Vol. 81                      Wednesday,  
No. 61                      March 30, 2016

Book 1 of 2 Books  
Pages 17601–18110

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see [www.ofr.gov](http://www.ofr.gov).

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at [www.fdsys.gov](http://www.fdsys.gov), a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, [gpocusthelp.com](mailto:gpocusthelp.com).

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see [bookstore.gpo.gov](http://bookstore.gpo.gov).

There are no restrictions on the republication of material appearing in the **Federal Register**.

**How To Cite This Publication:** Use the volume number and the page number. Example: 81 FR 12345.

**Postmaster:** Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

# Rules and Regulations

Federal Register

Vol. 81, No. 61

Wednesday, March 30, 2016

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

## NATIONAL CREDIT UNION ADMINISTRATION

### 12 CFR Part 703

RIN 3133-AE55

#### Investment and Deposit Activities—Bank Notes

**AGENCY:** National Credit Union Administration (NCUA).

**ACTION:** Final rule.

**SUMMARY:** The NCUA Board (Board) is finalizing a rule that amends the maturity requirement for bank notes to be permissible investments for federal credit unions (FCUs) by removing the word “original” from the current requirement that bank notes have “original weighted average maturities of less than 5 years.”

**DATES:** This rule is effective April 29, 2016.

**FOR FURTHER INFORMATION CONTACT:** John Nilles, Senior Capital Markets Specialist, Office of Examination and Insurance, at the above address or telephone (703) 518-6360; or Justin M. Anderson, Senior Staff Attorney, Office of General Counsel, at the above address or telephone (703) 518-6540.

#### SUPPLEMENTARY INFORMATION:

##### Table of Contents

- I. Background
- II. Comments on the October 2015 Proposal
- III. Final Rule
- IV. Regulatory Procedures

### I. Background

In October 2015, the Board issued a proposed rule to amend the maturity requirement for bank notes to be permissible investments for FCUs by removing the word “original” from the requirement that bank notes have “original weighted average maturities of less than 5 years.”<sup>1</sup> As the Board noted

in the proposal, the authority for FCUs to invest in bank notes is derived from the provision in the Federal Credit Union Act (the Act) that permits FCUs to make deposits in, among other things, national and state banks.

The Act does not provide authority for FCUs to purchase bank notes that are not deposits. The Act, however, does not define “deposit.” NCUA’s long-standing policy has been to use the definition of deposit in the Federal Reserve Board’s Regulation D. Regulation D provides, in relevant part, that a liability of a depository institution can be a “deposit” if, among other things: (1) It is insured; (2) it is not subordinated to the claims of depositors; and (3) it has a weighted average maturity of less than five years.<sup>2</sup>

The Board stated in the proposal that removing the word “original” would better align NCUA’s requirements for bank notes with the Regulation D definition of a deposit. Further, the Board noted that this amendment would also provide FCUs with some measure of regulatory relief. By removing the word “original,” which ties the bank note’s maturity to its original date of issuance, FCUs will be permitted to select from a much larger pool of possible bank note offerings. Specifically, FCUs will be permitted to purchase bank notes that had *original* maturities of *greater* than five years but have *remaining* maturities of *less than* five years. Expanding the list of permissible offerings for FCUs will result in: (1) Cheaper execution prices; (2) flexibility for FCUs; and (3) greater efficiency for FCUs in finding suitable offerings. The weighted average maturity of less than five years will also maintain safety and soundness by avoiding excessive interest rate risk.

### II. Comments on the October 2015 Proposal

The Board received eight comment letters in response to the October 2015 proposal. Generally, all of the commenters supported the rule as proposed. Several of those commenters, however, suggested ways to improve the rule.

One commenter suggested the Board eliminate the maturity requirement for bank notes completely. This commenter

suggested that, because there is no statutory requirement for the Board to align the definition of deposit with Regulation D, the Board should define deposit in a way that would allow FCUs to invest in bank notes with any maturities. However, the Federal Reserve Board’s Regulation D definition provides sufficient flexibility for FCUs, and maintains safety and soundness in this context. The Board, therefore, will continue to follow NCUA’s long-standing policy to use the definition of deposit in Regulation D to determine permissible bank notes that may be purchased by FCUs under the Act.

Another commenter requested the Board issue guidance on concentration limits for FCUs investing in bank notes. The Board notes that there are no regulatory concentration limits on bank notes due to the limited exposure to FCUs that the asset class currently represents.

A final commenter suggested the Board authorize additional investments for FCUs under part 703. This comment raises an issue that is outside the scope of this rulemaking. However, part 703 was included in the Office of General Counsel’s review of one-third of NCUA’s regulations in 2015. As a result, the Board is considering whether additional amendments to part 703 are warranted. If the Board determines to promulgate such amendments, it will do so in a separate rulemaking.

### III. Final Rule

For the reasons stated above, the Board is adopting as final the proposed amendment without change.

### IV. Regulatory Procedures

#### 1. Regulatory Flexibility Act

The Regulatory Flexibility Act requires NCUA to prepare an analysis of any significant economic impact a regulation may have on a substantial number of small entities (primarily those under \$100 million in assets).<sup>3</sup> This final rule will have a minimal economic impact on small credit unions as bank notes are just one small fraction of a typical investment portfolio. Accordingly, NCUA certifies the rule will not have a significant economic impact on a substantial number of small credit unions.

<sup>2</sup> NCUA’s regulations do not require that all of these criteria be met for bank notes to be permissible investments.

<sup>3</sup> 5 U.S.C. 603(a); 12 U.S.C. 1787(c)(1).

<sup>1</sup> 80 FR 63932 (Oct. 22, 2015).

## 2. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (PRA) applies to rulemakings in which an agency by rule creates a new paperwork burden or increases an existing burden.<sup>4</sup> For purposes of the PRA, a paperwork burden may take the form of a reporting or recordkeeping requirement, both referred to as information collections. This final rule creates new investment options for FCUs but will not create any new burdens or increase any existing burdens. Therefore, a PRA analysis is not required.

## 3. Executive Order 13132

Executive Order 13132 encourages independent regulatory agencies to consider the impact of their actions on state and local interests. NCUA, an independent regulatory agency as defined in 44 U.S.C. 3502(5), voluntarily complies with the executive order to adhere to fundamental federalism principles. The final rule does not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. NCUA has, therefore, determined that this final rule does not constitute a policy that has federalism implications for purposes of the executive order.

## 4. Assessment of Federal Regulations and Policies on Families

NCUA has determined that this final rule will not affect family well-being within the meaning of section 654 of the Treasury and General Government Appropriations Act, 1999, Public Law 105-277, 112 Stat. 2681 (1998).

### List of Subjects

#### 12 CFR Part 703

Credit unions, Investments.

By the National Credit Union Administration Board on March 24, 2016.

#### Gerard Poliquin,

Secretary of the Board.

For the reasons discussed above, the National Credit Union Administration amends 12 CFR part 703 as follows:

### PART 703—INVESTMENT AND DEPOSIT ACTIVITIES

■ 1. The authority citation for part 703 continues to read as follows:

**Authority:** 12 U.S.C. 1757(7), 1757(8), and 1757(15).

<sup>4</sup> 44 U.S.C. 3507(d); 5 CFR part 1320.

### § 703.14 [Amended]

■ 2. Amend § 703.14(f)(5) by removing the word “original”.

BILLING CODE 7535-01-P

## DEPARTMENT OF TRANSPORTATION

### Federal Aviation Administration

#### 14 CFR Part 71

[Docket No. FAA-2015-4532; Airspace Docket No. 15-AEA-10]

### Amendment of Class D Airspace and Class E Airspace for the Following New York Towns; Ithaca, NY; Poughkeepsie, NY

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Final rule; delay of effective date, correction.

**SUMMARY:** This action changes the effective date of a final rule published in the **Federal Register** of February 4, 2016, amending Class E Airspace designated as an extension at Ithaca Tompkins Regional Airport, Ithaca, NY; and the Kingston VORTAC, Poughkeepsie, NY. This correction updates the geographic coordinates of each navigation aid and Ithaca Tompkins Regional Airport (formerly Tompkins County Airport), under Class D airspace and Class E surface area airspace to coincide with the FAA's aeronautical database. Also, Dutchess County Airport is added to the Kingston VORTAC, Poughkeepsie, NY, designation in Class E airspace designated as an extension. The Kingston VORTAC reference is removed from the Class D airspace designation. This action also adds Class D airspace to the title of this rulemaking.

**DATES:** This correction is effective 0901 UTC, May 26, 2016, and the effective date of the rule amending 14 CFR part 71, published on February 4, 2016 (81 FR 5902), is delayed to 0901 UTC May 26, 2016. The Director of the Federal Register approves this incorporation by reference action under Title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

**FOR FURTHER INFORMATION CONTACT:** John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, P.O. Box 20636, Atlanta, Georgia 30320; telephone (404) 305-6364.

**SUPPLEMENTARY INFORMATION:**

### Authority for This Rulemaking

#### History

The **Federal Register** published a final rule amending Class E Airspace Designated as an Extension at Ithaca Tompkins Regional Airport, Ithaca, NY, (formerly Tompkins County Airport), and the Kingston VORTAC, Poughkeepsie, NY (81 FR 5902, February 4, 2016) Docket No. FAA-2015-4532. Further review revealed the geographic coordinates for the airport and nav aids needed to be amended in Class D airspace and Class E surface area airspace. It is also noted that the Kingston VORTAC is erroneously listed in Class D airspace for Poughkeepsie, NY, and is removed. Also, Class D Airspace is added to the title.

Class D and Class E airspace designations are published in paragraphs 5000, 6002, and 6004, respectively, of FAA Order 7400.9Z dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class D and Class E airspace designations listed in this document will be published subsequently in the Order. These are administrative corrections and do not affect the controlled airspace boundaries or operating requirements supporting operations in the Ithaca and Poughkeepsie, NY areas.

#### Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

#### Correction to Final Rule

Accordingly, pursuant to the authority delegated to me, in the **Federal Register** of February 4, 2016 (81 FR 5902) FR Doc. FAA-2016-02040, Amendment of Class E Airspace for the following NY Towns; Ithaca, NY; Poughkeepsie, NY, is corrected as follows:

On page 5902, column 2, beginning on line 6, remove the following text: “Amendment of Class E Airspace for the following New York Towns; Ithaca, NY; Poughkeepsie, NY” and add in its place “Amendment of Class D and E Airspace for the following New York Towns; Ithaca, NY, Poughkeepsie, NY

On page 5903, column 2, after line 23, add the following text:

*Paragraph 5000 Class D Airspace.*

\* \* \* \* \*

**AEA NY D Ithaca, NY [Corrected]**

Ithaca Tompkins Regional Airport, Ithaca, NY  
(Lat. 42°29'29" N., long. 76°27'31" W.)

That airspace extending upward from the surface to and including 3,600 feet MSL within a 4-mile radius of Ithaca Tompkins Regional Airport. This Class D airspace area is effective during specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be published continuously in the Airport/Facility Directory.

**AEA NY D Poughkeepsie, NY [Corrected]**

Dutchess County Airport, Poughkeepsie, NY  
(Lat. 41°37'36" N., long. 73°53'03" W.)

That airspace extending upward from the surface to and including 2,700 feet MSL within a 4-mile radius of Dutchess County Airport. This Class D airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory.

*Paragraph 6002 Class E Surface Area Airspace*

\* \* \* \* \*

**AEA NY E2 Ithaca, NY [Corrected]**

Ithaca Tompkins Regional Airport, Ithaca, NY  
(Lat. 42°29'29" N., long. 76°27'31" W.)  
Ithaca VOR/DME  
(Lat. 42°29'42" N., long. 76°27'35" W.)

Within a 4-mile radius of Ithaca Tompkins Regional Airport and that airspace extending upward from the surface from the 4-mile radius of the airport to the 5.7-mile radius of the airport clockwise from the 329° bearing to the 081° bearing from the airport; that airspace from the 4-mile radius of the airport to the 8.7-mile radius of the airport extending clockwise from the 081° bearing to the 137° bearing from the airport; that airspace from the 4-mile radius of the airport to the 6.6-mile radius of the airport extending clockwise from the 137° bearing to the 170° bearing from the airport; that airspace from the 4-mile radius to the 5.7-mile radius of the airport extending clockwise from the 170° bearing to the 196° bearing from the airport, and that airspace within 2.7 miles each side of the Ithaca VOR/DME 305° radial extending from the 4-mile radius of the airport to 7.4 miles northwest of the Ithaca VOR/DME. This Class E airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory.

\* \* \* \* \*

**AEA NY E2 Poughkeepsie, NY [Corrected]**

Dutchess County Airport, Poughkeepsie, NY  
(Lat. 41°37'36" N., long. 73°53'03" W.)  
Kingston VORTAC  
(Lat. 41°39'56" N., long. 73°49'20" W.)

Within a 4-mile radius of the Dutchess County Airport; and that airspace extending upward from the surface within 3.1 miles each side of the Kingston VORTAC 025° radial extending from the VORTAC to 8.3

miles northeast of the VORTAC, and within 1.8 miles each side of the Kingston VORTAC 231° radial extending from the 4-mile radius to 9.2 miles southwest of the VORTAC and within 3.1 miles each side of the Kingston VORTAC 050° radial extending from the VORTAC to 9.2 miles northeast of the VORTAC. This Class E airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Airport/Facility Directory.

**BILLING CODE 4910-13-P**

**DEPARTMENT OF TRANSPORTATION****Federal Aviation Administration****14 CFR Part 71**

[Docket No. FAA-2015-6231; Airspace Docket No. 15-AEA-12]

**Amendment of Class D Airspace and Class E Airspace; Lynchburg, VA**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Final rule; delay of effective date, correction.

**SUMMARY:** This action changes the effective date of a final rule published in the **Federal Register** of February 4, 2016, amending Class E surface area airspace at Lynchburg, VA, by adjusting the geographic coordinates at Lynchburg Regional-Preston Glenn Field Airport, and Falwell Airport. This correction updates the geographic coordinates of the above airports in Class D airspace, Class E airspace designated as an extension, and Class E airspace extending upward from 700 feet above the surface, and adds Class D Airspace to the title.

**DATES:** This correction is effective 0901 UTC, May 26, 2016, and the effective date of the rule amending 14 CFR part 71, published on February 4, 2016 (81 FR 5901), is delayed to 0901 UTC May 26, 2016. The Director of the Federal Register approves this incorporation by reference action under Title 1, Code of Federal Regulations, part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

**FOR FURTHER INFORMATION CONTACT:** John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, P.O. Box 20636,

Atlanta, Georgia 30320; telephone (404) 305-6364.

**SUPPLEMENTARY INFORMATION:****History**

The **Federal Register** published a final rule amending the geographic coordinates of Lynchburg Regional-Preston Glenn Field Airport and Falwell Airport, Class E surface airspace, Lynchburg, VA. (81 FR 5901, February 4, 2016) Docket No. FAA-2015-6231. Subsequent to publication, the FAA discovered the geographic coordinates of both airports in Class D Airspace, Class E airspace designated as an extension, and Class E airspace extending upward from 700 feet above the surface required an adjustment as well.

Class D and Class E airspace designations are published in paragraphs 5000, 6002, 6004, and 6005, respectively, of FAA Order 7400.9Z dated August 6, 2015, and effective September 15, 2015, which is incorporated by reference in 14 CFR part 71.1. The Class D and Class E airspace designations listed in this document will be published subsequently in the Order. These are administrative corrections and do not affect the controlled airspace boundaries or operating requirements supporting operations in the Lynchburg, VA area.

**Availability and Summary of Documents for Incorporation by Reference**

This document amends FAA Order 7400.9Z, Airspace Designations and Reporting Points, dated August 6, 2015, and effective September 15, 2015. FAA Order 7400.9Z lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

**Correction to Final Rule**

Accordingly, pursuant to the authority delegated to me, in the **Federal Register** of February 4, 2016 (81 FR 5901) FR Doc. FAA-206-02033, Amendment of Class E Airspace; Lynchburg, VA, is corrected as follows:

**§ 71.1 [Amended]**

On page 5901, column 1, line 22, remove the following text: "Amendment of Class E Airspace for Lynchburg, VA" and add in its place: "Amendment of Class D and Class E Airspace; Lynchburg, VA". On page 5902, column 1, after line 51, add the following text:

*Paragraph 5000 Class D Airspace.*

\* \* \* \* \*

**AEA VA D Lynchburg, VA [Corrected]**

Lynchburg Regional-Preston Glenn Field Airport, Lynchburg, VA

(Lat. 37°19'31" N., long. 79°12'04" W.)  
 Falwell Airport, VA  
 (Lat. 37°22'41" N., long. 79°07'20" W.)

That airspace extending upward from the surface to and including 3,400 feet MSL within a 4.5-mile radius of Lynchburg Municipal-Preston Glenn Field Airport, excluding the portion within a .5-mile radius of Falwell Airport. This Class D airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be published continuously in the Airport/Facility Directory.

Paragraph 6004 Class E Airspace Designated as an Extension to a Class D Surface Area.

\* \* \* \* \*

**AEA VA E4 Lynchburg, VA [Corrected]**

Lynchburg Regional-Preston Glenn Field Airport, Lynchburg, VA  
 (Lat. 37°19'31" N., long. 79°12'04" W.)  
 Lynchburg VORTAC  
 (Lat. 37°15'17" N., long. 79°14'11" W.)

That airspace extending upward from the surface within 2.7 miles each side of the Lynchburg VORTAC 020° and 200° radials extending from the 4.5-mile radius of Lynchburg Municipal-Preston Glenn Field Airport to 1 mile south of the VORTAC, and within 1.8 miles each side of the Lynchburg VORTAC 022° radial extending from the 4.5-mile radius of the airport to 11.3 miles northeast of the VORTAC. This Class E airspace area is effective during the specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be published continuously in the Airport/Facility Directory.

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

\* \* \* \* \*

**AEA VA E5 Lynchburg, VA [Corrected]**

Lynchburg Regional-Preston Glenn Field Airport, Lynchburg, VA  
 (Lat. 37°19'31" N., long. 79°12'04" W.)  
 Lynchburg VORTAC  
 (Lat. 37°15'17" N., long. 79°14'11" W.)  
 Falwell Airport, VA  
 (Lat. 37°22'41" N., long. 79°07'20" W.)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of Lynchburg Regional-Preston Glenn Field, and within 2.7 miles each side of the Lynchburg VORTAC 200° radial extending from the 6.5-mile radius to 7.4 miles south of the VORTAC, and within 3.1 miles each side of the Lynchburg VORTAC 022° radial extending from the 6.5-mile radius to 21.3 miles northeast of the VORTAC, and within a 6.5-mile radius of Falwell Airport.

**New Animal Drugs; Approval of New Animal Drug Applications; Changes of Sponsorship**

**AGENCY:** Food and Drug Administration, HHS.

**ACTION:** Final rule; technical amendment.

**SUMMARY:** The Food and Drug Administration (FDA) is amending the animal drug regulations to reflect application-related actions for new animal drug applications (NADAs) and abbreviated new animal drug applications (ANADAs) during November and December 2015. FDA is also informing the public of the availability of summaries of the basis of approval and of environmental review documents, where applicable. The animal drug regulations are also being

amended to reflect changes of sponsorship of applications that occurred in November and December 2015.

**DATES:** This rule is effective March 30, 2016.

**FOR FURTHER INFORMATION CONTACT:** George K. Haibel, Center for Veterinary Medicine (HFV-6), Food and Drug Administration, 7519 Standish Pl., Rockville, MD 20855, 240-402-5689, [george.haibel@fda.hhs.gov](mailto:george.haibel@fda.hhs.gov).

**SUPPLEMENTARY INFORMATION:**

**I. Approval Actions**

FDA is amending the animal drug regulations to reflect approval actions for NADAs and ANADAs during November and December 2015, as listed in table 1. In addition, FDA is informing the public of the availability, where applicable, of documentation of environmental review required under the National Environmental Policy Act (NEPA) and, for actions requiring review of safety or effectiveness data, summaries of the basis of approval (FOI Summaries) under the Freedom of Information Act (FOIA). These public documents may be seen in the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, between 9 a.m. and 4 p.m., Monday through Friday. Persons with access to the Internet may obtain these documents at the CVM FOIA Electronic Reading Room: <http://www.fda.gov/AboutFDA/CentersOffices/OfficeofFoods/CVM/CVMFOIAElectronicReadingRoom/default.htm>. Marketing exclusivity and patent information may be accessed in FDA's publication, Approved Animal Drug Products Online (Green Book) at: <http://www.fda.gov/AnimalVeterinary/Products/ApprovedAnimalDrugProducts/default.htm>.

141-084	SENTINEL (lufenuron and milbemycin oxime) Flavor Tabs.
141-105	PROGRAM (lufenuron) 6-Month Injectable for Cats.
141-120	CLOMICALM (clomipramine) Tablets.
141-163	MILBEMITE (milbemycin oxime) Otic Solution.
141-175	CAPSTAR (nitenpyram) Tablets.
141-203	DERAMAXX (deracoxib) Chewable Tablets.
141-204	SENTINEL Flavor Tabs and CAPSTAR Flea Management System.
141-205	PROGRAM Flavor Tabs and CAPSTAR Flea Management System.
141-218	ATOPICA (cyclosporine) Capsules.
141-320	ONSIOR (robenacoxib) Tablets.
141-329	ATOPICA (cyclosporine) Oral Solution for Cats.
141-333	SENTINEL SPECTRUM (milbemycin oxime, lufenuron, praziquantel) Chewable Tablets.
141-338	INTERCEPTOR SPECTRUM (milbemycin oxime and praziquantel) Chewable Tablets.
141-437	OSURNIA (florfenicol, betamethasone acetate, and terbinafine) Otic Gel.
141-443	ONSIOR (robenacoxib) Injection.
200-517	ZOBUXA (enrofloxacin) Tablets.
200-519	FLORVIO (florfenicol) 2.3% Concentrate Solution.

As provided in the regulatory text of this document, the animal drug regulations are amended to reflect these changes of sponsorship. Elanco US, Inc., is retaining Novartis' drug labeler code (058198). Accordingly, the animal drug regulations need only be amended in § 510.600(c) to add Elanco US, Inc., who previously was not the sponsor of an approved application. Cronus Pharma LLC will also be added as a new listing. Following these changes of sponsorship, Novartis is no longer the sponsor of an approved application and will be removed from § 510.600(c).

**III. Technical Amendments**

FDA has noticed the animal drug regulations in 21 CFR part 556 contain tolerances for residues in edible tissues for sulfathiazole, which is no longer the subject of an approved application (79 FR 15540, March 20, 2014). Accordingly, § 556.690 is being removed. FDA has also noticed that the animal drug regulations in 21 CFR 558.4 (§ 558.4) contain assay limits for ronnel and sulfaethoxyppyridazine in medicated feed. As there is no longer an approved application for use of either of these drugs in medicated feed, the table for Category II drugs in § 558.4 is being amended to remove assay limits in

medicated feed for both drugs. These actions are being taken to improve the accuracy of the regulations.

In addition, FDA is taking this opportunity to revise the spelling of a bacitracin salt to a preferred form, bacitracin methylenedisalicylate, and to correct the spelling of a genus of pathogenic bacteria, *Haemophilus*. These actions are being taken to improve the accuracy of the regulations. This rule does not meet the definition of "rule" in 5 U.S.C. 804(3)(A) because it is a rule of "particular applicability." Therefore, it is not subject to the congressional review requirements in 5 U.S.C. 801-808.

**List of Subjects**

*21 CFR Part 510*

Administrative practice and procedure, Animal drugs, Labeling, Reporting and recordkeeping requirements.

*21 CFR Parts 520, 522, 524, 528, and 529*

Animal drugs.

*21 CFR Part 556*

Animal drugs, Foods.

*21 CFR Part 558*

Animal drugs, Animal feeds.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Center for Veterinary Medicine, 21 CFR parts 510, 520, 522, 524, 528, 529, 556, and 558 are amended as follows:

**PART 510—NEW ANIMAL DRUGS**

■ 1. The authority citation for 21 CFR part 510 continues to read as follows:

Authority: 21 U.S.C. 360b.

**§ 520.88b [Amended]**

■ 4. In § 520.88b, in paragraph (b)(1)(ii)(B), remove “*Hemophilus*” and in its place add “*Haemophilus*”.

■ 5. In § 520.154b:

■ a. Revise the section heading.

■ b. In paragraph (a), remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

The revision reads as follows:

**§ 520.154b Bacitracin methylenedisalicylate and streptomycin sulfate powder.**

\* \* \* \* \*

**§ 520.441 [Amended]**

■ 6. In § 520.441, in paragraphs (b)(2) and (d)(4)(iii)(C), remove “000010” and in its place add “016592”; and in paragraphs (d)(1)(i)(A)(1), (d)(2)(i)(A)(1), (d)(4)(iii)(B), and (d)(4)(iv)(B), remove “*Hemophilus*” and in its place add “*Haemophilus*”.

**§ 520.443 [Amended]**

■ 7. In § 520.443, in paragraph (b), remove “No. 054628” and in its place add “Nos. 016592 and 054628”; and in paragraphs (d)(1)(i), (d)(2)(i), and (d)(3)(i), remove “*Hemophilus*” and in its place add “*Haemophilus*”.

**§ 520.445 [Amended]**

■ 8. In § 520.445, in paragraph (b), remove “000010” and in its place add “016592”.

**§ 520.446 [Amended]**

■ 9. In § 520.446, in paragraph (b)(1), remove “No. 054771” and in its place add “Nos. 054771 and 069043”.

**§ 520.447 [Amended]**

■ 10. In § 520.447, in paragraph (b), remove “Nos. 000859, 051311, 054771, 058829, and 061623” and in its place add “Nos. 051311, 054771, 058829, 061623, and 069043”.

**§ 520.823 [Amended]**

■ 11. In § 520.823, in paragraph (d)(2)(ii), remove “*Hemophilus*” and in its place add “*Haemophilus*”.

**§ 520.1010 [Amended]**

■ 12. In § 520.1010, in paragraph (b)(3), remove “Nos. 000859 and 058829” and in its place add “Nos. 058829 and 069043”.

**§ 520.1193 [Amended]**

■ 13. In § 520.1193, in paragraph (b)(2), remove “Nos. 000859 and 051311” and in its place add “Nos. 051311 and 069043”.

**§ 520.1720a [Amended]**

■ 14. In § 520.1720a, in paragraph (b)(2), remove “Nos. 000859 and 054628” and in its place add “Nos. 054628 and 069043”.

■ 15. In § 520.1870, revise paragraph (b) to read as follows:

**§ 520.1870 Praziquantel tablets.**

\* \* \* \* \*

(b) *Sponsor*. See No. 069043 in § 510.600(c) of this chapter for use of the product described in paragraph (a)(1) of this section as in paragraph (c)(1) of this section; and for use of the product

described in paragraph (a)(2) of this section as in paragraph (c)(2) of this section.

\* \* \* \* \*

**§ 520.2043 [Amended]**

■ 16. In § 520.2043, in paragraph (b)(1), remove “Nos. 000859, 054771, and 058829” and in its place add “Nos. 054771, 058829, and 069043”.

**§ 520.2044 [Amended]**

■ 17. In § 520.2044, in paragraph (b)(2), remove “000859” and in its place add “017135”.

**§ 520.2200 [Amended]**

■ 18. In § 520.2200, in paragraph (b), remove “000010” and in its place add “016592”.

**§ 520.2260a [Amended]**

■ 19. In § 520.2260a, in paragraph (a)(1), remove “000010” and in its place add “016592”.

**§ 520.2261a [Amended]**

■ 20. In § 520.2261a, in paragraph (b), remove “000010” and in its place add “016592”.

**§ 520.2261b [Amended]**

■ 21. In § 520.2261b, in paragraph (b), remove “000010” and in its place add “016592”.

**§ 520.2345d [Amended]**

■ 22. In § 520.2345d, in paragraphs (b)(5), (d)(1)(iii), and (d)(2)(iii), remove “000010” and in its place add “016592”; and in paragraphs (d)(1)(ii) and (d)(2)(ii), remove “*Hemophilus*” and in its place add “*Haemophilus*”.

- 23. In § 520.2471, revise paragraph (d)(2) to read as follows:

**§ 520.2471 Tilimicosin.**

\* \* \* \* \*

(d) \* \* \*

(2) *Indications for use*—(i) For the control of swine respiratory disease associated with *Pasteurella multocida* and *Haemophilus parasuis* in groups of swine in buildings where a respiratory disease outbreak is diagnosed.

(ii) For the control of swine respiratory disease associated with *Mycoplasma hyopneumoniae* in the presence of Porcine Reproductive and Respiratory Syndrome Virus (PRRSV) in groups of swine in buildings where a respiratory disease outbreak is diagnosed.

\* \* \* \* \*

**PART 522—IMPLANTATION OR INJECTABLE DOSAGE FORM NEW ANIMAL DRUGS**

- 24. The authority citation for 21 CFR part 522 continues to read as follows:

Authority: 21 U.S.C. 360b.

**§ 522.56 [Amended]**

- 25. In § 522.56, in paragraph (b), remove “000859” and in its place add “069043”.

**§ 522.390 [Amended]**

- 26. In § 522.390, in paragraph (b), remove “Nos. 000859 and 054771” and in its place add “Nos. 054771 and 069043”.

**§ 522.540 [Amended]**

- 27. In § 522.540, in paragraph (e)(2), remove “000859” and in its place add “069043”.

**§ 522.810 [Amended]**

- 28. In § 522.810, in paragraph (b), remove “000859” and in its place add “069043”.

**§ 522.1066 [Amended]**

- 29. In § 522.1066, in paragraph (b), remove “Nos. 000859 and 054771” and in its place add “Nos. 054771 and 069043”.

**§ 522.1662a [Amended]**

- 30. In § 520.1662a, in paragraphs (b)(3)(i)(b), (c)(3)(i), (d)(3)(i)(a), (e)(3)(i)(b), (g)(3)(i)(b), and (k)(3)(ii), remove “*Hemophilus*” and in its place add “*Haemophilus*”.

**§ 522.2260 [Amended]**

- 31. In § 522.2260, in paragraph (b), remove “000010” and in its place add “016592”.

**PART 524—OPHTHALMIC AND TOPICAL DOSAGE FORM NEW ANIMAL DRUGS**

- 32. The authority citation for 21 CFR part 524 continues to read as follows:

Authority: 21 U.S.C. 360b.

**§ 524.1044g [Amended]**

- 33. In § 522.1044g, in paragraph (b)(3), remove “000859” and in its place add “069043”.

**PART 528—NEW ANIMAL DRUGS IN GENETICALLY ENGINEERED ANIMALS**

- 34. The authority citation for 21 CFR part 528 continues to read as follows:

Authority: 21 U.S.C. 360b.

- 35. Add § 528.2010 to read as follows:

**§ 528.2010 Human lysosomal acid lipase recombinant deoxyribonucleic acid construct.**

(a) *Specifications*. A single copy of a human lysosomal acid lipase (hLAL) recombinant deoxyribonucleic acid (rDNA) gene construct located at the SYN LAL–C site in chromosome 6 in a specific, diploid line (SBC LAL–C) of hemizygous and homozygous domestic chickens (*Gallus gallus*), derived from the lineage progenitor XLL 109.

(b) *Sponsor*. See No. 069334 in § 510.600 of this chapter.

(c) *Conditions of use*—(1) *Intended use*. The gene construct directs the expression of that encoding gene such that recombinant, human lysosomal acid lipase (rhLAL) protein intended for the treatment of human disease is present in SBC LAL–C chicken egg whites.

(2) *Limitations*. Food or feed from XLL 109 chickens is not permitted in the food or feed supply.

**PART 529—CERTAIN OTHER DOSAGE FORM NEW ANIMAL DRUGS**

- 36. The authority citation for 21 CFR part 529 continues to read as follows:

Authority: 21 U.S.C. 360b.

- 37. Add § 529.539 to read as follows:

**§ 529.539 Dexmedetomidine.**

(a) *Specifications*. Each milliliter of gel contains 0.09 milligrams (mg) dexmedetomidine (equivalent to 0.1 mg dexmedetomidine hydrochloride).

(b) *Sponsor*. See No. 052483 in § 510.600(c) of this chapter.

(c) *Conditions of use*—(1) *Amount*. Administer onto the oral mucosa between the dog’s cheek and gum at a dose of 125 micrograms per square meter.

(2) *Indications for use*. For the treatment of noise aversion in dogs.

(3) *Limitations*. Federal law restricts this drug to use by or on the order of a licensed veterinarian.

**PART 556—TOLERANCES FOR RESIDUES OF NEW ANIMAL DRUGS IN FOOD**

- 38. The authority citation for 21 CFR part 556 continues to read as follows:

Authority: 21 U.S.C. 342, 360b, 371.

- 39. In § 556.70, in paragraph (b), remove “methylene disalicylate” and in its place add “methylenedisalicylate”; and add paragraph (c) to read as follows:

**§ 556.70 Bacitracin.**

\* \* \* \* \*

(c) *Related conditions of use*. See §§ 520.154a, 520.154c, 558.76, and 558.78 of this chapter.

- 40. In § 556.283, revise paragraphs (b)(3) and (4) to read as follows:

**§ 556.283 Florfenicol.**

\* \* \* \* \*

(b) \* \* \*

(3) *Freshwater-reared finfish (other than catfish) and salmonids*. The tolerance for florfenicol amine (the marker residue) in muscle/skin (the target tissues) is 1 ppm.

(4) *Catfish*. The tolerance for florfenicol amine (the marker residue) in muscle (the target tissues) is 1 ppm.

\* \* \* \* \*

**§ 556.690 [Removed]**

- 41. Remove § 556.690.

- 42. In § 556.765, revise paragraph (b)(1)(i) and add paragraphs (b)(1)(ii) and (c) to read as follows:

**§ 556.765 Zilpaterol.**

\* \* \* \* \*

(b) \* \* \*

(1) \* \* \*

(i) *Liver (the target tissue)*. The tolerance for zilpaterol (the marker residue) is 12 parts per billion (ppb).

(ii) *Muscle*. The tolerance for zilpaterol (the marker residue) is 10 ppb.

\* \* \* \* \*

(c) *Related conditions of use*. See § 558.665 of this chapter.

**PART 558—NEW ANIMAL DRUGS FOR USE IN ANIMAL FEEDS**

- 43. The authority citation for 21 CFR part 558 continues to read as follows:

Authority: 21 U.S.C. 354, 360b, 360ccc, 360ccc–1, 371.

**§ 558.4 [Amended]**

- 44. In § 558.4, in paragraph (d), in the “Category I” table, in the “Drug”

column, remove “Bacitracin methylene disalicylate” and in its place add “Bacitracin methylenedisalicylate”; and in the “Category II” table, remove the entries for “Ronnell” and “Sulfaethoxyypyridazine”.

#### § 558.55 [Amended]

■ 45. In § 558.55, in paragraph (d)(2)(ii), in the “Combination in grams per ton” and “Limitations” columns, remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.58 [Amended]

■ 46. In § 558.58, in paragraph (e)(4), in the “Limitations” column, remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.68 [Amended]

■ 47. In § 558.68, remove paragraph (e)(3).

■ 48. In § 558.76, remove paragraph (e)(2), redesignate paragraph (e)(3) as paragraph (e)(2), and revise redesignated paragraph (e)(2) to read as follows:

#### § 558.76 Bacitracin methylenedisalicylate.

\* \* \* \* \*

(e) \* \* \*

(2) Bacitracin methylenedisalicylate may also be used in combination with:

- (i) Amprolium as in § 558.55.
- (ii) Amprolium and ethopabate as in § 558.58.
- (iii) Clopidol as in § 558.175.
- (iv) Decoquinat as in § 558.195.
- (v) Diclazuril as in § 558.198.
- (vi) Fenbendazole as in § 588.258.
- (vii) Halofuginone hydrobromide as in § 558.265.
- (viii) Ivermectin as in § 558.300.
- (ix) Lasalocid as in § 558.311.
- (x) Monensin as in § 588.355.
- (xi) Narasin as in § 558.363.
- (xii) Nicarbazine alone and with narasin as in § 558.366.
- (xiii) Robenidine as in § 558.515.
- (xiv) Salinomycin as in § 558.550.
- (xv) Semduramicin as in § 558.555.
- (xvi) Zoalene as in § 558.680.

#### § 558.128 [Amended]

■ 49. In § 558.128, in paragraph (e)(7)(ii), remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.175 [Amended]

■ 50. In § 558.175, in paragraph (d)(2), in the “Combination in grams per ton” and “Limitations” columns, remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.195 [Amended]

■ 51. In § 558.195, in paragraph (e)(1)(ii), in the “Combination in grams/ton” and “Limitations” columns,

remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.198 [Amended]

■ 52. In § 558.198, in paragraphs (d)(1)(ii) and (d)(2)(ii), in the “Combination grams/ton” and “Limitations” columns, remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.258 [Amended]

■ 53. In § 588.258, in paragraphs (e)(2)(vi) and (vii), in the “Combination in grams per ton” and “Limitations” columns, remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

■ 54. In § 558.261, redesignate paragraphs (c)(2)(i) and (ii) as paragraphs (c)(2)(ii) and (i), respectively, revise redesignated paragraph (c)(2)(ii), and add paragraph (c)(4) to read as follows:

#### § 558.261 Florfenicol.

\* \* \* \* \*

(c) \* \* \*

(2) \* \* \*

(ii) For fish must not exceed 6 months from the date of issuance.

\* \* \* \* \*

(4) Type A medicated articles and medicated feeds intended for use in fish shall bear the following: “Not for use in animals intended for breeding purposes. The effects of florfenicol on reproductive performance have not been determined. Toxicity studies in dogs, rats, and mice have associated the use of florfenicol with testicular degeneration and atrophy.”

\* \* \* \* \*

#### § 558.265 [Amended]

■ 55. In § 558.265, in paragraphs (d)(1)(vi) and (d)(2)(ii), remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.300 [Amended]

■ 56. In § 558.300, in paragraphs (e)(2) and (3), in the “Combination in g/ton of feed” column, remove “methylene disalicylate” and in its place add “methylenedisalicylate”; and in paragraph (e)(9), in the “Combination in g/ton of feed” and “Limitations” columns, remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.311 [Amended]

■ 57. In § 558.311, in paragraphs (e)(1)(iv) and (x), in the “Limitations” column, remove “methylene disalicylate” and in its place add “methylenedisalicylate”; and in paragraph (e)(1)(xv), in the

“Combination in grams per ton” and “Limitations” columns, remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.355 [Amended]

■ 58. In § 558.355, in paragraphs (f)(1)(iii)(b), (f)(1)(xxiv), (f)(1)(xxix) introductory text, (f)(1)(xxix)(b), (f)(1)(xxx) introductory text, (f)(1)(xxx)(b), (f)(2)(ii) introductory text, (f)(2)(ii)(b), (f)(2)(iii) introductory text, (f)(2)(iii)(a), (f)(2)(iii)(b), (f)(4)(ii) introductory text, (f)(4)(ii)(b), (f)(4)(iii) introductory text, (f)(4)(iii)(b), (f)(4)(v) introductory text, and (f)(4)(v)(b), remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.363 [Amended]

■ 59. In § 558.363, in paragraphs (d)(1)(iv) introductory text, (d)(1)(iv)(B), and (d)(3)(ii), remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

#### § 558.366 [Amended]

■ 60. In § 558.366, in paragraph (d), in the “Combination in grams per ton” and “Limitations” columns, remove “methylene disalicylate” wherever it occurs and in its place add “methylenedisalicylate”.

#### § 558.450 [Amended]

■ 61. In § 558.450, in paragraph (d)(5)(v), in the “Indications for Use” column, remove “*Hemophilus*” and in its place add “*Haemophilus*”.

#### § 558.515 [Amended]

■ 62. In § 558.515, in paragraph (d), in the “Combination in grams per ton” and “Limitations” columns, remove “methylene disalicylate” wherever it occurs and in its place add “methylenedisalicylate”.

#### § 558.550 [Amended]

■ 63. In § 558.550, in paragraphs (d)(1)(iii)(a), (d)(1)(iii)(c), (d)(1)(vi)(a), (d)(1)(xx)(A), (d)(1)(xx)(C), (d)(1)(xxi)(A), (d)(1)(xxi)(C), (d)(3)(ii) introductory text, (d)(3)(ii)(B), (d)(3)(iii) introductory text, (d)(3)(iii)(B), (d)(3)(v) introductory text, and (d)(3)(v)(B), remove “methylene disalicylate” and in its place add “methylenedisalicylate”; and in paragraph (d)(1)(vi)(c), remove “Bacitracin MD” and in its place add “Bacitracin methylenedisalicylate”.

#### § 558.555 [Amended]

■ 64. In § 558.555, in paragraph (d)(2), in the “Combination in grams per ton” and “Limitations” columns, remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

**§ 558.680 [Amended]**

■ 65. In § 558.680, in paragraphs (d)(1)(ii), (iii), (iv), (vi), (vii), and (viii) in the “Combination in grams per ton” and “Limitations” columns, remove “methylene disalicylate” and in its place add “methylenedisalicylate”; and in paragraph (d)(2)(ii), in the “Combination in grams per ton” column, remove “methylene disalicylate” and in its place add “methylenedisalicylate”.

Dated: March 25, 2016.

**NATIONAL ARCHIVES AND RECORDS ADMINISTRATION**
**36 CFR Part 1258**

[FDMS No. NARA-16-0003; NARA-2016-018]

RIN 3095-AB90

**Fees**

**AGENCY:** National Archives and Records Administration (NARA).

**ACTION:** Direct final rule.

**SUMMARY:** The National Archives and Records Administration (NARA) is making a minor administrative revision to its fees regulation to set a time limit for requesting refunds of reproduction fees.

**DATES:** This rule is effective April 29, 2016, without further action, unless NARA receives adverse comments by April 19, 2016. If NARA receives an adverse comment, it will publish a timely withdrawal of the rule in the **Federal Register**.

**ADDRESSES:** You may submit comments, identified by RIN 3095-AB90, by any of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

- *Email:* [Regulation\\_comments@nara.gov](mailto:Regulation_comments@nara.gov). Include RIN 3095-AB90 in the subject line of the message.

- *Fax:* 301-837-0319. Include RIN 3095-AB90 in the subject line of the fax cover sheet.

- *Mail* (for paper, disk, or CD-ROM submissions. Include RIN 3095-AB90 on the submission): Regulations Comment Desk (External Policy Program, Strategy & Performance Division (SP)); Suite 4100; National Archives and Records Administration; 8601 Adelphi Road; College Park, MD 20740-6001

- *Hand delivery or courier:* Deliver comments to front desk at the address above.

*Instructions:* All submissions must include NARA’s name and the regulatory information number for this rulemaking (RIN 3095-AB90). We may publish any comments we receive without changes, including any personal information you include.

**FOR FURTHER INFORMATION CONTACT:** Kimberly Keravuori, by email at [regulation\\_comments@nara.gov](mailto:regulation_comments@nara.gov), or by telephone at 301-837-3151.

**SUPPLEMENTARY INFORMATION:**
**Background**

NARA is authorized by 44 U.S.C. 2116(c) to charge reproduction fees when it reproduces documents for non-Federal individuals or entities. This includes official reproductions with the Archives seal, reproductions of archival holdings, and reproductions of operational records. The statute authorizes NARA to recoup its costs, equipment fees, and similar expenses, and to retain the fees as part of the National Archives Trust Fund. NARA promulgated regulations at 36 CFR 1258 to notify users of the fee structure and processes. Among these regulations is a section addressing refunds of these fees (36 CFR 1258.16). It is this provision that we are revising with this rulemaking.

Due to various factors, it is occasionally difficult for us to make a legible reproduction, particularly of old documents. We notify customers if we anticipate the reproduction will have questionable legibility, and request the customer’s approval to proceed with the reproduction—and the fee charges. As a result, we do not provide refunds except in special cases; primarily if we have somehow processed an order incorrectly or it contains errors. However, the regulation’s refund provision did not include a refund cut-off period after which a person who ordered a reproduction could no longer request a refund. Customers could request refunds for orders that were years old, which has occurred in several instances. We had no recourse but to process the refunds, which is not a reasonable business practice for orders that are multiple years old. This also caused a significant administrative burden, as NARA had discarded records for some of these orders at the end of their routine business life, in accord with our agency’s official records schedule. For example, under records schedule 1807-2, orders made on our online ordering system (SOFA) are destroyed once they are one year old. A refund request five

years after the customer received the reproduction not only is not reasonable, but occurs four years after we destroyed records of the order, making it impossible for us to determine if the customer was notified and approved the reproduction, whether there really was an error or something incorrect about the order, and similar issues.

As a result of these difficulties with refund requests on old orders, we are now revising 36 CFR 1258.16 to set a refund time limit. Customers will have four months from the order date in which to request a refund.

**Regulatory Analysis**
**Review Under Executive Orders 12866 and 13563**

Executive Order 12866, Regulatory Planning and Review, 58 FR 51735 (September 30, 1993), and Executive Order 13563, Improving Regulation and Regulation Review, 76 FR 23821 (January 18, 2011), direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). This proposed rule is not “significant” under section 3(f) of Executive Order 12866 because it merely modifies the window of opportunity in which customers may request refunds of reproduction fees. The Office of Management and Budget (OMB) has reviewed this regulation.

**Review Under the Regulatory Flexibility Act (5 U.S.C. 601, et seq.)**

This review requires an agency to prepare an initial regulatory flexibility analysis and publish it when the agency publishes the proposed rule. This requirement does not apply if the agency certifies that the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities (5 U.S.C. 603). NARA certifies, after review and analysis, that this proposed rule will not have a significant adverse economic impact on small entities because it merely modifies the window of opportunity in which customers may request refunds of reproduction fees.

**Review Under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.)**

This proposed rule does not contain any information collection requirements subject to the Paperwork Reduction Act.

**Review Under Executive Order 13132, Federalism, 64 FR 43255 (August 4, 1999)**

Review under Executive Order 13132 requires that agencies review regulations for federalism effects on the institutional interest of states and local governments, and, if the effects are sufficiently substantial, prepare a Federal assessment to assist senior policy makers. This proposed rule will not have any direct effects on State and local governments within the meaning of the Executive Order. Therefore, the regulation requires no federalism assessment.

**List of Subjects in 36 CFR Part 1258**

Archives and records.

For the reasons stated in the preamble, NARA amends 36 CFR part 1258 as follows:

**PART 1258—FEES**

- 1. The authority citation for part 1258 remains as follows:

**Authority:** 44 U.S.C. 2116(c) and 2307.

- 2. Revise § 1258.16 to read as follows:

**§ 1258.16 What is NARA's refund policy?**

Due to various factors, it is occasionally difficult for NARA to make a legible reproduction. NARA will notify customers and ask for approval to proceed if we anticipate a reproduction of questionable legibility. As a result, NARA does not provide refunds except in special cases. If a customer requests a refund, we review the order to determine if we properly notified the customer of the questionable nature of the original and if the product is a true representation of the original. If the product is a true representation of the original, we will not issue a refund. If you feel we processed your order incorrectly or it contains errors, please contact us within 120 days of your order date to have your issue verified. Once we verify the issue, we will correct the error and resend the documents. If we cannot correct the error, you will receive a refund.

Dated: March 20, 2016.

**BILLING CODE 7515-01-P**

**ENVIRONMENTAL PROTECTION AGENCY**

**40 CFR Part 180**

[EPA-HQ-OPP-2015-0019; FRL-9944-12]

**Salicylaldehyde; Exemption From the Requirement of a Tolerance**

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Final rule.

**SUMMARY:** This regulation establishes an exemption from the requirement of a tolerance for residues of salicylaldehyde (2-hydroxybenzaldehyde, CAS Reg. No. 90-02-8) when used as an inert ingredient (penetration aid) in pesticide formulations applied to growing crops and raw agricultural commodities under 40 CFR 180.910 at a concentration not to exceed 14% by weight of the pesticide formulation. Ag-Chem Consulting LLC, on behalf of Omex Agrifluids submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting establishment of an exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of salicylaldehyde.

**DATES:** This regulation is effective March 30, 2016. Objections and requests for hearings must be received on or before May 31, 2016, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

**ADDRESSES:** The docket for this action, identified by docket identification (ID) number EPA-HQ-OPP-2015-0019, is available at <http://www.regulations.gov> or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460-0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPP Docket is (703) 305-5805. Please review the visitor instructions and additional information about the docket available at <http://www.epa.gov/dockets>.

**FOR FURTHER INFORMATION CONTACT:** Susan Lewis, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; main telephone

number: (703) 305-7090; email address: [RDfRNtices@epa.gov](mailto:RDfRNtices@epa.gov).

**SUPPLEMENTARY INFORMATION:**

**I. General Information**

*A. Does this action apply to me?*

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

*B. How can I get electronic access to other related information?*

You may access a frequently updated electronic version of 40 CFR part 180 through the Government Printing Office's e-CFR site at [http://www.ecfr.gov/cgi-bin/text-idx?&c=ecfr&tpl=/ecfrbrowse/Title40/40tab\\_02.tpl](http://www.ecfr.gov/cgi-bin/text-idx?&c=ecfr&tpl=/ecfrbrowse/Title40/40tab_02.tpl).

*C. How can I file an objection or hearing request?*

Under FFDCA section 408(g), 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA-HQ-OPP-2015-0019 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing, and must be received by the Hearing Clerk on or before May 31, 2016. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA-HQ-OPP-

2015–0019, by one of the following methods:

- *Federal eRulemaking Portal*: <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.

- *Mail*: OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.

- *Hand Delivery*: To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at <http://www.epa.gov/dockets/contacts.html>. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

## II. Petition for Exemption

In the **Federal Register** of April 6, 2015 (80 FR 18327) (FRL–9924–00), EPA issued a document pursuant to FFDCA section 408, 21 U.S.C. 346a, announcing the filing of a pesticide petition (PP IN–10777) by Ag-Chem Consulting LLC, 12208 Quinque Lane, Clifton, VA 20124 on behalf of Omex Agrifluids, 24730 Avenue 13, Madera, CA 93637. The petition requested that 40 CFR 180.910 be amended by establishing an exemption from the requirement of a tolerance for residues of salicylaldehyde (CAS Reg. No. 90–02–8) when used as an inert ingredient (penetration aid) in pesticide formulations applied to growing crops or to raw agricultural commodities after harvest at a concentration not to exceed 14% by weight of the pesticide formulation. That document referenced a summary of the petition prepared by Ag-Chem Consulting LLC, on behalf of Omex Agrifluids, the petitioner, which is available in the docket, <http://www.regulations.gov>. There were no comments received in response to the notice of filing.

## III. Inert Ingredient Definition

Inert ingredients are all ingredients that are not active ingredients as defined in 40 CFR 153.125 and include, but are not limited to, the following types of ingredients (except when they have a pesticidal efficacy of their own): Solvents such as alcohols and hydrocarbons; surfactants such as polyoxyethylene polymers and fatty acids; carriers such as clay and diatomaceous earth; thickeners such as carrageenan and modified cellulose; wetting, spreading, and dispersing agents; propellants in aerosol

dispensers; microencapsulating agents; and emulsifiers. The term “inert” is not intended to imply nontoxicity; the ingredient may or may not be chemically active. Generally, EPA has exempted inert ingredients from the requirement of a tolerance based on the low toxicity of the individual inert ingredients.

## IV. Aggregate Risk Assessment and Determination of Safety

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the exemption is “safe.” Section 408(c)(2)(A)(ii) of FFDCA defines “safe” to mean that “there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.” This includes exposure through drinking water and in residential settings, but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue and to “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . . .”

EPA establishes exemptions from the requirement of a tolerance only in those cases where it can be clearly demonstrated that the risks from aggregate exposure to pesticide chemical residues under reasonably foreseeable circumstances will pose no appreciable risks to human health. In order to determine the risks from aggregate exposure to pesticide inert ingredients, the Agency considers the toxicity of the inert in conjunction with possible exposure to residues of the inert ingredient through food, drinking water, and through other exposures that occur as a result of pesticide use in residential settings. If EPA is able to determine that a finite tolerance is not necessary to ensure that there is a reasonable certainty that no harm will result from aggregate exposure to the inert ingredient, an exemption from the requirement of a tolerance may be established.

Consistent with FFDCA section 408(c)(2)(A), and the factors specified in FFDCA section 408(c)(2)(B), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on

aggregate exposure for salicylaldehyde including exposure resulting from the exemption established by this action. EPA’s assessment of exposures and risks associated with salicylaldehyde follows.

### A. Toxicological Profile

EPA has evaluated the available toxicity data and considered their validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. Specific information on the studies received and the nature of the adverse effects caused by salicylaldehyde as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies are discussed in this unit.

The acute oral toxicity of salicylaldehyde was examined in male rats and mice. The general oral lethal amount of salicylaldehyde is estimated to be 500 mg/kg in mice. The dermal LD<sub>50</sub> for salicylaldehyde was determined to be greater than 23,000 mg/kg. Dermal irritation studies found salicylaldehyde to be irritating, with eschar formation and scarring 14 days after administration.

No adverse effects attributable to a single exposure to salicylaldehyde were seen in the toxicity databases. In a combined repeated dose toxicity study with the reproduction/developmental toxicity screening test, toxicity was not observed in parental animals nor in reproductive parameters at doses up to 160 mg/kg/day, the highest dose tested. Fetal susceptibility was observed. Reduced bodyweight and offspring mortality after 4 days of nursing were observed at 160 mg/kg/day. The NOAEL was 40 mg/kg/day. There was no evidence of neurotoxicity or immunotoxicity in the combined repeated dose toxicity with the reproduction/developmental toxicity screening test.

Salicylaldehyde was negative for mutagenicity in the Ames test and gave a positive response in the chromosome aberrations test using Chinese hamster cells (in vitro). An in vivo micronucleus assay was negative. Since the in vivo study is more reliable than the in vitro assays, the weight of evidence suggests that salicylaldehyde is unlikely to be mutagenic.

There are no cancer studies available for salicylaldehyde. According to a DEREK (Nexus) (structural activity relationship) report, there are no structural alerts for carcinogenicity.

Based on predicted rapid metabolism and excretion, lack of specific target organ toxicity in the repeat dose toxicity study, lack of mutagenicity concerns, and lack of any structural alerts for carcinogenicity, salicylaldehyde is not expected to be carcinogenic to humans at anticipated dietary concentrations.

The metabolism of salicylaldehyde in rabbits demonstrated that 75% of single dose of salicylaldehyde was excreted in the urine as glucuronic acid and sulfate conjugates of vanillic acid.

#### B. Toxicological Points of Departure/ Levels of Concern

Once a pesticide's toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each toxicological study to determine the dose at which no adverse effects are observed (the NOAEL) and the lowest dose at which adverse effects of concern are identified (the LOAEL). Uncertainty/safety factors are used in conjunction with the POD to calculate a safe exposure level—generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD)—and a safe margin of exposure (MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see <http://www.epa.gov/pesticides/factsheets/riskassess.htm>.

No acute toxicological endpoint of concern has been identified for salicylaldehyde. On the basis of the repeated dose and reproductive/developmental toxicity screening study, a no observed adverse effect level (NOAEL) for offspring toxicity for salicylaldehyde was 40 mg/kg bw/day based on reduced body weight and increased mortality in pups at 160 mg/kg/day. The standard 10X factors for intra- and inter-species were applied in establishing the chronic reference dose (cRfD) of 0.4 mg/kg/day (40 mg/kg/day/100). Based on the reduced FQPA Safety Factor for salicylaldehyde of 1X, the chronic population adjusted dose (cPAD) is equivalent to the chronic

reference dose (cRfD) at 0.4 mg/kg/day. The chronic oral NOAEL is also applicable to the short- and intermediate-term dermal and inhalation exposure routes.

#### C. Exposure Assessment

1. *Dietary exposure from food and feed uses.* In evaluating dietary exposure to salicylaldehyde, EPA considered exposure under the proposed exemption from the requirement of a tolerance. EPA assessed dietary exposures from salicylaldehyde in food as follows:

Acute dietary assessments take into account exposure estimates from dietary consumption of food and drinking water. Chronic dietary assessments take into account dietary food and drinking water. The Agency assessed the dietary exposures to salicylaldehyde as an inert ingredient used in pesticide formulations applied to growing crops and livestock.

No adverse effects attributable to a single exposure to salicylaldehyde were seen in the toxicity databases; therefore, an acute dietary risk assessment is not appropriate.

In conducting the chronic dietary exposure assessment to salicylaldehyde an inert ingredient used in pesticide formulations applied to growing crops, raw agricultural commodities, and livestock, the Dietary Exposure Evaluation Model/Food Commodity Intake Database (DEEM-FCID) TM, Version 3.16 was used. EPA used food consumption information from the U.S. Department of Agriculture's National Health and Nutrition Examination Survey, What We Eat in America, (USDA/NHANES/WWEIA). This dietary survey was conducted from 2003 to 2008. As to residue levels in food, no residue data were submitted for salicylaldehyde. In the absence of specific residue data, EPA has developed an approach that uses surrogate information to derive upper bound exposure estimates for the subject inert ingredient. Upper bound exposure estimates are based on the highest tolerance for a given commodity from a list of high-use insecticides, herbicides, and fungicides. A complete description of the general approach taken to assess inert ingredient risks in the absence of residue data is contained in the memorandum entitled "Alkyl Amines Polyalkoxylates (Cluster 4): Acute and Chronic Aggregate (Food and Drinking Water) Dietary Exposure and Risk Assessments for the Inerts." (D361707, S. Piper, 2/25/09) and can be found at <http://www.regulations.gov> in docket ID number EPA-HQ-OPP-2008-0738.

2. *Dietary exposure from drinking water.* For the purpose of the screening level dietary risk assessment to support this request for an exemption from the requirement of a tolerance for salicylaldehyde, a conservative drinking water concentration value of 100 ppb based on screening level modeling was used to assess the contribution to drinking water for the chronic dietary risk assessments for parent compound. These values were directly entered into the dietary exposure model.

3. *From non-dietary exposure.* The term "residential exposure" is used in this document to refer to non-occupational, non-dietary exposure (e.g., textiles (clothing and diapers), carpets, swimming pools, and hard surface disinfection on walls, floors, tables).

There are no current or proposed residential uses for salicylaldehyde; however, it is possible that salicylaldehyde may be used as an inert ingredient in pesticide products. A highly conservative residential exposure assessment was performed in which it was assumed that all residential use pesticide products would contain salicylaldehyde as an inert ingredient. A complete description of the approach used to assess possible residential exposures from salicylaldehyde can be found in <http://www.regulations.gov> in document "Salicylaldehyde; Human Health Risk Assessment and Ecological Effects Assessment to Support Proposed Exemption from the Requirement of a Tolerance When Used as an Inert Ingredient in Pesticide Formulations," pp. 15 in docket ID number EPA-HQ-OPP-2015-0019.

4. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCIA requires that, when considering whether to establish, modify, or revoke a tolerance or exemption from a tolerance, the Agency consider "available information" concerning the cumulative effects of a particular pesticide's residues and "other substances that have a common mechanism of toxicity."

EPA has not found salicylaldehyde to share a common mechanism of toxicity with any other substances, and salicylaldehyde does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has assumed that salicylaldehyde does not have a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA's Web site at

<http://www.epa.gov/pesticides/cumulative>.

#### D. Safety Factor for Infants and Children

1. *In general.* Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the FQPA Safety Factor (SF). In applying this provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

2. *Prenatal and postnatal sensitivity.* There is evidence of increased susceptibility of infants and children due to exposure to salicylaldehyde. In a combined repeated dose toxicity study with the reproduction/developmental toxicity screening test, offspring toxicity was manifested as decreased body weights and increased mortality in the absence of maternal toxicity at doses up to 160 mg/kg/day. The offspring toxicity NOAEL was 40 mg/kg/day. However, there are no low concerns for this susceptibility since there is a clear, well defined offspring toxicity NOAEL and this study is being used to establish the cRfD.

3. *Conclusion.* EPA has determined that reliable data show the safety of infants and children would be adequately protected if the FQPA SF were reduced to 1X. That decision is based on the following findings:

i. The toxicity database for salicylaldehyde includes the battery of acute studies, mutagenicity studies and a combined repeated dose toxicity study with the reproduction/developmental toxicity screening test.

ii. There is no evidence of neurotoxicity in the available studies, therefore there is no need for a developmental neurotoxicity study.

iii. There is no evidence of immunotoxicity in the available database, therefore there is no need for an immunotoxicity study.

iv. There are low to no concerns for the increased susceptibility seen in the combined repeated dose toxicity study with the reproduction/developmental toxicity screening test.

v. There are no residual uncertainties identified in the exposure databases. The dietary food exposure assessments were performed based on 14% by

weight in the formulation (the maximum allowable use rate) and tolerance-level residues.

EPA made conservative (protective) assumptions in the ground and surface water modeling used to assess exposure to salicylaldehyde in drinking water. EPA used similarly conservative assumptions to assess post application exposure of children as well as incidental oral exposure of toddlers. These assessments will not underestimate the exposure and risks posed by salicylaldehyde.

#### E. Aggregate Risks and Determination of Safety

1. *Acute risk.* An acute aggregate risk assessment takes into account acute exposure estimates from dietary consumption of food and drinking water. No adverse effect resulting from a single oral exposure was identified and no acute dietary endpoint was selected. Therefore, salicylaldehyde is not expected to pose an acute risk.

2. *Chronic risk.* Using the exposure assumptions described in this unit for chronic exposure, EPA has concluded that chronic exposure to salicylaldehyde from food and water will utilize 13% of the cPAD for the U.S. population and 49% of the cPAD for children 1–2 years old, the population group receiving the greatest exposure.

3. *Short- and intermediate-term risk.* Short- and intermediate-term aggregate exposure takes into account short-term residential exposure plus chronic exposure to food and water (considered to be a background exposure level).

Salicylaldehyde may be used as inert ingredients in pesticide products that could result in short-term residential exposure and the Agency has determined that it is appropriate to aggregate chronic exposure through food and water with short-term residential exposures to salicylaldehyde. Using the exposure assumptions described in this unit, EPA has concluded the combined short- and intermediate-term food, water, and residential exposures result in short- and intermediate-term aggregate MOEs of 430 for adults and 170 for children (1–2 years old). Because EPA's level of concern for salicylaldehyde is a MOE of 100 or below, these MOEs are not of concern.

4. *Aggregate cancer risk for U.S. population.* Based on a DEREK structural alert analysis and the lack of mutagenicity, salicylaldehyde not expected to pose a cancer risk to humans.

5. *Determination of safety section.* Based on these risk assessments, EPA concludes that there is reasonable certainty that no harm will result to the

general population, or to infants and children from aggregate exposure to salicylaldehyde residues.

#### V. Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation. EPA is establishing a limitation on the amount of salicylaldehyde that may be used in pesticide formulations applied to growing crops. That limitation will be enforced through the pesticide registration process under the Federal Insecticide, Fungicide, and Rodenticide Act ("FIFRA"), 7 U.S.C. 136 *et seq.* EPA will not register any pesticide formulation for use on growing crops for sale or distribution that exceed 14% of salicylaldehyde.

#### VI. Conclusions

Therefore, an exemption from the requirement of a tolerance is established under 40 CFR 180.910 for residues salicylaldehyde (CAS Reg. No. 90–02–8) when used as an inert ingredient (penetration aid) in pesticide formulations applied to growing crops and raw agricultural commodities after harvest at a concentration not to exceed crops at no more than 14% by weight of the pesticide formulation.

#### VII. Statutory and Executive Order Reviews

This action establishes an exemption from the requirement of a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled "Regulatory Planning and Review" (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use" (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled "Protection of Children from Environmental Health Risks and Safety Risks" (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled "Federal Actions to Address Environmental Justice in Minority Populations and Low-Income

Populations” (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the exemption in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or tribal governments, on the relationship between the national government and the States or tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled

“Federalism” (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled “Consultation and Coordination with Indian Tribal Governments” (65 FR 67249, November 9, 2000) do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

**VIII. Congressional Review Act**

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

**List of Subjects in 40 CFR Part 180**

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

**BILLING CODE 6560–50–P**

**DEPARTMENT OF HOMELAND SECURITY**

**Federal Emergency Management Agency**

**44 CFR Part 64**

[Docket ID FEMA–2016–0002; Internal Agency Docket No. FEMA–8429]

**Suspension of Community Eligibility**

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Final rule.

**SUMMARY:** This rule identifies communities where the sale of flood insurance has been authorized under the National Flood Insurance Program (NFIP) that are scheduled for suspension on the effective dates listed within this rule because of noncompliance with the floodplain management requirements of the

program. If the Federal Emergency Management Agency (FEMA) receives documentation that the community has adopted the required floodplain management measures prior to the effective suspension date given in this rule, the suspension will not occur and a notice of this will be provided by publication in the **Federal Register** on a subsequent date. Also, information identifying the current participation status of a community can be obtained from FEMA’s Community Status Book (CSB). The CSB is available at <http://www.fema.gov/fema/csb.shtm>.

**DATES:** The effective date of each community’s scheduled suspension is the third date (“Susp.”) listed in the third column of the following tables.

**FOR FURTHER INFORMATION CONTACT:** If you want to determine whether a particular community was suspended on the suspension date or for further information, contact Patricia Suber, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646–4149.

**SUPPLEMENTARY INFORMATION:** The NFIP enables property owners to purchase Federal flood insurance that is not otherwise generally available from private insurers. In return, communities agree to adopt and administer local floodplain management measures aimed at protecting lives and new construction from future flooding. Section 1315 of the National Flood Insurance Act of 1968, as amended, 42 U.S.C. 4022, prohibits the sale of NFIP flood insurance unless an appropriate public body adopts adequate floodplain management measures with effective enforcement measures. The communities listed in this document no longer meet that statutory requirement for compliance with program regulations, 44 CFR part 59. Accordingly, the communities will be suspended on the effective date in the third column. As of that date, flood insurance will no longer be available in the community. We recognize that some of these communities may adopt and submit the required documentation of legally enforceable floodplain

management measures after this rule is published but prior to the actual suspension date. These communities will not be suspended and will continue to be eligible for the sale of NFIP flood insurance. A notice withdrawing the suspension of such communities will be published in the **Federal Register**.

In addition, FEMA publishes a Flood Insurance Rate Map (FIRM) that identifies the Special Flood Hazard Areas (SFHAs) in these communities. The date of the FIRM, if one has been published, is indicated in the fourth column of the table. No direct Federal financial assistance (except assistance pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act not in connection with a flood) may be provided for construction or acquisition of buildings in identified SFHAs for communities not participating in the NFIP and identified for more than a year on FEMA's initial FIRM for the community as having flood-prone areas (section 202(a) of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4106(a), as amended). This prohibition against certain types of Federal assistance becomes effective for the communities listed on the date shown in the last column. The Administrator finds that notice and public comment procedures under 5 U.S.C. 553(b), are impracticable and unnecessary because communities listed

in this final rule have been adequately notified.

Each community receives 6-month, 90-day, and 30-day notification letters addressed to the Chief Executive Officer stating that the community will be suspended unless the required floodplain management measures are met prior to the effective suspension date. Since these notifications were made, this final rule may take effect within less than 30 days.

**National Environmental Policy Act.** This rule is categorically excluded from the requirements of 44 CFR part 10, Environmental Considerations. No environmental impact assessment has been prepared.

**Regulatory Flexibility Act.** The Administrator has determined that this rule is exempt from the requirements of the Regulatory Flexibility Act because the National Flood Insurance Act of 1968, as amended, Section 1315, 42 U.S.C. 4022, prohibits flood insurance coverage unless an appropriate public body adopts adequate floodplain management measures with effective enforcement measures. The communities listed no longer comply with the statutory requirements, and after the effective date, flood insurance will no longer be available in the communities unless remedial action takes place.

**Regulatory Classification.** This final rule is not a significant regulatory action

under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

**Executive Order 13132, Federalism.** This rule involves no policies that have federalism implications under Executive Order 13132.

**Executive Order 12988, Civil Justice Reform.** This rule meets the applicable standards of Executive Order 12988.

**Paperwork Reduction Act.** This rule does not involve any collection of information for purposes of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

**List of Subjects in 44 CFR Part 64**

Flood insurance, Floodplains.

Accordingly, 44 CFR part 64 is amended as follows:

**PART 64—[AMENDED]**

- 1. The authority citation for part 64 continues to read as follows:

**Authority:** 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp.; p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp.; p. 376.

**§ 64.6 [Amended]**

- 2. The tables published under the authority of § 64.6 are amended as follows:

**FEDERAL COMMUNICATIONS COMMISSION**

**47 CFR Part 51**

[GN Docket No. 13-5, RM-11358; WC Docket No. 05-25, RM-10593; FCC 15-97]

**Technology Transitions, Policies and Rules Governing Retirement of Copper Loops by Incumbent Local Exchange Carriers and Special Access for Price Cap Local Exchange Carriers; Correction**

**AGENCY:** Federal Communications Commission.

**ACTION:** Final rule, announcement of effective date; correction.

**SUMMARY:** The Federal Communications Commission published a document in the **Federal Register** of March 24, 2016 announcing that the Office of Management and Budget (OMB) has approved, for a period of three years, the information collection requirements. This document corrects the **DATES** section.

**DATES:** The amendments to 47 CFR 51.325(a)(4) and (e), 51.332, and 51.333(b) and (c) published at 80 FR 63322, October 19, 2015, are effective on March 24, 2016. The removal of 47 CFR 51.331(c) and 51.333(f) is effective on March 30, 2016.

**FOR FURTHER INFORMATION CONTACT:**

Michele Levy Berlove, Attorney Advisor, Wireline Competition Bureau, at 202-418-1477, or by email at [michele.berlove@fcc.gov](mailto:michele.berlove@fcc.gov).

**SUPPLEMENTARY INFORMATION:** The Federal Communications Commission published a document in the **Federal Register** of March 24, 2016 (81 FR 15647) announcing that the Office of Management and Budget (OMB) has approved, for a period of three years, the information collection associated with the Commission's network change disclosure rules pertaining to copper retirement notices. That document omitted the removal of 47 CFR 51.331(c) and 51.333(f) as effective rules.

In FR Doc. 2016-06683, published on March 24, 2016 on pages 15647-48, in the third and first columns respectively of those pages, correct the **DATES** caption to read:

**DATES:** The amendments to 47 CFR 51.325(a)(4) and (e), 51.332, and 51.333(b) and (c) published at 80 FR 63322, October 19, 2015, are effective on March 24, 2016. The removal of 47 CFR 51.331(c) and 51.333(f) is effective on March 30, 2016.

Federal Communications Commission.

**DEPARTMENT OF COMMERCE**

**National Oceanic and Atmospheric Administration**

**50 CFR Part 679**

[Docket No. 150818742-6210-02]

**RIN 0648-XE543**

**Fisheries of the Exclusive Economic Zone Off Alaska; Pollock in Statistical Area 610 in the Gulf of Alaska**

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Temporary rule; closure.

**SUMMARY:** NMFS is prohibiting directed fishing for pollock in Statistical Area 610 in the Gulf of Alaska (GOA). This action is necessary to prevent exceeding the B season allowance of the 2016 total allowable catch of pollock for Statistical Area 610 in the GOA.

**DATES:** Effective 1200 hours, Alaska local time (A.l.t.), March 28, 2016, through 1200 hours, A.l.t., May 31, 2016.

**FOR FURTHER INFORMATION CONTACT:** Josh Keaton, 907-586-7228.

**SUPPLEMENTARY INFORMATION:** NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The B season allowance of the 2016 total allowable catch (TAC) of pollock in Statistical Area 610 of the GOA is 4,591 metric tons (mt) as established by the final 2016 and 2017 harvest specifications for groundfish of the GOA (81 FR 14740, March 18, 2016) and inseason adjustment (81 FR 15650, March 24, 2016).

In accordance with § 679.20(d)(1)(i), the Regional Administrator has determined that the B season allowance of the 2016 TAC of pollock in Statistical Area 610 of the GOA will soon be reached. Therefore, the Regional Administrator is establishing a directed fishing allowance of 4,391 mt and is setting aside the remaining 200 mt as bycatch to support other anticipated groundfish fisheries. In accordance with § 679.20(d)(1)(iii), the Regional Administrator finds that this directed fishing allowance has been reached. Consequently, NMFS is prohibiting

directed fishing for pollock in Statistical Area 610 of the GOA.

After the effective date of this closure the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

#### **Classification**

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the closure of directed fishing for

pollock in Statistical Area 610 of the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of March 24, 2016.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

**Authority:** 16 U.S.C. 1801 *et seq.*

Dated: March 25, 2016.

**Emily H. Menashes,**  
*Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.*

# Proposed Rules

Federal Register

Vol. 81, No. 61

Wednesday, March 30, 2016

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

## DEPARTMENT OF TRANSPORTATION

### Federal Aviation Administration

#### 14 CFR Part 73

[Docket No. FAA-2016-4282; Airspace Docket No. 16-AWP-3]

RIN 2120-AA66

#### Proposed Establishment of Temporary Restricted Areas R-2509E, R-2509W, and R-2509N; Twentynine Palms, CA

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of proposed rulemaking (NPRM).

**SUMMARY:** This action proposes to establish temporary restricted areas R-2509E, R-2509W, and R-2509N, Twentynine Palms, CA, to support a Marine Expeditionary Brigade level Large Scale Exercise (LSE) planned for existing and newly acquired training lands at Marine Corps Air Ground Combat Center (MCAGCC), Twentynine Palms from August 1 to August 18, 2016.

**DATES:** Comments must be received on or before May 16, 2016.

**ADDRESSES:** Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, M-30, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12-140, Washington, DC 20590-0001; telephone: (202) 366-9826. You must identify FAA Docket No. FAA-2016-4282 and Airspace Docket No. 16-AWP-3, at the beginning of your comments. You may also submit comments through the Internet at [www.regulations.gov](http://www.regulations.gov). You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays. The Docket Office (telephone 1-800-647-5527), is on the ground floor of the building at the above address.

Comments on environmental and land use aspects to should be directed to: Mr.

Chris Proudfoot, Proposed 29 Palms Land Acquisition/Airspace Establishment Project MAGTFTC, MCAGCC, Bldg. 1554, Box 788104 Twentynine Palms, CA 92278-8104; phone: (760) 830-7926.

**FOR FURTHER INFORMATION CONTACT:** Jason Stahl, Airspace Policy Group, Office of Airspace Services, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: (202) 267-8783.

#### SUPPLEMENTARY INFORMATION:

##### Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would establish the temporary restricted area airspace at Twentynine Palms, CA, to enhance aviation safety and accommodate essential United States Marine Corps training requirements.

##### Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers (FAA Docket No. FAA-2016-4282 and Airspace Docket No. 16-AWP-3) and be submitted in triplicate to the Docket Management System (see **ADDRESSES** section for address and phone number). You may also submit comments through the Internet at [www.regulations.gov](http://www.regulations.gov).

Commenters wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to FAA Docket No. FAA-2016-4282 and Airspace Docket No. 16-AWP-3." The postcard will be date/time stamped and returned to the commenter.

All communications received on or before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this action may be changed in light of comments received. All comments submitted will be available for examination in the public docket both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

##### Availability of NPRMs

An electronic copy of this document may be downloaded through the Internet at [www.regulations.gov](http://www.regulations.gov).

You may review the public docket containing the proposal, any comments received and any final disposition in person at the Dockets Office (see **ADDRESSES** section for address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays. An informal docket may also be examined during normal business hours at the office of the Operations Support Group, Western Service Center, Federal Aviation Administration, 1601 Lind Ave. SW., Renton, WA 98057.

Persons interested in being placed on a mailing list for future NPRMs should contact the FAA's Office of Rulemaking, (202) 267-9677, for a copy of Advisory Circular No. 11-2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

##### Background

Marine Corps combat readiness depends on the continued availability of ranges and training areas that provide realistic, mission-oriented training and exercises. Marine Corps training proceeds on a continuum, from entry-level training of individual Marines in basic military skills to large-scale exercises involving a Marine Air Ground Task Force (MAGTF). Currently, the Marine Corps does not have

sufficient range space to conduct a Marine Expeditionary Brigade (MEB) level live fire exercise. Through careful analysis and a series of studies, MCAGCC Twentynine Palms was identified as the only Marine Corps installation capable of expansion to the dimensions required to support this level of exercise. Acquisition of new lands without the requisite special use airspace (SUA) would not allow for the training events required to successfully execute this essential exercise. Consequently, a new restricted area, military operations areas (MOA) and air traffic control-assigned airspace are being developed as a critical element of the required expansion to support large scale MEB level exercises and those supporting building block training events. A prior proposal for permanent SUA received a non-concurrence from LA Center and will not be available to support the first Large Scale Exercise on new Twentynine Palms lands planned for August 1 to August 18, 2016. The establishment of temporary restricted area R-2509E, W, and N, will substantially enhance both the capability and capacity of the MCAGCC Twentynine Palms Range and Training Areas (RTA) to conduct required training for a MEB large scale exercise.

### The Proposal

This proposal would establish new temporary restricted areas R-2509E, R-2509W, and R-2509N for the period from August 1 to August 18, 2016, to accommodate live fire from pistols, rifles, machine guns, anti-tank weapons, mortars, artillery, Unmanned Aircraft Systems, fixed wing, and rotary wing training activities including close air support and live ordnance delivery. This proposed temporary restricted area is required to effectively deconflict Department of Defense and civilian air traffic from hazards associated with live fire training.

Maximum altitudes within the R-2509E would be Flight Level (FL) 400, however, impacts mitigation were coordinated with Los Angeles Air Route Traffic Control Center and will be implemented to include limiting higher airspace activations above FL220 to only 2 hours for 2 days of the exercise. R-2509W would have a ceiling of 8,000 feet MSL and R-2509N would have a ceiling of 16,000 feet MSL. Supersonic flight will not be conducted as part of the above aviation training activities.

The times of use would be by NOTAM, and activations of R-2509E above FL220 would have the NOTAM issued 48 hours in advance. Expected usage would be 12 hours per day for 10

days up to 16,000 feet and 16 hours per day for 6 days up to FL220.

The lateral boundaries of the proposed areas would be as follows:

Temporary R-2509E—Beginning at lat. 34°40'30" N., long. 116°29'43" W.; to lat. 34°39'24" N., long. 116°29'19" W.; to lat. 34°36'00" N., long. 116°28'03" W.; to lat. 34°31'30" N., long. 116°26'48" W.; to lat. 34°30'00" N., long. 116°26'23" W.; to lat. 34°21'35" N., long. 116°21'38" W.; to lat. 34°19'30" N., long. 116°20'29" W.; to lat. 34°17'38" N., long. 116°19'19" W.; to lat. 34°22'25" N., long. 116°31'10" W.; to lat. 34°34'17" N., long. 116°35'52" W.; to the point of beginning.

Temporary R-2509W—Beginning at lat. 34°35'03" N., long. 116°36'10" W.; to lat. 34°34'17" N., long. 116°35'52" W.; to lat. 34°22'25" N., long. 116°31'10" W.; to lat. 34°26'57" N., long. 116°42'51" W.; to lat. 34°29'44" N., long. 116°42'51" W.; to the point of beginning.

Temporary R-2509N—Beginning at lat. 34°35'03" N., long. 116°36'10" W.; to lat. 34°40'30" N., long. 116°29'43" W.; to lat. 34°34'17" N., long. 116°35'52" W.; to the point of beginning.

These temporary restricted areas would automatically expire on August 18, 2016.

### Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

### Environmental Review

This proposal will be subjected to an environmental analysis in accordance with FAA Order 1050.1E, "Environmental Impacts: Policies and Procedures," prior to any FAA final regulatory action.

### List of Subjects in 14 CFR Part 73

Airspace, Prohibited areas, Restricted areas.

### The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 73 as follows:

### PART 73—SPECIAL USE AIRSPACE

■ 1. The authority citation for part 73 continues to read as follows:

**Authority:** 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959-1963 Comp., p. 389.

### § 73.25 California (Amended)

■ 2. § 73.25 is amended as follows:

\* \* \* \* \*

#### R-2509E Twentynine Palms, CA [New]

*Boundaries.* Beginning at lat. 34°40'30" N; long. 116°29'43" W; to lat. 34°39'24" N; long. 116°29'19" W; to lat. 34°36'00" N; long. 116°28'03" W; to lat. 34°31'30" N; long. 116°26'48" W; to lat. 34°30'00" N; long. 116°26'23" W; to lat. 34°21'35" N; long. 116°21'38" W; to lat. 34°19'30" N; long. 116°20'29" W; to lat. 34°17'38" N; long. 116°19'19" W; to lat. 34°22'25" N; long. 116°31'10" W; to lat. 34°34'17" N; long. 116°35'52" W; to the point of beginning.

*Designated altitudes.* Surface to FL 400.

*Time of designation.* Intermittent by NOTAM during the period from August 1 to August 18, 2016.

*Controlling agency.* FAA, Los Angeles Air Route Traffic Control Center (ARTCC).

*Using agency.* Commanding General, Marine Corps Air Ground Combat Center (MCAGCC), Twentynine Palms, CA.

#### R-2509W Twentynine Palms, CA [New]

*Boundaries.* Beginning at lat. 34°35'03" N., long. 116°36'10" W.; to lat. 34°34'17" N., long. 116°35'52" W.; to lat. 34°22'25" N., long. 116°31'10" W.; to lat. 34°26'57" N., long. 116°42'51" W.; to lat. 34°29'44" N., long. 116°42'51" W.; to the point of beginning.

*Designated altitudes.* Surface to 8,000 feet MSL.

*Time of designation.* Intermittent by NOTAM during the period from August 1 to August 18, 2016.

*Controlling agency.* FAA, Los Angeles Air Route Traffic Control Center (ARTCC).

*Using agency.* Commanding General, Marine Corps Air Ground Combat Center (MCAGCC), Twentynine Palms, CA.

#### R-2509N Twentynine Palms, CA [New]

*Boundaries.* Beginning at lat. 34°35'03" N., long. 116°36'10" W.; to lat. 34°40'30" N., long. 116°29'43" W.; to lat. 34°34'17" N., long. 116°35'52" W.; to the point of beginning.

*Designated altitudes.* Surface to 16,000 feet MSL.

*Time of designation.* Intermittent by NOTAM during the period from August 1 to August 18, 2016.

*Controlling agency.* FAA, Los Angeles Air Route Traffic Control Center (ARTCC).

*Using agency.* Commanding General, Marine Corps Air Ground Combat Center (MCAGCC), Twentynine Palms, CA.

Issued in Washington, DC, on March 24, 2016.

Gemechu Gelgelu,

Acting Manager, Airspace Policy Group.

## DEPARTMENT OF DEFENSE

### Department of the Air Force

#### 32 CFR Part 842

[Docket ID: USAF-2015-0003]

RIN 0701-AA79

#### Administrative Claims

**AGENCY:** Department of the Air Force, DoD.

**ACTION:** Proposed rule.

**SUMMARY:** This rule contains amendments for policy changes and clarification and deletions for the Air Force guidance on Administrative Claims and Personnel and Carrier Recovery Claims. The rule relates to the Air Force processes for claims filed for and against the Air Force as well as Air Force processes for filing personnel and carrier recovery claims.

**DATES:** Comments must be received by May 31, 2016.

**ADDRESSES:** You may submit comments, identified by docket number and/or Regulatory Information Number (RIN) and title, by any of the following methods:

- *Federal Rulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Mail:* Department of Defense, Office of the Deputy Chief Management Officer, Directorate of Oversight and Compliance, Regulatory and Audit Matters Office, 9010 Defense Pentagon, Washington, DC 20301-9010.

*Instructions:* All submissions received must include the agency name and docket number or RIN for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

**FOR FURTHER INFORMATION CONTACT:** Mr. Daniel Lemieux (AFLOA/JACC), 1500 West Perimeter Rd, Ste 1700, Joint Base Andrews, MD 20762, (240) 612-4646, [daniel.g.lemieux.civ@mail.mil](mailto:daniel.g.lemieux.civ@mail.mil).

#### SUPPLEMENTARY INFORMATION:

## Executive Summary

### I. Purpose of This Regulatory Action

The purpose of this rule is to provide the public with information necessary to file a claim against the United States Air Force for money damages and to notify the public of the procedures used to collect money from the public for damages to property under the control of the United States Air Force. Additionally, it is to provide the public with information about proposed changes and deletions concerning the settlement and payment of claims under the Military Personnel and Civilian Employee's Claims Act for incident to service loss and damage to personal property.

### II. Summary of the Major Provisions of This Regulatory Action

This part describes the process and procedures by which claims against the Air Force will be addressed, including who are proper claimants, how, where and when to file a claim, what claims are payable, how the Air Force will adjudicate claims and how to appeal unfavorable decisions. It also describes the process the Air Force will use for asserting claims against persons who damage Air Force property.

**Changes:** This part has been substantially revised and should be reviewed in its entirety to determine the changes made.

**Deletions:** This part has been substantially revised and should be reviewed in its entirety to determine the deletions made.

### III. Costs and Benefits

The regulations contained herein require the public who wish to file a claim against the Air Force to substantiate their loss, which may result in minor or incidental costs to the claimant. Revised regulations pertaining to how the Air Force asserts claims for damage to Air Force property may result in increased costs to those who cause said damage. The benefits of these regulations include increased safeguards to ensure public funds are not expended for fraudulent claims and to ensure the U.S. government receives adequate compensation for damages to its property wrongfully caused by others.

#### Retrospective Review

This rule is part of DoD's retrospective plan, completed in August 2011, under Executive Order 13563, "Improving Regulation and Regulatory Review," DoD's full plan and updates can be accessed at: <http://www.regulations.gov/#!docketDetail;dct=>

*FR+PR+N+O+SR; rpp=10; po=0; D=DOD-2011-OS-0036.*

*Administrative Procedure Act:* The Air Force has determined that the Administrative Procedure Act, 5 U.S.C. 553, requires notice of proposed rulemaking and an opportunity for public participation in connection with these correction amendments and deletions. In this regard, the Air Force notes that such notice and opportunity for comment is necessary because these correction amendments and deletions are not related solely to interpretative rules, general statements of policy, rules of agency organization, procedure, or practice, nor is there good cause to find that notice and public procedure thereon are impracticable, unnecessary or contrary to the public interest.

#### Regulatory Procedures

*Executive Order 12866, "Regulatory Planning and Review" and Executive Order 13563, "Improving Regulation and Regulatory Review"*

Executive Orders 13563 and 12866 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distribute impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The Department of Air Force has assessed this rule and determined this rule to be a "non-significant regulatory action."

*Unfunded Mandates Reform Act (Sec. 202, Pub. L. 104-4)*

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (Pub. L. 104-4) requires agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2014, that threshold is approximately \$141 million. This rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

*Public Law 96-354, "Regulatory Flexibility Act" (5 U.S.C. 601)*

It has been certified that this rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. Therefore, the Regulatory Flexibility Act, as amended,

does not require us to prepare a regulatory flexibility analysis.

Public Law 96-511, "Paperwork Reduction Act" (44 U.S.C. Chapter 35)

This rule does not impose reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995.

Executive Order 13132, "Federalism"

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This rule will not have a substantial effect on State and local governments.

List of Subjects in 32 CFR Part 842

Administrative claims.

Accordingly, 32 CFR part 842 is proposed to be amended as follows:

PART 842—[AMENDED]

1. The authority citation for 32 CFR part 842 continues to read as follows:

Authority: Sec. 8013, 100 Stat. 1053, as amended; 10 U.S.C. 8013, except as otherwise noted; 28 CFR 14.11, except as otherwise noted.

2. The Note for part 842 is revised to read as follows:

Note: Air Force Regulations are available on the e-Publishing Web site at http://www.e-publishing.af.mil/ for downloading. This part is derived from Air Force Instruction 51-501, Tort Claims, and Air Force Instruction 51-502, Personnel and Carrier Recovery Claims.

3. Amend part 842 by:

a. Revising all references to "HQ USAF/JACC" to read "AFLOA/JACC."

b. Revising all references to "USAF/JACC" to read "AFLOA/JACC."

4. Revise § 842.0 to read as follows:

§ 842.0 Scope.

This part establishes standard policies and procedures for all administrative claims resulting from Air Force activities and for which the Air Force has assigned responsibility.

5. Amend § 842.2 by:

a. Revising paragraph (f).

b. Removing paragraph (g).

c. Redesignating paragraphs (h) through (o) as (g) through (n).

d. Revising newly redesignated paragraph (g).

The revisions read as follows:

§ 842.2 Definitions.

\* \* \* \* \*

(f) AFLOA/JACC. Claims and Tort Litigation Division, 1500 West Perimeter Road, Suite 1700, Joint Base Andrews, MD 20762.

(g) Owner. A holder of a legal title or an equitable interest in certain property. Specific examples include:

(1) For real property. The mortgagor, and the mortgagee if that individual can maintain a cause of action in the local courts involving a tort to that specific property.

(2) For personal property. A bailee, lessee, mortgagor and a conditional vendee. A mortgagor, conditional vendor, title loan company or someone else other than the owner, who has the title for purposes of security are not owners.

\* \* \* \* \*

6. Revise § 842.4 to read as follows:

§ 842.4 Where to file a claim.

File a claim at the base legal office of the unit or installation at or nearest to where the accident or incident occurred. If the accident or incident occurred in a foreign country where no Air Force unit is located, file the claim with the Defense Attache (DATT) or Military Assistance Advisory Group (MAAG) personnel authorized to receive claims (DIAM 100-1 and AFR 400-45). In a foreign country where a claimant is unable to obtain adequate assistance in filing a claim, the claimant may contact the nearest Air Force SJA. The SJA then advises AFLOA/JACC through claims channels of action taken and states why the DATT or MAAG was unable to adequately assist the claimant.

§ 842.9 [Removed]

7. Remove § 842.9.

Subpart B—[Removed]

8. Remove Subpart B, consisting of §§ 842.10 through 842.14.

Subpart C—[Redesignated as Subpart B]

9. Redesignate subpart C, consisting of §§ 842.15 through 842.20, as subpart B, consisting of §§ 842.9 through 842.14, respectively.

10. Amend newly redesignated § 842.10 by revising paragraphs (a), (b), and (d) to read as follows:

§ 842.10 Definitions.

(a) Appointing commander. The commander exercising special court-martial jurisdiction over the offender.

(b) Board of officers. One to three commissioned officers appointed to investigate a complaint of willful property damage or wrongful taking by Air Force personnel.

\* \* \* \* \*

(d) Willful damage. Damage or destruction caused intentionally,

knowingly, and purposely, without justifiable excuse.

\* \* \* \* \*

11. Amend newly redesignated § 842.12 by adding paragraphs (g) through (i) to read as follows:

§ 842.12 Claims not payable.

\* \* \* \* \*

(g) Claims involving wrongful taking stemming from larceny, forgery or deceit, which are not accompanied by riotous or violent action.

(h) Claims against Air National Guard members unless they are performing duty under Title 10 U.S.C.

(i) Claims for indirect, consequential or remote damages.

12. Revise newly redesignated § 842.13 to read as follows:

§ 842.13 Limiting provisions.

(a) A complaint must be submitted within 90 days of the date of the incident. The appointing commander may find good cause for the delay and accept a late claim. The appointing commander's determination of good cause is final and not reviewable.

(b) Assessment of damages in excess of \$5,000 against an offender's pay for a single incident requires AFLOA/JACC approval.

13. Revise newly redesignated § 842.14 to read as follows:

§ 842.14 Filing a claim.

Claimant complains (orally or in writing) to the commander of a military organization or unit of the alleged offending member or members or to the commander of the nearest military installation. If the claim is made orally, the individual must assist the commander to reduce the complaint to writing within a reasonable time. The complainant need not request a sum certain in writing at the time the complaint is filed, but they must present such value and evidence before settlement is made.

Subpart D—[Redesignated as Subpart C]

14. Redesignate subpart D, consisting of §§ 842.21 through 842.35, as subpart C, consisting of §§ 842.15 through 842.29.

§ 842.16 [Amended]

15. Amend newly redesignated § 842.16 by:

a. Removing paragraphs (a), (c), (e), and (g).

b. Redesignating paragraphs (b), (d), (f), and (h) as paragraphs (a), (b), (c), and (d).

16. Revise newly designated § 842.17 to read as follows:

**§ 842.17 Delegations of authority.**

(a) *Settlement authority.* The Secretary of the Air Force has delegated the authority to assign areas of responsibility and designate functional responsibility for claims under the Military Personnel and Civilian Employees' Claims Act to The Judge Advocate General (TJAG).

(b) *Reconsideration authority.* A settlement authority has the same authority specified in paragraph (a) of this section. However, with the exception of TJAG, a settlement authority may not deny a claim on reconsideration that it, or its delegate, had previously denied.

(c) *Authority to reduce, withdraw and restore delegated settlement authority.* Any superior settlement authority may reduce, withdraw, or restore delegated authority.

■ 17. Amend newly designated § 842.18 by revising paragraph (a) to read as follows:

**§ 842.18 Filing a claim.**

(a) *How and when to file a claim.* A claim is filed when a federal military agency receives from a claimant or duly authorized agent a properly completed AF Form 180, DD Form 1842 or other written and signed demand for a determinable sum of money.

(1) A claim is also filed when a federal military agency receives from a claimant or duly authorized agent an electronic submission, through a Department of Defense claims Web site, indicating that the claimant intends for the appropriate military branch to consider a digitally signed demand for a determinable sum of money.

(2) A claim is also filed when the Air Force receives from a claimant or duly authorized agent an electronic submission, through the Air Force claims Web site, a digitally signed demand for a determinable sum of money.

\* \* \* \* \*

■ 18. Revise newly designated § 842.19 introductory text to read as follows:

**§ 842.19 Partial payments.**

Upon request of a claimant, a settlement authority may make a partial payment in advance of final settlement when a claimant experiences personal hardship due to extensive property damage or loss. Partial payments are made if a claim for only part of the loss is submitted and is readily provable, up to the amount of the settlement authority. (The claimant may later amend the claim for the remainder of the loss.) If the total payable amount of the claim exceeds the payment limits of the settlement authority, send it with

recommendations to the proper settlement authority.

\* \* \* \* \*

■ 19. Revise newly designated § 842.21 to read as follows:

**§ 842.21 Who may file a claim.**

A claim may be filed by:

- (a) A proper claimant,
- (b) An authorized agent or legal representative of a proper claimant,
- (c) A survivor of a deceased proper claimant in this order:

- (1) Spouse.
- (2) Children.
- (3) Father or mother.
- (4) Brothers or sisters.

■ 20. Amend newly designated § 842.24 by revising paragraph (d) to read as follows:

**§ 842.24 General provisions.**

\* \* \* \* \*

(d) Property that is owned by the claimants, or their immediate families, or borrowed for their use, or in which the claimants or their immediate families has an enforceable ownership interest.

\* \* \* \* \*

■ 21. Amend newly designated § 842.25 by revising introductory text and paragraphs (a) and (b) to read as follows:

**§ 842.25 Claims payable.**

Claims may be payable for loss of or damage to tangible personal property when the damage occurs incident to service. For loss of or damage to property to be incident to service, it must occur at a place and time that is connected to the service of an active duty military member or employment of a civilian employee.

(a) *Authorized Location.* Claims are only payable when the claimed property is located in an authorized location.

There must be some connection between the claimant's service and the location of the claimed property. Duty locations where personal property is used, stored or held because of official duties are authorized places. Other authorized places may include:

- (1) Any location on a military installation not otherwise excluded.
- (2) Any office, building, recreation area, or real estate the Air Force or any other DoD element uses or controls.
- (3) Any place a military member is required or ordered to be pursuant to their duties and while performing those duties.
- (4) Assigned Government Housing or Quarters in the United States or provided in kind. The Military Personnel and Civilian Employees' Claims Act specifically prohibits payment for loss of or damage to

property in quarters within the US unless the housing or quarters are assigned or otherwise provided in kind. Base housing that has not been privatized is generally considered assigned or provided in kind wherever it is located.

(i) Privatized Housing or Quarters within the United States subject to the Military

Housing Privatization Initiative located within the fence line of a military installation or on federal land in which the DoD has an interest is considered assigned or otherwise provided in kind for the purposes of the Military Personnel and Civilian Employees' Claims Act.

(ii) Reserved.

(5) Housing or Quarters outside the United States. Outside the US, authorized off-base quarters, as well as assigned quarters, including quarters in US territories and possessions, are authorized places. The residence of a civilian employee is not an authorized location if the employee is a local inhabitant.

(6) Temporary Duty Quarters (TDY) and locations en route to the TDY destination.

Significant deviations from the direct travel route are not authorized locations.

(7) Permanent Change of Station (PCS) temporary quarters and locations enroute to the PCS destination.

Significant deviations from the direct travel route are not authorized locations.

(8) Entitlement and Benefit Locations. For these locations to be authorized, the claimant must be using them for the intended purpose and the property must be reasonably linked to that purpose.

(9) Locations where Personal Property shipped or stored at government expense are found. Government facilities where property is stored at the claimant's expense or for their convenience without an entitlement are not authorized places.

(b) *Payable Causes of Loss Incident to Service.* Because the PCA is not a substitute for private insurance, loss or damage at quarters or other authorized locations may only be paid if caused by:

- (1) An unusual occurrence;
- (2) Theft, vandalism or other malfeasance;
- (3) Hostile action;
- (4) A carrier, contractor, warehouseman or other transportation service provider storing or moving goods or privately owned vehicles at government expense;
- (5) An agent of the US; or
- (6) A permanent seizure of a witness' property by the Air Force.

\* \* \* \* \*

- 22. Amend newly designated § 842.26 by:
  - a. Revising paragraphs (d), (j), (m), (n), (u), (y), and (z).
  - b. Remove paragraphs (aa), (bb), (cc), and (dd).

**§ 842.26 Claims not payable.**

\* \* \* \* \*

(d) The loss is recovered or recoverable from an insurer or other source unless the settlement authority determines there is good cause for not claiming against the insurer.

\* \* \* \* \*

(j) It is an appraisal fee, unless the settlement authority requires one to adjudicate the claim.

\* \* \* \* \*

(m) It is an item acquired, possessed, shipped, or stored in violation of any U.S. Armed Force directive or regulation.

(n) It is an item fraudulently claimed.

\* \* \* \* \*

(u) It is an inconvenience expense.

\* \* \* \* \*

(y) It is damage to, or loss of a rental vehicle which TDY or PCS orders authorized.

(z) It is a cost to relocate a telephone or mobile or manufactured home due to a government ordered quarters move.

**Subpart E—[Removed]**

- 23. Remove subpart E.

**Subpart F—[Redesignated as Subpart D]**

- 24. Redesignate subpart F, consisting of §§ 842.40 through 842.54, as subpart D consisting of §§ 842.30 through 842.44.

- 25. Revise newly redesignated § 842.30 to read as follows:

**§ 842.30 Scope of this subpart.**

This subpart establishes policies and procedures for all administrative claims under the Military Claims Act for which the Air Force has assigned responsibility.

- 26. Amend newly redesignated § 842.31, by revising paragraph (b) to read as follows:

**§ 842.31 Definitions.**

\* \* \* \* \*

(b) *Final denial.* A letter mailed from the settlement authority to the claimant or authorized agent advising the claimant that the Air Force denies the claim. Final denial letters mailed from within the United States shall be sent by U.S. Mail, certified mail, return receipt requested.

\* \* \* \* \*

- 27. Amend newly redesignated § 842.32 by:

■ a. Revising paragraphs (a)(1) introductory text, (a)(3) introductory text, (a)(3)(ii) and (iii), (a)(4) and (5), (b), and (f) introductory text:

■ b. Removing paragraph (f)(8) and redesignating paragraphs (f)(9) through (11) as paragraphs (f)(8) through (10).

The revisions read as follows:

**§ 842.32 Delegations of authority.**

(a) *Settlement authority:*

(1) The Secretary of the Air Force has authority to:

\* \* \* \* \*

(3) The following individuals have delegated authority to settle claims for \$25,000 or less and to deny claims in any amount:

\* \* \* \* \*

(ii) The Director, Civil Law and Litigation.

(iii) The Chief, Associate Chief and Branch Chiefs, Claims and Tort Litigation Division.

(4) SJAs of the Air Force component commander of the US Geographic combatant commands for claims arising within their respective combatant command areas of responsibility have delegated authority to settle claims payable or deny claims filed for \$25,000 or less.

(5) SJAs of GCMs in PACAF and USAFE have delegated authority to settle claims payable, or deny claims filed for \$15,000 or less.

(b) *Redelegation of authority. The Chief, Claims and Tort Litigation Division may redelegate his or her authority to Staff Judge Advocates. A settlement authority may redelegate his or her authority for claims not exceeding \$25,000, to a subordinate judge advocate or civilian attorney in writing. The Chief, AFLOA/JACC may redelegate up to \$25,000, in writing, to paralegals assigned to AFLOA/JACC and, upon request, may authorize installation Staff Judge Advocates to redelegate their settlement authority to paralegals under their supervision.*

\* \* \* \* \*

(f) *Special exceptions.* Do not settle or deny claims for the following reasons without AFLOA/JACC approval:

\* \* \* \* \*

- 28. Amend newly redesignated § 842.33, by revising paragraph (a) to read as follows:

**§ 842.33 Filing a claim.**

(a) *Elements of a proper claim.* A claim is must be filed on a Standard Form 95 or other written document. It must be signed by the Claimant or authorized agent, be for money damages

in a sum certain, and lay out a basic statement as to the nature of the claim that will allow the Air Force to investigate the allegations contained therein.

\* \* \* \* \*

- 29. Revise newly redesignated § 842.34 to read as follows:

**§ 842.34 Advance payments.**

Subpart P sets forth procedures for advance payments.

- 30. Amend newly redesignated § 842.35 by revising paragraphs (a) and (c) to read as follows:

**§ 842.35 Statute of limitations.**

(a) A claim must be filed in writing within 2 years after it accrues. It is deemed to be filed upon receipt by The Judge Advocate General, AFLOA/JACC, or a Staff Judge Advocate of the Air Force. A claim accrues when the claimant discovers or reasonably should have discovered the existence of the act that resulted in the claimed loss. The same rules governing accrual pursuant to the Federal Tort Claims Act should be applied with respect to the Military Claims Act. Upon receipt of a claim that properly belongs with another military department, the claim is promptly transferred to that department.

\* \* \* \* \*

(c) A claim filed after the statute of limitations has run is considered if the U.S. is at war or in an armed conflict when the claim accrues or if the U.S. enters a war or armed conflict after the claim accrues, and if good causes shows how the war or armed conflict prevented the claimant from diligently filing the claim within the statute of limitations. But in no case will a claim be considered if filed more than two years after the war or armed conflict ends.

- 31. Revise newly redesignated § 842.37 to read as follows:

**§ 842.37 Who are proper claimants.**

(a) Citizens and inhabitants of the United States. U.S. inhabitants includes dependents of the U.S. military personnel and federal civilian employees temporarily outside the U.S. for purposes of U.S. government service.

(b) U.S. military personnel and civilian employees. NOTE: These personnel are not proper claimants for claims for personal injury or death that occurred incident to their service.

(c) Foreign military personnel when the damage or injury occurs in the U.S. Do not pay for claims under the MCA for personal injury or death of a foreign military personnel that occurred incident to their service.

(d) States, state agencies, counties, or municipalities, or their political subdivisions.

(e) Subrogees of proper claimants to the extent they have paid for the claim in question.

■ 32. Revise newly redesignated § 842.38 to read as follows:

**§ 842.38 Who are not proper claimants.**

(a) Governments of foreign nations, their agencies, political subdivisions, or municipalities.

(b) Agencies and NAFIs of the U.S. Government.

(c) Subrogees of § 842.42(a) and (b) of this part.

(d) Inhabitants of foreign countries.

■ 33. Amend newly redesignated § 842.39 by:

■ a. Revising paragraph (a).

■ b. Removing paragraphs (c), (d) and (f).

■ c. Redesignating paragraph (e) as paragraph (c).

The revision reads as follows

**§ 842.39 Claims payable.**

(a) Claims arising from negligent or wrongful acts or omissions committed by United States military or civilian personnel while acting in the scope of their employment, subject to the exceptions listed in this subpart.

\* \* \* \* \*

■ 34. Revise newly redesignated § 842.40 to read as follows:

**§ 842.40 Claims not payable.**

(a) Is covered by the FTCA, FCA, IACA, 10 U.S.C. 2734a and 2734b, Air Force Admiralty Claims Act (AFACA), 10 U.S.C. 9801–9804, 9806, NGCA, 32 U.S.C. 715, or covered under the Military Personnel and Civilian Employees' Claims Act (MPCECA), 31 U.S.C. 3701, 3721. (1) MCA claims arising from noncombat activities in the U.S. are not covered by the FTCA because more elements are needed to state a claim under the MCA for noncombat activities. All FTCA claims are based on elements of traditional tort liability (*i.e.*, duty, breach, causation, and damages); that is, they are fault based. Noncombat activity claims under the MCA are based solely on causation and damages. Because MCA claims for noncombat activities are not fault based, they are not covered by the FTCA.

(2) Claims for incident-to-service damage to vehicles caused by the negligence of a member or employee of the armed forces acting in the scope of employment are paid under the MCA, instead of the Military Personnel and Civilian Employees' Claims Act.

(b) Arises with respect to the assessment or collection of any customs

duty, or the detention of any goods or merchandise by any U.S. officer of customs or excise, or any other U.S. law enforcement officer. NOTE: This includes loss or damage to property detained by members of the Security Forces or Office of Special Investigation (OSI).

(c) Is cognizable under U.S. admiralty and maritime law, to include:

(1) The Suits in Admiralty Act, 46 U.S.C. 30901 and following.

(2) The Death on the High Seas Act, 46 U.S.C. 30301 and following.

(3) The Public Vessels Act, 46 U.S.C. 31101 and following.

(4) EXCEPTION: Claims arising from noncombat activities may be paid under the MCA, even if they are also cognizable under paragraphs (c)(1) through (c)(3), of this section.

(d) Arises out of assault, battery, false imprisonment, false arrest, malicious prosecution, or abuse of process. EXCEPTION: Unless such actions were committed by an investigative or law enforcement officer of the U.S. who is empowered by law to conduct searches, seize evidence, or make arrests for violations of federal law.

(e) Arises out of libel, slander, misrepresentation, or deceit.

(f) Arises out of an interference with contract rights.

(g) Arises out of the combat activities of U.S. military forces.

(h) Is for the personal injury or death of a member of the Armed Forces of the U.S. incident to the member's service.

(i) Is for the personal injury or death of any person for workplace injuries covered by the Federal Employees' Compensation Act, 5 U.S.C. 8101, and following.

(j) Is for the personal injury or death of any employee of the U.S., including nonappropriated fund employees, for workplace injuries covered by the Longshore and Harbor Workers' Compensation Act, 33 U.S.C. 901, and following.

(k) Is for a taking of property, *e.g.*, by technical trespass or over flight of aircraft.

(l) Is for patent or copyright infringement.

(m) Results wholly from the negligent or wrongful act of the claimant.

(n) Is for the reimbursement of medical, hospital, or burial expenses furnished at the expense of the U.S., either directly or through contractual payments.

(o) Arises from contractual transactions, express or implied (including rental agreements, sales agreements, leases, and easements), that:

(1) Are payable or enforceable under oral or written contracts; or

(2) Arise out of an irregular procurement or implied contract.

(p) Is for the personal injury or death of military or civilian personnel of a foreign government incident to their service.

(q) Is based on an act or omission of an employee of the government, exercising due care, in the execution of a statute or regulation, whether or not such statute or regulation is valid. Do not deny claims solely on this exception without the prior approval of USAF/JACC. Claims under the noncombat activities provision of this subpart may be paid even if this paragraph applies. Is based on the exercise or performance of, or the failure to exercise or perform, a discretionary function or duty on the part of a federal agency or a federal government employee, whether or not the discretion involved is abused. Do not deny claims solely on this exception without the prior approval of USAF/JACC. EXCEPTION: Claims under the noncombat activities provision may be paid even if this paragraph applies.

(r) Is not in the best interests of the U.S., is contrary to public policy, or is otherwise contrary to the basic intent of the MCA. Examples include, but are not limited to, when a claimant's criminal conduct or failure to comply with a nonpunitive regulation is a proximate cause of the loss. Prior approval must be obtained from USAF/JACC before denying claims solely on this exception.

(s) Arises out of an act or omission of any employee of the government in administering the provisions of the Trading With the Enemy Act, 50 U.S.C. app. 1–44.

(t) Is for damages caused by the imposition or establishment of a quarantine by the U.S.

(u) Arises from the fiscal operations of the Department of the Treasury or from the regulation of the monetary system.

(v) Arises from the activities of the Tennessee Valley Authority.

(w) Arises from the activities of a federal land bank, a federal intermediate credit bank, or a bank for cooperatives.

(x) Is for the personal injury or death of any government contractor employee for whom benefits are available under any worker's compensation law, or under any contract or agreement providing employee benefits through insurance, local law, or custom when the U.S. pays insurance either directly or as part of the consideration under the contract. Only USAF/JACC may act on these claims.

(y) Is for damage, injury or death from or by flood or flood waters at any place.

(z) Is for damage to property or other losses of a state, commonwealth, territory, or the District of Columbia

caused by Air National Guard personnel engaged in training or duty under 32 U.S.C. 316, 502, 503, 504, or 505 who are assigned to a unit maintained by that state, commonwealth, territory, or the District of Columbia.

(aa) Is for damage to property or for any death or personal injury arising out of activities of any federal agency or employee of the government in carrying out the provisions of the Disaster Relief Act of 1974 (42 U.S.C. 5121, *et seq.*), as amended.

(bb) Arises from activities that present a political question.

(cc) Arises from private, as distinguished from government, transactions.

(dd) Is based solely on compassionate grounds.

(ee) Is for rent, damage, or other expenses or payments involving the regular acquisition, use, possession, or disposition of real property or interests therein by and for the U.S.

(ff) Is presented by a national, or a corporation controlled by a national, of a country at war or engaged in armed conflict with the U.S., or any country allied with such enemy country unless the appropriate settlement authority determines that the claimant is, and at the time of the incident was, friendly to the U.S. A prisoner of war or an interned enemy alien is not excluded as to a claim for damage, loss, or destruction of personal property in the custody of the U.S. otherwise payable. Forward claims considered not payable under this paragraph, with recommendations for disposition, to USAF/JACC.

(gg) Arises out of the loss, miscarriage, or negligent transmission of letters or postal matter by the U.S. Postal Service or its agents or employees.

(hh) Is for damage to or loss of bailed property when the bailor specifically assumes such risk.

(ii) Is for property damage, personal injury, or death occurring in a foreign country to an inhabitant of a foreign country.

(jj) Is for interest incurred prior to the payment of a claim.

(kk) Arises out of matters which are in litigation against the U.S.

(ll) Is for attorney fees or costs in connection with pursuing an administrative or judicial remedy against the U.S. or any of its agencies.

(mm) Is for bail, interest or inconvenience expenses incurred in connection with the preparation and presentation of the claim.

(nn) Is for a failure to use a duty of care to keep premises owned or under the control of the U.S. safe for use for any recreational purpose, or for a failure

by the U.S. to give any warning of hazardous conditions on such premises to persons entering for a recreational purpose unless there is a willful or malicious failure to guard or warn against a dangerous condition, or unless consideration was paid to the U.S. (including a nonappropriated fund instrumentality) to use the premises.

■ 35. Revise newly redesignated § 842.41 to read as follows:

**§ 842.41 Applicable law.**

This paragraph provides the existing law governing liability, measurement of liability and the effects of settlement upon awards.

(a) Many of the exclusions in this subpart are based upon the wording of 28 U.S.C. 2680 or other federal statutes or court decisions interpreting the Federal Tort Claims Act. Federal case law interpreting the same exclusions under the Federal Tort Claims Act is applied to the Military Claims Act. Where state law differs with federal law, federal law prevails.

(b) *Extent of liability.* Where the claim arises is important in determining the extent of liability.

(1) When a claim arises in the United States, its territories or possessions, the same law as if the claim was cognizable under the FTCA will be applied.

(2) *Claims in foreign countries.* In claims arising in a foreign country, where the claim is for personal injury, death, or damage to or loss of real or personal property caused by an act or omission alleged to be negligent, wrongful, or otherwise involving fault of military personnel or civilian officers or employees of the United States acting within the scope of their employment, liability or the United States is determined according federal case law interpreting the FTCA. Where the FTCA requires application of the law of the place where the act or omission occurred, settlement authorities will use the rules set forth in the currently adopted edition of the *Restatement of the Law*, published by the American Law Institute, to evaluate the liability of the Air Force, subject to the following rules:

(i) Foreign rules and regulations governing the operation of motor vehicles (rules of the road) are applied to the extent those rules are not specifically superseded or preempted by United States military traffic regulations.

(ii) Absolute or strict liability will not apply for claims not arising from noncombat activities.

(iii) Hedonic damages are not payable.

(iv) The collateral source doctrine does not apply.

(v) Joint and several liability does not apply. Payment will be made only upon the portion of loss, damage, injury or death attributable to the Armed Forces of the United States.

(vi) Future economic loss will be discounted to present value after deducting for federal income taxes and, in cases of wrongful death, personal consumption.

(c) Do not approve payment for:

(i) Punitive damages.

(ii) Cost of medical or hospital services furnished at the expense of the United States.

(iii) Cost of burial expenses paid by the United States.

(d) *Settlement by insurer or joint tortfeasor.* When settlement is made by an insurer or joint tortfeasor and an additional award is warranted, an award may be made if both of the following are present:

(1) The United States is not protected by the release executed by the claimant.

(2) The total amount received from such source is first deducted.

■ 36. Amend newly redesignated § 842.42, by revising paragraphs (a) and (c) to read as follows:

**§ 842.42 Appeal of final denials.**

(a) A claimant may appeal the final denial of the claim. The claimant sends the request, in writing, to the settlement authority that issued the denial letter within 60 days of the date the denial letter was mailed. The settlement authority may waive the 60 day time limit for good cause.

\* \* \* \* \*

(c) Where the settlement authority does not reach a final agreement on an appealed claim, he or she sends the entire claim file to the next higher settlement authority, who is the appellate authority for that claim. Any higher settlement authority may act upon an appeal.

\* \* \* \* \*

**Subpart G—[Redesignated as Subpart E]**

■ 37. Redesignate subpart G, consisting of §§ 842.55 through 842.68, as subpart E, consisting of §§ 842.45 through 842.58, respectively.

■ 38. Revise newly redesignated § 842.47 to read as follows:

**§ 842.47 Delegations of authority.**

(a) *Settlement authority.* (1) The Secretary of the Air Force has the authority to:

(i) Settle claims for payment of \$100,000 or less.

(ii) Settle claims for more than \$100,000, pay the first \$100,000, and

report the excess to the Department of the Treasury for payment.

(iii) Deny claims in any amount.

(2) The Judge Advocate General, Deputy Judge Advocate General, Director of Civil Law, and the Chief, Deputy Chief and Branch Chiefs, Claims and Tort Litigation Staff are FCCs and have delegated authority to:

(i) Settle claims for payment of \$100,000 or less.

(ii) Deny claims in any amount.

(3) The SJAs of the Air Force component commander of the U.S. geographic combatant commands are FCC for claims arising in their respective combatant command AORs and may deny claims of \$50,000 or less and will pay claims filed in any amount when payment is for \$50,000 or less.

(b) *Redelegating settlement authority.* A settlement authority appointed as a FCC in paragraph (a) of this section may appoint one or more subordinate judge advocates or civilian attorneys to act as FCC, and redelegate all or part of that settlement authority to such persons.

(c) *Settlement negotiations.* A settlement authority may settle a claim in any sum within its settlement authority, regardless of the amount claimed. Send uncompromised claims in excess of the delegated authority through claims channels to the level with settlement authority. Unsuccessful negotiations at one level do not bind higher authority.

(d) *Special exceptions.* Do not settle claims for medical malpractice without HQ USAF/JACC approval.

■ 39. Amend newly redesignated § 842.48, by revising paragraph (a) to read as follows:

**§ 842.48 Filing a claim.**

(a) *How and when filed.* A claim is filed when the Air Force receives from a claimant or authorized agent a properly completed SF 95 or other signed and written demand for money damages in a sum certain. A claim may be presented orally only if oral claims are the custom in the country where the incident occurred and the claimant is functionally illiterate. In any case where an oral claim is made, claims personnel must promptly reduce the claim to writing with all particulars carefully noted. A claim belonging to another agency is promptly transferred to the appropriate agency.

\* \* \* \* \*

■ 40. Revise newly redesignated § 842.49 to read as follows:

**§ 842.49 Advance payments.**

Subpart P outlines procedures for advance payments.

■ 41. Amend newly redesignated § 842.50, by revising paragraph (a) to read as follows:

**§ 842.50 Statute of limitations.**

(a) A claim must be presented to the Air Force within 2 years after it accrues. It accrues when the claimant discovers or reasonably should have discovered the existence of the act that resulted in the claimed loss or injury.

\* \* \* \* \*

■ 42. Amend newly redesignated § 842.52, by revising paragraphs (a) and (b) to read as follows:

**§ 842.52 Who are proper claimants.**

(a) Foreign nationals. In a wrongful death case, if the decedent is an inhabitant of a foreign country, even though his or her survivors are U.S. inhabitants, the FCA will apply.

(b) U.S. nationals residing abroad, unless the claim arises from a benefit, privilege or service provided to them by the U.S. Government, or they reside in the foreign country primarily because they are employed directly by the United States, or sponsored by or accompanying such a person, or employed by a U.S. civilian contractor in furtherance of a contract with the U.S. Government, or sponsored by or accompanying such a person.

\* \* \* \* \*

■ 43. Amend newly redesignated § 842.53 by revising paragraphs (b), (c), and (e) to read as follows:

**§ 842.53 Who are not proper claimants.**

\* \* \* \* \*

(b) Persons determined to be U.S. inhabitants. U.S. inhabitants include dependents of U.S. military personnel and U.S. Government civilian employees.

(c) Foreign military personnel suffering personal injury, or death arising incident to service or pursuant to combined and/or joint military operations. Such operations include, but are not limited to, military exercises and United Nations, NATO, and other regional peacekeeping and humanitarian missions.

\* \* \* \* \*

(e) National governments and their political subdivisions engaging in war or armed conflict with the United States or its allies. This includes factions that have not necessarily been recognized by the international community as a legitimate nation state.

\* \* \* \* \*

■ 44. Amend newly redesignated § 842.54 by:

- a. Revising paragraph (a).
- b. Removing paragraph (b).

■ c. Redesignating paragraph (c) as paragraph (b).

The revision reads as follows:

**§ 842.54 Payment criteria.**

The following criteria is considered before determining liability.

(a) The incident causing the damage or injury must arise in a foreign country and be caused by noncombatant activities of the U.S. Armed Forces or by the negligent or wrongful acts of civilian employees or military members of the Armed Forces.

(1) It is a prerequisite to U.S. responsibility if the employee causing the damage or injury is a local inhabitant, a prisoner of war, or an interned enemy alien. These persons are "employees" within the meaning of the Foreign Claims Act (FCA) only when in the service of the United States. Ordinarily, a slight deviation as to time or place does not constitute a departure from the scope of employment. The purpose of the activity and whether it furthers the general interest of the United States is considered. If the claim arose from the operation or use of a U.S. Armed Forces vehicle or other equipment by such a person, pay it provided local law imposes liability on the owner of the vehicle or other equipment in the circumstances involved.

(2) It is immaterial when the claim arises from the acts or omissions of any U.S. Armed Forces member or employee not listed in § 842.64(c)(1) of this part. The Act imposes responsibility on the United States when it places a US citizen or non-U.S. citizen employee in a position to cause the injury or damage. If the cause is a criminal act clearly outside the scope of employment, ordinarily pay the claim and consider disciplinary action against the offender.

\* \* \* \* \*

■ 45. Amend newly redesignated § 842.55 by:

- a. Revising paragraphs (a), (c), (f), (h), (m), (o) and (q).
- b. Adding paragraphs (s) and (t).

The revisions and additions read as follows:

**§ 842.55 Claims not payable.**

A claim is not payable when it:

(a) Is waived under an applicable international agreement, or pursuant to an applicable international agreement, a receiving state should adjudicate and pay the claim. However, if a foreign government subject to such an international agreement disputes its legal responsibilities under the agreement, and the claimant has no

other means of compensation, USAF/JACC may authorize payment.

\* \* \* \* \*

(c) Is for attorney fees, punitive damages, a judgment or interest on a judgment, bail, or court costs. FCC should consider providing early notice to claimants that attorney fees are not payable as an item of damage under the FCA.

\* \* \* \* \*

(f) Is a paternity claim.

\* \* \* \* \*

(h) Results wholly from the negligent or wrongful act of the claimant or agent.

\* \* \* \* \*

(m) Results from an action by an enemy, or directly or indirectly from an act of the U.S. armed forces in combat, except that a claim may be allowed if it arises from an accident or malfunction incident to the operation of an aircraft of the U.S. armed forces, including its airborne ordnance, indirectly related to combat, and occurring while preparing for or going to, or returning from a combat mission.

\* \* \* \* \*

(o) Arises out of personal activities of family members, guests, servants, or activities of the pets of members and employees of the U.S. Armed Forces.

\* \* \* \* \*

(q) Is covered under U.S. admiralty or maritime laws, unless authorized by The Judge Advocate General or Chief, Claims and Tort Litigation Staff.

\* \* \* \* \*

(s) Is not in the best interest of the United States, is contrary to public policy, or otherwise contrary to the basic intent of the FCA. Claims considered not payable on this basis will be forwarded to USAF/JACC for final decision.

(t) Is presented by a national, or a corporation controlled by a national, of a country at war or engaged in armed conflict with the United States, or any country allied with such enemy country unless the settlement authority determines the claimant is, and at the time of the incident was, friendly to the United States. EXCEPTION: A prisoner of war or interned enemy alien is not excluded from filing a claim for damage, loss, or destruction of personal property within the U.S. Armed Forces' custody if the claim is otherwise payable.

■ 46. Revise newly redesignated § 842.56 to read as follows:

**§ 842.56 Applicable law.**

This section provides guidance to determine the applicable law for assessment of liability.

(a) In adjudicating FCA claims, settlement authorities will follow the

law, customs, and standards of the country where the claim arose, except:

(1) Causation is determined based upon general principles of U.S. tort law found in federal case law and standard legal publications.

(2) Joint and several liability does not apply. Payment is based solely on the portion of loss, damage, injury or death attributable to the U.S. Armed Forces.

(3) If lost income or lost profits is recoverable under the law where the claim arose, they shall be limited to net lost income or net lost profits, taking into account appropriate deductions for taxes, regular business expenditures, and in the case of wrongful death, personal consumption during the loss period.

(b) Settlement authorities will not deduct compensation from collateral sources except for:

(1) Direct payments by a member or civilian employee of the U.S. Armed Forces for damages (not solatia).

(2) Any payments recovered or recoverable from an insurance policy when premiums were paid, directly or indirectly, by the United States, or a member or civilian employee of the U.S. Armed Forces; or when the member or employee has the benefit of the insurance (such as when a U.S. member or employee borrows a vehicle of a local national, and the vehicle carries insurance for the benefit of any driver with permission to drive the vehicle).

■ 47. Revise newly redesignated § 842.57 to read as follows:

**§ 842.57 Reconsideration of final denials.**

This section provides the procedures used to reconsider a final denial.

(a) An FCC has the inherent authority to reconsider a final decision. The mere fact that a request for reconsideration is received does not obligate the settlement authority to reopen the claim.

(b) The FCC does not mention a reconsideration right in the original denial letter.

(c) A settlement authority must reconsider the final action when there is:

(1) New and material evidence concerning the claim or,

(2) Obvious errors in the original decision.

(d) The FCC must document in the claim file the reason for reconsideration.

(e) A FCC above the original settlement authority may direct a claim be forwarded to a higher FCC for reconsideration.

■ 48. Revise newly redesignated § 842.58 to read as follows:

**§ 842.58 Right of subrogation, indemnity, and contribution.**

The Air Force has all the rights of subrogation, indemnity and contribution, as local law permits. However, settlement authorities will not seek contribution or indemnity from U.S. military members or civilian employees whose conduct gave rise to U.S. government liability, or whenever it would be harmful to international relations.

**Subpart H—[Redesignated as Subpart F]**

■ 49. Redesignate subpart H, consisting of §§ 842.69 through 842.72, as subpart F, consisting of §§ 842.59 through 842.62, respectively.

■ 50. Revise newly redesignated § 842.59 to read as follows:

**§ 842.59 Scope of this subpart.**

This subpart governs Air Force actions in investigating, processing, and settling claims under the International Agreement Claims Act.

■ 51. Amend newly redesignated § 842.60 by revising paragraphs (a), (d), (e), (f) and (g) to read as follows:

**§ 842.60 Definitions.**

\* \* \* \* \*

(a) *Civilian component.* Civilian personnel accompanying and employed by an international agreement contracting force. Local employees, contractor employees, or members of the American Red Cross are not a part of the civilian component unless specifically included in the agreement.

\* \* \* \* \*

(d) *Legally responsible.* A term of art providing for settlement of claims under cost sharing international agreements in accordance with the law of the receiving state. Often, employees who are local inhabitants, not part of the civilian component of the force, could cause the sending state to be legally responsible under a respondeat superior theory.

(e) *Receiving state.* The country where the force or civilian component of another contracting party is temporarily located. It is often thought of as the "host nation."

(f) *Sending state.* The country sending the force or civilian component to the receiving State. In cases where U.S. personnel are stationed in a foreign country, the U.S. is the sending state.

(g) *Third parties.* A term of art used in International Agreements. Parties other than members of the force and civilian component of the sending or receiving States. Dependents, tourists, and other noninhabitants of a foreign country are third parties (and therefore

can generally make a claim under a SOFA) unless the international agreement, or an understanding between the countries involved, specifically excludes them.

■ 52. Revise newly redesignated § 842.61 to read as follows:

**§ 842.61 Delegations of authority.**

(a) Staff Judge Advocates of the Air Force component commands of the U.S. geographic combatant commands will, within their combatant command AORs, fulfill U.S. obligations concerning claims abroad subject to 10 U.S.C. 2734a for which the Air Force has settlement authority. Consistent with 10 U.S.C. 2734a and the international agreement, they may reimburse or pay the pro rata share of a claim as agreed, or if inconsistent with the IACA or the international agreement, they may object to a bill presented,

(b) The Secretary of the Air Force, The Judge Advocate General, the Deputy Judge Advocate General, The Director of Civil Law and Chief of the Claims and Tort Litigation Division may also exercise settlement authority under 10 U.S.C. 2734a.

(c) *Redelegation of authority.* A settlement authority may redelegate his or her authority to a subordinate judge advocate or civilian attorney in writing.

(d) Authority to reduce, withdraw, and restore settlement authority. Any superior settlement authority may reduce, withdraw, or restore delegated authority.

■ 53. Amend newly redesignated § 842.62 by revising paragraph (b) to read as follows:

**§ 842.62 Filing a claim.**

\* \* \* \* \*

(b) *Claims arising in the United States.* The claimant files tort claims arising from the act or omission of military or civilian personnel of another contracting party at any U.S. military installation. The Staff Judge Advocate for the installation where such military or civilian personnel is assigned or attached will promptly notify the Foreign Claims Branch of USAF/JACC as well as the Commander, U.S. Army Claims Service. If the files said claim at an installation other than the location where said military or civilian personnel is assigned, the Staff Judge Advocate for that installation will promptly forward the claim to the appropriate installation Staff Judge Advocate.

**Subpart I—[Redesignated as Subpart G]**

■ 54. Redesignate subpart I, consisting of §§ 842.73 through 842.81 as subpart

G, consisting of §§ 842.63 through 842.71, respectively.

■ 55. Revise newly redesignated § 842.63 to read as follows:

**§ 842.63 Scope of this subpart.**

This subpart explains how to settle and pay claims against the United States, for property damage, personal injury, or death incident to the use of a government vehicle or any other government property on a government installation which are not payable under any other statute.

■ 56. Amend newly redesignated § 842.65 by revising paragraph (a)(5) to read as follows:

**§ 842.65 Delegations of authority.**

(a) \* \* \*

(5) SJA of the Air Force component commands of the U.S. geographic combatant commands.

\* \* \* \* \*

■ 57. Amend newly redesignated § 842.68 by:

■ a. Removing the brackets in the second sentence of paragraph (a).

■ b. Revising paragraph (c).

The revision reads as follows:

**§ 842.68 Claims payable.**

\* \* \* \* \*

(c) Arose from the use of a government vehicle at any place or from the use of other government property on a government installation, and

\* \* \* \* \*

■ 58. Amend newly redesignated § 842.69 by adding paragraph (e) to read as follows:

**§ 842.69 Claims not payable.**

\* \* \* \* \*

(e) For pain and suffering or other general damages.

■ 59. Revise newly redesignated § 842.71 to read as follows:

**§ 842.71 Settlement agreement.**

Do not pay a claim unless the claimant accepts the amount offered in full satisfaction of the claim and signs a settlement agreement to that effect, in which the claimant agrees to release any and all claims against the United States, its employees and agents arising from the incident in question. Use the settlement agreement approved for use by the Department of Justice for the settlement of FTCA claims, tailored to this claim.

**Subpart J—[Redesignated as Subpart H]**

■ 60. Redesignate subpart J, consisting of §§ 842.82 through 842.85, as subpart H, consisting of §§ 842.72 through 842.75, respectively.

■ 61. Amend newly redesignated § 842.74 by:

■ a. Revising paragraph (a)(1)(i).

■ b. Removing and reserving paragraph (a)(1)(ii) and removing paragraph (a)(1)(iii).

■ c. Revising paragraph (b)(3)(iv).

The revisions read as follows:

**§ 842.74 Delegations of authority.**

(a) \* \* \*

(1) \* \* \*

(i) Settle or deny a claim in any amount. Settlements for payment of more than \$500,000 are certified to Congress for payment.

\* \* \* \* \*

(b) \* \* \*

(3) \* \* \*

(iv) The Chief and Deputy Chief, Claims and Tort Litigation Division.

■ 62. In newly redesignated § 842.75, add paragraph (c) to read as follows:

**§ 842.75 Reconsidering claims against the United States.**

\* \* \* \* \*

(c) There is no time limit for submitting a request for reconsideration, but it is within the discretion of the settlement authority to decline to reconsider a claim based on the amount of time passed since the claim was originally denied.

**Subpart K—[Removed]**

■ 63. Remove subpart K, consisting of §§ 842.86 through 842.91.

■ 64. Add new subpart I, consisting of §§ 842.76 through 842.79.

**Subpart I—Claims Under the Federal Tort Claims Act (28 U.S.C. 1346(b), 2402, 2671, 2672, 2674–2680)**

Sec.

842.76 Scope of this subpart.

842.77 Delegations of authority.

842.78 Settlement agreements.

842.79 Administrative claim; when presented.

**Subpart I—Claims Under the Federal Tort Claims Act (28 U.S.C. 1346(b), 2402, 2671, 2672, 2674–2680)**

**§ 842.76 Scope of this subpart.**

This subpart, promulgated under the authority of 28 CFR 14.11, governs claims against the United States for property damage, personal injury, or death, from the negligent or wrongful acts or omission of Air Force military or civilian personnel while acting within the scope of their employment.

**§ 842.77 Delegations of authority.**

(a) *Settlement authority.* (1) The following individuals are delegated the full authority of the Secretary of the Air Force to settle and deny claims:

- (i) The Judge Advocate General.
- (ii) The Deputy Judge Advocate General.
- (iii) The Director of Civil Law.
- (iv) The Division Chief of Claims and Tort Litigation.
- (v) The Division Chief of Environmental Law and Litigation.

(b) *Redelegation of authority.* A settlement authority may be redelegated, in writing, to a subordinate judge advocate or civilian attorney. The Chief, AFLOA/JACC may redelegate up to \$25,000, in writing, to paralegals assigned to AFLOA/JACC and, upon request, may authorize installation Staff Judge Advocates to redelegate their settlement authority to paralegals under their supervision.

(c) *Authority to reduce, withdraw, and restore settlement authority.* Any superior settlement authority may reduce, withdraw, or restore delegated authority.

(d) *Settlement negotiations.* A settlement authority may settle a claim settled in any amount for a sum within the delegated authority. Unsettled claims in excess of the delegated authority will be sent to the next highest level with settlement authority. Unsuccessful negotiations at one level do not bind higher authority.

**§ 842.78 Settlement agreements.**

The claimant must sign a settlement agreement and general release before any payment is made.

**§ 842.79 Administrative claim; when presented.**

When the Air Force is the proper agency to receive a claim pursuant to 28 CFR 14.2(b), for purposes of the provisions of 28 U.S.C. 2401(b), 2672 and 2675, a claim shall be deemed to have been presented when it is received by:

- (a) The office of the Staff Judge Advocate of the Air Force installation nearest the location of the incident; or
- (b) The Claims and Tort Litigation Division, 1500 West Perimeter Road, Suite 1700, Joint Base Andrews, MD 20762.

**Subpart L—[Redesignated as Subpart J]**

- 65. Redesignate subpart L, consisting of §§ 842.92 through 842.99, as subpart J, consisting of §§ 842.80 through 842.87, respectively.
- 66. Revise newly redesignated § 842.80 to read as follows:

**§ 842.80 Scope of this subpart.**

This subpart describes how to assert, administer, and collect claims for damage to or loss or destruction of

government property and lost wages of Air Force servicemembers through negligent or wrongful acts. It does not cover admiralty, hospital recovery, or nonappropriated fund claims.

■ 67. Amend newly redesignated § 842.81 by revising paragraph (a) to read as follows:

**§ 842.81 Delegations of authority.**

(a) *Settlement authority.* (1) The following individuals have delegated authority to settle, compromise, suspend, or terminate action on claims asserted for \$100,000 or less and to accept full payment on any claim:

- (i) The Judge Advocate General.
- (ii) The Deputy Judge Advocate General.
- (iii) The Director of Civil Law.
- (iv) Chief, Deputy Chief, and Branch Chiefs, Claims and Tort Litigation Staff.

(2) Installation staff judge advocates have authority to assert claims in any amount, accept full payment on any claim and to compromise, suspend or terminate action on claims asserted for \$25,000 or less.

\* \* \* \* \*

■ 68. Amend newly redesignated § 842.82 by revising paragraphs (a)(2), (c), and (e) to read as follows:

**§ 842.82 Assertable claims.**

\* \* \* \* \*

(a) \* \* \*

(2) Less than \$100 but collection is practicable and economical.

\* \* \* \* \*

(c) The claim is for property damage arising from the same incident as a hospital recovery claim.

\* \* \* \* \*

(e) The claim is assertable as a counterclaim under an international agreement. (The claim should be processed under subpart G of this part).

\* \* \* \* \*

■ 69. Amend newly redesignated § 842.83 by revising paragraph (b)(2) and adding paragraph (f) to read as follows:

**§ 842.83 Non-assertable claims.**

\* \* \* \* \*

(b) \* \* \*

(2) Caused by a person who has accountability and responsibility for the damaged property under the Report of Survey system.

\* \* \* \* \*

(f) Loss or damage caused by an employee of another federal agency while the employee was acting in the scope of his employment.

■ 70. Revise newly redesignated § 842.85 to read as follows:

**§ 842.85 Referring a claim to the U.S. Attorney or the Department of Justice.**

If collection efforts are unsuccessful, AFLOA/JACC may refer a claim to the appropriate U.S. Attorney's Office or the Department of Justice for initiation of a lawsuit.

**Subpart M—[Redesignated as Subpart K]**

■ 71. Redesignate subpart M, consisting of §§ 842.100 through 842.114, as subpart K, consisting of §§ 842.88 through 842.102, respectively

■ 72. Revise newly redesignated § 842.88 to read as follows:

**§ 842.88 Scope of this subpart.**

This subpart establishes policies and procedures for all administrative claims under the National Guard Claims Act for which the Air Force has assigned responsibility. Unless otherwise outlined in this subpart, follow procedures as outlined in Subpart E for claims arising out of noncombat activities.

■ 73. Revise newly redesignated § 842.89 to read as follows:

**§ 842.89 Definitions.**

(a) *Air National Guard (ANG).* The federally recognized Air National Guard of each state, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, and Guam.

(b) *ANG member.* An ANG member is one who is performing duty under 32 U.S.C., section 316, 502, 503, 504, or 505 for which the member is entitled to pay from the United States or for which the member has waived pay from the United States.

(c) *ANG duty status—(1) Active federal service.* ANG members may serve on active Federal duty under 10 U.S.C. to augment the active Air Force under certain circumstances or for certain types of duty or training (e.g., overseas training exercises and ANG alert duty). Duty under 10 U.S.C. does not fall under this subpart.

(2) *Federally funded duty.* ANG members perform specified federally funded duty or training under 32 U.S.C. such as weekend drills, annual training, field exercises, range firing, military schooling, full time unit support, or recruiting duties. Duty under 32 U.S.C. falls under this subpart for noncombat activities.

(3) *State duty.* State duty is duty not authorized by federal law but required by the governor of the state and paid for from state funds. Such duty includes civil emergencies (natural or other disasters), civil disturbances (riots and strikes), and transportation requirements for official state functions,

public health, or safety. State duty does not fall under this subpart.

(d) *ANG technicians.* An ANG technician is a Federal employee employed under 32 U.S.C. 709. Tort claims arising out of his or her activity are settled under the Federal Tort Claims Act (FTCA).

■ 74. Amend newly redesignated § 842.90 by:

■ a. Removing the introductory text;

■ b. Revising paragraphs (a)(4) and (5) and (b).

■ c. Removing paragraph (f)(1) and redesignating paragraphs (f)(2) and (3) as (f)(1) and (2), respectively.

The revisions read as follows:

**§ 842.90 Delegations of authority.**

(a) \* \* \*

(4) The SJAs of the Air Force component commander of the U.S. Geographic combatant commands for claims arising within their respective combatant command areas of responsibility have delegated authority to settle claims payable or to deny claims filed for \$25,000 or less.

(5) SJAs of GCMs in PACAF and USAFE have delegated authority to settle claims payable, and deny claims filed, for \$15,000 or less.

(b) *Redelegation of authority.* A settlement authority may redelegate up to \$25,000 of settlement authority to a subordinate judge advocate or civilian attorney. This redelegation must be in writing and can be for all claims or limited to a single claim. The Chief, AFLOA/JACC may redelegate up to \$25,000, in writing, to paralegals assigned to AFLOA/JACC and, upon request, may authorize installation Staff Judge Advocates to redelegate their settlement authority to paralegals under their supervision.

\* \* \* \* \*

■ 75. Revise newly redesignated § 842.91 to read as follows:

**§ 842.91 Filing a claim.**

(a) *Elements of a proper claim.* A claim is must be filed on a Standard Form 95 or other written document. It must be signed by the Claimant or authorized agent, be for money damages in a sum certain, and lay out a basic statement as to the nature of the claim that will allow the Air Force to investigate the allegations contained therein.

(b) *Amending a claim.* A claimant may amend a claim at any time prior to final action. To amend a claim the claimant or his or her authorized agent must submit a written, signed demand.

■ 76. Revise newly redesignated § 842.92 to read as follows:

**§ 842.92 Advance payments.**

Subpart P of this part sets forth procedures for such payments.

■ 77. Revise newly redesignated § 842.93 to read as follows:

**§ 842.93 Statute of limitations.**

(a) A claim must be filed in writing within 2 years after it accrues. It is deemed to be filed upon receipt by The Judge Advocate General, USAF/JACC, or a Staff Judge Advocate of the Air Force. A claim accrues when the claimant discovers or reasonably should have discovered the existence of the act that resulted in the claimed loss. The same rules governing accrual pursuant to the Federal Tort Claims Act should be applied with respect to the National Guard Claims Act. Upon receipt of a claim that properly belongs with another military department, the claim is promptly transferred to that department.

(b) The statutory time period excludes the day of the incident and includes the day the claim was filed.

(c) A claim filed after the statute of limitations has run is considered if the U.S. is at war or in an armed conflict when the claim accrues or if the U.S. enters a war or armed conflict after the claim accrues, and if good causes shows how the war or armed conflict prevented the claimant from diligently filing the claim within the statute of limitations. But in no case will a claim be considered if filed more than two years after the war or armed conflict ends.

■ 78. Revise newly redesignated § 842.94 to read as follows:

**§ 842.94 Who may file a claim.**

The following individuals may file a claim under this subpart.

(a) Owners of the property or their authorized agents may file claims for property damage.

(b) Injured persons or their duly authorized agents may file claims for personal injury.

(c) Duly appointed guardians of minor children or any other persons legally entitled to do so under applicable local law may file claims for minors' personal injuries.

(d) Executors or administrators of a decedent's estate or another person legally entitled to do so under applicable local law, may file claims based on:

(1) An individual's death.

(2) A cause of action surviving an individual's death.

(e) Insurers with subrogation rights may file claims for losses paid in full by them. The parties may file claims jointly or individually, to the extent of each

party's interest, for losses partially paid by insurers with subrogation rights.

(f) Authorized agents signing claims show their title or legal capacity and present evidence of authority to present the claims.

■ 79. Revise newly redesignated § 842.95 to read as follows:

**§ 842.95 Who are proper claimants.**

(a) Citizens and inhabitants of the United States. U.S. inhabitants includes dependents of the U.S. military personnel and federal civilian employees temporarily outside the U.S. for purposes of U.S. government service.

(b) U.S. military personnel and civilian employees. NOTE: These personnel are not proper claimants for claims for personal injury or death that occurred incident to their service.

(c) Foreign military personnel when the damage or injury occurs in the U.S. Do not pay for claims under the MCA for personal injury or death of a foreign military personnel that occurred incident to their service.

(d) States, state agencies, counties, or municipalities, or their political subdivisions.

(e) Subrogees of proper claimants to the extent they have paid for the claim in question.

■ 80. Revise newly redesignated § 842.96 to read as follows:

**§ 842.96 Who are not proper claimants.**

(a) Governments of foreign nations, their agencies, political subdivisions, or municipalities.

(b) Agencies and Nonappropriated fund instrumentalities of the U.S. Government including the District of Columbia government.

(c) Inhabitants of foreign countries.

(d) The state, territory and its political subdivisions whose Air National Guard member caused the loss.

(e) Subrogees of the claimants in paragraphs (a) through (d) of this section.

■ 81. Revise newly redesignated § 842.97 to read as follows:

**§ 842.97 Claims payable.**

Claims arising from noncombat activities of the United States when caused by ANG members performing duty under 32 U.S.C. and acting within the scope of their employment, whether or not such injuries or damages arose out of their negligent or wrongful acts or omissions.

■ 82. In newly redesignated § 842.98, revise paragraphs (a), (b), and (c) to read as follows:

**§ 842.98 Claims not payable.**

\* \* \* \* \*

(a) Is covered by the FTCA, FCA, IACA, 10 U.S.C. 2734a and 2734b, Air Force Admiralty Claims Act (AFACA), 10 U.S.C. 9801–9804, 9806, MCA, 10 U.S.C. 2733, or covered under the Military Personnel and Civilian Employees' Claims Act (MPCECA), 31 U.S.C. 3701, 3721.

(b) NGCA claims arising from noncombat activities in the U.S. are not covered by the FTCA because more elements are needed to state an FTCA claim than are needed to state a claim under the NGCA for noncombat activities. All FTCA claims are based on elements of traditional tort liability (*i.e.*, duty, breach, causation, and damages); that is, they are fault based. Noncombat activity claims under the NGCA are based solely on causation and damages. Because NGCA claims for noncombat activities are not fault based, they are not covered by the FTCA.

(c) See subpart E for other claims not payable.

\* \* \* \* \*

■ 83. Revise newly redesignated § 842.99 to read as follows:

**§ 842.99 Applicable law.**

(a) Many of the exclusions in this subpart are based upon the wording of 28 U.S.C. 2680 or other federal statutes or court decisions interpreting the Federal Tort Claims Act. Federal case law interpreting the same exclusions under the Federal Tort Claims Act is applied to the National Guard Claims Act. Where state law differs with federal law, federal law prevails.

(b) *Extent of liability.* Where the claim arises is important in determining the extent of liability.

(1) When a claim arises in the United States, its territories or possessions, the same law as if the claim was cognizable under the FTCA will be applied.

(2) *Claims in foreign countries.* In claims arising in a foreign country, where the claim is for personal injury, death, or damage to or loss of real or personal property caused by an act or omission alleged to be negligent, wrongful, or otherwise involving fault of military personnel or civilian officers or employees of the United States acting within the scope of their employment, liability or the United States is determined according federal case law interpreting the FTCA. Where the FTCA requires application of the law of the place where the act or omission occurred, settlement authorities will use the rules set forth in the currently adopted edition of the *Restatement of the Law*, published by the American Law Institute, to evaluate the liability of the Air Force, subject to the following rules:

(i) Absolute or strict liability will not apply for claims not arising from noncombat activities.

(ii) Hedonic damages are not payable

(iii) The collateral source doctrine will not apply

(iv) Joint and several liability does not apply. Payment will be made only upon the portion of loss, damage, injury or death attributable to the Armed Forces of the United States.

(v) Future economic loss will be discounted to present value after deducting for federal income taxes and, in cases of wrongful death, personal consumption.

(c) Do not approve payment for:

(1) Punitive damages.

(2) Cost of medical or hospital services furnished at U.S. expense.

(3) Cost of burial expenses paid by the United States.

(d) *Settlement by insurer or joint tortfeasor.* When settlement is made by an insurer or joint tortfeasor and an additional award is warranted, an award may be made if both of the following are present:

(1) The United States is not protected by the release executed by the claimant.

(2) The total amount received from such source is first deducted.

■ 84. In newly redesignated § 842.100, revise paragraphs (a), (b), (c), and (d) to read as follows:

**§ 842.100 Appeal of final denials.**

\* \* \* \* \*

(a) A claimant may appeal the final denial of the claim. The claimant sends the request, in writing, to the settlement authority that issued the denial letter within 60 days of the date the denial letter was mailed. The settlement authority may waive the 60 day time limit for good cause.

(b) Upon receipt of the appeal, the original settlement authority reviews the appeal.

(c) Where the settlement authority does not reach a final agreement on an appealed claim, he or she sends the entire claim file to the next higher settlement authority, who is the appellate authority for that claim. Any higher settlement authority may act upon an appeal.

(d) The decision of the appellate authority is the final administrative action on the claim.

■ 85. Revise newly redesignated § 842.101 to read as follows:

**§ 842.101 Government's right of subrogation, indemnity, and contribution.**

The Air Force becomes subrogated to the rights of the claimant upon settling a claim. The Air Force has the rights of contribution and indemnity permitted

by the law of the situs or under contract. Do not seek contribution or indemnity from ANG members whose conduct gave rise to Government liability.

■ 86. Revise newly redesignated § 842.102 to read as follows:

**§ 842.102 Attorney fees.**

In the settlement of any claim pursuant to 32 U.S.C. 715 and this subpart, attorney fees will not exceed 20 percent of any award provided that when a claim involves payment of an award over \$1,000,000, attorney fees on that part of the award exceeding \$1,000,000 may be determined by the Secretary of the Air Force. For the purposes of this paragraph, an award is deemed to be the cost to the United States at the time of purchase of a structured settlement, and not its future value.

**Subpart N—[Redesignated as Subpart L]**

■ 87. Redesignate subpart N, consisting of §§ 842.115 through §§ 842.125 as subpart L, consisting of §§ 842.103 through §§ 842.113, respectively.

■ 88. Revise newly redesignated § 842.103 to read as follows:

**§ 842.103 Scope of this subpart.**

This subpart explains how the United States asserts and settles claims for costs of medical care, against third parties under the Federal Medical Care Recovery Act (FMCRA) (10 U.S.C. 1095) and various other laws.

■ 89. Amend newly redesignated § 842.104 by revising paragraph (a) and adding paragraphs (h) and (i) to read as follows:

**§ 842.104 Definitions.**

\* \* \* \* \*

(a) *Medical Cost Reimbursement Program Regional Field Offices.* The Chief of the Medical Cost Reimbursement Program (MCRP) Branch determines and assigns geographic responsibility for all regional field offices. Each field office is responsible for investigating all potential claims and asserting claims within their jurisdiction for the cost of medical care provided by either a Medical Treatment Facility or at a civilian facility through Tricare.

\* \* \* \* \*

(h) *Accrued pay.* The total of all pay accrued to the account of an active duty member during a period when the member is unable to perform military duties. It does not include allowances.

(i) *Future care.* Medical care reasonably expected to be provided or paid for in the future treatment of an

injured party as determined during the investigative process.

■ 90. Revise newly redesignated § 842.105 to read as follows:

**§ 842.105 Delegations of authority.**

(a) *Settlement authority.* The following individuals have delegated authority to settle, compromise, or waive MCRP claims for \$300,000 or less and to accept full payment on any claim:

- (1) The Judge Advocate General.
- (2) The Deputy Judge Advocate General.
- (3) The Director of Civil Law.
- (4) Chief, Claims and Tort Litigation Staff and the Chief, MCRP.

(b) *Redelegation of authority.* The individuals described in paragraph (a) of this section may re-delegate a portion or all of their authority to subordinates, subject to the following limitations:

(1) SJAs, when given Medical Cost Reimbursement (MCR) claims jurisdiction, are granted authority to waive, compromise, or settle claims in amounts of \$25,000 or less. This authority may be re-delegated in writing with authority to re-delegate to subordinates.

(2) SJAs of numbered Air Forces, when given MCR claims jurisdiction, are granted authority to waive, compromise, or settle claims in amounts of \$40,000 or less. This authority may be re-delegated in writing with authority to re-delegate to subordinates.

(3) SJAs of single base GCMs, the SJAs of GMCs in PACAF and USAFE, and the SJAs of each Air Force base, station, or fixed installation have delegated authority to compromise or waive claims for \$15,000 or less and to accept full payment on any claim

(c) *Authority to assert a claim.* Each settlement authority has authority to assert a claim in any amount for the reasonable value of medical care.

(d) *Authority to reduce, withdraw, and restore settlement authority.* Any superior settlement authority may reduce, withdraw, or restore delegated authority.

(e) *Settlement negotiations.* A settlement authority may settle a claim filed for an amount within the delegated settlement authority. Claims in excess of the delegated authority must be approved by the next higher settlement authority. Unsuccessful negotiations at one level do not bind higher authority.

Note: Telephonic approvals, in the discretion of the higher settlement authority, are authorized.

(f) *Special exceptions.* Only the Department of Justice (DOJ) may approve claims involving:

(1) Compromise or waiver of a claim for more than \$300,000.

(2) Settlement previously referred to DOJ.

(3) Settlement where a third party files suit against the U.S. or the injured party arising out of the same incident.

■ 91. Revise newly redesignated § 842.107 to read as follows:

**§ 842.107 Nonassertable claims.**

The following are considered nonassertable claims and should not be asserted:

(a) *Claims against any department, agency, or instrumentality of the United States.* “Agency or instrumentality” includes any self-insured nonappropriated fund activity whether revenue producing, welfare, or sundry. The term does not include private associations.

(b) *Claims for care furnished a veteran by the Department of Veterans Affairs (VA) for service connected disability.* However, claims may be asserted for the reasonable value of medical care an Air Force member receives prior to his or her discharge and transfer to the VA facility or when the Air Force has reimbursed the VA facility for the care.

(c) *Claims for care furnished a merchant seaman under 42 U.S.C. 249.* A claim against the seaman’s employer should not be filed.

(d) *Government contractors.* In claims in which the United States must reimburse the contractor for a claim according to the terms of the contract, settlement authorities investigate the circumstances surrounding the incident to determine if assertion is appropriate. If the U.S. is not required to reimburse the contractor, the MCR authority may assert a claim against the contractor.

(e) *Foreign governments.* Settlement authorities investigate any claims that might be made against foreign governments, their political subdivisions, armed forces members or civilian employees.

(f) *U.S. personnel.* Claims are not asserted against members of the uniformed services; employees of the U.S., its agencies or instrumentalities; or an individual who is a dependent of a service member or employee at the time of assertion unless they have insurance to pay the claim, they were required by law or regulation to have insurance which would have covered the Air Force, or their actions, which necessitated the medical treatment provided at government expense, constituted willful misconduct or gross negligence.

■ 92. Amend newly redesignated § 842.108 by revising paragraphs (a) and (b) to read as follows:

**§ 842.108 Asserting the claim.**

\* \* \* \* \*

(a) MCR personnel assert a claim against a tortfeasor or other third party using a formal letter on Air Force stationery. The assertion is made against all potential payers, including insurers. The demand letter should state the legal basis for recovery and sufficiently describe the facts and circumstances surrounding the incident giving rise to medical care. Applicable bases of recovery include U.S. status as a third-party beneficiary under various types of insurance policies, workers’ compensation laws, no-fault laws, or other Federal statutes, including COB or FMCRA.

(b) The MCR authority must promptly notify the injured parties or their legal representatives, in writing, that the United States will attempt to recover from the third parties the reasonable value of medical care furnished or to be furnished and that they:

(1) Should seek advice from a legal assistance officer or civilian counsel.

(2) Must cooperate in the prosecution of all actions of the United States against third parties.

(3) Must furnish a complete statement regarding the facts and circumstances surrounding the incident which caused the injury.

(4) Must not execute a release or settle any claim which exists as a result of the injury without prior notice to the MCR authority.

\* \* \* \* \*

■ 93. Revise newly redesignated § 842.109 to read as follows:

**§ 842.109 Referring a claim to the US Attorney.**

(a) All cases that require forwarding to the DoJ must be routed through the Chief, MCRP. The MCR authority ensures that personnel review all claims for possible referral not later than two years after the date of the incident for tort based cases.

(b) The United States or the injured party on behalf of the United States must file suit within 3 years after an action accrues. This is usually 3 years after the initial treatment is provided in a federal medical facility or after the initial payment is made by Tricare, whichever is first.

■ 94. Revise newly redesignated § 842.111 to read as follows:

**§ 842.111 Recovery rates in government facilities.**

The **Federal Register** contains the rates set by the Office of Management and Budget, of which judges take judicial notice. Apply the rates in effect at the time of care to claims.

■ 95. Revise newly redesignated § 842.112 to read as follows:

**§ 842.112 Waiver and compromise of United States interest.**

Waivers and compromises of government claims can be made. This paragraph lists the basic guidance for each action. (See this subpart for claims involving waiver and compromise of amounts in excess of settlement authorities' delegated amounts.)

(a) *Convenience of the Government.* When compromising or waiving a claim for convenience of the Government, settlement authorities should consider the following factors:

- (1) Risks of litigation.
- (2) Questionable liability of the third party.
- (3) Costs of litigation.
- (4) Insurance (Uninsured or Underinsured Motorist and Medical Payment Coverage) or other assets of the tortfeasor available to satisfy a judgment for the entire claim.
- (5) Potential counterclaim against the U.S.
- (6) Jury verdict expectancy amount.
- (7) Amount of settlement with proposed distribution.
- (8) Cost of any future care.
- (9) Tortfeasor cannot be located.
- (10) Tortfeasor is judgment proof.
- (11) Tortfeasor has refused to pay and the case is too weak for litigation.

(b) *Hardship on the injured party.* When compromising or waiving a claim to avoid undue hardship on the injured party, settlement authorities should consider the following factors:

- (1) Permanent disability or disfigurement of the injured party.
- (2) Decreased earning power of the injured party.
- (3) Out of pocket losses to the injured party.
- (4) Financial status of the injured party.
- (5) Pension rights of the injured party.
- (6) Other government benefits available to the injured party.
- (7) An offer of settlement from a third party which includes virtually all of the third party's assets, although the amount is considerably less than the calculation of the injured party's damages.
- (8) Whether the injured party received excessive treatment.
- (9) Amount of settlement with proposed distribution, including reductions in fees or damages by other parties, medical providers, or attorneys in order to reduce the hardship on the injured party.

(c) *Compromise or waiver.* A compromise or waiver can be made upon written request from the injured party or the injured party's legal representative.

■ 96. Revise newly redesignated § 842.113 to read as follows:

**§ 842.113 Reconsideration of a waiver for undue hardship.**

A settlement authority may reconsider its previous action on a request for waiver or compromise whether requested or not. Reconsideration is normally on the basis of new evidence or discovery of errors in the waiver submission or settlement, but can be based upon a re-evaluation of the claim by the settlement authority.

**Subpart O—[Removed]**

- 97. Remove subpart O, consisting of §§ 842.126 through 842.136.
- 98. Add new subpart M, consisting of §§ 842.114 through 842.117.

**Subpart M—Nonappropriated Fund Claims****§ 842.114 Scope of this subpart.**

This subpart describes how to settle claims for and against the United States for property damage, personal injury, or death arising out of the operation of Nonappropriated Fund Instrumentalities (NAFIs). Unless stated below, such claims will follow procedures outlined in other subparts of this part for the substantive law applicable to the particular claim. For example, a NAFI claim adjudicated under the Federal Tort Claims Act will follow procedures in this subpart as well as subpart K.

**§ 842.115 Definitions.**

(a) *Army and Air Force Exchange Service (AAFES).* The Army and Air Force Exchange Service is a joint command of the Army and Air Force, under the jurisdiction of the Chiefs of Staff of the Army and Air Force, which provides exchange and motion picture services to authorized patrons.

(b) *Morale, welfare, and recreation (MWR) activities.* Air Force MWR activities are activities operated directly or by contract which provide programs to promote morale and well-being of the Air Force's military and civilian personnel and their dependents. They may be funded wholly with appropriated funds, primarily with nonappropriated funds (NAF), or with a combination of appropriated funds and NAFs.

(c) *Nonappropriated funds.* Nonappropriated funds are funds generated by Department of Defense military and civilian personnel and their dependents and used to augment funds appropriated by the Congress to provide a comprehensive morale-building, welfare, religious, educational, and recreational program, designed to improve the well-being of military and civilian personnel and their dependents.

(d) *Nonappropriated funds instrumentality.* A nonappropriated fund instrumentality is a Federal government instrumentality established to generate and administer nonappropriated funds for programs and services contributing to the mental and physical well-being of personnel.

**§ 842.116 Payment of claims against NAFIs.**

Substantiated claims against NAFIs must not be paid solely from appropriated funds. Claims are sent for payment as set out in this subpart. Do not delay paying a claimant because doubt exists whether to use appropriated funds or NAFs. Pay the claim initially from appropriated funds and decide the correct funding source later.

**§ 842.117 Claims by customers, members, participants, or authorized users.**

(a) *Customer complaints.* Do not adjudicate claims complaints or claims for property loss or damage under this subpart that the local NAFI activity can satisfactorily resolve.

(b) *Claims generated by concessionaires.* Most concessionaires must have commercial insurance. Any unresolved claims or complaints against concessionaires or their insurers are sent to the appropriate contracting officers.

**Subpart P—[Redesignated as Subpart N]**

■ 99. Redesignate subpart P, consisting of §§ 842.137 through 842.143, as subpart N, consisting of §§ 842.118 through 842.124.

■ 100. Revise newly redesignated § 842.118 to read as follows:

**§ 842.118 Scope of this subpart.**

(a) This subpart explains how to process certain administrative claims:

(1) Against the United States for property damage, personal injury, or death, arising out of Air Force assigned noncombat missions performed by the Civil Air Patrol (CAP), as well as certain other Air Force authorized missions performed by the CAP in support of the Federal government.

(2) In favor of the United States for damage to US Government property caused by CAP members or third parties.

(b) Unless stated below, such claims will follow procedures outlined in other subparts of this part for the substantive law applicable to the particular claim. For example, a CAP claim adjudicated under the Military Claims Act will follow procedures in this subpart as well as subpart E.

**§§ 842.120 and 842.121 [Removed]**

- 101. Remove newly-redesignated §§ 842.120 and 842.121.

**§§ 842.122 through 842.124 [Redesignated as §§ 842.120 through 842.122]**

- 102. Newly redesignated §§ 842.122 through 842.124 are further redesignated as §§ 842.120 through 842.122, respectively.

**Subpart Q—[Redesignated as Subpart O]**

- 103. Redesignate subpart Q, consisting of §§ 842.144 through 842.150, as subpart O, consisting of §§ 842.123 through 842.129.
- 104. Revise newly redesignated § 842.123 to read as follows:

**§ 842.123 Scope of this subpart.**

This subpart tells how to make an advance payment before a claim is filed or finalized under the Military Claims, Foreign Claims and National Guard Claims Acts.

- 105. In newly redesignated § 842.124, revise paragraph (c)(4) to read as follows:

**§ 842.124 Delegation of authority.**

\* \* \* \* \*

(c) \* \* \*

\* \* \* \* \*

(4) SJAs of the Air Force component commander of the US Geographic combatant commands for claims arising within their respective combatant command areas of responsibility.

\* \* \* \* \*

- 106. In newly redesignated § 842.126, revise paragraph (b) to read as follows:

**§ 842.126 When authorized.**

\* \* \* \* \*

(b) The potential claimant has an immediate need amounting to a hardship for food, shelter, medical or burial expenses, or other necessities. In the case of a commercial enterprise, severe financial loss or bankruptcy will result if the Air Force does not make an advance payment.

\* \* \* \* \*

Henry Williams,

Acting Air Force Federal Liaison Officer.

**DEPARTMENT OF HOMELAND SECURITY****Coast Guard****33 CFR Part 165**

[Docket Number USCG-2016-0171]

RIN 1625-AA00

**Safety Zone; Louisiana Dragon Boat Race, Red River Mile Marker, (MM) 88.0 to (MM) 88.5**

AGENCY: Coast Guard, DHS.

ACTION: Notice of Proposed Rulemaking.

**SUMMARY:** The Coast Guard proposes to establish a permanent safety zone for an annually recurring marine event in the Red River, from MM 88.0 to MM 88.5. This action is necessary to protect persons and vessels from the potential safety hazards associated with a dragon boat race taking place in early May, 2016 and recurring annually thereafter. This proposed rulemaking would prohibit persons and vessels from being in the safety zone unless specifically authorized by the Captain of the Port (COTP), Lower Mississippi River or a designated representative. We invite your comments on this proposed rulemaking.

**DATES:** Comments and related material must be received by the Coast Guard on or before April 14, 2016.

**ADDRESSES:** You may submit comments identified by docket number USCG-2016-0171 using the Federal eRulemaking Portal at <http://www.regulations.gov>. See the "Public Participation and Request for Comments" portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

**FOR FURTHER INFORMATION CONTACT:** If you have questions about this proposed rulemaking, call or email LT Tyrone Conner, Sector Lower Mississippi River Waterways Management Division, U.S. Coast Guard; telephone (901)521-4725, email [Tyrone.L.Conner@uscg.mil](mailto:Tyrone.L.Conner@uscg.mil).

**SUPPLEMENTARY INFORMATION:****I. Table of Abbreviations**

CFR Code of Federal Regulations  
 DHS Department of Homeland Security  
 E.O. Executive order  
 FR Federal Register  
 NPRM Notice of proposed rulemaking  
 Pub. L. Public Law  
 § Section  
 U.S.C. United States Code

**II. Background, Purpose, and Legal Basis**

This is the sixth annual Louisiana Dragon Boat Race, occurring each year

on the Red River during the first few weeks in May. We have established a safety zone for the race event in past years through a temporary final rulemaking each year. For this year and subsequent years, we propose to establish the safety zone as a permanent annually recurring regulation to safeguard against the hazards associated with a race event on the Red River, near Alexandria, Louisiana.

The legal basis and authorities for this rule are found in 33 U.S.C. 1231. The purpose of this proposed safety zone is to protect both spectators and participants from the hazards associated with the race event.

**III. Discussion of Proposed Rule**

The COTP Lower Mississippi River proposes to establish a safety zone approximately 7:00 a.m. to 5:00 p.m. for approximately 10 hours on the first or second Saturday in May, recurring annually. The proposed safety zone would encompass all waters of the Red River from Mile Marker (MM) 88.0 to (MM) 88.5. All persons and vessels, except those persons and vessels participating in the dragon boat race and those vessels enforcing the areas, would be prohibited from entering, transiting through, anchoring in, or remaining within the safety zone. No vessel or person would be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. The regulatory text we are proposing appears at the end of this document.

**IV. Regulatory Analyses**

We developed this proposed rule after considering numerous statutes and executive orders (E.O.s) related to rulemaking. Below we summarize our analyses based on a number of these statutes and E.O.s, and we discuss First Amendment rights of protestors.

**A. Regulatory Planning and Review**

E.O.s 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This NPRM has not been designated a "significant regulatory action," under E.O. 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget.

This regulatory action determination is based on the time, location and duration of the safety zone. Vessel traffic would be restricted from entering,

transiting, or anchoring within a small portion of the Red River during one day each May. Vessels may request permission from the COTP to deviate from the restriction and transit through the safety zone and notifications to the marine community will be made through local notice to mariners (LNM) and broadcast notice to mariners (BNM). Therefore, those operating on the waterway will be able to plan operations around the proposed safety zone and its enforcement times.

#### B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section IV.A above this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

#### C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

#### D. Federalism and Indian Tribal Governments

A rule has implications for federalism under E.O. 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in E.O. 13132.

Also, this proposed rule does not have tribal implications under E.O. 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

#### E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

#### F. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves establishing a temporary safety zone for approximately 10 hours on one day in May each year on the Red River from (MM) 88.0 to (MM) 88.5. Normally such actions are categorically excluded from further review under paragraph

34(g) of Figure 2–1 of Commandant Instruction M16475.ID. A preliminary environmental analysis checklist and Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

#### G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

#### V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal eRulemaking Portal at <http://www.regulations.gov>. If your material cannot be submitted using <http://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

We accept anonymous comments. All comments received will be posted without change to <http://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Documents mentioned in this NPRM as being available in the docket, and all public comments, will be in our online docket at <http://www.regulations.gov> and can be viewed by following that Web site’s instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted or a final rule is published.

**List of Subjects in 33 CFR Part 165**

Marine safety, Navigation (water), Reporting and recordkeeping requirements, Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 165 as follows:

**PART 165— REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS**

■ 1. The authority citation for part 165 continues to read as follows:

**Authority:** 33 U.S.C. 1231; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, 160.5;

Department of Homeland Security Delegation No. 0170.1

■ 2. In § 165.801, amend Table 6 by adding line 13 to read as follows:

**§ 165.801 Annual fireworks displays and other events in the Eighth Coast Guard District requiring safety zones.**

**BILLING CODE 9110–04–P**

**POSTAL SERVICE**

**39 CFR Part 230**

**Procedures Relating to the Disposition of Property Acquired by the United States Postal Service Office of Inspector General for Use as Evidence**

**AGENCY:** Postal Service.

**ACTION:** Proposed rule.

**SUMMARY:** This proposed rule establishes procedures for the disposition of abandoned property held by the United States Postal Service Office of Inspector General. The rule establishes procedures for determining the ownership of abandoned property, the advertisement of abandoned items with no apparent owner held by the Office of Inspector General, and the disposal of items declared abandoned.

**DATES:** Comments must be received on or before April 29, 2016.

**ADDRESSES:** Written comments should be directed to the Office of Inspector General, Office of General Counsel, 1735 North Lynn Street, Arlington, Virginia 22209–2013. Copies of all written comments will be available at that address for inspection and copying between 9 a.m. and 4 p.m., Monday through Friday.

