicate prices for linear accelerators with image guidance and the price associated with updating existing linacs with image guidance. In our analysis of these documents, however, we identified several aspects that make us hesitant to use the documents to change the price of the equipment in the direct PE input database. First, many of the invoices listed a total contract value that was distinct from the sum of total prices listed on the invoice. The documents themselves did not include any explanation regarding the significant differences in value between these two prices and whether or not the differences in value represent costs related to other direct PE input equipment items, factors already incorporated into the equipment cost per minute calculation, or items included in the allocation of indirect PE. For example, some line items included the description of items such as ''travel and lodging,'' ''education,'' and treatment planning software or software upgrades that are already accounted for in the allocation of indirect PE. In many cases line-item prices were not included, making it difficult to identify the portion of the total invoice price attributable to direct equipment costs, which is necessary under the established PE methodology. Therefore, we will maintain the current equipment price for CY 2016 while we seek accurate information regarding the price of this capital equipment.

(2) Equipment Utilization Rate for Linear Accelerators

The cost of the capital equipment is the primary determining factor in the payment rates for these services. For each CPT code, the equipment costs are estimated based on multiplying the assumed number of minutes the equipment is used for that procedure by the per minute cost of the particular equipment item. Under our PE methodology, we currently use two default equipment usage assumptions in allocating capital equipment costs to calculate PE RVUs. The first is that each equipment item is only available to be used during what are assumed to be regular business hours for a physician's office: 10 hours per day, 5 days per week (50 hours per week) and 50 weeks per year. The second assumption is that the equipment is in use only 50 percent of the time that it is available for use. The current default 50 percent utilization rate assumption translates into 25 hours per week out of a 50-hour work week.

We have previously addressed the accuracy of these default assumptions as they apply to particular equipment resources and particular services. In the CY 2008 PFS proposed rule (72 FR 38132), we discussed the 50 percent utilization assumption and acknowledged that the default 50

percent usage assumption is unlikely to capture the actual usage rates for all equipment. However, we stated that we did not believe that we had strong empirical evidence to justify any alternative approaches. We indicated that we would continue to monitor the appropriateness of the equipment utilization assumption, and evaluate whether changes should be proposed in light of the data available.

Subsequently, a 2009 report on equipment utilization by MedPAC included studies that suggested a higher utilization rate for diagnostic imaging equipment costing more than $1 million. These studies cited by MedPAC suggested that for Magnetic Resonance Imaging equipment, a utilization rate of 92 percent on a 50-hour week would be most accurate. Similarly, another MedPAC-cited study suggested that for computed tomography scanners, 45 hours was more accurate, and would be equivalent to a 90 percent utilization rate on a 50-hour work week. For the CY 2010 PFS proposed rule, we proposed to increase the equipment usage rate to 90 percent for all services containing equipment that cost in excess of $1 million dollars. We stated that the studies cited by MedPAC suggested that physicians and suppliers would not typically make huge capital investments in equipment that would only be utilized 50 percent of the time (74 FR 33532).

In response to comments to that proposal, we finalized a 90 percent utilization rate assumption for MRI and CT to be transitioned over a 4-year period. Regarding the utilization assumptions for other equipment priced over $1 million, we stated that we would continue to explore data sources regarding use of the most accurate utilization rates possible (74 FR 61755). Congress subsequently specified the utilization rate to be assumed for MRI and CT by successive amendments to section 1848(b)(4)(C) of the Act. Section 3135(a) of the Affordable Care Act (Pub. L. 111–148) set the assumed utilization rate for expensive diagnostic imaging equipment to 75 percent, effective for 2011 and subsequent years. Section 635 of the American Taxpayer Relief Act (ATRA) (Pub. L. 112–240) set the assumed equipment utilization rate to 90 percent, effective for 2014 and subsequent years. Both of these changes were exempted from the budget neutrality requirements described in section 1848(c)(2)(B)(ii)(II) of the Act.

We have also made other adjustments to the default assumptions regarding the number of hours for which the equipment is available to be used. For example, some equipment used in furnishing services to Medicare beneficiaries is available to be used on a 24-hour/day, 7 days/per week basis. For these items, we develop the rate per minute by amortizing the cost over the extended period of time the equipment is in use.

Based on the RUC recommendations for the new codes that describe radiation treatment services, we do not believe our default assumptions regarding equipment usage are accurate for the capital equipment used in radiation treatment services. As we noted above, the RUC recommendations assume that the same type of linear accelerator is now typically used to furnish all levels and types of external beam radiation treatment services because the machines previously used to furnish these services are no longer manufactured. In valuing the previous code set and making procedure time assumptions, different equipment items were assumed to be used to furnish the different levels and types of radiation treatment. With the current RUC-recommended inputs, we can then assume that the same equipment item is used to furnish more services. If we assume the RUC recommendation to include the same kind of capital equipment for all of these codes is accurate, we believe that it is illogical to continue to assume that the equipment is only used for 25 out of a possible 50 hours per week. In order to estimate the difference between the previous number of minutes the linear accelerator was assumed to be in use under the previous valuation and the number of minutes now being recommended by the RUC, we applied the change in assumptions to the services reported in the most recent year of Medicare claims data. Under the assumptions reflected in the previous direct PE inputs, the kind of linear accelerator used for IMRT made up a total of 44.8 million out of 65 million minutes of external beam treatments furnished to Medicare beneficiaries. Under the new code set, however, we suggested in the proposed rule that a single kind of linear accelerator would be used for all of the 65 million minutes furnished to Medicare beneficiaries. This represents a 45 percent increase in the aggregate amount of time that this kind of linac is in use. As we noted in the proposed rule, the utilization rate that corresponds with that increase in minutes is not necessarily precise since the current utilization rate only reflects the default assumption and is not itself rooted in empirical data. Additionally, in some cases, individual practices that already use linear accelerators for IMRT may have replaced the now-obsolete capital equipment with new, additional linear accelerators instead of increasing the use of capital equipment already owned. However, we do not believe that the latter scenario is likely to be common in cases where the linear accelerators had previously been used only 25 hours per week.

Therefore, we proposed to adjust the equipment utilization rate assumption for the linear accelerator to account for the significant increase in usage. Instead of applying our default 50 percent assumption, we proposed to use a 70 percent assumption based on the recognition that the item is now being typically used in a significantly broader range of services, and that would increase how often the equipment is used in comparison to the previous assumption. In the proposed rule, we noted that we developed the 70 percent rate based on a rough reconciliation between the number of minutes the equipment is being used according to the new recommendations versus the current number of minutes based on an analysis of claims data.

Comment: Several commenters objected to our analysis specifically because we described it as a ''rough reconciliation.''

Response: We appreciate commenters' interest in our use of the best data available in determining what values to assign to necessary assumptions. We regret the use of the term ''rough reconciliation'' and clarify that our analysis relied on two somewhat imprecise data points: The RUC procedure time assumptions for individual services and the current 50 percent utilization assumption. Because both of these assumptions directly determine how capital equipment costs are translated into PE RVUs, they were essential to our analysis. However, we recognize that these assumptions are round figures, reflecting assumptions about what is typical. Therefore, when we combined these numbers with precise Medicare claims data in order to develop a more accurate assumption, we arrived at a very specific number that might have appeared to be very precise. Recognizing that the calculation was based on assumptions as noted above, we subsequently proposed to round the number to 70 percent instead of using the fractional result of the calculation. We continue to believe rounding to 70 percent is appropriate for the reasons stated above.

Given the best available information, we believe that the 70 percent utilization assumption based on the changes in direct PE input recommendations and Medicare claims

data is more accurate than the default utilization assumption of 50 percent. However, we have reviewed other information that suggests this utilization rate may be higher than 70 percent and that the number of available hours per week is greater than 50.

For example, as part of the 2014 RUC recommendations for the Radiation Treatment Delivery codes, the RUC submitted a 2011 staffing survey conducted by the American Society for Radiology Technicians (ASRT). Using the 2014 version of the same study, we noted that there are an average of 2.3 linacs per radiation treatment facility and 52.7 patients per day treated per radiation treatment facility. These data suggest that an average of 22.9 patients are treated on each linac per day. Using an average of the RUC-recommended procedure times for CPT codes 77385, 77386, 77402, 77407, and 77412 weighted by the annual volume of procedures derived from Medicare claims data yielded a total of 670.39 minutes or 11.2 hours that a single linac is in use per day. This is in contrast to both the number of hours of use reflected in our default assumptions (5 of the 10 available business hours per day) and in our proposed revision to the equipment utilization rate assumptions (7 hours out of 10 available business hours per day).

For advanced diagnostic imaging services, we finalized a policy for CY 2010 to change the equipment utilization assumption only by 10 percent per year, in response to suggestions from commenters. Because capital equipment costs are amortized over several years, we believe it is reasonable to transition changes to the default assumptions for particular items over several years. We noted in the proposed rule that the change from one kind of capital equipment to another is likely to occur over a number of years, roughly equivalent to the useful life of particular items as they become obsolete. In the case of most of these items, we have assumed a 7-year useful life, and therefore, we assumed that the transition to use of a single kind of capital equipment would likely take place over seven years as individual pieces of equipment age into obsolescence. However, in the case of this transition in capital equipment, we have reason to believe that the transition to the new capital equipment has already occurred. First, we note that the specialty societies concluded that the single linear accelerator was typical for these services at the time that the current recommendations were developed in 2013. Therefore, we believe it is logical to assume that, at a minimum, the first several years of the transition to new capital equipment had already taken place by 2013. This would not be surprising, given that prior to the 2013 review by the RUC, the codes describing the non-IMRT external beam radiation treatments had last been reviewed in 2002. Second, because we proposed to use the 2013 recommendations for the CY 2016 PFS payment rates, we believed it would be reasonable to assume that in the years between 2013 and 2016, the majority of the rest of the obsolete machines would have been replaced with the single linear accelerator.

Nonetheless, we recognized that there would be value in following precedent to transition changes in utilization assumptions over several years.

Given the fact that it is likely that the transition to the linear accelerator began prior to the 2013 revaluation of the radiation treatment delivery codes by the RUC and that the useful life of the newest generation of linear accelerator is seven years, we believe a 2-year transition to the 70 percent utilization rate assumption would account for any remaining time to transition to the new equipment. Therefore, in developing PE RVUs for these services, we proposed to use a 60 percent utilization rate assumption for CY 2016 and a 70 percent utilization rate assumption for CY 2017. The proposed PE RVUs displayed in Addendum B on the CMS Web site were calculated using the proposed 60 percent equipment utilization rate for the linac as displayed in the proposed direct PE input database.

Additionally, we continue to seek empirical data on the capital equipment costs, including equipment utilization rates, for the linac and other capital-intensive machines, and seek comment on how to most accurately address issues surrounding those costs within the PE methodology.

Comment: Most commenters were opposed to changing the default utilization assumption for linear accelerators. Many of these commenters stated that the rationale CMS used to support the change in default utilization assumption was inadequate and anecdotal. Several commenters performed and submitted their own data analyses.

Response: We continue to believe a reconciliation of Medicare claims data with the RUC-recommended procedure times results in the most accurate equipment utilization rate assumption. We also believe that whenever possible we should use the Medicare claims data to test the validity and internal consistency of our ratesetting assumptions. We do not agree with the commenters that such an approach is anecdotal. While CMS appreciates the analyses performed by some commenters, no additional data were submitted to substantiate these analyses.

Comment: One commenter conducted an analysis somewhat similar to ours, but used three data sets: Medicare claims data, the ASRT staffing survey CMS referenced in the proposed rule, and data from the CMS physician billing public use database. Based on this analysis, the commenter suggested that 50 percent is a more accurate utilization assumption.

Response: We appreciate the commenter's analysis, and found it to be very useful in considering whether or not to finalize our proposal. However, the commenter's conclusion of a 50 percent utilization rate is entirely dependent on what we believe is an overestimate of the number of linacs used to deliver radiation treatment. In order to determine the number of linacs overall, the commenter multiplied the 2.3 linacs per center statistic cited in the ASRT staffing survey by the number of individual billing entities reporting treatment services in the Medicare claims data as a proxy for the number of freestanding centers. That approach would count two radiation oncologists reporting services in the same center as if they were practicing in two centers, not one, and therefore overestimate the number of machines. Were the same analysis conducted using the number of centers included in the same ASRT staffing survey, the result of the analysis would be an approximately 70 percent equipment utilization rate. Therefore, we did not find the commenter's analysis persuasive.

Comment: Many commenters stated that a 70 percent utilization rate assumption did not take into account events beyond the control of the facility that could impact how long any given linear accelerator might be used over the course of time. These commenters suggested that issues such as time necessary to warm up the treatment machine, maintenance, patient preferences, missed appointments, and multiple treatment devices contributed to a lower utilization rate that CMS proposed to assume.

Response: We understand that the day-to-day operation and utilization of capital equipment will vary, and that is precisely why the equipment cost per minute calculation does not assume that the equipment is used for the full amount of time possible (100 percent rate). Instead, the utilization rate assumption is used to allocate the total cost of the equipment relative to other

direct PE costs on a per-minute basis. Therefore, the assumptions are intended to reflect the percentage of total time (assuming a 50-hour work week) payment is made for services on the machine. In assigning minutes to individual codes, we generally assign minutes for preparing and cleaning the equipment; therefore, these minutes would contribute to the 70 percent portion, or 35 hours per week. In contrast, minutes for a missed appointment would count toward the 30 percent of the 50 hours, or 15 hours per week, that the equipment is not being used.

Comment: Many commenters were concerned that a higher utilization rate assumption would have a negative effect on rural treatment centers and treatment centers in medically disadvantaged areas.

Response: We believe it is important to preserve access to care for all Medicare beneficiaries. However, we believe we are obligated under the statute to use accurate assumptions in developing RVUs for individual services under the PFS. Under the statutory construct of the PFS, we believe that accurate valuation for all PFS services is important in maintaining access to care for all Medicare beneficiaries.

Comment: A few commenters suggested that CMS should phase in the utilization rate change over four years or delay implementing the change until 2017.

Response: We appreciate the commenters' suggestions. We did consider these suggested alternatives as part of our rulemaking process. Although both a longer phase-in and a delay would temporarily mitigate the payment reductions for these services, especially in the context of other proposed payment reductions, we did not identify any persuasive rationale for delaying implementation or phasing in implementation over more than 2 years.

Comment: Many commenters were concerned that the change in utilization rate assumption was affecting all equipment items in the radiation treatment delivery codes, and argued that it should only apply to the linac. Commenters urged CMS to use a 50 percent utilization rate assumption for the other equipment items. Some commenters argued that this was contradictory to the utilization assumption for advanced diagnostic imaging.

Response: We applied the increased utilization rate assumption across all equipment items under the assumption that items generally located in the same room as the linear accelerator could not be used to furnish other services while the linear accelerator was in use, and therefore, would be subject to the same utilization assumptions. This approach is consistent with the application of the equipment utilization assumption for advanced diagnostic imaging.

