Based on a total recreational vessel population of 3,775 and 21 currently available pumpout facilities, the ratio of vessels to pumpouts is 180:1, which means there are significantly more pumpouts than the recommended range of 300–600:1. Also, based on the low level of commercial vessel traffic (approximately one vessel per month) at the two St. Lawrence River commercial ports and the transience of these vessels, the availability of four septic hauler pumpout truck companies provides adequate pumpout capacity for vessels that are too large to use the stationary pumpout facilities. Therefore, the EPA proposes to issue a determination that adequate pumpout facilities for the safe and sanitary removal and treatment of sewage for all vessels are reasonably available for the waters of the New York portion of the St. Lawrence River.

A 30-day period for public comment has been opened on this matter and the EPA invites any comments relevant to its proposed determination. If, after the public comment period ends, the EPA makes a final determination that adequate facilities for the safe and sanitary removal and treatment of sewage from all vessels are reasonably available for the waters of the New York State portion of the St. Lawrence River, the State may completely prohibit the discharge from all vessels of any sewage, whether treated or not, into such waters.