**FOR FURTHER INFORMATION CONTACT:** Gladis Griffith, Office of General Counsel, (703) 248–4683.

**SUPPLEMENTARY INFORMATION:** In the course of conducting official investigations, Special Agents of the United States Postal Service Office of Inspector General frequently recover property lost or stolen from the mail and obtain custody of property needed for use as evidence in proceedings to enforce various provisions of the United States Code. In most cases, such property is returned to the owner at the conclusion of the investigation or any resulting administrative or judicial proceedings. In some cases, however, the owners fail to claim property, and it therefore remains in the custody of the Office of Inspector General after it is no longer needed. The proposed rule would establish a fair and uniform procedure to identify the owners of such property, afford them an opportunity to claim its return, and in the event a valid claim is not received, treat such property as abandoned and direct that it be sold or put to official use. Apparent owners would be notified of their right to claim property, and where no apparent owner is known and the value of the property in question exceeds \$200, notice would be published on the Office of Inspector General’s Web site inviting the owner to submit a claim for its return.

**List of Subjects in 39 CFR Part 230**

Administrative practice and procedure, Claims, Law enforcement, Property (abandoned).

For the reasons stated in the preamble, the Postal Service proposes to amend 39 CFR part 230 as follows:

**PART 230—OFFICE OF INSPECTOR GENERAL**

■ 1. The authority citation for part 230 continues to read as follows:

**Authority:** 5 U.S.C. App.3; 39 U.S.C. 401(2) and 1001.

■ 2. Add the subpart C to read as follows:

**Subpart C—Rules of Procedure Relating to the Disposition of Stolen Mail Matter and Property Acquired by the Office of Inspector General for Use as Evidence**

- Sec.
- 230.30 Scope.
- 230.31 Definitions.
- 230.32 Disposition of property of apparent owners where property is valued over \$200.
- 230.33 Disposition of property of apparent owners where property is valued at \$200 or less.
- 230.34 Disposition of property of unknown owners where property is valued over \$200.
- 230.35 Disposition of property of unknown owners where property is valued at \$200 or less.
- 230.36 Contraband and property subject to court order.
- 230.37 Determination of type of property.
- 230.38 Disposition of abandoned property; additional period for filing claims.
- 230.39 Submission of claims.
- 230.40 Determination of claims.
- 230.41 Reconsideration of claims.
- 230.42 Disposition of property declared abandoned where title vests in the government.

**§ 230.30 Scope.**

This subpart prescribes procedures governing the disposition of any property (real, personal, tangible, or intangible) obtained by the United States Postal Service Office of Inspector General (Office of Inspector General) for possible use as evidence after the need to retain such property no longer exists.

**§ 230.31 Definitions.**

The following definitions apply to this subpart:

(a) *Apparent*. That which is clear, plain, and evident.

(b) *Owner*. The person recognized by the law as having the ultimate control over and right to use the property.

(c) *Ruling official*. The official who has the authority to grant or deny the claim for the abandoned or other unclaimed property where the property is located, typically the Executive Special Agent in Charge, or a designee. If, however, the property is a firearm or contraband, the Executive Special Agent in Charge should consult with the Office of Inspector General, Office of General Counsel prior to commencing the abandonment action.

(d) *Claimant*. The person who submitted the claim for the abandoned or other unclaimed property.

(e) *Owner*. The person recognized by the law as having the ultimate control over and right to use the property.

**§ 230.32 Disposition of property of apparent owners where property is valued over \$200.**

Where an apparent owner of property subject to this subpart is known, and the estimated value of the property exceeds \$200, the owner shall be notified by certified mail at his last known address. The written notice shall describe the property and the procedure for filing a claim for its return (*see*, §§ 230.36 and 230.39). Such claims must be filed within 30 days from the date the written notice is postmarked. If the apparent owner of the property fails to file a timely claim, the property is considered abandoned and must be disposed of as provided in § 230.38.

**§ 230.33 Disposition of property of apparent owners where property is valued at \$200 or less.**

Where an apparent owner of property subject to this subpart is known, and the estimated value of the property is \$200 or less, the Executive Special Agent in Charge, or a designee, should attempt to return the property to the owner. If successful, the Executive Special Agent in Charge shall request the owner sign a Hold Harmless Agreement. If not, the Executive Special Agent in Charge shall vest title in the Government.

**§ 230.34 Disposition of property of unknown owners where property is valued over \$200.**

(a) Where no apparent owner of property subject to this subpart is known, except property described in § 230.36, and the estimated value of the property exceeds \$200, the Executive Special Agent in Charge, or a designee,

must publish notice providing the following information:

(1) A description of the property, including model or serial numbers, if known;

(2) A statement of the location where the property was found;

(3) The name, address, and telephone number of the Executive Special Agent in Charge who has custody of the property; and

(4) A statement inviting any person who believes he or she is fully entitled to the property to submit a claim for its return with the Executive Special Agent in Charge identified in the notice. Such claim must be submitted within 30 days from the date of first publication of the notice.

(b) The notice under paragraph (a) of this section must be published for three consecutive weeks on the Office of Inspector General's Web site.

**§ 230.35 Disposition of property of unknown owners where property is valued at \$200 or less.**

Where the owner of property subject to this subpart is unknown and the estimated value of the property is \$200 or less, no notice is required, and the Executive Special Agent in Charge, or a designee, should vest title in the Government, subject to the rights of the owner to submit a valid claim as provided in § 230.38.

**§ 230.36 Contraband and property subject to court order.**

Claims submitted with respect to property subject to this subpart, possession of which is unlawful, must be denied, in writing, by certified mail, and the person submitting the claim must be accorded 45 days from the postmarked date to institute judicial proceedings to challenge the denial. If judicial proceedings are not instituted within 45 days, or any extension of time for good cause shown, the contraband property must be destroyed unless the Executive Special Agent in Charge, or a designee, determines that it should be placed in official use by the Office of Inspector General. Property subject to this part, the disposition of which is involved in litigation or is subject to an order of court, must be disposed of as determined by the court.

**§ 230.37 Determination of type of property.**

If the Office of Inspector General is unable to determine whether the personal property in its custody is abandoned or voluntarily abandoned, it shall contact the Office of Inspector General, Office of General Counsel for such a determination.

**§ 230.38 Disposition of abandoned property; additional period for filing claims.**

(a) Upon expiration of the time provided in §§ 230.32 and 230.34 for the filing of claims or any extension thereof, and without the receipt of a timely claim, the property described in the notice is considered abandoned and becomes the property of the Government. However, if the owner satisfies the requirements of paragraph (b) of this section, except for property described in § 230.36, such abandoned property must be returned to the owner if a valid claim is filed within three years from the date the property became abandoned, with the following qualifications:

(1) Where property has been placed in official use by the Office of Inspector General, a person submitting a valid claim under this section must be reimbursed the fair market value of the property at the time title vested in the Office of Inspector General, less costs incurred in returning or attempting to return such property to the owner; or

(2) Where property has been sold, a person submitting a valid claim under this section must be reimbursed the same amount as the last appraised value of the property prior to the sale of such property.

(b) In order to present a valid claim under paragraph (a) of this section, the claimant must establish he or she had no actual or constructive notice that he or she was entitled to file a claim pursuant to § 230.32 or § 230.34 prior to the date the property became abandoned. Publication of a notice pursuant to § 230.34 provides constructive notice, unless a claimant can demonstrate circumstances that reasonably precluded his or her access to the published notice.

**§ 230.39 Submission of claims.**

Claims submitted pursuant to this subpart must be submitted on Postal Service Form 1503, which may be obtained from the Executive Special Agent in Charge who has custody of the property.

**§ 230.40 Determination of claims.**

Upon receipt of a claim under this subpart, the Office of Inspector General must conduct an investigation to determine the merits of the claim. The results of the investigation must be submitted to the ruling official, who must approve or deny the claim by written decision, a copy of which must be forwarded to the claimant by certified mail. If the claim is granted, the conditions of relief and the procedures to be followed to obtain the relief shall be set forth. If the claim is

denied, the claimant shall be advised of the reason for such denial.

#### § 230.41 Reconsideration of claims.

A written request for reconsideration of denied claims must be based on evidence recently developed or not previously presented. It must be submitted within 10 days of the postmarked date of the letter denying the claim. The ruling official shall advise the Asset Forfeiture Coordinator if a timely reconsideration of the denial is made. The Office of Inspector General, Office of General Counsel shall rule on the reconsideration request.

#### § 230.42 Disposition of property declared abandoned where title vests in the government.

Property declared abandoned, including cash and proceeds from the sale of property subject to this part, may be shared with federal, state, or local agencies. Abandoned property may also be destroyed, sold, or placed into official use. However, before abandoned property can be shared with another agency, sold, or placed into official use, the Executive Special Agent in Charge must confer with the Office of Inspector General, Office of General Counsel. Unless the Executive Special Agent in Charge determines the cash or proceeds of the sale of the abandoned property are to be shared with other law enforcement agencies, such cash or proceeds shall be converted to money orders and transmitted to: United States Postal Service, Disbursing Officer, 2825 Lone Oak Parkway, Eagan, MN 55121-9640.

Stanley F. Mires,

Attorney, Federal Compliance.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### 42 CFR Part 8

RIN 0930-AA22

#### Medication Assisted Treatment for Opioid Use Disorders

**AGENCY:** Substance Abuse and Mental Health Services Administration (SAMHSA), HHS.

**ACTION:** Proposed rule.

**SUMMARY:** The Secretary of the Department of Health and Human Services (the Secretary) (HHS) proposes a rule to increase the highest patient limit for qualified physicians to treat opioid use disorder under section 303(g)(2) of the Controlled Substances

Act (CSA) from 100 to 200. The purpose of the proposed rule is to increase access to treatment for opioid use disorder while reducing the opportunity for diversion of the medication to unlawful use.

**DATES:** To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on May 31, 2016.

**ADDRESSES:** You may submit comments, identified by Regulatory Information Number (RIN) 0930-AA22, by any of the following methods:

- *Electronically: Federal eRulemaking Portal:* Go to <http://www.regulations.gov> and follow the instructions for submitting comments.

- *Regular Mail or Hand Delivery or Courier:* Written comments mailed by regular mail must be sent to the following address only: The Substance Abuse and Mental Health Services Administration, Department of Health and Human Services, Attn: Jinhee Lee, SAMHSA, 5600 Fishers Lane, Room 13E21C, Rockville, Maryland 20857. Please allow sufficient time for mailed comments to be received before the close of the comment period.

- *Express or Overnight Mail:* Written comments sent by hand delivery, or regular, express or overnight mail must be sent to the following address only: The Substance Abuse and Mental Health Services Administration, Department of Health and Human Services, Attn: Jinhee Lee, SAMHSA, 5600 Fishers Lane, Room 13E21C, Rockville, Maryland 20857.

*Instructions:* To avoid duplication, please submit only one copy of your comments by only one method. All submissions received must include the agency name and docket number or RIN for this rulemaking. All comments received will become a matter of public record and will be posted without change to <http://www.regulations.gov>, including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process and viewing public comments, see the “Public Participation” heading of the SUPPLEMENTARY INFORMATION section of this document.

*Docket:* For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>.

## I. Executive Summary

### A. Purpose

The purpose of this proposed rule is to expand access to medication-assisted treatment (MAT) by allowing eligible practitioners to request approval to treat up to 200 patients under section 303(g)(2) of the Controlled Substances Act (CSA). The rulemaking also includes requirements to ensure that patients receive the full array of services that comprise evidence-based MAT and minimize the risk that the medications provided for treatment are misused or diverted. We hope that this proposed rule will stimulate broader availability of high-quality MAT both in specialized addiction treatment settings and throughout more mainstream health care delivery systems.

Section 303(g)(2) of the CSA (21 U.S.C. 823(g)(2)) allows individual practitioners to dispense or prescribe Schedule III, IV, or V controlled substances that have been approved by the Food and Drug Administration (FDA) for use in maintenance and detoxification treatment without registering as an opioid treatment program (OTP). Currently, the only FDA-approved medications that meet this standard are buprenorphine and the combination buprenorphine/naloxone (hereinafter referred to as buprenorphine). Buprenorphine is a schedule III controlled substance under the CSA. The CSA also imposes a limit on the number of patients a practitioner may treat with certain types of FDA-approved narcotic drugs, such as buprenorphine, at any one time. Pursuant to 21 U.S.C. 823(g)(2)(B)(iii), the Secretary is authorized to change this patient limit by regulation at any one time.

Section 303(g)(2)(B)(iii) of the CSA allows qualified practitioners who file an initial notification of intent (NOI) to treat a maximum of 30 patients at a time. After 1 year, the practitioner may file a second NOI indicating his/her intent to treat up to 100 patients at a time. To qualify to treat any patients with buprenorphine, the practitioner must be a physician, possess a valid license to practice medicine, be a registrant of the Drug Enforcement Administration (DEA), have the capacity to refer patients for appropriate counseling and other necessary ancillary services, and have completed

required training. As specified in the statute, the training requirement may be satisfied in several ways: One may hold subspecialty board certification in addiction psychiatry from the American Board of Medical Specialties or addiction medicine from the American Osteopathic Association; hold an addiction certification from the American Society of Addiction Medicine (ASAM); complete an 8-hour training provided by an approved organization; have participated as an investigator in one or more clinical trials leading to the approval of a medication that qualifies to be prescribed under 21 U.S.C. 823(g)(2); or complete other training or have such other experience as the State medical licensing board or the Secretary considers to demonstrate the ability of the physician to treat and manage persons with opioid use disorder.

Access to MAT has been subject to patient limits via the provisions contained in the CSA and enforced by DEA. Since 21 U.S.C. 823(g)(2) was originally modified by legislation in 2000 to allow the provision of MAT without registering as an OTP, additional modifications have been made to address the application of the patient limit in group medical practices and to create a higher patient limit for practitioners with 1 year of experience. These changes, while important, have not proven sufficient to support the development of adequate treatment capacity to keep pace with the growth of the national crisis of opioid misuse and overdose. To the extent that the current patient limit contributes to this access challenge, this proposed rule seeks to make a useful change in an effort to improve access.

### B. Summary of Major Provisions

The proposed rule would revise the highest patient limit from 100 patients per practitioner with an existing waiver (waivered practitioner) to 200 patients for practitioners who meet certain criteria. Practitioners who have a waiver to treat 100 patients for at least 1 year would be eligible to apply for a waiver to treat up to 200 patients if they possess a subspecialty board certification in addiction medicine or addiction psychiatry or practice in a qualified practice setting as defined in this proposed rule. In either case, practitioners with the higher limit of 200 would also be required to accept greater responsibility for ensuring behavioral health services and care coordination are received and for ensuring quality assurance and improvement practices, diversion control, and continuity of care in

emergencies. The higher limit would also carry with it the duty to regularly reaffirm the practitioner's ongoing eligibility and to participate in data reporting and monitoring as required by SAMHSA. In addition, practitioners in good standing with a current waiver to prescribe to up to 100 patients (*i.e.*, the practitioner has filed an NOI and satisfied all required criteria) could request the higher limit in emergency situations for a limited time period. SAMHSA would review all emergency situation requests in consultation, to the extent practicable, with appropriate governmental authorities before such requests would be granted.

### C. Summary of Impacts

The proposed rule is intended to increase access to MAT for some patients with an opioid use disorder, providing them with a path to recovery; reduce costs across different sectors (*e.g.* health care, criminal justice, and social service); and, ultimately, reduce the number of opioid-related overdose deaths. From 2016–2020, present value benefits of \$11,019 million and annualized benefits of \$2,336 million are estimated using a 3 percent discount rate; present value benefits of \$10,148 million and annualized benefits of \$2,313 million are estimated using a 7 percent discount rate. Present value costs of \$955 million and annualized costs of \$202 million are estimated using a 3 percent discount rate; present value costs of \$880 million and annualized costs of \$201 million are estimated using a 7 percent discount rate.

## II. Public Participation

### Comments Invited

HHS invites interested parties to submit comments on all aspects of the proposed rule. When submitting comments, please reference a specific portion of the proposed rule, provide an explanation for any recommended change, and include supporting data. Specific agency questions for comment are listed in section VII. Comments responding to these questions should reference them by number.

All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable and/or confidential information that is included in a comment. We post all comments received as soon as possible after they have been received on the following Web site: <http://www.regulations.gov>. Follow the search instructions on that Web site to view public comments.

Comments received before the close of the comment period will also be available for public inspection, generally beginning approximately 3 weeks after publication of the proposed rule, at the headquarters of the Substance Abuse and Mental Health Services Administration, 5600 Fishers Lane, Rockville, Maryland 20857, Monday through Friday of each week from 8:30 a.m. to 4:00 p.m. To schedule an appointment to view public comments, call 240-276-1660.

We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and will respond to the comments in the preamble of the final rule. Please allow sufficient time for mailed comments to be received before the close of the comment period.

### III. Background

#### A. Opioid Use Disorder

Substance use disorder is a treatable chronic disease caused by changes to the structure and function of the brain due to exposure to intoxicating substances.<sup>1</sup> Most of these substances alter the brain by increasing the release of the neurotransmitter dopamine, which plays an important role in the brain's reward system.<sup>2</sup> Chronic exposure to drugs disrupts the way the brain controls both life-sustaining behaviors and those related to drug use.<sup>3</sup> Opioid use disorder is a type of substance use disorder that has the added complexity of disrupting the naturally occurring function of endorphins throughout the body.<sup>4</sup> This is what underlies the rapid formation of dependence and tolerance, and the withdrawal syndrome typically observed when opioid use is discontinued.<sup>5</sup> The cycle of tolerance and withdrawal leads persons dependent on opioids to take larger doses, seek more potent opioids, or adopt methods of administration, such as injection, to intensify the opioid's effects.<sup>6,7</sup> The possibility of

experiencing euphoria, while an element of drug initiation, becomes more and more remote as the euphoric feelings experienced become less pleasurable and use of the drug becomes necessary for the user to feel "normal".<sup>8</sup> As a result, most opioid dependent persons must continue to use opioids in order to maintain function and to forestall the painful symptoms of withdrawal.<sup>9</sup>

Opioid use disorder is essentially the same phenomenon. The potential for addiction and the symptoms of tolerance and withdrawal are very similar, whether the opioid is heroin or a prescription pain reliever, such as oxycodone or hydrocodone, because the brain responds to all opioids similarly. Untreated opioid dependence is associated with adoption of high-risk opioid use behaviors.<sup>10 11 12</sup> A person who is no longer able to avoid withdrawal with the amount of opioid he or she is accustomed to or can afford to buy may transition to using opioids by injection, for example, because this route of administration can more quickly and efficiently deliver the drug to the brain via injection into the bloodstream rather than through the digestive tract.<sup>13 14</sup> However, use of opioids by injection carries additional risks of infection with hepatitis C virus and human immunodeficiency virus (HIV), local and systemic infections, cardiovascular and respiratory problems, and higher overdose risk.<sup>15 16 17</sup>

The majority of these individuals do not recognize that repeated use of opioids, albeit legitimate, may increase the risk of developing an opioid use disorder, which may lead some individuals to switch from prescription drugs to cheaper and more risky substitutes like heroin. Based on combined 2014 National Survey on Drug Use and Health data, there are 1.9 million people aged 12 or older with a past-year pain reliever use disorder and 539,000 people with a past-year heroin use disorder.

As many as 86 percent of persons who met diagnostic criteria for opioid use disorder in 2014 could be classified as dependent on opioids.<sup>18</sup> In addition to changing the structure and function of the brain, when a person has dependence, the whole body has adapted to the presence of the opioid and does not function properly when the substance is absent, thus making it extremely difficult to discontinue use without formal treatment.<sup>19</sup> Many people with opioid dependence who undergo detoxification in order to stop using opioids subsequently relapse to opioid use.<sup>20</sup> As many as 95 percent of patients who undergo detoxification only, relapse to opioid use within weeks.<sup>21 22</sup>

Adverse consequences associated with prescription drug misuse have also increased. Prescription drugs, especially opioid analgesics, have increasingly been implicated in drug overdose deaths over the last decade.<sup>23</sup> The National Vital Statistics System indicated there were 18,893 opioid analgesics overdose related deaths in 2014, which is nearly 5 times greater than the number of related deaths in 1999.<sup>24</sup> Deaths related to heroin have also sharply increased, more than tripling between 2010 and 2014.<sup>25</sup> Rates of prescription drug misuse related to emergency department visits and treatment admissions have risen significantly in recent years.<sup>26</sup> The Centers for Disease Control and Prevention reports that almost 7,000 people are treated in emergency departments each day for using opioids in a manner other than as directed.<sup>27</sup> Opioids, primarily prescription pain relievers and heroin, are the main drugs associated with overdose deaths. In 2014, opioids were involved in 28,647 deaths, or 61 percent of all drug overdose deaths; the rate of opioid overdoses has tripled since 2000.<sup>28</sup>

The economic costs of illegal drug use, including the use of medications that are prescribed for others, are considerable. According to the Office of National Drug Control Policy, the economic cost of drug addiction in the United States was estimated at \$193 billion in 2007, the last available

estimate.<sup>29</sup> Indeed, opioid use disorders contribute to over \$72 billion in medical costs alone each year.<sup>30</sup> These costs—costs related to treatment and prevention services; other health care costs, such as those for individuals with co-occurring illnesses that result from or are exacerbated by use and misuse of drugs obtained illicitly; and costs associated with lost productivity, social welfare, and crime—impose burdens on the workplace, healthcare system, and communities.

### B. Medication-Assisted Treatment (MAT)

Opioid use disorder is a treatable medical condition from which it is possible to recover.<sup>31</sup> Medication, along with other behavioral therapy, has the potential to play an important role in the successful treatment of opioid use disorder and provide a foundation for recovery.<sup>32</sup> Research indicates that medication combined with behavioral health services produces the best outcomes.<sup>33</sup> <sup>34</sup> Effective treatment is comprehensive and tailored to each patient's drug use patterns; medical and psychiatric co-morbidities, and social corollaries of substance use disorder; and includes consideration of the person's vocational and legal needs.<sup>35</sup>

MAT is the use of medication in combination with behavioral health services to provide a whole-patient, individualized approach to the treatment of substance use disorder, including opioid use disorder.<sup>36</sup> MAT is a safe and effective strategy for decreasing the frequency and quantity of opioid use and reducing the risk of overdose and death.<sup>37</sup> Although MAT

has significant evidence to support it as an effective treatment, it remains highly underutilized, with only an estimated 1 million out of an estimated 2.5 million who needed treatment actually receiving it in 2012.<sup>38</sup> This gap is a function of many factors, including treatment capacity and negative attitudes, prejudice, and discrimination that prevent individuals from seeking services. A full discussion of the barriers to MAT utilization can be found in the regulatory impact analysis of this document.

Methadone, buprenorphine, and naltrexone are the three main types of active ingredients<sup>39</sup> contained in FDA approved products currently used to treat opioid use disorder in the U.S.<sup>40</sup> Treatment of opioid use disorder using methadone can only be provided in OTPs regulated by SAMHSA under 42 CFR part 8 and requires patient assessments, on-site counseling, daily monitoring and observation of the medication use, and careful control of any take-home methadone.<sup>41</sup> <sup>42</sup> Also, methadone for opioid use disorder can only be dispensed in an OTP clinic setting.<sup>34</sup> Unlike methadone, medicines containing buprenorphine are permitted to be dispensed in either an office-based setting or in an OTP, significantly increasing treatment access.<sup>43</sup> Under 21 U.S.C. 823(g)(2), qualified practitioners can prescribe, administer, or dispense medicines containing buprenorphine for treatment of opioid use disorder in various settings, including in an office, community hospital, health department, or correctional facility. As with all medications used in MAT, buprenorphine is prescribed as part of a comprehensive treatment plan that includes counseling and participation in social support programs.<sup>44</sup>

### C. Statutory and Rulemaking History

There is a long history of laws and rules to protect people from unnecessary or inappropriate exposure to opioids. Two important laws are the CSA and the Controlled Substances Import and Export Act, which became law in 1970. Together, these statutes and their implementing regulations

govern the manufacturing and distribution of controlled substances. Controlled substances are those medications or chemical substances that are scheduled I through V under the CSA, with Schedule I having the most relative abuse potential and likelihood of causing dependence when abused, and Schedule V having the least potential for abuse and dependence.<sup>45</sup>

In 2000, Congress amended the CSA (21 U.S.C. 801 *et seq.*) to establish “waiver authority for physicians who dispense or prescribe certain narcotic drugs for maintenance treatment or detoxification treatment” (Drug Addiction Treatment Act of 2000, Pub. L. 106–310, Title XXXV, 114 Stat. 1222, codified at 21 U.S.C. 823(g)(2)). This waiver authority established the existing 30 and 100 patient limits. Pursuant to such waiver authority, the statutory and regulatory requirement (21 U.S.C. 823(g)(1) and 21 CFR 1301.13(e)) that a practitioner obtain a separate DEA registration to prescribe buprenorphine for maintenance or detoxification treatment is waived. Prior to this amendment, practitioners who wanted to provide maintenance or detoxification treatment using opioid drugs were required to be registered as Narcotic Treatment Programs, today commonly referred to as OTPs.

Under the provisions of the CSA implementing regulations (21 CFR 1301.28(b)(1)(iii) and (iv)), the 30-patient limitation applied equally to individual practices and to group practices (*i.e.*, 30 patients per group practice), severely limiting the number of patients who could be treated by physicians in group practices. In 2005, the CSA was amended to lift the patient limitation on prescribing opioid addiction treatment medications by practitioners in group practices (Pub. L. 109–56) so that practitioners could prescribe up to 30 patients individually regardless of whether they are in a group or solo practice.<sup>46</sup> In 2006, the CSA was further amended by the Office of National Drug Control Policy Reauthorization Act of 2006 (Pub. L. 109–469) to permit the treatment of up to 100 patients by each qualifying practitioner. As a result, DEA made conforming changes their regulations.<sup>47</sup>

<sup>47</sup> See 21 CFR 1301.28(b)(1)(iii) and (iv).

#### *D. Current Process for Obtaining a Practitioner Waiver Under 21 U.S.C. 823(g)(2)*

To be able to prescribe buprenorphine for the maintenance or detoxification of opioid use disorder, qualified practitioners must file a Request for Patient Limit Increase with SAMHSA. In accordance with 21 U.S.C. 823(g)(2)(D)(iii), SAMHSA processes the Request for Patient Limit Increase by verifying the practitioner’s medical license and qualification to prescribe buprenorphine, and informs the DEA of whether the practitioner meets all of the statutory requirements for a waiver. If the statutory requirements for a waiver are met, the DEA verifies the practitioner’s current registration and assigns an identification number to the practitioner. This information is conveyed to the practitioner by a letter issued from SAMHSA. At this point, the practitioner is considered to be a waived practitioner.

Waived practitioners must comply with all sections of the CSA regarding validity of prescriptions, recordkeeping, inventory, and medication administration or dispensing. DEA is authorized to conduct periodic on-site inspections of all registrants. As of 2013, DEA had systematically visited nearly all waived practitioners. Most inspections were uneventful, and the majority of practitioners were found to be in compliance. Problems encountered typically involved administrative issues and required practitioners to make changes to recordkeeping practices. Should DEA find violations of law, it can revoke a practitioner’s right to prescribe buprenorphine and take further legal action, if necessary.

#### *E. Evaluations of the Current System*

Evaluations of the process for granting waivers under the 21 U.S.C. 823(g)(2) waiver system are limited. In 2006, SAMHSA published the results of an evaluation that examined the availability and effectiveness of treatment as well as adverse consequences.<sup>48</sup>

A number of barriers to MAT adoption using buprenorphine in an office-based setting were identified in this evaluation, with three in particular that were consistently identified amongst waived practitioners as problematic: (1) The 30-patient limit, (2) limited third-party reimbursement, and

(3) high medication/treatment costs. Additional barriers identified include a hesitation to initiate buprenorphine prescribing because of (1) a lack of a sufficient number of patients needing MAT for opioid use disorders, (2) difficult initial treatment setup and logistics, and (3) patients’ reluctance around counseling as a component of treatment. A number of non-waived practitioners cited common challenges to obtaining a waiver, including lack of appropriate training or experience, concerns about recordkeeping and potential audits by DEA, and a scarcity of appropriate concomitant counseling resources in their areas.

More recently, in September 2014, SAMHSA, in partnership with the National Institute on Drug Abuse, convened a meeting of expert professionals for a Buprenorphine Summit to gather the perspectives of leaders from the field regarding the state of practice and their assessment of possible strategies for moving forward. This Summit presented an opportunity for active and collaborative discussion about caring for patients; designing, operating, and sustaining programs; supporting recovery; and training practitioners. The participants explored what is known about the adoption of MAT with buprenorphine-containing products to treat opioid use disorder; reasons why it has not been as widely prescribed as might have been expected; and ways that Federal agencies, health professionals, and concerned individuals might enable buprenorphine treatment to become more accessible.

Participants from the Summit provided some reasons waived practitioners were not prescribing buprenorphine, including but not limited to the following: Practitioners do not have practice partners with waivers or practice partners who can provide cross-coverage because of the interpretation of the patient limit; they lack institutional support; their community lacks psychosocial resources for patients; they feel that with current patient limits, they cannot treat a sufficient volume of patients to meet all of the costs of providing buprenorphine given current third-party reimbursement; the regulations and scrutiny particular to prescribing buprenorphine can make them feel as if they are doing something questionable by prescribing it; and current confidentiality rules make it difficult to integrate substance use disorder care with primary care.

Some of the ideas that came out of the Summit included strategies to expand availability of buprenorphine treatment for opioid use disorders, such as

<sup>48</sup> Substance Abuse and Mental Health Services Administration. (2006). *The SAMHSA Evaluation of the Impact of the DATA Waiver Program*. Retrieved from: [http://www.buprenorphine.samhsa.gov/FOR\\_FINAL\\_summaryreport\\_colorized.pdf](http://www.buprenorphine.samhsa.gov/FOR_FINAL_summaryreport_colorized.pdf).

examining the elimination of restrictions on prescribing buprenorphine. Specific ideas included enabling non-physician practitioners to prescribe buprenorphine (which would require a legislative change); raising the cap on how many patients a practitioner can have in treatment at a time; and allowing practitioners to cross-cover one another on a short-term basis, which is a practice standard across medicine, without being in violation of the patient limit. The latter two are addressed in this Notice of Proposed Rulemaking (NPRM).

#### F. Need for Rulemaking

In the intervening 15 years since enactment of 21 U.S.C. 823(g)(2), there have been a number of changes, including the amendment that (1) allowed for practitioners in group practices to prescribe up to 30 patients individually regardless of whether they are in a group or sole practice, and (2) allowed for practitioners who had a waiver for at least 1 year to submit a second NOI to treat up to 100 patients at a time. Other changes include expansion in insurance coverage and parity protections due to passage of the Mental Health Parity and Addiction Equity Act, as well as the Affordable Care Act. Educational and training activities have also expanded, including the FDA Risk Evaluation and Mitigation Strategy (REMS) for buprenorphine and SAMHSA's Provider Clinical Support System for MAT. In addition, a new subspecialty board certification has been developed for allopathic physicians in addiction medicine, creating a pathway for more physicians to obtain broader knowledge of substance use disorders in general.

Despite this progress, the nation finds itself in the midst of a public health crisis of opioid addiction, misuse, and related morbidity and mortality.<sup>49</sup> Each day in the United States, 44 people die from overdose of prescription pain relievers.<sup>50</sup> As previously stated, in 2014, opioids were involved in 28,647 deaths, or 61 percent of all drug overdose deaths; the rate of opioid overdoses has tripled since 2000.<sup>51</sup>

There are approximately 1,400 OTPs and 31,857 practitioners waived to prescribe buprenorphine. The use of

extended-release injectable naltrexone has also made an important contribution to increasing access to MAT in the private physician office-based setting, but the number of patients receiving treatment with naltrexone in such settings is not known. Providers wishing to serve more people have the option of both office-based MAT with buprenorphine products as well as specialty addiction treatment programs that include an OTP. However, recent research has also shown that an estimated 1 million people out of 2.3 million individuals in the U.S. with opioid abuse or dependence were untreated.<sup>52</sup> This assumes that practitioners were treating patients at maximum capacity. Data from DATA-waived providers in 2008<sup>53</sup> indicate that practitioners are likely only reaching 57 percent of their total patient capacity for buprenorphine treatment. At the State level, an estimated 3 patients per 1,000 people in the U.S. had an unmet need for treatment, assuming that practitioners were treating patients at maximum potential capacity.<sup>54</sup>

While the Federal Guidelines for OTPs, published early in 2015, promote the use of both buprenorphine and naltrexone, in addition to methadone, in the approximately 1,400 OTPs, increasing access to MAT through OTPs is limited by several factors. These factors include the fact that the patient capacity of individual OTPs is typically determined by State licensing requirements, building permits, or other State or local regulations. Geography and the daily nature of methadone treatment are other factors that affect the ability to expand access to MAT via OTPs in general, but they do not directly relate to the capacity of an individual OTP to treat patients. Rather they are limitations on the expansion of access to more individuals utilizing methadone specifically.

HHS is promoting access to all forms of MAT for opioid use disorder through multiple activities included in the Secretary's Opioid Initiative. Given the Secretary's unique authority to increase the patient limit on treatment under 21 U.S.C. 823(g)(2) by rulemaking, the proposed rule is an essential element of

a comprehensive approach to increasing access to MAT.

Increasing the limits on the number of patients per waived practitioner has been requested by many individuals, organizations, and entities. In a letter to the Secretary, ASAM notes that the prescribing limit is a major barrier to patient access to care and the current limits place arbitrary limits on the number of patients a practitioner can treat. It also notes that no other medications are limited in such a manner.<sup>55</sup> The American Psychiatric Association, American Academy of Addiction Psychiatry, and the American Osteopathic Academy of Addiction Medicine also wrote to the Secretary and stated that as "the number of people addicted to these opioids increases, there continues to be a shortage of physicians who are appropriately trained to treat them. The shortage severely complicates and impairs our ability to effectively address the epidemic, particularly in many rural and underserved areas of the nation."<sup>56</sup>

In sum, given the public health crisis of opioid misuse and abuse and the treatment gap between those individuals with an opioid use disorder and those currently receiving treatment, this proposed rule is needed to raise the patient cap in an effort to increase access to MAT with buprenorphine and associated counseling and supports. In keeping with the spirit of mental health parity, we emphasize that competency in addiction care should exist throughout the healthcare continuum. To balance optimal access and safety, we strive to ensure that the credentials needed to prescribe MAT are within reach for interested physicians, programs are practical to implement, and reporting requirements are not perceived as a barrier to participation. We seek comment on whether the proposed rule appropriately strikes this balance.

## IV. Summary of Proposed Rule

### A. General

To date, SAMHSA has implemented the provisions of 21 U.S.C. 823(g)(2) without rulemaking due to the clear and specific provisions included in the statute. As authorized by the statute at 21 U.S.C. 823(g)(2)(B)(iii), SAMHSA is initiating rulemaking at this time to increase access to MAT with

buprenorphine in the office-based setting as authorized under 21 U.S.C. 823(g)(2). The proposed rule would increase the highest available patient limit for qualified practitioners to receive a waiver from 100 to 200. This new higher patient limit would significantly increase patient capacity for practitioners qualified to prescribe at this level while also ensuring that waived practitioners would be able to provide the full treatment continuum associated with MAT.

Practitioners authorized to treat up to 200 patients under 21 U.S.C. 823(g)(2) would be required to meet infrastructure, capacity, and reporting requirements that exceed those required for the lower limits. The incremental increase from 100 to 200 patients and the concomitant reporting requirements would allow the Department to monitor the quality of care being delivered, identify any changes in the rate of diversion, and improvements in health outcomes for opioid-dependent patients. It would attach additional criteria and responsibilities to practitioners who would be able to treat up to 200 patients with the specific aims of ensuring quality of care and minimizing diversion. Importantly, the additional criteria and responsibilities are not intended to be unduly burdensome to the practitioner who wishes to expand his or her MAT treatment practice and we seek comment on the associated burden. Rather, they are intended to reflect the current standard of care for the treatment of opioid use disorder while also recognizing the growing demand for opioid use disorder treatment integrated into the non-specialist practice in more mainstream settings. This proposed rule does not add these additional requirements to practitioners who have a waiver to treat 100 or fewer patients under 21 U.S.C. 823(g)(2). The proposed rule also would create an option for an increased patient limit for practitioners responding to emergency situations that require immediate, increased access to MAT pharmacotherapies. Also included in the proposed rule are key definitions.

This proposal would add subpart F to 42 CFR part 8. To accomplish this, additional changes would be made to part 8. Proposed changes to part 8 to accommodate the proposed rule include retitling the part to encompass all MAT over which the Secretary has regulatory authority. Consequently, under the proposed rule, subpart A would be entitled General Provisions. Current subparts A, B, and C would change to subparts B, C, and D, respectively. The titles of these subparts would be revised

to make it clear that they apply only to OTPs.

#### *B. Scope (§ 8.1)*

Under the proposed rule, the scope of part 8 would encompass rules that are applicable to OTPs, and to waived practitioners who seek to provide MAT to more than 100 patients. New subparts B through D under the proposed rule would contain the rules relevant to OTPs. Subpart E would be reserved and Subpart F would contain the proposed new rule. Section 8.1 would also explain that the proposed rules in the new subpart F pertain only to those practitioners using a waiver under 21 U.S.C. 823(g)(2) with a patient limit of 101 to 200.

#### *C. Definitions (§ 8.2)*

The definitions section would apply to the entirety of part 8. Definitions that would apply only to OTPs would be revised to reflect this in the specific definition. Two definitions would be eliminated: “Registered opioid treatment program” would be deleted because the term is not used anywhere in the text of the regulations; and the definition for “opiate addiction” would be renamed “opioid use disorder.”

This proposed rule also includes a definition of “patient.” At present, the definition of “patient” in § 8.2 is limited to those individuals receiving treatment at an OTP, which excludes those individuals receiving office-based opioid treatment with buprenorphine, *i.e.*, those subject to 21 U.S.C. 823(g)(2). As a result, there has been confusion among providers, insurers, pharmacists, and diversion investigators. This stems in part from the difference between formal admission and discharge practices that are customarily used in OTPs and other substance use disorder treatment programs and the more open-ended relationship between patient and practitioner in general medical and psychiatric practice. This confusion has also complicated the data collection necessary to assess access to treatment on community, state, and national levels. It has also hindered cross-coverage due to a concern that covering a patient for a short period of time keeps a practitioner accountable for that patient for an extended period of time.

The proposed rule would revise the definition of patient to make it inclusive of all persons receiving MAT with an opioid medication, consistent with the expanded scope of proposed revisions to 42 CFR part 8. By proposing that patient “means any individual who receives MAT from a practitioner or program subject to this part,” the definition would apply to the entire

period during which the eligible medication is expected to be used by the patient while under that practitioner’s care. For example, if a practitioner provides cross-coverage for another practitioner, and in the course of that coverage the covering practitioner provides a prescription for buprenorphine, the patient counts towards the cross-covering practitioner’s patient limit until the prescription has expired. However, if a cross-covering practitioner is merely available for consult but does not provide a prescription for buprenorphine while the prescribing practitioner is away, the patients being covered do not count towards the cross-covering practitioner’s patient limit at all. Therefore, this definition would be expected to help ensure consistency and clarity in how waived practitioners count patients towards the limit. We seek comments on this definition and other examples of coverage arrangements where clarity would be helpful.

The proposed rule would include the following definition of patient limit: “the maximum number of individual patients a practitioner may treat at any time using covered medications.”

Taken together, these two definitions would provide clear and fair guidance for regulatory enforcement and would be expected to reduce undercounting of patients by practitioners and, furthermore, would exclude those patients with whom a practitioner interacts as a professional courtesy or in a transitory fashion on behalf of another waived physician from being counted against the covering practitioner’s patient limit for an extended period of time. In this way it is expected that waived practitioners will be able to provide reciprocal cross-coverage of patients for brief periods, such as weekends or vacations, without implications, long-term or possibly at all, for their respective individual limits.

Other new definitions would include “behavioral health services,” “nationally recognized evidence-based guidelines” and “emergency situation.” These definitions would be in-line with definitions offered elsewhere and applied in the field. They would be minimally modified from other existing definitions to clarify the application of these terms to the unique circumstances of the practitioner providing MAT under 21 U.S.C. 823(g)(2).

In addition, this proposed rule would define “nationally recognized evidence-based guidelines” to mean a document produced by a national or international medical professional association, public health entity, or governmental body

with the aim of ensuring the appropriate use of evidence to guide individual diagnostic and therapeutic clinical decisions. Some examples include the ASAM National Practice Guidelines for the Use of Medications in the Treatment of Addiction Involving Opioid Use; SAMHSA's Treatment Improvement Protocol 40: Clinical Guidelines for the Use of Buprenorphine in the Treatment of Opioid Addiction; the World Health Organization Guidelines for the Psychosocially Assisted Pharmacological Treatment of Opioid Dependence; and the Federation of State Medical Boards' Model Policy on DATA 2000 and Treatment of Opioid Addiction in the Medical Office. SAMHSA would expect that guidelines falling into this definition may change over time but would not plan to keep a list for practitioners to consult.

#### *D. Opioid Treatment Programs (§§ 8.3 Through 8.34)*

Proposed retitled subparts B, C, and D would contain §§ 8.3 through 8.34. Proposed changes to these sections would be limited to changing the mailing address for program certification and accreditation body approval and updating terms, such as "opiate" and "opiate addiction" to "opioid" and "opioid use disorder," respectively.

#### *E. Which Practitioners Are Eligible for a Patient Limit of 200? (§ 8.610)*

This is the first proposed section of the new subpart F. Proposed § 8.610 would describe which practitioners are eligible for a patient limit of 200. Under routine conditions, a practitioner would qualify for the higher limit in one of two ways: By possessing subspecialty board certification in addiction medicine or addiction psychiatry or by practicing in a qualified practice setting as defined in the rule. In either case, practitioners with the higher limit would have to possess a waiver to treat 100 patients for at least 1 year in order to gain experience treating at a higher limit. The purpose of offering the 200 patient limit to practitioners in these two categories is to recognize the benefit offered to patients through: (1) The advanced training and maintenance of knowledge and skill associated with the acquisition of subspecialty board certification; and (2) the higher level of direct service provision and care coordination envisioned in the qualified practice setting. This approach would restrict access to the 200 patient limit to a subset of the practitioners waived to provide care to up to 100 patients. In addition to ensuring higher quality of care, the criteria for the higher limit

would be intended to minimize the risk of diversion of controlled substances to illicit use and accidental exposure that could result from increased prescribing of buprenorphine. A practitioner with board certification in an addiction subspecialty would have to have the training and experience necessary to recognize and address behaviors associated with increased risk of diversion. In the qualified practice settings, SAMHSA believes that the care team and practice systems will function to help ensure this same level of care. We seek comments on this proposed approach, including comments on whether there are other ways for SAMHSA to ensure quality and safety while encouraging practitioners to take on additional patients.

#### *F. What Constitutes a Qualified Practice Setting? (§ 8.615)*

Proposed § 8.615 would describe the necessary elements of a qualified practice setting, which can include practices with as few as one waived provider as long as these criteria are met and can include both private practices and community-based clinics. Necessary elements of a qualified practice setting would include having: (1) The ability to offer patients professional coverage for medical emergencies during hours when the practitioner's practice is closed; this does not need to involve another waived practitioner, only that coverage be available for patients experiencing an emergency even when the office is closed; (2) the ability to ensure access to patient case-management services; (3) health information technology (HIT) systems such as electronic health records, when practitioners are required to use it in the practice setting in which he or she practices; (4) participation in a prescription drug monitoring program (PDMP), where operational, and in accordance with State law. PDMP means a statewide electronic database that collects designated data on substances dispensed in the State. For practitioners providing care in their capacity as employees or contractors of a Federal government agency, participation in a PDMP would be required only when such participation is not restricted based on State law or regulation based on their state of licensure and is in accordance with Federal statutes and regulations; and (6) employment, or a contractual obligation to treat patients in a setting that has the ability to accept third-party payment for costs in providing health services, including written billing, credit and

collection policies and procedures, or Federal health benefits.

The elements were identified as common to many high-quality practice settings, which includes both private practices as well as federally qualified health centers and community mental health centers, and therefore worthy of replication. The elements would be expected to be common to OTPs, and OTPs currently in operation but not providing MAT under 21 U.S.C. 823(g)(2). Taken together, this would facilitate additional opportunities to expand access to MAT. Another consideration in the selection of these elements would be the need to limit the expansion of group practices formed for the sole purpose of pooling the individual practitioner limits to maximize revenue but which fail to offer a full continuum of services. HHS seeks comment on additional, alternate pathways by which a practitioner may become eligible to apply for a patient waiver of 200.

#### *G. What is the process to request a patient limit of 200? (§ 8.620)*

Proposed § 8.620 would describe the process to request a patient limit of 200. Similar to the waiver process for the 30 and 100 patient limits, the process would begin with filing a Request for Patient Limit Increase. A proposed draft of the Request for Patient Limit Increase is in the docket. Public comment is requested. The higher patient limit would carry with it greater responsibility for behavioral health services, care coordination, diversion control, and continuity of care in emergencies and for transfer of care in the event approval to treat up to 200 patients is not renewed or is denied. The new Request for Patient Limit Increase process would require providers to affirm that they would meet these requirements. The proposed definitions of "behavioral health services," "diversion control plan," "emergency situation," "nationally recognized evidence-based guidelines" and "practitioner incapacity" would be provided in § 8.2 to assist practitioners in understanding what is expected of them in making these attestations. These responsibilities would be aligned with the standards of ethical medical and business practice and would not be expected to be burdensome to practitioners. Resources exist to help in the development in patient placement in the event transfer to other addiction treatment would be required, for example, if a provider chose to no longer practice at the 200 patient limit. Examples of these resources would include but are not limited to: Single

State Authorities and State Opioid Treatment Authorities. Practitioners approved to treat up to 200 patients would also be required to reaffirm their ongoing eligibility to fulfill these requirements every 3 years as described in § 8.640.

*H. How will a request for patient limit increase be processed? (§ 8.625)*

Proposed § 8.625 would describe how SAMHSA will process a Request for Patient Limit increase. The process for requesting a patient limit up to 200 would be processed similarly to how the current 30 or 100 patient waiver is processed, with one difference. Whereas the lower patient limit waivers are not time limited, the waiver for the higher limit of 200 would have a term not to exceed 3 years. Thus, a practitioner would be required to submit a new Request for Patient Limit Increase every 3 years if he or she desired to continue treating up to 200 patients.

*I. What must practitioners do in order to maintain their approval to treat up to 200 patients under § 8.625? (§ 8.630)*

Proposed § 8.630 would describe the conditions for maintaining a waiver for each 3-year period for which waivers are valid, including maintenance of all eligibility requirements specified in § 8.610, and all attestations made in accordance with § 8.620(b). Compliance with the requirements specified in § 8.620 would have to be continuous. This includes compliance with reporting requirements specified in § 8.635.

*J. What are the reporting requirements for practitioners whose request for patient limit increase is approved under § 8.625? (§ 8.635)*

Proposed § 8.635 would describe the reporting requirements for practitioners whose Request for Patient Limit Increase is approved under § 8.625. Reporting would be required annually to ensure that eligibility requirements are being maintained and that waiver conditions are being fulfilled. We seek comments on whether the proposed reporting periods and deadline could be combined with other, existing reporting requirements in a way that would make reporting less burdensome for practitioners. Reporting requirements may include a request for information regarding:

- a. The average monthly caseload of patients receiving buprenorphine-based MAT, per year
- b. Percentage of active buprenorphine patients (patients in treatment as of reporting date) that received psychosocial or case management

services (either by direct provision or by referral) in the past year due to:

1. Treatment initiation
2. Change in clinical status
- c. Percentage of patients who had a prescription drug monitoring program query in the past month
- d. Number of patients at the end of the reporting year who:
  1. Have completed an appropriate course of treatment with buprenorphine in order for the patient to achieve and sustain recovery
  2. Are not being seen by the provider due to referral by the provider to a more or less intensive level of care
  3. No longer desire to continue use of buprenorphine
  4. Are no longer receiving buprenorphine for reasons other than 1–3.

We seek comment on this list.

*K. What is the process for renewing a practitioner's request for patient limit increase approval? (§ 8.640)*

Proposed § 8.640 would describe the process for a practitioner renewing his or her approval for the higher patient limit. In order for a practitioner to renew an approval, he or she would have to submit a renewal Request for Patient Limit Increase in accordance with the procedures outlined under § 8.620 at least 90 days before the expiration of the approval term.

*L. What are the responsibilities of practitioners who do not submit a renewal request for patient limit increase or whose request is denied? (§ 8.645)*

Proposed § 8.645 would describe the responsibilities of practitioners who do not submit a renewal Request for Patient Limit Increase or whose request is denied. Under § 8.620(b)(7) practitioners would notify all patients affected above the 100 patient limit, that the practitioner would no longer be able to provide MAT services using covered medications and would make every effort to transfer patients to other addiction treatment.

*M. Can SAMHSA suspend or revoke a practitioner's patient limit increase approval? (§ 8.650)*

Proposed § 8.650 would describe under what circumstances SAMHSA would suspend or revoke a practitioner's patient limit increase of 200. If SAMHSA had reason to believe that immediate action would be necessary to protect public health or safety, SAMHSA would suspend the practitioner's patient limit increase of

200. If SAMHSA determined that the practitioner had made misrepresentations in his or her Request for Patient Limit Increase, or if the practitioner no longer satisfied the requirements of this subpart, or he or she has been found to have violated the CSA pursuant to 21 U.S.C. 824(a), SAMHSA would revoke the practitioner's patient limit increase of 200.

*N. Can a practitioner request to temporarily treat up to 200 patients in emergency situations? (§ 8.655)*

Proposed § 8.655 would describe the process, including the information and documentation necessary, for a practitioner with an approved 100 patient limit, to request approval to temporarily treat up to 200 patients in an emergency situation. The intention of this provision would be to help assure continuity of care for patients whose care might otherwise be abruptly terminated due to the death or disability of their practitioner. This provision would also help communities respond rapidly to a sudden increase in demand for medication assisted treatment. Sudden increases in demand for treatment may be experienced when there is a local disease outbreak associated with drug use, or when a natural or human-caused disaster either displaces persons in treatment from their practitioner or program or destroys program infrastructure. The emergency provision generally would not be intended to correct poor resource deployment due to lack of planning. The emergency provision of the proposed rule would only be considered if other options for addressing the increased demand for medication-assisted treatment could not address the situation.

The practitioner must provide information and documentation that: (1) Describes the emergency situation in sufficient detail so as to allow a determination to be made regarding whether the emergency qualifies as an emergency situation as defined in § 8.2, and that provides a justification for an immediate increase in that practitioner's patient limit; (2) Identifies a period of time in which the higher patient limit should apply, and provides a rationale for the period of time requested; and (3) Describes an explicit and feasible plan to meet the public and individual health needs of the impacted persons once the practitioner's approval to treat up to 200 patients expires. Prior to taking action on a practitioner's request under this section, SAMHSA shall consult, to the extent practicable, with the appropriate governmental authority in order to

determine whether the emergency situation that a practitioner describes justifies an immediate increase in the higher patient limit. If, after consultation with the governmental authority, SAMHSA determines that a practitioner's request under this section should be granted, SAMHSA will notify the practitioner that his or her request has been approved. The period of such approval shall not exceed six months. A practitioner wishing to receive an extension of the approval period granted must submit a request to SAMHSA at least 30 days before the expiration of the six month period and certify that the emergency situation continues. Except as provided in this section and § 8.650, requirements in other sections under subpart F do not apply to practitioners receiving waivers in this section.

#### V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA), agencies are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. Currently, the information collection associated with the 30-patient and 100-patient limits is approved under OMB Control No. 0930-0234. In order to fairly evaluate whether changes to an information collection should be approved by the OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

1. Whether the information collection is necessary and useful to carry out the proper functions of the agency;
2. The accuracy of the agency's estimate of the information collection burden;
3. The quality, utility, and clarity of the information to be collected; and
4. Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

Under the PRA, the time, effort, and financial resources necessary to meet the information collection requirements referenced in this section are to be considered in rulemaking. We explicitly seek, and will consider, public comment on our assumptions as they relate to the PRA requirements summarized in this section. This proposed rule includes changes to information collection requirements, that is, reporting, recordkeeping or third-party disclosure requirements, as defined under the PRA (5 CFR part 1320). Some of the provisions would involve changes from

the information collections set out in the previous regulations.

Information collection requirements would be:

A. Approval, 42 CFR 8.620(a) through (c): In order for a practitioner to receive approval for a patient limit of 200, a practitioner must meet all of the requirements specified in § 8.610 and submit a Request for Patient Limit Increase to SAMHSA that includes all of the following:

- Completed 3-page Request for Patient Limit Increase Form, a draft of which is available for review in the public docket;
- Statement certifying that the practitioner:
  - Will adhere to nationally recognized evidence-based guidelines for the treatment of patients with opioid use disorders;
  - Will provide patients with necessary behavioral health services as defined in § 8.2 or will provide such services through an established formal agreement with another entity to provide behavioral health services;
  - Will provide appropriate releases of information, in accordance with Federal and State laws and regulations, including the Health Information Portability and Accountability Act Privacy Rule and part 2 of this chapter, if applicable, to permit the coordination of care with behavioral health, medical, and other service practitioners;
  - Will use patient data to inform the improvement of outcomes;
  - Will adhere to a diversion control plan to manage the covered medications and reduce the possibility of diversion of covered medications from legitimate treatment use;
  - Has considered how to assure continuous access to care in the event of practitioner incapacity or an emergency situation that would impact a patient's access to care as defined in § 8.2; and
  - Will notify all patients above the 100 patient level, in the event that the request for the higher patient limit is not renewed or is denied, that the practitioner will no longer be able to provide MAT services using buprenorphine to them and make every effort to transfer patients to other addiction treatment;

B. Diversion Control Plan, 42 CFR 8.12(c)(2): Creating and maintaining a diversion control plan is one of the requirements that practitioners must attest to before they are approved to treat at the higher limit. This plan is not required to be submitted to SAMHSA.

C. Reporting, 42 CFR 8.635: Reporting will be required annually to ensure that eligibility requirements are being

maintained and that waiver conditions are being fulfilled. Reporting requirements may include a request for information regarding: (1) The average monthly caseload of patients receiving buprenorphine-based MAT, per year; (2) the percentage of active buprenorphine patients (patients in treatment as of reporting date) who received psychosocial or case management services (either by direct provision or by referral) in the past year due to treatment initiation or change in clinical status; (3) Percentage of patients who had a prescription drug monitoring program query in the past month; (4) Number of patients at the end of the reporting year who: (a) Have completed an appropriate course of treatment with buprenorphine in order for the patient to achieve and sustain recovery, (b) Are not being seen by the provider due to referral by the provider to a more or less intensive level of care, (c) No longer desire to continue use of buprenorphine, (d) Are no longer receiving buprenorphine for reasons other than (a) through (c). To facilitate public comment, we have placed a draft version of the collection template in the public docket.

D. Renewal, 42 CFR 8.640: Describes the process for a practitioner renewing his or her approval for the higher patient limit. In order for a practitioner to renew an approval, he or she must submit a renewal Request for Patient Limit Increase in accordance with the procedures outlined under § 8.620 at least 90 days before the expiration of the approval term.

E. Patient Notice, 42 CFR 8.645: Describes the responsibilities of practitioners who do not submit a renewal Request for Patient Limit Increase. Practitioners who do not renew their Request for Patient Limit Increase must notify all patients above the 100 patient limit that the practitioner will no longer be able to provide MAT services using covered medications and make every effort to transfer patients to other addiction treatment. The Patient Notice is a model notice to guide practitioners in this situation when they notify their patients.

F. Emergency Provisions, 42 CFR 8.655: Describes the process for practitioners with a current waiver to prescribe up to 100 patients, and who are not otherwise eligible to treat up to 200 patients, to request a temporary increase to treat up to 200 patients in order to address emergency situations as defined in § 8.2. To initiate this process, the practitioner shall provide information and documentation that: (1) Describes the emergency situation in

sufficient detail so as to allow a determination to be made regarding whether the situation qualifies as an emergency situation as defined in § 8.2, and that provides a justification for an immediate increase in that practitioner's patient limit; (2) Identifies a period of time, not longer than 6 months, in which the higher patient limit should

apply, and provides a rationale for the period of time requested; and (3) Describes an explicit and feasible plan to meet the public and individual health needs of the impacted persons once the practitioner's approval to treat up to 200 patients expires. If a practitioner wishes to receive an extension of the approval period granted under this section, he or

she must submit a request to SAMHSA at least 30 days before the expiration of the 6-month period, and certify that the emergency situation as defined in § 8.2 necessitating an increased patient limit continues.

Annual burden estimates for these requirements are summarized in the following table:

42 CFR Citation	Purpose of submission	Number of respondents	Responses/ respondent	Burden/ response (hour)	Total burden (hour)	Hourly wage cost (\$)	Total wage cost (\$)
8.620(a) through (c) ....	Request for Patient Limit Increase.	517	1	.5	259	\$93.74	\$24,232
8.12(c)(2) .....	Diversion Control Plan .....	517	1	.5	259	93.74	24,232

**VI. Regulatory Impact Analysis**

*A. Introduction*

HHS has examined the impact of this proposed rule under Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act of 1980 (Pub. L. 96–354, September 19, 1980), the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4, March 22, 1995), and Executive Order 13132 on Federalism (August 4, 1999).

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, and safety effects; distributive impacts; and equity). Executive Order 13563 is supplemental to and reaffirms the principles, structures, and definitions governing regulatory review as established in Executive Order 12866. HHS expects that this proposed rule will have an annual effect on the

economy of \$100 million or more in at least 1 year and therefore is a significant regulatory action as defined by Executive Order 12866.

The Regulatory Flexibility Act (RFA) requires agencies that issue a regulation to analyze options for regulatory relief of small businesses if a rule has a significant impact on a substantial number of small entities. The RFA generally defines a “small entity” as (1) a proprietary firm meeting the size standards of the Small Business Administration; (2) a nonprofit organization that is not dominant in its field; or (3) a small government jurisdiction with a population of less than 50,000 (States and individuals are not included in the definition of “small entity”). HHS considers a rule to have a significant economic impact on a substantial number of small entities if at least 5 percent of small entities experience an impact of more than 3 percent of revenue. HHS anticipates that the proposed rule will not have a significant economic impact on a substantial number of small entities. We provide supporting analysis in section F.

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires that agencies prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold

after adjustment for inflation is \$144 million, using the most current (2014) implicit price deflator for the gross domestic product. HHS expects this proposed rule to result in expenditures that would exceed this amount.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a rule that imposes substantial direct requirement costs on State and local governments or has federalism implications. HHS has determined that the proposed rule, if finalized, would not contain policies that would have substantial direct effects on the States, on the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government. The proposed changes in the rule represent the Federal Government regulating its own program. Accordingly, HHS concludes that the proposed rule does not contain policies that have federalism implications as defined in Executive Order 13132 and, consequently, a federalism summary impact statement is not required.

*B. Summary of the Proposed Rule*

Section 303(g)(2) of the CSA (21 U.S.C. 823(g)(2)) allows individual practitioners to dispense and prescribe Schedule III, IV, or V controlled substances that have been approved by the FDA specifically for use in maintenance and detoxification treatment without obtaining the separate registration required by 21 CFR 1301.13(e) and imposes a limit on the

number of patients a practitioner may treat at any one time.

Section 303(g)(2)(B)(iii) of the CSA allows qualified practitioners who file an initial NOI to treat a maximum of 30 patients at a time. After one year, the practitioner may file a second NOI indicating his/her intent to treat up to 100 patients at a time. To qualify, the practitioner must be a practitioner, possess a valid license to practice medicine, be a registrant of the DEA, have the capacity to refer patients for appropriate counseling and other appropriate ancillary services, and have completed required training. The training requirement may be satisfied in several ways: One may hold subspecialty board certification in addiction psychiatry from the American Board of Medical Specialties or addiction medicine from the American Osteopathic Association; hold an addiction certification from the American Society of Addiction Medicine (ASAM); complete an 8-hour training provided by an approved organization; have participated as an investigator in one or more clinical trials leading to the approval of a medication that qualifies to be prescribed under 21 U.S.C. 823(g)(2); or complete other training or have such other experience as the state medical licensing board or Secretary of HHS considers to demonstrate the ability of the practitioner to treat and manage persons with opioid use disorder.

Pursuant to 21 U.S.C. 823(g)(2)(B)(iii), the Secretary is authorized to promulgate regulations that change the total number of patients that a practitioner may treat at any one time.

The laws pertaining to the utilization of buprenorphine were last revised approximately ten years ago at a time when the extent of the opioid public health crisis was less well-documented. The purpose of the proposed rule is to expand access to MAT with buprenorphine while encouraging practitioners administering buprenorphine to ensure their patients can receive the full array of services that comprise evidence-based MAT and to minimize the risk of drug diversion. The proposed rule would revise the highest patient limit from 100 patients per practitioner with an existing waiver (waivered practitioner) to 200 patients for practitioners who meet certain criteria in addition to those established in statute. Practitioners who have had a waiver to treat 100 patients for at least one year could obtain approval to treat up to 200 patients if they meet the requirements defined in this proposed rule and after submitting a Request for Patient Limit Increase to SAMHSA.

Practitioners approved to treat up to 200 patients will also be required to accept greater responsibility for providing behavioral health services and care coordination, and ensuring quality assurance and improvement practices, diversion control, and continuity of care in emergencies. The higher limit will also carry with it the duty to regularly reaffirm the practitioner's ongoing eligibility and to participate in data reporting and monitoring as required by SAMHSA. In addition, practitioners in good standing with a current waiver to treat up to 100 patients (*i.e.*, the practitioner has filed a NOI and satisfied all required criteria) may request approval to treat up to 200 patients in specific emergency situations for a limited time period specified in the rule. We anticipate that qualifying emergency situations will occur very infrequently. As a result, we do not anticipate that this provision will contribute significantly to the impact of this proposed rule. SAMHSA will review all emergency situation requests, to the extent practicable, in consultation with appropriate governmental authorities before such requests are granted. Finally, the proposed rule defines patient limit in such a way that firmly ties the individual patient to the prescribing practitioner of record rather than to the covering practitioner at a given moment. This will enable waived practitioners to provide reciprocal cross-coverage of patients for brief periods, such as weekends or vacations, without being considered to be in excess of their respective individual limits. Although this is a positive aspect of the proposed rule and will help to ensure continuity of care in select situations, we expect that this will primarily affect the timing of treatment rather than the quantity of treatment. As a result, we do not anticipate that this change will contribute significantly to the impact of this proposed rule, and we do not estimate the associated costs and benefits.

### C. Need for the Proposed Rule

The United States is facing an unprecedented increase in prescription opioid abuse, heroin use and opioid-related overdose deaths. In 2014, 18,893 overdose deaths involved prescription opioids and 10,574 involved heroin.<sup>57</sup>

<sup>57</sup> Center for Disease Control and Prevention, National Center for Health Statistics, National Vital Statistics System, Mortality File. (2015). Number and Age-Adjusted Rates of Drug-poisoning Deaths Involving Opioid Analgesics and Heroin: United States, 2000–2014. Atlanta, GA: Center for Disease Control and Prevention. Available at [http://www.cdc.gov/nchs/data/health\\_policy/AADR\\_](http://www.cdc.gov/nchs/data/health_policy/AADR_)

Underlying many of these deaths is an untreated opioid use disorder.<sup>58 59 60</sup> In 2014, more than 2.2 million people met diagnostic criteria for an opioid use disorder.<sup>61</sup>

Beyond the increase in overdose deaths, the health and economic consequences of opioid use disorders are substantial. In 2011, the most recent year data are available, an estimated 660,000 emergency department visits were due to the misuse or abuse of prescription opioids, heroin, or both.<sup>62</sup> A recent analysis estimated the costs associated with emergency department and hospital inpatient care for opioid abuse-related events in the United States was more than \$9 billion per year.<sup>63</sup> The societal costs of prescription opioid abuse, dependence, and misuse in the United States in 2011 were estimated at \$55.7 billion annually, not including societal costs related to heroin use.<sup>64</sup>

Beginning around 2006, the United States started to experience a significant increase in the rate of hepatitis C virus infections. The available epidemiology indicates this increase is largely due to the increased injection of prescription opioids and heroin.<sup>65 66</sup> In addition, in 2015, a large outbreak of HIV in a small rural community in Indiana was linked to injection of prescription opioids, primarily injection of the prescription opioid oxycodone. Over 80 percent

Increases in hepatitis C virus infection related to injection drug use related to injection drug use among persons aged ≤30 years—Kentucky, Tennessee, Virginia, and West Virginia, 2006–2012. *MMWR Morb Mortal Wkly Rep*. 2015;64(17):453–8.

of the 135 cases, as of April 2015, identified in the outbreak were co-infected with hepatitis C virus.<sup>67</sup> The infectious disease consequences associated with opioid injection have been found to account for a substantial proportion of the economic burden and disability associated with opioid use disorders.<sup>68</sup>

There is robust literature documenting the effectiveness and cost-effectiveness of the use of buprenorphine in the treatment of opioid use disorder. Buprenorphine has been shown to increase treatment retention and to reduce opioid use, relapse risk, and risk behaviors that transmit HIV and hepatitis.<sup>69 70 71 72 73 74</sup> Reductions in opioid-related mortality also have been shown for buprenorphine.<sup>75 76 77</sup>

Despite these well-documented benefits, buprenorphine treatment for opioid use disorder is significantly underutilized and often does not incorporate the full scope of recommended clinical practices that

make up evidence-based MAT. Generally, there is significant unmet need for MAT treatment among individuals with opioid use disorders.<sup>78</sup> There is also substantial geographic variation in the capacity to prescribe buprenorphine. Research suggests that 10 percent of the population live in areas where there is a shortage of practitioners eligible to prescribe buprenorphine or in counties that have no practitioners with a waiver to prescribe buprenorphine.<sup>79</sup> These are primarily rural counties and areas located in the middle of the country.<sup>80</sup> Only about 5 percent of practitioners with the 100 patient limit are located in rural counties.<sup>81</sup>

Evidence suggests that utilization of buprenorphine is limited directly by the existence of treatment caps. Practitioners currently providing MAT with buprenorphine under 21 U.S.C. 823(g)(2) report that being limited to treating not more than 100 patients at a time is a barrier to expanding treatment.<sup>82 83 84</sup> A recent survey by ASAM found that among the 1,309 respondents (approximately 35 percent of ASAM's membership), comprising a range of addiction stakeholders, including those working in OTPs and outpatient or office-based practice settings, 544, or 41.6 percent, were currently treating more than 80 patients, and 796, or 60.8 percent, reported there was demand for treatment in excess of the current 100 patient limit under the Drug Addiction Treatment Act of 2000 (Pub. L. 106–310).<sup>85</sup> Increasing the number of patients that a single

practitioner can treat with buprenorphine, then, could have a direct impact on buprenorphine capacity and utilization.

In addition to direct barriers to treating additional patients imposed by the patient limit, there are indirect barriers to expanding treatment capacity. In particular, increases in a practitioner's ability to expand his or her patient base will allow the practitioner to take advantage of economies of scale to increase the practice's efficiency. For example, a practitioner with a larger practice is more likely to be able to afford to hire specialized support staff, which allows the practitioner to reduce time spent on tasks best suited for another individual. This may help to enable the provision of the full complement of ancillary services that make up evidence-based MAT. Increasing a practitioner's maximum capacity for treatment has the potential to make treating patients with buprenorphine more economically feasible, which furthers the argument that these proposed changes will increase capacity to prescribe buprenorphine.

The statutory change implemented in 2007 that increased the limit on the number of buprenorphine patients a practitioner could treat from 30 to 100, after having a 30 patient limit for 1 year, was associated with a significant increase in the use of buprenorphine.<sup>86</sup> In 2007, when practitioners were first able to treat up to 100 patients, nearly 25 percent of eligible practitioners submitted a NOI to treat 100 patients (1,937 practitioners out of 7,887 practitioners).<sup>87</sup> The findings from the ASAM survey discussed above and additional information indicate there is sufficient demand from both providers and patients to raise the patient limit. In addition, based on the experience in 2007, it is expected that some proportion of eligible practitioners will respond to the proposed rule by submitting a Request for Patient Limit Increase to treat up to 200 patients.

#### D. Analysis of Benefits and Costs

##### a. Increased Ability for Waivered Practitioners To Treat Patients With Buprenorphine-Based MAT

This proposed rule directly expands opportunities for physicians who currently treat or who may treat patients with buprenorphine, as they will now have the potential to treat up to 200 patients with buprenorphine. We believe that this may translate to a

<sup>86</sup> Stein *supra* note 82.

<sup>87</sup> Jones, *supra* note 53.

financial opportunity for these physicians, depending on the costs associated with treating these additional patients.

Relatedly, this proposed rule may increase the value of the waiver to treat opioid use disorder under 21 U.S.C. 823(g)(2). The proposed rule would require practitioners to have a waiver to treat 100 patients for 1 year and to have a subspecialty board certification in addiction medicine, a subspecialty board certification in addiction psychiatry, or to practice in a qualified practice setting as defined in the rule in order to request approval to treat 200 patients. If getting to the 200-patient limit provides sufficient benefits to practitioners, this proposed rule may also increase incentives for other practitioners to apply for the lower patient limit waivers, insofar as they are milestones towards the 200-patient cap. In addition, this rule may also make it more valuable for practitioners to have subspecialty board certifications in addiction medicine and addiction psychiatry, or to practice in a qualified practice setting. The proposed rule, then, may increase the number of practitioners in these categories and thus the number of practitioners eligible for the 200 patient limit in the future.

#### b. Increased Treatment for Patients

Permitting practitioners to treat up to 200 patients will only be successful if it results in practitioners serving additional patients. As discussed previously, there are many reasons to expect this to happen as a result of finalization of this proposed rule. In addition, we expect that other factors could amplify the impact of the changes proposed in the rule. First, following the implementation of the Affordable Care Act, health insurance coverage has expanded dramatically in the United States. The uninsured rate among adults age 18–64 declined from 22.3 percent in 2010 to 12.7 percent during the first 6 months of 2015.<sup>88</sup> Further, the Affordable Care Act expanded coverage includes populations at high-risk for opioid use disorders that previously did not have sufficient access to health insurance coverage.<sup>89</sup> Second, parity protections from the Mental Health Parity and Addiction Equity Act and the Affordable Care Act will include coverage for mental health and substance use disorder treatment that is

comparable to medical and surgical coverage in many types of insurance policies. Insurance coverage and cost of treatment are often cited as important reasons that individuals seeking treatment have not used buprenorphine.<sup>90 91 92 93</sup> A NPRM to extend parity protections to Medicaid managed care was released in the spring of 2015. These changes in health insurance coverage should improve access to substance use disorder treatment, including buprenorphine.

#### c. Increased Time To Treat Patients

Lack of practitioner time to treat patients with opioid use disorder, which includes a patient exam, medication consultation, counseling, and other appropriate treatment services, and lack of behavioral health staff to provide these ancillary services, are additional barriers to providing MAT with buprenorphine in the office-based setting.<sup>94 95</sup> These barriers could be addressed by leveraging the time and skills of clinical support staff, such as nurses and clinical social workers. For example, in Massachusetts and Vermont, nurses provide screening, intake, education, and other ancillary services for patients treated with buprenorphine. This enables practitioners to treat additional patients and to provide the requisite psychosocial services.<sup>96 97 98</sup> However, in order to afford a nurse or other clinician dedicated to providing

evidence-based treatment for an opioid use disorder, practitioners need a minimum volume of patients. Allowing practitioners to treat up to 200 patients at a time would be a step towards supporting practitioners that seek to hire nurses and other clinical staff to reduce practitioners' time requirements and to provide the ancillary services of high-quality MAT with buprenorphine. This impact of leveraging non-physicians to facilitate expanded access to buprenorphine has been demonstrated in both Vermont and Massachusetts.<sup>99 100</sup>

Discussions with stakeholders about approaches to expanding access to MAT, including the use of buprenorphine-based MAT, suggest that expanding the patient limit in general will result in increased efficiencies in treating opioid use disorder patients. It will allow treating practitioners to provide the physician-appropriate services consistent with their waiver. It will provide more efficient supportive care, not related to prescribing or administering buprenorphine-containing products, by allowing the treating practitioner to supervise this care, which can be provided by physician assistants, nurse practitioners, nurse case managers, and other behavioral health specialists.

#### d. Federal Costs Associated With Disseminating Information About the Rule

Following publication of a final rule that builds upon this proposal and public comments, SAMHSA will work to educate providers about the requirements and opportunities for requesting and obtaining approval to treat up to 200 patients under 21 U.S.C. 823(g)(2). SAMHSA will prepare materials summarizing the changes as a result of the final rule, and provide these materials to practitioners potentially affected by the rulemaking upon publication of the final rule. SAMHSA has already established channels for disseminating information about rule changes to stakeholders, it is estimated that preparing and disseminating these materials will cost approximately \$40,000, based upon experience soliciting public comment on past rules and publications such as

the Federal Opioid Treatment Program Standards.

e. Practitioners Costs To Evaluate the Policy Change

We expect that, if this proposed rule is finalized, practitioners potentially affected by this proposed policy change will process the information and decide how to respond. In particular, they will likely evaluate the requirements and opportunities associated with the ability to treat up to 200 patients, and decide whether or not it is advantageous to pursue approval to treat up to 200 patients and make any necessary changes to their practice, such as obtaining subspecialty board certifications in either addiction medicine or addiction psychiatry, or the ability to treat patients in a qualified practice setting.

We estimate that practitioners may spend an average of thirty minutes processing the information and deciding what action to take. According to the U.S. Bureau of Labor Statistics,<sup>101</sup> the average hourly wage for a physician is \$93.74. After adjusting upward by 100 percent to account for overhead and benefits, we estimate that the per-hour cost of a physician's time is \$187.48. Thus, the cost per practitioner to process this information and decide upon a course of action is estimated to be \$93.74. SAMHSA will disseminate

information to an estimated 50,000 practitioners, which includes practitioners with a waiver to prescribe buprenorphine (*i.e.*, approximately 30,000 practitioners as of December 2015) and those who are reached through SAMHSA's dissemination network (*i.e.*, 20,000 practitioners). For purposes of analysis we assume that 75 percent of these practitioners will review this information, and, as a result, we estimate that dissemination will result in a total cost of \$3.5 million.

f. Practitioner Costs To Submit a Request for Patient Limit Increase

Practitioners who want to treat up to 200 patients at a given time are required to submit a Request for Patient Limit Increase form to SAMHSA. The proposed form is three pages in length. We estimate that the form takes a practitioner an average of 1 hour to complete the first time it is completed, implying a cost of \$187.48 per submission after adjusting upward by 100 percent to account for overhead and benefits. A draft Request for Patient Limit Increase form is available in the docket. We seek comment on our assumptions regarding the time required to complete the form.

We do not have ideal information with which to estimate the number of practitioners who will submit a Request for Patient Limit Increase form in

response to this proposed rule, and we therefore acknowledge uncertainty regarding the estimate of the total associated cost. However, based on the experience with the patient limit increase from 30 to 100 implemented in 2007<sup>102 103</sup>, the results of the 2015 ASAM survey described earlier, and discussions with stakeholders, we estimate that between 500 and 1,800 practitioners will request approval to treat 200 patients within the first year of the proposed rule. We estimate that between 100 and 300 additional practitioners will request approval to treat 200 patients in each of the subsequent 4 years. This would result in 600 to 2,100 practitioners in the second year, 700 to 2,400 practitioners in the third year, 800 to 2,700 in the fourth year, and 900 to 3,000 practitioners in the fifth year. We use the midpoint of each of these ranges to estimate costs and benefits in the first 5 years following publication of the final rule. This would result in a range of \$93,740 to \$337,464 in costs related to Request for Patient Limit Increase submissions in the first year. We seek comment on information which will allow us to refine our estimate of the number of practitioners who will submit a Request for Patient Limit Increase in response to this proposed rule.

	Number of requests for patient limit increase	Cost (\$)
Year 1 .....	1,150	\$215,600
Year 2-5 .....	200	37,500
Total .....	1,950	365,600

g. Practitioner Costs To Resubmit a Request for Patient Limit Increase

After approval, a practitioner would need to resubmit a Request for Patient Limit Increase every 3 years to maintain his or her waiver to treat up to 200 patients. A practitioner would use the same 3-page Request for Patient Limit

Increase used for an initial waiver request. We estimate that this will take 30 minutes because practitioners will be more familiar with the Request for Patient Limit Increase. Consistent with the physician wage estimate above, we estimate that resubmissions will require a practitioner an average of 30 minutes

to complete, implying a cost of \$93.74 per resubmission. To calculate costs associated with resubmission, we assume that all physicians who submit a Request for Patient Limit Increase will submit a renewal 3 years later. Our estimates are summarized in the table below.

	Number of renewals	Cost (\$)
Year 1-3 .....	0	0
Year 4 .....	1,150	\$108,000
Year 5 .....	200	19,000
Total .....	1,350	127,000

#### h. Private-Sector Costs Associated With Newly Applying for Any Waiver

Practitioners may also be interested in the ability to eventually treat up to 200 patients, and may make changes toward achieving that goal. As discussed previously, these proposed changes may increase the number of practitioners who apply for a waiver to treat 30 or 100 patients. This would require practitioners to complete the required training, possess a valid license to practice medicine, be a registrant of DEA, and have the capacity to refer patients for appropriate counseling and other appropriate ancillary services. In addition, these proposed changes could increase the number of practitioners who seek subspecialty board certifications in either addiction medicine or addiction psychiatry or meet the requirements for practicing in a qualified practice setting as outlined in the proposed rule. This would likely include practice experience requirements, fees and time associated with preparing for and taking an exam, time and fees for continuing medical education requirements, and payment of certification fees.

We do not have information to estimate the number of practitioners who will change behavior along these dimensions in response to this proposed rule. We seek comment on information which will allow us to estimate the number of practitioners who would apply to treat additional patients, the number who will seek additional subspecialty board certifications, and the number who will move toward meeting the requirements for treating in a qualified practice setting in response to the proposed changes.

#### i. Federal Costs Associated With Processing New 200 Patient Limit Waivers

In addition to the costs associated with practitioners seeking approval for the higher patient limit, costs will be incurred by SAMHSA and DEA in order to process the additional Requests For Patient Limit Increase generated by the proposed rule. For purposes of analysis, and based on contractor estimates, SAMHSA estimates that it will pay a contractor \$100 to process each waiver. As discussed previously, we estimate that between 500 and 1,800 practitioners will request approval to treat 200 patients within the first year of the rule, and between 100 and 300 additional practitioners will request approval to treat 200 patients in each of the subsequent 4 years. In addition, we estimate that physicians will resubmit 500 to 1,800 renewals in year 4, and 100

to 300 renewals in year 5. As a result, we estimate costs to SAMHSA to process these waivers of \$50,000–\$180,000 in year 1, \$10,000–\$30,000 in year 2, \$10,000–\$30,000 in year 3, \$60,000–\$210,000 in year 4, and \$20,000–\$60,000 in year 5 following publication of the final rule. We estimate that DEA will allocate the equivalent of 1 FTE at the GS–11 level to process the additional requests coming to DEA for issuance of a new DEA number designating the provider as eligible to prescribe buprenorphine for the treatment of opioid use disorder as a result of this proposed rule. We estimate the associated cost is \$144,238, which we arrive at by multiplying the salary of a GS–11 employee at step 5, which is \$72,219 in 2015, by two to account for overhead and benefits.

#### j. Costs of New Treatment

Once requests to treat up to 200 patients generated by the proposed rule are processed, approved practitioners would be able to increase the number of patients they treat with buprenorphine. These patients, then, could utilize additional medical services that are consistent with the expectations for high-quality, evidence-based MAT proposed in the rule. We estimate the cost for buprenorphine and these additional medical services, including behavioral health and psychosocial services, as a result of the proposed rule to total \$4,349 per patient per year, as described below.

This estimate was derived using claims data from the 2009–2014 Truven Health MarketScan® database. According to the MarketScan® data, the annual cost of buprenorphine prescriptions and ancillary services received totaled \$3,500 for individuals with private insurance and \$3,410 for individuals with Medicaid. Specifically, the average annual cost of buprenorphine prescriptions was \$2,100 for commercial insurance based on receipt of an average of seven buprenorphine prescriptions annually and \$2,600 for Medicaid based on receipt of an average of 10 buprenorphine prescriptions annually.

According to the MarketScan® data, approximately 69 percent of Medicaid patients and 45 percent of privately insured patients received an outpatient psychosocial service related to substance use disorder in addition to their buprenorphine prescription. The average number of visits among those who received any psychosocial service was eight for privately insured patients at an average cost of \$3,000 per year and 10 for Medicaid patients at an average cost of \$1,100 per year. We assumed

that the quality of care would increase among patients treated by practitioners with the 200-patient limit due to the extra oversight and quality of care requirements in the proposed rule. Specifically, we assumed that 80 percent of patients would receive outpatient psychosocial services. This would raise the cost of providing MAT with buprenorphine to \$4,590 for commercial insurance and \$3,525 for Medicaid beneficiaries. Based on data from IMS Health, it is estimated that approximately 18 percent of individuals receiving MAT with buprenorphine are Medicaid enrollees. Thus, we arrived at the estimated average cost for individuals new to the treatment system as a result of the proposed rule to be \$4,349 per patient per year.

The total resource costs associated with additional treatment is the product of additional treatment costs per person and the number of people who will receive additional treatment as a result of the proposed rule. For purposes of analysis, we assume that each practitioner who requests approval to treat 200 patients will treat between 20 and 40 additional patients each year. This is based on our experience with the increase from the 30 patient limit to the 100 patient limit.<sup>104 105</sup> We note that in that case, there were no new costs imposed on practitioners beyond those associated with additional treatment, whereas in this proposed rule there are new costs beyond those associated with additional treatment. However, applying this assumption would result in an estimated range of 10,000 to 72,000 additional patients treated in the first year; and an additional 2,000 to 12,000 patients in each subsequent year. To estimate costs associated with this increase in the number of patients, we assume that, on average, each physician will treat the equivalent of 30 full-time patients (*i.e.*, some patients might receive fewer services and others might receive more, but for cost estimates we assume it averages out to the equivalent of 30 patients receiving the full spectrum of care). We use these ranges to estimate costs and benefits of the rule as proposed. Based on this information, we estimate the treatment costs associated with new patients receiving treatment with buprenorphine as a result of this proposed rule will be between \$43.5 million and \$313 million in the first year with a central estimate of \$150 million, and an additional \$8.7 million to \$52.2 million in each subsequent year with a central estimate of \$26.1 million. We seek comment on information which

<sup>104</sup> Arfken, *supra* note 54.

<sup>105</sup> Jones, *supra* note 53.

will allow us to refine our efforts to quantify the number of people who may receive additional treatment with buprenorphine as a result of this proposed rule.

	Additional people receiving treatment	Treatment costs (Millions)
Year 1 .....	34,500	\$150
Year 2 .....	40,500	176
Year 3 .....	46,500	202
Year 4 .....	52,500	228
Year 5 .....	58,500	254

Evidence suggests that the benefits associated with additional buprenorphine utilization are likely to exceed their cost. One study estimated the costs and Quality Adjusted Life Year (QALY) gains associated with long-term office-based treatment with buprenorphine-naloxone for clinically stable opioid-dependent patients compared to no treatment. The authors estimate total treatment costs over 2 years of \$7,700 and an associated 0.22 QALY gain compared to no treatment in their base case.<sup>106</sup> <sup>107</sup> Following a food safety rule recently published by FDA,<sup>108</sup> we use a value of \$1,260 per quality-adjusted life day. This implies a value of \$460,215 (\$1,260 \* 365.25) per QALY, which we use to monetize the health benefits here. As a result, we estimate average annual benefits ranges of \$51,000 per person who achieves 6 months of clinical stability. In the absence of data on the percentage of patients newly receiving buprenorphine treatment who would achieve this status, we illustrate the calculation of rule-induced benefits using 100 percent as an input. We acknowledge that this approach would, all else equal, lead to overestimation of health benefits and request comment that would allow for refinement of the estimates. As a result, we estimate monetized health benefits of \$1,747 million in the first year, with estimated monetized health benefits rising by \$304 million in each subsequent year as more individuals receive treatment as a result of the rule. These monetized health benefits are

<sup>106</sup> Schackman BR, Leff JA, Polsky D, Moore BA, Fiellin DA. Cost-Effectiveness of Long-Term Outpatient Buprenorphine-Naloxone Treatment for Opioid Dependence in Primary Care. *Journal of General Internal Medicine*. 2012;27(6):669–676. doi:10.1007/s11606-011-1962-8.

<sup>107</sup> These results omit lost utility associated with the illegal consumption of heroin or other opioids. Such omission is consistent with Zerbe, R.O. Is Cost-Benefit Analysis Legal? Three Rules. *Journal of Policy Analysis and Management* 17(3): 419–456, 1998.

<sup>108</sup> This RIA can be found here: <http://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Reports/EconomicAnalyses/UCM472330.pdf>

summarized below. We acknowledge that this approach may underestimate or overestimate health benefits and request comment that would allow for refinement of the estimates. We also explore the sensitivity of these results to our assumptions regarding the health benefits related to treatment in our section on sensitivity analysis.

	Additional people receiving treatment	Monetized health benefits (millions)
Year 1 .....	34,500	\$1,747
Year 2 .....	40,500	2,050
Year 3 .....	46,500	2,354
Year 4 .....	52,500	2,658
Year 5 .....	58,500	2,961

#### k. Potential for Diversion

While we expect many benefits associated with this proposed rule, it is possible that there would be unintended negative consequences. First, prior research looked at Utah statewide increases in buprenorphine use and the number of reported pediatric exposures, and found that as buprenorphine use increased between 2002 and 2011, the number of unintentional pediatric exposures in the State increased.<sup>109</sup> Thus, it is possible that the increased utilization of buprenorphine as a result of this proposed rule without appropriate patient counseling and action to ensure the safe use, storage, and disposal of buprenorphine, may lead to an increase in unintentional pediatric exposures. In addition, there has been an increase in diversion of buprenorphine as use of the product has increased. According to the National Forensic Laboratory Information System (NFLIS)—a system used to track diversion—buprenorphine is the third most common narcotic analgesic reported in NFLIS, with 15,209 cases reported in 2014. This represents 12.4 percent of all narcotic analgesic cases in NFLIS in 2014.<sup>110</sup>

It is important to note that studies have found that the motivation to divert buprenorphine is often associated with lack of access to treatment or using the medication to manage withdrawal—as opposed to diversion for the medication's psychoactive effect.<sup>111</sup> <sup>112</sup>

<sup>109</sup> Centers for Disease Control and Prevention. Buprenorphine prescribing practices and exposures reported to a poison center—Utah, 2002–2011. *MMWR* 2012;61:997–1001.

<sup>110</sup> Drug Enforcement Administration. National Forensic Laboratory Information System. 2014 Annual Report. Available at: <https://www.nflis.deadiversion.usdoj.gov/Reports.aspx>.

<sup>111</sup> Lofwall MR, Havens JR. Inability to access buprenorphine treatment as a risk factor for using diverted buprenorphine. *Drug Alcohol Depend*. 2012;126(3):379–83.

Thus, the overall effect of this rulemaking on diversion is not clear given that the increased utilization of buprenorphine could affect the opportunity for diversion, but also could, in some cases, reduce diversion because of improved access to high-quality, evidence-based buprenorphine treatment.

Moreover, to reduce the risk of diversion, one of the additional requirements placed on providers who seek the 200 patient limit is implementation of a diversion control plan. However, it is possible that State and local law enforcement could incur additional costs if diversion increases as a result of this proposed rule. We do not have sufficient information to estimate the extent to which these unintended consequences could occur.

#### l. Practitioner Reporting Requirements

Under this proposed rule, as outlined earlier, practitioners approved to treat up to 200 patients would have to submit information about their practice annually to SAMHSA for purposes of monitoring regulatory compliance. The goal of the reporting requirement is to ensure that practitioners are providing high-quality, evidence-based buprenorphine treatment. It is anticipated that the data for the reporting requirement can be pulled directly from an electronic or paper health record, and that practitioners would not have to update their record-keeping practices after receiving approval to treat 200 patients. We estimate that compiling and submitting the report would require approximately 1 hour of physician time and 2 hours of administrative time. According to the U.S. Bureau of Labor Statistics<sup>89</sup>, the average medical and health services manager's hourly pay in 2014 was \$49.84, which corresponds to a cost of \$99.68 per hour after adjusting upward by 100 percent to account for overhead and benefits. Therefore, the cost of this reporting requirement per practitioner approved for the 200 patient limit is estimated to be the cost of 1 hour of a practitioner's time plus an hour of an administrator's time.

As noted above, using the mid-point estimate, we estimate that 1,150 practitioners will request a 200-patient waiver in year 1 and 200 practitioners will request a 200-patient waiver in subsequent years. We assume that all of these requests will be approved. The costs associated with this reporting

<sup>112</sup> Genberg BL, Gillespie M, Schuster CR, Johanson CE, et al. Prevalence and correlates of street-obtained buprenorphine use among current and former injectors in Baltimore, Maryland. *Addict Behav*. 2013;38(12):2868–73.

requirement are reported below. In addition, it is estimated that SAMHSA will incur a cost of \$100 per practitioner approved for the 200 patient limit to process the practitioner data reporting

requirement. These costs are reported below as well.

DEA may also incur costs in association with this proposed rule if, for example, DEA increases the number of site visits they conduct because

providers are treating more than 100 patients. We tentatively assume that DEA will incur no costs as a result of these reporting requirements, and we seek comment on this assumption.

	Number of physician reports	Physician costs	SAMHSA costs
Year 1 .....	1,150	\$445,000	\$115,000
Year 2 .....	1,350	522,000	135,000
Year 3 .....	1,550	600,000	155,000
Year 4 .....	1,750	677,000	175,000
Year 5 .....	1,950	754,000	195,000

m. Costs Associated With Waiver Requests in Emergencies

Under the proposed rule, practitioners in good standing with a current waiver to treat up to 100 patients may request temporary approval to treat up to 200 patients in specific emergency situations. As discussed previously, we anticipate that qualifying emergency situations will occur very infrequently. We estimate that practitioners will request ten of these waivers in each year. We estimate that requesting this waiver would require approximately 1 hour of physician time and 2 hours of administrative time, and responding to the request would require resources approximately equivalent to responding

the three Requests for Patient Limit Increase submissions, which is \$300. As a result, we estimate that this requirement is associated with costs of approximately \$7,000 in each year following publication of the final rule. We seek comment on the assumptions in this section.

n. Summary of Impacts

The proposed rule's impacts will take place over a long period of time. As discussed previously, we expect the existence of the waiver to treat 200 patients will increase the desirability of waivers to treat 30 and 100 patients. This implies that more practitioners will work toward fulfilling the requirements associated with receiving these waivers.

Further, this may make practitioners early in their career more likely to choose addiction medicine or addiction psychiatry as their specialty. All of this implies that the proposed rule will have a growing impact on capacity to prescribe buprenorphine as time passes. Since the lack of capacity to treat patients using buprenorphine is a barrier to its utilization, this suggests that the proposed rule will lead to growing increases in the utilization of buprenorphine, and growing increases in the associated positive health and economic effects.

The following table presents these costs and benefits over the first 5 years of the proposed rule.

ACCOUNTING TABLE OF BENEFITS AND COSTS OF ALL PROPOSED CHANGES

BENEFITS	Present value over 5 years by discount rate (millions of 2014 dollars)		Annualized value over 5 years by discount rate (millions of 2014 dollars)	
	3 Percent	7 Percent	3 Percent	7 Percent
Quantified Benefits .....	11,019	10,148	2,336	2,313
COSTS	3 Percent	7 Percent	3 Percent	7 Percent
Quantified Costs .....	955	880	203	201

E. Sensitivity Analysis

The total estimated benefits of the changes proposed here are sensitive to assumptions regarding the number of practitioners who will seek a waiver to treat 200 patients as a result of the proposed rule, the number of individuals who will receive MAT as a result of the proposed rule, the average per-person health benefits associated with this additional treatment, and the dollar value of these health improvements. We estimate that 500 to 1,800 practitioners will apply for a waiver to treat up to 200 patients in the first year, and 100 to 300 practitioners will apply for a waiver to treat up to 200

patients in subsequent years following publication of the final rule, with central estimates at the midpoint of each range. For alternative estimates in these ranges using a 3 percent discount rate, all else equal, we estimate annualized benefits ranging from \$1,054 million to \$3,618 million and annualized costs ranging from \$92 million to \$313 million.

We estimate that practitioners who receive a waiver to treat 200 patients will treat between 20 and 40 additional patients each year, with a central estimate of an average of 30 additional patients. For alternative estimates of 20 to 40 additional patients per year, all else equal, we estimate annualized

benefits using a 3 percent discount rate ranging from \$1,557 million to \$3,115 million over the 5 years following implementation.

We estimate that individuals who receive MAT as a result of the proposed rule will experience average health improvements equivalent to 0.11 QALYs. For alternative estimates of these health improvements between 0.06 and 0.16 QALYs, all else equal, we estimate annualized benefits using a 3 percent discount rate ranging from \$1,274 million to \$3,398 million over the 5 years following implementation. To estimate the dollar value of health benefits, we use a value of approximately \$460,000 per QALY. For

alternative values per QALY between \$300,000 and \$600,000, all else equal, we estimate annualized benefits using a 3 percent discount rate ranging from \$1,523 million to \$3,046 million over the 5 years following implementation.

Alternative assumptions along these four dimensions, when varied together,

using a 3 percent discount rate, imply annualized benefit estimates ranging from \$250 million to \$9,148 million and annualized cost estimates ranging from \$62 million to \$417 million. We note that, in all scenarios discussed in this section, annualized benefits

substantially exceed annualized costs. There are, however, uncertainties not reflected in this sensitivity analysis, which might lead to net benefits results that are smaller or larger than the range of estimates summarized in the following table.

LOW, HIGH, AND PRIMARY BENEFIT AND COST ESTIMATES

BENEFITS	Annualized Value over 5 Years 3% Discount Rate (Millions of 2014 Dollars)		
	Low	Primary	High
Quantified Benefits .....	250	2,336	9,148
Quantified Costs .....	62	203	417

*F. Analysis of Regulatory Alternatives*

We carefully considered the option of not pursuing regulatory action. However, existing evidence indicates that opioid use disorder and its related health consequences is a substantial and increasing public health problem in the United States, and it can be addressed by increasing access to effective treatment. As discussed previously, the lack of sufficient access to treatment is directly affected by the existing limit on the number of patients each practitioner with a waiver can currently treat using buprenorphine, and removing this barrier to access is very likely to increase the provision of this treatment. Finally, the provision of MAT with buprenorphine provides tremendous benefits to the individual who experiences health gains associated with treatment, as well as to society which bears smaller costs associated with the negative effects of opioid use disorders. These benefits are expected to greatly exceed the costs associated with increases in treatment. As a result, we expect the benefits of the proposed regulatory action to exceed its costs.

We also considered allowing practitioners waived to treat up to 100 patients to apply for the higher prescribing limit without having to meet the specialty board certification or qualified practice setting requirements as defined in the proposed rule. One important objective of this proposed rule is to expand access while mitigating the risks associated with expanded access. In addition, the effects of this rule are difficult to project, leading us to adopt a conservative approach to increasing access. Given the complexity of the condition, the increased potential for diversion associated with a higher prescribing limit, and the need to ensure high quality care, it was determined that

addiction specialist physicians and those with the infrastructure and capacity to deliver the full complement of services recommended by clinical practice guidelines would be best suited to balance these concerns.

Finally, we considered the alternative of having no reporting requirement for physicians with the 200-patient limit. Although this alternative would reduce the 1 hour of physician time and 2 hours of administrative time estimated for data reporting in our analysis, we did not pursue this alternative. The reporting requirements are intended to reinforce recommendations included in clinical practice guidelines on the delivery of high quality, effective, and safe patient care. Specifically, nationally-recognized clinical guidelines on office-based opioid treatment with buprenorphine suggest that optimal care include administration of the medication and the use of psychotherapeutic support services. They also recommend that physicians and practices prescribing buprenorphine for the treatment of opioid use disorder in the outpatient setting take steps to reduce the likelihood of buprenorphine diversion. Each of these tenets is reflected in the proposed reporting requirements.

*G. Regulatory Flexibility Analysis*

As discussed above, the RFA requires agencies that issue a regulation to analyze options for regulatory relief of small entities if a rule has a significant impact on a substantial number of small entities. The categories of entities affected most by this proposed rule will be offices of practitioners and hospitals. We expect that the vast majority of these entities will be considered small based on the Small Business Administration size standards or non-profit status, and assume here that all affected entities are small. According to SAMHSA data, as of

March 2016 there were 32,123 practitioners with a waiver to prescribe buprenorphine for the treatment of opioid use disorder. This group of practitioners is most likely to be impacted by the proposed rule, but we lack information on the total number of associated entities. We acknowledge that some practitioners with a waiver may provide services at multiple entities, many entities may employ multiple practitioners with a waiver, and some entities currently unaffiliated with these practitioners will be impacted by this proposed rule. As a result, we estimate that approximately 32,123 small entities will be affected by this proposed rule.

HHS considers a rule to have a significant economic impact on a substantial number of small entities if at least 5 percent of small entities experience an impact of more than 3 percent of revenue. As discussed above, the proposed rule imposes a small burden on entities. This burden is primarily associated with processing information disseminated by SAMHSA, opting to completing the waiver process to treat additional patients, and submitting information after receiving a waiver to treat 200 patients, which are estimated to take a maximum of 4 hours per practitioner in any given year. This represents less than 1 percent of hours worked for an individual working full-time. Further, this proposed rule does not require practitioners to undertake these burdens, as this rulemaking does not require practitioners to seek a waiver to treat 200 patients. As a result, we anticipate that this proposed rule will not have a significant impact on a substantial number of small entities. We seek comment on the assumptions used in this section, and on the proposed rule's burden on small entities.

## VII. Agency Questions for Comment

If any of the comments fall under any of the following questions, please indicate the question and number with your response.

(1) *Evidence Supporting an Optimal Patient Prescribing Limit*—This proposed rule is intended to improve patient access to buprenorphine for the treatment of opioid use disorder while also minimizing the risk of diversion and patient safety concerns. Based on the available information, including clinical guideline recommendations and expert stakeholder input, HHS is proposing a new 200-patient prescribing limit. HHS seeks comment that provides evidence that an alternate prescribing limit would be more appropriate than the one proposed in this rulemaking.

(2) *Potential New Formulations*—The Secretary shall establish a process by which patients who are treated with medications covered under 21 U.S.C. 823(g)(2)(C), and that have features that enhance safety or reduce diversion, as determined by the Secretary, may be counted differently toward the prescribing limit established in this proposed rule. The criteria for determining which if any of these medications or reformulations of existing medications may be considered, and how these patients will be counted toward the patient limit, will be based on the following principles:

a. Relative risk of diversion associated with medications that become covered under 21 U.S.C. 823(g)(2)(C) after the effective date of this proposed rule; and

b. Time required to monitor patient safety, assure medication compliance and effectiveness, and deliver or coordinate behavioral health services. HHS seeks comment on the principles by which the Secretary would determine which new medications would qualify.

(3) *Practitioner Training for 200 Patient Limit*—HHS is seeking specific comment related to the level of training necessary to request a patient limit increase to 200 patients outside of a qualified practice setting. Specifically, under the current rule for the patient limit of 30 and 100, the training requirement may be satisfied at the time of initial NOI through a number of pathways, but the most common ways are via a subspecialty board certification in addiction psychiatry or addiction medicine, an addiction certification from ASAM, or completion of an 8-hour training provided by an approved organization. In this NPRM, SAMHSA would require board certification in addiction psychiatry or addiction medicine, but would not require

additional training to progress to the 200-patient limit. However, this means that only practitioners with subspecialty board certifications will be eligible to apply for a patient waiver of 200 and practitioners satisfying training requirements via the other pathways for the 30 and 100 patients will not be eligible. SAMHSA is seeking comment on whether the range of provider qualifications is too broad or too narrow to expand access to high quality medication-assisted treatment for opioid use disorder. If commenters assert that opportunity to qualify should be broadened, we also welcome recommendations regarding alternate pathways that would affirm competence without necessitating specialty board certification.

(4) *Alternate pathways to qualify for 200-patient prescribing limit*—Under this proposal, only practitioners with current 100-patient waivers who are either board-certified in addiction medicine or addiction psychiatry or who practice in “qualified practice settings” or who request a temporary increase to treat up to 200 patients in order to address emergency situations may apply for the higher limit. HHS seeks comment on additional, alternate pathways by which a practitioner may become eligible to apply for a patient waiver of 200.

(5) *Process to request a patient limit of 200*—HHS is seeking specific comment related to the requirements as defined in § 8.620(a) through (c). Specifically, how much cost will be associated with each requirement and what fraction of practitioners practicing in qualified practice settings will be able to fulfill such requirements.

(6) *Patient Volume Necessary*—We are not aware of data that indicate what patient volume per practitioner is necessary in order to make the provision of buprenorphine to patients not cost prohibitive. We seek data on how many patients a physician would need to treat in order to make the training requirements, administrative requirements, and other requirements not cost prohibitive to the practitioner by type of clinical environment type (e.g., large group practice, small physician-owned practice, hospitals, Medicaid-accepting addiction treatment centers, etc.).

(7) *Frequency of Renewal Request for Patient Limit Increase to 200 Patients*—Currently, to be able to prescribe/dispense buprenorphine for the maintenance or detoxification of opioid use disorder, qualified practitioners must file a NOI with SAMHSA. Under this proposal, qualified practitioners in good standing with a current waiver to

dispense to up to 100 patients may file a Request for Patient Limit Increase to treat up to 200 patients for a term of 3 years. SAMHSA is seeking comment on whether requiring the renewal for qualified practitioners seeking to treat up to 200 patients every 3 years is sufficient or whether practitioners should renew the waiver every year or every 2 years, instead of every 3 years.

(8) *Synchronization of Renewal Request with DEA Practitioner Registration Renewal*—We seek comment on whether SAMHSA should synchronize the 3-year Request for Patient Limit Increase renewal with the renewal of the DEA practitioner registration to reduce practitioner burden.

(9) *Estimation of the Time Required to Seek Approval to Treat up to 200 Patients*—As stated in the Regulatory Impact Analysis, SAMHSA is seeking comment on the assumptions regarding the time required to complete the request for the higher patient limit.

(10) *Estimation of the Change in Practitioner Behavior*—As stated in the Regulatory Impact Analysis, SAMHSA does not have information to estimate the number of practitioners who would change behavior in response to this proposed rule. SAMHSA is seeking comment on the estimation of the number of practitioners who are not currently eligible to submit a Request for Patient Limit Increase to treat up to 200 patients but as a result of the proposed rule would take steps, such as obtain subspecialty board certification, or change practice settings, in order to qualify to treat up to 200 patients.

(11) *Estimation of the Number of Practitioners who are Eligible to Submit a Request for Patient Limit Increase to Treat up to 200 Patients*—As stated in the Regulatory Impact Analysis, SAMHSA seeks comment on an estimation of the number of practitioners who, based on the proposed rule, would be eligible to submit a Request for Patient Limit Increase to treat up to 200 patients, and, as a result of the proposed rule, would do so.

(12) *Estimation of the Number of People who will Receive MAT with Buprenorphine*—As stated in the Regulatory Impact Analysis, SAMHSA seeks comment in order to refine the estimation of the number of people who will receive MAT with buprenorphine as a result of the proposed rule.

(13) *Reporting Periods*—SAMHSA seeks comment on whether the reporting periods and deadline could be combined with other, existing reporting requirements in a way that would make

reporting less burdensome for practitioners.

(14) *Balance of Access and Safety*—SAMHSA seeks comment on whether the proposed rule appropriately strikes the balance between ensuring that the credentials needed to prescribe MAT are within reach for interested practitioners, programs are practical to implement, and reporting requirements are not perceived as a barrier to participation.

#### List of Subjects in 42 CFR Part 8

Health professions, Methadone, Reporting and recordkeeping requirements.

For the reasons stated in the preamble, HHS proposes to amend 42 CFR part 8 as follows:

### PART 8—MEDICATION ASSISTED TREATMENT FOR OPIOID USE DISORDERS

■ 1. The authority citation for part 8 continues to read as follows:

**Authority:** 21 U.S.C. 823; 42 U.S.C. 257a, 290bb–2a, 290aa(d), 290dd–2, 300x–23, 300x–27(a), 300y–11.

■ 2. Revise the heading of part 8 as set forth above.

■ 3. Amend part 8 as follows:

■ a. Remove the word “opiate” and add the word “opioid” in its place wherever it appears; and

■ b. Remove the phrases “opioid addiction” and “Opioid addiction” and add their places the phrases “opioid use disorder” and “Opioid use disorder”, respectively, wherever they appear.

■ 4. Redesignate subpart C, consisting of §§ 8.21 through 8.34, as subpart D and revise the heading as follows:

#### Subpart D—Procedures for Review of Suspension or Proposed Revocation of OTP Certification, and of Adverse Action Regarding Withdrawal of Approval of an Accreditation Body

■ 5. Redesignate subpart B, consisting of §§ 8.11 through 8.15, as subpart C and revise the heading as follows:

#### Subpart C—Certification and Treatment Standards for Opioid Treatment Programs

■ 6. Add subpart B, redesignate §§ 8.3, 8.4, 8.5, and 8.6 to the new subpart B, and revise the heading to read as follows:

#### Subpart B—Accreditation of Opioid Treatment Programs

■ 7. Revise the heading to subpart A to read as follows:

#### Subpart A—General Provisions

■ 8. Revise § 8.1 to read as follows:

#### § 8.1 Scope.

(a) Subparts A through C of this part establish the procedures by which the Secretary of Health and Human Services (the Secretary) will determine whether a practitioner is qualified under section 303(g) of the Controlled Substances Act (CSA) (21 U.S.C. 823(g)) to dispense opioid drugs in the treatment of opioid use disorders. The regulations also establish the Secretary’s standards regarding the appropriate quantities of opioid drugs that may be provided for unsupervised use by individuals undergoing such treatment (21 U.S.C. 823(g)(1)). Under these regulations, a practitioner who intends to dispense opioid drugs in the treatment of opioid use disorder must first obtain from the Secretary or, by delegation, from the Administrator, Substance Abuse and Mental Health Services Administration (SAMHSA), a certification that the practitioner is qualified under the Secretary’s standards and will comply with such standards. Eligibility for certification will depend upon the practitioner obtaining accreditation from an accreditation body that has been approved by SAMHSA. These regulations establish the procedures whereby an entity can apply to become an approved accreditation body. This part also establishes requirements and general standards for accreditation bodies to ensure that practitioners are consistently evaluated for compliance with the Secretary’s standards for treatment of opioid use disorder with an opioid agonist treatment medication.

(b) The regulations in subpart F of this part establish the procedures and requirements that practitioners who are authorized to treat up to 100 patients pursuant to a waiver obtained under section 303(g)(2) of the CSA (21 U.S.C. 823(g)(2)), must satisfy in order to treat up to 200 patients with medications covered under section 303(g)(2)(C) of the CSA.

■ 9. Amend § 8.2 as follows:

■ a. Revise the definitions of “Accreditation body” and “Accreditation body application”;

■ b. Add, in alphabetical order, the definitions of “Approval term”, “Behavioral health services”, and “Board certification”;

■ c. Revise the definition of “Certification”;

■ d. Add, in alphabetical order, the definitions of “Covered medications”, “Dispense”, “Diversion control plan”, and “Emergency situation”;

■ e. Revise the definition of “Interim maintenance treatment”;

■ f. Add, in alphabetical order, the definition of “Nationally recognized evidence-based guidelines”;

■ g. Add, in alphabetical order, the definition of “Opioid dependence”;

■ h. Remove the definition of “Opioid treatment”;

■ i. Revise the definitions of “Opioid treatment program” and “Opioid use disorder”;

■ j. Add, in alphabetical order, the definition of “Opioid use disorder treatment”;

■ k. Revise the definition of “Patient”;

■ l. Add, in alphabetical order, the definitions of “Patient limit” and “Practitioner incapacity”;

■ m. Remove the definition of “Registered opioid treatment program”; and

■ n. Add, in alphabetical order, the definition of “Waivered practitioner”.

The revisions and additions read as follows:

#### § 8.2 Definitions.

\* \* \* \* \*

*Accreditation body* means a body that has been approved by SAMHSA in this part to accredit opioid treatment programs using opioid agonist treatment medications.

*Accreditation body application* means the application filed with SAMHSA for purposes of obtaining approval as an accreditation body.

\* \* \* \* \*

*Approval term* means the 3 year period in which a practitioner is approved to treat up to 200 patients that commences when a practitioner’s Request for Patient Limit Increase is approved in accordance with § 8.625.

*Behavioral health services* means any non-pharmacological intervention carried out in a therapeutic context at an individual, family, or group level. Interventions may include structured, professionally administered interventions (e.g., cognitive behavior therapy or insight oriented psychotherapy) delivered in person, remotely via telemedicine shown in clinical trials to facilitate MAT outcomes or non-professional interventions.

*Board certification* in addiction medicine or psychiatry means the receipt of board certification in a particular addiction medicine or psychiatry specialty and/or subspecialty of medical practice (e.g., subspecialty board certification in addiction medicine or psychiatry) from the American Board of Medical Specialties, a subspecialty board certification in addiction medicine from the American Osteopathic Association (AOA) or American Board of Addiction Medicine (ABAM), or an addiction certification from the American Society of Addiction Medicine (ASAM).

*Certification* means the process by which SAMHSA determines that an opioid treatment program is qualified to provide opioid treatment under the Federal opioid treatment standards described in § 8.12.

\* \* \* \* \*

*Covered medications* means the drugs or combinations of drugs that are covered under 21 U.S.C. 823(g)(2)(C).

\* \* \* \* \*

*Dispense* means to deliver a controlled substance to an ultimate user by, or pursuant to the lawful order of, a practitioner, including the prescribing and administering of a controlled substance.

*Diversion control plan* means a set of documented procedures that reduce the possibility that controlled substances will be transferred or used illicitly.

*Emergency situation* means that an existing State, Tribal, or local system for substance use disorder services is overwhelmed or unable to meet the existing need for medication-assisted treatment as a direct consequence of a clear precipitating event. This precipitating event must have an abrupt onset such as practitioner incapacity, natural or human-caused disaster; an outbreak associated with drug use; and result in significant death, injury, exposure to life-threatening circumstances, hardship, suffering, loss of property, or loss of community infrastructure

\* \* \* \* \*

*Interim maintenance treatment* means maintenance treatment provided in an opioid treatment program in conjunction with appropriate medical services while a patient is awaiting transfer to a program that provides comprehensive maintenance treatment.

\* \* \* \* \*

*Nationally recognized evidence-based guidelines* means a document produced by a national or international medical professional association, public health agency, such as the World Health Organization, or governmental body with the aim of assuring the appropriate use of evidence to guide individual diagnostic and therapeutic clinical decisions.

\* \* \* \* \*

*Opioid dependence* means repeated self-administration that usually results in opioid tolerance, withdrawal symptoms, and compulsive drug-taking. Dependence may occur with or without the physiological symptoms of tolerance and withdrawal.

\* \* \* \* \*

*Opioid treatment program* or “*OTP*” means a program or practitioner

engaged in opioid treatment of individuals with an opioid agonist treatment medication registered under 21 U.S.C. 823(g)(1).

*Opioid use disorder* means a cluster of cognitive, behavioral, and physiological symptoms in which the individual continues use of opioids despite significant opioid-induced problems.

*Opioid use disorder treatment* means the dispensing of an opioid agonist treatment medication, along with a comprehensive range of medical and rehabilitative services, when clinically necessary, to an individual to alleviate the adverse medical, psychological, or physical effects incident to an opioid use disorder. This term includes a range of services including detoxification treatment, short-term detoxification treatment, long-term detoxification treatment, maintenance treatment, comprehensive maintenance treatment, and interim maintenance treatment.

*Patient* means any individual who receives MAT from a practitioner or program subject to this part.

*Patient limit* means the maximum number of individual patients a practitioner may treat at any one time using covered medications.

*Practitioner incapacity* means the inability of a waived practitioner as a result of an involuntary event to physically or mentally perform the tasks and duties required to provide medication-assisted treatment in accordance with nationally recognized evidence-based guidelines.

\* \* \* \* \*

*Waivered practitioner* means a physician who is appropriately licensed by the State to dispense covered medications and who possesses a waiver under 21 U.S.C. 823(g)(2).

■ 10. Amend § 8.3 by revising the introductory text of paragraph (b) to read as follows:

**§ 8.3 Application for approval as an accreditation body.**

\* \* \* \* \*

(b) *Application for initial approval.* Electronic copies of an accreditation body application form [SMA-167] shall be submitted to: <http://buprenorphine.samhsa.gov/pls/bwns/waiver>. Accreditation body applications shall include the following information and supporting documentation:

\* \* \* \* \*

**Subpart E [Reserved]**

■ 11. Reserve subpart E.

■ 12. Add subpart F, consisting of §§ 8.610 through 8.655, to read as follows:

**Subpart F—Authorization to Increase Patient Limit to 200 Patients**

Sec.

8.610 Which practitioners are eligible for a patient limit of 200?

8.615 What constitutes a qualified practice setting?

8.620 What is the process to request a patient limit of 200?

8.625 How will a Request for Patient Limit Increase be processed?

8.630 What must practitioners do in order to maintain their approval to treat up to 200 patients?

8.635 What are the reporting requirements for practitioners whose Request for Patient Limit Increase is approved?

8.640 What is the process for renewing a practitioner’s Request for Patient Limit Increase approval?

8.645 What are the responsibilities of practitioners who do not submit a renewal Request for Patient Limit Increase, or whose request is denied?

8.650 Can SAMHSA’s approval of a practitioner’s Request for Patient Limit Increase be suspended or revoked?

8.655 Can a practitioner request to temporarily treat up to 200 patients in emergency situations?

**Subpart F—Authorization to Increase Patient Limit to 200 Patients**

**§ 8.610 Which practitioners are eligible for a patient limit of 200?**

A practitioner is eligible for a patient limit of 200 if:

(a) The practitioner possesses a current waiver to treat up to 100 patients under section 303(g)(2) of the Controlled Substances Act (21 U.S.C. 823(g)(2)) and has maintained the waiver in accordance with applicable statutory requirements without interruption for at least one year since the practitioner’s notification of intent (NOI) under section 303(g)(2)(B) to treat up to 100 patients was approved;

(b) The practitioner:

(1) Holds a subspecialty board certification in addiction psychiatry or addiction medicine; or

(2) Provides MAT utilizing covered medications in a qualified practice setting as defined in § 8.615;

(c) The practitioner has not had his or her enrollment and billing privileges in the Medicare program revoked under § 424.535 of this title; and

(d) The practitioner has not been found to have violated the Controlled Substances Act pursuant to 21 U.S.C. 824(a).

**§ 8.615 What constitutes a qualified practice setting?**

A qualified practice setting is a practice setting which:

(a) Provides professional coverage for patient medical emergencies during hours when the practitioner’s practice is closed;

(b) Provides access to case-management services for patients including referral and follow-up services for programs that provide, or financially support, the provision of services such as medical, behavioral, social, housing, employment, educational, or other related services;

(c) Uses health information technology (HIT) systems such as electronic health records, if otherwise required to use it in the practice setting. HIT means the electronic systems that healthcare professionals and patients use to store, share, and analyze health information;

(d) Is registered for their State prescription drug monitoring program (PDMP) where operational and in accordance with federal and State law. PDMP means a statewide electronic database that collects designated data on substances dispensed in the State. For practitioners providing care in their capacity as employees or contractors of a Federal government agency, participation in a PDMP is required only when such participation is not restricted based on their state of licensure and is in accordance with Federal statutes and regulations;

(e) Accepts third-party payment for costs in providing health services, including written billing, credit and collection policies and procedures, or Federal health benefits.

**§ 8.620 What is the process to request a patient limit of 200?**

In order for a practitioner to receive approval for a patient limit of 200, a practitioner must meet all of the requirements specified in § 8.610 and submit a Request for Patient Limit Increase to SAMHSA that includes all of the following:

(a) Completed Request for Patient Limit Increase form;

(b) Statement certifying that the practitioner:

(1) Will adhere to nationally recognized evidence-based guidelines for the treatment of patients with opioid use disorders;

(2) Will provide patients with necessary behavioral health services as defined in § 8.2 or through an established formal agreement with another entity to provide behavioral health services;

(3) Will provide appropriate releases of information, in accordance with Federal and State laws and regulations, including the Health Information Portability and Accountability Act Privacy Rule and part 2 of this chapter, if applicable, to permit the coordination of care with behavioral health, medical, and other service practitioners;

(4) Will use patient data to inform the improvement of outcomes;

(5) Will adhere to a diversion control plan to manage the covered medications and reduce the possibility of diversion of covered medications from legitimate treatment use;

(6) Has considered how to assure continuous access to care in the event of practitioner incapacity or an emergency situation that would impact a patient's access to care as defined in § 8.2; and

(7) Will notify all patients above the 100 patient level, in the event that the request for the higher patient limit is not renewed or is denied, that the practitioner will no longer be able to provide MAT services using buprenorphine to them and make every effort to transfer patients to other addiction treatment;

(c) Any additional documentation to demonstrate compliance with § 8.610 as requested by SAMHSA.

**§ 8.625 How will a Request for Patient Limit Increase be processed?**

(a) Not later than 45 days after the date on which SAMHSA receives a practitioner's Request for Patient Limit Increase as described in § 8.620, or renewal Request for Patient Limit Increase as described in § 8.640, SAMHSA shall approve or deny the request.

(1) A practitioner's Request for Patient Limit Increase will be approved if the practitioner satisfies all applicable requirements under §§ 8.610 and 8.620. SAMHSA will thereafter notify the practitioner who requested the patient limit increase, and the Drug Enforcement Administration (DEA), that the practitioner has been approved to treat up to 200 patients using covered medications. A practitioner's approval to treat up to 200 patients under this section will extend for a term not to exceed 3 years.

(2) SAMHSA may deny a practitioner's Request for Patient Limit Increase if SAMHSA determines that:

(i) The Request for Patient Limit Increase is deficient in any respect; or

(ii) The practitioner has knowingly submitted false statements or made misrepresentations of fact in the practitioner's Request for Patient Limit Increase.

(b) If SAMHSA denies a practitioner's Request for Patient Limit Increase (or renewal), SAMHSA shall notify the practitioner of the reasons for the denial.

(c) If SAMHSA denies a practitioner's Request for Patient Limit Increase (or renewal) based solely on deficiencies that can be resolved, and the

deficiencies are resolved to the satisfaction of SAMHSA in a manner and time period approved by SAMHSA, the practitioner's Request for Patient Limit Increase will be approved. If the deficiencies have not been resolved to the satisfaction of SAMHSA within the designated time period, the Request for Patient Limit Increase will be denied.

**§ 8.630 What must practitioners do in order to maintain their approval to treat up to 200 patients?**

(a) A practitioner whose Request for Patient Limit Increase is approved in accordance with § 8.625 shall maintain all eligibility requirements specified in § 8.610, and all attestations made in accordance with § 8.620(b), during the practitioner's 3-year approval term. Failure to do so may result in SAMHSA withdrawing its approval of a practitioner's Request for Patient Limit Increase.

(b) All practitioners whose Request for Patient Limit Increase has been approved under § 8.625 must provide reports to SAMHSA as specified in § 8.635.

**§ 8.635 What are the reporting requirements for practitioners whose Request for Patient Limit Increase is approved?**

(a) All practitioners whose Request for Patient Limit Increase is approved under § 8.625 must submit reports to SAMHSA, along with documentation and data, as requested by SAMHSA, to demonstrate compliance with § 8.620, applicable eligibility requirements specified in § 8.610, and all attestation requirements in § 8.620(b).

(b) Reporting requirements may include a request for information regarding:

(1) The average monthly caseload of patients receiving buprenorphine-based MAT, per year.

(2) Percentage of active buprenorphine patients (patients in treatment as of reporting date) that received psychosocial or case management services (either by direct provision or by referral) in the past year due to:

(i) Treatment initiation.

(ii) Change in clinical status.

(3) Percentage of patients who had a prescription drug monitoring program query in the past month; and

(4) Number of patients at the end of the reporting year who:

(i) Have completed an appropriate course of treatment with buprenorphine in order for the patient to achieve and sustain recovery.

(ii) Are not being seen by the provider due to referral by the provider to a more or less intensive level of care.

(iii) No longer desire to continue use of buprenorphine.

(iv) Are no longer receiving buprenorphine for reasons other than paragraph (b)(4)(i) through (iii) of this section.

(c) The report must be submitted within twelve months after the date that a practitioner's Request for Patient Limit Increase is approved under § 8.625, and annually thereafter.

(d) SAMHSA may check reports from practitioners prescribing under the higher patient limit against other existing data sources, such as PDMPs. If discrepancies between reported information and other existing data are identified, SAMHSA may require additional documentation from practitioners whose reports are identified as including these discrepancies.

(e) Failure to submit reports under this section, or deficient reports, may be deemed a failure to satisfy the requirements for a patient limit increase, and may result in the withdrawal of SAMHSA's approval of the practitioner's Request for Patient Limit Increase.

**§ 8.640 What is the process for renewing a practitioner's Request for Patient Limit Increase approval?**

(a) Practitioners who intend to continue to treat up to 200 patients beyond their current 3 year approval term must submit a renewal Request for Patient Limit Increase in accordance with the procedures outlined under § 8.620 at least 90 days before the expiration of their approval term.

(b) If SAMHSA does not reach a final decision on a renewal Request for Patient Limit Increase before the expiration of a practitioner's approval term, the practitioner's existing approval term will be deemed extended until SAMHSA reaches a final decision.

**§ 8.645 What are the responsibilities of practitioners who do not submit a renewal Request for Patient Limit Increase or whose request is denied?**

Practitioners who are approved to treat up to 200 patients in accordance with § 8.625, but who do not renew

their Request for Patient Limit Increase, or whose request is denied, shall notify, under § 8.620(b)(7) in a time period specified by SAMHSA, all patients affected above the 100 patient limit, that the practitioner will no longer be able to provide MAT services using covered medications and make every effort to transfer patients to other addiction treatment.

**§ 8.650 Can SAMHSA's approval of a practitioner's Request for Patient Limit Increase be suspended or revoked?**

(a) *Suspension.* SAMHSA may suspend its approval of a practitioner's Request for Patient Limit Increase under § 8.625 if it has reason to believe that immediate action is necessary to protect public health or safety.

(b) *Revocation.* SAMHSA may revoke its approval of a practitioner's Request for Patient Limit Increase under § 8.625 at any time during the 3 year approval term if SAMHSA determines that the practitioner made any misrepresentations in the practitioner's Request for Patient Limit Increase, or if SAMHSA determines that the practitioner no longer satisfies the requirements of this subpart, or has been found to have violated the CSA pursuant to 21 U.S.C. 824(a).

**§ 8.655 Can a practitioner request to temporarily treat up to 200 patients in emergency situations?**

(a) Practitioners with a current waiver to prescribe up to 100 patients and who are not otherwise eligible to treat up to 200 patients under § 8.610 may request a temporary increase to treat up to 200 patients in order to address emergency situations as defined in § 8.2 if the practitioner provides information and documentation that:

(1) Describes the emergency situation in sufficient detail so as to allow a determination to be made regarding whether the situation qualifies as an emergency situation as defined in § 8.2, and that provides a justification for an immediate increase in that practitioner's patient limit;

(2) Identifies a period of time, not longer than 6 months, in which the higher patient limit should apply, and

provides a rationale for the period of time requested; and

(3) Describes an explicit and feasible plan to meet the public and individual health needs of the impacted persons once the practitioner's approval to treat up to 200 patients expires.

(b) Prior to taking action on a practitioner's request under this section, SAMHSA shall consult, to the extent practicable, with the appropriate governmental authority in order to determine whether the emergency situation that a practitioner describes justifies an immediate increase in the higher patient limit.

(c) If SAMHSA determines that a practitioner's request under this section should be granted, SAMHSA will notify the practitioner that his or her request has been approved. The period of such approval shall not exceed six months.

(d) If a practitioner wishes to receive an extension of the approval period granted under this section, he or she must submit a request to SAMHSA at least 30 days before the expiration of the six month period, and certify that the emergency situation as defined in § 8.2 necessitating an increased patient limit continues. Prior to taking action on a practitioner's extension request under this section, SAMHSA shall consult, to the extent practicable, with the appropriate governmental authority in order to determine whether the emergency situation that a practitioner describes justifies an extension of an increase in the higher patient limit.

(e) Except as provided in this section and § 8.650, requirements in other sections under subpart F of this part do not apply to practitioners receiving waivers in this section.

Dated: March 23, 2016.

**Kana Enomoto,**

*Principal Deputy Administrator, Substance Abuse and Mental Health Services Administration.*

Approved: March 24, 2016.

**Sylvia M. Burwell,**

*Secretary, Department of Health and Human Services.*

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

## DEPARTMENT OF AGRICULTURE

### Forest Service

#### Pacific Northwest National Scenic Trail Advisory Council

**AGENCY:** Forest Service, USDA.

**ACTION:** Notice of meeting.

**SUMMARY:** The Pacific Northwest National Scenic Trail Advisory Council (Council) will meet in Port Townsend, Washington. The Council is authorized under Section 5(d) of the National Trails System Act of 1968 (Act) and operates in compliance with the Federal Advisory Committee Act (FACA). Additional information concerning the Council, including the meeting summary/minutes, can be found by visiting the Council's Web site at: <http://www.fs.usda.gov/main/pnt/working-together/advisory-committees>.

**DATES:** The meeting will be held on the following dates and times:

- Wednesday, May 4, 2016 from 8:00 a.m. to 5:00 p.m. PDT.
- Thursday, May 5, 2016 from 8:00 a.m. to 5:00 p.m. PDT.
- Friday, May 6, 2016 from 8:00 a.m. to 5:00 p.m. PDT (optional field trip).

All meetings are subject to cancellation. For updated status of meeting prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

**ADDRESSES:** The meeting will be held at the Northwest Maritime Center, 431 Water Street, Port Townsend, WA 98368. Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION**. All comments, including names and addresses, when provided, are placed in the record and available for public inspection and copying. The public may inspect comments received at the Pacific Northwest Regional Office of the United States Forest Service: 1220 SW 3rd Avenue, Portland, OR 97204. Please

call ahead at 503-808-2468 to facilitate entry into the building.

**FOR FURTHER INFORMATION CONTACT:** Matt McGrath, Pacific Northwest National Scenic Trail Program Manager, by phone at 425-583-9304, or by email at [mtmcgrath@fs.fed.us](mailto:mtmcgrath@fs.fed.us).

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

**SUPPLEMENTARY INFORMATION:** The purpose of the meeting is to provide:

1. Review significant resources and current trail uses along the PNNST;
2. Provide recommendations on the Nature and Purposes of the PNNST, including trail uses; and
3. Discuss potential interpretive themes and strategies for youth and community engagement on the PNNST.

The meeting is open to the public. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should submit a request in writing by May 19, 2016, to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the Council may file written statements with the Council's staff before or after the meeting. Written comments and time requests for oral comments must be sent to Matt McGrath, Pacific Northwest National Scenic Trail Program Manager, 2930 Wetmore Avenue, Suite 3A, Everett, Washington 98201, or by email to [mtmcgrath@fs.fed.us](mailto:mtmcgrath@fs.fed.us).

**Meeting Accommodations:** If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices or other reasonable accommodation for access to the facility or proceedings by contacting the person listed in the section titled **FOR FURTHER INFORMATION CONTACT**. All reasonable accommodation requests are managed on a case by case basis.

Dated: March 23, 2016.

**Dianne C. Guidry,**  
Deputy Regional Forester.

## DEPARTMENT OF AGRICULTURE

### Forest Service

#### Shasta County Resource Advisory Committee

**AGENCY:** Forest Service, USDA.

**ACTION:** Notice of meeting.

**SUMMARY:** The Shasta County Resource Advisory Committee (RAC) will meet in Redding, California. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with Title II of the Act. Additional RAC information, including the meeting agenda and the meeting summary/minutes can be found at the following Web site:

[www.fs.usda.gov/main/stnf/workingtogether/advisorycommittees](http://www.fs.usda.gov/main/stnf/workingtogether/advisorycommittees).

**DATES:** The meeting will be held from 9:00 a.m. to 3:00 p.m. on May 3 and 4, 2016.

All RAC meetings are subject to cancellation. For status of meeting prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

**ADDRESSES:** The meeting will be held at USDA Service Center, Shasta-Trinity National Forest Headquarters, 3644 Avtech Parkway, Redding, California.

Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION**. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at USDA Service Center, Shasta-Trinity National Forest Headquarters, 3644 Avtech Parkway, Redding, California. Please call ahead to facilitate entry into the building.

**FOR FURTHER INFORMATION CONTACT:** Lesley Yen, Designated Federal Officer, by phone at 530-275-1587 or via email at [lyen@fs.fed.us](mailto:lyen@fs.fed.us).

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8:00 a.m. and 8:00 p.m.,

Eastern Standard Time, Monday through Friday.

**SUPPLEMENTARY INFORMATION:** The purpose of the meeting is to:

1. Review proposals for Secure Rural Schools Title II funding, and
2. Vote on proposals to recommend to the Shasta-Trinity National Forest Supervisor for approval.

The meeting is open to the public. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should request in writing by May 2, 2016, to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. Written comments and requests for time for oral comments must be sent to Lesley Yen, Designated Federal Officer, 14225 Holiday Road, Redding, California 96003; by email to [lyen@fs.fed.us](mailto:lyen@fs.fed.us), or via facsimile to 530-275-1512.

**Meeting Accommodations:** If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices or other reasonable accommodation for access to the facility or proceedings by contacting the person listed in the section titled **FOR FURTHER INFORMATION CONTACT**. All reasonable accommodation requests are managed on a case by case basis.

Dated: March 16, 2016.

**David R. Myers,**

*Shasta-Trinity National Forest Supervisor.*

## COMMISSION ON CIVIL RIGHTS

### Notice of Public Meeting of the Kansas Advisory Committee To Review Testimony Regarding Civil Rights and Voting Requirements in the State

**AGENCY:** U.S. Commission on Civil Rights.

**ACTION:** Announcement of meeting.

**SUMMARY:** Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act that the Kansas Advisory Committee (Committee) will hold a meeting on Friday, April 29, 2016, at 12:00 p.m. CDT for the purpose of reviewing and discussing testimony regarding voting rights in the State.

This meeting is available to the public through the following toll-free call-in

number: 888-587-0615, conference ID: 4700573. Any interested member of the public may call this number and listen to the meeting. The conference call operator will ask callers to identify themselves, the organization they are affiliated with (if any), and an email address prior to placing callers into the conference room. Callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Persons with hearing impairments may also follow the proceedings by first calling the Federal Relay Service at 1-800-977-8339 and providing the Service with the conference call number and conference ID number.

Members of the public are invited to make statements at the end of the conference call. In addition, members of the public may submit written comments; the comments must be received in the regional office within 30 days after the meeting. Written comments may be mailed to the Regional Programs Unit, U.S. Commission on Civil Rights, 55 W. Monroe St., Suite 410, Chicago, IL 60615. They may also be faxed to the Commission at (312) 353-8324, or emailed to Administrative Assistant, Corrine Sanders at [csanders@usccr.gov](mailto:csanders@usccr.gov). Persons who desire additional information may contact the Regional Programs Unit at (312) 353-8311.

Records and documents discussed during the meeting will be available for public viewing prior to and after the meeting at the following link: <https://database.faca.gov/committee/meetings.aspx?cid=249>. Click on the "Meeting Details" and "Documents" link to download. Records generated from this meeting may also be inspected and reproduced at the Regional Programs Unit, as they become available, both before and after the meeting. Persons interested in the work of this Committee are directed to the Commission's Web site, <http://www.usccr.gov>, or may contact the Regional Programs Unit at the above email or street address.

#### Agenda

Welcome and Introductions  
Discussion of Public Testimony on Voting Rights in Kansas  
Open Comment  
Adjournment

**DATES:** The meeting will be held on Friday, April 29, 2016, at 12:00 p.m. CDT.

**Public Call Information:** Dial: 888-587-0615; Conference ID: 4700573.

**FOR FURTHER INFORMATION CONTACT:** Melissa Wojnaroski, DFO, at 312-353-8311 or [mwojnaroski@usccr.gov](mailto:mwojnaroski@usccr.gov).

Dated: March 25, 2016.

## COMMISSION ON CIVIL RIGHTS

### Notice of Public Meeting of the Oklahoma Advisory Committee To Discuss a Draft Report Regarding the Civil Rights Impact of School Disciplinary Policies That May Contribute to High Rates of Juvenile Incarceration in Oklahoma

**AGENCY:** U.S. Commission on Civil Rights.

**ACTION:** Announcement of meeting.

**SUMMARY:** Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act that the Oklahoma Advisory Committee (Committee) will hold a meeting on Monday, May 02, 2016, from 12:00-1:00 p.m. CDT for the purpose of discussing a draft report regarding the civil rights impact of the "school to prison pipeline" in Oklahoma.

Members of the public may listen to the discussion. This meeting is available to the public through the following toll-free call-in number: 888-389-5988, conference ID: 4893967. Any interested member of the public may call this number and listen to the meeting. The conference call operator will ask callers to identify themselves, the organization they are affiliated with (if any), and an email address prior to placing callers into the conference room. Callers can expect to incur regular charges for calls they initiate over wireless lines according to their wireless plan, and the Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Persons with hearing impairments may also follow the proceedings by first calling the Federal Relay Service at 1-800-977-8339 and providing the Service with the conference call number and conference ID number.

Members of the public are also invited to make statements at the end of the conference call. In addition, members of the public may submit written comments; the comments must be

received in the regional office within 30 days following the meeting. Written comments may be mailed to the Regional Programs Unit, U.S. Commission on Civil Rights, 55 W. Monroe St., Suite 410, Chicago, IL 60615. They may also be faxed to the Commission at (312) 353-8324, or emailed to Administrative Assistant, Corrine Sanders at [csanders@usccr.gov](mailto:csanders@usccr.gov). Persons who desire additional information may contact the Regional Programs Unit at (312) 353-8311.

Records and documents discussed during the meeting will be available for public viewing prior to and after the meeting at: <https://database.faca.gov/committee/meetings.aspx?cid=269>. Clicking on the "Meeting Details" and "Documents" links to download. Records generated from this meeting may also be inspected and reproduced at the Regional Programs Unit, as they become available, both before and after the meeting. Persons interested in the work of this Committee are directed to the Commission's Web site, <http://www.usccr.gov>, or may contact the Regional Programs Unit at the above email or street address.

## DEPARTMENT OF COMMERCE

### International Trade Administration

[A–570–504]

#### Certain Petroleum Wax Candles From the People's Republic of China: Final Results of Expedited Fourth Sunset Review of the Antidumping Duty Order

**AGENCY:** Enforcement and Compliance, International Trade Administration, Department of Commerce.

**SUMMARY:** On December 1, 2015, the Department of Commerce (the "Department") published the notice of initiation of the first five-year ("sunset") review of the antidumping duty order on certain petroleum wax candles ("candles") from the People's Republic of China ("PRC") pursuant to section 751(c) of the Tariff Act of 1930, as amended (the "Act").<sup>1</sup> As a result of this sunset review, the Department finds that revocation of the antidumping duty order on candles from the PRC would be likely to lead to continuation or recurrence of dumping. The magnitude of the dumping margins likely to prevail is indicated in the "Final Results of Review" section of this notice.

**DATES:** *Effective Date:* March 30, 2016.

**FOR FURTHER INFORMATION CONTACT:** Katie Marksberry, AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–7906.

#### SUPPLEMENTARY INFORMATION:

##### Background

As noted above, on December 1, 2015, the Department published the initiation of the fourth sunset review of candles from the PRC.<sup>2</sup> On December 7, 2015, National Candle Association ("NCA") ("Petitioner") timely notified the Department of its intent to participate within the deadline specified in 19 CFR 351.218(d)(1)(i), claiming domestic interested party status under section 771(9)(C) of the Act.<sup>3</sup> On December 31, 2015, the Department received an adequate substantive response from Petitioner within the deadline specified in 19 CFR 351.218(d)(3)(i).<sup>4</sup> We received no responses from respondent interested parties. As a result, the Department conducted an expedited (120-day) sunset review of the order, pursuant to

section 751(c)(3)(B) of the Act and 19 CFR 351.218(e)(1)(ii)(C)(2).

#### Scope of the Order

The products covered by the order are certain scented or unscented petroleum wax candles made from petroleum wax and having fiber or paper-cored wicks. They are sold in the following shapes: Tapers, spirals and straight-sided dinner candles; rounds, columns, pillars, votives; and various wax-filled containers. The products were originally classifiable under the Tariff Schedules of the United States item 755.25, Candles and Tapers. The products are currently classifiable under the Harmonized Tariff Schedule ("HTS") item number 3406.00.00. The HTS item number is provided for convenience and customs purposes. The written description remains dispositive.

#### Analysis of Comments Received

All issues raised in this sunset review are addressed in the Issues and Decision Memorandum. The issues discussed in the Issues and Decision Memorandum include the likelihood of continuation or recurrence of dumping and the magnitude of the margins likely to prevail if the order were to be revoked. Parties may find a complete discussion of all issues raised in the review and the corresponding recommendations in this public memorandum which is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System ("ACCESS"). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, room 7046 of the main Department of Commerce building. In addition, a complete version of the Decision Memorandum can be accessed directly on the Internet at <http://enforcement.trade.gov/frn/index.html>. The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

#### Final Results of Review

Pursuant to section 752(c) of the Act, the Department determines that revocation of the order would be likely to lead to continuation or recurrence of dumping at weighted-average margins up to 95.86 percent.

#### Administrative Protective Order

This notice also serves as the only reminder to parties subject to administrative protective order ("APO") of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305.

<sup>1</sup> See *Initiation of Five-Year ("Sunset") Review*, 80 FR 75064 (December 1, 2015).

<sup>2</sup> *Id.*

<sup>3</sup> See Petitioners' December 7, 2015, submission.

<sup>4</sup> See Petitioners' December 31, 2015, submission.

Timely notification of the return of destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

We are publishing these final results and notice in accordance with sections 751(c), 752(c), and 777(i)(1) of the Act.

Dated: March 17, 2016.

**Paul Piquado,**

*Assistant Secretary for Enforcement and Compliance.*

### National Oceanic and Atmospheric Administration

RIN 0648-XE442

#### Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Subsea Cable-Laying Operations in the Bering, Chukchi, and Beaufort Seas

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Notice; proposed incidental harassment authorization; request for comments.

**SUMMARY:** NMFS has received an application from Quintillion Subsea Operations, LLC (Quintillion) for an Incidental Harassment Authorization (IHA) to take marine mammals, by harassment, incidental to a subsea cable-laying operation in the state and federal waters of the Bering, Chukchi, and Beaufort seas, Alaska, during the open-water season of 2016. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is requesting comments on its proposal to issue an IHA to Quintillion to incidentally take, by Level B Harassments, marine mammals during the specified activity.

**DATES:** Comments and information must be received no later than April 29, 2016.

**ADDRESSES:** Comments on the application should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service, 1315 East-West Highway, Silver Spring, MD 20910. The mailbox address for providing email comments is [itp.guan@noaa.gov](mailto:itp.guan@noaa.gov). Comments sent via email, including all attachments, must not exceed a 25-megabyte file size. NMFS is not

responsible for comments sent to addresses other than those provided here.

**Instructions:** All comments received are a part of the public record and will generally be posted to <http://www.nmfs.noaa.gov/pr/permits/incidental.htm> without change. All Personal Identifying Information (for example, name, address, etc.) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information.

An electronic copy of the application may be obtained by writing to the address specified above, telephoning the contact listed below (see **FOR FURTHER INFORMATION CONTACT**), or visiting the Internet at: <http://www.nmfs.noaa.gov/pr/permits/incidental.htm>. The following associated documents are also available at the same Internet address: Plan of Cooperation. Documents cited in this notice may also be viewed, by appointment, during regular business hours, at the aforementioned address.

NMFS is also preparing a draft Environmental Assessment (EA) in accordance with the National Environmental Policy Act (NEPA) and will consider comments submitted in response to this notice as part of that process. The draft EA will be posted at the foregoing internet site.

**FOR FURTHER INFORMATION CONTACT:** Shane Guan, Office of Protected Resources, NMFS, (301) 427-8401.

#### SUPPLEMENTARY INFORMATION:

##### Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

An authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring, and reporting of such takings are set forth. NMFS has defined “negligible

impact” in 50 CFR 216.103 as “an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.”

Except with respect to certain activities not pertinent here, the MMPA defines “harassment” as: Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment]; or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].

#### Summary of Request

On October 29, 2015, NMFS received an IHA application and marine mammal mitigation and monitoring plan (4MP) from Quintillion for the taking of marine mammals incidental to conducting subsea cable laying activities in the U.S. Bering, Chukchi, and Beaufort seas. After receiving NMFS comments on the initial application, Quintillion made revisions and updated its IHA application and 4MP on February 3, 2016. NMFS determined that the application and the 4MP were adequate and complete on February 5, 2016.

Quintillion proposes to install a subsea fiber optic network cable along the northern and western coasts of Alaska in the U.S. Bering, Chukchi, and Beaufort seas during the 2016 Arctic open-water season. The proposed activity would occur between June 1 and October 31, 2016. Noise generated from cable vessel’s dynamic positioning thruster could impact marine mammals in the vicinity of the activities. Take, by Level B harassments, of individuals of 8 species of marine mammals is proposed to be authorized from the specified activity.

#### Description of the Specified Activity

##### Overview

On October 29, 2015, NMFS received an application from Quintillion requesting an authorization for the harassment of small numbers of marine mammals incidental to subsea cable-laying operations in the Bering, Chukchi, and Beaufort seas off Alaska. After addressing comments from NMFS, Quintillion modified its application and submitted revised applications and 4MP on February 3, 2016. Quintillion’s proposed activities discussed here are

based on its February 3, 2016, IHA application and 4MP.

*Dates and Duration*

The proposed subsea cable-laying operation is planned for the 2016 open-water season (June 1 to October 31). All associated activities, including mobilization, pre-lay grapnel run (PLGR), cable-laying, post lay inspection and burial (PLIB), and demobilization of survey and support crews, would occur inclusive of the above seasonal dates. It is expected that the operations may last all season (approximately 150 days).

*Specified Geographic Region*

The planned fiber optic cable-laying project will occur in the offshore waters of the Bering, Chukchi, and Beaufort seas between Nome and Oliktok Point (the latter located 260 km [162 mi] southeast of Barrow). The specific area is provided in Figure 1 of Quintillion’s IHA application.

*Detailed Description of Activities*

I. Cable Network

The proposed subsea cable network is shown in Figure 1 of the IHA

application. The cable network includes the main trunk line and six branch lines. The main trunk line is 1,317 km (818 mi) in length, and will run from the tail of the Nome branch line to the tail of the Oliktok Point branch line (Table 1). The branch lines range between 27 km (17 mi) and 233 km (145 mi) long. The branch lines connect to the main trunk line at the branching unit (BU), which is a piece of hardware that allows the interconnection of the branch cable from the main trunk line to the shore end facility. The cable is also “repeated” in that approximately every 60 km (37 mi) a repeater is attached to the cable that amplifies the signal. Collectively, the cable, BUs, and repeaters make up the “submerged plant.” Depending on bottom substrate, water depth, and distance from shore, the cable would either lay on the ocean floor or will be buried using a plough or a remote operating vehicle (ROV) equipped for burial jetting.

II. Vessels

The cable-laying operations will be conducted from two ships, the *Ile de Brehat* and the *Ile de Sein*, and a large

cable-laying barge. Both ships are 140 m (460 ft) in length, 23 m (77 ft) in breadth, with berths for a crew of 70. The ships are propelled by two 4,000 kW fixed-pitch propellers. Dynamic positioning is maintained by two 1,500 kW bow thrusters, two 1,500 kW aft thrusters, and one 1,500 kW fore thruster.

Support vessels include a tug and barge that will remain in the vicinity of the main lay vessel. During cable laying activities occurring in nearshore waters too shallow of the *Ile de Brehat*, the tug and barge (using a dive team) will lay the final shore ends of the cable.

The branch line segment between Oliktok Point and BU Oliktok crosses a hard seafloor that poses a more unique challenge to burying the cable in the ice scour zone. For this segment the *CB Networker*, a 60-m (197-ft) powered cable-lay barge, will be used because it includes a vertical injector powerful enough to cut a cable trench through the hard sediments found off Oliktok Point. The *CB Networker* is also large enough to operate offshore and will lay the full 75 km cable length between Oliktok Point and BU Oliktok.

TABLE 1—CABLE NETWORK ROUTE LENGTHS FOR EACH SEGMENT

	Segment (km)							Total
	Main	Branch lines						
		Oliktok	Barrow	Wainwright	Point Hope	Kotzebue	Nome	
Route Length .....	1,317	74	27	31	27	233	195	1,904

III. Pre-Lay Grapnel Run

Before cable is laid, a pre-lay grapnel run (PLGR) will be carried out along the proposed cable route where burial is required. The objective of the PLGR operation is the identification and clearance of any seabed debris, for example wires, hawsers, wrecks, or fishing gear, which may have been deposited along the route. Any debris recovered during these operations would be discharged ashore on completion of the operations and disposed of in accordance with local regulations. If any debris cannot be recovered, then a local reroute would be planned to avoid the debris. The PLGR operation would be to industry standards employing towed grapnels; the type of grapnel being determined by the nature of the seabed. The PLGR operation would be conducted by a local tug boat ahead of the cable-laying.

IV. Cable-Laying

The objective of the surface laying operation is to install the cable as close

as possible to the planned route with the correct amount of cable slack to enable the cable to conform to the contours of the seabed without loops or suspensions. A slack plan would be developed that uses direct bathymetric data and a catenary modeling system to control the ship and the cable pay out speeds to ensure the cable is accurately placed in its planned physical position.

Where the BAS has determined that cable burial is possible, the cable would be buried using various methods. In water depths greater than about 12 m (about 40 ft), the cable would be buried using an SMD Heavy Duty HD3 Plough. The plough has a submerged weight of 25 tonnes (27.6 tons). The plough is pulled by the tow wire and the cable fed through a cable depressor that pushes it into the trench. Burial depth is controlled by adjusting the front skids. The normal tow speed is approximately 600 m/hr (approximately 0.37 mph).

In water depths less than 12 m (40 ft), burial would be by jet burial using a towed sled, tracked ROV, or by diver jet

burial, subject to seabed conditions in the area. The ROV would be used in areas accessible to the main lay vessel. The planned ROV, the ROVJET 400 series, is 5.8 m (19.0 ft) long and 3.4 m (11.2 ft) wide and weighs 9.1 tonnes (10 tons) in air, and has both a main and forward jet tool cable of trenching to 2 m (6.6 ft) depth.

Nearer to shore, where seasonal ice scouring occurs, the cable with be floated on the surface and then pulled through an existing horizontal directional drilling (HDD) bore pipe to the beach man hole (BMH) where it would be anchor-clamped and spliced to the terrestrial cable. The floated cable portion is then lowered to the seabed by divers and buried (using a post-lay burial method as described above) from the HDD Bore pipe seaward.

V. Post Lay Inspection and Burial

While it is expected that the cable trench would fill back in by natural current processes, it is important to ensure that cable splices and BUs are

fully buried, and that there are no unnecessary plough skips at locations where burial is critical. To ensure proper burial, a post lay inspection and burial (PLIB) would be conducted using the ROVJET 400 series mentioned above. It is expected that PLIB would be

necessary for no more than about 10 km (6.2 mi) of the cumulative planned burial routes.

**Description of Marine Mammals in the Area of the Specified Activity**

The Bering, Chukchi, and Beaufort seas support a diverse assemblage of

marine mammals. Table 2 lists the 12 marine mammal species under NMFS jurisdiction with confirmed or possible occurrence in the proposed project area.

**TABLE 2—MARINE MAMMAL SPECIES WITH CONFIRMED OR POSSIBLE OCCURRENCE IN THE PROPOSED ACTION AREA**

Common name	Scientific name	Status	Occurrence	Seasonality	Range	Abundance	
Odontocetes: Beluga whale (Beaufort Sea stock).	<i>Delphinapterus leucas</i>	.....	Common .....	Mostly spring and fall with some in summer.	Mostly Beaufort Sea ..	39,258	
Beluga whale (eastern Chukchi Sea stock).	.....	.....	Common .....	Mostly spring and fall with some in summer.	Mostly Chukchi Sea ...	3,710	
Beluga whale (eastern Bering Sea stock).	.....	.....	Common .....	Year round .....	Bering Sea .....	19,186	
Killer whale (Alaska resident stock).	<i>Orcinus orca</i>	.....	Occasional/Extralimital	Mostly summer and early fall.	California to Alaska ....	2,347	
Harbor porpoise (Bering Sea stock).	<i>Phocoena phocoena</i>	..	Occasional/Extralimital	Mostly summer and early fall.	California to Alaska ....	48,215	
Mysticetes: * Bowhead whale (W. Arctic stock).	<i>Balaena mysticetus</i>	....	Endangered; Depleted	Common .....	Mostly spring and fall with some in summer.	Russia to Canada .....	19,534
Gray whale (E. North Pacific stock).	<i>Eschrichtius robustus</i>	.....	Somewhat common ...	Mostly summer .....	Mexico to the U.S. Arctic Ocean.	20,990	
* Fin whale (N. East Pacific).	<i>Balaenoptera physalus</i>	.....	Endangered; Depleted	Rare .....	Mostly summer .....	N.E. Pacific Ocean ....	1,650
* Humpback whale (Central North Pacific stock).	<i>Megaptera novaeangliae</i>	.....	Endangered; Depleted	Rare .....	Mostly summer .....	North Pacific Ocean ...	10,103
* Humpback whale (western North Pacific stock).	<i>Megaptera novaeangliae</i>	.....	Endangered; Depleted	Rare .....	Mostly summer .....	North Pacific Ocean ...	1,107
Pinnipeds: * Bearded seal (Alaska stock).	<i>Erignathus barbatus</i>	.....	Threatened; Depleted	Common .....	Spring and summer ...	Bering, Chukchi, and Beaufort Seas.	155,000

Spotted seal (Alaska stock).	<i>Phoca largha</i>	.....	.....	Common .....	Summer .....	Japan to U.S. Arctic Ocean.	460,268
Ribbon seal (Alaska stock).	<i>Histiophoca fasciata</i>	.....	.....	Occasional .....	Summer .....	Russia to U.S. Arctic Ocean.	49,000

\* Endangered, threatened, or species of concern under the Endangered Species Act (ESA); Depleted under the MMPA.

Among these species, bowhead, humpback, and fin whales, and ringed and bearded are listed as endangered or threatened species under the Endangered Species Act (ESA). In addition, walrus and the polar bear could also occur in the Bering, Chukchi, and Beaufort seas; however, these species are managed by the U.S. Fish and Wildlife Service (USFWS) and are not considered in this Notice of Proposed IHA.

Of all these species, bowhead and beluga whales and ringed, bearded, and spotted seals are the species most frequently sighted in the proposed activity area. The proposed action area in the Bering, Chukchi, and Beaufort seas also includes areas that have been identified as important for bowhead whale reproduction during summer and fall and for beluga whale feeding and reproduction in summer.

Most bowheads fall migrate through the Alaskan Beaufort in water depths between 15 and 200 m (50 and 656 ft) deep (Miller et al. 2002), with annual variability depending on ice conditions. Hauser et al. (2008) conducted surveys for bowhead whales near the Colville River Delta (near Oliktok Point) during August and September 2008, and found most bowheads between 25 and 30 km (15.5 and 18.6 mi) north of the barrier islands (Jones Islands), with the nearest in 18 m (60 ft) of water about 25 km (16 mi) north of the Colville River Delta. No bowheads were observed inside the 18-m (60-ft) isobath. Most of the cable-lay activity planned for the Beaufort Sea will occur in water deeper than 15 m (50 ft) where migrating bowhead whales could most likely be encountered.

Three stocks of beluga whale inhabit the waters where cable-lay is planned to occur: Beaufort Sea, Eastern Chukchi

Sea, and Eastern Bering Sea (O’Corry-Crowe et al. 1997). All three stocks winter in the open leads and polynyas of the Bering Sea (Hazard 1988). In spring, the Beaufort Sea stock migrates through coastal leads more than 2,000 km (1,200 mi) to their summering grounds in the Mackenzie River delta where they molt, feed, and calve in the warmer estuarine waters (Braham et al. 1977). In late summer, these belugas move into offshore northern waters to feed (Davis and Evans 1982, Harwood et al. 1996, Richard et al. 2001). In the fall, they begin their migration back to their wintering grounds generally following an offshore route as they pass through the western Beaufort Sea (Richard et al. 2001).

The Beaufort Sea stock beluga whales take a more coastal route during their fall migration, but compared to the vanguard of population and the survey

effort expended, nearshore travel appears to be relatively rare. Most belugas recorded during aerial surveys conducted in the Alaskan Beaufort Sea in the last two decades were found more than 65 km (40 mi) from shore (Miller et al. 1999, Funk et al. 2008, Christie et al. 2010, Clarke and Ferguson 2010, Brandon et al. 2011). For the most part, beluga whales from this stock are expected to occur well north of the proposed cable route through the Beaufort Sea at the time of cable-lay activity.

The Eastern Chukchi Sea beluga whale stock summers in Kotzebue Sound and Kasegaluk Lagoon where they breed and molt, and then in late summer and fall they also move in the Beaufort Sea (Suydam et al. 2005). Suydam et al. (2005) satellite-tagged 23 beluga whales in Kasegaluk Lagoon and found nearly all the whales move into the deeper waters of the Beaufort Sea post-tagging. However, virtually none of the whales were found in continental shelf waters (<200 m deep) of the Beaufort Sea, and all were in waters at least 65 km (40 mi) north of the northern Alaska coastline. The most recent stock estimate is 3,710 animals (Allen and Angliss 2015). The planned cable-lay activity is most likely to encounter this stock whale laying the Kotzebue and Wainwright branch lines, but the routes do avoid the Kasegaluk Lagoon breeding and molting area.

There is little information on movements of the East Bering stock of beluga whales, although two whales were satellite tagged in 2012 near Nome wintered in Bristol Bay (Allen and Angliss 2015). These whales might be encountered while laying the Nome branch line.

In addition, a few gray whales are expected to be encountered along the main trunk line route through the north Bering and Chukchi seas. However, they are expected to be commonly observed along the nearshore segments of the branch lines, especially the Wainwright branch where they are commonly found in large feeding groups.

Three of the ice seal species—ringed, bearded, and spotted seals—are fairly common in the proposed subsea cable laying areas. However, there are no pinnipeds haulouts in the vicinity of the action area.

Further information on the biology and local distribution of these species can be found in Quintillion's application (see **ADDRESSES**) and the NMFS Marine Mammal Stock Assessment Reports, which are available online at: <http://www.nmfs.noaa.gov/pr/sars/species.htm>.

### Potential Effects of the Specified Activity on Marine Mammals

This section includes a summary and discussion of the ways that the types of stressors associated with the specified activity (e.g., operation of dynamic positioning thrusters) have been observed to or are thought to impact marine mammals. This section may include a discussion of known effects that do not rise to the level of an MMPA take (for example, with acoustics, we may include a discussion of studies that showed animals not reacting at all to sound or exhibiting barely measurable avoidance). The discussion may also include reactions that we consider to rise to the level of a take and those that we do not consider to rise to the level of a take. This section is intended as a background of potential effects and does not consider either the specific manner in which this activity will be carried out or the mitigation that will be implemented or how either of those will shape the anticipated impacts from this specific activity. The "Estimated Take by Incidental Harassment" section later in this document will include a quantitative analysis of the number of individuals that are expected to be taken by this activity. The "Negligible Impact Analysis" section will include the analysis of how this specific activity will impact marine mammals and will consider the content of this section, the "Estimated Take by Incidental Harassment" section, the "Proposed Mitigation" section, and the "Anticipated Effects on Marine Mammal Habitat" section to draw conclusions regarding the likely impacts of this activity on the reproductive success or survivorship of individuals and from that on the affected marine mammal populations or stocks.

When considering the influence of various kinds of sound on the marine environment, it is necessary to understand that different kinds of marine life are sensitive to different frequencies of sound. Based on available behavioral data, audiograms have been derived using auditory evoked potentials, anatomical modeling, and other data. Southall *et al.* (2007) designate "functional hearing groups" for marine mammals and estimate the lower and upper frequencies of functional hearing of the groups. The functional groups and the associated frequencies are indicated below (though animals are less sensitive to sounds at the outer edge of their functional range and most sensitive to sounds of frequencies within a smaller range somewhere in the middle of their functional hearing range):

- Low frequency cetaceans (13 species of mysticetes): Functional hearing is estimated to occur between approximately 7 Hz and 25 kHz;
- Mid-frequency cetaceans (32 species of dolphins, six species of larger toothed whales, and 19 species of beaked and bottlenose whales): Functional hearing is estimated to occur between approximately 150 Hz and 160 kHz;
- High frequency cetaceans (eight species of true porpoises, six species of river dolphins, *Kogia*, the franciscana, and four species of cephalorhynchids): Functional hearing is estimated to occur between approximately 200 Hz and 180 kHz;
- Phocid pinnipeds (true seals): Functional hearing is estimated between 75 Hz to 100 kHz; and
- Otariid pinnipeds (sea lions and fur seals): Functional hearing is estimated between 100 Hz to 48 kHz.

Species found in the vicinity of Quintillion subsea cable-laying operation area include four low-frequency cetacean species (Bowhead whale, gray whale, humpback whale, and fin whale), two mid-frequency cetacean species (beluga whale and killer whale), one high-frequency cetacean species (harbor porpoise), and four pinniped species (ringed seal, spotted seal, bearded seal, and ribbon seal).

The proposed Quintillion subsea cable-laying operation could adversely affect marine mammal species and stocks by exposing them to elevated noise levels in the vicinity of the activity area.

Exposure to high intensity sound for a sufficient duration may result in auditory effects such as a noise-induced threshold shift—an increase in the auditory threshold after exposure to noise (Finneran *et al.*, 2005). Factors that influence the amount of threshold shift include the amplitude, duration, frequency content, temporal pattern, and energy distribution of noise exposure. The magnitude of hearing threshold shift normally decreases over time following cessation of the noise exposure. The amount of threshold shift just after exposure is the initial threshold shift. If the threshold shift eventually returns to zero (*i.e.*, the threshold returns to the pre-exposure value), it is a temporary threshold shift (Southall *et al.*, 2007).

**Threshold Shift (noise-induced loss of hearing)**—When animals exhibit reduced hearing sensitivity (*i.e.*, sounds must be louder for an animal to detect them) following exposure to an intense sound or sound for long duration, it is referred to as a noise-induced threshold

shift (TS). An animal can experience temporary threshold shift (TTS) or permanent threshold shift (PTS). TTS can last from minutes or hours to days (*i.e.*, there is complete recovery), can occur in specific frequency ranges (*i.e.*, an animal might only have a temporary loss of hearing sensitivity between the frequencies of 1 and 10 kHz), and can be of varying amounts (for example, an animal's hearing sensitivity might be reduced initially by only 6 dB or reduced by 30 dB). PTS is permanent, but some recovery is possible. PTS can also occur in a specific frequency range and amount as mentioned above for TTS.

The following physiological mechanisms are thought to play a role in inducing auditory TS: Effects to sensory hair cells in the inner ear that reduce their sensitivity, modification of the chemical environment within the sensory cells, residual muscular activity in the middle ear, displacement of certain inner ear membranes, increased blood flow, and post-stimulatory reduction in both efferent and sensory neural output (Southall *et al.*, 2007). The amplitude, duration, frequency, temporal pattern, and energy distribution of sound exposure all can affect the amount of associated TS and the frequency range in which it occurs. As amplitude and duration of sound exposure increase, so, generally, does the amount of TS, along with the recovery time. For intermittent sounds, less TS could occur than compared to a continuous exposure with the same energy (some recovery could occur between intermittent exposures depending on the duty cycle between sounds) (Kryter *et al.*, 1966; Ward, 1997). For example, one short but loud (higher SPL) sound exposure may induce the same impairment as one longer but softer sound, which in turn may cause more impairment than a series of several intermittent softer sounds with the same total energy (Ward, 1997). Additionally, though TTS is temporary, prolonged exposure to sounds strong enough to elicit TTS, or shorter-term exposure to sound levels well above the TTS threshold, can cause PTS, at least in terrestrial mammals (Kryter, 1985). Although in the case of Quintillion's subsea cable laying operation, NMFS does not expect that animals would experience levels high enough or durations long enough to result in TS given that the noise levels from the operation are very low.

For marine mammals, published data are limited to the captive bottlenose dolphin, beluga, harbor porpoise, and Yangtze finless porpoise (Finneran *et al.*, 2000, 2002, 2003, 2005, 2007, 2010a,

2010b; Finneran and Schlundt, 2010; Lucke *et al.*, 2009; Mooney *et al.*, 2009a, 2009b; Popov *et al.*, 2011a, 2011b; Kastelein *et al.*, 2012a; Schlundt *et al.*, 2000; Nachtigall *et al.*, 2003, 2004). For pinnipeds in water, data are limited to measurements of TTS in harbor seals, an elephant seal, and California sea lions (Kastak *et al.*, 1999, 2005; Kastelein *et al.*, 2012b).

Lucke *et al.* (2009) found a threshold shift (TS) of a harbor porpoise after exposing it to airgun noise with a received sound pressure level (SPL) at 200.2 dB (peak-to-peak) re: 1  $\mu$ Pa, which corresponds to a sound exposure level of 164.5 dB re: 1  $\mu$ Pa<sup>2</sup> s after integrating exposure. NMFS currently uses the root-mean-square (rms) of received SPL at 180 dB and 190 dB re: 1  $\mu$ Pa as the threshold above which permanent threshold shift (PTS) could occur for cetaceans and pinnipeds, respectively. Because the airgun noise is a broadband impulse, one cannot directly determine the equivalent of rms SPL from the reported peak-to-peak SPLs. However, applying a conservative conversion factor of 16 dB for broadband signals from seismic surveys (McCauley, *et al.*, 2000) to correct for the difference between peak-to-peak levels reported in Lucke *et al.* (2009) and rms SPLs, the rms SPL for TTS would be approximately 184 dB re: 1  $\mu$ Pa, and the received levels associated with PTS (Level A harassment) would be higher. This is still above NMFS' current 180 dB rms re: 1  $\mu$ Pa threshold for injury. However, NMFS recognizes that TTS of harbor porpoises is lower than other cetacean species empirically tested (Finneran & Schlundt, 2010; Finneran *et al.*, 2002; Kastelein and Jennings, 2012).

Marine mammal hearing plays a critical role in communication with conspecifics, and interpretation of environmental cues for purposes such as predator avoidance and prey capture. Depending on the degree (elevation of threshold in dB), duration (*i.e.*, recovery time), and frequency range of TTS, and the context in which it is experienced, TTS can have effects on marine mammals ranging from discountable to serious (similar to those discussed in auditory masking, below). For example, a marine mammal may be able to readily compensate for a brief, relatively small amount of TTS in a non-critical frequency range that occurs during a time where ambient noise is lower and there are not as many competing sounds present. Alternatively, a larger amount and longer duration of TTS sustained during time when communication is critical for successful mother/calf interactions could have more serious impacts. Also, depending on the degree

and frequency range, the effects of PTS on an animal could range in severity, although it is considered generally more serious because it is a permanent condition. Of note, reduced hearing sensitivity as a simple function of aging has been observed in marine mammals, as well as humans and other taxa (Southall *et al.*, 2007), so one can infer that strategies exist for coping with this condition to some degree, though likely not without cost.

In addition, chronic exposure to excessive, though not high-intensity, noise could cause masking at particular frequencies for marine mammals that utilize sound for vital biological functions (Clark *et al.* 2009). Acoustic masking is when other noises such as from human sources interfere with animal detection of acoustic signals such as communication calls, echolocation sounds, and environmental sounds important to marine mammals. Therefore, under certain circumstances, marine mammals whose acoustical sensors or environment are being severely masked could also be impaired from maximizing their performance fitness in survival and reproduction.

Masking occurs at the frequency band which the animals utilize. Therefore, since noise generated from vessels dynamic positioning activity is mostly concentrated at low frequency ranges, it may have less effect on high frequency echolocation sounds by odontocetes (toothed whales). However, lower frequency man-made noises are more likely to affect detection of communication calls and other potentially important natural sounds such as surf and prey noise. It may also affect communication signals when they occur near the noise band and thus reduce the communication space of animals (*e.g.*, Clark *et al.* 2009) and cause increased stress levels (*e.g.*, Foote *et al.* 2004; Holt *et al.* 2009).

Unlike TS, masking, which can occur over large temporal and spatial scales, can potentially affect the species at population, community, or even ecosystem levels, as well as individual levels. Masking affects both senders and receivers of the signals and could have long-term chronic effects on marine mammal species and populations. Recent science suggests that low frequency ambient sound levels have increased by as much as 20 dB (more than 3 times in terms of sound pressure level) in the world's ocean from pre-industrial periods, and most of these increases are from distant shipping (Hildebrand 2009). All anthropogenic noise sources, such as those from vessel traffic and cable-laying while operating

dynamic positioning (DP) thrusters contribute to the elevated ambient noise levels, thus increasing potential for or severity of masking.

Finally, exposure of marine mammals to certain sounds could lead to behavioral disturbance (Richardson *et al.* 1995), such as: Changing durations of surfacing and dives, number of blows per surfacing, or moving direction and/or speed; reduced/increased vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); visible startle response or aggressive behavior (such as tail/fluke slapping or jaw clapping); avoidance of areas where noise sources are located; and/or flight responses (*e.g.*, pinnipeds flushing into water from haulouts or rookeries).

The onset of behavioral disturbance from anthropogenic noise depends on both external factors (characteristics of noise sources and their paths) and the receiving animals (hearing, motivation, experience, demography) and is also difficult to predict (Southall *et al.* 2007). Currently NMFS uses a received level of 160 dB re 1  $\mu$ Pa (rms) to predict the onset of behavioral harassment from impulse noises (such as impact pile driving), and 120 dB re 1  $\mu$ Pa (rms) for continuous noises (such as operating DP thrusters). No impulse noise is expected from the Quintillion subsea cable-laying operation. For the Quintillion subsea cable-laying operation, only the 120 dB re 1  $\mu$ Pa (rms) threshold is considered because only continuous noise sources would be generated.

The biological significance of many of these behavioral disturbances is difficult to predict, especially if the detected disturbances appear minor. However, the consequences of behavioral modification could be biologically significant if the change affects growth, survival, and/or reproduction, which depends on the severity, duration, and context of the effects.

#### Anticipated Effects on Marine Mammal Habitat

Project activities that could potentially impact marine mammal habitats include acoustical impacts to prey resources associated with laying cable on sea bottom. Regarding the former, however, acoustical injury from thruster noise is unlikely. Previous noise studies (*e.g.*, Greenlaw *et al.* 1988, Davis *et al.* 1998, Christian *et al.* 2004) with cod, crab, and schooling fish found little or no injury to adults, larvae, or eggs when exposed to impulsive noises exceeding 220 dB. Continuous noise levels from ship thrusters are generally below 180 dB, and do not create great

enough pressures to cause tissue or organ injury.