Comment: MedPAC expressed support for CMS' proposal to change the equipment utilization rate assumption for linear accelerators. MedPAC agreed that CMS should develop a normative standard based on the assumption that those who purchase an expensive piece of capital equipment would use it at a higher utilization rate.

Response: We appreciate MedPAC's support for the proposal.

(3) Other Equipment Cost Variables

Comment: A few commenters suggested that CMS update the price for the radiation treatment vault to approximately $800,000 and reduce the useful life assumption from 15 to 7 years. Several other commenters suggested that CMS update the variable maintenance rate from the default five percent assumption to between 10 and 15 percent.

Response: We appreciate the commenter's feedback, and acknowledge our longstanding concerns regarding obtaining accurate, objective information regarding the pricing of direct PE inputs, particularly the prices for expensive equipment. In the case of the radiation treatment vault, we believe that at least some portions of the costs associated with the vault construction are indirect PE under the established methodology. We will continue to consider this issue, including these commenters' suggestion to use increased pricing for the item.

Comment: Many commenters disagreed with the classification of ''intercom'' as an indirect PE. These commenters stated that the intercom is specifically for the practitioner to communicate directly with the patient and, as such, it constitutes a direct PE.

Response: We remind the commenter that under the established methodology, direct PE inputs are defined as clinical labor, disposable supplies, and medical equipment. Other items are incorporated as indirect costs, regardless of how the items are used.

Comment: Several commenters, including the AMA RUC, stated that CMS should include 2 minutes for the clinical labor task ''dose output and verification'' as it is performed on the equipment items associated with these codes.

Response: ''Dose output and verification'' occurs during the ''pre-service'' period and pre-service minutes are generally not allocated to the equipment items, under our established methodology.

(4) Specialty Impacts

Comment: One commenter stated that CMS should no longer display specialty level impacts for ''radiation therapy centers'' in the proposed and final rule. The commenter argued that since the PFS allowed charges associated with ''Radiation Therapy Centers'' represent only a small portion of radiation oncology services overall, displaying the impacts separately is misleading to the interested public.

Response: We appreciate the commenter's concerns and agree with commenters that the PFS allowed charges associated with ''radiation therapy centers'' is only a small portion of overall payments for radiation oncology services, including the total amount of those furnished outside of the hospital setting. Because we think it is important to maintain a consistent display of specialty-level impacts between a proposed and final rule, we are not making a change for this year's final rule. However, we are seeking additional comment regarding how the impacts for these services should be displayed in future rulemaking.

(5) Implementation of New Coding

Comment: Several commenters expressed concerns about the two new treatment delivery codes describing simple and complex IMRT treatment delivery in contrast to the current single code. Specifically, these commenters were concerned that that the CPT instruction that requires treatment for prostate and breast cancer to be reported using the simple IMRT treatment delivery code would have a negative impact on overall treatment for patients with prostate and breast cancer. These commenters suggested that that the new coding structure did not allow radiation therapy providers to accurately report prostate and breast cancer treatment services that are more resource intensive than those described in the simple IMRT code. These commenters also stated that the coding change including CMS' proposed valuations would have a widespread negative impact on access to care, including reduction in the number of freestanding centers offering radiation treatment for breast and prostate cancer, and therefore limit patients' access to care outside of the higher cost hospital setting.

Response: We believe that increased specificity in coding for such a resource-intensive, high-volume group of services is a significant improvement compared to the use of a single code to describe all IMRT treatment services, regardless

of their relative resource costs. However, we understand the commenters' concerns about the potential negative impact of implementing the new code set for payment of treatment for breast and prostate cancers. The primary resource cost for these services is represented by the capital equipment, so we believe that for purposes of most accurate payment, the optimal coding for these services would group them based on how long the capital equipment is being used per service, so that payment is linked to the resource costs of furnishing particular services. Under the current set of codes, payment would be made based on the assumptions regarding the typical resource costs for the treatment of particular diseases, instead of the resource costs based on the length of treatment time.

Comment: Several commenters pointed out a rank order anomaly in the PE RVUs among codes CPT codes 77402, 77407, and 77412 that describe simple, intermediate, and complex radiation treatment codes, respectively. The commenters stated that it was illogical for the intermediate radiation treatment delivery code to have higher PE RVUs and overall payment compared to the complex radiation treatment delivery. Commenters suggested that this anomaly may be the result of the allocation of indirect PE because the specialty reporting the utilization for the intermediate code is more frequently dermatology than radiation oncology and dermatology is allocated more indirect PE within the PE methodology.

Response: We agree with commenters that this rank order anomaly is due to the difference in the mix of specialties in the utilization for these services. We also agree with the commenters that such rank order anomalies within families should be avoided when possible. We believe these kinds of rank order anomalies generally suggest inaccurate valuations and present risks to accurate billing and overall ratesetting. The risks are associated with incentives toward inaccurate downward coding. For example, in this case, individual practitioners would have the financial incentive to report radiation treatment delivery services using the intermediate code, even when the complex code would be more accurate. If practitioners acted on such an incentive, there would be serious consequences within our ratesetting methodologies for both purposes of budget neutrality and for allocation of PE RVUs. The increased utilization of the higher paying intermediate code would result in inappropriately low budge neutrality adjustment across the PFS. The rank order anomaly might also result in cyclical fluctuations in the year-to-year allocation of PE. This would happen if the inappropriate reporting of the intermediate code itself resulted in a concentration of most of the overall volume (including radiation oncology at a greater volume than dermatology) in the intermediate code. Then, once the claims data reflecting this concentration were incorporated into PFS ratesetting, the rank order anomaly would recur and the cycle would begin again. In considering these comments in the context of our proposal to implement these codes, we considered how we might eliminate this anomaly. We concluded that the best approach would be to maintain the total number of PE RVUs for these services overall, but to redistribute them among the three codes in order to eliminate the rank order anomaly. In order to do this, we would calculate the PE RVUs for these services under the established methodology and multiply these RVUs by the volume associated with each code. We would then reallocate the total number of PE RVUs among the three codes based on the weights of their direct costs included in the direct PE input database, since the total direct costs for these codes reflect appropriate valuation. We are seeking comment on this approach or other possible ways to mitigate the impact of the rank order anomaly among these codes.

Comment: One commenter stated that, in light of the significant negative impact of the coding changes and the proposed change in the default utilization rate assumption, CMS should delay implementation of the new codes for another year and work with stakeholders to gather information on the appropriate pricing of equipment items, utilization of equipment, and coding structure. A few commenters also stated that CMS should consider pricing radiation treatment delivery through the OPPS. And finally, several commenters noted that the proliferation of TC-only codes had a negative impact on the overall allocation of PE RVUs for radiation oncology services.

Response: We agree with commenters regarding the magnitude of changes that would result from the new code set. In general, we believe that significant changes in coding can improve the valuation and payment for PFS services. In the case of this set of new codes, we believe increased granularity in IMRT treatment delivery codes would benefit payment accuracy. We also believe that it is generally preferable for CMS to use CPT codes to describe physicians' services paid under the PFS and that, when possible, we should use consistent coding between the PFS and OPPS.

In consideration of comments from stakeholders and our concerns as described above, however, we do not believe that, on balance, we should finalize the new code set for CY 2016. Therefore, for CY 2016, we are not finalizing our proposal to implement the new set of codes. We will continue the use of the current G-codes and values for CY 2016 while we seek more information, including public comments and recommendations regarding new codes to be developed either through the CPT process or through future PFS rulemaking. We believe that significant changes to the codes need to be made before we can develop accurate payment rates under the PFS for these services. These changes would include: developing a code set that recognizes the difference in costs between kinds of imaging guidance modalities; making sure that this code set facilitates valuation that incorporates the cost of imaging based on how frequently it is actually provided; and developing treatment delivery codes that are structured to differentiate payment based on the equipment resources used.

While we are not finalizing the new code set for these services, we are finalizing our proposals to include the single linear accelerator for radiation treatment delivery services as recommended by the RUC, and to update the default utilization rate assumption for linear accelerators used in radiation treatment services from 50 to 70 percent, phased in over 2 years. Under either set of codes, it is clear that the 50 percent utilization assumption is incompatible with the times used to develop payment rates for individual procedures, given that the same linear accelerator is used for the services.

Finally, because the costs of capital equipment are the primary drivers of RVUs and payment amounts for these services, and we acknowledge significant difficult in obtaining quality information regarding the actual costs of such equipment across the wide range of practitioners and suppliers that furnish these services, we will be engaging in market research to develop independent estimates of utilization and pricing for linear accelerators and image guidance used in furnishing radiation treatment services. We will also consider ways in which data collected from hospitals under the OPPS may be helpful in establishing rates for these and other technical component services. We will consider this information, including public comment, as we develop proposals for inclusion in future notice and comment rulemaking.

(6) Superficial Radiation Treatment Delivery

In the CY 2015 PFS final rule with comment period, we noted that changes to the CPT prefatory language modified the services that are appropriately billed using CPT code 77401 (radiation treatment delivery, superficial and/or ortho voltage, per day). The changes effectively meant that many other procedures supporting superficial radiation therapy were bundled with CPT code 77401. The RUC, however, did not review the inputs for superficial radiation therapy procedures, and therefore, did not assess whether changes in its valuation were appropriate in light of this bundling. Some stakeholders suggested that the change in the prefatory language precluded them from billing for codes that were previously frequently billed in addition to this code and expressed concern that as a result there would be significant reduction in their overall payments. In the CY 2015 PFS final rule with comment period, we requested information on whether the new radiation therapy code set, combined with modifications in prefatory text, allowed for appropriate reporting of the services associated with superficial radiation and whether the payment continued to reflect the relative resources required to furnish superficial radiation therapy services.

In response to our request, we received a recommendation from a stakeholder to make adjustments to both the work and PE components for CPT code 77401. The stakeholder suggested that since crucial aspects of the service, such as treatment planning and device design and construction, were not currently reflected in CPT code 77401, and practitioners were precluded from reporting these activities separately, additional work should be included for CPT code 77401. Additionally, the stakeholders suggested that the current inputs used to value the code are not accurate because the inputs include zero work and minutes for a radiation therapist to provide the service directly to the patient. The stakeholders suggested, alternatively, that physicians, not radiation therapists, typically provide superficial radiation services directly. Finally, stakeholders also suggested that we amend the direct PE inputs by including nurse time and updating the price of the capital equipment used in furnishing the service.

In response, we solicited recommendations from stakeholders, including the RUC, regarding whether or not it would be appropriate to add physician work for this service and remove minutes for the radiation therapists, even though physician work is not included in other radiation treatment services. We believe it would be appropriate to address the clinical labor assigned to the code in the context of the information regarding the work that might be associated with the service. We also solicited information on the possible inclusion of nurse time for this service as part of the comments and/or recommendations regarding work for the service. Lastly, we reviewed the invoices submitted in response to our request to update the capital equipment for the service.

We proposed to update the equipment item ER045 ''orthovoltage radiotherapy system'' by renaming it ''SRT–100 superficial radiation therapy system'' and update the price from $140,000 to $216,000, on the basis of the submitted invoices. The proposed PE RVUs displayed in Addendum B on the CMS Web site were calculated with this proposed modification that was displayed in the CY 2016 direct PE input database.

Comment: Multiple commenters from various specialty societies responded to our request for comment. Several stated that there was work in 77401, while other commenters stated that there was not. One commenter suggested that CMS create a G-code to account for work, while another commenter stated that 77401 should be resurveyed by the RUC.

Response: Given the disagreement among commenters on the work involved in furnishing CPT code 77401, we are considering the possibility of creating a code to describe total work associated with the course of treatment for these services and are seeking additional information on alternatives descriptions and valuations for a code describing this work for consideration in future rulemaking.

Comment: A few commenters pointed out that the description of equipment item ER045 as proposed, ''SRT–100 superficial radiation therapy system,'' is a particular item that might better be identified generically as ''superficial radiation therapy system.''

Response: We agree with the commenter's suggestion and have updated the direct PE input database accordingly.

Comment: A few commenters thanked CMS for updating the price of the superficial radiation therapy system.

Response: We appreciate the support for our proposal.

After considering the comments, we are finalizing the update to ER045 as proposed.

c. Advance Care Planning Services

For CY 2015, the CPT Editorial Panel created two new codes describing advance care planning (ACP) services: CPT code 99497 (Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health professional; first 30 minutes, face-to-face with the patient, family member(s) and/or surrogate); and an add-on CPT code 99498 (Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health professional; each additional 30 minutes (List separately in addition to code for primary procedure)). In the CY 2015 PFS final rule with comment period (79 FR 67670–71), we assigned a PFS interim final status indicator of ''I'' (Not valid for Medicare purposes. Medicare uses another code for the reporting and payment of these services) to CPT codes 99497 and 99498 for CY 2015. We said that we would consider whether to pay for CPT codes 99497 and 99498 after we had the opportunity to go through notice and comment rulemaking.

In the CY 2016 PFS proposed rule, for CY 2016 we proposed to assign CPT codes 99497 and 99498 PFS status indicator ''A,'' which is defined as: ''Active code. These codes are separately payable under the PFS. There will be RVUs for codes with this status. The presence of an ''A'' indicator does not mean that Medicare has made a national coverage determination regarding the service. Contractors remain responsible for local coverage decisions in the absence of a national Medicare policy.'' We proposed to adopt the RUC-recommended values (work RVUs, time, and direct PE inputs) for CPT codes 99497 and 99498 beginning in CY 2016. The services could be paid on the same day or a different day as other E/M services. Physicians' services are covered and paid by Medicare in accordance with section 1862(a)(1)(A) of the Act. Therefore, under our proposal CPT code 99497 (and CPT code 99498 when applicable) would be reported when the described service is reasonable and necessary for the diagnosis or treatment of illness or injury. For example, this could occur in conjunction with the management or treatment of a patient's current condition, such as a 68 year old male with heart failure and diabetes on multiple medications seen by his physician for the E/M of these two

diseases, including adjusting medications as appropriate. In addition to discussing the patient's short-term treatment options, the patient may express interest in discussing long-term treatment options and planning, such as the possibility of a heart transplant if his congestive heart failure worsens and advance care planning including the patient's desire for care and treatment if he suffers a health event that adversely affects his decision-making capacity. In this case the physician would report a standard E/M code for the E/M service and one or both of the ACP codes depending upon the duration of the ACP service. However the ACP service as described in this example would not necessarily have to occur on the same day as the E/M service.

We solicited comment on this proposal, including whether payment is needed and what type of incentives the proposal might create. In addition, we solicited comment on whether payment for advance care planning is appropriate in other circumstances such as an optional element, at the beneficiary's discretion, of the annual wellness visit (AWV) under section 1861(hhh)(2)(G) of the Act.

We received approximately 725 public comments to the proposed rule regarding payment for ACP services. We received comments from individual citizens; several coalitions; professional associations; professional and community-based organizations focusing on end-of-life health care; healthcare systems; major employers; and many individual healthcare professionals working in primary care, geriatrics, hospice/palliative medicine, critical care, emergency medicine and other settings. We also received comments from chaplains, ethicists, advanced illness counseling companies and other interested parties. The majority of commenters expressed support for the proposal, providing recommendations on valuation, the types of professionals who should able to furnish or bill for the services and the appropriate setting of care, intersection with existing codes, the establishment of standards or specialized training, and beneficiary cost sharing and education. Some commenters opposed or expressed provisional support for the proposal because they believed it might create perverse financial incentives relating to termination of patient care. We summarize all of the comments below.

