## II. What action is the agency taking?

Under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. 136p), at the discretion of the EPA Administrator, a Federal or state agency may be exempted from any provision of FIFRA if the EPA Administrator determines that emergency conditions exist which require the exemption. NASA has requested the EPA Administrator to issue a specific exemption for the use of OPA in the International Space Station IATCS coolant to control aerobic/microaerophilic water bacteria. Information in accordance with 40 CFR part 166 was submitted as part of this request.

As part of this request, the applicant asserts that it has considered the registered biocides and has concluded that OPA is the most effective biocide which meets the requisite criteria including: The need for safe, non-intrusive implementation and operation in a functioning system; the ability to control existing planktonic and biofilm residing micro-organisms; a negligible impact on system-wetted materials of construction; and a negligible reactivity with existing coolant additives. The International Space Station would not have an adequate long-term solution for controlling the micro-organisms in the coolant systems without the use of OPA.

The OPA is immobilized onto a porous resin material. Delivery into the coolant system is through connecting a stainless steel canister which contains the OPA-impregnated resin into the coolant system loop, using flexible hose and quick disconnects. As the coolant fluid flows through the canister, the OPA effectively elutes from the resin material into the coolant fluid.

The applicant proposes to make one application to obtain a concentration of up to 500 mg/L OPA, to the loops of the IATCS coolant system of the International Space Station comprised of the U.S. Laboratory Module (coolant system volume of 272 L), the Japanese Experiment Module (coolant system volume of 213 L), the Columbus (coolant system volume of 150 L), and Node 3 (coolant system volume of 194 L) for a total volume of 829 L. The maximum amount potentially used under the emergency exemption totals 1,964 cm<sup>3</sup> OPA resin, and would provide control of aerobic/

microaerophilic water bacteria for approximately one year, at which point the system would require replenishment. NASA has obtained approval for this use through EPA authorization of emergency exemptions annually over the past four years.

This notice does not constitute a decision by EPA on the application itself. The regulations governing FIFRA section 18 require publication of a notice of receipt of an application for a specific exemption proposing use of an active ingredient which has not been registered by EPA. The notice provides an opportunity for public comment on the application.

The Agency, will review and consider all comments received during the comment period in determining whether to issue the specific exemption requested by the National Aeronautics and Space Administration.

Specifically, we require providers to disclose to subscribers the following information: (1) Availability of backup power sources; (2) service limitations with and without backup power during a power outage; (3) purchase and replacement options; (4) expected backup power duration; (5) proper usage and storage conditions for the backup power source; (6) subscriber backup power self-testing and monitoring instructions; and (7) backup power warranty details, if any. Each element of this information must be given to subscribers both at the point of sale and annually thereafter, as described in the rule.

The disclosure requirements are intended to equip subscribers with necessary information to purchase and maintain a source of backup power to enhance their ability to maintain access to reliable 911 service from their homes.

We permit providers to convey both the initial and annual disclosures and information described above by any means reasonably calculated to reach the individual subscriber. For example, a provider may meet this obligation through a combination of disclosures via email, an online billing statement, or other digital or electronic means for

subscribers that communicate with the provider through these means. For a subscriber that does not communicate with the provider through email and/or online billing statements—such as someone who ordered service on the phone or in a physical store and receives a paper bill by regular mail—email would not be a means reasonably calculated to reach that subscriber.