Nedwell *et al.* (2003) measured noise associated with cable trenching operations offshore of Wales, and found that levels (178 dB at source) did not exceed those where significant avoidance reactions of fish would occur. Cable burial operations involve the use of ploughs or jets to cut trenches in the sea floor sediment. Cable ploughs are generally used where the substrate is cohesive enough to be “cut” and laid alongside the trench long enough for the cable to be laid at depth. In less cohesive substrates, where the sediment would immediately settle back into the trench before the cable could be laid, jetting is used to scour a more lasting furrow. The objective of both is to excavate a temporary trench of sufficient depth to fully bury the cable. The plough blade is 0.2 m (0.7 ft) wide producing a trench of approximately the same width. Jetted trenches are somewhat wider depending on the sediment type. Potential impacts to marine mammal habitat and prey include (1) crushing of benthic and epibenthic invertebrates with the plough blade, plough skid, or ROV track, (2) dislodgement of benthic invertebrates onto the surface where they may die, and (3) the settlement of suspended sediments away from the trench where they may clog gills or feeding structures of sessile invertebrates or smother sensitive species (BERR 2008). However, the footprint of cable trenching is generally restricted to 2 to 3 m (7–10 ft) width (BERR 2008), and the displaced wedge or berm is expected to naturally backfill into the trench. Jetting results in more suspension of sediments, which may take days to settle during which currents may transport it well away (up to several kilometers) from its source. Suspended sand particles generally settle within about 20 m (66 ft). BERR (2008) reviewed the effect of offshore wind farm construction, including laying of power and communication cables, on the environment. Based on a rating of 1 to 10, they concluded that sediment disturbance from plough operations rated the lowest at 1, with jetting rating from 2 to 4, depending on substrate. Dredging rated the highest (6) relative sediment disturbance.

The maximum amount of trenching possible is about 1,900 km (1,180 mi), but the width of primary effect is only about 3 m (10 ft). Thus, the maximum impact footprint is less than 6 km<sup>2</sup> (2.3 mi<sup>2</sup>), an insignificantly small area given the Chukchi Sea area alone is 595,000 km<sup>2</sup> (230,000 mi<sup>2</sup>). Overall, cable-laying effects to marine mammal habitat and

prey resources are considered not significant.

#### Proposed Mitigation

In order to issue an incidental take authorization (ITA) under section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to such activity, and other means of effecting the least practicable impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for taking for certain subsistence uses (where relevant).

For the proposed Quintillion open-water subsea cable-laying operations in the Bering, Chukchi, and Beaufort seas, NMFS worked with Quintillion and its contractor to propose the following mitigation measures to minimize the potential impacts to marine mammals in the project vicinity as a result of the activities. The primary purpose of these mitigation measures is to detect marine mammals and avoid vessel interactions during the pre- and post-cable-laying activities. Due to the nature of the activities, the vessel will not be able to engage direction alternation during cable-laying operations. However, since the cable-laying vessel will be moving at a slow speed of 600 meter/hour (0.37 mile per hour or 0.32 knot) during cable-laying operation, it is highly unlikely that the cable vessel would have physical interaction with marine mammals. The following are mitigation measures proposed to be included in the IHA (if issued).

##### (a) Establishing Zone of Influence (ZOI)

Protected species observers (PSOs) would establish a ZOI where the received level is 120 dB during Quintillion's subsea cable-laying operation and conduct marine mammal monitoring during the operation.

##### (b) Vessel Movement Mitigation During Pre- and Post-Cable-Laying Activities

When the cable-lay fleet is traveling in Alaskan waters to and from the project area (before and after completion of cable-laying), the fleet vessels would:

- Not approach concentrations or groups of whales (an aggregation of 6 or more whales) within 1.6 km (1 mi) by all vessels under the direction of Quintillion.
- Take reasonable precautions to avoid potential interaction with the bowhead whales observed within 1.6 km (1 mi) of a vessel.
- Reduce speed to less than 5 knots when visibility drops to avoid the likelihood of collision with whales. The

normal vessel travel speeds when laying cable is well less than 5 knots.

#### *Mitigation Conclusions*

NMFS has carefully evaluated Quintillion's proposed mitigation measures and considered a range of other measures in the context of ensuring that NMFS prescribes the means of effecting the least practicable impact on the affected marine mammal species and stocks and their habitat. Our evaluation of potential measures included consideration of the following factors in relation to one another:

- The manner in which, and the degree to which, the successful implementation of the measures are expected to minimize adverse impacts to marine mammals;
- The proven or likely efficacy of the specific measure to minimize adverse impacts as planned; and
- The practicability of the measure for applicant implementation.

Any mitigation measure(s) prescribed by NMFS should be able to accomplish, have a reasonable likelihood of accomplishing (based on current science), or contribute to the accomplishment of one or more of the general goals listed below:

1. Avoidance or minimization of injury or death of marine mammals wherever possible (goals 2, 3, and 4 may contribute to this goal).

2. A reduction in the numbers of marine mammals (total number or number at biologically important time or location) exposed to received levels of activities expected to result in the take of marine mammals (this goal may contribute to 1, above, or to reducing harassment takes only).

3. A reduction in the number of times (total number or number at biologically important time or location) individuals would be exposed to received levels of activities expected to result in the take of marine mammals (this goal may contribute to 1, above, or to reducing harassment takes only).

4. A reduction in the intensity of exposures (either total number or number at biologically important time or location) to received levels of activities expected to result in the take of marine mammals (this goal may contribute to 1, above, or to reducing the severity of harassment takes only).

5. Avoidance or minimization of adverse effects to marine mammal habitat, paying special attention to the food base, activities that block or limit passage to or from biologically important areas, permanent destruction of habitat, or temporary destruction/disturbance of habitat during a biologically important time.

6. For monitoring directly related to mitigation—an increase in the probability of detecting marine mammals, thus allowing for more effective implementation of the mitigation.

Based on our evaluation of the applicant's proposed measures, as well as other measures considered by NMFS, NMFS has preliminarily determined that the proposed mitigation measures provide the means of effecting the least practicable impact on marine mammal species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance. Proposed measures to ensure availability of such species or stock for taking for certain subsistence uses are discussed later in this document (see "Impact on Availability of Affected Species or Stock for Taking for Subsistence Uses" section).

#### **Proposed Monitoring and Reporting**

In order to issue an ITA for an activity, section 101(a)(5)(D) of the MMPA states that NMFS must set forth, "requirements pertaining to the monitoring and reporting of such taking." The MMPA implementing regulations at 50 CFR 216.104 (a)(13) indicate that requests for ITAs must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the proposed action area. Quintillion submitted a marine mammal monitoring plan as part of the IHA application. The plan may be modified or supplemented based on comments or new information received from the public during the public comment period or from the peer review panel (see the "Monitoring Plan Peer Review" section later in this document).

Monitoring measures prescribed by NMFS should accomplish one or more of the following general goals:

1. An increase in our understanding of the likely occurrence of marine mammal species in the vicinity of the action, *i.e.*, presence, abundance, distribution, and/or density of species.

2. An increase in our understanding of the nature, scope, or context of the likely exposure of marine mammal species to any of the potential stressor(s) associated with the action (*e.g.*, sound or visual stimuli), through better understanding of one or more of the following: The action itself and its environment (*e.g.*, sound source characterization, propagation, and ambient noise levels); the affected species (*e.g.*, life history or dive

pattern); the likely co-occurrence of marine mammal species with the action (in whole or part) associated with specific adverse effects; and/or the likely biological or behavioral context of exposure to the stressor for the marine mammal (*e.g.*, age class of exposed animals or known pupping, calving or feeding areas).

3. An increase in our understanding of how individual marine mammals respond (behaviorally or physiologically) to the specific stressors associated with the action (in specific contexts, where possible, *e.g.*, at what distance or received level).

4. An increase in our understanding of how anticipated individual responses, to individual stressors or anticipated combinations of stressors, may impact either: The long-term fitness and survival of an individual; or the population, species, or stock (*e.g.*, through effects on annual rates of recruitment or survival).

5. An increase in our understanding of how the activity affects marine mammal habitat, such as through effects on prey sources or acoustic habitat (*e.g.*, through characterization of longer-term contributions of multiple sound sources to rising ambient noise levels and assessment of the potential chronic effects on marine mammals).

6. An increase in understanding of the impacts of the activity on marine mammals in combination with the impacts of other anthropogenic activities or natural factors occurring in the region.

7. An increase in our understanding of the effectiveness of mitigation and monitoring measures.

8. An increase in the probability of detecting marine mammals (through improved technology or methodology), both specifically within the safety zone (thus allowing for more effective implementation of the mitigation) and in general, to better achieve the above goals.

#### *Proposed Monitoring Measures*

Monitoring will provide information on the numbers of marine mammals potentially affected by the subsea cable-laying operation and facilitate real-time mitigation to prevent injury of marine mammals by vessel traffic. These goals will be accomplished in the Bering, Chukchi, and Beaufort seas during 2016 by conducting vessel-based monitoring and passive acoustic monitoring to document marine mammal presence and distribution in the vicinity of the operation area.

Visual monitoring by Protected Species Observers (PSOs) during subsea cable-laying operation, and periods

when the operation is not occurring, will provide information on the numbers of marine mammals potentially affected by the activity. Vessel-based PSOs onboard the vessels will record the numbers and species of marine mammals observed in the area and any observable reaction of marine mammals to the cable-laying operation in the Bering, Chukchi, and Beaufort seas.

#### *Vessel-Based PSOs*

Vessel-based monitoring for marine mammals would be done by trained protected species observers (PSOs) throughout the period of subsea cable-laying operation. The observers would monitor the occurrence of marine mammals near the cable-laying vessel during all daylight periods during operation. PSO duties would include watching for and identifying marine mammals; recording their numbers, distances, and reactions to the survey operations; and documenting "take by harassment."

A sufficient number of PSOs would be required onboard each survey vessel to meet the following criteria:

- 100% monitoring coverage during all periods of cable-laying operations in daylight;
- Maximum of 4 consecutive hours on watch per PSO; and
- Maximum of 12 hours of watch time per day per PSO.

PSO teams will consist of Inupiat observers and experienced field biologists. Each vessel will have an experienced field crew leader to supervise the PSO team. The total number of PSOs may decrease later in the season as the duration of daylight decreases.

#### (1) PSOs Qualification and Training

Lead PSOs and most PSOs would be individuals with experience as observers during marine mammal monitoring projects in Alaska or other offshore areas in recent years. New or inexperienced PSOs would be paired with an experienced PSO or experienced field biologist so that the quality of marine mammal observations and data recording is kept consistent.

Resumes for candidate PSOs would be provided to NMFS for review and acceptance of their qualifications. Inupiat observers would be experienced in the region and familiar with the marine mammals of the area. All observers would complete a NMFS-approved observer training course designed to familiarize individuals with monitoring and data collection procedures.

#### (2) Specialized Field Equipment

The PSOs shall be provided with Fujinon 7 × 50 or equivalent binoculars for visual based monitoring onboard all vessels.

Laser range finders (Leica LRF 1200 laser rangefinder or equivalent) would be available to assist with distance estimation.

#### *Acoustic Monitoring*

##### (1) Sound Source Measurements

Quintillion plans to conduct a sound source verification (SSV) on one of the cable-lay ships and the anchor-handling tugs when both are operating near Nome (early in the season).

##### (2) Passive Acoustic Monitoring

After consulting with NMFS Office of Protected Resources, the National Marine Mammal Laboratory (NMML), and the North Slope Borough Department of Wildlife, Quintillion proposes to contribute to the 2016 joint Arctic Whale Ecology Study (ARCWEST)/Chukchi Acoustics, Oceanography, and Zooplankton Study-extension (CHAOZ-X).

The summer minimum extent of sea ice in the northern Bering Sea, Chukchi Sea, and western Beaufort Sea has diminished by more than 50% over the past two decades. This loss of ice has sparked concerns for long-term survival of ice-dependent species like polar bears, Pacific walrus, bearded seals, and ringed seals. In contrast, populations of some Arctic species such as bowhead and gray whales have increased in abundance, while subarctic species such as humpback, fin, and minke whales have expanded their ranges into the Arctic in response to warmer water and increased zooplankton production. The joint ARCWEST/CHAOZ-X program has been monitoring climate change and anthropogenic activity in the Arctic waters of Alaska since 2010 by tracking satellite tagged animals, sampling lower trophic levels and physical oceanography, and passively acoustically monitoring marine mammal and vessel activity. The current mooring locations for the passive acoustical monitoring (PAM) portion of the joint program align closely with the proposed Quintillion cable-lay route. Operating passive acoustic recorders at these locations in 2016 would provide information not only on the distribution and composition of the marine mammal community along the proposed cable-lay route at the time cable-lay activities would be occurring, but they could also record the contribution of the cable-lay activity on local acoustical environment

where the route passes close to these stations.

#### *Monitoring Plan Peer Review*

The MMPA requires that monitoring plans be independently peer reviewed "where the proposed activity may affect the availability of a species or stock for taking for subsistence uses" (16 U.S.C. 1371(a)(5)(D)(ii)(III)). Regarding this requirement, NMFS' implementing regulations state, "Upon receipt of a complete monitoring plan, and at its discretion, [NMFS] will either submit the plan to members of a peer review panel for review or within 60 days of receipt of the proposed monitoring plan, schedule a workshop to review the plan" (50 CFR 216.108(d)).

NMFS has established an independent peer review panel to review Quintillion's 4MP for the proposed subsea cable-laying operation in the Bering, Chukchi, and Beaufort seas. The panel is scheduled to meet via web conference in early March 2016, and will provide comments to NMFS in April 2016. After completion of the peer review, NMFS will consider all recommendations made by the panel, incorporate appropriate changes into the monitoring requirements of the IHA (if issued), and publish the panel's findings and recommendations in the final IHA notice of issuance or denial document.

#### *Reporting Measures*

##### (1) Final Report

The results of Quintillion's subsea cable laying activities monitoring reports would be presented in the "90-day" final reports, as required by NMFS under the proposed IHA. The initial final reports are due to NMFS within 90 days after the expiration of the IHA (if issued). The reports will include:

- Summaries of monitoring effort (e.g., total hours, total distances, and marine mammal distribution through the study period, accounting for sea state and other factors affecting visibility and detectability of marine mammals);
- Summaries of initial analyses of the datasets that interpret the efficacy, measurements, and observations, rather than raw data, fully processed analyses, or a summary of operations and important observations;
- Analyses of the effects of various factors influencing detectability of marine mammals (e.g., sea state, number of observers, and fog/glare);
- Species composition, occurrence, and distribution of marine mammal sightings, including date, water depth, numbers, age/size/gender categories (if determinable), group sizes, and ice cover;

- Estimates of uncertainty in all take estimates, with uncertainty expressed by the presentation of confidence limits, a minimum-maximum, posterior probability distribution, or another applicable method, with the exact approach to be selected based on the sampling method and data available;

- A clear comparison of authorized takes and the level of actual estimated takes; and

- A complete characterization of the acoustic footprint resulting from various activity states.

The “90-day” reports will be subject to review and comment by NMFS. Any recommendations made by NMFS must be addressed in the final report prior to acceptance by NMFS.

## (2) Notification of Injured or Dead Marine Mammals

In the unanticipated event that the specified activity clearly causes the take of a marine mammal in a manner prohibited by the IHA, such as a serious injury, or mortality (e.g., ship-strike, gear interaction, and/or entanglement), Quintillion would immediately cease the specified activities and immediately report the incident to the Chief of the Permits and Conservation Division, Office of Protected Resources, NMFS, and the Alaska Regional Stranding Coordinators. The report would include the following information:

- Time, date, and location (latitude/longitude) of the incident;
- Name and type of vessel involved;
- Vessel’s speed during and leading up to the incident;
- Description of the incident;
- Status of all sound source use in the 24 hours preceding the incident;
- Water depth;
- Environmental conditions (e.g., wind speed and direction, Beaufort sea state, cloud cover, and visibility);
- Description of all marine mammal observations in the 24 hours preceding the incident;
- Species identification or description of the animal(s) involved;
- Fate of the animal(s); and
- Photographs or video footage of the animal(s) (if equipment is available).

Activities would not resume until NMFS is able to review the circumstances of the prohibited take. NMFS would work with Quintillion to determine what is necessary to minimize the likelihood of further prohibited take and ensure MMPA compliance. Quintillion would not be able to resume its activities until notified by NMFS via letter, email, or telephone.

In the event that Quintillion discovers a dead marine mammal, and the lead

PSO determines that the cause of the death is unknown and the death is relatively recent (i.e., in less than a moderate state of decomposition as described in the next paragraph), Quintillion would immediately report the incident to the Chief of the Permits and Conservation Division, Office of Protected Resources, NMFS, and the NMFS Alaska Stranding Hotline and/or by email to the Alaska Regional Stranding Coordinators. The report would include the same information identified in the paragraph above. Activities would be able to continue while NMFS reviews the circumstances of the incident. NMFS would work with Quintillion to determine whether modifications in the activities are appropriate.

In the event that Quintillion discovers a dead marine mammal, and the lead PSO determines that the death is not associated with or related to the activities authorized in the IHA (e.g., previously wounded animal, carcass with moderate to advanced decomposition, or scavenger damage), Quintillion would report the incident to the Chief of the Permits and Conservation Division, Office of Protected Resources, NMFS, and the NMFS Alaska Stranding Hotline and/or by email to the Alaska Regional Stranding Coordinators, within 24 hours of the discovery. Quintillion would provide photographs or video footage (if available) or other documentation of the stranded animal sighting to NMFS and the Marine Mammal Stranding Network. Quintillion can continue its operations under such a case.

## Estimated Take by Incidental Harassment

Except with respect to certain activities not pertinent here, the MMPA defines “harassment” as: Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment]; or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].

Takes by Level B harassments of some species are anticipated as a result of Quintillion’s proposed subsea cable-laying operation. NMFS expects marine mammal takes could result from noise propagation from dynamic position thrusters during cable-laying operation. NMFS does not expect marine mammals would be taken by collision with cable and support vessels, because the vessels

will be moving at low speeds, and PSOs on the vessels will be monitoring for marine mammals and will be able to alert the vessels to avoid any marine mammals in the area.

For non-impulse sounds, such as those produced by the dynamic positioning thrusters during Quintillion’s subsea cable-laying operation, NMFS uses the 180 and 190 dB (rms) re 1  $\mu$ Pa isopleth to indicate the onset of Level A harassment for cetaceans and pinnipeds, respectively; and the 120 dB (rms) re 1  $\mu$ Pa isopleth for Level B harassment of all marine mammals. Quintillion provided calculations of the 120-dB isopleths expected to be produced by the dynamic positioning thrusters during the proposed cable-laying operation to estimate takes by harassment. NMFS used those calculations to make the necessary MMPA findings. Quintillion provided a full description of the methodology used to estimate takes by harassment in its IHA application, which is also provided in the following sections. There is no 180 or 190-dB zone from the proposed activities.

## Noise Sources

The proposed cable-laying activity is expected to generate underwater noises from several sources, including thrusters, plows, jets, ROVs, echo sounders, and positioning beacons. The predominant noise source and the only underwater noise that is likely to result in take of marine mammals during cable laying operations is the cavitating noise produced by the thrusters during dynamic positioning of the vessel (Tetra Tech 2014). Cavitation is random collapsing of bubbles produced by the blades. The *C/S Ile de Brehat* maintains dynamic positioning during cable-laying operations by using two 1,500 kW bow thrusters, two 1,500 kW aft thrusters, and one 1,500 kW fore thruster. Sound source measurements have not been conducted specific to the *C/S Ile de Brehat* but other acoustical studies have shown thruster noise measurements ranging between 171 and 180 dB re 1  $\mu$ Pa (rms) at 1 m (Nedwell et al. 2003, MacGillivray 2006, Samsung 2009, Hartin et al. 2011, Deepwater Wind 2013, Tetra Tech 2014).

Various acoustical investigations in the Atlantic Ocean have modeled distances to the 120 dB isopleth with results ranging between 1.4 and 3.575 km (Samsung 2009, Deepwater Wind 2013, Tetra Tech 2014) for water depths similar to where Quintillion would be operating in the Arctic Ocean. However, all these ranges were based on conservative modeling that included

maximum parameters and worst-case assumptions.

Hartin et al. (2011) physically measured dynamic positioning noise from the 104-m (341-ft) *Fugro Synergy* operating in the Chukchi Sea while it was using thrusters (2,500 kW) more powerful than those used on the *C/S Ile de Brehat* (1,500 kW). Measured dominant frequencies were 110 to 140 Hz, and the measured (90th percentile) radius to the 120-dB isopleth was 2.3 km (1.4 mi). Because this radius is a measured value from the same water body where Quintillion’s cable-laying operation would occur, as opposed to a conservatively modeled value from the Atlantic Ocean, it is the value used in calculating marine mammal exposure estimates. Sound source levels from the *Fugro Synergy* during dynamic positioning did not exceed 180 dB, thus there are no Level A harassment or injury concerns.

*Acoustic Footprint*

The acoustical footprint (total ensonified area) was determined by assuming that dynamic position would occur along all trunk and branch lines within the proposed fiber optics cable network, regardless of the cable-lay vessel used. The sum total of submerged cable length is 1,902.7 km (1,182.3 mi).

Assuming that the radius to the 120 dB isopleth is 2.3 km (1.4 mi) (Hartin et al. 2011), then the total ensonified area represents a swath that is 1,902.7 km (1,182.3 mi) in length and 4.6 km (2.8 mi) in width (2 x 2.3 km) or 8,752.4 km<sup>2</sup> (3,379.3 mi<sup>2</sup>). The Nome branch (194.7 km [121.0 mi]) and 87.1 km (54.1 mi) of the trunk line between BU Nome and BU Kotzebue fall within the Bering Sea. The combined length is 281.8 km (175.1 mi) and the total ensonified area is 1,296.3 km<sup>2</sup> (500.5 mi<sup>2</sup>). The Oliktok branch (73.9 km [45.9 mi]) and 254.1 km (157.9 mi) of the trunk line between Barrow and Oliktok are found in the Beaufort Sea. Here the combined length is 328 km (203.8 mi) and total ensonified area is 1,508.8 km<sup>2</sup> (582.6 mi<sup>2</sup>). The remaining area 5,947.3 km<sup>2</sup> (2,296.3 mi<sup>2</sup>) falls within the Chukchi Sea.

*Marine Mammal Densities*

Density estimates for bowhead, gray, and beluga whales were derived from aerial survey data collected in the Chukchi and Beaufort seas during the 2011 to 2013 Aerial Surveys of Arctic Marine Mammals (ASAMM) program (Clarke et al. 2012, 2013, 2014, 2015). The proposed cable routes cross ASAMM survey blocks 2, 11, and 12 in the Beaufort Sea, and blocks 13, 14, 18,

21, and 22 in the Chukchi Sea. Only data collected in these blocks were used to estimate densities for bowhead and gray whales. Beluga densities were derived from ASAMM data collected depth zones between 36 and 50 m (118 and 164 ft) within the Chukchi Sea between longitudes 157° and 169° W., and the depth zones between 21 and 200 m (68.9 and 656.2 ft) in the Beaufort Sea between longitudes 154° and 157° W. These depth zones reflect the depths where most of the cable-lay will occur. Harbor porpoise densities (Chukchi Sea only) are from Hartin et al. (2013), and ringed seal densities from Aerts et al. (2014; Chukchi Sea) and Moulton and Lawson (2002; Beaufort Sea). Spotted and bearded seal densities in the Chukchi Sea are also from Aerts et al. (2014), while spotted and bearded seal densities in the Beaufort Sea were developed by assuming both represented 5% of ringed seal densities. Too few sightings have been made in the Chukchi and Beaufort seas for all other marine mammal species to develop credible density estimates.

The density estimates for the seven species are presented in Table 3 (Chukchi/Bering) and Table 4 (Beaufort) below. The specific parameters used in deriving these estimates are provided in the discussions that follow.

TABLE 3—MARINE MAMMAL DENSITIES (#/km<sup>2</sup>) IN THE CHUKCHI AND BERING SEAS

Species	Summer	Fall
Bowhead Whale .....	0.0025	0.0438
Gray Whale .....	0.0680	0.0230
Beluga Whale .....	0.0894	0.0632
Harbor Porpoise .....	0.0022	0.0022
Ringed Seal .....	0.0846	0.0507
Spotted Seal .....	0.0423	0.0253
Bearded Seal .....	0.0630	0.0440

TABLE 4—MARINE MAMMAL DENSITIES (#/km<sup>2</sup>) IN THE BEAUFORT SEA

Species	Summer	Fall
Bowhead Whale .....	0.0444	0.0742
Gray Whale .....	0.0179	0.0524
Beluga Whale .....	0.0021	0.0142
Ringed Seal .....	0.3547	0.2510
Spotted Seal .....	0.0177	0.0125
Bearded Seal .....	0.0177	0.0125

*Bowhead Whale:* The summer density estimate for bowhead whales was derived from June, July, and August aerial survey data collected in the Chukchi and Beaufort Sea during the 2011 to 2014 ASAMM program (Clarke et al. 2012, 2013, 2014, 2015). Fall data were collected during September and October. Data only from the survey blocks that will be crossed by the

proposed cable route were used in the calculations, and included blocks 3, 11, and 12 in the Beaufort Sea and 13, 14, 18, 21, and 22 in the Chukchi Sea. ASAMM surveys did not extend more than about 25 km (15.5 mi) south of Point Hope, and there are no other systematic survey data for bowhead whales south of the point. During these three years, 87 bowhead whales were

recorded in the three Beaufort Sea blocks during 12,161 km (7,556 mi) of summer survey effort (0.0072/km), and 201 whales during 16,829 km (10,457 mi) of fall effort (0.0019/km). In the five Chukchi Sea survey blocks, 11 bowheads were recorded during 27,183 km (16,891 mi) of summer effort (0.0004/km), and 160 during 22,678 km (14,091 mi) of fall survey (0.0071/km).

Applying an effective strip half-width (ESW) of 1.15 (Ferguson and Clarke 2013), and a 0.07 correction factor for whales missed during the surveys, results in corrected densities of 0.0444 (Beaufort summer), 0.0742 (Beaufort fall), 0.0025 (Chukchi summer), and 0.0438 (Chukchi fall) whales per km<sup>2</sup> (Tables 3 and 4).

*Gray whale:* Gray whale density estimates were derived from the same ASAMM transect data used to determine bowhead whale densities. During the four years of aerial survey, 35 gray whales were recorded in the three Beaufort Sea blocks during 12,161 km (7,557 mi) of summer survey effort (0.0029/km), and 142 gray whales during 16,829 km (10,457 mi) of fall effort (0.0084/km). In the five Chukchi Sea survey blocks, 298 gray whales were recorded during 27,183 km (16,891 mi) of summer effort (0.0084/km), and 84 during 22,678 km (14,091 mi) of fall survey (0.0037/km). Applying an effective strip half-width (ESW) of 1.15 (Ferguson and Clarke 2013), and a correction factor of 0.07, results in corrected densities of 0.0179 (Beaufort summer), 0.0524 (Beaufort fall), 0.0680 (Chukchi summer), and 0.0230 (Chukchi fall) whales per km<sup>2</sup> (Tables 3 and 4).

*Beluga Whale:* Beluga whale density estimates were derived from the ASAMM transect data collected from 2011 to 2014 (Clarke et al. 2012, 2013, 2014, 2015). During the summer aerial surveys (June–August) there were 248 beluga whale observed along 3,894 km (2,420 mi) of transect in waters between 21 to 200 m (13–124 ft) deep and between longitudes 154° W. and 157° W. This equates to 0.0637 whales/km of trackline and a corrected density of 0.0894 whales per km<sup>2</sup>, assuming an ESW of 0.614 km and a 0.58 correction factor. Fall density estimates (September–October) for this region were based on 192 beluga whales seen along 4,267 km (2,651 mi). This equates to 0.0449 whales/km of trackline and a corrected density of 0.0632 whales per km<sup>2</sup>, assuming an ESW of 0.614 km and a 0.58 correction factor.

During the summer aerial surveys (June–August) there were 30 beluga whale observed along 20,240 km (12,577 mi) of transect in waters less than 36 to 50 m (22–31 ft) deep and between longitudes 157° W. and 169° W. This equates to 0.0015 whales/km of trackline and a corrected density of 0.0021 whales per km<sup>2</sup>, assuming an ESW of 0.614 km and a 0.58 correction factor. Calculated fall beluga densities for the same region was based on 231 beluga whales seen during 22,887 km of transect (1,794 mi). This equates to 0.0101 whales/km and a corrected

density of 0.142 whales per km<sup>2</sup>, again assuming an ESW of 0.614 km and a 0.58 correction factor.

*Harbor Porpoise:* Although harbor porpoise are known to occur in low numbers in the Chukchi Sea (Aerts et al. 2014), no harbor porpoise were positively identified during COMIDA and ASAMM aerial surveys conducted in the Chukchi Sea from 2006 to 2013 (Clarke et al. 2011, 2012, 2013, 2014). A few small unidentified cetaceans that were observed may have been harbor porpoise. Hartin et al. (2013) conducted vessel-based surveys in the Chukchi Sea while monitoring oil and gas activities between 2006 and 2010 and recorded several harbor porpoise throughout the summer and early fall. Vessel-based surveys may be more conducive to sighting these small, cryptic porpoise than the aerial-based COMIDA/ASAMM surveys. Hartin et al.'s (2013) three-year average summer densities (0.0022/km<sup>2</sup>) and fall densities (0.0021/km<sup>2</sup>) were very similar, and are included in Table 3.

*Ringed and Spotted Seals:* Aerts et al. (2014) conducted a marine mammal monitoring program in the northeastern Chukchi Sea in association with oil & gas exploration activities between 2008 and 2013. For seal sightings that were either ringed or spotted seals, the highest summer density was 0.127 seals/km<sup>2</sup> (2008) and the highest fall density was 0.076 seals/km<sup>2</sup> (2013). Where seals could be identified to species, they found the ratio of ringed to spotted seals to be 2:1. Applying this ratio to the combined densities results in species densities of 0.0846 seals/km<sup>2</sup> (summer) and 0.0507 seals/km<sup>2</sup> (fall) for ringed seals, and 0.0423 seals/km<sup>2</sup> (summer) and 0.0253 seals/km<sup>2</sup> (fall) for spotted seals. These are the densities used in the exposure calculations (Table 3) and to represent ringed and spotted seal densities for both the northern Bering and Chukchi seas.

Moulton and Lawson (2002) conducted summer shipboard-based surveys for pinnipeds along the nearshore Alaskan Beaufort Sea coast, while the Kingsley (1986) conducted surveys here along the ice margin representing fall conditions. The ringed seal results from these surveys were used in the exposure estimates (Table 3). Neither survey provided a good estimate of spotted seal densities. Green and Negri (2005) and Green et al. (2006, 2007) recorded pinnipeds during barging activity between West Dock and Cape Simpson, and found high numbers of ringed seal in Harrison Bay, and peaks in spotted seal numbers off the Colville River Delta where a haulout site is located. Approximately 5% of all

phocid sightings recorded by Green and Negri (2005) and Green et al. (2006, 2007) were spotted seals, which provide a suitable estimate of the proportion of ringed seals versus spotted seals in the Colville River Delta and Harrison Bay, both areas close to the proposed Oliktok branch line. Thus, the estimated densities of spotted seals in the cable-lay survey area were derived by multiplying the ringed seal densities from Moulton and Lawson (2002) and Kingsley (1986) by 5%.

Spotted seals are a summer resident in the Beaufort Sea and are generally found in nearshore waters, especially in association with haulout sites at or near river mouths. Their summer density in the Beaufort Sea is a function of distance from these haul out sites. Near Oliktok Point (Hauser et al. 2008, Lomac-McNair et al. 2014) where the Oliktok cable branch will reach shore, they are more common than ringed seals, but they are very uncommon farther offshore where most of the Beaufort Sea cable-lay activity will occur. This distribution of density is taken into account in the take authorization request.

*Bearded Seal:* The most representative estimates of summer and fall density of bearded seals in the northern Bering and Chukchi seas come from Aerts et al. (2014) monitoring program that ran from 2008 to 2013 in the northeastern Chukchi Sea. During this period the highest summer estimate was 0.063 seals/km<sup>2</sup> (2013) and the highest fall estimate was 0.044 seals/km<sup>2</sup> (2010). These are the values that were used in developing exposure estimates for this species for the northern Bering and Chukchi sea cable-lay areas (Table 3).

There are no accurate density estimates for bearded seals in the Beaufort Sea based on survey data. However, Stirling et al. (1982) noted that the proportion of eastern Beaufort Sea bearded seals is 5% that of ringed seals. Further, Clarke et al. (2013, 2014) recorded 82 bearded seals in both the Chukchi and Beaufort seas during the 2012 and 2013 ASAMM surveys, which represented 5.1% of all their ringed seal and small unidentified pinniped sightings (1,586). Bengtson et al. (2005) noted a similar ratio (6%) during spring surveys of ice seals in the Chukchi Sea. Therefore, the density values in Table 3 (/km<sup>2</sup>) were determined by multiplying ringed seal density from Moulton and Lawson (2002) and Kingsley (1986) by 5% as was done with spotted seals.

#### *Level B Exposure Calculations*

The estimated potential harassment take of local marine mammals by QSO's fiber optics cable-lay project was

determined by multiplying the seasonal animal densities in Tables 3 and 4 with the seasonal area that would be ensonified by thruster noise greater than 120 dB re 1 µPa (rms). The total area that would be ensonified in the Chukchi Sea is 5,947 km<sup>2</sup> (2,296 mi<sup>2</sup>), and for the Bering Sea 1,296 km<sup>2</sup> (500 mi<sup>2</sup>). Since there are no marine mammal density

estimates for the northern Bering Sea, the ensonified area was combined with the Chukchi Sea for a total ZOI of 7,243 km<sup>2</sup> (2,796 mi<sup>2</sup>). The ensonified area for the Beaufort Sea is 1,509 km<sup>2</sup> (583 mi<sup>2</sup>). Because the cable laying plan is to begin in the south as soon as ice conditions allow and work northward, the intention is to complete the Bering

and Chukchi seas portion of the network (1,575 km, [979 mi]) during the summer (June to August), and Beaufort Sea portion (328 km [204 mi]) during the fall (September and October). Thus, summer exposure estimates apply for the Bering and Chukchi areas and the fall exposure estimates for the Beaufort (Table 5).

TABLE 5—THE ESTIMATED NUMBER OF LEVEL B HARASSMENT EXPOSURES TO MARINE MAMMALS

Species	Exposures Bering/Chukchi	Exposures Beaufort	Exposures total
Bowhead Whale .....	18	112	130
Gray Whale .....	493	79	572
Beluga Whale .....	648	21	669
Harbor Porpoise .....	16	0	16
Ringed Seal .....	613	379	992
Spotted Seal .....	306	19	325
Bearded Seal .....	451	19	470

The estimated takes of marine mammals are based on the estimated exposures for marine mammals with known density information. For marine mammals whose estimated number of exposures were not calculated due to a

lack of reasonably accurate density estimates, but for which occurrence records within the project area exist (*i.e.*, humpback whale, fin whale, minke whale, killer whale, and ribbon seal), a small number of takes relatively based

on group size and site fidelity have been requested in case they are encountered. A summary of estimated takes is provided in Table 6.

TABLE 6—LEVEL B TAKE REQUEST AS PERCENTAGE OF STOCK

Species	Stock abundance	Level B take requested	Request Level B take by stock (percent)
Bowhead whale .....	19,534	130	0.8
Beluga whale (Beaufort Sea stock) .....	39,258	669	1.7
Beluga whale (E. Chukchi Sea stock) .....	3,710	669	18.0
Beluga whale (E. Bering Sea stock) .....	19,186	669	3.5
Gray whale .....	20,990	572	2.7
Humpback whale (W.N. Pacific stock) .....	1,107	15	1.36
Humpback whale (Cent. N. Pacific stock) .....	10,103	15	0.14
Fin whale .....	1,652	15	0.91
Minke whale .....	1,233	5	0.40
Killer whale .....	2,347	5	0.21
Harbor porpoise .....	48,215	16	0.03
Ringed seal .....	249,000	992	0.49
Spotted seal .....	460,268	325	0.07
Bearded seal .....	155,000	470	0.08
Ribbon seal .....	61,100	5	0.01

The estimated Level B takes as a percentage of the marine mammal stock are less than 1.72% in all cases (Table 6). The highest percent of population estimated to be taken is 18% for Level B harassments of the East Chukchi Sea stock of beluga whale. However, that percentage assumes that all beluga whales taken are from that population. Most likely, some beluga whales would be taken from each of the three stocks, meaning fewer than 669 beluga whales would be taken from either individual stock. The Level B takes of beluga whales as a percentage of populations

would likely be below 1.7, 18, and 3.5% for the Beaufort Sea, East Chukchi Sea, and East Bering Sea stocks, respectively.

**Analysis and Preliminary Determinations**

*Negligible Impact*

Negligible impact is “an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival” (50 CFR 216.103). A negligible impact finding is based on the lack of likely

adverse effects on annual rates of recruitment or survival (*i.e.*, population-level effects). An estimate of the number of Level B harassment takes, alone, is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be “taken” through behavioral harassment, NMFS must consider other factors, such as the likely nature of any responses (their intensity, duration, etc.), the context of any responses (critical reproductive time or location, migration, etc.), as well as the number

and nature of estimated Level A harassment takes, the number of estimated mortalities, effects on habitat, and the status of the species.

To avoid repetition, this introductory discussion of our analyses applies to all the species listed in Table 6, given that the anticipated effects of Quintillion's subsea cable-laying operation on marine mammals (taking into account the proposed mitigation) are expected to be relatively similar in nature. Where there are meaningful differences between species or stocks, or groups of species, in anticipated individual responses to activities, impact of expected take on the population due to differences in population status, or impacts on habitat, they are described separately in the analysis below.

No injuries or mortalities are anticipated to occur as a result of Quintillion's subsea cable-laying operation, and none are authorized. Additionally, animals in the area are not expected to incur hearing impairment (*i.e.*, TTS or PTS) or non-auditory physiological effects. The takes that are anticipated and authorized are expected to be limited to short-term Level B behavioral harassment in the form of brief startling reaction and/or temporary vacating the area.

Any effects on marine mammals are generally expected to be restricted to avoidance of a limited area around Quintillion's proposed activities and short-term changes in behavior, falling within the MMPA definition of "Level B harassment." Mitigation measures, such as controlled vessel speed and dedicated marine mammal observers, will ensure that takes are within the level being analyzed. In all cases, the effects are expected to be short-term, with no lasting biological consequence.

Of the 11 marine mammal species likely to occur in the proposed cable-laying area, bowhead, humpback, and fin whales, and ringed and bearded seals are listed as endangered or threatened under the ESA. These species are also designated as "depleted" under the MMPA. None of the other species that may occur in the project area are listed as threatened or endangered under the ESA or designated as depleted under the MMPA.

The project area of the Quintillion's proposed activities is within areas that have been identified as biologically important areas (BIAs) for feeding for the gray and bowhead whales and for reproduction for gray whale during the summer and fall months (Clarke et al. 2015). In addition, the coastal Beaufort Sea also serves as a migratory corridor during bowhead whale spring

migration, as well as for their feeding and breeding activities. Additionally, the coastal area of Chukchi and Beaufort seas also serve as BIAs for beluga whales for their feeding and migration. However, the Quintillion's proposed cable laying operation would briefly transit through the area in a slow speed (600 meters per hour). As discussed earlier, the Level B behavioral harassment on marine mammals from the proposed activity is expected to be brief startling reaction and temporary vacating of the area. There is no long-term biologically significant impact to marine mammals expected from the proposed subsea cable-laying activity.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed monitoring and mitigation measures, NMFS preliminarily finds that the total marine mammal take from Quintillion's proposed subsea cable-laying operation in the Bering, Chukchi, and Beaufort seas is not expected to adversely affect the affected species or stocks through impacts on annual rates of recruitment or survival, and therefore will have a negligible impact on the affected marine mammal species or stocks.

#### *Small Numbers*

The requested takes represent less than 18% of all populations or stocks potentially impacted (see Table 6 in this document). These take estimates represent the percentage of each species or stock that could be taken by Level B behavioral harassment. The numbers of marine mammals estimated to be taken are small proportions of the total populations of the affected species or stocks.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, NMFS finds that small numbers of marine mammals will be taken relative to the populations of the affected species or stocks.

#### **Impact on Availability of Affected Species for Taking for Subsistence Uses**

The proposed cable-lay activities will occur within the marine subsistence areas used by the villages of Nome, Wales, Kotzebue, Little Diomedes, Kivalina, Point Hope, Wainwright, Barrow, and Nuiqsut. Subsistence use varies considerably by season and location. Seven of the villages hunt bowhead whales (Suydam and George 2004). The small villages of Wales, Little Diomedes, and Kivalina take a bowhead whale about once every five years. Point

Hope and Nuiqsut each harvest three to four whales annually, and Wainwright five to six. Harvest from Barrow is by far the highest with about 25 whales taken each year generally split between spring and fall hunts. Point Hope and Wainwright harvest occurs largely during the spring hunt, and Nuiqsut's during the fall. Nuiqsut whalers base from Cross Island, located 70 km (44 mi) east of Oliktok.

Beluga are also annually harvested by the above villages. Beluga harvest is most important to Point Hope. For example, the village harvested 84 beluga whales during the spring of 2012, and averaged 31 whales a year from 1987 to 2006 (Frost and Suydam 2010). Beluga are also important to Wainwright villages. They harvested 34 beluga whales in 2012, and averaged 11 annually from 1987 to 2006 (Frost and Suydam 2010). All the other villages—Nome, Kotzebue, Wales, Kivalina, Little Diomedes, and Barrow—averaged less than 10 whales a year (Frost and Suydam 2010).

All villages utilize seals to one degree or another as well. Ringed seal harvest mostly occurs in the winter and spring when they are hauled out on ice near leads or at breathing holes. Bearded seals are taken from boats during the early summer as they migrate northward in the Chukchi Sea and eastward in the Beaufort Sea. Bearded seals are a staple for villages like Kotzebue and Kivalina that have limited access to bowhead and beluga whales (Georgette and Loon 1993). Thetis Island, located just off the Colville River Delta, is an important base from which villagers from Nuiqsut hunt bearded seals each summer after ice breakup. Spotted seals are an important summer resource for Wainwright and Nuiqsut, but other villages will avoid them because the meat is less appealing than other available marine mammals.

The proposed cable-lay activity will occur in the summer after the spring bowhead and beluga whale hunts have ended, and will avoid the ice period when ringed seals are harvested. The Oliktok branch will pass within 4 km (2 mi) of Thetis Island, but the laying of cable along that branch would occur in late summer or early fall, long after the bearded seal hunt is over. Based on the proposed cable-lay time table relative to the seasonal timing of the various subsistence harvests, cable-lay activities into Kotzebue (bearded seal), Wainwright (beluga whale), and around Point Barrow (bowhead whale) could overlap with important harvest periods. Quintillion will work closely with the AEWG, the Alaska Beluga Whale Committee, the Ice Seal Committee, and

the North Slope Borough to minimize any effects cable-lay activities might have on subsistence harvest.

*Plan of Cooperation or Measures To Minimize Impacts to Subsistence Hunts*

Regulations at 50 CFR 216.104(a)(12) require IHA applicants for activities that take place in Arctic waters to provide a Plan of Cooperation (POC) or information that identifies what measures have been taken and/or will be taken to minimize adverse effects on the availability of marine mammals for subsistence purposes.

Quintillion has prepared a draft POC, which was developed by identifying and evaluating any potential effects the proposed cable-laying operation might have on seasonal abundance that is relied upon for subsistence use.

Specifically, Quintillion has contracted with Alcatel-Lucent Submarine Networks to furnish and install the cable system. Alcatel-Lucent's vessel, Ile de Brehat, participates in the Automatic Identification System (AIS) vessel tracking system allowing the vessel to be tracked and located in real time. The accuracy and real time availability of AIS information via the web for the Bering, Chukchi, and Beaufort Seas will not be fully known until the vessels are in the project area. If access to the information is limited, Quintillion will provide alternate vessel information to the public on a regular basis. Quintillion can aid and support the AIS data with additional information provided to the local search and rescue, or other source nominated during the community outreach program.

In addition, Quintillion will communicate closely with the communities of Pt. Hope, Pt. Lay, and Wainwright should activities progress far enough north in late June to mid-July when the villages are still engaged with their annual beluga whale hunt. Quintillion will also communicate closely with the communities of Wainwright, Barrow, and Nuiqsut to minimize impacts on the communities' fall bowhead whale subsistence hunts, which typically occur during late September and into October.

Prior to starting offshore activities, Quintillion will consult with Kotzebue, Point Hope, Wainwright, Barrow, and Nuiqsut as well as the North Slope Borough, the Northwest Arctic Borough, and other stakeholders such as the EWC, the Alaska Eskimo Whaling Commission (AEWC), the Alaska Beluga Whale Committee (ABWC), and the Alaska Nanuq Commission (ANC). Quintillion will also engage in consultations with additional groups on request.

The draft POC is attached to Quintillion's IHA application.

**Endangered Species Act (ESA)**

Within the project area, the bowhead, humpback, and fin whales are listed as endangered and the ringed and bearded seals are listed as threatened under the ESA. NMFS' Permits and Conservation Division has initiated consultation with staff in NMFS' Alaska Region Protected Resources Division under section 7 of the ESA on the issuance of an IHA to Quintillion under section 101(a)(5)(D) of the MMPA for this activity. Consultation will be concluded prior to a determination on the issuance of an IHA.

**National Environmental Policy Act (NEPA)**

NMFS is preparing an Environmental Assessment (EA), pursuant to NEPA, to determine whether the issuance of an IHA to Quintillion for its subsea cable-laying operation in the Bering, Chukchi, and Beaufort seas during the 2016 Arctic open-water season may have a significant impact on the human environment. NMFS has released a draft of the EA for public comment along with this proposed IHA.

**Proposed Authorization**

As a result of these preliminary determinations, NMFS proposes to issue an IHA to Quintillion for subsea cable-laying operation in the Bering, Chukchi, and Beaufort Sea during the 2016 Arctic open-water season, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated. The proposed IHA language is provided next.

This section contains a draft of the IHA itself. The wording contained in this section is proposed for inclusion in the IHA (if issued).

(1) This Authorization is valid from June 1, 2016, through October 31, 2016.

(2) This Authorization is valid only for activities associated with subsea cable-laying related activities in the Bering, Chukchi, and Beaufort seas. The specific areas where Quintillion's operations will be conducted are within the Bering, Chukchi, and Beaufort seas, Alaska, as shown in Figure 1 of Quintillion's IHA application.

(3)(a) The species authorized for incidental harassment takings by Level B harassment are: Beluga whales (*Delphinapterus leucas*); bowhead whales (*Balaena mysticetus*); gray whales (*Eschrichtius robustus*), humpback whale (*Megaptera novaeangliae*), fin whale (*Balaenoptera physalus*), killer whale, (*Orcinus orca*), harbor porpoise (*Phocoena phocoena*),

ringed seal (*Phoca hispida*), bearded seals (*Erignathus barbatus*); and spotted seals (*Phoca largha*) (Table 6).

(3)(b) The authorization for taking by harassment is limited to the following acoustic sources and from the following activities:

(i) Operating dynamic positioning thrusters during subsea cable-laying activities; and

(ii) Vessel activities related to subsea cable-laying activities.

(3)(c) The taking of any marine mammal in a manner prohibited under this Authorization must be reported within 24 hours of the taking to the Alaska Regional Administrator (907-586-7221) or his designee in Anchorage (907-271-3023), National Marine Fisheries Service (NMFS) and the Chief of the Permits and Conservation Division, Office of Protected Resources, NMFS, at (301) 427-8401, or her designee (301-427-8418).

(4) The holder of this Authorization must notify the Chief of the Permits and Conservation Division, Office of Protected Resources, at least 48 hours prior to the start of subsea cable-laying activities (unless constrained by the date of issuance of this Authorization in which case notification shall be made as soon as possible).

(5) Prohibitions

(a) The taking, by incidental harassment only, is limited to the species listed under condition 3(a) above and by the numbers listed in Table 6. The taking by serious injury or death of these species or the taking by harassment, injury or death of any other species of marine mammal is prohibited and may result in the modification, suspension, or revocation of this Authorization.

(b) The taking of any marine mammal is prohibited whenever the required source vessel protected species observers (PSOs), required by condition 7(a)(i), are not onboard in conformance with condition 7(a)(i) of this Authorization.

(6) Mitigation

(a) Establishing Disturbance Zones:

(i) Establish zones of influence (ZOIs) surrounding the cable-laying vessel where the received level would be 120 dB (rms) re 1  $\mu$ Pa. The size of the modeled distance to the 120 dB (rms) re 1  $\mu$ Pa is 2.3 km.

(ii) Immediately upon completion of data analysis of the field verification measurements required under condition 7(e)(i) below, the new 120 dB (rms) re 1  $\mu$ Pa ZOI shall be established based on the sound source verification.

(b) Vessel Movement Mitigation:

(i) When the cable-lay fleet is traveling in Alaskan waters to and from

the project area (before and after completion of cable-laying), the fleet vessels would:

(A) Not approach within 1.6 km (1 m) distance from concentrations or groups of whales (aggregation of six or more whales) by all vessels under the direction of Quintillion.

(B) Take reasonable precautions to avoid potential interaction with the bowhead whales observed within 1.6 km (1 mi) of a vessel.

(C) Reduce speed to less than 5 knots when weather conditions require, such as when visibility drops, to avoid the likelihood of collision with whales. The normal vessel travel speeds when laying cable is well less than 5 knots; however vessels laying cable cannot change course and cable-laying operations will not cease until the end of cable is reached.

(c) Mitigation Measures for Subsistence Activities:

(i) For the purposes of reducing or eliminating conflicts between subsistence whaling activities and Quintillion's subsea cable-laying program, Quintillion will provide a daily report of all Quintillion activities and locations to the subsistence communities (see reporting below).

(ii) Quintillion will provide the Alaska Eskimo Whaling Association (Barrow), Kawerak, Inc. (Nome), and Maniilaq Association (Kotzebue) memberships with the Marine Exchange of Alaska so that subsistence communities can track all vessel operations via the vessels' autonomous information system.

(iii) Quintillion will prepare a daily report of project activities, sea conditions, and subsistence interactions, and send to all interested community leaders.

(iv) The daily reports will include a contact address and phone number where interested community leaders can convey any subsistence concerns.

(v) Quintillion shall monitor the positions of all of its vessels and will schedule timing and location of cable-laying segments to avoid any areas where subsistence activity is normally planned.

(vi) Barge and ship transiting to and from the project area:

(A) Vessels transiting in the Beaufort Sea east of Bullen Point to the Canadian border shall remain at least 5 miles offshore during transit along the coast, provided ice and sea conditions allow. During transit in the Chukchi Sea, vessels shall remain as far offshore as weather and ice conditions allow, and at all times at least 5 miles offshore.

(B) From August 31 to October 31, transiting vessels in the Chukchi Sea or

Beaufort Sea shall remain at least 20 miles offshore of the coast of Alaska from Icy Cape in the Chukchi Sea to Pitt Point on the east side of Smith Bay in the Beaufort Sea, unless ice conditions or an emergency that threatens the safety of the vessel or crew prevents compliance with this requirement. This condition shall not apply to vessels actively engaged in transit to or from a coastal community to conduct crew changes or logistical support operations.

(C) Vessels shall be operated at speeds necessary to ensure no physical contact with whales occurs, and to make any other potential conflicts with bowheads or whalers unlikely. Vessel speeds shall be less than 10 knots when within 1.6 kilometers (1 mile) of feeding whales or whale aggregations (6 or more whales in a group).

(D) If any vessel inadvertently approaches within 1.6 kilometers (1 mile) of observed bowhead whales, except when providing emergency assistance to whalers or in other emergency situations, the vessel operator will take reasonable precautions to avoid potential interaction with the bowhead whales by taking one or more of the following actions, as appropriate:

- Reducing vessel speed to less than 5 knots within 900 feet of the whale(s);
- Steering around the whale(s) if possible;
- Operating the vessel(s) in such a way as to avoid separating members of a group of whales from other members of the group;
- Operating the vessel(s) to avoid causing a whale to make multiple changes in direction; and
- Checking the waters immediately adjacent to the vessel(s) to ensure that no whales will be injured when the propellers are engaged.

(vii) Quintillion shall complete operations in time to ensure that vessels associated with the project complete transit through the Bering Strait to a point south of 59 degrees North latitude no later than November 15, 2016. Any vessel that encounters weather or ice that will prevent compliance with this date shall coordinate its transit through the Bering Strait to a point south of 59 degrees North latitude with the appropriate Com-Centers. Quintillion vessels shall, weather and ice permitting, transit east of St. Lawrence Island and no closer than 10 miles from the shore of St. Lawrence Island.

(7) Monitoring:

(a) Vessel-based Visual Monitoring:

(i) Vessel-based visual monitoring for marine mammals shall be conducted by NMFS-approved protected species

observers (PSOs) throughout the period of survey activities.

(ii) PSOs shall be stationed aboard the cable-laying vessels and the Oliktok cable-laying barge through the duration of the subsea cable-laying operation. PSOs will not be aboard the smaller barge in waters of depths less than 12 m.

(iii) A sufficient number of PSOs shall be onboard the survey vessel to meet the following criteria:

(A) 100% Monitoring coverage during all periods of cable-laying operations in daylight;

(B) Maximum of 4 consecutive hours on watch per PSO, with a minimum 1-hour break between shifts; and

(C) Maximum of 12 hours of watch time in any 24-hour period per PSO.

(iv) The vessel-based marine mammal monitoring shall provide the basis for real-time mitigation measures as described in (6)(b) above.

(b) Protected Species Observers and Training

(i) PSO teams shall consist of Inupiat observers capable of carrying out requirements of the IHA and NMFS-approved field biologists.

(ii) Experienced field crew leaders shall supervise the PSO teams in the field. New PSOs shall be paired with experienced observers to avoid situations where lack of experience impairs the quality of observations.

(iii) Crew leaders and most other biologists serving as observers in 2016 shall be individuals with experience as observers during recent marine mammal monitoring projects in Alaska, the Canadian Beaufort, or other offshore areas in recent years.

(iv) Resumes for PSO candidates shall be provided to NMFS for review and acceptance of their qualifications.

Inupiat observers shall be experienced (as hunters or have previous PSO experience) in the region and familiar with the marine mammals of the area.

(v) All observers shall complete an observer training course designed to familiarize individuals with monitoring and data collection procedures. The training course shall be completed before the anticipated start of the 2016 open-water season. The training session(s) shall be conducted by qualified marine mammalogists with extensive crew-leader experience during previous vessel-based monitoring programs.

(vi) Training for both Alaska native PSOs and biologist PSOs shall be conducted at the same time in the same room. There shall not be separate training courses for the different PSOs.

(vii) Crew members should not be used as primary PSOs because they have

other duties and generally do not have the same level of expertise, experience, or training as PSOs, but they could be stationed on the fantail of the vessel to observe the near field, especially the area around the airgun array, and implement a power-down or shutdown if a marine mammal enters the safety zone (or exclusion zone).

(viii) If crew members are to be used in addition to PSOs, they shall go through some basic training consistent with the functions they will be asked to perform. The best approach would be for crew members and PSOs to go through the same training together.

(ix) PSOs shall be trained using visual aids (e.g., videos, photos), to help them identify the species that they are likely to encounter in the conditions under which the animals will likely be seen.

(x) Quintillion shall train its PSOs to follow a scanning schedule that consistently distributes scanning effort appropriate for each type of activity being monitored. All PSOs should follow the same schedule to ensure consistency in their scanning efforts.

(xi) PSOs shall be trained in documenting the behaviors of marine mammals. PSOs should record the primary behavioral state (i.e., traveling, socializing, feeding, resting, approaching or moving away from vessels) and relative location of the observed marine mammals.

#### (c) Marine Mammal Observation Protocol

(i) PSOs shall watch for marine mammals from the best available vantage point on the survey vessels, typically the bridge.

(ii) PSOs shall scan systematically with the unaided eye and 7 × 50 reticle binoculars, and night-vision equipment when needed.

(iii) Personnel on the bridge shall assist the marine mammal observer(s) in watching for marine mammals; however, bridge crew observations will not be used in lieu of PSO observation efforts.

(iv) Monitoring shall consist of recording of the following information:

(A) The species, group size, age/size/sex categories (if determinable), the general behavioral activity, heading (if consistent), bearing and distance from vessel, sighting cue, behavioral pace, and apparent reaction of all marine mammals seen near the vessel (e.g., none, avoidance, approach, paralleling, etc.);

(B) The time, location, heading, speed, and activity of the vessel, along with sea state, visibility, cloud cover and sun glare at (I) any time a marine mammal is sighted, (II) at the start and

end of each watch, and (III) during a watch (whenever there is a change in one or more variable);

(C) The identification of all vessels that are visible within 5 km of the vessel from which observation is conducted whenever a marine mammal is sighted and the time observed;

(D) Any identifiable marine mammal behavioral response (sighting data should be collected in a manner that will not detract from the PSO's ability to detect marine mammals);

(E) Any adjustments made to operating procedures; and

(F) Visibility during observation periods so that total estimates of take can be corrected accordingly.

(vii) Distances to nearby marine mammals will be estimated with binoculars (7 × 50 binoculars) containing a reticle to measure the vertical angle of the line of sight to the animal relative to the horizon. Observers may use a laser rangefinder to test and improve their abilities for visually estimating distances to objects in the water.

(viii) PSOs shall understand the importance of classifying marine mammals as "unknown" or "unidentified" if they cannot identify the animals to species with confidence. In those cases, they shall note any information that might aid in the identification of the marine mammal sighted. For example, for an unidentified mysticete whale, the observers should record whether the animal had a dorsal fin.

(ix) Additional details about unidentified marine mammal sightings, such as "blow only," mysticete with (or without) a dorsal fin, "seal splash," etc., shall be recorded.

(x) Quintillion shall use the best available technology to improve detection capability during periods of fog and other types of inclement weather. Such technology might include night-vision goggles or binoculars as well as other instruments that incorporate infrared technology.

#### (d) Field Data-Recording and Verification

(i) PSOs shall utilize a standardized format to record all marine mammal observations.

(ii) Information collected during marine mammal observations shall include the following:

(A) Vessel speed, position, and activity

(B) Date, time, and location of each marine mammal sighting

(C) Marine mammal information under (c)(iv)(A)

(D) Observer's name and contact information

(E) Weather, visibility, and ice conditions at the time of observation

(F) Estimated distance of marine mammals at closest approach

(G) Activity at the time of observation, including possible attractants present

(H) Animal behavior

(I) Description of the encounter

(J) Duration of encounter

(K) Mitigation action taken

(iii) Data shall be recorded directly into handheld computers or as a back-up, transferred from hard-copy data sheets into an electronic database.

(iv) A system for quality control and verification of data shall be facilitated by the pre-season training, supervision by the lead PSOs, and in-season data checks, and shall be built into the software.

(v) Computerized data validity checks shall also be conducted, and the data shall be managed in such a way that it is easily summarized during and after the field program and transferred into statistical, graphical, or other programs for further processing.

#### (e) Passive Acoustic Monitoring

(i) Sound Source Measurements:

(a) Using a hydrophone system, the holder of this Authorization is required to conduct sound source verification test for the dynamic positioning thrusters of the cable-laying vessel early in the season.

(b) The test results shall be reported to NMFS within 5 days of completing the test.

(ii) Marine Mammal Passive Acoustic Monitoring

(a) Quintillion would support the 2016 joint Arctic Whale Ecology Study (ARCWEST)/Chukchi Acoustics, Oceanography, and Zooplankton Study-extension (CHAOZ-X).

(9) Reporting:

(a) Sound Source Verification Report: A report on the preliminary results of the sound source verification measurements, including the measured source level, shall be submitted within 14 days after collection of those measurements at the start of the field season. This report will specify the distances of the ZOI that were adopted for the survey.

(b) Technical Report (90-day Report): A draft report will be submitted to the Director, Office of Protected Resources, NMFS, within 90 days after the end of Quintillion's subsea cable-laying operation in the Bering, Chukchi, and Beaufort seas. The report will describe in detail:

(i) Summaries of monitoring effort (e.g., total hours, total distances, and

marine mammal distribution through the project period, accounting for sea state and other factors affecting visibility and detectability of marine mammals);

(ii) Summaries that represent an initial level of interpretation of the efficacy, measurements, and observations, rather than raw data, fully processed analyses, or a summary of operations and important observations;

(iii) Analyses of the effects of various factors influencing detectability of marine mammals (*e.g.*, sea state, number of observers, and fog/glare);

(iv) Species composition, occurrence, and distribution of marine mammal sightings, including date, water depth, numbers, age/size/gender categories (if determinable), group sizes, and ice cover;

(v) Estimates of uncertainty in all take estimates, with uncertainty expressed by the presentation of confidence limits, a minimum-maximum, posterior probability distribution, or another applicable method, with the exact approach to be selected based on the sampling method and data available; and

(vi) A clear comparison of authorized takes and the level of actual estimated takes.

(d) The draft report shall be subject to review and comment by NMFS. Any recommendations made by NMFS must be addressed in the final report prior to acceptance by NMFS. The draft report will be considered the final report for this activity under this Authorization if NMFS has not provided comments and recommendations within 90 days of receipt of the draft report.

(10)(a) In the unanticipated event that survey operations clearly cause the take of a marine mammal in a manner prohibited by this Authorization, such as a serious injury or mortality (*e.g.*, ship-strike, gear interaction, and/or entanglement), Quintillion shall immediately cease cable-laying operations and immediately report the incident to the Chief, Permits and Conservation Division, Office of Protected Resources, NMFS, at 301-427-8401. The report must include the following information:

(i) Time, date, and location (latitude/longitude) of the incident;

(ii) The name and type of vessel involved;

(iii) The vessel's speed during and leading up to the incident;

(iv) Description of the incident;

(v) Status of all sound source use in the 24 hours preceding the incident;

(vi) Water depth;

(vii) Environmental conditions (*e.g.*, wind speed and direction, Beaufort sea state, cloud cover, and visibility);

(viii) Description of marine mammal observations in the 24 hours preceding the incident;

(ix) Species identification or description of the animal(s) involved;

(x) The fate of the animal(s); and

(xi) Photographs or video footage of the animal (if equipment is available).

(b) Activities shall not resume until NMFS is able to review the circumstances of the prohibited take. NMFS shall work with Quintillion to determine what is necessary to minimize the likelihood of further prohibited take and ensure MMPA compliance. Quintillion may not resume their activities until notified by NMFS via letter, email, or telephone.

(c) In the event that Quintillion discovers an injured or dead marine mammal, and the lead PSO determines that the cause of the injury or death is unknown and the death is relatively recent (*i.e.*, in less than a moderate state of decomposition as described in the next paragraph), Quintillion will immediately report the incident to the Chief, Permits and Conservation Division, Office of Protected Resources, NMFS, at 301-427-8401 and the NMFS Alaska Stranding Hotline (1-877-925-7773). The report must include the same information identified in Condition 10(a) above. Activities may continue while NMFS reviews the circumstances of the incident. NMFS will work with Quintillion to determine whether modifications in the activities are appropriate.

(d) In the event that Quintillion discovers an injured or dead marine mammal, and the lead PSO determines that the injury or death is not associated with or related to the activities authorized in Condition 3 of this Authorization (*e.g.*, previously wounded animal, carcass with moderate to advanced decomposition, or scavenger damage), Quintillion shall report the incident to the Chief, Permits and Conservation Division, Office of Protected Resources, NMFS, at 301-427-8401 and the NMFS Alaska Stranding Hotline (1-877-925-7773) within 24 hours of the discovery. Quintillion shall provide photographs or video footage (if available) or other documentation of the stranded animal sighting to NMFS and the Marine Mammal Stranding Network. Quintillion can continue its operations under such a case.

(11) The Plan of Cooperation outlining the steps that will be taken to cooperate and communicate with the native communities to ensure the

availability of marine mammals for subsistence uses, must be implemented.

(12) This Authorization may be modified, suspended, or withdrawn if the holder fails to abide by the conditions prescribed herein or if the authorized taking is having more than a negligible impact on the species or stock of affected marine mammals, or if there is an unmitigable adverse impact on the availability of such species or stocks for subsistence uses.

(13) A copy of this Authorization and the Incidental Take Statement must be in the possession of each vessel operator taking marine mammals under the authority of this Incidental Harassment Authorization.

(14) Quintillion is required to comply with the Terms and Conditions of the Incidental Take Statement corresponding to NMFS' Biological Opinion.

#### Request for Public Comments

NMFS requests comment on our analysis, the draft authorization, and any other aspect of the Notice of Proposed IHA for Quintillion's proposed subsea cable-laying operation in the Bering, Chukchi, and Beaufort seas. Please include with your comments any supporting data or literature citations to help inform our final decision on Quintillion's request for an MMPA authorization.

Dated: March 24, 2016.

## COMMODITY FUTURES TRADING COMMISSION

### Market Risk Advisory Committee

**AGENCY:** Commodity Futures Trading Commission.

**ACTION:** Notice of meeting.

**SUMMARY:** The Commodity Futures Trading Commission (CFTC) announces that on April 26, 2016, from 10:00 a.m. to 1:30 p.m., the Market Risk Advisory Committee (MRAC) will hold a public meeting at the CFTC's Washington, DC, headquarters. The MRAC will describe and discuss how well the derivatives markets are currently functioning, including the impact and implications of the evolving structure of these markets on the movement of risk across market participants. Specific topics to be covered are listed in this Notice.

**DATES:** The meeting will be held on April 26, 2016, from 10:00 a.m. to 1:30

p.m. Members of the public who wish to submit written statements in connection with the meeting should submit them by May 10, 2016.

**ADDRESSES:** The meeting will take place in the Conference Center at the CFTC's headquarters, Three Lafayette Centre, 1155 21st Street NW., Washington, DC 20581. Written statements should be submitted by mail to: Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW., Washington, DC 20581, attention: Secretary of the Commission; or by electronic mail to: [secretary@cftc.gov](mailto:secretary@cftc.gov). Please use the title "Market Risk Advisory Committee" in any written statement you submit. Any statements submitted in connection with the committee meeting will be made available to the public, including by publication on the CFTC Web site, [www.cftc.gov](http://www.cftc.gov).

**FOR FURTHER INFORMATION CONTACT:** Petal Walker, MRAC Designated Federal Officer, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW., Washington, DC 20581; (202) 418-5794.

**SUPPLEMENTARY INFORMATION:** The MRAC will describe and discuss how well the derivatives markets are currently functioning, including the impact and implications of the evolving structure of these markets on the movement of risk across market participants. Specifically, the MRAC will describe and discuss:

(a) How effectively end-users and other market participants, in different asset classes (e.g., energy, rates), are able to find counterparties for transactions, receive accurate pricing and volume information, and otherwise access the markets; and

(b) The extent and nature of the current use of portfolio compression and related services, and the benefits and challenges posed by portfolio compression activity in the derivatives markets.

The meeting will be open to the public with seating on a first-come, first-served basis. Members of the public may also listen to the meeting by telephone by calling a domestic toll-free telephone or international toll or toll-free number to connect to a live, listen-only audio feed. Call-in participants should be prepared to provide their first name, last name, and affiliation.

Domestic Toll Free: 1-866-844-9416.

International Toll and Toll Free: Will be posted on the CFTC's Web site, [www.cftc.gov](http://www.cftc.gov), on the page for the meeting, under Related Documents.

Pass Code/Pin Code: CFTC.

After the meeting, a transcript of the meeting will be published through a link on the CFTC's Web site, [www.cftc.gov](http://www.cftc.gov). All written submissions provided to the CFTC in any form will also be published on the CFTC's Web site. Persons requiring special accommodations to attend the meeting because of a disability should notify the contact person listed in this Notice.

**Authority:** 5 U.S.C. app. 2 § 10(a)(2)).

Dated: March 25, 2016.

## CONSUMER PRODUCT SAFETY COMMISSION

[CPSC Docket No. 16-C0002]

### Gree Electric Appliances, Inc. of Zhuhai, Hong Kong Gree Electric Appliances Sales Co., Ltd., and Gree USA Sales, Ltd., Provisional Acceptance of a Settlement Agreement and Order

**AGENCY:** Consumer Product Safety Commission.

**ACTION:** Notice.

**SUMMARY:** It is the policy of the Commission to publish settlements which it provisionally accepts under the Consumer Product Safety Act in the **Federal Register** in accordance with the terms of 16 CFR 1118.20(e). Published below is a provisionally-accepted Settlement Agreement with Gree Electric Appliances, Inc. of Zhuhai, Hong Kong Gree Electric Appliances Sales Co., Ltd., and Gree USA Sales, Ltd. containing a civil penalty in the amount of fifteen million four hundred fifty thousand dollars (US\$15,450,000) within thirty (30) days of service of the Commission's final Order accepting the Settlement Agreement.<sup>1</sup>

**DATES:** Any interested person may ask the Commission not to accept this agreement or otherwise comment on its contents by filing a written request with the Office of the Secretary by April 14, 2016.

<sup>1</sup> The Commission voted (4-1) to provisionally accept the Settlement Agreement and Order regarding Gree Electric Appliances, Inc. of Zhuhai, Hong Kong Gree Electric Appliances Sales Co., Ltd., and Gree USA Sales, Ltd. Chairman Kaye, Commissioner Adler, Commissioner Robinson and Commissioner Mohorovic voted to provisionally accept the Settlement Agreement and Order. Commissioner Buerkle voted to reject the Settlement Agreement and Order. Commissioner Mohorovic and Commissioner Robinson filed statements regarding this matter. The statements are available at the Office of the Secretary or the CPSC Web site, [www.cpsc.gov](http://www.cpsc.gov).

**ADDRESSES:** Persons wishing to comment on this Settlement Agreement should send written comments to the Comment 16-C0002, Office of the Secretary, Consumer Product Safety Commission, 4330 East West Highway, Room 820, Bethesda, Maryland 20814-4408.

**FOR FURTHER INFORMATION CONTACT:** Daniel R. Vice, Trial Attorney, Division of Compliance, Office of the General Counsel, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, Maryland 20814-4408; telephone (301) 504-6996.

**SUPPLEMENTARY INFORMATION:** The text of the Agreement and Order appears below.

Dated: March 25, 2016.

**Todd A. Stevenson,**  
*Secretary.*

## UNITED STATES OF AMERICA CONSUMER PRODUCT SAFETY COMMISSION

In the Matter of: GREE ELECTRIC APPLIANCES, INC., OF ZHUHAI, HONG KONG GREE ELECTRIC APPLIANCES SALES CO., LTD., AND GREE USA SALES, LTD.

CPSC Docket No.: 16-C0002

### SETTLEMENT AGREEMENT

1. In accordance with the Consumer Product Safety Act, 15 U.S.C. 2051-2089 ("CPSA") and 16 CFR 1118.20, Gree Electric Appliances, Inc., of Zhuhai, Hong Kong Gree Electric Appliances Sales Co., Ltd., and Gree USA Sales, Ltd. (collectively "Gree"), and the United States Consumer Product Safety Commission ("Commission"), through its staff, hereby enter into this Settlement Agreement ("Agreement"). The Agreement, and the incorporated attached Order, resolve staff's charges that Gree is subject to civil penalties in this matter, under section 20 of the CPSA, 15 U.S.C. 2069, as set forth below.

### THE PARTIES

2. The Commission is an independent federal regulatory agency, established pursuant to, and responsible for the enforcement of, the CPSA, 15 U.S.C. 2051-2089. By executing the Agreement, staff is acting on behalf of the Commission, pursuant to 16 CFR 1118.20(b). The Commission issues the Order under the provisions of the CPSA.

3. Gree Electric Appliances, Inc., of Zhuhai, is incorporated in China, and its principal place of business is in China. Hong Kong Gree Electric Appliances Sales Co., Ltd., is incorporated in Hong Kong, and its

principal place of business is in Hong Kong. Gree USA Sales, Ltd., is incorporated in California, and its principal place of business is in City of Industry, CA.

#### STAFF CHARGES

4. Between January 2005 and August 2013, Gree manufactured, imported, and sold approximately 2.5 million dehumidifiers manufactured before December 2012 (“Dehumidifiers”) in the United States.

5. The Dehumidifiers are a “consumer product” that was “distributed in commerce,” as those terms are defined or used in sections 3(a)(5) and (8) of the CPSA, 15 U.S.C. 2052(a)(5) and (8). Gree was a “manufacturer” and “distributor” of the Dehumidifiers, as such terms are defined in sections 3(a)(7) and (11) of the CPSA, 15 U.S.C. 2052(a)(7) and (11).

#### *Violation of CPSA Section 19(a)(4)*

6. The Dehumidifiers are defective and create an unreasonable risk of serious injury or death because they can overheat, smoke and catch fire, posing smoke and burn hazards to consumers.

7. In July 2012, Gree began receiving reports of smoking, sparking and fires involving the Dehumidifiers. Gree received reports of property damage due to these fires.

8. In response to reports of smoking, sparking and fires, Gree implemented design changes to remedy the defect and unreasonable risk of injury or death associated with the Dehumidifiers.

9. Despite having information reasonably supporting the conclusion of a defect or the creation of an unreasonable risk of serious injury or death associated with the Dehumidifiers, Gree did not notify the Commission immediately of such defect or risk, as required by sections 15(b)(3) and (4) of the CPSA, 15 U.S.C. 2064(b)(3) and (4).

10. Because the information in Gree’s possession constituted actual and presumed knowledge, Gree knowingly violated section 19(a)(4) of the CPSA, 15 U.S.C. 2068(a)(4), as the term “knowingly” is defined in section 20(d) of the CPSA, 15 U.S.C. 2069(d).

#### *Violation of CPSA Section 19(a)(12)*

11. Although Gree knew that the Dehumidifiers were not compliant with UL flammability standards, Gree sold, offered for sale, distributed in commerce, and imported the Dehumidifiers bearing the UL mark.

12. The UL mark is a registered safety certification mark owned by UL, which is an accredited conformity assessment body.

13. Because Gree knew, or should have known, that the sale, offer for sale, distribution, and importation of Dehumidifiers that were not compliant with UL standards was not authorized by UL, Gree knowingly violated section 19(a)(12) of the CPSA, 15 U.S.C. 2068(a)(12), as the term “knowingly” is defined in section 20(d) of the CPSA, 15 U.S.C. 2069(d).

#### *Violation of CPSA Section 19(a)(13)*

14. Gree made material misrepresentations to Commission staff that the Dehumidifiers met UL flammability standards, knowing such representations to be false.

15. Gree also made material misrepresentations to Commission staff concerning the date when Gree became aware that the Dehumidifiers were not compliant with UL standards, knowing such representations to be false.

16. By knowingly making material misrepresentations to Commission staff during the course of an investigation, Gree knowingly violated section 19(a)(13) of the CPSA, 15 U.S.C. 2068(a)(13), as the term “knowingly” is defined in section 20(d) of the CPSA, 15 U.S.C. 2069(d).

#### *Civil Penalties Pursuant to CPSA Section 20*

17. Pursuant to section 20 of the CPSA, 15 U.S.C. 2069, Gree is subject to civil penalties for its knowing violations of sections 19(a)(4), (12), and (13) of the CPSA, 15 U.S.C. 2068(a)(4), (12) and (13).

#### RESPONSE OF GREE

18. The signing of this Agreement does not constitute an admission by Gree that either reportable information or a substantial product hazard exists.

19. Gree enters into this Agreement to settle this matter without the delay and expense of litigation. Gree enters into this Agreement and agrees to pay the amount referenced below in compromise of the staff’s charges.

20. Gree voluntarily notified the Commission in connection with the dehumidifiers in March 2013. Gree carried out a voluntary recall in cooperation with the Commission and acted to reduce the potential risk of injury.

#### AGREEMENT OF THE PARTIES

21. Gree submits to the jurisdiction of the Commission in the matter involving the Dehumidifiers.

22. The parties enter into the Agreement for settlement purposes only. The Agreement does not constitute an admission by Gree or a determination by

the Commission that Gree violated the CPSA’s reporting requirements.

23. In settlement of staff’s charges, and to avoid the cost, distraction, delay, uncertainty, and inconvenience of protracted litigation, Gree shall pay a civil penalty in the amount of fifteen million four hundred fifty thousand dollars (US\$15,450,000) within thirty (30) calendar days after receiving service of the Commission’s final Order accepting the Agreement. All payments to be made under the Agreement shall constitute debts owing to the United States and shall be made by electronic wire transfer to the United States via: <http://www.pay.gov> for allocation to and credit against the payment obligations of Gree under this Agreement. Failure to make such payment by the date specified in the Commission’s final Order shall constitute Default.

24. All unpaid amounts, if any, due and owing under the Agreement shall constitute a debt due and immediately owing by Gree to the United States, and interest shall accrue and be paid by Gree at the federal legal rate of interest set forth at 28 U.S.C. 1961(a) and (b) from the date of Default until all amounts due have been paid in full (hereinafter “Default Payment Amount” and “Default Interest Balance”). Gree shall consent to a Consent Judgment in the amount of the Default Payment Amount and Default Interest Balance, and the United States, at its sole option, may collect the entire Default Payment Amount and Default Interest Balance or exercise any other rights granted by law or in equity, including but not limited to referring such matters for private collection, and Gree agrees not to contest, and hereby waives and discharges any defenses to, any collection action undertaken by the United States or its agents or contractors pursuant to this paragraph. Gree shall pay the United States all reasonable costs of collection and enforcement under this paragraph, respectively, including reasonable attorney’s fees and expenses.

25. After staff receives this Agreement executed on behalf of Gree, staff shall promptly submit the Agreement to the Commission for provisional acceptance. Promptly following provisional acceptance of the Agreement by the Commission, the Agreement shall be placed on the public record and published in the **Federal Register**, in accordance with the procedures set forth in 16 CFR 1118.20(e). If the Commission does not receive any written request not to accept the Agreement within fifteen (15) calendar days, the Agreement shall be deemed finally accepted on the 16th calendar

day after the date the Agreement is published in the **Federal Register**, in accordance with 16 CFR 1118.20(f).

26. This Agreement is conditioned upon, and subject to, the Commission's final acceptance, as set forth above, and it is subject to the provisions of 16 CFR 1118.20(h). Upon the later of: (i) Commission's final acceptance of this Agreement and service of the accepted Agreement upon Gree, and (ii) the date of issuance of the final Order, this Agreement shall be in full force and effect and shall be binding upon the parties.

27. Effective upon the later of: (i) the Commission's final acceptance of the Agreement and service of the accepted Agreement upon Gree, and (ii) and the date of issuance of the final Order, for good and valuable consideration, Gree hereby expressly and irrevocably waives and agrees not to assert any past, present, or future rights to the following, in connection with the matter described in this Agreement: (i) an administrative or judicial hearing; (ii) judicial review or other challenge or contest of the Commission's actions; (iii) a determination by the Commission of whether Gree failed to comply with the CPSA and the underlying regulations; (iv) a statement of findings of fact and conclusions of law; and (v) any claims under the Equal Access to Justice Act.

28. Gree shall implement and maintain a compliance program designed to ensure compliance with the CPSA and regulations enforced by the Commission with respect to any consumer product manufactured, imported, distributed, or sold by Gree, and which, at a minimum, shall contain the following elements:

a. written standards and policies;

b. written procedures that provide for the appropriate forwarding to compliance personnel of all information that may relate to, or impact, CPSA compliance, including all reports and complaints involving consumer products, whether an injury is referenced or not;

c. a mechanism for confidential employee reporting of compliance-related questions or concerns to either a compliance officer or to another senior manager with authority to act as necessary;

d. effective communication of company compliance-related policies and procedures regarding the CPSA to all applicable employees through training programs or otherwise;

e. Gree senior management responsibility for CPSA compliance and accountability for violations of the statutes and regulations enforced by the Commission;

f. Gree governing body oversight of CPSA compliance; and

g. retention of all CPSA compliance-related records for at least five (5) years, and availability of such records to staff upon reasonable request.

29. Gree shall implement, maintain, and enforce a system of internal controls and procedures designed to ensure that, with respect to all consumer products manufactured, imported, distributed, or sold by Gree:

a. information required to be disclosed by Gree to the Commission is recorded, processed, and reported in accordance with applicable law;

b. all reporting made to the Commission is timely, truthful, complete, accurate, and in accordance with applicable law; and

c. prompt disclosure is made to Gree's management of any significant deficiencies or material weaknesses in the design or operation of such internal controls that are reasonably likely to affect adversely, in any material respect, Gree's ability to record, process, and report to the Commission in accordance with applicable law.

30. Upon reasonable request of staff, Gree shall provide written documentation of its improvements, processes and controls, including, but not limited to, the effective dates of such improvements, processes and controls as set forth in paragraphs 28 through 29 above. Upon reasonable request, Gree shall cooperate fully and truthfully with staff and shall make available, in a manner agreed to by the parties, all non-privileged information and materials, and personnel deemed necessary by staff to evaluate Gree's compliance with the terms of the Agreement.

31. The parties acknowledge and agree that the Commission may publicize the terms of the Agreement and the Order.

32. Gree represents that the Agreement: (i) is entered into freely and voluntarily, without any degree of duress or compulsion whatsoever; (ii) has been duly authorized; and (iii) constitutes the valid and binding obligation of Gree, enforceable against Gree in accordance with its terms. Gree will not directly or indirectly receive any reimbursement, indemnification, insurance-related payment, or other payment in connection with the civil penalty to be paid by Gree pursuant to the Agreement and Order. The individuals signing the Agreement on behalf of Gree represent and warrant that they are duly authorized by Gree to execute the Agreement.

33. The signatories represent that they are authorized to execute this Agreement.

34. The Agreement is governed by the laws of the United States.

35. The Agreement and the Order shall apply to, and be binding upon, Gree and each of its successors, transferees, and assigns, and a violation of the Agreement or Order may subject Gree, and each of its successors, transferees, and assigns, to appropriate legal action.

36. Nothing herein shall preclude the Commission from initiating any other proceedings to enforce the Order.

37. The Agreement and the Order constitute the complete agreement between the parties on the subject matter contained therein.

38. The Agreement may be used in interpreting the Order. Understandings, agreements, representations, or interpretations apart from those contained in the Agreement and the Order may not be used to vary or contradict their terms. For purposes of construction, the Agreement shall be deemed to have been drafted by both of the parties and shall not, therefore, be construed against any party for that reason in any subsequent dispute.

39. The Agreement may not be waived, amended, modified, or otherwise altered, except as in accordance with the provisions of 16 CFR 1118.20(h). The Agreement may be executed in counterparts.

40. If any provision of the Agreement or the Order is held to be illegal, invalid, or unenforceable under present or future laws effective during the terms of the Agreement and the Order, such provision shall be fully severable. The balance of the Agreement and the Order shall remain in full force and effect, unless the Commission and Gree agree in writing that severing the provision materially affects the purpose of the Agreement and the Order.

**UNITED STATES OF AMERICA  
CONSUMER PRODUCT SAFETY  
COMMISSION**

In the Matter of: GREE ELECTRIC  
APPLIANCES, INC., OF ZHUHAI,  
HONG KONG GREE ELECTRIC  
APPLIANCES SALES CO., LTD., AND  
GREE USA SALES, LTD.

CPSC Docket No.: 16-C0002

**ORDER**

Upon consideration of the Settlement Agreement entered into between Gree Electric Appliances, Inc. of Zhuhai, Hong Kong Gree Electric Appliances Sales Co., Ltd., and Gree USA Sales, Ltd. (collectively "Gree"), and the U.S. Consumer Product Safety Commission ("Commission"), and Gree having submitted to the jurisdiction of the Commission with respect to the subject matter, and it appearing that the Settlement Agreement and the Order are in the public interest, it is:

*ORDERED* that the Settlement Agreement be, and is, hereby, accepted; and it is

*FURTHER ORDERED* that Gree shall comply with the terms of the Settlement Agreement and shall pay a civil penalty in the amount of fifteen million four hundred fifty thousand dollars (US\$15,450,000) within thirty (30) days after service of the Commission's final Order accepting the Settlement Agreement. The payment shall be made by electronic wire transfer to the Commission via: <http://www.pay.gov>. Upon the failure of Gree to make the foregoing payment when due, interest on the unpaid amount shall accrue and be paid by Gree at the federal legal rate of interest set forth at 28 U.S.C. 1961(a) and (b). If Gree fails to make such payment or to comply in full with any other provision of the Settlement Agreement, such conduct will be considered a violation of the Settlement Agreement and Order.

Provisionally accepted and provisional Order issued on the 25th day of March, 2016.

*BY ORDER OF THE COMMISSION:*

Todd A. Stevenson, Secretary  
U.S. Consumer Product Safety Commission  
[FR Doc. 2016-07124 Filed 3-29-16; 8:45 am]  
**BILLING CODE 6355-01-P**

**CORPORATION FOR NATIONAL AND  
COMMUNITY SERVICE**

**Proposed Information Collection;  
Comment Request**

**AGENCY:** Corporation for National and Community Service.

**ACTION:** Notice.

**SUMMARY:** The Corporation for National and Community Service (CNCS), as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) (44 U.S.C. Sec. 3506(c)(2)(A)). This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirement on respondents can be properly assessed.

Currently, CNCS is soliciting comments concerning its proposed AmeriCorps NCCC's (National Civilian Community Corps) Member Experience Survey. This survey was developed to support NCCC performance measurement for use in program development, funding, and evaluation. The survey instrument will be completed by NCCC Members following the completion of their service term. In particular, this survey will be administered to NCCC Members who are exiting early or have already exited early from the AmeriCorps NCCC program. Completion of this information collection is not required for the completion of a service term with NCCC.

Copies of the information collection request can be obtained by contacting the office listed in the Addresses section of this Notice.

**DATES:** Written comments must be submitted to the individual and office listed in the **ADDRESSES** section by May 31, 2016.

**ADDRESSES:** You may submit comments, identified by the title of the information collection activity, by any of the following methods:

(1) By mail sent to: Corporation for National and Community Service, National Civilian Community Corps; Attention Barbara Lane, Director Projects and Partnerships, Room 3240, 250 E. Street SW., Washington, DC 20525.

(2) By hand delivery or by courier to the CNCS mailroom at Room 4200 at the mail address given in paragraph (1) above, between 9:00 a.m. and 4:00 p.m. Eastern Time, Monday through Friday, except federal holidays.

(3) Electronically through [www.regulations.gov](http://www.regulations.gov).

Individuals who use a telecommunications device for the deaf (TTY-TDD) may call 1-800-833-3722 between 8:00 a.m. and 8:00 p.m. Eastern Time, Monday through Friday.

**FOR FURTHER INFORMATION CONTACT:** Barbara Lane, 202-606-6867, or by email at [blane@cns.gov](mailto:blane@cns.gov).

**SUPPLEMENTARY INFORMATION:**

CNCS is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of CNCS, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are expected to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (e.g., permitting electronic submissions of responses).

**Background**

This information collection serves as part of an overall AmeriCorps NCCC logic model to help measure the degree to which the program is addressing the statutory areas of national and community needs in a way that strengthens communities and builds leaders. The survey will be administered electronically to all members departing early from the program.

**Current Action**

This is a new information collection request. The NCCC Member Experience Survey consists of between 29 and 30 questions, depending on which

responses the respondents specify. All Members departing early from AmeriCorps NCC will receive their survey as a single instrument. Each NCCC Member will receive an individual survey. The exact same survey, not part of this information collection request, is administered to all graduating Members while they are in service and closed for completion prior to the completion of the program.

*Type of Review:* New.

*Agency:* Corporation for National and Community Service.

*Title:* NCCC Member Experience Survey.

*OMB Number:* None.

*Agency Number:* None.

*Affected Public:* The NCCC Member Experience Survey will be administered to the former NCCC Member for their most recent NCCC service term. These Members will have served with AmeriCorps NCCC for any length of time, without graduating. There are approximately 400 Members that depart the program early each year. The early exiting and former Members are uniquely able to provide the information sought in the NCCC Member Experience Survey.

*Total Respondents:* Based on the number of Members who have departed the program early over the last five annual years, NCCC expects to administer 450 surveys each fiscal year to Members who departed the program early. These may not be unique responders as a few Members may have served with NCCC in a prior service term.

*Frequency:* Biweekly. Each early departed Member will complete only one survey for their most recent service term.

*Average Time per Response:* Averages 25 minutes.

*Estimated Total Burden Hours:* 167 hours.

*Total Burden Cost (capital/startup):* None.

*Total Burden Cost (operating/maintenance):* None.

Comments submitted in response to this Notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

Dated: March 23, 2016.

**Gina Cross,**

*Acting Director, National Civilian Community Corps.*

BILLING CODE 6050-28-P

## DEPARTMENT OF DEFENSE

### Office of the Secretary

[Docket ID: DoD-2016-OS-0031]

### Proposed Collection; Comment Request

**AGENCY:** Defense Finance and Accounting Service (DFAS), DoD.

**ACTION:** Notice.

**SUMMARY:** In compliance with the *Paperwork Reduction Act of 1995*, the DFAS announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

**DATES:** Consideration will be given to all comments received by May 31, 2016.

**ADDRESSES:** You may submit comments, identified by docket number and title, by any of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

- *Mail:* Department of Defense, Office of the Deputy Chief Management Officer, Directorate of Oversight and Compliance, Regulatory and Audit Matters Office, 9010 Defense Pentagon, Washington, DC 20301-9010.

*Instructions:* All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

Any associated form(s) for this collection may be located within this same electronic docket and downloaded for review/testing. Follow the instructions at <http://www.regulations.gov> for submitting comments.

Please submit comments on any given form identified by docket number, form number, and title.

**FOR FURTHER INFORMATION CONTACT:** To request more information on this

proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Finance and Accounting Services, 1240 East 9th Street, Enterprise Solutions and Standards Code JFJB, Cleveland, Ohio 44199, ATTN: Stuart Kran, or email: [stuart.a.kran.civ@mail.mil](mailto:stuart.a.kran.civ@mail.mil), or call (216) 204-4377.

**SUPPLEMENTARY INFORMATION:** *Title; Associated Form; and OMB Number:* Application for Pay in Arrears; DD Form 827; OMB Control Number 0730-XXXX.

*Needs and Uses:* The information collected is provided by service members, former service members, or legal representatives of incapacitated members in claiming arrears of pay believed to be due the service member. The authority for this form is 5 U.S.C. Section 301 which states in part that the head of a military department may prescribe regulations for the government of his/her department and the custody, use and preservation of its records, papers and property. However, it does not authorize withholding information from the public or limiting the availability of records to the public.

*Affected Public:* Individuals or households.

*Annual Burden Hours:* 832.

*Number of Respondents:* 3328.

*Responses per Respondent:* 1.

*Annual Responses:* 3328.

*Average Burden per Response:* 15 Minutes.

*Frequency:* On occasion.

When the Disbursing Officer/Finance Officer is not authorized to make payment due to lapsed appropriations, more than the current and previous five years, the claim is forwarded to the appropriate DFAS site for settlements. Claims are to be submitted on a DD 827. All necessary documentation must be attached to the claim. If the member is on active duty or separated for less than one year, the claim will be sent to the site servicing that branch of service. Army and Air Force claims will be sent to DFAS-IN, Navy and Marine Corps claims will be sent to DFAS-CL. For members separated over one year, the claim will be sent to DFAS-IN, Debts and Claims Management Office.

Dated: March 25, 2016.

BILLING CODE 5001-06-P

**DEPARTMENT OF DEFENSE****Department of the Navy****Notice of Public Meetings for the Draft Environmental Impact Statement for the Disposal and Reuse of Surplus Property at Naval Station Newport, Rhode Island**

**AGENCY:** Department of the Navy, Department of Defense.

**ACTION:** Notice.

**SUMMARY:** Pursuant to the National Environmental Policy Act (NEPA) of 1969 (Public Law [Pub. L.] 91-190, 42 United States Code [U.S.C.] 4321-4347), as implemented by the Council on Environmental Quality (CEQ) regulations implementing NEPA (40 Code of Federal Regulations [CFR] Parts 1500-1508), the Department of the Navy (DoN) has prepared and filed the Draft Environmental Impact Statement (EIS) to evaluate the potential human and natural environmental consequences of the disposal of surplus property at Naval Station (NAVSTA) Newport, Rhode Island, by the Navy and its subsequent redevelopment by the respective municipalities in which the surplus property is geographically located. Public Law 101-510, the Defense Base Closure and Realignment Act of 1990, as amended in 2005 (BRAC Law), has directed the Navy to realign NAVSTA Newport. As a result of this action, the Navy has declared approximately 158 acres of land area at NAVSTA Newport to be surplus to the needs of the federal government.

With the filing of the Draft EIS, the DoN is initiating a 45-day public comment period and has scheduled two public open house meetings to provide information and receive written comments on the Draft EIS. Federal, state, and local elected officials and agencies and the public are encouraged to provide written comments.

**DATES AND ADDRESSES:** The Navy will hold two open house public meetings at the locations listed below and will allow individuals to review and comment on the information presented in the Draft EIS. DoN representatives will be available during the open house to clarify information presented in the Draft EIS, as necessary. There will not be a formal presentation.

Thursday, April 14, 2016; 4:00 p.m. to 8:00 p.m.; Joseph H. Gaudet Middle School Cafeteria; 1113 Aquidneck Ave. (Turner Rd entrance); Middletown, Rhode Island 02842.

Friday, April 15, 2016; 10:00 a.m. to 2:00 p.m.; Newport Police Department

Assembly Room; 120 Broadway; Newport, Rhode Island 02840.

**FOR FURTHER INFORMATION CONTACT:**

Director, BRAC Program Management Office (PMO) East, Attn: Newport EIS, 4911 South Broad Street, Building 679, Philadelphia, PA 19112-1303, telephone 215-897-4900, fax: 215-897-4902; email: [james.e.anderson1.ctr@navy.mil](mailto:james.e.anderson1.ctr@navy.mil). For more information on the NAVSTA Newport BRAC Draft EIS, visit the Navy BRAC PMO Web site (<http://www.bracpmo.navy.mil>) or the project Web site <http://www.newporteis.com/>.

**SUPPLEMENTARY INFORMATION:** The Draft EIS was prepared in accordance with the requirements of the BRAC Law; NEPA; the CEQ regulations implementing NEPA (40 CFR 1500-1508); Navy procedures for implementing NEPA (32 CFR 775), Office of the Chief of Naval Operations (OPNAV) Manual M-5090.1; and other applicable Department of Defense (DoD) and Navy policies and guidance. A Notice of Intent (NOI) to prepare this Draft EIS was published in the **Federal Register** on October 31, 2012 (**Federal Register**, Vol. 77, No. 211/Wednesday, October 31, 2012/Notices). The Navy is the lead agency for the proposed action.

The purpose of the proposed action is to comply with the BRAC Law and provide for the disposal and reuse of surplus property at NAVSTA Newport in a manner consistent with the Aquidneck Island Reuse Planning Authority's (AIRPA) Redevelopment Plan for Surplus Properties at NAVSTA Newport (Redevelopment Plan). The proposed action is needed to provide the local community an opportunity for economic development and job creation.

The Draft EIS has considered two redevelopment alternatives. Alternative 1, the preferred alternative, is the disposal of the surplus property and reuse in accordance with the Redevelopment Plan, which has been prepared and approved by the AIRPA. Alternative 1 includes mixed land use types and densities for each of four non-contiguous surplus properties as well as open space and natural areas.

Alternative 2 provides for the disposal of the surplus property at NAVSTA Newport and redevelopment at a higher density and with a different mix of uses than Alternative 1. A No Action alternative was also considered, as required by NEPA and to provide a point of comparison for assessing impacts of the redevelopment alternatives.

The four surplus properties to be redeveloped are located in three separate municipalities on Aquidneck Island: Former Navy Lodge

(approximately 3 acres located in the Town of Middletown), Former Naval Hospital (approximately 15.2 acres, consisting of 8.3 acres of land and 6.9 acres of offshore riparian rights, located in the City of Newport), Tank Farms 1 and 2 (approximately 136 acres located in the Town of Portsmouth), and Midway Pier/Greene Lane (approximately 10.7 acres located in the Town of Middletown).

Federal, state, and local agencies, as well as interested members of the public, are invited and encouraged to review and comment on the Draft EIS. The Draft EIS is available for viewing at the following locations: Newport Public Library (300 Spring Street, Newport, RI 02840), Town of Portsmouth Town Hall (2200 East Main Road, Portsmouth, RI 02871), City of Newport, City Hall (43 Broadway, Newport, RI 02840), and Town of Middletown Planning Department (350 East Main Road, Middletown, RI 02842).

An electronic version of the Draft EIS can be viewed or downloaded at the following Web sites—<http://www.bracpmo.navy.mil> and <http://www.newporteis.com/>. A limited number of hard copies are available by contacting BRAC PMO East at the address in this notice.

Comments can be made in the following ways: (1) Written statements can be submitted to a DoN representative at the public meeting; (2) written comments can be mailed to Director, BRAC PMO East, Attn: Newport EIS, 4911 South Broad Street, Building 679, Philadelphia, PA 19112-1303; (3) written comments can be emailed to [james.e.anderson1.ctr@navy.mil](mailto:james.e.anderson1.ctr@navy.mil); or (4) comments can be faxed to 215-897-4902, Attn: Mr. James Anderson. Comments may be submitted without attending the public meeting. All comments postmarked or emailed no later than midnight, May 2, 2016, will become part of the public record and will be responded to in the Final EIS.

Requests for special assistance, sign language interpretation for the hearing impaired, language interpreters, or other auxiliary aids for the scheduled public meetings must be sent by mail or email to Mr. Matthew Butwin, Ecology and Environment, Inc., 368 Pleasant View Drive, Lancaster, NY 14086, telephone: 716-684-8060, email: [mbutwin@ene.com](mailto:mbutwin@ene.com) no later than April 1, 2016.

Dated: March 24, 2016.

**C. Pan,**

*Lieutenant, Judge Advocate General's Corps,  
U.S. Navy, Alternate Federal Register Liaison  
Officer.*

## ELECTION ASSISTANCE COMMISSION

### Sunshine Act Notice

**AGENCY:** U.S. Election Assistance Commission.

**TIME AND DATE:** Thursday, April 14, 2016, 9 a.m.–5 p.m. and Friday, April 15, 2016, 8:10 a.m.–12 p.m. (Executive Board Session: Thursday, April 14, 2016, 7:30 p.m.).

**PLACE:** The Sheraton Carlsbad Hotel, 5480 Grand Pacific Drive, Carlsbad, CA 92008, Phone: (760) 827-2400.

**STATUS:** This meeting will be open to the public.

**MATTERS TO BE CONSIDERED:** The U.S. Election Assistance Commission (EAC) Standards Board will meet to address its responsibilities under the Help America Vote Act of 2002 (HAVA), to present its views on issues in the administration of Federal elections, formulate recommendations to the EAC, and receive updates on EAC activities.

The Standards Board will receive an overview of EAC Agency Operations, and will receive updates on EAC Grants and Audits, EAC Testing and Certification, and EAC's New Web site Rollout. The Board will receive an update on the Status of State Testing and Certification Consortium. The Board will receive an update on the work of EAC's Technical Guidelines Development Committee (TGDC). The Board will discuss and vote on recommendations from the TGDC. The Board will receive briefings from the National Association of Secretaries of State (NASS), the Federal Voting Assistance Program (FVAP), and the United States Postal Service (USPS).

The Standards Board will conduct committee breakout sessions and hear committee reports. The Board will discuss and vote on proposed Bylaws amendments, and will fill vacancies on the Executive Board of the Standards Board. The Executive Board will elect new officers, appoint Standards Board committee members and chairs, and consider other administrative matters.

**CONTACT PERSON FOR MORE INFORMATION:** Bryan Whitener, Telephone: (301) 563-3961.

**Bryan Whitener,**

*Director of Communications and  
Clearinghouse, U.S. Election Assistance  
Commission.*

## DEPARTMENT OF ENERGY

### Notice of Public Meeting To Inform the Design of a Consent-Based Siting Process for Nuclear Waste Storage and Disposal Facilities

**AGENCY:** Fuel Cycle Technologies, Office of Nuclear Energy, Department of Energy.

**ACTION:** Notice of public meeting.

**SUMMARY:** The U.S. Department of Energy (DOE) is implementing a consent-based siting process to establish an integrated waste management system to transport, store, and dispose of spent nuclear fuel and high-level radioactive waste. In a consent-based siting approach, DOE will work with communities, tribal governments and states across the country that express interest in hosting any of the facilities identified as part of an integrated waste management system. As part of this process, the Department is hosting a series of public meetings to engage communities and individuals and discuss the development of a consent-based approach to managing our nation's nuclear waste. A public meeting will be held in Tempe, AZ on June 23, 2016.

**DATES:** The meeting will take place on Thursday, June 23, 2016 from 5:00 p.m. to 9:30 p.m. MST. Informal poster sessions will be held from 4:00 p.m. until 5:00 p.m. MST and again after 9:30 p.m. MST. Department officials will be available to discuss consent-based siting during the poster sessions.

**ADDRESSES:** The meeting will be held at Marriott Phoenix Tempe at the Buttes, 2000 W Westcourt Way, Tempe, AZ 85282. To register for this meeting and to review the agenda for the meeting, please go to [energy.gov/consentbasedsiting](http://energy.gov/consentbasedsiting).

**FOR FURTHER INFORMATION CONTACT:** Requests for further information should be sent to [consentbasedsiting@hq.doe.gov](mailto:consentbasedsiting@hq.doe.gov) or to Michael Reim at 202-586-2981. Updated information on this and other planned public meetings on consent based siting will be posted at [energy.gov/consentbasedsiting](http://energy.gov/consentbasedsiting).

If you are unable to attend a public meeting or would like to further discuss ideas for consent-based siting, please request an opportunity for us to speak with you. The Department will do its best to accommodate such requests and help arrange additional opportunities to engage. To learn more about nuclear energy, nuclear waste, and ongoing technical work please go to [energy.gov/consentbasedsiting](http://energy.gov/consentbasedsiting).

*Privacy Act:* Data collected via the mechanisms listed above will not be protected from the public view in any way.

Issued in Washington, DC, on March 24, 2016.

**Andrew Griffith,**

*Associate Deputy Assistant Secretary, Office of Nuclear Energy, Department of Energy.*

## DEPARTMENT OF ENERGY

### Quadrennial Energy Review: Notice of Public Meeting

**AGENCY:** Office of Energy Policy and Systems Analysis, Secretariat, Quadrennial Energy Review Task Force, Department of Energy.

**ACTION:** Notice of public meetings and updated meeting locations.

**SUMMARY:** At the direction of the President, the U.S. Department of Energy (DOE or Department), as the Secretariat for the Quadrennial Energy Review Task Force (QER Task Force), will convene public meetings for the second installment of the Quadrennial Energy Review, an integrated study of the U.S. electricity system from generation through end use. A mixture of panel discussions and a public

comment period will frame multi-stakeholder discourse around deliberative analytical questions relating to the intersection of electricity and its role in promoting economic competitiveness, energy security, and environmental responsibility. This document announces that the Atlanta meeting which was originally scheduled for March 31 will now be held on May 24.

**DATES:** The public meetings will be held on April 15, 2016 in Boston, Massachusetts at 9:30 a.m.; April 25, 2016 in Salt Lake City, Utah at 8:30 a.m.; May 6, 2016 in Des Moines, Iowa; May 9, 2016 in Austin, Texas; May 10, 2016 in Los Angeles, California; and May 24, 2016 in Atlanta, Georgia. Written comments are welcome, especially following the public meetings, and should be submitted within 60 days of the meetings, but no later than July 1, 2016.

**ADDRESSES:** The April 15, 2016, QER meeting in Boston will take place at the Marriott Long Wharf, Salons DEFL, 296 State Street, Boston, Massachusetts. The April 25 QER meeting in Salt Lake City will take place at Western Electricity Coordinating Council, 155 North 400 West, Suite 200, Salt Lake City, Utah. Additional QER meeting locations and addresses will be announced when they are available, in **Federal Register** notices and at [energy.gov/qer](http://energy.gov/qer).

Between February 4, 2016 and July 1, 2016, you may submit written comments online at <http://energy.gov/qer> or by U.S. mail to the Office of Energy Policy and Systems Analysis, EPSA–60, QER Meeting Comments, U.S. Department of Energy, 1000 Independence Avenue SW., Washington, DC 20585–0121.

**FOR FURTHER INFORMATION CONTACT:** John Richards, EPSA–60, U.S. Department of Energy, Office of Energy Policy and Systems Analysis, 1000 Independence Avenue SW., Washington, DC 20585–0121. *Telephone:* 202–586–0507 *Email:* [John.Richards@Hq.Doe.Gov](mailto:John.Richards@Hq.Doe.Gov)

**SUPPLEMENTARY INFORMATION:** On January 9, 2014, President Obama issued a *Presidential Memorandum—Establishing a Quadrennial Energy Review*. To accomplish this review, the Presidential Memorandum establishes a Quadrennial Energy Review Task Force to be co-chaired by the Director of the Office of Science and Technology Policy, and the Director of the Domestic Policy Council. Under the Presidential Memorandum, the Secretary of Energy shall provide support to the Task Force, including support for coordination activities related to the preparation of the Quadrennial Energy Review (QER)

Report, policy analysis and modeling, and stakeholder engagement.

The Quadrennial Energy Review process itself involves robust engagement of federal agencies and outside stakeholders, and further enables the federal government to translate policy goals into a set of analytically based, integrated actions for proposed investments over a four year planning horizon. Unlike traditional federal Quadrennial Review processes, the QER is conducted in a multi-year installment series to allow for more focused analysis on particular sub-sectors of the energy system. The initial focus for the Quadrennial Energy Review was our Nation's transmission, storage and distribution infrastructures that link energy supplies to intermediate and end users, because these capital-intensive infrastructures tend to set supply and end use patterns, investments and practices in place for decades. On April 21, 2015, the Quadrennial Energy Review Task Force released its first Quadrennial Energy Review installment report entitled, "Energy Transmission, Storage, and Distribution Infrastructure". Among the issues highlighted by the analysis in the first installment of the QER were the growing dependencies of all critical infrastructures and economic sectors on electricity, as well as, the increasing interdependence of the various energy subsectors. In response to these findings, and to provide an appropriate consideration of an energy sector undergoing significant technological and regulatory change, the second installment of the QER will conduct a comprehensive review of the nation's electricity system, from generation to end use, including a more comprehensive look at electricity transmission, storage, and distribution infrastructure covered in installment one. The electricity system encompasses not just physical structures, but also a range of actors and institutions. Under this broad framing, the second installment intends to consider the roles and activities of all relevant actors, industries, and institutions integral to continuing to supply reliable and affordable electricity at a time of dramatic change in technology development. Issues to be considered in QER analyses include fuel choices, distributed and centralized generation, physical and cyber vulnerabilities, federal, state, and local policy direction, expectations of residential and commercial consumers, and a review of existing and evolving business models for a range of entities throughout the system.

Significant changes will be required to meet the transformational opportunities and challenges posed by our evolving electricity system. The Administration is seeking public input on key questions relating to possible federal actions that would address the challenges and take full advantage of the opportunities of this changing system to meet the Nation's objectives of reliable, affordable and clean electricity. Over the course of 2016, the Secretariat for the Quadrennial Energy Review Task Force will hold a series of public meetings to discuss and receive comments on the issues outlined above, and well as, others, as they relate to the second installment of the Quadrennial Energy Review.

The Department of Energy has a broad role in energy policy development and the largest role in implementing the Federal Government's energy research and development portfolio. Many other executive departments and agencies also play key roles in developing and implementing policies governing energy resources and consumption, as well as, associated environmental impacts. In addition, non-Federal actors are crucial contributors to energy policies. Because most energy and related infrastructure is owned by private entities, investment by and engagement of, input from the private sector is necessary to develop and implement effective policies. State and local policies, the views of non-governmental, environmental, faith-based, labor, and other social organizations, and contributions from the academic and non-profit sectors are also critical to the development and implementation of effective Federal energy policies.

The interagency Quadrennial Energy Review Task Force, which includes members from all relevant executive departments and agencies, will develop an integrated review of energy policy that integrates all of these perspectives. It will build on the foundation provided in the Administration's *Blueprint for a Secure Energy Future* of March 30, 2011, and *Climate Action Plan* released on June 25, 2013. The Task Force will offer recommendations on what additional actions it believes would be appropriate. These may include recommendations on additional executive or legislative actions to address the energy challenges and opportunities facing the Nation.

#### **Quadrennial Energy Review Public Meetings**

This document announces that the Atlanta meeting which was originally scheduled (81 FR 12885, March 11, 2016) for March 31 will now be held on May 24. The DOE will hold public

meetings on electricity from generation through end use, in the following cities:

Boston, Massachusetts, April 15, 2016  
Salt Lake City, Utah, April 25, 2016  
Des Moines, Iowa, May 6, 2016  
Austin, Texas, May 9, 2016  
Los Angeles, California, May 10, 2016  
Atlanta, Georgia, May 24 2016

Each meeting will feature facilitated panel discussions, followed by an open microphone session. People who would like to speak during the open microphone session at the public meeting should come prepared to speak for no more than five minutes and will be accommodated on a first-come, first-served basis, according to the order in which they register to speak on a sign-in sheet available at the meeting location, on the morning of the meeting. In advance of the meetings, DOE anticipates making publicly available a briefing memorandum providing useful background information regarding the topics under discussion at the meeting. DOE will post this memorandum on its Web site: <http://energy.gov/qer>.

*Submitting comments online.* DOE will accept public comments on the QER from February 4, 2016, to July 1, 2016, at [energy.gov/qer](http://energy.gov/qer). Submitting comments online to the DOE Web site will require you to provide your name and contact information. Your contact information will be viewable to DOE staff only. Your contact information will not be publicly viewable except for your first and last names, organization name (if any), and submitter representative name (if any). Your contact information will be publicly viewable if you include it in the comment itself or in any documents attached to your comment. Any information that you do not want to be publicly viewable should not be included in your comment, nor in any document attached to your comment. Otherwise, persons viewing comments will see only first and last names, organization names, correspondence containing comments, and any documents submitted with the comments.

Do not submit information for which disclosure is restricted by statute, such as trade secrets and commercial or financial information (hereinafter referred to as Confidential Business Information (CBI)). Comments submitted through the DOE Web site cannot be claimed as CBI. Comments received through the Web site will waive any CBI claims for the information submitted. For information on submitting CBI, see the Confidential Business Information section, below.

If you do not want your personal contact information to be publicly

viewable, do not include it in your comment or any accompanying documents. Instead, provide your contact information in a cover letter. Include your first and last names, email address, telephone number, and optional mailing address. The cover letter will not be publicly viewable as long as it does not include any comments.

Include contact information each time you submit comments, data, documents, and other information to DOE. If you submit via mail or hand delivery/courier, please provide all items on a CD, if feasible, in which case it is not necessary to submit printed copies. No telefacsimiles (faxes) will be accepted.

Comments, data, and other information submitted to DOE electronically should be provided in PDF (preferred), Microsoft Word or Excel, WordPerfect, or text (ASCII) file format. Provide documents that are not secured, written in English, and are free of any defects or viruses. Documents should not contain special characters or any form of encryption and, if possible, they should carry the electronic signature of the author.

*Confidential Business Information.* Pursuant to 10 CFR 1004.11, any person submitting information that he or she believes to be confidential and exempt by law from public disclosure should submit via email, postal mail, or hand delivery/courier two well-marked copies: One copy of the document marked "confidential" including all the information believed to be confidential, and one copy of the document marked "non-confidential" with the information believed to be confidential deleted. Submit these documents via email or on a CD, if feasible. DOE will make its own determination about the confidential status of the information and treat it according to its determination. Confidential information should be submitted to the Confidential QER email address: [QERConfidential@hq.doe.gov](mailto:QERConfidential@hq.doe.gov).

Factors of interest to DOE when evaluating requests to treat submitted information as confidential include: (1) A description of the items; (2) whether and why such items are customarily treated as confidential within the industry; (3) whether the information is generally known by or available from other sources; (4) whether the information has previously been made available to others without obligation concerning its confidentiality; (5) an explanation of the competitive injury to the submitting person which would result from public disclosure; (6) when such information might lose its confidential character due to the passage of time; and (7) why disclosure

of the information would be contrary to the public interest. It is DOE's policy that all comments may be included in the public docket, without change and as received, including any personal information provided in the comments (except information deemed to be exempt from public disclosure).

Issued in Washington, DC, on March 25, 2016.

**April Salas,**

*QER Secretariat Director, Quadrennial Energy Review Task Force, U.S. Department of Energy.*

**BILLING CODE 6450-01-P**

## DEPARTMENT OF ENERGY

[OE Docket No. EA-378-A]

### Application To Export Electric Energy; Cargill Power Markets, LLC

**AGENCY:** Office of Electricity Delivery and Energy Reliability, DOE.

**ACTION:** Notice of application.

**SUMMARY:** Cargill Power Markets, LLC (Applicant or CPM) has applied to renew its authority to transmit electric energy from the United States to Mexico pursuant to section 202(e) of the Federal Power Act.

**DATES:** Comments, protests, or motions to intervene must be submitted on or before April 29, 2016.

**ADDRESSES:** Comments, protests, motions to intervene, or requests for more information should be addressed to: Office of Electricity Delivery and Energy Reliability, Mail Code: OE-20, U.S. Department of Energy, 1000 Independence Avenue SW., Washington, DC 20585-0350. Because of delays in handling conventional mail, it is recommended that documents be transmitted by overnight mail, by electronic mail to [Electricity.Exports@hq.doe.gov](mailto:Electricity.Exports@hq.doe.gov), or by facsimile to 202-586-8008.

**SUPPLEMENTARY INFORMATION:** Exports of electricity from the United States to a foreign country are regulated by the Department of Energy (DOE) pursuant to sections 301(b) and 402(f) of the Department of Energy Organization Act (42 U.S.C. 7151(b), 7172(f)) and require authorization under section 202(e) of the Federal Power Act (16 U.S.C. 824a(e)).

On June 1, 2011, DOE issued Order No. EA-378 to CPM, which authorized the Applicant to transmit electric energy from the United States to Mexico as a power marketer for a five-year term using existing international transmission facilities. That authority

expires on June 1, 2016. On March 16, 2016, the Applicant filed an application with DOE for renewal of the export authority contained in Order No. EA-378 for an additional five-year term.

In its application, CPM states that it does not own or operate any electric generation or transmission facilities, and it does not have a franchised service area. The electric energy that CPM proposes to export to Mexico would be surplus energy purchased from third parties such as electric utilities and Federal power marketing agencies pursuant to voluntary agreements. The existing international transmission facilities to be utilized by CPM have previously been authorized by Presidential permits issued pursuant to Executive Order 10485, as amended, and are appropriate for open access transmission by third parties.

*Procedural Matters:* Any person desiring to be heard in this proceeding should file a comment or protest to the application at the address provided above. Protests should be filed in accordance with Rule 211 of the Federal Energy Regulatory Commission's (FERC) Rules of Practice and Procedures (18 CFR 385.211). Any person desiring to become a party to these proceedings should file a motion to intervene at the above address in accordance with FERC Rule 214 (18 CFR 385.214). Five copies of such comments, protests, or motions to intervene should be sent to the address provided above on or before the date listed above.

Comments and other filings concerning CPM's application to export electric energy to Mexico should be clearly marked with OE Docket No. EA-378-A. An additional copy is to be provided directly to Stephen Dvorske, Cargill Power Markets, LLC, 9350 Excelsior Blvd. MS 150, Hopkins, MN 55343.

A final decision will be made on this application after the environmental impacts have been evaluated pursuant to DOE's National Environmental Policy Act Implementing Procedures (10 CFR part 1021) and after a determination is made by DOE that the proposed action will not have an adverse impact on the sufficiency of supply or reliability of the U.S. electric power supply system.

Copies of this application will be made available, upon request, for public inspection and copying at the address provided above, by accessing the program Web site at <http://energy.gov/node/11845>, or by emailing Angela Troy at [Angela.Troy@hq.doe.gov](mailto:Angela.Troy@hq.doe.gov).

Issued in Washington, DC, on March 24, 2016.

## DEPARTMENT OF ENERGY

[OE Docket No. EA-209-D]

### Application To Export Electric Energy; Cargill Power Markets, LLC

**AGENCY:** Office of Electricity Delivery and Energy Reliability, DOE.

**ACTION:** Notice of application.

**SUMMARY:** Cargill Power Markets, LLC (Applicant or CPM) has applied to renew its authority to transmit electric energy from the United States to Canada pursuant to section 202(e) of the Federal Power Act.

**DATES:** Comments, protests, or motions to intervene must be submitted on or before April 29, 2016.

**ADDRESSES:** Comments, protests, motions to intervene, or requests for more information should be addressed to: Office of Electricity Delivery and Energy Reliability, Mail Code: OE-20, U.S. Department of Energy, 1000 Independence Avenue SW., Washington, DC 20585-0350. Because of delays in handling conventional mail, it is recommended that documents be transmitted by overnight mail, by electronic mail to [Electricity.Exports@hq.doe.gov](mailto:Electricity.Exports@hq.doe.gov), or by facsimile to 202-586-8008.

**SUPPLEMENTARY INFORMATION:** Exports of electricity from the United States to a foreign country are regulated by the Department of Energy (DOE) pursuant to sections 301(b) and 402(f) of the Department of Energy Organization Act (42 U.S.C. 7151(b), 7172(f)) and require authorization under section 202(e) of the Federal Power Act (16 U.S.C. 824a(e)).

On June 1, 2011, DOE issued Order No. EA-209-C to CPM, which authorized the Applicant to transmit electric energy from the United States to Canada as a power marketer for a five-year term using existing international transmission facilities. That authority expires on June 1, 2016. On March 16, 2016, CPM filed an application with DOE for renewal of the export authority contained in Order No. EA-216 for an additional five-year term.

In its application, CPM states that it does not own or operate any electric generation or transmission facilities, and it does not have a franchised service

area. The electric energy that CPM proposes to export to Canada would be surplus energy purchased from third parties such as electric utilities and Federal power marketing agencies pursuant to voluntary agreements. The existing international transmission facilities to be utilized by CPM have previously been authorized by Presidential permits issued pursuant to Executive Order 10485, as amended, and are appropriate for open access transmission by third parties.

*Procedural Matters:* Any person desiring to be heard in this proceeding should file a comment or protest to the application at the address provided above. Protests should be filed in accordance with Rule 211 of the Federal Energy Regulatory Commission's (FERC) Rules of Practice and Procedures (18 CFR 385.211). Any person desiring to become a party to these proceedings should file a motion to intervene at the above address in accordance with FERC Rule 214 (18 CFR 385.214). Five copies of such comments, protests, or motions to intervene should be sent to the address provided above on or before the date listed above.

Comments and other filings concerning CPM's application to export electric energy to Canada should be clearly marked with OE Docket No. EA-209-D. An additional copy is to be provided directly to Stephen Dvorske, Cargill Power Markets, LLC, 9350 Excelsior Blvd., MS 150, Hopkins, MN 55343.

A final decision will be made on this application after the environmental impacts have been evaluated pursuant to DOE's National Environmental Policy Act Implementing Procedures (10 CFR part 1021) and after a determination is made by DOE that the proposed action will not have an adverse impact on the sufficiency of supply or reliability of the U.S. electric power supply system.

Copies of this application will be made available, upon request, for public inspection and copying at the address provided above, by accessing the program Web site at <http://energy.gov/node/11845>, or by emailing Angela Troy at [Angela.Troy@hq.doe.gov](mailto:Angela.Troy@hq.doe.gov).

Issued in Washington, DC, on March 24, 2016.

**Christopher Lawrence,**

*Electricity Policy Analyst, Office of Electricity Delivery and Energy Reliability.*

**BILLING CODE 6450-01-P**

## DEPARTMENT OF ENERGY

[OE Docket No. EA-289-C]

### Application To Export Electric Energy; Intercom Energy, Inc.

**AGENCY:** Office of Electricity Delivery and Energy Reliability, DOE.

**ACTION:** Notice of application.

**SUMMARY:** Intercom Energy, Inc. (Applicant or Intercom) has applied to renew its authority to transmit electric energy from the United States to Mexico pursuant to section 202(e) of the Federal Power Act.

**DATES:** Comments, protests, or motions to intervene must be submitted on or before April 29, 2016.

**ADDRESSES:** Comments, protests, motions to intervene, or requests for more information should be addressed to: Office of Electricity Delivery and Energy Reliability, Mail Code: OE-20, U.S. Department of Energy, 1000 Independence Avenue SW., Washington, DC 20585-0350. Because of delays in handling conventional mail, it is recommended that documents be transmitted by overnight mail, by electronic mail to [Electricity.Exports@hq.doe.gov](mailto:Electricity.Exports@hq.doe.gov), or by facsimile to 202-586-8008.

**SUPPLEMENTARY INFORMATION:** Exports of electricity from the United States to a foreign country are regulated by the Department of Energy (DOE) pursuant to sections 301(b) and 402(f) of the Department of Energy Organization Act (42 U.S.C. 7151(b), 7172(f)) and require authorization under section 202(e) of the Federal Power Act (16 U.S.C. 824a(e)).

On May 17, 2011, DOE issued Order No. EA-289-B to Intercom, which authorized the Applicant to transmit electric energy from the United States to Mexico as a power marketer for a five-year term using existing international transmission facilities. That authority expires on May 17, 2016. On March 22, 2016, Intercom filed an application with DOE for renewal of the export authority contained in Order No. EA-289 for an additional five-year term.

In its application, Intercom states that it does not own or operate any electric generation or transmission facilities, and it does not have a franchised service area. The electric energy that Intercom proposes to export to Mexico would be surplus energy purchased from third parties such as electric utilities and Federal power marketing agencies pursuant to voluntary agreements. The existing international transmission facilities to be utilized by the Applicant have previously been authorized by

Presidential permits issued pursuant to Executive Order 10485, as amended, and are appropriate for open access transmission by third parties.

**Procedural Matters:** Any person desiring to be heard in this proceeding should file a comment or protest to the application at the address provided above. Protests should be filed in accordance with Rule 211 of the Federal Energy Regulatory Commission's (FERC) Rules of Practice and Procedures (18 CFR 385.211). Any person desiring to become a party to these proceedings should file a motion to intervene at the above address in accordance with FERC Rule 214 (18 CFR 385.214). Five copies of such comments, protests, or motions to intervene should be sent to the address provided above on or before the date listed above.

Comments and other filings concerning Intercom's application to export electric energy to Mexico should be clearly marked with OE Docket No. EA-289-C. An additional copy is to be provided directly to Ernesto Pallares, Intercom Energy, Inc., 1224 Tenth Avenue, Suite 202, Coronado, CA 92118 and to William DeGrandis, Paul Hastings, LLP, 875 15th Street NW., Washington, DC 20005.

A final decision will be made on this application after the environmental impacts have been evaluated pursuant to DOE's National Environmental Policy Act Implementing Procedures (10 CFR part 1021) and after a determination is made by DOE that the proposed action will not have an adverse impact on the sufficiency of supply or reliability of the U.S. electric power supply system.

Copies of this application will be made available, upon request, for public inspection and copying at the address provided above, by accessing the program Web site at <http://energy.gov/node/11845>, or by emailing Angela Troy at [Angela.Troy@hq.doe.gov](mailto:Angela.Troy@hq.doe.gov).

Issued in Washington, DC, on March 24, 2016.

**Christopher Lawrence,**

## DEPARTMENT OF ENERGY

### Notice of Public Meeting To Inform the Design of a Consent-Based Siting Process for Nuclear Waste Storage and Disposal Facilities

**AGENCY:** Fuel Cycle Technologies, Office of Nuclear Energy, Department of Energy.

**ACTION:** Notice of public meeting.

**SUMMARY:** The U.S. Department of Energy (DOE) is implementing a consent-based siting process to establish an integrated waste management system to transport, store, and dispose of spent nuclear fuel and high-level radioactive waste. In a consent-based siting approach, DOE will work with communities, tribal governments and states across the country that express interest in hosting any of the facilities identified as part of an integrated waste management system. As part of this process, the Department is hosting a series of public meetings to engage communities and individuals and discuss the development of a consent-based approach to managing our nation's nuclear waste. A public meeting will be held in Sacramento, CA on April 26, 2016.

**DATES:** The meeting will take place on Tuesday April 26, 2016 from 5:00 p.m. to 9:30 p.m. PDT. Informal poster sessions will be held from 4:00 p.m. until 5:00 p.m. PDT and again after 9:30 p.m. PDT. Department officials will be available to discuss consent-based siting during the poster sessions.

**ADDRESSES:** The meeting will be held at Holiday Inn Capitol Plaza—Sacramento, 300 J Street, Sacramento, CA 95814. To register for this meeting and to review the agenda for the meeting, please go to [energy.gov/consentbasedsiting](http://energy.gov/consentbasedsiting).

**FOR FURTHER INFORMATION CONTACT:** Requests for further information should be sent to [consentbasedsiting@hq.doe.gov](mailto:consentbasedsiting@hq.doe.gov) or to Michael Reim at 202-586-2981. Updated information on this and other planned public meetings on consent based siting will be posted at [energy.gov/consentbasedsiting](http://energy.gov/consentbasedsiting).

If you are unable to attend a public meeting or would like to further discuss ideas for consent-based siting, please request an opportunity for us to speak with you. The Department will do its best to accommodate such requests and help arrange additional opportunities to engage. To learn more about nuclear energy, nuclear waste, and ongoing technical work please go to [energy.gov/consentbasedsiting](http://energy.gov/consentbasedsiting).

**Privacy Act:** Data collected via the mechanisms listed above will not be protected from the public view in any way.

Issued in Washington, DC, on March 24, 2016.

**Andrew Griffith,**

*Associate Deputy Assistant Secretary, Office of Nuclear Energy, Department of Energy.*

## ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPPT-2016-0125; FRL-9943-74]

### Agency Information Collection Activities; Proposed New Collection (EPA ICR No. 2532.01); Comment Request

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice.

**SUMMARY:** In compliance with the Paperwork Reduction Act (PRA), this document announces that EPA is planning to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB). The ICR, entitled: "Use of Mercury and Mercury Compounds in Products and Processes" and identified by EPA ICR No. 2532.01 and OMB Control No. 2070-NEW, represents a new request. Before submitting the ICR to OMB for review and approval, EPA is soliciting comments on specific aspects of the proposed information collection that is summarized in this document. The ICR and accompanying material are available in the docket for public review and comment.

**DATES:** Comments must be received on or before May 31, 2016.

**ADDRESSES:** Submit your comments, identified by docket identification (ID) number EPA-HQ-OPPT-2016-0125, by one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

- *Mail:* Document Control Office (7407M), Office of Pollution Prevention and Toxics (OPPT), Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001.

- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at <http://www.epa.gov/dockets/contacts.html>.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <http://www.epa.gov/dockets>.

**FOR FURTHER INFORMATION CONTACT:** For technical information contact: Sue Slotnick, National Program Chemicals Division (7404T), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001;

telephone number: (202) 566-1973;  
email address: [sloznick.sue@epa.gov](mailto:sloznick.sue@epa.gov).

*For general information contact:* The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554-1404; email address: [TSCA-Hotline@epa.gov](mailto:TSCA-Hotline@epa.gov).

#### SUPPLEMENTARY INFORMATION:

#### I. What information is EPA particularly interested in?

Pursuant to PRA section 3506(c)(2)(A) (44 U.S.C. 3506(c)(2)(A)), EPA specifically solicits comments and information to enable it to:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility.

2. Evaluate the accuracy of the Agency's estimates of the burden of the proposed collection of information, including the validity of the methodology and assumptions used.

3. Enhance the quality, utility, and clarity of the information to be collected. In particular, EPA seeks comment on these aspects of the questionnaire:

- Are there additional products or product categories that should be included in the questionnaire?
- Are there additional products or product categories that should be eliminated from the questionnaire?
- Should the questionnaire ask respondents to identify which products are intended solely as replacement parts?

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses. In particular, EPA is requesting comments from very small businesses (those that employ less than 25) on examples of specific additional efforts that EPA could make to reduce the paperwork burden for very small businesses affected by this collection.

#### II. What information collection activity or ICR does this action apply to?

*Title:* Use of Mercury and Mercury Compounds in Products and Processes.

*ICR number:* EPA ICR No. 2532.01.

*OMB control number:* OMB Control No. 2070-NEW.

*ICR status:* This ICR is for a new information collection activity. An Agency may not conduct or sponsor,

and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the Code of Federal Regulations (CFR), after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, and are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers for certain EPA regulations is consolidated in 40 CFR part 9.

*Abstract:* The U.S. EPA is making efforts to reduce the non-essential use of mercury and mercury compounds in products and certain manufacturing processes to prevent future releases of mercury to the environment. After negotiating and joining a global agreement called the Minamata Convention on Mercury, EPA continues to pursue measures to reduce the use of mercury in various media. EPA has determined that significant data gaps exist that prevent the Agency from taking systematic, strategic, and effective actions to reduce the use of mercury and mercury compounds in order to prevent potential releases to the environment.

To close such data gaps, EPA will collect information from persons who process, import, and/or export mercury or mercury-added products. In addition, EPA will request information from persons who process mercury or mercury compounds for use in certain industrial processes. EPA is particularly interested in the amount of mercury or mercury compounds used in mercury-added products as a whole and among various categories of products, including mercury or mercury compounds that are added during domestic manufacture, as well as contained in imported and exported products.

Initially this will be a one-time information collection, but EPA may request subsequent renewals of OMB approval of the information collection as necessary. Information will be collected from companies that manufacture, import, or export a product or products containing mercury or mercury compounds, or companies that use mercury or mercury compounds in a manufacturing process or processes. EPA will request that companies voluntarily submit responses to a questionnaire during a period of 60 days after OMB approves the proposed collection. Thereafter, EPA will issue formal measures under section 11 of the Toxic Substances Control Act (TSCA) to obtain the information if appropriate.

EPA anticipates that the information collection activity will involve 250 private entities, although the number of entities may be as high as 646. The years of interest are 2010, 2013, and 2016.

EPA will use the collected information to determine whether and if so what type of actions, including voluntary and/or mandatory measures, are needed to reduce non-essential use of mercury or mercury compounds. The Agency will also use such information to prioritize where and how EPA applies measures in order to help prevent potential risks of mercury exposure to human health and the environment. In addition, this information will be used to facilitate compliance with obligations of the United States under the Minamata Convention to continue to reduce the use of mercury in products and processes and to report on actions taken to do so.

Responses to the collection of information are voluntary. However, should EPA initiate TSCA section 11 actions to compel submission of information, those responses would be mandatory. Respondents may claim all or part of a notice confidential. EPA will disclose information that is covered by a claim of confidentiality only to the extent permitted by, and in accordance with, the procedures in TSCA section 14 and 40 CFR part 2.

*Burden statement:* The annual public reporting and recordkeeping burden for this collection of information is estimated to average 9.9 hours per response. Burden is defined in 5 CFR 1320.3(b).

The ICR, which is available in the docket along with other related materials, provides a detailed explanation of the collection activities and the burden estimate that is only briefly summarized here:

*Respondents/Affected Entities:* Entities potentially affected by this ICR are persons who process mercury or mercury compounds for use in the production of mercury-added products, import mercury for use in the production of mercury-added products, import mercury-added products, export mercury-added products, and/or process mercury or mercury compounds for use in certain industrial processes.

*Estimated total number of potential respondents:* 646.

*Frequency of response:* One time.

*Estimated total average number of responses for each respondent:* 1.0.

*Estimated total annual burden hours:* 6,399 hours.

*Estimated total annual costs:* \$444,430. This includes an estimated burden cost of \$444,430 and an

estimated cost of \$0 for capital investment or maintenance and operational costs.

### III. What is the next step in the process for this ICR?

EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. EPA will issue another **Federal Register** document pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB. If you have any questions about this ICR or the approval process, please contact the technical person listed under **FOR FURTHER INFORMATION CONTACT**.

**Authority:** 44 U.S.C. 3501 *et seq.*

Dated: March 23, 2016.

**James Jones,**

*Assistant Administrator, Office of Chemical Safety and Pollution Prevention.*

## ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OAR-2003-0162; FRL-9943-22-OEI]

### Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Regional Haze Regulations (Renewal)

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice.

**SUMMARY:** The Environmental Protection Agency has submitted an information collection request (ICR), "Regional Haze Regulations (Renewal)" (EPA ICR No. 1813.09, OMB Control No. 2060-0421) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). This is a proposed extension of the ICR, which is currently approved through March 31, 2016. Public comments were previously requested via the **Federal Register** (80 FR 58473) on September 29, 2015 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

**DATES:** Additional comments may be submitted on or before April 29, 2016.

**ADDRESSES:** Submit your comments, referencing Docket ID Number EPA-HQ-OAR-2003-0162, to (1) EPA online using [www.regulations.gov](http://www.regulations.gov) (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW., Washington, DC 20460, and (2) OMB via email to [oira\\_submission@omb.eop.gov](mailto:oira_submission@omb.eop.gov). Address comments to OMB Desk Officer for EPA.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

### FOR FURTHER INFORMATION CONTACT:

Chris Werner, Air Quality Policy Division, Office of Air Quality Planning and Standards, C539-04, Environmental Protection Agency, Research Triangle Park, NC 27711; telephone number: (919) 541-5133; fax number: (919) 541-5315; email address: [werner.christopher@epa.gov](mailto:werner.christopher@epa.gov).

### SUPPLEMENTARY INFORMATION:

Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at [www.regulations.gov](http://www.regulations.gov) or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The telephone number for the Docket Center is 202-566-1744. For additional information about EPA's public docket, visit <http://www.epa.gov/dockets>.

**Abstract:** This ICR is for activities related to the implementation of the EPA's regional haze rule, for the time period between March 31, 2016, and March 31, 2019, and renews the previous ICR. The regional haze rule codified at 40 CFR parts 308 and 309, as authorized by sections 169A and 169B of the Clean Air Act, requires states to develop implementation plans to protect visibility in 156 federally-protected Class I areas. Tribes may choose to develop implementation plans. For this time period, states will primarily be developing and submitting periodic comprehensive implementation plan revisions (or initial implementation plans) and progress reports to comply with the regulations.

**Form Numbers:** None.

**Respondents/affected entities:** Entities potentially affected by this action are state, local and tribal air quality agencies, regional planning organizations and facilities potentially regulated under the regional haze rule.

**Respondent's obligation to respond:** Mandatory [see 40 CFR 51.308(b), (f) and (g) and 40 CFR 51.309(d)(10)].

**Estimated number of respondents:** 52 (total); 52 state agencies.

**Frequency of response:**

Approximately every 5 years.

**Total estimated burden:** 10,307 hours (per year). Burden is defined at 5 CFR 1320.03(b).

**Total estimated cost:** \$510,489 (per year). There are no annualized capital or operation and maintenance costs.

**Changes in the Estimates:** There is an increase of 4,259 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This increase is due to this ICR renewal period covering different task elements than the previous renewal (EPA ICR No. 1813.08). These differences reflect the requirements of the current regional haze rule with respect to the scheduled events and activities in the implementation process. The last collection request anticipated the program consisting mainly of submission of 5-year progress reports. The change in burden reflects changes in labor rates and changes in the activities conducted due to the normal progression of the program, especially the fact that states will be working on and submitting periodic comprehensive State Implementation Plan (SIP) revisions (or initial SIPs).

**Courtney Kerwin,**

*Acting Director, Collection Strategies Division.*

[FR Doc. 2016-07087 Filed 3-29-16; 8:45 am]

## ENVIRONMENTAL PROTECTION AGENCY

[FRL-9944-40-OW]

### Notice of a Public Meeting and Webinar: Managing Cyanotoxins in Drinking Water

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice of a public meeting.

**SUMMARY:** The U.S. Environmental Protection Agency (EPA) announces an opportunity for public input on the EPA's tools and information related to drinking water cyanotoxin management. The EPA is holding a public meeting for interested parties to provide input either

in person or online via a webinar on lessons learned after the release of the June 2015 *Recommendations for Public Water Systems to Manage Cyanotoxins in Drinking Water*. The agency plans to use this information to inform development of additional tools to support states and/or utilities. The EPA seeks to engage with stakeholders on information the agency can provide to support states and public water systems in addressing cyanotoxin public health concerns in drinking water.

**DATES:** The public meeting will be held on April 29, 2016, from 9:15 a.m. to 12:30 p.m., Central Standard Time. Registration and check-in begins at 8:45 a.m. Persons wishing to attend the meeting in person or online via webinar must register by April 28, 2016, as described in the **SUPPLEMENTARY INFORMATION** section.

**ADDRESSES:** The public meeting will be held at 77 West Jackson Blvd., Chicago, Illinois, Lake Michigan conference room on the 12th floor. All attendees must show government-issued photo identification (e.g., a driver's license) when signing in. Please arrive at least 15 minutes early to allow time to clear security. This meeting will also be simultaneously broadcast as a webinar, available on the Internet.

**FOR FURTHER INFORMATION CONTACT:** Members of the public who wish to receive further information about the public meeting or have questions about this notice should contact Hannah Holsinger at (202) 564-0403 or [holsinger.hannah@epa.gov](mailto:holsinger.hannah@epa.gov).

**SUPPLEMENTARY INFORMATION:**

**I. General Information**

a. *How may I participate in this meeting/webinar?* Persons wishing to attend the meeting in person or online via the webinar must register in advance no later than 5:00 p.m., Eastern Daylight Savings Time, on April 28, 2016. To register, go online to: [https://www.eventbrite.com/e/us-epa-public-meeting-managing-cyanotoxins-in-drinking-water-tickets-22748127261?utm\\_term=eventurl\\_text](https://www.eventbrite.com/e/us-epa-public-meeting-managing-cyanotoxins-in-drinking-water-tickets-22748127261?utm_term=eventurl_text). Teleconferencing will be available for individuals participating via the webinar. The number of seats and webinar connections available for the meeting is limited and will be available on a first-come, first-served basis. Early registration is encouraged to ensure proper accommodations. The EPA will do its best to include all those interested in either meeting in person or via the webinar.

b. *How can I get a copy of the meeting/webinar materials?* Prior to the public meeting, a link to the meeting

materials will be sent by email to the registered attendees; copies will also be available for attendees at the meeting. For persons unable to attend the meeting, please contact Katie Foreman at [foreman.katherine@epa.gov](mailto:foreman.katherine@epa.gov) to request meeting materials.

c. *Special Accommodations:* Individuals with disabilities who wish to attend the meeting in person can request special accommodations by contacting Hannah Holsinger at [holsinger.hannah@epa.gov](mailto:holsinger.hannah@epa.gov) no later than April 22, 2016.

**II. Background**

Cyanobacteria are naturally occurring organisms similar to algae. These organisms can occur in fresh water and may rapidly multiply causing "blooms" under favorable conditions. Conditions that enhance bloom formation and persistence include light intensity and duration, nutrient availability (such as nitrogen and phosphorus), water temperature, pH and water column stability. Some blooms produce cyanotoxins such as microcystin, cylindrospermopsin and anatoxin-a, which can be a health concern. For additional background information on cyanotoxins in drinking water, please go to: [http://www2.epa.gov/sites/production/files/2014-08/documents/cyanobacteria\\_factsheet.pdf](http://www2.epa.gov/sites/production/files/2014-08/documents/cyanobacteria_factsheet.pdf).

The EPA released health advisories in June 2015 for two cyanotoxins: Microcystin and cylindrospermopsin. In June 2015, the EPA also released recommendations for public water systems on managing risks from cyanotoxins in drinking water. For additional background information on the health advisories and recommendations, please go to: <http://www.epa.gov/nutrient-policy-data/guidelines-and-recommendations>. The EPA's goal for this meeting is to obtain information on state, utility and public experiences in managing risks from cyanotoxins in drinking water. The EPA is seeking to get input on lessons learned after the release of the June 2015 recommendations document, *Recommendations for Public Water Systems to Manage Cyanotoxins in Drinking Water*. The EPA plans to use this information to develop additional tools or make modifications to the current recommendations document.

Dated: March 24, 2016.

**BILLING CODE 6560-50-P**

**ENVIRONMENTAL PROTECTION AGENCY**

[FRL-9944-39-0A]

**Applicability Determination Index (ADI) Data System Recent Posting: Agency Applicability Determinations, Alternative Monitoring Decisions, and Regulatory Interpretations Pertaining to Standards of Performance for New Stationary Sources, National Emission Standards for Hazardous Air Pollutants, and the Stratospheric Ozone Protection Program**

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice of availability.

**SUMMARY:** This notice announces applicability determinations, alternative monitoring decisions, and regulatory interpretations that the Environmental Protection Agency (EPA) has made under the New Source Performance Standards (NSPS); the National Emission Standards for Hazardous Air Pollutants (NESHAP); and/or the Stratospheric Ozone Protection Program.

**FOR FURTHER INFORMATION CONTACT:** An electronic copy of each complete document posted on the Applicability Determination Index (ADI) data system is available on the Internet through the Resources and Guidance Documents for Compliance Assistance page of the Clean Air Act Compliance Monitoring Web site under "Air" at: <https://www2.epa.gov/compliance/resources-and-guidance-documents-compliance-assistance>. The letters and memoranda on the ADI may be located by date, office of issuance, subpart, citation, control number, or by string word searches. For questions about the ADI or this notice, contact Maria Malave at EPA by phone at: (202) 564-7027, or by email at: [malave.maria@epa.gov](mailto:malave.maria@epa.gov). For technical questions about individual applicability determinations, monitoring decisions or regulatory interpretations, refer to the contact person identified in the individual documents, or in the absence of a contact person, refer to the author of the document.

**SUPPLEMENTARY INFORMATION:**

**Background**

The General Provisions of the NSPS in 40 Code of Federal Regulations (CFR) part 60 and the General Provisions of the NESHAP in 40 CFR part 61 provide that a source owner or operator may request a determination of whether certain intended actions constitute the commencement of construction,

reconstruction, or modification. EPA's written responses to these inquiries are commonly referred to as applicability determinations. See 40 CFR 60.5 and 61.06. Although the NESHAP part 63 regulations [which include Maximum Achievable Control Technology (MACT) standards and/or Generally Available Control Technology (GACT) standards] and Section 111(d) of the Clean Air Act (CAA) contain no specific regulatory provision providing that sources may request applicability determinations, EPA also responds to written inquiries regarding applicability for the part 63 and Section 111(d) programs. The NSPS and NESHAP also allow sources to seek permission to use monitoring or recordkeeping that is different from the promulgated requirements. See 40 CFR 60.13(i), 61.14(g), 63.8(b)(1), 63.8(f), and 63.10(f). EPA's written responses to these inquiries are commonly referred to as alternative monitoring decisions. Furthermore, EPA responds to written inquiries about the broad range of NSPS and NESHAP regulatory requirements as they pertain to a whole source category. These inquiries may pertain, for example, to the type of sources to which the regulation applies, or to the testing, monitoring, recordkeeping, or reporting requirements contained in the

regulation. EPA's written responses to these inquiries are commonly referred to as regulatory interpretations.

EPA currently compiles EPA-issued NSPS and NESHAP applicability determinations, alternative monitoring decisions, and regulatory interpretations, and posts them to the ADI on a regular basis. In addition, the ADI contains EPA-issued responses to requests pursuant to the stratospheric ozone regulations, contained in 40 CFR part 82. The ADI is a data system on the Internet with over three thousand EPA letters and memoranda pertaining to the applicability, monitoring, recordkeeping, and reporting requirements of the NSPS, NESHAP, and stratospheric ozone regulations. Users can search for letters and memoranda by date, office of issuance, subpart, citation, control number, or by string word searches.

Today's notice comprises a summary of 66 such documents added to the ADI on March 22, 2016. This notice lists the subject and header of each letter and memorandum, as well as a brief abstract of the letter or memorandum. Complete copies of these documents may be obtained from the ADI on the Internet through the Resources and Guidance Documents for Compliance Assistance

page of the Clean Air Act Compliance Monitoring Web site under "Air" at: <https://www2.epa.gov/compliance/resources-and-guidance-documents-compliance-assistance>.

**Summary of Headers and Abstracts**

The following table identifies the control number for each document posted on the ADI data system on March 22, 2016; the applicable category; the section(s) and/or subpart(s) of 40 CFR part 60, 61, or 63 (as applicable) addressed in the document; and the title of the document, which provides a brief description of the subject matter.

We have also included an abstract of each document identified with its control number after the table. These abstracts are provided solely to alert the public to possible items of interest and are not intended as substitutes for the full text of the documents. This notice does not change the status of any document with respect to whether it is "of nationwide scope or effect" for purposes of CAA section 307(b)(1). For example, this notice does not convert an applicability determination for a particular source into a nationwide rule. Neither does it purport to make a previously non-binding document binding.

**ADI DETERMINATIONS UPLOADED ON MARCH 22, 2016**

Control No.	Categories	Subparts	Title
1500021	NSPS	J	Change to Alternative Sulfur Monitoring Plan for Flare System.
1500022	NSPS	J	Alternative to Hydrogen Sulfide Monitoring for Flare System.
1500023	NSPS	EEEE	Applicability Determination for a Rural Institutional Waste Incinerator.
1500024	NSPS	DD	Regulatory Interpretation for Grain Elevators with Expanded Capacity.
1500025	NSPS	AAAA	Applicability Determination for a Small Municipal Waste Combustor.
1500026	NSPS	Y	NSPS Source Test Plan Approval.
1500027	NSPS	A, DD	Performance Test Waivers for New Design and Identical Units at Grain Elevators.
1500028	NSPS	A, JJJJ	Test Waiver for Identical Biogas-fueled Generators.
1500029	NSPS	A, JJJJ	30-Day Advance Test Notice Waiver for Generators.
1500030	NSPS	CCCC, EEEE	Applicability Determination for Incinerator Burning MSW or RDF.
1500031	NSPS	Dc	Applicability Determination for Boiler De-rating.
1500033	NSPS	KKKK	Request for Performance Test Waiver at Combustion Turbine.
1500034	NSPS	Ec	Alternative Monitoring of Waste Combusted.
1500035	NSPS	CCCC	Applicability Determination for Incinerator Burning MSW or RDF.
1500036	NSPS	GG	Monitoring at Turbines During Non-Operational Periods.
1500038	NSPS	A, JJJJ	30-Day Advance Test Notice Waiver for Generators.
1500039	NSPS	Cb, Eb	Carbon Feed Rate Monitoring Waiver Request.
1500049	NSPS	KKKK	Performance Test Waiver for Identical Turbines.
1500051	NSPS	J, Ja	Alternative Monitoring Plan for Tank Degassing and Vapor Control Projects at Petroleum Refineries.
1500054	NSPS	NNN	Alternative Monitoring for an Absorber on a Distillation Unit.
1500056	NSPS	OOO	Applicability Determination for Nonmetallic Mineral Processing Loading Station Enclosed in a Building.
1500057	NSPS	Ce, Ec	Alternative Monitoring for Wet Scrubber at a Waste Incinerator.
1500058	NSPS	J	Alternative Monitoring for Wet Gas Scrubber In Lieu of COMS at an FCCU.
1500059	NSPS	IIII	Emergency Generator Applicability with Respect to Readiness Testing and Commissioning.
1500060	MACT, NESHAP, NSPS.	IIII, ZZZZ	Regulatory Interpretation of NSPS and NESHAP Emergency Internal Combustion Engine Provisions.

## ADI DETERMINATIONS UPLOADED ON MARCH 22, 2016—Continued

Control No.	Categories	Subparts	Title
1500062	NSPS	Ja	Alternative Monitoring of Hydrogen Sulfide and TRS in Sour Gas Routed to Flares.
1500063	NSPS	J	Alternative Monitoring Plan for Wet Gas Scrubber at a Refinery.
1500064	NSPS	O000	Alternate Reporting Schedule for Gas Plant.
1500065	NSPS	JJJJ	Applicability Determination and Testing Waiver Request for Spark Ignition Engines.
1500066	NSPS	JJJJ	Alternative Testing for Spark Ignition Engines.
1500067	NSPS	IIII	Alternative Test Method Request for Compression Ignition Engines Switching to Biodiesel.
1500068	NSPS	J, Ja	Alternative Monitoring of Hydrogen Sulfide from Portable Thermal Oxidizers at Multiple Refineries.
1500069	NSPS	JJJJ	Alternative Test Method to Cutter Analyzers for Emissions from an Internal Combustion Engine.
1500071	NSPS	JJJJ	Alternative Test Method for Non-methane Organic Emissions from Stationary Spark Ignition Combustion Engines.
1500072	NSPS	J	Alternative Monitoring Plan for Hydrogen Sulfide Content of Refinery Fuel Gas.
1500073	MACT, NSPS	ZZZZ, JJJJ	Alternative Test Method for Non-methane Organic Emissions from Stationary Spark Ignition Combustion Engines.
1500074	NSPS	Ec	Deadline for Initial Compliance Testing of a Waste Incinerator.
1600004	NSPS	DD	Clarification of the Definition of Permanent Storage Facilities.

Z150011	MACT, NESHAP	ZZZZ	Applicability Determination for Emergency Engines to RICE NESHAP.

**Abstracts***Abstract for [1500021]*

Q: Will EPA approve a change to the previously approved March 22, 2011 alternative monitoring plan (AMP) for Shell Oil Products Puget Sound Refinery (PSR) in Anacortes, Washington?

A: Yes. EPA conditionally approves Shell's revision to the PSR 2011 AMP. For the monitoring of H<sub>2</sub>S, PSR is requesting to monitor as required by NSPS subpart J, rather than the alternative monitoring method that was specified in the 2011 AMP. PSR requests that certain portions of the approved AMP stay in place to maintain approval of an alternative means for demonstrating compliance for three interconnected flares. The conditions that must be satisfied to allow PSR to rely on the AMP instead of utilizing an H<sub>2</sub>S continuous monitoring system according to subpart J are stated in the EPA approval letter.

*Abstract for [1500022]*

Q: Will EPA approve an alternative monitoring plan (AMP) for the Shell Oil Anacortes, Washington facility to install, maintain, and operate a total sulfur continuous monitoring system (CMS) as an alternative to a hydrogen sulfide (H<sub>2</sub>S) CMS, and to use sulfur data collected at the east flare to represent the sulfur content at the north and south flares?

A: Yes. EPA conditionally approves Shell's AMP for utilizing a H<sub>2</sub>S CMS. The conditions to allow Shell to rely on the AMP instead of utilizing an H<sub>2</sub>S CMS are stated in the EPA approval letter.

*Abstract for [1500023]*

Q: Will EPA grant approval of exempted status under 40 CFR 60.2887(h) of the NSPS subpart EEEE as a rural institutional waste incinerator for an incineration unit that Glacier Bay National Park and Preserve (the Park) in Alaska intends to purchase and install?

A: Yes. EPA determines that the proposed incinerator meets the exclusion for rural institutional waste incinerators because the unit is located more than 50 miles from the boundary of the nearest Metropolitan Statistical Area, alternative disposal options are not available or are economically infeasible, and the Park has submitted this request prior to initial startup of the incinerator.

*Abstract for [1500024]*

Q: Are all on-site units at Kalama Export located in Kalama, Washington that were constructed after August 3,

1978, subject to NSPS subpart DD for Grain Elevators when applicability is triggered due to expanded capacity?

A: No. In its response to the Southwest Clean Air Agency in Vancouver, Washington, EPA explains that the rule applies to each individual affected facility at a grain elevator. Therefore, only the units that are constructed, modified, or reconstructed when and after the NSPS is triggered because of expanded capacity become subject to the rule.

*Abstract for [1500025]*

Q1: Does NSPS subpart AAAAA for Small Municipal Waste Combustion (MWC) Units apply to gas combustion turbine that combust a small amount of non-condensable hydrocarbon gases, which is located at the Green Power facility in Pasco, Washington?

A1: Yes. In a response to the Washington State Department of Ecology and the counsel to the source, EPA indicates that the NSPS subpart AAAAA applies to the gas combustion turbine it is considered to be within the MWC unit boundaries and based on the capacity of the MWC. Based on the MWC definition at 40 CFR 60.1465, the catalytic pressure-less de-polymerization process (CDP) begins the MWC since it is used to convert municipal solid waste into synthetic liquid petroleum fuel, which includes a small amount of non-condensable hydrocarbon gases. Since the non-condensable hydrocarbon gas generated by the CDP is combusted in the turbine, the compressor section and combustor section of the turbine at the facility are within the MWC boundaries. In addition, it is determined that the combustion capacity of the MWC, which would not include the capacity attributable to the flare since it is a control device, is within the applicable range of subpart AAAAA. Furthermore, the Green Power operation does not combust landfill gases and the landfill gas exemption, therefore, is not applicable.

Q2: Does NSPS subpart AAAAA apply to the Green Power CDP if it operates in an anaerobic environment, exposed only to inert gases, due to explosion hazard?

A2: No. EPA determines that the Green Power CDP would not be subject to Subpart AAAAA due to the absence of combustion if the plant is constructed such that there is no combustion of the synthetic fuel product.

Q3: Does NSPS subpart AAAAA apply to the Green Power proposed Algae Production Alternative whereby the non-condensable hydrocarbon gases produced in the reactor are routed to a biological treatment unit as a nutrient in

the production of algae which would subsequently be harvested and reintroduced as a feedstock for the CDP process?

A3: No. EPA determines that in this scenario Subpart AAAAA would not apply due to the absence of combustion.

*Abstract for [1500026]*

Q: Will EPA approve a source test plan submitted by Eielson Air Force Base in Alaska for a particulate matter source test on six bin vent filters for a new mechanical coal tipper subject to NSPS subpart Y?

A: Yes. EPA approves the Eielson source test plan under subpart Y. Eielson has incorporated the guidance received by EPA regarding the proper location for a testing port installation to address issues with inadequate duct diameter sizing for that bin into the source test plan.

*Abstract for [1500027]*

Q1: Will EPA, in consideration of difficulty in applying existing methods to new technology, waive the Method 5 and a portion of the Method 9 readings for three ship loader bustle filters at EGT Development, LLC's (EGT's) Export Elevator facility at Port of Longview, Washington?

A1: Yes. EPA grants EGT the waiver for the Method 5 reading required under the initial performance and for a portion of the required Method 9 readings for the three bustle filters for several reasons. There are technical difficulties that arise in performing the test methods with the new loading spout dust control system design. Specifically, technical issues arise with conducting the Method 5 test where the loading spout dust control system has been moved to the bottom of the ship loader spout, and with conducting a Method 9 opacity reading while the loading spout is within the hold of the ship loading grain. These technical issues combined with the anticipated significant margin of compliance, the testing of other units with identical filter media at the same facility, and the opacity readings that can be performed justifies the waiver approval.

Q2: Will EPA approve a waiver of initial performance testing for certain Donaldson bin vent CPV design PowerCore Filters (CPV filters) that EGT plans to install at this facility when they are in a group of identical units?

A2: Yes. EPA waives the initial Method 5 performance test for certain CPV filters as outlined in the EPA approval letter. NSPS emission test results with Duraplex filter media show maximum emissions are an order of magnitude lower than the

manufacturer's guarantee (0.002 grains/dscf), and two orders of magnitude lower than the 0.01 grains/dscf NSPS limit. Furthermore, the local air permitting authority will be requiring additional testing on a reasonable schedule and there will be a rotation of testing within a group, so that a different unit within the group is tested each time for any future performance tests. This applies to a total of 14 NSPS test units, which represents a group of identical units where that group is unique, has a unique air volume and aspirates a conveyor or facility with a unique conveying capacity.

*Abstract for [1500028]*

**Q:** Will EPA waive the requirement for Cargill Environmental Finance (Cargill) to performance test at two biogas-fueled generators under NSPS subpart JJJJ based on the test results of an identical (third) biogas-fueled generator at the Dry Creek Dairy in Hanson, Idaho?

**A:** Yes. EPA waives the Cargill performance test for the three generators that are located at the same facility, produced by the same manufacture, have the same model number, rated capacity, operating specifications, and are maintained in a similar manner. There is a substantial margin of compliance documented by the prior performance test results that were submitted.

*Abstract for [1500029]*

**Q:** Will EPA waive the requirement of 40 CFR 60.8(d) to provide notification 30 days in advance of a performance test for recently installed biogas-fueled generators at Big Sky West in Gooding, Idaho due to winter weather conditions and the pending holidays?

**A:** Yes. EPA waives the requirement to provide notification 30 days in advance of a performance test pursuant to the provisions at 40 CFR 60.19(f)(3) to implement it early in December due to weather conditions and the pending Holidays. EPA requests that you provide the exact testing date, a copy of the full testing protocol, and the results of the test once completed to the regulatory agencies.

*Abstract for [1500030]*

**Q:** Does EPA determine that Shell Offshore's incineration unit located on the Discoverer Drill vessel, operated in the Chukchi Sea is exempted from the requirements of 40 CFR part 60 subpart CCCC for Commercial and Industrial Solid Waste Incineration Units pursuant to the exemption provided in 40 CFR 60.2020(c)(2)?

**A:** Yes. Based on the information provided, EPA determines that Shell's incinerator qualifies for the exemption in 40 CFR 60.2020(c)(2) for units under a certain capacity that burn greater than 30 percent municipal solid waste or refuse-derived fuel, provided that Shell keeps the records required to demonstrate that it continues to qualify for the exemption on an ongoing basis.

*Abstract for [1500031]*

**Q:** Does EPA determine that physical changes made to two boilers subject to NSPS subpart Dc owned and operated by Yakama Forest Products (YFP) at the Large Log Complex have de-rated the boilers' heat input capacity?

**A:** Yes. Based on the test data submitted following the physical changes of replacing the burners on each boiler, EPA determines that boilers No. 3 and 4 have been permanently de-rated to a heat input capacity below 30 MM BTU/hr. YFP must ensure that oil pressure at the burners meets the conditions of this determination to remain consistent with the conditions during the source test that was the basis for this determination.

*Abstract for [1500033]*

**Q:** Will EPA approve Northwest Pipeline's request for an extension of the deadline to conduct a performance test required by 40 CFR 60.4340(a) in NSPS subpart KKKK for a turbine located at the Chehalis Compressor Station?

**A:** No. EPA determines that an applicable basis for waiving the testing requirement has not been identified. According to 40 CFR 60.4340(a), testing can be performed once every two years when emissions are less than 75 percent of the emission limit. Therefore, Northwest Pipeline must perform annual performance tests in accordance with § 60.4400.

*Abstract for [1500034]*

**Q:** Will EPA approve an alternative monitoring procedure (AMP) for monitoring the amount of waste combusted in the Northstar incinerator to demonstrate that the incinerator qualifies for the co-fired combustor exemption under 40 CFR part 60 subpart Ec for Hospital Medical Infectious Waste (HMIW) Incinerators located at BP Exploration Alaska's (BPXA's) Northstar Development Facility in the Beaufort Sea?

**A:** No. EPA denies the AMP because use of the proposed method to weigh only the HMIW incinerated, instead of weighing both the HMIW and the non-HMIW, will not assure compliance with BPXA's claim that the incinerator meets

the exemption for co-fired combustors under 40 CFR part 60 subpart Ec, as well as the exemption for "municipal waste combustion units" in 40 CFR 62.14525(c)(2).

*Abstract for [1500035]*

**Q:** Does EPA determine that Andarko's incineration unit located at various drilling locations within the Gubik and Chandler Prospects in Alaska is exempted from the requirements of 40 CFR part 60 subpart CCCC pursuant to the provisions at 40 CFR 60.2020(c)(2)?

**A:** Yes. Based on the information provided, EPA determines that Andarko's incinerator qualifies for the exemption in 40 CFR 60.2020(c)(2) for units under a certain capacity that burn greater than 30 percent municipal solid waste or refuse-derived fuel. Andarko must keep the records required to demonstrate that it continues to qualify for the exemption on an ongoing basis.

*Abstract for [1500036]*

**Q:** Is fuel sampling required for two turbines owned by Black Hills Corporation that monitor under NSPS subpart GG custom fuel monitoring schedules for semi-annual periods in which the turbines have not operated for the entire semi-annual period? The turbines are located at the Glenns Ferry Cogeneration Partners and Rupert Cogeneration Partners facilities in Idaho.

**A:** No. EPA determines that fuel sampling required by a custom fuel monitoring schedule is not required for semi-annual periods in which the turbine has not operated for the entire semi-annual period. Sampling must be done upon re-startup.

*Abstract for [1500038]*

**Q:** Will EPA waive the requirement in 40 CFR 60.8(d) for Cargill to provide a notification 30 days in advance of a performance test for the recently installed biogas-fueled generators at Dry Creek Dairy in Hansen, Idaho?

**A:** Yes. EPA waives the requirement to provide notification 30 days in advance of a performance test pursuant to the provisions at 40 CFR 60.19(f)(3). The source identified a date on which testing would be conducted.

*Abstract for [1500039]*

**Q:** Will EPA grant a waiver to Covanta Marion, Incorporated (CMI) in Brooks, Oregon, for the municipal waste combustor (MWC) unit load level limitations, under 40 CFR 60.53b(b)(2), for the two weeks preceding, and during the annual dioxin/furan and mercury performance tests for the purpose of evaluating system performance?

A: Yes. For the purpose of evaluating system performance, EPA waives the MWC load limit for the two week period preceding, and during the annual dioxin/furan and mercury performance test.

*Abstract for [1500049]*

Q: Will EPA provide a waiver pursuant to 40 CFR 60.8(b)(4) from the initial and subsequent performance testing requirement under NSPS subpart KKKK for three identical Solar Saturn T-1301 turbines operating under the same conditions on the same platform in the Cook Inlet at XTO Energy's Kenai, Alaska facility?

A: Yes. EPA grants the request to expand the November 9, 2011 waiver to Solar Saturn T-1301 turbine, serial number SDR-105092 under the condition that a different turbine will be tested each year on a three year rotation. If any tests exceeds 50 percent of the NOx emission limits, all turbines will be required to conduct performance tests.

*Abstract for [1500051]*

Q: Can EPA approve an Alternative Monitoring Plan (AMP) for Envent Corporation to conduct monitoring of hydrogen sulfide (H2S) emissions, in lieu of installing a continuous emission monitoring system when performing tank degassing and other similar operations controlled by portable, temporary thermal oxidizers, at refineries in Region 6 States that are subject to NSPS subparts J or Ja?

A: Yes. EPA conditionally approves the AMP based on the description of the process, the vent gas streams, the design of the vent gas controls, and the H2S monitoring data furnished. EPA specifies the proposed operating parameter limits and data which the refineries must furnish as part of the conditional approval. The approved AMP applies only to similar degassing operations conducted by ENVENT at refineries in EPA Region 6.

*Abstract for [1500054]*

Q: Is the alternative monitoring plan (AMP) submitted to the Tennessee Department of Environment and Conservation (TDEC) for the distillation unit in Source B-99A-2 at the Eastman Chemical Company (Eastman) facility in Kingsport, Tennessee acceptable?

A: Yes. Based upon the information provided in the AMP by Eastman, EPA determines that the AMP is acceptable since the proposed monitoring parameters (water flow rate, propionic acid flow rate, and propionic acid inlet temperature) will provide adequate assurance of compliance. We agree that three of the parameters that the

company would be required to monitor under NSPS subpart NNN (propionic acid specific gravity, water specific gravity, and water temperature) will not be useful indicators of absorber performance for the source in question. For ongoing compliance demonstration, EPA also provides guidance on how to define excess emissions in terms of the alternative monitoring parameters.

*Abstract for [1500056]*

Q1: Does a silo or frame structure enclosing a railcar loading station at three separate Hi-Crush Proppant nonmetallic mineral processing plants located in Augusta, Independence, and Blair, Wisconsin meet the definition of a "building" under NSPS subpart OOO?

A1: Yes. Based on Hi-Crush's representation that the enclosed railcar loading stations are housed in structures with roofs, EPA concludes that these structures would meet the definition of "building" in NSPS subpart OOO.

Q2: Would the openings of those buildings be considered a "vent"?

A2: No. The building openings have no mechanically induced air flow for the purpose of exhausting from a building.

Q3: Since these railcar loading stations are contained in a building, would the applicable particulate matter standard only be that fugitive emissions from the building openings must not exceed 7 percent opacity?

A3: Yes. One emission limit option for an enclosed railcar loading station that is itself enclosed in a building is to restrict fugitive emissions from the building openings (except for vents as defined in 40 CFR 60.671) to 7 percent opacity, per section 60.672(e)(1).

*Abstract for [1500057]*

Q: Does EPA approve a waiver from the 40 part 60 subpart Ec requirement to monitor the minimum pressure drop across a wet scrubber that control emissions of acid gases (*i.e.*, HCl) and is part of the emission control system for the Stericycle hospital/medical/infectious waste incineration (HMIWI) unit in Apopka, Florida? The Stericycle HMIWI unit is equipped with a dry scrubber followed by a fabric filter and a wet scrubber and with a selective noncatalytic reduction system. All other applicable parameter monitoring requirements are proposed to be met by the facility.

A: Yes. EPA approves the waiver request since the removal of acid gases is not dependent on the monitoring of wet scrubber minimum pressure drop and all other applicable monitoring parameters for the control system will be met. Monitoring of the other wet

scrubber monitoring parameters identified in Table 3 of subpart Ec (*i.e.*, the minimum scrubber liquor flow rate and the minimum scrubber liquor pH) will indicate if the scrubber is working properly. Further, compliance with the PM emission limit is achieved without the use of the wet scrubber based on information.

*Abstract for [1500058]*

Q: May an Alternative Monitoring Plan (AMP) be conditionally approved for parametric monitoring in lieu of a continuous opacity monitoring system (COMS) for a Wet Gas Scrubber (WGS) on a Fluidized Catalytic Cracking Unit (FCCU) subject to NSPS subpart J, at the Phillips 66 Company Alliance Refinery in Belle Chasse, Louisiana?

A: Yes. Based on the information provided, EPA approves the AMP for the proposed operating parameters conditioned on the source conducting a performance test that demonstrates compliance and that establishes the operating parameter limits (OPLs) for the WGS. EPA approves the two proposed operating parameters, including the 1) minimum Liquid-to-Gas (L/G) Ratio on a 3-hour rolling average basis; and, 2) minimum slurry liquid circulation pump discharge pressure on a 3-hour rolling average basis. The OPLs are to be recalculated based on the average of three runs, provided the average PM emissions for the three runs meet the PM emissions limit of the rule in pounds per kilopounds of coke processed.

*Abstract for [1500059]*

Q: Is Capitol One National Association required to petition the Administrator under 40 CFR 60.4211(e) for approval to exceed the 100 hour readiness testing limit for emergency generators testing for commissioning purposes under subpart IIII for internal compression engines during the initial onsite commissioning process of its Data Center in Chester, Virginia?

A: No. A petition is not necessary or appropriate. When a new greenfield source is under construction, subpart IIII allows emergency generators to be used as needed to complete the construction process, so long as Capitol One abides by the 100 hours limitation when the Data Center is in commercial operation.

*Abstract for [1500060]*

Q: Portland General Electric Company (PGE) seeks verification that the emergency diesel-fired emergency generators at its Carver Readiness Center in Clackamas, Oregon, run for 50 of 100 hours total use to supply power,

allowed under NSPS subpart III and NESHAP subpart ZZZZ, can be part of its Dispatchable Standby Generation (DSG) program.