Valuation

Comment: Many commenters supported the separate identification and payment for ACP, either by adopting CPT codes 99497 and 99498 or other unique code(s). Many commenters supported the proposal broadly, advocating for improved Medicare coverage and payment of ACP. Several commenters supported our proposal to adopt the RUC-recommended payment inputs. Several other commenters stated the proposed payment amount was insufficient, and one of these commenters recommended a payment rate equal to the payment for CPT code 99215 (Office or other outpatient visit for the E/M of an established patient) in order to appropriately account for the physician's time.

Response: We appreciate the commenters' support for separate identification and payment for voluntary ACP services. We believe the RUC-recommended inputs accurately reflect the resource costs involved in furnishing the services described by CPT codes 99497 and 99498, and therefore, are finalizing our proposal to adopt the RUC-recommended values for both codes.

Comment: Regarding the time required to furnish ACP services, the commenters cited times ranging from 10 minutes to several hours over multiple encounters, depending on the setting and the patient's condition. Several commenters requested payment for increments of time of less than 30 minutes (for example, 10–15 minutes). One said the services typically require 30–45 minutes of face-to-face time with the patient and family. Several commenters recommended payment for services lasting less than 30 minutes, for example, by pro-rating the add-on code.

Response: We believe the CPT codes describe time increments that are appropriate for furnishing ACP services in various settings. Therefore we are finalizing our proposal to adopt the CPT codes and CPT provisions regarding the reporting of timed services.

Comment: Many commenters recommended that CMS issue a national coverage decision to avoid any local variation in coverage.

Response: We believe it may be advantageous to allow time for implementation and experience with ACP services, including identification of any variation in utilization, prior to considering a controlling national coverage policy through the National Coverage Determination process (see 78 FR 48164, August 7, 2013). By including ACP services as an optional element of the AWV (for both the first visit and subsequent visits), as discussed below, this rule creates an annual opportunity for beneficiaries to access ACP services should they elect to do so.

Comment: Many commenters recommended limits on utilization to prevent abuse, while others recommended no utilization limits in order to increase access and ensure periodic updates to advance care plans. Several commenters were concerned that the lack of utilization limits would lead to practitioners harassing patients.

Response: In general, we do not agree with the commenters who suggested that this service is more likely to be subject to overutilization or abuse than other PFS services without our adoption of explicit frequency limitations. We believe the CPT codes describe time increments that are appropriate for furnishing ACP services in various settings. Therefore, we are finalizing our proposal to adopt the CPT codes and CPT provisions regarding the reporting of timed services. Since the services are by definition voluntary, Medicare beneficiaries may decline to receive them. When a beneficiary elects to receive ACP services, we encourage practitioners to notify the beneficiary that Part B cost sharing will apply as it does for other physicians' services (except when ACP is furnished as part of the AWV, see the discussion below). We plan to monitor utilization of the new CPT codes over time to ensure that they are used appropriately.

Intersection With Other Services

Comment: Many commenters supported our proposal to pay for ACP services when furnished either on the same day or a different day than other E/M services. Several commenters asked CMS to specify whether and how the ACP codes could be billed in conjunction with E/M visits or services that span a given time period, such as 10- or 90-day global codes or Transitional Care Management (TCM) and Chronic Care Management (CCM) services. One commenter recommended that CMS unbundle ACP services from critical care services and pay at a higher rate, but did not suggest an alternative payment amount.

Response: We believe that CPT guidance for these codes is consistent with the description and recommended valuation of the described services. When adopting CPT codes for payment, we generally also adopt CPT coding guidance. In this case, CPT instructs that CPT codes 99497 and 99498 may be billed on the same day or a different day as other E/M services, and during the same service period as TCM or CCM services and within global surgical periods. We are also are adopting the CPT guidance prohibiting the reporting of CPT codes 99497 and 99498 on the same date of service as certain critical care services including neonatal and pediatric critical care.

Who Can Furnish/Setting of Care

Comment: Many commenters who supported the proposal provided recommendations regarding which practitioners and support staff should be able to provide or be paid for ACP services. Many commenters sought clarification regarding who would qualify as the ''other health care professionals'' described by or able to bill the CPT codes. Many commenters described ACP services as being routinely provided by a multidisciplinary team under physician supervision. For example, they stated that ACP is routinely provided by physicians, non-physician practitioners and other staff under the order and medical management of the beneficiary's treating provider. They stated that often a team approach is used, involving coordination between the beneficiary's physicians, non-physician practitioners (such as licensed clinical social workers or clinical nurse specialists) and other licensed and credentialed hospital staff such as registered nurses.

Similarly, other commenters described social workers, clinical psychologists, registered nurses, chaplains and other individuals as appropriate providers of ACP services, either alone or together with a physician, and recommended payment for the services of these individuals. For example, one commenter stated that a significant portion of ACP discussions occur between patients and registered nurses or allied health professionals functioning as care coordinators, care navigators or similar roles; that a growing proportion are performed at home; and that CMS should enable care coordinators and navigators to bill the ACP codes either by defining them as ''other qualified health professionals'' or under ''incident to'' provisions.

Some commenters specifically recommended allowing social workers and chaplains qualified under the hospice benefit to bill the ACP codes. One community oncologist association stated that best practices have evolved to include a multi-disciplinary approach utilizing trained physician, advanced practice provider and social worker skill sets, and that nearly half of their oncology network's ACP is performed by licensed clinical social workers. This commenter stated that while it is typical for a physician to initiate the ACP discussion with patients, ACP usually occurs with a mid-level provider or social worker and therefore the association requested that CMS allow clinical social workers to bill for these services. Another national association stated that it was working towards the development of new CPT codes for practitioners such as social workers who the commenter believed would not be able to directly bill the proposed codes.

Some commenters argued that such non-medically trained individuals are qualified and have special training and expertise (whether psychosocial, spiritual or legal) that are needed on ACP care teams. Some believed that ACP is sometimes appropriate for physicians to perform, but that physicians do not have enough time to supply all of the demand for ACP services. Some commenters similarly argued that inclusion of social workers and other non-medically trained individuals including Spiritual Directors, Chaplains, Clinical Pastoral Counselors and others would alleviate concerns about undue influence over patient decisions. These commenters stated that part of the ACP conversation is emotional and spiritual and not merely clinical, so it is important to include individuals who can address the non-clinical aspect of ACP. Some commenters argued that widening the field of professionals who can initiate these conversations within their scope of practice will further encourage appropriate and frequent ACP. Several commenters stated that physicians should not be paid for ACP services due to an ethical or financial conflict of interest, and that communities should take more responsibility for these services.

In contrast, several commenters were concerned that allowing ACP to be paid to certain trained facilitators would undermine physician authority in treating patients. These commenters described the use of trained facilitators in certain community models that offer group discussions by trained lay and health professionals. These commenters were concerned that such facilitators would qualify as ''other qualified professionals'' under the CPT code descriptor and be given control over ACP, shaping physician behavior. One commenter stated that to prevent coercion of patients, it would be better if payment was limited to non-employees of hospitals.

Response: We appreciate the many comments we received on existing or recommended practice patterns for the provision of ACP services. We acknowledge the broad range of commenters that stated that the services described by CPT codes 99497 and 99498 are appropriately provided by physicians or using a team-based approach provided by physicians, non-physician practitioners and other staff under the order and medical management of the beneficiary's treating physician. We note that the CPT code descriptors describe the services as furnished by physicians or other qualified health professionals, which for Medicare purposes is consistent with allowing these codes to be billed by the physicians and NPPs whose scope of practice and Medicare benefit category include the services described by the CPT codes and who are authorized to independently bill Medicare for those services. Therefore only these practitioners may report CPT codes 99497 or 99498. We note that as a physicians' service, ''incident to'' rules apply when these services are furnished incident to the services of the billing practitioner, including a minimum of direct supervision. We agree with commenters that advance care planning as described by the proposed CPT codes is primarily the provenance of patients and physicians. Accordingly we expect the billing physician or NPP to manage, participate and meaningfully contribute to the provision of the services, in addition to providing a minimum of direct supervision. We also note that the usual PFS payment rules regarding ''incident to'' services apply, so that all applicable state law and scope of practice requirements must be met in order to bill ACP services.

Comment: Several commenters recommended that CMS not require direct supervision for ACP services or allow it to be furnished ''incident to'' under general supervision.

Response: As discussed above, we understand that the services described by CPT codes 99497 and 99498 can be provided by physicians or using a team-based approach where, in addition to providing a minimum of direct supervision, the billing physician or NPP manages, participates and meaningfully contributes to the provision of the services. We note that the ''incident to'' rules apply when these services are provided incident to the billing practitioner, including direct supervision. We do not believe it would be appropriate to create an exception to allow these services to be furnished incident to a physician or NPP's professional services under less than direct supervision because the billing practitioner must participate and meaningfully contribute to the provision of these face-to-face services.

Comment: Many commenters made recommendations regarding the settings of care that would be appropriate for payment of ACP services. Some of these commenters specified that payment should be made in both ambulatory and inpatient settings. Many commenters stated that ACP is ideally performed in

a primary care setting, where the patient has a longstanding relationship with a physician and can engage in planning prior to illness, at which time they may be most receptive and most likely to have full decision making capacity. However many commenters believed payment was also appropriate in inpatient and other acute care settings. A few commenters recommended payment for an outpatient code or a code that would not be payable in the intensive care setting. Some commenters recommended that ACP should only be payable in clinical settings and that CMS should explicitly exclude group information sessions and similar offerings. Commenters stated that patients should be able to choose any location for ACP services including at home; in community-based settings; or via telehealth, telephone or other remote technologies. A few commenters were concerned that CMS might limit payment to certain specialists and recommended against such a policy.

Response: We agree with commenters that ACP services are appropriately furnished in a variety of settings, depending on the condition of the patient. These codes will be separately payable to the billing physician or practitioner in both facility and non-facility settings and are not limited to particular physician specialties. We refer commenters to the CY 2016 hospital outpatient prospective payment system final rule with comment period for a discussion of how payment will be made to hospitals for ACP services furnished in hospital outpatient departments.

Comment: Many commenters supported payment for ACP along the entire health continuum, in advance of acute illness, and revisiting the advance care plan with changes in the patient's condition. These commenters stated ACP is a routine service that should be regularly performed like preventive services. These commenters responded affirmatively to our solicitation as to whether or not ACP services should be included as an optional element, at the beneficiary's discretion, of the annual wellness visit (AWV) under section 1861(hhh)(2)(G) of the Act. Several of these commenters specified that ACP should remain separately paid even if included as an optional element of the AWV.

Response: We appreciate the response of commenters regarding our request for comment on whether or not we should include ACP as an optional element, at the beneficiary's discretion, of the annual wellness visit (AWV) under section 1861(hhh)(2)(G) of the Act. Based on the commenters' positive response to this solicitation, we are adding ACP as a voluntary, separately payable element of the AWV. We are instructing that when ACP is furnished as an optional element of AWV as part of the same visit with the same date of service, CPT codes 99497 and 99498 should be reported and will be payable in full in addition to payment that is made for the AWV under HCPCS code G0438 or G0439, when the parameters for billing those CPT codes are separately met, including requirements for the duration of the ACP services. Under these circumstances, ACP should be reported with modifier -33 and there will be no Part B coinsurance or deductible, consistent with the AWV.

Regarding who can furnish ACP when it is furnished as an optional element of the AWV, we note that AWV cannot be furnished as an ''incident to'' service since the AWV has a separate, distinct benefit category from ''incident to'' services. However, the current regulations for the AWV allow the AWV to be furnished under a team approach by physicians or other health professionals under direct supervision. Therefore, the rules that apply to the AWV will also apply to ACP services when furnished as an optional element of the AWV, including the requirement for direct supervision.

Comment: We received several comments requesting that ACP be added as a billable visit for FQHCs, and several comments requesting that we ensure that Medicare Administrative Contractors (MACs) are aware that a standalone ACP counseling session with an FQHC billable provider qualifies as a ''billable visit'' under Medicare's Prospective Payment System (PPS) for FQHCs.

Response: RHCs and FQHCs furnish Medicare Part B services and are paid in accordance with the RHC all-inclusive rate system or the FQHC PPS. Beginning on January 1, 2016, ACP will be a stand-alone billable visit in a RHC or FQHC, when furnished by a RHC or FQHC practitioner and all other program requirements are met. If furnished on the same day as another billable visit, only one visit will be paid. Coinsurance will be applied for ACP when furnished in an FQHC, and coinsurance and deductibles will be applied for ACP when furnished in an RHC. Coinsurance and deductibles will be waived when ACP is furnished as part of an AWV. Additional information on RHC and FQHC billing of ACP will be available in sub-regulatory guidance.

Standards/Training

Comment: Many commenters recommended that CMS establish standards or require specialized training as a condition of payment for ACP services. Many commenters recommended standards or special training in relevant state law and advance planning documents; content and time; communication, representation, counseling, shared decision making and skills outside the scope of physician training. Several commenters recommended standards regarding the use of certified electronic health record technology; contractual or employment relationships with nurses, social workers and other clinical staff working as part of an ACP team; use of written protocols and workflows to make ACP part of routine care; and working with professional societies and other organizations including the National Quality Forum and the Agency for Healthcare Research & Quality to establish quality standards for clinician-patient communication and ACP that would be tied to payment. Many commenters recommended policies to ensure documentation and transmission of the results of ACP among health care providers. Some of these commenters encouraged CMS to use technology to enhance the use and portability of advance directives across care settings and state lines, or recommended a universal registry.

Several commenters were concerned about the nature of the services that would be payable under the proposed codes, noting that ACP should extend beyond education about advance directives and completing forms. Several recommended the development of content criteria or quality measures to ensure that ACP services are meaningful and of value to patients. Some commenters expressed concern about ensuring appropriate services were furnished as part of ACP. For example, they expressed concern that payable services would include mere group information sessions, filling out forms or similar offerings. One commenter recommended that CMS require some minimal element like one personal real-time encounter, whether face-to-face or by phone or telemedicine.

Response: Since CPT codes 99497 and 99498 describe face-to-face services, we do not believe it would be appropriate at this time to apply additional payment standards as we have for certain non-face-to-face services such as CCM services. We will continue to consider whether additional standards, special training or quality measures may be appropriate in the future as a condition of Medicare payment for ACP services. We note that we did not propose to add ACP services to the list of Medicare telehealth services, so the face-to-face

services described by the codes need to be furnished in-person in order to be reported to Medicare.

Comment: Several commenters supported advance care planning between patients and clinicians, but expressed concern about the potential for bias against choosing treatment options involving living with disability, requiring physicians to discuss questionable treatment options (such as physician assisted suicide or other patient choices that might violate individual physician ethics) and similar issues. Some commenters were concerned that patients might change their decisions once care was actually needed and be unable to override previous advance directives; or that the government would be making healthcare decisions instead of patients, physicians, and families.

