[Project No. 14387–001]

Albany Engineering Corporation; Notice of Successive Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On September 22, 2015, Albany Engineering Corporation filed an application for a successive preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of hydropower at the New York State Canal Corporation's Lock C1 Dam located on the Hudson River in Saratoga and Rensselaer Counties, New York. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed Waterford Hydroelectric Project would consist of the following: (1) An existing 672-foot-

long and 15-foot-high ogee-shaped concrete gravity dam with a 356-foot-long tainter-gated structure forming the eastern portion of the dam; (2) an existing impoundment having a surface area of 400 acres and a storage capacity of 5,000 acre-feet at the spillway crest elevation of 28.3 feet National Geodetic Vertical Datum; (3) either a new powerhouse at the east end of the dam with two identical turbine generator units with a total installed capacity of 10.2 megawatts (MW) (Scenario 1), or two new identical modular floating barge-type structures at the west end of the tainter gates housing 18 turbine-generator units with a total installed capacity of 4.0 MW (Scenario 2); (4) a proposed 10,000-foot-long, 34.5-kilovolt transmission line; and (5) appurtenant facilities. The proposed project would have an annual generation of 39,000 megawatt-hours (MWh) (Scenario 1) or 12,000 MWh (Scenario 2).