A: 40 CFR 60.4211 and 63.6640 authorize limited non-emergency use of diesel engines that are classified and regulated as emergency engines. EPA determines that the language in 40 CFR 63.6640 of subpart ZZZZ regarding emergency engines dispatched under a financial arrangement with another entity was not intended to prohibit utilities from dispatching engines that they own and operate under the 50-hour non-emergency operation option provided.

*Abstract for [1500062]*

Q: Does EPA approve revisions to the Alternative Monitoring Plan (AMP) for monitoring hydrogen sulfide (H<sub>2</sub>S) concentration and determining the total reduced sulfur (TRS) concentration in the sour gas routed to flares at the Lion Oil Company El Dorado (Lion Oil), Arkansas Refinery, which are subject to NSPS subpart Ja?

A: Yes. EPA conditionally approves Lion Oil's revised AMP, which supersedes previous approvals to expand use of the approved AMP for determining TRS under NSPS subpart Ja, and that includes additional operating parameters, clarifications on sampling locations, and test protocol specifications.

*Abstract for [1500063]*

Q: Does EPA approve a revision to an Alternative Monitoring Plan (AMP) that has been conditionally approved for the wet gas scrubber (WGS) on a Fluidized Catalytic Cracking Unit (FCCU) at Marathon Petroleum's refinery in Texas City, Texas subject to NSPS Part 60 subpart J, be resubmitted for approval of a revision based on an additional operation mode at reduced charge rate?

A: Yes. EPA conditionally approves the revision to the EPA-approved AMP based on the additional information provided by Marathon to add an additional mode of operation. The condition for approval requires Marathon to conduct performance testing to demonstrate compliance and to establish the operating parameter limits (OPLs) for the WGS at the additional FCCU reduced charge rate, as established in the EPA response letter.

*Abstract for [1500064]*

Q: Does EPA approve alternate semiannual reporting periods under section 60.5420(b) of NSPS subpart OOOO to run from April 1 through September 30, and from October 1

through March 31, at the Atlas Pipeline Driver Gas Plant in Midland, Texas?

A: Yes. EPA approves the proposed alternate reporting schedule to align the periodic reporting time period requirements of NSPS subpart 0000 since it does not extend the reporting period that would be covered by the next semiannual report, as allowed under section 60.5420(b). The alternate reporting schedule does not extend the reporting period that would be covered by the next semiannual.

*Abstract for [1500065]*

Q1: Are the five City of Rock Island Public Works Department 880 HP spark ignition natural gas fired engines (plus one offline spare) at their wastewater treatment plant in Wisconsin considered emergency engines under NSPS subpart JJJJ?

A1: No. Since the engines would be operated approximately 16 times per year for 270 hours, EPA determines that the engines do not meet the definition of emergency stationary internal combustion engines. Therefore, the engines are subject to subpart JJJJ.

Q2: Can a waiver from performance testing be granted for the engines?

A2: No. EPA cannot grant a waiver of performance testing for these engines, but due to the potential difficulties in testing, EPA encourages the City to request alternative testing if necessary.

*Abstract for [1500066]*

Q: May EPA approve an alternative to stack testing under NSPS subpart JJJJ for nine identical non-certified Riverview bio-gas fueled generators located on three farms (Riverview Dairy, West River Dairy, and District 45 Dairy) in Minnesota?

A: No. EPA does not approve any of the five alternative options proposed by Riverview for its generators, which included: (1) exemption from ongoing testing for engines that meet the standard, (2) retroactive certification by the manufacturer, (3) self-certification through testing, (4) provide certification to manufacturers that have met the standards, and (5) test one engine and apply results to all nine. However, EPA does provide two alternatives, Modified Option 1A and 1B that could be used to demonstrate compliance. Modified Option 1A is annual testing for NO, NO<sub>x</sub>, CO and O<sub>2</sub> using a portable analyzer. Modified Option 1B is to test each dairy's engine sets at least once every three years, rotating annually on a three-year cycle.

*Abstract for [1500067]*

Q: May an alternative test method be approved for Hawaiian Electric

Company's four new compression ignition engines subject to NSPS subpart IIII at the Honolulu International Airport in Oahu that were certified on diesel but will be operated on biodiesel?

A: Yes. EPA determines that operation of the engines on biodiesel would not void the certification if all of the following conditions are met: the biodiesel meets the requirements of 40 CFR 60.4207(b), the manufacturer's warranty includes the use of the biodiesel, and the biodiesel meets ASTM D6751. The engines must also be installed, configured, operated and maintained per the manufacturer's instructions.

*Abstract for [1500068]*

Q: Does EPA approve an Alternative Monitoring Plan (AMP) for Evergreen Industrial Services (EIS) to conduct monitoring of hydrogen sulfide (H<sub>2</sub>S) emissions in lieu of installing a continuous emission monitoring system (CEMS), to monitor emissions controlled by portable and temporary thermal oxidizers units (TOUs) during tank degassing and other similar operations at refineries in Region 6 that are subject to NSPS subparts J or Ja?

A: Yes. Based on the description of the process, the vent gas streams, the design of the vent gas controls, and the H<sub>2</sub>S monitoring data furnished, EPA conditionally approves the AMP when EIA is conducting degassing operations at refineries in Region 6 since it is impractical to use a H<sub>2</sub>S CEMS in a portable TOUs. The EPA response letter list the operating conditions for degassing operations and data which the refineries must furnish to EIS as part of the conditional approval.

*Abstract for [1500069]*

Q: May Derenzo & Associates in Livonia, Michigan use a TECO Model 55C analyzer in lieu of Method 18 that will be used with Method 25A to determine nonmethane organic compounds emitted from an internal combustion engine subject to NSPS subpart JJJJ?

A: Yes. EPA approves the request to use TECO Model 55C as an alternative to Method 18 for measuring methane since it should produce results similar to the "cutter" analyzers already allowed by the regulation.

*Abstract for [1500071]*

Q: Does EPA approve the use by TRC Companies located in Lowell, Massachusetts of a TECO Model 55C analyzer to measure non-methane organic compounds (NMOC) from engines subject to NSPS subpart JJJJ?

A: Yes. EPA approve TRC Companies request for use of the TECO Model 55C analyzer in lieu of Method 18 to measure NMOC from subpart JJJJ engines, and the analyzer may be used by other engines subject to NSPS subpart JJJJ. EPA will announce this as broadly applicable to all stationary spark ignition combustion engines on our Web site at <http://www.epa.gov/ttn/emc/trnmethods.html#CatB>.

*Abstract for [1500072]*

Q1: Does EPA conditionally approve a revision to a previously approved Alternative Monitoring Plan (AMP) to allow for an automatic sampling system, and an associated flow meter for collecting and recording hydrogen sulfide (H<sub>2</sub>S) content, to be included for the West Operations Ground Flare (Multi Jet Flare), which is part of a Flare Gas Recovery System (FGRS) subject to NSPS subpart Ja, at the Motiva Enterprises Norco Refinery in Norco, Louisiana?

A1: Yes. EPA conditionally approves the AMP revision based on how the automatic sampling system functions regarding the configuration and operation of the FGRS. The H<sub>2</sub>S concentration of the combined refinery fuel gas stream routed to the FGRS and the Multi Jet Flare was less than 1 part per million. This satisfied EPA's condition for approval that the H<sub>2</sub>S content shall be inherently low. Additionally, the automatic sampling device samples the blended fuel gas stream before it is sent to the Multi Jet Flare, and there are no crossover points between the FGRS and other fuel gas streams. This satisfied EPA's condition for approval that no crossover points shall exist in the fuel gas vent stream going to the Multi Jet Flare. Based on review by EPA Headquarters, Motiva also was authorized to use an alternate test method for testing and analysis, which removed the previous requirement to measure and record refinery fuel gas H<sub>2</sub>S concentrations using the Length of Stain Tube method. EPA's "Conditions for Approval of the Alternative Monitoring Plan for Miscellaneous Refinery Fuel Gas Streams, dated December 7, 1999, are incorporated by reference, except for the monitoring provisions in Steps 1 through 7, as described in the EPA response letter.

Q2: What recordkeeping and report requirements are included in the conditional approval?

A2: Motiva shall maintain the H<sub>2</sub>S concentration data from the sampling system and the alternate test method in the laboratory information management system. The gas flow data from the flow

meter will be maintained in the electronic process data storage system. Additional records shall be kept to note when the FGRS is operating in either of two different scenarios. Quarterly reporting must be submitted, except more frequently under certain circumstances, as outlined in the conditional EPA approval letter.

*Abstract for [1500073]*

Q: May Derenzo & Associates in Livonia, Michigan use the TECO Model 55I analyzer (which is a newer version of the previously approved Model 55C) in lieu of Method 18 and Method 25A to determine non-methane organic compounds (NMOC) emitted from RICE subject to NSPS subpart JJJJ or NESHAP subpart ZZZZ?

A: Yes. EPA approves the alternative testing request for NSPS subpart JJJJ, provided that the facility follows all applicable requirements in Method 25A for sample heating, appropriate test procedures, calibration and standardization. Since NESHAP subpart ZZZZ does not require the measurement of NMOC that part of the request is not considered.

*Abstract for [1500074]*

Q: Can EPA confirm the proposed deadline for completing the initial performance test under 40 CFR part 60 subpart Ec for the University of Texas Medical Branch's medical infectious waste incinerator in Galveston, Texas?

A: Yes. EPA confirms that the initial compliance performance test should be completed within 60 days of achieving maximum production rate, and not later than 180 days after initial startup as required under section 60.8 of the General Provisions.

*Abstract for [A150001]*

Q: Does the use of the Pre-Construction Survey, as described in ASTM E2356-14 "Standard Practice for Comprehensive Building Asbestos Surveys," demonstrate compliance with the "thorough inspection" requirement at 40 CFR 61.145(a)?

A: Yes. If an owner/operator follows the steps described in Sections 1 through 5 and Section 8 in ASTM E2356-14 "Standard Practice for Comprehensive Building Asbestos Surveys", it would provide a thorough inspection of the facility. However, EPA would not accept the Limited Asbestos Screen (*i.e.*, Practice E2308) described in Section 1.5 as a substitute for the Comprehensive Building Asbestos Survey, and would not consider the Limited Asbestos Screen as a thorough inspection.

*Abstract for [C150001]*

Q: Do regulations related to ozone depleting substances under 40 CFR part 82 prohibit the use of Leak Stop to repair leaks in residential air conditioning systems that contain chlorofluorocarbons?

A: No. The use of aerosol chemical products such as Leak Stop are not prohibited as long as there is no "knowing venting" or "knowing release" of an ozone depleting substance taking place. We do not currently have any information about the propellant used by the Leak Stop product. However, if it is propelled by a Class I or II ozone depleting substance, then it is banned under the non-essential products exclusion found at 40 CFR 82.60.

*Abstract for [M150010]*

Q: Will EPA approve a waiver of the initial performance test according to the provisions of 40 CFR 60.8(b)(4) and 63.7(h) for a new chemset chamber subject to the NESHAP for Lead Acid Battery Manufacturing, 40 CFR part 63 subpart P P P P P P, and the NSPS for Lead Acid Battery Manufacturing, 40 CFR part 60 subpart K K, at the Johnson Controls Battery Group Inc.'s (JCBGI's) facility in Canby, Oregon?

A: No. EPA is denying the requested waiver because the new unit is not identical to the previously installed units and could have a different capacity. While emissions are expected to be low, the initial performance test is valuable to verify the installations of new equipment.

*Abstract for [M150011]*

Q: Will EPA approve a National Security Exemption (NSE) for the Department of Defense to waive the performance testing requirements for twelve stationary diesel fired engines constructed between 2003 and 2009, all of which are subject to the National Emissions Standard for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines (RICE) at 40 CFR part 63, subpart ZZZZ, while five engines are also subject to the New Source Performance Standard for Compression Ignition RICE at 40 CFR part 60, subpart IIII, which are located at Fort Greely, Alaska?

A: No. An NSE exemption is not necessary because 40 CFR part 63 subpart ZZZZ does not require performance testing for emergency engines; according, an exemption from performance testing is not necessary for these twelve engines if they meet the definition of "emergency stationary RICE" under subpart XXXX. In addition,

subpart III does not require performance testing for manufactured-certified engines; accordingly, an exemption from performance testing under subpart III is not necessary for the five manufactured-certified engines located at Fort Greely.

*Abstract for [M150012]*

**Q:** Does EPA determine that the operation of an emergency generator owned and operated by the Union Pacific Railroad's rail yard facility in Lane County, Oregon is classified as a stationary source under NESHAP subpart ZZZZ?

**A:** No. EPA determines that the engine used to provide power restoration for emergencies at railroad tunnels in Oregon is a portable diesel generator. Because the engine has not provided power, or operated for emergency use, or any other purpose other than testing at the location where it has been stored for more than 12 months, it does not meet the definition of stationary engine for that location under subpart ZZZZ.

*Abstract for [M150013]*

**Q1:** Does EPA determine that 40 CFR part 63 subpart HHHHHH, National Emission Standards for Hazardous Air Pollutants: Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources, apply to the process of spray applying vehicle undercoating?

**A1:** Yes. EPA determines the process of spray applying vehicle undercoating is subject to NESHAP subpart HHHHHH. The undercoating would be considered a coating under the NESHAP definitions and would not be a sealant. It is generally spray-applied using a hand-held device that creates an atomized mist of coating and deposits the coating on a sub straight, just as are other automotive coatings.

**Q2:** Does EPA determine that the exemption for facilities that do not spray-apply target HAP-containing coatings is available to part of a facility?

**A2:** No. EPA determines that a facility that is not exempt must satisfy the rule requirements for all of their spray-applied coating operations. If the facility spray-applies no target HAP, then it may request exemption from the rule.

*Abstract for [M150015]*

**Q:** Will EPA approve an alternative to the visible emissions monitoring requirement of 40 CFR 63.11423(b) of the National Emission Standards for Hazardous Air Pollutants (NESHAP) for Lead Acid Battery Manufacturing Area Sources, subpart PPPPPP, for Johnson Controls Battery Group Incorporated's

facility in Canby, Oregon to shut down equipment per permit conditions if any visible emissions are observed rather than continuing to operate and conduct a Method 9 test?

**A:** Yes. EPA approves this minor change in monitoring methodology pursuant to 40 CFR 63.8(b)(i) because it will be more stringent than that which is required according to 40 CFR 63.11423(b) by the NESHAP standard.

*Abstract for [M150016]*

**Q:** Does 40 CFR part 63 subpart MMMMMM for Area Source Carbon Black Production apply to Reclaim Technologies' tire reclamation facility at the Port of Morrow near Boardman, Oregon?

**A:** No. Based on the information provided by Reclaim, EPA determines that the process at Reclaim's facility is materially different from the "carbon black production" process that is subject to subpart MMMMMM. The process involves heating shredded tires in an oxygen starved environment to recover carbon black, oil and steel from the tires. As such the process does not fall within the definition of "carbon black production" and is not subject to subpart MMMMMM.

*Abstract for [M150017]*

**Q:** The Olympic Region Clean Air Agency (ORCAA) in Port Angeles, Washington asked if 40 CFR part 63 subpart HHHHHH for Paint Stripping and Miscellaneous Surface Coating Operations apply to the process of spray-applied truck bed lining.

**A:** EPA determines that operations that spray-apply coatings to truck bed liners, including color coatings, are subject to subpart HHHHHH, based on the definitions of coatings and spray-applied coating operations in 40 CFR 63.11180. Although the definition of "truck bed liner coating" does exclude color coats, that definition is not referred in 40 CFR 63.11170, the applicability section for subpart HHHHHH. The lining operation is generally spray-applied using a hand-held device that creates an atomized mist of coating and deposits the coating on a substrate, just as are other automotive coatings.

*Abstract for [M150023]*

**Q:** Does EPA approve Holcim's particulate matter (PM) alternative continuous parameter monitoring system (CPMS) plan for the common stack venting exhaust emissions from different sources at their Portland cement plant in Florence, Colorado, subject to the National Emission Standards for Hazardous Air Pollutants

From the Portland Cement Manufacturing Industry, subpart LLL?

**A:** Yes. Pursuant to 40 CFR 63.8(f)(2) and 63.1350(o)(4), EPA conditionally approves the use of one PM CPMS on the common stack whereby a site-specific operating limit is established that corresponds to the results of performance testing demonstrating compliance with the kiln and clinker cooler emission limits. The conditions for approval are specified in the EPA response letter.

*Abstract for [M150024]*

**Q:** Does EPA approve an alternative monitoring plan that uses a longer averaging time for inlet flow monitoring as a surrogate parameter for monitoring methanol destruction in the Aeration Stabilization Basin (ASB) subject to the National Emission Standards for Hazardous Air Pollutants (NESHAP) from the Pulp and Paper Industry, subpart S, at the Clearwater Paper Corporation, Cypress Bend Mill located in McGehee, Arkansas?

**A:** Yes. Based on the monitoring data provided by the company and performance test results, EPA approves the AMP request. EPA agrees that a daily flow is not representative of the actual hydraulic retention time in the ASB, whereas a nine-day rolling average inlet flow established per 40 CFR 63.453(n)(4) provides an actual representation of the treatment system retention time.

*Abstract for [M150025]*

**Q:** Does EPA approve an alternative monitoring request to conduct monthly pressure differential measurements across the catalyst at load conditions within plus or minus 10 percent of the baseline load established during the initial engine performance tests outlined in QEP Field Services Company's (QEP) Consent Decree, rather than the plus or minus 10 percent of 100 percent load as required in 40 CFR part 63 subpart ZZZZ for Stationary Reciprocating Internal Combustion Engines located at Chapita, Coyote Wash, Island and Wonsits Valley Compressor Stations?

**A:** Yes. EPA conditionally approves the AMP request pursuant to § 63.8(t)(2) based on the performance testing negotiated as part of the QEP Consent Decree. EPA believes that it is technically appropriate to conduct the monthly pressure drop readings at plus or minus 10 percent of the load at an affected facility engine when the initial performance test that was conducted is showing compliance with the MACT ZZZZ. The conditions for approval are described in the EPA response letter.

*Abstract for [M150026]*

Q: Do NSPS subpart IIII and NESHAP subpart ZZZZ apply to the engine of a mobile power generator in Springdale, Arkansas that is designed to supply electrical power on a temporary basis, at various locations within the Kawneer Springdale Plant, and does not remain at any location greater than 12 months?

A: No. EPA determines that NSPS subpart IIII and NESHAP subpart ZZZZ do not apply since this engine is considered a nonroad mobile source. The mobile generator is a wheeled unit and its engine meets the criteria for a nonroad engine that it be by itself or in or on a piece of equipment that is portable or transportable. Furthermore, it will not remain in a single location for longer than 12 consecutive months.

*Abstract for [M150027]*

Q1: Is the stationary gas compression reciprocating internal combustion engine (RICE) at the Dimension Energy Company Coquille Bay, Louisiana facility a remote affected source under 40 CFR part 63 subpart ZZZZ?

A1: Yes. After reviewing the description of the RICE and its operations, EPA determines that it is an existing area source which meets the definition of a remote stationary RICE under 40 CFR 63.6675.

Q2: What are the continuing compliance requirements for a remote stationary RICE?

A2: The operator must: Perform prescribed preventative maintenance at certain intervals; maintain the RICE according to the manufacturer's instructions; minimize startup time or develop a maintenance plan using good air pollution prevention practices; and, maintain records to demonstrate that applicable requirements have been completed.

*Abstract for [M150028]*

Q: Does EPA agree that the Callidus Closed Loop Gasification System (CCLGS) at the Del-Tin Fiber plant in El Dorado, Arkansas is exempt from the Boiler MACT, subpart DDDDD under the exemption at 40 CFR 63.7491(h) because it is subject to and complying with the Plywood MACT, subpart DDDD?

A: No. The EPA determines that both the Boiler MACT and the Plywood MACT apply to specific components of the CCLGS based on a review of the design and operation information available for the Del-Tin Fiber facility, so the exemption at 40 CFR 63.7491(h) does not apply. The rotary gasifiers and secondary combustion chamber (SCC) are considered affected sources,

specifically defined as "process heaters" under the Boiler MACT when combustion gases are not used to directly heat process material. The portion of combustion gases that directly flow through the dryer units are considered affected sources under the Plywood MACT (§ 63.2232(b) and § 63.2292) and are thereby exempted from the Boiler MACT requirements (§ 63.7491(1)). However, any combustion gases from the rotary gasifiers and the SCC that bypass the dryer units and are used for indirect heat transfer to process material or to heat transfer material for use in a process unit are subject to the Boiler MACT (§ 63.7575).

*Abstract for [M150029]*

Q: Does EPA agree to accept data from a prior performance test in lieu of a new performance test to demonstrate initial compliance with 40 CFR part 63 subpart ZZZZ for six natural gas fueled spark plug ignition engines at the ExxonMobil Chemical facility in Baton Rouge, Louisiana?

A: Yes. EPA accepts a previous performance testing for six engines conducted in lieu of implementing an initial test. The testing was done using the same methods specified in subpart ZZZZ, and was conducted within two years of the performance test deadline. Additionally, the equipment was not modified following the April 2012 testing.

*Abstract for [M150030]*

Q: Does EPA agree that the RockTenn Hodge Mill Boiler in Hodge, Louisiana is a biomass hybrid suspension grate boiler under 40 CFR part 63 subpart DDDDD?

A: Yes. EPA agrees that the boiler is subject to NESHAP subpart DDDDD since the description provided meets the definition of a hybrid suspension grate boiler found in the rule. Since natural gas and tire derived fuel (TDF) are also used, the facility must keep records to demonstrate the annual average moisture content is at or above 40 percent. The facility must use natural gas for startup, shutdown, and flame stabilization, and use TDF when excessively firing wet biomass fuel.

*Abstract for [M150031]*

Q: Are three Electric Utility Generating Units (EUGUs) located at the Lafayette Utilities System (LUS) Doc Bonin Electric Generating Station in Lafayette, Louisiana considered to be affected sources with gas-fired boilers that are not subject to Boiler Area Source MACT, subpart JJJJJJ?

A: EPA determines that the boilers are not affected sources subject to the Boiler Area Source MACT if all conditions at 40 CFR 63.11237 are met. Gas-fired boilers are excluded from subpart JJJJJJ per 40 CFR 63.11195(e). A permit limitation is necessary to verify applicability requirements are met for each EUGU for burning fuel oil only during natural gas curtailment, and to not exceed testing hours with fuel oil during any calendar year.

*Abstract for [M150032]*

Q1: Does EPA approve an Alternative Monitoring Plan (AMP) for three Reciprocating Internal Combustion Engines (RICE) subject to NESHAP subpart ZZZZ at the Occidental Permian Terrill Gas Treating Facility for testing at less than 100 percent maximum load?

A1: Yes. EPA approves Occidental Permian proposed AMP for a lower engine load be set as a maximum load for compliance demonstration.

Specifically, we approve performance testing at the alternate lower maximum engine load with monitoring required at plus or minus 10 percent. The three RICE cannot operate at 100 percent load due to site-specific operations at the facility, and therefore cannot be tested at 100 percent plus or minus 10 percent operational capacity, as specified at 40 CFR 63.6620(b)(2). If operations change such that the maximum load of the engines exceeds the alternative lower maximum load, the AMP approval will be terminated, and retesting will be required to demonstrate compliance with NESHAP subpart ZZZZ at the higher engine load.

*Abstract for [M150034]*

Q: Does EPA agree that the backup power generator at the Freddie MAC facility in Carrollton, Texas is classified as an existing commercial emergency stationary Reciprocating Internal Combustion Engine (RICE) that is not subject to 40 CFR part 63 subpart ZZZZ?

A: Yes. EPA determines that the Freddie MAC facility is an area source with a commercial NAICS code, and the backup power generator meets the exemption provided at 40 CFR 63.6585(f)(2) applicable to emergency stationary RICE operated at an area source. This RICE, used solely for backup power generation, have not exceeded 50 hours for any activities during any one year period within the past two year period.

*Abstract for [M150036]*

Q: Will EPA provide a waiver to CertainTeed Corporation of the 60-day requirement under 40 CFR 63.9(c) to notify EPA in advance of the initial

performance test at the GS Roofing facility in Portland, Oregon?

A: Yes. EPA is granting a waiver of the 60-day requirement for a notification prior to the initial performance test pursuant to 40 CFR 63.9(i) of the 40 CFR 63.9(c) requirement to enable testing during facility's highest volume period with the maximum ambient temperature, which is will occur in less than 60 days. This would enable the estimation of what the emissions are during a worst case scenario to test the limits of our system.

*Abstract for [Z150002]*

Q: Does 40 CFR part 61 subpart N apply to the Bullseye Glass Company's manufacture of colored art glass in its Portland, Oregon facility?

A: Yes. NESHAP subpart N applies to the company's manufacture of colored art glass. According to 40 CFR 61.160(a), 40 CFR part 61 subpart N does not apply to pot furnaces but rather to each glass melting furnace that uses commercial arsenic as a raw material. However, based on information provided by Bullseye Glass including descriptions, photos and diagrams, EPA determines that the vessels used by Bullseye do not meet the definition of pot furnaces because they are not sealed off from the furnace atmosphere so that there is potential for emissions to escape with the furnace exhaust.

*Abstract for [Z150004]*

Q: Are boilers/engines/marine equipment on a liquefied natural gas carrier (LNGC) at the proposed Aguirre Gasport located approximately 3 miles offshore of the Puerto Rico Electric Power Authority subject to NSPS and NESHAP standards when the LNGC will be converted into a Floating Storage and Regasification Unit (FSRU) to be permanently moored at the GasPort?

A: Yes. Based on the information provided, EPA determines that the FSRU is a stationary source because it utilizes boilers as the main propulsion devices instead of reciprocating internal combustion engines (RICE) and it will be permanently moored, except when there is a need to take the unit to safer water due to and special circumstances. Therefore, the affected equipment on the FSRU, except for non-reciprocating internal combustion engine (RICE), is subject to NSPS and NESHAP standards. All non-reciprocating RICE equipment on the FSRU is not a stationary sources because it falls under the definition of nonroad engines as they will be used on self-propelled equipment. Therefore, the NSPS and NESHAP do not apply to the nonroad RICE. However, the nonroad RICE must

comply with the applicable nonroad engine standards in 40 CFR parts 89, 94, 1039, 1042, 1043, 1045, 1048, 1054, 1065, and 1068, if applicable. Specific questions on the requirements and applicability of a particular NSPS and NESHAP rules can be discussed separately on a case-by-case basis as the need arises.

*Abstract for [Z150005]*

Q: Are the 39 emergency stationary reciprocating internal combustion engines (RICE) at Los Alamos National Laboratory (LANL) area source facility subject to RICE NESHAP requirements?

A: No. EPA determines that the 39 emergency RICE at LANL are not subject to the RICE NESHAP because they are located at an area source that is classified as an "institutional" facility. The RICE rule excludes existing stationary emergency engines located at residential, commercial, or institutional facilities that are area sources of HAP. Note that the engines must meet the definition of "Emergency stationary RICE" in 40 CFR 63.6675.

*Abstract for [Z150006]*

Q: Northern Natural Gas based in Omaha, Nebraska asked that, under 40 CFR 63.6625(h), part 63 NESHAP subpart ZZZZ for spark ignition reciprocating internal combustion engines (RICE) regarding minimizing engine idle time, if an engine does not complete start up within the thirty minute time limit, are there any restrictions on initiating another startup of the engine and/or the time frame to complete the subsequent startup?

A: No. An engine does not need to be shut off if it does not complete startup within thirty minutes. However, any further activity after thirty minutes is considered part of normal operation. Multiple startups should be counted as separate events with a thirty minute time limit per event. If startups occur consecutively with short durations in between, they could be considered as one startup since startups are part of a single occasion where the engine is working up to normal operations.

*Abstract for [Z150009]*

Q1: May emergency Reciprocating Internal Combustion Engines (RICE) that currently do not qualify for the exclusion in 40 CFR 63.6585(f)(2) because they are contractually obligated to be available for more than 15 hours for the purposes specified at 40 CFR 63.6640(f)(2)(ii) and (iii) and (f)(4)(ii), later qualify for exclusion once those contracts expire, provided that the other conditions of 40 CFR 63.6585(f)(2) are met?

A1: If an emergency stationary RICE does not meet the conditions for the exclusion in 40 CFR 63.6585(f)(2) as of the compliance date, then it is subject to subpart ZZZZ at the date of compliance. However, if the engine's status subsequently changes to meet the conditions of 40 CFR 63.6585(f)(2) after the compliance date, the engine would no longer be subject to subpart ZZZZ.

Q2: Can emergency RICE located at area sources continue to participate in peak shaving programs for up to 50 hours per year until May 3, 2014 without losing their emergency engine status?

A2: An emergency stationary RICE located at an area source of HAP emissions can be used for peak shaving for up to 50 hours per year until May 3, 2014 if the engine is operated as part of a peak shaving (load management program) with the local distribution system operator and the power is provided only to the facility itself or to support the local distribution system. This is the case whether or not the engine will be retrofitted to comply with the subpart ZZZZ standards for non-emergency engines.

Q3: Do 40 CFR 63.6640(f)(4)(i) and (ii) address separate and distinct non-emergency situations, and does the "local reliability" exception set forth in 40 CFR 63.6640(f)(4)(ii) have no sunset provision?

A3: Yes. 40 CFR 63.6640(f)(4)(i) and (ii) are separate and distinct situations and there is no sunset provision for the operation specified in § 63.6640(f)(4)(ii). An emergency stationary RICE at an area source of HAP emissions can continue to operate for up to 50 hours per calendar year for the purpose specified in § 63.6640(f)(4)(ii) beyond May 3, 2014.

Q4: How does EPA interpret 40 CFR 63.6640(f)(4)(ii)(A), which requires that to qualify for the 50 hour exemption, the emergency RICE must be dispatched by the local balancing or local transmission and distribution system operator?

A4: If the local transmission and distribution system operator informs the facility that they will be cutting their power, which, in turn, causes the facility to engage its emergency stationary RICE, the engine would be considered dispatched by the local transmission and distribution system operator.

*Abstract for [Z150010]*

Q1: What date is used under NESHAP subpart ZZZZ to determine if engines located at Allison Transmission Indianapolis facility in Indiana, are "existing" or "new"?

A1: The rule uses the date that the engine commenced construction to determine if the engine is existing or new. The General Provisions to 40 CFR part 63 define both “construction” and “commenced” and those definitions are applied to the subpart.

Q2: Does NESHAP subpart ZZZZ apply to an engine that has been rebuilt, specifically where the engine core is reused, but components such as pistons, rings and bearings are reconditioned or replaced?

A2: A rebuilt engine would need to be evaluated to determine if reconstruction had occurred. The General Provisions to part 63 defines “reconstruction.”

*Abstract for [Z150011]*

Q: Are the emergency engines located at the NASA Langley Research Facility in Hampton, VA subject to NESHAP subpart ZZZZ for Reciprocating Internal Combustion Engines?

A: No. EPA determines that the emergency engines are located at a facility that is an area source and classified as an “institutional” facility. Therefore, under 40 CFR 63.6590(b)(3), emergency engines at the facility are exempt from requirements under NESHAP subpart ZZZZ.

*Abstract for [1600004]*

Q: Does EPA accept the industry coalition request to rescind a November 21, 2007, letter to the National Grain and Feed Association in which EPA stated that temporary storage facilities meet the definition of “permanent storage capacity” under 40 CFR part 60, subpart DD, NSPS for Grain Elevators (Subpart DD), and required it be included when determining applicability of Subpart DD for a particular facility?

A: Yes. The EPA is proposing revisions to Subpart DD and has also decided to re-evaluate the rationale for the November 21, 2007 letter. While the definition of “permanent storage capacity” in Subpart DD is broad, we are now aware that temporary storage facilities (TSFs) generally handle the grain less time throughout the year than other types of permanent storage facilities and may require different treatment. Also, while not dispositive as to the applicability of the rule to these units, we note that TSFs did not exist during the development of Subpart DD, and their processes and handling techniques were not specifically considered during the rulemaking process. For these reasons, EPA rescinds the November 21, 2007 letter. As a result, TSFs do not meet the definition of “permanent storage capacity” under Subpart DD and should not be included

when determining applicability under Subpart DD for a particular facility.

Dated: February 25, 2016.

## FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060-1213]

### Information Collection Being Reviewed by the Federal Communications Commission Under Delegated Authority

**AGENCY:** Federal Communications Commission.

**ACTION:** Notice and request for comments.

**SUMMARY:** As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the Federal Communications Commission (Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission’s burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The Commission may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

**DATES:** Written PRA comments should be submitted on or before May 31, 2016.

**ADDRESSES:** Direct all PRA comments to Cathy Williams, FCC, via email [PRA@fcc.gov](mailto:PRA@fcc.gov) and to [Cathy.Williams@fcc.gov](mailto:Cathy.Williams@fcc.gov). Include in the comments the Title as shown in the **SUPPLEMENTARY INFORMATION** section below.

**FOR FURTHER INFORMATION CONTACT:** For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

### SUPPLEMENTARY INFORMATION:

*OMB Control Number:* 3060–1213.

*Title:* Application to Participate in a Reverse Incentive Auction, FCC Form 177.

*Form Number:* FCC Form 177.

*Type of Review:* Extension of a currently approved collection.

*Respondents:* Business or other for-profit entities, not-for-profit institutions, and state, local or tribal governments.

*Estimated Number of Respondents and Responses:* 600 respondents and 600 responses.

*Estimated Time per Response:* 90 minutes.

*Frequency of Response:* One-time reporting requirement.

*Obligation to Respond:* Required to obtain or retain benefits. Statutory authority for the currently approved information collection is contained in sections 154(i) and 309(j)(5) of the Communications Act, as amended, 47 U.S.C. 4(i), 309(j)(5), and sections 1.2204 and 73.3700(h)(4)(i), (h)(4)(ii), and (h)(6) of the Commission’s rules, 47 CFR 1.2204, 73.3700(h)(4)(i), (h)(4)(ii), and (h)(6).

*Estimated Total Annual Burden:* 900 hours.

*Total Annual Costs:* None.

*Nature and Extent of Confidentiality:* Certain information collected on FCC Form 177 will be treated as confidential for various periods of time during the course of the broadcast incentive auction (BIA) pursuant to 47 U.S.C. 1452(a)(3) and section 1.2206(b) of the Commission’s rules, 47 CFR 1.2206(b). To the extent necessary, respondents may request confidential treatment of information collected on FCC Form 177 that is not already being treated as confidential pursuant to section 0.459 of the Commission’s rules. See 47 CFR 0.459.

*Privacy Act Impact Assessment:* No impact(s).

*Needs and Uses:* A request for approval of this information collection will be submitted to the Office of Management and Budget (OMB) after this 60-day comment period in order to obtain the full three year clearance from OMB. On February 22, 2012, the President signed the Spectrum Act, which, among other things, authorized the Commission to conduct incentive auctions, and directed that the Commission use this innovative tool for an incentive auction of broadcast television spectrum to help meet the Nation’s growing spectrum needs. See

Middle Class Tax Relief and Job Creation Act of 2012, Public Law 112–96, sections 6402, 6403, 125 Stat. 156 (2012) (Spectrum Act). The Commission's broadcast incentive auction (BIA) will have three main components: (1) A reverse auction in which broadcast television licensees will submit bids to voluntarily relinquish their spectrum usage rights in exchange for defined shares of proceeds from the forward auction; (2) a repacking of the broadcast television bands; and (3) a forward auction of initial licenses for flexible use of the newly available spectrum. The information collection requirements reported under this new collection are the result of various Commission actions in which the Commission adopted general rules to govern the auction—including various application disclosures and certifications that must be made by broadcast television licensees to establish their eligibility to participate in the reverse auction—in order to implement the new and novel incentive auction approach for use in the BIA.

Under this information collection, the Commission will collect information that will be used to determine whether an applicant is legally qualified to participate in a reverse incentive auction. To aid in collecting this information, the Commission has created FCC Form 177, which the public will use to participate in reverse incentive auctions, including the Commission's upcoming broadcast incentive reverse auction. The Commission's auction rules and related requirements are designed to ensure that the competitive bidding process is limited to serious qualified applicants, deter possible abuse of the bidding and licensing process, and enhance the use of competitive bidding to assign Commission licenses and permits in furtherance of the public interest. The information collected on FCC Form 177 will be used by the Commission to determine if an applicant is legally qualified to participate in the reverse auction. Commission staff will review the information collected on FCC Form 177 as part of the pre-auction process, prior to the start of the reverse auction. Staff will determine whether each applicant satisfies the Commission's requirements to participate in the reverse auction. Without the information collected on FCC Form 177, the Commission will not be able to determine if an applicant is legally qualified to participate in the reverse auction and has complied with the various applicable regulatory and

statutory auction requirements for such participation.

Federal Communications Commission.

**BILLING CODE 6712–01–P**

## FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–1214]

### Information Collection Being Reviewed by the Federal Communications Commission

**AGENCY:** Federal Communications Commission.

**ACTION:** Notice and request for comments.

**SUMMARY:** As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

**DATES:** Written PRA comments should be submitted on or before May 31, 2016. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

**ADDRESSES:** Direct all PRA comments to Nicole Ongele, FCC, via email [PRA@fcc.gov](mailto:PRA@fcc.gov) and to [Nicole.Ongele@fcc.gov](mailto:Nicole.Ongele@fcc.gov).

**FOR FURTHER INFORMATION CONTACT:** For additional information about the information collection, contact Nicole Ongele at (202) 418–2991.

#### SUPPLEMENTARY INFORMATION:

*OMB Control Number:* 3060–1214.

*Title:* Direct Access to Numbers Order, FCC 15–70, Conditions.

*Form Number:* N/A

*Type of Review:* Revision of currently approved collection.

*Respondents:* Business or other for-profit.

*Number of Respondents and Responses:* 13 respondents; 13 responses.

*Estimated Time per Response:* 10–20 hours.

*Frequency of Response:* One-time application, on-going and bi-annual reporting requirements.

*Obligation to Respond:* Voluntary. Statutory authority for this information collection is contained in 47 U.S.C. 251(e)(1).

*Total Annual Burden:* 520 hours.

*Total Annual Costs:* No cost.

*Privacy Act Impact Assessment:* No impact(s).

*Nature and Extent of Confidentiality:* If respondents submit information which respondents believe is confidential, respondents may request confidential treatment of such information pursuant to section 0.459 of the Commission's rules, 47 CFR 0.459.

*Needs and Uses:* In a June 2015 Report and Order (FCC 15–70), the Commission established the Numbering Authorization Application process, which allows interconnected VoIP providers to apply for a blanket authorization from the FCC that, once granted, will allow them to demonstrate that they have the authority to provide service in specific areas, thus enabling them to request numbers directly from the Numbering Administrators. This collection covers the information and certifications that applicants must submit in order to comply with the Numbering Authorization Application process. The data, information, and documents acquired through this collection will allow interconnected VoIP providers to obtain numbers with minimal burden or delay while also preventing providers from obtaining numbers without first demonstrating that they can deploy and properly utilize such resources. This information will also help the Federal Communications Commission (FCC) protect against number exhaust while promoting competitive neutrality among

traditional telecommunications carriers and interconnected VoIP providers by allowing both entities to obtain numbers directly from the Numbering Administrators. It will further help the FCC to maintain efficient utilization of numbering resources and ensure that telephone numbers are not being stranded.

Federal Communications Commission.

## FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060-0600 and 3060-0995]

### Information Collections Being Reviewed by the Federal Communications Commission Under Delegated Authority

**AGENCY:** Federal Communications Commission.

**ACTION:** Notice and request for comments.

**SUMMARY:** As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501-3520), the Federal Communications Commission invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

**DATES:** Written PRA comments should be submitted on or before May 31, 2016.

**ADDRESSES:** Direct all PRA comments to Cathy Williams, FCC, via email [PRA@fcc.gov](mailto:PRA@fcc.gov) and to [Cathy.Williams@fcc.gov](mailto:Cathy.Williams@fcc.gov). Include in the comments the Title as shown in the **SUPPLEMENTARY INFORMATION** section below.

**FOR FURTHER INFORMATION CONTACT:** For additional information about the information collection, contact Cathy Williams at (202) 418-2918.

**SUPPLEMENTARY INFORMATION:**

*OMB Control Number:* 3060-0600.

*Title:* Application to Participate in an FCC Auction, FCC Form 175.

*Form Number:* FCC Form 175.

*Type of Review:* Extension of a currently approved collection.

*Respondents:* Business or other for-profit entities, not-for-profit institutions, and state, local or tribal governments.

*Estimated Number of Respondents and Responses:* 500 respondents and 500 responses.

*Estimated Time per Response:* 90 minutes.

*Frequency of Response:* On occasion reporting requirement.

*Obligation to Respond:* Required to obtain or retain benefits. Statutory authority for the currently approved information collection is contained in sections 154(i) and 309(j)(5) of the Communications Act, as amended, 47 U.S.C. 4(i), 309(j)(5), and sections 1.2105, 1.2110, 1.2112 of the Commission's rules, 47 CFR 1.2105, 1.2110, 1.2112. Statutory authority for the revised information collection is contained in sections 154(i) and 309(j)(5) of the Communications Act of 1934, as amended, 47 U.S.C. 4(i), 309(j)(5), and sections 1.2105, 1.2110, 1.2112 of the Commission's rules, as amended, 47 CFR 1.2105, 1.2110, 1.2112.

*Estimated Total Annual Burden:* 750 hours.

*Total Annual Costs:* None.

*Nature and Extent of Confidentiality:* Information collected on FCC Form 175 is made available for public inspection, and the Commission is not requesting that respondents submit confidential information on FCC Form 175. Respondents seeking to have information collected on FCC Form 175 withheld from public inspection may request confidential treatment of such information pursuant to section 0.459 of the Commission's rules, 47 CFR 0.459.

*Privacy Act Impact Assessment:* No impact(s).

*Needs and Uses:* A request for extension of this information collection (no change in requirements) will be submitted to the Office of Management and Budget (OMB) after this 60-day comment period in order to obtain the

full three year clearance from OMB. On February 22, 2012, the President signed the Spectrum Act, which, among other things, authorized the Commission to conduct incentive auctions, and directed that the Commission use this innovative tool for an incentive auction of broadcast television spectrum to help meet the Nation's growing spectrum needs. See Middle Class Tax Relief and Job Creation Act of 2012, Pub. L. 112-96, sections 6402, 6403, 125 Stat. 156 (2012) (Spectrum Act). The Commission's broadcast incentive auction (BIA) will have three main components: (1) A reverse auction in which broadcast television licensees will submit bids to voluntarily relinquish their spectrum usage rights in exchange for defined shares of proceeds from the forward auction; (2) a repacking of the broadcast television bands; and (3) a forward auction of initial licenses for flexible use of the newly available spectrum.

The Commission is revising the currently approved information collection on FCC Form 175 to implement new collection requirements that are the result of (1) various Commission actions in which the Commission adopted general rules and procedures to govern the BIA, including rules applicable to applicants seeking to participate in the forward auction component of the BIA and, (2) the Commission's adoption of new and modified competitive bidding rules and requirements in the *Updating Part 1 Report and Order*, which will apply to applicants seeking to participate in a Commission auction, including the forward auction component of the BIA.

The Commission's auction rules and related requirements are designed to ensure that the competitive bidding process is limited to serious qualified applicants, deter possible abuse of the bidding and licensing process, and enhance the use of competitive bidding to assign Commission licenses in furtherance of the public interest. The information collected on FCC Form 175 is used by the Commission to determine if an applicant is legally, technically, and financially qualified to participate in a Commission auction. Additionally, if an applicant applies for status as a particular type of auction participant pursuant to Commission rules, the Commission uses information collected on FCC Form 175 to determine whether the applicant is eligible for the status requested. Commission staff reviews the information collected on FCC Form 175 for a particular auction as part of the pre-auction process, prior to the auction being held. Staff determines whether each applicant satisfies the

Commission's requirements to participate in the auction and, if applicable, is eligible for the status as a particular type of auction participant it requested. Without the information collected on FCC Form 175, the Commission will not be able to determine if an applicant is legally, technically, and financially qualified to participate in a Commission auction, including the forward auction component of the BIA, and has complied with the various applicable regulatory and statutory auction requirements for such participation.

The Commission plans to continue to use the FCC Form 175 for all upcoming, non-reverse spectrum auctions, including those required or authorized to be conducted pursuant to the Spectrum Act, collecting only the information necessary for each particular auction.

*OMB Control Number:* 3060-0995.

*Title:* Section 1.2105(c), Bidding Application and Certification Procedures; Sections 1.2105(c) and 1.2205, Prohibition of Certain Communications.

*Form Number:* N/A.

*Type of Review:* Extension of a currently approved collection.

*Respondents:* Business or other for-profit entities, not-for-profit institutions, and state, local or tribal governments.

*Estimated Number of Respondents and Responses:* 10 respondents and 10 responses.

*Estimated Time per Response:* 1.5 hours to 2 hours.

*Frequency of Response:* On occasion reporting requirement.

*Obligation to Respond:* Required to obtain or retain benefits. Statutory authority for this currently approved information collection is contained in sections 154(i) and 309(j) of the Communications Act, as amended, 47 U.S.C. 4(i), 309(j)(5), and section 1.2105(c) of the Commission's rules, 47 CFR 1.2105(c). Statutory authority for the revised information collection is contained in sections 154(i), 309(j), and 1452(a)(3) of the Communications Act, as amended, 47 U.S.C. 4(i), 309(j)(5), 1452(a)(3), and sections 1.2105(c) and 1.2205 of the Commission's rules, 47 CFR 1.2105(c), 1.2205.

*Estimated Total Annual Burden:* 50 hours.

*Total Annual Costs:* \$9,000.

*Nature and Extent of Confidentiality:* The Commission will take all reasonable steps to protect the confidentiality of all Commission-held data of a reverse auction applicant consistent with the confidentiality requirements of the Spectrum Act and the Commission's

rules. See 47 U.S.C. 1452(a)(3); 47 CFR 1.2206. In addition, to the extent necessary, a full power or Class A television broadcast licensee may request confidential treatment of any report of a prohibited communication submitted to the Commission that is not already being treated as confidential pursuant to section 0.459 of the Commission's rules, 47 CFR 0.459. Forward auction applicants are entitled to request confidentiality in accordance with section 0.459 of the Commission's rules, 47 CFR 0.459.

*Privacy Act Impact Assessment:* No impact(s).

*Needs and Uses:* A request for extension of this information collection (no change in requirements) will be submitted to the Office of Management and Budget (OMB) after this 60-day comment period in order to obtain the full three year clearance from OMB. On February 22, 2012, the President signed the Spectrum Act, which, among other things, authorized the Commission to conduct incentive auctions, and directed that the Commission use this innovative tool for an incentive auction of broadcast television spectrum to help meet the Nation's growing spectrum needs. See Middle Class Tax Relief and Job Creation Act of 2012, Public Law 112-96, sections 6402, 6403, 125 Stat. 156 (2012) (Spectrum Act), codified at 47 U.S.C. 309(j)(8)(G), 1452. The Commission's broadcast incentive auction (BIA) will have three main components: (1) A reverse auction in which broadcast television licensees will submit bids to voluntarily relinquish their spectrum usage rights in exchange for defined shares of proceeds from the forward auction; (2) a repacking of the broadcast television bands; and (3) a forward auction of initial licenses for flexible use of the newly available spectrum.

The Commission is revising the currently approved information collection to implement new collection requirements resulting from the Commission's adoption of new and modified rules prohibiting certain communications for full power and Class A television broadcast licensees and for applicants seeking to participate in the forward auction component of the BIA and requiring such covered parties to file a report with the Commission within a specified period of time if they make or receive a prohibited communication. Subject to certain exceptions, section 1.2205(b) of the Commission's rules provides that, beginning on the deadline for submitting applications to participate in the reverse auction and until the results of the incentive auction are announced

by public notice, all full power and Class A broadcast television licensees are prohibited from communicating directly or indirectly any incentive auction applicant's bids or bidding strategies to any other full power or Class A broadcast television licensee or to any forward auction applicant. Section 1.2205(c) requires any party that makes or receives a prohibited communication to report such communication in writing to the Commission immediately, and in no case later than five business days after the communication occurs. Section 1.2205(d) provides the procedures for filing any reports required under section 1.2205(c). Subject to certain exceptions, forward auction applicants in the BIA are subject to a BIA-specific provision in section 1.2105(c) of the Commission's rules (in addition to the Commission's existing prohibited communications rule applicable to applicants in traditional Commission auctions), which provides that, beginning on the deadline for submitting applications to participate in the forward auction and until the results of the incentive auction have been announced by public notice, all forward auction applicants are prohibited from communicating directly or indirectly any incentive auction applicant's bids or bidding strategies to any full power or Class A broadcast television licensee. Section 1.2105(c) requires forward applicants that make or receive a prohibited communications that is prohibited under section 1.2105(c) to file a report of such a communication with the Commission.

The Commission's rules prohibiting certain communications in Commission auctions are designed to reinforce existing antitrust laws, facilitate detection of collusive conduct, and deter anticompetitive behavior, without being so strict as to discourage pro-competitive arrangements between auction participants. They also help assure participants that the auction process will be fair and objective, and not subject to collusion. The information collected through the Commission's existing reporting requirement under section 1.2105(c) allows the Commission to enforce the prohibition on forward auction applicants by making clear the responsibility of parties who receive information that potentially violates the rules to promptly report to the Commission, thereby enhancing the competitiveness and fairness of its spectrum auctions. The revised information collection under the BIA-specific rule in section 1.2105(c) and in sections 1.2205(c) and 1.2205(d) will

likewise help the Commission enforce the prohibition on covered parties in the BIA, further assuring incentive auction participants that the auction process will be fair and competitive. The prohibited communication reporting requirement required of covered parties will enable the Commission to ensure that no bidder gains an unfair advantage over other bidders in its auctions and thus enhances the competitiveness and fairness of Commission's auctions. The information collected will be reviewed and, if warranted, referred to the Commission's Enforcement Bureau for possible investigation and administrative action. The Commission may also refer allegations of anticompetitive auction conduct to the Department of Justice for investigation.

Federal Communications Commission.

## FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060-0895]

### Information Collection Being Reviewed by the Federal Communications Commission

**AGENCY:** Federal Communications Commission.

**ACTION:** Notice and request for comments.

**SUMMARY:** As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501-3520), the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

**DATES:** Written PRA comments should be submitted on or before May 31, 2016. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

**ADDRESSES:** Direct all PRA comments to Nicole Ongele, FCC, via email [PRA@fcc.gov](mailto:PRA@fcc.gov) and to [Nicole.Ongele@fcc.gov](mailto:Nicole.Ongele@fcc.gov).

**FOR FURTHER INFORMATION CONTACT:** For additional information about the information collection, contact Nicole Ongele at (202) 418-2991.

#### SUPPLEMENTARY INFORMATION:

*OMB Control Number:* 3060-0895.

*Title:* Numbering Resource

Optimization, CC Docket No. 99-200.

*Form Number:* FCC Form 502.

*Type of Review:* Revision of a currently approved collection.

*Respondents:* Business or other for-profit entities and state, local or tribal government.

*Number of Respondents and*

*Responses:* 2,793 respondents; 10,165 responses.

*Estimated Time per Response:* 1 hour-44.4 hours.

*Frequency of Response:* On occasion and semi-annual reporting requirements and recordkeeping requirement.

*Obligation to Respond:* Mandatory. Statutory authority for this information collection is contained in 47 U.S.C. 151, 153, 154, 201-205 and 251 of the Communications Act of 1934.

*Total Annual Burden:* 132,384 hours.

*Total Annual Cost:* \$3,465,570.20.

*Privacy Impact Assessment:* No impact(s).

*Nature and Extent of Confidentiality:* Disaggregated, carrier specific forecast and utilization data will be treated as confidential and will be exempt from public disclosure under 5 U.S.C. 552(b)(4).

*Needs and Uses:* The data collected on FCC Form 502 helps the Commission manage the ten-digit North American Numbering Plan (NANP), which is currently being used by the United States and 19 other countries. Under the Communications Act of 1934, as amended, the Commission was given "exclusive jurisdictions over those portions of the North American Numbering Plan that pertains to the

United States." Pursuant to that authority, the Commission conducted a rulemaking in March 2000 that the Commission found that mandatory data collection is necessary to efficiently monitor and manage numbering use. The Commission is revising this information collection to implement its newly adopted rules that allow interconnected Voice over Internet Protocol (VoIP) providers to obtain numbering resources directly from the Numbering Administrators. The following information collection requirements will be contained in this collection:

- (1) Utilization/Forecast Report;
- (2) Application for initial numbering resource;
- (3) Application for growth numbering resources;
- (4) Recordkeeping requirement;
- (5) Notifications by state commissions;
- (6) Demonstration to state commission; and
- (7) Petitions for additional delegation of numbering authority.

The data from this information collection is used by the FCC, state regulatory commissions, and the NANPA to monitor numbering resource utilization by all carriers using the resource and to project the dates of area code and NANP exhaust.

Federal Communications Commission.

## FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060-0953]

### Information Collection Being Reviewed by the Federal Communications Commission

**AGENCY:** Federal Communications Commission.

**ACTION:** Notice and request for comments.

**SUMMARY:** As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501-3520), the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the proposed collection of

information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

**DATES:** Written PRA comments should be submitted on or before May 31, 2016. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

**ADDRESSES:** Direct all PRA comments to Nicole Ongele, FCC, via email [PRA@fcc.gov](mailto:PRA@fcc.gov) and to [Nicole.Ongele@fcc.gov](mailto:Nicole.Ongele@fcc.gov).

**FOR FURTHER INFORMATION CONTACT:** For additional information about the information collection, contact Nicole Ongele at (202) 418-2991.

**SUPPLEMENTARY INFORMATION:**

*OMB Control Number:* 3060-0953.

*Title:* Sections 95.1111 and 95.1113, Frequency Coordination/Coordinator, Wireless Medical Telemetry Service (WMTS).

*Form No.:* N/A.

*Type of Review:* Revision of a currently approved collection.

*Respondents:* Business or other for-profit and not-for-profit institutions.

*Number of Respondents and Responses:* 3,000 respondents; 3,000 responses.

*Estimated Time per Response:* 1-5 hours.

*Frequency of Response:* On occasion reporting requirement, third party disclosure requirement and recordkeeping requirement.

*Obligation to Respond:* Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 154 and 303.

*Total Annual Burden:* 15,000 hours.

*Total Annual Cost:* \$750,000.

*Privacy Act Impact Assessment:* N/A.

*Nature and Extent of Confidentiality:* No information is requested that would require assurance of confidentiality.

*Needs and Uses:* The Commission will submit this information collection to OMB as a revision after this 60 day comment period to obtain the full three-year clearance from them.

On August 11, 2015 the Federal Communications Commission released a Report and Order, *Amendment of Part 15 of the Commission's Rules for Unlicensed Operations in the Television Bands, Repurposed 600 MHz Band, 600 MHz Guard Bands and Duplex Gap, and Channel 37, and Amendment of Part 74 of the Commission's Rules for Low Power Auxiliary Stations in the Repurposed 600 MHz Band and 600 MHz Duplex Gap*, ET Docket No 14-165, GN Docket No. 12-268, FCC 15-99, which modifies Commission rules for unlicensed wireless devices and wireless microphones in the reconstituted TV bands and the new 600 MHz band.

On June 12, 2000, the Commission released a Report and Order, ET Docket No. 99-255, FCC 00-211, which allocated spectrum and established rules for a "Wireless Medical Telemetry Service" (WMTS) that allows potentially life-critical equipment to operate in an interference-protected basis. Medical telemetry equipment is used in hospitals and health care facilities to transmit patient measurement data such as pulse and respiration rate to a nearby receiver, permitting greater patient mobility and increased comfort. The Commission designated a frequency coordinator, who maintains a database of all WMTS equipment. All parties using equipment in the WMTS are required to coordinate/register their operating frequency and other relevant technical operating parameters with the designated coordinator. The database provides a record of the frequencies used by each facility or device to assist parties in selecting frequencies to avoid interference. Without a database, there would be no record of WMTS usage because WMTS transmitters will not be individually licensed. The designated frequency coordinator has the responsibility to maintain an accurate engineering database of all WMTS transmitters, identified by location (coordinates, street address, and building), operating frequency, emission type and output power, frequency range(s) used, modulation scheme used, effective radiated power, number of transmitters in use at the health care facility at the time of registration, legal name of the authorized health care provider, and point of contact for

authorized health care provider. The frequency coordinator will make the database available to WMTS users, equipment manufacturers and the public. The coordinator will also notify users of potential frequency conflicts. In addition, in order to receive interference protection, parties operating WMTS networks on channel 37 shall notify one of the white space database administrators of their operating location pursuant to §§ 15.713(j)(11) and 15.715(p) of that chapter.

Federal Communications Commission.

## FEDERAL DEPOSIT INSURANCE CORPORATION

### FDIC Systemic Resolution Advisory Committee; Notice of Meeting

**AGENCY:** Federal Deposit Insurance Corporation.

**ACTION:** Notice of open meeting.

**SUMMARY:** In accordance with the Federal Advisory Committee Act, Pub. L. 92-463 (Oct. 6, 1972), 5 U.S.C. App. 2, notice is hereby given of a meeting of the FDIC Systemic Resolution Advisory Committee (the "SR Advisory Committee"), which will be held in Washington, DC. The SR Advisory Committee will provide advice and recommendations on a broad range of issues regarding the resolution of systemically important financial companies pursuant to the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. 111-203 (July 21, 2010), 12 U.S.C. 5301 *et seq.* (the "Dodd-Frank Act").

**DATES:** Thursday, April 14, 2016, from 9:00 a.m. to 3:00 p.m.

**ADDRESSES:** The meeting will be held in the FDIC Board Room on the sixth floor of the FDIC Building located at 550 17th Street NW., Washington, DC.

**FOR FURTHER INFORMATION CONTACT:** Requests for further information concerning the meeting may be directed to Mr. Robert E. Feldman, Committee Management Officer of the FDIC, at (202) 898-7043.

**SUPPLEMENTARY INFORMATION:**

#### Agenda

The agenda will include a discussion of a range of issues and developments related to the resolution of systemically important financial companies pursuant to the Dodd-Frank Act. The agenda may be subject to change. Any changes to the

agenda will be announced at the beginning of the meeting.

### Type of Meeting

The meeting will be open to the public, limited only by the space available, on a first-come, first-served basis. For security reasons, members of the public will be subject to security screening procedures and must present valid photo identification to enter the building. The FDIC will provide attendees with auxiliary aids (e.g., sign language interpretation) required for this meeting. Those attendees needing such assistance should call (703) 562-6067 (Voice or TTY) at least two days before the meeting to make necessary arrangements. Written statements may be filed with the SR Advisory Committee before or after the meeting. This SR Advisory Committee meeting will be Webcast live via the Internet and subsequently made available on-demand approximately two weeks after the event. Visit <https://fdic.primetime.mediaplatform.com/#!/channel/1384300429544/Advisory+Committee+on+Systemic+Resolution> to view the event. If you need any technical assistance, please visit our Video Help page at: <https://www.fdic.gov/video.html>.

Dated: March 25, 2016.

Federal Deposit Insurance Corporation.

**Robert E. Feldman,**

*Executive Secretary, Federal Deposit Insurance Corporation.*

## FEDERAL MARITIME COMMISSION

[Docket No. 16-07]

### Notice of Filing of Complaint and Assignment

Jill M. Alban, Grant M. Alban, Mary Arnold, Al Baker, Katrina Bonar, Emmett R. Brophy, Steven Bruzonsky, Monica Bushey, Craig Buske, Doda "Danny" Camaj, Stephanie B. Crosby, Melinda Deneau, Jennifer Dillon, Jeffrey L. Gannon, Pamela Goessling, Thomas Goessling, Sean Gurney, Sheryl Haley, Lesley Denise Hart, Bruce Hertz, Elizabeth Ashley Hill Nèe Edwards, Maria Kooken, Adair Lara, Christine Laster, Kori Lehrkamp, Michael Lehrkamp, John Leyva, Joan Macquarrie, Daniel Morris, Tony Nikprelaj, Gustavo Adolfo Perez, Judy A. Reiber, Roberta Rothstein, Jeffrey Rubinstein, Alexandra Scott, Jason Smith, Catherine Taylor, Richard Tomasko, and Demian Vargas,  
V.

Nippon Yusen Kabushiki Kaisha, Nyk Line (North America) Inc., Mitsui O.S.K. Lines, Ltd., Mitsui O.S.K. Bulk Shipping (USA),

Inc., World Logistics Service (USA) Inc., Höegh Autoliners AS, Höegh Autoliners, Inc., Nissan Motor Car Carriers Co. Ltd., Kawasaki Kisen Kaisha, Ltd., "K" Line America, Inc., Wallenius Wilhelmsen Logistics AS, Wallenius Wilhelmsen Logistics Americas LLC, EUKOR Car Carriers Inc., Compañía Sud Americana De Vapores, A., and CSAV Agency North America, LLC

Notice is given that a Complaint has been filed with the Federal Maritime Commission (Commission) by the above named Complainants, on behalf of themselves and all others similarly situated, hereinafter "Complainants," against the above named providers of "Vehicle Carrier Services" and unnamed co-conspirators, hereinafter "Respondents." The Complaint is brought as a proposed class action. Complainants "seek to represent all persons and entities in the United States who purchased or leased a new, assembled motor vehicle for personal use and not for resale, incorporating a Vehicle Carrier Service charge charged by any Respondent or any current or former subsidiary or affiliate thereof, or any co-conspirator, from and including January 1, 2000. . . ." Complainants allege that Respondents "transport large numbers of cars, trucks, and other automotive vehicles including agriculture and construction equipment . . . across large bodies of water using specialized cargo ships known as Roll On/Roll Off vessels. . . ."

Complainants allege that Respondents violated provisions of the Shipping Act of 1984, including 46 U.S.C. 40302(a), 41102(b)(1), 41102(c), 41103(a)(1) and (2), 41104(10), 41105(1) and (6), and the Commission's regulations at 46 CFR 535.401 *et seq.*, because they "participated in a combination and conspiracy to suppress and eliminate competition in the Vehicle Carrier Services market by agreeing to fix, raise, stabilize and/or maintain the prices of, and allocate the market and customers for Vehicle Carrier Services sold to automobile manufacturers and others in the United States, and elsewhere, for the import and export of new, assembled motor vehicles to and from the United States."

Complainants request the following relief:

- (1) That Respondents be required to answer the charges herein;
- (2) That after due investigation and hearing Respondents be found to have violated 46 U.S.C. 40302(a), 41102(b)(1), 41102(c), 41103(a)(1) and (2), 41104(10), 41105(1) and (6), and 46 CFR 535.401, *et seq.*, and such other provisions as to which violations may be proved hereunder;

(3) The FMC determine that this action may be maintained as a class action under Rule 23(a), (b)(2) and (b)(3) of the Federal Rules of Civil Procedure, and direct that reasonable notice of this action, as provided by Rule 23(c)(2) of the Federal Rules of Civil Procedure, be given to each and every member of the Class;

(4) That Complainants be awarded reparations in a sum to be proven under 46 U.S.C. 41305, with interest (46 U.S.C. 41305(a)) and reasonable attorneys' fees (46 U.S.C. 41305 (b));

(5) That Complainants be awarded double its proven actual injury under 46 U.S.C. 41305(c) because Respondents and their co-conspirators violated 46 U.S.C. 41102(b) and 41105(1);

(6) That Respondents be found jointly and severally liable for the conduct alleged herein including that of their co-conspirators; and

(7) That such other and further order or orders be made as the FMC determines to be proper.

The full text of the complaint can be found in the Commission's Electronic Reading Room at [www.fmc.gov/16-07](http://www.fmc.gov/16-07).

This proceeding has been assigned to the Office of Administrative Law Judges. The initial decision of the presiding officer in this proceeding shall be issued by March 24, 2017 and the final decision of the Commission shall be issued by October 10, 2017.

**Karen V. Gregory,**  
*Secretary.*

BILLING CODE 6731-AA-P

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Agency for Healthcare Research and Quality

#### Agency Information Collection Activities: Proposed Collection; Comment Request

**AGENCY:** Agency for Healthcare Research and Quality, HHS.

**ACTION:** Notice.

**SUMMARY:** This notice announces the intention of the Agency for Healthcare Research and Quality (AHRQ) to request that the Office of Management and Budget (OMB) approve the proposed information collection project: "Survey of Hospital Quality Leaders." In accordance with the Paperwork Reduction Act, 44 U.S.C. 3501-3521, AHRQ invites the public to comment on this proposed information collection.

**DATES:** Comments on this notice must be received by May 31, 2016.

**ADDRESSES:** Written comments should be submitted to: Doris Lefkowitz, Reports Clearance Officer, AHRQ, by email at [doris.lefkowitz@AHRQ.hhs.gov](mailto:doris.lefkowitz@AHRQ.hhs.gov).

Copies of the proposed collection plans, data collection instruments, and specific details on the estimated burden can be obtained from the AHRQ Reports Clearance Officer.

**FOR FURTHER INFORMATION CONTACT:** Doris Lefkowitz, AHRQ Reports Clearance Officer, (301) 427-1477, or by email at [doris.lefkowitz@AHRQ.hhs.gov](mailto:doris.lefkowitz@AHRQ.hhs.gov).

**SUPPLEMENTARY INFORMATION:**

**Proposed Project**

*Survey of Hospital Quality Leaders*

The Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Hospital Survey (HCAHPS) was first implemented on a voluntary basis in 2006 to assess patients' experiences with care. Today, hospitals subject to the Inpatient Prospective Payment System (IPPS) annual payment update provisions are required to collect and submit HCAHPS data in order to receive their full annual payment update. In addition, HCAHPS performance was added to the calculation of the value-based incentive payment in the Hospital Value-Based Purchasing (Hospital VBP) program, beginning with discharges in October 2012. The FY 2015 Hospital VBP program links 30% of the Inpatient Prospective Payment System hospitals' payment from CMS to HCAHPS performance.

Despite the high stakes associated with HCAHPS scores, little is known about the ways in which hospitals are using HCAHPS data and supplemental

information about patient experience to understand and improve their patients' experiences.

This research has the following goals:

(1) To characterize the role of HCAHPS in hospitals' efforts to improve patient experiences

(2) to identify the types of quality improvement activities that hospitals implement to improve their HCAHPS scores

(3) to describe hospitals' perspectives on HCAHPS

(4) to determine the types of information collected by hospitals beyond those required for Hospital VBP

This study is being conducted by AHRQ through its contractor, the RAND Corporation, pursuant to AHRQ's statutory authority to conduct and support research on health care and on systems for the delivery of such care, including activities with respect to the quality, effectiveness, efficiency, appropriateness and value of health care services and with respect to quality measurement and improvement. 42 U.S.C. 299a(a)(1) and (2).

**Method of Collection**

*Survey of Hospital Quality Leaders:* This survey will elicit information from approximately 500 hospital quality leaders in a variety of hospital settings, including high- and low-performing hospitals, facilities of varying sizes, and hospitals representing all nine geographic Census divisions. Hospital quality leaders will be asked to provide information about the use of HCAHPS in their hospital, with questions addressing all of the substantive areas identified in the goals section above.

Characterizing hospitals' use of HCAHPS data will provide important insight into the activities hospitals conduct to improve patient experience scores. This information may be useful in supporting hospitals that lag behind their peers, learning from hospitals with outstanding records of patient experience, and providing recommendations that may be used to refine HCAHPS survey content.

**Estimated Annual Respondent Burden**

Table 1 shows the estimated annualized burden and cost for the respondents' time to participate in this data collection. These burden estimates are based on tests of data collection conducted on nine or fewer entities. As indicated below, the annual total burden hours are estimated to be 294 hours. The annual total cost associated with the annual total burden hours is estimated to be \$14,708.

Table 1 shows the estimated annualized burden for the respondents' time to participate in this data collection. The Survey of Hospital Quality Leaders will be administered to 500 individuals. Prior work suggests that 3-5 items can typically be completed per minute, depending on item complexity and respondent characteristics, (Hays & Reeve, 2010; Berry, 2009). We have calculated our burden estimate using a conservative estimate of 4.5 items per minute. The survey contains 159 items and is thus estimated to require an average administration time of 35 minutes. As indicated below, the annual total burden hours are estimated to be 294 hours.

TABLE 1—ESTIMATED ANNUALIZED BURDEN HOURS AND COST

Collection task	Number of respondents	Number of responses per respondent	Hours per response	Total burden hours	Average hourly wage rate*	Total cost burden
Survey of Hospital Quality Leaders .....	500	1	.59	294	\$49.96	\$14,708
Totals .....				294		\$14,708

\*Based upon mean hourly wages, "National Compensation Survey: All United States December 2009–January 2011," U.S. Department of Labor, Bureau of Labor Statistics.

**Request for Comments**

In accordance with the Paperwork Reduction Act, comments on AHRQ's information collection are requested with regard to any of the following: (a) Whether the proposed collection of information is necessary for the proper performance of AHRQ health care research and health care information dissemination functions, including whether the information will have

practical utility; (b) the accuracy of AHRQ's estimate of burden (including hours and costs) of the proposed collection(s) of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information upon the respondents, including the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and included in the Agency's subsequent request for OMB approval of the proposed information collection. All comments will become a matter of public record.

**Sharon B. Arnold,**  
*Acting Director.*

**BILLING CODE 4160-90-P**

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Agency for Healthcare Research and Quality

#### National Advisory Council for Healthcare Research and Quality: Request for Nominations for Public Members

**AGENCY:** Agency for Healthcare Research and Quality (AHRQ), HHS.

**ACTION:** Notice of request for nominations for public members.

**SUMMARY:** 42 U.S.C. 299c establishes a National Advisory Council for Healthcare Research and Quality (the Council). The Council is to advise the Secretary of HHS (Secretary) and the Director of the Agency for Healthcare Research and Quality (AHRQ) on matters related to activities of the Agency to carry out its mission. AHRQ's mission is to produce evidence to make health care safer, higher quality, more accessible, equitable, and affordable, and to work within the U.S. Department of Health and Human Services and with other partners to make sure that the evidence is understood and used.

The terms of seven current members will expire in November 2016. To fill these positions, we are seeking individuals who are distinguished in: (1) The conduct of research, demonstration projects, and evaluations with respect to health care; (2) the fields of health care quality research or health care improvement; (3) the practice of medicine; (4) other health professions; (5) representing the private health care sector (including health plans, providers, and purchasers) or administrators of health care delivery systems; (6) the fields of health care economics, information systems, law, ethics, business, or public policy; and, (7) the representation of the interests of patients and consumers of health care. 42 U.S.C. 299c(c)(2).

Individuals are particularly sought with experience and success in activities specified in the summary above.

**DATES:** Nominations should be received on or before 60 days after date of publication.

**ADDRESSES:** Nominations should be sent to Jaime Zimmerman AHRQ, 5600 Fishers Lane, 06E37A, Rockville, Maryland 20857. Nominations may also be emailed to [NationalAdvisoryCouncil@ahrq.hhs.gov](mailto:NationalAdvisoryCouncil@ahrq.hhs.gov).

**FOR FURTHER INFORMATION CONTACT:** Jaime Zimmerman, AHRQ, at (301) 427-1456.

**SUPPLEMENTARY INFORMATION:** 42 U.S.C. 299c provides that the Secretary shall appoint 21 appropriately qualified individuals to the National Advisory Council for Healthcare Research and Quality. At least 17 members shall be representatives of the public and at least one member shall be a specialist in the rural aspects of one or more of the professions or fields listed in the above summary. In addition, the Secretary designates, as ex officio members, representatives from other Federal agencies, principally agencies that conduct or support health care research, as well as Federal officials the Secretary may consider appropriate. 42 U.S.C. 299c(c)(3). The Council meets approximately 3 times a year in the Washington, DC, metropolitan area, generally in Rockville, Maryland, to provide broad guidance to the Secretary and AHRQ's Director on the direction of and programs undertaken by AHRQ.

Seven individuals will be selected by the Secretary to serve on the Council beginning with the meeting in the spring of 2017. Members generally serve 3-year terms. Appointments are staggered to permit an orderly rotation of membership.

Interested persons may nominate one or more qualified persons for membership on the Council. Self-nominations are accepted. Nominations shall include: (1) A copy of the nominee's resume or curriculum vitae; and (2) a statement that the nominee is willing to serve as a member of the Council. Selected candidates will be asked to provide detailed information concerning their financial interests, consultant positions and research grants and contracts, to permit evaluation of possible sources of conflict of interest. Please note that once a candidate is nominated, AHRQ may consider that nomination for future positions on the Council. Federally registered lobbyists are not permitted to serve on this advisory board pursuant to the Presidential Memorandum entitled "Lobbyists on Agency Boards and Commissions" dated June 10, 2010, and the Office of Management and Budget's "Final Guidance on Appointment of Lobbyists to Federal Boards and Commissions," 76 FR 61756 (October 5, 2011).

The Department seeks a broad geographic representation. In addition, AHRQ conducts and supports research concerning priority populations, which include: Low-income groups; minority groups; women; children; the elderly; and individuals with special health care needs, including individuals with disabilities and individuals who need chronic care or end-of-life health care.

See 42 U.S.C. 299(c). Nominations of persons with expertise in health care for these priority populations are encouraged.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Centers for Disease Control and Prevention

#### Disease, Disability, and Injury Prevention and Control Special Emphasis Panel (SEP): Initial Review

In accordance with Section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), the Centers for Disease Control and Prevention (CDC) announces a meeting for the initial review of applications in response to Funding Opportunity Announcement (FOA) DP 16-003, Johnston County Osteoarthritis Project: Arthritis, Disability, and Other Chronic Diseases.

*Time and Date:* 11:00 a.m.–2:00 p.m., EDT, April 12, 2016 (Closed).

This notice did not publish within the 15-day regulatory requirement, although it was submitted to the Office of the Federal Register on March 4, 2016. This is a re-submission for publication.

*Place:* Teleconference.

*Status:* The meeting will be closed to the public in accordance with provisions set forth in Section 552b(c) (4) and (6), Title 5 U.S.C., and the Determination of the Director, Management Analysis and Services Office, CDC, pursuant to Public Law 92-463.

*Matters for Discussion:* The meeting will include the initial review, discussion, and evaluation of applications received in response to "Johnston County Osteoarthritis Project: Arthritis, Disability, and Other Chronic Diseases", FOA DP16-003.

*Contact Person for More Information:* Jaya Raman Ph.D., Scientific Review Officer, CDC, 4770 Buford Highway, Mailstop F80, Atlanta, Georgia 30341, Telephone: (770) 488-6511, [kva5@cdc.gov](mailto:kva5@cdc.gov).

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and

Prevention and the Agency for Toxic Substances and Disease Registry.

**Catherine Ramadei,**

*Acting Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.*

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Notice.

**SUMMARY:** This notice amends the notice of a major disaster declaration for the State of Louisiana (FEMA-4263-DR), dated March 13, 2016, and related determinations.

**DATES:** *Effective Date:* March 17, 2016.

**FOR FURTHER INFORMATION CONTACT:** Dean Webster, Office of Response and Recovery, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646-2833.

**SUPPLEMENTARY INFORMATION:** The notice of a major disaster declaration for the State of Louisiana is hereby amended to include the following areas among those areas determined to have been adversely affected by the event declared a major disaster by the President in his declaration of March 13, 2016.

The parishes of Allen, Ascension, and Calcasieu for Individual Assistance and assistance for debris removal and emergency protective measures (Categories A and B), including direct federal assistance, under the Public Assistance program.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050 Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance

(Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

**W. Craig Fugate,**

*Administrator, Federal Emergency Management Agency.*

**DEPARTMENT OF HOMELAND SECURITY**

**Federal Emergency Management Agency**

[Internal Agency Docket No. FEMA-4263-DR; Docket ID FEMA-2016-0001]

**Louisiana; Major Disaster and Related Determinations**

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Notice.

**SUMMARY:** This is a notice of the Presidential declaration of a major disaster for the State of Louisiana (FEMA-4263-DR), dated March 13, 2016, and related determinations.

**DATES:** *Effective Date:* March 13, 2016.

**FOR FURTHER INFORMATION CONTACT:** Dean Webster, Office of Response and Recovery, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646-2833.

**SUPPLEMENTARY INFORMATION:** Notice is hereby given that, in a letter dated March 13, 2016, the President issued a major disaster declaration under the authority of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the “Stafford Act”), as follows:

I have determined that the damage in certain areas of the State of Louisiana resulting from severe storms and flooding beginning on March 8, 2016, and continuing, is of sufficient severity and magnitude to warrant a major disaster declaration under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the “Stafford Act”). Therefore, I declare that such a major disaster exists in the State of Louisiana.

In order to provide Federal assistance, you are hereby authorized to allocate from funds available for these purposes such amounts as you find necessary for Federal disaster assistance and administrative expenses.

You are authorized to provide Individual Assistance and assistance for debris removal and emergency protective measures (Categories A and B) under the Public Assistance program in the designated areas, Hazard Mitigation throughout the State, and any other forms of assistance under the Stafford Act that you deem appropriate subject to completion of Preliminary Damage Assessments (PDAs). Direct Federal assistance is authorized.

Consistent with the requirement that Federal assistance is supplemental, any Federal funds provided under the Stafford Act for Hazard Mitigation and Other Needs Assistance will be limited to 75 percent of the total eligible costs. Federal funds provided under the Stafford Act for Public Assistance also will be limited to 75 percent of the total eligible costs, with the exception of projects that meet the eligibility criteria for a higher Federal cost-sharing percentage under the Public Assistance Alternative Procedures Pilot Program for Debris Removal implemented pursuant to section 428 of the Stafford Act.

Further, you are authorized to make changes to this declaration for the approved assistance to the extent allowable under the Stafford Act.

The time period prescribed for the implementation of section 310(a), Priority to Certain Applications for Public Facility and Public Housing Assistance, 42 U.S.C. 5153, shall be for a period not to exceed six months after the date of this declaration.

The Federal Emergency Management Agency (FEMA) hereby gives notice that pursuant to the authority vested in the Administrator, under Executive Order 12148, as amended, Gerard M. Stolar, of FEMA is appointed to act as the Federal Coordinating Officer for this major disaster.

The following areas of the State of Louisiana have been designated as adversely affected by this major disaster:

The parishes of Bossier, Claiborne, Grant, Morehouse, Ouachita, Richland, and Webster for Individual Assistance.

The parishes of Bossier, Claiborne, Grant, Morehouse, Ouachita, Richland, and Webster for debris removal and emergency protective measures (Categories A and B), including direct federal assistance, under the Public Assistance program.

All areas within the State of Louisiana are eligible for assistance under the Hazard Mitigation Grant Program.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050, Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance

(Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

## DEPARTMENT OF THE INTERIOR

### Fish and Wildlife Service

**[FWS-HQ-FAC-2016-N050; FF09F42300-FVWF97920900000-XXX]**

#### Sport Fishing and Boating Partnership Council

**AGENCY:** Fish and Wildlife Service, Interior.

**ACTION:** Notice of meeting.

**SUMMARY:** We, the U.S. Fish and Wildlife Service (Service), announce a public meeting of the Sport Fishing and Boating Partnership Council (Council). A Federal advisory committee, the Council was created in part to foster partnerships to enhance public awareness of the importance of aquatic resources and the social and economic benefits of recreational fishing and boating in the United States. This meeting is open to the public, and interested persons may make oral statements to the Council or may file written statements for consideration.

**DATES:** The meeting will take place Tuesday, May 3, 2016, from 8:30 a.m. to 4:30 p.m. (Eastern Time) and Wednesday, May 4, 2016, from 8:30 a.m. to 3:30 p.m. For deadlines and directions on registering to attend the meeting, submitting written material, and/or giving an oral presentation, please see “Public Input” under **SUPPLEMENTARY INFORMATION.**

**ADDRESSES:** The meeting will be held at the National Oceanic and Atmospheric Administration’s Florida Keys Eco-Discovery Center, 35 East Quay Road, Key West, Florida 33040.

**FOR FURTHER INFORMATION CONTACT:** Brian Bohnsack, Sport Fishing and Boating Partnership Council Coordinator, 5275 Leesburg Pike, Mailstop FAC, Falls Church, VA 22041; telephone (703) 358-2435; fax (703) 358-2487; or email [brian\\_bohnsack@fws.gov](mailto:brian_bohnsack@fws.gov).

**SUPPLEMENTARY INFORMATION:** In accordance with the requirements of the Federal Advisory Committee Act, 5 U.S.C. App., we announce that the Sport Fishing and Boating Partnership Council will hold a meeting.

## Background

The Council was formed in January 1993 to advise the Secretary of the Interior, through the Director of the Service, on aquatic conservation endeavors that benefit recreational fishery resources and recreational boating and that encourage partnerships among industry, the public, and government. The 18-member Council, appointed by the Secretary of the Interior, includes the Service Director and the president of the Association of Fish and Wildlife Agencies, who both serve in ex officio capacities. Other Council members are directors from State agencies responsible for managing recreational fish and wildlife resources and individuals who represent the interests of saltwater and freshwater recreational fishing, recreational boating, the recreational fishing and boating industries, recreational fisheries resource conservation, Native American tribes, aquatic resource outreach and education, and tourism. Background information on the Council is available at <http://www.fws.gov/sfbpc>.

## Meeting Agenda

During the meeting, the Council will consider issues affecting recreational fishing and boating programs on Federal lands. An abbreviated list of planned agenda items includes:

- An update and discussion on the Council’s assessment of the Recreational Boating and Fishing Foundation’s implementation of the National Outreach and Communication Program (Catalog of Federal Domestic Assistance number 15.653);
- An update and discussion regarding the Council’s proposed pilot project to improve the efficiency of Federal agencies’ permitting review processes associated with boating infrastructure projects (*e.g.*, boat dock replacement and maintenance, boat ramp construction and maintenance);
- An update of the fishing and boating programs administered by the Florida Fish and Wildlife Conservation Commission;
- Status of the Council’s nomination process and charter update; and
- Other miscellaneous Council business.

The final agenda will be posted on the Internet at <http://www.fws.gov/sfbpc>.

**Public Input**

If you wish to	Then you must contact the Council Coordinator (see <b>FOR FURTHER INFORMATION CONTACT</b> ) no later than
Attend the meeting .....	Wednesday, April 27, 2016.
Submit written information or questions before the meeting for the Council to consider during the meeting.	Wednesday, April 27, 2016.
Give an oral presentation during the meeting.	Wednesday, April 27, 2016.

**Attendance**

The Council meeting will be held at the National Oceanic and Atmospheric Administration's Florida Keys Eco-Discovery Center, 35 East Quay Road, Key West, Florida. Signs will be posted to direct attendees to the specific conference room.

**Submitting Written Information or Questions**

Interested members of the public may submit relevant information or questions for the Council to consider during the meeting. Written statements must be received by the date listed above in "Public Input." Written statements must be supplied to the Council Coordinator either by sending one hard copy with original signature via the mail or one electronic copy via email (acceptable file formats are Adobe Acrobat PDF, MS Word, MS PowerPoint, or rich text file).

**Giving an Oral Presentation**

Individuals or groups requesting to make an oral presentation during the meeting will be limited to 2 minutes per speaker, with no more than a total of 30 minutes for all speakers. Interested parties should contact the Council Coordinator, in writing (preferably via email; see **FOR FURTHER INFORMATION CONTACT**), to be placed on the public speaker list for this meeting. To ensure an opportunity to speak during the public comment period of the meeting, members of the public must register with the Council Coordinator. Registered speakers who want to expand on their oral statements, or those who wanted to speak but could not be accommodated on the agenda, may submit written statements to the Council Coordinator up to 30 days after the meeting.

**Meeting Minutes**

Summary minutes of the meeting will be maintained by the Council Coordinator (see **FOR FURTHER INFORMATION CONTACT**) and will be available for public inspection within 90 days of the meeting. They will be posted on the Council's Web site at <http://www.fws.gov/sfbpc>.

**James W. Kurth,**

*Acting Director.*

**Advisory Council on Wildlife Trafficking**

**AGENCY:** Fish and Wildlife Service, Interior.

**ACTION:** Notice of meeting.

**SUMMARY:** We, the U.S. Fish and Wildlife Service (Service), announce a public meeting of the Advisory Council on Wildlife Trafficking (Council). The Council's purpose is to provide expertise and support to the Presidential Task Force on Wildlife Trafficking. You may attend the meeting in person, or you may participate via telephone. At this time, we are inviting submissions of questions and information for consideration during the meeting.

**DATES:** *Meeting:* The meeting will be held on Friday, April 15, 2016, from 9 a.m. to 1 p.m. Eastern Time.

*Registering to Attend the Meeting:* To attend the meeting in person, you must register by close of business on April 8, 2016. (You do not need to register to listen via phone.) Please submit your name, email address, and phone number to Mr. Cade London to complete the registration process (see **FOR FURTHER INFORMATION CONTACT**). Because there is limited seating available, registrations will be taken on a first-come, first-served basis. Members of the public requesting reasonable accommodations, such as hearing interpreters, must contact Mr. London, in writing (preferably by email), no later than April 5, 2015.

*Submitting Questions or Information:* If you want to provide us with questions and information to be considered during the meeting, your material must be received or postmarked on or before April 8, 2015. Comments submitted electronically using the Federal eRulemaking Portal (see **ADDRESSES**

section) must be received by 11:59 p.m. Eastern Time on April 8, 2015.

*Making an Oral Presentation at the Meeting:* If you want to make an oral presentation at the meeting (in person or by phone), contact Mr. London no later than April 8, 2015 (see **FOR FURTHER INFORMATION CONTACT**). For more information, see Making an Oral Presentation under **SUPPLEMENTARY INFORMATION**.

**ADDRESSES:** *Meeting Location:* The meeting will be held at the U.S. Department of the Interior, South Interior Building Auditorium, 1951 Constitution Avenue NW., Washington, DC 20240.

*Meeting Call-In Numbers:* Members of the public unable to attend the meeting in person may call in at 888-606-5920 (toll free) or 630-395-0312 (toll) using the dial-in passcode 1214001. To ensure that enough call-in lines are available, we request that members of the public register as call-in participants at <https://www.mymeetings.com/emeet/rsvp/index>.

*Conference ID=7459947&passcode=1214001.* Members may register to give an oral presentation over the phone as well. For more information, see Making an Oral Presentation under **SUPPLEMENTARY INFORMATION**.

*Submitting Questions or Information:* You may submit questions or information for consideration during the meeting by one of the following methods:

1. *Electronically:* Go to the Federal eRulemaking Portal: <http://www.regulations.gov>. In the Search box, enter FWS-HQ-IA-2014-0019. Then click on the "Search" button. You may submit questions or information by clicking on "Comment Now!"

2. *By hard copy:* Submit by U.S. mail or hand-delivery to: Public Comments Processing, Attn: FWS-HQ-IA-2014-0019; Division of Policy, Performance, and Management Programs; U.S. Fish and Wildlife Service; 5275 Leesburg Pike, MS: BPHC; Falls Church, VA 22041-3803.

We will not accept email or faxes. We request that you send comments only by the methods described above. We will post all comments on <http://www.regulations.gov>. This generally means that we will post any personal information you provide us (see the Submitting Public Comments section for more information).

*Reviewing Comments Received by the Service:* See Reviewing Public Comments in the **SUPPLEMENTARY INFORMATION** section.

**FOR FURTHER INFORMATION CONTACT:** Mr. Cade London, Policy Advisor, International Affairs, U.S. Fish and Wildlife Service, by email at [cade\\_london@fws.gov](mailto:cade_london@fws.gov) (preferable method of contact); by U.S. mail at U.S. Fish and Wildlife Service; 5275 Leesburg Pike, MS: IA; Falls Church, VA 22041–3803; by telephone at (703) 358–2584; or by fax at (703) 358–2276.

**SUPPLEMENTARY INFORMATION:** In accordance with the requirements of the Federal Advisory Committee Act (5 U.S.C. App.), we announce that the Advisory Council on Wildlife Trafficking (Council) will hold a meeting to discuss the implementation of the National Strategy for Combating Wildlife Trafficking, and other Council business as appropriate. The Council's purpose is to provide expertise and support to the Presidential Task Force on Wildlife Trafficking.

You may attend the meeting in person, or you may participate via telephone. At this time, we are inviting submissions of questions and information for consideration during the meeting.

### Background

Executive Order 13648 established the Advisory Council on Wildlife Trafficking on August 30, 2013, to advise the Presidential Task Force on Wildlife Trafficking, through the Secretary of the Interior, on national strategies to combat wildlife trafficking, including, but not limited to:

1. Effective support for anti-poaching activities;
2. Coordinating regional law enforcement efforts;
3. Developing and supporting effective legal enforcement mechanisms; and
4. Developing strategies to reduce illicit trade and consumer demand for illegally traded wildlife, including protected species.

The eight-member Council, appointed by the Secretary of the Interior, includes former senior leadership within the U.S. Government, as well as chief executive officers and board members from conservation organizations and the private sector. For more information on the Council and its members, visit <http://www.fws.gov/international/advisory-council-wildlife-trafficking/>.

### Meeting Agenda

The Council will consider:

1. Task Force discussions,
2. Administrative topics, and
3. Public comment and response.

The final agenda will be posted on the Internet at <http://www.fws.gov/>

[international/advisory-council-wildlife-trafficking/](http://www.fws.gov/international/advisory-council-wildlife-trafficking/).

### Making an Oral Presentation

Members of the public who want to make an oral presentation in person or by telephone at the meeting will be prompted during the public comment section of the meeting to provide their presentation and/or questions. If you want to make an oral presentation in person or by phone, contact Mr. Cade London (**FOR FURTHER INFORMATION CONTACT**) no later than the date given in the **DATES** section.

Registered speakers who want to expand on their oral statements, or those who wanted to speak but could not be accommodated on the agenda, are invited to submit written statements to the Council after the meeting. Such written statements must be received by Mr. London, in writing (preferably via email), no later than April 22, 2016.

### Submitting Public Comments

You may submit your questions and information by one of the methods listed in **ADDRESSES**. We request that you send comments by only one of the methods described in **ADDRESSES**.

If you submit information via the Federal eRulemaking Portal (<http://www.regulations.gov>), your entire submission—including any personal identifying information—will be posted on the Web site.

If your submission is made via a hardcopy that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy submissions at <http://www.regulations.gov>.

### Reviewing Public Comments

Comments and materials we receive will be available for public inspection at <http://www.regulations.gov>. Alternatively, you may view them by appointment during normal business hours at 5275 Leesburg Pike, Falls Church, VA 22041–3803. Please contact Mr. London (see **FOR FURTHER INFORMATION CONTACT**).

### Obtaining Meeting Minutes

Summary minutes of the meeting will be available on the Council Web site at <http://www.fws.gov/international/advisory-council-wildlife-trafficking/>. Alternatively, you may view them by appointment during normal business hours at 5275 Leesburg Pike, Falls Church, VA 22041–3803. Please contact

Mr. London (see **FOR FURTHER INFORMATION CONTACT**).

**Gloria Bell,**

## DEPARTMENT OF THE INTERIOR

### Bureau of Land Management

[16X.LLWO320000.L13200000.PP0000]

### Notice of Intent To Prepare a Programmatic Environmental Impact Statement To Review the Federal Coal Program and To Conduct Public Scoping Meetings

**AGENCY:** Bureau of Land Management, Interior.

**ACTION:** Notice.

**SUMMARY:** In compliance with the National Environmental Policy Act of 1969, as amended (NEPA), the Bureau of Land Management (BLM), Washington Office, intends to prepare a Programmatic Environmental Impact Statement (EIS) to review the Federal coal program.

This Notice of Intent begins the process of defining the scope of the Programmatic EIS by providing background on the Federal coal program and identifying the issues that may be addressed in the Programmatic EIS. This Notice informs the public about: Concerns that have been raised about the Federal coal program; issues that are expected to be assessed in the Programmatic EIS; and potential modifications to the Federal coal program suggested by stakeholders during the listening sessions that could be considered in the Programmatic EIS. This Notice of Intent also announces plans to conduct public scoping meetings, invites public participation in the scoping process, and solicits public comments for consideration in establishing the scope and content of the Programmatic EIS.

**DATES:** The BLM will invite interested agencies, States, American Indian tribes, local governments, industry, organizations and members of the public to submit comments or suggestions to assist in identifying significant issues and in determining the scope of this Programmatic EIS.

The BLM will be holding public scoping meetings to obtain comments on the Programmatic EIS and plans to hold these meetings in the following locations: Casper, WY; Grand Junction, CO; Knoxville, TN; Pittsburgh, PA; Salt

Lake City, UT; and Seattle, WA. The BLM will announce the specific dates and locations of the scoping meetings at least 15 days in advance through local media, newspapers, and the project Web site at: [http://www.blm.gov/wo/st/en/prog/energy/coal\\_and\\_non-energy/details\\_on\\_coal\\_peis.html](http://www.blm.gov/wo/st/en/prog/energy/coal_and_non-energy/details_on_coal_peis.html). In addition, the BLM will consider all written comments received or postmarked during the public comment period on scoping, which will close 30 days after the final public meeting.

**ADDRESSES:** You may submit written comments by the following methods:

- *Email:* [BLM\\_WO\\_Coal\\_Program\\_PEIS\\_Comments@blm.gov](mailto:BLM_WO_Coal_Program_PEIS_Comments@blm.gov). This is the preferred method of commenting.
- *Mail, personal, or messenger delivery:* Coal Programmatic EIS Scoping, Bureau of Land Management, 20 M St. SE., Room 2134LM, Washington, DC 20003.

**FOR FURTHER INFORMATION CONTACT:**

Mitchell Leverette, Chief, Division of Solid Minerals, email: [mleveret@blm.gov](mailto:mleveret@blm.gov), telephone: 202–912–7113, or visit the Coal Programmatic EIS Web site at: [http://www.blm.gov/wo/st/en/prog/energy/coal\\_and\\_non-energy/details\\_on\\_coal\\_peis.html](http://www.blm.gov/wo/st/en/prog/energy/coal_and_non-energy/details_on_coal_peis.html).

**SUPPLEMENTARY INFORMATION:** On January 15, 2016, the Secretary of the Interior issued Order No. 3338 directing the BLM to conduct a broad, programmatic review of the Federal coal program it administers through preparation of a Programmatic EIS under NEPA. 42 U.S.C. 4321 *et seq.* The Order was issued in response to a range of concerns raised about the Federal coal program, including, in particular, concerns about whether American taxpayers are receiving a fair return from the development of these publicly owned resources; concerns about market conditions, which have resulted in dramatic drops in coal demand and production in recent years, with consequences for coal-dependent communities; and concerns about whether the leasing and production of large quantities of coal under the Federal coal program is consistent with the Nation's goals to reduce greenhouse gas emissions to mitigate climate change. In light of these issues, the Programmatic EIS will identify and evaluate potential reforms to the Federal coal program. This review will enable the Department to consider how to modernize the program to allow for the continued development of Federal coal resources, as appropriate, while addressing the substantive issues raised by the public, other stakeholders, and the Department's own review of the comments it has received during recent

listening sessions held last year in Washington, DC; Billings, Montana; Gillette, Wyoming; Denver, Colorado; and Farmington, New Mexico.

**Background and Need for Agency Action**

*A. Overview of Federal Coal Program*

Under the Mineral Leasing Act of 1920, as amended, 30 U.S.C. 181 *et seq.*, and the Mineral Leasing Act for Acquired Lands of 1947, as amended, 30 U.S.C. 351 *et seq.*, the BLM is responsible for the leasing of Federal coal and regulation of the development of that coal on approximately 570 million acres of the 700 million acres of mineral estate that is owned by the Federal government. This includes Federal mineral rights on Federal lands and Federal mineral rights located under surface lands with non-Federal ownership. Under the authority of the Mineral Leasing Act, the BLM administers leasing and monitors coal production. Other Departmental bureaus, in particular the Office of Surface Mining Reclamation and Enforcement (OSMRE) and the Office of Natural Resources Revenue (ONRR), also take actions related to coal mining on Federal lands. The OSMRE, and those States that have regulatory primacy under the Surface Mining Control and Reclamation Act of 1977 (SMCRA), permit coal mining and reclamation activities, and monitor reclamation and reclamation bonding actions. The ONRR collects and audits all payments required under the lease, including bonus bids, royalties, and rental payments, and distributes those funds between the Federal Treasury and the States where coal resources are located.

**1. Federal Coal Leasing and Production**

On average, over the last few years, about 41 percent of the Nation's annual coal production came from Federal land. Federal coal produced from the Powder River Basin in Montana and Wyoming accounts for over 85 percent of all Federal coal production. Federal coal was used to generate an estimated 14 percent of the Nation's electricity in 2015. Coal is also used for other critical processes, including making steel (metallurgical coal).

As of FY2015, the BLM administered 306 coal leases, covering 482,691 acres in 11 States, with an estimated 7.75 billion tons of recoverable Federal coal. Over the last decade (2006–2015), the BLM sold 32 coal leases and managed leases that produced approximately 4.3 billion tons of coal and resulted in \$9.55

billion in revenue collections by the United States.

The U.S. Energy Information Administration (EIA) estimates total U.S. coal production in 2015 was about 895 million short tons (MMst), 10 percent lower than in 2014 and the lowest level since 1986.<sup>1</sup> EIA projects that coal production will fall by another 12 percent in 2016, then rise by 2 percent in 2017.<sup>2</sup> The approximately 7.75 billion tons of recoverable reserves of Federal coal currently under lease is estimated to be sufficient to continue production at current levels for 20 years, averaged across all leases, and these reserves would be sufficient to cover production, on average, for even longer if coal production declines, as is projected.

EIA estimates that U.S. coal exports decreased 23 MMst (24 percent) from 2014 levels to 74 MMst in 2015, and EIA expects the current global coal market trends to continue.<sup>3</sup> EIA forecasts that coal exports will decline by an additional 10 MMst (13 percent) in 2016 and by 1 MMst (2 percent) in 2017.<sup>4</sup>

In terms of employment and revenues to the States, coal mining employed almost 90,000 people in 2012. More recently, there were an estimated 74,000 direct jobs in coal mining as of May 2014, including roughly 6,500 in Wyoming.<sup>5</sup> Revenues from Federal coal provided Wyoming approximately \$556 million in FY2014. Other States received the following approximate amounts: Utah—\$44 million; Montana—\$43 million; Colorado—\$36 million; and New Mexico—\$16 million.

**2. Federal Coal Program**

The current BLM coal leasing program includes land use planning, processing applications (*e.g.*, for exploration licenses and lease sales), estimating the value of proposed leases, holding lease

<sup>1</sup> U.S. EIA, *Short Term Energy Outlook: Coal* (Mar. 8, 2016) (<http://www.eia.gov/forecasts/steo/report/coal.cfm>); U.S. EIA, *Today in Energy: Coal Production and Prices Decline in 2015* (Jan. 8, 2016) (<http://www.eia.gov/todayinenergy/detail.cfm?id=24472>). Note that the EIA data referenced in this Notice is more recent than the EIA data referenced in the Secretarial Order.

<sup>2</sup> U.S. EIA, *Short Term Energy Outlook: Coal* (Mar. 8, 2016) (<http://www.eia.gov/forecasts/steo/report/coal.cfm>).

<sup>3</sup> U.S. EIA, *Short Term Energy Outlook: Coal* (Mar. 8, 2016) (<http://www.eia.gov/forecasts/steo/report/coal.cfm>).

<sup>4</sup> U.S. EIA, *Short Term Energy Outlook: Coal* (Mar. 8, 2016) (<http://www.eia.gov/forecasts/steo/report/coal.cfm>).

<sup>5</sup> Bureau of Labor Statistics, *May 2014 National Industry-Specific Occupational Employment and Wage Estimates: NAICS 212100—Coal Mining* ([http://www.bls.gov/oes/current/naics4\\_212100.htm](http://www.bls.gov/oes/current/naics4_212100.htm)); Wyoming Department of Workforce Services, *Wyoming Labor Market Information* (<http://doe.state.wy.us/lmi/CES/nawy14.htm>).

sales, and post-leasing actions (*e.g.*, production verification, lease and production inspection and enforcement, royalty reductions, and bond review).

The Federal Government receives revenue from coal leasing in three ways: (1) A bonus that is paid at the time BLM issues a lease; (2) Rental fees; and (3) Production royalties. The royalty rates are set by regulation at a fixed 8 percent for underground mines and not less than 12.5 percent for surface mines. All receipts from a lease are shared with the State in which the lease is located (51 percent to the Federal Government and 49 percent to the State).

The BLM's planning process for Resource Management Plans, supported by environmental analysis under NEPA, identifies areas that are potentially available to be considered for coal leasing. The planning process considers, among other things, the impacts of a "reasonably foreseeable development scenario," but it does not directly authorize any coal leasing or determine which coal will actually be leased.

The Federal Coal Leasing Amendments Act of 1976 (FCLAA), which amended Section 2 of the Mineral Leasing Act of 1920, requires that, with limited exceptions, Federal lands available for coal leasing be sold by competitive bid, with the BLM receiving "fair market value" for the lease. While multiple bids are not required, all successful bids must equal or exceed the estimated pre-sale fair market value for the lease, as calculated by the BLM. Competitive leasing is not required for: (1) Preference right lease applications for owners of pre-FCLAA prospecting permits; and (2) Modifications of existing leases, where Congress has authorized the Secretary to allow up to 960 acres (increased from 160 acres by the Energy Policy Act of 2005) of contiguous lands for noncompetitive leasing by modifying an existing lease.

The BLM issued coal leasing regulations in 1979 that provided for two separate competitive coal leasing processes: (1) Regional leasing, where the BLM selects tracts within a region for competitive sale; and (2) Leasing by application, where an industry applicant nominates a particular tract of coal for competitive sale.

Regional coal leasing requires the BLM to select potential coal leasing tracts based on land use planning, expected coal demand, and potential environmental and economic impacts.<sup>6</sup> This process includes use of a Federal/State advisory board known as a

Regional Coal Team,<sup>7</sup> to provide input on leasing decisions. The regional leasing system has not been used since 1990, and currently all BLM coal leasing is done by application.<sup>8</sup> Leasing by application begins with the submission of an application to lease a tract of coal identified by the applicant.<sup>9</sup> The BLM reviews the application for completeness, to ensure that it conforms to existing land use plans, and to ensure that it contains sufficient geologic data to determine the fair market value of the coal. The agency then prepares an analysis under NEPA (either an Environmental Assessment or an EIS) and seeks public comment on the proposed lease sale. Through this process, the BLM evaluates alternative tract configurations to maximize competitiveness and value, and to avoid bypassing Federal coal. The BLM also consults with other appropriate Federal, State, and tribal government agencies, and the BLM determines whether the surface owner consents to leasing in situations where the surface is not administered by the BLM. Preparations for the actual lease sale begin with the BLM formulating, after obtaining public comment, a pre-sale estimate of the fair market value of the coal. This estimate is kept confidential and is used to evaluate the bids for the lease "bonus" received during the sale. Sealed bids are accepted prior to the date of the sale and are publicly announced during the sale. The winning bid is the highest bid that meets or exceeds the coal tract's presale estimated fair market value, assuming that the bidder meets all eligibility requirements and has paid the appropriate fees and payments.

There are two separate bonding requirements for Federal coal leases. The BLM requires a bond adequate to ensure compliance with the terms and conditions of the lease, which must cover a portion of potential liabilities associated with the bonus bid, rental fees, and royalties. In addition, under SMCRA, the OSMRE or the State with regulatory primacy requires sufficient bonding to cover anticipated reclamation costs.

<sup>7</sup> The BLM regulations require a Regional Coal Team to be established for each coal production region, comprised of representatives from the BLM and the Governors of each State in the region. The Regional Coal Teams are to guide the coal planning process for each coal production region, serve as the forum for BLM and State consultation, and make recommendations on coal leasing levels. 43 CFR 3400.4.

<sup>8</sup> While the Powder River Basin (PRB) coal production region was decertified in 1992, the PRB regional coal team is still in place and meets periodically to review regional activity and make recommendations on coal leasing in the region.

<sup>9</sup> See 43 CFR subpart 3425.

A Federal coal lease has an initial term of 20 years, but it may be terminated after 10 years if the coal resources are not diligently developed. 30 U.S.C. 207. Existing leases that have met their diligence requirements may be renewed for additional 10 year terms following the initial 20 year term.

### 3. Previous Comprehensive Reviews

The Department has previously conducted two separate, comprehensive reviews of the Federal coal program. In the late 1960s, there were serious concerns about speculation in the coal leasing program. A BLM study discovered a sharp increase in the total Federal acreage under lease and a consistent decline in coal production. In response, the Department undertook the development of a planning system to determine the size, timing, and location of future coal leases, and the preparation of a Programmatic EIS for the entire Federal coal leasing program. Beginning in February 1973, the short-term actions included a complete moratorium on the issuance of new coal prospecting permits, and a moratorium with limited exceptions on the issuance of new Federal coal leases. New leases were issued only to maintain existing mines or to supply reserves for production in the near future, where "near future" meant that development and production were to commence within 3 and 5 years, respectively. The moratorium was scaled back over time, but was not completely lifted until 1981, after the Programmatic EIS had been completed, a new leasing system had been adopted through regulation, and litigation was resolved.

In 1982, concerns about the Federal coal program arose again, this time related to allegations that the Government did not receive fair market value from a large lease sale in the Powder River Basin under the new procedures adopted as part of the programmatic review in the 1970s. Among other reports on the issue, in May 1983, the Government Accountability Office (GAO) issued a report concluding that the Department had received roughly \$100 million less than it should have for the leases sold. In response, in July 1983, Congress directed the Secretary to appoint members to a commission, known as the Linowes Commission, to investigate fair market value policies for Federal coal leasing. Congress also, in the 1984 Appropriations Act, directed the Office of Technology Assessment (OTA) to study whether the Department's coal leasing program was compatible with the nationally mandated environmental protection goals.

<sup>6</sup> 43 CFR part 3420.

As part of the 1984 Appropriations Bill, Congress imposed a moratorium on the sale or lease of coal on public lands, subject to certain exceptions, starting in 1983 and ending 90 days after publication of the Linowes Commission's report. The Linowes Commission published the *Report of the Commission on Fair Market Value Policy for Federal Coal Leasing* in February 1984. The OTA report, *Environmental Protection in the Federal Coal Leasing Program*, was released in May 1984. The principal thrust of these reports was that the Department should: (1) Temper its pace of coal leasing; (2) Improve and better document its procedures for receiving fair market value; and (3) Take care to balance competing resource uses in making lease decisions.

Interior Secretary William P. Clark extended the suspension of coal leasing (with exceptions for emergency leasing and processing preference right lease applications, among other things), while the Department completed its comprehensive review of the program. This review included proposed modifications to be made by the Department in response to the Linowes Commission and OTA reports. Secretary Clark announced on August 30, 1984, that the Department would prepare an EIS supplement to the 1979 Programmatic EIS for the Federal coal management program. The Department issued the Record of Decision for the Programmatic EIS supplement in January 1986, in the form of a Secretarial Issue Document. That document recommended continuation of the leasing program with modifications. In conjunction with those modifications, Interior Secretary Donald Hodel lifted the coal leasing moratorium in 1987.

### *B. Need for Comprehensive Review of Federal Coal Program*

On March 17, 2015, Secretary Jewell called for "an honest and open conversation about modernizing the Federal coal program." As described above, the last time the Federal coal program underwent comprehensive review was in the mid-1980s, and market conditions, infrastructure development, scientific understanding, and national priorities have changed considerably since that time. The Secretary's call also responded to continued concerns from numerous stakeholders about the Federal coal program, including concerns raised by the GAO,<sup>10</sup> the Department's Office of

Inspector General (OIG),<sup>11</sup> members of Congress, interested stakeholders, and the public. The concerns raised by the GAO and OIG centered on whether taxpayers are receiving fair market value from the sale of coal. Others raised concerns that the current Federal leasing structure lacks transparency and competition and is therefore not ensuring that the American taxpayer receives a fair return from Federal coal resources, while also raising questions regarding current market conditions for the coal industry generally and related implications for Federal resources. Stakeholders also questioned whether the leasing program results in over-supply of a commodity that has significant environmental and health impacts, including impacts on global climate change.

In response to the Secretary's call for a conversation to address these concerns, the BLM held 5 listening sessions regarding the Federal coal program in the summer of 2015. Sessions were held in Washington, DC; Billings, Montana; Gillette, Wyoming; Denver, Colorado; and Farmington, New Mexico. The Department heard from 289 individuals during the sessions and received more than 92,000 written comments before the comment period closed on September 17, 2015. The oral and written comments reflected several recurring themes:

- Concern about global climate change and the impact of coal production and use.
- Concern about the loss of jobs and local revenues if coal production is reduced.
- Support for increased transparency and public participation in leasing and royalty decisions and concern that the structure of the leasing program does not provide for adequate competition or a fair return to the taxpayer for the use of Federal resources.
- Support for increasing coal royalty rates because: (1) The royalty rate should account for the environmental costs of coal production; (2) The royalty rate should match the rate for offshore Federal leases; and (3) Taxpayers are not receiving a fair return.
- Support for maintaining or lowering coal royalty rates because: (1) The coal industry already pays more than its fair share and existing Federal rates are too high given current market conditions; (2) Raising rates will lower production and revenues; and (3) Raising rates will cost jobs and harm communities.
- Support for streamlining the current leasing process, so that the Federal coal program is administered in a way that better promotes economic stability and jobs, especially in coal communities which are

*Exports, and Provide More Public Information*, GAO 14-140 (Dec. 2013).

<sup>11</sup> OIG, *Coal Management Program*, U.S. Department of the Interior, Report No.: CR-EV-BLM-0001-2012 (June 2013).

already suffering from depressed economic conditions.

Of these concerns, three aspects of the current Federal coal program received the most attention. First, numerous stakeholders are concerned that American taxpayers are not receiving a fair return on public coal resources. Second, many stakeholders are concerned that the Federal coal program conflicts with the Administration's climate policy and our national climate goals, making it more difficult for us to achieve those goals. Third, there are numerous and varying concerns about the structure of the Federal coal program in light of current market conditions, including how implementation of the Federal leasing program affects current and future coal markets, coal-dependent communities and companies, and the reclamation of mined lands. These three main concerns are addressed in more detail below.

### 1. Concerns About Fair Return

In 2013, both GAO and OIG issued reports expressing concerns about the Federal coal program, particularly with respect to the leasing process and fair market value. In response, in 2014, the BLM developed new protocols and issued policy guidance, a manual, and a handbook to implement these changes. Nevertheless, stakeholders have expressed concerns that the BLM's response, while helpful, was insufficient to rectify fundamental weaknesses in the program with respect to fair return.<sup>12</sup>

These concerns arise, at least in part, because there is currently very little competition for Federal coal leases. About 90 percent of lease sales receive bids from only one bidder, typically the operator of a mine adjacent to the new lease, given the investment required to

<sup>12</sup> See, e.g., Taxpayers for Common Sense, *Federal Coal Leasing: Fair Market Value and a Fair Return for the American Taxpayer* (Sept. 2013). ([http://www.taxpayer.net/images/uploads/downloads/TCS\\_Federal\\_Coal\\_Leasing\\_Report\\_-\\_Final\\_-\\_Updated\\_10.4.13.pdf](http://www.taxpayer.net/images/uploads/downloads/TCS_Federal_Coal_Leasing_Report_-_Final_-_Updated_10.4.13.pdf)); Center for American Progress, *Modernizing the Federal Coal Program* (Dec. 2014) (<https://cdn.americanprogress.org/wp-content/uploads/2014/12/FederalCoal.pdf>); Headwaters Economics, *An Assessment of U.S. Federal Coal Royalties* (Jan. 2015) (<http://headwaterseconomics.org/wphw/wp-content/uploads/Report-Coal-Royalty-Valuation.pdf>); Center for American Progress, *Cutting Subsidies and Closing Loopholes in the U.S. Department of the Interior's Coal Program* (Jan. 6, 2015) (<https://cdn.americanprogress.org/wp-content/uploads/2015/01/CoalSubs-brief2.pdf>); Institute for Policy Integrity, *Harmonizing Preservation and Production* (June 2015) (<http://policyintegrity.org/publications/detail/harmonizing-preservation-and-production/>); Institute for Policy Integrity, *Illuminating the Hidden Costs of Coal* (Dec. 2015) (<http://policyintegrity.org/publications/detail/hidden-costs-of-coal/>).

<sup>10</sup> GAO, *Coal Leasing: BLM Could Enhance Appraisal Process, More Explicitly Consider Coal*

open a new mine. While the BLM conducts a peer-reviewed analysis to estimate a pre-sale fair market value of the coal and will not sell a lease unless the bid meets or exceeds that value, commenters have questioned whether an accurate fair market value can be identified in the absence of a truly competitive marketplace.

Commenters also raised concerns about the royalty rates set in Federal leases, which are set by regulation at a fixed 8 percent for underground mines and not less than 12.5 percent for surface mines. Many stakeholders believe that these rates do not adequately compensate the public for the removal of the coal and the externalities associated with its use. Still others have suggested that the large volumes and relatively low costs of Federal coal, which currently represents approximately 41 percent of total domestic production, have the effect of artificially lowering market prices for coal, further reducing the amount of royalties received.

Stakeholders also criticize the Federal coal program for obtaining even lower returns through certain types of leasing actions, such as lease modifications, and through royalty rate reductions, which may result in royalty rates as low as 2 percent. In addition, stakeholders have noted that the \$100 acre minimum bid requirement established in the regulations is outdated, and although the minimum bid does not apply frequently, given fair market value requirements, there are situations in which it sets the floor for the bid price.

Some stakeholders further suggest that a fair return to the taxpayer should also include compensation for externalities such as the environmental damage (or lost environmental benefits) from the removal and combustion of the coal.

## 2. Concerns About Market Conditions

Stakeholders raised a variety of concerns about the implications of current and future coal market conditions. As reported by EIA, between 2008 and 2013, U.S. coal production fell by 16 percent in total, as declining natural gas prices and other factors made coal less competitive as a fuel for generating electricity.<sup>13</sup> In 2015, U.S. coal production was roughly 891 MMst, 11 percent lower than 2014, and the lowest level since 1986.<sup>14</sup> World-wide

demand for coal appears to be softening as well, with EIA estimating a 23 percent decline in total U.S. coal exports in 2015 from the previous year.<sup>15</sup> As a result of these market trends, a number of mines in the U.S. have idled production, companies have asked the BLM to hold off on processing certain lease tracts for sale, several major coal companies have entered Chapter 11 bankruptcy, many coal miners have been laid off, and coal-dependent communities have suffered.<sup>16</sup> The EIA and other projections of future coal production anticipate continuing declines.

Stakeholders have urged the BLM to modify the Federal coal program to take these significant market changes into account, although the recommended changes vary. Some suggest that the program should attempt to improve the economic viability of the coal industry by reducing royalties and streamlining the leasing and permitting processes. Others raise concerns that the program has contributed to low coal prices by incentivizing over-production through non-competitive sales that oversupply the market.

Some have focused on how current market conditions threaten reclamation of lands disturbed by coal mining and may leave State and Federal governments with billions of dollars of unfunded reclamation liabilities. Specifically, many coal companies “self-bond” to meet reclamation bonding requirements, and some stakeholders have asserted that these companies may no longer have the funds to support reclamation activities, and/or they may attempt to shed reclamation obligations in bankruptcy.<sup>17</sup> OSMRE currently estimates that there is over \$3.6 billion in outstanding self-bonded reclamation liability in the United States.

Stakeholders also expressed a number of views regarding export of Federal coal. Some see export markets as a possible way to maintain or expand Federal coal production, while others view the production of coal for export

as a less valuable activity than coal production for domestic use. A number of stakeholders expressed concern that exports, or the potential for exports, were not adequately considered as part of the leasing process.

## 3. Concerns About Climate Change

The third broad category of concerns about the Federal coal program relates to its impacts on climate change. The United States has pledged under the United Nations Framework Convention on Climate Change to reduce its greenhouse gas (GHG) emissions by 26–28 percent below 2005 levels by 2025. The Obama Administration has made, and is continuing to make, unprecedented efforts to reduce U.S. GHG emissions in line with this target through measures such as vehicle efficiency standards, the Clean Power Plan, energy efficiency standards, requirements to reduce methane reductions from oil and gas production, and many other measures. Numerous scientific studies indicate that reducing GHG emissions from coal use worldwide is critical to addressing climate change.<sup>18</sup>

As noted above, the Federal coal program is a significant component of overall U.S. coal production. In recent years, Federal coal has comprised about 41 percent of the coal produced in the U.S.<sup>19</sup> When combusted, this Federal coal contributes roughly 10 percent of total U.S. GHG emissions.<sup>20</sup>

Many stakeholders highlighted the tension between producing very large quantities of Federal coal while pursuing policies to reduce U.S. GHG emissions substantially, including from coal combustion. They also stated that the current leasing system does not provide a way to systematically consider the climate impacts and costs to the public of Federal coal development, either as a whole, or in the context of particular projects. In addition, they raise concerns that exporting Federal coal, and the associated GHG emissions, undermines

<sup>18</sup> See, e.g., McGlade and Ekins, The geographical distribution of fossil fuels unused when limiting global warming to 2 °C, *Nature*, 517, 187–190 (Jan. 8, 2015) (finding that globally over 80% of current coal reserves should remain unused from 2010 to 2050 to meet the target of 2 degrees C).

our nation's efforts to encourage all countries to contribute to climate change mitigation efforts.

### C. Secretarial Order

On January 15, 2016, the Secretary of the Interior issued Order No. 3338 directing the BLM to conduct a broad, programmatic review of the Federal coal program it administers through the preparation of a Programmatic EIS under NEPA. The Order stated:

Given the broad range of issues raised over the course of the past year (and beyond) and the lack of any recent analysis of the Federal coal program as a whole, a more comprehensive, programmatic review is in order, building on the BLM's public listening sessions . . . .

\* \* \* \* \*

[T]he purpose of the P[rogrammatic] EIS is to identify, evaluate, and potentially recommend reforms to the Federal coal program. This review will enable the Department to consider how to modernize the program to allow for the continued development of Federal coal resources while addressing the substantive issues raised by the public, other stakeholders, and the Department's own review of the comments it has received.

The Order does not apply to the coal program on Indian lands, as that program is distinct from the BLM's program and is subject to the unique trust relationship between the United States and federally recognized Indian tribes and government-to-government consultation requirements. The Order also does not apply to any action of OSMRE or ONRR.

### D. Scoping Discussion

The Programmatic EIS will identify and review potential modifications to the Federal coal program to address the concerns discussed above and others that may be identified during the scoping process, and potentially, identify a preferred set of actions. Such modifications could include changes to guidance, regulations, and/or land use plans. The process of developing the Programmatic EIS will be used to identify and develop potential changes to the program and evaluate their projected effects on the quality of the human environment. In addition, the Programmatic EIS will consider, as an alternative, a continuation of the current Federal coal program without any modifications, as required by NEPA. The scoping process will refine the specific issues to be addressed in the Programmatic EIS and the potential modifications to be evaluated. Cooperating agencies may include any

Federal, State, or local agency or tribal government with jurisdiction or special expertise in matters within the scope of the Programmatic EIS.

#### 1. Issues To Be Addressed

The full set of issues to be assessed in the Programmatic EIS will be determined through the public scoping process, but it is expected to include the following topics. The Order identified most of these, but the following list has been expanded to include additional topics and details raised through the listening sessions.

##### a. *How, When, and Where to Lease.*

The regional leasing program authorized in the 1979 regulations has not worked as envisioned and, instead, the BLM has conducted leasing only in response to industry applications. Given concerns about the lack of competition in the lease-by-application system, as well as consideration of environmental goals, the Programmatic EIS will examine whether the current regulatory framework should be changed to provide a better mechanism or mechanisms to decide which coal resources should be made available and how the leasing process should work.

As part of this evaluation, the Programmatic EIS will examine the issue of when to lease. Some leasing programs for other Federal resources operate with an established schedule for leasing or consideration of leasing (*e.g.*, BLM holds onshore oil and gas lease sales on a quarterly basis if parcels are available; offshore oil and gas leasing occurs using a schedule established in a five-year plan). The Programmatic EIS will examine whether scheduled sales should be used for Federal coal. In addition, the Programmatic EIS will look at the factors that should be considered in decisions about the timing of leasing. For example, it will evaluate whether market conditions should affect the timing of lease sales, such that sales would occur when coal values are higher rather than during periods of market downturns, when revenues from lease sales would be lower.

The Programmatic EIS will also examine where to lease and where not to lease, consistent with taking a landscape level view of this question. The Federal Land Policy and Management Act requires the BLM to develop land use plans, also known as Resource Management Plans to guide the BLM's management of public lands. The BLM uses this planning process to identify and address, at a broad scale, potential conflicts over and impacts of possible resource uses. The Programmatic EIS will consider whether

the BLM's unsuitability screening criteria adequately address the questions of where and/or where not to lease for coal production, as well as other potential factors that could be applied during the planning process to provide guidance on the most appropriate locations for coal leasing. This question is particularly timely in light of the BLM's recent proposal to update the current planning regulations ("Planning 2.0").<sup>21</sup> The proposed regulatory changes highlight, in particular, opportunities for early public involvement in the planning process and landscape level planning efforts that may cross traditional administrative boundaries, both of which are relevant for planning related to the coal program.

b. *Fair Return.* The Programmatic EIS will address whether the bonus bids, rents, and royalties received under the Federal coal program are successfully securing a fair return to the American public for Federal coal, and, if not, what adjustments could be made to provide such compensation. As part of this analysis, the Programmatic EIS will examine how each of these components of fair return should be calculated, including whether (and if so, what) externalities should be considered as part of the fair return calculation.

c. *Climate Impacts.* With respect to the climate impacts of the Federal coal program, the Programmatic EIS will examine how best to measure and assess the climate impacts of continued Federal coal production, transportation, and combustion. This will include evaluation of potential substitution effects from any changes in Federal coal production, and consideration of how best to ensure no unnecessary and undue degradation of public lands from climate change impacts. It will also consider whether and how to mitigate, account for, or otherwise address those impacts through the structure and management of the coal program, including, as appropriate, land use planning, adjustments to the scale and pace of leasing, adjustments to royalties or other means of internalizing externalities, mitigation through greenhouse gas reductions elsewhere, information disclosure, and other approaches. The Programmatic EIS will examine the climate impacts of the coal program in the context of the Nation's climate objectives, as well as the Nation's energy and security needs.

d. *Other Impacts.* The Federal coal program has other potential impacts on public health and the environment,

<sup>21</sup> Dept. of Interior, Bureau of Land Management, Resource Management Planning, Proposed Rule, 81FR 9674 (Feb. 25, 2016).

beyond climate impacts, that will also be assessed in the Programmatic EIS. These include the effects of coal production on: The quantity and quality of water resources, including aquifer drawdown and impacts on streams and alluvial valley floors; air quality and the associated effects on health and visibility; wildlife, including endangered species; and other land uses such as grazing and recreation. These impacts are commonly addressed through mitigation requirements. Recent mitigation directives focus on developing a comprehensive, clear, and consistent approach for avoidance and minimization of, and compensatory mitigation for, the impacts of agency activities and the projects agencies approve.<sup>22</sup> The Programmatic EIS will evaluate the BLM's general approach to mitigation for these impacts from coal production, and specifically, whether impacts from mining and combusting Federal coal are adequately mitigated across the Federal coal program, including the timing and certainty of mitigation, and whether standard mitigation at the programmatic level should be required, in addition to on a project-by-project basis.

*e. Socio-Economic Considerations.* Beyond the issue of fair market value, the Programmatic EIS will assess whether the current Federal coal leasing program adequately accounts for externalities related to Federal coal production, including environmental and social impacts. It will more broadly examine how the administration, availability, and pricing of Federal coal affect State, regional, and national economies (including job impacts), and energy markets in general, including the pricing and viability of other coal resources (both domestic and foreign) and other energy sources. The impact of possible program alternatives on the projected fuel mix and cost of electricity in the United States will also be examined.

*f. Exports.* The Programmatic EIS will address whether and, if so, how leasing decisions should consider actual and/or

projected exports of domestic coal from any given tract and potential mechanisms that could be used to appropriately evaluate export potential.

*g. Energy Needs.* Finally, the Programmatic EIS will examine how Federal coal supports fulfilling the energy needs of the United States. The evaluation will include an assessment of how the administration, availability, and pricing of Federal coal impacts electricity generation in the United States, particularly in light of other regulatory influences, and what other sources of energy supply (including efficiency) are projected to be available.

## 2. Potential Modifications to the Federal Coal Program To Be Considered

The BLM is considering various approaches for reforming the Federal coal program to address some or all of the identified issues above, including providing a fair return to taxpayers and providing appropriate consideration of the impacts the program has on the environment. These approaches may be considered separately or in any combination.

To date, stakeholders have made suggestions that range from maintaining the status quo to undertaking sweeping changes. During the listening sessions, commenters suggested a variety of modifications that could be made to the Federal coal program to better address concerns about fair return to taxpayers, market conditions, and effects on climate change, among others. Some of these suggestions were sufficiently specific to constitute potential approaches that could be evaluated in the Programmatic EIS. These proposals are summarized below.

The BLM requests comment on whether the Programmatic EIS should further evaluate some or all of these specific approaches, or some variation on them. The BLM also welcomes suggestions for other potential approaches that should be evaluated in the Programmatic EIS, including approaches that may be contrary to those articulated below, such as reforming the leasing process to promote coal development through steps that might accelerate leasing and reduce delays and costs. As previously noted, the Programmatic EIS will also consider a "no action alternative"—the continuation of the program without any modifications—as required by NEPA. We encourage commenters to be as specific as possible in identifying the types of changes to the program that the Programmatic EIS should evaluate, including changes to regulations, guidance, and management practices.

To address concerns about fair returns to taxpayers, the BLM is considering evaluating the following approaches:

- Raise the royalty rate or adjust the royalty terms of new leases, such as:
    - Raise the royalty rate to 18.75 percent, consistent with the royalty rate for Federal offshore oil and gas;
    - Raise the royalty rate to a level that would provide parity on an energy content (Btu) basis with the royalties currently collected for Federal onshore natural gas, a common substitute fuel;
    - Raise the royalty rate to the point that would maximize revenues to the taxpayer, taking into consideration any decrease in demand that may result from the higher royalty rate; or
    - Identify and require an "adder" to be paid to reflect the cost of the harm to the public from negative externalities from coal development;
      - Limit the use of royalty rate reductions;
      - Change the methodology for determining fair market value when establishing the minimum bid or valuing lease modifications, such as:
        - Use the market price of non-Federal coal in the region or nation-wide;
        - Include the option value of leasing the coal resource at a given point in time;
        - Include the social cost of mining (*i.e.*, the cost to taxpayers of mining imposed by fixed cost non-internalized externalities, such as loss of recreational or other values, which do not vary by quantity produced);
        - Explicitly include export value in establishing fair market value;
        - Replace the lease by application approach with an open process of setting (after public comment and expert advice) minimal acceptable bid levels for tracts; or
        - Update the minimum bid established by regulation to account for inflation, and/or establish state-specific minimum bids;
          - Raise rental rates to adjust for inflation and/or incorporate lost value of other uses of the land and anticipated externalities of exploratory activities;
          - Do not lease to companies that have more than 10 years of recoverable reserves coal at the time of lease application; and
          - Evaluate whether there is an over-supply of Federal coal that is undercutting market prices for coal in the United States and thereby leading to lower royalty revenue.
- The BLM received the following industry proposals concerned with promoting coal production that are also under consideration:
- Lower royalty rates, including as a means of increasing overall government take;

<sup>22</sup> Secretary of the Interior, Secretarial Order 3330 (Oct. 31, 2013) (establishing a Department-wide mitigation strategy) (<https://www.doi.gov/sites/doi.gov/files/migrated/news/upload/Secretarial-Order-Mitigation.pdf>); President Obama, Presidential Memorandum: Mitigating Impacts on Natural Resources from Development and Encouraging Related Private Investment (Nov. 3, 2015) (<https://www.whitehouse.gov/the-press-office/2015/11/03/mitigating-impacts-natural-resources-development-and-encouraging-related>). Consistent with these directives, the BLM is currently working on a mitigation policy that will bring consistency to the consideration and application of avoidance, minimization, and compensatory actions or development activities and projects impacting public lands and resources.

- Broaden the applicability of royalty rate reductions;
- Reform the leasing process to accelerate leasing and reduce delays and costs;
  - Base bonus bids on the amount of recoverable coal, not coal reserves;
  - Convert revenue streams to pay-as-you go, instead of an upfront payment of bonus bids over five years; and
  - Reestablish the Royalty Policy Committee to guide changes to royalties.

To address concerns about climate impacts and/or other public health and environmental harms, the BLM is considering evaluating the following approaches:

- Change the methodology for determining which, or how much, Federal coal and/or acreage is made available for leasing, such as:
  - Establish a “budget,” or other quantity-based schedule, for the amount of Federal coal and/or acreage to be leased over a given period, with the budget set on a declining schedule consistent with the United States’ climate goals and commitments and market demand;
  - Re-establish an updated version of the regional planning and leasing process, using land use planning and environmental evaluation to decide whether an area should be leased; or
  - Develop a landscape-level approach to identify geographic areas for potential leasing to identify and address potential conflicts
    - Raise royalty rates or require an “adder” to be paid to reflect the cost of the harm to the public from negative externalities from coal development (could include production-related externalities, transportation-related externalities, externalities from use of coal, and/or costs of infrastructure demand, such as water and power), such as:
      - Incorporating the social cost of carbon;
      - Incorporating the social cost of methane; or
      - Reflecting other externalities;
      - Require climate and/or other public health and environmental harms to be mitigated; and
      - Prohibit or otherwise limit leasing to entities that are not meeting their environmental responsibilities, such as:
        - Entities listed in the Office of Surface Mining Reclamation and Enforcement Applicator Violator System; or
        - Entities that have not met their reclamation or bonding (including bond release) requirements.

#### E. Scoping Process

The Federal coal program Programmatic EIS process will provide

opportunities for formal public participation through commenting during public scoping and on the draft Programmatic EIS, when that is published. The BLM aims to complete the Coal Programmatic EIS over roughly 3 years. The process will include public and agency scoping, including public scoping meetings, collection of public comments during the scoping period, issuance of a summary of substantive comments received during the scoping period, as well as issuance of a scoping report at the end of the scoping process; coordination and consultation with Federal, State, tribal and local governments; publication of a draft Programmatic EIS; public review of and comments on the draft Programmatic EIS; and publication of a final Programmatic EIS, which will include the BLM’s responses to substantive comments received on the draft Programmatic EIS. The Programmatic EIS process is intended to involve all interested agencies (Federal, State, county, and local), Native American tribes, public interest groups, businesses, and members of the public.

At this time, interested parties are invited to participate in the scoping process to assist the BLM in identifying and refining the issues and policy proposals to be analyzed in depth and in eliminating from detailed study those policy proposals and issues that are not feasible or pertinent. Participation in the scoping process may take the form of attendance at public scoping meetings, speaking at public scoping meetings, and/or submitting written comments.

In addition to taking comment on the specific approaches discussed above, as well as welcoming suggestions for other potential approaches that should be evaluated in the Programmatic EIS, BLM is soliciting input on the following:

1. Potential new leasing models, or potential reforms to the previous or existing leasing models of regional leasing and lease by application;
2. Other approaches to increase competition in the leasing process;
3. Data or analyses that justify a specific change to the royalty rate;
4. Potential approaches to improve the pre-sale estimate of fair market value;
5. Whether, and how, to account in the leasing process for the extent to which reclamation responsibilities have been met;
6. Potential approaches to design a ‘budget’ for the amount of Federal coal and/or acreage to be leased over a given period; and
7. How to account for export potential in the leasing process.

Public scoping meetings will be held as indicated above under the **DATES** section. These scoping meetings will be

informal. The presiding officer will establish only those procedures needed to ensure that everyone who wishes to speak has a chance to do so, to the extent practicable, and that the agency representatives understand all issues and comments. Persons wishing to speak on behalf of an organization should identify that organization in their request to speak. Should any speaker wish to provide for the record further information that cannot be presented within the designated time, such information may be submitted in writing or electronically by the date listed in the **DATES** section to the addresses listed in the **ADDRESSES** section.

In submitting written comments, individuals should be aware that the entire comment—including personal identifying information (including address, phone number, and email address)—may be made publicly available at any time. While the commenter can request in the comment that the commenter’s personal identifying information be withheld from public review, this cannot be guaranteed. All comments from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be available for public inspection in their entirety. If you would like to receive a copy of the draft Programmatic EIS and other project materials, you are encouraged to make this request through the project Web site ([http://www.blm.gov/wo/st/en/prog/energy/coal\\_and\\_non-energy/details\\_on\\_coal\\_peis.html](http://www.blm.gov/wo/st/en/prog/energy/coal_and_non-energy/details_on_coal_peis.html)), or you may contact Mitchell Leverette as provided in the **ADDRESSES** section of this notice.

Pursuant to 36 CFR 800.2(d)(3), the BLM will use the NEPA public participation requirements to satisfy the public involvement requirements under Section 106 of the National Historic Preservation Act (NHPA), 16 U.S.C. 470(f). The BLM will consult with Indian tribes on a government-to-government basis in accordance with Executive Order 13175 and other policies. Tribal concerns, including impacts on Indian trust assets and potential impacts to cultural resources, will be given due consideration. Federal, State, and local agencies, along with tribes and other stakeholders that may be interested in or affected by the Federal coal program, are invited to participate in the scoping process and, if eligible, may request or be requested by the BLM to participate in the development of the environmental analysis as a cooperating agency.

After gathering public comments on issues and policy proposals that should be addressed in the Programmatic EIS, the BLM will identify the issues and policy proposals to be addressed in the Programmatic EIS and the issues and proposals determined to be beyond the scope of the Programmatic EIS.

Following closure of the scoping period, the BLM will prepare a scoping summary report and will make the report available to the public. The report will be posted on the project Web site ([http://www.blm.gov/wo/st/en/prog/energy/coal\\_and\\_non-energy/details\\_on\\_coal\\_peis.html](http://www.blm.gov/wo/st/en/prog/energy/coal_and_non-energy/details_on_coal_peis.html)), or may be requested from Mitchell Leverette, as provided in the **ADDRESSES** section of this notice.

**Authority:** The BLM will prepare the Programmatic EIS in accordance with, but not limited to, the National Environmental Policy Act, 42 U.S.C. 4321 *et seq.*; the Council on Environmental Quality regulations (CEQ), 40 CFR parts 1500–1508; the U.S. Department of the Interior regulations implementing NEPA, 43 CFR part 46; and the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. 1701 *et seq.*

This notice is published in accordance with section 40 CFR 1501.7 of the CEQ regulations and 43 CFR 46.235 of the DOI regulations implementing the NEPA.

**Neil Kornze,**

*Director, Bureau of Land Management,  
Department of the Interior.*

## DEPARTMENT OF THE INTERIOR

### Bureau of Land Management

[LLWO2200000.L10200000.PK0000.  
00000000; Control No. 1004–0019]

### Renewal of Approved Information Collection

**AGENCY:** Bureau of Land Management, Interior.

**ACTION:** 60-Day notice and request for comments.

**SUMMARY:** In compliance with the Paperwork Reduction Act, the Bureau of Land Management (BLM) invites public comments on, and plans to request approval to continue, the collection of information from individuals, households, farms, and businesses interested in cooperating with the BLM in constructing or maintaining range improvement projects that enhance or

improve livestock grazing management, improve watershed conditions, enhance wildlife habitat, or serve similar purposes. The BLM also invites public comments on this collection of information. The Office of Management and Budget (OMB) has assigned control number 1004–0019 to this information collection.

**DATES:** Please submit comments on the proposed information collection by May 31, 2016.

**ADDRESSES:** Comments may be submitted by mail, fax, or electronic mail.

*Mail:* U.S. Department of the Interior, Bureau of Land Management, 1849 C Street NW., Room 2134LM, Attention: Jean Sonneman, Washington, DC 20240.

*Fax:* to Jean Sonneman at 202–245–0050.

*Electronic mail:* [Jean\\_Sonneman@blm.gov](mailto:Jean_Sonneman@blm.gov).

Please indicate “Attn: 1004–0019” regardless of the form of your comments.

**FOR FURTHER INFORMATION CONTACT:**

Kimberly Hackett, at 202–912–7216. Persons who use a telecommunication device for the deaf may call the Federal Information Relay Service at 1–800–877–8339, to leave a message for Ms. Hackett.

**SUPPLEMENTARY INFORMATION:** OMB regulations at 5 CFR part 1320, which implement provisions of the Paperwork Reduction Act, 44 U.S.C. 3501–3521, require that interested members of the public and affected agencies be given an opportunity to comment on information collection and recordkeeping activities (see 5 CFR 1320.8 (d) and 1320.12(a)). This notice identifies an information collection that the BLM plans to submit to OMB for approval. The Paperwork Reduction Act provides that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond.

The BLM will request a 3-year term of approval for this information collection activity. Comments are invited on: (1) The need for the collection of information for the performance of the functions of the agency; (2) the accuracy of the agency’s burden estimates; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the information collection burden on respondents, such

as use of automated means of collection of the information. A summary of the public comments will accompany our submission of the information collection requests to OMB.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

The following information pertains to this request:

*Title:* Grazing Management: Range Improvements Agreements and Permits (43 CFR Subpart 4120).

*OMB Control Number:* 1004–0019.

*Summary:* This request pertains to range improvements on public lands managed by the BLM. Range improvements enhance or improve livestock grazing management, improve watershed conditions, enhance wildlife habitat, or serve similar purposes. At times, the BLM may require holders of grazing permits or grazing leases to install range improvements to meet the terms and conditions of their permits or leases. Operators may also come to the BLM with proposals for range improvements. Often the BLM, operators, and other interested parties work together and jointly contribute to construction of range improvements in order to facilitate improved grazing management or enhance other multiple uses. Cooperators may include lenders which provide the funds that operators contribute for improvements.

*Frequency of Collection:* On occasion.

*Forms:*

- Form 4120–6 (Cooperative Range Improvement Agreement); and
- Form 4120–7 (Range Improvement Permit).

*Description of Respondents:* Holders of BLM grazing permits or grazing leases; affected individuals and households; and affected tribal, state, and county agencies.

*Estimated Annual Responses:* 1,110.

*Estimated Annual Burden Hours:* 1,640.

*Estimated Annual Non-Hour Costs:* None.

The estimated burdens are itemized in the following table:

Type of response A	Number of responses B	Hours per response C	Total hours (Column B × Column C) D
Cooperative Range Improvement Agreement, 43 CFR 4120.3–2, Form 4120–6 and related non-form information .....	500	2	1,000
Range Improvement Permit, 43 CFR 4120.3–3, Form 4120–7 and related non-form information .....	30	2	60
Affected Public/Individuals and Households, 43 CFR 4120.5–1 .....	50	1	50
Affected Public/Tribal, State, and County Agencies, 43 CFR 4120.5–2 .....	530	1	530
Total .....	1,110	.....	1,640

**Jean Sonneman,**  
 Bureau of Land Management, Information  
 Collection Clearance Officer.

**DEPARTMENT OF THE INTERIOR**

**Bureau of Land Management**

[LLWO320000 L13300000.PP0000 12X]

**Renewal of Approved Information  
 Collection; OMB Control No. 1004–  
 0121**

**AGENCY:** Bureau of Land Management,  
 Interior.

**ACTION:** 30-Day notice and request for  
 comments.

**SUMMARY:** The Bureau of Land  
 Management (BLM) has submitted an  
 information collection request to the  
 Office of Management and Budget  
 (OMB) to continue the collection of  
 information regarding authorizations  
 pertaining to solid minerals other than  
 coal and oil shale. The Office of  
 Management and Budget (OMB)  
 previously approved this information  
 collection activity, and assigned it  
 control number 1004–0121.

**DATES:** The OMB is required to respond  
 to this information collection request  
 within 60 days but may respond after 30  
 days. For maximum consideration,  
 written comments should be received  
 on or before April 29, 2016.

**ADDRESSES:** Please submit comments  
 directly to the Desk Officer for the  
 Department of the Interior (OMB #1004–  
 0121), Office of Management and  
 Budget, Office of Information and  
 Regulatory Affairs, fax 202–395–5806,  
 or by electronic mail at *OIRA\_*  
*submission@omb.eop.gov*. Please  
 provide a copy of your comments to the  
 BLM. You may do so via mail, fax, or  
 electronic mail.

*Mail:* U.S. Department of the Interior,  
 Bureau of Land Management, 1849 C  
 Street NW., Room 2134LM, Attention:  
 Jean Sonneman, Washington, DC 20240.

*Fax:* to Jean Sonneman at 202–245–  
 0050.

*Electronic mail:* *Jean\_Sonneman@*  
*blm.gov*.

Please indicate “Attn: 1004–0121”  
 regardless of the form of your  
 comments.

**FOR FURTHER INFORMATION CONTACT:**

Vince Vogt, at 202–912–7125. Persons  
 who use a telecommunication device for  
 the deaf may call the Federal  
 Information Relay Service at 1–800–  
 877–8339, to leave a message for Mr.  
 Vogt. You may also review the  
 information collection request online at  
[http://www.reginfo.gov/public/do/](http://www.reginfo.gov/public/do/PRAMain)  
*PRAMain*.

**SUPPLEMENTARY INFORMATION:** The  
 Paperwork Reduction Act (44 U.S.C.  
 3501–3521) and OMB regulations at 5  
 CFR part 1320 provide that an agency  
 may not conduct or sponsor a collection  
 of information unless it displays a  
 currently valid OMB control number.  
 Until OMB approves a collection of  
 information, you are not obligated to  
 respond. In order to obtain and renew  
 an OMB control number, Federal  
 agencies are required to seek public  
 comment on information collection and  
 recordkeeping activities (see 5 CFR  
 1320.8(d) and 1320.12(a)).

As required at 5 CFR 1320.8(d), the  
 BLM published a 60-day notice in the  
**Federal Register** on September 16, 2015  
 (80 FR 55640), and the comment period  
 ended November 16, 2015. The BLM  
 received no comments.

The BLM now requests comments on  
 the following subjects:

1. Whether the collection of  
 information is necessary for the proper  
 functioning of the BLM, including  
 whether the information will have  
 practical utility;
2. The accuracy of the BLM’s estimate  
 of the burden of collecting the  
 information, including the validity of  
 the methodology and assumptions used;
3. The quality, utility and clarity of  
 the information to be collected; and
4. How to minimize the information  
 collection burden on those who are to

respond, including the use of  
 appropriate automated, electronic,  
 mechanical, or other forms of  
 information technology.

Please send comments as directed  
 under **ADDRESSES** and **DATES**. Please  
 refer to OMB control number 1004–0121  
 in your correspondence. Before  
 including your address, phone number,  
 email address, or other personal  
 identifying information in your  
 comment, you should be aware that  
 your entire comment—including your  
 personal identifying information—may  
 be made publicly available at any time.  
 While you can ask us in your comment  
 to withhold your personal identifying  
 information from public review, we  
 cannot guarantee that we will be able to  
 do so.

The following information pertains to  
 this request:

*Title:* Leasing of Solid Minerals Other  
 Than Coal and Oil Shale (43 CFR parts  
 3500, 3580, and 3590).

*OMB Control Number:* 1004–0121.

*Abstract:* This control number enables  
 the BLM to fulfill its responsibilities  
 regarding prospecting permits,  
 exploration licenses, leases, the  
 exchange of leases, use permits, and the  
 regulation of mining activities for solid  
 minerals other than coal or oil shale.  
 The information activities currently  
 approved under control number 1004–  
 0121 include requirements that an  
 applicant, a permittee or a lessee submit  
 information that enables the BLM to:

- Determine if applicants, permittees,  
 and lessees meet qualification criteria;
- Assure compliance with various  
 other legal requirements relating to the  
 leasing of solid minerals other than coal  
 or oil shale;
- Gather data needed to determine  
 the environmental impacts of  
 developing solid leasable minerals other  
 than coal or oil shale;
- Maintain accurate leasing records;  
 and
- Oversee and manage the leasing of  
 solid minerals other than coal or oil  
 shale.

*Forms:*

Form 3504–1, Personal Bond and Power of Attorney;  
 Form 3504–3, Bond under Lease;  
 Form 3504–4, Statewide or Nationwide Personal Mineral Bond;  
 Form 3510–1, Prospecting Application and Permit;  
 Form 3510–2, Phosphate or Sodium Use Permit; and

Form 3520–7, Lease.  
*Frequency of Collection:* On occasion.  
*Description of Respondents:* Applicants for, and holders of, the following authorizations in connection with solid minerals other than coal or oil shale:  
 • Prospecting permits;  
 • Exploration licenses;

• Leases; and  
 • Use permits.  
*Obligation to Respond:* To obtain or retain a benefit.  
*Estimated Annual Responses:* 473.  
*Estimated Annual Burden Hours:* 16,346.  
 The following table itemizes the estimated burden hours:

Type of response	Number of responses	Hours per response	Total hours (Column B × Column C)
A.	B.	C.	D.
Request for Effective Date, 43 CFR 3501.20 .....	10	1	10
Qualification Requirements/Individuals or Households, Guardians or Trustees, Heirs, and Devises, 43 CFR 3502.27, 3502.29, 3502.33, 3502.34, and 3502.40 .....	3	2	6
Qualification Requirements/Associations and Partnerships, 43 CFR 3502.28, 3502.33, and 3502.34 .....	3	2	6
Qualification Requirements/Corporations, 43 CFR 3502.30, 3502.33, and 3502.34 .....	44	2	88
Surface Owner Consultation/State or Local Government, 43 CFR 3503.21(b) .....	1	2	2
Surface Owner Consultation/Educational, Charitable, or Religious Organization, 43 CFR 3503.21(b) .....	2	2	4
Applicant's Land Description, 43 CFR 3503.30 through 3503.32 .....	50	2	100
Bonding, 43 CFR 3504.50 through 3504.71, Forms 3504–1, 3504–3, and 3504–4 .....	40	4	160
Application for a Prospecting Permit, 43 CFR 3505.12 and 3505.13, Form 3510–1 .....	50	10	500
Amendment or Withdrawal of an Application for Prospecting Permit, 43 CFR 3505.30 and 3505.31 .....	10	5	50
Exploration Plan, 43 CFR 3505.40, 3505.45, and 3592.1(a) .....	25	400	10,000
Application to Extend a Prospecting Permit, 43 CFR 3505.60 through 3505.66 .....	5	40	200
Application for an Exploration License, 43 CFR 3506.11 through 3506.25 .....	4	10	40
Application for a Preference Right Lease, 43 CFR 3507.11 through 3507.19, Form 3520–7 ...	2	300	600
Application for a Competitive Lease, 43 CFR 3508.12 through 3508.22 .....	5	20	100
Application for a Fractional or Future Interest Lease, 43 CFR 3509.10 through 3509.51 .....	1	80	80
Application for a Fringe Acreage Lease or Lease Modification, (43 CFR 3510.12) .....	10	20	200
Objection to Proposed Readjustment of Lease Terms and Conditions, 43 CFR 3511.25 and 3511.26 .....	20	2	40
Request for Renewal of a Lease, 43 CFR 3511.27 .....	20	2	40
Assignment, Sublease, or Transfer, 43 CFR 3512.11 through 3512.17 .....	30	6	180
Application for Waiver, Suspension, or Reduction of Rental or Minimum Royalties, or for a Reduction in the Royalty Rate, 43 CFR 3513.11 through 3513.26 .....	2	100	200
Lease Relinquishment, 43 CFR 3514.11 through 3514.21 .....	10	40	400
Mineral Lease Exchange, 43 CFR 3515.23 through 3515.27 .....	1	40	40
Application for a Use Permit, 43 CFR 3516.15 through 3516.30, Form 3510–2 .....	1	10	10
Application for Approval of a Hardrock Mineral Development Contract or Processing or Milling Arrangement, 43 CFR 3517.15 .....	1	20	20
Application for a Gold, Silver, or Quicksilver Lease in a Confirmed Private Land Grant, 43 CFR 3581.3 and 3581.4, Form 3520–7 .....	1	20	20
Application for a Hardrock Mineral Lease in the Shasta and Trinity Units of the Whiskeytown-Shasta-Trinity National Recreation Area, 43 CFR 3583.3 .....	1	20	20
Application for a Mineral Lease in the White Mountain National Recreation Area, 43 CFR 3585.3–2 .....	1	20	20
Mining Plan, 43 CFR 3592.1 through 3592.3 .....	5	300	1,500
Modification of an Exploration or Mining Plan, 43 CFR 3592.1(d) .....	10	150	1,500
Data on Bore Holes and Samples, 43 CFR 3593.1 .....	25	2	50
Production Records, 43 CFR 3597.1 and 3597.2 .....	80	2	160
<b>Totals</b> .....	<b>473</b>	<b>.....</b>	<b>16,346</b>

Dated: March 23, 2016.

**DEPARTMENT OF THE INTERIOR**  
**Bureau of Land Management**  
**[LLWO3200000–L19900000.PP0000]**  
**Renewal of Approved Information Collection; Control No. 1004–0114**  
**AGENCY:** Bureau of Land Management, Interior.

**ACTION:** 60-Day notice and request for comments.  
**SUMMARY:** In compliance with the Paperwork Reduction Act, the Bureau of Land Management (BLM) invites public comments on, and plans to request approval to continue, the collection of information for the location, recording, and maintenance of mining claims and sites. The Office of Management and

Budget (OMB) has assigned control number 1004–0114 to this information collection.

**DATES:** Please submit comments on the proposed information collection by May 31, 2016.

**ADDRESSES:** Comments may be submitted by mail, fax, or electronic mail.

*Mail:* U.S. Department of the Interior, Bureau of Land Management, 1849 C Street NW., Room 2134LM, Attention: Jean Sonneman, Washington, DC 20240.

*Fax:* to Jean Sonneman at 202–245–0050.

*Electronic mail:*  
Jean\_Sonneman@blm.gov.

Please indicate “Attn: 1004–0114” regardless of the form of your comments.

**FOR FURTHER INFORMATION CONTACT:**

Sonia Santillan, at 202–912–7123. Persons who use a telecommunication device for the deaf may call the Federal Information Relay Service at 1–800–877–8339, to leave a message for Ms. Santillan.

**SUPPLEMENTARY INFORMATION:** OMB regulations at 5 CFR part 1320, which implement provisions of the Paperwork Reduction Act, 44 U.S.C. 3501–3521, require that interested members of the public and affected agencies be given an opportunity to comment on information collection and recordkeeping activities (see 5 CFR 1320.8 (d) and 1320.12(a)). This notice identifies an information collection that the BLM plans to submit to OMB for approval. The Paperwork

Reduction Act provides that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond.

The BLM will request a 3-year term of approval for this information collection activity. Comments are invited on: (1) The need for the collection of information for the performance of the functions of the agency; (2) the accuracy of the agency’s burden estimates; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the information collection burden on respondents, such as use of automated means of collection of the information. A summary of the public comments will accompany our submission of the information collection requests to OMB.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

The following information pertains to this request:

*Title:* Recordation of Location Notices and Mining Claims; Payment of Fees (43 CFR parts 3832 through 3838).

*OMB Control Number:* 1004–0114.

*Summary:* The BLM seeks to renew the previously approved information collection for the regulations at 43 CFR parts 3832 through 3838. These regulations pertain to the location, recording, and maintenance of mining claims and sites, in accordance with the Mining Law (30 U.S.C. 22–54), Section 314 of the Federal Land Policy and Management Act (FLPMA) (43 U.S.C. 1744), certain other statutes pertaining to specific Federal lands, and the Stock Raising Homestead Act (43 U.S.C. 299 and 301).

*Frequency of Collection:* On occasion, except Form 3830–2 (which may be filed annually) and annual FLPMA documents (which are to be filed annually when required).

*Forms:* Form 3830–2, Maintenance Fee Waiver Certification; and Form 3830–3, Notice of Intent to Locate a Lode or Placer Mining Claim(s) and/or a Tunnel Site(s) on Lands Patented under the Stock Raising Homestead Act of 1916, As Amended by the Act of April 16, 1993.

*Description of Respondents:* Mining claimants.

*Estimated Annual Responses:* 136,338.

*Estimated Annual Burden Hours:* 64,412.

*Estimated Annual Non-Hour Costs:* \$1,677,670.

The estimated burdens are itemized in the following table:

Type of response	Number of responses	Time per response	Total hours (Column B × Column C)
A	B	C	D
Notice of Intent to Locate Under the Stock Raising Homestead Act (43 CFR part 3838) Form 3830–3.	91	1 hour .....	91
Locating Mining Claims or Sites (43 CFR part 3832) .....	28,122	30 minutes .....	14,061
Recording a New Location Notice (43 CFR part 3833, subpart A) .....	28,122	30 minutes .....	14,061
Amending a Location Notice (43 CFR part 3833, subpart B) .....	3,586	30 minutes .....	1,793
Transfer of Interest (43 CFR part 3833, subpart C) or Acquisition of a Delinquent Co-Claimant’s Interests in a Mining Claim or Site (43 CFR part 3837).	27,530	30 minutes .....	13,765
Waiver from Annual Maintenance Fee (43 CFR part 3835, subpart A) Form 3830–2 and/or nonform data.	22,828	20 minutes .....	7,609
Annual FLPMA Documents (43 CFR part 3835, subpart C) Form 3830–4 .....	26,054	30 minutes .....	13,027
Deferring Assessment Work (43 CFR part 3836, subpart B) .....	5	1 hour .....	5
<b>Totals .....</b>	<b>136,338</b>	<b>.....</b>	<b>64,412</b>

**Renewal of Approved Information Collection****AGENCY:** Bureau of Land Management, Interior.**ACTION:** 60-Day notice and request for comments.

**SUMMARY:** In compliance with the Paperwork Reduction Act, the Bureau of Land Management (BLM) invites public comments on, and plans to request approval to continue, the collection of information that enables the BLM to manage Federal coal resources in accordance with applicable statutes. The Office of Management and Budget (OMB) has assigned control number 1004-0073 to this information collection.

**DATES:** Please submit comments on the proposed information collection by May 31, 2016.

**ADDRESSES:** Comments may be submitted by mail, fax, or electronic mail.

*Mail:* U.S. Department of the Interior, Bureau of Land Management, 1849 C Street NW., Room 2134LM, Attention: Jean Sonneman, Washington, DC 20240.

*Fax:* to Jean Sonneman at 202-245-0050.

*Electronic mail:* Jean\_Sonneman@blm.gov.

Please indicate "Attn: 1004-0073" regardless of the form of your comments.

**FOR FURTHER INFORMATION CONTACT:** Bill Radden-Lesage, at 202-912-7116. Persons who use a telecommunication device for the deaf may call the Federal Information Relay Service at 1-800-877-8339, to leave a message for Mr. Radden-Lesage.

**SUPPLEMENTARY INFORMATION:** OMB regulations at 5 CFR part 1320, which implement provisions of the Paperwork Reduction Act, 44 U.S.C. 3501-3521, require that interested members of the public and affected agencies be given an opportunity to comment on information collection and recordkeeping activities (see 5 CFR 1320.8 (d) and 1320.12(a)). This notice identifies an information collection that the BLM plans to submit to OMB for approval. The Paperwork Reduction Act provides that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond.

The BLM will request a 3-year term of approval for this information collection activity. Comments are invited on: (1) The need for the collection of information for the performance of the functions of the agency; (2) the accuracy of the agency's burden estimates; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the information collection burden on respondents, such as use of automated means of collection of the information. A summary of the public comments will accompany our submission of the information collection requests to OMB.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

The following information pertains to this request:

*Title:* Coal Management (43 CFR parts 3400 through 3480).

*OMB Control Number:* 1004-0073.

*Summary:* This collection enables the BLM to learn the extent and qualities of Federal coal resources; evaluate the environmental impacts of coal leasing and development; determine the qualifications of prospective lessees to acquire and hold Federal coal leases; and ensure lessee compliance with applicable statutes, regulations, and lease terms and conditions.

*Frequency of Collection:* On occasion.

*Forms:*

- 3440-1, Application and License to Mine Coal (Free Use); and

- 3400-12, Coal Lease.

*Description of Respondents:*

- Applicants for, and holders of, coal exploration licenses;

- Applicants/bidders for, and holders of, coal leases;

- Applicants for, and holders of, licenses to mine coal; and

- Surface owners and State and tribal governments whose lands overlie coal deposits.

*Estimated Annual Responses:* 2,159.

*Estimated Annual Burden Hours:* 39,809.

*Estimated Annual Non-Hour Costs:* \$625,883 in document processing fees.

**SUPPLEMENTARY INFORMATION:** OMB regulations at 5 CFR part 1320, which implement provisions of the Paperwork Reduction Act, 44 U.S.C. 3501-3521, require that interested members of the public and affected agencies be given an opportunity to comment on information collection and recordkeeping activities (see 5 CFR 1320.8 (d) and 1320.12(a)). This notice identifies an information collection that the BLM plans to submit to OMB for approval. The Paperwork Reduction Act provides that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of

information, you are not obligated to respond.

The BLM will request a 3-year term of approval for this information collection activity. Comments are invited on: (1) The need for the collection of information for the performance of the functions of the agency; (2) the accuracy of the agency's burden estimates; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the information collection burden on respondents, such as use of automated means of collection of the information. A summary of the public comments will accompany our submission of the information collection requests to OMB.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we

cannot guarantee that we will be able to do so.

The following information pertains to this request:

**Title:** Free Use Application and Permit for Vegetative or Mineral Materials (43 CFR parts 3600, 3620, and 5510).

**OMB Control Number:** 1004-0001.

**Summary:** The Bureau of Land Management (BLM) collects information from respondents for free use permits for vegetative or mineral materials in order to: (1) Determine whether the applicant is eligible for free use, (2) Determine whether the vegetative or mineral materials at issue qualify for free use; (3) Determine whether free use is consistent with pertinent land use plans and authorities; and (4) Monitor the authorized removal and uses of vegetative and mineral materials to ensure sustainable resource management and verify that the actual use is consistent with the authorization. The BLM seeks approval to continue to use one form for vegetative materials,

and different forms for mineral materials.

**Frequency of Collection:** On occasion.  
**Forms:**

- 3604-1a, Free Use Permit Application for Mineral Materials;
- 3604-1b, Free Use Permit for Mineral Materials; and
- 5510-1, Free Use Application and Permit for Vegetative Materials.

**Description of Respondents:** Individuals seeking authorization for free use of mineral or vegetative materials.

**Estimated Annual Responses:**

- 160 mineral materials applications; and
- 100 vegetative material applications.

**Estimated Annual Burden Hours:**

- 120 burden hours for mineral materials;
- 75 burden hours for vegetative materials.

**Estimated Annual Non-Hour Costs:** None.

The estimated annual burdens of this collection are itemized below:

Type of response	Number of responses	Hours per response	Total hours (Column B × Column C)
A	B	C	D
3604-1a, Free Use Permit Application for Mineral Materials and 3604-1b, Free Use Permit for Mineral Materials .....	160	0.75	120

**Notice of Availability and Request for Comments on Draft Director's Order #21 Concerning National Park Service Policies and Procedures Governing Philanthropic Partnerships**

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice of availability.

**SUMMARY:** The National Park Service (NPS), under its authority at 54 U.S.C. 100101(a) *et seq.*, has prepared a new, revised Director's Order setting forth the policies and procedures that guide NPS philanthropic partnerships to reflect the

evolving nature of this topic and updated terms and practices used by today's growing field of philanthropy and fundraising professionals. Once adopted, the policies and procedures will supersede and replace the policies and procedures issued in July 2008.

**DATES:** Written comments will be accepted until May 16, 2016.

**ADDRESSES:** Draft Director's Order #21 is available online at: <http://parkplanning.nps.gov/DO-21>, where readers may submit comments electronically.

**FOR FURTHER INFORMATION CONTACT:** Reginald Chapple, Division Chief, Office of Partnerships & Philanthropic Stewardship, National Park Service, at [reginald\\_chapple@nps.gov](mailto:reginald_chapple@nps.gov), or by phone at 202-354-2112.

**SUPPLEMENTARY INFORMATION:** The NPS is updating its current system of internal written policy guidance. When these updated documents contain new policies or internal procedural requirements that may affect parties outside the NPS, the NPS, as a matter of

policy, makes them available for public review and comment before adopting them.

After public review and comment, the NPS will issue a new, revised Director's Order #21 and accompanying reference manual. Director's Order #21 covers topics such as criteria for reviewing, accepting, and recognizing donations; establishing roles and responsibilities for NPS employees who work with the philanthropic sector; and identifying agreements for fundraising and sponsorship activities.

**Public Availability of Comments:** Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: March 8, 2016.

PPWOCRADN0-PCU00RP14.R50000]

#### Notice of Inventory Completion: University of South Alabama, Center for Archaeological Studies, Mobile, AL

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice.

**SUMMARY:** The University of South Alabama, Center for Archaeological Studies, has completed an inventory of human remains, in consultation with the appropriate Indian tribes or Native Hawaiian organizations, and has determined that there is no cultural affiliation between the human remains and any present-day Indian tribes or Native Hawaiian organizations. Representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written request to the University of South Alabama, Center for Archaeological Studies. If no additional requestors come forward, transfer of control of the human remains to the Indian tribes or Native Hawaiian organizations stated in this notice may proceed.

**DATES:** Representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written request with information in support of the request to the University of South Alabama, Center for Archaeological Studies at the address in this notice by April 29, 2016.

**ADDRESSES:** Gregory A. Waselkov, Director, Center for Archaeological Studies, University of South Alabama, 6052 USA Drive South, Mobile, AL 36688, telephone (251) 460-6911, email [gwaselkov@southalabama.edu](mailto:gwaselkov@southalabama.edu).

**SUPPLEMENTARY INFORMATION:** Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3003, of the completion of an inventory of human remains under the control of the University of South Alabama, Center for Archaeological Studies, Mobile, AL. The human remains were removed from

sites 1FR310 and 1FR323, Franklin County, AL.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3) and 43 CFR 10.11(d). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the Native American human remains. The National Park Service is not responsible for the determinations in this notice.

#### Consultation

A detailed assessment of the human remains was made by the University of South Alabama, Center for Archaeological Studies professional staff in consultation with representatives of Absentee-Shawnee Tribe of Indians of Oklahoma; Alabama-Coushatta Tribe of Texas (previously listed as the Alabama-Coushatta Tribes of Texas); Alabama-Quassarte Tribal Town; Cherokee Nation; Chitimacha Tribe of Louisiana; Coushatta Tribe of Louisiana; Eastern Band of Cherokee Indians; Eastern Shawnee Tribe of Oklahoma; Jena Band of Choctaw Indians; Kialegee Tribal Town; Mississippi Band of Choctaw Indians; Shawnee Tribe; The Chickasaw Nation; The Choctaw Nation of Oklahoma; The Muscogee (Creek) Nation; Poarch Band of Creeks (previously listed as the Poarch Band of Creek Indians of Alabama); The Quapaw Tribe of Indians; The Seminole Nation of Oklahoma; Thlopthlocco Tribal Town; Tunica-Biloxi Indian Tribe; and the United Keetoowah Band of Cherokee Indians in Oklahoma.

#### History and Description of the Remains

Around 1969, human remains representing, at minimum, one adult individual were removed from site 1FR310 in Franklin County, AL. This small collection may have been picked up from the site surface. All that is known regarding the circumstances surrounding the removal of these human remains is that an archeologist, Noel Read Stowe, wrote his master's thesis on this and other sites in Franklin County, AL, and donated the human remains to the University of South Alabama around 1970. No known individuals were identified. No associated funerary objects are present.

Around 1969, human remains representing, at minimum, one adult individual were removed from site 1FR323 in Franklin County, AL. This small collection may have been picked up from the site surface. All that is known regarding the circumstances surrounding the removal of these

remains is that an archeologist, Noel Read Stowe, wrote his master's thesis on this site and other sites in Franklin County, AL, donated the human remains to the University of South Alabama around 1970. No known individuals were identified. No associated funerary objects are present.

#### Determinations Made by the University of South Alabama, Center for Archaeological Studies

Officials of the University of South Alabama, Center for Archaeological Studies have determined that:

- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice are Native American based on the context of their recovery from sites 1FR310 and 1FR323.
- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- Pursuant to 25 U.S.C. 3001(2), a relationship of shared group identity cannot be reasonably traced between the Native American human remains and any present-day Indian tribe.
- Treaties, Acts of Congress, or Executive Orders indicate that the land from which the Native American human remains were removed is the aboriginal land of The Chickasaw Nation.
- Pursuant to 43 CFR 10.11(c)(1), the disposition of the human remains may be to The Chickasaw Nation.

#### Additional Requestors and Disposition

Representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written request with information in support of the request to Gregory A. Waselkov, Director, Center for Archaeological Studies, University of South Alabama, 6052 USA Drive South, Mobile, AL 36688, telephone (251) 460-6911, email [gwaselkov@southalabama.edu](mailto:gwaselkov@southalabama.edu), by April 29, 2016. After that date, if no additional requestors have come forward, transfer of control of the human remains to The Chickasaw Nation may proceed.

The University of South Alabama, Center for Archaeological Studies is responsible for notifying Absentee-Shawnee Tribe of Indians of Oklahoma; Alabama-Coushatta Tribe of Texas (previously listed as the Alabama-Coushatta Tribes of Texas); Alabama-Quassarte Tribal Town; Cherokee Nation; Chitimacha Tribe of Louisiana; Coushatta Tribe of Louisiana; Eastern Band of Cherokee Indians; Eastern Shawnee Tribe of Oklahoma; Jena Band

of Choctaw Indians; Kialegee Tribal Town; Mississippi Band of Choctaw Indians; Shawnee Tribe; The Chickasaw Nation; The Choctaw Nation of Oklahoma; The Muscogee (Creek) Nation; Poarch Band of Creeks (previously listed as the Poarch Band of Creek Indians of Alabama); The Quapaw Tribe of Indians; The Seminole Nation of Oklahoma; Thlopthlocco Tribal Town; Tunica-Biloxi Indian Tribe; and the United Keetoowah Band of Cherokee Indians in Oklahoma that this notice has been published.

Dated: February 29, 2016.

## DEPARTMENT OF THE INTERIOR

### National Park Service

[NPS-WASO-NRSS-EQD-SSB-20715; PPWONRADE3, PPMRSNR1Y.NM000]

#### Information Collection Request Sent to the Office of Management and Budget (OMB) for Approval; National Park Service Institutional Animal Care and Use Committee (NPS IACUC) Amendment, Annual Review, Exhibition, and General Submission Forms

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice; request for comments.

**SUMMARY:** We (National Park Service, NPS) are asking the Office of Management and Budget (OMB) to approve the Information Collection Request (IC) described below. This collection is set to expire on March 31, 2016. The NPS is requesting approval of a previously approved collection and two additional new forms that will be used by the Institutional Animal Care and Use Committee (NPS IACUC/the Committee) to collect information from researchers, and to ensure compliance with the Animal Welfare Act (AWA), its regulations (AWAR) and standards, and the Interagency Research Animal Committee (IRAC) principles, for projects involving the use of vertebrate animals in research, teaching, and training. As required by the Paperwork Reduction Act of 1995 and as part of our continuing efforts to reduce paperwork and respondent burden, we invite the general public and other federal agencies to take this opportunity to comment on this IC. We may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number.