Response: As discussed above, based on public comments we received, we believe the services described by CPT codes 99497 and 99498 are appropriately provided by physicians or using a team-based approach where ACP is provided by physicians, non-physician practitioners and other staff under the order and medical management of the beneficiary's treating physician. We also note that the CPT code descriptors describe the services as furnished by physicians or other qualified health professionals, which for Medicare purposes, is consistent with allowing these codes to be billed by the physicians and NPPs whose scope of practice and Medicare benefit category include the services described by the CPT codes and who are authorized to independently bill Medicare for those services. Therefore only these practitioners may report CPT codes 99497 or 99498, and ''incident to'' rules apply when these services are provided incident to the services of the billing practitioner under a minimum of direct supervision. We agree with commenters that advance care planning as described by the new CPT codes is primarily the provenance of patients and physicians. Accordingly we expect the billing physician or NPP, in addition to providing a minimum of direct supervision, to manage, participate and meaningfully contribute to the provision of the services. Also, we note that PFS payment rules apply when ACP is furnished incident to other physicians' services, including where applicable, that state law and scope of practice must be met. Since the ACP services are by definition voluntary, we believe Medicare beneficiaries should be given a clear opportunity to decline to receive them. We note that beneficiaries may receive assistance for completing legal documents from other non-clinical assisters outside the scope of the Medicare program. Nothing in this final rule with comment period prohibits beneficiaries from seeking independent counseling from other individuals outside the Medicare program—either in addition to, or separately from, their physician or NPP.

Beneficiary Considerations

Comment: Several commenters suggested that CMS pursue waivers of cost sharing for ACP services or that cost sharing should vary by the condition of the patient.

Response: We lack statutory authority to waive beneficiary cost sharing for ACP services generally because they are not preventive services assigned a grade of A or B by the United States Preventive Services Task Force (USPSTF); nor may CMS vary cost sharing according to the patient's diagnosis. Under current law, the Part B cost sharing (deductible and coinsurance) will be waived when ACP is provided as part of the AWV, but we lack authority to waive cost sharing in other circumstances. We would recommend that practitioners inform beneficiaries that the ACP service will be subject to separate cost sharing.

Comment: One commenter recommended beneficiary education through *Medicare & You*, partnerships with senior advocacy groups and other means.

Response: We agree that beneficiary education about ACP services, especially the voluntary nature of the services, is important. We welcome such efforts by beneficiary advocacy and community-based organizations and will consider whether additional material should be added to the *Medicare & You* handbook to highlight new payment provisions for these voluntary services.

In summary, we are finalizing our proposal to assign CPT codes 99497 and 99498 PFS status indicator ''A'' with RVUs developed based on the RUC-recommended values. We are also adding ACP as an optional element, at the beneficiary's discretion, of the AWV. We are also making the conforming changes to our regulations at § 410.15 that describe the conditions for and limitations on coverage for the AWV.

We note that while some public commenters were opposed to Medicare paying for ACP services, the vast majority of comments indicate that most patients desire access to ACP services as they prepare for important medical decisions.

d. Valuation of Other Codes for CY 2016

(1) Excision of Nail Bed (CPT Code 11750)

CPT code 11750 appeared on the RUC's misvalued code screen of 10-day global services with greater than 1.5 office visits and utilization over 1,000. The Health Care Professional Advisory Committee (HCPAC) reviewed the survey results for valuing this code and determined that 1.99 work RVUs, corresponding to the 25th percentile survey result, was the appropriate value for this service. As discussed in the proposed rule, we indicated that we believed the recommendation for this service overstated the work involved in performing this procedure, specifically, given the decrease in post-operative visits. Due to similarity in service and time, we indicated that we believed a direct crosswalk from the work RVU for CPT code 10140 (Drainage of blood or fluid accumulation), which is also a 10-day global service with one post-operative visit, more accurately reflects the time and intensity of furnishing the service. Therefore, for CY 2016 we proposed a work RVU of 1.58 for CPT code 11750.

The following is a summary of the comments we received on our proposal.

Comment: One commenter disagreed with CMS' direct crosswalk of the work RVU from CPT code 10140 to CPT code 11750. The commenters suggested that CMS establish the RVU for this procedure consistent with the recommendation. Additionally, the commenter stated that the HCPAC recommendation accounted for the removal of one post-operative visit from the global period. The commenter also stated that CMS' proposed work RVU would have an intraservice work intensity similar to a level one E/M visit (99211), which suggests that the value is too low.

Response: In developing our proposed RVUs for this service, we reviewed codes with similar intra-service and total times, and identified CPT code 11760 (Repair of nail bed) and CPT code 11765 (Excision of nail fold toe). Since we believe that the crosswalk for CPT code 11750 has similar intensity, and our proposed RVU is consistent with these similar services, we do not agree with the commenter who states that the proposed work RVU is inaccurate.

After consideration of comments received, we are finalizing a work RVU of 1.58 for CPT code 11750, as proposed.

(2) Bone Biopsy Excisional (CPT Code 20240)

In its review of 10-day global services, the RUC identified CPT code 20240 as potentially misvalued. Subsequent to this identification, the RUC requested that CMS change this code from a 10-day global period to a 0-day global period for this procedure. Based on survey data, the RUC recommended a decrease in the intraservice time from 39 to 30 minutes, removal of two postoperative visits (one 99238 and one 99212), and an increase in the work RVUs for CPT code 20240 from 3.28 to 3.73. In the proposed rule, we stated that we did not believe the RUC recommendation accurately reflected the work involved in this procedure, especially given the decrease in intraservice time and post-operative visits relative to the previous assumptions used in valuing the service. Therefore, for CY 2016, we proposed a work RVU of 2.61 for CPT code 20240 based on the reductions in time for the service.

The following is a summary of the comments we received on our proposal.

Comment: Several commenters, including the RUC, recommended that CMS reconsider its decision not to accept the RUC's recommendation for CPT code 20240. The commenters noted that the service was last valued by the Harvard study over 20 years ago and the assumptions made at the time no longer reflect current practice as the survey respondents included fewer than 10 non-orthopedic surgeons. Commenters stated that podiatry is currently the dominant provider of the service. Commenters also stated that deriving a new proposed work RVU based on existing work RVUs would be misguided in this case.

The commenters also suggested that using a reverse building block methodology to convert a 10-day global code to 0-day global code by removing the bundled E/M services is inappropriate since magnitude estimation was used initially when establishing the work RVUs for surgical codes. Several commenters indicated that CMS' proposed work RVU has inappropriately low work intensity and expressed concern about CMS' approach to global code conversion.

Additionally, the RUC expressed disagreement with CMS' decision to remove 6 minutes of clinical labor minutes for discharge management time from 0-day global services stating there is clinical staff time that needs to be accounted for; the commenter requested we include the 6 minutes of clinical labor time based on the standard clinical labor task ''conduct phone calls/call in prescriptions.''

Response: In proposing what we believed to be a more accurate value for CPT code 20240, we considered applying the intra-service ratio, which yielded a value of 2.52 RVUs; however we believed that value would have inadequately reflected the work involved in furnishing the service. Instead, we opted to use the reverse building block methodology to remove the post-operative visits, acknowledging the transition from a 10-day to a 0-day global period. We removed the RVUs associated with the visits (1.12 RVUs) from the RUC-recommended value of 3.73 RVUs and arrived at an RVU of 2.61, which we continue to believe accurately accounts for work involved in furnishing the service. While we generally understand that the work RVUs may not have been developed using a building-block methodology, and that the reverse building block methodology may not always be the best approach to valuing services, we do not agree that significant changes in the post-operative period should be ignored, especially since we note that the RUC uses magnitude estimation to develop recommended work RVUs in the context of survey data regarding the number and level of visits in the post-operative periods.

In terms of the clinical labor minutes associated with the discharge day management, we do not agree that the typical discharge work associated for this service or for others without work time for discharge day management would typically involve clinical staff conducting phone calls regarding prescriptions. We are aware that some codes include the clinical labor minutes for discharge management even though the work time for these codes do not include time for discharge management. We are seeking comment on how we might address this discrepancy in future rulemaking.

After consideration of comments received, we are finalizing the proposed work RVU of 2.61 for CPT code 20240.

(3) Endobronchial Ultrasound (CPT Codes 31622, 31652, 31653, 31625, 31626, 31628, 31629, 31654, 31632 and 31633)

For CY 2016, the CPT Editorial Panel deleted one code, CPT code 31620 (Ultrasound of lung airways using an endoscope), and created three new codes, CPT codes 31652–31654, to describe bronchoscopic procedures that are inherently performed with endobronchial ultrasound (EBUS).

In their review of the newly revised EBUS family, the RUC recommended a change in the work RVUs for CPT code 31629 from 4.09 to 4.00. The RUC also recommended maintaining the current work RVUs for CPT codes 31622, 31625, 31626, 31628, 31632 and 31633. We proposed to use those work RVUs for CY 2016.

For the newly created codes, the RUC recommended work RVUs of 5.00 for CPT code 31652, 5.50 for CPT code 31653 and 1.70 for CPT code 31654. In the proposed rule, we stated that we believe the RUC-recommended work RVUs for these services overstate the work involved in furnishing the procedures. In order to develop proposed work RVUs for CPT code 31652, we compared the service described by the code descriptor to deleted CPT codes 31620 and 31629, because this new code describes a service that combines services described by CPT code 31620 and 31629. Specifically, we took the sum of the current work RVU of CPT code 31629 (WRVU = 4.09) and the CY 2015 work RVU of CPT code 31620 (WRVU = 1.40) and multiplied it by the quotient of CPT code 31652's RUC-recommended intraservice time (INTRA = 60 minutes) and the sum of CPT codes 31620 and 31629's current and CY 2015 intraservice times (INTRA = 70 minutes), respectively. This resulted in a proposed work RVU of 4.71. To value CPT code 31653, we used the RUC-recommended increment of 0.5 work RVUs between this service and CPT code 31652 to calculate for CPT code 31653 our proposed work RVUs of 5.21. Lastly, because the service described by new CPT code 31654 is very similar to deleted CPT code 31620, we stated that we believed a direct crosswalk of the previous values for CPT code 31620 accurately reflected the time and intensity of furnishing the service described by CPT code 31654. Therefore, we proposed a work RVU of 1.40 for CPT code 31654.

The following is a summary of the comments we received on our proposals.

Comment: Several commenters, including the RUC, stated they did not agree with CMS' calculations or methodology utilized in valuing these services. The commenters suggested that CMS' calculations were based on inconsistent data. One commenter stated the methodology outlined in the proposed rule had several flaws in the understanding of the new and deleted bronchoscopy codes and questioned what purpose the creation of the new bundled codes were designed to address.

Response: As we have addressed more broadly, when we do not believe that

the RUC-recommended values adequately address changes in the time resources required to furnish particular services, we have used several methodologies to identify potential work RVUs. We examine the results of such approaches and consider whether or not these results appropriately account for the total work of the service. We continue to believe that the methodology used to calculate the proposed work RVU is the most appropriate methodology to use for these procedures.

Specifically, in considering CPT code 31652 in the context of similar codes, including CPT code 31638 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with revision of tracheal or bronchial stent inserted at previous session (includes tracheal/bronchial dilation as required)) and CPT code 31661(Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial thermoplasty, 2 or more lobes) both of which have 60 minutes of intraservice time and RVUs of 4.88 and 4.50, we continue to believe that a work RVU of 4.71 is the most accurate valuation. For CPT code 31653, we continue to believe that maintaining the RUC-recommended 0.5 work RVU increment between 31652 and 31653 yields the most accurate value for CPT code 31653. For CPT code 31654, we note the direct crosswalk preserves the work RVU of 1.40 from the previous CPT code 31620, which was also an add-on code, and had more intraservice time. Therefore, after consideration of comments received, we are finalizing the work RVUs for CPT codes 31622, 31652, 31653, 31625, 31626, 31628, 31629, 31654, 31632 and 31633 for CY 2016 as proposed.

Comment: One commenter also expressed appreciation of CMS' acceptance of the RUC's PE recommendation for several codes in this family.

Response: We appreciate the support of the commenter.

Comment: In its comment, the RUC indicated that equipment items ES045 and ES016 were incorrectly included for 31652, 31653, and 31654 and that these items were replaced with new equipment codes. In the CY 2015 Technical Correction Notice (CMS–1612–F2), equipment item ES015 was included in 31654, and the clinical labor direct PE inputs for 31654 were omitted from the direct PE input database. Similarly, for CPT code 31629, the RUC indicated that CMS proposed 30 minutes for clinical labor tasks ''assist physician in performing procedure'' and ''assist physician for moderate sedation'', as included in the CY 2016 proposed direct PE input database, while the RUC had recommended 35 minutes. The RUC opined that since the 30 minutes displayed for CPT code 31629 was incorrect, all of the corresponding equipment times included discrepancies of 5 minutes. The RUC suggested that all equipment times should increase by 5 minutes, excluding the stretcher, which should remain 89 minutes as that equipment is not needed during the intraservice portion of the procedure. In addition, the RUC suggested that the calculation of supply item ''gas, oxygen'' (SD084) would also be affected by the ''assist physician'' time and should be 105 liters, rather than 90 liters as currently indicated in the supply direct PE input CMS file.

Response: We agree with the RUC's comments regarding the proposed direct PE inputs for these procedures; the resulting changes appear in the final direct PE input database for CY 2016.

(4) Intravascular Ultrasound (CPT Codes 37252 and 37253)

In the CY 2015 PFS proposed rule, a stakeholder requested that CMS establish non-facility PE RVUs for CPT codes 37250 and 37251. CMS sought comment regarding the setting and valuation of these services. In September 2014, these codes were referred to the CPT Editorial Panel. The CPT Editorial Panel deleted CPT codes 37250 and 37251 and created new bundled codes 37252 and 37253 to describe intravascular ultrasound (IVUS). The RUC recommended 1.80 RVUs for CPT code 37252 and 1.44 RVUs for CPT code 37253. The RUC also recommended new direct PE inputs for an IVUS catheter and IVUS system. CMS proposed to accept the RUC-recommended work RVUs for intravascular ultrasound.

Comment: Commenters expressed support for CMS' proposed work and time values, as well as for updating the direct PE inputs.

Response: We appreciate commenters' support, and we are finalizing these values as proposed.

(5) Laparoscopic Lymphadenectomy (CPT Codes 38570, 38571 and 38572).

