Activity for Which Permit Is Requested

Enter Antarctic Specially Protected Areas. The applicant plans to enter Canada Glacier, Lake Fryxell, to continue operation of a previously installed, continuously recording stream gauge station, perform maintenance, conduct stream flow measurements and collect water quality samples near the stream gauge site. The applicant will also collect water quality samples of the melt-water of the Canada Glacier and along the length of the stream to study in-stream biogeochemical processes. The applicant plans to collect a maximum of five moss samples per year using a 3 cm corer to a depth of about 3 cm and a maximum of five soil samples of approximately 200 g per year from which to extract nematodes. Photography, LIDAR, and other survey and monitoring techniques may be used to detect changes in the stream bed and algal mat distribution over time, and/or to monitor the change in the stream gauge system through time.

The applicant also plans to enter Lower Taylor Glacier and Blood Falls to continue measurements of the Santa Fe Stream including: Stream-flow using velocity meters; pH, temperature, and conductivity via meters; and collection of water quality samples. The collection of water from the Blood Falls area occurs on the glacial moraine, not the glacier itself, and the sample is small (< 1 L) and comprised of both brine reservoir discharge (when present) and surface ice melt-water.