**DATES:** To ensure that your comments on this ICR are considered, we must receive them on or before April 29, 2016.

**ADDRESSES:** Please direct all written comments on this ICR directly to the Office of Management and Budget (OMB) Office of Information and Regulatory Affairs, Attention: Desk Officer for the Department of the Interior, to *OIRA\_Submission@omb.eop.gov* (email) or 202-395-5806 (fax); and identify your submission as 1024-0265 IACUC. Also send a copy to Phadrea Ponds, Information Collection Coordinator, National Park Service, 1201 Oakridge Drive, Fort Collins, CO 80525 (mail); or *phadrea\_ponds@nps.gov* (email). Please reference Information Collection 1024-0265 in your email.

#### FOR FURTHER INFORMATION CONTACT:

Aaron Smith, NPS IACUC Administrator by mail at Biological Resource Division, 1201 Oakridge Drive, Suite 200, Fort Collins, CO 80525 or *aaron\_d\_smith@nps.gov* (email). You may also contact Tracy Thompson at *tracy\_thompson@nps.gov* (email). You may also access this ICR at *www.reginfo.gov* by using the OMB Control Number (1024-0265).

*I. Abstract:* The NPS is requesting to renew a previously approved collection (OMB Control Number: 1024-0265) and have two additional forms approved. All research, teaching, and training projects involving vertebrate animals taking place on NPS territories must be approved by the NPS IACUC prior to their commencement. Principal Investigators (PI) are required to submit the completed General Submission, Annual Renewal, Amendment, BioBlitz/Field Study, or Concurrence Submission forms as required for approval to the NPS IACUC Office.

Under the provisions of the Animal Welfare Act, Interagency Research Animal Committee's U.S. Government Principles, and The *NPS Organic Act*, 16 U.S.C. a-1, individuals or agencies proposing research, teaching, or training activities involving vertebrate animals must have IACUC review and oversight of these activities. This collection will continue to gather information on these activities that will be conducted in NPS units for the NPS IACUC to meet these requirements.

#### *II. Data:*

*OMB Control Number:* 1024-0265.

*Title:* National Park Service Institutional Animal Care and Use Committee (NPS IACUC) Amendment, Annual Review, Exhibition, and General Submission Forms.

*Form Numbers:* 10-1301, General Submission Form; 10-1301A, Amendment Form; 10-1302, Annual Review Form; 10-1303, Concurrence Form; and 10-1304, BioBlitz Field Study Form.

*Type of Request:* Revision of a currently approved collection.

*Affected Public:* State and local governments; private businesses.

*Respondent Obligation:* Mandatory.

*Frequency of Collection:* One time; on occasion

*Estimated Number of Responses:* 230.

*Estimated Annual Burden Hours:* 140 hours.

*Estimated Annual Reporting and Recordkeeping "Non-Hour Cost":* None.

*III. Request for Comments:* On January 13, 2016, we published a Federal Register notice (81 FR 1642) announcing that we would submit this IC to OMB for approval. Public comments were solicited for 60 days ending March 14, 2016. We did not receive any comments in response to that notice.

We again invite comments concerning this information collection on:

- Whether or not the collection of information is in accordance with the regulatory requirements;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

A Federal agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: March 25, 2016.

**Notice of Inventory Completion:  
Kamehameha Schools and University  
of Hawai'i at Hilo, Hilo, HI**

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice.

**SUMMARY:** The Kamehameha Schools and University of Hawai'i at Hilo have completed an inventory of human remains, in consultation with the appropriate Indian tribes or Native Hawaiian organizations, and have determined that there is a cultural affiliation between the human remains and present-day Indian tribes or Native Hawaiian organizations. Lineal descendants or representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written request to the Kamehameha Schools. If no additional requestors come forward, transfer of control of the human remains to the lineal descendants, Indian tribes, or Native Hawaiian organizations stated in this notice may proceed.

**DATES:** Lineal descendants or representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written request with information in support of the request to the Kamehameha Schools, at the address in this notice by April 29, 2016.

**ADDRESSES:** Jason Jeremiah, Senior Manager, Cultural Resources, Community Engagement & Resources Group, Kamehameha Schools, 567 South King Street, Suite 200, Honolulu, HI 96813, telephone (808) 523-6200.

**SUPPLEMENTARY INFORMATION:** Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3003, of the completion of an inventory of human remains under the control of the Kamehameha Schools and in the physical custody of the University of Hawai'i at Hilo. The human remains were removed from Pakini Iki, Ka'u District, Hawai'i Island, Ka'u District, Hawai'i Island.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3). The determinations in this notice are the sole responsibility of

the museum, institution, or Federal agency that has control of the Native American human remains. The National Park Service is not responsible for the determinations in this notice.

**Consultation**

A detailed assessment of the human remains was made by the professional staff of Kamehameha Schools and University of Hawai'i at Hilo, in consultation with representatives of Aha Moku Advisory Committee; Department of Hawaiian Homelands; the Hawaiian Civic Club of Ka'u; the Hawai'i Island Burial Council; Hui Malama i Nā Kūpuna o Hawai'i Nei; the Kamehameha Schools (Landowners and NHO); and the Office of Hawaiian Affairs.

**History and Description of the Remains**

Between 1955 and 1957, human remains representing, at minimum, two individuals were removed from Waiahukini Rockshelter Site in Ka'u, Hawai'i Island, HI, which are on lands belonging to Kamehameha Schools (formerly Bishop Estate Trust). Excavations were under the direction of Professor William Bonk at the University of Hawai'i at Hilo (then called Hilo College) and the Bishop Museum. Three human teeth were identified in bags of midden deposit in the summer of 2014, which had been stored with the other excavated material from the site at University of Hawai'i at Hilo until the present time. No known individuals were identified. No funerary objects are present.

Although some historical era artifacts were identified in the uppermost layers of Waiahukini, the human remains were identified in midden deposits dated to the pre-Contact era.

These collections remain in the physical custody of University of Hawai'i at Hilo although control of the collections is with Kamehameha Schools.

**Determinations Made by the  
Kamehameha Schools and University of  
Hawai'i at Hilo**

Officials of the Kamehameha Schools and University of Hawai'i at Hilo have determined that:

- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- Pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the Native American human remains and the Aha Moku Advisory Committee (Moku o Keawe), Hawaiian Civic Club of Ka'u, Kamehameha

Schools, and the Office of Hawaiian Affairs.

**Additional Requestors and Disposition**

Lineal descendants or representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written request with information in support of the request to Jason Jeremiah, Senior Manager, Cultural Resources, Community Engagement & Resources Group, Kamehameha Schools, 567 South King Street, Suite 200, Honolulu, HI 96813, telephone (808) 523-6200, by April 29, 2016. After that date, if no additional requestors have come forward, transfer of control of the human remains to the Aha Moku Advisory Committee (Moku o Keawe), the Hawaiian Civic Club of Ka'u, Kamehameha Schools, and the Office of Hawaiian Affairs may proceed.

The Kamehameha Schools and University of Hawai'i at Hilo is responsible for notifying the Aha Moku Advisory Committee; Department of Hawaiian Homelands; the Hawaiian Civic Club of Ka'u Hawai'i Island Burial Council; Hui Malama i Nā Kūpuna o Hawai'i Nei; Kamehameha Schools (Landowners and NHO); and the Office of Hawaiian Affairs that this notice has been published.

Dated: February 25, 2016.

**Notice of Inventory Completion:  
Sheriff's Office, Berrien County, Saint  
Joseph, MI**

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice.

**SUMMARY:** The Sheriff's Office of Berrien County, MI has completed an inventory of human remains, in consultation with the appropriate Indian tribes or Native Hawaiian organizations, and has determined that there is no cultural affiliation between the human remains and any present-day Indian tribes or Native Hawaiian organizations. Representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written

request to the Berrien County Sheriff's Office. If no additional requestors come forward, transfer of control of the human remains to the Indian tribes or Native Hawaiian organizations stated in this notice may proceed.

**DATES:** Representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written request with information in support of the request to the Berrien County Sheriff's Office at the address in this notice by April 29, 2016.

**ADDRESSES:** Berrien County Sheriff's Office, Attention Chief Deputy Michael Bradley, 919 Port Street, Saint Joseph, MI 49085, email [mbradley@berriencounty.org](mailto:mbradley@berriencounty.org).

**SUPPLEMENTARY INFORMATION:** Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3003, of the completion of an inventory of human remains under the control of the Berrien County Sheriff's Office. The human remains were removed from Galien River in New Buffalo, MI.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3) and 43 CFR 10.11(d). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the Native American human remains. The National Park Service is not responsible for the determinations in this notice.

*Consultation:* A detailed assessment of the human remains was made by the Berrien County Sheriff's office and the Michigan State University Anthropology Department professional staff in consultation with representatives of the Absentee-Shawnee Tribe of Indians of Oklahoma; Bad River Band of the Lake Superior Tribe of Chippewa Indians of the Bad River Reservation, Wisconsin; Bay Mills Indian Community, Michigan; Bois Forte Band (Nett Lake) of the Minnesota Chippewa Tribe, Minnesota; Chippewa-Cree Indians of the Rocky Boy's Reservation, Montana (previously listed as the Chippewa-Cree Indians of the Rocky Boy's Reservation, Montana); Citizen Potawatomi Nation, Oklahoma; Delaware Nation, Oklahoma; Eastern Shawnee Tribe of Oklahoma; Fond du Lac Band of the Minnesota Chippewa Tribe, Minnesota; Forest County Potawatomi Community, Wisconsin; Grand Portage Band of the Minnesota Chippewa Tribe, Minnesota; Grand Traverse Band of the Ottawa and the Chippewa Indians, Michigan; Hannahville Indian Community,

Michigan; Ho-Chunk Nation of Wisconsin; Keweenaw Bay Indian Community, Michigan; Kickapoo Tribe of Indians of the Kickapoo Reservation in Kansas; Kickapoo Tribe of Oklahoma; Lac Courte Oreilles Band of Lake Superior Chippewa Indians of Wisconsin; Lac Vieux Desert Band of Lake Superior Chippewa Indians of Michigan; Leech Lake Band of the Minnesota Chippewa Tribe, Minnesota; Little River Band of Ottawa Indians, Michigan; Little Traverse Bay Bands of Odawa Indians, Michigan; Match-e-be-nash-she-wish Band of Pottowatomi Indians of Michigan; Miami Tribe of Oklahoma; Mille Lacs Band of the Minnesota Chippewa Tribe, Minnesota; Nottawaseppi Huron Band of the Potawatomi, Michigan (previously listed as the Huron Potawatomi, Inc.); Ottawa Tribe of Oklahoma; Peoria Tribe of Indians of Oklahoma; Pokagon Band of Potawatomi Indians, Michigan and Indiana; Prairie Band of Potawatomi Nation (previously listed as the Prairie Band of Potawatomi Nation, Kansas); Red Cliff Band of Lake Superior Chippewa Indians of Wisconsin; Red Lake Band of Chippewa Indians, Minnesota; Sac and Fox Tribe of the Mississippi in Iowa; Sac and Fox Nation of Missouri in Kansas and Nebraska, Sac and Fox Nation, Oklahoma; Saginaw Chippewa Indian Tribe of Michigan; Sault Ste. Marie Tribe of Chippewa Indians, Michigan; Shawnee Tribe; Sokaogon Chippewa Community, Wisconsin; St. Croix Chippewa Indians of Wisconsin; Turtle Mountain Band of Chippewa Indians of North Dakota; White Earth Band of Minnesota Chippewa Tribe, Minnesota; Winnebago Tribe of Nebraska; and the Wyandotte Nation (hereafter The Consulted Tribes).

#### History and Description of the Remains

In April 2011, human remains representing, at minimum, one individual were removed from Galien River in Berrien County, MI. In early April of 2011 a minor was fishing in the Galien River in new Buffalo Township, MI. After casting into the center of the river the youth reeled in what appeared to be a large bone. The youth took the bone to his high school science teacher who contacted the Berrien County Sheriff's Office.

The Sheriff's Office's Dive Team responded by searching a section of the river approximately eight feet square, where they found additional skeletonized human remains. All of the human remains, including the original bone found by the minor, were transported to the Anthropology Department at Michigan State University and examined by Dr. Norman

Sauer. The human remains were found to be "adult prehistoric Native American" of indeterminate gender, and returned to the Berrien County Sheriff's Office. No known individuals were identified. No associated funerary objects are present.

At the time of the excavation and removal of these human remains, the land from which the remains were removed was not the tribal land of any Indian tribe or Native Hawaiian organization.

#### Determinations Made by the Berrien County Sheriff's Office

Officials of the Berrien County Sheriff's Office have determined that:

- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice are Native American based on osteological evidence.
- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- Pursuant to 25 U.S.C. 3001(2), a relationship of shared group identity cannot be reasonably traced between the Native American human remains and any present-day Indian tribe.
- According to final judgments of the Indian Claims Commission or the Court of Federal Claims, the land from which the Native American human remains were removed is the aboriginal land of The Consulted Tribes
- Pursuant to 43 CFR 10.11(c)(2)(i), the disposition of the human remains may be to The Consulted Tribes.

#### Additional Requestors and Disposition

Representatives of any Indian tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains should submit a written request with information in support of the request to the Berrien County Sheriff's Office, Attention Chief Deputy Michael Bradley, 919 Port Street, Saint Joseph, MI 49085, email [mbradley@berriencounty.org](mailto:mbradley@berriencounty.org) by April 29, 2016.

After that date, if no additional requestors have come forward, transfer of control of the human remains to The Consulted Tribes may proceed.

The Berrien County Sheriff's Office is responsible for informing The Consulted Tribes that this notice has been published:

Dated: February 18, 2016.

**BILLING CODE 4312-50-P**

## DEPARTMENT OF JUSTICE

## Drug Enforcement Administration

## Avi Weisfogel, D.D.S.; Decision and Order

On November 2, 2015, the Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration (DEA), issued an Order to Show Cause to Avi Weisfogel, D.D.S. (Registrant), of Old Bridge, New Jersey. GX 1, at 1. The Show Cause Order proposed the revocation of Registrant's Certificate of Registration BW6474580, pursuant to which he is authorized to dispense controlled substances in schedules II through V as a practitioner, the denial of any application to renew or modify the registration, and the denial of any application for any other DEA registration, on the ground that he "do[es] not have authority to handle controlled substances in New Jersey, the [S]tate in which he is registered with the" Agency. *Id.* (citing 21 U.S.C. 823(f) and 824(a)(3)).

More specifically, the Show Cause Order alleged that Registrant entered into a consent order with the New Jersey State Board of Dentistry (Board), pursuant to which the Board revoked his license to practice dentistry effective November 13, 2014. *Id.* The Show Cause Order thus alleged that Registrant is "without authority to handle controlled substances in New Jersey, the State in which [he is] registered." *Id.* The Order thus advised Registrant that his registration was subject to revocation "based upon [his] lack of authority to handle controlled substances in the State of New Jersey." *Id.* (citing 21 U.S.C. 802(21), 823(f) and 824(a)(3)).<sup>1</sup>

Having determined that Registrant was no longer practicing at his registered location, a Diversion Investigator obtained his residence address and initially attempted to serve the Show Cause Order on him by Certified Mail, Return Receipt Requested, which was addressed to him at his residence. GX 6, at 1–2 (Declaration of DI). However, the mailing was returned unclaimed. GX 3, at 1. Subsequently, on December 4, 2015, the DI mailed the Show Cause Order to Registrant's residence by regular first class mail. GX 6, at 2. The DI averred that the Order was not returned as undeliverable. *Id.*

In its Request for Final Agency Action, the Government advises that

neither Registrant, nor anyone representing him, has requested a hearing or sent any other correspondence to DEA. Request for Final Agency Action, at 6. Accordingly, the Government filed its Request for Final Agency Action seeking the revocation of Registrant's Registration along with the Investigative Record to support its Request. *See* 21 CFR 1301.43(d) & (e).

Based on the Government's submission, I conclude that Registrant has received constitutionally adequate notice of the proceeding. *See Jones v. Flowers*, 547 U.S. 220 (2006). I find that since the date of service of the Order to Show Cause, 30 days have now passed, and neither Registrant, nor anyone purporting to represent him, has either requested a hearing on the allegations or submitted a written statement in lieu of a hearing. *See* 21 CFR 1301.43(a) & (c). Accordingly, I find that Registrant has waived his right to a hearing or to submit a written statement. *Id.* § 1301.43(c) & (d). I therefore issue this Decision and Final Order based on the Investigative Record submitted by the Government. *Id.* § 1301.43(e). I make the following findings of fact.

**Findings**

Registrant is the holder of DEA Certificate of Registration BW6474580, pursuant to which he is authorized to dispense controlled substances in schedules II through V, at the registered address of 30 State Highway 18, Old Bridge, NJ. GX 2. The registration does not expire until May 31, 2017. *Id.*

Registrant previously held a dental license issued by the New Jersey State Board of Dentistry. GX 5, at 1. Registrant also previously held a New Jersey Controlled Dangerous Substance Registration (CDS). However, on November 13, 2014, Registrant entered into a Consent Order with the Board of Dentistry in which he agreed that his dental license "is hereby permanently retired [and this] is to be deemed a revocation of licensure." GX 5, at 2. As for his New Jersey CDS Registration, it became inactive on the same date that Registrant entered into the Consent Order with the Board and has since expired. According to the online records of the State of New Jersey, as of the date of this Order, Registrant's New Jersey Dentist license remains revoked. *See also* <https://newjersey.mylicense.com/verification>.

**Discussion**

Pursuant to 21 U.S.C. 824(a)(3), the Attorney General is authorized to suspend or revoke a registration issued under section 823, "upon a finding that

the Registrant . . . has had his State license . . . suspended [or] revoked . . . by competent State authority and is no longer authorized by State law to engage in the . . . dispensing of controlled substances." Moreover, DEA has repeatedly held that the possession of authority to dispense controlled substances under the laws of the State in which a practitioner engages in professional practice is a fundamental condition for obtaining and maintaining a practitioner's registration. *James L. Hooper*, 76 FR 71371 (2011), *pet. for rev. denied*, *Hooper v. Holder*, 481 Fed. Appx. 826 (4th Cir. 2012).

This rule derives from the text of two provisions of the CSA. First, Congress defined "the term 'practitioner' [to] mean[ ] a . . . physician . . . or other person licensed, registered or otherwise permitted, by . . . the jurisdiction in which he practices . . . to distribute, dispense, [or] administer . . . a controlled substance in the course of professional practice." 21 U.S.C. 802(21). Second, in setting the requirements for obtaining a practitioner's registration, Congress directed that "[t]he Attorney General shall register practitioners . . . if the applicant is authorized to dispense . . . controlled substances under the laws of the State in which he practices." 21 U.S.C. 823(f). Because Congress has clearly mandated that a practitioner possess state authority in order to be deemed a practitioner under the Act, DEA has held repeatedly that revocation of a practitioner's registration is the appropriate sanction whenever he is no longer authorized to dispense controlled substances under the laws of the State in which he practices his profession. *See, e.g., Calvin Ramsey*, 76 FR 20034, 20036 (2011); *Sheran Arden Yeates, M.D.*, 71 FR 39130, 39131 (2006); *Dominick A. Ricci*, 58 FR 51104, 51105 (1993); *Bobby Watts*, 53 FR 11919, 11920 (1988).

Because Registrant no longer holds authority to dispense controlled substances in New Jersey, the State in which he is registered with the Agency, I will order that his registration be revoked and that any pending application to renew or modify his registration be denied.

**Order**

Pursuant to the authority vested in me by 21 U.S.C. 823(f) and 824(a), as well as 21 CFR 0.100(b), I order that DEA Certificate of Registration BW6474580, issued to Avi Weisfogel, D.D.S., be, and it hereby is, revoked. I further order that any pending application of Avi Weisfogel, D.D.S., to renew or modify his

<sup>1</sup> The Show Cause Order also notified Registrant of his right to request a hearing on the allegations or to submit a written statement in lieu of a hearing, the procedure for electing either option, and the consequence for failing to elect either option. GX 1, at 2 (citing 21 CFR 1301.43).

registration, be, and it hereby is, denied. This Order is effective April 29, 2016.

Dated: March 21, 2016.

**Chuck Rosenberg,**  
Acting Administrator.

## OFFICE OF MANAGEMENT AND BUDGET

### Request for Comments on Category Management Policy 16-2: Improving the Acquisition and Management of Common Information Technology: Mobile Devices and Services

**AGENCY:** Office of Management and Budget.

**ACTION:** Notice of public comment period.

**SUMMARY:** The Office of Management and Budget (OMB) is seeking public comment on a draft memorandum titled, “*Category Management Policy 16-2: Improving the Acquisition and Management of Common Information Technology: Mobile Devices and Services.*”

**DATES:** The 30-day public comment period on the draft memorandum begins on March 30, 2016.

**ADDRESSES:** Interested parties should provide comments at the following link: <https://mobile.cio.gov/>.

**FOR FURTHER INFORMATION CONTACT:** Ms. Meredith Romley at *Meredith.B.Romley@omb.eop.gov* or *OFCIO@omb.eop.gov*.

**SUPPLEMENTARY INFORMATION:** The Office of Management and Budget (OMB) and Office of Federal Procurement Policy are jointly proposing the third IT Category Management policy memorandum. This memo is required under the Federal Information Technology Oversight and Reform Act (FITARA). The memo seeks to improve the acquisition and management of mobile devices and services through consolidation of contracts, mandated use of one or more government-wide best-in-class contract solutions, improved demand management, and increased accountability of agency officials. Authority for this notice is granted

under the Clinger-Cohen Act, 40 U.S.C. Subtitle III.

**Tony Scott,**  
Administrator, Office of the Federal Chief Information Officer.

Anne Rung,  
Administrator, Office of Federal Procurement Policy.

## NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

### Information Security Oversight Office

[NARA-2016-023]

### National Industrial Security Program Policy Advisory Committee (NISPPAC)

**AGENCY:** National Archives and Records Administration (NARA).

**ACTION:** Notice of Advisory Committee Meeting.

**SUMMARY:** In accordance with the Federal Advisory Committee Act (5 U.S.C. app 2) and implementing regulation 41 CFR 101-6, NARA announces the following committee meeting.

**DATES:** The meeting will be held on April 14, 2016, from 10:00 a.m. to 12:00 p.m. EDT.

**ADDRESSES:** National Archives and Records Administration, 700 Pennsylvania Avenue NW., Archivist's Reception Room, Room 105, Washington, DC 20408.

**FOR FURTHER INFORMATION CONTACT:** Robert Tringali, Program Analyst, by mail at ISOO, National Archives Building; 700 Pennsylvania Avenue NW., Washington, DC 20408, by telephone number at (202) 357-5335, or by email at *robert.tringali@nara.gov*. Contact ISOO at *ISOO@nara.gov* and the NISPPAC at *NISPPAC@nara.gov*.

**SUPPLEMENTARY INFORMATION:** The purpose of this meeting is to discuss National Industrial Security Program policy matters. The meeting will be open to the public. However, due to space limitations and access procedures, you must submit the name and telephone number of individuals planning to attend to the Information Security Oversight Office (ISOO) no later than Monday, April 11, 2016. ISOO will provide additional instructions for accessing the meeting's location.

Dated: March 23, 2016.

## NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

### Office of Government Information Services

[NARA-2016-024]

### Freedom of Information Act (FOIA) Advisory Committee; Meeting

**AGENCY:** National Archives and Records Administration (NARA).

**ACTION:** Notice of Federal Advisory Committee Meeting.

**SUMMARY:** In accordance with the Federal Advisory Committee Act (5 U.S.C. App) and the second United States Open Government National Action Plan (NAP) released on December 5, 2013, NARA announces an upcoming Freedom of Information Act (FOIA) Advisory Committee meeting.

**DATES:** The meeting will be on April 19, 2016, from 10:00 a.m. to 1:00 p.m. EDT. You must register for the meeting by 5:00 p.m. EDT on April 18, 2016.

**Location:** National Archives and Records Administration (NARA); 700 Pennsylvania Avenue NW.; Archivist's Reception Room (Room 105); Washington, DC 20408.

**FOR FURTHER INFORMATION CONTACT:** Christa Lemelin, Designated Federal Officer for this committee, by mail at National Archives and Records Administration; Office of Government Information Services; 8601 Adelphi Road—OGIS; College Park, MD 20740-6001, by telephone at 202-741-5773, or by email at *Christa.Lemelin@nara.gov*.

**SUPPLEMENTARY INFORMATION:** *Agenda and meeting materials:* You may find all meeting materials at <https://ogis.archives.gov/foia-advisory-committee/meetings.htm>. The purpose of this meeting is to discuss the FOIA issues on which the Committee is focusing its efforts: Oversight and accountability, proactive disclosures, and fees. The meeting will include subcommittee status reports and discussion of proposed recommendations to make to the Archivist of the United States. Guest speaker Margaret B. Kwoka, Assistant Professor at the University of Denver Sturm College Of Law, will present her academic study of the commercial use of FOIA at six Federal agencies, and proactive disclosures as a public benefit

and potential cost-saving measure for agencies.

*Procedures:* The meeting is open to the public. Due to space limitations and access procedures, you must register in advance if you wish to attend the meeting. You will also go through security screening when you enter the building. Seating in the meeting room is limited and will be available on a first-come, first-served basis. Registration for the meeting will go live via Eventbrite on April 4, 2016 at 10:00 a.m. EDT. To register for the meeting, please do so at this Eventbrite link: <http://www.eventbrite.com/e/freedom-of-information-act-foia-advisory-committee-meeting-registration-22044174720>. Members of the media who wish to register, those who are unable to register online, and those who require special accommodations, should contact Christa Lemelin at the phone number, mailing address, or email address listed above.

Dated: March 23, 2016.

**Patrice Little Murray,**

*Committee Management Officer.*

## NATIONAL CREDIT UNION ADMINISTRATION

### Agency Information Collection Activities: Proposed Collection; Comment Request; Investment and Deposit Activities

**AGENCY:** National Credit Union Administration (NCUA).

**ACTION:** Notice and request for comment.

**SUMMARY:** NCUA, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to comment on a reinstatement of a previously approved collection, as required by the Paperwork Reduction Act of 1995 (Pub. L. 104-13, 44 U.S.C. Chapter 35).

**DATES:** Written comments should be received on or before May 31, 2016 to be assured consideration.

**ADDRESSES:** Interested persons are invited to submit written comments on the information collection to Dawn Wolfgang, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314-3428; Fax No. 703-519-8579; or Email at [PRAComments@NCUA.gov](mailto:PRAComments@NCUA.gov).

**FOR FURTHER INFORMATION CONTACT:** Requests for additional information should be directed to the address above.

**SUPPLEMENTARY INFORMATION:**

*OMB Number:* 3133-0133.

*Title:* Investment and Deposit Activities, 12 CFR part 703.

*Abstract:* The National Credit Union Administration (NCUA) Federal Credit Union Act, 12 U.S.C. 1757(7), 1757(8), 1757(15), lists securities, deposits, and other obligations in which a Federal Credit Union (FCU) may invest. The regulations related to these areas are contained in Part 703 and Section 721.3 of the NCUA Rules and Regulations. These regulations also set forth requirements related to maintaining an adequate investment program, including several required reporting areas.

The information collected is used by the NCUA to determine compliance with the appropriate sections of the NCUA Rules and Regulations and Federal Credit Union Act, which governs investment and deposit activities on the basis of safety and soundness concerns. It is used to determine the level of risk that exists within a credit union, the actions taken by the credit union to mitigate such risk, and helps prevent losses to federal credit unions and the National Credit Union Share Insurance Fund (NCUSIF).

*Type of Review:* Reinstatement with change of a previously approved collection.

*Affected Public:* Federal credit unions.

*Estimated No. of Respondents/Recordkeepers:* 3,899.

*Frequency of Response:* Upon occurrence of triggering action.

*Estimated Burden Hours per Response:* Avg. time per response for information collection requirements prescribed under Subpart A: 0.55; Subpart B: 6.96.

*Estimated Total Annual Burden Hours:* 211,935.

*Reason for Change:* The number of respondents have decreased (Subpart A) due to an adjustment in the number of FCUs, decreasing the total burden, and increases in the number of responses are attributed to adjustments to reflect actual program activity. Program changes are attributed to new information collection requirements prescribed by Subpart B.

*Request for Comments:* Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will become a matter of public record. The public is invited to submit comments concerning: (a) Whether the collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility;

(b) the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of the information on the respondents, including the use of automated collection techniques or other forms of information technology.

By Gerard Poliquin, Secretary of the Board, the National Credit Union Administration, on March 23, 2016.

Dated: March 24, 2016.

**Dawn D. Wolfgang,**

*NCUA PRA Clearance Officer.*

**BILLING CODE 7535-01-P**

## NUCLEAR REGULATORY COMMISSION

[NRC-2016-0068]

### Integrated Action Plan To Modernize Digital Instrumentation and Controls Regulatory Infrastructure

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Preliminary draft action plan; request for comment.

**SUMMARY:** The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment its preliminary draft action plan, "Integrated Action Plan to Modernize Digital Instrumentation and Controls Regulatory Infrastructure." This preliminary draft action plan outlines the strategy and implementation milestones the NRC staff has identified in order to modernize the NRC's digital instrumentation and controls (I&C) regulatory infrastructure.

**DATES:** Submit comments by April 24, 2016. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received before this date.

**ADDRESSES:** You may submit comments by any of the following methods (unless this document describes a different method for submitting comments on a specific subject):

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for Docket ID NRC-2016-0068. Address questions about NRC dockets to Carol Gallagher; telephone: 301-415-3463; email: [Carol.Gallagher@nrc.gov](mailto:Carol.Gallagher@nrc.gov). For technical questions, contact the individual listed in the **FOR FURTHER**

**INFORMATION CONTACT** section of this document.

- *Mail comments to:* Cindy Bladey, Office of Administration, Mail Stop: OWFN-12-H08, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001.

For additional direction on obtaining information and submitting comments, see “Obtaining Information and Submitting Comments” in the **SUPPLEMENTARY INFORMATION** section of this document.

**FOR FURTHER INFORMATION CONTACT:**

Todd Keene, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-415-1994; email: [Todd.Keene@nrc.gov](mailto:Todd.Keene@nrc.gov).

**SUPPLEMENTARY INFORMATION:**

**I. Obtaining Information and Submitting Comments**

*A. Obtaining Information*

Please refer to Docket ID NRC-2016-0068 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for Docket ID NRC-2016-0068.
- *NRC’s Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select “ADAMS Public Documents” and then select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to [pdr.resource@nrc.gov](mailto:pdr.resource@nrc.gov). The ADAMS accession number for each document referenced in this notice (if that document is available in ADAMS) is provided the first time that a document is referenced. The preliminary draft action plan is available in ADAMS under Accession No. ML16075A466.

- *NRC’s PDR:* You may examine and purchase copies of public documents at the NRC’s PDR, Room O1-F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

*B. Submitting Comments*

Please include Docket ID NRC-2016-0068 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission.

The NRC will post all comment submissions at <http://www.regulations.gov> as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

**II. Background**

The NRC is requesting public comments on a preliminary draft action plan in an effort to gain an understanding of stakeholder perspectives of the digital I&C regulatory challenges, priorities and potential solutions. The development of this action plan was directed by the Commission in SRM-15-0106 (February 25, 2016) (ADAMS Accession No. ML16056A614). In order to reach the widest audience, the action plan will be provided via email and posted on the NRC public Web site, as well as published in the **Federal Register**. Additionally, a public meeting on the preliminary draft action plan will be held on March 30, 2016, at NRC Headquarters. Additional information concerning the public meeting can be found on NRC’s Public Meeting Schedule Web page; <http://meetings.nrc.gov/pmns/mtg>.

The NRC staff has developed the preliminary draft action plan to provide a strategy to modernize the digital I&C regulatory infrastructure in order to improve the predictability and consistency of the process for licensing and oversight of industry stakeholders. Improvements and modernization of the NRC’s digital I&C regulatory processes will improve efficiency of the oversight of licensee implementation of digital I&C equipment.

This preliminary draft action plan has not been subject to all levels of NRC management review. Accordingly, it may be incomplete or in error in one or more respects and may be subject to further revision before the staff presents an action plan regarding an integrated strategy to modernize the NRC’s digital instrumentation and controls regulatory infrastructure to the Commission in a SECY paper (currently scheduled to be

provided to the Commission in May 2016).

Because of the schedule for development of the plan, the NRC will not issue a comment response document providing formal written responses to comments which are received.

Dated at Rockville, Maryland, this 24th day of March, 2016.

For the Nuclear Regulatory Commission.

**Sheldon D. Stuchell,**

*Chief, Generic Communications Branch, Division of Policy and Rulemaking, Office of Nuclear Reactor Regulation.*

**BILLING CODE 7590-01-P**

**SECURITIES AND EXCHANGE COMMISSION**

[Release No. IC-32048; File No. 812-14430]

**NexPoint Capital, Inc., et al.; Notice of Application**

March 24, 2016.

**AGENCY:** Securities and Exchange Commission (“Commission”).

**ACTION:** Notice of application for an order under section 17(d) and section 57(i) of the Investment Company Act of 1940 (the “Act”) and rule 17d-1 under the Act to permit certain joint transactions otherwise prohibited by section 17(d) and section 57(a)(4) of the Act and rule 17d-1 under the Act.

**SUMMARY OF APPLICATION:** Applicants request an order to permit a business development company (“BDC”) and a closed-end management investment company to co-invest in portfolio companies with each other and with certain affiliated investment funds.

**APPLICANTS:** NexPoint Capital, Inc. (“NexPoint Capital”), NexPoint Credit Strategies Fund (“NHF”) (each of NexPoint Capital and NHF, an “Existing Investment Company” and collectively, the “Existing Investment Companies”), NexPoint Advisors, L.P. (“NexPoint Advisors”), Highland Multi Strategy Credit Fund, L.P. (“HMSCF”) and Highland Capital Healthcare Partners (Master), L.P. (“HCHP” and, collectively with HMSCF, the “Existing Private Funds”), Highland Capital Management, L.P., Highland Capital Healthcare Advisors, L.P. and Acis Capital Management, L.P. (each, a “Current Adviser to Private Funds” and, collectively, the “Current Advisers to Private Funds,” and, the Current Advisers to Private Funds collectively with the Existing Investment Companies, NexPoint Advisors and the Existing Private Funds, the “Applicants”).

**FILING DATES:** The application was filed on March 6, 2015 and amended on August 28, 2015, December 21, 2015, March 11, 2016, and March 18, 2016.

**HEARING OR NOTIFICATION OF HEARING:** An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on April 18, 2016, and should be accompanied by proof of service on applicants, in the form of an affidavit, or for lawyers, a certificate of service. Pursuant to rule 0-5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary.

**ADDRESSES:** Secretary, U.S. Securities and Exchange Commission, 100 F St. NE., Washington, DC 20549-1090.

*Applicants:* 300 Crescent Court, Suite 700, Dallas, Texas 75201.

**FOR FURTHER INFORMATION CONTACT:** Jill Ehrlich, Senior Counsel, at (202) 551-6819, or Mary Kay Frech, Branch Chief, at (202) 551-6821 (Division of Investment Management, Chief Counsel's Office).

**SUPPLEMENTARY INFORMATION:** The following is a summary of the application. The complete application may be obtained via the Commission's Web site by searching for the file number, or for an applicant using the Company name box, at <http://www.sec.gov/search/search.htm> or by calling (202) 551-8090.

### Applicants' Representations

1. NexPoint Capital, a Delaware corporation, is an externally managed, non-diversified, closed-end management investment company that has elected to be regulated as a BDC under the Act.<sup>1</sup> NexPoint Capital's investment objective is to generate current income and capital appreciation primarily through investments in middle-market healthcare companies, middle-market companies in non-healthcare sectors, syndicated floating rate debt of large nonpublic and public

companies and collateralized loan obligations. NexPoint Capital's board of directors currently consists of six members, five of whom are not "interested persons" of NexPoint Capital within the meaning of section 2(a)(19) of the Act (the "Independent Directors").

2. NHF, a Delaware statutory trust, is an externally managed, non-diversified, closed-end management investment company registered under the Act. NHF's investment objective is to generate current income and capital appreciation primarily through investments in: (i) Secured and unsecured floating and fixed rate loans; (ii) bonds and other debt obligations; (iii) debt obligations of stressed, distressed and bankrupt issuers; (iv) structured products, including but not limited to, mortgage-backed and other asset-backed securities and collateralized debt obligations; and (v) equities. NHF's board of trustees currently consists of six members, five of whom are not "interested persons" of NHF within the meaning of section 2(a)(19) of the Act (the "Independent Trustees").

3. NexPoint Advisors, a Delaware limited partnership, is registered under the Investment Advisers Act of 1940 ("Advisers Act") and is the investment adviser of NexPoint Capital and NHF.

4. The Existing Private Funds are entities formed under the laws of Delaware or under the laws of the Cayman Islands. In reliance on the exclusion from the definition of "investment company" provided by section 3(c)(1) or 3(c)(7) of the Act, neither of the Existing Private Funds will be registered under the Act. Highland Capital Management, L.P., registered as an investment adviser under the Advisers Act, serves as the investment adviser to HMSCF, and Acis Capital Management, L.P., registered as an investment adviser under the Advisers Act, serves as the investment sub-adviser to HMSCF. Highland Capital Healthcare Advisors, L.P., registered as an investment adviser under the Advisers Act, serves as the investment adviser to HCHP. NexPoint Advisors expects that certain portfolio companies that are appropriate investments for a Private Fund<sup>2</sup> may

also be appropriate for one or more Investment Companies,<sup>3</sup> with certain exceptions based on available capital or diversification.

5. Applicants seek an order ("Order")<sup>4</sup> to allow an Investment Company to co-invest in the same issuers of securities with one or more other Investment Companies or Private Funds (the "Co-Investment Program") with which it may be prohibited from co-investing by reason of section 17(d) or section 57 of the Act. For purposes of the application, a "Co-Investment Transaction" means any transaction in which an Investment Company (or one of its Wholly Owned Investment Subsidiaries, as defined below) participates together with one or more other Investment Companies and/or Private Funds in reliance on the requested Order. "Potential Co-Investment Transaction" means any investment opportunity in which an Investment Company (or a Wholly Owned Investment Subsidiary) could not participate together with one or more other Investment Companies and/or Private Funds without obtaining and relying on the Order.

6. Each of the Investment Companies may, from time to time and as applicable, form a special purpose subsidiary (a "Wholly-Owned Investment Subsidiary").<sup>5</sup> Wholly-Owned Investment Subsidiaries would be prohibited from investing in a Co-

and is registered as an investment adviser under the Advisers Act.

<sup>3</sup> The term "Investment Company" means any Existing Investment Company and any future closed-end investment company that (a) is registered under the Act or has elected to be regulated as a BDC under the Act, (b) will be advised by an Adviser, and (c) that intends to participate in the Co-Investment Program.

<sup>4</sup> All existing entities that currently intend to rely on the Order have been named as Applicants and any entities that may rely on the Order in the future will comply with the terms and conditions of the application.

<sup>5</sup> The term "Wholly-Owned Investment Subsidiary" means an entity (a) whose sole business purpose is to hold one or more investments and issue debt on behalf of such Investment Company, to obtain debt financing for those investments and, in the case of a Wholly Owned Investment Subsidiary organized as a small business investment company under the Small Business Investment Act of 1958 ("SBA Act"), to maintain a license under the SBA Act and issue debentures guaranteed by the Small Business Administration; (b) that is wholly owned by such Investment Company (with the applicable Investment Company at all times holding directly or indirectly, beneficially and of record, 100% of the voting and economic interests); (c) with respect to which the board of directors or board of trustees, as applicable, of such Investment Company has the sole authority to make all determinations with respect to the Wholly Owned Investment Subsidiary's participation under the conditions to the application; and (d) that is an entity that would be an investment company but for section 3(c)(1) or 3(c)(7) of the Act.

<sup>1</sup> Section 2(a)(48) defines a BDC to be any closed-end investment company that operates for the purpose of making investments in securities described in sections 55(a)(1) through 55(a)(3) of the Act and makes available significant managerial assistance with respect to the issuers of such securities.

<sup>2</sup> "Private Fund" means any Existing Private Fund or any entity (a) whose investment adviser is an Adviser, (b) that would be an investment company but for section 3(c)(1) or 3(c)(7) of the Act, and (c) that intends to participate in the Co-Investment Program (as defined below). "Adviser" means (a) NexPoint Advisors, (b) the Current Advisers to Private Funds, and (c) any future investment adviser that controls, is controlled by or is under common control with any of NexPoint Advisors or the Current Advisers to Private Funds

Investment Transaction with any other Investment Company or Private Fund because the Wholly-Owned Investment Subsidiary would be a company controlled by the applicable Investment Company for purposes of section 17(d) and section 57(a)(4) and rule 17d-1. Applicants request that any Wholly Owned Investment Subsidiary be permitted to participate in Co-Investment Transactions in lieu of the Investment Company of which it is a subsidiary and that the participation in any such transaction by any Wholly Owned Investment Subsidiary be treated, for purposes of the Order, as though the Investment Company of which it is a subsidiary were participating directly. Applicants represent that this treatment is justified because any Wholly Owned Investment Subsidiary would have no purpose other than serving as a holding and financing vehicle for the applicable Investment Company's investments and, therefore, no conflicts of interest could arise between an Investment Company and its Wholly Owned Investment Subsidiary. The board of directors or board of trustees, as applicable, of an Investment Company would make all relevant determinations under the conditions with regard to the participation of such Investment Company's Wholly Owned Investment Subsidiary in a Co-Investment Transaction, and the board of directors or the board of trustees, as applicable, of an Investment Company would be informed of, and take into consideration, any proposed use of any Wholly Owned Investment Subsidiary in such Investment Company's place. If an Investment Company proposes to participate in the same Co-Investment Transaction with any of its Wholly Owned Investment Subsidiaries, the board of directors or the board of trustees, as applicable, of such Investment Company will also be informed of, and take into consideration, the relative participation of the Investment Company and the Wholly Owned Investment Subsidiary.

7. Applicants represent that the Adviser of another Investment Company or a Private Fund will refer to the Adviser of an Investment Company all Potential Co-Investment Transactions within such Investment Company's Objectives and Strategies<sup>6</sup> that are

<sup>6</sup> "Objectives and Strategies" means the Investment Company's investment objectives and strategies, as described in its registration statement on Form N-2 and other filings made with the Commission by such Investment Company under the Securities Act of 1933, as amended ("1933 Act"), or the Act, any reports filed by such Investment Company with the Commission under

considered for such other Investment Company or Private Fund, and such investment opportunities may result in a Co-Investment Transaction. For each such referral, the applicable Adviser will consider the investment objective, investment policies, investment position, investment strategies, investment restrictions, regulatory and tax requirements, capital available for investment and other pertinent factors applicable to such Investment Company. Likewise, when selecting investments for a Private Fund, the applicable Adviser to the Private Fund will select investments separately for the Private Fund, considering the investment objective, investment policies, investment position, investment strategies, investment restrictions, regulatory and tax requirements, capital available for investment and other pertinent factors applicable to such Private Fund. Each Co-Investment Transaction and the proposed allocation of such Co-Investment Transaction would be approved prior to the actual investment by the required majority (within the meaning of section 57(o) of the Act) (the "Required Majority")<sup>7</sup> of the Investment Company's board of directors or board of trustees, as applicable.

8. Other than pro rata dispositions and follow-on investments<sup>8</sup> as provided in conditions 7 and 8, and after making the determinations required in conditions 1 and 2(a), the applicable Adviser will present each Potential Co-Investment Transaction and the proposed allocation to the directors or trustees of the applicable Investment Company who are eligible to vote under section 57(o) of the Act ("Eligible Directors"), and the Required Majority will approve each Co-Investment Transaction prior to any investment by such Investment Company.

9. With respect to the pro rata dispositions and follow-on investments provided in conditions 7 and 8, the Investment Companies may participate in a pro rata disposition or follow-on investment without obtaining prior approval of the Required Majority if, among other things: (i) The proposed participation of such Investment

the Securities Exchange Act of 1934, as amended, or the Act and such Investment Company's reports to stockholders.

<sup>7</sup> In the case of an Investment Company that is a registered closed-end fund, the directors or trustees that make up the Required Majority will be determined as if the Investment Company were a BDC subject to section 57(o).

<sup>8</sup> "Follow-on investment" means an additional investment in an existing portfolio company, including through the exercise of warrants, conversion privileges or other rights to acquire securities of the portfolio company.

Company and each other Investment Company or Private Fund in such disposition or follow-on investment is proportionate to its outstanding investments in the issuer immediately preceding the disposition or follow-on investment, as the case may be; and (ii) the board of directors or board of trustees, as applicable, of the Investment Company has approved such Investment Company's participation in pro rata dispositions and follow-on investments as being in the best interests of the Investment Company. If such board does not so approve, any such disposition or follow-on investment will be submitted to the Investment Company's Eligible Directors. The board of directors or board of trustees, as applicable, of an Investment Company may at any time rescind, suspend or qualify its approval of pro rata dispositions and follow-on investments, with the result that all dispositions and/or follow-on investments must be submitted to the Eligible Directors of such Investment Company.

10. No Independent Director or Independent Trustee of an Investment Company will have a financial interest in any Co-Investment Transaction, other than indirectly through share ownership in the Investment Company.

11. Under condition 14, if NexPoint Advisors or its principals, or any person controlling, controlled by, or under common control with NexPoint Advisors or its principals, and the Private Funds (collectively, the "Holders") own in the aggregate more than 25 percent of the outstanding voting shares of an Investment Company (the "Shares"), then the Holders will vote such Shares as directed by an independent third party when voting on matters specified in the condition. Applicants believe that this condition will ensure that the Independent Directors or Independent Trustees will act independently in evaluating the Co-Investment Program, because the ability of NexPoint Advisors or its principals to influence the Independent Directors or Independent Trustees by a suggestion, explicit or implied, that the Independent Directors or Independent Trustees can be removed will be limited significantly. Applicants represent that the Independent Directors or Independent Trustees shall evaluate and approve any independent third party, taking into account its qualifications, reputation for independence, cost to the shareholders, and other factors that they deem relevant.

#### Applicants' Legal Analysis

1. Section 17(d) of the Act and rule 17d-1 under the Act prohibit affiliated

persons of a registered investment company from participating in joint transactions with the company or a company controlled by such company unless the Commission has granted an order permitting such transactions. Section 57(a)(4) of the Act prohibits certain affiliated persons of a BDC from participating in joint transactions with the BDC (or a company controlled by such company) in contravention of rules as prescribed by the Commission. Section 57(i) of the Act provides that, until the Commission prescribes rules under section 57(a)(4), the Commission's rules under section 17(d) of the Act applicable to registered closed-end investment companies will be deemed to apply to BDCs. Because the Commission has not adopted any rules under section 57(a)(4), rule 17d-1 applies to BDCs. NexPoint Advisors and any other Investment Company or Private Fund that it advises could be deemed to be persons related to an Investment Company in a manner described by section 2(a)(3) or section 57(b), as applicable, and, therefore, prohibited by section 17(d) or section 57(a)(4), as applicable, and rule 17d-1 from participating in the Co-Investment Program. In addition, because the other Advisers are "affiliated persons" of NexPoint Advisors, such Advisers and the Investment Companies and Private Funds advised by any of them could be deemed to be persons related to such Investment Company in a manner described by section 2(a)(3) or section 57(b), as applicable, and also prohibited from participating in the Co-Investment Program. Finally, because any Wholly Owned Investment Subsidiary will be controlled by an Investment Company, it will be subject to section 17(d) or section 57(a)(4), and thus also subject to the provisions of rule 17d-1.

2. Rule 17d-1, as made applicable to BDCs by section 57(i), prohibits any person who is related to a BDC in a manner described in section 57(b), acting as principal, from participating in, or effecting any transaction in connection with, any joint enterprise or other joint arrangement or profit-sharing plan in which the BDC is a participant, absent an order from the Commission. In passing upon applications under rule 17d-1, the Commission considers whether the company's participation in the joint transaction is consistent with the provisions, policies, and purposes of the Act and the extent to which such participation is on a basis different from or less advantageous than that of other participants.

3. Applicants state that they expect that co-investment in portfolio companies by the Investment

Companies and the Private Funds will increase favorable investment opportunities for each participant.

4. Applicants submit that the fact that the Required Majority will approve each Co-Investment Transaction before investment, and other protective conditions set forth in the application, will ensure that each Investment Company will be treated fairly. Applicants state that each Investment Company's participation in the Co-Investment Transactions will be consistent with the provisions, policies, and purposes of the Act and on a basis that is not different from, or less advantageous than, that of the other Investment Companies or the Private Funds.

#### Applicants' Conditions

Applicants agree that any order granting the requested relief will be subject to the following conditions:

1. Each time an Adviser considers a Potential Co-Investment Transaction for a Private Fund or another Investment Company that falls within an Investment Company's then-current Objectives and Strategies, the Investment Company's Adviser will make an independent determination of the appropriateness of such investment for such Investment Company in light of such Investment Company's then-current circumstances.

2. (a) If the applicable Adviser deems an Investment Company's participation in any Potential Co-Investment Transaction to be appropriate for such Investment Company, it will then determine an appropriate level of investment for such Investment Company;

(b) If the aggregate amount recommended by the applicable Adviser to be invested in such Potential Co-Investment Transaction by an Investment Company, together with the amount proposed to be invested by the other participating Investment Companies and Private Funds, collectively, in the same transaction, exceeds the amount of the investment opportunity, then the investment opportunity will be allocated among them pro rata based on each participating party's capital available for investment in the asset class being allocated, up to the amount proposed to be invested by each party. The applicable Adviser will provide the Eligible Directors of each participating Investment Company with information concerning each participating party's available capital to assist the Eligible Directors with their review of such Investment Company's investments for

compliance with these allocation procedures; and

(c) After making the determinations required in conditions 1 and 2(a), the applicable Adviser will distribute written information concerning the Potential Co-Investment Transaction, including the amount proposed to be invested by each Investment Company and each Private Fund, to the Eligible Directors of each participating Investment Company for their consideration. An Investment Company will co-invest with one or more other Investment Companies and/or Private Funds only if, prior to the Investment Company's participation in the Potential Co-Investment Transaction, the Required Majority concludes that:

(i) The terms of the Potential Co-Investment Transaction, including the consideration to be paid, are reasonable and fair to such Investment Company and its stockholders and do not involve overreaching in respect of such Investment Company or its stockholders on the part of any person concerned;

(ii) the Potential Co-Investment Transaction is consistent with:

(A) The interests of the stockholders of such Investment Company; and

(B) such Investment Company's then-current Objectives and Strategies;

(iii) the investment by another Investment Company or any Private Fund would not disadvantage such Investment Company, and participation by such Investment Company would not be on a basis different from, or less advantageous than, that of any other Investment Company or Private Fund; provided, that if any other Investment Company or Private Fund, but not such Investment Company itself, gains the right to nominate a director for election to a portfolio company's board of directors or the right to have a board observer or any similar right to participate in the governance or management of the portfolio company, such event will not be interpreted to prohibit the Required Majority from reaching the conclusions required by this condition (2)(c)(iii), if

(A) The Eligible Directors will have the right to ratify the selection of such director or board observer, if any;

(B) the Advisers agree to, and do, provide periodic reports to each Investment Company's board of directors or board of trustees, as applicable, with respect to the actions of such director or the information received by such board observer or obtained through the exercise of any similar right to participate in the governance or management of the portfolio company; and

(C) any fees or other compensation that any other Investment Company, Private Fund or any affiliated person of another Investment Company or Private Fund receives in connection with the right of such other Investment Company or Private Fund to nominate a director or appoint a board observer or otherwise to participate in the governance or management of the portfolio company will be shared proportionately among the participating Private Funds (which each may, in turn, share their portion with their affiliated persons) and the participating Investment Companies in accordance with the amount of each party's investment; and

(iv) the proposed investment by the Investment Company will not benefit the other Investment Companies, the Advisers, the Private Funds or any affiliated person of any of them (other than the parties to the Co-Investment Transaction), except (A) to the extent permitted by condition 13; (B) to the extent permitted by sections 17(e) or 57(k) of the Act, as applicable; (C) indirectly, as a result of an interest in the securities issued by one of the parties to the Co-Investment Transaction; or (D) in the case of fees or other compensation described in condition 2(c)(iii)(C).

3. Each Investment Company has the right to decline to participate in any Potential Co-Investment Transaction or to invest less than the amount proposed.

4. The applicable Adviser will present to the board of directors or the board of trustees, as applicable, of each Investment Company, on a quarterly basis, a record of all investments in Potential Co-Investment Transactions made by any of the other Investment Companies and the Private Funds during the preceding quarter that fell within such Investment Company's then-current Objectives and Strategies that were not made available to such Investment Company and an explanation of why the investment opportunities were not offered to such Investment Company. All information presented to a board pursuant to this condition will be kept for the life of such Investment Company and at least two years thereafter, and will be subject to examination by the Commission and its staff.

5. Except for follow-on investments made in accordance with condition 8,<sup>9</sup> an Investment Company will not invest in reliance on the Order in any issuer in which any other Investment Company,

Private Fund or any affiliated person of another Investment Company or Private Fund is an existing investor.

6. An Investment Company will not participate in any Potential Co-Investment Transaction unless the terms, conditions, price, class of securities to be purchased, settlement date and registration rights will be the same for each participating Investment Company and Private Fund. The grant to another participant, but not such Investment Company, of the right to nominate a director for election to a portfolio company's board of directors, the right to have an observer on the board of directors or similar rights to participate in the governance or management of the portfolio company will not be interpreted so as to violate this condition 6, if conditions 2(c)(iii)(A), (B) and (C) are met.

7. (a) If any Investment Company or Private Fund elects to sell, exchange or otherwise dispose of an interest in a security that was acquired in a Co-Investment Transaction, the applicable Advisers will:

(i) Notify each Investment Company that participated in the Co-Investment Transaction of the proposed disposition at the earliest practical time; and

(ii) formulate a recommendation as to participation by such Investment Company in any such disposition.

(b) Each Investment Company will have the right to participate in such disposition on a proportionate basis, at the same price and on the same terms and conditions as those applicable to any participating Private Funds and other participating Investment Companies.

(c) An Investment Company may participate in such disposition without obtaining prior approval of the Required Majority if: (i) The proposed participation of such Investment Company and of each other participant in such disposition is proportionate to its outstanding investment in the issuer immediately preceding the disposition; (ii) the board of directors or board of trustees, as applicable, of such Investment Company has approved as being in the best interests of such Investment Company the ability to participate in such dispositions on a pro rata basis (as described in greater detail in the application); and (iii) such board is provided on a quarterly basis with a list of all dispositions made in accordance with this condition. In all other cases, the applicable Adviser will provide its written recommendation as to an Investment Company's participation to the Eligible Directors of such Investment Company, and the Investment Company will participate in

such disposition solely to the extent that the Required Majority determines that it is in the Investment Company's best interests.

(d) Each Investment Company and each other participant will bear its own expenses in connection with any such disposition.

8. (a) If any Investment Company or Private Fund desires to make a follow-on investment in a portfolio company whose securities were acquired in a Co-Investment Transaction, the applicable Advisers will:

(i) Notify each Investment Company that participated in the Co-Investment Transaction of the proposed transaction at the earliest practical time; and

(ii) formulate a recommendation as to the proposed participation, including the amount of the proposed follow-on investment, by such Investment Company.

(b) Such Investment Company may participate in such follow-on investment without obtaining prior approval of the Required Majority if: (i) The proposed participation of each Investment Company and each Private Fund in such investment is proportionate to its outstanding investment in the issuer immediately preceding the follow-on investment; (ii) the board of directors or board of trustees, as applicable, of such Investment Company has approved as being in the best interests of such Investment Company the ability to participate in follow-on investments on a pro rata basis (as described in greater detail in the application); and (iii) such board is provided on a quarterly basis with a list of all follow-on investments made in accordance with this condition. In all other cases, the applicable Adviser will provide its written recommendation as to such Investment Company's participation to the Eligible Directors, and such Investment Company will participate in such follow-on investment solely to the extent that the Required Majority determines that it is in such Investment Company's best interests.

(c) If with respect to any follow-on investment:

(i) The amount of the opportunity is not based on the Investment Companies' and the Private Funds' outstanding investments immediately preceding the follow-on investment; and

(ii) the aggregate amount recommended by the applicable Adviser to be invested by each Investment Company in the follow-on investment, together with the amount proposed to be invested by the participating Private Funds in the same transaction, exceeds the amount of the opportunity, then the

<sup>9</sup>This exception applies only to follow-on investments by an Investment Company in issuers in which that Investment Company already holds investments.

amount to be invested by each such party will be allocated among them pro rata based on each participating party's capital available for investment in the asset class being allocated, up to the amount proposed to be invested by each.

(d) The acquisition of follow-on investments as permitted by this condition will be considered a Co-Investment Transaction for all purposes and subject to the other conditions set forth in the application.

9. The Independent Directors or Independent Trustees, as applicable, of each Investment Company will be provided quarterly for review all information concerning Potential Co-Investment Transactions and Co-Investment Transactions, including investments made by the other Investment Companies and the Private Funds that the applicable Investment Company considered but declined to participate in, so that the Independent Directors or Independent Trustees, as applicable, may determine whether all investments made during the preceding quarter, including those investments which the applicable Investment Company considered but declined to participate in, comply with the conditions of the Order. In addition, the Independent Directors or Independent Trustees, as applicable, will consider at least annually the continued appropriateness for such Investment Company of participating in new and existing Co-Investment Transactions.

10. The Investment Companies will maintain the records required by section 57(f)(3) of the Act as if each of the Investment Companies were a business development company and as if each of the investments permitted under these conditions were approved by the Required Majority under section 57(f) of the Act.

11. No Independent Directors or Independent Trustees, as applicable, will also be a director, general partner, managing member or principal, or otherwise an "affiliated person" (as defined in the Act) of any Private Fund.

12. The expenses, if any, associated with acquiring, holding or disposing of any securities acquired in a Co-Investment Transaction (including, without limitation, the expenses of the distribution of any such securities registered for sale under the 1933 Act) will, to the extent not payable by the Advisers under their respective advisory agreements with the Investment Companies and the Private Funds, be shared by the participating Investment Companies and the participating Private Funds in proportion to the relative amounts of the securities held or being

acquired or disposed of, as the case may be.

13. Any transaction fee<sup>10</sup> (including break-up or commitment fees but excluding broker's fees contemplated by section 17(e) or 57(k) of the Act, as applicable) received in connection with a Co-Investment Transaction will be distributed to the participating Investment Companies and the participating Private Funds on a pro rata basis, based on the amount each invested or committed, as the case may be, in such Co-Investment Transaction. If any transaction fee is to be held by an Adviser pending consummation of the Co-Investment Transaction, the fee will be deposited into an account maintained by such Adviser at a bank or banks having the qualifications prescribed in section 26(a)(1) of the Act, and such account will earn a competitive rate of interest that will also be divided pro rata among the participating Investment Companies and the participating Private Funds based on the amount each invests in such Co-Investment Transaction. None of the Investment Companies, the Private Funds, the Advisers, nor any affiliated person of the Investment Companies or Private Funds will receive additional compensation or remuneration of any kind as a result of, or in connection with, a Co-Investment Transaction (other than (a) in the case of the participating Investment Companies and the participating Private Funds, the pro rata transaction fees described above and fees or other compensation described in condition 2(c)(iii)(C) and (b) in the case of the Advisers, investment advisory fees paid in accordance with the respective investment advisory agreements).

14. If the Holders own in the aggregate more than 25 percent of the Shares of an Investment Company, then the Holders will vote such Shares as directed by an independent third party when voting on (1) the election of directors; (2) the removal of one or more directors; or (3) any other matter under either the Act or applicable state law affecting the Board's composition, size, or manner of election.

For the Commission, by the Division of Investment Management, under delegated authority.

<sup>10</sup> Applicants are not requesting and the staff is not providing any relief for transaction fees received in connection with any Co-Investment Transaction.

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-77440; File No. SR-NYSEArca-2016-50]

### Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 6.2 To Create a Reserve Market Maker Options Trading Permit

March 24, 2016.

Pursuant to Section 19(b)(1)<sup>1</sup> of the Securities Exchange Act of 1934 (the "Act")<sup>2</sup> and Rule 19b-4 thereunder,<sup>3</sup> notice is hereby given that, on March 22, 2016, NYSE Arca, Inc. (the "Exchange" or "NYSE Arca") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 6.2 to create a Reserve Market Maker Options Trading Permit ("Reserve OTP"). The proposed rule change is available on the Exchange's Web site at [www.nyse.com](http://www.nyse.com), at the principal office of the Exchange, and at the Commission's Public Reference Room.

#### II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 15 U.S.C. 78a.

<sup>3</sup> 17 CFR 240.19b-4.

*A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change*

1. Purpose

The Exchange proposes to amend Rule 6.2 to create a Reserve OTP.

Under the current NYSE Arca Fee Schedule (Fee Schedule),<sup>4</sup> an OTP Holder or OTP Firm<sup>5</sup> acting as a Market Maker must pay a monthly fee for each Options Trading Permit ("OTP") it utilizes.<sup>6</sup> In order to act as a Market Maker<sup>7</sup> on the Exchange Floor, an individual must be specifically named on the relevant Market Maker's OTP. On some occasions, a Market Maker operating on the Floor may be absent from the Floor either briefly or for an entire trading day due to illness or planned absence. When such absences occur, the OTP Holder or OTP Firm may wish to have a Market Maker Authorized Trader<sup>8</sup> ("MMAT") employee engage in open outcry trading to cover for the absent Market Maker. However, an MMAT may only step in to cover for the absent Market Maker if it is specifically named on the relevant OTP, and it may not be economical for the OTP Holder or OTP Firm to maintain an additional OTP—or there may not be enough time to complete the approval process for an additional OTP—to address the such [sic] short-term absences. In such cases, the OTP Holder or OTP Firm must carry out its

<sup>4</sup> See Fee Schedule, available here, [https://www.nyse.com/publicdocs/nyse/markets/arca-options/NYSE\\_Arca\\_Options\\_Fee\\_Schedule.pdf](https://www.nyse.com/publicdocs/nyse/markets/arca-options/NYSE_Arca_Options_Fee_Schedule.pdf).

<sup>5</sup> An OTP Holder is a natural person, in good standing, that has been issued an OTP. See Rule 1.1.(q). An OTP Firm is a sole proprietorship, partnership, corporation, limited liability company or other organization in good standing, who has been issued an OTP or upon whom an OTP Holder has conferred trading privileges on the Exchange. See Rule 1.1.(r).

<sup>6</sup> OTPs are issued by the Exchange for effecting approved securities transactions on the Exchange's Trading Facilities. See Rule 1.1.(p). The cost of each OTP ranges from \$6,000, for the first OTP, to \$1,000 for the fifth or greater OTP, as the cost decreases as the number of OTPs utilized per month increases. See *supra* n. 4. The first OTP allows a Market Maker to quote in up to 175 issues; a Market Maker is required to have four OTPs to quote all issues on the Exchange. See *id.*

<sup>7</sup> A Market Maker is an individual who is registered with the Exchange for the purpose of making transactions as a dealer-specialist on the Floor of the Exchange or for the purpose of submitting quotes electronically and making transactions as a dealer-specialist through the NYSE Arca OX electronic trading system. See Rule 6.32(a).

<sup>8</sup> A Market Maker Authorized Trader is an authorized trader who performs market making activities pursuant to Rule 6 on behalf of an OTP Holder or OTP Firm registered as a Market Maker. See Rule 6.1A(a)(9). A Market Maker Authorized Trader must meet the same registration requirements as a Market Maker before they can be designated as a Market Maker Authorized Trader. See Rule 6.33.

responsibilities with fewer than the optimal number of Market Makers on the Trading Floor. For example, under the Fee Schedule, a total of four OTPs are required to stream quotes electronically into all option issues traded on the Exchange. Additionally, each OTP can have an individual named to act as a Market Maker in open outcry trading on the Floor of the Exchange. Thus, an OTP Holder or OTP Firm with four OTPs may stream quotes in every option issue on the Exchange and have four individuals conduct trading in open outcry on the trading Floor as Market Makers. If one of those four individuals is unavailable due to sickness, vacation or other reason, the OTP Holder or OTP Firm is required to pay for an additional OTP (presently \$1,000) in order to have a fifth individual trade in open outcry as a Market Maker. If the OTP Holder or OTP Firm activates an individual on an OTP for any portion of a month, even as little as one day, the OTP Holder or OTP Firm is charged the full monthly OTP fee.<sup>9</sup>

The Exchange believes that an option should be available to Market Maker firms to address the short-term absence of an employee in a more economical way, which also would assist the Exchange in maintaining fair and orderly markets. Accordingly, the Exchange proposes new paragraph (i) to Rule 6.2 (Admission to and Conduct on the Options Trading Floor) to create a Reserve OTP. A Reserve OTP would permit an OTP Holder or OTP Firm to have a qualified MMAT employee cover for the absent Market Maker under the firm's OTP, effectively empowering the individual acting as a qualified MMAT to act as a Market Maker in lieu of the absent individual until such time as the absent Market Maker returns.

As proposed, when a Market Maker is or will be absent, an OTP Holder or OTP Firm that maintains a Reserve OTP would be required to provide written notice to the Exchange—at least one day in advance—that it will utilize such Reserve OTP (the "Notice"). The Notice would identify both the absent Market Maker (who will not be utilizing the Reserve OTP) and the MMAT who will be acting as the substitute Market Maker. While the Notice is in effect, only the specifically named MMAT acting as a substitute Market Maker will be authorized to utilize the OTP. When the original Market Maker returns, the OTP Holder or OTP Firm would provide written notice to the Exchange—at least

<sup>9</sup> The Monthly OTP fee is based on the maximum number of OTPs held by an OTP Firm or OTP Holder during a calendar month. See *supra* n. 4, endnote 1.

one day in advance, and, as of the date specified in the notice, the original Market Maker may resume reliance on the OTP and the MMAT would no longer be able to utilize the OTP. In this manner, an OTP Holder or OTP Firm that has purchased the four OTPs required to quote every issue on the Exchange would have the ability to ensure it has sufficient Market Maker coverage in the event of an absence, without having to incur the full OTP fee, by instead paying a Reserve OTP fee of \$175 per month, which would be established by a separate fee filing with the Commission.<sup>10</sup> The proposed fee would be assessed to an OTP Holder for each MMAT in its employ whom the OTP Holder or OTP Firm wishes to be eligible to be named to the OTP to act as a Market Maker to cover for another Market Maker who is otherwise unable to be at work that day.

Any natural person to whom a Reserve OTP is issued would be required, as of the date of notice, to (a) be fully qualified and approved by the Exchange to be an OTP Holder or OTP Firm authorized as an MMAT; and (b) meet all of the requirements of an OTP Holder or OTP Firm under the Exchange's rules.

Implementation

The Exchange proposes to announce the implementation of the proposed rule change via Trader Update.

2. Statutory Basis

The Exchange believes that the proposed change is consistent with Section 6(b) of the Act,<sup>11</sup> in general, and furthers the objectives of Section 6(b)(5),<sup>12</sup> in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitation transactions in securities, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with

<sup>10</sup> The Exchange will not implement the proposed change until it has filed to modify its fee schedule to address the addition of a Reserve OTP. The Exchange also notes this \$175 fee is consistent with fees on other option exchanges. See NYSE Amex Options Fee Schedule, Section III.A. (charging \$175 monthly fee for Reserve Floor Market Maker), available here, [https://www.nyse.com/publicdocs/nyse/markets/amex-options/NYSE\\_Amex\\_Options\\_Fee\\_Schedule.pdf](https://www.nyse.com/publicdocs/nyse/markets/amex-options/NYSE_Amex_Options_Fee_Schedule.pdf).

<sup>11</sup> 15 U.S.C. 78f(b).

<sup>12</sup> 15 U.S.C. 78f(b)(5).

the Section 6(b)(5)<sup>13</sup> requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

Specifically, the Exchange believes that the proposed rule change would remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest because it would provide a more cost-effective method for OTP Holders or OTP Firms to have fully qualified personnel step in to handle other employees' absences. As such, the proposed change would enable OTP Holders and OTP Firms to better utilize their personnel and resources, thereby contributing to fair and orderly markets.

The Exchange notes that the concept of a Reserve OTP is not new or novel and has been in place at other option exchanges for several years. For example, NYSE Amex Options implemented the concept in January 2012.<sup>14</sup>

#### *B. Self-Regulatory Organization's Statement on Burden on Competition*

The Exchange does not believe that this proposed rule change would impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change would relieve the burden on OTP Holders or OTP Firms when they have employees absent from the trading floor and would, in turn, improve the competitiveness of Exchange Market Makers and also promote competition for order flow among market participants and the options exchanges.

#### *C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others*

No written comments were solicited or received with respect to proposed rule change.

### **III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action**

Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate if consistent with the protection of

investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act<sup>15</sup> and Rule 19b-4(f)(6) thereunder.<sup>16</sup>

A proposed rule change filed under Rule 19b-4(f)(6)<sup>17</sup> normally does not become operative for 30 days after the date of filing. However, pursuant to Rule 19b-4(f)(6)(iii),<sup>18</sup> the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Exchange states that such waiver would allow the Exchange to begin implementation of the proposed rule without delay, which the Exchange believes would promote the efficient use of resources and promote competition among the option exchanges. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. As stated in the filing, the Exchange believes that the proposed rule change will enable OTP Holders and OTP Firms to better utilize their personnel and resources, thereby contributing to fair and orderly markets. The Exchange states that it will not implement the proposed rule change until it submits a filing to adopt a fee related to the Reserve OTP. Accordingly, the Commission designates the proposed rule change to be operative upon filing.<sup>19</sup>

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

<sup>15</sup> 15 U.S.C. 78s(b)(3)(A).

<sup>16</sup> 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6)(iii) requires the Exchange to give the Commission written notice of the Exchange's intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

<sup>17</sup> 17 CFR 240.19b-4(f)(6).

<sup>18</sup> 17 CFR 240.19b-4(f)(6)(iii).

<sup>19</sup> For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

### **IV. Solicitation of Comments**

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

#### *Electronic Comments*

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-NYSEARCA-2016-50 on the subject line.

#### *Paper Comments*

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEARCA-2016-50. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEARCA-2016-50, and should be submitted on or before April 20, 2016.

<sup>13</sup> *Id.*

<sup>14</sup> See Securities Exchange Act Release No. 66237 (January 25, 2012), 77 FR 4848 (January 31, 2012) (SR-NYSEAmex-2012-02) (amending Rule 902NY to create a Reserve Floor Market Maker Amex Trading Permit ("Reserve ATP")).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>20</sup>

**Brent J. Fields,**  
Secretary.

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-77441; File No. SR-NYSEArca-2016-44]

### Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Proposed Rule Change Amending NYSE Arca Equities Rule 7.31P(h) To Add a New Discretionary Pegged Order

March 24, 2016.

Pursuant to Section 19(b)(1)<sup>1</sup> of the Securities Exchange Act of 1934 (the “Act”)<sup>2</sup> and Rule 19b-4 thereunder,<sup>3</sup> notice is hereby given that, on March 11, 2016, NYSE Arca, Inc. (the “Exchange” or “NYSE Arca”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend NYSE Arca Equities Rule 7.31P(h) (Orders and Modifiers) to add a new Discretionary Pegged Order. The proposed rule change is available on the Exchange’s Web site at [www.nyse.com](http://www.nyse.com), at the principal office of the Exchange, and at the Commission’s Public Reference Room.

#### II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below,

of the most significant parts of such statements.

#### A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

##### 1. Purpose

The Exchange proposes to amend NYSE Arca Equities Rule 7.31P(h) (Orders and Modifiers) (“Rule 7.31P”) to add a new Discretionary Pegged Order. The proposed new order is based on the Discretionary Peg Order as proposed by Investors’ Exchange, LLC (“IEX”) in its Form 1 Application seeking registration as a national securities exchange under Section 6 of the Act (“IEX Form 1 Application”).<sup>4</sup> The Exchange proposes to adopt the Discretionary Pegged Order for its Pillar trading platform only.

As proposed, Rule 7.31P(h)(3) would provide that a Discretionary Pegged Order would be a Pegged Order<sup>5</sup> to buy (sell) that upon entry to the NYSE Arca Marketplace<sup>6</sup> would be assigned a working price<sup>7</sup> equal to the lower (higher) of the midpoint of the PBBO<sup>8</sup> (“Midpoint Price”) or the limit price of the order. Any untraded shares of such order would be assigned a working price equal to the lower (higher) of the PBB (PBO) or the order’s limit price and would automatically be adjusted in response to changes to the PBB (PBO) for buy (sell) orders up (down) to the order’s limit price. In order to trade with contra-side orders on the NYSE Arca Book, a Discretionary Pegged Order to buy (sell) would exercise the least amount of price discretion necessary from its working price to its discretionary price (defined as the lower (higher) of the Midpoint Price or the Discretionary Pegged Order’s limit

price), except during periods of quote instability, as defined in proposed Rule 7.31P(h)(3)(D), as described in greater detail below. This proposed rule text is based on proposed IEX Rule 11.190(a)(10), but with non-substantive differences to use Pillar terminology to describe how the Discretionary Pegged Order would operate on the Exchange. Unlike IEX, the Exchange proposes to price a Discretionary Pegged Order based on the PBBO rather than the NBBO, which is the reference price that the Exchange uses for its Pegged Orders under Rule 7.31P(h).

Proposed Rule 7.31P(h)(3)(A) would provide that Discretionary Pegged Orders would not be displayed, must be designated Day, and would be eligible to be designated for the Core Trading Session only. Accordingly, the proposed rule would provide that Discretionary Pegged Orders that include a designation for the Early Trading Session or Late Trading Session would be rejected. This proposed rule text is based on proposed IEX Rules 11.190(a)(10)(F) (a Discretionary Peg Order is eligible to trade only during IEX’s Regular Market Session) and 11.190(a)(10)(H) (a Discretionary Peg Order is not eligible to display). Unlike IEX, the Exchange proposes that a Discretionary Pegged Order be Day time-in-force and not include any other time-in-force instruction. The descriptions set forth in proposed IEX Rule 11.190(a)(10)(A), (C), and (E) are set forth in current Rule 7.31P(h), which defines Pegged Orders as a Limit Order that does not route. Therefore, the Exchange proposes not to specify these requirements separately for the proposed Discretionary Pegged Order. Unlike IEX’s proposed Discretionary Peg Order, the Exchange’s proposed Discretionary Pegged Order would have to include a limit price.

Proposed Rule 7.31P(h)(3)(B) would provide that when exercising discretion, Discretionary Pegged Orders would maintain their time priority at their working price as Priority 3—Non-Display Orders and would be prioritized behind Priority 3—Non-Display Orders with a working price equal to the discretionary price of a Discretionary Pegged Order at the time of execution. If multiple Discretionary Pegged Orders are exercising price discretion during the same book processing action, they would maintain their relative time priority at the discretionary price. This proposed rule text is based on the last two full sentences of proposed IEX Rule 11.190(a)(10), with non-substantive differences to use Pillar terminology to describe the relative ranking and priority of Discretionary Pegged Orders.

<sup>4</sup> See proposed IEX Rules 11.190(a)(10) and 11.190(g) in Exhibit B to IEX’s Form 1 Application and Securities Exchange Act Release No. 75925 (Sept. 15, 2015), 80 FR 57261 (Sept. 22, 2015) (File No. 10-222).

<sup>5</sup> A “Pegged Order” is defined in Rule 7.31P(h) as a Limit Order that does not route with a working price that is pegged to a dynamic reference price. If the designated reference price is higher (lower) than the limit price of a Pegged Order to buy (sell), the working price will be the limit price of the order.

<sup>6</sup> The term “NYSE Arca Marketplace” is defined in Rule 1.1(e) as the electronic securities communications and trading facility designated by the Board of Directors through which orders of Users are consolidated for execution and/or display.

<sup>7</sup> The term “working price” is defined in Rule 7.36P(a)(3) as the price at which an order is eligible to trade at any given time, which may be different from the limit price or display price of the order. The term “limit price” is defined in Rule 7.36P(a)(2) as the highest (lowest) specified price at which a Limit Order to buy (sell) is eligible to trade.

<sup>8</sup> The term “PBBO” is defined in Rule 1.1(dd) as the highest Protected Bid and the lowest Protected Offer.

<sup>20</sup> 17 CFR 200.30-3(a)(12).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 15 U.S.C. 78a.

<sup>3</sup> 17 CFR 240.19b-4.

Proposed Rule 7.31P(h)(3)(C) would provide that a Discretionary Pegged Order would be eligible to exercise price discretion to its discretionary price, except during periods of quote instability, as specified in proposed Rule 7.31P(h)(3)(D). Proposed Rule 7.31P(h)(3)(C)(i) would provide that if the Corporation<sup>9</sup> determines the PBB for a particular security to be an unstable quote in accordance with proposed Rule 7.31P(h)(3)(D), it would restrict buy Discretionary Pegged Orders in that security from exercising price discretion to trade against interest above the PBB. Proposed Rule 7.31P(h)(3)(C)(ii) would provide that if the Corporation determines the PBO for a particular security to be an unstable quote in accordance with proposed Rule 7.31P(h)(3)(D), it would restrict sell Discretionary Pegged Orders in that security from exercising price discretion to trade against interest below the PBO. This rule text is based on proposed IEX Rule 11.190(a)(10)(K) with non-substantive differences to refer to the Corporation instead of the "System" and to measure the PBBO rather than the NBBO for quote instability.

Proposed Rule 7.31P(h)(3)(D) would set forth how the Exchange would determine quote stability, *i.e.*, crumbling quote, of the PBBO. This proposed rule text is based on proposed IEX Rule 11.190(g) with non-substantive differences to use the term "Corporation" instead of "System," and as described above, to measure the stability of the PBBO rather than the NBBO. As proposed, when the Corporation determines a quote, either the PBB or the PBO, is unstable, the determination would remain in effect at that price level for ten (10) milliseconds. As further proposed, the Corporation would only treat one side of the PBBO as unstable in a particular security at any given time.

The Exchange would determine quote instability or a crumbling quote when the following factors occur:

- The PBB and PBO are the same as the PBB and PBO one (1) millisecond ago (proposed Rule 7.31P(h)(3)(D)(i)(A)); and
- the PBBO spread is less than or equal to the thirty (30) day median PBBO spread during the Core Trading Session (proposed Rule 7.31P(h)(3)(D)(i)(B)); and
- there are more protected quotations on the far side, *i.e.* more protected quotations on the PBO than the PBB for

buy orders, or more protected quotations on the PBB than the PBO for sell orders (proposed Rule 7.31P(h)(3)(D)(i)(C)); and

- the quote instability factor result from the quote stability calculation is greater than the defined quote instability threshold (proposed Rule 7.31P(h)(3)(D)(i)(D)).

The Exchange proposes that the quote stability calculation used to determine the current quote instability factor would be defined by the following formula that utilizes the quote stability coefficients and quote stability variables defined below:

$$1 / (1 + e^{-((C0 + C1 * N + C2 * F + C3 * N-1 + C4 * F-1))})$$

(See proposed Rule 7.31P(h)(3)(D)(i)(D)(1)).

As set forth in proposed Rule 7.31P(h)(3)(D)(i)(D)(1)(a), the Exchange proposes to utilize the values below for the quote stability coefficients:

$$C0 = -2.39515; (ii) C1 = -0.76504; (iii) C2 = 0.07599; (iv) C3 = 0.38374; and (v) C4 = 0.14466.$$

As set forth in proposed Rule 7.31P(h)(3)(D)(i)(D)(1)(b), the Exchange proposes to utilize the following quote stability variables to calculate the current quote instability factor: (i) N = the number of protected quotations on the near side of the market, *i.e.* PBB for buy orders and PBO for sell orders; (ii) F = the number of protected quotations on the far side of the market, *i.e.* PBO for buy orders and PBB for sell orders; (iii) N-1 = the number of protected quotations on the near side of the market one (1) millisecond ago; and (iv) F-1 = the number of protected quotations on the far side of the market one (1) millisecond ago.

As set forth in proposed Rule 7.31P(h)(3)(D)(i)(D)(2), the Exchange proposes to utilize a quote instability threshold of 0.32. Finally, as set forth in proposed Rule 7.31P(h)(3)(D)(i)(D)(3), the Exchange reserves the right to modify the quote instability coefficients or quote instability threshold at any time, subject to a filing of a proposed rule change with the SEC.

Because of the technology changes associated with this proposed rule change, the Exchange will announce by Trader Update the implementation date.

## 2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934 (the "Act"),<sup>10</sup> in general, and furthers the objectives of Section 6(b)(5),<sup>11</sup> in

particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

Specifically, the Exchange believes that the proposed rule change would remove impediments to and perfect the mechanism of a free and open market and a national market system by promoting transparency in Exchange rules by adopting a new order type that is designed to exercise discretion in order to provide price improvement to contra-side orders. Similar to how MPL Orders operate, the Discretionary Pegged Order is designed to be a non-displayed order that could execute at the midpoint of the PBBO, and thus would enhance order execution opportunities at the Exchange that provide price improvement opportunities over the PBBO. However, unlike an MPL Order, the Exchange would monitor the quality of the PBBO to assess whether a Discretionary Pegged Order would be eligible to exercise its discretion. As proposed, the Exchange would use a mathematical calculation (the "quote instability calculation") to assess the probability of an imminent change to the current PBB to a lower price or the PBO to a higher price for a particular security ("quote instability factor"). When the quoting activity meets predefined criteria and the quote instability factor calculated is greater than the Exchange's proposed threshold ("quote instability threshold"), the Exchange would treat the quote as not stable ("quote instability" or "crumbling quote").

The Exchange believes that using the proposed quote instability calculation to determine quote instability would remove impediments to and perfect the mechanism of a free and open market and a national market system because the Exchange would be monitoring the PBBO on behalf of its members in an objective and transparent manner to assess the quality of the PBBO and whether it is appropriate for a Discretionary Pegged Order to exercise its discretion. The Exchange further believes that it would remove impediments to and perfect the mechanism of a free and open market and a national market system for the Exchange to monitor the quote stability because it would assist ETP Holders in obtaining best execution for their

<sup>9</sup>The term "Corporation" is defined in Rule 1.1(k) to mean NYSE Arca Equities, as described in NYSE Arca Equities' Certificate of Incorporation and Bylaws.

<sup>10</sup> 15 U.S.C. 78f(b).

<sup>11</sup> 15 U.S.C. 78f(b)(5).

customers by limiting executions at the midpoint of the PBBO when the PBBO is not stable, thereby providing a more conservative alternative for investors seeking to passively participate with contra-side order flow. The proposed rule change would therefore facilitate transactions in securities and improve trading within the national market system.

As discussed above, the proposed rule change is based on the proposed rules of IEX, which has not yet been approved as a registered securities exchange. In a letter commenting on IEX's Form 1 Application, the Exchange previously stated that it did not oppose IEX's proposed quote instability feature, but noted that it offers a feature typically performed by broker-dealers.<sup>12</sup> Generally, an exchange's function is to reprice orders based on direction from its members and input from market data, e.g., a Pegged Order is repriced based on changes to the PBBO. By contrast, broker dealers generally perform the function of evaluating the quality of the market to determine whether to trade and at what price. The proposed quote stability calculation would perform a similar function by monitoring the quality of the market in order to assess whether to exercise price discretion, and therefore the Exchange would be making pricing decisions for its members based on the Exchange's evaluation of the quality of the PBBO. In a separate context, the Commission has disapproved a registered exchange from performing the same services as a broker-dealer.<sup>13</sup> While the Exchange believes that the proposal is consistent with the Act for the reasons described above, the Exchange respectfully requests that the Commission clearly articulate the boundaries of when an exchange may and may not offer services that are otherwise performed by broker dealers and, when it is appropriate for an exchange to monitor the quality of the prices in a market to determine how to price an order.

To this end, the Exchange believes that the proposed rule change would achieve efficiency and cost savings for market participants that rely on the

Exchange to manage the price-discovery process on their behalf because it presents an option for ETP Holders to have the Exchange monitor the quality of the PBBO. Specifically, the Discretionary Pegged Order will be an option to assist market participants to achieve best execution on behalf of their customers by reducing the potential to execute at a stale price. The manner by which the Exchange would monitor the quality of the quote would be objective and transparent, as specified in proposed Rule 7.31P(h)(3)(D). Market participants that use the Discretionary Pegged Order would thus be able to serve their customers better, thereby protecting investors and the public interest.

#### *B. Self-Regulatory Organization's Statement on Burden on Competition*

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed Discretionary Pegged Order and related quote instability would promote competition because it is based on the proposed rules of IEX, which would implement the Discretionary Peg Order and related quote instability if approved as a registered securities exchange under Section 6 of the Act.

#### *C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others*

No written comments were solicited or received with respect to the proposed rule change.

### **III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action**

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

A. By order approve or disapprove such proposed rule change, or

B. institute proceedings to determine whether the proposed rule change should be disapproved.

### **IV. Solicitation of Comments**

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act.

Comments may be submitted by any of the following methods:

#### *Electronic Comments*

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-NYSEArca-2016-44 on the subject line.

#### *Paper Comments*

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEArca-2016-44. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2016-44 and should be submitted on or before April 20, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>14</sup>

## SECURITIES AND EXCHANGE COMMISSION

**[Release No. 34-77437; File No. SR-NYSEArca-2013-107]**

### Self-Regulatory Organizations; NYSE Arca, Inc.; Order Granting an Extension to Limited Exemption From Rule 612(c) of Regulation NMS in Connection With the Exchange's Retail Liquidity Program Until August 31, 2016

March 24, 2016.

On December 23, 2013, the Securities and Exchange Commission ("Commission") issued an order pursuant to its authority under Rule 612(c) of Regulation NMS ("Sub-Penny Rule")<sup>1</sup> that granted NYSE Arca, Inc. ("Exchange") a limited exemption from the Sub-Penny Rule in connection with the operation of the Exchange's Retail Liquidity Program ("Program").<sup>2</sup> The limited exemption was granted concurrently with the Commission's approval of the Exchange's proposal to adopt the Program for a one-year pilot term.<sup>3</sup> The exemption was granted coterminous with the effectiveness of the pilot Program; both the pilot

Program and exemption are scheduled to expire on March 31, 2016.<sup>4</sup>

The Exchange now seeks to extend the exemption until August 31, 2016.<sup>5</sup> The Exchange's request was made in conjunction with an immediately effective filing that extends the operation of the Program through the same date.<sup>6</sup> In its request to extend the exemption, the Exchange notes that the participation in the Program has increased more recently. Accordingly, the Exchange has asked for additional time to allow itself and the Commission to analyze more robust data concerning the Program, which the Exchange committed to provide to the Commission.<sup>7</sup> For this reason and the reasons stated in the Order originally granting the limited exemption, the Commission finds that extending the exemption, pursuant to its authority under Rule 612(c) of Regulation NMS, is appropriate in the public interest and consistent with the protection of investors.

Therefore, it is hereby ordered that, pursuant to Rule 612(c) of Regulation NMS, the Exchange is granted a limited exemption from Rule 612 of Regulation NMS that allows it to accept and rank orders priced equal to or greater than \$1.00 per share in increments of \$0.001, in connection with the operation of its Retail Liquidity Program, until August 31, 2016.

The limited and temporary exemption extended by this Order is subject to modification or revocation if at any time the Commission determines that such action is necessary or appropriate in furtherance of the purposes of the Securities Exchange Act of 1934. Responsibility for compliance with any applicable provisions of the Federal securities laws must rest with the

<sup>4</sup> The pilot term of the Program was originally scheduled to end on April 14, 2015, but the Exchange initially extended the term through September 30, 2015, *see* Securities Exchange Act Release No. 74572 (March 24, 2015), 80 FR 16705 (March 30, 2015) (NYSEArca-2015-22), and then subsequently extended the term again through March 31, 2016, *see* Securities Exchange Act Release Nos. 75994 (September 28, 2015), 80 FR 59834 (October 2, 2015) (SR-NYSEArca-2015-84) and 77236 (Feb. 25, 2016), 81 FR 10943 (March 2, 2016) (SR-NYSEArca-2016-30). Each time the pilot term of the Program was extended, the Commission granted the Exchange's request to also extend the Sub-Penny exemption through September 30, 2015, *see* Securities Exchange Act Release No. 74609 (March 30, 2015), 80 FR 18272 (April 3, 2015), and March 31, 2016, *see* Securities Exchange Act Release No. 34-76021 (September 29, 2015), 80 FR 60207 (October 5, 2015).

<sup>5</sup> *See* Letter from Martha Redding, Assistant Secretary, NYSE, to Brent J. Fields, Secretary, Securities and Exchange Commission, dated March 17, 2016.

<sup>6</sup> *See* Securities Exchange Act Release No. 77425 (March 23, 2016), FR—(SR-NYSEArca-2016-47).

<sup>7</sup> *See* Order, *supra* note 2, 78 FR at 79529.

persons relying on the exemption that is the subject of this Order.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>8</sup>

## SECURITIES AND EXCHANGE COMMISSION

**[Release No. 34-77438; File Nos. SR-NYSE-2011-55; SR-NYSEAmex-2011-84]**

### Self-Regulatory Organizations; New York Stock Exchange LLC; NYSE MKT LLC; Order Granting an Extension to Limited Exemptions From Rule 612(c) of Regulation NMS in Connection With the Exchanges' Retail Liquidity Programs Until August 31, 2016

March 24, 2016.

On July 3, 2012, the Securities and Exchange Commission ("Commission") issued an order pursuant to its authority under Rule 612(c) of Regulation NMS ("Sub-Penny Rule")<sup>1</sup> that granted the New York Stock Exchange LLC ("NYSE") and NYSE MKT LLC<sup>2</sup> ("NYSE MKT" and, together with NYSE, the "Exchanges") limited exemptions from the Sub-Penny Rule in connection with the operation of the Exchanges' respective Retail Liquidity Programs ("Programs").<sup>3</sup> The limited exemptions were granted concurrently with the Commission's approval of the Exchanges' proposals to adopt their respective Programs for one-year pilot terms.<sup>4</sup> The exemptions were granted coterminous with the effectiveness of the pilot Programs; both the pilot Programs and exemptions are scheduled to expire on March 31, 2016.<sup>5</sup>

<sup>8</sup> 17 CFR 200.30-3(a)(83).

<sup>1</sup> 17 CFR 242.612(c).

<sup>2</sup> At the time it filed the original proposal to adopt the Retail Liquidity Program, NYSE MKT went by the name NYSE Amex LLC. On May 14, 2012, the Exchange filed a proposed rule change, immediately effective upon filing, to change its name from NYSE Amex LLC to NYSE MKT LLC. *See* Securities Exchange Act Release No. 67037 (May 21, 2012), 77 FR 31415 (May 25, 2012) (SR-NYSEAmex-2012-32).

<sup>3</sup> *See* Securities Exchange Act Release No. 67347 (July 3, 2012), 77 FR 40673 (July 10, 2012) (SR-NYSE-2011-55; SR-NYSEAmex-2011-84) ("Order").

<sup>4</sup> *See id.*

<sup>5</sup> The pilot terms of the Programs were originally scheduled to end on July 31, 2013, but the Exchanges initially extended the terms for an additional year, through July 31, 2014, *see* Securities Exchange Act Release Nos. 70096 (August 2, 2013), 78 FR 48520 (August 8, 2013) (SR-NYSE-2013-48), and 70100 (August 2, 2013), 78 FR 48535 (August 8, 2013) (SR-NYSEMKT-

<sup>1</sup> 17 CFR 242.612(c).

<sup>2</sup> *See* Securities Exchange Act Release No. 71176 (December 23, 2013), 78 FR 79524 (December 30, 2013) (SR-NYSEArca-2013-107) ("Order").

<sup>3</sup> *See id.*

The Exchanges now seek to extend the exemptions until August 31, 2016.<sup>6</sup> The Exchanges' request was made in conjunction with immediately effective filings that extend the operation of the Programs through the same date.<sup>7</sup> In their request to extend the exemptions, the Exchanges note that the participation in the Programs has increased more recently. Accordingly, the Exchanges have asked for additional time to allow themselves and the Commission to analyze more robust data concerning the Programs, which the Exchanges committed to provide to the Commission.<sup>8</sup> For this reason and the reasons stated in the Order originally granting the limited exemptions, the Commission finds that extending the exemptions, pursuant to its authority under Rule 612(c) of Regulation NMS, is appropriate in the public interest and consistent with the protection of investors.

Therefore, it is hereby ordered that, pursuant to Rule 612(c) of Regulation NMS, each Exchange is granted a limited exemption from Rule 612 of Regulation NMS that allows it to accept and rank orders priced equal to or greater than \$1.00 per share in increments of \$0.001, in connection with the operation of its Retail Liquidity Program, until August 31, 2016.

The limited and temporary exemptions extended by this Order are subject to modification or revocation if

2013–60), and then subsequently extended the terms again through March 31, 2015, *see* Securities Exchange Act Release Nos. 72629 (July 16, 2014), 79 FR 42564 (July 22, 2014) (SR–NYSE–2014–35), and 72625 (July 16, 2014), 79 FR 42566 (July 22, 2014) (SR–NYSEMKT–2014–60), September 30, 2015, *see* Securities Exchange Act Release Nos. 74454 (March 6, 2015), 80 FR 13054 (March 12, 2015) (SR–NYSE–2015–10), and 74455 (March 6, 2015), 80 FR 13047 (March 12, 2015) (SR–NYSEMKT–2015–14), and March 31, 2016 *see* Securities Exchange Act Release Nos. 75993 (September 28, 2015), 80 FR 59844 (October 2, 2015) (SR–NYSE–2015–41), and 75995 (September 28, 2015), 80 FR 59836 (October 2, 2015) (SR–NYSEMKT–2015–69). Each time the pilot terms of the Programs were extended, the Commission granted the Exchanges' requests to also extend the Sub-Penny exemptions through July 31, 2014, *see* Securities Exchange Act Release No. 70085 (July 31, 2013), 78 FR 47807 (August 6, 2013), March 31, 2015, *see* Securities Exchange Act Release No. 72732 (July 31, 2014), 79 FR 45851 (August 6, 2014), September 30, 2015, *see* Securities Exchange Act Release No. 74507 (March 13, 2015), 80 FR 14421 (March 19, 2015), and March 31, 2016, *see* Securities Exchange Act Release No. 76020 (September 29, 2015), 80 FR 60201 (October 5, 2015).

<sup>6</sup> See Letter from Martha Redding, Assistant Secretary, NYSE, to Brent J. Fields, Secretary, Securities and Exchange Commission, dated March 17, 2016.

<sup>7</sup> See Securities Exchange Act Release Nos. 77426 (March 23, 2016), FR – (SR–NYSE–2016–25), and 77424 (March 23, 2016), FR – (SR–NYSEMKT–2016–39).

<sup>8</sup> See Order, *supra* note 3, 77 FR at 40681.

at any time the Commission determines that such action is necessary or appropriate in furtherance of the purposes of the Securities Exchange Act of 1934. Responsibility for compliance with any applicable provisions of the Federal securities laws must rest with the persons relying on the exemptions that are the subject of this Order.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>9</sup>

## DEPARTMENT OF STATE

[Public Notice: 9502]

### 60-Day Notice of Proposed Information Collection: Statement of Exigent/Special Family Circumstances for Issuance of a U.S. Passport to a Minor Under Age 16

**ACTION:** Notice of request for public comment.

**SUMMARY:** The Department of State is seeking Office of Management and Budget (OMB) approval for the information collection described below. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this notice is to allow 60 days for public comment preceding submission of the collection to OMB.

**DATES:** The Department will accept comments from the public up to May 31, 2016.

**ADDRESSES:** You may submit comments by any of the following methods:

- *Web:* Persons with access to the Internet may comment on this notice by going to [www.Regulations.gov](http://www.Regulations.gov). You can search for the document by entering “Docket Number: DOS–2016–0017” in the Search field. Then click the “Comment Now” button and complete the comment form.

- *Email:* [PPTFormsOfficer@state.gov](mailto:PPTFormsOfficer@state.gov)
- *Regular Mail:* Send written comments to: U.S. Department of Sta., P.O. Box 1227, Sterling, Virginia 20166–1227.

You must include the DS form number (if applicable), information collection title, and the OMB control number in any correspondence.

**FOR FURTHER INFORMATION CONTACT:** Direct requests for additional

information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to U.S. Department of State, PPT Forms Officer, 44132 Mercure Cir., P.O. Box 1227, Sterling, Virginia 20166–1227, who may be reached on 202–485–6538 or at [PPTFormsOfficer@state.gov](mailto:PPTFormsOfficer@state.gov).

#### SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Statement of Exigent/Special Family Circumstances for Issuance of a U.S. Passport to a Minor under Age 16.
- *OMB Control Number:* 1405–0216.
- *Type of Request:* Revision of a Currently Approved Collection.
- *Originating Office:* Bureau of Consular Affairs, Passport Services CA/PPT.
- *Form Number:* DS–5525.
- *Respondents:* Individuals or Households.
- *Estimated Number of Respondents:* 43,526 respondents.
- *Estimated Number of Responses:* 43,526 responses.
- *Average Time Per Response:* 30 minutes.
- *Total Estimated Burden Time:* 21,763 hours.
- *Frequency:* On occasion.
- *Obligation to Respond:* Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

*Abstract of proposed collection:* The information collected on the DS–5525, “Statement of Exigent/Special Family Circumstances for Issuance of a U.S. Passport to a Minor under Age 16”, is used in conjunction with the DS–11, “Application for a U.S. Passport”. The DS–5525 can serve as the statement describing exigent or special family

<sup>9</sup> 17 CFR 200.30–3(a)(83).

circumstances, which is required if written consent of the non-applying parent or guardian cannot be obtained when the passport application is executed for a minor under age 16.

*Methodology:* Passport Services collects information from U.S. citizens and non-citizen nationals when they complete and submit the DS-5525, "Statement of Exigent/Special Family Circumstances for Issuance of a U.S. Passport to a Minor under Age 16". Passport applicants can either download the DS-5525 from the internet or obtain the form from an Acceptance Facility/Passport Agency. The form must be completed, signed, and submitted along with the applicant's DS-11, "Application for a U.S. Passport".

Dated: March 18, 2016.

**Brenda S. Sprague,**

*Deputy Assistant Secretary for Passport Services, Bureau of Consular Affairs, Department of State.*

### Culturally Significant Objects Imported for Exhibition Determinations: "High Society: The Portraits of Franz X. Winterhalter" Exhibition

**SUMMARY:** Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), E.O. 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.*; 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236-3 of August 28, 2000 (and, as appropriate, Delegation of Authority No. 257-1 of December 11, 2015), I hereby determine that the objects to be included in the exhibition "High Society: The Portraits of Franz X. Winterhalter," imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to loan agreements with the foreign owners or custodians. I also determine that the exhibition or display of the exhibit objects at The Museum of Fine Arts, Houston, Houston, Texas, from on or about April 17, 2016, until on or about August 14, 2016, and at possible additional exhibitions or venues yet to be determined, is in the national interest. I have ordered that Public Notice of these Determinations be published in the **Federal Register**.

**FOR FURTHER INFORMATION CONTACT:** For further information, including a list of the imported objects, contact the Office of Public Diplomacy and Public Affairs in the Office of the Legal Adviser, U.S. Department of State (telephone: 202-632-6471; email: [section2459@state.gov](mailto:section2459@state.gov)). **FOR FURTHER INFORMATION CONTACT:** Direct requests for additional information regarding the collection

listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to U.S. Department of State, PPT Forms Officer, 44132 Mercure Cir., P.O. Box 1227, Sterling, Virginia 20166-1227, who may be reached on 202-485-6538 or at [PPTFormsOfficer@state.gov](mailto:PPTFormsOfficer@state.gov).

#### SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Statement of Consent: Issuance of a U.S. Passport to a Minor Under Age 16.

- *OMB Control Number:* 1405-0129.

- *Type of Request:* Revision of a Currently Approved Collection.

- *Originating Office:* Bureau of Consular Affairs, Passport Services CA/PPT.

- *Form Number:* DS-3053.

- *Respondents:* Individuals or Households.

- *Estimated Number of Respondents:* 465,848 respondents.

- *Estimated Number of Responses:* 465,848 responses.

- *Average Time per Response:* 20 minutes.

- *Total Estimated Burden Time:*

155,127 hours per year.

- *Frequency:* On occasion.

- *Obligation to Respond:* Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.

- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.

- Enhance the quality, utility, and clarity of the information to be collected.

- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

#### Abstract of Proposed Collection

The information collected on the DS-3053 is used to facilitate the issuance of passports to U.S. citizens and nationals under the age of 16. The primary purpose of soliciting the information is to ensure that both parents and/or all guardians consent to the issuance of a passport to a minor under age 16, except where one parent has sole custody or there are exigent or special family circumstances.

### Methodology

Passport Services collects information from parents or legal guardians of U.S. citizens and non-citizen nationals minors when they complete and submit the Statement of Consent or Special Circumstances: Issuance of a Passport to a Minor under Age 16. Passport applicants can either download the DS-3053 from the internet or obtain one from an Acceptance Facility/Passport Agency. The form must be completed, signed, and submitted along with the applicant's DS-11, Application for a U.S. Passport.

Dated: March 18, 2016.

**Brenda S. Sprague,**

*Deputy Assistant Secretary for Passport Services, Bureau of Consular Affairs, Department of State.*

### DEPARTMENT OF STATE

[Public Notice: 9504]

#### 60-Day Notice of Proposed Information Collection: Electronic Diversity Visa Entry Form

**ACTION:** Notice of request for public comment.

**SUMMARY:** The Department of State is seeking Office of Management and Budget (OMB) approval for the information collection described below. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this notice is to allow 60 days for public comment preceding submission of the collection to OMB.

**DATES:** The Department will accept comments from the public up to *May 31, 2016*.

**ADDRESSES:** You may submit comments by any of the following methods:

- **Web:** Persons with access to the Internet may comment on this notice by going to [www.Regulations.gov](http://www.Regulations.gov). You can search for the document by entering "Docket Number: DOS-2016-0014" in the Search field. Then click the "Comment Now" button and complete the comment form.

- **Email:** [PRA\\_BurdenComments@state.gov](mailto:PRA_BurdenComments@state.gov). You must include the DS form number, information collection title, and the OMB control number in any correspondence.

**FOR FURTHER INFORMATION CONTACT:** Direct requests for additional information regarding the collection

listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Taylor Mauck, who may be reached on 202-485-7635 or at [PRA\\_BurdenComments@state.gov](mailto:PRA_BurdenComments@state.gov).

#### SUPPLEMENTARY INFORMATION:

- **Title of Information Collection:** Electronic Diversity Visa Entry Form.
- **OMB Control Number:** 1405-0153.
- **Type of Request:** Extension of a Currently Approved Collection.
- **Originating Office:** CA/VO/L/R.
- **Form Number:** DS-5501.
- **Respondents:** Immigrant Visa Applicants.
- **Estimated Number of Respondents:** 11,072,400.
- **Estimated Number of Responses:** 11,072,400.
- **Average Time per Response:** 30 Minutes.
- **Total Estimated Burden Time:** 5,536,200 hours.
- **Frequency:** Annually.
- **Obligation to Respond:** Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

**Abstract of proposed collection:** The Department of State utilizes the Electronic Diversity Visa Lottery (EDV) Entry Form to elicit information necessary to ascertain the applicability of the legal provisions of the diversity immigrant visa program. The 2 primary requirements are: The applicant is from a low admission country and is a high school graduate, or has two years of experience in a job that requires two years of training. The foreign nationals complete the electronic entry forms and then applications are randomly selected for further participation in the program. Department of State regulations

pertaining to diversity immigrant visas under the INA are published in 22 CFR 42.33.

**Methodology:** The EDV Entry Form is available online at [www.dvlottery.state.gov](http://www.dvlottery.state.gov) and can only be submitted electronically during the annual registration period.

Dated: March 2, 2016.

**Edward Ramotowski,**

*Deputy Assistant Secretary, Bureau of Consular Affairs, Department of State.*

### DEPARTMENT OF STATE

[Public Notice: 9500]

#### Notice of Public Meeting

**SUMMARY:** The U.S. Department of State, Bureau of Oceans and International Environmental and Scientific Affairs (OES), Office of Marine Conservation announces that the Advisory Panel to the U.S. Section of the North Pacific Anadromous Fish Commission will meet on May 9th, 2016.

**DATES:** The meeting will take place via teleconference on May 9th, 2016 from 2 p.m. to 3 p.m. Eastern time.

**Meeting Details:** The teleconference call-in number is toll-free 877-336-1831, passcode 6472335, and will have a limited number of lines for members of the public to access from anywhere in the United States. Callers will hear instructions for using the passcode and joining the call after dialing the toll-free number noted. Members of the public wishing to participate in the teleconference must contact the OES officer in charge as noted in the **FOR FURTHER INFORMATION CONTACT** section below no later than close of business on Friday, May 6th, 2016.

**FOR FURTHER INFORMATION CONTACT:** Elana Katz-Mink, Office of Marine Conservation, OES, Room 2758, U.S. Department of State, 2201 C Street NW., Washington, DC 20520. Telephone (202) 647-1073, fax (202) 736-7350, email address [katz-minkeh@state.gov](mailto:katz-minkeh@state.gov).

**SUPPLEMENTARY INFORMATION:** In accordance with the requirements of the Federal Advisory Committee Act, notice is given that the Advisory Panel to the U.S. Section of the North Pacific Anadromous Fish Commission (NPAFC) will meet on the date and time noted above. The panel consists of members from the states of Alaska and Washington who represent the broad range of fishing and conservation interests in anadromous and ecologically related species in the North Pacific. Certain members also represent

relevant state and regional authorities. The panel was established in 1992 to advise the U.S. Section of the NPAFC on research needs and priorities for anadromous species, such as salmon, and ecologically related species occurring in the high seas of the North Pacific Ocean. The upcoming Panel meeting will focus on a review of the agenda for the 2016 annual meeting of the NPAFC (May 16–20, 2016; Busan, Republic of Korea). Background material is available from the point of contact noted above and by visiting [www.npafc.org](http://www.npafc.org).

Dated: March 22, 2016.

## **SURFACE TRANSPORTATION BOARD**

[STB Docket No. EP 670 (Sub-No. 1)]

### **Notice of Rail Energy Transportation Advisory Committee Meeting**

**AGENCY:** Surface Transportation Board.

**ACTION:** Notice of Rail Energy Transportation Advisory Committee meeting.

**SUMMARY:** Notice is hereby given of a meeting of the Rail Energy Transportation Advisory Committee (RETAC), pursuant to the Federal Advisory Committee Act (FACA), 5 U.S.C. app. 2 10(a)(2).

**DATES:** The meeting will be held on Friday, April 15, 2016, at 9:00 a.m. C.D.T.

**ADDRESSES:** The meeting will be held at the BNSF Railway Corporate Headquarters at 2650 Lou Menk Drive, Fort Worth, Texas 76131-2830. Members of the public who wish to attend are encouraged to contact Katherine Bourdon (see contact information below) in advance to avoid delays in security processing on the day of the meeting.

**FOR FURTHER INFORMATION CONTACT:** Katherine Bourdon (202) 245-0285; [Katherine.Bourdon@stb.dot.gov](mailto:Katherine.Bourdon@stb.dot.gov).

[Assistance for the hearing impaired is available through the Federal Information Relay Service (FIRS) at: (800) 877-8339.]

**SUPPLEMENTARY INFORMATION:** RETAC was formed in 2007 to provide advice and guidance to the Board, and to serve as a forum for discussion of emerging issues related to the transportation of energy resources by rail, including coal, ethanol, and other biofuels,

*Establishment of a Rail Energy Transportation Advisory Committee*, Docket No. EP 670. The purpose of this meeting is to continue discussions regarding issues such as rail performance, capacity constraints, infrastructure planning and development, and effective coordination among suppliers, carriers, and users of energy resources. Potential agenda items for this meeting include a performance measures review, industry segment updates by RETAC members, and a roundtable discussion.

The meeting, which is open to the public, will be conducted in accordance with the Federal Advisory Committee Act, 5 U.S.C. app. 2; Federal Advisory Committee Management regulations, 41 CFR pt. 102-3; RETAC's charter; and Board procedures. Further communications about this meeting may be announced through the Board's Web site at [WWW.STB.DOT.GOV](http://WWW.STB.DOT.GOV).

**Written Comments:** Members of the public may submit written comments to RETAC at any time. Comments should be addressed to RETAC, c/o Katherine Bourdon, Surface Transportation Board, 395 E Street SW., Washington, DC 20423-0001 or [Katherine.Bourdon@stb.dot.gov](mailto:Katherine.Bourdon@stb.dot.gov).

**Authority:** 49 U.S.C. 1321, 49 U.S.C. 11101; 49 U.S.C. 11121.

Decided: March 24, 2016.

By the Board, Joseph H. Dettmar, Acting Director, Office of Proceedings.

**Brendetta S. Jones,**

*Clearance Clerk.*

## **DEPARTMENT OF TRANSPORTATION**

### **Federal Aviation Administration**

[Docket No. FAA-2015-2836]

#### **Guidance on the Procedures and Process To Petition the Secretary Under the Airport and Airway Improvement Act**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of final policy.

**SUMMARY:** This final policy establishes the procedures and processes to petition the Secretary under the Airport and Airway Improvement Act 49 U.S.C. 47106(c)(1)(A)(ii). The Federal Aviation Administration (FAA) issued guidance on the procedures and process to petition the Secretary under 49 U.S.C. 47106(c)(1)(A)(ii) in the **Federal Register** on August 4, 2015. This guidance is intended to provide detail

and clarity about who may petition the Secretary, when such a petition may be filed, how the petition may be made, and the procedures and process to petition the Secretary under this Section of the Airport and Airway Improvement Act.

**DATES:** *Effective Date:* The Guidance becomes effective immediately upon publication in the **Federal Register**.

**SUPPLEMENTARY INFORMATION:** By **Federal Register** Notice issued on August 4, 2015 (80 FR 46380), the FAA notified the public of the issuance for public comment of proposed Guidance on the Procedures and Process to Petition the Secretary under the Airports and Airway Improvement Act. FAA requested comments, suggestions and recommendations that would assist the agency in assessing and understanding the potential effects and implications of providing guidance on the procedures for and process of the right to petition the Secretary under 49 U.S.C. Section 47106(c)(1)(A)(ii). The Notice called for public comments to be received by FAA on or before October 5, 2015. No comments were received by that date. Other than editorial changes and one minor clarification, this final Guidance is identical to the proposed guidance.

### **I. Background**

In 1982, Congress enacted the Airport and Airway Improvement Act (AAIA) (Pub. L. 97-248). Relevant portions of the AAIA are codified in 49 U.S.C. Chapter 471, Subchapter I, Airport Improvement. The AAIA, among other items, established the current-day Airport Improvement Program (AIP) that is administered by the FAA's Office of Airports. Through the AIP, the FAA provides grants to public agencies—and, in limited cases, to private airport owners and operators—for the planning and development of public-use airports that are included in the National Plan of Integrated Airport Systems (NPIAS). The current AIP program built on earlier grant programs that are funded through a variety of user fees and fuel taxes. For more information on the history of the AIP and predecessor grant programs, see <http://www.faa.gov/airports/aip/>.

The AAIA also provides certain prerequisites and conditions that an airport sponsor must meet in order to be eligible for consideration of AIP funding. In 1992, Congress amended various provisions of the AAIA with the Airport and Airway Safety, Capacity, Noise Improvement, and Intermodal Transportation Act, Public Law 102-581. Section 113(b), Public Access and Participation with Respect to Airport

Projects, amended Section 509(b)(6)(A) of the AIA (49 U.S.C. 47106(c)(1)(A)) by inserting the following:

(ii) the sponsor of the project certifies to the Secretary that the airport management board either has voting representation from the communities where the project is located or has advised the communities that they have the right to petition the Secretary concerning a proposed project.

The Secretary of the U.S. Department of Transportation has delegated the responsibility to respond to a petition under Section 47106 to the Administrator of the FAA, 49 CFR 1.83(a)(9). The Administrator has further delegated the authority to administer this provision to the Associate Administrator for the Office of Airports (ARP-1). Order 1100.154A.<sup>1</sup> The requirement for a sponsor to provide such certification to the FAA is incorporated into FAA Order 5050.4B, National Environmental Policy Act (NEPA) Implementing Instructions for Airport Actions, par. 1203.

## II. Purpose

After receiving a small number of submissions under this provision, the Associate Administrator for the Office of Airports has determined it would be helpful and appropriate to provide the public with more guidance on the procedures and processes associated with this provision:

The Secretary may approve an application under this subchapter for an airport development project involving the location of an airport or runway or a major runway extension only if the sponsor certifies to the Secretary that the airport management board has voting representation from the communities in which the project is located or has advised the communities that they have the right to petition the Secretary about a proposed project.].

49 U.S.C. Section 47106(c)(1)(A)(ii).

## III. Final Guidance

### A. Where To File

The Secretary of the U.S. Department of Transportation has delegated the responsibility to respond to a petition under Section 47106 to the Administrator of the FAA. Accordingly, any petition under this statutory provision should be addressed to the Associate Administrator for the Office of Airports, 800 Independence Avenue SW., Washington, DC 20591.

### B. Form and Substance

The statute does not prescribe any specific format for the submission of a petition. The petition should be a

<sup>1</sup> For clarity, this guidance will continue to use the term "Secretary" in this context.

concise statement describing the project to which the petitioner objects, and clearly indicating the petitioner's specific objection to the project. The petition must also include a description of the result the petitioner is seeking. The petition should normally not exceed ten (10) pages. Upon application from the petitioner, the Secretary will consider extending the length of a petition for a large, complex project. Petitions must be legible and must be signed by the petitioner(s), who must be a duly authorized representative(s) of the community (see Section III.D.4 of this **Federal Register** notice). The FAA will not consider any petition that is not signed by the petitioner(s).

### C. Time To File a Petition

A petition filed under section 47106(c)(1)(A)(ii) should be filed only after the Airport Sponsor notifies a community of its right to file a petition.

Petitions to the Secretary pursuant to Section 47106(c)(1)(A)(ii) must be submitted within thirty (30) days after the FAA gives notice that the sponsor has presented evidence that the requirements of Section 47106(c)(1)(A)(ii) have been fulfilled. Although the environmental analysis and the grant decisions are separate processes and decisions, grant-related findings that are preconditions of issuing a grant are often made in the environmental Record of Decision (ROD). Typically, the FAA demonstrates that the sponsor has satisfied the requirements of Section 47106(c)(1)(A)(ii) in its Final Environmental Impact Statement (FEIS). Generally, the FEIS will contain a certification from the Airport Sponsor either that each community in which the project is located has a voting member on its airport management board, or that each community in which the project is located has been advised of its right to petition the Secretary. Normally the Airport Sponsor will have notified each of the communities prior to the publication of an FEIS, allowing communities at least 30 days to prepare and file a petition.<sup>2</sup> The thirty-day time to file ensures that communities without voting representation on the airport management board have the same ability to object to or provide input on a project prior to a final decision that grant-related preconditions have been

<sup>2</sup> Should the FAA prepare an Environmental Assessment (EA) for a project to which § 47106(c)(1)(A)(ii) applies, or an EIS under MAP-21, Section 1319, the time to file a petition to the Secretary will begin to run when the community is informed of its right to file such a petition by the airport sponsor and will expire 30 days after such notification.

met as those communities that do have voting representation on the airport management board. Additionally, the 30-day period coincides with the Council on Environmental Quality's (CEQ) requirement that imposes a 30-day "cooling off" period on federal agencies between the publication of an FEIS and a ROD. However, the FAA may also provide notice that the sponsor has fulfilled the requirements of Section 47106(c)(1)(A)(ii) through a Draft EA, a Final EA, a Draft EIS, or via a separate **Federal Register** Notice. This type of FAA notice would also start the 30-day time limit for a community to file a petition pursuant to Section 47106(c)(1)(A)(ii).

### D. Definitions

#### (1) Location of an Airport

For purposes of Section 47106(c)(1)(A)(ii), location of an airport means approval of an airport at a location where no airport exists. This definition is consistent with the definition of the term airport location approval found in FAA Order 5050.4B, National Environmental Policy Act (NEPA) Implementing Instructions for Airport Actions (April 2006). Order 5050.4B defines airport location approval as approval of a new public use airport at a location where no airport exists. (Order 5050.4B, ¶¶ 9.p and 203). In interpreting Section 47106(c)(1)(A)(ii), it is appropriate to be consistent with other FAA interpretations of similar terms. Defining the term location of an airport consistently with the definition in the most current version of Order 5050.4B avoids confusion that could be caused by applying different definitions depending on the circumstances of the inquiry.

#### (2) Location of a Runway

While other FAA documents have referred to the location of a runway, none have defined the term. Because the term is similar to the term "location of an airport," it is appropriate to define the terms in a similar manner. For purposes of Section 47106(c)(1)(A)(ii), location of a runway refers to decisions approving the site of a new or relocated runway where a runway does not currently exist.

#### (3) Major Runway Extension

Order 5050.4B defines a major runway extension as one that creates a significant impact to an affected environmental resource (including noise), or one that permanently removes

a relocated threshold.<sup>3</sup> Removal of a dislocated threshold is not considered a runway extension.<sup>4</sup> The definition of major runway extension that appears in Order 5050.4B, ¶9.1 will be used in interpreting Section 47106(c)(1)(A)(ii).

#### (4) Communities in Which the Project Is Located

The term community is not defined in the statute. In the enabling legislation, this provision was entitled “Public Participation With Respect to Airport Projects.” The term “community” will be defined as a jurisdictional authority, that is, a political subdivision of a state, such as a town, township, city, or county. Defining community as a jurisdictional authority is consistent with the context of Section 47106(c). For example, in subsection (A)(i) the statute speaks of “objectives of any planning that the community has carried out.” Typically, only political subdivisions of a state, such as those described above, would have planning authority. Similarly, in the FAA’s experience, only a jurisdictional authority or political subdivision would be considered for voting representation on the airport’s governing authority. It is only in the absence of such voting representation of a jurisdictional authority or political subdivision that the statute provides the opportunity to petition the Secretary.

Defining community as a jurisdictional authority or political subdivision is also consistent with the definition of community in Order 5050.4B, ¶1203(b)(1).

Accordingly, only a political subdivision of a state that enjoys general jurisdiction, or a Tribal government meets the definition of community in this context. Political subdivisions of a state that have a specific, substantive authority, such as water districts or school districts, do not adequately represent the interests of the community at large. They are not required to balance the interests of the whole community on a wide range of issues. Rather, they seek to promote their specific substantive interest. Additionally, water districts or school districts would not normally be invited to sit on an airport management board. Thus, only a political subdivision of a state which enjoys general jurisdiction is a community entitled to file a petition under Section 47106(c)(1)(A)(ii).

Finally, under the statute, a community is only eligible to petition

under Section 47106(c)(1)(A)(ii) if the project is located in the community. If land is disturbed in the community, then the project is considered to be located in that community. The courts have also provided instruction on when a project is located in a community. In *City of Bridgeton v. FAA*, 212 F. 3d 448 (8th Cir. 2000), the court determined that a community in which there was no construction and no significant noise impact could not challenge the failure to notify it that it could petition the Secretary. Thus, outside the construction context, a project may be located in a community only if the project will have a significant impact on the community. For example, where a project will cause a significant noise impact on a community, the project is located in that community. If the project does not create a significant impact in the community, the community will have no right to petition the Secretary.

#### E. Other Considerations

There are currently ten states that participate in the FAA’s State Block Grant Program (SBGP). Under the program, the State agency (usually the aviation division of the state Department of Transportation) assumes responsibility for administering AIP grants for non-primary airports (including several categories of AIP funds). See 49 U.S.C. Section 47128. As part of the responsibility, the state assumes various responsibilities for the FAA including reviewing and approving proposed changes to the Airport Layout Plan (ALP) and compliance with the National Environmental Policy Act (NEPA).

The FAA interprets 49 U.S.C. Section 47106(c)(1)(A)(ii) as not being generally applicable to a project approved and administered as part of a state block grant. The plain language of this statutory provision states that this Section is triggered when a proponent submits a project grant application to the FAA. In the case of the SBGP, no such request is made because most of the funds are given to the states as a block (except for AIP Discretionary funds), and the state assumes responsibility for administering those funds. Participants in the SBGP are required to engage communities according to FAA guidance and to circulate the draft EA if warranted. However, in cases where the project may involve a request for AIP Discretionary funding, or other extraordinary circumstances, the FAA may determine that a community meeting the requirements set forth herein may have the right to petition the Secretary in connection with an AIP

grant. Petitions involving a SBGP project must include facts describing the extraordinary circumstances that they believe justify the Secretary entertaining the petition.

#### F. Agency Response

The FAA will provide a written response to a petition to the Secretary. The FAA may respond by outlining the issues raised in the petition and providing its responses either within the environmental ROD, or it may elect to respond in a separate document.

**Authority:** 49 U.S.C. 47106(c)(1)(A)(ii), 14 CFR part 1.

Issued in Washington, DC, on March 22, 2016.

## DEPARTMENT OF TRANSPORTATION

### Federal Highway Administration

[Docket No. FHWA-2016-0010]

#### Agency Information Collection Activities: Notice of Request for Approval of a New Information Collection

**AGENCY:** Federal Highway Administration (FHWA), DOT.

**ACTION:** Notice of request for approval of a new information collection.

**SUMMARY:** The FHWA has forwarded the information collection request described in this notice to the Office of Management and Budget (OMB) for approval of a new information collection. We published a **Federal Register** Notice with a 60-day public comment period on this information collection on June 23, 2015. We are required to publish this notice in the **Federal Register** by the Paperwork Reduction Act of 1995.

**DATES:** Please submit comments by April 29, 2016.

**ADDRESSES:** You may send comments within 30 days to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street NW., Washington, DC 20503, Attention DOT Desk Officer. You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the FHWA’s performance; (2) the accuracy of the estimated burden; (3) ways for the FHWA to enhance the quality, usefulness, and clarity of the collected information; and

<sup>3</sup> A relocated threshold leaves the pavement usable only for taxiing.

<sup>4</sup> Pavement beyond a dislocated threshold is available for takeoff.

(4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. All comments should include the Docket No. FHWA-2016-0010.

**FOR FURTHER INFORMATION CONTACT:**

Michael Nesbitt ([michael.nesbitt@dot.gov](mailto:michael.nesbitt@dot.gov)), 202-366-1179, Office of Infrastructure, Federal Highway Administration, Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC 20590. Office hours are from 8 a.m. to 5 p.m., Monday through Friday, except Federal holidays.

**SUPPLEMENTARY INFORMATION:** *Title:* National Transportation Performance Management (TPM) Implementation Review, TPM Toolbox, and TPM State-of-Practice Questionnaires.

*Type of request:* New information collection requirement.

*Background:* Moving The Moving Ahead for Progress in the 21st Century (MAP-21) Act and the subsequent Fixing America's Surface Transportation Act (FAST Act) transformed the Federal-aid highway program by establishing new requirements for transportation performance management to ensure the most efficient investment of Federal transportation funds.

Transportation performance management increases the accountability and transparency of the Federal-aid highway program and provides for a framework to support improved investment decision making through a focus on performance outcomes for key national transportation goals. State transportation agencies (STAs) will be expected to use the information and data generated as a result of the new regulations to make better informed transportation planning and programming decisions. The new performance aspects of the Federal-aid program will allow FHWA to better communicate a national performance story and to more reliably assess the impacts of Federal funding investments.

Under the "National Transportation Performance Management (TPM) Implementation Review Survey, TPM State-of-Practice Questionnaires, and TPM Toolbox" information collection request (ICR), the FHWA will collect information on the current state of the practice, data, methods, and systems used by State, metropolitan, regional, local, and/or tribal transportation entities to support their TPM processes in accordance with 23 U.S.C. 119, 134-135, and 148-150, as amended by MAP-21 and the FAST Act. This information will also be used to develop and deliver existing and future Federal Highway

Programs through successful partnerships, value-added stewardship, and risk-based oversight. Underpinning this effort will be a robust focus on improving FHWA and its partners' capacity to implement performance provisions. The information collected from these activities will translate into having a better skilled workforce, effective supporting systems, and clearly articulated programs that are optimally positioned and equipped to deliver the FHWA's mission. In general, the components of the "National TPM Implementation Review Survey, TPM State-of-Practice Questionnaires, and TPM Toolbox" will involve questions related to:

1. TPM related implementation efforts, programs, and activities,
2. Needs for TPM guidance and policy concerning MAP-21 and FAST provisions;
3. TPM capacity building needs;
4. Effectiveness implementing performance based planning and programming and TPM processes.

The most consequential activity covered by this ICR is the "National TPM Implementation Review Survey," which is scheduled to be administered in 2016 and again several years later.

*Overview*

In the summer of 2015, the Federal Highway Administration (FHWA) published the National TPM Implementation Review Survey and Information Collection Request, Docket FHWA-2015-0013. In that 60-day **Federal Register** Notice (FRN), FHWA stated it would administer the first National TPM Implementation Review Survey in 2016 to establish a baseline and assess:

1. FHWA and its partners' progress implementing MAP-21 performance provisions and related TPM best practices; and
2. The effectiveness of performance-based planning and programming processes and transportation performance management.

In that FRN, FHWA also stated that a second National TPM Implementation Review Survey will be conducted several years after the first to assess FHWA and its partners' progress in addressing any gaps or issues identified during the first survey. The findings from the first review survey will be used in a pair of statutory reports to Congress due in 2017 on the effectiveness of performance-based planning, programming processes, and transportation performance management (23 U.S.C. 119, 134(l)(2), and 135(h)(2)). The findings from the second survey will be used in a subsequent follow-up

report. It is important to note that this is not a compliance review. The overall focus of the National TPM Implementation Review Survey is on the TPM and performance-based planning processes and practices used by STAs and MPOs, not the performance outcomes of those processes.

FHWA received 20 comment letters and over 24 unique comments. While a number of concerns were expressed by the commenters, they generally supported the information collection request outlined in the FRN. Regarding the National TPM Implementation Review Survey, stakeholders were most concerned about the estimated burden of effort and time for administration of the survey. Based on those specific comments to the docket, it became clear that a majority of responding States, MPOs, and their respective associations want FHWA to: (1) "coordinate with stakeholders when developing" the design of any TPM surveys, questionnaires, or related instruments; (2) Provide more information on the type of questions to be asked as part of the National TPM Implementation Review Survey and any State-of-Practice Questionnaires; (3) Minimize the burden of effort to the greatest extent practicable; (4) Delay administration of National TPM Implementation Review Survey until after the final rulemakings; and (5) Share data from the National TPM Implementation Review Survey with States, MPOs, and their respective associations to support the development of federally and state funded TPM capacity building efforts.

To address the first three concerns listed in the preceding paragraph, stakeholders can provide input on the design of National TPM Implementation Review Survey by:

1. Submitting comments on the draft survey questions and survey design report to the docket.
2. Participating in one of two webinar listening sessions on the design of the National TPM Implementation Review Survey. The date and time of these webinars will be advertised at [www.fhwa.dot.gov/TPM](http://www.fhwa.dot.gov/TPM). To receive an email notification announcing the date and time of these webinar listening sessions, please visit [www.fhwa.dot.gov/TPM](http://www.fhwa.dot.gov/TPM) and subscribe to email updates.

To address the concern on the timing of the National TPM Implementation Review Survey, FHWA decided to delay administering the review until after publication of the *Statewide and Nonmetropolitan Transportation Planning; Metropolitan Transportation Planning Final Rulemaking*.

In addition to the more formal National TPM Implementation Review Survey, FHWA will conduct informal voluntary TPM State-of-Practice Questionnaires related to ongoing TPM policy and guidance, technical assistance, and capacity needs. To address concerns expressed by stakeholders regarding the burden of effort and administration of these additional questionnaires, FHWA is proposing to sequence the National TPM Implementation Review Survey and other State-of-the-Practice Questionnaires on a biennial cycle. Under this biennial cycle, the first National TPM Implementation Review Survey would be administered in 2016 and the follow-up in 2020. The smaller, less formal State-of-the-Practice Questionnaires would be administered in 2018 and 2022. The State-of-the-Practice Questionnaires are essential to helping FHWA coordinate with its many stakeholders to reduce duplicative survey efforts as the industry works to implement and understand the TPM practices.

Under this sequencing, the National TPM Implementation Review Survey will continue to serve the original purpose of allowing FHWA to evaluate the effectiveness of efforts to implement TPM and PBPP. The State-of-the-Practice Questionnaires will enable FHWA and its stakeholders to coordinate the collection of information necessary to advance the state-of-the-practice and further TPM capacity building efforts. This approach limits the number of TPM related surveys to 4 over a number of years:

- National TPM Implementation Review Survey (*Baseline*): 2016.
- State-of-the-Practice Questionnaires: 2018.
- National TPM Implementation Review Survey (*Follow-up*): 2020.
- State-of-the-Practice Questionnaires: 2022.

After each survey or questionnaire, FHWA and its stakeholders will explore how to better align the information collection requests with yet-to-be determined performance management reporting processes. The information will be collected from State, metropolitan, regional, local, and/or tribal transportation agencies via internet-based questionnaires or web applications and will be used to help FHWA and its partner organizations do the following:

- Strategically plan to meet ever growing demand for TPM technical assistance needs;
- Develop and refine TPM policy and guidance based on stakeholder feedback;

- Channel resources to meet capacity development and training needs; and
- Identify and prioritize TPM research needs.

Lastly, as part of FHWA's ongoing technical assistance efforts, a TPM Toolbox is being created to help FHWA's partners self-assess and benchmark their TPM implementation progress, capabilities, and gaps. The TPM Toolbox will also help FHWA streamline the integration and administration of all the efforts described above. To maximize the effectiveness and efficiency of the TPM Toolbox, FHWA will collect business contact and organizational demographic (size of organization, location, etc.) information along with the responses submitted as part of the TPM Toolbox's self-assessment applications.

*Respondents:* The 975 respondents estimate is based on soliciting input from 52 STA, 409 MPOS, and a sampling of other State and local transportation entities. In most cases, only STAs and MPOs will be surveyed.

*Frequency:* Agencies will be solicited to provide information via a survey 1 time every two years. Additionally, transportation agencies may submit information more frequently by using the TPM Toolbox's self-assessment tool.

*Estimated Average Burden per Response:* The estimated average annual burden hours is up to 20 hours per response during a year with a survey/questionnaire request.

*Estimated Total Annual Burden Hours:* The estimated total annual burden hours for all respondents is estimated to be 19,500 burden hours (975 respondents  $\times$  20 burden hours) per year with survey/questionnaire requests.

**Professional Staff Time During a Survey Year**

- 20 hours/respondent  $\times$  975 respondents  $\times$  1 questionnaire during a survey year = 19,500 hours

**Clerical Staff Time During a Survey Year**

- 2 hours/respondent  $\times$  975 respondents  $\times$  1 questionnaire during a survey year = 1,950 hours

The aggregated associated salary cost to all respondents (975) during a survey year is estimated to be \$1,032,213 based on an average salary of \$38 per hour (approximately \$79,000 per year) for professional staff and \$18 per hour (approximately \$37,000 per year) for clerical staff. Disaggregated, the total average annual cost per respondent during a survey year is estimated to be \$1,058.68. The burden hours and costs are illustrated below.

**Professional Staff Cost During a Survey Year**

- All respondents: 19,500 hours  $\times$  \$38 per hour = \$741,000
  - Per respondent: (20  $\times$  \$38 = \$760)

**Clerical Staff Cost During a Survey Year**

- All respondents: 1,950 hours  $\times$  \$18 per hour = \$35,100
  - Per respondent (2 hours  $\times$  \$18 per hour = \$36)

**Total Annual Cost During a Survey Year**

- Subtotal Direct Salaries (Professional + Clerical) \$776,100
- Overhead/fringe benefits at 33%: \$256,113
- Total annual respondents cost during survey year: \$1,032,213
  - Total average annual cost per respondent during survey year: \$1,058.68

*Public Comments Invited:* You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection of information is necessary for the U.S. DOT's performance, including whether the information will have practical utility; (2) the accuracy of the U.S. DOT's estimate of the burden of the proposed information collection; (3) ways to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

**Authority:** The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1.48.

Issued On: March 25, 2016.

## DEPARTMENT OF TRANSPORTATION

### National Highway Traffic Safety Administration

[Docket No. NHTSA-2015-0083, Notice 2]

#### Decision That Nonconforming Model Year 2014 Mercedes-Benz SLK Class Passenger Cars Are Eligible for Importation

**AGENCY:** National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

**ACTION:** Grant of petition.

**SUMMARY:** This document announces a decision by the National Highway Traffic Safety Administration that certain model year (MY) 2014 Mercedes-Benz SLK Class passenger cars (PCs) that were not originally manufactured to comply with all applicable Federal Motor Vehicle Safety Standards (FMVSS) are eligible for importation into the United States because they are substantially similar to vehicles originally manufactured for sale in the United States and certified by their manufacturer as complying with the safety standards (the U.S. certified version of the MY 2014 Mercedes-Benz SLK Class PC), and they are capable of being readily altered to conform to the standards.

**DATES:** This decision became effective on March 25, 2016.

**ADDRESSES:** For further information contact George Stevens, Office of Vehicle Safety Compliance, NHTSA (202-366-5308).

**SUPPLEMENTARY INFORMATION:**

**Background**

Under 49 U.S.C. 30141(a)(1)(A), a motor vehicle that was not originally manufactured to conform to all applicable FMVSS shall be refused admission into the United States unless NHTSA has decided that the motor vehicle is substantially similar to a motor vehicle originally manufactured for importation into and sale in the United States, certified as required under 49 U.S.C. 30115, and of the same model year as the model of the motor vehicle to be compared, and is capable of being readily altered to conform to all applicable FMVSS.

Petitions for eligibility decisions may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR part 592. As specified in 49 CFR 593.7, NHTSA publishes notice in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA decides, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this decision in the **Federal Register**.

J.K. Technologies, LLC, of Baltimore, Maryland (JK) (Registered Importer# RI-90-006), petitioned NHTSA to decide whether MY 2014 Mercedes-Benz SLK Class PCs are eligible for importation into the United States. NHTSA published a notice of the petition on February 16, 2016 (81 FR 7889) to afford an opportunity for public comment. No

comments were received in response to this petition. The reader is referred to the receipt notice for a thorough description of the petition.

*NHTSA'S Conclusions*

NHTSA has reviewed the petition and has concluded that the vehicles covered by the petition are substantially similar to MY 2014 Mercedes-Benz SLK Class PC's and are capable of being readily altered to comply with all applicable FMVSS.

NHTSA has also determined that any RI who imports or modifies one of these vehicles must include in the statement of conformity and associated documents (referred to as a "conformity package") it submits to NHTSA under 49 CFR 592.6(d) additional specific proof to confirm that the vehicle was manufactured to conform to, or was successfully altered to conform to, FMVSS No. 101, *Controls and Displays*, FMVSS No. 138, *Tire Pressure Monitoring Systems*, FMVSS No. 208 *Occupant Crash Protection* and FMVSS No. 301 *Fuel System Integrity*. This proof must include detailed descriptions of all modifications made to achieve conformity with those standards, including a detailed description of systems in place (if any) on the vehicle at the time it was delivered to the RI and a similarly detailed description of the systems in place after the vehicle is altered, including photographs of all required labeling. The description must also include parts assembly diagrams and associated part numbers for all components that were removed from or installed on the vehicle, a description of how any computer programming changes were completed, and a description of how compliance was verified after alterations were completed. Photographs (*e.g.*, monitor print screen captures) or report printouts, as practicable, must be submitted as proof that any computer reprogramming was carried out successfully.

In addition to the information specified above, each conformity package must also include evidence showing how the RI verified that the changes it made in loading or reprogramming vehicle software to achieve conformity with each separate FMVSS, did not also cause the vehicle to fall out of compliance with any other applicable FMVSS.

*Decision*

Accordingly, on the basis of the foregoing, NHTSA hereby decides that MY 2014 Mercedes-Benz SLK Class passenger cars that were not originally

manufactured to comply with all applicable FMVSS, are substantially similar to MY 2014 Mercedes-Benz SLK Class passenger cars manufactured for importation into and/or sale in the United States, and certified under 49 U.S.C. 30115, and are capable of being readily altered to conform to all applicable Federal Motor Vehicle Safety Standards.

*Vehicle Eligibility Number for Subject Vehicles*

The importer of a vehicle admissible under any final decision must indicate on the form HS-7 accompanying entry the appropriate vehicle eligibility number indicating that the vehicle is eligible for entry. VSP-581 is the vehicle eligibility number assigned to vehicles admissible under this notice of final decision.

**Authority:** 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8.

**DEPARTMENT OF TRANSPORTATION**

**National Highway Traffic Safety Administration**

[Docket No. NHTSA-2014-0045; Notice 2]

**General Motors, LLC, Grant of Petition for Decision of Inconsequential Noncompliance**

**AGENCY:** National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

**ACTION:** Grant of petition.

**SUMMARY:** General Motors, LLC, (GM) has determined that certain model year (MY) 2014 GMC Sierra Denali vehicles do not fully comply with paragraph S3.1.4 of Federal Motor Vehicle Safety Standard (FMVSS) No. 102, *Transmission shift position sequence, starter interlock, and transmission braking effect*. GM filed a report dated January 31, 2014 pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. GM then petitioned NHTSA under 49 CFR part 556 requesting a decision that the subject noncompliance is inconsequential to motor vehicle safety.

**ADDRESSES:** For further information on this decision contact John Finneran, Office of Vehicle Safety Compliance, National Highway Traffic Safety Administration (NHTSA), telephone

(202) 366-5289, facsimile (202) 366-5930.

**SUPPLEMENTARY INFORMATION:**

I. *GM's Petition*: Pursuant to 49 U.S.C. 30118(d) and 30120(h) and the rule implementing those provisions at 49 CFR part 556, GM submitted a petition for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

Notice of receipt of GM's petition was published, with a 30-Day public comment period, on May 22, 2014 in the **Federal Register** (79 FR 29501). One comment was received from the Advocates for Highway and Auto Safety. To view the petition and all supporting documents log onto the Federal Docket Management System (FDMS) Web site at: <http://www.regulations.gov/>. Then follow the online search instructions to locate docket number "NHTSA-2014-0045."

II. *Vehicles Involved*: Affected are approximately 2,747 MY 2014 GMC Sierra Denali vehicles equipped with RPO code "UHS" instrument cluster displays that were manufactured between July 16, 2013 and January 22, 2014.

III. *Noncompliance*: GM explains that in certain circumstances the subject vehicles may experience a condition where the instrument cluster resets, and the analog gauges and the PRNDM indicators turn off momentarily to ensure the integrity of the information being displayed by electronic devices. Since all vehicles sold in the U.S. must display the shift positions, including the positions in relation to each other and the position selected whenever the ignition is in a position where the transmission can be shifted; or the transmission is not in park, these vehicles fail to fully meet the requirements set forth in paragraph S3.1.4 of FMVSS No. 102.

IV. *Rule Text*: Paragraph S3.1.4 of FMVSS No. 102 requires in pertinent part:

S3.1.4 Identification of shift positions and of shift position sequence . . .

S3.1.4.1 Expect as specified in S3.1.4.3, if the transmission shift position sequence includes a park position, identification of shift positions, including the positions in relation to each other and the position selected, shall be displayed in view of the driver whenever any of the following conditions exist:

(a) The ignition is in a position where the transmission can be shifted; or

(b) The transmission is not in park . . .

S3.1.4.3 Such information need not be displayed when the ignition is in a position that is used only to start the vehicle . . .

V. *Summary of GM's Analyses*: GM stated its belief that the subject noncompliance is inconsequential to motor vehicle safety for the following reasons:

1. GM believes that the condition is extremely unlikely to occur. For the condition to occur, the instrument cluster design input rate must be exceeded. This can only happen under extreme load conditions. For example, GM was able to create the condition in the laboratory by simultaneously inputting a series of warnings into the cluster during an active search of a media device connected to the vehicle while a Bluetooth® connected phone call is received by the vehicle.

2. GM states that any disruption of the PRNDM display as a result of this condition is very brief. In the unlikely event the condition were to occur and the instrument cluster resets, the PRNDM display would be restored within 1.3 seconds. This momentary reset would be a clear indication to the driver that service may be required.

3. GM also believes that the condition has little effect on the normal operation of the vehicle. While the operation of the instrument panel is briefly affected by the underlying condition, none of the other vehicle operations are affected.

4. GM states that the condition is extremely remote and not likely to occur during shifting. Considering the unusual combination of pre-conditions for the condition to occur, it is very unlikely the brief disruption of the PRNDM display would occur when it is needed, *i.e.*, during shifting. Most shifting occurs shortly after the vehicle is started, or just prior to being turned off. In the rare instance of a cluster reset, it would be more likely to occur during driving, not immediately after starting the vehicle or just prior to the driver exiting the vehicle.

5. GM is not aware of any reported instrument cluster resets as a result of the subject noncompliance.

6. GM also expressed its belief that for previous noncompliances that GM believes were similar, NHTSA granted petitions for inconsequential noncompliance.

GM has additionally informed NHTSA that it has corrected the noncompliance so that all future production vehicles will comply with FMVSS No. 102.

In summation, GM believes that the described noncompliance of the subject vehicles is inconsequential to motor vehicle safety, and that its petition, to exempt GM from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the recall noncompliance as

required by 49 U.S.C. 30120 should be granted.

**NHTSA'S Decision**

*NHTSA'S Analysis*: GM explains that because they could only duplicate the subject condition with a series of unlikely simultaneous inputs, they believe that the subject noncompliance is not likely to occur. As an example, if all of the following conditions were to occur simultaneously the subject condition may occur causing an instrument cluster reset: A navigation route is active; three cluster warnings are initiated simultaneously; there is an incoming Bluetooth® connected phone call that triggers a Driver Information Center message; and a passenger actively searches a media device that provides more data than a typical radio display (*e.g.*, XM radio, or a paired media device). If all the above were to occur at precisely the same instant (within a millisecond) according to the GM, a cluster reset may be triggered. NHTSA agrees with GM that the possibility of this condition occurring is improbable because multiple specific actions must be taken by the driver and/or passenger simultaneously.

GM states that the disruption of the PRNDM as a result of this condition is very brief and in the unlikely event the condition were to occur and the instrument cluster resets, the PRNDM display would be restored within 1.3 seconds. GM also noted that while the operation of the instrument panel would be briefly affected by the underlying condition, no other vehicle operations are affected.

After receipt of GM's petition, NHTSA requested more information regarding the subject noncompliance. GM submitted videos showing that when the condition occurs any existing warning lights extinguish, the indicators (gauges) drop to zero, and operation of the entire instrument panel is interrupted. Specifically, any illuminated telltales extinguish for approximately 1.3 seconds before a bulb check that lasts approximately five seconds is initiated. At the conclusion of the bulb check any previously illuminated telltales will illuminate and remain illuminated.

NHTSA agrees with GM that if the instrument panel reset were to happen it would only be a momentary condition, the instrument panel telltales and indicators would extinguish and return to normal very quickly, with little, if any, impact to the driver.

GM mentioned two previous petitions that the agency granted due to the loss or failure of telltale indications. In the first petition, *General Motors Corp.; Grant of Petition for Determination of*

*Inconsequential Noncompliance*, 56 FR 33323 (July 19, 1991), the noncompliance would only manifest itself when the headlight high beams were turned on and the cigar lighter was activated. In this situation the required high beam telltale could dim or extinguish altogether for a short period of time while the cigar lighter was being powered. The petition was granted because the agency determined there was no consequence to motor vehicle safety attached to the extinguishment of the high beam telltale.

In the second petition, submitted by Nissan, *Nissan North America, Incorporated, Grant of Petition for Decision of Inconsequential Noncompliance*, 78 FR 59090 (Sept. 25, 2013), under rare circumstances the transmission gear selected was not always displayed correctly as required. The petition was granted because it was only possible for the gear indication to extinguish when the engine was inactive and the vehicle was inoperable. Upon reactivating the engine the gear indicator displayed the correct gear.

Advocates for Highway and Auto Safety (Advocates), provided comments about GM's petition in response to the petition receipt notice published in the **Federal Register**. The Advocates do not specifically support the granting or denial of GM's petition, but believe that the existence of such a malfunction raises serious questions regarding vehicle design which can lead to this kind of situation.

Finally, GM states that they are not aware of any reported instrument cluster resets as a result of the subject condition. *NHTSA'S Decision*: In consideration of the foregoing, NHTSA finds that GM has met its burden of persuasion that the FMVSS No. 102 noncompliance in the affected vehicles is inconsequential to motor vehicle safety. Accordingly, GM's petition is hereby granted and GM is consequently exempted from the obligation of providing notification of, and a free remedy for, that noncompliance under 49 U.S.C. 30118 and 30120.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, this decision only applies to the subject noncompliant vehicles that GM no longer controlled at the time it determined that the noncompliance

existed. However, the granting of this petition does not relieve vehicle distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant vehicles under their control after GM notified them that the subject noncompliance existed.

**Authority:** 49 U.S.C. 30118, 30120; Delegations of authority at 49 CFR 1.95 and 501.8.

## DEPARTMENT OF TRANSPORTATION

### National Highway Traffic Safety Administration

[Docket No. NHTSA-2014-0056; Notice 2]

#### Chrysler Group LLC, Grant of Petition for Decision of Inconsequential Noncompliance

**AGENCY:** National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

**ACTION:** Grant of petition.

**SUMMARY:** Chrysler Group LLC (Chrysler)<sup>1</sup> has determined that certain model year (MY) 2013 and 2014 Fiat brand, 500e model, passenger cars do not fully comply with paragraph S5.4.1 of Federal Motor Vehicle Safety Standard (FMVSS) No. 101, *Controls and Displays*. Chrysler has filed an appropriate report dated April 1, 2014, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. Chrysler then petitioned NHTSA under 49 CFR part 556 requesting a decision that the subject noncompliance is inconsequential to motor vehicle safety.

**ADDRESSES:** For further information on this decision contact John Finneran, Office of Vehicle Safety Compliance, National Highway Traffic Safety Administration (NHTSA), telephone (202) 366-5289, facsimile (202) 366-5930.

#### SUPPLEMENTARY INFORMATION:

##### I. Chrysler's Petition

Pursuant to 49 U.S.C. 30118(d) and 30120(h) and the rule implementing those provisions at 49 CFR part 556), Chrysler has petitioned for an exemption from the notification and remedy requirements of 49 U.S.C.

<sup>1</sup> Chrysler is a wholly owned subsidiary of the automaker Fiat S.p.A.

Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

Notice of receipt of Chrysler's petition was published, with a 30-Day public comment period, on June 19, 2014 in the **Federal Register** (79 FR 35227). No comments were received. To view the petition and all supporting documents log onto the Federal Docket Management System (FDMS) Web site at: <http://www.regulations.gov/>. Then follow the online search instructions to locate docket number "NHTSA-2014-0056."

##### II. Vehicles Involved

Affected are approximately 3,447 MY 2013 and 2014 Fiat brand, 500e model, passenger cars manufactured between March 21, 2013 and February 11, 2014 at Chrysler's Toluca Assembly Plant.

##### III. Noncompliance

Chrysler explains that the noncompliance is that the low tire pressure indicator telltale installed on the subject vehicles is orange in color rather than yellow as required by paragraph S5.4.1 of FMVSS No. 101.

##### IV. Rule Text

Paragraph S5.4 of FMVSS No. 101 requires in pertinent part:

S5.4 Color

S5.4.1 The light of each telltale listed in Table 1 must be of the color specified for that telltale in column 6 of that table.

##### V. Summary of Chrysler's Analyses

Chrysler stated that in the FMVSS No. 138 Final Rule (**Federal Register** Volume 70, Number 67 (April 8, 2005)) NHTSA indicated that the intent of a TPMS warning telltale is to notify the operator of safety consequences that do not constitute an emergency requiring immediate service. While the affected vehicles may display an orange TPMS telltale, Chrysler's position is the operator notification conveys the appropriate message to the operator when there is either significant tire under-inflation or a TPMS malfunction.

Chrysler's reasoning in support of the position is as follows:

- For the subject vehicles, if the TPMS telltale is illuminated and the operator does not understand its meaning, the TPMS telltale graphic is shown and described in the *Introduction, Instrument Cluster Descriptions, and Starting and Operating* sections of the vehicle owner's manual. An operator can easily refer to the owner's manual and determine the TPMS telltale relates to significant tire under-inflation or a TPMS malfunction. The owner's manual

does not reference the color of the TPMS telltale, but rather that it “illuminates” in the event of low tire pressure and/or TPMS fault.

- In the event there is significant under-inflation of tires, the TPMS telltale is illuminated and the instrument cluster Electronic Vehicle Information Center (EVIC) will display a highlighted graphic of the locations including the pressure values of the affected tires.

- In the event there is a TPMS fault, the telltale will flash on and off for 75 seconds and then maintain a continuous illumination. The system fault will sound a chime and also display a “Service TPM System” message in the EVIC for approximately 3 seconds. This message contains the same symbol as the telltale. If the ignition switch is cycled, this sequence will repeat, providing the system fault still exists. If the system fault no longer exists, the TPMS telltale will no longer flash, and the “Service TPM System” message will no longer display.

In addition to the TPMS telltale alerting the operator of a significant loss of tire pressure, or a TPMS malfunction as required, the EVIC messages and owner’s manual provide more than the minimum level of information required aiding the operator’s association of the illuminated telltale with an appropriate response.

Chrysler also made reference to a previous petition for inconsequential noncompliance that addressed labeling issues that NHTSA granted.

Chrysler has additionally informed NHTSA that it has corrected the noncompliance so that all future production vehicles will comply with FMVSS No. 101.

In summation, Chrysler believes that the described noncompliance of the subject vehicles is inconsequential to motor vehicle safety, and that its petition, to exempt Chrysler from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the recall noncompliance as required by 49 U.S.C. 30120 should be granted.

#### *NHTSA’S Decision*

*NHTSA’S Analysis:* Chrysler explained that if the TPMS telltale is illuminated and the operator does not understand its meaning, the operator can easily refer to the owner’s manual and determine that the TPMS telltale relates to significant tire under-inflation or a TPMS malfunction. Chrysler also stated that the owner’s manual does not reference the color of the TPMS telltale, but rather that it “illuminates” in the

event of low tire pressure and/or TPMS fault.

NHTSA understands that many vehicle operators are not familiar with the standard TPMS telltale used in vehicles today. The agency anticipates that regardless of TPMS telltale color, yellow or orange, vehicle operators familiar with the telltale symbol will not be confused by the telltale color, and those not familiar with the telltale symbol will still have to reference the owner’s manual to determine the meaning when illumination occurs.

Chrysler explained that in the event there is a significant low inflation pressure condition, the TPMS telltale will illuminate as required, and the instrument cluster Electronic Vehicle Information Center (EVIC) will display a highlighted graphic depicting locations and pressure values of affected tires.

The agency is in agreement with Chrysler that the information provided by the EVIC is in addition to the telltale required by the TPMS safety standard (FMVSS No. 138). The EVIC information and warnings will aid the vehicle operator in the recognition of low tire inflation pressure and TPMS system malfunctions.

For the reasons stated above, the agency concludes that in the case of the subject vehicles, the low tire pressure indicator telltales installed on the subject vehicles being orange in color rather than yellow poses little if any risk to motor vehicle safety.

*NHTSA’S Decision:* In consideration of the foregoing, NHTSA finds that Chrysler has met its burden of persuasion that the subject FMVSS No. 101 noncompliance in the subject vehicles is inconsequential to motor vehicle safety. Accordingly, Chrysler’s petition is hereby granted and Chrysler is exempted from the obligation of providing notification of, and a free remedy for, that noncompliance under 49 U.S.C. 30118 and 30120.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, any decision on this petition only applies to the subject vehicles that Chrysler no longer controlled at the time it determined that the noncompliance existed. However, the granting of this petition does not relieve Chrysler distributors and dealers of the prohibitions on the sale, offer for sale,

or introduction or delivery for introduction into interstate commerce of the noncompliant vehicles under their control after Chrysler notified them that the subject noncompliance existed.

**Authority:** 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8.

## **DEPARTMENT OF TRANSPORTATION**

### **National Highway Traffic Safety Administration**

[Docket No. NHTSA-2015-0113; Notice 2]

#### **Nitto Tire U.S.A, Inc., Grant of Petition for Decision of Inconsequential Noncompliance**

**AGENCY:** National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

**ACTION:** Grant of petition.

**SUMMARY:** Nitto Tire U.S.A., Inc. (Nitto), has determined that certain Nitto NT05 passenger car tires manufactured between December 14, 2014 and August 1, 2015, do not fully comply with paragraph S5.5(e) of Federal Motor Vehicle Safety Standard (FMVSS) No. 139, *New Pneumatic Radial Tires for Light Vehicles*. Nitto filed a report<sup>1</sup> pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. Nitto then petitioned NHTSA under 49 CFR part 556 requesting a decision that the subject noncompliance is inconsequential to motor vehicle safety.

**ADDRESSES:** For further information on this decision contact Abraham Diaz, Office of Vehicle Safety Compliance, the National Highway Traffic Safety Administration (NHTSA), telephone (202) 366-5310, facsimile (202) 366-5930.

#### **SUPPLEMENTARY INFORMATION:**

##### **I. Overview**

Pursuant to 49 U.S.C. 30118(d) and 30120(h) (see implementing rule at 49 CFR part 556), Nitto submitted a petition for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

<sup>1</sup> Originally dated September 15, 2015 under the name of its parent company Toyo Tire Holdings of Americas Inc., and refiled under its own name on November 5, 2015.

Notice of receipt of the petition was published, with a 30-day public comment period, on December 14, 2015 in the **Federal Register** (80 FR 77415). No comments were received. To view the petition and all supporting documents log onto the Federal Docket Management System (FDMS) Web site at: <http://www.regulations.gov/>. Then follow the online search instructions to locate docket number "NHTSA-2015-0113."

## II. Tires Involved

Affected are approximately 1,059 Nitto NT05 size 295/35ZR18 99W passenger car tires manufactured between December 14, 2014 and August 1, 2015.

## III. Noncompliance

Nitto explains that the noncompliance is that the sidewall markings on the subject tires do not include the correct generic name for the plies in the tread and sidewall area of the tires as required by paragraph S5.5(e) of FMVSS No. 139. Specifically, the subject tires are marked with "Tread 2 Steel 2 Rayon 1 Nylon; Sidewall 3 Rayon." The correct marking should be "Tread 2 Steel 2 Polyester 1 Nylon; Sidewall 3 Polyester."

## IV. Rule Text

Paragraph S5.5(e) of FMVSS No. 139 requires in pertinent part:

S5.5 *Tire markings.* Except as specified in paragraphs (a) through (i) of S5.5, each tire must be marked on each sidewall with the information specified in S5.5(a) through (d) and on one sidewall with the information specified in S5.5(e) through (i) according to the phase-in schedule specified in S7 of this standard. . . .

(e) The generic name of each cord material used in the plies (both sidewall and tread area) of the tire; . . .

## V. Summary of Nitto's Analyses

Nitto stated its belief that the subject noncompliance is inconsequential to motor vehicle safety for the following reasons:

(1) Nitto believes that in the Safety Act Congress acknowledged that there are cases where a vehicle or equipment may fail to comply with a safety standard, but that the impact on motor vehicle safety is so slight that an exemption from the notice and remedy requirements of the Safety Act is justified.

(2) Nitto states that the subject tires meet all other performance and regulatory requirements of FMVSS No. 139.

(3) Nitto has not received any complaints, claims, or warranty adjustments related to this noncompliance.

(4) Nitto believes that NHTSA has previously granted inconsequential noncompliance petitions for noncompliances that it believes are similar to the subject noncompliance.

Nitto has additionally informed NHTSA that it has corrected the noncompliance so that future production of the subject tires will comply with all applicable labeling requirements of FMVSS No. 139.

In summation, Nitto believes that the described noncompliance of the subject tires is inconsequential to motor vehicle safety, and that its petition, to exempt Nitto from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the recall noncompliance as required by 49 U.S.C. 30120 should be granted.

### *NHTSA'S Decision*

*NHTSA'S Analysis:* The agency agrees with Nitto that the noncompliances are inconsequential to motor vehicle safety. The agency believes that the true measure of inconsequentiality to motor vehicle safety in this case is that there is no effect of the noncompliances on the operational safety of vehicles on which these tires are mounted.

Although tire construction affects the strength and durability, neither the agency nor the tire industry provides information relating tire strength and durability to the ply cord material in the tread and sidewall. Therefore, tire dealers and customers should consider the tire construction information along with other information such as load capacity, maximum inflation pressure, and tread wear, temperature, and traction ratings, to assess performance capabilities of various tires.

In the agency's judgement, the incorrect labeling of the tire construction information will have an inconsequential effect on motor vehicle safety because most consumers do not base tire purchases or vehicle operation parameters on the ply material in a tire.

*NHTSA'S Decision:* In consideration of the foregoing, NHTSA finds that Nitto has met its burden of persuasion that the subject FMVSS No. 139 noncompliance in the affected tires is inconsequential to motor vehicle safety. Accordingly, Nitto's petition is hereby granted and Nitto is consequently exempted from the obligation of providing notification of, and a free remedy for, that noncompliance under 49 U.S.C. 30118 and 30120.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, this

decision only applies to the subject tires that Nitto no longer controlled at the time it determined that the noncompliance existed. However, the granting of this petition does not relieve equipment distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant tires under their control after Nitto notified them that the subject noncompliance existed.

**Authority:** 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8.

## DEPARTMENT OF TRANSPORTATION

### Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA-2016-0021]

### Oil Spill Response Planning Workshop

**AGENCY:** Pipeline and Hazardous Materials Safety Administration, DOT.

**ACTION:** Notice of public workshop.

**SUMMARY:** This notice is to announce a public workshop to discuss Oil Spill Response Plans covered by PHMSA's Part 130 and Part 194 regulations. The purpose of the workshop is to bring federal regulators, interested members of the public, industry, and other stakeholders together to share knowledge and experiences with oil spill response planning and preparedness, gather ideas for harmonizing PHMSA's regulations with other agencies, and discuss practical ways regulated entities can better plan and prepare for an oil spill.

**DATES:** The public workshop will held on Tuesday, April 12, 2016, from 9:00 a.m. to 4:30 p.m. EST. Changes to start and finish times will be updated on the PHMSA meeting Web site (<https://primis.phmsa.dot.gov/meetings/MtgHome.mtg?mtg=112>).

**ADDRESSES:** The workshop will be held at the National Transportation Safety Board, 490 L'Enfant Plaza East, Southwest, Washington, DC.

The workshop agenda and any additional information will be published on the PHMSA home page Web site at (<http://www.phmsa.dot.gov/pipeline>), and on the PHMSA meeting page Web site <https://primis.phmsa.dot.gov/meetings/MtgHome.mtg?mtg=112>. Presentations will also be available online at the

meeting page Web site within 30 days following the workshop.

**Registration:** Members of the public may attend this free workshop. Please note that the public workshop will be webcast. The details on this meeting, including the location, times, agenda items, and link to the webcast, will be available on the meeting page (<https://primis.phmsa.dot.gov/meetings/MtgHome.mtg?mtg=112>) as they become available. Attendees, both in person and by webcast, are strongly encouraged to register in advance at (<https://primis.phmsa.dot.gov/meetings/MtgHome.mtg?mtg=112>) to help ensure accommodations are adequate.

**Comments:** Members of the public may also submit written comments either before or after the workshop. Comments should reference Docket No. PHMSA-2016-0021. Comments may be submitted in the following ways:

- **E-Gov Web site:** <http://www.regulations.gov>. This site allows the public to enter comments on any **Federal Register** notice issued by any agency. Follow the instructions for submitting comments.
- **Fax:** 1-202-493-2251.
- **Mail:** Docket Management System, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12-140, Washington, DC 20590.
- **Hand Delivery:** DOT Docket Management System, Room W12-140, on the ground floor of the West Building, 1200 New Jersey Avenue SE., Washington, DC between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays.

**Instructions:** Identify the docket number at the beginning of your comments. If you submit your comments by mail, submit two copies. If you wish to receive confirmation that PHMSA has received your comments, include a self-addressed stamped postcard. Internet users may submit comments at <http://www.regulations.gov>.

**Note:** Comments will be posted without changes or edits to <http://www.regulations.gov> including any personal information provided. Please see the Privacy Act Statement heading below for additional information.

### Privacy Act Statement

Anyone may search the electronic form of all comments received for any of our dockets. You may review DOT's complete Privacy Act Statement in the **Federal Register** published April 11, 2000, (65 FR 19476).

### Information on Services for Individuals With Disabilities

For information on facilities or services for individuals with disabilities, or to request special assistance at the meeting, please contact Kristen Beer, Office of Pipeline Safety, at 202-366-8405 or by email at [kristen.beer@dot.gov](mailto:kristen.beer@dot.gov).

**FOR FURTHER INFORMATION CONTACT:** David Lehman, Director, Emergency Support and Security Division, at 202-366-4439 or [david.lehman@dot.gov](mailto:david.lehman@dot.gov), regarding the subject matter in this notice.

### Introduction

The federal pipeline oil spill response plan regulations (49 CFR 194) require operators to prepare and submit a response plan in order to minimize the harm caused to the environment due to the discharge of oil into or on any inland navigable waters of the United States or adjoining shorelines. This workshop will focus on multi-agency alignment, operator compliance, and participation in required drills and exercises. Additionally, attendees and commenters will be given the opportunity to provide suggestions and recommendations for possible changes to the oil spill response regulations.

### Background

PHMSA wishes to gather information about the efficacy of the oil spill response plan regulations. PHMSA is aware that regulated entities and members of the public have requested greater direction and regulatory interpretation. PHMSA is also aware that its oil spill response plan regulations do not fully align with the regulations of other federal agencies that have been delegated jurisdiction under 42 U.S.C. 1321(j)(5). PHMSA is exploring ways to reduce redundancy, clarify language and improve efficacy of its oil spill response plan regulations.

PHMSA believes improving the response plan preparation and submission process is important for improving response actions, ensuring response capabilities, and minimizing harm to the environment. In particular, PHMSA is interested in collaboration with other jurisdictional federal agencies, operators, and oil spill response organizations.

Issued in Washington, DC, on March 24, 2016, under authority delegated in 49 CFR 1.97.

**Alan K. Mayberry,**  
*Deputy Associate Administrator for Policy and Programs.*

**BILLING CODE 4910-60-P**

## DEPARTMENT OF TRANSPORTATION

### Office of the Secretary

### Transportation Research and Development Strategic Plan

**AGENCY:** Office of the Assistant Secretary for Research and Technology (OST-R), Department of Transportation (DOT).

**ACTION:** Request for Information (RFI).

**SUMMARY:** Section 6019 of the Fixing America's Surface Transportation Act (FAST Act; Pub. L. 114-94; December 4, 2015; codified at 49 U.S.C. 6503) requires that the Secretary develop a 5-year transportation research and development strategic plan to guide future Federal transportation research and development activities. The FAST Act states that the strategic plan shall "describe how the plan furthers the primary purpose of the transportation research and development program.

**DATES:** Comments must be received by April 29, 2016.

**ADDRESSES:** To ensure that you do not duplicate your docket submissions, please submit them by only one of the following means:

- **Federal eRulemaking Portal:** Go to <http://www.regulations.gov> and follow the online instructions for submitting comments.
- **Mail:** U.S. Department of Transportation, Dockets Management Facility, Room W12-140, 1200 New Jersey Ave. SE., Washington, DC 20590-0001.
- **Hand Delivery:** West Building Ground Floor, Room W12-140, 1200 New Jersey Ave. SE., between 9 a.m. 5 p.m., Monday through Friday, except Federal holidays. The telephone number is (202) 366-9329.

All comments must include the docket number DOT-OST-2016-0044 at the beginning of the submission. All comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided.

**FOR FURTHER INFORMATION CONTACT:** Aaron Jette, Community Planner, U.S. DOT Volpe Center, Attn: Aaron Jette; Office 460; 55 Broadway, Cambridge, MA 02142. Telephone (617) 494-2335 or Email [RDTPlan@dot.gov](mailto:RDTPlan@dot.gov).

**SUPPLEMENTARY INFORMATION:** The FAST Act states that the strategic plan shall "describe how the plan furthers the primary purpose of the transportation research and development program, which shall include—

- (A) Improving mobility of people and goods;
- (B) Reducing congestion;

(C) Promoting safety;  
 (D) Improving the durability and extending the life of transportation infrastructure;

(E) Preserving the environment;

(F) Preserving the existing transportation system.”

The FAST Act also requires that the strategic plan take into account research and development by other Federal, State, local, private sector and non-profit institutions.

The Office of the Assistant Secretary for Research and Technology invites the public to provide comments to inform the development of the 5-year strategic plan for transportation Research, Development and Technology (RD&T). Comments should regard appropriate RD&T activities to meet the purposes and considerations listed in the FAST Act and/or emerging RD&T challenges, opportunities, and priorities that U.S. DOT RD&T should address over the next five years. In particular, comments may respond to any or all of the following questions:

1. What research strategies and priorities should the U.S. DOT adopt to achieve the primary purposes cited in the FAST Act?

2. How can the issues raised in the U.S. DOT document “*Beyond Traffic 2045: Trends and Choices*” be strategically addressed by RD&T activities over the next five years?

3. What emerging challenges or opportunities in transportation warrant additional Federal RD&T activities or investments?

4. What current and planned RD&T activities sponsored by the federal government should be continued or revised in the future?

5. What strategies could improve the cost-effectiveness of U.S. DOT research investments?

6. How can U.S. DOT best coordinate its RD&T activities with Federal, State, local, private sector, non-profit institutions, and international partners?

7. What knowledge gaps merit additional exploration by the USDOT?

For information about current U.S. DOT RD&T activities please visit the Department’s Web site at: <https://www.transportation.gov/research-and-statistics>.

The U.S. DOT RD&T Strategic Plan will present the Department’s strategy for responding to the trends and opportunities identified in *Beyond Traffic 2045: Trends and Choices* ([www.transportation.gov/BeyondTraffic](http://www.transportation.gov/BeyondTraffic)). *Beyond Traffic* examines the long-term and emerging trends affecting our Nation’s transportation system and the implications of those trends. It describes

how demographic and economic trends, as well as changes in technology, governance, and our climate are affecting how people and goods travel today, and how they could affect travel in the future. *Beyond Traffic* provides a framework for identifying U.S. DOT RD&T priorities that will advance technologies and inform decisions regarding how we move, how we move things, how we move better, how we adapt, and how we align decisions and dollars.

Issued in Washington, DC, on March 23, 2016.

**Gregory D. Winfree,**

*Assistant Secretary for Research and Technology.*

**BILLING CODE 4910–9X–P**

## DEPARTMENT OF TRANSPORTATION

### Office of the Secretary of Transportation

[Docket No. DOT–OST–2016–0037]

#### Notice of order soliciting community proposals

**AGENCY:** Department of Transportation, Office of the Secretary.

**ACTION:** Notice of order soliciting community proposals (Order 2016–3–32).

**SUMMARY:** The Department of Transportation is soliciting proposals from communities or consortia of communities interested in receiving grants under the Small Community Air Service Development Program. The full text of the Department’s order, including Appendices, is included in this Notice. As noted in the order, an application for a grant under this program must include a Grant Proposal of no more than 20 pages (one-sided only), a completed Application for Federal Domestic Assistance (SF424), a Summary Information Schedule, and any letters from the applicant community showing support.