The RUC identified three laparoscopic lymphadenectomy codes as potentially misvalued: CPT code 38570 (Laparoscopy, surgical; with retroperitoneal lymph node sampling (biopsy), single or multiple); CPT code 38571 (Laparoscopy, surgical; with retroperitoneal lymph node sampling (biopsy), single or multiple with bilateral total pelvic lymphadenectomy); and CPT code 38572 (Laparoscopy, surgical; with retroperitoneal lymph node sampling (biopsy), single or multiple with bilateral total pelvic lymphadenectomy and periaortic lymph node sampling (biopsy), single or multiple). Accordingly, the specialty society surveyed these 10-day global codes, and the survey results indicated decreases in intraservice and total work times. After reviewing the survey responses, the RUC recommended that CMS maintain the current work RVU for CPT code 38570 of 9.34; reduce the work RVU for CPT code 38571 from 14.76 to 12.00; and reduce the work RVU for CPT code 38572 from 16.94 to 15.60. We used the RUC recommendations to propose values for CPT codes 38571 and 38572, since the RUC recommended reductions in the work RVUs that correspond with marked decreases in intraservice time and decreases in total time. As discussed in the proposed rule, we did not agree with the RUC's recommendation to maintain the current work RVU for CPT code 38570 in spite of similar changes in intraservice and total times as were shown in the RUC recommendations for CPT codes 38571 and 38572. Therefore, we proposed a work RVU for CPT code 38570 of 8.49, which reflects the proportional reduction in total time for this code and maintains the rank order among the three codes.

The following is a summary of the comments we received on our proposals.

Comment: Several commenters, including the RUC, indicated that CMS should use the recommended work RVU of 9.34 for CPT code 38570. Commenters stated that CMS used an erroneous calculation to derive the proposed work RVU of 8.49, with the use of time ratios being methodologically flawed due to an assumption that the existing time is correct, that physician intensity would remain constant for a service over a period of many years, and that different components of total time consisting of differing levels of physician intensity cannot be measured together. Commenters stated that using this rationale as the basis for not accepting the RUC recommendation was unprecedented and misguided.

Commenters also stated that the recommended work RVU of 9.34 was based on work time and a comparison to CPT codes 31239 (Nasal/sinus endoscopy, surgical; with dacryocystorhinostomy) and 50590 (Lithotripsy, extracorporeal shock wave). Commenters indicated that the comparison to these codes confirmed

that maintaining the current value for CPT code 38570 would be appropriate. A different commenter stated that the survey time for this procedure had increased to 280 minutes and included a hospital inpatient visit. This commenter also urged CMS to maintain the current work RVUs of 9.34 for CPT code 38570.

Response: We refer the reader to our earlier discussion about time ratios. We continue to believe that the use of time ratios is one of several reasonable methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values do not account for information that suggests the amount of time involved in furnishing the procedure has changed significantly. In the case of CPT code 38570, we noted that the intraservice time was reduced by 50 percent, from 120 minutes to 60 minutes, and the total time was also reduced from 242 minutes to 220 minutes. We also noted that the other codes in the same family, CPT codes 38571 and 38572, reflected similar time reductions and consequently had reduced recommended work RVUs. We believe that in order to maintain relativity, it is appropriate to apply a similar reduction to the work RVUs of CPT code 38570.

We were unable to find mention of CPT code 31239 in the RUC recommendations for 38570. Therefore, we considered the values for the code as a potential rationale for using the RUC-recommended value for CPT code 38570. We concluded that CPT code 31239 has limited utility as a comparison, since its values appear to be an outlier among codes with similar characteristics. For example, all 25 of the other 10-day global codes with 60 minutes of intraservice time have a lower work RVU than CPT code 38570, most of them substantially lower, with CPT code 49429 (Removal of peritoneal-venous shunt) having the next highest work RVU of 7.44. We also do not agree with the comparison to CPT code 50590, since that code describes all of the work within a 90-day global period, and we do not believe that relativity between services would be preserved if we were to make direct work RVU comparisons between 10-day and 90-day global codes.

After consideration of comments received, we are finalizing our proposed work RVUs of 8.49 for CPT code 38570, 12.00 for CPT code 38571, and 15.60 for CPT code 38572.

(6) Mediastinoscopy With Biopsy (CPT Codes 39401 and 39402)

The RUC identified CPT code 39400 (Mediastinoscopy, including biopsy(ies) when performed) as a potentially misvalued code due to an unusually high preservice time and Medicare utilization over 10,000. In reviewing the code's history, = the CPT Editorial Panel concluded that the code had been used to report two distinct procedural variations although the code was valued using a vignette for only one of them. As a result, CPT code 39400 is being deleted and replaced with CPT codes 39401 and 39402 to describe each of the two mediastinoscopy procedures.

We proposed to accept the RUC-recommended work RVU of 5.44 for code 39401 and to use the RUC-recommended crosswalk from CPT code 52235 (Cystourethroscopy, with fulguration), which accurately estimates the overall work for CPT code 39401. In the proposed rule, we disagreed with the RUC-recommended work RVU of 7.50 for CPT code 39402. We stated that the work RVU for CPT code 39401 establishes an accurate baseline for this family of codes, so we proposed to scale the work RVU of CPT code 39402 in accordance with the change in the intraservice times between CPT codes 39401 and 39402. We indicated that applying this ratio in the intraservice time to the work RVU of CPT code 39401 yielded a total work RVU of 7.25 for CPT code 39402. We also noted that the RUC recommendation for CPT code 39401 represented a decrease in value by 0.64 work RVUs, which is roughly proportionate to the reduction from a full hospital discharge visit (99238) to a half discharge visit assumed to be typical in the post-operative period. The RUC recommendation for CPT code 39402 had the same reduction in the post-operative work without a corresponding decrease in its recommended work RVU. In order to reflect the reduction in post-operative work and to maintain relativity between the two codes in the family, we proposed a work RVU of 7.25 for CPT code 39402.

The following is a summary of the comments we received on our proposals.

Comment: Several commenters stated that the use of intraservice time ratios was inappropriate for valuation of CPT codes. They indicated that CMS should instead use the RUC's recommended work RVU of 7.50, due to the difference in technical skill, physical/mental effort, and additional stress involved in the performance of CPT code 39402 relative to CPT code 39401. Commenters expressed the importance of using physician survey data and magnitude estimation to arrive at work RVUs.

Response: We refer the reader to our earlier discussions about the utility of time ratios in identifying potential work RVUs for PFS services. We note that when comparing the work RVUs for CPT codes 39401 and 39402, the work RVU for CPT code 39402 was higher than would be expected based on the difference in time between these two procedures, even considering the more difficult clinical nature of CPT code 39402. We continue to believe that the use of intraservice time ratios is one of several different methods that can be effectively employed for valuation of CPT codes. For this particular mediastinoscopy family, CPT codes 39401 and 39402 share identical preservice time, postservice time, and office visits. Based on this information, we continue to believe that the intraservice time ratio between the two codes is the most accurate method for determining the work RVU for this procedure.

Comment: Several commenters suggested that CMS should use the RUC-recommended work RVU of 7.50 for CPT code 39402 based on the use of a building block methodology. Commenters stated that the RUC arrived at this value by adding the work RVU of CPT code 39401 (5.44 RVUs) to one half of the work RVU of CPT code 32674 (4.12 RVUs). The resulting calculation of 5.44 plus 2.06 equaled 7.50 RVUs, exactly the same value recommended by the RUC and a proof of the accuracy of magnitude estimation.

Response: We believe that the use of the reverse building block methodology would result in a significantly lower valuation for CPT code 39402. The current CPT code used for a mediastinoscopy with lymph node biopsy is 39400, which has a work RVU of 8.05, and includes three postoperative visits in its global period (a 99231 hospital inpatient visit, a 99238 hospital discharge visit, and a 99213 office visit). CPT code 39402 does not include the hospital inpatient visit (0.76 RVUs) or the office visit (0.97 RVUs), and includes only half of the discharge visit (0.64 RVUs). If the work of these visits were removed from CPT code 39400, the result would be a work RVU of 8.05 − 2.37 = 5.68. We believe that this work RVU understates the work of CPT code 39402, which is why we believe that a building block methodology would be less accurate than the use of the intraservice time ratio for this code family.

After consideration of comments received, we are finalizing our proposed work RVU of 5.44 for CPT code 39401 and 7.25 for 39402.

(7) Hemorrhoid(s) Injection (CPT Code 46500)

The RUC identified CPT code 46500 (Injection of sclerosing solution, hemorrhoids) as potentially misvalued, and the specialty society resurveyed this 10-day global code. The survey showed a significant decrease in the reported intraservice and total work times. After reviewing the survey responses, the RUC recommended that CMS maintain the current work RVU of 1.69 in spite of the reductions in intraservice and total times. We proposed to reduce the work RVU to 1.42, which reduces the work RVU by the same ratio as the reduction in total time.

We also proposed to refine the RUC-recommended direct PE inputs by removing the inputs associated with cleaning the scope.

The following is a summary of the comments we received on our proposals.

Comment: The RUC disagreed with the methodology CMS used to develop the proposed work RVUs stating that CMS' proposed methodology did not account for differences in pre-service or post-service time. The RUC also stated that different components of total time (preservice time, intra-service time, post-service time, and post-operative visits) consist of differing levels of physician intensity and CMS' calculations did not appear to have been based on any clinical information or any measure of physician intensity.

Another commenter supported our efforts to identify and address such incongruities between work times and work RVUs, stating that when work time decreases, work RVUs should decrease comparatively, absent a compelling argument that the intensity of the service has increased sufficiently to offset the decrease in work time.

One commenter disagreed with CMS' proposed PE refinements for CPT code 46500 regarding the pre-service clinical labor time for the facility setting, clinical labor time related to setting up endoscopy equipment, clinical labor time and supplies related to cleaning endoscopy equipment, equipment time for item ES002, and clinical labor time associated with clinical labor task ''follow-up phone calls and prescriptions''. The commenter also disagreed with CMS' refinement of not including setup and clean-up time for the scope at the post-operative visit.

Response: We believe the total time ratio produces an RVU that is comparable with other 10-day global services. We note that CPT code 41825 (Excision of lesion or tumor (except listed above), dentoalveolar structures; without repair) and CPT code 10160 (Puncture aspiration of abscess, hematoma, bulla, or cyst) are similar 10-day global services that have comparable work RVUs. For CY 2016, we are finalizing our proposed value of 1.42 RVUs for CPT code 46500.

After reviewing the public comments that were submitted regarding direct PE inputs, we recognize that we mistakenly believed that a disposable scope was included as a direct PE input, when a reusable equipment item was actually included. As a result, we removed the clinical labor time associated with setting up and cleaning the scope. Since we made this refinement in error, we will restore the clinical labor time associated with setting up and cleaning the scope. We also agree with commenters regarding the time for clinical labor task ''follow-up phone calls and prescriptions''. Therefore, we are restoring the RUC-recommended clinical labor times for ''follow-up phone calls & prescriptions'', ''setup scope (non-facility setting only)'', and ''clean scope''. As a result of including the previously removed clinical labor time associated with the equipment input ES002 (anoscope with light source), we are increasing the equipment time for this code from 60 minutes to 70 minutes. We did not add the set-up and clean scope time to the post-operative visits, however, since the clinical labor time for post-operative visits across PFS services match the clinical labor for the associated E/M visits. We are seeking comment regarding whether or not we should reconsider that practice broadly before making an exception in this particular case.

(8) Liver Allotransplantation (CPT Code 47135)

The RUC identified CPT code 47135 (Liver allotransplantation; orthotopic, partial or whole, from cadaver or living donor, any age) as potentially misvalued, and the specialty society resurveyed this 90-day global code. The survey results showed a significant decrease in reported intraservice work time, but a significant increase in total work time (the number of post-operative visits significantly declined while the level of visits increased). After reviewing the survey responses, the RUC recommended an increase in the work RVU from 83.64 to 91.78, which corresponds to the survey median result, as well as the exact work RVU for CPT code 33935 (Heart-lung transplant with recipient cardiectomy-pneumonectomy). In the proposed rule, we stated that we did not believe the RUC-recommended crosswalk was the most accurate from among the group of transplant codes. We noted that CPT code 32854 (Lung transplant, double (bilateral sequential or en bloc); with cardiopulmonary bypass) has intraservice and total times that are closer to those the RUC recommended for CPT code 47135, and CPT code 32854 has a work RVU of 90.00 which corresponds to the 25th percentile survey result for CPT code 47135. Therefore, we proposed to increase the work RVU of CPT code 47135 to 90.00.

The following is a summary of the comments we received on our proposal.

Comment: The RUC stated that its original reference code is the most appropriate comparator for this service and revising the work RVU for CPT code 47135 to 1.9 percent below the RUC's recommendation would be arbitrary and punitive. Another commenter stated that while they believed the RUC proposed valuation more accurately reflected the work involved, they appreciated the proposal to increase the work RVUs associated with liver transplants, and suggested that CMS accept the RUC-recommended direct PE valuations.

Response: As we stated in the proposed rule, CPT code 32854(Lung transplant, double (bilateral sequential or en bloc); with cardiopulmonary bypass) has very similar intra-service and total times, in addition to an identical work RVU (90.00) to the 25th percentile survey result. We continue to believe the proposed direct crosswalk from CPT code 32854 (Lung transplant, double (bilateral sequential or en bloc); with cardiopulmonary bypass) to CPT code 47135 results in the most accurate valuation. Therefore, for CY 2016 we are finalizing without modification our proposed work RVU of 90.00 for CPT code 47135.

(9) Genitourinary Catheter Procedures (CPT Codes 50430, 50431, 50432, 50433, 50434, 50435, 50693, 50694, and 50695)

For CY 2016, the CPT Editorial Panel deleted six CPT codes (50392, 50393, 50394, 50398, 74475, and 74480) that were commonly reported together, and created 12 new CPT codes, both to describe these genitourinary catheter procedures more accurately and to bundle inherent imaging guidance. Three of these CPT codes (506XF, 507XK, and 507XL) were referred back to CPT to be resurveyed as add-on codes. The other nine codes were reviewed at the January 2015 RUC meeting and assigned recommended work RVUs and direct PE inputs.

We proposed to use the RUC-recommended work RVU of 3.15 for CPT code 50430. We agreed that this is

an appropriate value and that the code should be used as a basis for establishing relativity with the rest of the family. We began by making comparisons between the service times of CPT code 50430 and the other codes in the family in order to determine the appropriate proposed work RVU of each procedure.

In our proposal for CPT code 50431, we stated that we disagreed with the RUC-recommended work RVU of 1.42; we instead proposed a work RVU of 1.10, based on three separate data points. First, the RUC recommendation stated that CPT code 50431 describes work previously described by a combination of CPT codes 50394 and 74425. These two codes have work RVUs of 0.76 and 0.36, respectively, which sum together to 1.12. Second, we noted that the work of CPT code 49460 (Mechanical removal of obstructive material from gastrostomy) is similar, with the same intraservice time of 15 minutes and same total time of 55 minutes but a work RVU of 0.96. Finally, we observed that the minimum survey result had a work RVU of 1.10, and we suggested that this value reflected the total work for the service. Accordingly, we proposed 1.10 as the work RVU for CPT code 50431.

