

- Alternative 3—First Alternative to the Proposed Action
- Alternative 4—Second Alternative to the Proposed Action

Responsible Official

Ian Reid, District Ranger, North Fork John Day Ranger District will be the responsible official for making the decision and providing direction for the analysis.

Nature of Decision To Be Made

The responsible official will decide whether or not to authorize the proposal.

Preliminary Issues

The Forest Service has identified seven issues from previous scoping:

- Issue 1: Large scale landscape burning may have a negative impact on air quality.
- Issue 2: The prescribed fire treatment proposed in Moist and Cold upland forests (UF) is not appropriate for these Potential Vegetation Groups (PVGs) and associated biophysical environments. These PVGs historically burned at mixed (primarily Moist UF) and high (primarily Cold UF and some Moist UF) severity at the hottest and driest time of the year. Impacts of prescribed burning in the late summer and fall to Moist and Cold UF stands would not be characteristic of these PVGs; as a result, impacts to nutrient cycling, dead wood recruitment, vegetative succession, wildlife species, etc., would also be uncharacteristic.
- Issue 3: Prescribed fire treatments in the Wilderness may have a negative impact on Wilderness characteristics.
- Issue 4: Mechanical treatments need to be prescribed in a manner which maximizes economic benefits.
- Issue 5: Some proposed treatments may be a threat to forest investments such as white pine plantations and Subalpine fir stands.
- Issue 6: Treatment under the Proposed Action would impact the quality of forested stands that provide connectivity between late and old structure and Forest Plan designated old growth habitat at the analysis area and larger landscape scale; treated (mechanical and prescribed fire) connectivity habitat would not meet Forest Plan standards following implementation. The treatment activities would affect the ability of wildlife to move freely between late and old structure and designated old growth stands, and may ultimately impact population levels and the viability of species dependent on old forest habitat.