**DATES:** Applications must be submitted no later than May 2, 2016.

**ADDRESSES:** Communities must submit applications electronically through <http://www.grants.gov>.

**FOR FURTHER INFORMATION CONTACT:** Brooke Chapman, Associate Director, Small Community Air Service Development Program, Office of Aviation Analysis, 1200 New Jersey Avenue SE., W86–307, Washington, DC 20590, (202) 366 0577.

**SUPPLEMENTARY INFORMATION:** By this order, the U.S. Department of

Transportation (the Department or DOT) invites proposals from communities and/or consortia of communities interested in obtaining a federal grant under the Small Community Air Service Development Program (“Small Community Program” or “SCASDP”) to address air service and airfare issues in their communities. Subject to the availability of funding, the Department has up to \$5 million available for FY 2016 grant awards to carry out this program. There is no other limitation on the amount of individual awards, and the amounts awarded will vary depending upon the features and merits of the selected proposals. In past years, the Department’s individual grant sizes have ranged from \$20,000 to nearly \$1.6 million. Funding amounts made available for reimbursement may be impacted by future limitations placed on the spending authority and appropriations enacted for the Department. *OST cannot award grants until the enactment of authorizing legislation, an appropriations act, budget authority, and apportionment from the Office of Management and Budget (OMB).* OST may, at its discretion, issue partial funding awards up to the level authorized and provided that the above conditions are met. Additional information on the budget process may be found in OMB A–11: [http://www.whitehouse.gov/omb/circulars\\_default/](http://www.whitehouse.gov/omb/circulars_default/).

*Applications of no more than 20 one-sided pages each (excluding the completed Application for Federal Domestic Assistance (SF424), Summary Information schedule, and any letters from the community or an air carrier showing support for the application), including all required information, must be submitted to [www.grants.gov](http://www.grants.gov) no later than 5:00 p.m. EDT on May 2, 2016.* Applicants are strongly encouraged to submit applications in advance of the deadline. Please be aware that applicants must complete the grants.gov registration process before submitting an application, and that this process usually takes two to four weeks to complete.<sup>1</sup> The Department will not accept late-filed applications except under limited circumstances related to technical difficulties. Additional information on applying through grants.gov is in Appendix A, including a notice regarding late-filed applications.

<sup>1</sup> If an applicant experiences difficulties at any point during the registration or application process, it should contact the grants.gov support center by email ([support@grants.gov](mailto:support@grants.gov)) or by telephone (1–800–518–4726, available 24/7 except Federal holidays). See [www.grants.gov/web/grants/support.html](http://www.grants.gov/web/grants/support.html).

This order is organized into the following sections:

- I. Background
- II. Selection Criteria and Guidance on Application of Selection Criteria
- III. Evaluation and Selection Process
- IV. How To Apply
- V. Air Service Development Zone
- VI. Grant Administration
- VII. Questions and Clarifications
- Appendix A—Additional Information on Applying Through [www.grants.gov](http://www.grants.gov)
- Appendix B—Summary Information
- Appendix C—Application Checklist
- Appendix D—Confidential Commercial Information

## I. Background

The Small Community Program was established by the Wendell H. Ford Aviation Investment and Reform Act for the 21st Century (Pub. L. 106–181), reauthorized by the Vision 100–Century of Aviation Reauthorization Act (Pub. L. 108–176), and subsequently reauthorized by the FAA Modernization and Reform Act of 2012 (Pub. L. 112–95) (FAA 2012), as amended. The program is designed to provide financial assistance to small communities in order to help them enhance their air service. The Department provides this assistance in the form of monetary grants that are disbursed on a reimbursable basis. Authorization for this program is codified at 49 U.S.C. 41743.

The Small Community Program is authorized to receive appropriations under 49 U.S.C. 41743(e)(2), as amended. Appropriations are provided for this program for award selection in FY 2016 pursuant to FAA 2012 and the Consolidated Appropriations Act, 2016 (Pub. L. 114–113). The Airport and Airway Extension Act of 2015 provides contract authority until March 31, 2016, for the Airport Improvement Program, which funds SCASDP. Therefore, subject to the availability of funding, the Department has up to \$5 million available for FY 2016 grant awards to carry out this program. There is no other limitation on the amount of individual awards, and the amounts awarded will vary depending upon the features and merits of the selected proposals. In past years, the Department's individual grant sizes have ranged from \$20,000 to nearly \$1.6 million. Funding amounts made available for reimbursement may be impacted by future limitations placed on the spending authority and appropriations enacted for the Department. *OST cannot award grants until the enactment of authorizing legislation, an appropriations act, budget authority, and apportionment from the Office of Management and*

*Budget (OMB).* OST may, at its discretion, issue partial funding awards up to the level authorized and provided that the above conditions are met. Additional information on the budget process may be found in OMB A–11: [http://www.whitehouse.gov/omb/circulars\\_default/](http://www.whitehouse.gov/omb/circulars_default/).

### A. Eligible Applicants

Eligible applicants are small communities that meet the following statutory criteria under 49 U.S.C. 41743, as amended by Public Law 114–113:

1. (a) The airport serving the community or consortium is not larger than a small hub airport, according to FAA hub classifications effective on the date of service of this Order,<sup>2</sup> or
- (b) As of calendar year 1997, the airport serving the community or consortium was not larger than a small hub airport,<sup>3</sup> and
2. It has insufficient air carrier service or unreasonably high air fares; and
3. The airport serving the community presents characteristics, such as geographic diversity or unique circumstances that demonstrate the need for, and feasibility of, grant assistance from the Small Community Program.<sup>4</sup>

No more than four communities or consortia of communities, or a combination thereof, from the same State may be selected to participate in the program in any fiscal year. No more than 40 communities or consortia of communities, or a combination thereof, may be selected to participate in the program in each year for which the funds are appropriated.

*Consortium applications:* Both individual communities and consortia of communities are eligible for SCASDP funds. An application from a consortium of communities must be one that seeks to facilitate the efforts of the communities working together toward one joint grant project, with one joint objective, including the establishment of one entity to ensure that the joint objective is accomplished.

*Multiple applications prohibited:* A community may file only one

<sup>2</sup> “Small hub airport” is defined in 49 U.S.C. 47102 (23) as “a commercial service airport that has at least 0.05 percent but less than 0.25 percent of the passenger boardings.” See also [http://www.faa.gov/airports/planning\\_capacity/passenger\\_allcargo\\_stats/categories/](http://www.faa.gov/airports/planning_capacity/passenger_allcargo_stats/categories/). For FAA passenger enplanement information to use to determine an airport's eligibility as a small hub airport, see [http://www.faa.gov/airports/planning\\_capacity/passenger\\_allcargo\\_stats/passenger/](http://www.faa.gov/airports/planning_capacity/passenger_allcargo_stats/passenger/).

<sup>3</sup> See, <http://www.dot.gov/policy/aviation-policy/small-community-rural-air-service/SCASDP>, for the FAA's 1997 list of Primary and Nonprimary Commercial Service Airports.

<sup>4</sup> 49 U.S.C. 41743(c)(1), (2).

application for a grant, either individually or as part of a consortium.

*Communities without existing air service:* Communities that do not currently have commercial air service are eligible for SCASDP funds.

*Essential Air Service communities:* Small communities that meet the basic SCASDP criteria and currently receive subsidized air service under the Essential Air Service (“EAS”) program are eligible to apply for SCASDP funds. However, *grant awards to EAS-subsidized communities are limited to marketing or promotion projects that support existing or newly subsidized EAS.* Grant funds will *not* be authorized for EAS-subsidized communities to support any *new* competing air service. Furthermore, no funds will be authorized to support additional flights by EAS carriers or changes to those carriers' existing schedules. These restrictions are necessary to avoid conflicts with the mandate of the EAS program.

*Alternate Essential Air Service communities:* Likewise, small communities that meet the basic SCASDP criteria and currently receive assistance under the Alternate Essential Air Service Pilot Program (“Alternate EAS Pilot Program”) (49 U.S.C. 41745(a)) are eligible to apply for SCASDP funds. Since the Alternate EAS Pilot Program is a substitute/alternative to traditional EAS, we would consider applications from communities receiving assistance under 49 U.S.C. 41745(a) only for marketing or promotion projects; however, if the community is already receiving Department support for marketing projects, per the community's proposal under the Alternate EAS Pilot Program, the community's project would not be considered for a SCASDP grant.

### Eligible Projects

The Department is authorized to award grants under 49 U.S.C. 41743 to communities that seek to provide assistance to:

- A U.S. air carrier<sup>5</sup> to subsidize service to and from an underserved airport for a period not to exceed 3 years;
- An underserved airport to obtain service to and from the underserved airport; and/or
- An underserved airport to implement such other measures as the Secretary, in consultation with such airport, considers appropriate to improve air service both in terms of the

<sup>5</sup> Only U.S. air carriers are eligible to receive assistance from communities under SCASDP. See 49 U.S.C. 41743(d)(1) and 40102(a)(2).

cost of such service to consumers and the availability of such service, including improving air service through marketing and promotion of air service and enhanced utilization of airport facilities.

Applicants should also keep in mind the following statutory restrictions on eligible projects:

- An applicant may not receive an additional grant to support the same project from a previous grant (see Same Project Limitation below); and
- An applicant may not receive an additional grant, prior to the completion of its previous grant (see Concurrent Grant Limitation below).

**Same Project Limitation:** Under 49 U.S.C. 41743(c), a community or consortium may not receive an additional grant to support the same project for which it received a previous grant (Same Project Limitation).<sup>6</sup> In assessing whether a previous grantee's current application represents a new project, the Department will compare the goals and objectives of the previous grant, including the key components of the means by which those goals and objectives were to be achieved, to the current application. For example, if a community received an earlier grant to support a revenue guarantee for service to a particular destination or direction, a new application by that community for another revenue guarantee for service to the same destination or in the same direction is ineligible, even if the revenue guarantee were structured differently or the type of carrier were different. However, a new application by such a previous grantee for service to a new destination or direction using a revenue guarantee, or for general marketing of the airport and the various services it offers, is eligible.<sup>7</sup> The Department recognizes that not all revenue guarantees, marketing agreements, studies, or other activities are of the same nature, and that if a subsequent application incorporates different goals or significantly different components, it may be sufficiently different to constitute a new project under 49 U.S.C. 41743(c).

**Concurrent Grant Limitation:** A community or consortium may have

only one SCASDP grant at any time. If a community or consortium applies for a subsequent SCASDP grant when its current grant has not yet expired, that community/consortium must notify the Department of its intent to terminate the current SCASDP grant, and if the community/consortium is selected for a new grant, such termination must take place prior to entering into the new grant agreement. In addition, for consortium member applicants, permission must be granted from both the grant sponsor and the Department to withdraw from the current SCASDP grant before that consortium member will be deemed eligible to receive a subsequent SCASDP grant.

**Airport Capital Improvements Ineligible:** Airport capital improvement projects, including, but not limited to, runway expansions and enhancements, the construction of additional aircraft gates, and other airport terminal expansions and reconfigurations are ineligible for funding under the Small Community Program. Airports seeking funding for airport capital improvement projects may want to consult with their local FAA Regional Office to discuss potential eligibility for grants under the Airport Improvement Program.

## II. Selection Criteria and Guidance on Application of Selection Criteria

SCASDP grants will be awarded based on the selection criteria as outlined below. There are two categories of selection criteria: Priority Selection Criteria and Secondary Selection Criteria. Applications that meet one or more of the Priority Selection Criteria will be viewed more favorably than those that do not meet any Priority Selection Criteria.

### A. Priority Selection Criteria

The statute directs the Department to give priority consideration to those communities or consortia where the following criteria are met:

1. *Air fares are higher than the national average air fares for all communities*—The Department will compare the local community's air fares to the national average air fares for all similar markets. Communities with market air fares significantly higher than the national average air fares in similar markets will receive priority consideration. The Department calculates these fares using data from the Bureau of Transportation Statistics (BTS) Airline Origin and Destination Survey data. The Department evaluates all fares in all relevant markets that serve a SCASDP community and compares the SCASDP community fares to all fares in similar markets across the

country. Each SCASDP applicant's air fares are computed as a percentage above or below the national averages. The report compares a community's air fares to the average for all other similar markets in the country that have similar density (passenger volume) and similar distance characteristics (market groupings). All calculations are based on 12-month ended periods to control for seasonal variation of fares.

2. *The community or consortium will provide a portion of the cost of the activity from local sources other than airport revenue sources*—The Department will consider whether a community or consortium proposes local funding for the proposed project. Applications providing proportionately higher levels of cash contributions from sources other than airport revenues will be viewed more favorably. Applications that provide multiple levels of contributions (state, local, cash and in-kind contributions) will also be viewed more favorably. See Additional Guidance—Cost Sharing and Local Contributions, in Subsection C below, for more information on the application of this selection criterion.

3. *The community or consortium has established or will establish a public-private partnership to facilitate air carrier service to the public*—The Department will consider a community's or consortium's commitment to facilitate air carrier service in the form of a public-private partnership. Applications that describe in detail how the partnership will actively participate in the implementation of the proposed project will be viewed more favorably.

4. *The assistance will provide material benefits to a broad segment of the traveling public, including businesses, educational institutions, and other enterprises, whose access to the national air transportation system is limited*—The Department will consider whether the proposed project would provide, to a broad segment of the community's traveling public, important benefits relevant to the community. Examples include service that would offer new or additional access to a connecting hub airport, service that would provide convenient travel times for both business and leisure travelers that would help obviate the need to drive long distances, and service that would offer lower fares.

5. *The assistance will be used in a timely manner*—The Department will consider whether a proposed project provides a well-defined strategic plan and reasonable timetable for use of the grant funds. In the Department's experience, reasonable timetables for

<sup>6</sup> This limitation applies for all projects contained in a previous grant agreement's scope; thus, even if the community did not actively implement a project listed in the scope of an earlier grant agreement, it may not receive funding for that project in a subsequent round of SCASDP funding.

<sup>7</sup> As noted in the "Market Analysis" subsection of section C below, target markets proposed by communities may be destination specific (e.g., service to LAX), a geographic region (e.g., northwest mountain region) or directional (e.g., hub in the southeastern United States or a point north, south, east, or west of the applicant community).

use of grant funds generally include a year to complete studies, two years for marketing and promotion of the airport, community, carrier, or destination, and three years for projects that target a revenue guarantee, subsidy, or other financial incentives. Applicants should describe how their projects can be accomplished within this timetable, including whether the airport and proposed air service provider have the requisite authorities and certifications necessary to carry out the proposed projects. In addition, because of this emphasis placed on timely use of funds, applicants proposing new service should describe the airport and whether it can support the proposed service, including whether the airport holds, or intends to apply for, an airport operating certificate issued under 14 CFR part 139. Air service providers proposed for the new service must have met or be able to meet, in a reasonably short period of time, all Department requirements for air service certification, including safety and economic authorities.

6. *Multiple communities cooperate to submit a regional or multistate application to consolidate air service into one regional airport*—The Department will consider whether a proposed project involves a consortium effort to consolidate air service into one regional airport. This statutory priority criterion was added pursuant to Section 429 of the FAA Modernization and Reform Act of 2012 (Pub. L. 112–95).

#### B. Secondary Selection Criteria

1. *Innovation*—The Department will consider whether an application proposes new and creative solutions to air transportation issues facing the community, including:

- The extent to which the applicant's proposed solution(s) to solving the problem(s) is new or innovative, including whether the proposed project utilizes or encourages intermodal or regional solutions to connect passengers to the community's air service (or, if the community cannot implement or sustain its own air services, to connect to a neighboring community's air service) *e.g.*, cost-effective inter/intra city passenger bus service, or marketing of intermodal surface transportation options also available to air travelers; and
- whether the proposed project, if successfully implemented, could serve as a working model for other communities.

2. *Community Participation*—The Department will consider whether an application has broad community participation, including:

- Whether the proposed project has broad community support; and
- the community's demonstrated commitment to and participation in the proposed project.

3. *Location*—The Department will consider the location and characteristics of a community:

- The geographic location of each applicant, including the community's proximity to larger centers of air service and low-fare service alternatives;
- The population and business activity, as well as the relative size of each community; and
- Whether the community's proximity to an existing or prior grant recipient could adversely affect either its proposal or the project undertaken by the other recipient.

4. *Other Factors*—The Department will also consider:

- Whether the proposed project clearly addresses the applicant's stated problems;
- The community's existing level of air service and whether that service has been increasing or decreasing;
- Whether the applicant has a plan to provide any necessary continued financial support for the proposed project after the requested grant award expires;
- The grant amount requested compared with the total funds available for all communities;
- The proposed federal grant amount requested compared with the local share offered;
- any letters of intent from airline planning departments or intermodal surface transportation providers on behalf of applications that specifically indicate intent to enlist new or expanded air service or surface transportation service in support of the air service in the community;
- whether the applicant has plans to continue with the proposed project if it is not self-sustaining after the grant award expires; and
- equitable and geographic distribution of available funds.

#### C. Additional Guidance

*Market Analysis:* Applicants requesting funds for a revenue guarantee/subsidy/financial incentive are encouraged to conduct and reference in their applications an in-depth analysis of their target markets. Target markets can be destination specific (*e.g.*, service to LAX), a geographic region (*e.g.*, northwest mountain region) or directional (*e.g.*, hub in the southeastern United States or a point north, south, east, or west of the applicant community).

*Complementary Marketing Commitment:* Applicants requesting

funds for a revenue guarantee/subsidy/financial incentive are encouraged to designate in their applications a portion of the project funds (Federal, local or in-kind) for the development and implementation of a marketing plan in support of the service sought.

*Subsidies for a carrier to compete against an incumbent:* The Department is reluctant to subsidize one carrier, but not others in a competitive market. For this reason, a community that proposes to use the grant funds for service in a city-pair market that is already served by another air carrier must explain in detail why the existing service is insufficient or unsatisfactory, or provide other compelling information to support such a proposal.

*Cost Sharing and Local Contributions:* Applications must clearly identify the level of federal funding sought for the proposed project. Applications must also identify the community's cash contributions to the proposed project, in-kind contributions from the airport, and in-kind contributions from the community. Non-federal funds will be applied proportionately to the entire scope of the project. Communities cannot use non-federal funds selectively to fund certain components of a project (see Section VI—Grant Administration—Payments for more information). Cash contributions from airport revenues must be identified separately from cash contributions from other community sources. Cash contributions from the state and/or local government should be separately identified and described as well.

*Types of contributions.* Contributions should represent a *new* financial commitment or *new* financial resources devoted to attracting new or improved service, or addressing specific high-fare or other service issues, such as improving patronage of existing service at the airport. For communities that propose to contribute to the grant project, that contribution can be in the following forms:

*Cash from non-airport revenues.* A cash contribution can include funds from the state, the county or local government, and/or from local businesses, or other private organizations in the community. Because private cash contributions are to be from local community sources, the Department will not consider as a part of these non-airport revenues any funds that a community might receive from an air carrier interested in providing service under that community's proposal. Moreover, contributions that are comprised of intangible non-cash items, such as the value of donated advertising, are considered in-kind

contributions (see further discussion below).

*Cash from airport revenues.* This includes contributions from funds generated by airport operations. Airport revenues may not be used for revenue guarantees to airlines, per 49 U.S.C. 47107 and 47133. Applications that include local contributions based on airport revenues do not receive priority consideration for selection.

*In-kind contributions from the airport.* This can include such items as waivers of landing fees, ground handling fees, terminal rents, fuel fees, and/or vehicle parking fees.

*In-kind contributions from the community.* This can include such items as donated advertising from media outlets, catering services for inaugural events, or in-kind trading, such as advertising in exchange for free air travel. Travel banks and travel commitments/pledges are considered to be in-kind contributions.

*Cash vs. in-kind contributions.* Communities that include local contributions made in cash will be viewed more favorably.

*Eligible Air Carriers:* As noted in footnote 3 above, only U.S. air carriers are eligible to receive assistance from communities under SCASDP grants. A particular U.S. carrier may hold authority to conduct operations as a certificated air carrier, a commuter air carrier, or an air taxi operator.<sup>8</sup> Communities are encouraged to verify, at an early stage of any air carrier discussions, that the air carrier does in fact hold appropriate Department authority to conduct the proposed services. Communities may verify this authority by contacting the Department's Air Carrier Fitness Division at (202) 366-9721.

*Aviation Security:* Communities proposing new or expanded air service under a SCASDP grant proposal are encouraged to contact the Transportation Security Administration (TSA) early in the process to ascertain what the security implications of such service would be with respect to the airport involved, and what measures that airport would need to take with the TSA to assure that the service would meet all applicable TSA requirements.

### III. Evaluation and Selection Process

The Department will first review each application to determine whether it has

satisfied the following eligibility requirements:

1. The applicant is an eligible applicant;
2. The application is for an eligible project (including compliance with the Same Project Limitation); and
3. The application is complete (including submission of a completed SF424 and all of the information listed in Contents of Application, in Section IV below).

To the extent that the Department determines that an application does not satisfy these eligibility requirements, the Department will deem that application ineligible and not consider it further.

The Department will then review all eligible applications based on the selection criteria outlined above in Section II. The Department will not assign specific numerical scores to projects based on the selection criteria. Rather, ratings of "highly recommended," "recommended," "acceptable," or "not recommended" will be assigned to applications. Applications that align well with one or more of the Priority Selection Criteria will be viewed more favorably than those that do not align with any Priority Selection Criteria. The Department will consider the Secondary Selection Criteria when comparing and selecting among similarly-rated projects.

The Department reserves the right to award funds for a part of the project included in an application, if a part of the project is eligible and aligns well with the selection criteria specified in this Order. In addition, as part of its review of the Secondary Selection Criterion "Other Factors," the Department will consider the geographical distribution of the applications to ensure consistency with the statutory requirement limiting awards to no more than four communities or consortia of communities, or a combination thereof, from the same state. The final selections will be limited to no more than 40 communities or consortia of communities, or a combination thereof.

Grant awards will be made as promptly as possible so that selected communities can complete the grant agreement process and implement their plans. Given the competitive nature of the grant process, the Department will not meet with applicants regarding their applications. All non-confidential portions of each application, all correspondence and ex-parte communications, and all orders will be posted in the above-captioned docket on [www.regulations.gov](http://www.regulations.gov).

The Department will announce its grant selections in a Selection Order

that will be posted in the above-captioned docket, served on all applicants and all parties served with this Solicitation Order, and posted on the Department's SCASDP Web site <https://www.transportation.gov/policy/aviation-policy/small-community-rural-air-service/SCASDP>.

### IV. How To Apply

Required Steps:

- Determine eligibility;
- Register with [www.grants.gov](http://www.grants.gov) (see Registration with [www.grants.gov](http://www.grants.gov), below);
- Submit an Application for Federal Domestic Assistance (SF424);
- Submit a completed "Summary Information" schedule. This is your application cover sheet (see Appendix B);
- Submit a detailed application of up to one-sided 20 pages (excluding the completed SF424, Summary Information schedule, and any letters from the community or an air carrier showing support for the application) that meets all required criteria (see Appendix C);
- Attach any letters from the community or an air carrier showing support for the application to the proposal, which should be addressed to: Brooke Chapman, Associate Director, Small Community Air Service Development Program; and
- Provide separate submission of confidential material, if requested. (see Appendix D)

An application will not be complete and will be deemed ineligible for a grant award until and unless all required materials, including SF424, have been submitted through [www.grants.gov](http://www.grants.gov) and time-stamped by 5:00 p.m. EDT on May 2, 2016 (the "Application Deadline").

An application consisting of more than 20 pages will be accepted by the Department, but the content in the additional pages past page 20 will not be evaluated or considered by the Department. The Department would prefer that applicants use one-inch margins and a font size not less than 12 point type.

*Late Application Notice:* Applicants who are unable to successfully submit their application package through [grants.gov](http://grants.gov) prior to the Application Deadline due to technical difficulties outside their control must submit an email to [SCASDPgrants@dot.gov](mailto:SCASDPgrants@dot.gov) with the information described in Appendix A.

*Registration with [www.grants.gov](http://www.grants.gov):* Communities must be registered with [www.grants.gov](http://www.grants.gov) in order to submit an application for funds available under this program. For consortium

<sup>8</sup>For example, an air carrier holding only air taxi authority under 14 CFR parts 298 and 135 is limited to the use of small aircraft (60 or fewer seats and a maximum payload capacity of 18,000 pounds or less, and to conducting fewer than five round-trip flights per week in a particular city-pair market.

applications, only the Legal Sponsor must be registered with *www.grants.gov* in order to submit its application for funds available under this program. See Appendix A for additional information on applying through *www.grants.gov*.

*Contents of Application:* There is no set format that must be used for applications. Each application should, to the maximum extent possible, address the selection criteria set forth in Section II, above, including a clear description of the air service needs/deficiencies and present plans/strategies that directly address those needs/deficiencies. At a minimum, however, each application must include the following information:

- A description of the community's air service needs or deficiencies, including information about: (1) Major origin/destination markets that are not now served or are not served adequately; (2) fare levels that the community deems relevant to consideration of its application, including market analyses or studies demonstrating an understanding of local air service needs; (3) any recent air service developments that have adversely affected the community;<sup>9</sup> and (4) any air service development efforts over the past three years and the results of those efforts (including marketing and promotional efforts).
- A strategic plan for meeting those needs under the Small Community Program, including the community's specific project goal(s) and detailed plan for attaining such goal(s). If the application is selected, DOT will work with the grantee to incorporate the relevant elements of the application's strategic plan into the grant agreement's project scope.<sup>10</sup> Applicants should note that, once a grant agreement is signed, the agreement generally cannot be amended in a way that would alter the project scope. Applicants also are advised to obtain firm assurances from air carriers proposing to offer new air

<sup>9</sup>For example, if a community has lost service or been otherwise adversely affected as a result of an airline merger, the applicant should describe the situation in detail and quantify, to the extent possible, its effects on the community.

<sup>10</sup>If new service is proposed to or from a specific city or market served by multiple airports (such as New York, Chicago, Los Angeles, or Washington, DC, for example), the applicant is encouraged to identify the airport(s) in that city or market the community would be targeting under its proposal in order to facilitate the drafting of the grant agreement's project scope. Communities should carefully select, within a specific city or market, those airports for which it proposes service, as proposing multiple airports in a city or market could impact the ability of a community to seek future grants involving those airports (see Same Project Limitation, above).

services if a grant is awarded. Strategic plans should:

- For applications involving new or improved service, explain how the service will become self-sufficient;
  - fully and clearly outline the goals and objectives of the project; and
  - fully and clearly summarize the actual, specific steps (in bullet form, with a proposed timeline) that the community intends to take to bring about these goals and objectives.
- A detailed description of the funding necessary for implementation of the proposed project (including federal and non-federal contributions).
  - An explanation of how the proposed project differs from any previous projects for which the community received SCASDP funds (see Same Project Limitation, above).
  - Designation of a legal sponsor responsible for administering the proposed project. The legal sponsor of the proposed project must be a government entity, such as a state, county, or municipality. The legal sponsor must be legally, financially, and otherwise able to execute the grant agreement and administer the grant, including having the authority to sign the grant agreement and to assume and carry out the certifications, representations, warranties, assurances, covenants and other obligations required under the grant agreement with the Department and to ensure compliance by the grant recipient with the grant agreement and grant assurances. If the applicant is a public-private partnership, a public government member of the organization must be identified as the community's sponsor to receive project cost reimbursements. A community may designate only one government entity as the legal sponsor, even if it is applying as a consortium that consists of two or more local government entities. Private organizations may not be designated as the legal sponsor of a grant under the Small Community Program. The community has the responsibility to ensure that the legal sponsor and grant recipient of any funding has the legal authority under state and local laws to carry out all aspects of the grant, and the Department may require an opinion of the legal sponsor's attorney as to its legal authority to act as a sponsor and to carry out its responsibilities under the grant agreement. The applicant should also provide the name of the signatory party for the legal sponsor.

#### V. Air Service Development Zone Designation

As part of the Small Community Program, the Department may also

designate one grant recipient as an "Air Service Development Zone" (ASDZ).<sup>11</sup> The purpose of the designation is to provide communities interested in attracting business to the area surrounding the airport and/or developing land-use options for the area to work with the Department on means to achieve those goals. The Department will assist the designated community in establishing contacts with and obtaining advice and assistance from appropriate government agencies, including the Department of Commerce and other offices within the Department of Transportation, and in identifying other pertinent resources that may aid the community in its efforts to attract businesses and to formulate land-use options. However, the community receiving this designation will be responsible for developing, implementing, and managing activities related to the air service development zone initiative. Only communities that are interested in these objectives and have a plan to accomplish them should apply for this designation. There are no additional funds associated with this designation, and applying for this designation will provide no special benefits or priority to the community applying for a SCASDP grant.

Grant applicants interested in selection for the Air Service Development Zone designation must include in their applications a separate section, titled, *Support for Air Service Development Zone Designation*. The community should provide as detailed a plan as possible, including what goals it expects to achieve from the air service development zone designation and the types of activities on which it would like to work with the Department in achieving those goals. The community should also indicate whether further local government approvals are required in order to implement the proposed activities.

#### VI. Grant Administration

*Grant Agreements:* Communities awarded grants are required to execute a grant agreement with the Department before they begin to expend funds under the grant award. Applicants should not assume they have received a grant, nor should they obligate or expend local funds prior to receiving and fully executing a grant agreement with the Department. Expenditures made prior to the execution of a grant agreement, including costs associated with preparation of the grant application, will not be reimbursed. Moreover, there are numerous assurances that grant

<sup>11</sup> See 49 U.S.C. 41743(h).

recipients must sign and honor when federal funds are awarded. All communities receiving a grant will be required to accept and meet the obligations created by these assurances when they execute their grant agreements. Copies of assurances are available online at <http://www.dot.gov/policy/aviation-policy/small-community-rural-air-service/SCASDP>, (click on “SCASDP Grant Assurances”).

**Payments:** The Small Community Program is a reimbursable program; therefore, communities are required to make expenditures for project implementation under the program prior to seeking reimbursement from the Department. Eligible project implementation costs are reimbursable from grant funds only for services or property delivered during the grant term. Reimbursement rates are calculated as a percentage of the total federal funds requested divided by the federal funds plus the local cash contribution (which is not refundable). The percentage is determined by:  $(\text{SCASDP Grant Amount}) \div (\text{SCASDP Grant Amount} + \text{Local Cash Contribution} + \text{State Cash Contribution, if applicable})$ . For example, if a community requests \$500,000 in federal funding and provides \$100,000 in local contributions, the reimbursement rate would be 83.33 percent:  $(500,000 / (500,000 + 100,000)) = 83.33$ . Payments/expenditures in forms other than cash (e.g., in-kind) are not reimbursable.

**Grantee Reports:** Each grantee must submit quarterly reports on the progress made during the previous quarter in implementing its grant project. In addition, each community will be required to submit a final report on its project to the Department, and 10 percent of the grant funds will not be reimbursed to the community until such a final report is received. Additional information on award administration for selected communities will be provided in the grant agreement.

## VII: Questions and Clarifications

For further information concerning the technical requirements set out in this Order, please contact Brooke Chapman at [Brooke.Chapman@dot.gov](mailto:Brooke.Chapman@dot.gov) or (202) 366-0577. A TDD is available for individuals who are deaf or hard of hearing at (202) 366-3993. The Department may post answers to questions and other important clarifications in the above-captioned docket on [www.regulations.gov](http://www.regulations.gov) and on the program Web site at <https://www.transportation.gov/policy/aviation-policy/small-community-rural-air-service/SCASDP>.

This Order is issued under authority delegated in 49 CFR 1.25a(b).

Accordingly,

1. Applications for funding under the Small Community Air Service Development Program should be submitted via [www.grants.gov](http://www.grants.gov) as an attachment to the SF424 by 5:00 p.m. EDT, May 2, 2016; and

2. This Order will be published in the **Federal Register**, posted on [www.grants.gov](http://www.grants.gov) and [www.regulations.gov](http://www.regulations.gov), and served on the United States Conference of Mayors, the National League of Cities, the National Governors Association, the National Association of State Aviation Officials, County Executives of America, the American Association of Airport Executives, and the Airports Council International—North America.

Issued in Washington, DC on March 28, 2016.

By:

**Susan L. Kurland,**

*Assistant Secretary for Aviation and International Affairs.*

An electronic version of this document is available online at [www.regulations.gov](http://www.regulations.gov).

### Additional Information on Applying Through [www.Grants.Gov](http://www.Grants.Gov)

Applications must be submitted electronically through <http://www.grants.gov/web/grants/applicants/apply-for-grants.html>. To apply for funding through [www.grants.gov](http://www.grants.gov), applicants must be properly registered. The Grants.gov/Apply feature includes a simple, unified application process that makes it possible for applicants to apply for grants online. There are five “Get Registered” steps for an organization to complete at Grants.gov. Complete instructions on how to register and apply can be found at <http://www.grants.gov/web/grants/applicants/organization-registration.html>. If applicants experience difficulties at any point during registration or application process, please call the [www.grants.gov](http://www.grants.gov) Customer Support Hotline at 1-800-518-4726, Monday-Friday from 7:00 a.m. to 9:00 p.m. EDT.

Registering with [www.grants.gov](http://www.grants.gov) is a one-time process; however, processing delays may occur and it can take up to several weeks for first-time registrants to receive confirmation and a user password. It is highly recommended that applicants start the registration process as early as possible to prevent delays that may preclude submitting an application by the deadlines specified. Applications must be submitted and time-stamped not later than 5:00 p.m. EDT on May 2, 2016 (the Application Deadline), and, as set forth below,

failure to complete the registration process before the Application Deadline is not a valid reason to permit late submissions.

In order to apply for SCASDP funding through <http://www.grants.gov/web/grants/applicants/apply-for-grants.html>, all applicants are required to complete the following:

1. **DUNS Requirement.** The Office of Management and Budget requires that all businesses and nonprofit applicants for federal funds include a Dun and Bradstreet Data Universal Numbering System (DUNS) number in their applications for a new award or renewal of an existing award. A DUNS number is a unique nine-digit sequence recognized as the universal standard for identifying and keeping track of entities receiving federal funds. The identifier is used for tracking purposes and to validate address and point of contact information for federal assistance applicants, recipients, and sub-recipients. The DUNS number will be used throughout the grant life cycle. The DUNS number must be included in the data entry field labeled “Organizational DUNS” on the SF-424 form. Instructions for obtaining DUNS number can be found at the following Web site: <http://www.grants.gov/web/grants/applicants/organization-registration/step-1-obtain-duns-number.html>.

2. **System for Award Management.** In addition to having a DUNS number, applicants applying electronically through Grants.gov must register with the federal System for Award Management (SAM). Step-by-step instructions for registering with SAM can be found here: <http://www.grants.gov/web/grants/applicants/organization-registration/step-2-register-with-sam.html>. All applicants must register with SAM in order to apply online. Failure to register with the SAM will result in your application being rejected by Grants.gov during the submissions process.

3. **Username and Password.** Acquire an Authorized Organization Representative (AOR) and a [www.grants.gov](http://www.grants.gov) username and password. Complete your AOR profile on [www.grants.gov](http://www.grants.gov) and create your username and password. You will need to use your organization’s DUNS Number to complete this step. For more information about creating a profile on Grants.gov visit: <http://www.grants.gov/web/grants/applicants/organization-registration/step-3-username-password.html>.

4. After creating a profile on Grants.gov, the E-Biz Point of Contact (E-Biz POC)—a representative from your organization who is the contact listed

for SAM—will receive an email to grant the AOR permission to submit applications on behalf of their organization. The E-Biz POC will then log in to Grants.gov and approve an applicant as the AOR, thereby giving him or her permission to submit applications. To learn more about AOR Authorization visit: <http://www.grants.gov/web/grants/applicants/organization-registration/step-4-aor-authorization.html>. To track an AOR status visit: <http://www.grants.gov/web/grants/applicants/organization-registration/step-5-track-aor-status.html>.

Applicants are, therefore, encouraged to register early. The registration process can take up to four weeks to be completed. Thus, registration should be done in sufficient time to ensure it does not impact your ability to meet required submission deadlines. You will be able to submit your application online any time after you have approved as an AOR.

5. *Electronic Signature.* Applications submitted through Grants.gov constitute a submission as electronically signed applications. The registration and account creation with Grants.gov with E-Biz POC approval establishes an Authorized Organization Representative (AOR). When you submit the application through Grants.gov, the name of your AOR on file will be inserted into the signature line of the application. Applicants must register the individual who is able to make legally binding commitments for the applicant organization as the Authorized Organization Representative (AOR);

6. Search for the Funding Opportunity on [www.grants.gov](http://www.grants.gov). Please use the following identifying information when searching for the SCASDP funding opportunity on [www.grants.gov](http://www.grants.gov). The Catalog of Federal Domestic Assistance (CFDA) number for this solicitation is 20.930, titled Payments for Small Community Air Service Development.

7. Submit an application addressing all of the requirements outlined in this funding availability announcement. Within 24–48 hours after submitting your electronic application, you should receive an email validation message from [www.grants.gov](http://www.grants.gov). The validation message will tell you whether the application has been received and validated or rejected, with an explanation. *You are urged to submit your application at least 72 hours prior to the due date of the application to allow time to receive the validation message and to correct any problems*

*that may have caused a rejection notification.*

8. *Timely Receipt Requirements and Proof of Timely Submission.* Proof of timely submission is automatically recorded by Grants.gov. An electronic timestamp is generated within the system when the application is successfully received by Grants.gov. The applicant will receive an acknowledgement of receipt and a tracking number from Grants.gov with successful transmission of the application. Applicants should print this receipt and save it, as a proof of timely submission.

9. Grants.gov allows applicants to download the application package, instructions and forms that are incorporated in the instructions, and work offline. In addition to forms that are part of the application instructions, there will be a series of electronic forms that are provided utilizing Adobe Reader.

a. *Adobe Reader.* Adobe Reader is available for free to download from the Adobe Software Compatibility page: <http://www.grants.gov/web/grants/applicants/adobe-software-compatibility.html>. Adobe Reader allows applicants to read the electronic files in a form format so that they will look like any other Standard form. The Adobe Reader forms have content sensitive help. This engages the content sensitive help for each field you will need to complete on the form. The Adobe Reader forms can be downloaded and saved on your hard drive, network drive(s), or CDs.

b. **Note:** For the Adobe Reader, Grants.gov is compatible with versions 9.0.0 and later versions. Always refer to the Adobe Software Compatibility page for compatible versions for the operating system you are using. Please do not use lower versions of the Adobe Reader.

c. *Mandatory Fields in Adobe Forms.* In the Adobe Reader forms, you will note fields that will appear with a background color on the data fields to be completed. These fields are mandatory fields and they must be completed to successfully submit your application.

**Note:** When uploading attachments please use generally accepted formats such as .pdf, .doc, and .xls. While you may embed picture files such as .jpg, .gif, .bmp, in your files, please do not save and submit the attachment in these formats. Additionally, the following formats will not be accepted: .com, .bat, .exe, .vbs, .cfg, .dat, .db, .dbf, .dll, .ini, .log, .ora, .sys, and .zip.

*Experiencing Unforeseen  
www.grants.gov Technical Issues*

**Late Application Notice:** Applicants who are unable to successfully submit their application package through grants.gov prior to the Application Deadline due to technical difficulties outside their control must submit an email to [SCASDPgrants@dot.gov](mailto:SCASDPgrants@dot.gov) with the following information:

- The nature of the technical difficulties experienced in attempting to submit an application;
- A screenshot of the error;
- The Legal Sponsor's name; and
- The Grants.Gov tracking number (e.g. GRANT12345678).

DOT will consider late applications on a case-by-case basis and reserves the right to reject late applications that do not meet the conditions outlined in the Order Soliciting Small Community Grant Proposals. Late applications from applicants that do not provide DOT an email with the items specified above will not be considered.

If you experience unforeseen [www.grants.gov](http://www.grants.gov) technical issues beyond your control that prevent you from submitting your application by the Application Deadline, you must contact us at [SCASDPgrants@dot.gov](mailto:SCASDPgrants@dot.gov) or [Vince.Corsaro@dot.gov](mailto:Vince.Corsaro@dot.gov) or (202) 366–1842 by 5:00 p.m. EDT the day following the deadline and request approval to submit your application after the deadline has passed. At that time, DOT staff will require you to provide your DUNS number and your [www.grants.gov](http://www.grants.gov) Help Desk tracking number(s). After DOT staff review all of the information submitted and contact the [www.grants.gov](http://www.grants.gov) Help Desk to validate the technical issues you reported, DOT staff will contact you to either approve or deny your request to submit a late application through [www.grants.gov](http://www.grants.gov). If the technical issues you reported cannot be validated, your application will be rejected as untimely.

To ensure a fair competition for limited discretionary funds, the following conditions are not valid reasons to permit late submissions: (1) Failure to complete the registration process before the deadline date; (2) failure to follow [www.grants.gov](http://www.grants.gov) instructions on how to register and apply as posted on its Web site; (3) failure to follow all of the instructions in the funding availability notice; and (4) technical issues experienced with the applicant's computer or information technology (IT) environment.

**APPLICATION UNDER  
SMALL COMMUNITY AIR SERVICE DEVELOPMENT PROGRAM**

**DOCKET DOT-OST-2016-0037**

**SUMMARY INFORMATION<sup>1</sup>**

**All applicants must submit this Summary Information schedule, as the application coversheet, a completed standard form SF424 and the full application proposal on [www.grants.gov](http://www.grants.gov).**

**For your preparation convenience, this Summary Information schedule is located at <https://www.transportation.gov/policy/aviation-policy/small-community-rural-air-service/SCASDP>**

**A. PROVIDE THE LEGAL SPONSOR AND ITS DUN AND BRADSTREET (D&B) DATA UNIVERSAL NUMBERING SYSTEM (DUNS) NUMBER, INCLUDING +4, EMPLOYEE IDENTIFICATION NUMBER (EIN) OR TAX ID.**

**Legal Sponsor Name:**

\_\_\_\_\_  
**Name of Signatory Party for Legal Sponsor:**

\_\_\_\_\_  
**DUNS Number:**

\_\_\_\_\_  
**EIN/Tax ID:**

**B. LIST THE NAME OF THE COMMUNITY OR CONSORTIUM OF COMMUNITIES APPLYING:**

- 1. \_\_\_\_\_
- 2. \_\_\_\_\_
- 3. \_\_\_\_\_
- 4. \_\_\_\_\_

**C. PROVIDE THE FULL AIRPORT NAME AND 3-LETTER IATA AIRPORT CODE FOR THE APPLICANT(S) AIRPORT(S) (ONLY PROVIDE CODES FOR THE AIRPORT(S) THAT ARE ACTUALLY SEEKING SERVICE).**

- 1. \_\_\_\_\_
- 2. \_\_\_\_\_

\_\_\_\_\_  
<sup>1</sup> Note that the Summary Information does not count against the 20-page limit of the SCASDP application.

3.

4.

**THE AIRPORT SEEKING SERVICE IS NOT LARGER THAN A SMALL HUB AIRPORT:**

- UNDER FAA HUB CLASSIFICATIONS EFFECTIVE ON THE DATE OF SERVICE OF THE ATTACHED ORDER
- AS OF CALENDAR YEAR 1997

**DOES THE AIRPORT SEEKING SERVICE HOLD AN AIRPORT OPERATING CERTIFICATE ISSUED BY THE FEDERAL AVIATION ADMINISTRATION UNDER 14 CFR PART 139? (IF "NO", PLEASE EXPLAIN WHETHER THE AIRPORT INTENDS TO APPLY FOR A CERTIFICATE OR WHETHER AN APPLICATION UNDER PART 139 IS PENDING.)**

- Yes
- No (explain)

**D. SHOW THE DRIVING DISTANCE FROM THE APPLICANT COMMUNITY TO THE NEAREST:**

- 1. Large hub airport: \_\_\_\_\_
- 2. Medium hub airport: \_\_\_\_\_
- 3. Small hub airport: \_\_\_\_\_
- 4. Airport with jet service: \_\_\_\_\_

**Note: Provide the airport name and distance, in miles, for each category.**

**E. LIST THE 2-DIGIT CONGRESSIONAL DISTRICT CODE APPLICABLE TO THE SPONSORING ORGANIZATION, AND IF A CONSORTIUM, TO EACH PARTICIPATING COMMUNITY.**

- 1. \_\_\_\_\_
- 2. \_\_\_\_\_
- 3. \_\_\_\_\_
- 4. \_\_\_\_\_

**F. APPLICANT INFORMATION: (CHECK ALL THAT APPLY)**

- Not a Consortium       Interstate Consortium       Intrastate Consortium
- Community currently receives subsidized Essential Air Service, or receives assistance under the Alternate Essential Air Service Pilot Program
- Community (or Consortium member) previously received a Small Community Air Service Development Program Grant

If previous recipient: Provide year of grant(s): \_\_\_\_\_ ; and, the text of the grant agreement section(s) setting forth the scope of the grant project:

---

---

---

---

---

**G. PUBLIC/PRIVATE PARTNERSHIPS: (LIST ORGANIZATION NAMES)**

PUBLIC	PRIVATE
1.	1.
2.	2.
3.	3.
4.	4.
5.	5.

**H. PROJECT PROPOSAL:**

**1a. GRANT GOALS: (CHECK ALL THAT APPLY)**

- Launch New Carrier       Secure Additional Service       Upgrade Aircraft
- First Service       New Route       Service Restoration
- Regional Service       Surface Transportation       Professional Services<sup>2</sup>
- Other (explain below)

---

---

<sup>2</sup> "Professional Services" involve a community contracting with a firm to produce a product such as a marketing plan, study, air carrier proposal, etc.

**1b. GRANT GOALS: (SYNOPSIS)**

Concisely describe the scope of the proposed grant project. (For example, "Revenue guarantee to recruit, initiate, and support new daily service between \_\_\_\_\_ and \_\_\_\_\_;" or "Marketing program to support existing service between \_\_\_\_\_ and \_\_\_\_\_ by \_\_\_\_\_ Airlines.")

---

---

---

**2. FINANCIAL TOOLS TO BE USED: (CHECK ALL THAT APPLY)**

- Marketing (including Advertising):** promotion of the air service to the public
  - Start-up Cost Offset:** offsetting expenses to assist an air service provider in setting up a new station and starting new service (for example, ticket counter reconfiguration)
  - Revenue Guarantee:** an agreement with an air service provider setting forth a minimum guaranteed profit margin, a portion of which is eligible for reimbursement by the community
  - Recruitment of U.S. Air Carrier:** air service development activities to recruit new air service, including expenses for airport marketers to meet with air service providers to make the case for new air service
  - Fee Waivers:** waiver of airport fees, such as landing fees, to encourage new air service; counted as in-kind contributions only
  - Ground Handling Fee:** reimbursement of expenses for passenger, cabin, and ramp (below wing) services provided by third party ground handlers
  - Travel Bank:** travel pledges, or deposited monetary funds, from participating parties for the purchase of air travel on a U.S. air carrier, with defined procedures for the subsequent use of the pledges or the deposited funds; counted as in-kind contributions only
  - Other** (explain below)
- 
- 

**I. EXISTING LANDING AIDS AT LOCAL AIRPORT:**

- Full ILS
- Outer/Middle Marker
- Published Instrument Approach

- Localizer                       Other (specify)

**J. PROJECT COST: DO NOT ENTER TEXT IN SHADED AREA**

**REMINDER: LOCAL CASH CONTRIBUTIONS MAY NOT BE PROVIDED BY AN AIR CARRIER (SEE "TYPES OF CONTRIBUTIONS FOR REFERENCE).**

LINE	DESCRIPTION	SUB TOTAL	TOTAL AMOUNT
1	Federal amount requested

## APPLICATION CHECKLIST

INCLUDED?	ITEM
<i>For Immediate Action</i>	
	Determine Eligibility
	New Grants.gov users must register with www.grants.gov. Existing Grants.gov users <i>must verify existing www.grants.gov account has not expired and the Authorized Organization Representative (AOR) is current.</i>
<i>For Submission by 5:00 PM EDT on May 2, 2016</i>	
	Communities with active SCASDP grants: notify DOT/X50 of intent to terminate existing grant in order to be eligible for selection in FY2016
	Complete Application for Federal Domestic Assistance (SF424) via www.grants.gov
	Summary Information schedule complete and used as cover sheet (see <b>Appendix B</b> )
	<b>Application of up to 20 one-sided pages (excluding any letters from the community or an air carrier showing support for the application), to include:</b>
	<ul style="list-style-type: none"> <li>• A description of the community's air service needs or deficiencies.</li> </ul>
	<ul style="list-style-type: none"> <li>• The driving distance, in miles, to the nearest large, medium, and small hub airports, and airport with jet service.</li> </ul>
	<ul style="list-style-type: none"> <li>• A strategic plan for meeting those needs under the Small Community Program, including a concise synopsis of the scope of the proposed grant project.</li> </ul>
	<ul style="list-style-type: none"> <li>• For service to or from a specific city or market, such as New York, Chicago, Los Angeles, or Washington, D.C., for example), a list of the airports that the applicant considers part of the market.</li> </ul>
	<ul style="list-style-type: none"> <li>• A detailed description of the funding necessary for implementation of the community's project.</li> </ul>
	<ul style="list-style-type: none"> <li>• An explanation of how the proposed project differs from any previous projects for which the community received SCASDP funds (if applicable).</li> </ul>
	<ul style="list-style-type: none"> <li>• Designation of a legal sponsor responsible for administering the program.</li> </ul>
	<ul style="list-style-type: none"> <li>• A motion for confidential treatment (if applicable) – see Appendix D below.</li> </ul>

BILLING CODE 4910-9X-C

**Confidential Commercial Information**

Applicants will be able to provide certain confidential business information relevant to their proposals on a confidential basis. Under the Department's Freedom of Information Act regulations (49 CFR 7.17), such information is limited to commercial or financial information that, if disclosed, would either likely cause substantial harm to the competitive position of a business or enterprise or make it more difficult for the Federal Government to obtain similar information in the future.

Applicants seeking confidential treatment of a portion of their applications must segregate the confidential material in a sealed envelope marked "Confidential Submission of X (the applicant) in Docket DOT-OST-2016-0037" and include with that material a request in the form of a motion seeking confidential treatment of the material under 14 CFR 302.12 ("Rule 12") of the Department's regulations. The applicant should submit an original and two copies of its motion and an original and two copies of the confidential material in the sealed envelope.

The confidential material should *not* be included with the original of the applicant's proposal that is submitted via [www.grants.gov](http://www.grants.gov). The applicant's original submission, however, should indicate clearly where the confidential material would have been inserted. If an applicant invokes Rule 12, the confidential portion of its filing will be treated as confidential pending a final determination. All confidential material must be received by 5:00 p.m. EDT, May 2, 2016, and delivered to the U.S. Department of Transportation, Office of Aviation Analysis, 8th Floor, Room W86-307, 1200 New Jersey Ave. SE., Washington, DC 20590.

BILLING CODE 4910-9X-P

**DEPARTMENT OF TRANSPORTATION****Office of the Secretary**

[Docket No. DOT-OST-2015-0255]

**Request for Comments**

**AGENCY:** Office of the Secretary, U.S. Department of Transportation.

**ACTION:** Notice and request for comments.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), this notice announces that the U.S. Department of

Transportation (DOT) will forward the Information Collection Request (ICR) abstracted below to the Office of Management and Budget (OMB) for clearance. The ICR describes the nature of the information collection and its expected cost and burden hours. The **Federal Register** Notice, with a 60-day comment period soliciting comments on the questionnaire, was published on December 30, 2015, [FR Vol. 80, No. 250, page 81671]. One comment was received.

**DATES:** Comments on this notice must be received by April 29, 2016.

**ADDRESSES:** Interested persons are invited to submit comments regarding this proposal to the DOT/OST Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, Docket Library, Room 10102, 725 17th Street NW., Washington, DC 20503, or by email to [oira\\_submission@omb.eop.gov](mailto:oira_submission@omb.eop.gov).

**FOR FURTHER INFORMATION CONTACT:** Sam Brooks, Equal Opportunity Specialist (S-33), Departmental Office of Civil Rights, Office of the Secretary, U.S. Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC 20590, 202-366-7145.

**SUPPLEMENTARY INFORMATION:**

**Form Title(s):** Voluntary Web-Based Questionnaire of Airport Concession Disadvantaged Business Enterprises and Disadvantaged Business Enterprise Firms.

**Form Number:** None.

**OMB Control Number:** None.

**Abstract:** The DOT's Operating Administrations distribute substantial funds each year to finance construction projects initiated by state and local governments, public transit and airport agencies. The DOT has the important responsibility of ensuring that firms competing for DOT-assisted contracts for these projects are not disadvantaged by unlawful discrimination. The DOT's most important tool for meeting this requirement has been its Disadvantaged Business Enterprise (DBE) program, which originally began in 1980 as a minority/women's business enterprise program established by regulation under the authority of Title VI of the Civil Rights Act of 1964 and other nondiscrimination statutes that apply to DOT financial assistance programs. The DBE program was reauthorized by Congress several times since its inception; most recently in the "Fixing America's Surface Transportation Act" or the "FAST-ACT," (P.L. 114-94, December 4, 2015). See more at: <https://www.transportation.gov/civil-rights/disadvantaged-business-enterprise#sthash.67nZv63S.dpuf>,

which funded surface transportation programs for highways, highway safety, and transit. Section 1101(b) of the Act describes Congress's findings regarding the continued need for the DBE program due to the discrimination and related barriers that pose significant obstacles for minority and women-owned businesses seeking federally-assisted surface transportation work. The DBE program focuses primarily on construction and professional services contracts, while the airport concession disadvantaged business enterprise (ACDBE) program focuses on lease and supplier agreements for food, beverage, retail, and car rental services. Congress raised concerns that discrimination and related barriers continue to pose obstacles to disadvantaged firms seeking to do business at U.S. airports. The information requested will assist DOT in measuring whether both programs are achieving the objectives to create a level playing field on which ACDBEs/DBEs can compete fairly and assist in the development of ACDBE/DBE firms to compete successfully in the marketplace.

The single comment that was received by DOT during the 60-day comment period was provided by a trade association and had four components. The association (1) asked DOT to use the data collection measure to address the issue of out-of-date DBE directories; (2) observed that prime contractors need better information on the types of construction work DBEs are able to perform; (3) requested that the questionnaire "query DBE firms on the issue of training;" and (4) asked DOT to evaluate the responses regarding perceived barriers or challenges from the perspective of all parties. After careful consideration, DOT makes due note of all four components. Only items (1) and (3) appear to request changes to proposed questions. However, as these items are not strictly germane to the stated purpose (measuring the objective of creating a level playing field) of the questionnaire, the Department respectfully declines to alter the content of the questions.

The questionnaire will be for the use of ACDBE and DBE certified firms, so that they can provide information regarding the nature of their business and bidding history, and perceived barriers/challenges that may have prevented them from receiving a contract or successfully competing in DOT's ACDBE/DBE program. A link to the questionnaire will be made available by DOT's Departmental Office of Civil Rights for use by the Department's state and local recipients, which can in turn post this link on their own Web sites.

The information collected will be used to assist DOT in measuring whether the ACDBE/DBE program is achieving its objectives. The DOT estimates that it takes an individual approximately 10 minutes to complete the questionnaire.

*Type of Request:* New information collection.

*Affected Public:* Airport Concession Disadvantaged Business Enterprises and Disadvantaged Business Enterprises certified under the authority of 49 CFR parts 23 and 26.

*Total Annual Estimated Burden:* 628 hours.

*Frequency of Collection:* An individual's completion of the questionnaire is solely voluntary.

*Comments are Invited on:* Any aspect of this information collection, including (a) whether the proposed collection of information is necessary for the proper performance of DOT's ACDBE/DBE program; (b) the accuracy of the estimated burden; (c) ways for the Department to enhance the quality, utility and clarity of the information

collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. Comments should be sent to the address in the preamble. All responses to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will also become a matter of public record.

Issued in Washington, DC, on March 23, 2016.

**Habib Azarsina,**  
*OST Privacy and PRA Officer, U.S.  
Department of Transportation.*

OMB CONTROL NUMBER: 21XX-XXXX

EXPIRATION DATE: mm/dd/yyyy

**Paperwork Reduction Act Burden Statement**

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number. The OMB Control Number for this information collection is 21XX-XXXX. Public reporting for this collection of information is estimated to be approximately 10 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, completing and reviewing the collection of information.

All responses to this collection of information are voluntary. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Office of the Secretary of Transportation, Washington, D.C. 20590.

**Question**      **Firm name**  
Answer            Firm name

**Question**      **Home State**  
Answer            [Drop Down]

**Question**      **How many years has your firm been in existence?**  
Answer            [less than 1 year]  
                         [1-3 years]  
                         [3 or more years]

**Question**      **How long has your firm been certified as an ACDBE/DBE?**  
Answer            [years/months]

**Question**      **On what basis did you rely in submitting your ACDBE/DBE certification application?**  
Answer            [Black Americans]  
                         [Hispanic Americans]  
                         [Asian-Pacific Americans]  
                         [Subcontinent Asian Americans]  
                         [Non-minority women]  
                         [Non-minority economically disadvantaged male]

**Question**      **How would you describe your firm's primary line of business?**  
Answer            [Trucking]  
                         [Engineering]  
                         [Heavy construction]  
                         [Environmental remediation]  
                         [Electrical contractor]  
                         [Supplier of bulk materials]  
                         [Other / text field]

**Question**      **Did you become ACDBE/DBE certified in order to bid on a contract let by a transportation agency?**  
Answer            [YES/NO]

**Question**      **If not, did you ever bid on a transportation contract?**  
Answer            [YES/NO]

---

<b>Question</b>	<b>How many total contracts have you bid on in the last 2 years that were let by a transportation agency?</b>
Answer	[0] [1-5] [5-10] [20 or more]
<b>Question</b>	<b>Of those bids, how many contracts did you bid on as an ACDBE/DBE?</b>
Answer	[0] [1-5] [5-10] [20 or more]
<b>Question</b>	<b>Of those bids, how many were successful?</b>
Answer	[0] [1-5] [5-10] [20 or more]
<b>Question</b>	<b>Is this the first year that you have received a federally assisted contract or lease as a ACDBE/DBE?</b>
Answer	[YES/NO]
<b>Question</b>	<b>In the last 2 years, how often have primes contacted you and asked that you bid on a particular project as an ACDBE/DBE (on average)?</b>
Answer	[0 times] [1-5 times per month] [5-10 per month] [20 or more times]
<b>Question</b>	<b>Of those, how many times did you bid?</b>
Answer	[0 times] [1-5 times per month] [5-10 per month] [20 or more times]
<b>Question</b>	<b>How many times were you successful?</b>
Answer	[0 times] [1-5 times per month] [5-10 per month] [20 or more times]
<b>Question</b>	<b>In the last 2 years, on average, how often have you performed work outside of your home state as an ACDBE/DBE?</b>
Answer	[0 times] [1-5 times per month] [5-10 per month] [20 or more times]
<b>Question</b>	<b>What barriers have you encountered that you believe have prevented you from receiving a contract or successfully competing in the ACDBE/DBE program?</b>
Answer	[Insufficient Bonding Capacity] [Lack of Necessary Equipment for job]

[Primes use same ACDBE/DBE]  
 [Scope of contract was too large for my firm]  
 [Discrimination by prime]  
 [My ACDBE/DBE firm was not certified in the NAICS Code solicited]  
 [Competition from other small firms]  
 [My firm was not promptly paid by the prime]  
 [Other, please describe]

**Question** Has your firm ever filed an ACDBE/DBE-related complaint with a local transportation agency?

**Answer** [YES/NO]

**Question** If Yes, what did the complaint involve?

**Answer** [Primes use same ACDBE/DBE]  
 [The scope of contract was too large for my firm to consider bidding on]  
 [Discrimination by prime]  
 [My firm was not promptly paid by the prime]  
 [Other, please describe]

**Question** How are you made aware of existing and future federally-assisted contracting opportunities?

**Answer** [Recipient Websites]  
 [Direct solicitation]  
 [Other, please describe]

**Question** Of the federally-assisted contracts that you have bid on in the last two years, how many included ACDBE/DBE contract goals?

**Answer** [Do not know if there were ACDBE/DBE contract goals on the contract]  
 [0]  
 [1-5]  
 [5-10]  
 [20 or more]

 BILLING CODE 4910-9X-P

## DEPARTMENT OF THE TREASURY

### Office of the Comptroller of the Currency

#### Agency Information Collection Activities; Revision of an Approved Information Collection; Submission for OMB Review; Annual Company-Run Stress Test Reporting Template and Documentation for Covered Institutions With Total Consolidated Assets of \$10 Billion to \$50 Billion Under the Dodd-Frank Wall Street Reform and Consumer Protection Act

**AGENCY:** Office of the Comptroller of the Currency, Treasury (OCC).

**ACTION:** Notice and request for comment.

**SUMMARY:** The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to comment on a revision to this information collection, as required

by the Paperwork Reduction Act of 1995. An agency may not conduct or sponsor, and a respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The OCC is also giving notice that it has sent the collection to OMB for review.

The OCC is finalizing revisions to the collection titled “Annual Company-Run Stress Test Reporting Template and Documentation for Covered Institutions with Total Consolidated Assets of \$10 Billion to \$50 Billion under the Dodd-Frank Wall Street Reform and Consumer Protection Act.” The OCC also is giving notice that it has sent the collection to OMB for review.

**DATES:** Comments must be received by April 29, 2016.

**ADDRESSES:** Because paper mail in the Washington, DC area and at the OCC is subject to delay, commenters are encouraged to submit comments by email, if possible. Comments may be sent to: Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, Attention:

1557-0311, 400 7th Street SW., Suite 3E-218, Mail Stop 9W-11, Washington, DC 20219. In addition, comments may be sent by fax to (571) 465-4326 or by electronic mail to [prainfo@occ.treas.gov](mailto:prainfo@occ.treas.gov). You may personally inspect and photocopy comments at the OCC, 400 7th Street SW., Washington, DC 20219. For security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling (202) 649-6700 or, for persons who are deaf or hard of hearing, TTY, (202) 649-5597. Upon arrival, visitors will be required to present valid government-issued photo identification and to submit to security screening in order to inspect and photocopy comments.

All comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not enclose any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

Additionally, please send a copy of your comments by mail to: OCC Desk

Officer, 1557–0311, U.S. Office of Management and Budget, 725 17th Street NW., #10235, Washington, DC 20503, or by email to: oira\_submission@omb.eop.gov.

**FOR FURTHER INFORMATION CONTACT:** You can request additional information from or a copy of the collection from Shaquita Merritt or Mary H. Gottlieb, Clearance Officers, (202) 649–5490, or for persons who are deaf or hard of hearing, TTY, (202) 649–5597, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219. In addition, copies of the templates referenced in this notice can be found on the OCC's Web site under Tools and Forms (<http://www.occ.gov/tools-forms/forms/bank-operations/stress-test-reporting.html>).

**SUPPLEMENTARY INFORMATION:** The OCC is requesting comment on a revision to the following information collection:

*Title:* Annual Company-Run Stress Test Reporting Template and Documentation for Covered Institutions with Total Consolidated Assets of \$10 Billion to \$50 Billion under the Dodd-Frank Wall Street Reform and Consumer Protection Act.

*OMB Control No.:* 1557–0311.

*Description:* Section 165(i)(2) of the Dodd-Frank Wall Street Reform and Consumer Protection Act<sup>1</sup> (Dodd-Frank Act) requires certain financial companies, including national banks and Federal savings associations, to conduct annual stress tests<sup>2</sup> and requires the primary financial regulatory agency<sup>3</sup> of those financial companies to issue regulations implementing the stress test requirements.<sup>4</sup> A national bank or Federal savings association is a “covered institution,” and therefore subject to the stress test requirements, if its total consolidated assets exceed \$10 billion. Under section 165(i)(2), a covered institution is required to submit to the Board of Governors of the Federal Reserve System (Board) and to its primary financial regulatory agency a report at such time, in such form, and

containing such information as the primary financial regulatory agency may require.<sup>5</sup> On October 9, 2012, the OCC published in the **Federal Register** a final rule implementing the section 165(i)(2) annual stress test requirements.<sup>6</sup> On October 22, 2013 the OCC published in the **Federal Register** a notice describing the reports and information required under section 165(i)(2) for covered institutions with average total consolidated assets between \$10 to \$50 billion.<sup>7</sup> The OCC proposed revisions to these templates on October 20, 2015.<sup>8</sup> The OCC received one comment. The OCC is now finalizing these revisions, as described below.

The OCC is finalizing the following revisions and clarifications for the OCC DFAST 10–50 report, effective for the 2016 stress test cycle: Changing the dates on the reporting templates to match the revised “as of” date from September 30 to December 31, changing the reporting submission due date from March to July, and modifying the reporting instructions to clarify a number of items. Additionally, the line item “Qualifying subordinated debt and redeemable preferred stock” will be eliminated in the capital section of the balance sheet, and the report form will include updated references to specific reporting items on the Reports of Condition and Income (Call Report).

The OCC received one comment letter. The comment letter requested updates to several Call Report references in the reporting templates and clarification to the balance sheet capital section of the instructions. In response to this comment, the templates and instructions have been updated with revised references that the OCC believes will provide additional clarity.

The OCC has worked closely with the Board and the Federal Deposit Insurance Corporation to make the agencies' respective rules implementing the annual stress testing requirements under the Dodd-Frank Act consistent and comparable by requiring similar standards for scope of application, scenarios, data collection and reporting

forms. The OCC also has worked to minimize any potential duplication of effort related to the annual stress test requirements.

*Type of Review:* Revision to an existing collection.

*Affected Public:* Businesses or other for-profit.

*Burden Estimates:*

*Estimated Number of Respondents:* 36

*Estimated Total Annual Burden:* 16,884 hours.

The burden for each \$10 to \$50 billion covered institution that completes the revised results template is estimated to be 445 hours for a total of 14,685 hours. This burden includes 20 hours to input this data and 425 hours for work related to modeling efforts. The estimated revised burden for each \$10 to \$50 billion covered institution that completes the annual DFAST Scenarios Variables Template is estimated to be 24 hours for a total of 792 hours.

Comments submitted in response to this notice will be summarized and included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the OCC, including whether the information has practical utility;

(b) The accuracy of the OCC's estimate of the burden of the collection of information;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the collection on respondents, including through the use of automated collection techniques or other forms of information technology; and,

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: March 24, 2016.

Part II

## Department of the Interior

---

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Designation and Nondesignation of Critical Habitat on Molokai, Lanai, Maui, and Kahoolawe for 135 Species; Final Rule

**DEPARTMENT OF THE INTERIOR****Fish and Wildlife Service****50 CFR Part 17**

[Docket No. FWS–R1–ES–2015–0071; 4500030114]

RIN 1018–AZ25

**Endangered and Threatened Wildlife and Plants; Designation and Nondesignation of Critical Habitat on Molokai, Lanai, Maui, and Kahoolawe for 135 Species**

**AGENCY:** Fish and Wildlife Service, Interior.

**ACTION:** Final rule.

**SUMMARY:** We, the U.S. Fish and Wildlife Service, designate or revise critical habitat for 125 listed species on the islands of Maui, Molokai, and Kahoolawe in the State of Hawaii. We are designating critical habitat for 50 plant and animal species, and revising critical habitat for 85 plant species. In total, approximately 157,002 acres (ac) (63,537 hectares (ha)) on the islands of Molokai, Maui, and Kahoolawe fall within the boundaries of the critical habitat designation. Although we proposed critical habitat on 25,413 ac (10,284 ha) on the island of Lanai, this area is excluded from final designation under section 4(b)(2) of the Endangered Species Act. In addition, under section 4(b)(2), approximately 59,479 ac (24,070 ha) on the islands of Maui and Molokai are excluded from critical habitat designation. These exclusions mean that we are not designating critical habitat for 10 of the species included in our proposed rule. We also removed 29,170 ac (11,805 ha) of areas we determined do not meet the definition of critical habitat. In this final rule, we accept name changes or corrections for 10 endangered plants and 2 endangered birds. The effect of this rule is to conserve these 125 species and their habitats under the Endangered Species Act.

**DATE:** This rule is effective on April 29, 2016.

**ADDRESSES:** This final rule, final economic analysis, and the document “Supplementary Information for the Designation and Nondesignation of Critical Habitat on Molokai, Lanai, Maui, and Kahoolawe for 135 Species” are available on the Internet at <http://www.regulations.gov> under Docket No. FWS–R1–ES–2015–0071. Comments and materials received, as well as supporting documentation used in preparing this final rule, are available for public inspection, by appointment,

during normal business hours, at the U.S. Fish and Wildlife Service, Pacific Islands Fish and Wildlife Office, 300 Ala Moana Boulevard, Room 3–122, Honolulu, HI 96850; by telephone at 808–792–9400; or by facsimile at 808–792–9581.

The coordinates or plot points or both from which the maps are generated are included in the administrative record for this critical habitat designation and are available at <http://www.fws.gov/pacificislands>, at <http://www.regulations.gov> under Docket No. FWS–R1–ES–2015–0071, and at the Pacific Islands Fish and Wildlife Office (see **FOR FURTHER INFORMATION CONTACT**).

**FOR FURTHER INFORMATION CONTACT:** Mary Abrams, Field Supervisor, U.S. Fish and Wildlife Service, Pacific Islands Fish and Wildlife Office, 300 Ala Moana Boulevard, Room 3–122, Honolulu, HI 96850; by telephone at 808–792–9400; or by facsimile at 808–792–9581. If you use a telecommunications device for the deaf (TDD), call the Federal Information Relay Service (FIRS) at 800–877–8339.

**SUPPLEMENTARY INFORMATION:**

**Organization of the Final Rule**

This final rule describes the final critical habitat designation for 135 Maui Nui species under the Endangered Species Act of 1973, as amended (Act or ESA) (16 U.S.C. 1531 *et seq.*). The pages that follow summarize the comments and information received during multiple open comment periods and a public hearing in response to the proposed rule published on June 11, 2012 (77 FR 34464), and in response to the notice of availability of the draft economic analysis of the proposed designation published on January 31, 2013 (78 FR 6785), describe any changes from the proposed rule, and detail the final designation for the Maui Nui species. To assist the reader, the content of the document is organized as follows:

- I. Executive Summary
- II. Previous Federal Actions
- III. Background
  - Mauui Nui Species Addressed in This Final Rule
    - An Ecosystem-Based Approach To Determining Primary Constituent Elements of Critical Habitat
- IV. Summary of Comments and Recommendations
  - Peer Review
  - Comments from Federal Agencies
  - Comments from State of Hawaii Elected Officials
  - Comments from State of Hawaii Agencies
  - Comments from Maui County
  - Public Comments
  - Comments on the Draft Economic Analysis (DEA)

- V. Summary of Changes From the Proposed Rule
- VI. Critical Habitat Background
- VII. Methods
  - Occupied Areas
  - Essential Physical or Biological Features
  - Special Management Considerations or Protections
  - Unoccupied Areas
  - Criteria Used To Identify Critical Habitat
- VIII. Final Critical Habitat Designation
  - Descriptions of Critical Habitat Units
- IX. Effects of Critical Habitat Designation
  - Section 7 Consultation
  - Application of the “Adverse Modification” Standard
- X. Exemptions
  - Application of Section 4(a)(3) of the Act
- XI. Exclusions
  - Application of Section 4(b)(2) of the Act
  - Exclusions Based on Economic Impacts
  - Exclusions Based on National Security Impacts
  - Exclusions Based on Other Relevant Factors
  - Summary of Exclusions Based on Other Relevant Factors
- XII. Required Determinations
- XIII. References Cited
- Regulation Promulgation

**I. Executive Summary**

*Why we need to publish a rule.* This is a final rule to designate or revise critical habitat for 135 species from the island cluster of Maui Nui (Molokai, Maui, Lanai, and Kahoolawe) in the State of Hawaii. Under the Act, any species that is determined to be an endangered or threatened species requires critical habitat to be designated, to the maximum extent prudent and determinable. Designations and revisions of critical habitat can only be completed by issuing a rule.

We, the U.S. Fish and Wildlife Service (Service), listed 96 of the 135 species as endangered or threatened species at various times (see 77 FR 34464; June 11, 2012). On June 11, 2012, we published in the **Federal Register** a proposed rule to list 38 Maui Nui species as endangered, reaffirm the listing of 2 species as endangered, and designate or revise critical habitat for 135 Maui Nui species (77 FR 34464). On May 28, 2013 (78 FR 32014) we listed 38 Maui Nui species as endangered and reaffirmed the listing of 2 species as endangered. Section 4(b)(2) of the Act states that the Secretary shall designate critical habitat on the basis of the best available scientific data after taking into consideration the economic impact, national security impact, and any other relevant impact of specifying any particular area as critical habitat.

The critical habitat areas we are designating in this rule constitute our current best assessment of the areas that meet the definition of critical habitat for

125 of the 135 Maui Nui species. Here we are designating as critical habitat approximately 157,002 acres (ac) (63,537 hectares (ha)) in 165 unique units for 125 Maui Nui species: 31,513 ac (12,753 ha) on Molokai; 119,349 ac (48,299 ha) on Maui; and 6,142 ac (2,486 ha) on Kahoolawe. No critical habitat is designated on the island of Lanai as a consequence of exclusions under section 4(b)(2) of the Act; as a consequence, final critical habitat is not designated for 10 of the Maui Nui species.

In this final rule, 29,170 ac (11,805 ha) have been removed from the area originally proposed as a result of refinement in unit areas made in response to public comments and additional field visits. We removed these areas based on our determination that they do not meet the definition of critical habitat. In addition, 84,891 ac (34,354 ha) of non-Federal lands on Maui, Molokai, and Lanai have been excluded from final designation under section 4(b)(2) of the Act. For these lands, the Secretary has determined that the benefits of exclusion outweigh the benefits of critical habitat designation and that these exclusions will not result in the extinction of the species.

In this final rule, we also recognize taxonomic changes and spelling corrections of the scientific names for 10 plant species and 2 bird species, and revise the List of Endangered and Threatened Plants and the List of Endangered and Threatened Wildlife accordingly.

We have prepared an economic analysis of the designation of critical habitat. In order to consider economic impacts, we have prepared an analysis of the economic impacts of the critical

habitat designation and related factors. We announced the availability of the draft economic analysis (DEA) in the **Federal Register** on January 31, 2013 (78 FR 6785), allowing the public to provide comment on our analysis. We also held a public information meeting and public hearing on our proposed rulemaking and associated DEA in Kihei, Maui, on February 21, 2013. We have considered the comments and have completed the final economic analysis (FEA) concurrently with this final determination.

*Peer review and public comment.* We sought comments from independent specialists to ensure that our designation is based on scientifically sound data and analyses. We obtained opinions from four knowledgeable individuals with scientific expertise to review our technical assumptions and analysis, and to determine whether or not we had used the best available scientific information. These peer reviewers generally concurred with our methods and conclusions, and provided additional information, clarifications, and suggestions to improve this final rule. Information we received from peer review is incorporated into this final designation. We also considered all comments and information we received from the public during multiple comment periods, which totaled 135 days in length.

**II. Previous Federal Actions**

Federal actions for these species are outlined in our May 28, 2013 (78 FR 32014), final rule to list 38 Maui Nui species and reaffirm the listing of 2 endangered plants and in our June 11, 2012 (77 FR 34464), proposed rule to list 38 species as endangered and

designate critical habitat for 135 Maui Nui species. (Please note that because the proposed rule to designate critical habitat was originally published in conjunction with the proposed listing rule, which has already been finalized, the proposed rule critical habitat rule and associated documents, such as the draft economic analysis, are posted at <http://www.regulations.gov> under the original Docket No. FWS-R1-ES-2011-0098). Publication of the June 11, 2012, proposed rule opened a 60-day comment period, which was extended on August 9, 2012 (77 FR 47587) for an additional 30 days and closed on September 10, 2012. In addition, we published a public notice of the proposed rule on June 20, 2012, in the local Honolulu Star Advertiser, Maui Times, and Molokai Dispatch newspapers. On January 31, 2013 (78 FR 6785), we reopened the comment period for an additional 30 days on the entire June 11, 2012, proposed rule (77 FR 34464), as well as on the draft economic analysis on the proposed critical habitat designation, and announced both a public information meeting and a hearing to be held in Kihei, Maui, on February 21, 2013. This second comment period closed on March 4, 2013. We opened a final comment period on the proposed critical habitat designation for an additional 15 days on June 10, 2015 (80 FR 32922).

**III. Background**

*Maui Nui Species Addressed in This Final Rule*

The table below (Table 1) provides the common name, scientific name, and listing status for the species that are the subject of this final rule.

TABLE 1—THE MAUI NUI SPECIES ADDRESSED IN THIS FINAL RULE

[Note that many of the species share the same common name. “NCN” indicates no common name. “E” denotes endangered status under the act; “T” denotes threatened status under the act]

Scientific name	Common name(s)	Listing status	Critical habitat <sup>1</sup>
<b>Plants:</b>			
<i>Abutilon eremitopetalum</i> .....	[NCN] .....	E	Final.
<i>Acaena exigua</i> .....	liliwai .....	E	Final.

Birds:			
<i>Palmeria dolei</i>	Akohekohe, crested honeycreeper	E	Final.
<i>Pseudonestor xanthophrys</i>	Kiwikiu, Maui parrotbill	E	Final.
Snails:			
<i>Newcombia cumingi</i>	Newcomb's tree snail	E	Final.
<i>Partulina semicarinata</i>	Lanai tree snail	E	Final.
<i>Partulina variabilis</i>	Lanai tree snail	E	Final.

<sup>1</sup> Listed species for which critical habitat is designated for the first time are classified here as “Final.” If this is a revision of previously designated critical habitat, the species is classified as “Revised” followed by the year of the original designation.

Taxonomic Changes and Spelling Corrections Since Listing for 2 Bird Species and 10 Plant Species From Maui Nui

As described in detail in our proposed rule (June 11, 2012; 77 FR 34464), in

this final rule we are accepting name or spelling changes for 2 bird species and 10 plant species. In brief, we accept the recently adopted Hawaiian common name, kiwikiu, for the Maui parrotbill (*Pseudonestor xanthophrys*). We also add the Hawaiian common name,

akohekohe, to the listing for the crested honeycreeper (*Palmeria dolei*). Additionally, based on recent botanical work, we accept various name changes and spelling corrections for 10 endangered plant species listed between 1991 and 1999 (Table 2).

TABLE 2—NAME CHANGES AND SPELLING CORRECTIONS FOR 2 LISTED ENDANGERED HAWAIIAN BIRDS AND 10 LISTED ENDANGERED HAWAIIAN PLANTS

Listing	Family	Name as previously listed	Newly accepted name	Change in range of listed entity?
<b>Birds:</b>				
32 FR 4001 .....	Fringillidae .....	Maui parrotbill ( <i>Pseudonestor xanthophrys</i> )	Kiwikiu, Maui parrotbill ..... ( <i>Pseudonestor xanthophrys</i> ) .....	No.
32 FR 4001 .....	Fringillidae .....	Crested honeycreeper ( <i>Palmeria dolei</i> ) .....	Akohekohe, crested honeycreeper ..... ( <i>Palmeria dolei</i> ).	No.
<b>Plants:</b>				
59 FR 49025 .....	Aspleniaceae ....	<i>Asplenium fragile</i> var. <i>insulare</i> .....	<i>Asplenium peruvianum</i> var. <i>insulare</i> .....	No.
56 FR 55770 .....	Gentianaceae ...	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .....	No.
61 FR 53130 .....	Campanulaceae	<i>Cyanea dunbarii</i> .....	<i>Cyanea dunbariae</i> .....	No.
56 FR 47686 .....	Campanulaceae	<i>Cyanea macrostegia</i> ssp. <i>gibsonii</i> .....	<i>Cyanea gibsonii</i> .....	No.
59 FR 56333 .....	Aspleniaceae ....	<i>Diellia erecta</i> .....	<i>Asplenium dielerectum</i> .....	No.
64 FR 48307 .....	Rubiaceae .....	<i>Hedyotis schlechtendahlana</i> var. <i>remyi</i> .....	<i>Kadua cordata</i> ssp. <i>remyi</i> .....	No.
57 FR 46325 .....	Rubiaceae .....	<i>Hedyotis mannii</i> .....	<i>Kadua laxiflora</i> .....	No.
57 FR 20772 .....	Asteraceae .....	<i>Lipochaeta kamolensis</i> .....	<i>Melanthera kamolensis</i> .....	No.
59 FR 10305 .....	Cyperaceae .....	<i>Mariscus fauriei</i> .....	<i>Cyperus fauriei</i> .....	No.
57 FR 20772 .....	Lycopodiaceae	<i>Phlegmariurus mannii</i> .....	<i>Huperzia mannii</i> .....	No.

All of the aforementioned taxonomic changes and spelling corrections are currently accepted by the scientific community; detailed background information on each of the changes is provided in our supporting document “Supplementary Information for the Designation and Nondesignation of Critical Habitat on Molokai, Lanai, Maui, and Kahoolawe for 135 Species,” available at <http://www.regulations.gov> and at <http://www.fws.gov/pacificislands> (see ADDRESSES). In accordance with the references cited in our proposed rule (June 11, 2012; 77 FR 34464) and our supporting documentation, we are revising the List of Endangered and Threatened Plants at 50 CFR 17.12 and the List of Endangered and Threatened Wildlife at 50 CFR 17.11. In addition, we made editorial revisions to a limited number of units and species descriptions in 50 CFR 17.99(a)(1) and (b) (Kauai), 50 CFR 17.99(i) and (j) (Oahu), 50 CFR 17.99(k) and (l) (Hawaii Island) to adopt the taxonomic changes.

Current Status of 135 Listed Maui Nui Species  
Plants

In order to avoid confusion regarding the number of locations of each species, we use the word “occurrence” instead of “population.” It is important to note that a “location” or “occurrence” as used here is not the same as a “population,” as in many cases a location or occurrence may represent only one or very few representative individuals of the species present. A population, on the other hand, represents a group of interbreeding organisms sufficiently represented in

numbers of individuals, age class, and genetic diversity to remain viable over the long term in the face of demographic, environmental, and genetic stochasticity, and natural catastrophes. This distinction is particularly important in evaluating the current status of each species relative to the determination of what is essential for the conservation of the species, as guided, for example, by the recovery plan for the plant or animal species, if available (e.g., as defined for several of the plant species in this final rule in the Recovery Plan for the Maui Plant Cluster; Service 1997, pp. iv–v), or by the general guidelines of the Hawaii and Pacific Plant Recovery Coordinating Committee (HPPRCC, 1998, 32 pp. + appendices). In general, populations are considered as meeting the objectives for conservation if they are secure, stable, and naturally reproducing over some minimum period of time, depending upon their life history. As reported here, each occurrence is composed only of wild (i.e., not propagated and outplanted) individuals, and unless otherwise specified. In this rule, outplanted occurrences are generally not considered as meeting specified recovery objectives because currently these outplants have not been observed to be naturally reproducing and stable (over at least two generations), and as such have not demonstrated the capacity for reproduction and recruitment necessary to maintain or increase the population over time.

*Abutilon eremitopetalum* (no common name (NCN)), a short-lived perennial shrub in the mallow family (Malvaceae), is endemic to Lanai (Bates 1999, pp. 871–872). At the time we

designated critical habitat in 2003, *A. eremitopetalum* was known from a single occurrence of seven individuals on Lanai (68 FR 1220, January 9, 2003). Currently, there are nine individuals at Puu Mahanalua in the lowland dry ecosystem (TNC 2007; HBMP 2010; PEPP 2008, p. 45; PEPP 2011, p. 49).

*Acaena exigua* (liliwai), a short-lived perennial herb in the rose family (Rosaceae), is known from west Maui and Kauai (Wagner *et al.* 1999p, pp. 1,102–1,103). *Acaena exigua* was rediscovered in 1997 at Puu Kukui on west Maui, when one individual was found growing in a bog in the montane wet ecosystem, but this individual died in 2000 (TNC 2007; Oppenheimer *et al.* 2002, p. 1). This area on west Maui was searched as recently as 2008 by botanists; however, no plants were found (Aruch 2010, in litt.). Botanists continue to survey the potentially suitable habitat in the area where this species was last observed.

*Adenophorus periens* (pendant kiihi fern), a short-lived perennial fern in the grammitis family (Grammitidaceae), is epiphytic on the native tree *Acacia koa* (koa). *Adenophorus periens* is known from Kauai, Oahu, Lanai, Maui, and the island of Hawaii (Palmer 2003, p. 39). At the time we designated critical habitat in 2003 and 2012, *A. periens* was known from Kauai, Molokai, the island of Hawaii, and Oahu (68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). *Adenophorus periens* was last seen on Molokai in 1995, in the montane wet ecosystem, at the edge of Pepeopae bog (Perlman 2008b, in litt.). It was last collected in the late 1800s to early 1900s

from the montane wet ecosystem on east Maui and Lanai (TNC 2007; HBMP 2010).

*Alectryon macrococcus* (mahoe), a long-lived perennial tree in the soapberry family (Sapindaceae), is known from two varieties: *Alectryon macrococcus* var. *auwahiensis* (east Maui) and *A. macrococcus* var. *macrococcus* (Kauai, Oahu, Molokai, and Maui) (Wagner *et al.* 1999x, p. 1,225). At the time we designated critical habitat in 2003, *A. macrococcus* var. *auwahiensis* was known from three occurrences on east Maui (68 FR 25934, May 14, 2003). Currently, *A. macrococcus* var. *auwahiensis* is found in one occurrence of seven individuals in Auwahi, in the lowland dry ecosystem (TNC 2007; HBMP 2010; NTBG Provenance Report 1993; PEPP 2009, p. 33). This variety was historically found in the lowland dry, montane dry, and montane mesic ecosystems, not lower than 1,200 feet (ft) (360 meters (m)) in elevation (TNC 2007; HBMP 2010; Wagner *et al.* 1999, p. 1,225). At the time we designated critical habitat in 2003 and 2012, *A. macrococcus* var. *macrococcus* was found on Kauai, Molokai, west Maui, and Oahu (68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). Currently, on Molokai, this variety is found in three known occurrences: One individual at Kahawai, eight individuals from Kaunakakai to Kawela, and one individual in Makolelau, in the lowland mesic and montane mesic ecosystems. On west Maui, *A. macrococcus* var. *macrococcus* is found in 6 occurrences totaling 11 individuals (1 individual each at Honokowai Stream, Wahikuli, Kahoma Ditch Trail, Olowalu, and Iao Valley, and 6 individuals at Honokowai) in the lowland wet and wet cliff ecosystems. On east Maui, there are an unknown number of individuals at Kahakapao in the montane mesic ecosystem (TNC 2007; HBMP 2008; Oppenheimer 2010p, in litt.).

*Argyroxiphium sandwicense* ssp. *macrocephalum* (ahinahina, Haleakala silversword) is a short-lived perennial rosette shrub in the sunflower family (Asteraceae) and is known from within a 2,500-ac (1,000-ha) area, between 6,900 to 9,800 ft (2,100 to 3,000 m) in elevation, at the summit and crater of Haleakala on east Maui (Carr 1999a, p. 261; Service 2010, in litt.; Haleakala National Park (HNP) 2012, in litt.; Service 2015, in litt.). In 2006, seven occurrences totaled approximately 50,000 individuals (a decline from 75,000 known individuals in 1990), and span across adjoining dry cliff,

subalpine, and alpine ecosystems (TNC 2007; Perlman 2008c, in litt., p. 1; Service 2010, in litt.; HNP 2012, in litt.; Service 2015, in litt.). These seven occurrences are generally considered to represent one single population, which is greatly reduced in its distribution from its historical range on Haleakala. One individual is found in Hanawi Natural Area Reserve (NAR) in the montane mesic ecosystem (TNC 2007; Perlman 2008c, p. 1; HBMP 2010). This species is monocarpic (dies after flowering) and reaches full maturity after 15 to 50 years. The triggers for blooming are unknown, and plants flower sporadically, or sometimes all at once, from June through October (Starr *et al.* 2007, in litt.; Starr *et al.* 2009, p. 1). This species experiences reduced reproductive success in low-flowering years (Forsyth 2003; Krushelnycky *et al.* 2012, p. 8). As populations and numbers of individuals decrease in numbers, they are less likely to be visited by pollinators, and fitness is reduced as population size decreases, with extinction of these groups of plants becoming more likely as the population declines (Forsyth 2002, pp. 26–27; Krushelnycky *et al.* 2012, p. 9; Krushelnycky 2014, p. 12). In addition, this species is an obligate out-crosser, meaning it cannot fertilize itself, but must have pollen from other non-related individuals to set fertile seed (Krushelnycky 2014, p. 5). Lower numbers of populations and individuals increases the distances pollinators are required to travel, also contributing to lack of pollination from other non-related individuals (Forsyth 2002, p. 40). Research also indicated that, even with greater than 2,700 individuals blooming simultaneously, there would be very little, if any, seed set (Forsyth 2002, p. 40). Furthermore, because all of the plants that flower die afterward, large numbers of individuals are lost following such an event, and without subsequent seed set and recruitment, this represents a significant loss to the total population. Given that there are very low-flowering years in the current population of approximately 50,000 individuals, it is likely that, if the population continues to decline, even fewer plants would have reproductive success (Forsyth 2002, p. 42). Altogether, this combination of life history characteristics results in a population that may appear to be relatively large, but is actually highly vulnerable to large losses of individuals very quickly under certain circumstances (such as when environmental conditions trigger large numbers of adults to flower and die all

at once). Yearly measurements in census plots indicate a population decline of 73 percent since 1982, likely associated with changing climatic conditions (Starr *et al.* 2009; in litt.; Krushelnycky *et al.* 2012, p. 8). Threats, including competition with nonnative plants, loss of native pollinators (affecting seed set), drought, predation by rats (*Rattus* spp.), slugs, and nonnative insects, and predation and competition with native pollinators by nonnative ants, continue to affect this species (Cole *et al.* 1992, pp. 1320–1321; Starr and Starr 2002, pp. 3–4; Forsyth 2002, p. 81; Krushelnycky 2014, pp. 8–10). Weather and rainfall changes resulting from climate change are potential threats, as suitable habitat to the summit of Haleakala will continue to diminish over time (Starr *et al.* 2009, in litt.). To attain delisting goals, the threats to its pollinators must be controlled, and the widespread occurrences must exceed and be maintained at over 50,000 individuals to ensure genetic variability and long-term persistence (Forsyth 2002, p. 42; Krushelnycky *et al.* 2012, p. 12). Because of its unique reproductive features, the ongoing and potential threats to this species, and the small range of its current occurrences at higher elevations on east Maui, and to accommodate loss of habitat with expected climate change, we consider the single remaining population of *A. sandwicense* ssp. *macrocephalum* to be vulnerable to extinction. The establishment of additional populations in currently unoccupied habitat (in addition to occupied habitat) is essential to this species' conservation, to achieve redundancy in populations and provide the species with the resiliency to withstand threats and respond to climate change over time. For this species in particular, with all remaining individuals highly concentrated in one small area, it is essential to achieve a widespread distribution of multiple populations across areas that are presently unoccupied to reduce risk from stochastic events, as well as to allow for blooming at different times so not all reproductive individuals in a population die simultaneously.

*Asplenium dielerectum* (asplenium-leaved diellia) (formerly *Diellia erecta*), a short-lived perennial fern in the spleenwort family (Aspleniaceae), is historically known from Kauai, Oahu, Molokai, Lanai, Maui, and the island of Hawaii (Palmer 2003, pp. 117–119). At the time we designated critical habitat in 2003 and 2012, this species was known from Kauai, Molokai, Maui, the island of Hawaii, and Oahu (68 FR 9116, February 27, 2003; 68 FR 12982, March

18, 2003; 68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, 77 FR 57648). Currently, *A. diellectum* is known from two occurrences on Molokai, where an unknown number of plants were last seen in Onini and Makolelau gulches in the 1990s, in the lowland mesic ecosystem (Lau 2010, in litt.). Historically, this species was also found in the montane mesic and lowland wet ecosystems (HBMP 2010). Botanists believe that additional individuals of this species may be found during further searches of potentially suitable habitat on Molokai (Lau 2010, in litt.). In addition, there are two occurrences totaling five individuals on Maui. Four individuals occur on west Maui at Hanaulaiki in the lowland dry ecosystem, and on east Maui, one individual occurs at Polipoli in the montane mesic ecosystem (Oppenheimer 2010q, in litt.). Historically, *A. diellectum* was also found in the lowland mesic and lowland wet ecosystems on west Maui, and in the lowland dry and dry cliff ecosystems on Lanai (HBMP 2010).

*Asplenium peruvianum* var. *insulare* (NCN) (formerly *Asplenium fragile* var. *insulare*) is a short-lived perennial terrestrial fern in the spleenwort (Aspleniaceae) family, from Maui and the island of Hawaii (Palmer 2003, pp. 70–71). At the time we designated critical habitat in 2003, this variety was found on east Maui in 2 occurrences and on the island of Hawaii in 36 occurrences (68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003). Currently, on east Maui, *A. peruvianum* var. *insulare* is known from five occurrences at Waikamoi Stream, at Puu Luau, east of Hosmer Grove, north of Kalapawili Ridge, and in Hanawi Natural Area Reserve. These occurrences total as many as 100 individuals, in the montane wet, montane mesic, and subalpine ecosystems (TNC 2007; HBMP 2010; Oppenheimer 2010r, in litt.).

*Bidens campylothea* ssp. *pentamera* (kookoolau), a short-lived perennial herb in the sunflower family (Asteraceae), occurs only on the island of Maui (Ganders and Nagata 1999, pp. 271, 273). Historically, *B. campylothea* ssp. *pentamera* was found on Maui's eastern volcano (Haleakala). Currently, this subspecies is found on east Maui in the montane mesic, montane wet, dry cliff, and wet cliff ecosystems of Waikamoi Preserve and Kipahulu Valley (in Haleakala National Park) (TNC 2007; Welton 2008, in litt.; National Tropical Botanical Garden (NTBGa) 2009, pp. 1–2; Fay 2010, in litt.; HBMP 2010). It is uncertain if plants observed in the Hana FR at Waihoi Valley are *B.*

*campylothea* ssp. *pentamera* (Osterneck 2010, in litt.; Haleakala National Park (HNP) 2012, in litt.). On west Maui, *B. campylothea* ssp. *pentamera* is found on and near cliff walls in the lowland dry and lowland mesic ecosystems of Papalaua Gulch (West Maui FR) and Kauaula Valley (NTBG 2009a, pp. 1–2; Perlman 2009a, in litt.). The 6 occurrences on east and west Maui total approximately 200 individuals.

*Bidens campylothea* ssp. *waihoiensis* (kookoolau), a short-lived perennial herb in the sunflower family (Asteraceae), occurs only on the island of Maui (Ganders and Nagata 1999, pp. 271, 273). Historically, *B. campylothea* ssp. *waihoiensis* was found on Maui's eastern volcano in Waihoi Valley and Kaumakani ridge (HBMP 2010). Currently, this subspecies is found in the lowland wet, montane wet, and wet cliff ecosystems in Kipahulu Valley (Haleakala National Park) and possibly in Waihoi Valley (Hana Forest Reserve) on east Maui (TNC 2007; HBMP 2010; Welton 2008, in litt.). Approximately 200 plants are scattered over an area of about 2.5 miles (mi) (4 kilometers (km)) in Kipahulu Valley (Welton 2010a, in litt.). In 1974, hundreds of individuals were observed in Waihoi Valley along Waihoi stream (NTBG 2009b, p. 4).

*Bidens conjuncta* (kookoolau), a short-lived perennial herb in the sunflower family (Asteraceae), occurs only on west Maui (Ganders and Nagata 1999, pp. 273–274). Historically, this species was known from the mountains of the Honokohau drainage basin, from the west Maui summit to as low as 2,500 ft (760 m) elevation (Sherff 1923, p. 162; HBMP 2010). In the 1990s, this species occurred in two areas encompassing over 800 ac (330 ha). Currently, *B. conjuncta* is found scattered in nine locations at elevations above 3,000 ft (914 m) in the lowland wet, montane wet, and wet cliff ecosystems. The largest numbers of individuals are found in two upper elevation areas encompassing only 135 ac (55 ha). A rough estimate is that all known occurrences may total from 3,000 to as many as 7,000 individuals (Oppenheimer 2005–GIS data; TNC 2007; Oppenheimer 2008a, in litt.; HBMP 2010; Perlman 2010, in litt.). However, it is not known whether any of these occurrences may meet the criteria for qualifying as a self-sustaining population. Currently, the greatest threat to *B. conjuncta* is competition with nonnative plants. Other threats include habitat modification by pigs, goats, and nonnative plants, herbivory by pigs, goats, slugs, and rats, seed predation by

rats, hurricanes, and effects of climate change. To be considered for delisting, these threats must be managed or controlled, with a minimum of 8 to 10 self-sustaining populations consisting of all size classes sustained over a period of 5 years. These goals have not yet been met; in addition, all threats are not being sufficiently managed throughout all of the occurrences. Designation of unoccupied habitat (in addition to occupied habitat) is essential to the conservation of *B. conjuncta* as it remains in danger of extinction throughout its range, therefore it requires sufficient habitat to allow the species to persist in the face of ongoing threats and to provide for the expansion and reestablishment of populations in areas presently unoccupied by the species to meet recovery goals.

*Bidens micrantha* ssp. *kalealaha* (kookoolau), a short-lived perennial herb in the sunflower family (Asteraceae), is known from Lanai and Maui (Ganders and Nagata 1999, pp. 278–279). At the time we designated critical habitat in 2003, this subspecies was known from one occurrence on Lanai and four occurrences on east Maui (68 FR 1220, January 9, 2003; 68 FR 25934, May 14, 2003). Currently, *B. micrantha* ssp. *kalealaha* is known from 4 occurrences totaling over 200 individuals on Lanai and Maui. On Lanai, this subspecies is known from 1 occurrence of 12 to 14 individuals north of Waiapaa Gulch in the lowland mesic ecosystem (Puttock 2003, p. 1; TNC 2007; HBMP 2010). On east Maui, there are 4 occurrences: approximately 200 individuals south of Puu Keokea, a few individuals above Polipoli State Park, and 2 wild occurrences in Haleakala National Park (with an unreported number of individuals) (National Park Service (NPS) 2012, in litt.). The Park has outplanted 585 individuals at 18 locations (NPS 2012, in litt.). Two occurrences are in the subalpine ecosystem, and two are in the dry cliff ecosystem (TNC 2007; Oppenheimer 2010s, in litt.; NPS 2012, in litt.; HNP 2012, in litt.). On west Maui, there are four to six individuals at Honokowai in the lowland wet ecosystem (TNC 2007; HBMP 2010). This subspecies was historically known from the lowland dry and dry cliff ecosystems on Lanai, and from the montane mesic and lowland dry ecosystems on east Maui (TNC 2007; HBMP 2010).

*Bidens wiebkei* (kookoolau), a short-lived perennial herb in the sunflower family (Asteraceae), is endemic to Molokai (Ganders and Nagata 1999, pp. 282–283). At the time we designated critical habitat in 2003, this species was known from five occurrences on

Molokai (68 FR 12982, March 18, 2003). Currently, *B. wiebkei* is known from 6 occurrences totaling as many as 500 individuals. In the coastal ecosystem, several hundred plants occur on the windward sea cliffs from Papalaua Valley to Puahaunui Point, and 200 or more individuals are found on rolling hills and sea cliffs at Lamaloa Gulch. Approximately 40 individuals occur west of Waialua near Kahawaiiki Gulch in the lowland wet ecosystem, and about 10 individuals occur at Kumueli in the montane wet ecosystem. In the montane mesic ecosystem, there are 2 occurrences: 10 to 20 individuals below Puu Kolekole, and 1 individual at Kawela Gulch (Wood and Perlman 2002, pp. 1–2; Perlman 2006a, pp. 1–2; TNC 2007; Oppenheimer 2009a, in litt.; Wood 2009b, pp. 1–2; HBMP 2010).

*Bonamia menziesii* (NCN) is a short-lived perennial liana (vine) in the morning glory family (Convolvulaceae). *Bonamia menziesii* is known from Kauai, Oahu, Molokai, Lanai, Maui, and Hawaii Island (Austin 1999, p. 550; HBMP 2010). At the time we designated critical habitat in 2003 and 2012, *B. menziesii* was known from 3 occurrences on Lanai, 9 occurrences on Kauai, 6 occurrences on Maui, 2 occurrences on Hawaii Island, and 12 to 13 occurrences on Oahu (68 FR 1220, January 9, 2003; 68 FR 9116, February 27, 2003; 68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). However, no critical habitat was designated for this species on Lanai or Molokai in 2003 (68 FR 1220, January 9, 2003; 68 FR 12982, March 18, 2003). Currently, *B. menziesii* is known from 6 occurrences on Lanai and Maui, totaling over 10 individuals. On Lanai, *B. menziesii* is found at Kanepuu (one individual observed dead in 2008, two other individuals not observed since 2001) and at Puhielelu Ridge (two individuals were observed in 1996) in the lowland mesic ecosystem (TNC 2007; HBMP 2010; Oppenheimer 2010t, in litt.). This species is found on west Maui at Honokowai (two individuals) in the wet cliff ecosystem, and on east Maui at Puu o Kali (one individual), Kaloi (one individual), and Kanaio NAR (four individuals), in the lowland dry ecosystem (TNC 2007; Bily 2010, in litt.; HBMP 2010). This species was last seen in the dry cliff ecosystem on west Maui in 1920 (TNC 2007; HBMP 2010). *Bonamia menziesii* has not been observed on Molokai (in the lowland dry and lowland mesic ecosystems) since the early 1900s (HBMP 2010).

*Brighamia rockii* (pua ala), a short-lived perennial stem succulent in the bellflower family (Campanulaceae), is

known from east Molokai and Lanai, and may have occurred on Maui (Lammers 1999, p. 423). At the time we designated critical habitat on Maui and Molokai in 2003, this species was known from five occurrences on Molokai (68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003). Currently, *B. rockii* is found on Molokai at Lepau Point (one individual); at Waiehu, (four individuals), and on Huelo islet (one individual), in the coastal and wet cliff ecosystems (TNC 2007; HBMP 2010; NTBG 2009i; Oppenheimer 2010u, in litt.). This species was last observed on Lanai in 1911, in the dry cliff ecosystem (HBMP 2010). According to Lammers (1999, p. 423), *B. rockii* was likely found in the coastal ecosystem on Maui.

*Calamagrostis hillebrandii* (NCN), a short-lived perennial in the grass family (Poaceae), occurs only on the island of Maui (O'Connor 1999, p. 1,509). Historically, this species was known from Puu Kukui in the west Maui mountains (Wagner *et al.* 2005a—*Flora of the Hawaiian Islands database*). Currently, this species is found in bogs in the montane wet ecosystem in the west Maui mountains, from Honokohau to Kahoolewa ridge, including East Bog and Eke Crater, in three occurrences totaling a few hundred individuals (TNC 2007; HBMP 2010; Oppenheimer 2010a, in litt.).

*Canavalia molokaiensis* (awikiwiki), a short-lived perennial climbing herb in the pea family (Fabaceae), is endemic to east Molokai (Wagner and Herbst 1999, p. 653). At the time we designated critical habitat in 2003, this species was known from seven occurrences on Molokai (68 FR 12982, March 18, 2003). Currently, *C. molokaiensis* is found in 9 occurrences totaling approximately 170 individuals in the following locations: Kawailena drainage in Pelekunu Valley (1 individual); Kua Gulch (approximately 100 individuals); near the junction at Kupiaia Gulch (10 to 20 individuals); Waiehu (5 to 10 individuals); west Kawela Gulch (6 individuals); Kukaiwaa (approximately 15 individuals); Mokomoko Gulch (a few individuals); Wailua (10 individuals); and Waialeia Stream (a few individuals) (Perlman 2008d, pp. 1–2; HBMP 2010; Tangalin 2010, in litt.). These plants are found in the coastal, lowland mesic, lowland wet, and wet cliff ecosystems (TNC 2007).

*Canavalia pubescens* (awikiwiki), a short-lived perennial climber in the pea family (Fabaceae), is currently found only on the island of Maui, although it was also historically known from Niihau, Kauai, and Lanai (Wagner and Herbst 1999, p. 654). On Niihau, this species was known from one population

in Haao Valley that was last observed in 1949 (HBMP 2010). On Kauai, this species was known from six populations ranging from Awaawapuhi to Wainiha, where it was last observed in 1977 (HBMP 2010). On Lanai, this species was known from Kaena Point to Huawai Bay. Eight individuals were reported in the coastal ecosystem west of Hulupoe, but they have not been seen since 1998 (Oppenheimer 2007a, in litt.; HBMP 2010). At present, the only known occurrence is on east Maui, from Puu o Kali south to Pohakea, in the lowland dry ecosystem (Oppenheimer 2006a, in litt.; Starr 2006, in litt.; Altenburg 2007, pp. 12–13; Oppenheimer 2007, in litt.; Greenlee 2013, in litt.). All plants of this species that formerly were found in the Ahihi-Kinau NAR on Maui were destroyed by feral goats (*Capra hircus*) by the end of 2010 (Fell-McDonald 2010, in litt.). In addition, although approximately 20 individuals of *Canavalia pubescens* were reported from the Palauea-Keahou area as recently as 2010 (Altenberg 2010, in litt.), no individuals have been found in site visits to this area over the last 2 years (Greenlee 2013, in litt.). Greenlee (2013, in litt.) reports that these plants may have succumbed to prolonged drought. In April of 2010, *C. pubescens* totaled as many as 500 individuals; however, with the loss of the plants at Ahihi-Kinau NAR and the loss of plants at Palauea-Keahou, *C. pubescens* may currently total fewer than 200 individuals at a single location.

*Cenchrus agrimonioides* (kamanomano (also known as sandbur or agrimony)), a short-lived perennial in the grass family (Poaceae), is known from two varieties: *C. agrimonioides* var. *agrimonioides* (Lanai, Maui, Oahu, and Hawaii) and *C. agrimonioides* var. *laysanensis* (Kure Atoll, Midway Atoll, and Laysan) (O'Connor 1999, pp. 1,511–1,512). At the time we designated critical habitat in 2003 and 2012, *C. agrimonioides* was known from one occurrence on east Maui, one occurrence on west Maui, and three to six occurrences on Oahu (HBMP 2010; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). Currently, on Maui, *C. agrimonioides* is known from four occurrences totaling five individuals in the lowland dry ecosystem. On west Maui, this variety occurs in Hanaulaiki and Papalaua gulches (one individual at each location). On east Maui, *C. agrimonioides* occurs in Kanaio (2 individuals), and within the Kanaio NAR (one individual) (TNC 2007; PEPP 2008, pp. 47–48; PEPP 2009, p. 39; HBMP 2010). This plant was last observed on

Lanai in 1915, in the lowland mesic ecosystem (TNC 2007; HBMP 2010).

*Clermontia lindseyana* (oha wai), a short-lived perennial shrub or tree in the bellflower family (Campanulaceae), is known from Maui and Hawaii Island (Lammers 1999, p. 431). At the time we designated critical habitat in 2003, *C. lindseyana* was known from 2 occurrences on Maui and from 15 occurrences on Hawaii Island (68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003). Currently, there is 1 known occurrence totaling approximately 30 individuals on east Maui at Wailaulau in the montane mesic ecosystem (Perlman 2007a, in litt.; TNC 2007; PEPP 2009, pp. 40–41; Wood 2009c, in litt.; HBMP 2010; Oppenheimer 2010a, in litt.; Oppenheimer 2010b, in litt.; Oppenheimer 2010v, in litt.; Oppenheimer 2010w, in litt.).

*Clermontia oblongifolia* ssp. *brevipes* (oha wai), a short-lived perennial shrub or tree in the bellflower family (Campanulaceae), is endemic to east Molokai (Lammers 1999, pp. 432–433). At the time we designated critical habitat in 2003, this species was known from one occurrence in Kamakou Preserve (68 FR 12982, March 18, 2003; Perlman 2009d, in litt.). Currently, *C. oblongifolia* ssp. *brevipes* is found in 1 known occurrence totaling 11 individuals on Uapa Ridge in the montane wet ecosystem (TNC 2007; HBMP 2010; Bakutis 2009a, in litt.; Perlman 2009d, in litt.). Historically, this subspecies also occurred in the lowland mesic, lowland wet, and wet cliff ecosystems (TNC 2007; HBMP 2010).

*Clermontia oblongifolia* ssp. *mauiensis* (oha wai), a short-lived perennial shrub or tree in the bellflower family (Campanulaceae), is known from Lanai and Maui (Lammers 1999, pp. 432–433). At the time we designated critical habitat in 2003, this species was known from one occurrence of two individuals on west Maui, and from historical occurrences on Lanai and east Maui (68 FR 1220, January 9, 2003; 68 FR 25934, May 14, 2003; Perlman 2009e, in litt.; HBMP 2010). However, no critical habitat was designated for this species on Maui in 2003 (68 FR 25934, May 14, 2003). Currently, *C. oblongifolia* ssp. *mauiensis* is found in one known occurrence totaling four individuals in Haipuena Gulch in the montane wet ecosystem on east Maui (TNC 2007; Perlman 2009e, in litt.; HBMP 2010). Historically, this species was also found in the lowland mesic and lowland wet ecosystem on Lanai, and the lowland wet ecosystem on Maui (TNC 2007; HBMP 2010). An examination of the type specimen and

other collections indicates that *C. oblongifolia* ssp. *mauiensis* may be a hybrid; however, further examination of specimens from Lanai and Maui are necessary (Albert 2001, in litt.; Oppenheimer 2010s, in litt.).

*Clermontia peleana* (oha wai) is a short-lived perennial shrub or tree in the bellflower family (Campanulaceae). There are two subspecies: *C. peleana* ssp. *peleana* (Hawaii Island) and *C. peleana* ssp. *singuliflora* (east Maui and Hawaii Island) (Lammers 1999, p. 435). This species is observed to be epiphytic on *Metrosideros* spp. (ohia), *Acacia koa* (koa), and *Cheirodendron* (olapa) (Lammers 1999, p. 435). At the time we designated critical habitat on Maui in 2003, *C. peleana* had not been observed on either island since the early 1900s (68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003). Critical habitat was designated on the island of Hawaii in 2003 (68 FR 39624, July 2, 2003). Currently, there are no known individuals of *C. peleana* ssp. *singuliflora* on Maui; however, this subspecies was recently rediscovered on Hawaii Island (TNC 2010). *Clermontia peleana* ssp. *singuliflora* was last seen in 1920, on east Maui in the lowland wet ecosystem (TNC 2007; HBMP 2010).

*Clermontia samuelii* (oha wai), a short-lived perennial shrub in the bellflower family (Campanulaceae), is known from Maui (Lammers 1999, p. 436). There are two subspecies: *C. samuelii* ssp. *hanaensis*, which generally is found at lower elevations, and *C. samuelii* ssp. *samuelii* (Lammers 1995, p. 344). At the time we designated critical habitat in 2003, *C. samuelii* was known from seven occurrences on east Maui (68 FR 25934, May 14, 2003). Currently, *C. samuelii* ssp. *hanaensis* is found in bog margins in the lowland wet and montane wet ecosystems at Kopiliula, and at Kawaipapa, with historical occurrences at Kuhiwa Valley, Palikea Stream, and Waihoi Valley (TNC 2007; HBMP 2010; Oppenheimer 2010b, in litt.; Welton 2010a, in litt.).

*Clermontia samuelii* ssp. *samuelii* is found in 2 known occurrences, in East Maui's montane wet ecosystem (TNC 2007; HBMP 2010; Welton 2010a, in litt.). Five individuals have been outplanted in two locations within Haleakala National Park (NPS 2012, in litt.) There is a report of one individual (subspecies unknown) at Papanalohou Point on west Maui (HBMP 2010).

*Colubrina oppositifolia* (kauila), a long-lived perennial tree in the buckthorn family (Rhamnaceae), is known from Maui, Oahu, and Hawaii (Wagner *et al.* 1999, p. 1,094). At the time we designated critical habitat in 2003 and 2012, this species was known

from two occurrences on west Maui, five occurrences on Hawaii Island, and four occurrences on Oahu (68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). Currently, on west Maui, there are two individuals in the lowland mesic ecosystem. Historically, this species was also reported from the lowland dry ecosystem on east Maui (TNC 2007; Perlman 2008e, in litt.; Oppenheimer 2009b, in litt.; HBMP 2010).

*Ctenitis squamigera* (pauoa), a short-lived perennial terrestrial fern in the spleenwort family (Asplenaceae), is known from Kauai, Oahu, Molokai, Lanai, Maui, and the island of Hawaii (Palmer 2003, pp. 100–102). At the time we designated critical habitat in 2003 on Kauai, Molokai, and Maui, and in 2012 on Oahu, *C. squamigera* was known from 2 occurrences on Lanai, 1 occurrence on Molokai, 12 occurrences on Maui, and 4 occurrences on Oahu (68 FR 1220, January 9, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). No critical habitat was designated for this species on Lanai or Hawaii in 2003 (68 FR 1220, January 9, 2003; 68 FR 39624, July 2, 2003). Currently, *C. squamigera* is found in 12 known occurrences totaling over 120 individuals on Lanai, Molokai, and west Maui (Oppenheimer 2010i, in litt.). On Lanai, an unknown number of individuals occur on the leeward (south) side of the island at Waiapaa in the wet cliff ecosystem. There are historical records from the dry cliff and wet cliff ecosystems at upper Kehewai Gulch, Haalelepaakai, and Kaiholena (HBMP 2010). On Molokai, 20 individuals occur at Wawaia in the lowland mesic ecosystem. On west Maui, there are 9 occurrences totaling 80 to 84 individuals in the lowland dry, lowland mesic, lowland wet, montane mesic, and wet cliff ecosystems. *Ctenitis squamigera* is found in Honokowai Valley (20 individuals), Puu Kaeo (2 to 4 individuals), Kahana Iki (1 individual), Kahana (14 individuals), Kanaha Valley (10 individuals), Kahoma (1 individual), Puehuehunui (1 to 2 individuals), Ukumehame Valley (1 to 2 individuals), and Iao Valley (approximately 30 individuals). On east Maui, there are 28 individuals at Pohakea in the lowland dry ecosystem and a historical record from the lowland mesic ecosystem. This species was apparently found in the Kipahulu FR (Kaapahu) area on east Maui, but no further details have been provided (Wood and Perlman 2002, p. 7; East Maui Watershed Partnership 2006, p.

17; TNC 2007; HBMP 2010; Oppenheimer 2010r, in litt.).

*Cyanea asplenifolia* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is found only on the island of Maui. This species was known historically from Waihee Valley and Kaanapali on west Maui, and Halehaku ridge on east Maui (Lammers 1999, p. 445; HBMP 2010). On west Maui, in the lowland wet ecosystem, there are 3 occurrences totaling 14 individuals in the Puu Kukui Preserve and two occurrences totaling 5 individuals in the West Maui NAR. On east Maui, *C. asplenifolia* is found in 1 occurrence each in the lowland mesic ecosystem in Haleakala National Park (53 individuals) and Kipahulu FR (140 individuals), and 1 occurrence in the lowland wet ecosystem in the Makawao FR (5 individuals) (TNC 2007; Oppenheimer 2008b, in litt., 2010b, in litt.; PEPP 2008, p. 48; Welton and Haus 2008, p. 12; NTBG 2009c, pp. 3–5; HBMP 2010; Welton 2010a, in litt.). Currently, *C. asplenifolia* is known from 8 occurrences totaling fewer than 200 individuals. The occurrence at Haleakala National Park is protected by a temporary enclosure (Haleakala National Park (HNP) 2012, in litt.).

*Cyanea copelandii* ssp. *haleakalaensis* (haha), a short-lived perennial vine-like shrub in the bellflower family (Campanulaceae), is known from Maui (Lammers 1999, pp. 445–446). At the time we designated critical habitat in 2003, this subspecies was known from five occurrences on Maui (68 FR 25934, May 14, 2003). Currently, *C. copelandii* ssp. *haleakalaensis* is found in 7 widely distributed occurrences totaling over 600 individuals on east Maui. One occurrence of over 20 scattered individuals is found in east Makaiwa in the lowland wet ecosystem; 4 occurrences totaling approximately 100 individuals are found along streams in Keanae in the lowland wet and montane wet ecosystems; 2 occurrences totaling approximately 500 individuals are found in Kipahulu Valley, in the montane wet, wet cliff, and lowland wet ecosystems; and a few individuals are found at Kaapahu in the montane wet and lowland mesic ecosystems (HNP 2004, pp. 5–6; HNP 2005, pp. 5–6; HNP 2007, pp. 2, 4; TNC 2007; Perlman 2007b, in litt.; Bily *et al.* 2008, p. 37; Welton and Haus 2008, pp. 12–13; Wood 2009d, in litt.; HBMP 2010; Oppenheimer 2010b, in litt.; 2010x, in litt.; Welton 2010a, in litt.). Forty-six individuals have been outplanted at 10 sites within Haleakala National Park (NPS 2012, in litt.).

*Cyanea dunbariae* (haha) (formerly *Cyanea dunbarii*), is a short-lived perennial shrub in the bellflower family (Campanulaceae), and is endemic to Molokai (Lammers 1999, p. 448). At the time we designated critical habitat in 2003, this species was known from one occurrence at Mokomoko Gulch (68 FR 12982, March 18, 2003). Currently, there are 10 individuals in Mokomoko Gulch in the lowland mesic ecosystem (TNC 2007; PEPP 2008, p. 48; HBMP 2010; Oppenheimer 2010u, in litt.; NTBG 2011a). Historically, this species was also found in Molokai's lowland wet and montane mesic ecosystems (TNC 2007; HBMP 2010).

*Cyanea duvalliorum* (haha), a short-lived perennial tree in the bellflower family (Campanulaceae), is found only in the east Maui mountains (Lammers 2004, p. 89). This species was described in 2004, after the discovery of individuals of a previously unknown species of *Cyanea* at Waiohiwi Gulch (Lammers 2004, p. 91). Studies of earlier collections of sterile material extend the historical range of this species on the windward slopes of Haleakala in the lowland wet and montane wet ecosystems, east of Waiohiwi Stream, from Honomanu Stream to Wailua Iki Streams, and to Kipahulu Valley (Lammers 2004, p. 89). In 2007, one individual was observed in the lowland wet ecosystem of the Makawao FR (NTBG 2009d, p. 2). In 2008, 71 individuals were found in 2 new locations in the Makawao FR, along with many juveniles and seedlings (NTBG 2009d, p. 2). Currently there are 2 occurrences with an approximate total of 71 individuals in the montane wet ecosystem near Makawao FR, with an additional 135 individuals outplanted in Waikamoi Preserve (TNC 2007; NTBG 2009d, p. 2; Oppenheimer 2010a, in litt.).

*Cyanea gibsonii* (haha) (formerly *Cyanea macrostegia* ssp. *gibsonii*), is a short-lived perennial tree in the bellflower family (Campanulaceae), and is known from Lanai (Lammers 1999, p. 457). In 2003, this species was known from two occurrences (68 FR 1220, January 9, 2003). However, no critical habitat was designated for this species on Lanai in 2003 (68 FR 1220, January 9, 2003). Currently, there are about 10 to 20 individuals in Hauola Gulch, in the montane wet ecosystem (TNC 2007; PEPP 2009, p. 53; HBMP 2010; Oppenheimer 2010t, in litt.). Historically, this species was also found north of Lanaihale and at Puu Alii in the wet cliff and montane wet ecosystems (PEPP 2009, p. 53).

*Cyanea glabra* (haha), a short-lived perennial shrub in the bellflower family

(Campanulaceae), is endemic to Maui (Lammers 1999, pp. 449, 451). At the time we designated critical habitat in 2003, this species was known from one occurrence on west Maui (68 FR 25934, May 14, 2003). However, on west Maui, individuals identified as *C. glabra* in the lowland wet and wet cliff ecosystems may be an undescribed species related to *C. acuminata* (Lorence 2010, in litt.; Oppenheimer 2010y, in litt.). On east Maui, wild individuals of *C. glabra* in the montane wet and montane mesic ecosystems may more closely resemble the endangered *C. maritae* (Oppenheimer 2010y, in litt.). Further taxonomic study of these occurrences is needed (TNC 2007; Perlman 2009f, in litt.; HBMP 2010). In the meantime, we will continue to identify these individuals as *C. glabra*.

*Cyanea grimesiana* ssp. *grimesiana* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is known only from Oahu and Molokai (Lammers 2004 p. 84; Lammers 1999, pp. 449, 451; 68 FR 35950, June 17, 2003). On Molokai, this species was last observed in 1991 in the wet cliff ecosystem at Wailau Valley (PEPP 2010, p. 45). Currently, on Oahu there are five to six individuals in four occurrences in the Waianae and Koolau Mountains (U.S. Army 2006; HBMP 2010).

*Cyanea hamatiflora* ssp. *hamatiflora* (haha), a short-lived perennial palm-like tree in the bellflower family (Campanulaceae), is known from east Maui (Lammers 1999, p. 452). At the time we designated critical habitat in 2003, there were nine occurrences (68 FR 25934, May 14, 2003). Currently, there are at least 9 occurrences totaling between 458 and 558 individuals in the lowland wet and montane wet ecosystems, at Haipuaena Stream, Wailuaiki Stream, above Kuhiwa Valley, in Kipahulu Valley, and at Kaapahu (TNC 2007; PEPP 2008, pp. 50–51; Welton and Haus 2008, p. 26; HBMP 2010; Oppenheimer 2010b, in litt.; Welton 2010a, in litt.). Historically, this subspecies also occurred in the montane mesic ecosystem (TNC 2007; HBMP 2010). Seventeen individuals have been outplanted at three sites in Haleakala National Park (NPS 2012, in litt.).

*Cyanea horrida* (haha nui), a member of the bellflower family (Campanulaceae), is a short-lived perennial palm-like tree found only on the island of Maui. This species was known historically from the slopes of Haleakala (Lammers 1999, p. 453; HBMP 2010). Currently, *C. horrida* is known from 12 occurrences totaling 44 individuals in the montane mesic, montane wet, and wet cliff ecosystems in Waikamoi Preserve, Hanawai Natural

Area Reserve, and Haleakala National Park on east Maui (TNC 2007; PEPP 2009, p. 52; HBMP 2010; Oppenheimer 2010c, in litt.; PEPP 2010, pp. 46–47; TNCH 2010a, p. 1).

*Cyanea kunthiana* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is found only on Maui, and was historically known from both the east and west Maui mountains (Lammers 1999, p. 453; HBMP 2010). *Cyanea kunthiana* was known to occur in the montane mesic ecosystem in the east Maui mountains in upper Kipahulu Valley, in Haleakala National Park and Kipahulu FR (HBMP 2010). Currently, in the east Maui mountains, *C. kunthiana* occurs in the lowland wet and montane wet ecosystems in Waikamoi Preserve, Hanawi NAR, East Bog, Kaapahu, and Kipahulu Valley. In the west Maui mountains, *C. kunthiana* occurs in the lowland wet and montane wet ecosystems at Eke Crater, Kahoolewa ridge, and at the junction of the Honokowai, Hahakea, and Honokohau gulches (TNC 2007; HBMP 2008; NTBG 2009e, pp. 1–3; HBMP 2010; Oppenheimer 2010a, in litt.; Perlman 2010, in litt.). The 15 occurrences total 165 individuals, although botanists speculate that this species may total as many as 400 individuals with further surveys of potential habitat on east and west Maui (TNC 2007; HBMP 2010; Fay 2010, in litt.; Oppenheimer 2010a, in litt.; Osternak 2010, in litt.).

*Cyanea lobata* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is known from two subspecies, *C. lobata* ssp. *baldwinii* (Lanai) and *C. lobata* ssp. *lobata* (west Maui) (Lammers 1999, pp. 451, 454). At the time we designated critical habitat on Maui in 2003, there were no known occurrences of *C. lobata* ssp. *baldwinii* on Lanai and five occurrences of *C. lobata* ssp. *lobata* on west Maui (68 FR 1220, January 9, 2003; 68 FR 25934, May 14, 2003). However, no critical habitat was designated for this species on Lanai in 2003 (68 FR 1220, January 9, 2003). In 2006, *C. lobata* ssp. *baldwinii* was rediscovered around Hauola on Lanai, in the montane wet ecosystem (Wood 2006a, p. 15; TNC 2007; Wood 2009e, in litt.). Currently, there are three to four individuals at this location (Perlman 2007c, in litt.; Oppenheimer 2009c, in litt.; PEPP 2009, p. 53). On west Maui, there are five occurrences of *C. lobata* ssp. *lobata* totaling eight individuals at Honokohau, Honokowai, and Mahinahina, in the lowland wet and wet cliff ecosystems (TNC 2007; HBMP 2010; Oppenheimer 2010i, in litt.).

*Cyanea magnicalyx* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is known from west Maui (Lammers 1999, pp. 449, 451; Lammers 2004, p. 84). Currently, there are seven individuals in three occurrences on west Maui: Two individuals in Kaluanui, a subgulch of Honokohau Valley, in the lowland wet ecosystem; four individuals in Iao Valley in the wet cliff ecosystem; and one individual in a small drainage south of the Kauaula rim, in the montane mesic ecosystem (Lammers 2004, p. 87; Perlman 2009b in litt.; Wood 2009d, in litt.).

*Cyanea mannii* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is endemic to east Molokai (Lammers 1999, p. 456). At the time we designated critical habitat in 2003, there were eight occurrences at Puu Kolekole and Kawela Gulch (68 FR 12982, March 18, 2003). Currently, there are fewer than 200 individuals in 11 occurrences extending across the summit area from Mokomoko Gulch to Kua Gulch, in the lowland mesic, montane mesic, and montane wet ecosystems (Perlman 2002a, in litt.; Wood and Perlman 2002, p. 2; TNC 2007; Wood 2009f, in litt.; HBMP 2010; Oppenheimer 2010u, in litt.).

*Cyanea maritae* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is found only on Maui (Lammers 2004, p. 92). Sterile specimens were collected from the northwestern slopes of Haleakala in the Waiohiwi watershed and east to Kipahulu in the early 1900s. Between 2000 and 2002, fewer than 20 individuals were found in the Waiohiwi area (Lammers 2004, pp. 92, 93). Currently, there are 4 occurrences, totaling between 23 and 50 individuals in Kipahulu, Kaapahu, west Kahakapao, and in the Koolau FR in the lowland wet and montane wet ecosystems on east Maui (TNC 2007; Oppenheimer 2010b, in litt.; Welton 2010b, in litt.).

*Cyanea mauensis* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), was last observed on Maui about 100 years ago (Lammers 2004, pp. 84–85; TNC 2007). Although there are no documented occurrences of this species known today, botanists believe this species may still be extant as all potentially suitable lowland mesic and dry cliff habitat has not been surveyed.

*Cyanea mceldowneyi* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is found on east Maui (Lammers 1999, p. 457). At the time we designated critical habitat in 2003, this species was known from 11 occurrences (68 FR 25934, May 14,

2003). Currently, *C. mceldowneyi* is known from at least 10 occurrences totaling over 100 individuals in the lowland wet, montane wet, and montane mesic ecosystems (PEPP 2007, p. 39; TNC 2007; PEPP 2008, pp. 53–54; PEPP 2009, pp. 53, 57; HBMP 2010; Oppenheimer 2010b, in litt.).

*Cyanea munroi* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is known from Molokai and Lanai (Lammers 1999, pp. 449, 451; Lammers 2004, pp. 84–87). Currently, there are no known individuals on Molokai (last observed in 2001), and only two individuals on Lanai at a single location, in the wet cliff ecosystem (TNC 2007; Perlman 2008a, in litt.; Wood 2009a, in litt.; HBMP 2010; Oppenheimer 2010d, in litt.).

*Cyanea obtusa* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), is found only on Maui (Lammers 1999, p. 458). Historically, this species was found in both the east and west Maui mountains (Hillebrand 1888, p. 254; HBMP 2010). Not reported since 1919 (Lammers 1999, p. 458), *C. obtusa* was rediscovered in the early 1980s at one site each on east and west Maui. However, by 1989, plants in both locations had disappeared (Hobdy *et al.* 1991, p. 3; Medeiros 1996, in litt.). In 1997, 4 individuals were observed in Manawainui Gulch in Kahikinui, and another occurrence of 5 to 10 individuals was found in Kahakapao Gulch, both in the montane mesic ecosystem on east Maui (Wood and Perlman 1997, p. 11; Lau 2001, in litt.). However, the individuals found at Kahakapao Gulch are now considered to be *Cyanea elliptica* or hybrids between *C. obtusa* and *C. elliptica* (PEPP 2007, p. 40). In 2001, several individuals were seen in Hanaula and Pohakea gulches on west Maui; however, only hybrids are currently known in this area (NTBG 2009f, p. 3). It is unknown if individuals of *C. obtusa* remain at Kahikinui, as access to the area to ascertain the status of these plants is difficult and has not been attempted since 2001 (PEPP 2008, p. 55; PEPP 2009, p. 58). Two individuals were observed on a cliff along Wailaulau Stream in the montane mesic ecosystem on east Maui in 2009 (Duvall 2010, in litt.). Currently, this species is known from one occurrence of only a few individuals in the montane mesic ecosystem on east Maui. Historically, this species also occurred in the lowland dry ecosystem at Manawainui on west Maui and at Ulupalakua on east Maui (HBMP 2010).

*Cyanea procera* (haha), a short-lived perennial tree in the bellflower family (Campanulaceae), is known from

Molokai (Lammers 1999, p. 460). At the time we designated critical habitat in 2003, this species was known from five occurrences (68 FR 12982, March 18, 2003). Currently, there are one to two individuals near Puuokaeha in Kawela Gulch in the montane mesic ecosystem (TNC 2007; PEPP 2008, pp. 55–56; Oppenheimer 2010u, in litt.; NTBG 2011b). Historically, this species was also found in the lowland mesic and montane wet ecosystems (TNC 2007; HBMP 2010).

*Cyanea profuga* (haha), a short-lived perennial shrub in the bellflower family (Campanulaceae), occurs only on Molokai (Lammers 1999, pp. 461–462; Wood and Perlman 2002, p. 4). Historically, this species was found in Mapulehu Valley and along Pelekunu Trail, and has not been seen in those locations since the early 1900s (Wood and Perlman 2002, p. 4). In 2002, six individuals were discovered along a stream in Wawaia Gulch (Wood and Perlman 2002, p. 4). In 2007, seven individuals were known from Wawaia Gulch, and an additional six individuals were found in Kumueli (Wood 2005, p. 17; USFWS 2007a; PEPP 2010, p. 55). In 2009, only four individuals remained at Wawaia Gulch; however, nine were found in Kumueli Gulch (Bakutis 2010, in litt.; Oppenheimer 2010e, in litt.; Perlman 2010, in litt.; PEPP 2010, p. 55). Currently, there are 4 occurrences totaling up to 34 individuals in the lowland mesic and montane wet ecosystems on Molokai (TNC 2007; Bakutis 2010, in litt.; Perlman 2010, in litt.).

*Cyanea solanacea* (popolo, haha nui), a short-lived perennial shrub in the bellflower family (Campanulaceae), is found only on Molokai. According to Lammers (1999, p. 464) and Wagner (*et al.* 2005a—*Flora of the Hawaiian Islands database*) the range of *C. solanacea* includes Molokai and may also include west Maui. In his treatment of the species of the Hawaiian endemic genus *Cyanea*, Lammers (1999, p. 464) included a few sterile specimens of *Cyanea* from Puu Kukui, west Maui and the type specimen (now destroyed) for *C. scabra* var. *sinuata* from west Maui in *C. solanacea*. However, Oppenheimer recently reported (Oppenheimer 2010a, in litt.) that the plants on west Maui were misidentified as *C. solanacea* and are actually *C. macrostegia*. Based on Oppenheimer's recent field observations, the range of *C. solanacea* is limited to Molokai. Historically, *Cyanea solanacea* ranged from central Molokai at Kalae, eastward to Pukoo in the lowland mesic, lowland wet, and montane mesic ecosystems (HBMP 2010). Currently, there are four small

occurrences at Hanalilolilo, near Pepeopae Bog, Kaunakakai Gulch, and Kawela Gulch, in the montane wet ecosystem. These occurrences total 26 individuals (Bakutis 2010, in litt.; Oppenheimer 2010a, in litt.; TNCH 2011, pp. 21, 57).

*Cyperus fauriei* (formerly *Mariscus fauriei*) (NCN), is a short-lived perennial in the sedge family (Cyperaceae), and is known from Molokai, Lanai, and the island of Hawaii (Koyama 1999, p. 1,417). At the time we designated critical habitat in 2003, *C. fauriei* was known from 1 occurrence of 20 to 30 individuals on Molokai and 2 occurrences on the island of Hawaii (68 FR 12982, March 18, 2003; 68 FR 39624, July 2, 2003). Currently, on Molokai, an unknown number of individuals are found in the area of Makolelau, at Kamakou Preserve at Makakupaia, at Waihanau drainage, and at Kamalo, in the lowland mesic and montane mesic ecosystems (TNC 2007; HBMP 2010; Oppenheimer 2010u, in litt.). *Cyperus fauriei* was last observed on Lanai in the early 1900s, in the lowland dry ecosystem (TNC 2007; HBMP 2010).

*Cyperus pennatififormis* (NCN), a short-lived perennial in the sedge family (Cyperaceae), is known from Laysan Island, Kauai, Oahu, east Maui, and the island of Hawaii (Koyama 1999, pp. 1,421–1,423). There are two varieties: *C. pennatififormis* var. *bryanii* (Laysan) and *C. pennatififormis* var. *pennatififormis* (main Hawaiian Islands). At the time we designated critical habitat on Laysan, Kauai, and Maui in 2003, and on Oahu in 2012, this species was known from only one occurrence (totaling an unknown number of individuals) on Laysan Island (*C. pennatififormis* var. *bryanii*), and one occurrence (totaling 30 individuals) on east Maui (*C. pennatififormis* var. *pennatififormis*) (68 FR 9116, February 27, 2003; 68 FR 25934, May 14, 2003; 68 FR 28054, May 22, 2003; 77 FR 57648, September 18, 2012). Both occurrences were in the coastal ecosystem (68 FR 25934, May 14, 2003; 68 FR 28054, May 22, 2003). The known occurrence of *C. pennatififormis* var. *pennatififormis* in the coastal ecosystem on east Maui has not been relocated (Wagner *et al.* 2005; HBMP 2010).

*Cyperus trachysanthos* (puukaa), a short-lived grass-like perennial in the sedge family (Cyperaceae), is known from the islands of Niihau, Kauai, Oahu, Molokai, and Lanai (Koyama 1999, pp. 1,399–1,400). At the time we designated critical habitat in 2003 and 2012, *C. trachysanthos* was found on Kauai and Oahu, respectively (68 FR 9116, February 27, 2003; 77 FR 57648, September 18, 2012). This species has

not been observed on the islands of Lanai and Molokai, in the lowland dry ecosystems since 1912 and 1919, respectively (TNC 2007; HBMP 2010).

*Cyrtandra ferripilosa* (haiwale), a short-lived perennial shrub in the African violet family (Gesneriaceae), occurs only on Maui (St. John 1987, pp. 497–498; Wagner and Herbst 2003, p. 29). This species was discovered in 1980 in the east Maui mountains at Kuiki in Kipahulu Valley (St. John 1987, pp. 497–498; Wagner *et al.* 2005a—*Flora of the Hawaiian Islands database*). Currently, there are a few individuals each in two occurrences at Kuiki and on the Manawainui plane in the montane mesic and montane wet ecosystems (Oppenheimer 2010f, in litt.; Welton 2010a, in litt.).

*Cyrtandra filipes* (haiwale), a short-lived perennial shrub in the African violet family (Gesneriaceae), is found on Maui (Wagner *et al.* 1999d, pp. 753–754; Oppenheimer 2006b, in litt.). According to Wagner *et al.* (1999d, p. 754), the range of *C. filipes* includes Maui and Molokai. Historical collections from Kapunakea (1800) and Olowalu (1971) on Maui indicate it once had a wider range on this island. In 2004, it was believed there were over 2,000 plants at Honokohau and Waihee in the west Maui mountains; however, recent studies have shown that these plants do not match the description for *C. filipes* (Oppenheimer 2006b, in litt.). Currently, there are between 134 and 155 individuals in 4 occurrences in the lowland wet and wet cliff ecosystems at Kapalaoa, Honokowai, Honolulu, and Waihee Valley on west Maui, and approximately 7 individuals at Mapulehu in the lowland mesic ecosystem on Molokai, with an historical occurrence in the lowland wet ecosystem (Oppenheimer 2010c, in litt.).

*Cyrtandra munroi* (haiwale), a short-lived perennial shrub in the African violet family (Gesneriaceae), is known from Lanai and west Maui (Wagner *et al.* 1999d, p. 770; 68 FR 25934, May 14, 2003). At the time we designated critical habitat on Maui in 2003, *C. munroi* was known from two occurrences on Lanai and five occurrences on west Maui (68 FR 1220, January 9, 2003; 68 FR 25934, May 14, 2003). However, no critical habitat was designated for this species on Lanai (68 FR 1220, January 9, 2003). Currently, on Lanai, *C. munroi* is found in 3 occurrences totaling 23 individuals at Puu Alii (20 individuals), Waihalala Gulch (1 individual), and Lanaihale (2 individuals), in the montane wet and wet cliff ecosystems (TNC 2007; HBMP 2010; Oppenheimer 2010u, in litt.). On west Maui, *C. munroi* is found in 6 occurrences totaling 45 individuals at

Makamakaole Gulch (1 individual), Honokohau Gulch (1 individual), Kahana Valley (1 individual), Hahakea Gulch (1 individual), Kapunakea Preserve (12 individuals), and Amalu Stream (29 individuals), in the lowland wet and wet cliff ecosystems (TNC 2007; HBMP 2010; Oppenheimer 2010i, in litt.).

*Cyrtandra oxybapha* (haiwale), a short-lived perennial shrub in the African violet family (Gesneriaceae), is found on Maui (Wagner *et al.* 1999d, p. 771). This species was discovered in the upper Pohakea Gulch in Hanaula in the west Maui mountains in 1986 (Wagner *et al.* 1989, p. 100; TNC 2007). Currently, there are 2 known occurrences with a total of 137 to 250 individuals. *Cyrtandra oxybapha* occurs in the montane wet ecosystem on west Maui, from Hanaula to Pohakea Gulch. This occurrence totals between 87 and 97 known individuals, with perhaps as many as 150 or more (Oppenheimer 2008c, in litt.). The current status of the 50 to 100 individuals in the montane mesic ecosystem in Manawainui Gulch on east Maui is unknown, as these plants have not been surveyed since 1997 (Oppenheimer 2010a, in litt.).

*Diplazium molokaiense* (NCN), a short-lived perennial terrestrial fern in the spleenwort family (Aspleniaceae), is known from all of the major Hawaiian Islands except Hawaii Island (Palmer 2003, p. 125). At the time we designated critical habitat on Kauai, Molokai, and Maui, in 2003, and on Oahu in 2012, *D. molokaiense* was known only from east Maui (68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). Currently, *D. molokaiense* is known from three occurrences on Maui. On west Maui, there are five individuals at Puehuhunui in the montane mesic ecosystem. On east Maui, there are 2 occurrences, one at Honomanu (about 15 individuals) in the montane wet ecosystem, and one in the Kula FR (about 50 individuals) in the montane mesic ecosystem (Wood 2006b, pp. 32–34; TNC 2007; Wood 2007, p. 14; PEPP 2009, p. 71; HBMP 2010). *Diplazium molokaiense* occurred historically in the dry cliff ecosystem on east Maui, and the lowland wet and dry cliff ecosystems on west Maui (TNC 2007; HBMP 2010). It was also found in the lowland mesic and dry cliff ecosystems on Lanai, and in the lowland mesic ecosystem on Molokai (TNC 2007; HBMP 2010).

*Dubautia plantaginea* ssp. *humilis* (naenae), a short-lived perennial shrub or small tree in the sunflower family (Asteraceae), is known from west Maui (Carr 1999b, pp. 304–305). At the time

we designated critical habitat in 2003, *D. plantaginea* ssp. *humilis* was known from 2 occurrences totaling 60 to 65 individuals on west Maui (68 FR 25934, May 14, 2003). Currently, *D. plantaginea* ssp. *humilis* is known from 1 occurrence of 35 individuals in Iao Valley, in the wet cliff ecosystem (TNC 2007; PEPP 2009, p. 72; HBMP 2010; Oppenheimer 2010i, in litt.).

*Eugenia koolauensis* (nioi), a long-lived perennial shrub or small tree in the myrtle family (Myrtaceae), is known from Oahu and Molokai (Wagner *et al.* 1999w, p. 960). At the time we designated critical habitat on Molokai in 2003 and on Oahu in 2012, this species was only known from 13 occurrences on Oahu (68 FR 12982, March 18, 2003; 77 FR 57648, September 18, 2012). Currently, *E. koolauensis* is extant only on Oahu. This species was last seen on Molokai in 1920, in the lowland dry ecosystem (TNC 2007; HBMP 2010).

*Festuca molokaiensis* (NCN), a short-lived perennial in the grass family (Poaceae), is found on Molokai (Catalan *et al.* 2009, p. 54). This species is only known from the type locality at Kupaia Gulch, in the lowland mesic ecosystem (Catalan *et al.* 2009, p. 55). Last seen in 2009, the current number of individuals is unknown; however, field surveys for *F. molokaiensis* at Kupaia Gulch are planned for 2011 (Oppenheimer 2010g, in litt.). Oppenheimer (2011, pers. comm.) suggests that the drought over the past couple of years on Molokai may have suppressed the growth of *F. molokaiensis* and prevented its observation by botanists in the field. He also suggested that this species may be an annual whose growth will be stimulated by normal rainfall patterns.

*Flueggea neowawraea* (mehamehame) is a long-lived perennial tree in the family Euphorbiaceae. This species is known from Kauai, Oahu, Molokai, Maui, and the island of Hawaii (Hayden 1999, pp. 620–621). At the time we designated critical habitat in 2003, there were 100 occurrences on Kauai, 4 occurrences on Maui, and 2 occurrences on the island of Hawaii; in 2012, there were 18 occurrences on Oahu, (68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). *Flueggea neowawraea* was last observed at Waihi on Molokai in 1931 (HBMP 2010). Currently, two individuals of *F. neowawraea* are found on east Maui's southern flank of Haleakala at Auwahi, in the lowland dry ecosystem (PEPP 2009, p. 73; Oppenheimer 2010b, in litt.). *Flueggea neowawraea* was last observed on Molokai in 1931 at

Waiianui, in the lowland mesic ecosystem (HBMP 2010).

*Geranium arboreum* (Hawaiian red-flowered geranium), a short-lived perennial shrub in the geranium family (Geraniaceae), is known from east Maui (Wagner *et al.* 1999e, p. 729). At the time we designated critical habitat in 2003, there were 12 occurrences totaling 158 individuals (68 FR 25934, May 14, 2003). Currently, there are 5 occurrences totaling fewer than 30 individuals in east Maui's montane mesic and subalpine ecosystems. Historically, *G. arboreum* was also found in the montane dry ecosystem (TNC 2007; Oppenheimer 2009d, in litt.; Perlman 2009g, in litt.; Wood 2009g, in litt.; HBMP 2010; Oppenheimer 2010b, in litt.; Welton 2010a, in litt.). One hundred and eighty-nine individuals have been outplanted at 11 sites within Haleakala National Park (NPS 2012, in litt.).

*Geranium hanaense* (nohoanu), a short-lived perennial shrub in the geranium family (Geraniaceae), is found on Maui (Wagner *et al.* 1999e, pp. 730–732). This species was first collected in 1973, from two adjacent montane bogs on the northeast rift of Haleakala, east Maui (Medeiros and St. John 1988, pp. 214–220). At that time, there were an estimated 500 to 700 individuals (Medeiros and St. John 1988, pp. 214–220). Currently, *G. hanaense* occurs in “Big Bog” and “Mid Camp Bog” in the montane wet ecosystem on the northeast rift of Haleakala, with the same number of estimated individuals (Welton 2008, in litt.; Welton 2010a, in litt.; Welton 2010b, in litt.).

*Geranium hillebrandii* (nohoanu), a short-lived perennial shrub in the geranium family (Geraniaceae), is found on Maui (Aedo and Munoz Garmendia 1997, p. 725; Wagner *et al.* 1999e, pp. 732–733; Wagner and Herbst 2003, p. 28). Little is known of the historical locations of *G. hillebrandii*, other than the type collection made in the 1800s at Eke Crater, in the west Maui mountains (Hillebrand 1888, p. 56). Currently, 4 occurrences total over 10,000 individuals, with the largest 2 occurrences in the west Maui bogs, from Puu Kukui to East Bog and Kahoolewa ridge. A third occurrence is at Eke Crater and the surrounding area, and the fourth occurrence is at Lihau (HBMP 2010; Oppenheimer 2010h, in litt.). These occurrences are found in the montane wet and montane mesic ecosystems on west Maui (TNC 2007).

*Geranium multiflorum* (nohoanu), a short-lived perennial shrub in the geranium family (Geraniaceae), is known from east Maui (Wagner *et al.* 1999e, pp. 733–734). At the time we

designated critical habitat in 2003, there were 13 occurrences. Due to the inaccessibility of the plants, and the difficulty in determining the number of individuals (because of the plant's multi-branched form), the total number of individuals of this species was not known; however, it was assumed to not exceed 3,000 (68 FR 25934, May 14, 2003). Currently, *G. multiflorum* is found in nine occurrences on east Maui, from Koolau Gap to Kalapawili Ridge, in the subalpine, montane mesic, montane wet, and dry cliff ecosystems. It is estimated there may be as many as 500 to 1,000 individuals (Bily *et al.* 2003, pp. 4–5; TNC 2007; Perlman 2009h, in litt.; Wood 2009h, in litt.; HBMP 2010; Oppenheimer 2010b, in litt.; HNP 2012, in litt.). One hundred and fifty plants have been outplanted at eight locations within Haleakala National Park (NPS 2012, in litt.).

*Gouania hillebrandii* (NCN), a short-lived perennial shrub in the buckthorn family (Rhamnaceae), is known from Molokai, Lanai, Maui, and Kahoolawe (Wagner *et al.* 1999z, p. 1,095). At the time we designated critical habitat in 1984 on Maui, there was one occurrence (49 FR 44753, November 9, 1984). Currently, on Molokai, there is 1 occurrence of about 50 individuals at Puu Kolekole in the lowland mesic ecosystem (USFWS 1990, pp. 4–10; TNC 2007; PEPP 2008, p. 61; Perlman 2008f, in litt.; Wood 2009i, in litt.). On west Maui, there are fewer than 1,000 individuals in the lowland dry ecosystem (TNC 2007; HBMP 2010; Oppenheimer 2010i, in litt.). This species was last observed on Lanai and Kahoolawe in the 1800s (HBMP 2010).

*Gouania vitifolia* (NCN), a short-lived perennial climbing shrub or woody vine in the buckthorn family (Rhamnaceae), is known from Oahu, Maui, and the island of Hawaii (Wagner *et al.* 1999z, p. 1,097). At the time we designated critical habitat on Maui and Hawaii in 2003 and Oahu in 2012, *G. vitifolia* was only known from one occurrence on the island of Hawaii and two occurrences on Oahu (68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). Currently, botanists are searching potentially suitable habitat in the wet cliff ecosystem on west Maui where *G. vitifolia* was last seen in the 1800s (TNC 2007; HBMP 2010; Oppenheimer 2010z, in litt.).

*Hesperomannia arborescens* (NCN), a short-lived perennial shrubby tree in the sunflower family (Asteraceae), is known from Oahu, Molokai, Lanai, and Maui (Wagner *et al.* 1999m, p. 325). At the time we designated critical habitat on Molokai and Maui in 2003 and on Oahu

in 2012, *H. arborescens* was known from 1 occurrence on Molokai, 4 occurrences on west Maui, and 19 occurrences on Oahu (68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). However, no critical habitat was designated for this species on Maui in 2003 (68 FR 25934, May 14, 2003). Currently, there are five or six occurrences on Molokai and Maui totaling 122 to 125 individuals. On Molokai, there are 30 individuals between Wailau and Pelekunu in the wet cliff ecosystem. Historically, this species was also reported from the montane wet ecosystem (HBMP 2010). On west Maui, 4 or 5 occurrences totaling 92 to 95 individuals are found in the lowland wet and wet cliff ecosystems, in Honokohau (30 individuals), Waihee (approximately 60 individuals), Kapilau Ridge (1 individual), and Lanilili (1 individual). There is some question regarding the identification of three individuals in Iao Valley (HBMP 2010; Oppenheimer 2010i, in litt.). This species has not been observed since 1940 on Lanai, in the wet cliff ecosystem (TNC 2007; HBMP 2010). The results of a recent research study indicate that the plants on Oahu may be genetically distinct from plants on Molokai, Maui, and Lanai (Ching-Harbin 2003, p. 81; Morden and Harbin 2013).

*Hesperomannia arbuscula* (NCN), a short-lived perennial tree or shrub in the sunflower family (Asteraceae), is known from Oahu and west Maui (Wagner *et al.* 1999m, p. 325). At the time we designated critical habitat in 2003 on Maui and in 2012 on Oahu, eight occurrences were found on west Maui, and five occurrences were known from Oahu (68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). Currently, on west Maui, there are three individuals in Iao Valley, in the lowland wet ecosystem (TNC 2007; HBMP 2010; Oppenheimer 2010aa, in litt.). This species was last observed in the 1990s in the wet cliff, dry cliff, and lowland dry ecosystems on west Maui (TNC 2007; HBMP 2010). The results of a recent research study indicate that the plants on west Maui may be *H. arborescens*; if a taxonomic change should be required, we will address that change in a future rulemaking (Ching-Harbin 2003, p. 81; Morden and Harbin 2013).

*Hibiscus arnottianus* ssp. *immaculatus* (kokio keokeo), a long-lived perennial tree in the mallow family (Malvaceae), is endemic to east Molokai (Bates 1999, pp. 882–883). At the time we designated critical habitat in 2003, this subspecies was known

from three occurrences on east Molokai (68 FR 12982, March 18, 2003). Currently, *H. arnottianus* ssp. *immaculatus* is found in 5 occurrences, totaling fewer than 100 individuals, from Waiehu to Papalaua in the coastal and wet cliff ecosystems (Perlman 2002b, in litt.; TNC 2007; NTBG 2009j; Wood 2009j, in litt.; HBMP 2010; Oppenheimer 2010u, in litt.).

*Hibiscus brackenridgei* (mao hau hele) is a short-lived perennial shrub or small tree in the mallow family (Malvaceae). This species is known from the islands of Kauai, Oahu, Molokai, Lanai, Maui, Hawaii, and possibly Kahoolawe. There are three subspecies: *H. brackenridgei* ssp. *brackenridgei* (Lanai, Maui, and Hawaii), *H. brackenridgei* ssp. *mokuleianus* (Kauai and Oahu), and *H. brackenridgei* ssp. *molokaiana* (Molokai and Oahu) (Wilson 1993, p. 278; Bates 1999, pp. 885–886). At the time we designated critical habitat on Molokai, Maui, and Hawaii in 2003 and on Oahu in 2012, *H. brackenridgei* ssp. *brackenridgei* was known from 2 occurrences on Lanai, 5 occurrences on Maui, and 4 occurrences on Hawaii, and *H. brackenridgei* ssp. *mokuleianus* was known from 7 occurrences totaling between 47 and 50 individuals on Oahu. *Hibiscus brackenridgei* ssp. *molokaiana* was reported from one occurrence on Oahu and had not been seen on Molokai since 1920 (68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). No critical habitat was designated for this species on Lanai in 2003 (68 FR 1220, January 9, 2003). Currently, *H. brackenridgei* ssp. *brackenridgei* is extant on the islands of Lanai, Maui, and Hawaii. On Lanai, there are two individuals near Keomuku Road, and one individual at Kaena, both in the lowland dry ecosystem. Historically, this subspecies was also known from Lanai's coastal ecosystem (TNC 2007; Oppenheimer 2010t, in litt.). On west Maui, there are a few individuals in Kaonohue Gulch in the lowland dry ecosystem. On east Maui, there is 1 occurrence of about 10 individuals at Keokea, in the lowland dry ecosystem (TNC 2007; PEPP 2008, pp. 64–65; PEPP 2009, pp. 76–78; Oppenheimer 2010t, in litt.; 2010u, in litt.; 2010bb, in litt.; PEPP 2011, p. 118). Historically, on Molokai, *Hibiscus brackenridgei* ssp. *molokaiana* was found in the coastal ecosystem at Kihaapilani (TNC 2007; HBMP 2010).

*Huperzia mannii* (wawaeiole), is a short-lived perennial fern ally in the hanging fir-moss family (Lycopodiaceae) that is typically epiphytic on native plants such as *Metrosideros polymorpha* or *Acacia koa*. This species is known

from Kauai, Maui, and the island of Hawaii (Palmer 2003, p. 256). At the time we designated critical habitat on Kauai and Maui in 2003, this species was known from Maui and the island of Hawaii (68 FR 25934, May 14, 2003). No critical habitat was designated for this species on Hawaii in 2003 (68 FR 39624, July 2, 2003). Currently, on Maui there are 6 occurrences totaling 97 to 100 individuals. On west Maui, 14 to 17 individuals of *H. mannii* occur in the West Maui NAR, in the montane mesic ecosystem. This species also occurred historically in the lowland wet and montane wet ecosystems (HBMP 2010). On east Maui, 2 individuals are reported north of Waikamoi Preserve in the montane wet ecosystem; 10 individuals occur at Kipahulu in the lowland wet ecosystem; approximately 40 individuals occur at Cable Ridge in the lowland mesic ecosystem; approximately 30 individuals occur at Kaapahu in the lowland mesic ecosystem; and 1 individual was observed at Manawainui (Kipahulu FR) in the montane mesic ecosystem (HNP 2004, pp. 5–7; HNP 2006, p. 3; TNC 2007; Welton and Haus 2008, pp. 12–13; Perlman 2009i, in litt., 2009j, in litt.; Wood 2009k, in litt.; HBMP 2010; Welton 2010a, in litt.). Sixty-seven plants have been outplanted at eight locations within Haleakala National Park (NPS 2012, in litt.).

*Ischaemum byrone* (Hilo ischaemum) is a short-lived stoloniferous (creeping along the ground with rooting from nodes) perennial in the grass family (Poaceae) known from Kauai, Oahu (historical), Molokai, east Maui, and Hawaii island (O'Connor 1999, pp. 1,556–1,557). At the time we designated critical habitat in 2003 and 2012, *I. byrone* was known from two occurrences on Kauai (2 individuals, last observed in 1993); two occurrences on Molokai (100 to 1,000 individuals, last observed in 1994), six occurrences on Maui (fewer than 2,000 individuals), and six occurrences on Hawaii Island (unknown numbers, last observed in 1997) (68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003; Pratt 2009, in litt.; Wood 2009, in litt.). In 2004, *I. byrone* was re-observed on Hawaii Island (unknown number of individuals) (HBMP 2010). Currently, *I. byrone* is known from six occurrences on Molokai and Maui, possibly totaling several thousand individuals (HBMP 2010). On Molokai, *I. byrone* is found in the coastal ecosystem from Wailau to Waiehu (approximately 200 individuals) (TNC 2007; Oppenheimer 2009e, in litt.;

HBMP 2010). On east Maui, there are an unknown number of individuals at Pauwahu Point; 20 individuals in scattered patches at Mokuhuki islet; many individuals at Keawaiki Bay; and an unknown number of individuals at Kalahu Point, and at Waiohonu Stream and Muolea Point, all in the coastal ecosystem. These occurrences may total several thousands of individuals, depending on rainfall (TNC 2007; HBMP 2010; Oppenheimer 2010b, in litt.); however, exact numbers of individuals are difficult to determine because of its growth habit. Overall, the numbers of individuals have decreased from the more than 5,000 reported in 2010 to possibly several thousand individuals in 2015, with the highest numbers occurring along the northeast coast of Maui (Service 2010, in litt.). Current threats to this species are significant and include grazing by feral ungulates and deer, competition with nonnative plants, drought, hurricanes, and human use of coastal areas. Potential effects of climate change include sea level rise. In addition, the recently established nonnative plant, *Polypogon interruptus* (ditch polypogon), occupies the same coastal habitat as *I. byrone* on Molokai and Maui and is observed to displace *I. byrone* (Warshauer *et al.* 2009, in litt.). Fortini *et al.* (2013, p. 78) conducted a landscape-based assessment of climate change vulnerability for *I. byrone* and concluded that this species is highly vulnerable to the impacts of climate change. Furthermore, this study identified this species as one that will have no overlapping area between its current and future climate envelope (areas that contain the full range of climate conditions under which the species is known to occur) by 2100. To be considered for delisting, threats to this species must be managed or controlled (*e.g.*, by fencing) and the species must be represented in an *ex situ* (at other than the plant's natural location, such as a nursery or arboretum) collection. In addition, a minimum of 8 to 10 self-sustaining populations (over a period of at least 5 years), consisting of all size classes, should be documented on the islands of Maui, Molokai, and if possible, at least one other island where it now occurs or occurred historically. The delisting goals for this species have not been met, and no separate occurrences total more than 300 mature individuals. In addition, all threats are not being sufficiently managed throughout all of the occurrences. Therefore, designation of unoccupied habitat (in addition to occupied habitat) is essential to the

conservation of *I. byrone* as it remains in danger of extinction throughout its range, and the species will require the expansion or reestablishment of populations in areas presently unoccupied by the species to withstand ongoing and future threats and to meet recovery goals.

*Isodendron pyriformis* (wahine noho kula), a short-lived perennial shrub in the violet family (Violaceae), is known from Niihau, Oahu, Molokai, Lanai, Maui, and Hawaii (Wagner *et al.* 1999aa, p. 1,331). At the time we designated critical habitat on Molokai, and Maui in 2003, and on Oahu in 2012, *I. pyriformis* was known from a single occurrence on the island of Hawaii (68 FR 12982, March 18, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). Currently, there are no extant occurrences on Lanai, Molokai, or Maui. Historically, *I. pyriformis* was found on Molokai in the lowland mesic ecosystem, and on west Maui in the lowland wet, dry cliff, and wet cliff ecosystems. We have no habitat information for the historical occurrences on Lanai (TNC 2007; PEPP 2008, p. 103; HBMP 2010).

*Kadua cordata* ssp. *remyi* (formerly *Hedyotis schlechtendahlana* var. *remyi*) (kopa), is a short-lived perennial subshrub in the coffee family (Rubiaceae), and is known from Lanai (Wagner *et al.* 1999a, pp. 1,150–1,152). In 2003, this subspecies was known from eight individuals; however, no critical habitat was designated for this subspecies on Lanai (68 FR 1220, January 9, 2003). Currently, two wild and three out-planted individuals are reported from Kaiholena–Hulopoe ridge, in the lowland wet ecosystem. Historically, this species also occurred in the lowland mesic ecosystem (TNC 2007; PEPP 2009, pp. 5, 82; HBMP 2010; Oppenheimer 2010cc, in litt.).

*Kadua coriacea* (kioele) is a short-lived perennial shrub in the coffee family (Rubiaceae), and is known from Oahu, Maui, and the island of Hawaii (Wagner *et al.* 1999a, p. 1,141). At the time we designated critical habitat on Maui in 2003 and on Oahu in 2012, this species was known from one individual in the lowland dry ecosystem at Lihau, on west Maui, and four occurrences on the island of Hawaii (68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). However, no critical habitat was designated for this species on Hawaii in 2003 (68 FR 39624, July 2, 2003). In 2008, the only known individual on Maui was burned during a wildfire and died (PEPP 2008, p. 67).

*Kadua laxiflora* (formerly *Hedyotis mannii*) (pilo) is a short-lived perennial subshrub in the coffee family

(Rubiaceae), and is known from Molokai, Lanai, and west Maui (Wagner *et al.* 1999a, p. 1,148). At the time we designated critical habitat on Maui in 2003, this species was known from a total of five occurrences on Lanai (two occurrences), Molokai (one occurrence), and west Maui (two occurrences) (68 FR 1220, January 9, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003). However, no critical habitat was designated for this species on Lanai or Molokai in 2003 (68 FR 1220, January 9, 2003; 68 FR 12982, March 18, 2003). Currently, on Lanai, there are two individuals at Hauola Gulch in the montane wet ecosystem. There are historical reports from the lowland mesic, lowland wet, and wet cliff ecosystems on this island. On west Maui, there are four individuals at Kauaula Valley, in the wet cliff ecosystem. Historically, this species was also reported from the lowland wet and dry cliff ecosystems (TNC 2007; Perlman 2008g, in litt.; Oppenheimer 2009f, in litt.; PEPP 2009, pp. 3, 14, 24, 82–83; HBMP 2010). There are no extant individuals on Molokai, although there are historical reports from the lowland mesic and montane mesic ecosystems (TNC 2007; HBMP 2010).

*Kanaloa kahoolawensis* (kohe malama malama o kanaloa), a short-lived perennial shrub in the pea family (Fabaceae), occurs only on Kahoolawe (Lorence and Wood 1994, p. 137). Soil cores suggest *K. kahoolawensis* was quite widespread in lowland dry areas throughout the main Hawaiian Islands during the early Pleistocene (Burney *et al.* 2001, p. 632; Athens 2002 *et al.*, p. 74). At the time we designated critical habitat in 2003, *K. kahoolawensis* was known from two individuals on the Aleale sea stack on the south central coast of Kahoolawe (68 FR 25934, May 14, 2003). Currently, *K. kahoolawensis* is known from the same location with one surviving individual, in the coastal ecosystem (TNC 2007; NTBG 2008; HBMP 2010).

*Kokia cookei* (Cooke's kokio), a short-lived perennial small tree in the mallow family (Malvaceae), is known from Molokai, historically in the lowland dry ecosystem (Bates 1999, p. 890; TNC 2007; HBMP 2010). At the time *K. cookei* was listed in 1979, there were no individuals remaining in the wild, and one individual in an arboretum on Oahu; no critical habitat was designated for this species on Molokai (44 FR 62470, October 30, 1979; 68 FR 12982, March 18, 2003). Currently, one individual is in cultivation at Waimea Arboretum, and there are propagules at the Volcano Rare Plant Facility, Lyon Arboretum, Amy Greenwell

Ethnobotanical Garden, Leeward Community College, Hoolawa Farms, and Maui Nui Botanical Garden (Orr 2007, in litt.; Seidman 2007, in litt.).

*Labordia tinifolia* var. *lanaiensis* (kamakahala), a short-lived perennial shrub or small tree in the logania family (Loganiaceae), is known from Lanai (Wagner *et al.* 1999z, pp. 861–862). In 2003, this variety was known from one occurrence totaling three to eight individuals along the summit of Lanaihale; however, no critical habitat was designated for this species on Lanai (68 FR 1220, January 9, 2003). Currently, *L. tinifolia* var. *lanaiensis* is found in one occurrence of at least five individuals in Awehi Gulch in the wet cliff ecosystem. This variety was historically also found in the lowland mesic, lowland wet, and montane wet ecosystems (TNC 2007; HBMP 2010; Oppenheimer 2010t, in litt.; Oppenheimer 2010d, in litt.).

*Labordia triflora* (kamakahala), a short-lived perennial shrub or small tree in the logania family (Loganiaceae), is known from east Molokai (Wagner *et al.* 1999z, p. 423). At the time we designated critical habitat in 2003, this species was known from 10 individuals (68 FR 12982, March 18, 2003). Currently, 4 occurrences totaling 20 individuals are reported from Kua, Wawaia, Kumueli, and Manawai Gulch, in the lowland mesic ecosystem (TNC 2007; PEPP 2007, p. 48; PEPP 2008, p. 85; HBMP 2010).

*Lysimachia lydgatei* (NCN), a short-lived perennial shrub in the primrose family (Primulaceae), is known from west Maui (Wagner *et al.* 1999bb, p. 1,082). At the time we designated critical habitat in 2003, there were four occurrences (68 FR 25934, May 14, 2003). Currently, there are 2 occurrences totaling approximately 30 individuals. Both occurrences are found at Puehuhunui, in the montane mesic and wet cliff ecosystems (Perlman 1997, in litt.; TNC 2007; Wood 2009l, in litt.; HBMP 2010; Oppenheimer 2010dd, in litt.). This species is also historically known from the lowland dry ecosystem on west Maui (TNC 2007; HBMP 2010).

*Lysimachia maxima* (NCN), a short-lived perennial shrub in the primrose family (Primulaceae), is known from Molokai (Wagner *et al.* 1999bb, p. 1,083). At the time we designated critical habitat in 2003, this species was known from one occurrence (68 FR 12982, March 18, 2003). Currently, *L. maxima* is known from 2 occurrences totaling 28 individuals on east Molokai. There are 20 individuals near Ohialele, and 8 individuals in 2 distinct patches in east Kawela Gulch, in the lowland wet and montane wet ecosystems (PEPP

2007, p. 48; TNC 2007; PEPP 2008, p. 85; HBMP 2010).

*Marsilea villosa* (ihi ihi), a short-lived perennial fern in the marsilea family (Marsileaceae), is known from Niihau, Oahu, and Molokai (Palmer 2003, pp. 180–182). At the time we designated critical habitat on Molokai in 2003 and on Oahu in 2012, this species was found in four occurrences on Molokai, and in five to six occurrences on Oahu (68 FR 12982, March 18, 2003; 77 FR 57648, September 18, 2012). No critical habitat was designated for this species on Molokai in 2003 (68 FR 12982, March 18, 2003). Currently, *M. villosa* is known from eight occurrences on Molokai, totaling possibly thousands of individuals in areas that flood periodically, such as small depressions and flood plains with clay soils. There is one small occurrence at Kamakaipo, and seven occurrences between Kaa and Ilio Point, covering areas from 20 square (sq) ft (6 sq m) to over 2 ac (0.8 ha), all in the coastal ecosystem (Perlman 2006b, in litt.; TNC 2007; Bakutis 2009b, in litt.; Wood 2009m, in litt.; Chau 2010, in litt.; Garnett 2010b in litt.; HBMP 2010; Oppenheimer 2010u, in litt.).

*Melanthera kamolensis* (formerly *Lipochaeta kamolensis*) (nehe) is a short-lived perennial herb in the sunflower family (Asteraceae), and is known from east Maui (Wagner *et al.* 1990a, p. 337). At the time we designated critical habitat in 2003, this species was known from one occurrence (68 FR 25934, May 14, 2003). Currently, a single occurrence of *M. kamolensis* is found in Kamole Gulch, totaling between 30 and 40 individuals, in the lowland dry ecosystem. A second occurrence just west of Kamole appears to be a hybrid swarm (hybrids between parent species, and subsequently formed progeny from crosses among hybrids and crosses of hybrids to parental species) of *M. kamolensis* and *M. rockii*, with approximately 100 individuals (TNC 2007; HBMP 2010; Medeiros 2010, in litt.).