We employed a similar methodology to develop a proposed work RVU of 4.25 for CPT code 50432. The three previously established codes were combined in CPT code 50432; these had respective work RVUs of 3.37 (CPT code 50392), 0.54 (CPT code 74475), and 0.36 (CPT code 74425); together these sum to 4.27 work RVUs. We also examined the valuation of this service relative to other codes in the family. The ratio of the intraservice time of 35 minutes for CPT code 50430 and the intraservice time of 48 minutes for CPT code 50432, applied to the work RVU of base code 50430 (3.15), results in a potential work RVU of 4.32. The total time for CPT code 50432 is higher than CPT code 50430 (107 minutes relative to 91 minutes); applying this ratio to the base work RVU results in a work RVU of 3.70. We utilized these data to inform our proposed crosswalk. In valuing CPT code 50432, we considered CPT code 31660 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance), which has an intraservice time of 50 minutes, total time of 105 minutes, and a work RVU of 4.25. Therefore, we proposed to establish the work RVU for CPT code 50432 at the crosswalked value of 4.25 work RVUs.

In the proposed rule, we stated that according to the RUC recommendations, CPT codes 50432 and 50433 are very similar procedures, with CPT code 50433 making use of a nephroureteral catheter instead of a nephrostomy catheter. The RUC valued the added difficulty of CPT code 50433 at 1.05 work RVUs compared to CPT code 50432. We proposed to maintain the relative difference in work between these two codes by proposing a work RVU of 5.30 for CPT code 50433 (4.25 + 1.05). Additionally, we considered CPT code 57155 (Insertion of uterine tandem and/or vaginal ovoids for clinical brachytherapy), which has a work RVU of 5.40 and an identical intraservice time of 60 minutes, but 14 additional minutes of total time (133 minutes compared to 119 minutes for CPT code 50433), which supported the difference of 0.10 RVUs. For these reasons, we proposed a work RVU of 5.30 for CPT code 50433.

As with the other genitourinary codes, we developed the proposed work RVU of CPT code 50434 in order to preserve relativity within the family. In the proposed rule, we stated that CPT code 50434 has 15 fewer minutes of intraservice time compared to CPT code 50433 (45 minutes compared to 60 minutes). We proposed to apply this ratio of 0.75 to the base work RVU of CPT code 50433 (5.30), which resulted in a potential work RVU of 3.98. We also considered CPT code 50432 as another similar service within this family of services, with three more minutes of intraservice time compared to CPT code 50434 (48 minutes of intraservice time instead of 45 minutes). We noted that applying this ratio (0.94) to the base work RVU of CPT code 50432 (4.25) resulted in a potential work RVU of 3.98. Based on this information, we identified CPT code 31634 (Bronchoscopy, rigid or flexible, with balloon occlusion) as an appropriate direct crosswalk, and proposed a work RVU of 4.00 for CPT code 50434. The two codes share an identical intraservice time of 45 minutes, though the latter possesses a lower total time of 90 minutes.

For CPT code 50435, we considered how the code and work RVU would fit within the family in comparison to our proposed values for CPT codes 50430 and 50432. CPT code 50430 serves as the base code for this group; it has 35 minutes of intraservice time in comparison to 20 minutes for CPT code 50435. This intraservice time ratio of 0.57 (20/35) resulted in a potential work RVU of 1.80 for CPT code 50435 when applied to the work RVU of CPT code 50430 (3.15). Similarly, CPT code 50432 is the most clinically similar procedure to CPT code 50435. CPT code 50432 has 48 minutes of intraservice time compared to 20 minutes of intraservice time for CPT code 50435. This ratio of 0.42 (20/48) applied to the base work RVU of CPT code 50432 (4.25) results in a potential work RVU of 1.77. We also considered two additional procedures to determine a proposed value for CPT code 50435. CPT code 64416 (Injection, anesthetic agent; brachial plexus) also includes 20 minutes of intraservice time and has a work RVU of 1.81. CPT code 36569 (Insertion of peripherally inserted central venous catheter) has the same intraservice and total time as CPT code 50435, with a work RVU of 1.82. Accordingly, we proposed a work RVU of 1.82, a direct crosswalk from CPT code 36569.

The remaining three codes all utilize ureteral stents and form their own small subfamily within the larger group of genitourinary catheter procedures. For CPT code 50693, we proposed a work RVU of 4.21, which corresponds to the 25th percentile survey result. We stated in the proposed rule that we believed that the work RVU corresponding to the 25th percentile survey result provided a more accurate value for CPT code 50693 based on the work involved in the procedure and within the context of other codes in the family. We also indicated that CPT code 31648 (Bronchoscopy, rigid or flexible, with removal of bronchial valve), which shares 45 minutes of intraservice time and has a work RVU of 4.20, was an accurate crosswalk for CPT code 50693.

For CPT code 50694, we compared its intraservice time to the code within the family that had the most similar duration, CPT code 50433. This code has 60 minutes of intraservice time compared to 62 minutes for CPT code 50694. This is a ratio of 1.03; when applied to the base work RVU of CPT code 50433 (5.30), we arrived at a potential work RVU of 5.48. We also looked to procedures with similar times, in particular CPT code 50382 (Removal and replacement of internally dwelling ureteral stent), which has 60 minutes of intraservice time, 125 minutes of total time, and a work RVU of 5.50. We proposed a work RVU of 5.50, a direct crosswalk from CPT code 50382.

Finally, we developed the proposed work RVU for CPT code 50695 using three related methods. In the proposed rule, we stated that CPT codes 50694 and 50695 describe very similar procedures, with 50695 adding the use of a nephrostomy tube. The RUC addressed the additional difficulty of this procedure by recommending 1.55 more work RVUs for CPT code 50695 than for CPT code 50694. Maintaining the 1.55 work RVUs increment, we noted that adding 1.55 to our proposed work RVU for CPT code 50694 (5.50)

would produce a work RVU of 7.05 for CPT code 50695. We also examined the ratio of intraservice times for CPT code 50695 (75 minutes) and the base code in the subfamily, CPT code 50693 (45 minutes). The intraservice time ratio between these two codes is 1.67; when applied to the base work RVU of CPT code 50693 (4.21), we calculated a potential work RVU of 7.02. We also noted that CPT code 36481 (Percutaneous portal vein catheterization by any method) shares the same intraservice time as CPT code 50695 and has a work RVU of 6.98. Accordingly, to maintain relativity among this subfamily of codes, we proposed a work RVU of 7.05 for CPT code 50695 based on an incremental increase of 1.55 RVUs from CPT code 50694.

In reviewing the direct PE inputs for this family of codes, we refined a series of the RUC- recommended direct PE inputs in order to maintain relativity with other codes in the direct PE database. All of the following refinements refer to the non-facility setting for this family of codes. Under the clinical labor inputs, we proposed to remove the RN/LPN/MTA (L037D) (intraservice time for assisting physician in performing procedure) for CPT codes 50431 and 50435. This amounts to 15 minutes for CPT code 50431 and 20 minutes for CPT code 50435. Moderate sedation is not inherent in these procedures and, therefore, we indicated that we did not believe that this clinical labor task would typically be completed in the course of this procedure. We also reduced the RadTech (L041B) intraservice time for acquiring images from 47 minutes to 46 minutes for CPT code 50694. This procedure contains 62 minutes of intraservice time, with clinical labor assigned for acquiring images (75 percent) and a circulator (25 percent). The time for these clinical labor tasks is 46.5 minutes and 15.5 minutes, respectively. The RUC recommendation for CPT code 50694 rounded both of these values upwards, assigning 47 minutes for acquiring images and 16 minutes for the circulator, which together sum to 63 minutes. We reduced the time for clinical labor tasks ''acquire images'' to 46 minutes to preserve the 62 minutes of total intraservice time for CPT code 50694.

With respect to the post-service portion of the clinical labor service period, we proposed to change the labor type for the task ''patient monitoring following service/check tubes, monitors, drains (not related to moderate sedation)''. There are 45 minutes of clinical labor time assigned under this category to CPT codes 50430, 50432, 50433, 50434, 50693, 50694, and 50695. Although we agreed that the 45 minutes are accurate for these procedures as part of moderate sedation, we proposed to change the clinical labor type from the RUC-recommended RN (L051A) to RN/LPN/MTA (L037D) to reflect the staff that would typically be doing the monitoring for these procedures. Even though the CPT Editorial Committee's description of post-service work for CPT code 50435 included a recovery period for sedation, we recognized in our proposal that according to the RUC recommendation, CPT codes 50431 and 50435 did not use moderate sedation; therefore, we did not propose to include moderate sedation inputs for these codes.

The RUC recommendation for CPT code 50433 included a nephroureteral catheter as a new supply input with an included invoice. However, the RUC recommendation did not discuss the use of a nephroureteral catheter in the intraservice work description. CPT code 50433 did mention the use of a nephroureteral stent in this description, but there is no request for a nephroureteral stent supply item on the PE worksheet for this code. We asked for feedback from stakeholders regarding the use of the nephroureteral catheter for CPT code 50433, but did not propose to add the nephroureteral catheter as a supply item for CPT code 50433 pending this information. We also requested stakeholder feedback regarding the intraservice work description in for this code to explain the use, if any, of the nephroureteral catheter in this procedure.

The RUC recommended the inclusion of ''room, angiography'' (EL011) for this family of codes. In our proposal we stated that we did not agree with the RUC that an angiography room would be used in the typical case for these procedures, as there are other rooms available which can provide fluoroscopic guidance. Most of the codes that make use of an angiography room are cardiovascular codes, and much of the equipment listed for this room would not be used for non-cardiovascular procedures. We therefore proposed to replace equipment item ''room, angiography'' (EL011) with equipment item ''room, radiographic-fluoroscopic'' (EL014) for the same number of minutes. We requested public comment regarding the typical room type used to furnish the services described by these CPT codes, as well as the more general question of the typical room type used for GU and GI procedures. In the past, the RUC has developed broad recommendations regarding the typical uses of rooms for particular procedures, including the radiographic-fluoroscopy room. In the proposed rule, we stated that we believed that such a recommendation from the RUC concerning all of these codes could be useful in ensuring relativity across the PFS.

The following is a summary of the comments we received on our proposals.

Comment: Several commenters, including the RUC, stated that the CMS proposed work RVUs were based on a flawed methodology. Commenters stated that CMS ignored intensity measures, differences in patient population, and risk profile considerations between the genitourinary codes. These commenters indicated that they did not agree with the use of intraservice time ratios as a methodology for establishing work RVUs.

Response: We refer the reader to our earlier discussion about the utility of time ratios in identifying potential work RVUs. For this particular group of codes, we believe that establishing CPT code 50430 as the baseline value and then using intraservice time ratios to maintain relativity of work RVUs results in accurate work RVUs for these services. We note that these refined work RVUs were supported in all cases by the use of crosswalks to existing CPT codes which we believe reflect similar intensity, which further supported the refined work RVUs

Comment: Several commenters indicated that the compelling evidence standard applied by the RUC for requiring an increase in valuation had been met for this code family, and therefore increased work RVUs were acceptable when compared to the previous group of genitourinary catheter procedures.

Response: We recognize that the RUC internal deliberations include rules that govern under what circumstances individual specialties can request that the RUC recommend CMS increase values for particular services. As observers to the RUC process, we appreciate having an understanding of these rules in the context of our review of RUC-recommended values. However, we remind the commenters that we are aware of such rules when we initially consider RUC recommendations. We are committed to preserving relativity between services across the entirety of the PFS, and believe that our proposed values best achieve that aim.

Comment: Several commenters disagreed with the use of crosswalks to other CPT codes provided by CMS. Commenters stated that the work

between the codes was not comparable due to clinical differences between the genitourinary catheter codes and the procedures described in the crosswalk codes. Commenters specifically referenced the crosswalk that CMS selected for CPT code 50431 and stated that the CMS chosen crosswalk code does not have the same infectious considerations (bacteremia) or the magnitude of diagnostic considerations as CPT code 50431.

Response: In the resource-based relative value system, services do not have to be clinically similar in order to be comparable. Relative value units (RVUs) are comparable across services furnished by different medical specialties. We note as well that the crosswalk codes referenced by the RUC in its recommendations are frequently not clinically similar to the CPT code under review. In the case of 50431, we note that our crosswalk to CPT code 49460 has identical intraservice time and total time with CPT code 50431, along with similar clinical intensity, suggesting that it has value as a point of comparison for this code. Furthermore, we did not establish a direct crosswalk between the work of these two codes, only using CPT code 49460 (which has a work RVU of 0.96 RVUs) as one of three separate data points. For our second data point, we wrote that the recommendation for CPT code 50431 stated that the new code described work previously performed by a combination of CPT codes 50394 and 74425. These two codes have work RVUs of 0.76 and 0.36, respectively, which sum together to 1.12. For our third data point, we observed that the minimum survey result had a work RVU of 1.10, which we believe accurately reflects the total work for this service. The survey minimum value of 1.10 RVUs was the method used to establish our proposed work RVU for this code. We refer readers to the discussion above in the Methodology for Establishing Work RVUs section for more information regarding the crosswalks used in developing values for this procedure.

After consideration of comments received, we are finalizing our proposed work RVU of 1.10 for CPT code 50431.

Comment: Several commenters disagreed with the CMS proposed work RVU of 4.25 for CPT code 50432 and suggested that CMS accept the RUC-recommended RVU of 4.70. They indicated that CMS used a clinically dissimilar crosswalk, CPT code 31660, which consists of very different work, patient populations, and potential complications. Commenters also stated that CMS used a different combination of existing CPT codes in its building block valuation of the new code 50432, leaving out CPT code 50390. Commenters indicated that this was a mistake and the use of CPT code 50390 would be typical.

Response: As we mentioned previously, in the resource-based relative value system, services do not have to be clinically similar to be comparable. CPT code 31660 shares intraservice time and total time values that are nearly identical to CPT code 50432, along with similar clinical intensity, so we continue to believe that it is an accurate crosswalk. We also do not believe that the use of CPT code 50390 would be typical in constructing a building block methodology for CPT code 50432. The new code is assembled through a combination of genitourinary catheter CPT code 50392 with injection CPT codes 74425 and 74475. We do not believe that CPT code 50390 would typically be included in this group as well, since the code descriptors for both 50390 and 50392 also include drainage and this service would not be performed twice. We believe that the new CPT code 50432 would be used for either the previously reported CPT codes 50390 or 50392 service, but not for both of them at once. In addition, the RUC has recommended that we assume that most of the procedures previously reported using CPT code 50392 would be reported using new CPT code 50432.

We note as well that our proposed work RVU for CPT code 50432 was supported by the use of two time ratios with CPT code 50430. Both the intraservice time ratio and the total time ratio suggested that a value below the RUC recommendation of 4.70 RVUs would be more accurate. After consideration of comments received, we are finalizing our proposed work RVU of 4.25 for CPT code 50432.

Comment: Several commenters stated that CMS should accept the RUC-recommended work RVU of 5.75 for CPT code 50433. While they agreed with CMS' use of the RUC-recommended increment of 1.05 RVUs relative to CPT code 50432, they did not agree with the CMS refined work RVU of CPT code 50432 itself. Some commenters also did not support the CMS crosswalk to CPT code 57155, which they stated had very different work, patient population, and potential complications.

