SUPPLEMENTARY INFORMATION:

Background

The NRC issues LR–ISGs to communicate insights and lessons learned and to address emergent issues not covered in license renewal guidance documents, such as the GALL Report, NUREG–1801, Rev. 2 (Dec. 2010), and the Standard Review Plan for Review of License Renewal Applications for Nuclear Power Plants (SRP–LR), NUREG–1800, Rev. 2 (Dec. 2010), which are available under ADAMS Accession Nos. ML103490041 and ML103490036, respectively. In this way, the NRC staff and stakeholders may use the guidance in an LR–ISG document before it is incorporated into a formal license renewal guidance document revision. The NRC staff issues LR–ISGs in accordance with the LR–ISG Process, Revision 2 (ADAMS Accession No. ML100920158), for which a notice of availability was published in the **Federal Register** on June 22, 2010, (75 FR 35510).

The NRC staff has developed LR–ISG–2015–01 to address new recommendations related to buried and underground piping and tanks within the scope of part 54 of title 10 of the *Code of Federal Regulations* (10 CFR), “Requirements for Renewal of Operating Licenses for Nuclear Power Plants.”

On June 29, 2015, (80 FR 37028) the NRC requested public comments on draft LR–ISG–2015–01 (ADAMS Accession No. ML15125A377).

The NRC received comments from the Nuclear Energy Institute by letter dated August 6, 2015, (ADAMS Accession No. ML15225A076), Hank Kleinfelder by letter dated August 6, 2015, (ADAMS Accession No. ML15225A077), Anonymous by letter dated August 7, 2015, (ADAMS Accession No. ML15225A078), Kevin Anstee for Entergy—River Bend Station by letter dated August 10, 2015, (ADAMS Accession No. ML15244A392), and Steven Daily by letter dated August 10, 2015, (ADAMS Accession No. ML15244A391). No other comments were submitted. The NRC considered these comments in developing the final LR–ISG. Detailed responses to the comments can be found in Appendix D of the final LR–ISG.

The final LR–ISG–2015–01 is approved for NRC staff and stakeholder use and will be incorporated into the NRC’s next formal license renewal guidance document revision.

Congressional Review Act

This ISG is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

Backfitting and Issue Finality

Issuance of this final LR–ISG does not constitute backfitting as defined in 10 CFR 50.109 (the Backfit Rule) and is not otherwise inconsistent with the issue finality provisions in 10 CFR part 52, “Licenses, Certifications, and Approvals for Nuclear Power Plants.” As discussed in the “Backfitting and Issue Finality” section of the final LR–ISG–2015–01, the LR–ISG is directed to holders of operating licenses or combined licenses who are currently in the license renewal process. The LR–ISG is not directed to holders of operating licenses or combined licenses until they apply for license renewal. The LR–ISG is also not directed to licensees who already hold renewed operating or combined licenses. However, the NRC could also use the LR–ISG in evaluating voluntary, licensee-initiated changes to previously approved aging management programs.

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is considering issuance of an amendment to the NRC's Source Materials License No. STB-401, issued to Mallinckrodt, for operation of their facility located in St. Louis, Missouri. This amendment allows Mallinckrodt the option to perform direct dose assessment of residual radioactivity in addition to using derived concentration guideline levels (DCGLs) to demonstrate compliance with the license termination criteria at the Mallinckrodt site in St. Louis, Missouri. Consistent with part 51 of title 10 of the *Code of Federal Regulations* (10 CFR), the NRC performed an EA. Based on the results of the EA described below, the NRC will not prepare an environmental impact statement for the license amendment, and is issuing a FONSI.

The NRC received, by letter dated February 12, 2015 (ADAMS Accession No. ML15063A404), an application from Mallinckrodt LLC to amend the NRC's Source Materials License No. STB-401. The licensee requests the option to perform direct dose assessment of residual radioactivity in addition to using DCGLs to demonstrate compliance with the license termination criteria in 10 CFR 20.1402 at the Mallinckrodt site in St. Louis, Missouri. The license currently states that the Decommissioning of the Columbium-Tantalum (C-T) process area building slabs and foundations, paved surfaces, and all subsurface materials, shall be done in accordance with the Mallinckrodt C-T Decommissioning Project, C-T Phase II Decommissioning Plan (DP), Revision 2, submitted to NRC on October 14, 2008 (ADAMS Accession No. ML083150652), and revisions submitted on June 3, 2010 (ADAMS Accession No. ML101620140). A Notice of Availability of an EA and FONSI was published for the NRC's approval of the DP in the **Federal Register** on July 1, 2010 (75 FR 38148). The NRC approved