*Melicope adscendens* (alani), a short-lived perennial sprawling shrub in the rue family (Rutaceae), is known from Maui (Stone *et al.* 1999, p. 1,183). At the time we designated critical habitat in 2003, there were 16 occurrences (68 FR 25934, May 14, 2003). Currently, *M. adscendens* is known from 2 occurrences totaling 33 individuals at Auwahi, in the lowland dry and montane mesic ecosystems on east Maui (TNC 2007; PEPP 2009, p. 85; Buckman 2010, in litt.; HBMP 2010). Historically, this species has not been observed below 3,200 ft (975 m) (Wagner *et al.* 1999, p. 1,183).

*Melicope balloui* (alani), a short-lived perennial tree or shrub in the rue family (Rutaceae), is known from east Maui (Stone *et al.* 1999, pp. 1,183–1,184). At the time we designated critical habitat in 2003, there were 3 occurrences totaling 50 individuals (68 FR 25934, May 14, 2003). Currently, there are approximately 50 individuals near Palikea Stream, in the lowland wet ecosystem, and a few individuals at Puuokakae in the montane wet ecosystem (TNC 2007; Wood 2009n, in litt.; HBMP 2010). The status and taxonomic certainty of the occurrence within Haleakala National Park is in question (NPS 2012, in litt.).

*Melicope knudsenii* (alani), a long-lived perennial tree in the rue family (Rutaceae), is known from Kauai and Maui (Stone *et al.* 1999, pp. 1,192–1,193). At the time we designated critical habitat in 2003, there were 10 occurrences on Kauai and 4 occurrences on Maui (68 FR 9116, February 27, 2003; 68 FR 25934, May 14, 2003). Currently, on east Maui, there are two individuals at Auwahi, in the montane dry ecosystem (TNC 2007; HBMP 2010; Oppenheimer 2010b, in litt.).

*Melicope mucronulata* (alani), a long-lived perennial tree in the rue family (Rutaceae), is known from Molokai and east Maui (Stone *et al.* 1999, p. 1,196). At the time we designated critical habitat on Molokai and Maui in 2003, there were two occurrences on Molokai and two occurrences on east Maui (68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003). Currently, there are two occurrences on Molokai, one individual at Kupaia Gulch, and three individuals at Onini Gulch, in the lowland mesic ecosystem (TNC 2007; PEPP 2008, p. 69; PEPP 2009, p. 86; HBMP 2010;). This species was historically also found in the montane mesic ecosystem on Molokai (TNC 2007; HBMP 2010). The occurrence status of *M. mucronulata* in the lowland dry and montane dry ecosystems on east Maui is unknown.

*Melicope munroi* (alani), a short-lived perennial shrub in the rue family (Rutaceae), is known from Lanai and Molokai (Stone *et al.* 1999, p. 1,196). In 2003, there were two occurrences on Lanai; however, no critical habitat was designated for this species on Lanai or Molokai (68 FR 1220, January 9, 2003; 68 FR 12982, March 18, 2003). Currently, on Lanai, *M. munroi* is known from at least 2 occurrences of fewer than 40 individuals on the Lanaihale summit and the ridge of Waialala Gulch, in the montane wet and wet cliff ecosystems (TNC 2007; HBMP 2010; Oppenheimer 2010t, in litt.). This species has not been seen on Molokai since 1910, where it was last observed

in the lowland mesic ecosystem (68 FR 12982, March 18, 2003).

*Melicope ovalis* (alani), a long-lived perennial tree in the rue family (Rutaceae), is known from east Maui (Stone *et al.* 1999, p. 1,198). At the time we designated critical habitat in 2003, there were two occurrences (68 FR 25934, May 14, 2003). Currently, there are approximately 50 individuals in 4 occurrences in the lowland wet ecosystem in Keanae Valley, and in the montane wet and wet cliff ecosystems at Kipahulu Valley and Palikea Stream (TNC 2007; Bily *et al.* 2008 p. 45; Wood 2009o, in litt.; HBMP 2010; Oppenheimer 2010b, in litt.; Welton 2010a, in litt.). Forty-five individuals were outplanted in nine locations within Haleakala National Park (NPS 2012, in litt.).

*Melicope reflexa* (alani), a short-lived perennial sprawling shrub in the rue family (Rutaceae), is endemic to east Molokai (Stone *et al.* 1999, p. 1,203). At the time we designated critical habitat in 2003, there were three occurrences (68 FR 12982, March 18, 2003). Currently, there are two occurrences totaling at least six individuals. There are at least five individuals at Puuohelo and one individual at Puniuohua in the lowland wet ecosystem (TNC 2007; HBMP 2010; Oppenheimer 2010ee, in litt.). Historically, this species was also found in the lowland mesic and montane wet ecosystems (TNC 2007; HBMP 2010; Oppenheimer 2010u, in litt.; Wood 2010b, in litt.).

*Mucuna sloanei* var. *persericea* (sea bean), a short-lived perennial vine in the pea family (Fabaceae), is found on Maui (Wilmot-Dear 1990, pp. 27–29; Wagner *et al.* 2005a–*Flora of the Hawaiian Islands database*). In her revision of *Mucuna* in the Pacific Islands, Wilmot-Dear recognized this variety from Maui based on leaf indumentum (covering of fine hairs or bristles) (Wilmot-Dear 1990, p. 29). At the time of Wilmot-Dear's publication, *M. sloanei* var. *persericea* ranged from Makawao to Wailua Iki, on the windward slopes of the east Maui mountains (Wagner *et al.* 2005a–*Flora of the Hawaiian Islands database*). Currently, there are possibly a few hundred individuals in five occurrences: Ulalena Hill, north of Kawaipapa Gulch, lower Nahiku, Koki Beach, and Piinau Road, all in the lowland wet ecosystem on east Maui (Duvall 2010, in litt.; Hobdy 2010, in litt.).

*Myrsine vaccinioides* (kolea), a short-lived perennial shrub in the myrsine family (Myrsinaceae), is found on Maui (Wagner *et al.* 1999f, p. 946; HBMP 2010). This species was historically

known from shrubby bogs near Violet Lake on west Maui (Wagner *et al.* 1999f, p. 946). In 2005, three occurrences of a few hundred individuals were reported at Eke, Puu Kukui and near Violet Lake (Oppenheimer 2006c, in litt.). Currently, there are estimated to be several hundred, but fewer than 1,000, individuals scattered in the summit area of the west Maui mountains at Eke Crater, Puu Kukui, Honokowai-Honolua, and Kahoolewa, in the montane wet ecosystem (Oppenheimer 2010i, in litt.).

*Neraudia sericea* (NCN), a short-lived perennial shrub in the nettle family (Urticaceae), is known from Molokai, Lanai, Maui, and Kahoolawe (Wagner *et al.* 1999cc, p. 1,304). At the time we designated critical habitat in 2003, *N. sericea* was known from Molokai and Maui (68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003). Currently, this species is found only on east Maui at Kahikinui, where there are fewer than five individuals in the montane mesic ecosystem. This species has not been observed in the lowland dry ecosystem on east Maui since the early 1900s. Historically, *N. sericea* was found in the lowland dry and dry cliff ecosystems on Lanai, the lowland mesic and montane mesic ecosystems on Molokai, the lowland dry and dry cliff ecosystems on west Maui, and the lowland dry ecosystem on Kahoolawe (TNC 2007; HBMP 2010; Medeiros 2010, in litt.).

*Nototrichium humile* (kului), a short-lived perennial trailing shrub in the amaranth family (Amaranthaceae), is known from Oahu and east Maui (Wagner *et al.* 1999dd, pp. 193–194). At the time we designated critical habitat on Maui in 2003 and Oahu in 2012, *N. humile* was only known from 12 occurrences on Oahu (68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). This species has not been seen on Maui since 1976, when one individual was reported from the lowland dry ecosystem (TNC 2007; HBMP 2010).

*Peperomia subpetiolata* (alaala wai nui), a short-lived perennial herb in the pepper family (Piperaceae), is found on Maui (Wagner *et al.* 1999g, p. 1035; HBMP 2010). Historically, *P. subpetiolata* was known only from the lower Waikamoi (Kula pipeline) area on the windward side of Haleakala on east Maui (Wagner *et al.* 1999g, p. 1,035; HBMP 2010). In 2001, it was estimated that 40 individuals occurred just west of the Makawao-Koolau FR boundary, in the montane wet ecosystem. *Peperomia cookiana* and *P. hirtipetiola* also occur in this area, and are known to hybridize with *P. subpetiolata* (NTBG 2009g, p. 2; Oppenheimer 2010j, in litt.). In 2007, 20 to 30 hybrid plants were observed at Maile Trail, and at three areas near the

Waikamoi Flume road (NTBG 2009g, p. 2). Based on the 2007 and 2010 surveys, all known plants are now considered to be hybrids mostly between *P. subpetiolata* and *P. cookiana*, with a smaller number of hybrids between *P. subpetiolata* and *P. hirtipetiola* (NTBG 2009g, p. 2; Lau 2011, in litt.). *Peperomia subpetiolata* is recognized as a valid species, and botanists continue to search for plants in its previously known locations as well as in new locations with potentially suitable habitat (NTBG 2009g, p. 2; PEPP 2010, p. 96; Lau 2011, pers. comm.).

*Peucedanum sandwicense* (makou), a short-lived perennial herb in the parsley family (Apiaceae), is known from Kauai, Oahu, Molokai, Maui, and Keopuka islet off the coast of east Maui (Constance and Affolter 1999, p. 208). At the time we designated critical habitat in 2003, *P. sandwicense* was known from 15 occurrences on Kauai, 5 occurrences on Molokai, 3 occurrences on Maui; and, in 2012 from 2 occurrences on Oahu (68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). Currently, *P. sandwicense* is known from 6 occurrences totaling over 45 individuals on Molokai and east Maui. On Molokai, there are 3 occurrences totaling 32 to 37 individuals, at Mokapu islet (25 individuals), Lepau Point (2 individuals), and Kalaupapa Trail (5 to 10 individuals), all in the coastal ecosystem. There is a report of an individual found near the lowland wet ecosystem, but this plant has not been relocated since 1989 (TNC 2007; HBMP 2010; NTBG 2010a, in litt.; NTBG 2010b, in litt.). On east Maui, *P. sandwicense* occurs on Keopuka islet (15 individuals), Pauwalu Point (an unknown number of individuals), and Honolulu Nui (an unknown number of individuals), in the coastal ecosystem. Historically, this species was found on west Maui in the lowland wet ecosystem (TNC 2007; HBMP 2010; NTBG 2010a, in litt.; NTBG 2010b, in litt.).

*Phyllostegia bracteata* (NCN), a short-lived perennial herb in the mint family (Lamiaceae), is found on Maui (Wagner *et al.* 1999h, pp. 814–815). Historically, this species was known from the east Maui mountains at Ukulele, Puu Nianiau, Waikamoi Gulch, Koolau Gap, Kipahulu, Nahiku-Kuhiwa trail, Waihoi Valley, and Manawainui; and from the west Maui mountains at Puu Kukui and Hanakaoo (HBMP 2010). This species appears to be short-lived, ephemeral, and disturbance-dependent, in the lowland wet, montane mesic, montane wet, subalpine, and wet cliff ecosystems

(NTBG 2009h, p. 1). There have been several reported sightings of *P. bracteata* between 1981 and 2001, at Waihoi Crater Bog, Waikamoi Preserve, Waikamoi flume, and Kipahulu on east Maui, and at Pohakea Gulch on west Maui; however, none of these individuals were extant as of 2009 (PEPP 2009, pp. 89–90). In 2009, one individual was found at Kipahulu, near Delta Camp, on east Maui, but was not relocated on a follow-up survey during that same year (NTBG 2009h, p. 3). Botanists continue to search for *P. bracteata* in previously reported locations, as well as in other areas with potentially suitable habitat (NTBG 2009h, p. 3; PEPP 2009, pp. 89–90).

*Phyllostegia haliakalae* (NCN), a short-lived perennial vine in the mint family (Lamiaceae), is known from Molokai, Lanai, and east Maui (Wagner 1999, p. 269). The type specimen was collected by Wawra in 1869 or 1870, in a dry ravine at the foot of Haleakala. An individual was found in flower on the eastern slope of Haleakala, in the wet cliff ecosystem, in 2009; however, this plant has died (TNC 2007; Oppenheimer 2010b, in litt.). Collections were made before the plant died, and propagules outplanted in the Puu Mahoe Arboretum (three plants) and Olinda Rare Plant Facility (four plants) (Oppenheimer 2011b, in litt.). In addition, this species has been outplanted in the lowland wet, montane wet, and montane mesic ecosystems of Haleakala National Park (HNP 2012, in litt.). Botanists continue to search in areas with potentially suitable habitat for wild individuals of this plant (Oppenheimer 2010b, in litt.).

*Phyllostegia haliakalae* was last reported from the lowland mesic ecosystem on Molokai in 1928, and from the dry cliff and wet cliff ecosystems on Lanai in the early 1900s (TNC 2007; HBMP 2010). Currently no individuals are known in the wild on Maui, Molokai, or Lanai; however, over 100 individuals have been outplanted (HNP 2012, in litt.).

*Phyllostegia hispida* (NCN), a short-lived perennial vine in the mint family (Lamiaceae), is known from Molokai (Wagner *et al.* 1999h, pp. 817–818). Until an individual was rediscovered in 1996, *P. hispida* was thought to be extinct in the wild. This individual died in 1998, and *P. hispida* was thought to be extirpated, until another plant was found in 2005. Propagules were taken and propagated; however, the wild individual died. This sequence of events occurred again in 2006 and 2007 (74 FR 11319, March 17, 2009). At the time we listed *P. hispida* in 2009, no critical habitat was designated for this species

on Molokai (74 FR 11319, March 17, 2009). Currently *P. hispida* is known from 4 occurrences totaling 25 individuals in the montane wet and wet cliff ecosystems on Molokai (TNC 2007; PEPP 2009, pp. 7, 15, 90–93). Historically, this species also occurred in the lowland wet ecosystem (TNC 2007; HBMP 2010).

*Phyllostegia mannii* (NCN), a short-lived perennial vine in the mint family (Lamiaceae), is known from Molokai and Maui (Wagner *et al.* 1999h, pp. 820–821). At the time we designated critical habitat on Molokai and Maui in 2003, this species was only known from one individual on east Molokai. It had not been observed on Maui for over 70 years (68 FR 25934, May 14, 2003). Currently, on Molokai, there are three individuals in Hanalilolilo, in the montane wet ecosystem. Historically, *P. mannii* occurred in Molokai's lowland mesic and lowland wet ecosystems, and the montane wet and montane mesic ecosystems on east Maui (TNC 2007; Perlman 2009k, in litt.; HBMP 2010; Oppenheimer 2010u, in litt.; Wood 2010c, in litt.).

*Phyllostegia pilosa* (NCN), a short-lived perennial vine in the mint family (Lamiaceae), is known from east Maui (Wagner 1999, p. 274). There are two occurrences totaling seven individuals west of Puu o Kakae on east Maui, in the montane wet ecosystem (TNC 2007; HBMP 2010). The individuals identified as *P. pilosa* on Molokai, at Kamoku Flats (montane wet ecosystem) and at Mooloa (lowland mesic ecosystem), have not been observed since the early 1900s (TNC 2007; HBMP 2010).

*Pittosporum halophilum* (hoawa), a short-lived perennial shrub or small tree in the pittosporum family (Pittosporaceae), is found on Molokai (Wood 2005, pp. 2, 41). This species was reported from Huelo islet, Mokapu Island, Okala Island, and Kukaiwaa peninsula. On Huelo islet, there were two individuals in 1994, and in 2001, only one individual remained (Wood *et al.* 2001, p. 12; Wood *et al.* 2002, pp. 18–19). The current status of this species on Huelo islet is unknown. On Mokapu Island, there were 15 individuals in the coastal ecosystem in 2001, and in 2005, 10 individuals remained. On Okala Island, there were two individuals in 2005, and one individual on the sea cliff at Kukaiwaa peninsula (Wainene) (Wood 2005, pp. 2, 41). As of 2010, there were three occurrences totaling five individuals: three individuals on Mokapu Island, one individual on Okala Island, and one individual on Kukaiwaa peninsula (Bakutis 2010, in litt.; Hobdy 2010, in litt.; Perlman 2010, in litt.). At least 17

individuals have been outplanted at 3 sites on the coastline of the nearby Kaalaupapa peninsula (Garnett 2010a, in litt.).

*Plantago princeps* (laukahi kuahiwi), a short-lived perennial shrub or herb in the plantain family (Plantaginaceae), is known from the islands of Kauai, Oahu, Molokai, Maui, and Hawaii (Wagner *et al.* 1999ee, pp. 1,054–1,055). Wagner *et al.* recognize four varieties of *P. princeps*: *P. princeps* var. *anomala* (Kauai and Oahu), *P. princeps* var. *laxiflora* (Molokai, Maui, and Hawaii), *P. princeps* var. *longibracteata* (Kauai and Oahu), and *P. princeps* var. *princeps* (Oahu) (Wagner *et al.* 1999ee, pp. 1,054–1,055). At the time we designated critical habitat on Kauai, Molokai, and Maui, in 2003, and on Oahu in 2012, there was one known occurrence of *P. princeps* var. *laxiflora* on Molokai and eight occurrences on Maui (68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). Currently, *P. princeps* var. *laxiflora* is known from 6 occurrences totaling approximately 70 individuals on Maui (Oppenheimer 2010a, in litt.). On east Maui, there are 3 occurrences totaling 41 to 46 individuals in the dry cliff and wet cliff ecosystems, at Waikau (1 individual), Kaupo Gap (about 30 individuals), and Palikea (10 to 15 individuals). On west Maui, there are 3 occurrences totaling 15 individuals in the wet cliff ecosystem, in Kauaula Valley, Nakalaloa Stream, and in Iao Valley (TNC 2007; Oppenheimer 2009g, in litt.; HBMP 2010). Almost 500 individuals have been outplanted at 43 sites within Haleakala National Park (NPS 2012, in litt.). On Molokai, this species was found in the lowland wet and montane mesic ecosystems as recently as 1987 (TNC 2007; HBMP 2008; Oppenheimer 2010u, in litt.).

*Platanthera holochila* (NCN), a short-lived perennial herb in the orchid family (Orchidaceae), is known from Kauai, Oahu, Molokai, and Maui (Wagner *et al.* 1999ff, p. 1,474). At the time we designated critical habitat on Kauai, Maui in 2003, and on Oahu in 2012, there were two known occurrences on Kauai, one occurrence on Molokai, and six occurrences on Maui (68 FR 9116, February 27, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). No critical habitat was designated for this species on Molokai in 2003 (68 FR 12982, March 18, 2003). Currently, there are 4 known occurrences totaling 44 individuals on Molokai and west Maui. On Molokai, there is 1 occurrence at Hanalilolilo totaling 24 individuals in the montane wet ecosystem. There are 3 occurrences

on west Maui, at Waihee Valley in the wet cliff ecosystem (12 individuals), Waihee Valley in the wet cliff ecosystem (6 individuals), and Pohakea Gulch in the montane wet ecosystem (2 individuals). Historically, this species was also found in the montane wet ecosystem on east Maui (TNC 2007; HBMP 2010; Oppenheimer 2010u, in litt.).

*Pleomele fernaldii* (hala pepe), a long-lived perennial tree in the asparagus family (Asparagaceae), is found only on the island of Lanai (Wagner *et al.* 1999i, p. 1,352; Wagner and Herbst 2003, p. 67). Historically known throughout Lanai, this species is currently found in the lowland dry, lowland mesic, lowland wet, dry cliff, and wet cliff ecosystems, from Hulopaa and Kanoa gulches southeast to Waiakeakua and Puhielelu (St. John 1947, pp. 39–42 cited in St. John 1985, pp. 171, 177–179; HBMP 2006; PEPP 2008, p. 75; HBMP 2010; Oppenheimer 2010d, in litt.). Currently, there are several hundred to perhaps as many as 1,000 individuals. The number of individuals has decreased by about one-half in the past 10 years (there were more than 2,000 individuals in 1999), with very little recruitment observed recently (Oppenheimer 2008d, in litt.).

*Portulaca sclerocarpa* (poe), a short-lived perennial herb in the purslane family (Portulacaceae), is known from a single collection from Poopoo islet off the south coast of Lanai, and from the island of Hawaii (Wagner *et al.* 1999gg, p. 1,074). At the time we designated critical habitat in 2003, there was 1 known occurrence on Poopoo islet and 24 occurrences on Hawaii Island (68 FR 1220, January 9, 2003; 68 FR 39624, July 2, 2003). Currently, on Lanai, this species is only known from an unknown number of individuals in the coastal ecosystem on Poopoo islet (TNC 2007; HBMP 2010).

*Pteris lidgatei* (NCN), a short-lived perennial terrestrial fern in the maidenhair fern family (Adiantaceae), is known from Oahu, Molokai, and Maui (Palmer 2003, p. 229). At the time we designated critical habitat on Molokai and Maui in 2003, and on Oahu in 2012, this species was known from two occurrences on Maui and five occurrences on Oahu (68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). Currently, *P. lidgatei* is known from four occurrences totaling over nine individuals on Molokai and Maui. On Molokai, there are six to eight individuals in Kumueli Gulch in the montane wet ecosystem. Historically, this species was also found in Molokai's wet cliff ecosystem. On west Maui, *P.*

*lidgatei* is known from a single individual at Kauaula Valley in the wet cliff ecosystem, an unknown number of individuals in both the upper Kauaula Valley in the lowland wet ecosystem and upper Kahakuloa Stream in the wet cliff ecosystem (PEPP 2007, pp. 54–55; TNC 2007; PEPP 2009, p. 103; HBMP 2010; Oppenheimer 2010i, in litt.; Oppenheimer 2010u, in litt.).

*Remya mauiensis* (Maui remya), a short-lived perennial shrub in the sunflower family (Asteraceae), is known from west Maui (Wagner *et al.* 1999m, p. 353). At the time we designated critical habitat in 2003, there were 5 known occurrences totaling 21 individuals (68 FR 25934, May 14, 2003). Currently, *R. mauiensis* is found in 6 occurrences totaling approximately 500 individuals at Kauaula (lowland mesic ecosystem), Puehuhunui (lowland mesic and montane mesic ecosystems), Ukumehame (wet cliff ecosystem), Papalaua (montane mesic ecosystem), Pohakea (lowland dry ecosystem), and Manawainui (lowland dry ecosystem) (TNC 2007; HBMP 2010; Oppenheimer 2010ff, in litt.). Historically, this species also occurred in Maui's lowland wet ecosystem (TNC 2007; HBMP 2010).

*Sanicula purpurea* (NCN), a short-lived perennial herb in the parsley family (Apiaceae), is known from bogs and surrounding wet forest on Oahu and west Maui (Constance and Affolter 1999, p. 210). At the time we designated critical habitat in 2003 (Maui) and 2012 (Oahu), this species was known from seven occurrences on west Maui and five occurrences on Oahu (68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). Currently, on west Maui, as many as 50 individuals are found in 4 known occurrences in bogs in the montane wet ecosystem (TNC 2007; Perlman 2007d, in litt.; HBMP 2010; Oppenheimer 2010gg, in litt.; Wood 2010d, in litt.).

*Santalum haleakalae* var. *lanaiense* (iliahi, Lanai sandalwood) is a long-lived perennial tree in the sandalwood family (Santalaceae). Currently, *S. haleakalae* var. *lanaiense* is known from Molokai, Lanai, and Maui, in 26 occurrences totaling fewer than 100 individuals (Wagner *et al.* 1999c, pp. 1,221–1,222; HBMP 2010; Harbaugh *et al.* 2010, pp. 834–835). On Molokai, there are more than 12 individuals in 4 occurrences from Kikiakala to Kamoku Flats and Puu Kokekole, with the largest concentration at Kumueli Gulch, in the montane mesic and lowland mesic ecosystems (Harbaugh *et al.* 2010, pp. 834–835). On Lanai, there are approximately 10 occurrences totaling 30 to 40 individuals: Kanepuu, in the

lowland mesic ecosystem (5 individuals); the headwaters of Waiopae Gulch in the lowland wet ecosystem (3 individuals); the windward side of Hauola on the upper side of Waiopae Gulch in the lowland mesic ecosystem (1 individual); the drainage to the north of Puhielelu Ridge and enclosure, in the headwaters of Lopa Gulch in the lowland mesic ecosystem (3 individuals); 6 occurrences near Lanaihale in the montane wet ecosystem (21 individuals); and the mountains east of Lanai City in the lowland wet ecosystem (a few individuals) (HBMP 2008; Harbaugh *et al.* 2010, pp. 834–835; HBMP 2010; Wood 2010a, in litt.). On west Maui, there are eight single-individual occurrences: Hanaulaiki Gulch in the lowland dry ecosystem; Kauaula and Puehuhunui Gulches in the lowland mesic, montane mesic, and wet cliff ecosystems; Kahanahaiki Gulch and Honokowai Gulch in the lowland wet ecosystem; Wakihuli in the wet cliff ecosystem; and Manawainui Gulch in the montane mesic and lowland dry ecosystems (HBMP 2010; Harbaugh *et al.* 2010, pp. 834–835; Wood 2010a, in litt.). On east Maui, there are 4 occurrences (10 individuals) in Auwahi, in the montane mesic, montane dry, and lowland dry ecosystems (TNC 2007; HBMP 2010; Harbaugh *et al.* 2010, pp. 834–835).

*Schenkia sebaeoides* (formerly *Centaurium sebaeoides*) (awiwai) is a short-lived annual herb in the gentian family (Gentianaceae) known from the islands of Kauai, Oahu, Molokai, Lanai, and west Maui (Wagner *et al.* 1990b, p. 725; 68 FR 1220, January 9, 2003). At the time we designated critical habitat on Kauai, Molokai, and Maui in 2003, and on Oahu in 2012, the species was reported from one occurrence on Lanai, three occurrences on Kauai, two occurrences on Molokai, three occurrences on Maui, and two occurrences on Oahu (68 FR 1220, January 9, 2003; 68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). No critical habitat was designated for this species on Lanai in 2003 (68 FR 1220, January 9, 2003). Currently, on Lanai, Molokai, and Maui, there are at least eight occurrences, with the highest number of individuals on Molokai. The annual number of individuals on each island varies widely depending upon rainfall (Oppenheimer 2009i, in litt.; HBMP 2010). On Lanai, there is 1 occurrence totaling between 20 and 30 individuals, in the lowland dry ecosystem (TNC 2007; HBMP 2010). On Molokai, there are 2 or more occurrences containing

thousands of individuals in the coastal ecosystem (TNC 2007; HBMP 2010). On west Maui, there are 5 occurrences, totaling several thousand individuals, along the north coast from Haewa Point to Puu Kahulanapa, in the coastal ecosystem (Oppenheimer 2010i, in litt.).

*Schiedea haleakalensis* (NCN), a short-lived perennial shrub in the pink family (Caryophyllaceae), is known from east Maui (Wagner *et al.* 1999j, pp. 512–514). At the time we designated critical habitat in 2003, this species was known from two occurrences in Haleakala National Park (68 FR 25934, May 14, 2003). Currently, *S. haleakalensis* is found in 2 occurrences totaling fewer than 50 individuals, at Leleiwai Pali and Kaupo Gap in the subalpine and dry cliff ecosystems, within Haleakala National Park (Welton 2010a, in litt.). One hundred forty-three individuals have been outplanted at 11 sites within Haleakala National Park (NPS 2012, in litt.).

*Schiedea jacobii* (NCN), a short-lived perennial herb or subshrub in the pink family (Caryophyllaceae), occurs only on Maui (Wagner *et al.* 1999j, p. 284). Discovered in 1992, the single occurrence consisted of nine individuals along wet cliffs between Hanawi Stream and Kuhuwa drainage (in Hanawi NAR), in the montane wet ecosystem on east Maui (Wagner *et al.* 1999j, p. 286). By 1995, only four plants could be relocated in this location. It appeared that the other five known individuals had been destroyed by a landslide (Wagner *et al.* 1999j, p. 286). In 2004, one seedling was observed in the same location, and in 2010, no individuals were relocated (Perlman 2010, in litt.). The State of Hawaii plans to outplant propagated individuals in a fenced area in Hanawi Natural Area Reserve in 2011 (Oppenheimer 2010a, in litt.; Perlman 2010, in litt.).

*Schiedea laui* (NCN), a short-lived perennial herb or subshrub in the pink family (Caryophyllaceae), is found only on Molokai (Wagner *et al.* 2005b, pp. 90–92). In 1998, when this species was first observed, there were 19 individuals located in a cave along a narrow stream corridor at the base of a waterfall in the Kamakou Preserve, in the montane wet ecosystem (Wagner *et al.* 2005b, pp. 90–92). By 2000, only 9 individuals with a few immature plants and seedlings were relocated, and in 2006, 13 plants were seen (Wagner *et al.* 2005b, pp. 90–92; PEPP 2007, p. 57). Currently, there are 24 to 34 individuals in the same location in Kamakou Preserve (Bakutis 2010, in litt.).

*Schiedea lydgatei* (NCN), a short-lived perennial subshrub in the pink family (Caryophyllaceae), is known from east

Molokai (Wagner *et al.* 1999j, p. 516). At the time we designated critical habitat in 2003, this species was known from four occurrences totaling more than 1,000 individuals (68 FR 12982, March 18, 2003). Currently, there are over 200 individuals between Kawela and Makolelau gulches, in the lowland mesic ecosystem (TNC 2007; PEPP 2009, p. 109; HBMP 2010; Oppenheimer 2010u, in litt.).

*Schiedea salicaria* (NCN), a short-lived perennial shrub in the pink family (Caryophyllaceae), occurs on Maui (Wagner *et al.* 1999j, pp. 519–520). It is historically known from a small area on west Maui, from Lahaina to Waikapu. Currently, this species is found in three occurrences: Kaunoahua gulch (500 to 1,000 individuals), Puu Hona (about 50 individuals), and Waikapu Stream (3 to 5 individuals), in the lowland dry ecosystem on west Maui (TNC 2007; Oppenheimer 2010k, in litt.; Oppenheimer 2010l, in litt.). Hybrids and hybrid swarms between *S. salicaria* and *S. menziesii* are known on the western side of west Maui (Wagner *et al.* 2005b, p. 138). However, according to Weller (2012, in litt.) the hybridization process is natural when *S. salicaria* and *S. menziesii* co-occur and because of the dynamics in this hybrid zone, traits of *S. salicaria* prevail and replace those of *S. menziesii*. Weller (2012, in litt.) notes that populations of both species will likely remain distinct because the two species do not overlap throughout much of their range.

*Schiedea sarmentosa* (NCN), a short-lived perennial herb in the pink family (Caryophyllaceae), is endemic to Molokai (Wagner *et al.* 2005b, pp. 116–119). At the time we designated critical habitat in 2003, this species was known from five occurrences with an estimated total of over 1,000 individuals (68 FR 12982, March 18, 2003). Currently, *S. sarmentosa* is known from three occurrences from Onini Gulch to Makolelau, with as many as several thousand individuals, in the lowland mesic ecosystem (TNC 2007; Perlman 2009l, in litt.; HBMP 2010; Oppenheimer 2010hh, in litt.; Perlman 2010, in litt.; Wood 2010e, in litt.).

*Sesbania tomentosa* (ohai) is a short-lived perennial shrub or small tree in the pea family (Fabaceae) (Geesink *et al.* 1999, pp. 704–705). At the time we designated critical habitat in 2003, *S. tomentosa* was known from 1 occurrence on Kauai, 9 occurrences on Molokai, 7 occurrences on Maui, several thousand individuals on Nihoa Island, “in great abundance” on Necker Island, 31 occurrences on Hawaii Island; and, in 2012, from 3 occurrences on Oahu (68 FR 9116, February 27, 2003; 68 FR

12982, March 18, 2003; 68 FR 25934, May 14, 2003; 68 FR 28054, May 22, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). Historically widespread throughout the Hawaiian Islands and the Northwestern Hawaiian Islands (NWHI), this species now occurs in larger numbers only on Nihoa and Necker (NWHI, approximately 5,500 individuals), with relatively few occurrences persisting on the eight main Hawaiian islands. Currently, on the eight main Hawaiian Islands, *S. tomentosa* is known from Kauai, Molokai, Maui, Kahoolawe, Oahu, and Hawaii (possibly totaling as many as 2,000 individuals). The number of individuals at any one location varies widely, depending on rainfall (TNC 2007; NTBG 2009k). On Molokai, there is one occurrence on the northwest shore from Moomomi to Nenehanaupo (35 individuals), and about 1,000 or more individuals on the south coast scattered from Kamiloloa to the Kawela plain, in the coastal and lowland dry ecosystems. Historically, this species also occurred in Molokai's lowland mesic ecosystem (TNC 2007; Cole 2008, in litt.; NTBG 2009k). On west Maui, there are 3 occurrences totaling 80 individuals from Nakalele Point to Mokolea Point, in the coastal ecosystem. Historically, this species also occurred in the lowland dry ecosystem on west Maui (TNC 2007; NTBG 2009k; Oppenheimer 2009h, in litt.). On east Maui, there is one occurrence of 10 individuals in the lowland dry ecosystem (TNC 2007; Cole 2008, in litt.; Oppenheimer 2009h, in litt.; Oppenheimer 2010i, in litt.). On Kahoolawe, about 300 individuals occur in the coastal ecosystem on Puu Koaie islet. *Sesbania tomentosa* has not been seen in the coastal and lowland dry ecosystems on Lanai for over 50 years (TNC 2007; HBMP 2010). Current threats to this species are significant and include herbivory by feral ungulates, deer, nonnative insects (borers and scale), and slugs, seed predation by rats, fire, drought, and low fruit set resulting from lack of pollinators or self-incompatibility, and low seedling recruitment. Herbivory by the nonnative gray bird grasshopper, *Schistocerca nitens*, is a threat to occurrences on Nihoa (Latchininsky 2008, 15 pp.). Fortini *et al.* (2013, p. 89) conducted a landscape-based assessment of climate change vulnerability for *S. tomentosa*, and concluded that this species is moderately vulnerable to the impacts of climate change. To be considered for delisting, threats to *S. tomentosa* must be managed or controlled, and there must be a minimum of 8 to 10 self-

sustaining populations consisting of all size classes, over a period of 5 years, that should be documented on 2 to 3 of the eight main Hawaiian islands where it now occurs or occurred historically. These goals have not been met, as currently no population on the main Hawaiian Islands is considered sufficiently large and self-sustaining; in addition, all threats are not being sufficiently managed throughout all of the occurrences, even at the more remote occurrences on the NWHI. Designation of unoccupied habitat (in addition to occupied habitat) is essential to the conservation of *S. tomentosa* as it remains in danger of extinction throughout its range, therefore it requires sufficient habitat to persist in the face of ongoing and future threats, and for the expansion or reestablishment of multiple, self-sustaining populations in areas presently not occupied by the species to meet recovery goals.

*Silene alexandri* (NCN), a short-lived perennial subshrub in the pink family (Caryophyllaceae), is known from Molokai (Wagner *et al.* 1999j, p. 522). At the time we designated critical habitat in 2003, *S. alexandri* was extirpated in the wild, but individuals remained in cultivation (68 FR 12982, March 18, 2003). Currently, *S. alexandri* is known from 1 occurrence of 25 individuals near Kawela Gulch, in the lowland mesic ecosystem (TNC 2007; HBMP 2008; PEPP 2009, p. 111; HBMP 2010; Oppenheimer 2010u, in litt.).

*Silene lanceolata* (NCN), a short-lived perennial subshrub in the pink family (Caryophyllaceae), is known from Kauai, Oahu, Molokai, Lanai, and the island of Hawaii (Wagner *et al.* 1999j, p. 523). At the time we designated critical habitat on Molokai in 2003 and on Oahu in 2012, *S. lanceolata* was known from Molokai, Oahu, and the island of Hawaii (68 FR 12982, March 18, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). However, no critical habitat was designated for this species on Lanai, Kauai, or Hawaii in 2003 (68 FR 1220, January 9, 2003; 68 FR 9116, February 27, 2003; 68 FR 39624, July 2, 2003). Currently, on Molokai, there are 2 occurrences totaling approximately 200 individuals at Kapuaokoolau and along cliffs between Kawela and Makolelau, in the lowland mesic ecosystem (TNC 2007; HBMP 2008; Oppenheimer 2010u, in litt.). This species has not been observed in the lowland dry ecosystem on Lanai since the 1930s (TNC 2007; HBMP 2010).

*Solanum incompletum* (popolo ku mai), a short-lived perennial shrub in the nightshade family (Solanaceae), is

reported from Kauai, Molokai, Lanai, Maui, and the island of Hawaii (Symon 1999, pp. 1,270–1,271). At the time we designated critical habitat in 2003, this species was only known from one occurrence on the island of Hawaii (68 FR 39624, July 2, 2003). Currently, there are no known occurrences on Lanai, Molokai, or Maui (HBMP 2008; PEPP 2009, p. 112; HBMP 2010). Historically, this species occurred in the lowland dry, lowland mesic, and dry cliff ecosystems on Lanai, and in the lowland dry and lowland mesic ecosystems on east Maui. It is unclear when and where this plant was collected on Molokai (TNC 2007; HBMP 2010).

*Spermolepis hawaiiensis* (NCN), an annual herb in the parsley family (Apiaceae), is known from Kauai, Oahu, Molokai, Lanai, and the island of Hawaii (Constance and Affolter 1999, p. 212). At the time we designated critical habitat on Kauai, Molokai, and Maui in 2003, and on Oahu in 2012, *S. hawaiiensis* was known from 3 occurrences on Lanai, 2 occurrences on Kauai, 1 occurrence on Molokai, 5 occurrences on Maui, 30 occurrences on Hawaii Island, and 4 occurrences on Oahu (68 FR 1220, January 9, 2003; 68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 77 FR 57648, September 18, 2012). No critical habitat was designated for this species on Hawaii Island in 2003 (68 FR 39624, July 2, 2003). Currently in Maui Nui there are nine occurrences totaling possible a several thousand individuals. On Lanai, there are 3 occurrences at Makiki Ridge, Kahewai Gulch to Puhialelu Ridge, and Kapoho Gulch, totaling between 500 and 600 individuals in the lowland dry and lowland mesic ecosystems. On Molokai, there are thousands of individuals at Makolelau and Kapuaokoolau, in the lowland mesic and montane mesic ecosystems (Perlman 2007e, in litt.; TNC 2007; HBMP 2010; Oppenheimer 2010u, in litt.). On east Maui, there is one occurrence at Kanaio, with possibly 1,000 individuals, in the lowland dry ecosystem. On west Maui, there are at least 3 occurrences that may total over 1,000 individuals at Puu Hipa, Olowalu, and Ukumehame in the lowland dry ecosystem. A recent (2010) fire at Olowalu burned at least 50 individuals (TNC 2007; HBMP 2010; Oppenheimer 2010b, in litt. 2010i, in litt.). Because of this species' annual growth habit (grows, blooms, seeds, and dies within 1 year), larger numbers of individuals (as compared to long-lived perennials) are required to ensure long-term

persistence as reproduction is dependent on the longevity of the seedbank. Overall, the numbers of individuals have declined from the approximately 13,000 wild individuals reported in 2010 to approximately 6,000 wild individuals reported in 2015 (Service 2010, in litt.; Service 2015, in litt.). Current threats to this species are herbivory by feral pigs, goats, sheep, deer, and mouflon; competition with nonnative plants; fire; erosion; landslides; rockslides; and drought (Service 1999, in litt.; Service 2015, in litt.). Fortini *et al.* (2013, p. 89) conducted a landscape-based assessment of climate change vulnerability for *S. hawaiiensis* and concluded that this species has moderately low vulnerability to the impacts of climate change. Since *S. hawaiiensis* is an annual plant, to be considered for delisting, a minimum of 5 to 7 naturally reproducing populations of at least 500 individuals each must be stable or increasing in numbers on islands where it now occurs or occurred historically. These goals have not been met and threats are not being sufficiently managed. Designation of unoccupied habitat (in addition to occupied habitat) is essential to the conservation of *S. hawaiiensis* as it remains in danger of extinction throughout its range, therefore sufficient habitat is required to allow the species to persist in the face of ongoing and future threats, and for the expansion or reestablishment of multiple, self-sustaining populations in areas presently not occupied by the species to meet recovery goals.

*Stenogyne bifida* (NCN), a short-lived climbing perennial herb in the mint family (Lamiaceae), is known from Molokai (Weller and Sakai 1999, p. 835). At the time we designated critical habitat in 2003, there were five known occurrences (68 FR 12982, March 18, 2003). Currently, *S. bifida* is known from one individual in Kawela Gulch, in the montane wet ecosystem (TNC 2007; HBMP 2008; PEPP 2009, p. 113; Tangalin 2009, in litt.; HBMP 2010). The status of the plants in the montane mesic ecosystem, farther west, is unknown (Oppenheimer 2009i, in litt.). Historically, this species was also found in Molokai's lowland mesic, lowland wet, montane mesic, and wet cliff ecosystems (TNC 2007; HBMP 2010).

*Stenogyne kauaulaensis* (NCN), a short-lived perennial vine in the mint family (Lamiaceae), occurs on Maui. This recently described (2008) plant is found only along the southeastern rim of Kauaula Valley, in the montane mesic ecosystem on west Maui (TNC 2007; Wood and Oppenheimer 2008, pp. 544–

545). At the time *S. kauaulaensis* was described, the authors reported a total of 15 individuals in one occurrence. However, one of the authors reports that due to the clonal (genetic duplicate) growth habit of this species, botanists believe it is currently represented by only three genetically distinct individuals (Oppenheimer 2010k, in litt.).

*Tetramolopium capillare* (pamakani), a short-lived perennial sprawling shrub in the sunflower family (Asteraceae), is known from west Maui (Lowrey 1999, p. 363). At the time we designated critical habitat in 2003, this species was known from five occurrences (68 FR 25934, May 14, 2003). Although *Tetramolopium capillare* was last observed in the wet cliff (Kauaula) and dry cliff (Ukumehame) ecosystems in 2001, and in the lowland dry ecosystem (Ukumehame) in 1995, these plants are no longer extant (TNC 2007; HBMP 2010; Oppenheimer 2010i, in litt.). Currently, there are no known occurrences on west Maui (PEPP 2009, p. 113).

*Tetramolopium lepidotum* ssp. *lepidotum* (NCN), a short-lived perennial shrub in the sunflower family (Asteraceae), is known from Oahu and Lanai (Lowrey 1999, p. 376). At the time we designated critical habitat in 2012, this subspecies was only known from three occurrences on Oahu (77 FR 57648, September 18, 2012). Currently, *T. lepidotum* ssp. *lepidotum* is only found on Oahu. This subspecies was last observed in the lowland dry ecosystem on Lanai in the early 1900s (TNC 2007; HBMP 2008; PEPP 2009, pp. 113–114; HBMP 2010).

*Tetramolopium remyi* (NCN), a short-lived perennial shrub in the sunflower family (Asteraceae), is known from Lanai and west Maui (Lowrey 1999, pp. 367–368). At the time we designated critical habitat in 2003, there was one occurrence on Lanai totaling approximately 150 individuals, and there were an unknown number of individuals in the Kuia area on west Maui (68 FR 1220, January 9, 2003; 68 FR 25934, May 14, 2003). Currently, there is one known individual on Lanai at Awehi, in the lowland dry ecosystem (TNC 2007; HBMP 2010; Oppenheimer 2010ii, in litt.; Perlman 2008h, in litt.). There are an unknown number of individuals in the Kuia area on west Maui in the lowland dry ecosystem (TNC 2007; HBMP 2010).

*Tetramolopium rockii* (NCN), a short-lived perennial shrub in the sunflower family (Asteraceae), is endemic to the island of Molokai (Lowrey 1999, p. 368). There are two varieties: *T. rockii* var. *calcisabulorum* and *T. rockii* var. *rockii*

(Lowrey 1999, p. 368). At the time we designated critical habitat in 2003, *T. rockii* was known from four occurrences totaling thousands of individuals (68 FR 12982, March 18, 2003). *Tetramolopium rockii* var. *calcisabulorum* was reported from Kaiehu Point to Kapalauoa, intergrading with var. *rockii*. *Tetramolopium rockii* var. *rockii* occurred from Kalawao to Kahinaakalani, Kaiehu point to Kapalauoa, and Moomomi to Kahinaakalani. Currently, numbers fluctuate considerably from year to year but remain in the thousands, and occurrences are found along the northwest shore of Molokai, from Kaa Gulch to Kahinaakalani, and on Kalaupapa peninsula from Alau to Makalii, in the coastal ecosystem (Canfield 1990, p. 20; Perlman 2006c, in litt.; TNC 2007; HBMP 2008; NTBG 2009l; HBMP 2010; Wood 2010f, in litt.).

*Vigna o-wahuensis* (NCN), a twining, short-lived perennial herb in the pea family (Fabaceae), is known from all of the main Hawaiian Islands except Kauai (Geesink *et al.* 1999, pp. 720–721). At the time we designated critical habitat on Maui and Hawaii in 2003 and Oahu in 2012, *V. o-wahuensis* was known from 6 occurrences totaling approximately 30 individuals on Lanai, Molokai, Maui, and Kahoolawe, and the island of Hawaii (68 FR 1220, January 9, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003; 77 FR 57648, September 18, 2012). However, no critical habitat was designated for this species on Lanai or Molokai in 2003 (68 FR 1220, January 9, 2003; 68 FR 12982, March 18, 2003). Currently, there are 22 individuals in 3 occurrences on Molokai, Maui, and Kahoolawe. On Molokai, 2 occurrences totaling 12 individuals are known from Makakupaia and Makolelau, in the lowland mesic ecosystem. On east Maui, there are approximately 10 individuals at Kanaio Beach in the coastal ecosystem. On Kahoolawe, there is one individual in the lowland dry ecosystem. Historically, *V. o-wahuensis* was found in the lowland dry and lowland mesic ecosystems on Lanai, and in the coastal ecosystem on Kahoolawe (Perlman 2005, in litt.; TNC 2007; HBMP 2010; Wood 2010g, in litt.).

*Viola lanaiensis* (NCN), a short-lived perennial subshrub in the violet family (Violaceae), is known from Lanai (Wagner *et al.* 1999aa, pp. 1,334–1,336). In 2003, there were 2 known occurrences totaling fewer than 80 individuals; however, no critical habitat was designated for this species on Lanai (68 FR 1220, January 9, 2003).

Currently, 6 individuals are found in Awehi Gulch, in the wet cliff ecosystem on Lanai. Historically, this species was also reported in the montane wet and dry cliff ecosystems on Lanai (TNC 2007; HBMP 2008; PEPP 2008, p. 84; PEPP 2009, p. 117; HBMP 2010). A new population of over 140 individuals of *V. lanaiensis* was recently discovered on Helu Peak, west Maui, in the montane mesic ecosystem (Havran *et al.* 2012). This information extends the known range for *V. lanaiensis* to the island of Maui. However, we will reevaluate the listing status of this species in a future proposed rulemaking.

*Wikstroemia villosa* (akia), a short-lived perennial shrub or tree in the akia family (Thymelaeaceae), is found on Maui (Peterson 1999, pp. 1,290–1,291). Historically known from the lowland wet, montane wet, and montane mesic ecosystems on east and west Maui, this species is currently known from a recent discovery (2007) of one individual on the windward side of Haleakala (on east Maui), in the montane wet ecosystem (Peterson 1999, p. 1,291; TNC 2007; HBMP 2010). As of 2010, there was one individual and one seedling at the same location (Oppenheimer 2010m, in litt.). In addition, three individuals have been outplanted in Waikamoi Preserve (Oppenheimer 2010m, in litt.).

*Zanthoxylum hawaiiense* (ae), a long-lived perennial tree in the rue family (Rutaceae), is known from Kauai, Molokai, Lanai, Maui, and the island of Hawaii (Stone *et al.* 1999, pp. 1,214–1,215). At the time we designated critical habitat on Kauai, Molokai, and Maui in 2003, *Z. hawaiiense* was known from 3 occurrences on Kauai, 5 individuals on Molokai, 9 occurrences on Maui, and 186 occurrences on the island of Hawaii (68 FR 9116, February 27, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003; 68 FR 39624, July 2, 2003). No critical habitat was designated for this species on Hawaii in 2003 (68 FR 39624, July 2, 2003). Currently, on Molokai and Maui, this species is known from 5 or 6 occurrences totaling 14 individuals. On Molokai, there are two mature individuals in the lowland wet ecosystem, one individual above Kamalo in the montane wet ecosystem, and one individual in Makolelau Gulch in the lowland mesic ecosystem. On west Maui, there are seven individuals at Puehuhunui in the montane mesic and lowland mesic ecosystems. On east Maui, at Auwahi, there are three individuals in the montane dry and lowland dry ecosystems. Historically, this species also occurred in Maui's subalpine and montane mesic ecosystems (Perlman 2001, in litt.;

Evans *et al.* 2003, pp. 41, 47; NTBG 2005; TNC 2007; Wood 2007, in litt.; HBMP 2008; PEPP 2009, pp. 22, 27, 119; HBMP 2010). *Zanthoxylum hawaiiense* was last seen on Lanai in the lowland wet ecosystem in 1947 (TNC 2007; HBMP 2010).

#### Animals

##### Birds

##### Kiwikiu

The Maui parrotbill, or kiwikiu (*Pseudonestor xanthophrys*), is a small Hawaiian honeycreeper found only on the island of Maui, currently in the mid- to upper-elevation montane mesic and montane wet ecosystems (USFWS 2006, p. 2–79; TNC 2007). The Hawaiian honeycreepers are in the subfamily Drepanidinae of the finch family, Fringillidae (AOU 1998, p. 673). The kiwikiu is most common in wet forests dominated by *Metrosideros polymorpha* trees and a few mesic areas dominated by *M. polymorpha* and *Acacia koa* trees with an intact, dense, diverse native understory and subcanopy of ferns, sedges, epiphytes, shrubs and small to medium trees (USFWS 2006, p. 2–79). In 1980, the number of kiwikiu was estimated by the Hawaii Forest Bird Survey (HFBS) at 500 ±230 (95 percent confidence interval) birds with an average density of 10 birds per 0.39 sq mi (1 sq km) (Scott *et al.* 1986, p. 115). Currently, the kiwikiu is found only on Haleakala on east Maui, in an area of 12,355 ac (50 sq km) at elevations between 4,500 and 6,500 ft (1,360 to 1,970 m) (NPS 2012, in litt.). The kiwikiu is insectivorous and often feeds in a deliberate manner, using its massive hooked bill to dig, tear, crack, crush, and chisel the bark and softer woods on a variety of understory native shrubs and small- to medium-sized subcanopy trees, especially *Rubus hawaiiensis* (akala), *Broussaisia arguta* (kanawao), and *M. polymorpha* (USFWS 2006, p. 2–77; NPS 2012, in litt.). Kiwikiu also pluck and bite open fruits, especially *B. arguta* fruits, in search of insects, but do not eat the fruit itself (USFWS 2006, pp. 2–77–2–78). The open cup nest, composed mainly of lichens (*Usnea* sp.) and *Leptecophylla tameiameiae* (pukiawe) twigs, is built by the female an average of 40 ft (12 m) above the ground in a forked branch just under the outer canopy foliage (USFWS 2006, p. 2–78). Based on collections of subfossil bones, the current geographic range is much restricted compared to the known prehistorical range, which included mesic leeward forests and low elevations between 660 and 1,000 ft (200 to 300 m) on east Maui as well as Molokai (James and Olson 1991, p. 80;

Olson and James 1991, pp. 14–15; TNC 2007). Surveys from 1995 to 1997 at Hanawi, a study site located in the core of the species' range, showed that the kiwikiu occurred there at approximately the same density (40 birds per 0.39 sq mi (1 sq km)) as in 1980 (Simon *et al.* 2002, p. 477). However, subsequent surveys across the species' range have not conclusively shown that its densities are stable (Camp *et al.* 2009, p. 39).

##### Akohekohe

The crested honeycreeper, or akohekohe (*Palmeria dolei*), is a small forest bird found only on the island of Maui, currently in the mid- to upper-elevation montane mesic and montane wet ecosystems (USFWS 2006, p. 2–139; TNC 2007). Like the kiwikiu, the akohekohe is also a Hawaiian honeycreeper in the subfamily Drepanidinae of the finch family, Fringillidae (AOU 1998, p. 678). The akohekohe is most common in the wet forest habitat described above for the kiwikiu, except that the lower limit of the akohekohe's elevational range is higher (roughly 5,000 ft (1,525 m)) than the lower limit of the kiwikiu's elevational range (USFWS 2006, p. 2–139; NPS 2012, in litt.). In 1980, the number of akohekohe was estimated by the HFBS at 3,800 ±700 (95 percent confidence interval) individuals (Scott *et al.* 1986, p. 168). Currently the akohekohe is found only on Haleakala, east Maui, in 14,080 ac (58 sq km) at elevations between 5,000 and 6,500 ft (1,500 to 1,970 m) at Manawainui, Kipahulu Valley, and the upper Hana rainforest (USFWS 2006, p. 2–140; NPS 2012, in litt.). The akohekohe is primarily nectarivorous, but also feeds on caterpillars, spiders, and dipterans (flies) (USFWS 2006, p. 2–138). Nectar is primarily sought from flowers of *Metrosideros polymorpha* trees but also from several subcanopy tree and shrub species when *M. polymorpha* trees are not in bloom (USFWS 2006, p. 2–139; NPS 2012, in litt.). The open cup nest is built by the female an average 46 ft (14 m) above the ground in the terminal ends of branches below the canopy foliage of *M. polymorpha* trees (USFWS 2006, p. 2–139). Based on collections of subfossil bones, the current geographic range is much restricted compared to the known prehistorical range, which included dry leeward areas of east and west Maui, and Molokai (Berlin and VanGelder 1999, p. 3). The HFBS and subsequent surveys of the akohekohe range yielded densities of 81 ±10 birds per 0.39 sq mi (1 sq km) in 1980, 98 ±11 birds per 0.39 sq mi (1 sq km) from 1992 to 1996, and 116 ±14 birds per 0.39 sq

mi (1 sq km) between 1997 and 2001 (Camp *et al.* 2009, p. 81; Gorresen *et al.* 2009, pp. 123–124). Densities in the core of the species' range within the Hanawi Natural Area Reserve were 183 ±59 birds per 0.39 sq mi (1 sq km) in 1988, and 290 ±10 birds per 0.39 sq mi (1 sq km) from 1995 to 1997 (Berlin and VanGelder 1999, p. 11). These results indicate that the species' rangewide and core densities have both increased and the current population may be larger than previously estimated (Gorresen *et al.* 2009, p. 124).

#### Tree Snails

Newcomb's tree snail (*Newcombia cumingi*), a member of the family Achatinellidae and the endemic Hawaiian subfamily Achatinellinae (Newcomb 1853, p. 25), is known only from the island of Maui (Cowie *et al.* 1995, p. 62). The exact life span and fecundity of the Newcomb's tree snail is unknown, but they attain adult size within 4 to 5 years (Thacker and Hadfield 1998, p. 2). Newcomb's tree snail is believed to exhibit the low reproductive rate of other Hawaiian tree snails belonging to the same family (Thacker and Hadfield 1998, p. 2). It feeds on fungi and algae that grow on the leaves and trunks of its native host plant, the tree *Metrosideros polymorpha* (Pilsbry and Cooke 1912–1914, p. 103). Historically, Newcomb's tree snail was distributed from the west Maui mountains (near Lahaina and Wailuku) to the slopes of Haleakala (Makawao) on east Maui (Pilsbry and Cooke 1912–1914, p. 10). In 1994, a small population of Newcomb's tree snail was found on a single ridge on the northeastern slope of the west Maui mountains, in the lowland wet ecosystem (Thacker and Hadfield 1998, p. 3; TNC 2007). Eighty-six snails were documented in the same location in 1998; in 2006, only nine individuals were located; and, in 2012, only one individual was located (Thacker and Hadfield 1998, p. 2; Hadfield 2007, p. 8; Higashino 2013, in litt.).

*Partulina semicarinata* (Lanai tree snail, pupu kani oe), a member of the family Achatinellidae and the endemic Hawaiian subfamily Achatinellinae, is known only from the island of Lanai (Pilsbry and Cooke 1912–1914, p. 86). Adults may attain an age exceeding 15 to 20 years, and reproductive output is low, with an adult snail giving birth to 4 to 6 live young per year (Hadfield and Miller 1989, pp. 10–12). *Partulina semicarinata* is arboreal and nocturnal, and grazes on fungi and algae growing on leaf surfaces (Pilsbry and Cooke 1912–1914, p. 103). This snail species is found on the following native host

plants: *Metrosideros polymorpha*, *Broussaisia arguta* (kanawao), *Psychotria* spp. (kopiko), *Coprosma* spp. (pilo), *Melicope* spp. (alani), and dead *Cibotium glaucum* (tree fern, hapuu). Occasionally the snail is found on nonnative plants such as *Psidium guajava* (guava), *Cordyline australis* (New Zealand tea tree), and *Phormium tenax* (New Zealand flax) (Hadfield 1994, p. 2). Historically, *P. semicarinata* was found in wet and mesic *M. polymorpha* forests on Lanai. There are no historical population estimates for this snail, but qualitative accounts of Hawaiian tree snails indicates they were once widespread and abundant, possibly numbering in the tens of thousands between the 1800s and early 1900s (Hadfield 1986, p. 69). In 1993, 105 individuals of *P. semicarinata* were found during surveys conducted in its historical range. Subsequent surveys in 1994, 2000, 2001, and 2005 documented 55, 12, 4, and 29 individuals, respectively, in the lowland wet, montane wet, and wet cliff ecosystems in central Lanai (Hadfield 2005, pp. 3–5; TNC 2007).

*Partulina variabilis* (Lanai tree snail, pupu kani oe), a member of the family Achatinellidae and the endemic Hawaiian subfamily Achatinellinae, is known only from the island of Lanai (Pilsbry and Cooke 1912–1914, p. 86). Adults may attain an age exceeding 15 to 20 years, and reproductive output is low, with an adult snail giving birth to 4 to 6 live young per year (Hadfield and Miller 1989, pp. 10–12). *Partulina variabilis* is arboreal and nocturnal, and grazes on fungi and algae growing on leaf surfaces (Pilsbry and Cooke 1912–1914, p. 103). This snail is found on the following native host plants: *Metrosideros polymorpha*, *Broussaisia arguta*, *Psychotria* spp., *Coprosma* spp., *Melicope* spp., and dead *Cibotium glaucum*. Occasionally *Partulina variabilis* is found on nonnative plants such as *Psidium guajava* and *Cordyline australis* (Hadfield 1994, p. 2). Historically, *Partulina variabilis* was found in wet and mesic *M. polymorpha* forests on Lanai. There are no historical population estimates for this snail, but qualitative accounts of Hawaiian tree snails indicate they were widespread and abundant, possibly numbering in the tens of thousands between the 1800s and early 1900s (Hadfield 1986, p. 69). In 1993, 111 individuals of *P. variabilis* were found during surveys conducted in its historical range. Subsequent surveys in 1994, 2000, 2001, and 2005 documented 175, 14, 6, and 90 individuals, respectively, in the lowland wet, montane wet, and wet cliff

ecosystems in central Lanai (Hadfield 2005, pp. 3–5; TNC 2007).

#### *An Ecosystem-Based Approach To Determining Primary Constituent Elements of Critical Habitat*

Under section 4(a)(3)(A) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), we are required to designate critical habitat to the maximum extent prudent and determinable concurrently with the publication of a final determination that a species is endangered or threatened. In this final rule, we are designating critical habitat for 125 endangered or threatened species (122 plants, 1 tree snail, and 2 forest birds) on the islands of Molokai, Maui, and Kahoolawe. As described in our June 11, 2012, proposed rule (77 FR 34464), we proposed critical habitat for the first time for 50 plant and animal species (37 newly listed and 2 species for which we reaffirmed listed status, as well as 11 previously listed plant and animal species that did not have designated critical habitat (May 28, 2013; 78 FR 32014)), and proposed to revise critical habitat for 85 listed plant species, for a total of 135 species. As noted above, as a result of exclusions under section 4(b)(2) of the Act, no critical habitat is designated for 10 of those species, therefore we are finalizing critical habitat for 125 of those 135 species.

In this final rule, we are designating critical habitat for 125 species in 165 unique critical habitat units. Although critical habitat is identified for each species individually, we have found that the conservation of each depends, at least in part, on the successful functioning of the physical or biological features of their commonly shared ecosystem. Each critical habitat unit identified in this final rule contains the physical or biological features essential to the conservation of those individual species that occupy that particular unit, or areas essential for the conservation of those species identified that do not presently occupy that particular unit. Where the unit is not occupied by a particular species, we conclude it is still essential for the conservation of that species because the designation allows for the expansion of its range and reintroduction of individuals into areas where it occurred historically, and provides area for recovery in the case of stochastic events that otherwise hold the potential to eliminate the species from the one or more locations where it may presently be found. Under current conditions, many of these species are so rare in the wild that they are at high risk of extirpation or even extinction from various stochastic events, such as

hurricanes or landslides. Therefore, building up resilience and redundancy in these species through the establishment of multiple, robust populations is a key component of recovery.

Each of the areas designated represents critical habitat for multiple species, based upon their shared habitat requirements (*i.e.*, physical or biological features) essential for their conservation. This designation of critical habitat also takes into account any species-specific conservation needs. For example, the presence of a seasonally wet area within the coastal ecosystem is essential for the conservation of the plant *Marsilea villosa*, but is not a requirement shared by all of the other species within that same ecosystem; this is an example of a species-specific requirement. However, a broader, functioning ecosystem is also essential to *M. villosa* because it provides the “ecosystem-level” physical or biological features required to support its specific life-history requirements.

In the interest of reducing the length of this document, we have provided detailed background information regarding the islands of Maui Nui, as well as descriptions of the relevant Maui Nui ecosystems that provide habitat for these species, in our supporting document “Supplemental Information for the Designation and Nondesignation of Critical Habitat on Molokai, Lanai, Maui, and Kahoolawe for 135 Species,” available at <http://www.regulations.gov> (see **ADDRESSES**).

#### IV. Summary of Comments and Recommendations

On June 11, 2012, we published a proposed rule to list 38 Maui Nui species (35 plants and 3 tree snails) as endangered and reevaluate the listing of 2 Maui Nui plant species as endangered throughout their ranges, and to designate critical habitat for 135 species (77 FR 34464). The proposed rule opened a 60-day comment period. On August 9, 2012 (77 FR 47587), we extended the comment period for the proposed rule for an additional 30 days, ending on September 10, 2012. We requested that all interested parties submit comments or information concerning the proposed listing and designation of critical habitat for 135 species. We contacted all appropriate State and Federal agencies, county governments, elected officials, scientific organizations, and other interested parties and invited them to comment. In addition, we published a public notice of the proposed rule on June 20, 2012, in the local Honolulu Star Advertiser, Maui Times, and Molokai Dispatch

newspapers, at the beginning of the comment period. We received three requests for public hearings. On January 31, 2013, we published a document (78 FR 6785) reopening the comment period on the June 11, 2012, proposed rule (77 FR 34464), announcing the availability of our draft economic analysis (DEA) on the proposed critical habitat, and requesting comments on both the proposed rule and the DEA. This comment period closed on March 4, 2013. In addition, in that same document (January 31, 2013; 78 FR 6785) we announced a public information meeting and hearing, which we held in Kihei, Maui, on February 21, 2013. On June 10, 2015, we again reopened the comment period on the proposed critical habitat for an additional 15 days (80 FR 32922); this comment period closed on June 25, 2015.

In addition, on February 25, 2013, during a meeting of the Maui County Council’s Policy and Intergovernmental Affairs (PIA) Committee in Wailuku, Maui, the council received public testimony on the Service’s June 11, 2012 (77 FR 34464), proposed rule. Fourteen individuals present at the meeting provided oral testimony, and 4 individuals provided only written testimony, on the proposed designation of critical habitat for 135 species.

During the comment periods, we received a total of 150 unique comment letters on the proposed listing of 38 species, reevaluation of listing for 2 species, and proposed designation of critical habitat. In addition, we received 5,107 copies of an electronic form letter in support of critical habitat designation from a Web site available to a worldwide audience. No additional scientific information was provided in these form letters. We also received a petition entitled “Maui Hunters Oppose Maui Nui Critical Habitat Designation,” signed by 93 individuals. Of the 150 commenters, 11 were State of Hawaii or Maui County elected officials, three were Federal agencies (Pacific West Region of the National Park Service, Haleakala National Park, and Kalaupapa National Historical Park), four were State of Hawaii agencies (Hawaii Department of Health (although they did not provide any comments specific to critical habitat), Hawaii Department of Agriculture, Hawaii Division of Forestry and Wildlife, Hawaii Department of Hawaiian Homelands), three were affiliated with Maui County (Maui County Police Department, Maui County Planning Department, and Maui County Council Committee on Policy and Intergovernmental Affairs), and 129 were nongovernmental organizations or

individuals; and, counted separately, the 5,107 electronic form letters (as described above). During the February 21, 2013, public hearing, 25 individuals or organizations made comments on the proposed designation of critical habitat for 135 species and the DEA. Due to the nature of the proposed rule, we received combined comments from the public and peer reviewers on both the listing action and the critical habitat designation. Comments relevant to the proposed listing of the 38 species and reevaluation of 2 species were addressed in the final listing rule published May 28, 2013 (78 FR 32014). In this final rule, we address only those comments relevant to the designation of critical habitat.

All substantive information provided during the comment periods related to the critical habitat designation has either been incorporated directly into this final rule as appropriate or is addressed below. Comments we received are grouped into comments specifically relating to the proposed critical habitat designation, the Lanai Memorandum of Understanding (MOU), or the DEA. For readers’ convenience, we have combined similar comments into single comments and responses.

#### Peer Review

In accordance with our peer review policy published in the **Federal Register** on July 1, 1994 (59 FR 34270), we solicited expert opinions from 10 knowledgeable individuals with scientific expertise on the Maui Nui plants, snails, and forest birds and their habitats, including familiarity with the species, the geographic region in which these species occur, and conservation biology principles. We received responses from four of these individuals. Of these four peer reviewers, three provided comments on the proposed critical habitat designation (the other reviewer commented only on the proposed listings). These peer reviewers generally supported our methodology and conclusions. We reviewed all comments we received from the peer reviewers for substantive issues and new information regarding the proposed designation of critical habitat for 135 species. Peer reviewer comments are addressed in the following summary and incorporated into the final rule as appropriate.

#### General Peer Review Comments

(1) *Comment:* One peer reviewer noted the absence of a literature cited section for the proposed rule.

*Our Response:* Although not included with the proposed rule itself, information on how to obtain a list of

our supporting documentation used was provided in the proposed rule under the sections Public Comments and References Cited (77 FR 34464; June 11, 2012). In addition, the lists of references cited in the proposed rule (77 FR 34464; June 11, 2012) and in this final rule are available on the Internet at <http://www.regulations.gov> at Docket Nos. FWS-R1-ES-2011-0098 and FWS-R1-ES-2015-0071, respectively, in the "Supporting Documents" section, and upon request from the Pacific Islands Fish and Wildlife Office (see **FOR FURTHER INFORMATION CONTACT**).

(2) *Comment*: One peer reviewer provided additional information regarding the biogeographical differences between east and west Maui.

*Our Response*: We have included this information in this final rule and corrected statements about the range of annual rainfall on east Maui (Giambelluca *et al.* 2011—online Rainfall Atlas of Hawaii), the diversity of vegetation in the mesic and wet ecosystems of east Maui relative to west Maui (Price 2004, p. 493), and the geologic age of the youngest lava flows found within the Cape Kinau region of east Maui (Sherrod *et al.* 2006, p. 40) (see *The Islands of Maui Nui* in our supporting document "Supplemental Information for the Designation and Nondesignation of Critical Habitat on Molokai, Lanai, Maui, and Kahoolawe for 135 Species," available at <http://www.regulations.gov> (see **ADDRESSES**)).

Peer Reviewer Comments on Critical Habitat for Plants

(3) *Comment*: One peer reviewer pointed out that, based on personal observations and information from Wagner *et al.* (2005, pp. 3 and 135), *Schiedea lydgatei*, a listed endangered plant for which we proposed revised critical habitat in the lowland mesic ecosystem on Molokai, occurs in lowland dry shrublands. In addition, this same reviewer noted that the endangered *Schiedea sarmentosa*, for which we proposed revised critical habitat in lowland mesic ecosystem on Molokai, occurs in lowland dry forest and shrubland on steep slopes and cliffs.

*Our Response*: We believe that both *Schiedea lydgatei* and *S. sarmentosa* are appropriately characterized as occupants of the lowland mesic ecosystem. According to the Hawaii State geodatabase dataset for annual rainfall in Hawaii (Giambelluca *et al.* 1986, digitized in ArcMap), *Schiedea lydgatei* and *S. sarmentosa* occur within the area defined as mesic, with rainfall between 50 to 75 inches (in) (127 to 190 centimeters (cm)) per year. In addition,

this area is within mesic habitat defined by The Nature Conservancy's GIS database for "An Ecoregional Assessment of Biodiversity Conservation for the Hawaiian High Islands" (<http://www.hawaiiecoregionplan.info/>). Portions of this area are affected by erosion resulting from browsing and trampling by feral ungulates and may be locally drier from lack of ground cover and exposure to wind, making it appear that this area should be characterized as "lowland dry." However, for the reasons cited above, we believe it is characterized correctly within the mesic ecosystem.

(4) *Comment*: One peer reviewer suggested that it may be appropriate to exclude certain State lands pursuant to the criteria under section 4(b)(2) of the Act from designated critical habitat for plants. These State lands include State Natural Area Reserves (NARs) that are fenced, ungulate-free, and staffed, and that are Priority I watershed areas according to the State's 'Rain Follows the Forest' plan (Hawaii Department of Land and Natural Resources (HDLNR) 2011, entire), or State lands covered by the HDLNR and Watershed Partnerships' Watershed Protection and Restoration Plan and that have permanent management teams of watershed partnership staff. The reviewer identified the following specific areas to consider excluding from critical habitat: Fenced, ungulate-free NARs of the west Maui mountains, ungulate-free portions of Hanawi NAR, and Puu Alii and Olokui NARs on Molokai.

*Our Response*: We commend the State of Hawaii for its dedication of staff and resources toward protection and management of species and their habitats through the 'Rain Follows the Forest' plan, management plans for individual State NARs, and watershed partnerships programs throughout the State. These initiatives, plans, and programs serve to focus conservation efforts and educate the public on the importance of these areas. The DLNR-DOFAW expressed support for the management goals of the critical habitat designation for west Maui, but were concerned that designation of critical habitat on lands actively managed for watershed and species protection on west Maui could have undesirable impacts on those private landowners who are conservation partners and members of the West Maui Mountains Watershed Partnership. We have taken those conservation efforts by these partners under consideration, and as a result of this evaluation, we have excluded all such private landowners

from the designation of critical habitat in this final rule, based on the demonstrated beneficial conservation efforts of those landowners (see *Exclusions Based on Other Relevant Factors*).

We support and value the conservation efforts by the State and recognize the necessity of actions taken on State lands for conservation of species and their habitats. We also agree that, if fenced, and maintained as ungulate-free, these areas on State lands would provide benefits to the species and their habitats. However, we note that the West Maui NAR-Kahakuloa section is within a public hunting area (pigs, goats, and birds) with daily bag limits, Hanawi NAR is within a public hunting area (goats and pigs) with daily bag limits, and Puu Alii NAR and Olokui NAR on Molokai are also within public hunting areas (goats and pigs) with daily bag limits, implying these areas are not yet entirely ungulate-free. Therefore, any beneficial management actions to address the threats from nonnative species in the NARs (*e.g.*, fencing, weed control) may be negated by the presence of ungulates. In addition, we considered the State's comments that "the Department [of Land and Natural Resources] does not have concerns or objections to the designation of CH [critical habitat] as proposed for Department lands within the West Maui mountains," nor did the State express concerns or object to critical habitat designation with regard to any of the NARs suggested by the peer reviewer. Although the State did not specifically request exclusion of any State lands under section 4(b)(2) of the Act, they did request that some areas be removed from the designation based on a conflict between the State's intended use of those areas (*e.g.*, recreational hunting) and critical habitat, or suggested that some of these areas were not necessary for the recovery of the species, and that recovery could be achieved elsewhere. We concluded that the suggested areas meet the definition of critical habitat. Further, the State offered no explanation as to why the benefit of exclusion of any State lands may outweigh the benefit of inclusion in critical habitat. Consequently, the Secretary has chosen not to exercise her discretionary authority to exclude any State lands from this final designation of critical habitat for the Maui Nui species.

Peer Reviewer Comments on Critical Habitat for Akohekohe and Kiwikiu

(5) *Comment*: Two peer reviewers stated that we did not adequately discuss the basis for proposing extensive areas of unoccupied habitat

for the two honeycreepers on west Maui and on Molokai. It was suggested that we include additional discussion on the significance of risk to isolated populations and their susceptibility to stochastic events. Additionally it was recommended that we elaborate upon the need for establishing secondary populations of the honeycreepers and to explain the feasibility of captive breeding to support these planned introduced populations.

*Our Response:* We appreciate the peer reviewers' comments. In this final rule we have included additional information to explain the need to designate unoccupied habitat for the two honeycreepers on west Maui and on Molokai (see "Recovery Strategy for Two Forest Birds," below). These forest birds now occur in low numbers and have experienced significant range restrictions. They face threats from natural processes such as inbreeding depression and natural and manmade stochastic events such as hurricanes, wildfires, and changes in habitat vegetation such as periodic dieback events (Revised Recovery Plan for Hawaiian Forest Birds (Recovery Plan), Service 2006, pp. ix–x). For both of these birds, long-term recovery cannot be achieved based solely upon the protection of existing populations. Population growth and expansion is essential to the conservation of these species, which will require sufficient areas of suitable unoccupied habitat within their historical range. In proposing areas of unoccupied habitat, we used the recovery areas identified for the akohekohe and kiwikiu in the Recovery Plan, the known locations of the species, The Nature Conservancy's Ecoregional Assessment of the Hawaiian High Islands (2006) and ecosystem maps (TNC 2007), published and unpublished reports, and GIS layers (see Methods, below). According to the Recovery Plan, the recovery areas are areas that will allow for the long-term survival and recovery of these two Hawaiian forest birds.

In this final rule we have also outlined the recovery criteria, as identified in the Recovery Plan, to ensure the conservation of the akohekohe and kiwikiu within their existing occupied habitat and those unoccupied habitats identified as essential for their conservation (see "Recovery Strategy for Two Forest Birds," below).

(6) *Comment:* One peer reviewer prioritized proposed critical habitat in order of importance to the akohekohe and kiwikiu. The reviewer suggested the following: First priority critical habitat units should include units with

populations of one or both of the honeycreepers and units adjacent to these areas within the same ecosystem designations; second priority critical habitat units should include adjacent habitat areas with the potential of linking isolated populations and/or providing contiguous habitat around Haleakala; third priority critical habitat units should include mesic *Acacia koa* (koa) woodlands above the current distribution of the two birds. Regarding these third priority areas, the reviewer emphasized that they are essential habitat because koa woodlands may represent a more optimal foraging habitat for the honeycreepers, and higher elevation habitat may provide a cooler refuge from encroaching disease (avian malaria, transmitted by mosquitoes) as local mean temperatures continue to rise. The reviewer went on to suggest that even heavily grazed and logged areas in the mesic koa woodlands should not be exempt from critical habitat, as areas with active or planned koa reforestation projects may have the greatest potential for sustaining higher densities of honeycreepers through their capacity to support the birds' arthropod prey.

*Our Response:* We appreciate the thorough consideration given by this peer reviewer to our proposed critical habitat for the akohekohe and kiwikiu. However, under the Act and our regulations at 50 CFR 424.12, critical habitat areas are not prioritized or ranked in any way at the time they are designated. However, the information provided by the peer reviewer may be germane to the prioritization of recovery actions for the akohekohe and kiwikiu, therefore we have provided it to the Hawaiian Forest Bird Recovery Team so that it may be incorporated into future planning efforts, as appropriate, possibly including revision of the 2006 Recovery Plan. As explained above, we used the recovery areas identified for the akohekohe and kiwikiu in the Recovery Plan, and other information (see also Methods, below) to identify critical habitat boundaries. According to the Recovery Plan, the recovery areas are areas that will provide for the long-term survival and recovery of these two Hawaiian forest birds. Recovery areas encompass existing endangered forest bird populations, as well as habitat areas from which these species have disappeared in the recent past, but which still provide or could provide the conditions and resources essential to support populations of endangered forest bird species. The recovery plan recognizes that to ensure the potential for population increase, additional

unoccupied but potentially suitable habitat will require restoration. These areas include koa forest and grazed areas that have potential for reforestation upslope from current populations, as suggested by the peer reviewer (see, for example, Service 2006, pp. 2–84–2–85, regarding habitat restoration needs for the kiwikiu, with particular attention to koa forests). In addition, the recovery area identified includes high-elevation forest habitat (up to the maximum elevation available on west Maui, excluding only the highest slopes of Haleakala on east Maui above treeline), thereby capturing as much potentially disease- and vector-free habitat as possible. We incorporated these areas as they are described in the Revised Recovery Plan for Hawaiian Forest Birds (Service 2006, pp. 2–80) into the forest bird critical habitat designation; we believe the areas we have designated are in agreement with the conservation principles suggested for the akohekohe and kiwikiu by the peer reviewer.

(7) *Comment:* One peer reviewer stated that actively managing for annual disease mortality may be essential for population expansion of the honeycreepers within the mesic and wet lowland areas proposed for critical habitat in order to ultimately restore the birds to their original altitudinal distribution.

*Our Response:* We agree that active management for disease mortality is likely essential for expansion of the honeycreeper into lowland mesic and wet areas where they no longer occur. In this final rule, we have provided additional background information on disease management within the lowland units proposed as critical habitat for the two honeycreepers (see "Disease and Disease Vectors" in the section *Special Management Considerations or Protections*, below). In addition, the importance of mosquito control due to the threat to Hawaiian forest birds, including the akohekohe and kiwikiu, from mosquito-borne diseases at lower elevations is discussed in the Recovery Plan (Service 2006, pp. 2–85, 2–143, and pp. 4–62–4–82), Ahumada *et al.* (2010, pp. 331–355), and LaPointe *et al.* in Pratt *et al.* (2010, pp. 405–424).

(8) *Comment:* One peer reviewer noted that our proposed designation of critical habitat for the honeycreepers within unoccupied lowland to montane mesic forest habitat on west Maui and Molokai would help to restore these species to their historic and prehistoric ranges and, more importantly, would provide habitat for secondary populations to insure against the

impacts resulting from disease or stochastic events including hurricanes or fires. However, the reviewer suggested that despite the benefit of being more distant from the current honeycreeper populations on east Maui, proposed units on Molokai were more likely to require management for avian malaria due to the lower elevation compared to proposed units on west Maui. The reviewer suggested that proposed higher elevation units on west Maui would be more suitable for translocations of the honeycreepers.

*Our Response:* In the proposed rule, we proposed critical habitat in unoccupied areas on east and west Maui and Molokai to support the recovery strategy of expanding the range of the two species of honeycreepers beyond the currently limited habitat surrounding the summit of east Maui (Service 2006, pp. 2–83, 2–143). According to the Recovery Plan, reestablishment of the akohekohe and kiwikiu on west Maui or Molokai is an important component of the recovery strategies for these two species in order to reduce the threat from catastrophic events such as hurricanes and epizootics of disease (in this case, epizootics refers to contributing factors of a disease that is temporarily prevalent in an animal population). We agree that critical habitat units on Molokai are more likely to require management for avian malaria due to their lower elevation compared to critical habitat units on west Maui. Selection of sites for translocation of these species will be determined by the Hawaiian Forest Bird Recovery Team.

(9) *Comment:* One peer reviewer emphasized that the successful conservation of the two honeycreepers within designated lands will require control of feral pigs in order to provide the healthy and diverse understory necessary as foraging substrate and alternative nectar and arthropod food resources for the two birds. Additionally, the reviewer stated that feral pig control will also reduce the available larval mosquito habitat and, dependent on the surface hydrology, may go a long way toward eliminating disease transmission in the designated units. Lastly, the reviewer asserted that both cattle ranching and the management of feral pigs as game animals within State and privately owned designated lands would continue to increase the detrimental impacts to the honeycreepers' habitat.

*Our Response:* We agree that a healthy and diverse understory is necessary for the successful conservation of native forest birds on the Maui Nui islands. The Recovery Plan provides details

regarding the recovery strategies for the akohekohe and kiwikiu. These strategies include the protection, restoration, and management of native high-elevation forests on east Maui, research to understand threats from disease and predation, and captive propagation to produce birds and translocation of birds for reestablishment of wild populations on west Maui or Molokai (Service 2006, p. 2–83 and p. 2–143). Habitat management and restoration will include fencing and removal of feral ungulates (in particular feral pigs) that degrade and destroy native forest bird habitat. In addition, fencing and removal of feral ungulates may contribute to the control of avian disease in these two birds by reducing or eliminating larval mosquito habitat in wet forests created by the feeding and wallowing habits of feral pigs (LaPointe *et al.* in Pratt *et al.* 2010, pp. 405–424).

Game mammal hunting is a recreational and cultural activity in Hawaii that is regulated by the HDLNR on State and private lands (HDLNR 2002, entire). Critical habitat does not give the Federal government authority to control or otherwise manage feral animals on non-Federal land. These land management options continue to be landowner decisions and, absent Federal involvement, are not affected by the designation of critical habitat. It is well-known that game mammals affect listed plant and animal species in Hawaii. We believe it is important to develop and implement management programs that provide for the recovery of listed species, but also acknowledge the importance of continued ungulate hunting in game management areas. We welcome opportunities to work closely with the State and other partners to ensure that game management programs are implemented in a manner consistent with both of these needs.

(10) *Comment:* One peer reviewer suggested the final rule be shortened and made more accessible to the general public by including a more simple listing or graphic depiction of the relevant facts including both former and current species' ranges, current population sizes, current densities, territory sizes, minimal viable population sizes, and ranges of limiting factors.

*Our Response:* We appreciate the suggestions offered by this peer reviewer and agree that the status information on the akohekohe and kiwikiu (77 FR 34464, June 11, 2012, pp. 34525–34526) in the proposed rule may not be as accessible to the public as desired, although it is provided in the same format as the status information on the other listed species. The akohekohe

and kiwikiu were listed as endangered species in 1967 (32 FR 4001; March 11, 1967) and at that time critical habitat was not designated for these two species because it was not provided for by the statute at that time. Since 1967, detailed information on ranges, densities, territory sizes, and recovery actions needed for native Hawaiian forest birds, including the akohekohe and kiwikiu, can be found in several published and unpublished documents (*e.g.*, Service 2006 and Pratt *et al.* 2010, entire) and is not repeated in this final rule. The Revised Recovery Plan for Hawaiian Forest Birds, for example, contains an excellent short description of each species and their status (Service 2006; kiwikiu, pp. 2–77–2–85, akohekohe, pp. 2–138–2–143). In this final rule we are not reevaluating the listing as endangered of these two forest birds, we are only designating critical habitat for them.

(11) *Comment:* One peer reviewer suggested that recovery areas identified in the 2006 Recovery Plan be renamed and addressed in our rule as “Maui Nui critical habitat areas and needed recovery actions for critical habitat parcels.” Additionally, the reviewer recommended that the recovery actions listed in the Recovery Plan are appropriate actions to promote, fund, and implement in designated critical habitat for the Hawaiian honeycreepers.

*Our Response:* In our description of the information we used to identify the areas that contain the physical or biological features essential for the conservation of the akohekohe and kiwikiu, we state that we developed this information by considering the “recovery area as determined in the revised Recovery Plan” (see Methods), in addition to other published and unpublished data sources. The areas designated as critical habitat in this final rule are not equivalent to, or the same as, the recovery areas in the Recovery Plan. The Recovery Plan is a planning document, to aid in the conservation and recovery of the species, and has no regulatory authority. Critical habitat, on the other hand, is a term defined and used in the Act, and imposes regulatory authority over Federal activities. Critical habitat is a specific geographic area(s) that contains features essential for the conservation of an endangered or threatened species and that may require special management and protection, and areas outside the geographical area occupied by the species at the time it is listed, upon a determination by the Secretary that such areas are essential for the conservation of the species. Under the Act, Federal agencies are required to

consult with the Fish and Wildlife Service on actions they carry out, fund, or authorize to ensure that their actions will not destroy or adversely modify critical habitat. In this way, a critical habitat designation protects areas that are necessary for the conservation of the species. We agree with the reviewer that the recovery actions listed in the Recovery Plan are appropriate actions to promote, fund, and implement, as appropriate, in designated critical habitat areas.

#### Peer Reviewer Comments on Critical Habitat for Lanai Tree Snails

(12) *Comment:* One peer reviewer provided us with maps created in the early 1900s by renowned ornithologist and botanist, George Munro, showing the distribution of the Lanai tree snails within the Lanaihale Mountains. The peer reviewer recommended that the boundaries of the final critical habitat designation for these species be adjusted accordingly, in conjunction with careful review of the remaining available habitat in the Lanaihale Mountains.

*Our Response:* The Service appreciates this additional information concerning the historical range of the snails. We have examined the maps provided and analyzed the best available information regarding the snails' habitat requirements based upon the physical and biological features essential to their conservation and which may require special management considerations or protection, unoccupied habitat essential to the conservation of the snails, and the current status of habitat within the Lanaihale mountains. For the reasons described below (see *Exclusions Based on Other Relevant Factors*), critical habitat is not designated on the island of Lanai in this final rule, as a consequence of exclusions under section 4(b)(2) of the Act. However, it is important to understand that any exclusion does not reflect a determination that the area in question does not meet the definition of critical habitat or is not important for the conservation of the species; an exclusion only reflects the Secretary's determination that the benefits of excluding that area from critical habitat outweigh the benefits of including it in the designation.

#### Comments From Federal Agencies

We received comments from the National Park Service (Pacific West Region), Haleakala National Park (on Maui), and Kalaupapa National Historical Park (on Molokai). Haleakala National Park provided information on one or more of the plant and forest bird

species addressed in this final rule that occur in the Park, and this information was incorporated, as appropriate, into the final rule listing 38 species on Molokai, Lanai, and Maui as endangered, which published on May 28, 2013 (78 FR 32014), or into this final rule and its supporting documentation.

(13) *Comment:* The National Park Service (NPS) supported the intent concerning exclusions of "developed areas such as buildings, paved areas, and other structures that lack the physical or biological features essential for the conservation of the species." However, the NPS suggested that all such areas within Haleakala National Park be excluded from critical habitat designation and that the exclusion include a buffer area.

*Our Response:* In our proposed rule published on June 11, 2012 (77 FR 34464), and in this final rule, we state that existing manmade features and structures such as buildings, and developed or paved areas, including trails, are not designated as critical habitat. Federal actions involving these areas would not trigger section 7 consultation unless the specific action would also affect adjacent critical habitat or its primary constituent elements. This would include existing manmade features and structures in Haleakala National Park. There are, however, no predefined "buffer areas" that are included in the textual exclusion of existing manmade features and structures. Mapping every structure, building, developed area, paved area, or trail, and the surrounding physical or biological features, may prove confusing and indecipherable to the general public, and in any case, is not a realistic possibility at the scale of mapping provided in the Code of Federal Regulations. Therefore, in this final rule, as with all critical habitat rules, we made every effort to avoid including manmade features and structures that may be contained within critical habitat, but the scale of the maps we prepared under the parameters for publication within the Code of Federal Regulations may not reflect the exclusion of such developed areas. Any such structures and the lands under them that are inside critical habitat boundaries shown on the maps in this final rule are excluded by text in this final rule and are not designated as critical habitat (see below, *Criteria Used to Identify Critical Habitat*).

(14) *Comment:* The NPS urged us to only designate occupied critical habitat for the two forest birds (akohekohe and kiwikiu) and not currently unoccupied areas. According to their letter, including areas for critical habitat

designation where akohekohe and kiwikiu do not currently exist is based on assumptions that: (1) Unoccupied areas will produce all the elements necessary for the survival of the species; (2) unoccupied areas will not contain elements that are detrimental to the species (e.g., invasive, nonnative species and mosquitoes); and (3) reintroduction of the species into unoccupied areas will be successful (e.g., the species will persist in the area). Data from Haleakala National Park show that some invasive plants are difficult, if not impossible, to control after feral ungulates are removed. In addition, there is no effective way to remove mosquitoes from an area.

*Our Response:* We appreciate the NPS' comments but disagree with its rationale for removing all unoccupied areas from critical habitat; we consider all unoccupied areas designated as critical habitat for the two forest birds to be essential to the conservation of the species, because the areas presently occupied by these forest birds are not adequate to ensure their conservation, for the reasons detailed here. Each of these bird species has been reduced to a single population, resulting in significant vulnerability of each species to extinction. The conservation of these species will require a significant increase in numbers of individuals and populations; in addition, there is evidence that these species are presently restricted to suboptimal habitats. The akohekohe is currently found in one population on east Maui within approximately 14,080 ac (58 sq km) at elevations between 5,000 and 6,900 ft (1,500 to 2,100 m). This species has been reduced to an estimated 5 percent of its former historical range on Maui, and has been extirpated from the island of Molokai. The kiwikiu is now found in only one population on Haleakala Volcano on Maui, and is restricted to an area of 12,400 ac (50 sq km) of wet montane forests at high elevation (4,000 to 7,700 ft (1,200 to 2,350 m)). This species formerly occupied dry leeward forests and low elevation areas on east Maui as well, and has also been extirpated from Molokai.

The Revised Recovery Plan for Hawaiian Forest Birds recognizes that the long-term recovery strategy for the akohekohe and kiwikiu are similar because they inhabit similar geographic areas and face similar threats (Service 2006, p. 2–141). Historically, kiwikiu favored koa forests for foraging, but such forests have been largely lost to past logging and ranching, such that kiwikiu are now restricted to wet montane forests with low numbers of koa that are likely marginal habitat for the species

(Service 2006, pp. 2–81, 2–84). The specialized foraging behavior of the kiwikiu requires the birds to defend large territories year-round, resulting in relatively low densities of birds (Service 2006, p. 2–78); this additionally translates into relatively large areas of habitat required to support populations of kiwikiu. Likewise the akohekohe was initially observed in koa forests on Maui, but is now absent due to the widespread destruction of these forest types (Service 2006, p. 2–140). Akohekohe also use relatively large areas of habitat, as, being nectarivorous, they migrate altitudinally for foraging in response to the timing of flowering of various trees and shrubs. Akohekohe are now restricted to high elevation forests due to the presence of mosquito-borne diseases at lower elevations, but are additionally restricted at upper elevations in some areas by destruction of forest habitat.

Areas currently unoccupied by the two bird species are essential to their conservation for multiple reasons. Primary amongst these is the high risk of extinction faced by any species that occurs in only a single population; this risk may be from a predictable threat such as disease, or a stochastic threat, such as a hurricane. For both the akohekohe and kiwikiu, the reestablishment of additional populations is needed to reduce this elevated risk of extinction (Service 2006, pp. 2–83, 2–143); this risk could be reduced from the establishment of additional populations on Maui, and possibly by reestablishing the species on Molokai as well. The risk of extinction for these species is such that one of the recovery criteria for listed Hawaiian forest birds is the requirement that the species occurs in two or more viable populations or a viable metapopulation (Service 2006, pp. 2–83–2–84, 2–143, 3–5–3–6). The establishment of additional populations in currently unoccupied areas reduces the likelihood of significant impacts to the species as a whole from risks associated with disease, as well as catastrophes such as hurricanes and fires, and increases the ecological breadth of the species to help buffer against climatic fluctuations. Additional or larger populations will additionally promote natural demographic and evolutionary processes to increase the long-term viability of the species. Unoccupied areas can help facilitate the dispersal of birds, including seasonal movements, which can increase gene flow between isolated populations and increase the viability of established and newer populations. For all of these reasons, we

have concluded that a critical habitat designation limited to the areas presently occupied by the akohekohe and kiwikiu is inadequate to ensure the conservation of the species, and we have therefore designated as critical habitat certain areas outside of the present range of the akohekohe and kiwikiu that we have determined are essential to the conservation of these species.

(15) *Comment:* Kalaupapa National Historical Park (KNHP) agreed with our ecosystem-based approach for grouping plants and defining their habitat consistently. According to KNHP, this approach will aid in the management of endangered and threatened plants as part of the collection of native communities across the landscape. According to their letter, much of the proposed critical habitat falls on areas with intact native plant communities or areas already under protection by decree or due to their remote locations, and added that proposing critical habitat in intact native plant communities or protected conservation areas or areas with difficult access will favor public acceptance of the proposed critical habitat.

*Our Response:* We appreciate KNHP's comments regarding the proposal to designate critical habitat for 135 species on the islands of Maui, Molokai, Lanai, and Kahoolawe. We agree that using an ecosystem-based approach to organize this rule and designate critical habitat will help provide for more focused conservation efforts and concerted management efforts to address the common threats that occur across these ecosystems.

*Comments From State of Hawaii Elected Officials*

(16) *Comment:* Maui Senator Rosalyn Baker commented that the Service did not discuss the proposal or its potential impacts with most of the owners of the affected lands. Senator Baker also stated that many landowners have not been offered the opportunity to work collaboratively with the Service to determine if their lands are currently occupied by the species or if their lands are essential to the species.

*Our Response:* We appreciate the Senator's comments and suggestions to work collaboratively with Maui landowners regarding critical habitat. We also appreciate the Senator's suggestions to increase our outreach efforts to the Maui community, particularly to individual landowners, and we plan to adopt these suggestions as we move forward with conservation in Maui Nui. We used the best available scientific information to determine

habitat essential to the species (see Methods, below), and incorporated new information received since publication of the proposed rule on June 11, 2012 (77 FR 34464), and release of our draft economic analysis (DEA) on January 31, 2013 (78 FR 6785), to further refine the critical habitat boundaries. Our notification process followed Service policies; our regulations at 50 CFR 424.16(c); and the Act, as amended, at section 4(b)(5) in paragraphs (A), (C), (D), and (E). We contacted all appropriate State and Federal agencies, county governments, elected officials, scientific organizations, and other interested parties and invited them to comment. In addition, we published a public notice of the proposed rule on June 20, 2012, in the local Honolulu Star Advertiser, Molokai Dispatch, and Maui News newspapers, at the beginning of the comment period. The proposed rule also directed reviewers to contact the Service for further clarification on any part of the proposed rule, and provided contact information (77 FR 34464; June 11, 2012). During the initial comment period on our proposed rule we became aware that there were errors in the landownership information in the geospatial data sets associated with parcel data from Maui County (2008), which were used to identify affected landowners. We recognize that some landowners whose properties overlapped with the proposed critical habitat did not receive notification letters due to errors in landownership information we received from the State, or missing landowner information in the State's geospatial data sets. However, we subsequently received updated landownership information for the parcel data for the County of Maui (2010). Shortly after publishing our January 31, 2013 (78 FR 6785), document announcing the DEA, reopening the comment period on the DEA and the proposed rule, and announcing the public information meeting and public hearing, we sent letters to all of the affected landowners that we were able to identify. In that letter we provided information on the proposed rule, the DEA, and the public information meeting and hearing held on February 21, 2013, in Kihei, Maui. In addition, we again contacted all appropriate State and Federal agencies, county governments, elected officials, scientific organizations, and other interested parties and invited them to comment. We met with the State Division of Forestry and Wildlife, Department of Hawaiian Home Lands, Hawaii Cattlemen's Council (including a representative of the Hawaii Farm

Bureau Federation), Maui Land and Pineapple Co., Inc., Ulupalakua Ranch, Haleakala Ranch, Alexander and Baldwin (including East Maui Irrigation Co., Inc.), West Maui Mountains Watershed Partnership, Leeward Haleakala Watershed Restoration Partnership, East Maui Watershed Partnership, and Castle and Cooke Resorts. We also provided maps of parcel-specificity to every landowner who contacted us and requested them following publication of the 2012 proposed rule and the 2013 notice. In order to reach as many interested individuals as possible on Maui Nui we believe we used the best approach afforded by our staff levels and resources and fully complied with our statutory and regulatory requirements for public notice.

(17) *Comment:* Senator Baker commented that proposed critical habitat on State, county, and private lands will have a direct and negative impact on Maui County, and is essentially a “taking” without compensation. The Senator added that the designation will also affect property values, trigger rezoning of lands to conservation status, and place the landowner at risk of third-party lawsuits that may prohibit future land use activities.

*Our Response:* We appreciate the Senator’s comments and have addressed the issues she raised below (see our responses to Comments (22), (50), and (59) (regarding rezoning), (55) (regarding “Federal nexus”), (56) (regarding “taking”), and (59) (regarding property values)). Our final economic analysis (FEA) dated September 23, 2015, acknowledges the potential for critical habitat designation to increase the possibility of legal challenges that may affect private entities (IEc 2015, pp. 3–3—3–4, 5–17, 5–20). Due to significant uncertainties regarding the extent to which the designation will increase the probability of legal challenges (over and above the presence of the listed species or other designated critical habitat (e.g., Blackburn’s sphinx moth (*Manduca blackburni*) critical habitat)), the direct costs of legal fees and time spent on lawsuits, and the potential outcome of lawsuits, the DEA (and subsequent FEA) does not estimate a monetary cost from potential third-party lawsuits. The FEA does, however, recognize the possibility of lawsuits as a consequence of the designation, and presents a qualitative assessment of this and other potential indirect effects that are subject to significant uncertainty in Section 5.3.2 (IEc 2015, pp. 5–16—5–23); our final designation of critical habitat takes all of

these potential effects into consideration.

(18) *Comment:* The chair of the Maui County Council (Council), Ms. Gladys Baisa, and the chair of the Council’s Policy and Intergovernmental Affairs Committee, Mr. G. Riki Hokama, commented that the Service failed to consult with individuals in the community, native Hawaiian groups, private landowners, ranchers and farmers, and others who, in their view, may suffer devastating economic and cultural impacts from the designation of critical habitat.

*Our Response:* We thank the chairs for their comments. We discussed with key stakeholders the likelihood of potential indirect impacts of the critical habitat designation, based on the consequences of previous designations on Maui (IEc 2015, p. 5–16). As noted in our response to *Comment* (16), above, there is significant uncertainty surrounding the likelihood, timing, and magnitude of any of these potential indirect impacts, therefore we were unable to monetize such impacts; we do, however, evaluate them qualitatively (IEc 2015, pp. 5–16—5–23), and this final designation of critical habitat reflects our thorough consideration of these indirect impacts. In terms of quantified impacts, our FEA projects a total of approximately \$120,000 in incremental impacts over 20 years from critical habitat designation (IEc 2015, p. 1–7).

(19) *Comment:* The Council’s chair commented that Maui County farmers and ranchers who fund their operations with Federal funds or may seek Federal funding in the future will be (negatively) affected by the proposed critical habitat.

*Our Response:* See our response to *Comment* (59), below.

(20) *Comment:* The Council’s chair suggested that the designation of critical habitat should include all policy-making entities, including the Hawaii State legislature, State and County departments, and the Maui County Council.

*Our Response:* We appreciate the suggestions to work collaboratively with Hawaii State and Maui County policy makers. Section 4(a)(3)(A) of the Act provides the Secretary with the authority to designate critical habitat for endangered or threatened species. The Act defines “Secretary” as the Secretary of the Interior or the Secretary of Commerce. For the species at issue here, it is the Secretary of the Interior who is vested with this authority. However, the Service and the Secretary are committed to working with our conservation partners in State agencies and County and local jurisdictions, and specifically

invite the comments of such agencies on our proposed rulemakings. We give full and careful consideration to such comments in the development of our final rulemakings.

(21) *Comment:* The Council’s chair expressed concerns with the economic analysis and suggested that a more detailed approach that recognizes the differences in the opportunity cost of the land is needed. In addition, she stated that potential price increases due to costs associated with critical habitat rules and regulations could jeopardize Hawaii’s efforts towards food sustainability.

*Our Response:* We appreciate the Council chair’s comments. See also our response to *Comments* (37) and (60), below.

(22) *Comment:* The Council’s chair commented that designation of critical habitat within areas currently zoned for agriculture may cause the State to reclassify them to conservation. Rezoning to conservation will subject the landowner to additional permitting requirements and restrictions on the use of the land.

*Our Response:* The relevant State endangered and threatened species statute contains no reference to designated critical habitat. Also, unlike the automatic conferral of State law protection for all federally listed species, State law does not require initiation of the amendment process for federally designated critical habitat. (Compare HRS section 195D–5.1 with HRS section 195D–4(a)). Although the State of Hawaii has a relatively long history of critical habitat designation, there is no record of such rezoning ever having occurred in response to critical habitat. See also our response to *Comments* (50) and (55), below.

(23) *Comment:* The Maui County Council’s Policy and Intergovernmental Affairs Committee (PIA Committee) commented that native Hawaiian groups had not been consulted regarding proposed critical habitat in Maui County, per section 106 of the National Historic Preservation Act of 1966, which “requires open, good faith consultation with interested parties.”

*Our Response:* The intent of the National Historic Preservation Act of 1966 (NHPA; 16 U.S.C. 470 *et seq.*) is to preserve historical and archaeological sites in the United States. Under the NHPA, Federal undertakings with a potential to cause effects to historic properties must complete the process set out in NHPA’s section 106 and its implementing regulations. However, the designation of critical habitat does not cause effects to historic properties or direct future agency actions that may

affect historic properties. The designation of critical habitat simply requires a Federal agency proposing an activity to consult with us pursuant to section 7(a)(2) of the Act to ensure that the activity does not destroy or adversely modify critical habitat. If the Federal agency activity itself may result in effects to historic properties, it is the responsibility of the Federal agency proposing the activity to ensure that the activity complies with the NHPA. Therefore, we have determined that the designation of critical habitat has no potential to cause effects to historic properties pursuant to 36 CFR 800.3(a)(1) (Initiation of the section 106 process [NHPA]).

(24) *Comment:* The Maui County Council's PIA Committee commented that it is unacceptable that the Maui Nui proposed rule will be finalized without holding public hearings on the islands of Lanai and Molokai, and that many residents are probably unaware of the proposed rule.

*Our Response:* Under the Act at section 4(b)(5)(E) and our regulations at 50 CFR 424.16(c)(3), we are directed to hold at least one public hearing on a proposed rule (*i.e.*, proposed listing and/or critical habitat designation), if requested. We received three requests for public hearings, all from Maui residents. We regret that we were not able to hold public hearings on the islands of Lanai and Molokai due to our limited resources, but in accordance with the requirements of the Act, we held a public hearing on the island of Maui, where the County government and most of the County population are located. See our response to *Comment* (16), above, regarding our notification process to all interested parties, including residents of Lanai and Molokai.

(25) *Comment:* The Maui County Council's PIA Committee commented that many parties who provided public testimony during the Committee's meeting on February 25, 2013, already engage in significant voluntary conservation efforts and that finalizing critical habitat as proposed may result in fewer voluntary actions. The Committee suggested that by working collaboratively with affected parties the Service will encourage ongoing conservation efforts.

*Our Response:* We appreciate the comments and suggestion, and acknowledge and fully support the current and ongoing voluntary conservation actions undertaken by the State watershed partnerships, other State and Federal agencies, nonprofit organizations, and individual landowners. Service staff made

themselves available at the February 25, 2013, meeting of the Maui County Council's PIA Committee, to provide information on the proposed critical habitat, and answered numerous questions on the proposed rule for the members of the committee and others present. We appreciate the concerns of potentially affected parties, and we intend to continue working collaboratively with these partnerships, agencies, organizations, and landowners; we will also seek to include others as we conduct conservation in the Hawaiian Islands.

*Comments from State of Hawaii Agencies*

(26) *Comment:* The Hawaii Department of Land and Natural Resources (DLNR) commented that they support the proposal to designate critical habitat for 135 species on the islands of Maui Nui and that they also support the proposed exclusions. They, and the landowner, asked that the Service reevaluate the exclusion of 8,746 ac of land owned by Haleakala Ranch on east Maui and reflect that amount to be 9,796 ac.

*Our Response:* The original amount of acreage of proposed critical habitat only overlapped 8,746 ac (3,539 ha) of Haleakala Ranch lands. The statement "Designation of critical habitat on the 9,796 ac of Haleakala Ranch Company Lands" was an estimate of the total area under consideration, but not proposed, at the time of the proposed rule. In this rule, we are excluding 8,716 ac (3,527 ha) of proposed critical habitat on Haleakala Ranch lands. The 30-ac difference from the proposed 8,746 ac results from the sale of 30 ac (12 ha) of Haleakala Ranch lands within proposed Maui—Lowland Dry—Unit 2 to another landowner between the time of publication of the proposed and final critical habitat rules.

The Hawaii DLNR's Division of Forestry and Wildlife (DOFAW) provided extensive comments on the proposed rule. Those comments are organized by island and by region, and we address them accordingly, below.

West Maui

(27) *Comment:* DOFAW supported the goals of critical habitat designation proposed for west Maui, and stated that they have no concerns or objections to the designation of CH [critical habitat] as proposed for Department lands within the West Maui mountains. They did express concern, however, that the designation may have undesirable impacts on the activities of some of its conservation partners. DOFAW fears that designation of those lands as

critical habitat will not appreciably enhance conservation efforts for listed species but may impose regulatory and administrative burdens on landowners that have, for years, been committed to conservation efforts on their lands. DOFAW urged the Service to evaluate exclusion from critical habitat under section 4(b)(2) of the Act for landowners in this partnership (West Maui Mountains Watershed Partnership), and to meet and discuss the option with interested landowners. DOFAW believes that the benefits of such exclusion outweigh the benefits of specifying the area as critical habitat, but defers to the comments and desires of the private landowners on the matter.

*Our Response:* We appreciate DOFAW's comments and agree that many landowners in the West Maui Mountains Watershed Partnership (WMMWP) are committed to conservation efforts on their lands and are active participants in the WMMWP, which provides or accepts funds and enters into agreements with State or Federal agencies to implement effective conservation actions that benefit listed species and their habitat. Under section 4(b)(2) of the Act, we consider other relevant impacts, in addition to economic impacts and impacts to national security, in identifying areas to exclude from critical habitat. We received several requests for exclusion from parties to the WMMWP, and in each case we carefully considered whether the benefits of exclusion would outweigh the benefits of including the areas in question in critical habitat. In the majority of cases, this consideration resulted in the exclusion of landowners who are active members of the WMMWP and have demonstrated the positive conservation benefits of their participation, and as a consequence, critical habitat is not designated on any private lands within WMMWP boundaries in this final rule (see *Exclusions Based on Other Relevant Factors*, below).

East Maui

Kipahulu Forest Reserve to Koolau Forest Reserve

(28) *Comment:* DOFAW suggested that the lower boundary of critical habitat in this area follow both current and the State's recently proposed management fence line boundaries in these forest reserves (FRs). According to DOFAW, listed species at lower elevations can be protected and recovered within the RFF ("Rain Follows the Forest" plan) priority watershed areas.

*Our Response:* DOFAW's recommendation would entail removing or excluding lands proposed for designation so that the designation would be co-extensive with RFF priority watershed areas. We agree with and support the goals and intent of the RFF but are concerned about the scope of the RFF goals and the timeline to accomplish these goals. Currently, only 10 percent of the State's priority watershed protection areas are fenced from hooved animals, although we recognize the State's goal is to double the area protected in the next 10 years. The State asserts that the first goals of the RFF are to remove all hooved animals from Priority I and II areas; that fencing 840,000 acres of these areas will be incremental and will depend upon landowner approval; and that "decades of work will be required." Approximately 35 percent of the Priority I areas are on State lands; however, only 4 percent of these lands are currently fenced. In addition, Priority I and II areas do not include lowland dry and mesic ecosystems on Maui, the most critically imperiled ecosystems throughout the State. Under the RFF, beneficial management actions to address the threats from nonnative species to these ecosystems may not be undertaken for decades, and perhaps not at all. In addition, the designation of critical habitat serves to educate the public about the importance of these areas for conservation of the Maui Nui species. For all of these reasons, we consider there to be benefits to the inclusion of these areas in critical habitat for the Maui Nui species, thus we are not aligning the lower boundary of critical habitat with the current and recently proposed management fence line boundaries proposed by the State. Although there are some potential benefits to exclusion in terms of maintaining our partnership with the State, at the present time, because the effectiveness and timing of the described management actions under the RFF plan are unknown and do not address threats on many of the areas we proposed as critical habitat, and because of the great importance of these lowland dry and mesic habitats to the Maui Nui species, we are unable to conclude that the benefits of excluding these areas outweigh the benefits of including them in the final critical habitat designation.

Makawao and Kula Forest Reserves

(29) *Comment:* DOFAW stated that it is seeking to have much of the lands in the Makawao and Kula FRs available for customary practice and recreation, and that they will conduct management for listed species recovery on other State

lands. DOFAW also stated that it will protect any known listed species within the Makawao and Kula FRs by constructing protective fencing around listed species to prevent access by feral ungulates and suggested that these two FRs be removed from critical habitat.

*Our Response:* We have considered DOFAW's request to remove Makawao and Kula FRs from critical habitat. We understand DOFAW's mandate to provide multipurpose public use on some of their lands, including customary practice and recreation. Within the Kula and Makawao FRs, DOFAW plans to provide public recreational use, which may include public hunting opportunities. We support DOFAW's commitment to provide in-situ protection to listed species that currently occur within Makawao and Kula FRs. Protective fencing around listed plant occurrences will protect them from immediate disturbance and predation by feral ungulates. However, while such localized efforts may contribute to the protection of individuals of the species, they will not provide for the expansion and growth of populations that is essential to the conservation of the species. We further note that while the State proposes to conduct management for listed species recovery on other Department lands, no specific plans or details are provided that would lead us to conclude that the benefits of excluding the Makawao and Kula FRs would outweigh the benefits of including these areas in critical habitat.

Portions of three proposed critical habitat units (plant critical habitat units Maui—Montane Mesic—Unit 1 (1,777 ac, 719 ha), Maui—Subalpine—Unit 1 (3,060 ac, 1,238 ha), and Maui—Alpine—Unit 1 (13 ac, 5 ha); and the corresponding forest bird critical habitat units Unit 18—Montane Mesic and Unit 24—Subalpine) overlapped a total of 4,899 ac (1,984 ha) in Kula FR. In this final rule, we are designating the same areas within Kula FR as critical habitat for 29 species (27 plants and 2 forest birds) in these units. Each of these five critical habitat units provides the physical or biological features essential to the conservation of the species and requires special management considerations or protections (e.g., feral ungulate control) (occupied habitat) or habitat that is essential to the conservation and recovery of the species (unoccupied habitat). For example, the Kula FR contains the only known occurrences of the endangered plant *Geranium arboreum* (totaling fewer than 40 individuals). Fencing these individuals will provide immediate direct protection from feral ungulates;

however, fencing these individuals will not provide for recovery of the species. Due to the small numbers of individuals and low population size of this species, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery. The recovery guidelines (i.e., the steps needed to reach recovery and delist a species) for a long-lived perennial plant species such as *G. arboreum* call for 8 to 10 populations of 100 individuals per population, sustained over a minimum of 5 years (Service 1997, pp. 91–93). Therefore, in addition to the habitat containing the currently known individuals, areas of suitable habitat within the historical range of *G. arboreum* (northern and southern Haleakala, and slopes of western Haleakala) are needed for recovery of this species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for the recovery of all of these 29 plant and 2 bird species.

In Makawao FR, portions of three proposed critical habitat units (plant critical habitat units Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, and Maui—Montane Mesic—Unit 1; and the corresponding forest bird critical habitat Unit 2—Lowland Wet, Unit 10—Montane Wet, and Unit 18—Montane Mesic) overlapped a total of 1,912 ac (774 ha) in Makawao FR. These units are critical habitat for 45 species (43 plants and 2 forest birds). Each of these six critical habitat units provides the physical or biological features essential to the conservation of the 45 species, is within the historical range of these plant and bird species, and requires special management (occupied habitat) or these units provide the primary constituent elements (PCEs) necessary for the reestablishment of wild populations within their historical range and are essential to the conservation of the species (unoccupied habitat). Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for the recovery of the 45 plant and bird species. We revised the unit boundaries for Maui—Lowland Wet—Unit 1 and Maui—Montane Mesic—Unit 1 that overlapped with Makawao FR, which resulted in acreage reductions in these units as follows: Maui—Lowland Wet—Unit 1: reduced by 138 ac (56 ha) and Maui—Montane Mesic—Unit 1: reduced by 470 ac (191 ha), with 282 ac (114 ha) redefined as part of Maui—Montane

Wet—Unit 1. These revisions were based on comments from DOFAW, as well as other interested parties indicating that: (a) Changes in land use had occurred within the proposed critical habitat units that would preclude certain areas from supporting the physical and biological features; or (b) the areas in question were not essential to the conservation of the species.

Although DOFAW requested that we remove all portions of Kula FR and Makawao FR from critical habitat, we did not entirely remove these forest reserves from critical habitat designation in this final rule. The portions of the five plant critical habitat units (Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Mesic—Unit 1, Maui—Subalpine—Unit 1, and Maui—Alpine—Unit 1) and the corresponding forest bird critical habitat units (Unit 2—Lowland Wet, Unit 10—Montane Wet, Unit 18—Montane Mesic, and Unit 24—Subalpine) that overlap with the Kula and Makawao FRs are located on the west side of Haleakala, and none of this area is within the State's Priority I watershed protection area (RFF). Therefore, beneficial management actions to address the threats from nonnative species to these ecosystems may not be undertaken for decades, and perhaps not at all. As described above, in response to information received from DOFAW and other parties, we removed an area of approximately 608 ac (247 ha) that overlapped with the Makawao FR upon a determination that this area does not meet the definition of critical habitat. All remaining areas, however, do meet the definition of critical habitat for the reasons described in detail above. DOFAW has proposed some management actions in these areas, but it is unclear whether these actions will be implemented, and in any case, the actions proposed are not likely to make a meaningful contribution to the conservation of the species (e.g., fencing off individual plants to protect them from ungulates, while a potentially useful defensive mechanism, does not actively promote the recovery of the species). Based on these considerations, we could not conclude that the benefit of excluding these areas outweighs the benefit of including them in the final designation.

Kaupo to Kahikinui and Na Kula Natural Area Reserve

(30) *Comment:* According to its letter, DOFAW is working with the Leeward Haleakala Watershed Restoration Partnership (LHWRP) to restore and protect mauka (mountain) lands from

Kaupo to the western boundary of the Department of Hawaiian Home Lands (DHHL) lands of Kahikinui moku (section of land), and recognizes the need to protect coastal lands from Nuu Makai to Keonioio. DOFAW suggested that the critical habitat boundary from Kaupo to Kahikinui follow the LHWRP fenceline. DOFAW stated that the areas proposed at mid-elevation are larger than needed for recovery of certain species. In addition, DOFAW is concerned that the designation may have undesirable impacts on the activities of some of its conservation partners and will not appreciably enhance conservation efforts for listed species but may impose regulatory and administrative burdens on landowners. DOFAW urged the Service to evaluate a section 4(b)(2) exclusion from critical habitat for the private landowners in the LHWRP, and believes that the benefits of exclusion outweigh the benefits of specifying the area as critical habitat, but defers to the comments and desires of the private landowners.

*Our Response:* We appreciate DOFAW's comments and support the goals and intent of the LHWRP and believe that management actions such as those conducted by LHWRP provide some conservation benefits to listed species and their habitat. We did not realign the critical habitat boundary to follow the LHWRP fenceline as the fence traverses two different habitat types for multiple species, and removing areas in elevations above the fenceline would fragment adjoining habitat in subalpine and dry cliff habitats. In addition, for the reasons described in this document, we have determined that all areas identified here as critical habitat are essential for the conservation of the species. However, for the reasons described below (see *Exclusions Based on Other Relevant Factors*, below), critical habitat is not designated on private lands in the LHWRP in this final rule, where landowners provided us with information demonstrating their participation in conservation efforts that benefit the species. Approximately 7 mi (11 km) of fenceline from Kaupo to Kahikinui is above 7,000 ft (2,134 m) elevation, and is on private lands or is within Haleakala National Park boundaries. The forest bird recovery area (Service 2006, map data) and critical habitat for the two forest birds is below this elevation in the fenceline area for about half of the fence distance. See also our responses to *Comments* (66) and (67), below.

In addition, we revised the unit boundary we proposed for Maui—Lowland Dry—Unit 1, and this revision

resulted in a reduction in Maui—Lowland Dry—Unit 1 by 1,607 ac (650 ha). This revision was based on comments from DOFAW, as well as other interested parties and recent site visits indicating that: (1) Changes in land use had occurred within the proposed critical habitat unit that would preclude certain areas from supporting the physical and biological features; or (2) the area in question was not essential to the conservation of the species. Based upon this information we concluded that the areas in question do not meet the definition of critical habitat, therefore they were removed from the final designation.

Honuaula and Kanaio

(31) *Comment:* DOFAW did not object to the designation of critical habitat for most of the areas proposed within the moku (section of land) of Honuaula and the ahupuaa (tract of land from summit to ocean) of Kanaio. However, included in the proposed critical habitat within Kanaio is an area that is proposed for use for recreational hunting. DOFAW asked that this area be removed from critical habitat, and suggested that the species can be recovered in protected areas nearby, such as the Kanaio NAR and private lands held by partners committed to protection of those resources.

*Our Response:* We appreciate DOFAW's comments regarding Honuaula and Kanaio. We understand DOFAW's mandate to provide multipurpose public use on some of their lands, including public recreational use such as public hunting opportunities within the ahupuaa of Kanaio. However, at this time we have not removed Kanaio NAR or the area west of the NAR from critical habitat unit Maui—Lowland Dry—Unit 1; this area is essential for 19 endangered plant species due to the small numbers and low population sizes of these 19 species, as the area provides suitable habitat and space for expansion or reintroduction, which are essential to achieving population levels necessary for recovery of these species. As we have determined that this area is essential for the conservation of these species, and the area in question is planned for recreational hunting (therefore ungulates would be present), we could find no benefit to exclusion of this area that would outweigh the benefit of including it in critical habitat, therefore it was not excluded from the final designation. We did, however, re-evaluate and remove an area from critical habitat designation on State lands surrounding Puu Pimoe (146 ac (59 ha)) after site visits determined that

changes in land use had occurred within the area that would preclude it from supporting the physical and biological features (see *Comment* (30), above). As the area in question therefore does not meet the definition of critical habitat, it was removed from the final designation.

In addition, although DOFAW suggests that these species can be recovered in nearby protected areas such as Kanaio NAR and private lands, the southern portion of the NAR and private lands are not yet protected from feral ungulates, a major threat to listed species in this area. Kanaio NAR extends from 1,000 to 3,000 ft (305 to 900 m) elevation, an area that is not suitable for recovery of coastal or lowland dry species, or species that occur at higher elevations. Conservation management actions such as ungulate eradication from these areas have not yet been funded or implemented. Based on our consideration of all of these factors, we could not conclude that the benefits of excluding this area outweigh the benefits of including it in the final designation of critical habitat.

#### Lanai

(32) *Comment*: DOFAW did not object to the designation of critical habitat for most of the areas proposed for Lanai but was concerned that the proposed critical habitat would establish boundaries on the landscape that would be difficult to identify in the field. In particular, DOFAW was concerned that unfenced critical habitat may be inadvertently accessed from the public hunting areas, and requested that we remove two areas from proposed critical habitat: (1) The area near Honopu Road, because it believes no listed species occur there and other areas can provide recovery habitat; and (2) the apparent “buffer” that extends around the lands of Kanepuu Preserve.

*Our Response*: We appreciate DOFAW's request. For the reasons described below (see *Exclusions Based on Other Relevant Factors*, below), critical habitat is not designated on the island of Lanai in this final rule, as a consequence of exclusions under section 4(b)(2) of the Act.

#### Molokai

(33) *Comment*: DOFAW suggested that certain lands be removed from the western section of proposed critical habitat as they are not needed for recovery and the affected species can be better managed and recovered elsewhere on Molokai, including Kahanui, Kapuna, and Pukaawa sections of the Molokai FR. DOFAW clarified that the western section of proposed critical

habitat referred to the western portion of critical habitat Molokai—Lowland Mesic—Unit 1, during a meeting with Service staff on August 14, 2012.

*Our Response*: We have considered DOFAW's request to remove the western section of Molokai—Lowland Mesic—Unit 1 from critical habitat. Maps provided by DOFAW for their “Priority Watershed Areas” of Molokai indicate the westernmost section of Molokai—Lowland Mesic—Unit 1 is within the State's “Priority II” area, and, therefore, is of lower priority to DOFAW in terms of future on-the-ground management and protection, although these conservation management actions have not yet been funded or implemented. Our analysis indicates that DOFAW is requesting we remove approximately 3,224 ac (1,305 ha) or approximately one-third of critical habitat in the lowland mesic ecosystem on Molokai. This unit is critical habitat for 37 plant species and the two forest birds; 17 of the plant species currently occur in this unit (see below, *Descriptions of Critical Habitat Units*). This unit provides the physical or biological features essential to the conservation of the species and requires special management considerations or protections (e.g., nonnative species control) (occupied habitat) or habitat that is essential to the conservation and recovery of the species (unoccupied habitat). For example, the only known occurrence, totaling 10 individuals, of the endangered plant *Cyanea dunbariae* (a Molokai endemic) and 5 of the 11 occurrences, totaling approximately 150 of the 200 known individuals, of the endangered *C. mannii* (a Molokai endemic), are on State lands within Molokai—Lowland Mesic—Unit 1. Due to the small numbers of individuals and low population sizes of these species, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery. The recovery guidelines for short-lived perennial plant species such as *Cyanea dunbariae* and *C. mannii* are 8 to 10 populations of 300 individuals per population, sustained over a minimum of 5 years (Service 1996, p. iv). Therefore, areas of suitable habitat within the historical ranges of *C. dunbariae* and *C. mannii* (including lowland wet, montane mesic, and montane wet ecosystems), in addition to the lowland mesic ecosystem containing the currently known individuals, are needed for recovery of these two species. For *C. dunbariae*, this area is only found in the lowland mesic ecosystem (Molokai—Lowland Mesic—Unit 1), the only known location of this

species, and the lowland wet and montane mesic ecosystems, within its historical range but where the species no longer occurs. For *C. mannii*, areas of suitable habitat within its historical range are only found in the lowland mesic ecosystem (Molokai—Lowland Mesic—Unit 1), and montane wet and montane mesic ecosystems, where only 11 occurrences and 200 total individuals of this species are found. Molokai—Lowland Mesic—Unit 1 is the only unit within its lowland habitat determined to be essential for its recovery and in need of special management or protections. Therefore, we disagree with DOFAW's statement that the western section of Molokai—Lowland Mesic—Unit 1 is not needed for recovery. Molokai—Lowland Mesic—Unit 1 is essential for the conservation of *C. dunbariae* and *C. mannii* and the other 35 endangered plant species and the two endangered forest birds due to the small numbers and low population sizes of these 39 species because this unit provides suitable habitat and space for expansion or reintroduction, which are essential to achieving population levels necessary for recovery of these species. Therefore, the western section of Molokai—Lowland Mesic—Unit 1 is included in this final critical habitat designation.

(34) *Comment*: The Department of Hawaiian Home Lands (DHHL) requested that all of its lands within proposed critical habitat be excluded from final designation. The DHHL supported the Service's new approach of multi- versus single-species protection, and sees economic benefits to taking a comprehensive planning and management approach. However, the DHHL feels that its current land use and management practices are sufficient to protect the species and their habitat. The DHHL also recommended that the Service consult with the Hawaiian Homes Commission, the Department of Hawaiian Home Lands, the Office of Native Hawaiian Relations, and their beneficiaries to include native intelligence and knowledge of species, habitat, and place-based management and protection prior to designation of critical habitat. The DHHL stated that they rely on Federal funding, and section 7 consultations could lead to direct negative economic impacts to them.

*Our Response*: We support the DHHL's ongoing management on Maui at Auwahi for seabird protection, Kahikihui for koa (*Acacia koa*) forest ecosystem protection, Puu o Kali for wiliwili (*Erythrina sandwicensis*) dryland forest protection, and, on Molokai at Moomomi Park for shoreline

and associated resource protection and Kapaakea Mauka for community pasture lands and stewardship, including the development of fire breaks.

Prior to publishing our proposed rule (77 FR 34464; June 11, 2012), we met with representatives of the DHHL on July 22, 2011, and August 30, 2011. At those meetings we provided information regarding our compilation of available information on species and habitat areas on Maui, and requested updated information from the DHHL. The DHHL provided information on its currently developed lands and their lands slated for future homesteads and other development. The DHHL did not express concern regarding critical habitat on lands on which they are conducting conservation actions, such as at Puu o Kali, on Maui. At the time we published our proposed rule (77 FR 34464; June 11, 2012), we notified elected officials, the Maui County Planning Department, and several Hawaiian organizations including Kamehameha Schools, the Office of Hawaiian Affairs (offices for Honolulu, Maui, Molokai, and Lanai), the DHHL, the State Historic Preservation Division, the Kahoolawe Island Reserve Commission, and Kahea-The Hawaiian-Environmental Alliance. Following publication of our proposed rule, we again met with DHHL representatives (October 11, 2012). At that meeting, DHHL staff stated that they need to be able to use their lands to “their fullest ability” and that they may develop wind and geothermal energy projects on the islands of Maui and Molokai in the future. The DHHL provided information on future development and current grazing leases on its lands in proposed critical habitat. In addition, the DHHL expressed interest in developing conservation partnership projects with the Service in the future.

Based on information provided by the DHHL in its March 1, 2013, and June 23, 2015, letters, and at the October 11, 2012, meeting, we reviewed and incorporated new information, and made changes to 4 of the 9 critical habitat units on Maui and all 4 critical habitat units on Molokai that overlapped DHHL’s lands. These revisions were based on comments indicating that: (a) Changes in land use had occurred within the proposed critical habitat units that would preclude certain unoccupied areas from supporting the primary constituent elements; and (b) the areas in question were not essential to the conservation of the species. Following our review of the information provided, we removed those unoccupied areas that we determined did not meet the definition

of critical habitat. For the remaining areas, while we appreciate any management efforts implemented by DHHL, the fact that management is already taking place does not mean that the area in question does not meet the definition of critical habitat. The Courts have been clear that the statutory standard does not specify that “additional” special management considerations or protections may be required, and the very fact that areas are being actively managed or protected serves as evidence that special management considerations or protections may be required, in accordance with the statutory definition of critical habitat.

Although the DHHL stated that section 7 consultation (due to a nexus created by Federal funding provided to the DHHL) on designated critical habitat on its lands could lead to direct negative economic impacts, they did not indicate how, specifically, they foresee a consultation resulting in such impacts. Our FEA specifically considered the potential effects of critical habitat designation on DHHL lands (IEC 2015, p. 3–6). In communications with DHHL, it was established that most lands proposed as critical habitat are within DHHL’s own conservation land use district, so existing management is consistent with the needs of critical habitat. For the proposed critical habitat that overlaps with DHHL’s special use district, which may potentially be subject to future energy development, there were no specific plans for any projects, and DHHL stated that they are trying to avoid any development in critical habitat (IEC 2015, p. 3–6). We therefore do not have information to suggest any likely direct negative economic impacts of the designation on DHHL.

(35) *Comment:* The DHHL requested that the Secretaries (of the Department of Interior and the Department of Commerce) consider the effects of designation of critical habitat on Hawaiian Home Lands in a manner similar to the effects it has on tribal lands, including the impact on tribal sovereignty. DHHL states that the United States maintained authority over consents to the Hawaiian Homes Commission Act (HHCA) amendments and exchanges involving Hawaiian home lands. It further states that the United States has the responsibility to ensure that the State of Hawaii is carrying out its trust duties under the HHCA and may sue for breach of trust.

*Our Response:* In accordance with the President’s memorandum of April 29, 1994 (Government-to-Government Relations With Native American Tribal

Governments; 59 FR 22951), Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments), and the Department of the Interior’s manual at 512 DM 2, we readily acknowledge our responsibility to communicate meaningfully with recognized Federal Tribes on a government-to-government basis. In accordance with Secretarial Order 3206 of June 5, 1997 (American Indian Tribal Rights, Federal-Tribal Trust Responsibilities, and the Endangered Species Act), we readily acknowledge our responsibilities to work directly with tribes in developing programs for healthy ecosystems, to incorporate native intelligence and knowledge of species, habitat, and place-based management and protection, to acknowledge that tribal lands are not subject to the same controls as Federal public lands, to remain sensitive to Indian culture, and to make information available to tribes. In addition, a 2004 consolidated appropriations bill (Pub. L. 118 Statute 444, Section 148) established the Office of Native Hawaiian Relations within the Secretary’s Office and its duties include effectuating and implementing the special legal relationship between the Native Hawaiian people and the United States; and fully integrating the principle and practice of meaningful, regular, and appropriate consultation with the Native Hawaiian people by assuring timely notification of and prior consultation with the Native Hawaiian people before any Federal agency takes any actions that may have the potential to significantly affect Native Hawaiian resources, rights, or lands. A 2011 Memorandum of Understanding (MOU) signed by the Department of the Interior states that “Federal agencies are required to consult with Native Hawaiian organizations before taking any action that may have the potential to significantly affect Native Hawaiian resources, rights, or lands.” Although native Hawaiians are not technically a “recognized Federal tribe” as referenced in the above Executive and Secretarial Orders, we endeavor to fully engage and work directly with native Hawaiians as much as possible. At the time we published our proposed rule (77 FR 34464; June 11, 2012), we notified several Hawaiian organizations including the DHHL, Kamehameha Schools, the Office of Hawaiian Affairs (offices for Honolulu, Maui, Molokai, and Lanai), the State Historic Preservation Division, the Kahoolawe Island Reserve Commission (KIRC), and Kahea-The Hawaiian-Environmental Alliance. We attended meetings with

staff from DHHL (July and August, 2011, and October, 2012), Kamehameha Schools (July 2011), and KIRC (July 2012), to discuss the proposal and address any concerns regarding the proposed listings and proposed critical habitat, and have considered all comments provided by these organizations in this final rule.

(36) *Comment:* The University of Hawaii, Institute for Astronomy (IfA) was concerned regarding proposed critical habitat on Map 23, Maui—Alpine—Unit 1 and Maui—Subalpine—Unit 1, as it appears to include buildings, roads, and other paved areas, owned and managed by the University of Hawaii, as part of the Haleakala High Altitude Observatory Site (HO). In 1961, State of Hawaii Executive Order No. 1987 set aside approximately 18 ac (7.3 ha) of land for the HO to be used for observatory site purposes only. The IfA requested that the HO be excluded from critical habitat designation.

*Our Response:* We carefully reviewed the areas proposed as critical habitat that overlap lands owned by the State and the University of Hawaii. Maui—Alpine—Unit 1, at the summit of Haleakala, encompasses a total of 2,107 ac (853 ha). The parcel referred to above, Tax Map Key (TMK) (2) 2-2-007:008 (18 ac; 7 ha) represents a small portion of the unit. The other larger parcels (TMK (2) 2-0-007:006 (138 ac; 56 ha) and TMK (2) 2-2-007:005 (161 ac; 65 ha) overlap both Maui—Alpine—Unit 1 and Maui—Subalpine—Unit 1. As a result of this examination, we have determined that these unoccupied parcels, and other small areas within these parcels that include astronomical facilities, are too degraded or modified by buildings and roads to support the species, that changes in land use have occurred within the proposed critical habitat units that would preclude certain areas from supporting the species, and therefore these areas are not essential for the conservation of the species for which they were proposed as critical habitat. We have therefore removed 295 acres (120 ha) of Maui—Alpine—Unit 1 and 44 acres (18 ha) of Maui—Subalpine—Unit 1, areas surrounding the HO, from designation as critical habitat (see below, Summary of Changes from Proposed Rule).

(37) *Comment:* The Hawaii State Department of Agriculture (HDOA) stated that exclusion of agricultural lands from critical habitat designation is important for Hawaii's food sustainability. The HDOA indicated that compensation will help landowners to efficiently increase food production or purchase additional lands for agricultural production should critical

habitat be designated on agricultural lands.

*Our Response:* Following publication of our proposed rule we received additional information from the public and concerned landowners regarding lands within proposed critical habitat that are in active crop production or actively managed for cattle ranching. We appreciate this new information, and, based on the information we received, we have removed areas from the final designation that are too degraded or modified to support the species (*i.e.*, where the essential physical or biological features are lacking in occupied habitat), where changes in land use have occurred within the proposed critical habitat units that would preclude certain areas from supporting the primary constituent elements, and, in the case of unoccupied areas, upon a determination that these areas are not essential for the conservation of the species for which they were proposed as critical habitat. In addition, we have excluded approximately 62,490 ac (25,289 ha) of privately owned lands under agricultural production for cattle ranching from critical habitat under section 4(b)(2) of the Act (see *Exclusions Based on Other Relevant Factors*, below) See our response to *Comment* (58, 59, and 60) regarding economically viable use of property and the effects of critical habitat designation. We have no information to suggest that critical habitat will have any impact on food sustainability in the State of Hawaii.

(38) *Comment:* The HDOA stated that the section 7 consultation process is slow and cumbersome, and lacks a clear administrative appeal process. Formal consultations can take up to 90 days plus an additional 45 days to prepare a biological opinion. The consultation process can result in modifications to the project, up to and including stopping the project from proceeding altogether. The HDOA believes the timeframe for formal consultations should be limited to 60 days in order to reduce uncertainty and risk for agricultural landowners. According to HDOA, if it is determined that a project will jeopardize a listed species or adversely modify designated critical habitat, a private landowner should have the ability to appeal the consultation finding without expending significant amounts of resources.

*Our Response:* We appreciate the HDOA's concerns. Both the Act and the Code of Federal Regulations (CFR) direct the process and timing of how the Service conducts consultation (see sections 7(a)(4), 7(b)(1)(A), and 7(b)(1)(B) of the Act, and 50 CFR

402.14(e), (f), and (g)). Included is the process whereby a private landowner requiring a permit or license from a Federal agency may become an applicant to the process. Applicant status includes specific privileges with regard to timing and application for exemption from section 7(a)(2) of the Act.

#### *Comments From Maui County*

(39) *Comment:* The Maui County Police Department requested that their communications facilities be excluded from critical habitat for public safety reasons. Their specific concerns are Lanai—Montane Wet—Unit 3 and Lanai—Wet Cliff—Unit 5, and Maui—Montane Mesic—Unit 1 and Maui—Subalpine—Units 1 and 2.

*Our Response:* As developed areas or manmade structures such as the communications facilities referenced here (towers, roads, etc.) do not provide the physical or biological features essential for the conservation of the Maui Nui species, they are not considered critical habitat; any such areas are not included in this designation. We make every effort to avoid including developed areas such as buildings, pavement, and other structures within the boundaries of critical habitat; however, the scale of the maps we prepared under the parameters for publication within the Code of Federal Regulations may not reflect the exclusion of such developed lands. Any such lands that have been inadvertently left inside critical habitat boundaries shown on the maps of this final rule, including the communications facilities in the five critical habitat units referenced by the Maui County Police Department, have been excluded by text in the rule and are not designated as critical habitat. Therefore, a Federal action involving these lands will not trigger section 7 consultation with respect to critical habitat and the requirement of no adverse modification unless the action may affect the adjacent critical habitat. Maintenance of communications towers that result in minimal ground disturbance are unlikely to pose a threat to Maui Nui critical habitat. In most cases, the Service's concern with respect to these projects relates to the potential for effects to bird species resulting from collisions.

(40) *Comment:* The Maui County Planning Department requested that we remove county lands from critical habitat within Lanai—Lowland Mesic—Unit 1, Maui—Lowland Dry—Unit 3, and Maui—Montane Mesic—Unit 1. All of the county lands described in their

letter contain buildings, structures (e.g., water tanks, reservoirs), or roads.

*Our Response:* We appreciate the information provided by the county and carefully reviewed these county lands in proposed critical habitat. As explained in our response to *Comment* (39), above, developed areas or manmade structures lacking the physical or biological features essential to the conservation of the Maui Nui species are excluded by text in the rule and are not designated as critical habitat. Such is the case here for the county lands in Lanai—Lowland Mesic—Unit 1, which appeared to be within the boundaries of the proposed critical habitat due only to the scale of mapping; these developed areas are not included in the final designation. In addition, we removed county lands proposed for critical habitat in Maui—Montane Mesic—Unit 1 because these lands are too degraded or modified to support the species or because changes in land use had occurred within the proposed critical habitat units that would preclude certain areas from supporting the primary constituent elements (occupied areas), or because these areas are not essential for the conservation and recovery of the species for which they were proposed as critical habitat (unoccupied areas). These areas therefore do not meet the definition of critical habitat. The county facility within proposed Maui—Lowland Dry—Unit 3 is not included within the unit; however, this may not have been apparent due to the resolution of the map printed in the June 11, 2012, proposed rule (77 FR 34464).

(41) *Comment:* The Maui County Planning Department requested that we provide a mechanism in our proposed rule to exclude lands in the future from critical habitat based on the development of management plans that meet the criteria described in *Exclusions Based on Other Relevant Factors* (see 77 FR 34464; June 11, 2012).

*Our Response:* In considering whether to exclude a particular area from the designation, we must identify the benefits of including the area in the designation, identify the benefits of excluding the area from the designation, determine whether the benefits of exclusion outweigh the benefits of inclusion, and conclude that the exclusion under consideration will not result in the extinction of the species. A revision to the critical habitat regulation requires a new rulemaking published in the **Federal Register** (see section 4(a)(3) of the Act and 50 CFR 424.12), with notification of all interested parties. In our June 11, 2012, proposed rule and in this final rule we state that we consider a number of factors in evaluating an

exclusion under the “other relevant factors” provision of the statute, including whether the landowners have developed any conservation plans or other management plans for areas determined to be essential to the species, or whether there are conservation partnerships that would be encouraged by designation of, or exclusion from, critical habitat. Currently, the County of Maui is a participating member in the Hawaii Association of Watershed Partnerships and provides funding for various fencing, survey, and invasive species projects on Maui, Lanai, and Molokai. Participating in a watershed partnership is only one aspect of the many landowner conservation activities we examine when determining whether exclusion from critical habitat outweighs the benefits of inclusion in critical habitat. We also consider the additional regulatory benefits that area would receive from the protection from adverse modification or destruction as a result of actions with a Federal nexus, the educational benefits of mapping habitat essential for recovery of the listed species, and any benefits that may result from a designation due to State or Federal laws that may apply to critical habitat. In evaluating a conservation plan, we consider a variety of factors including, but not limited to, whether the plan is finalized; how it provides for the conservation of the essential physical or biological features; whether there is a reasonable expectation that the conservation management strategies and actions contained in the plan are likely to be implemented into the future; whether the plan’s strategies are likely to be effective; and whether the plan contains a monitoring program or adaptive management to ensure that the conservation measures are effective and can be adapted in the future in response to new information.

We must base our consideration of potential exclusions on the evidence available to us at the time of rulemaking; there is no mechanism for forecasting exclusions into the future based on conservation plans that have yet to be developed. However, after going through a new rulemaking process, we can revise a critical habitat designation in the future if appropriate.

(42) *Comment:* The Maui County Planning Department requested that we consider excluding the Kanepuu Preserve and the Lanaihale Forest Conservation area, both on Lanai.

*Our Response:* The areas referenced by the Maui County Planning Department are covered by the Lanai Memorandum of Understanding (see below) and are excluded from the final

designation, as critical habitat is not designated on the island of Lanai as a consequence of exclusions under section 4(b)(2) of the Act, for the reasons described below (see *Exclusions Based on Other Relevant Factors*).

(43) *Comment:* The Maui County Planning Department commented on an extensive trail system on the island of Lanai, and stated that use of these trails for hunting, recreation, and cultural activities is part of Lanai’s economy. The Planning Department requested clarification for how these uses could be compatible with critical habitat designation.

*Our Response:* We have no information to suggest that critical habitat designation impacts trail usage. Regardless, for the reasons described below (see *Exclusions Based on Other Relevant Factors*), critical habitat is not designated on the island of Lanai in this final rule, as a consequence of exclusions under section 4(b)(2) of the Act.

#### *Public Comments*

(44) *Comment:* Several commenters noted that on Maui all individuals of the endangered plant *Canavalia pubescens* are found on recent lava flows, and suggested that these flows be considered critical habitat for this plant. In addition, many lowland dry species flourish on recent lava flows (less than 10,000 years old) as these areas exhibit healthy recruitment of native plant species such as *C. pubescens*, and appear to offer protection from wildfires and other threats. Another commenter noted that the aa (basaltic lava having a rough surface) substrate supports the greatest remaining native lowland dry forest biodiversity. One commenter suggested three factors that may contribute to the survival of native species on this substrate: (a) The sparseness of vegetation on aa prevents the percolation of wildfires; (b) the ruggedness of the terrain and its sparse vegetation discourages ungulate browsers; and (c) the sparseness of soil prevents ecosystem domination by alien grasses. The same commenter also raised the possibility that the harshness of the habitats with aa substrate and shallow soils currently function as ecological sinks (i.e., areas where populations of species may be extirpated without input from population sources outside the area) for endangered species in the lowland dry ecosystem, as evidenced by the lack of recruitment of certain native tree species in these areas. The commenter hypothesized that areas currently devoid of native species and characterized by older (over 500,000

years old), deeper soils previously supported the highest densities of these species and served as the source populations for their colonization of aa flows. Therefore, the commenter supported designation of areas with older, deeper soils in the lowland dry ecosystem.

*Our Response:* We appreciate the comments provided and agree that recent lava flows provide important habitat for the endangered plant *Canavalia pubescens*. Recent lava flows may be characterized by little-weathered lava substrate that is one of the physical and biological features of the lowland dry ecosystem in which *C. pubescens* is known to occur. The occurrence of *C. pubescens* and other native plant species on recent lava flows indicates the importance of these areas to their conservation. The ruggedness of recent lava flow substrates may function as a deterrent to ingress of ungulates thereby preventing herbivory of native plant species. The limited accumulation of soil due to the lack of weathering on recent lava flow substrates may also prevent ingress of nonnative grasses, which typically prefer areas with greater soil formation, thereby allowing native vegetation that is adapted to these conditions to flourish. In addition, information in our files indicates that *C. pubescens* occurs on substrates ranging in age from 3,000 to 5,000 years old to 140,000 to 780,000 years old (Sherrod *et al.* 2006, p. 2; HBMP 2010). In this final rule, we designate four units on east Maui (Maui—Lowland Dry—Unit 1 through Maui—Lowland Dry—Unit 4) totaling 16,841 ac (6,816 ha) for *C. pubescens*, as well as 18 other plant species in the lowland dry ecosystem. The recovery guidelines for a short-lived perennial plant species such as *C. pubescens* are 8 to 10 populations of 300 individuals per population, sustained over a minimum of 5 years (Service 1999, p. iv). In addition, these four critical habitat units provide varied substrate types, including those mentioned by the commenter (over 500,000 years old) in the lowland dry ecosystem.

(45) *Comment:* Two commenters faulted the Service for not providing adequate notification of the proposed rule to potentially impacted Maui residents. In addition, one commenter stated that the letters the Service sent out were vague and not specific to the lands that may be affected.

*Our Response:* We appreciate the comments and regret that some landowners did not receive our notification letters. Unfortunately, we are not able to send personalized letters and maps to all affected and interested

parties. We did, however, provide maps of parcel-specificity to every landowner who contacted us and requested them following publication of the June 11, 2012, proposed rule and the January 31, 2013, document reopening the comment period on the proposed rule. Please see our response to *Comment* (16), above, for a detailed explanation of the notification process we used to reach as many potentially interested parties as possible regarding this rulemaking.

(46) *Comment:* One commenter stated that “the proposed rule expressly fails to provide any detailed narrative description of appropriate specificity to allow fair comment” and cited 77 FR 34688 at (x)(B) “[Reserved for textual description of Unit 3]”. The commenter also stated that the proposed rule contains only generalized “maps,” such as Map 10 on 77 FR 34689, to indicate the areas proposed for designation. Another commenter added that more detailed mapping is required for landowners to accurately assess the impact of the proposed designation and assist the Service in determining the appropriateness of the designation.

*Our Response:* The commenter misunderstands the bracketed information cited above. The bracketed information cited above does not infer a “word” description of the unit. A word description of each critical habitat unit is found in *Descriptions of Proposed Critical Habitat Units* in the June 11, 2012 (77 FR 34464), proposed rule. The description for Maui—Lowland Dry—Unit 3 is found at 77 FR 34551 (77 FR 34464; June 11, 2012). The “textual description” of Unit 3 (Maui—Lowland Dry—Unit 3) refers to the UTM coordinates (mapping vertices) for unit delineation using GIS, which, until recently, were identified and published in the **Federal Register** in final rulemakings. However, on May 1, 2012 (77 FR 25611), the Service published a final rule revising the regulations for requirements to publish textual descriptions of final critical habitat boundaries in the **Federal Register**. As a result, as of May 31, 2012 (the effective date of the May 1, 2012, rule), the Service no longer publishes the UTM coordinates for critical habitat boundaries in the **Federal Register**. Because the publication process for our proposed rule had already begun on May 31, 2012, the text reading “reserved for textual description” (which applied to the old method of providing UTM coordinates) had not been removed before publication of the proposed rule for the Maui Nui species on June 11, 2012. Currently, the coordinates on which each map is based are available to the public at the Federal eRulemaking portal ([http://](http://www.regulations.gov)

[www.regulations.gov](http://www.regulations.gov)) using the docket number for the rulemaking (in this case, FWS–R1–ES–2015–0071), and at the Web site of the field office responsible for the critical habitat (<http://www.fws.gov/pacificislands>) for the final critical habitat for 125 Maui Nui species. The proposed rule included maps to identify the areas proposed for critical habitat designation. The proposed rule also directed reviewers to contact the Service for further clarification on any part of the proposed rule, and provided contact information. Although we did not include parcel-specific maps in the proposed rule, we did provide maps of this specificity to every landowner who contacted us and requested them following publication of the proposed rule and the January 31, 2013, document reopening the comment period on the proposed rule.

(47) *Comment:* One commenter questioned the Service’s determination of the status of a species within a given critical habitat unit as both “Species occupied” and “Species unoccupied” at the same time, and cited 77 FR 34710 at (xxix) “Table of Protected Species Within Each Critical Habitat Unit.”

*Our Response:* We appreciate the comment and in this final rule have modified the “Table of Protected Species Within Each Critical Habitat Unit,” first, by changing the title to “Occupancy of Species by Designated Critical Habitat Units for [Island],” and secondly, to accurately reflect whether a unit was either occupied or unoccupied by a species at the time of listing. In addition, each unit description provides a clear description of whether a unit is occupied or unoccupied by each species for which the unit is being designated (see *Descriptions of Critical Habitat Units*).

(48) *Comment:* One commenter stated that it is naïve to assume historical distribution patterns can be a guide to suitable locations for recovery efforts of rare species.

*Our Response:* In this final rule, we use information on the present and historical distribution of each species, based on the best available scientific data, to determine the locations of past and current occurrences and to determine the physical or biological features essential to support the species in those locations. It is Service policy that listed species will not be relocated or transplanted by the Service outside their historical range without specific case-by-case approval from the Director (65 FR 56916; September 20, 2000), therefore we look first to areas within the historical range to guide recovery efforts for listed species. Furthermore, our implementing regulations at 50 CFR

424.12(b) state that, in determining what areas are critical habitat, the Secretary shall consider “habitats . . . representative of the historic geographical and ecological distributions of a species.” We recognize that not all areas within the historical distribution of a species will necessarily retain the physical or biological features essential to support the species under contemporary conditions; in many cases, the formerly occupied habitat has either been eliminated or has become severely degraded. In identifying areas for designation as critical habitat, we used information regarding the past and current locations of species, the past and current status of the habitat, and whether or not the habitat, including that in need of management, could provide the essential physical and biological features for the species for which it is designated. We note that in several cases, in response to public comment, we have removed areas from this final designation of critical habitat upon the receipt of information indicating that the areas in question are no longer capable of supporting the species.

(49) *Comment:* One commenter stated that reliance on unpublished, non-public data that is not readily available to the public is contrary to legal requirements. Withholding this information deprives the public of a full and fair opportunity to comment on the rule. The rule should therefore be withdrawn.

*Our Response:* Under section 4(b)(2), we are required to designate, and make revisions to, critical habitat based on the best scientific data available and after taking into consideration the economic impact, the impact on national security, and any other relevant impact. In the June 11, 2012, proposed rule and in this final rule, we used the best scientific information available, including but not limited to, the State’s Hawaii Biodiversity and Mapping Program databases, the National Tropical Botanical Garden’s plant databases, TNC’s High Island Ecoregion Plan (along with the accompanying GIS ecosystem data), and our own rare plant species database. These databases include information from numerous sources including, but not limited to, expert field observations, museum collections, and published and unpublished literature, and are, in our opinion, sources of the best scientific data available. These data sources are often the best available information for the species. See also, Methods, below.

As stated in the proposed rule, the supporting documentation we used in

developing the proposed critical habitat was available to the public through a combination of online access through <http://www.regulations.gov>, or by appointment at the Pacific Islands Fish and Wildlife Office. We provided direction as to how to obtain a list of the supporting documentation used under both the Public Comments and References Cited sections of the proposed rule. In addition, a list of references cited in the proposed rule and in this final rule is available on the Internet at <http://www.regulations.gov>, and upon request from the Pacific Islands Fish and Wildlife Office (see **FOR FURTHER INFORMATION CONTACT**).

(50) *Comment:* Several commenters expressed concern about the potential negative effects of critical habitat designation on their lands because of the interplay of Federal and Hawaii State law. For example, they were concerned that designation of critical habitat could lead to reclassification of land by the State into the conservation district pursuant to Hawaii Revised Statutes (HRS) 195D–5.1 and HRS 205–1(3). In addition, they stated that although there are no prohibitions for adverse modification of habitat on private lands under the Endangered Species Act, such prohibitions exist under Hawaii endangered species law (HRS Chapter 195–D) and environmental impact statement law (HRS Chapter 343), and these State prohibitions may negatively impact landowners with critical habitat designation.

*Our Response:* These concerns are addressed below, separated by topic.

*Reclassification of Land Due to Critical Habitat Designation—*HRS section 195D–5.1 states that the Department of Land and Natural Resources (DLNR) “shall initiate amendments to the conservation district boundaries consistent with section 205–4 in order to include high quality native forests and the habitat of rare native species of flora and fauna within the conservation district.” HRS section 205–2(e) specifies that “conservation districts shall include areas necessary for \* \* \* conserving indigenous or endemic plants, fish and wildlife, including those which are threatened or endangered \* \* \*.” Unlike the automatic conferral of State law protection for all federally listed species (see HRS 195D–4(a)), these provisions do not explicitly reference federally designated critical habitat, and DLNR has no history of proposing amendments to include designated critical habitat in the conservation district.

As described in section 3.1 of the FEA, the analysis integrates the best available information regarding the potential effects of critical habitat on State and county land management based on interviews with staff from the Department of Land and Natural Resources (DLNR)’s Office of Conservation and Coastal Lands (OCCL) and the State Office of Planning, as well as the County of Maui’s Department of Planning. According to the State Office of Planning, critical habitat is taken into consideration during the redistricting process, but does not itself generate a redistricting of lands to the Conservation District. According to the County Department of Planning, the presence of critical habitat is one of many factors under consideration during the rezoning process. Representatives from OCCL, the State, and the county were unable to identify an instance in which the presence of critical habitat specifically drove decisions related to redistricting or rezoning. As such, it has not been the State’s practice thus far to redistrict critical habitat areas as conservation district lands. The FEA does, however, describe uncertainty with regard to future State and county management of these lands in section 3.4. In addition, section 5.3.2 of the FEA describes the potential indirect effects of critical habitat designation, including concern that the designation may result in costly lawsuits. Uncertainty exists regarding the potential for, as well as the number, timing, and outcome of, such lawsuits, thus associated impacts are not monetized in the economic analysis.

*Prohibitions Under Hawaii Endangered Species Law and Environmental Impact Statement Law With Critical Habitat Designation—*HRS 195D covers conservation of aquatic life, wildlife, and land plants in the State of Hawaii. Only two sections of HRS 195D are relevant to this discussion, HRS section 195D–4 and 195D–5.1. HRS section 195D–4 recognizes the Federal status (endangered or threatened) of flora and fauna in Hawaii as determined by the Department of the Interior. This section also outlines State regulations for possession, trade, or other uses of these species. HRS section 195D–5.1 “Protection of Hawaii’s unique flora and fauna” states that the DLNR shall initiate amendments to the conservation district boundaries consistent with section 205–4 in order to include high-quality native forests and the habitat for rare native species of flora and fauna within the conservation district. Neither of these sections of HRS 195D includes

automatic prohibitions against adversely modifying habitat on private lands.

HRS 343 provides a comprehensive review of the environmental impact statement (EIS) process, and describes the applicability and requirements for environmental assessments (EA), regardless of the underlying land classification. It states that an environmental impact statement is required for any proposed land reclassifications under 343–5(2) and 343–5(7) and “any use within any land classified as a conservation district by the State land use commission under Chapter 205.” HRS 343, therefore, provides guidelines for the EIS process and EA process regarding: (a) Land reclassification, and (b) proposed actions or proposed land use changes on lands that are classified as conservation. HRS 343 does not trigger land reclassification as a result of critical habitat designation nor does it prohibit any actions or proposed land use changes in areas designated as critical habitat, whether or not these areas are in the conservation district.

(51) *Comment:* One commenter stated that an area that is not inhabited by the species is not essential to the conservation of the species. However, another commenter supported the inclusion of areas no longer occupied by the endangered species, but which are critical for their recovery.

*Our Response:* By definition in section 3(5)(A) of the Act, critical habitat for an endangered or threatened species includes: (i) The specific areas within the geographical area occupied by a species, at the time it is listed in accordance with the Act, on which are found those physical or biological features (I) essential to the conservation of the species and (II) which may require special management considerations or protection; and (ii) specific areas outside the geographical area occupied by a species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

In this final rule, the critical habitat designation is a combination of areas occupied by the species, as well as areas that are unoccupied (see below, “Recovery Strategy for Hawaiian Plants,” “Recovery Strategy for Two Forest Birds,” and “Recovery Strategy for Three Tree Snails”). For areas considered occupied, the best available scientific information suggests that these species occupied these areas at the time of listing. However, due to the small population sizes, few numbers of individuals, and reduced geographic range of each of the 125 species for which we are designating critical habitat

in this rule, we have determined that a designation limited to the known present range of each species would be inadequate to achieve the conservation of those species. The areas that may have been unoccupied at the time of listing have been determined to be essential for the conservation and recovery of the species because they provide the physical or biological features necessary for the expansion of existing wild populations and reestablishment of wild populations within the historical range of the species.

(52) *Comment:* Two commenters disputed the use of an ecosystem-based approach in our determination of primary constituent elements (PCEs) for each species and cited the regulations for determining critical habitat at 50 CFR 424.12 (b). In addition, one commenter cited *Middle Rio Grande Conservancy District v. Babbitt*, 206 F.Supp.2d 1156 (D. N.M. 2000) and argued that the proposed ecosystem critical habitat designations are overly generalized and, therefore, lack the necessary analysis and explanation required by the Act for each species.

*Our Response:* Under the Act and its implementing regulations, we are required to identify the physical and biological features essential to the conservation of the 135 species for which we proposed critical habitat. We identified the physical and biological features that support the successful functioning of the ecosystem(s) upon which each species individually depends, and that may require special management considerations or protection. Table 5 (see below) identifies the physical or biological features of a functioning ecosystem for each of the ecosystem types identified as essential to the conservation of the 125 species for which we are designating critical habitat in this final rule (critical habitat is not designated for 10 species due to exclusions). These features provide the environmental conditions essential to meeting the fundamental requirements of each species. In many cases, due to our limited knowledge of specific life-history requirements for the species that are little-studied and occur in remote and inaccessible areas, the more general description of the physical and biological features that provide for the successful functioning of the ecosystem represents the best (and, in many cases, the only) scientific information available. Accordingly, the physical and biological features of a properly functioning ecosystem are, at least in part, the physical and biological features essential to the conservation of the 125

species. In this final rule the PCEs for each species are defined based on those physical or biological features essential to support the life-history processes for each species within the ecosystems in which they occur, and reflects a distribution that we conclude is essential to the species’ conservation needs within those ecosystems. The ecosystems’ features include the appropriate microclimatic conditions for germination and growth of the plants (e.g., light availability, soil nutrients, hydrologic regime, and temperature) and space within the appropriate habitats for population growth and expansion, as well as to maintain the historical geographical and ecological distribution of each species. The features are defined by elevation, annual levels of precipitation, substrate type and slope, and the potential to maintain characteristic native plant genera in the canopy, subcanopy, and understory levels of the vegetative community. Where further information was available indicating additional, specific, life-history requirements for some species, the PCEs relating to these requirements are described separately; for example, we have identified bogs as a unique PCE for several species. The physical and biological features essential to the conservation of these species are described in Table 5 of this final rule.

(53) *Comment:* One commenter stated that proposed critical habitat designations based on the presence of one or few individuals of the native canopy, subcanopy, or understory species listed as physical or biological features for each ecosystem (associated native plant genera as identified in Table 5) do not achieve the ecosystem approach or satisfy the requirement of having the physical and biological features of that ecosystem.

*Our Response:* See our response to *Comment* (52), above, regarding the methods for identification of physical and biological features for each of the species for which occupied final critical habitat is designated. For the species that are the subject of this rule, the essential physical and biological features are described as the elevation, precipitation, and substrate required by the species, in combination with presence of one or more of the associated native plants that occur within that elevation, precipitation, and substrate range. We consider the presence of one or more of the identified native canopy, subcanopy, or understory species as indicative of the capability of that area to likewise support the threatened or endangered Maui Nui species that also depend on that habitat type.

(54) *Comment:* One commenter stated that the primary constituent elements (PCEs) for a given species are non-determinable in areas that are unoccupied by the species.

*Our Response:* Although the presence of the PCEs may make an area presently unoccupied by the species particularly desirable as a site for potential recovery, the Act does not require that areas outside the geographical area occupied by the species at the time it is listed contain the PCEs; instead, unoccupied areas must be essential for the conservation of the species. The recovery guidelines published in our recovery plans for the Maui Nui species spell out the criteria (e.g., number of populations and number of individuals) necessary to recover or remove the species from protection under the Act. Due to the small numbers of individuals and low population sizes of the 125 Maui Nui species for which we are designating critical habitat in this final rule, suitable habitat and space for expansion of existing populations or reintroduction are essential to achieving population levels necessary for the conservation of these species. As explained in detail in the Methods section of this document (see “Unoccupied Areas”), these areas are essential to achieving these goals. We carefully considered the historical distribution of each species, its specific habitat requirements, and its current population status relative to the goals set for recovery to determine those unoccupied areas that are essential to achieve the abundance and distribution of self-sustaining populations needed to attain the conservation of each species.

(55) *Comment:* One commenter stated that the Regulatory Flexibility Act (RFA, 5 U.S.C. 601 *et seq.*) analysis in the proposed rule failed to take into account the activities associated with the Honuaula Partners, LLC (HP), development, and disagreed with the initial finding that the proposed designation of critical habitat for the 135 species will not have a significant effect on a substantial number of entities. The commenter further stated that the construction and development activities envisioned by HP will likely require the services of numerous small businesses ranging from contractors and subcontractors to landscapers and suppliers of materials, engineers, architects, planners, and others. In addition, the commenter stated that the analysis is inaccurate because it relied upon earlier economic analyses in 2003 and 2008, which did not take into account the HP project.

*Our Response:* Under the RFA, we are required to evaluate the potential

impacts of critical habitat on small businesses, but this evaluation may be limited to impacts to directly regulated entities. The designation of critical habitat only has direct regulatory impact through section 7 of the Act, in which a Federal action agency is required to consult with us on any project that is implemented, funded, permitted, or otherwise authorized by that agency (that is, a “Federal nexus” exists) and that may affect designated critical habitat. Critical habitat has no regulatory effect under the Act on actions that do not have a Federal nexus. Since Federal action agencies are the only directly regulated entities as a result of the designation of critical habitat, the designation will not have a significant impact on a substantial number of small business entities. For a further discussion of this issue, please see below (Required Determinations) and our final economic analysis (IEC 2015, Appendix A).

(56) *Comment:* Several commenters stated that the designation of critical habitat is a taking of property without just compensation.

*Our Response:* The designation of critical habitat does not deny anyone economically viable use of their property. There are no automatic restrictions or prohibitions on uses of areas designated as critical habitat under the Act. The regulatory effect of the Act is the requirement under section 7(a)(2) that Federal agency actions avoid the destruction or adverse modification of designated critical habitat. Furthermore, if in the course of a consultation with a Federal agency, the resulting biological opinion concludes that a proposed action is likely to result in destruction or adverse modification of critical habitat, we are required to suggest reasonable and prudent alternatives that can be implemented in a manner consistent with the intended purpose of the action, that can be implemented consistent with the scope of the Federal agency’s legal authority and jurisdiction, and that are economically and technologically feasible.

(57) *Comment:* Two commenters stated that the takings analysis is inadequate and violates the letter and intent of Executive Order 12630 (“Governmental Actions and Interference with Constitutionally Protected Property Rights”). Because a taking implications assessment (TIA) has not been published with the proposed rule, landowners are deprived of the ability to rationally or reasonably comment on the conclusion of the Service that the “designation of critical habitat for each of these species does

not pose significant takings implications within or affected by the proposed designation” at 77 FR 34464 (June 11, 2012).

*Our Response:* Executive Order 12630 only requires that a taking implications assessment (TIA) be discussed in proposed and final rulemakings and be made available to the public if there are significant takings implications. If there are not significant takings implications, there is no requirement that this issue be addressed in a rulemaking. In our proposed rule (77 FR 34464; June 11, 2012), we stated that we analyzed the potential takings implications of critical habitat designation for 135 species and found that this designation of critical habitat does not pose significant takings implications for lands within or affected by the proposed designation. We have prepared a TIA for this final rulemaking and found that the designation of critical habitat for the Maui Nui species does not pose significant takings implications for lands within or affected by the designation.

(58) *Comment:* One commenter stated that the proposed rule does not take into account the additional costs that will be imposed on State and county governments by the proposed critical habitat designation. The commenter suggested that the proposed designation of critical habitat on the Makena Property will delay the widening and extension of Piilani Highway. The ATC Makena Holdings (ATC), along with three other private landowners, plans to fund and construct the widening of Piilani Highway. The ATC is also considering plans to extend Piilani Highway onto the Makena property in order to provide an alternative access route to serve the Makena Resort. The proposed rule does not address the significant economic impacts that could be faced by the Hawaii Department of Transportation or the County of Maui if the planned roadway improvements are not constructed by private developers. The commenter suggested that in the absence of private funding, Federal, State, or county funds will be required.

*Our Response:* The final economic analysis (FEA) incorporates additional discussion regarding the potential expansion of the Piilani Highway within Maui—Lowland Dry—Unit 3. Although the timing, nature, and location of the project is currently uncertain, we forecast costs associated with a formal section 7 consultation on the project in 2015. The Service has determined that the potential project area for the highway expansion overlaps with the probable range of the Blackburn’s sphinx moth. Consultation on this project would be required due to the

presence of the Blackburn's sphinx moth regardless of whether critical habitat is designated for the Maui Nui species. As discussed in section 2.3 of the DEA, critical habitat designation for the Maui Nui species is not likely to generate additional conservation recommendations beyond what would be recommended due to the presence of the moth. Accordingly, it is unlikely that critical habitat for the Maui Nui species will generate substantial additional costs with respect to this highway project. However, we note in section 3.3 of the FEA that should the Service recommend that the project incorporate additional conservation efforts specifically in order to avoid adverse modification of critical habitat, these would be considered incremental impacts of the designation.

(59) *Comment:* One commenter stated that most of Hawaii's farmers and ranchers are small entities and would be unfairly disadvantaged by this proposal. Critical habitat designation may adversely impact farmers and ranchers by placing potentially inappropriate restrictions on future use, adversely impacting the value and mortgageability of the land, and encouraging other land use regulators to further restrict these lands in the future.

*Our Response:* We appreciate the commenter's concerns. We address these concerns below.

*Direct impacts to farmers and ranchers*—According to the FEA, the direct impacts of critical habitat designation on grazing and farming (*i.e.*, impacts generated by section 7 consultation and associated conservation recommendations) are expected to be minor (Section 5.3). The only section 7 consultations that occur on farming and grazing activities are associated with Federal assistance programs, such as the Natural Resources Conservation Service's (NRCS) EQIP (Environmental Quality Incentives Program) and WHIP (Wildlife Habitat Incentive Program) programs, which generally support ecologically beneficial projects. Outside of participation in these programs, we have not consulted on farming and grazing activities in Maui Nui over the last 10 years since critical habitat was first designated for 107 plant and animal species in the Maui Nui islands. All of the consultations with NRCS were informal, were ecologically beneficial to listed species or designated critical habitat, and have not been time-intensive and have not resulted in modifications to projects or activities. According to the FEA, it is unlikely that critical habitat designation will result in modifications to farming and grazing activities through

section 7 consultation. Therefore, the direct effects of the designation are most likely to be limited to additional administrative effort (by the Federal agencies involved in the consultation) as part of future section 7 consultations (IEC 2015, Section 5.3.1). We cannot foresee any direct impacts to farmers and ranchers as a consequence of critical habitat designation. We note that the analysis under the Small Business Regulatory Enforcement Act (SBREFA) in Appendix A of the FEA acknowledges the possibility of some indirect impacts on farmers and ranchers, however, such effects are not quantified due to the significant uncertainty surrounding the likelihood and potential magnitude of any such potential effects (IEC 2015, p. A-7).

*Impacts on the value and mortgageability of the land*—We understand the commenter's concern that critical habitat designation may adversely impact the value and mortgageability of the land, and encourage other land use regulators to further restrict these lands in the future. The FEA (IEC 2015, Section 5.3.2) recognizes that these indirect effects of the critical habitat designation are of concern, but also found significant uncertainty regarding the potential for these economic impacts to occur. According to the FEA, no studies have evaluated the potential perceptual effect of critical habitat on land values in Hawaii (*i.e.*, regardless of actual regulatory effects, potential buyers, lenders, and appraisers may perceive that critical habitat designation restricts land use and thus reduces the value of the land). However, there are studies that show that critical habitat has the potential to change behavior of the public outside of the regulatory changes associated with the designation. A 2009 California study showed that critical habitat designation *within urban growth areas* [emphasis ours] resulted in measurable reductions in land values. The study did not identify statistically significant effects of critical habitat designation on land values *outside of urban growth areas* [emphasis ours]. Approximately 0.10 percent (160 ac (65 ha)) of the total area designated as critical habitat in Maui Nui in this final rule is in the State's urban district. Therefore, while we acknowledge the concern regarding the potential perceptual effect of critical habitat on land values in Hawaii, we are unable to measure the cost of this indirect impact to a landowner, or state with certainty the probability of such an effect being realized.

*Future restrictions on these lands*—According to the State's Office of

Conservation and Coastal Lands and the State Office of Planning, critical habitat designation does not automatically generate a district reclassification, although it is one factor taken into consideration both during the 5-year boundary reviews and review of petitions for boundary amendments (IEC 2015, Section 5.3.2). See also our response to *Comment* (50), above.

(60) *Comment:* One commenter stated a concern regarding the ability of farmers and ranchers to meet the food supply needs of residents and visitors with the proposed designation. The 1.3 million plus residents and over 7 million tourists per year are dependent upon food and energy imports for nearly all their needs.