Response: We agree that CPT code 50433 is accurately valued at 1.05 RVUs greater than CPT code 50432, which describes the additional work performed by placing a nephroureteral catheter relative to the work of placing a nephrostomy catheter. However, we continue to believe that our proposed work RVU for CPT code 50432 is an accurate value for the reasons detailed above. With regard to our crosswalk, we maintain that relative value units are comparable across different medical specialties. CPT code 57155 (Insertion of uterine tandem and/or vaginal ovoids for clinical brachytherapy) has an identical intraservice time of 60 minutes and 14 additional minutes of total time, along with similar clinical intensity, which support the difference of 0.10 RVUs when compared to CPT code 50433. After consideration of the comments received, we are finalizing a work RVU of 5.30 for CPT code 50433.

Comment: Several commenters requested that CMS adopt the RUC-recommended work RVU of 4.20 for CPT code 50434. Commenters disagreed with the methodology that CMS used to arrive at the proposed value of 4.00 RVUs, in particular the use of intraservice time ratios, and stated that the CMS crosswalk to CPT code 31634 (Bronchoscopy, rigid or flexible, with balloon occlusion) was inappropriate due to clinical dissimilarity.

Response: We refer the reader to our earlier discussion about intraservice time ratios. We found the identical result of 3.98 work RVUs for CPT code 50434 when we applied the intraservice time ratio to CPT codes 50432 and 50433. This lent further support to our proposed work RVU. With regard to our crosswalk, we note that in the resource-based relative value system, CPT codes do not have to be clinically similar to be comparable. CPT code 31634 shares the identical intraservice time with CPT code 50434 and serves as a direct crosswalk. After consideration of comments received, we are finalizing our proposed work RVU of 4.00 for CPT code 50434.

Comment: Several commenters made similar statements regarding the proposed work RVU for CPT code 50435, criticizing the use of intraservice time ratios with other codes in the genitourinary catheter family and disagreeing with the crosswalked CPT codes for being medically dissimilar.

Response: We refer the reader to our earlier discussion about intraservice time ratios and continue to believe that their use results in accurate work RVUs for this family of codes. We made use of an intraservice time ratio with both CPT code 50430 (the base code for the family) and CPT code 50432 (the most clinically similar code), which produced results of 1.80 and 1.77 RVUs, respectively. We also found two different crosswalks with identical intraservice time and very similar work RVUs, including CPT code 36569, with identical intraservice time, identical

total time, and a work RVU of 1.82 RVUs. Although we maintain that relative value units are comparable across different medical specialties, CPT code 36569 does in fact describe a medically related procedure, with the insertion of a central venous catheter. After consideration of comments received, we are finalizing our proposed work RVU of 1.82 for CPT code 50435.

Comment: Commenters urged CMS to adopt the RUC-recommended work RVU, corresponding to the median survey work RVU of 4.60 RVUs for CPT code 50693. They stated that the placement of a ureteral stent requires more work than the placement of a nephroureteral catheter, and the 0.21 RVU differential proposed by CMS is insufficient to reflect the additional work difficulty of CPT code 50693.

Response: We are uncertain about which codes are being compared by the commenters, since the 0.21 RVU differential referenced by the commenters does not exist in the codes that appear to be discussed in the comment (50433). Since the commenters did not include the five digit CPT designation in their comparison, we are uncertain which code the commenters intended to discuss.

We continue to believe that a work RVU of 4.21, corresponding to the 25th percentile survey result, is the most accurate value for CPT code 50693. We believe that the ureteral stent procedures are clinically similar to the rest of the genitourinary catheter family, and the use of intraservice time ratios with these procedures provides an accurate method for determining relative values. We continue to believe that the work RVU of 4.21, corresponding to the 25th percentile survey result, is further supported through our crosswalk to CPT code 31648 (Bronchoscopy, rigid or flexible, with removal of bronchial valve) which has similar times and a work RVU of 4.20. After consideration of comments received, we are finalizing our proposed work RVU of 4.21 for CPT code 50693.

Comment: Several commenters made statements similar to those mentioned previously regarding the work RVU for CPT code 50694, criticizing the use of intraservice time ratios with other codes in the genitourinary catheter family and disagreeing with the crosswalked CPT codes for being medically dissimilar.

Response: We refer the reader to our earlier discussion about intraservice time ratios and continue to believe that their use results in accurate work RVUs for this family of codes. We compared CPT code 50694 with 50433, the code within the family with the most similar intraservice time, which resulted in a potential work RVU of 5.48. We also found that CPT code 50382 had nearly identical intraservice time and total time, and a work RVU of 5.50. While we maintain that relative value units are comparable across different medical specialties, we do not agree with the commenters that CPT code 50382 is medically dissimilar from CPT code 50694. The former refers to the removal and replacement of a ureteral stent, while the latter refers to the placement of a ureteral stent. We believe that these codes describe very similar procedures, share the same patient population, and can serve as a direct crosswalk for the work RVU of each other. After consideration of comments received, we are finalizing our proposed work RVU of 5.50 for CPT code 50694.

Comment: A few commenters stated that their comments on CPT code 50695 are similar to those they had made previously about CPT code 50433. While they agreed that CMS was correct to maintain the RUC-recommended increment of 1.55 RVUs greater than the value of CPT code 50694, they did not agree with the CMS refined work RVU of 50694 itself. Commenters also did not support the CMS crosswalk to CPT code 36481, which they stated had very different work, patient population, and potential complications.

Response: We agree that CPT code 50695 is accurately valued at 1.55 RVUs greater than CPT code 50694, which describes the additional work performed by the use of a nephrostomy tube. However, we continue to believe that the proposed work RVU for CPT code 50694 is an accurate value for the reasons detailed above. With regard to our crosswalk, we continue to believe that relative value units are comparable across services furnished by different medical specialties. CPT code 36481 (Percutaneous portal vein catheterization by any method) has an identical intraservice time of 75 minutes and 18 additional minutes of total time, but a lower work RVU (6.98 RVUs) than the one suggested by our incremental method. Commenters also did not discuss our use of an intraservice time ratio with the base code in this subfamily, CPT code 50693, which suggested a work RVU of 7.02. After consideration of comments received, we are finalizing our proposed work RVU of 7.05 for CPT code 50695.

Comment: Several commenters disagreed with the CMS proposal to eliminate the RN/LPN/MTA blend (L037D) of clinical labor for assisting the physician during procedures 50431 and 50435. The CMS rationale was based on the lack of moderate sedation taking place in these two procedures. However, commenters argued that these procedures do require monitoring for patient stability that the attending physician cannot provide. They urged that the RN/LPN/MTA blend would be most appropriate for these procedures.

Response: We are not aware of any other procedures in which there is a third assistant in the procedure room when moderate sedation is not being provided. We believe that the standard use of clinical labor staff would be typical when performing these procedures.

Comment: Commenters also disagreed with the CMS proposal to change the labor type for patient monitoring following service (not related to moderate sedation) from the RUC-recommended RN (L051A) to the RN/LPN/MTA blend (L037D). Commenters stated that although use of the RN/LPN/MTA blend is standard for this clinical labor task, the RUC allows specialty groups to use an RN with justification, and that was the case here for these procedures since they involve invasive percutaneous solid organ interventions.

Response: After consideration of comments, we agree that the use of the RN (L051A) clinical labor is typical for patient monitoring following service (not related to moderate sedation) for these particular specialty groups. We will restore the recommended L051A labor type for this clinical labor task for CPT codes 50430, 50432, 50433, 50434, 50693, 50694, and 50695. We will also consider making a formal proposal regarding the most suitable type of clinical labor staff for this monitoring in future rulemaking.

Comment: CMS sought clarification regarding the use of the nephroureteral catheter (SD306) for CPT code 50433. CMS removed this supply from CPT code 50433 since it was not mentioned in the information about the survey included in the RUC recommendation. Commenters wrote to explain that the phrase ''An 8 Fr nephroureteral stent is inserted with the distal pigtail in the bladder'' is included in the description of work for CPT code 50433, and in the context of genitourinary and biliary procedures, the historic term ''stent'' has been used interchangeably with the term ''catheter''. Commenters suggested that the nephroureteral catheter should be maintained as a supply item for this code and for CPT code 50434.

Response: We agree that the nephroureteral catheter should be maintained as a supply item for CPT codes 50433 and 50434, based on the presentation of this additional information. However, based on our analysis of the comments, we believe

that our review of the RUC recommendations would be facilitated by consistent use of terminology throughout the information included in the recommendations.

Comment: Several commenters, including the RUC, disagreed with the CMS decision to replace the angiography room (EL011) with a fluoroscopic room (EL014) for the genitourinary catheter family of codes. Commenters stressed that the fluoroscopic room was incapable of 3-axis rotational imaging, that it would require dangerous movement of the patient, and that it presented sterility concerns. Commenters further disagreed that use of the angiography room was typically limited to cardiovascular procedures. They suggested that looking at service utilization, rather than number of CPT codes, indicates that non-vascular interventional procedures together comprise more than 50 percent of utilization of a typical angiography room. Commenters also provided a list of the equipment found in an angiography room, and stated that everything other than the ''Injector, Provis'' would be typically utilized for the genitourinary catheter procedures. As a result, the commenters urged CMS to reverse the proposed refinement and restore the use of the angiography room for these codes.

Response: We continue to believe that the use of an angiography room would not be typical for these genitourinary catheter procedures. The new genitourinary catheter codes in this family are being constructed through the bundling of imaging guidance with previously existing genitourinary catheter procedures. With the exception of CPT code 50398, the direct PE inputs for the predecessor codes do not include the use of an angiography room. We do not have reason to believe the coding changes related to these procedures would necessitate the use of different technology in furnishing the services. While it is true that the angiography room was included as a direct PE input for some of the predecessor imaging services, such as CPT codes 77475, 77480, and 77485, the equipment times for these services were significantly shorter than the time included for the base procedures, where use of the room was not considered to be typical. Given the six fold increase in recommended time and the significantly higher expenses of the newly recommended equipment versus the equipment costs associated with the predecessor codes, we are seeking not only a rationale for the use of the angiography room, but also evidence that this room is typically used when these services are reported in the nonfacility setting.

Comment: One commenter disagreed with the CMS decision to refine the time for clinical labor task ''Clean room/equipment by physician staff'' (L041B) from 6 minutes to 3 minutes. The commenter stated that there had been a robust discussion of this topic at the RUC meeting, and the additional minutes are needed to clean fluids/equipment/etc.

Response: We continue to believe that the standard time of 3 minutes for this clinical labor task is more accurate for the genitourinary catheter family of codes. We do not believe that these procedures typically produce enough external fluids to justify 6 minutes for room cleaning.

Comment: Several commenters disagreed with the CMS refinement of supplies to remove those that were duplicative of the same supplies found in visit packs (SA048) and sedation packs (SA044). Commenters stated that the IV starter kit (SA019), endoscope cleaning and disinfecting pack (SA042), non-sterile gloves (SB022), sterile gloves (SB024), sterile surgical gown (SB028), and three-way stop cock (SC049) were not duplicative supplies, as they were used in addition to the supplies included in the packs. Commenters requested that these supplies be restored to the direct PE inputs for the genitourinary catheter codes.

Response: We agree with the commenters that three sets of sterile garments would typically be used for the three medical professionals performing the procedure. We are therefore restoring one pair of sterile gloves, one sterile surgical gown, one IV starter kit, and one three-way stop cock to these codes, consistent with the RUC recommendation. We do not believe that the use of two more pairs of non-sterile gloves (beyond the two pairs already included in the visit pack) would be typical for these procedures. With regards to the ''endoscope cleaning and disinfecting pack'', our rationale was not that this supply was duplicative, but rather that its use would not be typical because the genitourinary catheter codes do not make use of an endoscope. We did not receive comments that suggested that supply item ''endoscope cleaning and disinfecting pack'' would typically be used.

After consideration of comments received, we are finalizing the direct PE inputs as proposed, with the addition of the nephroureteral catheter for CPT code 50433, the change in clinical labor type from L037D to L051A for patient monitoring following service (not related to moderate sedation), and the additional four supplies detailed in the previous paragraph for CPT codes 50430, 50432, 50433, 50434, 50693, 50694, and 50695.

(10) Penile Trauma Repair (CPT Codes 54437 and 54438)

The CPT Editorial Panel created these two new codes because there are no existing codes to capture penile traumatic injury that includes penile fracture, also known as traumatic corporal tear, and complete penile amputation. CPT code 54437 describes a repair of traumatic corporeal tear(s), while CPT code 54438 describes a replantation, penis, complete amputation.

In the proposed rule, we stated that we disagreed with the RUC recommendation of 24.50 work RVUs for CPT code 54438. We indicated that a work RVU of 22.10, corresponding to the 25th percentile survey result, was a more accurate value based on the work involved in the procedure and within the context of other codes in the same family, since CPT code 54437 was also valued using the 25th percentile. We found further support for this valuation through a crosswalk to CPT code 43334 (Repair, paraesophageal hiatal hernia via thoracotomy, except neonatal), which has an identical intraservice time and a work RVU of 22.12. Therefore, we proposed a work RVU of 22.10 for CPT code 54438.

Because CPT codes 54437 and 54438 are typically performed on an emergency basis, in the proposed rule, we questioned the accuracy of the standard 60 minutes of preservice clinical labor in the facility setting, as we suggested that the typical procedure would not make use of office-based clinical labor. We suggested, for example, the typical case would require 8 minutes to schedule space in the facility for an emergency procedure, or 20 minutes to obtain consent. We solicited further public comment on this issue from the RUC and other stakeholders.

The following is a summary of the comments we received on our proposals.

Comment: One commenter urged CMS to accept the RUC-recommended value for CPT code 54438 at 24.50 RVUs. This commenter argued that the RUC regularly accepts the median survey work RVU for one service and the 25th percentile survey result work RVU for another when both are in the same code family, particularly when they diverge in length of time. The commenter also suggested that reducing the intensity of CPT code 54438 below its RUC-recommended value of 0.071

was inappropriate for such a complex and difficult procedure, with an unusual patient population that is often schizophrenic and prone to self-injury. This commenter emphasized using the RUC-supplied reference of CPT code 53448 as justification for the RUC-recommended work RVU.

Response: We appreciate the presentation of this additional information concerning the complexity and intensity of CPT code 54438. We agree that the unusual patient population for this procedure justifies a higher work RVU than the proposed value. After consideration of comments received, we are finalizing our proposed work RVU of 11.50 for CPT code 54437, and assigning the RUC-recommended work RVU of 24.50 for CPT code 54438.

(11) Intrastromal Corneal Ring Implantation (CPT Code 65785)

CPT code 65785 is a new code describing insertion of prosthetic ring segments into the corneal stroma for treatment of keratoconus in patients whose disease has progressed to a degree that they no longer tolerate contact lens wear for visual rehabilitation.

In the proposed rule, we stated that we disagreed with the RUC recommendation of a work RVU of 5.93 for CPT code 65785. Although we appreciated the extensive list of other codes the RUC provided as references, we expressed concern that the recommended value for CPT code 65785 overestimated the work involved in furnishing this service relative to other PFS services. We did not find any codes with comparable intraservice and total time that had a higher work RVU. The recommended crosswalk, CPT code 67917 (Repair of ectropion; extensive), appears to have the highest work RVU of any 90-day global surgery service in this range of work time values. It also has longer intraservice time and total time than the code in question, making a direct crosswalk unlikely to be accurate.

