**SUPPLEMENTARY INFORMATION:****I. Abstract**

Through acts such as the National Construction Safety Team Act (NCSTA) and the NIST Organic Act, among others, as well as the President's Climate Action Plan (2013),<sup>a</sup> NIST conducts research and develops guidance and other related tools to promote and enhance the safety and well-being of people in the face of a hazard event. With this in mind, NIST proposes to conduct a number of data collection efforts within the topic areas of disaster and failure studies and community resilience and sustainability. This includes studies of specific disaster events (e.g., wildfire, urban fire, structure collapse, hurricane, earthquake, tornado, and flood events), assessments of community resilience and sustainability, and evaluations of the usability and utility of NIST guidance or other products. For example, one study may assess user perceptions and applications of the NIST "Community Resilience Planning Guide for Buildings and Infrastructure Systems" as well as adherence to building and fire codes and standards in community resilience planning. Another example may include the study of disaster impacts to community members due to a large-scale wildfire event. These data collection efforts may be either qualitative or quantitative in nature, or may consist of mixed methods. Additionally, data may be collected via a variety of means, including but not limited to electronic or social media, direct or indirect observation (i.e., in person, video and audio collections), interviews, questionnaires, and focus groups. NIST will limit its inquiries to data collections that solicit strictly voluntary opinions or responses. The results of the data collected will be used to decrease

<sup>a</sup>The President's Climate Action Plan (2013) is available at: <https://www.whitehouse.gov/sites/default/files/image/president27sclimateactionplan.pdf>. On page 13, it is explicitly noted that "the National Institute of Standards and Technology will convene a panel on disaster-resilience standards to develop a comprehensive, community-based resilience framework and provide guidelines for consistently safe buildings and infrastructure—products that can inform the development of private-sector standards and codes."

negative impacts of disasters on society, and, in turn, increase community resilience within the U.S. communities. Steps will be taken to ensure anonymity of respondents in each activity covered by this request.