As a result, we proposed a work RVU for CPT code 65785 based on the intraservice time ratio in relation to the recommended crosswalk. We compared the 33 minutes of intraservice time in CPT code 67917 to the 30 minutes of intraservice time in CPT code 65785. The intraservice time ratio between these two codes is 0.91, and when multiplied by the work RVU of CPT code 67917 (5.93) resulted in a potential work RVU of 5.39. We also considered CPT code 58605 (Ligation or transection of fallopian tube(s)), which has the same intraservice time, 7 additional minutes of total time, and a work RVU of 5.28. In the proposed rule, we stated that we believed that CPT code 58605 was a more accurate direct crosswalk because it shares the same intraservice time of 30 minutes with CPT code 65785. Accordingly, we proposed a work RVU of 5.39 for CPT code 65785.

The RUC recommendation for CPT code 65785 included a series of invoices for several new supplies and equipment items. One of these was the 10–0 nylon suture with two submitted invoice prices of $245.62 per box of 12, or $20.47 per suture, and another was priced at $350.62 per box of 12, or $29.22 per suture. Given the range of prices between these two invoices, we sought publicly available information and identified numerous sutures that appear to be consistent with those recommended by the specialty society, at lower prices, which we believed were more likely to be typical since we assumed that the typical practitioner would seek the best price. One example is ''Surgical Suture, Black Monofilament, Nylon, Size: 10–0, 12''/30cm, Needle: DSL6, 12/bx'' for $146. Therefore, we proposed to establish a new supply code for ''suture, nylon 10–0'' and price that item at $12.17 each. We welcomed comments from stakeholders regarding this supply item.

The following is a summary of the comments we received on our proposals.

Comment: Several commenters indicated that CMS should reconsider its decision and accept the RUC-recommended work RVU of 5.93. These commenters stated that the intraservice time ratio used by CMS did not account for differences in preservice time, postservice time, or levels of physician intensity. Commenters also disagreed with CMS' statement that there were no services with a comparable intraservice and total time that had a higher work RVU than the RUC-recommended value of 5.93 for CPT code 65785. The commenters supplied a list of seven CPT codes that have a work RVU higher than 5.93 RVUs.

Response: We continue to believe that the use of intraservice time ratios is one of several different methods that can be used to identify potential work RVUs. For this particular code, the RUC used a direct crosswalk to CPT code 67917 (Repair of ectropion; extensive) to set their recommended work RVU at 5.93 RVUs. We do not believe that that direct crosswalk was the most accurate way to value CPT code 65785, since code 67917 has an intraservice time that is 10 percent longer than the intraservice time of CPT code 65785 (33 minutes to 30 minutes). CPT code 67917 is a clinically similar code which the RUC used for its own valuation of CPT code 65785, making it an especially good choice for comparative purposes after applying a ratio to normalize the intraservice times. We continue to believe that the use of an intraservice time ratio resulted in the most accurate value, given the difference in time between the two codes.

As discussed in the proposed rule, all CPT codes with comparable time values and the same global period had lower work RVUs than the RUC-recommended work RVU of 5.93. While it is true that the seven codes provided by the commenters have work RVUs higher than 5.93 RVUs, we do not agree that these CPT codes are appropriate for comparative purposes with code 65785. CPT code 33768 is an add-on code (global ZZZ) that cannot be compared to a code with a 90-day global period such as 65785. CPT code 59830 is a Harvard-valued code that has not been subject to RUC review, has low utilization (2013 = 7 reported services), and 20 minutes fewer total time than CPT code 65785. CPT codes 66770 and 67145 are also Harvard codes which have not been RUC reviewed, and both have different intraservice times than 65785, 5 minutes and 10 minutes, respectively. CPT codes 67210 and 67220 are the only codes supplied by the commenters to be recently reviewed by the RUC, but both of them have only 15 minutes intraservice time, limiting their utility for comparative purposes with the 30 minutes intraservice time assumed for CPT code 65785. Although we accept the commenters' point that other codes with work RVUs above 5.93 RVUs do exist, we do not agree that codes referenced by commenters have ''comparable intraservice and total time'' with CPT code 65785. We continue to believe that scaling the RUC's key reference code of 67917 by the intraservice time ratio between the two codes provides the most accurate value for CPT code 65785.

After consideration of comments received, we are finalizing the work RVU and the direct PE inputs for CPT code 65785 as proposed.

(12) Dilation and Probing of Lacrimal and Nasolacrimal Duct (CPT Codes 66801, 68810, 68811, 68815 and 68816)

The RUC reviewed 10-day global services and identified 18 services with greater than 1.5 office visits and 2012 Medicare utilization data over 1,000, including CPT codes 66801, 68810, 68811, 68815, and 68816. The RUC requested surveys and reviews of these services for CY 2016.

As discussed in the proposed rule, the RUC recommended a work RVU of 1.00

for CPT code 68801 and a work RVU of 1.54 for CPT code 68810. Although we proposed to use the RUC-recommended work RVU for CPT code 68810, we stated that the recommendation for CPT code 68801 did not best reflect the work involved in the procedure because of a discrepancy between the post-operative work time and work RVU. Specifically, the RUC recommendation for the procedure included the removal of a 99211 visit, but the RUC-recommended work RVU did not reflect any corresponding adjustment. We proposed to accept the RUC's recommendation to remove the 99211 visit from the service but proposed to further reduce the work RVU for CPT code 68801 by removing the RVUs associated with CPT code 99211. Therefore, for CY 2016, we proposed a work RVUs of 0.82 to CPT code 68801 and 1.54 to CPT code 68810.

The RUC recommended a work RVU of 2.03, 3.00, and 2.35 for CPT codes 68811, 68815 and 68816, respectively. In the proposed rule, we stated that the RUC recommendations for these services do not appear to best reflect the work involved in performing these procedures. To value these services for the proposed rule, we calculated a total time ratio by dividing the code's current total time by the RUC-recommended total time, and then applying that ratio to the current work RVU. This produced the proposed work RVUs of 1.74, 2.70, and 2.10 for CPT codes 68811, 68815, and 68816, respectively.

The following is a summary of the comments we received on our proposals.

Comment: Several commenters, including the RUC, suggested that CMS reconsider its decision to not accept the RUC recommendations. The commenters believe that using a reverse building block methodology to reduce a work RVU for this service is inappropriate since magnitude estimation was used to establish the recommended work RVUs for this series of codes. Commenters also believe that CMS did not provide detailed rationale for the rejection of the RUC-recommended work RVUs for CPT codes 68811, 68815 and 68816. Finally, commenters noted that the existing IWPUT for each of these three surgical services is below 0.03, which the commenters believe calls into question the accuracy of the existing work time and its usage in deriving a new work RVU.

Response: We appreciate the commenters' perspectives, but reiterate that our proposed values accounted for the changes in the time resources assumed to be involved in furnishing these services since they were previously valued. We note that the validity of the IWPUT alone as a measure of intensity is reliant on the accuracy of the assumption regarding the number and level of visits for services in the global period for individual services. Therefore, we do not generally agree that a low IWPUT itself indicates misvaluation, particularly for services with global periods. After considering the comments received, we continue to believe that the work RVUs proposed for these codes accurately reflect the work involved in furnishing these services.

Therefore, for CY 2016 we are finalizing work RVUs for CPT codes 68801, 68810, 68811, 68815, and 68816, as proposed.

(13) Spinal Instability (CPT Codes 72081, 72082, 72083, and 72084)

For CY 2015, the CPT Editorial Panel deleted codes 72010 (radiologic examination, spine, entire, survey study, anteroposterior and lateral), 72069 (radiologic examination, spine, thoracolumbar, standing (scoliosis)), and 72090 (radiological examination, spine; scoliosis study, including supine and erect studies), revised one code, 72080 (Radiologic examination, spine; thoracolumbar junction, minimum of 2 views) and created four new codes which cover radiologic examination of the entire thoracic and lumbar spine, including the skull, cervical and sacral spine if performed. The new codes were organized by number of views, ranging from one view in 72081, two to three views in 72082, four to five views in 72083, and minimum of six views in 72084.

In the proposed rule, we stated that we did not agree with the RUC's recommended work RVUs for the four new codes. For 72081, we noted that the one minute increase in time resulted in a larger work RVU than would be expected when taking the ratio between time and RVUs in the source code and comparing that to the time and work RVU ratio in the new code. Using the relationship between time and RVUs from deleted CPT code 72069, we proposed a work RVU of 0.26 for CPT code 72081, which differs from the RUC-recommended value of 0.30. Using an incremental methodology based on the relationship between work and time in the first code we proposed to adjust the RUC-recommended work RVUs for CPT codes 72082, 72083 and 72084 to 0.31, 0.35, and 0.41, respectively.

The following is a summary of the comments we received on our proposals.

Comment: Many commenters, including the RUC, disagreed with CMS' proposed crosswalk for 72081 and urged CMS to use the RUC recommendation. The commenters stated that since CPT code 72069 is being deleted due to changes in technology and patient population, it is a poor comparison. Other commenters pointed out that CPT code 72081 typically includes an X-ray of skull, cervical spine, and pelvis and therefore is by definition more work than CPT code 72069. CPT code 72069 is also noted as ''CMS/other'' code in the RUC's time file and the times in that file are not divided into time periods as CPT code 72081 is. One commenter suggested that a more accurate crosswalk was CPT code 74020 (Radiologic examination, abdomen; complete, including decubitus and/or erect views,) which has a work RVU of 0.30. Using the same increments, the commenter suggested that the CMS proposed change for CPT code 72081 to 0.26 RVUs would result in an accurate increase in work across the family.

Response: We continue to believe that CPT code 72069 is an accurate crosswalk. While CPT code 72069 may not be divided into time periods, the ratio between the total time and the RVU adequately reflects the relationship between time and intensity in CPT code 72081. Although we used CPT code 72069 as a comparison to CPT code 72081, we note that CPT code 72081 has a higher work RVU, which accounts for the extra work associated with imaging the skull, cervical spine, and pelvis. We do not believe that CPT code 74020 would be an accurate crosswalk because it describes a radiological examination of the abdomen whereas CPT code 72069 refers to the same anatomical region as CPT code 72081.

Therefore, after considering the comments received, we are finalizing these work RVUs for 72081, 72082, 72083, and 72084 as proposed.

(14) Echo Guidance for Ova Aspiration (CPT Code 76948)

In the CY 2014 PFS final rule with comment period, we requested additional information to assist us in the valuation of ultrasound guidance codes. We nominated these codes as potentially misvalued based on the extent to which standalone ultrasound guidance codes were billed separately from services where ultrasound guidance was an integral part of the procedure. CPT code 76948 was among the codes considered potentially misvalued. CPT code 76948 was surveyed by the specialty societies and the RUC issued a recommendation for CY 2016. In the proposed rule, we stated that we had concerns about valuation of this code since it is a guidance code

used only for a single procedure, CPT code 58970 (aspiration of ova), and that these two codes are typically billed concurrently. We believe CPT codes 76948 and 58970 should be bundled to accurately reflect how the service is furnished.

We proposed to use work times based on refinements of the RUC-recommended values by removing the 3 minutes of pre and post service time since these times are reflected in CPT code 58970. We proposed work and time values for 76948 based on a crosswalk from 76945 (Ultrasonic guidance for chorionic villus sampling, imaging supervision and interpretation) which has a work time of 30 minutes and an RVU of 0.56. Therefore we proposed to maintain 25 minutes of intraservice time for CPT code 76948 and proposed a work RVU of 0.56.

The following is a summary of the comments we received on our proposals.

Comment: Commenters stated that CMS should not have removed the work from the pre and post service portions of the service period and should restore the RUC-recommended work RVU of 0.85. The commenters stated that in the pre service period the physician reviews clinical history as well as prior imaging studies, and in the post service period the physician reviews and signs final report. The RUC commented that CPT codes 58970 and 76945 were billed less than 10 times each in 2014, and were not billed together in any of those instances. The RUC acknowledged that these codes may be billed together under private payers and stated they would continue to review codes billed together 75 percent of the time and bundle them when appropriate.

Response: We appreciate the commenters' feedback. However, given the definition of the codes, we continue to believe that CPT code 76945 is the image guidance code for CPT code 58970, and that these codes would not typically be billed separately. We acknowledge the anomalies in the low volume of Medicare claims data but do not believe that data likely reflects the way the services are intended to be reported. Therefore, any pre- or post-service work would be accounted for in CPT code 58970. After considering the comments received, we are finalizing a work RVU of 0.56 for CPT code 76945 as proposed.

(15) Surface Radionuclide High Dose Radiation Brachytherapy (CPT Codes 77767, 77768, 77770, 77771, and 77772)

In October 2014 the CPT Editorial Panel created five new codes to describe high dose radiation (HDR) brachytherapy. We proposed the RUC-recommended work RVUs of 1.05, 1.40, 1.95, 3.80, and 5.40 respectively, for CPT codes 77767, 77768, 77770, 77771, and 77772. The RUC also recommended a new PE input, a brachytherapy treatment vault, which we proposed to include without modification.

Comment: Commenters expressed support for CMS' proposed work and time values for this family of codes, and for CMS' proposal to add the brachytherapy vault as a PE input. Many commenters expressed concern for the overall downward trend in reimbursement for brachytherapy services, citing a sustained decrease in office-based brachytherapy procedures since 2009. The commenters encouraged CMS to enact measures to improve this.

Response: We appreciate commenters' concerns regarding accurate payment for brachytherapy services. The revaluation of services under the Potentially Misvalued Code Initiative is aimed at achieving the most appropriate relative values under the PFS. There is not an intentional ''downward trend'' for any particular family of services. We remind commenters and stakeholders that disagree with CMS values, including those based on RUC recommendations, that in addition to submitting comments on our proposed rules, they may also nominate codes as potentially misvalued through the public nomination process. We are finalizing the values for HDR brachytherapy as proposed.

(16) Immunohistochemistry (CPT Codes 88341, 88342, and 88344)

As discussed in the proposed rule, in establishing CY 2015 interim final direct PE inputs for CPT codes 88341, 88342, and 88344, we replaced the RUC-recommended supply item ''UltraView Universal DAB Detection Kit'' (SL488) with ''Universal Detection Kit'' (SA117), since the RUC recommendation did not provide an explanation for the required use of a more expensive kit. We also adjusted the equipment time for equipment item ''microscope, compound'' (EP024). We reexamined these codes when valuing the immunofluorescence family of codes for CY 2016, and reviewed information received by commenters that explained the need for these supply items. Specifically, commenters explained that the universal detection kit that CMS included in place of the RUC-recommended kit was not typically used in these services as it was not clinically appropriate. We proposed to include the RUC-recommended supply item SL488 for CPT codes 88341, 88342, and 88344, as well as the RUC-recommended equipment time for ''microscope, compound'' for CY 2016.