*Our Response:* We appreciate the commenter's concern. Section 5.3 of the FEA highlights the concern that critical habitat has the potential to hinder the State's food sustainability goal (IEC 2015, p. 5-16). As described in section 5.3, the designation is not likely to change how NRCS and the Service manage and regulate farming and grazing activities. Section 5.3.2 discusses the potential for critical habitat to result in indirect effects that hinder the State's goal to work toward food sustainability. As described in that section, the extent to which the designation will limit agricultural production occurring within the critical habitat area is uncertain. However, only a small fraction of the total State agricultural production overlaps the proposed critical habitat area.

(61) *Comment:* One commenter stated that some of the proposed critical habitat areas are State-owned parcels that may be leased to farmers and ranchers. The commenter added that some also include irrigation infrastructure and are within irrigation water lease areas, raising serious concerns about diminished irrigation water availability, especially important to farmers and ranchers in this time of severe drought. According to this commenter, these areas should be excluded from designation.

*Our Response:* When delineating critical habitat units, we made an effort to avoid developed areas such as towns, agricultural lands, and other lands with similar features that do not contain the primary constituent elements. Most of the area within critical habitat designated in this final rule is within the conservation district, with less than 10 percent of the critical habitat within the agricultural district. However, some species, such as *Canavalia pubescens*, *Melanthera kamolensis*, and *Sesbania tomentosa*, only occur in, and historically occurred in, low-elevation

areas where agriculture is most common. Habitat containing primary constituent elements or otherwise essential to the conservation of these species is not available in areas outside the agricultural district.

We made every attempt to avoid including irrigation systems and their related developed structures to support irrigation within the critical habitat areas, as these systems and structures normally do not contain, and are not likely to develop, primary constituent elements and are not otherwise essential to the conservation of these species. Even if we have not been able to exclude every such development from these mapped units, they are not included in critical habitat pursuant to the text of this final rule because they are manmade features. Thus, unless the operation and maintenance of irrigation systems and related developed structures would indirectly affect critical habitat, these systems and structures should not be affected by section 7 of the Act. As for the areas surrounding these structures, in the absence of a Federal nexus (as described above; see response to *Comment* (55)), critical habitat will have no effect on the delivery of water for agriculture. In addition, none of the 125 species are entirely aquatic, although a few require bogs or seasonally wet habitats; however, we have no information to suggest that conservation activities for these species would cause a reduction in water diversion or irrigation water.

(62) *Comment*: Three commenters provided information on a potential wind energy project that may be sited in or adjacent to proposed Molokai—Coastal—Unit 2. One commenter requested that the area proposed as critical habitat be modified to increase the distance of the critical habitat unit from the potential impact of an industrial-scale wind energy project.

*Our Response*: We appreciate the information provided by the commenters. Based on the information provided and information in our FEA (IEc 2015, pp. 4–7, 4–9–4–10, and A–6–A–7), Molokai Renewables, LLC, a joint venture between Pattern Energy Group LP and Bio-Logical Capital, LLC, plans to develop a wind energy farm on Molokai Ranch lands, near proposed Molokai—Coastal—Unit 1 and Molokai—Lowland Dry—Unit 1. Energy would be transmitted to Oahu via an undersea transmission cable that may potentially run through proposed Molokai—Coastal—Unit 2. This proposed project is in the initial planning phase and information on the timing, scale, location, and likelihood of construction of an industrial scale wind

energy project is not available. Molokai—Coastal—Unit 2 totals 977 ac (396 ha) on State and private land. This unit provides the physical and biological features for 12 endangered plants and for the maintenance and expansion of the existing wild occurrences of one of these species that occupies the unit, and provides the habitat for reestablishment of populations, within their historical range, for the other 11 plant species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery. Lacking information on the location of the proposed wind farm, we are unable to modify Molokai—Coastal—Unit 2 to increase its distance from the proposed wind farm.

(63) *Comment*: One commenter stated that many farmers participate in the U.S. Department of Agriculture (USDA)—NRCS and other Federal programs, and thus formal consultation with the Service will be triggered in order to determine whether the habitat will be adversely impacted (regardless of whether any endangered species are actually present). This consultation can result in costly delays and modifications to the project up to and including stopping the activity from proceeding altogether.

*Our Response*: We appreciate the commenter's concerns. See our response to *Comment* (59), above.

(64) *Comment*: One commenter stated that the Service should reevaluate the ecosystem-based management units of possible habitat for Maui Nui species by focusing on only those areas that are essential for the conservation of the species and eliminating areas that do not currently contain the PCEs, especially grazing land. Courts have consistently held that such a generalization of critical habitat is unacceptable. See *Home Builders of No. California*, 616 F.3d 983, *Cape Hatteras Access Pres. Alliance*, 344 F. Supp. 2d 108, *Middle Rio Grande Conservancy District v. Babbitt*, 206 F. Supp.2d 1156 (D. N.M. 2000).

*Our Response*: On the islands of Maui Nui (Molokai, Lanai, Maui, and Kahoolawe), native species that occur in the same habitat types (ecosystems) depend on the same biological or physical features because they are dependent on the successful functioning of the ecosystem they have in common to survive. While we have used this methodology because it, along with species-specific habitat requirements, represents the best available scientific information, this approach may also

provide efficiencies in identifying conservation actions at the ecosystem scale, to enhance or restore critical ecological processes and provide for long-term viability of those species in their native environment. Upon receipt of public comments from landowners and biologists, we have re-evaluated areas proposed as critical habitat, and have further refined the critical habitat units to remove areas where the land use has changed or the land has been otherwise modified so that it no longer contains the PCEs and therefore does not meet the definition of critical habitat (for areas occupied by the listed species). In all cases, we only designate unoccupied areas as critical habitat upon a determination that such areas are essential for the conservation of the species. In cases where, based upon public comments from landowners and biologists, we found that some unoccupied areas initially proposed as critical habitat are not in fact essential for the conservation of the species, we have removed those areas from this final designation.

(65) *Comment*: According to one commenter, the overly broad critical habitat designation effectively places the cost and burden of disproving the presence of critical habitat on the private landowner. In addition, the proposed rule does not analyze how land uses will or will not affect the protections that critical habitat is supposed to offer.

*Our Response*: Critical habitat protections are only triggered if there is a Federal nexus (an action authorized, funded, or carried out by a Federal agency). In cases where there is such a Federal nexus, it is not the duty of the private landowner to disprove the presence of critical habitat; rather, it is the duty of the Federal agency to ensure that it complies with section 7 of the Act. If, through the section 7 consultation process, it is determined that a Federal agency action may result in “destruction or adverse modification of critical habitat” (as those terms are used in section 7), we suggest those reasonable and prudent alternatives that can be taken by the Federal agency or applicant in implementing the agency action.

(66) *Comment*: Several commenters stated that they, or others, are members of State watershed partnerships and participate in voluntary conservation actions. The designation of critical habitat on their lands will burden landowners and alienate the very group that can help the most with species and habitat conservation.

*Our Response*: We fully support the voluntary watershed partnerships in the

State of Hawaii, including the four partnerships in Maui Nui (West Maui Mountains Watershed Partnership, East Maui Watershed Partnership, East Molokai Watershed Partnership, and Leeward Haleakala Watershed Restoration Partnership). These partnerships are voluntary alliances of public and private landowners “committed to the common value of protecting forested watersheds for water recharge, conservation, and other ecosystem services through collaborative management” (<http://hawp.org/partnerships>). Most of the ongoing conservation management actions undertaken by the watershed partnerships address threats to upland habitat from nonnative species (e.g., feral ungulates, nonnative plants) and may include fencing, ungulate removal, nonnative plant control, and outplanting of native (including rare native) species on lands within the partnership. Funding for the watershed partnerships is provided through a variety of State and Federal sources (including funding provided by the Service), public and private grants, and in-kind services provided by the partners or volunteers. Landowner participation in the voluntary watershed partnerships in the State of Hawaii, resulting in many cases in significant conservation benefits to native and listed species, is an important consideration in our weighing of the benefits of exclusion versus inclusion in critical habitat under section 4(b)(2) of the Act. The Secretary places great value on such partnerships; participation in the watershed partnerships of Maui, Molokai, or Lanai was one of the considerations in each of the exclusions from critical habitat in this final rule. At the same time, however, we are judicious in our exclusions, and we carefully considered whether we had evidence that each landowner is implementing conservation measures as a member of a voluntary watershed partnership that result in significant benefits to the listed species in our weighing of the benefits of exclusion versus inclusion. We did not exclude areas from critical habitat if the landowner is a member of a watershed partnership, but could not demonstrate a history of implementing conservation actions for the benefit of native or listed species.

(67) *Comment:* Several commenters stated that designation of critical habitat would interfere with their ability to obtain Federal funding and cause delays associated with Act consultations over effects on critical habitat and the

inflexible requirements that there be no adverse modification of critical habitat.

*Our Response:* Both the Act and the Code of Federal Regulations (CFR) direct the process and timing of how the Service conducts consultation (see sections 7(b)(1) and 7(2) of the Act, and 50 CFR 402.14(e)). Pursuant to section 7(a)(2) of the Act, Federal agencies must consult with the Service to ensure that any action authorized, funded, or carried out by such agency that may affect critical habitat is not likely to result in the destruction or adverse modification of critical habitat. To avoid destruction or adverse modification of critical habitat, the Federal agency may, during consultation, modify the proposed action to minimize or avoid adverse impacts to critical habitat. If we issue a biological opinion concluding that a project is likely to result in the destruction or adverse modification of critical habitat, we also provide “reasonable and prudent alternatives” to the project, if any are identifiable. Reasonable and prudent alternatives are defined at 50 CFR 402.02 as alternative actions identified during consultation that can be implemented in a manner consistent with the intended purpose of the action, that are consistent with the scope of the Federal agency’s legal authority and jurisdiction, that are economically and technologically feasible, and that the Director believes would avoid the likelihood of the destruction or adverse modification of critical habitat. In our experience, it is unusual for a project to proceed to this point; usually we can agree upon project modifications earlier in the process that address any concerns, thereby allowing the project to proceed. However, in those rare cases in which we do find that destruction or adverse modification of critical habitat is likely, we attempt to provide alternatives to avoid that outcome.

Our FEA considers the direct impacts of critical habitat designation to stem from the consideration of the potential for destruction or adverse modification of critical habitat during section 7 consultations. The administrative costs of conducting section 7 consultation is a direct impact of a designation, as is the implementation of any conservation efforts that might be taken by the action agency in conjunction with section 7 consultation to avoid potential destruction or adverse modification of critical habitat. The total quantified incremental impacts of the critical habitat designation are estimated to be approximately \$20,000 on an annualized basis over 10 years (IEC 2015, p. ES–7). The potential for time delays that may be associated with the

need to reinitiate section 7 consultation or compliance with other laws triggered by the designation are considered indirect impacts of the designation. Although the FEA highlights which projects or activities may be affected by critical habitat designation, significant uncertainty and data limitations largely preclude the quantification of indirect impacts (IEC 2015, p. ES–7).

(68) *Comment:* Several commenters stated that designation of critical habitat would cause the Federal Government to dramatically reduce or cut off human access to water, or prevent the landowner from developing water resources. Subsequently, the State Water Commission would take steps to reduce off-stream water usage where it competes with water necessary to sustain endangered plants. This could affect ranches and entire communities.

*Our Response:* None of the Maui Nui species addressed in this rule is entirely aquatic, and although some species do depend on bogs or seasonal wetland type habitats, there is no information to suggest that critical habitat for the Maui Nui species would lead to a reduction in water diversion or prevent the development of water resources. Water infrastructure is considered a manmade feature, and, therefore, these features and structures do not contain, and are not likely to develop, any primary constituent elements. There is no expectation that ranches or communities will in any way be affected by a reduction in water supplies as a consequence of critical habitat.

(69) *Comment:* Several commenters stated that designation of critical habitat would trigger rezoning procedures under State law to more restrictive zoning on private property. In addition, the commenters believe that other provisions of Hawaii State law would then burden the use of their property. For example, commenters believed that new projects on lands designated as critical habitat will require a conservation district use permit, and an environmental impact statement (EIS) instead of a less comprehensive environmental assessment (EA), and that development in, or a change in use of, coastal lands that are designated critical habitat will make it more difficult to obtain a special management permit, pursuant to the Coastal Zone Management Act (16 U.S.C. 1451 *et seq.*).

*Our Response:* Regarding potential rezoning or restrictions on property use, please see above, our responses to *Comments* (50) and (59). Under the Coastal Zone Management Act (CZMA), an applicant for a required Federal license or permit to conduct an activity

that affects any land or water use or natural resource of the coastal zone must provide a certification that the proposed activity complies with policies of the State's approved coastal zone management program. Therefore, regardless of the designation of critical habitat, an applicant is required to obtain certification from the State that a proposed activity in the coastal zone complies with the State's coastal zone management program. The 1990 implementation plan for the State of Hawaii's coastal zone management program was last updated in 2006, and evaluation findings for 2004–2008 were completed in 2010 (NOAA 2010, 45 pp), and there is no reference in these documents to the treatment of critical habitat for federally listed species (Hawaii Coastal Zone Management Program 1990, entire; Hawaii Ocean Resources Management Plan 2013, entire). The 2013 management plan refers to the presence of, and concern for, endangered species in the marine environment and for endangered waterbirds and states that such species are of Statewide conservation concern (Hawaii Ocean Resources Management Plan 2013, p. 16). The plan also discusses the importance of watershed management as watersheds affect water quantity and quality, ultimately affecting ocean water quality and reef systems (Hawaii Ocean Resources Management Plan 2013, p. 27). In sum, although the 2013 Hawaii Ocean Resources Management Plan states that balancing protection of endangered species with other priorities of ocean resource management is critical, the plan does not mandate or prohibit any actions with specific regard to critical habitat.

(70) *Comment:* Some commenters stated that their lands were not included in studies or site inspections, or were apparently done without the owners' knowledge or consent. The commenters believe that if their lands were inspected, it would be determined that there were no primary constituent elements.

*Our Response:* As required by section 4(b) of the Act, we used the best scientific data available in determining those areas that contain the physical or biological features essential to the conservation of the Maui Nui species by identifying the occurrence data for each species and determining the characteristics of the habitat types upon which they depend. The information we used is described in detail in our June 11, 2012, proposed rule (77 FR 34464) and in this final rule (see Methods); also see our response to *Comment* (121) for a description of the information we used

to derive the primary constituent elements.

Both before and following publication of our June 11, 2012, proposed rule (77 FR 34464), the Service contacted many landowners. Some allowed site visits, and some did not reply to our requests, or did not state that they desired a site visit by Service biologists. Much of our identification of the physical or biological features can be achieved using remote sensing data; in no case did Service staff enter private lands without the express permission of the landowner. Based on comments and information provided during the public comment periods indicating that information in our proposed rule was in error, or there had been changes in land use that would preclude certain areas from supporting the primary constituent elements (occupied areas), or the areas in question were not essential to the conservation of the species (unoccupied areas), we have removed such areas from the final designation because they do not meet the definition of critical habitat. In addition, some areas were excluded from critical habitat under section 4(b)(2) of the Act. All of these changes to areas proposed as critical habitat are described in the Summary of Changes from Proposed Rule, below.

(71) *Comment:* One commenter stated that the regulatory flexibility analysis provided in the proposed rule was inadequate, as commercial activities are not limited to only three proposed critical habitat units. Commercial activities (specifically cattle ranching) also occur in proposed units Maui—Montane Dry—Unit 1, Maui—Lowland Dry—Unit 1, Maui—Lowland Mesic—Unit 1, and Maui—Coastal—Unit 7. The commenter has applied for Federal funding previously, including NRCS funding from the EQIP program, and believes that, if critical habitat is designated, any future use of Federal funding would be subject to consultation under the Act. The commenter expressed concern over the potential negative economic impacts as a consequence of such consultation.

*Our Response:* This comment was submitted prior to the release of the DEA, which included a complete regulatory flexibility analysis in Appendix A. The regulatory flexibility analysis in the economic analysis draws from the findings of the report with respect to the likelihood of projects or activities with a Federal nexus triggering section 7 consultation. The economic analysis identifies the commercial activities (agriculture and grazing) occurring within the units highlighted by the commenter. Section 5.3.1 of the economic analysis further

recognizes that grazing and farming operations that have participated in Federal assistance programs, such as NRCS' EQIP and WHIP, have been subject to section 7 consultation considering potential effects on listed species and critical habitats. The NRCS has stated that, regardless of critical habitat designation, these programs only support projects that are ecologically beneficial. As a result, all previous consultations on NRCS-funded projects have been informal and have resulted in a not likely to adversely affect (NLAA) determination for listed species and critical habitats. The NRCS stated that these consultations have not been time-intensive and have not resulted in modifications to projects or activities. The NRCS and Service do not expect that critical habitat will affect the ability of projects funded through these programs to be implemented, as planned. In any case, for the reasons described below (see *Exclusions Based on Other Relevant Factors*), critical habitat is not designated on the ranch lands that were the focus of concern of this commenter, as a consequence of exclusions under section 4(b)(2) of the Act.

(72) *Comment:* Two commenters stated that the Service must prepare a NEPA analysis on the proposed rule to ensure that we make an informed decision regarding the impact of critical habitat designation on the environment. Unlike the Act, NEPA sets forth procedural requirements for all Federal government agencies. It requires that Federal agencies undertaking Federal actions undertake an extensive examination of all the environmental impacts (including cultural impacts as required under the National Historic Preservation Act) of its actions. Given the magnitude of the Service's critical habitat proposal, the large number of industries that it will likely affect, and its impact to the local and State economy, a thorough examination and disclosure of the proposal is needed with substantial opportunities for public input.

*Our Response:* It is the Service's position that, outside the jurisdiction of the Circuit Court of the United States for the Tenth Circuit, we do not need to prepare environmental analyses as defined by NEPA (42 U.S.C. 4321 *et seq.*) in connection with designating critical habitat under the Act. This position was upheld by the U.S. Court of Appeals for the Ninth Circuit (*Douglas County v. Babbitt*, 48 F.3d 1495 (9th Cir. 1995), cert. denied 516 U.S. 1042 (1996)).

(73) *Comment:* Two commenters expressed their support for our

proposed designation of critical habitat in Maui County. Conservation is needed for Hawaiian endangered plants and animals and has been demonstrably successful in places like Waikamoi Preserve. One commenter was especially appreciative of being able to visit places that are being protected from invasive, nonnative species and evoke Hawaiian ecosystems that her ancestors frequented.

*Our Response:* We appreciate the comments.

(74) *Comment:* One commenter requested that the Service designate critical habitat in 170 acres of land above the Wailea Emerald Golf Course because of the potential for development in this area. According to this commenter, this is the site of a functioning ecosystem that includes mature wiliwili (*Erythrina sandwicensis*) and the endangered awikiwiki (*Canavalia pubescens*).

*Our Response:* The area referred to by this commenter was proposed as critical habitat in our June 11, 2012, proposed rule (77 FR 34464). In this final rule, we excluded 901 ac (365 ha) under section 4(b)(2) of the Act (see *Exclusions Based on Other Relevant Factors*, below), and designate 188 ac (76 ha) of Maui—Lowland Dry—Unit 3 as critical habitat. The area referred to by the commenter was excluded as part of the Ulupalakua Ranch property (see *Exclusions Based on Other Relevant Factors*). However, we emphasize that exclusion under section 4(b)(2) of the Act does not signal that an area is not essential for the conservation of the species, only that the Secretary has determined that the benefits of excluding that area outweigh the benefits of including it in critical habitat (and such exclusion will not result in the extinction of the species).

(75) *Comment:* One commenter suggested that the Service work collaboratively with the community, including landowners and homeowners, to provide conservation measures for plants and animals so that critical habitat designation is not necessary. This same commenter stated that protecting habitat for native plants will also protect the coastal reefs and the ocean environment.

*Our Response:* We appreciate the suggestions and fully support collaborative conservation planning and implementation with landowners and other interested parties. Time and resources permitting, we will continue to seek avenues of collaborative conservation efforts with private landowners in Maui Nui. See also our responses to *Comments* (25) and (66), above.

(76) *Comment:* Several commenters remarked that there is no evidence to show that critical habitat designation will protect endangered species and that a more thorough job should be done with available resources on lands already dedicated to conservation.

*Our Response:* We appreciate the comments. In this final rule, we are designating critical habitat for 125 listed endangered or threatened species (122 plants, 1 tree snail, and 2 forest birds) on the islands of Molokai, Maui, and Kahoolawe using an ecosystem-based approach in identifying the physical and biological features essential to the conservation of these species, and unoccupied areas essential to their conservation, that we believe will ultimately provide for greater public understanding of the conservation and recovery needs for each of the species addressed in this final rule. The recovery criteria for these species include both conservation of existing populations of these species, as well as reestablishment of populations in suitable habitat within the species' historical range. We further note, as stated earlier, that the designation of critical habitat for listed species is a requirement under section 4(a)(3) of the Act, and is not a discretionary action.

We agree that more could be done to help ameliorate the threats to these 125 species and their habitats. Conservation efforts are challenged by the number of threats, the extent of these threats across the landscape, and the lack of sufficient resources (e.g., funding) to control or eradicate them from all areas where these 125 species occur now or occurred historically. In addition, not all of the habitat essential to the conservation and recovery of these species is contained within areas dedicated to conservation.

(77) *Comment:* One commenter stated that he was denied the opportunity at the public hearing to poll the audience regarding their position on the proposed critical habitat designation.

*Our Response:* Per our guidelines (USFWS Endangered Species Act Public Hearings Handbook, N.D. 19 pp.), our public hearing officer respectfully informed the individual that he could question the audience when the public hearing was formally concluded but that he would not be recorded unless he was presenting testimony. The commenter then declined to provide testimony.

(78) *Comment:* Several commenters questioned the lack of information regarding trespass and liability on private lands that are designated as critical habitat. They were concerned that no guidelines are provided regarding allowable activities on these lands. They also stated their concern

regarding lawsuits by environmental organizations if critical habitat is harmed. There also is no process for third-party appeal.

*Our Response:* State law provisions regarding trespass on privately owned lands are effective regardless of the designation of critical habitat. The designation of critical habitat does not create a wilderness area, preserve, or wildlife refuge, nor does it open a privately owned area to human access or use. It does not alter State law with regard to trespass on privately owned lands.

In response to the second concern, the designation of critical habitat on private lands would only affect current or ongoing land management practices when there is a Federal nexus. In our June 11, 2012, proposed rule (77 FR 34464) and in this final rule (see *Application of the "Adverse Modification" Standard*, below), we state that activities funded, carried out, or authorized (e.g., issue a permit) by a Federal agency that may destroy or adversely modify critical habitat for the Maui Nui species include, but are not limited to:

(1) Federal actions that would appreciably degrade or destroy the physical or biological features for the species including, but not limited to, the following: Overgrazing; maintaining or increasing feral ungulate levels; clearing or cutting native live trees and shrubs (e.g., woodcutting, bulldozing, construction, road building, mining, herbicide application); and taking actions that pose a risk of fire.

(2) Federal actions that would alter watershed characteristics in ways that would appreciably reduce groundwater recharge or alter natural, wetland, aquatic, or vegetative communities. Such actions include new water diversion or impoundment, excess groundwater pumping, and manipulation of vegetation through activities such as the ones mentioned in (1), above.

(3) Recreational activities that may appreciably degrade vegetation.

(4) Mining sand or other minerals.

(5) Introducing or encouraging the spread of nonnative plant species.

(6) Importing nonnative species for research, agriculture, and aquaculture, and releasing biological control agents.

Our FEA acknowledges the potential for critical habitat designation to increase the vulnerability of private landowners to legal challenges regarding their operations (IEc 2015, pp. 5–20). Due to significant uncertainties regarding the extent to which the designation will increase the probability of legal challenges (over and above the

presence of the listed species or other critical habitat designations (*e.g.*, Blackburn's sphinx moth critical habitat), the direct costs of legal fees and time spent on lawsuits, and the potential outcome of lawsuits, the FEA does not estimate a monetary cost from potential third-party lawsuits.

(79) *Comment:* Several commenters stated the following: (a) The proposed rule does not comply with legal requirements (*i.e.*, it does not use the best scientific information available) because no public input in the collection and analysis of a broad range of information was used; (b) broad brush strokes were used, resulting in a far-reaching designation on State, county, and private lands that will have a direct and negative impact on Maui County and its economic well-being; (c) areas proposed for critical habitat do not have critical habitat; and (d) the Service has not addressed the comments in a manner that reflects or acknowledges their concerns.

*Our Response:* See our responses to *Comments* (16) and (120). In this final rule, we address all comments we received on the proposed critical habitat designations described in the June 11, 2012, proposed rule (77 FR 34464) and the DEA. We are unable to address statement (c) above in the absence of additional details.

(80) *Comment:* Several commenters expressed concern that the designation of critical habitat will reduce subsistence hunting and gathering.

*Our Response:* Game mammal hunting is a recreational and cultural activity in Hawaii that is regulated by the Hawaii Department of Land and Natural Resources on State and private lands (Hawaii Department of Land and Natural Resources 2002). Critical habitat does not give the Federal Government authority to control or otherwise manage feral animals on non-Federal land. Absent Federal involvement, these land management decisions are not affected by the designation of critical habitat. It is well-known that game mammals affect listed plant and animal species in Hawaii. We believe it is important to develop and implement management programs that provide for the recovery of listed species and acknowledge the importance of continued ungulate hunting in game management areas when it is compatible with the recovery of endangered species. In general, the establishment of game management areas is not compatible with recovery in areas needed for recovery. We welcome opportunities to work closely with the State and other partners to ensure that game management programs are

implemented in a manner consistent with both of these needs.

Critical habitat does not give the Federal Government authority to control or otherwise manage gathering of plants on non-Federal land or in the absence of some other Federal action. However, the State of Hawaii regulates the gathering of plants that are State listed as endangered or threatened on both private and State lands (HRS (section 195D-4(e), 4(f), and 4(g)). Gathering of native plants that are not State listed on private lands is not regulated by the State of Hawaii. Gathering of native plants that are not State listed on State lands is regulated by the State (Hawaii Administrative Rules—Title 13).

(81) *Comment:* Several commenters stated that this overly broad proposed rule is inconsistent with the State's New Day Initiative because it has the potential to remove farms and ranches that produce local products, including food, from production while providing no certainty that these critical habitat designations will result in benefit to the species.

*Our Response:* Governor Abercrombie's 2010 New Day Initiative proposes many important agricultural goals for Hawaii, including, but not limited to, preserving and growing more food on Hawaii's agricultural lands, repairing old irrigation systems, assisting community-based farming entrepreneurial endeavors, raising the demand for local food, and developing educational programs to improve community and cultural understanding of growing food locally. Designation of critical habitat would not affect the ability of private landowners or lessees of publicly owned agricultural lands to conduct any of these or related agricultural activities, absent a Federal nexus. Even in the case of a Federal nexus, critical habitat would not prevent the use of agricultural lands, but could result in the consideration of potential project modifications or alternatives to avoid the destruction or adverse modification of critical habitat in the course of implementing the intended purpose of the action. See also our response to *Comment* (59), above.

(82) *Comment:* One commenter requested that the area proposed as critical habitat for Newcomb's tree snail (*Newcombia cumingi*) on Puu Kukui Watershed Preserve be excluded because the landowner can accomplish the conservation goals for this tree snail without critical habitat designation. The request is based on the existence of a long-term management plan for the preserve; a history of self-funding conservation actions on the preserve;

past and current cooperative agreements with the Service, including a current agreement to protect and enhance habitat for this tree snail; and ongoing implementation of actions that benefit the conservation of endangered and threatened species.

*Our Response:* We proposed critical habitat for Newcomb's tree snail on Puu Kukui Watershed Preserve because these lands support the only known population of this tree snail and contain the physical or biological features of its lowland wet ecosystem habitat and suitable habitat and space for expansion or reintroduction to achieve population levels that could approach recovery. As described by the commenter, recently the Service and the private landowner entered into a cooperative agreement to protect and enhance habitat for this tree snail. For the reasons described below (see "*Exclusions Based on Other Relevant Factors*"), we are excluding 8,931 ac (3,614 ha) of land on Puu Kukui Watershed Preserve from critical habitat, including the portion proposed for Newcomb's tree snail critical habitat.

(83) *Comment:* Several commenters stated that they conduct conservation actions to control erosion and feral ungulates, and that designation of critical habitat may impede conservation actions in the future.

*Our Response:* We appreciate the commenters' concerns, and recognize that private landowners conduct voluntary conservation efforts, such as efforts to control erosion or soil loss, and fencing to exclude nonnative pigs, axis deer, and goats from private lands. It is unclear to us if the second part of the comment implies that the designation of critical habitat will impede the implementation of conservation actions or that the private landowners may not support voluntary conservation actions on their private lands in the future if those lands are designated critical habitat. The designation of critical habitat will not impede the implementation of conservation actions described by these commenters, and in all likelihood provide additional support for these habitat-enhancing actions that will also benefit listed species. We are concerned and deeply regret that some private landowners may not support voluntary conservation actions on their private lands in the future should critical habitat be designated on their lands. The purpose of designating critical habitat is to contribute to the conservation of endangered and threatened species and the ecosystems upon which they depend. The outcome of the designation, triggering regulatory requirements for actions funded,

authorized, or carried out by Federal agencies under section 7(a)(2) of the Act, can sometimes appear to be a disincentive to conservation on non-Federal lands. Thus, the benefits of excluding areas that are covered by partnerships or voluntary conservation efforts can, in specific circumstances, be high. For the reasons described below (see “*Exclusions Based on Other Relevant Factors*”), we are excluding 84,891 ac (34,354 ha) of private lands on Maui, Lanai, and Molokai from critical habitat. Again we note that in the absence of a Federal nexus, the designation of critical habitat has no direct regulatory impact on private landowners.

(84) *Comment*: Several commenters stated that public notice of the proposed designation of private land as critical habitat has been inadequate. These commenters suggested conducting information meetings using a “talk-story” approach. That is, conduct informal meetings with the public, including landowners with lands within already designated critical habitat who can address questions such as the impact(s) of critical habitat on their land, including the impact on land values, and the benefits, if any, of critical habitat on their land, including getting grants for conservation projects such as fences to exclude nonnative animals.

*Our Response*: We appreciate the concerns regarding our notification process of the proposed rule. See also our response, above, to *Comment* (16). We also appreciate the suggestions provided by these commenters regarding public information meetings. Although our ability to conduct one-on-one meetings with various interest groups throughout Hawaii (e.g., community associations, nonprofit interest groups, State and Federal agencies, *aha mokus*) is currently constrained by our resource limitations, we will seriously consider adopting a “talk-story” approach as part of our community outreach efforts as our limited staff and resources allow.

(85) *Comment*: Several commenters stated that the designation of critical habitat would be devastating to an already struggling industry (i.e., ranching) due to the effects of the recent drought. In addition, a critical habitat designation will burden a private landowner with additional Federal, State and local regulations. Critical habitat designation could put an end to their livelihood.

*Our Response*: See our responses to *Comments* (50), (55), (56), and (59), above. Absent a Federal nexus for a proposed action on private property, a

critical habitat designation does not prevent or prohibit an activity such as ranching on private or State property. As described earlier, even in the case of a potential Federal nexus, critical habitat does not prevent a private landowner from using their lands for ranching or other activities, but requires the Federal action agency to ensure that their action does not destroy or adversely modify critical habitat, through potential project modifications or other measures to minimize and mitigate the effects of the action.

(86) *Comment*: One commenter was concerned regarding a portion of an irrigation ditch system within Maui—Lowland Wet—Unit 1 and requested that the Service adjust the boundary of the unit above the upper ditch system.

*Our Response*: We have carefully examined the area of concern and have determined that changes in land use had occurred within the proposed critical habitat unit that would preclude the area identified by the commenter from supporting the primary constituent elements (for those species that occupy this unit) and further, the area in question is not essential to the conservation of any of the species (for those species for which this unit was proposed as unoccupied critical habitat). As a consequence, we have concluded that this area does not meet our definition of critical habitat and we have removed it from the final designation of Maui—Lowland Wet—Unit 1. See also Summary of Changes from Proposed Rule, below.

(87) *Comment*: One commenter stated that the Service must accord native Hawaiians with the same special considerations that are given to native Americans, that native Hawaiians have rights vested by law and are wards of the State, and that it is our fiduciary duty not to impose on those rights.

*Our Response*: See our response to *Comment* (35), above.

#### Public Comments on Proposed Maui—Lowland Dry—Unit 3

Several commenters submitted comments regarding the designation of critical habitat in proposed Maui—Lowland Dry—Unit 3, and we grouped similar comments together relating specifically to this unit below.

(88) *Comment*: Four commenters supported designation of the lowland dry ecosystem and described Hawaiian lowland dry forests as the most critically endangered ecosystem in Hawaii, with less than 3 percent remaining Statewide and 5 percent remaining on Maui. Several commenters also strongly supported designation of Maui—Lowland Dry—Unit 3. Another

commenter supported the revision (reevaluation) of critical habitat for the currently listed dry forest species using the ecosystem approach.

*Our Response*: We appreciate these comments. Habitat loss and degradation of the lowland dry ecosystem is demonstrated by the current and ongoing threats of development and urbanization, introduced ungulates, nonnative plants, fire, and hurricanes to species and their habitat in the lowland dry ecosystem (see *The Present or Threatened Destruction, Modification, or Curtailment of Its Habitat or Range* in our final rule to list as endangered 38 species on the islands of Maui, Molokai, and Lanai (78 FR 32014; May 28, 2013)). In this final rule, we are designating critical habitat in six units (Maui—Lowland Dry—Unit 1 through Maui—Lowland Dry—Unit 6) totaling 20,740 ac (8,392 ha) for 30 species in the lowland dry ecosystem on Maui. Twelve of the plant species occur only on east Maui, 11 occur only on west Maui, and 7 occur on both east and west Maui. These lowland dry units provide the areas that contain the physical and biological features essential to the conservation of the 30 species and require special management considerations or protections (e.g., nonnative species control) (occupied habitat) or habitat that is essential to the conservation and recovery of the species (unoccupied habitat). Maui—Lowland Dry—Unit 3 is particularly unique because, even though close to developed or otherwise badly degraded areas, it contains a high concentration of native plant species, many comprising the PCEs for species that occur within the lowland dry forest, including canopy trees such as *Erythrina sandwicensis* (wiliwili) and *Myoporum sandwicense* (naio), and subcanopy and understory plants such as *Capparis sandwichiana* (maiapilo), *Chamaesyce celastroides* (akoko), *Dodonaea viscosa* (aalii), *Ipomoea* sp. (koaliawa and moon flower), *Plumbago zeylanica* (iliee), *Sicyos* sp. (anunu), *Sida fallax* (ilima), and *Waltheria indica* (uhaloa). The very rough lava substrate in the area is apparently not preferred by feral ungulates, resulting in less herbivory of native plant species, thus threats are reduced in this unit and native plant species have a greater chance of survival. Due to the currently limited numbers of individuals and populations, the expansion or reestablishment of listed plant populations in unoccupied areas are essential to the conservation of the species and to meet recovery goals. Because of the uniqueness and rarity of

this area in the lowland dry ecosystem on east Maui, we conclude this unit is essential to the recovery of *Canavalia pubescens* and 16 other lowland dry plant species. See also our response to *Comment* (109), below.

(89) *Comment*: Several commenters noted the threat of deer and goats to *Canavalia pubescens* throughout its range on Maui, with specific impacts to populations on the Palauea lava flow and Ahihi-Kinau. In addition, the large loss of *C. pubescens* individuals at Ahihi-Kinau Natural Area Reserve (NAR) illustrates the need for multiple viable habitats for this species and increases the significance for protection of other areas such as those found within Maui—Lowland Dry—Unit 3. The commenters also recommended that fenced areas and regular monitoring are necessary to protect this species from the threat of ungulates in these areas.

*Our Response*: We agree that herbivory and habitat modification by deer and goats constitute threats to the lowland dry ecosystem in which *Canavalia pubescens* is known to occur on Maui (see *The Present or Threatened Destruction, Modification, or Curtailment of Its Habitat or Range and Disease or Predation* in our final rule to list as endangered 38 species on the islands of Maui, Molokai, and Lanai (78 FR 32014; May 28, 2013)). We also agree that recovery of this species will require multiple viable sites and that conservation efforts, such as fencing and regular monitoring, are necessary to address threats to *C. pubescens* and its habitat from ungulates. In this final rule, for the reasons described above (see our response to *Comment* (44) and (88)), we are designating critical habitat in a total of 16,841 ac (6,816 ha) in critical habitat units Maui—Lowland Dry—Unit 1 through Maui—Lowland Dry—Unit 4 for *C. pubescens* and 18 other lowland dry plant species. These lowland dry units provide the physical or biological features essential to the conservation of the species and require special management considerations or protections (e.g., nonnative species control) (occupied habitat) or habitat that is essential to the conservation and recovery of the species (unoccupied habitat).

(90) *Comment*: Several commenters recommended inclusion of additional areas to Maui—Lowland Dry—Unit 3, such as the 22-ac Palauea Cultural Preserve, and portions of land owned by Makena Holdings (Tax Map Key (2) 2–1–008:90), based on the presence of lava flows of similar geologic age and origin. These commenters noted that the presence of *Canavalia pubescens* in the Palauea Cultural Preserve supports

designation of this area as critical habitat. One commenter noted that a native plant restoration plan was created for the Palauea Cultural Preserve and that the preserve is currently being transferred to joint management by the Office of Hawaiian Affairs and the University of Hawaii.

*Our Response*: We appreciate the information provided regarding the Palauea Cultural Preserve and Tax Map Key (2) 2–1–008:90. We carefully reviewed the areas proposed as critical habitat and the recovery needs (see *Comment* (44), (88), and (89)) of *Canavalia pubescens* on the island of Maui. In this final rule, we are designating critical habitat in four units in the lowland dry ecosystem on east Maui (Maui—Lowland Dry—Unit 1 through Maui—Lowland Dry—Unit 4) totaling 16,841 ac (6,816 ha) for 19 species in the lowland dry ecosystem. A critical habitat designation does not signal that habitat outside the designated area (e.g., the Palauea Cultural Preserve or portions of TMK (2) 2–1–008:90) is unimportant or may not be needed for the recovery of the species. However, we do note that the Palauea Cultural Preserve is a cultivated garden setting, and that individuals of *C. pubescens* have been planted there. Although such an area supports individuals of this endangered species, these individual plants in a garden setting do not contribute to a self-sustaining occurrence in the wild. For recovery to occur, populations must be viable in the wild, where they have the potential to contribute further to population growth and expansion. To achieve population growth and expansion, there must be evidence that the plants are reproducing on their own, meaning that multiple generations are successfully produced. Areas that are important to the conservation of *C. pubescens*, both inside and outside the critical habitat designation, will continue to be subject to: (1) Conservation actions implemented under section 7(a)(1) of the Act, and (2) regulatory protections afforded by the requirement in section 7(a)(2) of the Act for Federal agencies to insure their actions are not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of critical habitat. These protections and management actions will continue to contribute to the conservation of this species. Similarly, critical habitat designations made on the basis of the best available information at the time of designation will not control the direction and substance of future

recovery plans, habitat conservation plans (HCPs), or other species conservation planning efforts if new information available at the time of these planning efforts calls for a different outcome. We hope to work collaboratively in the future with the Office of Hawaiian Affairs and the University of Hawaii regarding the Palauea Cultural Preserve native plant restoration plan.

(91) *Comment*: One commenter noted that the accessibility of proposed Maui—Lowland Dry—Unit 3 provides a potential benefit to the species that would allow regular monitoring, as well as easy access for educational tours and community-based restoration efforts. The commenter also noted that the proximity of Maui—Lowland Dry—Unit 3 to schools, churches, and visitor populations is an ideal location to promote ongoing community involvement.

*Our Response*: We appreciate the comments and agree that accessibility may be an important component of the management required for the recovery of endangered species. In addition, critical habitat designation increases public awareness of the presence of listed species and the importance of habitat protection, and provides educational benefits resulting from identification of the features essential to the conservation of the 17 species for which critical habitat is designated in Maui—Lowland Dry—Unit 3 and the delineation of areas important for their recovery.

(92) *Comment*: One commenter stated that critical habitat designation should benefit property owners who wish to develop ecotourism industries by increasing their ability to draw tourists to natural resource assets on their lands. In addition, the commenter stated that development projects adjacent to areas designated as critical habitat can also increase their property values by marketing pedestrian access to nature preserves. The commenter felt this was particularly applicable for Maui—Lowland Dry—Unit 3.

*Our Response*: Section 6.3 of the DEA (also Section 6.3 of the FEA) describes the potential incremental benefits of conservation efforts for the Maui Nui species, including the potential for property value benefits that may result from open space or decreased density of development and increased potential for recreation or tourism. We thank the commenter for the statements, as the benefits of critical habitat are frequently not acknowledged. We are aware that not all property owners share the same views regarding beneficial impacts of critical habitat designation on their lands.

(93) *Comment*: One commenter stated that the Service failed to provide documentation for the occurrence of the listed plant, *Hibiscus brackenridgei*, in Maui—Lowland Dry—Unit 3. The commenter provided the results of a botanical survey (Guinther 2012, pp. 7–8), which did not detect the presence of *H. brackenridgei* on the parcel owned by ATC Makena Holdings, LLC (TMK (2) 2–1–008: 108), located within Maui—Lowland Dry—Unit 3.

*Our Response*: The best available information in our files indicates the occurrence of *Hibiscus brackenridgei* within Maui—Lowland Dry—Unit 3 as recently as 2011 (Oppenheimer 2010bb, in litt.; PEPP 2011, p. 118). Documentation for this record was cited in our June 11, 2012, proposed rule (77 FR 34464) and in the references cited for this final rule and available at <http://www.regulations.gov>. The references cited in our proposed rule and in this final rule are available by contacting the Pacific Islands Fish and Wildlife Office (see **FOR FURTHER INFORMATION CONTACT**). Although *H. brackenridgei* was not detected during the survey cited above on the parcel owned by ATC Makena Holdings, LLC, this species is present elsewhere in the proposed unit. In addition, we have determined that Maui—Lowland Dry—Unit 3, including the area in the ATC Makena Holdings, LLC, parcel, is essential for the conservation of *H. brackenridgei* and 16 other species for which it is designated critical habitat in this unit of the lowland dry ecosystem. Maui—Lowland Dry—Unit 3 contains one or more of the physical and biological features of the lowland dry ecosystem (see also responses to *Comment* (88), (89), and (109), as well as Table 5). Maui—Lowland Dry—Unit 3 is essential to the conservation of these species because it is one of the few remaining areas of the lowland dry ecosystem that provides multiple essential physical or biological features in the requisite combination of appropriate substrate, rainfall, and native plant components to potentially successfully support viable populations of these species. Maui—Lowland Dry—Unit 3 additionally has the benefit of being geographically separated from Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, and Maui—Lowland Dry—Unit 4, thus providing potential redundancy so that species that occur in this unit or are reestablished in this unit are more likely to survive and provide for the conservation of species dependent on the lowland dry ecosystem in case of catastrophic events such as drought and fire.

Once known from the islands of Kauai, Oahu, Molokai, Lanai, Maui, Hawaii, and possibly Kahoolawe, *H. brackenridgei* is now known only from Lanai, Maui, and Hawaii. On Lanai, there are only two individuals of the species remaining. On Maui, two occurrences of the species are known, one in east Maui (about 10 individuals) and one in west Maui (a few individuals), both in the lowland dry ecosystem. The recovery guidelines for short-lived perennial plant species such as *H. brackenridgei* are 8 to 10 populations of 300 individuals per population sustained over a minimum of 5 years (Service 1999, pp. iv–v); this translates to a minimum recovery goal of approximately 2,400 to 3,000 individuals in total, in 8 to 10 self-sustaining populations. To meet such a goal, areas of currently unoccupied but suitable habitat within the historical range of *H. brackenridgei* in the lowland dry ecosystem on east Maui are essential for the recovery of this species. With so few individuals left, extensive population growth and reestablishment of additional populations will be required in areas that are not currently occupied by *H. brackenridgei* or other of the Maui Nui species. Maui—Lowland Dry—Unit 3 provides one of the best remaining examples of the lowland dry ecosystem type, with good potential to support the population growth, expansion, and reestablishment essential to achieve the conservation of *H. brackenridgei* and the 16 other species native to the lowland dry ecosystem on Maui for which critical habitat is designated in this unit (see also responses to *Comment* (88), (89), and (109) regarding the characteristics specific to Maui—Lowland Dry—Unit 3 that we conclude are essential to the conservation of the Maui Nui species).

(94) *Comment*: One commenter stated that Maui—Lowland Dry—Unit 3 may not be suitable habitat for *Alectryon macrococcus* (mahoe) because this species is a dryland forest tree found above 1,200 ft elevation. The commenter stated that Wagner *et al.* (1990) attributed the decline of this species to seed predation by boring insects and rats. According to the commenter, neither of these threats could be easily controlled for this species within Maui—Lowland Dry—Unit 3 at Makena, so the proposed critical habitat unit is not suitable. In addition, the commenter implied that the few individuals known from the lowland dry environment likely occur in the enclosures at Auwahi above 3,300 ft, based on the references provided by the Service in the proposed rule.

*Our Response*: Wagner *et al.* (1999, p. 1,225) describes the elevational range of *Alectryon macrococcus* as occurring between 1,200 ft to 3,500 ft (360 to 1,070 m). Based on this information, and historical and current occurrence data in our files, Maui—Lowland Dry—Unit 3 may not be suitable for this species because the elevation of this unit, 320 to 1,200 ft (100 to 360 m), is below the elevational range described for *A. macrococcus* by Wagner *et al.* (1999, p. 1,225). Despite the lack of more comprehensive survey data and the possibility for the discovery of new and unknown populations of native plant species, the best available scientific data on current and historical occurrences for this species does not support the designation of critical habitat in Maui—Lowland Dry—Unit 3 for *A. macrococcus*. Therefore, we are not designating critical habitat for *A. macrococcus* (var. *auwahiensis*) in critical habitat unit Maui—Lowland Dry—Unit 3 at this time.

(95) *Comment*: One commenter stated that Maui—Lowland Dry—Unit 3 may not be suitable habitat for *Bonamia menziesii* because only a few individuals are known from the lowland dry ecosystem (at Puu o Kali, Kaloi, and Kanaio), and cited the information on page 77 FR 34515 in our proposed rule published on June 11, 2012. The commenter added that this species is possibly not an endemic species (Wagner *et al.* 1990, p. 550).

*Our Response*: We disagree with the commenter's statement that Maui—Lowland Dry—Unit 3 is not suitable for *Bonamia menziesii* for the following reasons: The occurrence of only a few individuals within a particular area does not necessarily indicate that the area is unsuitable. This species was historically wide-ranging in the lowland dry areas of east Maui, and has since declined in numbers (HBMP 2010). The locations cited by the commenter where *B. menziesii* currently occurs (within Maui—Lowland Dry—Unit 1 and Maui—Lowland Dry—Unit 2) contain one or more of the physical and biological features that are present within Maui—Lowland Dry—Unit 3. Also, since publication of our proposed rule (June 11, 2012; 77 FR 34464) and during the public comment periods, we received information that additional individuals of *B. menziesii* have been found in the lowland dry ecosystem of east Maui (on State lands in Maui—Lowland Dry—Unit 1; Higashino 2013, pers. comm.), adding to the number of individuals of the species known from the lowland dry ecosystem. The recovery guidelines for short-lived perennial plant species such as *B.*

*menziesii* are 8 to 10 populations of 300 individuals per population, sustained over a minimum of 5 years (Service 1999, pp. iv–v). Therefore, areas of suitable habitat within the historical range of *B. menziesii* in the lowland dry ecosystem on east Maui are essential for the conservation of this species, as significant growth and reestablishment of *B. menziesii* populations in areas not currently occupied by the species will be required to achieve these goals. Maui—Lowland Dry—Unit 3 contains one or more of the physical and biological features of the lowland dry ecosystem (see Table 5), similar to those at the locations cited by the commenter; it also provides a site with particularly good potential for supporting future populations, due to the combination of essential features that occur there (see our responses to *Comment* (88), (89), and (93), above, and (109), below). Maui—Lowland Dry—Unit 3 provides the physical or biological features essential for the reestablishment of wild populations of the species. Due to the currently limited numbers of individuals and populations, the expansion or reestablishment of populations in unoccupied areas are essential to the conservation of the species and to meet recovery goals.

We believe the commenter's second point regarding the endemism of *B. menziesii* incorrectly interprets Austin's discussion in Wagner *et al.* (1999, p. 550). In the *Manual of Flowering Plants of Hawaii*, Austin (1999, p. 550) questioned the origin of the genus, not the species. Austin concluded that “*Bonamia menziesii* apparently has close affinities with taxa of northwestern South and Central America,” which we interpret as suggesting a possible origin of the Hawaiian species, and not a suggestion that there is a lack of distinction between the Hawaiian and potential Central and South American members of this genus at the species level.

(96) *Comment*: One commenter stated that *Colubrina oppositifolia* is easy to propagate in lowland dry to mesic areas and easily incorporated into landscaping in these ecosystems, which suggests Maui—Lowland Dry—Unit 3 is not critical to its recovery. The commenter also appeared to question the suitability of Maui—Lowland Dry—Unit 3 due to the recent discovery (1995) of *C. oppositifolia* in the lowland mesic ecosystem on west Maui, and unpublished reports of its historical occurrence in the lowland dry ecosystem on east Maui, citing information at 77 FR 34516 in our June 11, 2012, proposed rule.

*Our Response*: The historical occurrence of *Colubrina oppositifolia* on east Maui in the lowland dry ecosystem (HBMP 2010) and its “recent discovery on west Maui in 1995” in the lowland mesic ecosystem indicates the need for critical habitat on both east and west Maui in those respective ecosystems. In fact, the commenter's statement that *C. oppositifolia* is easy to propagate and easily incorporated into landscaping in the lowland dry and mesic ecosystems also suggests that Maui—Lowland Dry—Unit 3 contains suitable habitat for this species. Remaining areas of suitable habitat in the lowland dry ecosystem are essential to the conservation of the species, as evidenced by the wide gap between the recovery goals for a species such as *C. oppositifolia* and its current status. The recovery guidelines for long-lived perennial plant species such as *C. oppositifolia* are 8 to 10 populations of 100 individuals per population, sustained over a minimum of 5 years (Service 1996, p. iv), or approximately 800 to 1,000 individuals in total in 8 to 10 self-sustaining populations. Currently, in Maui Nui, this species is known only from about five individuals in two locations on west Maui, and from one possible individual on east Maui that has not been relocated in over 20 years. Therefore, areas of suitable habitat within the historical range of *C. oppositifolia* (including lowland dry and lowland mesic ecosystems) on both east and west Maui are essential to achieve the increase in numbers of individuals and occurrences of this species to provide for its conservation and recovery. Maui—Lowland Dry—Unit 3 provides the physical or biological features essential for the reestablishment of wild populations of the species, and is a site with particularly good potential for supporting future populations, due to the combination of essential features that occur there (see also our responses to *Comment* (88), (89), and (93), above, and (109), below).

(97) *Comment*: One commenter questioned the suitability of Maui—Lowland Dry—Unit 3 for *Ctenitis squamigera* based on Palmer's (2003) description of the habitat of this species as the mesic forest floor above 590 ft on all the main Hawaiian Islands except Hawaii Island and possibly Kauai. The commenter also suggested that the occurrence records for this species cited at 77 FR 34516 in our June 11, 2012, proposed rule lack specificity, but tend to support the Palmer description.

*Our Response*: The information provided by the commenter regarding the geographic range and elevation at which *Ctenitis squamigera* may occur is

accurate. Historically, this species was found on Kauai, Oahu, Molokai, Maui, Lanai, and Hawaii. Currently, there are 12 occurrences, totaling approximately 100 individuals, on the islands of Lanai, Molokai, and Maui. Data in our files indicate that *C. squamigera* is known from the lowland dry ecosystem on east Maui (HBMP 2010). Maui—Lowland Dry—Unit 3 is not known to be occupied by *C. squamigera*, but contains one or more of the physical and biological features of the lowland dry ecosystem (see *Comment* (88), (89), (93), (109), and Table 5), including the appropriate native plant species, rainfall, and substrate to support the species, and also includes the elevation cited by the commenter. The recovery guidelines for short-lived perennial plant species such as *C. squamigera* are 8 to 10 populations of 300 individuals per population, sustained over a minimum of 5 years (Service 1998, p. iv), or an objective of a minimum of approximately 2,400 to 3,000 individuals. Areas of suitable habitat in the lowland dry ecosystem are limited within the historical range of this species. Because of the low number of individuals at known locations of this species (100 individuals across 12 scattered occurrences, and recalling that an occurrence is not equivalent to a self-sustaining population), areas of unoccupied suitable habitat including Maui—Lowland Dry—Unit 3 are essential for the reestablishment of populations that will be required to achieve the conservation and recovery of *C. squamigera*. See also our response to *Comment* (109), below.

(98) *Comment*: One commenter stated that Maui—Lowland Dry—Unit 3 may not be suitable habitat for *Flueggea neowawraea*. The commenter acknowledged that individuals of this species are reported at 820 ft elevation and above, in the lowland dry ecosystem at Auwahi. However, according to the commenter, the environment in Maui—Lowland Dry—Unit 3 is far too dry in contrast to the Auwahi enclosures, where this species is currently found, and which are located above 3,100 elevation, receive regular fog drip, and are able to support kikuyu (*Pennisetum clandestinum*), a widespread nonnative pasture grass and dominant ground cover.

*Our Response*: The information provided by the commenter regarding the elevation and occurrence of *Flueggea neowawraea* in the Auwahi enclosures is accurate. Data in our files indicate that *F. neowawraea* is known from the lowland dry ecosystem on east Maui (HBMP 2010). Maui—Lowland Dry—Unit 3 contains one or more of the

physical and biological features of the lowland dry ecosystem (see Table 5), including the elevational range cited by the commenter. The recovery guidelines for long-lived perennial plant species such as *F. neowawraea* are 8 to 10 populations of 100 individuals per population, sustained over a minimum of 5 years (Service 1999, pp. iv–v), for an objective of roughly 800 to 1,000 individuals total in these multiple populations. Historically, *F. neowawraea* was known from Kauai, Oahu, Molokai, Maui, and Hawaii. Currently, there are 5 occurrences on Kauai (26 individuals), 1 occurrence on Oahu (1 individual), 2 individuals on Maui, 4 occurrences on Hawaii (8 individuals), and no known occurrences on Molokai (PEPP 2009, p. 25; PEPP 2012). Although there are multiple occurrences of *F. neowawraea*, most are of only 1 or a few individuals, for a total of fewer than 40 plants known. The species is far from meeting the recovery objective of 800 to 1,000 individuals in 8 to 10 self-sustaining populations of at least 100 individuals each. Therefore, areas of suitable habitat within the historical range of *F. neowawraea* in the lowland dry ecosystem on east Maui are essential for the recovery of this species. Although areas of suitable habitat in the lowland dry ecosystem are now limited, Maui—Lowland Dry—Unit 3 provides one of the few remaining areas that includes several of the physical or biological features essential to the conservation of the plant species that depend upon this habitat type, including appropriate elevation, substrate, rainfall, and associated native plant species (see *Comment* (88), (89), and (93), above, and (109), below, for additional information on the characteristics specific to this unit that we have determined are essential for the conservation of the Maui Nui species). Maui—Lowland Dry—Unit 3 also provides unoccupied habitat separated from Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, and Maui—Lowland Dry—Unit 4, so that, in case of catastrophic events such as drought and fire, one or more occurrences of this species could persist and provide for its conservation.

(99) *Comment*: One commenter stated that Maui—Lowland Dry—Unit 3 may not be suitable habitat for *Melanthera kamolensis*. The reason provided by the commenter was that this species is “extremely rare; known only from a small population in Kamole Gulch, southeastern Maui (Wagner *et al.* 1990, p. 337).”

*Our Response*: The information provided by the commenter regarding the known location of *Melanthera*

*kamolensis* is accurate. However, *M. kamolensis* is known historically from three collections in an area extending approximately 1 mile (1,000 m) on east Maui (Wagner *et al.* 1999, p. 337), and currently known only from a single occurrence with 30 to 40 individuals in the lowland dry ecosystem on east Maui (HBMP 2010, Medeiros 2010, in litt.). Maui—Lowland Dry—Unit 3 contains one or more of the physical and biological features of the lowland dry ecosystem (Table 5), similar to those at the location cited by the commenter. The recovery guidelines for short-lived perennial plant species such as *M. kamolensis* are 8 to 10 populations of 300 individuals per population, sustained over a minimum of 5 years (Service 1997, pp. iv–v), for a total of 2,400 to 3,000 individuals in 8 to 10 self-sustaining populations. With a single known occurrence of only 30 to 40 individuals at present, population growth will be essential to the conservation of the species, as will the reestablishment of multiple new populations in areas of currently unoccupied lowland dry habitat. Therefore, additional areas of suitable habitat within the historical range of *M. kamolensis* in the lowland dry ecosystem on east Maui are essential for the recovery of this species. Although areas of suitable habitat in the lowland dry ecosystem are now limited, Maui—Lowland Dry—Unit 3 provides one of the few remaining areas that includes several of the physical or biological features essential to the conservation of the plant species that depend upon this habitat type, including appropriate elevation, substrate, rainfall, and associated native plant species. Maui—Lowland Dry—Unit 3 provides unoccupied habitat separated from Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, and Maui—Lowland Dry—Unit 4, so that, in case of catastrophic events such as drought and fire, an occurrence of this species could persist. See also responses to *Comment* (88), (89), (93), and (109) for additional details of the characteristics specific to this unit that we have determined are essential to the conservation of the Maui Nui species.

(100) *Comment*: One commenter stated that Maui—Lowland Dry—Unit 3 may not be suitable habitat for *Melicope adscendens*. The primary reason provided by the commenter was that this species is “known only from mesic forest at Auwahi (Wagner *et al.* 1990, p. 1,183).” In addition, the commenter argued that the environment in Maui—Lowland Dry—Unit 3 is far too dry in contrast to the Auwahi enclosures,

which are situated above 3,100 ft, receive regular fog drip, and are able to support kikuyu, the widespread nonnative pasture grass, as the dominant ground cover.

*Our Response*: The information provided by the commenter from Wagner *et al.* (1990, p. 1,183) regarding the geographic range of *Melicope adscendens* in mesic forest on east Maui is accurate, although Wagner *et al.* do not give an elevational range for this species. The elevation of the Auwahi enclosures range from 3,200 to 4,400 ft (980 to 1,340 m) in the dry and mesic forest ecosystems on east Maui (TNC 2007; LHWRP 2010, pp. 1–4). We have determined, based on the best available scientific data for this species, that Maui—Lowland Dry—Unit 3 does not provide the physical or biological feature of elevation that is considered essential for the conservation of *M. adscendens*, and that this unoccupied area is not essential to the conservation of the species. Currently, there are areas within the required elevational range of the species within Maui—Lowland Dry—Unit 1 that provide habitat for this species’ conservation. Therefore, based on the best scientific data available at this time, Maui—Lowland Dry—Unit 3 is not designated as critical habitat for *M. adscendens* in this final rule as it does not meet the definition of critical habitat for this species (see Summary of Changes from Proposed Rule, below).

(101) *Comment*: One commenter stated that Maui—Lowland Dry—Unit 3 may not be suitable habitat for *Melicope mucronulata*. The primary reason provided by the commenter was a statement cited in Wagner *et al.* (1990, p. 1,196) that this species was “not seen on Maui in recent time, but previously collected from the south slope of east Maui mountain.” The commenter also cited our June 11, 2012, proposed rule (77 FR 34464) that this species is “not known to be an inhabitant of the lowland dry ecosystem.”

*Our Response*: The tree species *Melicope mucronulata* currently occurs only on the island of Molokai, where a total of four individuals are known to occur, three in one location, and one in another. Its current status on Maui is not known, although on east Maui, *M. mucronulata* is known historically from one occurrence in the lowland dry ecosystem, and from one occurrence in the montane dry ecosystem (TNC 2007; HBMP 2010). The recovery guidelines for long-lived perennial plant species such as *M. mucronulata* are 8 to 10 populations of 100 individuals per population, sustained over a minimum of 5 years and within its historical range (Service 1997, pp. iv–v). This translates

to a total of at least 800 to 1,000 individuals in 8 to 10 populations across its historical range. Significant population growth and the reestablishment of populations in suitable habitat across its historical range will be required to achieve the conservation of this species. Areas of suitable habitat within the historical range of *M. mucronulata* include the lowland dry ecosystem on east Maui (TNC 2007; HBMP 2010). Maui—Lowland Dry—Unit 3 contains one or more of the physical and biological features of the lowland dry ecosystem (see *Comment* (88), (89), (93), (109), and Table 5). This unit is considered particularly important for the recovery and conservation of *M. mucronulata* because the last known location of an individual of this species was located in or near Maui—Lowland Dry—Unit 3. We therefore consider Maui—Lowland Dry—Unit 3 essential to the conservation of this species, as the last known occurrence of the species there indicates this specific area has a high likelihood of either supporting unknown remaining representatives of the species, or at least the potential to support the species in response to recovery efforts. We are unable to find the statement cited by the commenter that *M. mucronulata* is “not known to be an inhabitant of the lowland dry ecosystem.” Our June 11, 2012, proposed rule (see 77 FR 34521) states, “The occurrence status of *M. mucronulata* in the lowland dry and montane dry ecosystems on east Maui is unknown.”

(102) *Comment*: One commenter stated that Maui—Lowland Dry—Unit 3 may not be suitable habitat for *Neraudia sericea*. The primary reason provided by the commenter was that this species is “found above 2,200 ft in mesic to dry forest (Wagner *et al.* 1990, p. 1,304).” The commenter also cited information in our proposed rule (June 11, 2012; 77 FR 34464) that “on east Maui, (this species) is now known only from Kahikinui, and not observed in lowland dry ecosystem since 1900.”

*Our Response*: On east Maui, *Neraudia sericea* is known historically from the lowland dry and montane dry ecosystem, and currently from multiple occurrences in the montane dry ecosystem (TNC 2007; HBMP 2010). Historical information for *N. sericea* indicates it was once wide-ranging on east Maui and well within the lowland dry ecosystem, and at elevations as low as 900 ft (270 m) (HBMP 2010), and also was known from Molokai, Lanai, and Kahoolawe (Wagner *et al.* 1999cc, p. 1,304). The recovery guidelines for short-lived perennial plant species such

as *N. sericea* are 8 to 10 populations of 300 individuals per population, sustained over a minimum of 5 years and within its historical range (Service 1999, pp. iv–v). The conservation of this species will therefore require attaining a total of 2,400 to 3,000 individuals in 8 to 10 self-sustaining populations across its historical range. Currently, this species is known from a total of five individuals at a single location, at Kahikinui on east Maui (HBMP 2010; Medeiros 2010, in litt.). Significant population growth, expansion and reestablishment in suitable habitat across its historical range will be essential to the conservation of this species. Although areas of suitable habitat in the lowland dry ecosystem are now limited, Maui—Lowland Dry—Unit 3 provides one of the few remaining areas that includes several of the physical or biological features essential to the conservation of the plant species that depend upon this habitat type, including appropriate elevation, substrate, rainfall, and associated native plant species (see also *Comment* (88), (89), (93), and (109)). Areas of suitable habitat within the historical range of *N. sericea* include the lowland dry ecosystem on east Maui. Considering all of this information, we have determined that Maui—Lowland Dry—Unit 3 is within the historical range of this species, contains one or more of the physical and biological features of the lowland dry ecosystem (see Table 5), and is essential to its conservation to attain the recovery goals as stated above.

(103) *Comment*: One commenter stated that Maui—Lowland Dry—Unit 3 may not be suitable habitat for *Solanum incompletum*. The primary reason provided by the commenter was that this species is “found above 2,200 ft in mesic to dry forest (Wagner *et al.* 1990, p. 1,271).” The commenter also cited information in our June 11, 2012, proposed rule (77 FR 34464) that this species is “apparently no longer extant on Maui.”

*Our Response*: According to Symon (in Wagner *et al.* 1999, p. 1,271), *Solanum incompletum* occurs in dry to mesic forest, diverse mesic forest, and subalpine forest, from 2,000 to 6,600 ft (600 to 2,020 m) on Kauai, Molokai, Lanai, Maui, and Hawaii Island. The broad elevational range and distribution among islands suggests that *S. incompletum* may occupy a broad range of ecosystems. Although this species no longer occurs on Maui, historically it was reported from the lowland dry ecosystem in the area of Maui—Lowland Dry—Unit 3 on east Maui (TNC 2007; HBMP 2010). The recovery guidelines for short-lived perennial

plant species such as *S. incompletum* are 8 to 10 populations of 300 individuals per population, sustained over a minimum of 5 years and within its historical range (Service 1999, pp. iv–v). The conservation of this species will therefore require a total of approximately 2,400 to 3,000 individuals in 8 to 10 self-sustaining populations across its historical range, which formerly included five islands. Currently, this species is known from 3 occurrences totaling 14 individuals on the single island of Hawaii (PEPP 2009, p. 26). Significant population growth, expansion, and reestablishment in suitable habitat across its historical range will be essential to the conservation of this species. Areas of suitable habitat within the historical range of *S. incompletum* include the lowland dry ecosystem on east Maui. Maui—Lowland Dry—Unit 3 is in the area where *S. incompletum* was once found on east Maui, and is essential to the conservation of the species because it provides one of the few remaining areas that includes several of the physical or biological features essential to the conservation of the plant species that depend upon this habitat type, including appropriate elevation, substrate, rainfall, and associated native plant species (see responses to *Comment* (88), (89), and (93), as well as (109)). We therefore conclude that Maui—Lowland Dry—Unit 3 is essential to the conservation of the species in order to attain the recovery goals for this species.

(104) *Comment*: Several commenters noted the occurrence of the endangered plant *Canavalia pubescens* (awikiwiki) on lands owned by Honuaua Partners and the threat of development posed by the proposed Honuaua (also known as Wailea 670) development within Maui—Lowland Dry—Unit 3. The commenters supported Maui—Lowland Dry—Unit 3 as proposed, and likewise did not support the developer’s proposal to set aside an area less than the maximum acreage specified by County zoning conditions. One commenter recommended extending the northern boundary of the unit to include the historic rock wall “that demarcates the remnant dry forest habitat from the deep soil habitat which is devoid of native plant species.” The commenters also did not support the conservation measures included in the developer’s draft State and Federal habitat conservation plan (HCP).

*Our Response*: We are aware that *Canavalia pubescens* occurs on lands owned by Honuaua Partners and appreciate the commenters’ support for Maui—Lowland Dry—Unit 3. We note

the suggestion to extend the northern boundary of the unit but were provided no supporting information to justify this change in the unit boundary. Honuaua Partners, LLC, has been working with the State Department of Land and Natural Resources (DLNR) and the Service to develop a State and Federal HCP that addresses impacts to the endangered Blackburn's sphinx moth, the endangered plant *C. pubescens*, and other listed plant species and their habitat. A draft of this plan has been released for public comment by the Hawaii Department of Land and Natural Resources. The HCP applicant is revising the draft HCP and we anticipate a request for public comments based on the updated draft. As this HCP is being considered in a separate regulatory process that is not yet completed, it is inappropriate for us to respond to the statements regarding the land acreage set aside and County zoning conditions, and the conservation measures included in the draft HCP in this rule.

(105) *Comment*: One commenter stated that all remaining habitat for *Canavalia pubescens* is essential to its conservation, and exclusion of habitat in the Wailea 670 (Honuaua Partners, LLC) development would very likely contribute to the extinction of the species.

*Our Response*: We carefully reviewed the areas proposed as critical habitat and the recovery needs of *Canavalia pubescens* in the lowland dry and coastal ecosystems on the islands of Maui and Lanai, respectively (77 FR 34464). In this final rule, for the reasons described above (see our response to *Comment* (44), (74), (88), (89), (93), and (109)), critical habitat is designated for *C. pubescens* and 18 other plants in four lowland dry critical habitat units (Maui—Lowland Dry—Unit 1 through Maui—Lowland Dry—Unit 4). Proposed critical habitat on Lanai is excluded from final designation under section 4(b)(2) of the Act (see *Exclusions Based on Other Relevant Factors*, below).

(106) *Comment*: One commenter requested that the land owned by Honuaua Partners, LLC, in Maui—Lowland Dry—Unit 3 be excluded from critical habitat designation pursuant to the criteria under section 4(b)(2) of the Act and on the basis of the draft habitat conservation plan under development. The commenter also added that Honuaua Partners, LLC, wishes to use its lands in a way that would actively help conserve and assist in the recovery of endangered and threatened species, and added that Honuaua Partners, LLC, looks forward to partnering with the Service and Hawaii DLNR to create mitigation measures that will benefit

many other species as well. The commenter stated that designation of critical habitat on land owned by Honuaua Partners, LLC, will constrain their ability to develop their property to generate income to support conservation actions, and be less beneficial to the species.

*Our Response*: The draft Federal HCP is being developed and is under revision. Therefore, at this time, we are not excluding lands owned by Honuaua Partners, LLC in Maui—Lowland Dry—Unit 3 under section 4(b)(2) of the Act. See also our responses to *Comment* (105) and (107).

(107) *Comment*: One commenter stated that the Honuaua project will provide significant economic benefits to Maui and the Kihei-Makena region over the coming 2 decades.

*Our Response*: The Service does not anticipate loss of economic benefits of this project to Maui. The Honuaua project, a master planned community with residential, commercial, and recreational uses, has been in development for many years, and the developer, Honuaua Partners, LLC, has been working with the Service to develop an HCP as part of its application for an incidental take permit. The draft HCP considers the impacts of the project on Blackburn's sphinx moth and the nene (Hawaiian goose, *Branta sandvicensis*), as well as the Maui Nui species. The draft HCP includes a variety of conservation measures, including a 40-acre on-site conservation easement and 354 acres of off-site conservation easements. In response to the proposed critical habitat rule for the Maui Nui species, the Service made some additional conservation recommendations to Honuaua Partners. In response to these recommendations, Honuaua Partners elected to provide \$125,000 to contribute to a fencing project in lowland dry habitat, perform fence maintenance, and to include an additional nine plant species in their outplanting efforts. Because these measures were not planned prior to the proposed designation of critical habitat for the Maui Nui species, our FEA considers this cost to be an incremental impact of the designation (IEc 2015, p. 3–16–3–17). There may additional administrative costs associated with section 7 consultation as well, estimated at \$4,000 (these costs, however, would be borne primarily if not entirely by the Service). Finally, there are unquantified impacts associated with project delays to allow for revision of the draft HCP, and there may be some additional costs associated with any additional measures that may be recommended by the

Service to avoid adverse effects to critical habitat. Such costs are, however, only potential and uncertain at this time (IEc 2015, p. 3–17). The roughly \$130,000 cost of additional conservation measures and administrative effort is a low end estimate of the incremental impacts of critical habitat designation on this project. However, it is important to note that the purpose of these conservation recommendations is to allow the Honuaua project to move forward; there is no information to suggest that the anticipated economic benefits to this area will not be realized. See also our response to *Comment* (106).

(108) *Comment*: One commenter stated that the Makena Property in Maui—Lowland Dry—Unit 3 is not occupied by any of the current or proposed endangered species and, unless the Service determines that the area is necessary for the conservation of the species, is not necessary for the conservation of any of the listed species (50 CFR 424.02(d)(2)).

*Our Response*: See our responses to *Comment* (44), (74), (88), (89), (93), (95) through (99), (101) through (103), and (109). For the reasons described in this rule, we have determined that the area within Maui—Lowland Dry—Unit 3 is occupied by *Canavalia pubescens* and provides the physical or biological features essential to the conservation of this and 16 other species, and these features require special management considerations or protections. We have also determined that the unit is essential for the recovery and conservation of 16 listed lowland dry plant species as unoccupied habitat. Please see the Methods section of this document for a detailed discussion of how we determined that the area currently occupied by each of these species is inadequate to provide for their conservation, and that unoccupied habitat is essential for the conservation of the Maui Nui plant species. In addition, our responses to the comments referenced above underscore the habitat characteristics specific to Maui—Lowland Dry—Unit 3 that makes this particular unit essential to the conservation of all of these 17 plant species.

(109) *Comment*: One commenter stated the Makena Property in Maui—Lowland Dry—Unit 3 is not a suitable environment for many of the listed species, and that the June 11, 2012, proposed rule (77 FR 34464) ignores the impact on this property from drought, invasive plants, deer, stock grazing, insect predators, agriculture, and miscellaneous land disturbances.

*Our Response*: See our responses to *Comment* (44), (74) (88), (89), (93), (95)

through (99), and (101) through 103). Although Maui—Lowland Dry—Unit 3 is within an area affected by invasive plants and other disturbances, this unit has the capability to be functionally restored to support the physical and biological features and provide essential habitat for the 17 species for which it is designated critical habitat. Due to its relative accessibility, the lowland dry ecosystem is one of the most negatively affected native habitats on the island of Maui, experiencing current and ongoing threats of development and urbanization, introduced ungulates, nonnative plants, fire, and hurricanes. As a result, there are no areas of lowland dry habitat that remain in pristine condition or are unaffected to some degree by these various deleterious agents. For this reason, an area such as Maui—Lowland Dry—Unit 3 that still maintains relatively high potential for restoration is particularly valuable for the recovery of the Maui Nui species that depend on this habitat, and is therefore considered essential to their conservation. See also the Methods section regarding “Unoccupied Areas” for additional details on the essential nature of unoccupied areas with the inherent potential for restoration to support reintroduced populations.

(110) *Comment*: One commenter stated that the cost of reintroduction would be tremendous because the Makena Property in Maui—Lowland Dry—Unit 3 is not occupied by any of the current or proposed endangered species.

*Our Response*: We acknowledge that the Makena Property is not currently known to be occupied by any of the 17 species for which Maui—Lowland Dry—Unit 3 is designated as critical habitat; however, other areas of the unit are occupied by *Canavalia pubescens* with some individuals within 220 ft (68 m) of the Makena Property boundary. In addition, due to the small population sizes, few numbers of individuals, and reduced geographic range of each of the 17 species for which critical habitat is here designated, we have determined that a designation limited to the known present range of each species would be inadequate to achieve the conservation of those species. For the reasons described above, and reiterated in our response to *Comment* (109), all of Maui—Lowland Dry—Unit 3, whether occupied or unoccupied, is considered essential to the conservation of the 17 species for which it is designated. The areas believed to be unoccupied, and that may have been unoccupied at the time of listing, which includes the Makena Property, have been determined to be essential for the conservation of

the species because they provide the physical or biological features necessary for the expansion of existing wild populations and reestablishment of wild populations within the historical range of the species (see *Comment* (44), (74) (88), (89), (93), (95) through (99), (101) through 103) and (109)). We recognize that species recovery actions will require substantial resources. However, critical habitat designation does not obligate the land owner to undertake any conservation measures.

(111) *Comment*: One commenter stated that the proposed rule fails to acknowledge that the boundaries of the proposed unit Maui—Lowland Dry—Unit 3 includes their property.

*Our Response*: Our June 11, 2012, proposed rule does not identify landownership for individual parcels, nor is it possible to do so given the constraints on resolution for maps published in the **Federal Register**. However, we endeavored to reach all landowners whose property was within proposed critical habitat by letter following publication of the June 11, 2012, proposed rule (77 FR 34464) and following publication of our January 31, 2013, document reopening the comment period on the proposed rule (78 FR 6785) (see our response to *Comment* (45), above).

(112) *Comment*: Some commenters questioned the criteria used to determine the proposed unit boundaries for Maui—Lowland Dry—Unit 3. The commenters stated that the “boundary lines do not correspond to existing property boundaries, geological features, soil types or vegetation,” and, therefore, the commenters suggested that the “process was broad brush and driven, at least partly, by considerations other than those mandated by law” and that the designation is likely to be considered arbitrary and capricious.

*Our Response*: As required by section 4(b)(2) of the Act, we used the best scientific data available in determining those areas that contain the physical or biological features essential to the conservation of the Maui Nui species, by identifying the occurrence data for each species and determining the primary constituent elements based on the ecosystems upon which they depend, as well as other relevant factors. The information we used is described in our June 11, 2012, proposed rule and in this final rule (see Methods). The criteria used to identify critical habitat boundaries, including the boundaries for Maui—Lowland Dry—Unit 3, are described in our proposed rule (77 FR 34464; June 11, 2012) and in this final rule (see below, *Criteria Used to Identify Critical*

*Habitat*). Boundaries for this unit in particular were determined using current and historical species locations and the presence of the physical and biological features based on rainfall data, soil type data and observations from on-site surveys including locations and distribution of the endangered *Canavalia pubescens*, along with the distribution of other native lowland dry plant species. As defined in section (3)(5)(C) of the Act, critical habitat shall not include the entire geographical area which can be occupied by the threatened or endangered species.

(113) *Comment*: One commenter stated that the proposed rule fails to adequately explain the portion of the 6,537 ac (2,645 ha) owned by Ulupalakua Ranch under consideration for exclusion from critical habitat designation in Maui—Lowland Dry—Unit 3.

*Our Response*: Our June 11, 2012, proposed rule (77 FR 34464) identified some of the specific landowners under consideration for exclusion under section 4(b)(2) of the Act. In that proposed rule, we indicated that we were considering excluding 6,537 ac (2,645 ha) of land owned by Ulupalakua Ranch under section 4(b)(2) of the Act, and we presented a discussion of our rationale in *Conservation Partnerships on Non-Federal Lands*. In addition, Figure 5—Ulupalakua Ranch (see 77 FR 34464; June 11, 2012) presented the specific area owned by Ulupalakua Ranch under consideration for exclusion. In this final rule, we have excluded 6,537 ac (2,645 ha) of land on Ulupalakua Ranch from critical habitat (see below, *Exclusions Based on Other Relevant Factors*, and Figure 5—Ulupalakua Ranch, in the document “Supplementary Information for the Designation and Nondesignation of Critical Habitat on Molokai, Lanai, Maui, and Kahoolawe for 135 Species,” available on the Internet at <http://www.regulations.gov> under Docket No. FWS-R1-ES-2015-0071).

Public Comments Specific to the Island of Lanai

(114) *Comment*: One commenter expressed opposition to the designation of critical habitat on private lands on Lanai because the commenter believes the designation will negatively impact the rights of private landowners, will serve as a disincentive for landowners to participate in voluntary conservation efforts, and will have negative consequences for Castle and Cooke Resorts, LLC, who had committed substantial resources and efforts towards implementing a 2002 memorandum of agreement with the

Service. This commenter stated that the designation of additional critical habitat is unnecessary in light of the already ongoing conservation management activities benefiting endangered species on the island and will result in little if any additional benefit to the species, and that any limited regulatory, educational, or recovery benefits that might arise from the designation are greatly outweighed by the benefits of encouraging and acknowledging voluntary conservation efforts by other private landowners.

*Our Response:* The Service recognizes the importance of landowner cooperation for recovery of listed species. This is especially true for the island of Lanai, which is almost entirely under private ownership by two entities (Castle and Cooke Properties, Inc., and Lanai Resorts, LLC, now known as Pulama Lanai). Conservation of rare species on Lanai requires control of threats from alien plant and animal species, fire, and proactive propagation and translocation of species into their historical range where they no longer occur. Castle and Cooke Properties, Inc., and Pulama Lanai cooperate with the Service, the State of Hawaii, and other organizations to implement voluntary conservation activities on their lands that result in conservation benefits to the species and their habitat. We agree with the commenter that listed species can realize significant benefits as a result of conservation partnerships with private landowners; because the majority of endangered or threatened species are found on private lands, the Secretary places great value on such partnerships. For the reasons described below (see “*Exclusions Based on Other Relevant Factors*”), the Secretary has determined that the benefit of excluding the areas proposed for critical habitat on Lanai outweighs the benefits of including them in the designation; therefore we have excluded all lands on Lanai from critical habitat in this final rule under section 4(b)(2) of the Act.

(115) *Comment:* One commenter opposed the overlap of proposed critical habitat on Lanai with water utility infrastructure (*i.e.*, pipelines, tanks, reservoirs, etc.), communications infrastructure (*i.e.*, antennae, roadways, etc.), existing electric utility infrastructure owned by Maui Electric Company, Ltd. (MECO), family housing, parks, golf courses, the Lanai Cemetery, and the Lanai Pine Sporting Clays and Archery Range (Sporting Clay Range), located along Keomuku Road. The commenter stated that these areas do not contain the PCEs and should not be included in the critical habitat designation.

*Our Response:* The commenter is correct that structures and urbanized landscape areas such as those mentioned above are considered manmade features and therefore would not be considered critical habitat pursuant to this final rule, because these features and structures normally do not contain, and are not likely to develop, any primary constituent elements and do not meet the definition of critical habitat. Thus, unless the operation and maintenance of such facilities would indirectly affect critical habitat, the facilities would not be affected by section 7 of the Act. Furthermore, operation and maintenance of existing manmade features and structures adjacent to and within critical habitat are not subject to section 7 consultation, unless they involve Federal funding or permitting and they affect the critical habitat or the species. We removed the area containing the existing water utility infrastructure owned by MECO for the reasons described above (see response to *Comment* (40)), because these lands are modified by the infrastructure and do not contain the physical or biological features required by the species, are not likely to develop the primary constituent elements, and are not otherwise essential to the conservation of these species.

(116) *Comment:* One commenter objected to the overlap of proposed Lanai—Dry Cliff—Unit 1 with the Experience Golf Course at Koele.

*Our Response:* The commenter is correct that structures and urbanized landscape areas such as golf courses are considered manmade features and therefore are not considered critical habitat pursuant to this final rule, because these features do not meet the definition of critical habitat.

(117) *Comment:* The proposed Lanai—Lowland Mesic—Unit 1 includes a portion of the planned Lanai wind farm to be located on approximately 7,000 acres in the northwest portion of the island of Lanai. Meetings or coordination with several local, State, and Federal agencies have been conducted to identify the potential permits or authorizations that may be required for various parts of the proposed project. These Federal permits and any Federal funds used as part of the Lanai wind project will trigger a burdensome and costly obligation for consultation under section 7 of the Act. The wind project is not presently subject to this consultation obligation, and current project budgets do not anticipate this additional expense, nor should the project have to incur this expense.

*Our Response:* For the reasons described below (see “*Exclusions Based on Other Relevant Factors*”), critical habitat is not designated on the island of Lanai in this final rule, as a consequence of exclusions under section 4(b)(2) of the Act. However, we wish to point out that exclusion from critical habitat does not relieve the planned Lanai wind farm from required Federal permits and consultations with the Service, due to the impacts of the construction, running, and maintenance of the wind farm on Federal and State listed species present in the project area (for example, there are listed seabirds present, in addition to the relevant Maui Nui species addressed in this final rule). The protections of section 9 of the Act still apply, and consultation is still required under section 7 if listed species may be affected; exclusion from critical habitat removes only the requirement to consult with the Service on effects to critical habitat. Therefore, it is incorrect to state that the wind farm project “is not presently subject to this consultation obligation.”

(118) *Comment:* One commenter noted the discussion in our proposed rule at 77 FR 34496 (June 11, 2012) regarding the potential effects of changes in environmental conditions that may result from global climate change on the 38 species proposed for listing and the Maui Nui ecosystems. This commenter noted our regulations at 50 CFR 424.12(a)(1)(ii), which state that critical habitat designation is not prudent if such designation “would not be beneficial to the species.” According to the commenter, designation of critical habitat on Lanai will adversely affect the development of the proposed wind farm, a renewable energy project intended to have a positive impact on climate change. Therefore, the benefits to these species will be lost, and critical habitat designation is arbitrary, capricious, an abuse of the Service’s discretion, and not in accordance with law.

*Our Response:* We share the commenter’s concern for minimizing and ameliorating climate change and its effects upon Hawaii’s endangered and threatened plants and animals. In our proposed rule, in the absence of finding that the designation of critical habitat would increase threats to a species, if there are any benefits to a critical habitat designation, then a prudent finding is warranted (see Prudency Determination for 44 Maui Nui Species, at 77 FR 34511; June 11, 2012). The potential benefits to the 44 species include: (1) Triggering consultation under section 7 of the Act for actions in which it would not otherwise occur; (2)

focusing conservation activities on the most essential features and areas; (3) providing educational benefits to State or county governments or private entities; and (4) preventing people from causing inadvertent harm to the species. While the commenter states that “the benefits to these species will be lost” from positive impacts to climate change due to critical habitat designation on Lanai, for the reasons given at 77 FR 34512 (June 11, 2012), we found designation of critical habitat to be prudent for these 44 species. Prudency determinations for the other 91 species were made in previous rulemakings (see above, *Previous Federal Actions*). In addition, for the reasons described below (see *Exclusions Based on Other Relevant Factors*), critical habitat is not designated on the island of Lanai in this final rule, as a consequence of exclusions under section 4(b)(2) of the Act.

(119) *Comment*: One commenter stated that the areas where the proposed critical habitat designation overlaps the proposed Lanai wind farm are devoid of the plant species for which the designation is proposed. The commenter also stated that extensive erosion is not identified in the proposed rule and that the cost of any habitat restoration in these extremely eroded areas would be prohibitive.

*Our Response*: The commenter is referring to proposed Lanai—Lowland Mesic—Unit 1, a proposed critical habitat unit totaling 11,172 ac (4,521 ha) that overlaps the jeep road area, east of and including the “Garden of the Gods” area. The jeep road would be used to access the wind tower project area. Based on our understanding of existing wind projects in Hawaii and elsewhere, the actual footprint of wind tower facilities is quite small, and on Lanai it is anticipated that the existing jeep road will be used for access to the wind tower project. Lanai—Lowland Mesic—Unit 1 was proposed as critical habitat for a total of 13 plant species, and is occupied by 5 species and unoccupied by 8 species. This critical habitat unit provides the physical or biological features essential to the conservation of the species and requires special management considerations or protections (e.g., feral ungulate control) (occupied habitat) or habitat that is essential to the conservation and recovery of the species (unoccupied habitat). Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for the recovery of the species. There are seven fenced units (TNC’s Kanepuu

units) spaced along approximately 4.5 miles (7 km) of the summit ridge. To protect these fenced units, provide enough landscape-scale ecosystem habitat for recovery of the 13 lowland mesic species, and to prevent “edge effects,” Lanai—Lowland Mesic—Unit 1 was delineated in the proposed rule to provide an essential area of habitat up to 1,000 ft (400 m) from the current fencelines. Removal of ungulates (axis deer and mouflon) from within this unit would allow regrowth of vegetation and prevent the ultimate progression of erosion into the fenced units (Laurance *et al.* 2002 in Miller 2009, in litt.). This is an effective and relatively inexpensive approach to begin restoration efforts in this area, and has been demonstrated in other restoration areas on east Maui at Auwahi and Nuu Mauka, and on the island of Kahoolawe, especially if ungulates are controlled and the seed bank is established through seed-scattering (Medeiros 1999, 14 pp.). In any case, for the reasons described below (see *Exclusions Based on Other Relevant Factors*), critical habitat is not designated on the island of Lanai in this final rule, as a consequence of exclusions under section 4(b)(2) of the Act.

(120) *Comment*: One commenter stated that the proposed rule applies broad-brush designations on Lanai that cover vast territory with entirely disparate ecosystems, elevations, and terrain such that designation is without an adequate scientific basis. According to this commenter, the Service did not establish any rational basis for concluding that each designated ecosystem unit has all of the necessary primary constituent elements (PCEs). Throughout the proposed rule, boundaries for units are drawn without regard for the actual unit definitions and PCEs, including vastly disparate terrain and ecological conditions. Indeed, areas described in the proposed rule as having certain topography, rainfall, and other “essential” elements do not have those conditions at all. Often, even correct descriptions are so generalized as to be almost meaningless in the context of assessing whether areas are critical for survival of a species. The result of drawing boundaries without particular regard to the unit definition compels the conclusion that either the PCEs are, in fact, unimportant or the environment is not critical for specific species recovery.

*Our Response*: When determining critical habitat we used the best available scientific information, including TNC’s High Island Ecoregion Plan, along with the accompanying GIS ecosystem data. When we found inconsistencies with regard to data from

more recent botanical surveys, geological and vegetation databases, and other resources, we conducted an analysis to determine which ecosystem characteristics best represented the area and the species’ needs at a large landscape scale. However, for the reasons described below (see *Exclusions Based on Other Relevant Factors*), critical habitat is not designated on the island of Lanai in this final rule, as a consequence of exclusions under section 4(b)(2) of the Act.

(121) *Comment*: One commenter disputed our characterizations of ecosystem type and definitions of PCEs within several proposed critical habitat units on Lanai including Lanai—Coastal Unit—1, Lanai—Coastal—Unit 2, Lanai—Coastal Unit—3, Lanai—Lowland Dry—Unit 1, Lanai—Lowland Dry—Unit 2, Lanai—Lowland Mesic—1, and Lanai—Dry Cliff—1. The commenter stated that characterizations of ecosystem type and the described PCEs for these units were either incorrect or contradictory or both.

*Our Response*: We disagree. We consider the PCEs as described for each unit and for each species to be the specific compositional elements of physical and biological features that are essential to the conservation of those species. Our proposed rule (77 FR 34464; June 11, 2012) identified the PCEs that support the life-history processes for each species within the ecosystems in which they occur, and reflects a distribution that we believe achieves the species’ recovery needs. The described ecosystems’ features include the appropriate microclimatic conditions for germination and growth of the plants (e.g., light availability, soil nutrients, hydrologic regime, and temperature, and space within the appropriate habitats for population growth and expansion). The PCEs are defined by elevation, annual levels of precipitation, locally influenced fog-drip, substrate type and slope, and the characteristic native plant genera in the canopy, subcanopy, or understory levels of the vegetative community. The physical or biological features for each of the described ecosystems were presented in Table 5 of our proposed rule (77 FR 34464; June 11, 2012) and were derived from several sources, including:

(a) The Nature Conservancy’s Ecoregional Assessment of the Hawaiian High Islands (2006) and ecosystem maps (2007);

(b) Natural Resources Conservation Service’s soil type analysis data layer for GIS mapping;

(c) Ecosystem community analyses by Gagne and Cuddihy (1999, pp. 45–114);

(d) Geographic information system maps of habitat essential to the recovery of Hawaiian plants (Hawaii and Pacific Plant Recovery Coordinating Committee 1998);

(e) GAP (geographic analysis program) vegetation data (GAP 2005);

(f) Projections of geographic ranges of plant species in the Hawaiian Islands, including climate data, substrate data, topography, soils, and disturbance, Price *et al.* 2012 (34 pp. + appendices);

(g) Final critical habitat designations for the island of Lanai (68 FR 1220; January 9, 2003); and

(h) Recent biological surveys, site visits, and scientific reports regarding species and their habitats.

(122) *Comment:* One commenter stated that the area of proposed critical habitat for the Lanai tree snails (*Partulina semicarinata* and *P. variabilis*) was excessive and too extensive based upon the known biology of these species and was therefore unlawful.

*Our Response:* We disagree. The extent and range of habitat required by these species (lowland wet, montane wet, wet cliff) is well-documented. Both species were once widely distributed on Lanai. Historically, *Partulina semicarinata* was found in wet and mesic *Metrosideros polymorpha* forests on Lanai. In 1993, 105 individuals of *P. semicarinata* were found during surveys conducted in its historical range. Subsequent surveys in 1994, 2000, 2001, and 2005 documented this species in the lowland wet, montane wet, and wet cliff ecosystems in central Lanai (Hadfield 2005, pp. 3–5; TNC 2007). *Partulina variabilis* was found historically in wet and mesic *Metrosideros polymorpha* forests on Lanai. In 1993, 111 individuals of *P. variabilis* were found during surveys conducted in its historical range. Subsequent surveys in 1994, 2000, 2001, and 2005 documented this species in the lowland wet, montane wet, and wet cliff ecosystems in central Lanai (Hadfield 2005, pp. 3–5; TNC 2007).

For each tree snail, *Partulina semicarinata* and *P. variabilis*, we proposed critical habitat in the habitat types and in the amount and distribution we concluded is essential to the conservation of these species. Under the Act's sections 4(a)(3) and 4(b)(2) and our regulations at 50 CFR 424.14, we are to designate critical habitat on the basis of the best scientific data available. The best scientific data available include the surveys conducted over the past 20 years and unpublished reports cited above, which indicated that the areas proposed as critical habitat for the Lanai tree snails are essential for the

conservation of the species. Regardless, for the reasons described below (see *Exclusions Based on Other Relevant Factors*), we have excluded all lands on Lanai under section 4(b)(2), including the lands that we proposed for critical habitat for these two tree snails, from critical habitat designation in this final rule. We again note that exclusion from critical habitat does not indicate that these areas are not essential for the conservation of the species, only that the Secretary has determined that the benefits of excluding these areas outweigh the benefits of including them in critical habitat (and that the exclusion will not result in the extinction of the species).

(123) According to one commenter, the proposed rule violates the Act, Administrative Procedure Act (APA; 5 U.S.C. Subchapter II), various Executive Orders, and the 2002 memorandum of agreement between the Service and Castle and Cooke Resorts.

*Our Response:* We disagree. Section 4(a)(3)(A) of the Act provides the Secretary with the responsibility to designate critical habitat for endangered or threatened species to the maximum extent prudent and determinable. Section 4(b)(2) of the Act directs the Secretary (acting through the Service) to designate critical habitat on the basis of the best scientific data available and after taking into consideration the economic impact, the impact on national security, and any other relevant impact of the designation. The Administrative Procedure Act (APA) governs the process by which Federal agencies develop and issue regulations. It requires the Federal agency to publish notices of proposed and final rulemaking in the **Federal Register**, and to provide opportunities for public comment. In our June 11, 2012, proposed rule (77 FR 34464) and in this final rule we used the best scientific data available (see Methods, below). Following publication of our proposed rule, we had 135 days of public comment and held a public information meeting and public hearing. We determined that the proposed rule would have no impact on national security, but as a result of considering other relevant impacts, we evaluated and determined that the benefits of excluding several areas from designation outweighed the benefits of inclusion, and will not lead to the extinction of the species. The 2002 MOA referenced by the commenter has been replaced by the 2015 Memorandum of Understanding (MOU). As a result of the conservation benefits provided by this 2015 MOU, in part, in this final rule, all areas proposed as

critical habitat on Lanai are excluded from designation (see below, *Exclusions Based on Other Relevant Factors*).

(124) *Comment:* One commenter stated that the proposed rule failed to provide sufficiently detailed narrative descriptions of the proposed units on Lanai to allow fair comment. Additionally, the commenter stated that the proposed rule contained only generalized maps to indicate the areas proposed for designation, and this failure to provide sufficient maps and information to allow fully informed public review and comment was not in accordance with law.

*Our Response:* A description of each critical habitat unit is found in *Descriptions of Proposed Critical Habitat Units* in the June 11, 2012, proposed rule (77 FR 34464). In the Proposed Regulation Promulgation section of our proposed rule, we used a placeholder, “[Reserved for textual description of . . .],” to refer to the UTM's (mapping vertices) for unit delineation using GIS, which, until recently, were identified and published in the **Federal Register** in final rulemakings. However, on May 1, 2012, the Service published a final rule (77 FR 25611) revising the regulations for requirements to publish textual descriptions of final critical habitat boundaries in the **Federal Register**. As of May 31, 2012 (the effective date of that final rule), the Service no longer publishes the coordinates for critical habitat boundaries in the **Federal Register**. The coordinates on which each map is based are available to the public at the Federal eRulemaking portal (<http://www.regulations.gov>) using the docket number for the rulemaking (in this case, FWS–R1–ES–2015–0071), and at the Web site of the field office responsible for the final critical habitat for 125 Maui Nui species (<http://www.fws.gov/pacificislands>). The maps provided in the proposed rule identify the areas proposed for critical habitat designation. We believe these maps are adequate for regulatory purposes. The proposed rule also directs reviewers to contact the Service for further clarification on any part of the proposed rule, and provides contact information (77 FR 34464; June 11, 2012). Although we did not include parcel-specific maps in our proposed rule (77 FR 34464; June 11, 2012), we did provide maps of this specificity to every landowner who contacted us and requested them following publication of the proposed rule.

(125) *Comment:* The Service did not respond to the Castle and Cooke Resorts, LLC, Freedom of Information Act (FOIA) request in a timely manner to

allow meaningful comment on the proposed rule.

*Our Response:* The rule proposing listing 38 species and critical habitat for 135 species on Maui Nui was published June 11, 2012 (77 FR 34464), with an initial 60-day public comment period that ran through August 10, 2012. We received a FOIA request dated July 9, 2012, from Castle and Cooke Resorts, LLC, on July 10, 2012. The letter requested the Service to withdraw the proposed designation of critical habitat on the island of Lanai and the proposed listing, as endangered, of species for which critical habitat is proposed on Lanai, or as an alternative, extend the comment period to February 2013, for the proposed designation. On August 9, 2012 (77 FR 47587), we extended the comment period for an additional 30 days, through September 10, 2012, for a total initial comment period 90 days in length. We also notified the commenter that we would again be reopening the comment period for the forthcoming draft economic analysis, which would provide the opportunity for further comments. On January 31, 2013 (78 FR 6785), we announced the reopening of the comment period for the proposed rule and the draft economic analysis for an additional 30 days, through March 4, 2013. We also announced a public information meeting and public hearing to be held on Maui on February 21, 2013. On June 10, 2015 (80 FR 32922), we reopened the comment period for another 15 days. We believe the commenter had sufficient time to prepare comments on the proposed rule during these open comment periods, which totaled 135 days in length and extended over more than 3 years.

(126) *Comment:* The proposed rule states that “The Office of Information and Regulatory Affairs [(OIRA)] has determined that this rule is not significant” (77 FR 34586). However, this is contradicted by overwhelming evidence to the contrary. The proposed rule encompasses areas slated for development, including a proposed wind farm on Lanai that will be the largest in the State. The investment in the project, including its undersea cable, is estimated to total over \$1 billion. The critical habitat designation may seriously impede the wind farm’s construction or operation. Adverse impacts on the project from the critical habitat designation could jeopardize or greatly impede the project, resulting in an enormous economic effect. Executive Order 12866 requires agencies to consider not only the dollar figure associated with the proposed rule’s impact, but also the effect on State and local communities. The proposed rule

would negatively impact the State’s policies, laws, goals, and commitments to reduce its dependence on fossil fuels. Similarly, delays or other negative impacts on the proposed wind farm could affect the jobs that the project would create, as well as substantial tax revenues and community benefits related to the development and operation of the wind farm. If the wind farm is not constructed, the State’s heavy reliance on fossil fuels will continue, contributing to global warming, which will have a deleterious effect on the plant and snail species for which the designation is made. Given the potential effects, economic and otherwise, the proposed rule is a “significant regulatory action” and should be treated as such.

*Our Response:* Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant rules. The Office of Information and Regulatory Affairs determined that our proposed rule published on June 11, 2012 (77 FR 34464) is not a significant rule. As defined by Executive Order 12866, a rule is determined to be significant if it may:

- Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;
- Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;
- Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or
- Raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in this Executive order.

Like the proposed rule, this final rule does not meet any of these criteria, and OIRA does not consider it to be a significant regulatory action.

(127) *Comment:* One commenter disagreed that the proposed rule does not “significantly affect energy supply, distribution, and use” because proposed critical habitat includes areas that are part of the planned Lanai wind farm, which will be “an enormous step towards reducing Hawaii’s dependence on fossil fuels.” According to this commenter, the process required by the Federal agencies to receive a “special exemption” under 16 U.S.C. 1536(a)(2) to authorize, fund, or carry out any action likely to result in destruction or adverse modification of critical habitat

will present enormous barriers to Hawaii’s transition to sustainable energy. Finally, the commenter stated that the Service must prepare a Statement of Energy Effects that addresses the planned Lanai wind farm.

*Our Response:* According to information in our files, the proposed critical habitat overlaps with an existing agricultural road that will be upgraded to provide access to lands identified for a planned Lanai wind farm. The commenter assumes that upgrading the agricultural road will result in destruction or adverse modification of critical habitat, and would prohibit Federal agencies from authorizing or funding the project. As stated elsewhere in this final rule, manmade features, including roads, are not considered critical habitat pursuant to this rule, because these features and structures normally do not contain, and are not likely to develop, any primary constituent elements and do not meet the definition of critical habitat. Moreover, the Service excluded this critical habitat unit from the final designation under section 4(b)(2) of the Act for the reasons described below. We note, however, that consultation on any Federal permits needed may be required due to potential effects on listed species. If no Federal agency is involved with the project, but the project may take federally listed species, the applicant should apply for an incidental take permit under section 10(a)(1)(B) of the Act.

We do not need to submit a summary of the potential effects of this designation on the supply, distribution, or use of energy (Energy Supply, Distribution, or Use—Executive Order 13211), because our regulatory action would not result in a “significant adverse effect” as defined by Office of Management and Budget (OMB) Memoranda 01–27 (Guidance for Implementing E.O. 13211) (July 13, 2001).

Public Comments on the Memorandum of Understanding (MOU) Between Lanai Resorts, LLC, (Doing Business as Pulama Lanai), Castle & Cooke Properties, Inc. (CCPI), and the Service

(128) *Comment:* Two commenters stated that, through the MOU, the landowner acknowledges the importance of commitment to habitat management and that the interests of preservation and conservation are often better served through mutual agreements between landowners and the Service.

*Our response:* We agree. Continued support of management actions for Lanai’s natural resources is important to

the landowner and to the threatened and endangered species known from Lanai.

(129) *Comment:* Five commenters oppose the MOU between the Service, Pulama Lanai, and CCPI, and the exclusion of critical habitat on Lanai. Three of these commenters believe that the Service would allow the landowner “free rein” over Lanai’s environment, removing all regulatory controls and all private responsibilities of land stewardship. Two of these commenters believe the MOU would be used for personal gain by the landowner and the Service. One commenter states that the MOU will not contribute to the long-term conservation of the Maui Nui species.

*Our response:* The MOU promotes cooperative conservation efforts that benefit the covered species, including preparation and implementation of the Lanai Natural Resources Plan (LNRP). Any funding for conservation measures and implementation will be used for such, and certainly not for personal gain. The MOU does not limit or diminish the legal obligations and responsibilities to engage in consultation as required under section 7 of the Act for listed species occurring on Lanai. The MOU does not place the Service in a position to advocate for activities counter to its mission. We believe that there is a higher likelihood of beneficial conservation activities occurring on Lanai with the MOU between Pulama Lanai, CCPI, and the Service. Designation of critical habitat ensures that, if there is a Federal nexus, the Federal action agency must consult with the Service on actions that may affect the critical habitat and must avoid destroying or adversely modifying critical habitat. However, designation of critical habitat does not result in preparation of land management plans by a landowner or require a landowner to manage land areas, or to undertake specific steps toward recovery of a species. The Service therefore believes that the value of the MOU lessens the benefits of possible section 7 consultations related to critical habitat, allows for a positive working relationship between all parties involved, and will result in long-term benefits for species and their habitats. Our rationale for concluding that the benefits of exclusion outweigh the benefits of including this area as critical habitat is discussed in detail in the *Exclusions Based on Other Relevant Factors* section, below.

(130) *Comment:* One commenter stated that the MOU does not provide enough specific information regarding conservation measures.

*Our response:* The MOU is not a management plan, it is a document that initiates the cooperative conservation efforts between the Service and the Pulama Lanai. As outlined in the MOU, the Service will provide technical assistance to Pulama Lanai in the development and implementation of the LNRP.

(131) *Comment:* Eight commenters stated that preparation and implementation of the MOU and the LNRP lacks community input and approvals.

*Our response:* The Lanai MOU is an agreement specifically between the landowner and the Service. The Service published a notice in the **Federal Register** on June 10, 2015(80 FR 32922), reopening the comment period on the proposed rule from that day through June 25, 2015, to allow the public the opportunity to provide further input on the proposed exclusions and the conservation benefits provided by continued landowner partnerships for Maui Nui. We have incorporated our responses to those comments in this final rule. The LNRP is currently being developed by Pulama Lanai with technical assistance from the Service.

(132) *Comment:* Three commenters state that Pulama Lanai has attempted to disband the Lanai Water Advisory Committee and the Lanai Forest and Watershed Partnership, and based on this action, the Service should not establish a partnership with Pulama Lanai.

*Our response:* Participation in Hawaii Watershed Partnerships are voluntary and are only one of many ways in which the Service may engage and cooperate with a private landowner on conservation actions. The Act allows the Secretary of the Interior to exclude areas when the benefits of exclusion outweigh the benefits of inclusion, unless the Secretary determines that such exclusion will result in the extinction of the species (16 U.S.C. 1533(b)(2)). The Service, Pulama Lanai, and CCPI, have worked in partnership to execute an MOU that is intended to benefit the covered species on the island of Lanai. For reasons described below (see *Exclusions Based on Other Relevant Factors*), no critical habitat is designated on the island of Lanai in this final rule as a consequence of exclusions under section 4(b)(2) of the Act.

(133) *Comment:* Six commenters oppose the development of a wind power facility on Lanai and believe the MOU between Pulama Lanai, CCPI, and the Service facilitates such development.

*Our response:* The Lanai MOU and exclusion from critical habitat does not

preclude the need for CCPI to avoid the incidental take of listed species and it is our expectation that CCPI will consult with the Service and DOFAW regarding the impacts of wind development to such species. This activity would likely require the development of a Habitat Conservation Plan (HCP) that appropriately avoids, minimizes, and mitigates potential project impacts on listed species. If so, the Service would evaluate impact of issuing an Incidental Take Permit for the HCP under the National Environmental Policy Act (NEPA) and conduct a section 7 consultation. While we believe that Pulama Lanai’s voluntary participation in conducting conservation measures lessens the conservation benefits of critical habitat, making exclusion from this designation warranted, nothing in the MOU supersedes the requirements of the Act.

(134) *Comment:* Five commenters stated that an annual commitment of \$210,000 annually, as included in the MOU, is not enough funding to support management actions.

*Our response:* An MOU does not obligate a landowner to any set amount of funding for conservation actions in covered areas. Landowner participation in an MOU is voluntary. An MOU sets goals for conservation measures, including preparation and implementation of management plans. Within the Lanai MOU, the landowner has committed to contribute a minimum of \$210,000 annually for implementation of activities described in the MOU and the LNRP, based on priorities identified in the LNRP. LNRP funds shall not be inclusive of costs of mitigation actions for management activities in No Development Areas (as outlined in Exhibit H of the MOU).

(135) *Comment:* Four commenters stated that oversight of implementation of the MOU and the LNRP would be inadequate. One commenter also stated that the fencing project begun in 2002 was not completed.

*Our response:* The current landowner has indicated interest in being a good steward of Lanai’s natural resources, and has entered into the MOU agreement with the Service with that understanding, and has also expanded resources management capabilities. The LNRP, resulting from the MOU, will describe in more detail conservation measures and timelines, including how adaptive management measures will be addressed. Fencing projects are expensive and often larger projects are broken into increments to allow for the complexities of construction and management. The first and second increments of the planned fencing

project, beginning with the MOU in 2002, were completed. Other fencing activities will be covered in the LNRP. See also our response to *Comment* (140).

(136) *Comment*: Five commenters objected to statements in the MOU regarding the permit process and stated that the Service oversteps its bounds.

*Our response*: Under the MOU, the Service agreed to cooperate with Pulama Lanai and CCPI to process in a timely manner any necessary recovery permits that may be required to implement objectives of the LNRP. This would allow completion of conservation measures in a timely manner to meet specified timelines as outlined in the LNRP. However, any permit would have to comply with normal permitting requirements and procedures. Permits for wind farm and other projects would be obtained by the landowner independently from the MOU agreement, and may include the development of an HCP, and associated NEPA evaluation and section 7 consultation, as described above.

(137) *Comment*: Five commenters object to exclusion of The Nature Conservancy's Kanepuu management unit of Kanepuu Preserve from critical habitat, and also state that widening of the road in that area would contribute to negative impacts to habitat.

*Our response*: As stated in the MOU, both the landowner and the Service recognize the importance of habitat within Kanepuu. We believe that the benefits of exclusion this area from critical habitat outweigh the benefits of including this area in critical habitat. Both the landowner and the Service support identification and implementation of conservation measures for the habitat and any listed species. Improvement or widening of the existing access roadway through or around Kanepuu may occur as long as such activities: (1) Have the consent of The Nature Conservancy (who holds a permanent easement of the area) or its successor, (2) have the consent of Pulama Lanai, and (3) mitigation measures by CCPI are reasonably agreed to by the Service in order to mitigate any adverse effects on native vegetation. However, nothing in the MOU supersedes the requirements of the Act and all activities undertaken pursuant to the MOU must be in compliance with all applicable State and Federal laws and regulations. Currently, the Service has not received a project proposal for a wind farm on Lanai; however, as discussed above, it would likely entail a Habitat Conservation Plan (HCP) process, including NEPA and section 7 consultation, to assess and mitigate for environmental impacts.

(138) *Comment*: One commenter suggested that the uau, or Hawaiian petrel, be considered as part of the LNRP.

*Our response*: The LNRP is a comprehensive resource management plan and will include conservation actions for this species.

(139) *Comment*: One commenter stated that the MOU and any future LNRP do not provide sufficient information to determine if a specific exclusion may result in extinction of a species.

*Our response*: The determination of whether an exclusion will result in the extinction of a listed species is not provided in the MOU or the LNRP, but is provided in this final rule. Here, at the conclusion of the section titled "*Exclusions Based on Other Relevant Factors*," we detail our assessment of whether the exclusion of any particular areas would result in the extinction of the listed species that occur within that area (see "*Exclusion Will Not Result in Extinction of the Species*"). We have carefully considered the status of each species within each of the areas excluded, and evaluated whether the exclusion would result in the extinction of each listed species on a case by case basis. We paid particular attention to several of the Lanai species, as some of these species occur only within the areas excluded from the final designation of critical habitat (*i.e.*, the two Lanai tree snails, and the plants *Abutilon eremitopetalum*, *Cyanea gibsonii*, *Kadua cordata ssp. remyi*, *Labordia tinifolia var. lanaiensis*, *Pleomele fernaldii*, *Viola lanaiensis*). As described in this final rule, in the case of each exclusion from this final designation of critical habitat, we conclude that the benefits of exclusion outweigh the benefits of inclusion, for the reasons detailed below, and further conclude that the failure to designate such areas as critical habitat will not result in the extinction of the listed species concerned. Each exclusion made in this final rule is based upon the strength of existing conservation actions, commitments, and partnerships, which will maintain, restore, or enhance habitat for the Maui Nui species, above and beyond the benefits that would accrue from the designation of critical habitat. Based on the management plans and agreements in place, and the proven track record of our conservation partners, we reasonably assume these positive actions will continue into the future. For all of these reasons, we conclude not only that exclusion will not result in the extinction of any of the Maui Nui species, but we expect that exclusion

will result in the improvement of the status of each species in question, due to the positive conservation efforts taking place in those areas excluded. See, for example, our response to *Comment* (140), below, for an accounting of the positive conservation benefits demonstrated to date for the Lanai species as a result of the actions of our conservation partners and the management plans and agreements in place on that island, and the further benefits that are expected to accrue to those species as a result of future efforts as well.

(140) *Comment*: One commenter stated that, based on previous failure to complete the Lanaihale fencing project, the current MOU would also result in failure to complete conservation measures or management actions.

*Our response*: The first two phases of an ungulate exclusion fence, described by the commenter as the Lanaihale fencing project, were completed under a MOU and partnership with Lanai's previous landowner. We anticipate the completion of the fence and other conservation measures under the Lanai Natural Resources Plan (LNRP), which is currently under development as a consequence of the MOU with the new landowners, recently signed by the Service, Lanai Resorts, LLC (dba Pulama Lanai), and Castle and Cooke Properties, Inc., on January 26, 2015. Since that time, the parties have worked diligently to implement the actions described in the MOU. Beginning in February, 2015, Pulama Lanai has convened meetings with their planning team, including the Service, for the development of the comprehensive LNRP that will address priorities and actionable items necessary for the conservation of species and habitats on the island. While this effort is ongoing, Pulama Lanai has begun to implement specific conservation measures for priority species and areas. The MOU also calls for the landowner to identify conservation measures for some of the rarest plants that would be implemented in the near term, even before the LNRP is completed. Specifically, to date Pulama Lanai has: (1) Worked with the Service and the Hawaii Division of Forestry and Wildlife (DOFAW) regarding necessary permits to conduct listed plant species conservation work; (2) designated an additional 220 ac (89 ha) to be added to the Lanaihale No Development Area; (3) developed and implemented a fence maintenance plan for all existing conservation fences; (4) conducted monitoring for ungulates within existing conservation fences and implemented ungulate removal; (5) communicated with The Nature

Conservancy regarding ungulate management and fence maintenance at Kanepuu Preserve; (6) installed deer proof fencing for *Hibiscus brackenridgei* along Keomuku Road and have plans to do the same for the populations of *Tetramalopium remyi* and *Abutilon menziesii* (also referred to as the “Core Rare Plant Clusters”) within the 24-month time frame set forth in the MOU; (7) identified other rare plant species for conservation actions and protection in coordination with the Plant Extinction Prevention Program (PEPP); and (8) implemented advanced technology and additional measures to improve bio-security on the island to reduce the incursion of invasive species. Additionally, Pulama Lanai has coordinated closely with the Service on the location of a protective listed tree snail enclosure, which will be constructed following a ranking of potential sites by the State’s snail experts. Further coordination is occurring on the conservation of listed Hawaiian petrels on Lanaihale. While not part of the MOU, Pulama Lanai and the Service are working on plans to implement conservation activities starting in 2016. Most recently, Pulama Lanai has hired a lead wildlife biologist to assist with the planning and implementation of conservation actions across the island. Developing and maintaining public and private partnerships for species conservation is important and we believe that the steps this landowner has already taken to implement the MOU and the significant conservation benefits that have already been realized as a result indicate that this conservation partnership will provide significant benefits to the listed species that occur on Lanai. These benefits lessen the incremental benefit of critical habitat.

(141) *Comment:* One commenter stated that the selection of no more than 215 additional acres to the “no development area” is inexplicable and unexplained.

*Our response:* The addition of 215 acres to the No Development Area was in response to possible disturbance of habitat resulting from development of a wellhead within Increment 1 fencing (see Exhibit J, and section 4.3.2(1) of the MOU), if it occurs. Development of a new water well would be subject to conditions as outlined in the MOU, including botanical surveys, restoration, and mitigation of other impacts (and consistent with applicable provisions of Exhibit H of the MOU).

Comments on the Draft Economic Analysis (DEA)

Comments From the State of Hawaii Agencies on the DEA

(142) *Comment:* The Hawaii Department of Agriculture (HDOA) is concerned that incremental impacts of critical habitat designation are not sufficiently quantified in the DEA and the DEA uses probable or possible ranges of other listed species to discount the economic impacts of proposed critical habitat. The HDOA believes that baseline protection costs should include only already designated critical habitat that is occupied by listed species and subject to existing conservation measures.

*Our Response:* The presence of a listed species provides extensive baseline protections under sections 7, 9, and 10 of the Act, regardless of the designation of critical habitat; therefore we do not limit our consideration of baseline protections to those areas that are already designated as critical habitat. As described in chapter 2 of the draft EA, section 7 of the Act in particular requires Federal agencies to consult with the Service to ensure that any action authorized, funded, or carried out will not likely jeopardize the continued existence of any endangered or threatened species, even absent critical habitat designation. In this case, the presence of the listed Blackburn’s sphinx moth would trigger protections under the jeopardy standard that would by extension provide baseline protections to the Maui Nui species in areas within the probable range of the moth (see paragraphs 71 through 73 of the final EA). Because these protections are in place regardless of designated critical habitat, they are appropriately considered as part of the baseline for this analysis.

(143) *Comment:* The HDOA and two other commenters stated that the Service has already designated critical habitat in a significant amount of area in Hawaii and should use the costs of these designations on agricultural landowners to monetize some of the indirect impacts in the current DEA.

*Our Response:* The DEA does consider how previous critical habitat designations may have indirectly affected agricultural landowners and therefore no changes were made in the FEA in response to this comment. This analysis involved outreach to agricultural landowners and organizations to gather information on experience with previous critical habitat designations in Hawaii. The information gathered supports the qualitative analysis of potential indirect impacts of

critical habitat designation on grazing and farming in Exhibit 5–8, including descriptions of potential change in management of land by the State and county; perceptual effects on land values; limitations on ability of ranch owners to diversify; increased potential for legal actions; and obstacle to statewide food sustainability. However, we could identify no specific historical studies or examples of critical habitat designation precipitating these types of impacts in Hawaii. For each of the potential indirect impacts, Exhibit 5–8 accordingly describes the uncertainties that preclude their monetization but highlights their potential for consideration alongside the quantified impacts in the analysis.

*Comments From the Public on the DEA*

(144) *Comment:* The Association of Universities for Research in Astronomy (AURA) disagreed with the conclusions of the draft economic analysis (DEA). According to AURA, the DEA doesn’t take into consideration the lengthy and costly consultations that have already taken place regarding the University of Hawaii’s Haleakala High Altitude Observatory Site (also known as the Advanced Technology Solar Telescope (ATST) project) and it does not consider more than \$1.5 million in funds committed to wildlife protection in the 328-acre mitigation area.

*Our Response:* Our DEA was designed to look at the potential economic impacts stemming specifically from the proposed designation of critical habitat for the Maui Nui species; it was not intended to address any and all costs that may have been incurred as a consequence of other actions (for example, prior consultations that may have occurred related to the presence of listed species at the ATST site). The FEA concluded that construction of the ATST facilities, which falls within proposed critical habitat unit Maui—Alpine—Unit 1, was likely to result in land disturbance of less than 1 acre (IEC 2015, p. 3–12). The FEA also acknowledges that the Service conducted a formal consultation on the proposed construction and issued a biological opinion on June 15, 2011 (IEC 2015, p. 3–13). The Service indicated that they would likely not recommend any further project modifications beyond the mitigation already planned, and that any further incremental costs would be limited to additional administrative costs, estimated to be \$4,000 borne by the Service, Federal action agency, and the project proponent (IEC 2015, p. 3–13). However, in this final rule, we also re-evaluated proposed critical habitat for two

proposed units within or bordering the project area (Maui—Subalpine—Unit 1 and Maui—Alpine—Unit 1) and removed areas that no longer contained the physical or biological features that could support and provide for species' recovery, or that we determined was otherwise not essential for the conservation of the species (see our response at *Comment* (36), above). As a result of this evaluation, the University of Hawaii's Haleakala High Altitude Observatory Site has been removed from the final designation because it does not meet the definition of critical habitat for the Maui Nui species.

(145) *Comment*: The DEA contains no mention of the Makena Resort or Makena property, and fails to consider the economic impact of designation on the ATC Makena property. ATC Makena was not contacted during preparation of the DEA regarding the proposed designation or for additional information on their property.

*Our Response*: The final economic analysis (FEA) incorporates additional discussion regarding the potential expansion of the Piilani Highway within Maui—Lowland Dry—Unit 3 (IEc 2015, p. 3–18). Although the timing, nature, and location of the project is currently uncertain, we forecast costs associated with a formal section 7 consultation on the project. The Service has determined that the potential project area for the highway expansion overlaps with the probable range of the Blackburn's sphinx moth (see pp. 2–11—2–13 of our FEA (IEc 2015) for a detailed discussion of the baseline protections associated with the Blackburn's sphinx moth, as well as an explanation of the term "probable range" as applied here; see also our response to *Comment* (149), below). As described in our FEA, consultation on this project would be required due to the presence of the Blackburn's sphinx moth regardless of whether critical habitat is designated for the Maui Nui species (IEc 2015, pp. 2–11—2–13). As discussed in Section 2.3.2 of the FEA, critical habitat designation for the Maui Nui species is not likely to generate additional conservation recommendations beyond what would be recommended due to the presence of the moth. Accordingly, we conclude that the incremental impacts of critical habitat on the Piilani Highway project would be limited to the administrative costs of considering critical habitat as part of the forecast section 7 consultation, estimated at approximately \$4,000 (IEc 2015, p. 3–18). Such costs are generally borne primarily by the Service and the Federal action agency, with some costs

occasionally accrued by the project proponent.

(146) *Comment*: Several commenters stated that: (1) The estimated costs of \$115,000 to \$125,000 over the next 10 years for Maui, Molokai, Lanai, and Kahoolawe, combined, were not credible; (2) an analysis of the total cost of designation (as in the DEA) does not help to determine which parcels should be included in the critical habitat area and which should be excluded; and (3) consultations in Hawaii require more effort than elsewhere.

*Our Response*: As stated in the FEA, quantified incremental impacts of the proposed critical habitat designation are estimated at \$100,000 for areas proposed for critical habitat designation, and \$5,000 for areas considered for exclusion (2014–2023, 7 percent discount rate) (IEc 2015, p. 1–7). The derivation of these costs are presented at the proposed critical habitat unit level throughout the FEA, are detailed in Chapters 3, 4, and 5 of the FEA, and are also summarized in the Executive Summary Exhibit ES–3. As stated in Section 2.3.2 of the FEA, the administrative costs of consultation applied in the analysis are based on data from the Federal Government Schedule Rates, Office of Personnel Management, and a review of consultation records from several Service field offices across the country, as described in the notes to Exhibit 2–2 (IEc 2015, p. 2–18). The costs are intended to provide a representative order of magnitude for administrative costs associated with consultation. To the extent that consultations occurring in the areas proposed for critical habitat designation require a greater amount of effort, the FEA may underestimate consultation costs; this limitation is acknowledged throughout the FEA (IEc 2015, Exhibits 3–11, 4–5, and 5–9). The administrative cost estimates and associated implications on the findings of the analysis are described in Section 2.3.2 of the FEA.

(147) *Comment*: The impact of critical habitat designation on 13,700 acres of private lands on Maui may range up to \$50 million or more. Impacts from the designation on the per acre land value range from \$975 to \$45,000. For the islands of Maui, Molokai, and Lanai, the total impact from the designation will be \$56.5 million or more, with an average of up to \$3,900 or more, per acre.

*Our Response*: We are uncertain as to the source of the commenter's information; no documentation was provided to support the costs claimed. The FEA quantified the impacts of designation of critical habitat on Maui

to be approximately \$100,000 over 10 years, and annualized impacts of \$20,000, based on our consideration of the potential impacts of critical habitat on development projects, energy projects, and grazing and farming activities, as documented and described in detail in Chapters 3, 4, and 5 of the FEA (IEc 2015). We did consider the potential for loss in land value associated with foregone potential future uses, based on an average "asset value" for agricultural land (including buildings) of \$8,201 per acre in 2007. This average asset value is based on County level information from the National Agricultural Statistics Service, U.S. Department of Agriculture (IEc 2015, p. 5–19).

(148) *Comment*: One commenter, citing the DEAs for critical habitat designation for three Willamette species and 124 Oahu species, stated that the loss of land value in those analyses ranged from 73 to 100 percent, with devaluation of property by as much as \$65 million.

*Our Response*: The findings of the two studies referenced in the comment are not transferable to this analysis for multiple reasons. First, the three Willamette species analysis applied a different framework for evaluating impacts (Northwest Economic Associates 2006). Specifically, the analysis quantified all impacts of species conservation regardless of whether they were incremental effects of the critical habitat designation. Thus the results should not be interpreted as impacts of critical habitat designation. Furthermore, the analysis acknowledges that it is uncertain whether the quantified impacts would occur at all, explaining: "The estimates of economic loss in this section are overstated. As stated in the introduction, the impact of species and habitat conservation on future development projects is uncertain. Absent specific information on how development projects would mitigate for impacts to Fender's blue butterfly, Kincaid's lupine, and Willamette Daisy, the economic analysis presents the value derived from potential future development on private lands within the proposed critical habitat designation. To the extent that development is excluded from the proposed critical habitat designation, the estimated impacts accurately represent the non-agriculture component of land value lost by private landowners. To the extent that development is allowed within the proposed critical habitat designation the estimated impacts are overstated (Northwest Economic Associates 2006, pp. 39–41)."

In the case of Oahu, the commenter has overstated the range of potential impacts to land values estimated in the DEA (IEc 2013). Potential effects to land values were forecast only in the context of one particular critical habitat unit that was slated for development, Lowland Dry 8. In that case, we stated “The Service believes that a realistic lower-bound estimate of the potential economic impacts to the landowners in Lowland Dry 8 is no impact at all. The Service cannot identify any realistic Federal nexus on the types of future uses identified. Critical habitat designations have no effect on private actions on private property absent a Federal nexus that would allow the Service to consult on the activity with its Federal partner.” The possible decrease in land value cited by the commenter refers to the “worst case scenario” contemplated in the DEA that no future development would proceed on the property at all; this scenario was included to be conservative, but is described as “extremely unlikely to occur” (IEc 2013, p. 74). The designation of critical habitat does not prevent development from occurring; it requires Federal agencies to avoid destruction or adverse modification of critical habitat. Even if such a finding is made, we will attempt to recommend reasonable and prudent alternatives. Therefore, we have no basis to assume that development would be prohibited.

(149) *Comment:* Four commenters stated that the incremental impacts are not sufficiently quantified or monetized. The commenters are concerned that the DEA is using probable or possible ranges of other listed species, such as the Blackburn’s sphinx moth, to discount economic impacts of proposed critical habitat. The commenters believe that only prior critical habitat designations where protected species occupy the land and are subject to existing conservation measures under the Act should be used as baseline protection costs. One commenter stated that it was inappropriate to use the probable range of Blackburn’s sphinx moth to minimize the impacts of the proposed designation. In addition, no maps of historical or probable range of the moth are provided in the proposed rule or DEA.

*Our Response:* See our responses to *Comment* (142) and (145). The probable range of the Blackburn’s sphinx moth is an important consideration in this analysis, because due to the significant overlap between the essential physical or biological features for the moth and those of the Maui Nui species, consultations under the jeopardy standard (and associated conservation

recommendations) within the probable range of the moth afford extensive baseline protections to the Maui Nui species within the area of overlap and limits the potential impact of critical habitat (see Section 2.3.2 of the FEA). Exhibit ES-5 of the DEA showed the relevant map of unoccupied units that do not overlap with the probable range of the Blackburn’s sphinx moth (and hence have the potential for relatively greater incremental impacts); however, we have updated this figure in the FEA to show the entirety of the Blackburn’s sphinx moth’s probable range. As detailed on p. 2–12 of the FEA, the term “probable range” is used because the precise location of the present range of the Blackburn’s sphinx moth is not well known; therefore, the Service recommends consultation in areas within the historical range of the moth because the species may be present. Within that range, the Service suggests surveys to determine whether there is suitable habitat for the moth within the proposed project area. If there is suitable habitat within the project area, the Service recommends that project proponents survey within these areas to determine presence or absence of the moth. Because the majority of the moth’s lifespan is spent underground in a pupal stage, and only moth larvae and adults transit the landscape, it may not be feasible to confirm absence of the moth from the proposed project area. Due to the difficulty in confirmation of moth absence, many project proponents opt to assume the moth is present in suitable habitat. Because of the significant overlap between the essential physical or biological features for the moth and those of the Maui Nui species, the Service has assumed for purposes of this analysis that within the probable range of the moth, there will be significant overlap between those areas that provide suitable habitat for the moth and the areas identified as critical habitat for the Maui Nui species.

(150) *Comment:* One commenter stated that because the legal standards for determination of jeopardy and adverse modification are not the same, the Service cannot assume that the outcomes of jeopardy and adverse modification analyses for the designation will be closely linked.

*Our Response:* We agree that the standards for determination of jeopardy and adverse modification are not the same, nor did we intend to give the impression that we consider them to be so. Section 7 of the Act (7)(a)(2) states that “each Federal agency shall, in consultation with and with the assistance of the Secretary, insure that any action authorized, funded, or

carried out by such agency is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of habitat of such species . . . .” If jeopardy or adverse modification is determined, reasonable and prudent alternatives are recommended. These recommendations focus on minimizing impacts so as to avoid jeopardy or adverse modification (IEc 2015, p. 2–15). In some cases, such as for the Maui Nui species considered here, project modifications recommended to avoid jeopardy may be similar to those recommended to avoid adverse modification of habitat, such as “avoid destruction of individual listed plants,” “control feral ungulates,” and “propagate and outplant” (IEc 2015, pp. D–11–D–12). However, the FEA recognizes that the analyses for jeopardy and those for adverse modification can differ. The economic impacts of conservation measures undertaken to avoid jeopardy to the species are considered baseline impacts in the FEA, as they are not generated by the critical habitat designation. Baseline conservation measures and associated economic impacts are not affected by decisions related to critical habitat designation for the species (IEc 2015, pp. 2–7–2–9).

(151) *Comment:* Some commenters stated that the incremental administrative consultation costs estimated by the Service are too low. Environmental activist groups have sued landowners to force them to undertake conservation activities. Note the palila case, in which the State was sued for allowing destruction of habitat by uncontrolled feral ungulates. Given that ungulates are identified as one of the primary threats to endangered species, there is a possibility of landowners being forced to undertake costly ungulate control on their land as a result of critical habitat designation. A baseline cost for mitigation is \$6,000,000 for every 120 acres of disturbed habitat, which is the cost of mitigation for the Saddle Road-Palila project on the Big Island.

*Our Response:* The *Palila* case was based on section 9 of the Act, which makes it a crime for anyone to “take” (defined as harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt any of these actions) an endangered species. This provision of the Act can be asserted by private citizens or by the Federal government. In *Palila*, private non-profit organizations claimed that the State’s Department of Land and Natural Resources was taking the palila by maintaining populations of feral sheep

and goats in the bird's habitat. The fact that it was designated critical habitat had no legal relevance to this allegation; the designation played only an informational role in identifying habitat important to the species.

In contrast to section 9, which sets forth protections that apply to individuals of the listed species, critical habitat receives protection under section 7 of the Act. The requirements of section 7 apply to Federal agencies and requires that these agencies ensure, in consultation with the Service, that any action they authorize, fund, or carry out is not likely to result in the destruction or adverse modification of critical habitat. Section 7 requirements do not apply to non-Federal landowners absent a Federal nexus. The designation of critical habitat does not affect land ownership or establish a refuge, wilderness, reserve, preserve, or other conservation area. The designation does not allow the government or public to access private lands, and does not require implementation of restoration, recovery, or enhancement measures by non-Federal landowners. Where a landowner requests Federal agency funding or authorization for an action that may affect a listed species or critical habitat, the consultation requirements of section 7(a)(2) of the Act apply, but even in the event of a destruction or adverse modification finding, the obligation of the Federal action agency and the landowner is not to restore or recover the species, but to implement reasonable and prudent alternatives to avoid destruction or adverse modification of critical habitat.

We do acknowledge that in some highly unusual cases, wherein a landowner undertakes an action with a Federal nexus, and that action is so significant to the critical habitat as a whole as to be considered potential adverse modification, some reasonable and prudent alternatives may result in significant costs. We recognize this possibility in our FEA, which underscores that such a situation may have a potentially major effect on the economic impacts as estimated in our analysis. Specifically, the FEA clarifies that while we anticipate that the most likely change in conservation recommendations, if any, would be the additional specification that habitat offsets occur within the affected critical habitat unit, or within critical habitat of the same type (based on our past experience with consultation), nonetheless "final recommendations to avoid adverse effects on critical habitat will depend upon the specific nature of the proposed project and will be made as part of future consultation on the

project" (IEc 2015, p. 3–21). Because of the significant uncertainties surrounding the probability of such a situation arising, and the entirely speculative nature of what reasonable and prudent alternatives might be called for in such a hypothetical, it is not possible to quantify such potential impacts. We therefore acknowledge in our FEA that our assumptions regarding the effect of critical habitat designation on potential conservation recommendations may result in an underestimate of costs (IEc 2015, p. 3–21).

(152) *Comment:* One commenter stated that, of the 25,413 acres proposed for designation on Lanai, 99.99 percent (25,408 acres) are privately owned by Lanai Resorts. This is in contrast to the entire proposed designation, which is reported [in the DEA] to only overlap private lands by 42 percent. Lanai Resorts suffers a disproportionate burden resulting from the proposed designation on Lanai and the DEA fails to recognize this disproportionate burden. Another commenter stated that the DEA fails to quantify impacts to existing and proposed development (e.g., Manele Project, Koele Project, water utility infrastructure, electric utility infrastructure, Lanai wind project) on Lanai.

*Our Response:* Forty-two percent of the proposed critical habitat on the four islands of Maui, Kahoolawe, Molokai, and Lanai overlapped private lands. The DEA analyzed the effects of critical habitat designation on those areas with known or possible development pressure. At the time of the writing of the DEA, the level of uncertainty regarding the nature of future development, as well as how the designation of critical habitat may affect projects, precluded the quantification of impacts of critical habitat on future development in three proposed Lanai critical habitat units (Lanai—Coastal—1, Lanai—Dry Cliff—Unit 1, and Lanai—Lowland Mesic—Unit 1). As a result, the DEA qualitatively described the likely incremental impacts to potential future development activities in these units. However, for the reasons described below (see *Exclusions Based on Other Relevant Factors*, below), critical habitat is not designated on the island of Lanai in this final rule, as a consequence of exclusions under section 4(b)(2) of the Act.

(153) *Comment:* One commenter stated that the DEA is flawed and does not meet the requirements to support the designation. Specifically, the commenter stated that the designation must be limited geographically to what is essential to the conservation of the

species, and that the Service cannot arbitrarily proposed to designate "acres upon acres of areas already developed or proposed for development" without first identifying the elements essential for the survival of the species. The commenter further stated that the determination must consider the probable economic and other impacts of the designation upon proposed or ongoing activities, and implied that the Service failed to clearly identify accurate and relevant facts to support its economic analysis. The commenter cited several court cases to support this statement and concludes that the DEA contained several errors that biased the analysis in a single direction, producing lower estimates of the costs resulting from critical habitat designation.

*Our Response:* First, our process for identifying those areas proposed as critical habitat is not arbitrary, and is clearly detailed in the Methods section of this document. As required by the Act, we used the best scientific data available to first determine the physical or biological feature essential to the conservation of the species, and to identify those specific areas within the geographical area occupied by the species that provide those essential features, which may require special management considerations or protection. In addition, we identified some specific areas outside the geographical area occupied by the species upon a determination that such areas are essential for the conservation of the species.

Second, the purpose of the DEA is not to "support the designation," but to inform the Secretary for the purpose of considering the potential economic impacts of the designation, as required by section 4(b)(2) of the Act. Specifically, the information contained in the DEA is intended to assist the Secretary in determining whether the benefits of excluding particular areas from the designation outweigh the benefits of including those areas in the designation. Our DEA, and subsequent FEA, analyzed the potential for both direct and indirect incremental impacts of the critical habitat designation; this analysis is thoroughly detailed and documented, and clearly identifies the source of all relevant facts and figures utilized (IEc 2015, entire). The FEA incorporates consideration of all reasonably foreseeable potential economic impacts, including some that were not initially recognized but that were identified during the public comment periods; this includes consideration of the potential impacts of the designation on ongoing or proposed development projects, energy projects,

and grazing and farming activities. Although the FEA quantifies the potential direct and indirect impacts of the designation wherever possible, in some cases of significant uncertainty, such quantification was not possible. However, the FEA is explicit in acknowledging all assumptions and limitations of the analysis, including the identification of those areas where the potential impacts may be underestimated (e.g., Exhibits 3–11, 4–5, and 5–9).

(154) *Comment:* One commenter states the Honuaua project is not being held up by consultations with State and Federal wildlife officials, but because the developer has failed to complete an accurate archeological review, as required for Phase II Project District approval.

*Our Response:* Section 3.3.1 of the FEA describes that the Honuaua project has been subject to delays related to the revision of the HCP following the proposed critical habitat designation (IEc 2015, p. 3–17). The analysis does not address delays that may be associated with State Historic Preservation Division's processes, as these are unrelated to the proposed critical habitat designation.

(155) *Comment:* Many of the areas proposed for designation are not currently inhabited by any of the listed species. Thus, the "baseline" for evaluating the economic impact of designation of these areas is "zero" because there is no present duty to consult with the Service. The Service must consider the full economic impact of the proposed habitat designation, rather than just looking at the incremental increase in cost.

*Our Response:* We agree that areas not presently occupied by any listed species and therefore not already subject to consultation with the Service have the potential for greater economic impacts. We explicitly acknowledged this situation in the DEA, stating "Where critical habitat is both unoccupied by the Maui Nui species and outside of the probable range of the Blackburn's sphinx moth, the incremental impact of critical habitat designation would be greater than in units occupied by the Maui Nui species or the moth. This is because impacts of critical habitat in these units would include all administrative costs of consultation and all costs associated with implementing conservation measures for the Maui Nui species" (IEc 2013, p. 2–12). Recognizing that economic activities in these units are the most likely to be subject to recommendations for incremental conservation measures to avoid adverse modification of critical

habitat, and therefore experience incremental economic impacts, the DEA (and subsequent FEA) focused the analysis specifically on these units (IEc 2015, p. ES–10, Exhibit ES–7). The potential economic impact of the designation reported in the DEA (and subsequent FEA) therefore directly incorporates this consideration into its estimate, and the costs presented are those that are fully attributable to the proposed critical habitat.

(156) *Comment:* A key finding of the DEA is that "The presence of the Maui Nui species provides extensive baseline protection that includes offsetting habitat loss. . ." This statement is erroneous in that it assumes that each proposed unit claimed to be occupied by the species is entirely occupied. This is not the case. This is because the Service has a unique and unprecedented "ecosystem" approach to this proposed designation.

*Our Response:* As described in the FEA (pp. ES–10—ES–13, 2–11), a number of the proposed critical habitat units are not considered to be occupied by the Maui Nui species. In addition, within the occupied units for the plant species, we clearly acknowledge that the plants are not necessarily identified throughout the unit but may occur intermittently throughout the unit (IEc 2015, p. 2–11). Where the species are not present at a project or activity site, section 7 consultations may not focus on the effects to the species but will consider the potential for adverse modification of critical habitat. With this in mind, the FEA identified ongoing and currently planned projects within the proposed critical habitat units and determined whether and how the designation would affect the projects. As stated in the FEA, for most of the ongoing and currently planned projects identified, project modifications, including habitat offsets, have been implemented or are currently being planned within the critical habitat unit even absent the proposed designation (IEc 2015, p. ES–4). Therefore, for these projects, incremental impacts are expected to be limited to the costs of additional administrative effort in section 7 consultations. However, the FEA also states that "critical habitat designation may generate the additional specification that offsets be located within the affected critical habitat unit, or within critical habitat of the same type" (IEc 2015, p. ES–4). The FEA identified one project for which this was the case (the Honuaua project) and presents both quantified and unquantified incremental effects of critical habitat in Chapter 3 of the FEA.

The "ecosystem approach" used in this rule is not unprecedented, but has been used in similar rulemakings for species in the Hawaiian islands as an organizational tool due to many of the characteristics shared by the listed species (for example, 48 Species on Kauai; 75 FR 18959, April 13, 2010). These characteristics include common threats to the essential physical or biological features (e.g., introduced ungulates, nonnative plants) and a shared dependence on similar habitat types or ecosystems. In addition, in many cases the species in question are extremely rare or have been extirpated from the wild, therefore data to inform us as to the essential physical or biological features for each species is extremely limited. In such cases, the identification of indicator species or other characteristics of the specific ecosystems known to have historically supported the species in question represent the best scientific data available to help us identify the physical or biological features essential to the conservation of these species (occupied areas), as well as the specific areas essential to the conservation of these species (unoccupied areas). This approach and our application of it to each of the species addressed in the final rule is detailed in the Methods section of this document.

(157) *Comment:* Based on a single telephone call with an unidentified staff person at the DLNR Office of Conservation and Coastal Lands, the DEA concludes that the proposed critical habitat designation will have no effect on conservation district boundary amendments. There is no opinion from a Hawaii court, attorney general, or the chair of DLNR to that effect. Without substantial legal authority to the contrary, the appropriate assumption for the DEA is that all land designated as critical habitat will be included within conservation district boundaries by DLNR. It must be assumed that agencies will dutifully encourage protection of areas designated as critical habitat, meaning that permits, entitlements, or rezoning sought for such lands will either be denied, or extremely expensive mitigation or offsetting will be required. These assumptions must be applied even to areas presently unoccupied by any species for which they are designated. In addition, the comments note that because critical habitat triggers reclassification of land to the conservation district under Hawaii law, this will lower property values, making it difficult to sell property in the future, cause project delays, lead to EIS

requirements, and cause costly lawsuits, and therefore constitutes a “taking.”

*Our Response:* As described in Section 3.1 of the FEA, the analysis integrates the best available information regarding the potential effects of critical habitat on State and county land management based on interviews with staff from the Department of Land and Natural Resources (DLNR)’s Office of Conservation and Coastal Lands (OCCL) and the State Office of Planning, as well as the County of Maui’s Department of Planning. According to the State Office of Planning, critical habitat is taken into consideration during the redistricting process, but does not itself generate a redistricting of lands to the Conservation District. According to the County Department of Planning, the presence of critical habitat is one of many factors under consideration during the rezoning process. Representatives from OCCL, the State, and the county were unable to identify an instance in which the presence of critical habitat specifically drove decisions related to redistricting or rezoning. As such, it has not been the State’s practice thus far to redistrict critical habitat areas as conservation district lands. The FEA does, however, describe uncertainty with regard to the future State and county management of these lands in Section 3.4. In addition, Section 5.3.2 of the FEA describes the potential indirect effects of critical habitat designation, including concern that the designation may result in lawsuits. Uncertainty exists regarding the potential for as well as the number, timing, and outcome of such lawsuits, thus associated impacts are not monetized in the economic analysis. Please also see our responses to *Comment* (22), (50), and (59), concerning critical habitat and rezoning issues, above.

(158) *Comment:* No attribution to the Service or agreement by the Service is offered in the DEA for the conclusion that the expectation that “the effects of critical habitat [on the Lanai wind project] will be limited to incremental administrative effort as part of a future formal section 7 consultation.” and that “it is unlikely however, that the project will be subject to additional conservation . . .”. Three factors are listed as the basis for the conclusion that additional conservation is unlikely to be required: (1) The project will have a limited physical footprint and only affect poor quality habitat; (2) the level of ground disturbance as access roads will be located on existing roadways; and (3) the project is already subject to considerable conservation measures as identified by the Hawaii Clean Energy

PEIS. There is no indication that the Service is in agreement with these reasons.

*Our Response:* The FEA provides explanation for each of these conclusions, with attribution, in section 4.3.1 (IEc 2015, pp. 4–10—4–11). We agree with the statements in the DEA (and subsequent FEA) cited by the commenter, as well as the ultimate conclusion that the effects of critical habitat will be limited to incremental administrative effort as part of a future formal section 7 consultation on the Lanai wind project. We note that for the reasons described below (see *Exclusions Based on Other Relevant Factors*, below), critical habitat is not designated on the island of Lanai in this final rule, as a consequence of exclusions under section 4(b)(2) of the Act.

(159) *Comment:* The DEA should be revised to include the new development plans that encompass grazing and farming on Lanai.

*Our Response:* The level of uncertainty regarding the nature of future development, as well as how the designation of critical habitat may result in project modifications, precluded the quantification of impacts of critical habitat on future development in the FEA (IEc 2015, p. 3–2). However, for the reasons described below (see *Exclusions Based on Other Relevant Factors*), critical habitat is not designated on the island of Lanai in this final rule as a consequence of exclusion under section 4(b)(2) of the Act.

(160) *Comment:* The DEA fails to adequately quantify the impacts of critical habitat designation on Kaupo Ranch operations. The DEA does not acknowledge that the designation of critical habitat on ranch lands will result in the removal of 756 acres from production.

*Our Response:* We do not anticipate that critical habitat would result in Kaupo Ranch’s land being taken out of production. As described in Section 5.3 of the FEA, the designation is not likely to change how NRCS and the Service manage and regulate farming and grazing activities. Chapter 5 of the analysis also notes the potential fire break benefit of cattle grazing; however, absent changes in management of grazing activity, we do not expect critical habitat to affect this potential benefit. In any case, for the reasons described below (see *Exclusions Based on Other Relevant Factors*) Kaupo Ranch lands have been excluded from critical habitat under section 4(b)(2) of the Act in this final rule.

(161) *Comment:* One commenter requested that an analysis of the interplay of grazing activities, critical

habitat designation and “harm” under Hawaii’s endangered species State law be conducted by experts familiar with State law and included in the final economic analysis.

*Our Response:* As described in Section 3.1 of the FEA, several State agencies were contacted to inform the discussion and evaluation of the interplay between critical habitat designation and land use in Hawaii, including the potential for critical habitat to result in redistricting to the Conservation District. State agencies contacted include the State Office of Planning, the Department of Land and Natural Resources’ Office of Conservation and Coastal Lands, the State Department of Fish and Wildlife, the State Land Use Commission, and the Department of Hawaiian Homelands. The Maui County Planning Department’s Zoning Administration and Enforcement Division was also contacted regarding the issue of critical habitat affecting how the county implements zoning changes. However, although critical habitat may be an educational tool to identify habitat where a species may occur, it does not increase or decrease a landowner’s liability for take of a listed species under either State or Federal law.

(162) *Comment:* The incremental approach to evaluating economic impacts has been misapplied in the DEA and the incremental impacts are likely underestimated. As much as 70 to 80 percent of the critical habitat could be expected to be unoccupied habitat where recommendations for habitat offsets for habitat disturbance would not be baseline recommendations, and therefore, the incremental costs of critical habitat designation could be significant. The DEA contends that approximately 42 percent of unoccupied critical habitat overlaps with the probable range of the Blackburn’s sphinx moth. The basis for this assumption is unclear and it is unclear why the probable range of the moth is the regulatory equivalent of occupied habitat.

*Our Response:* We have provided further detail regarding our rationale for the baseline protections provided within the probable range of the Blackburn’s sphinx moth in paragraphs 71 through 75 of the FEA. See also our responses to *Comment* (142) and (149), above.

(163) *Comment:* The DEA does not adequately consider costs associated with indirect impacts of critical habitat designation. Failure to quantify these impacts renders them meaningless in terms of the overall economic impact

estimated for the proposed critical habitat.

*Our Response:* Both the DEA and subsequent FEA consider the potential for both direct and indirect incremental impacts of the designation. The FEA provides an extensive discussion on the potential indirect impacts of the designation, including the entirety of Sections 2.3.2 (IEc 2015, pp. 2–19–2–21) and section 5.3.2 of the FEA (IEc 2015, pp. 5–16–5–22); Exhibit 5.8 is entirely devoted to potential indirect effects of the proposed critical habitat. Chapter 5, in particular, includes an extensive discussion on the potential indirect impacts of the designation, and considers information provided by stakeholders indicating particular concerns with the potential for changes in the way the State or county may manage lands, possible reductions in land values due to changes in land management, and perceptual effects on land values. These concerns are all presented and discussed, but the potential indirect impacts cannot be quantified due to their speculative nature. There is substantial uncertainty regarding whether they will occur, and, if they do, the potential magnitude of any effect. For example, although many landowners expressed concern that their land would use value as a result of redistricting or rezoning in response to critical habitat, the assumption that this would occur and result in limiting development is speculative, based on information provided to us by State and county agencies (IEc 2015, pp. 3–3–3–4; see our response to *Comment* (148), above). According to the Department of Planning's Zoning Administration and Enforcement Division, there has never been an instance when an area of land was rezoned due to the presence of critical habitat (IEc 2015, p. 3–7). The FEA presents a discussion that specifically addresses the uncertainty surrounding the potential indirect impacts of critical habitat that preclude quantification in this particular instance, but acknowledges that such uncertainties may result in an underestimate of the quantified impacts of the designation reported in the analysis (IEc 2015, pp. 5–22–5–23).

(164) *Comment:* The economic analysis needs to include specific cost estimates or ranges of potential costs for a variety of other potential impacts from critical habitat designation. These costs include: Impacts on credit availability, lawsuits, limitations on ability to diversify land uses, project delays, environmental compliance, and reduction in food production. In addition, the economic analysis should quantify these types of incremental

costs: \$100,000 per acre to acquire mitigation land to offset impacts to critical habitat (these are costs above and beyond the costs of offsetting impacts to listed species), impacts of administrative consultation, project modifications and delays, section 7 consultations, and completion of an EIS.

*Our Response:* The quantified impacts presented in the analysis include costs associated with section 7 consultations, as well as costs of additional conservation measures for the Honuauia development project resulting from the proposed critical habitat designation. The analysis also identifies areas in which projects or activities may be affected by critical habitat designation but significant uncertainty and data limitations preclude quantification of impacts—these impacts are referred to in the analysis as “unquantified impacts.” Section 5.3.2 of the FEA addresses stakeholders' concerns that critical habitat designation will change the way the State or county manages and permits current and future activities on designated lands; results in perceptual effects on land values; limits the ability of land owners to diversify current land uses; generates costly lawsuits; and hinders the State's goal to work toward food sustainability. While uncertainty regarding the likelihood of such outcomes and magnitude of associated impacts precludes quantification, the Service considers all potential impacts of the proposed critical habitat, regardless of whether they are direct or indirect, or quantified or unquantified. See also our response to *Comment* (151), above.

(165) *Comment:* Many commenters expressed concern that the proposed critical habitat will negatively affect hunting, for example by causing areas to be fenced and thus limiting land available for hunting.

*Our Response:* Critical habitat designation does not affect activities, including human access, on State or private lands unless some kind of Federal permit, license, or funding is involved (there is a Federal nexus) and the activities may affect the species. Recreational, commercial, and subsistence activities, including hunting, on non-Federal lands are not regulated by critical habitat designation, and may be impacted only where there is Federal involvement in the action and the action is likely to destroy or adversely modify critical habitat. As noted in our FEA, the Service coordinates with the State in managing hunting areas. The State does not fence critical habitat areas and the Service does not anticipate recommending to the State that the Maui Nui critical

habitat area be fenced. Critical habitat is accordingly not expected to limit land available for hunting (IEc 2015, p. 1–5).

## V. Summary of Changes From the Proposed Rule

In preparing this final rule, we reviewed and fully considered comments from the public on the proposed critical habitat designation for 135 Maui Nui species. This final rule incorporates the following substantive changes to our proposed designation, based on the comments we received:

(1) In the Methods section of our June 11, 2012 proposed rule (77 FR 34464), we explained that we used the recovery areas delineated in the Service's 2006 Revised Recovery Plan for Hawaiian Forest Birds to assist us in our identification of proposed critical habitat. In response to public comments, in this final rule we have expanded our discussion of how we used the information in that plan, which we consider to be the best scientific data available, to explain the need to designate critical habitat in unoccupied areas for the akohekohe and kiwikuu. In addition, we have outlined the goals and necessary management actions to ensure the conservation of these two endangered forest birds within their existing occupied habitat and those unoccupied habitats identified as necessary for their conservation (see *Criteria Used to Identify Critical Habitat Boundaries and Special Management Considerations or Protections*, below), based on peer review comments.

(2) We have included additional information on disease and disease vectors in our discussion of Hawaiian forest birds (see “Disease and Disease Vectors” in *Special Management Considerations or Protections*, below), based on peer review comments.

(3) In response to public comments, we have included additional information from the Service's recovery plans for one or more of the Maui Nui plants to further clarify why it is essential to the conservation of each species to designate critical habitat in unoccupied areas and to include area for the expansion or augmentation of existing populations. In addition, although we had explained in our proposed rule (June 11, 2012; 77 FR 34464) that we had relied, in part, on maps of habitat essential to the recovery of Hawaiian plants, as determined by the HPPRCC (1998, 32 pp. + appendices), in response to public comments received, in this final rule we have provided further clarifying information on the overall recovery goals and objectives for Hawaiian plants (see “Recovery Strategy for Hawaiian

Plants,” below) that we used to help guide the areas identified as critical habitat for those species lacking recovery plans. Where specific recovery plans were lacking, we relied on all species information in our files, including the recovery guidelines provided by the HPPRCC (1998) and other reports such as the recently developed plant species range maps (Price *et al.* 2012, 34 pp.), if available for the species. In this final rule, we further clarify why it is essential to the conservation of each species to designate critical habitat in unoccupied areas, and to include area for the expansion or augmentation of existing populations.

(4) We have included additional information on current recovery delisting objectives for the three tree snails included in this final rule (see “Recovery Strategy for Three Tree Snails,” below), to further clarify the habitat needs of these species in response to public comments.

(5) We have included additional information on the threat posed by the predatory rosy wolf snail (*Euglandina rosea*) to the Newcomb’s tree snail (see “Predation by the Nonnative Rosy Wolf Snail,” in *Special Management Considerations or Protections*, below).

(6) We made revisions to the primary constituent elements (PCEs) for eight plants, based on comments we received. Because of these PCE revisions, we removed *Alectryon macrococcus* var. *auwahiensis* and *Melicope adscendens* from the list of plants in Maui—Lowland Dry—Units 3 and 4 because the elevation of these units is too low to have the ability to provide habitat for these species. We added Dry Cliff as an ecosystem for *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Bidens micrantha* ssp. *kalealaha*, and *Geranium multiflorum* on east Maui in Maui—Dry Cliff—Units 1 through 4, added Lowland Wet and Montane Wet

as ecosystems for *Phyllostegia haliakalae* on east Maui (Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Units 1–4), added Lowland Dry as an ecosystem for *Hibiscus brackenridgei* on Molokai (Molokai—Lowland Dry—Units 1 and 2), and we removed Maui—Subalpine—Units 1 and 2 for *Solanum incompletum* on east Maui, in response to comments received from biologists regarding critical habitat and habitat requirements for these species. We also revised Tables 5 and 6 to reflect these changes.

(7) We had specifically described in the text of the proposed rule (June 11, 2012; 77 FR 34464) that space within the appropriate habitats for population growth and expansion, as well as to maintain the historical geographical and ecological distribution of each species, is an essential physical or biological feature for each of the Maui Nui species. In this final rule, in response to public comment, we have expanded that discussion to further clarify why additional suitable habitat in areas that are currently unoccupied, or that may have been unoccupied at the time of listing, is essential for the conservation of each of the Maui Nui species.

(8) We have modified Table 5, Physical or Biological Features in Each Ecosystem, so that the heading for canopy, subcanopy, and understory plants reads “Supporting one or more of these associated native plant genera” instead of “Capable of supporting one or more of these associated native plant genera,” to make it clear that the presence of one or more of the associated native plant genera identified is a physical or biological feature for the listed species in each ecosystem.

(9) We are removing the entry for “Family Rhamnaceae: *Gouania hillebrandii*” from 50 CFR 17.96(a). With this rule, the critical habitat designation for *Gouania hillebrandii* is set forth at 50 CFR 17.99.

(10) We revised the unit boundaries proposed for Molokai, Maui, and Kahoolawe, based on comments indicating that changes in land use had occurred within the proposed critical habitat units that would preclude certain occupied areas from supporting the primary constituent elements, or that the unoccupied areas in question were not essential to the conservation of the species. Such areas do not meet the statutory definition of critical habitat, therefore we removed them from the final designation. In addition, portions of some units were excluded from critical habitat under section 4(b)(2) of the Act (as described in the section *Exclusions Based on Other Relevant Factors*, below). These removals and exclusions resulted in acreage reductions in several units on Maui, Molokai, and Kahoolawe. In addition, four units on Maui (Dry Cliff—Unit 7, Montane Wet—Unit 8, Montane Mesic—Unit 6, Wet Cliff—Unit 5) and all units on Lanai are removed entirely as critical habitat as a result of exclusions under section 4(b)(2) of the Act. Table 3, A through E, provides details for all units that have changed as a result of these removals and exclusions between the proposed and final rules.

Table 3. Summary of Changes From Proposed Rule—Critical Habitat Units With Changes to Area (Note: Units that are unchanged are not shown in this table, hence final acreages do not sum up to equal the total final critical habitat). All changes are reductions unless otherwise noted; values denoted with a plus sign (+) are additions to units. In many cases, additions reflect acres that were initially misclassified into a different ecosystem unit and were simply moved from one unit to another (thus those acres are reflected as a reduction in a different unit under the Boundary Adjustment column).

\* Net acres removed, adjusted to reflect 13 ac (5 ha) added in course of boundary adjustments, as detailed in Table 3B.

**VI. Critical Habitat**

*Background*

Critical habitat is defined in section 3 of the Act as:

(1) The specific areas within the geographical area occupied by a species, at the time it is listed in accordance with the Act, on which are found those physical or biological features

(a) Essential to the conservation of the species and

(b) Which may require special management considerations or protection; and

(2) Specific areas outside the geographical area occupied by a species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Conservation, as defined under section 3 of the Act, means to use and

the use of all methods and procedures that are necessary to bring an endangered or threatened species to the point at which the measures provided under the Act are no longer necessary. Such methods and procedures include, but are not limited to, all activities associated with scientific resources management, such as research, census, law enforcement, habitat acquisition and maintenance, propagation, live trapping, transplantation, and, in the extraordinary case where population pressures within a given ecosystem cannot otherwise be relieved, may include regulated taking.

Critical habitat receives protection under section 7 of the Act through the prohibition against Federal agencies carrying out, funding, or authorizing the destruction or adverse modification of critical habitat. Section 7(a)(2) of the Act

requires consultation on Federal actions that may affect critical habitat. The designation of critical habitat does not affect land ownership or establish a refuge, wilderness, reserve, preserve, or other conservation area. Such designation does not allow the government or public access to private lands. Such designation does not require implementation of restoration, recovery, or enhancement measures by non-Federal landowners. Where a landowner seeks or requests Federal agency funding or authorization for an action that may affect a listed species or critical habitat, the consultation requirements of section 7(a)(2) of the Act would apply, but even in the event of a destruction or adverse modification finding, the Federal action agency's and the applicant's obligation is not to restore or recover the species, but to

implement reasonable and prudent alternatives to avoid destruction or adverse modification of critical habitat.

Under the first prong of the Act's definition of critical habitat, areas within the geographical area occupied by the species at the time it was listed are included in a critical habitat designation if they contain physical or biological features (1) essential to the conservation of the species and (2) that may require special management considerations or protection. For these areas, critical habitat designations identify, to the extent known using the best scientific and commercial data available, those physical or biological features that are essential to the conservation of the species (such as space, food, cover, and protected habitat). In identifying those physical or biological features within an area, we focus on the principal biological or physical constituent elements (primary constituent elements such as roost sites, nesting grounds, seasonal wetlands, water quality, tide, soil type) that are essential to the conservation of the species. Primary constituent elements are those specific elements of the physical or biological features that provide for a species' life-history processes and are essential to the conservation of the species.

Under the second prong of the Act's definition of critical habitat, we can designate critical habitat in areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species. For example, an area currently occupied by the species but that was not occupied at the time of listing may be essential to the conservation of the species and may be included in the critical habitat designation. We designate critical habitat in areas outside the geographical area occupied by a species only when designation limited to its range would be inadequate to ensure the conservation of the species.

Section 4 of the Act requires that we designate critical habitat on the basis of the best scientific data available. Further, our Policy on Information Standards Under the Endangered Species Act (published in the **Federal Register** on July 1, 1994 (59 FR 34271)), the Information Quality Act (section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Pub. L. 106–554; H.R. 5658)), and our associated Information Quality Guidelines, provide criteria, establish procedures, and provide guidance to ensure that our decisions are based on the best scientific data

available. They require our biologists, to the extent consistent with the Act and with the use of the best scientific data available, to use primary and original sources of information as the basis for recommendations to designate critical habitat.

When we are determining which areas should be designated as critical habitat, our primary source of information is generally the information developed during the listing process for the species. Additional information sources may include the recovery plan for the species; articles in peer-reviewed journals; conservation plans developed by States and counties; scientific status surveys and studies; biological assessments; or other unpublished materials and expert opinion or personal knowledge.

Habitat is dynamic, and species may move from one area to another over time. We recognize that critical habitat designated at a particular point in time may not include all of the habitat areas that we may later determine to be necessary for the recovery of the species. For these reasons, a critical habitat designation does not signal that habitat outside the designated area is unimportant or may not be required for recovery of the species. Areas that are important to the conservation of the species, both inside and outside the critical habitat designation, will continue to be subject to: (1) Conservation actions implemented under section 7(a)(1) of the Act, (2) regulatory protections afforded by the requirement in section 7(a)(2) of the Act for Federal agencies to insure their actions are not likely to jeopardize the continued existence of any endangered or threatened species, and (3) section 9 of the Act's prohibitions on taking any individual of the species, including taking caused by actions that affect habitat. Federally funded or permitted projects affecting listed species outside their designated critical habitat areas may still result in jeopardy findings in some cases. These protections and conservation tools will continue to contribute to recovery of the species. Similarly, critical habitat designations made on the basis of the best available information at the time of designation will not control the direction and substance of future recovery plans, habitat conservation plans (HCPs), or other species conservation planning efforts if new information available at the time of these planning efforts calls for a different outcome.

#### *Prudency Determination for 44 Maui Nui Species*

Section 4(a)(3) of the Act, as amended, and implementing regulations (50 CFR 424.12) require that, to the maximum extent prudent and determinable, the Secretary designate critical habitat at the time a species is determined to be endangered or threatened. Our regulations at 50 CFR 424.12(a)(1) state that designation of critical habitat is not prudent when one or both of the following situations exist: (1) The species is threatened by taking or other human activity, and identification of critical habitat can be expected to increase the degree of threat to the species; or (2) such designation of critical habitat would not be beneficial to the species.

#### 40 Maui Nui Species

On May 28, 2013, we published the final rule to list as endangered 38 Maui Nui species (35 plants and 3 tree snails) and reaffirm the listing as endangered of two endemic Hawaii plants (78 FR 32014). These 40 species include 3 tree snails and 37 plants, as follows: Newcomb's tree snail (*Newcombia cumingi*) and the two Lanai tree snails (*Partulina semicarinata* and *P. variabilis*); the plants *Bidens campylotheca* ssp. *pentamera*, *Bidens campylotheca* ssp. *waihoiensis*, *Bidens conjuncta*, *Calamagrostis hillebrandii*, *Canavalia pubescens*, *Cyanea asplenifolia*, *Cyanea duvalliorum*, *Cyanea grimesiana* ssp. *grimesiana*, *Cyanea horrida*, *Cyanea kunthiana*, *Cyanea magnicalyx*, *Cyanea maritae*, *Cyanea mauiensis*, *Cyanea munroi*, *Cyanea obtusa*, *Cyanea profuga*, *Cyanea solanacea*, *Cyrtandra ferrispilosa*, *Cyrtandra filipes*, *Cyrtandra oxybapha*, *Festuca molokaiensis*, *Geranium hanaense*, *Geranium hillebrandii*, *Mucuna sloanei* var. *persericea*, *Myrsine vaccinioides*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *Phyllostegia haliakalae*, *Phyllostegia pilosa*, *Pittosporum halophilum*, *Pleomele fernaldii*, *Santalum haleakalae* var. *lanaiense*, *Schiedea jacobii*, *Schiedea laui*, *Schiedea salicaria*, *Stenogyne kauaulaensis*, and *Wikstroemia villosa*. There is currently no documentation that the 37 listed endangered or threatened plants are threatened by taking or other human activity. Overcollection is a potential serious threat to the three listed endangered tree snails (*Newcombia cumingi*, *Partulina semicarinata*, and *P. variabilis*) (see "B. Overutilization for Commercial, Recreational, Scientific, or Educational Purposes," at 78 FR 32050; May 28, 2013). Europeans and others collected

Hawaiian tree snails starting in the 1800s and into the early 20th century. Even today, there are Internet Web sites that sell Hawaiian tree snail shells, including other species of the Hawaiian *Partulina*. It is unknown if the shells offered for sale are from historical collections or recent collections from the wild. However, we do not believe the designated critical habitat will increase the threat of overcollection of *N. cumingi*, *P. semicarinata*, and *P. variabilis* because our approach to critical habitat designation is based on the physical or biological features essential to the conservation of the species and does not identify the locations of individuals of the three tree snails. In addition, the critical habitat unit maps are published at a scale that does not pinpoint the locations of the three snail species to the extent that individuals of these three tree snail species can be located on the private lands on which they occur.

#### Four Previously Listed Maui Nui Species

We listed the akohekohe or crested honeycreeper and the kiwikiu or Maui parrotbill as endangered species in 1967 (32 FR 4001; March 11, 1967), under the Endangered Species Preservation Act of 1966 (precursor to the Endangered Species Act of 1973). Critical habitat was not determined at that time because it was not required under the Act until 1978. Neither the akohekohe nor the kiwikiu is threatened by taking or other human activity (32 FR 4001, March 11, 1967; USFWS 2006, pp. 2–81 to 2–82, 2–142).

At the time we listed the plant *Kokia cookei* (Cooke's kokia) as endangered in 1979, we found that designation of critical habitat was not prudent because this species had been extirpated from its natural range on Molokai and was known only from a single specimen in cultivation and tissue culture maintained in a laboratory, therefore at that time we concluded that the species would not benefit from the designation of critical habitat (44 FR 62470; October 30, 1979). *Kokia cookei* is not threatened by vandalism, collecting, or other human activities, and we believe there is a benefit to a critical habitat designation for this species (see discussion below).

We listed the plant *Acaena exigua* (liliwai), known from Kauai and Maui, as endangered in 1992 (57 FR 20772; May 15, 1992). At that time, the species had not been seen since 1973. In 1997, botanists rediscovered *A. exigua* in the Puu Kukui Preserve on west Maui, but it has not been seen at this location since 2000 (68 FR 25934; May 14, 2003).

We determined that critical habitat was not prudent for *Acaena exigua* at the time of listing (1992) and again at the time we reevaluated prudence determinations for many listed plants in the Hawaiian Islands because at that time we believed *A. exigua* was most likely extinct, and therefore would not benefit from a critical habitat designation (2003) (57 FR 20772, May 15, 1992; 68 FR 9116, February 27, 2003, p. 9185). *Acaena exigua* is not threatened by vandalism, collecting, or other human activities, and we believe there is a benefit to a critical habitat designation for this species (see discussion below). Although the reasons for the disappearance of this species on west Maui are not known, botanists believe it may be rediscovered in the same area where it was last seen in 2000, with sustained searching.

We reviewed the information available for the 39 endangered plants, 3 tree snails, and the 2 endangered birds (akohekohe and kiwikiu) pertaining to the biological needs of these 44 species and characteristics of their last known habitats. In the absence of finding that the designation of critical habitat would increase threats to a species, if there are any benefits to a critical habitat designation, then a prudent finding is warranted. The potential benefits to the 39 endangered plants, the 3 tree snails, and the 2 endangered birds (akohekohe and kiwikiu) include: (1) Triggering consultation under section 7 of the Act, in new areas for actions in which there may be a Federal nexus where it would not otherwise occur because, for example, it is or has become unoccupied or the occupancy is in question; (2) focusing conservation activities on the most essential features and areas; (3) providing educational benefits to State or county governments or private entities; and (4) preventing people from causing inadvertent harm to the species.

There are two plant species, *Kokia cookei* and *Acaena exigua*, for which we now find that the designation of critical habitat is prudent, which is a change from earlier determinations that critical habitat was not prudent for these species, neither of which is known to occur in the wild. At the time the *K. cookei* was listed (October 30, 1979; 44 FR 62470) we determined that the designation of critical habitat was not prudent, because *K. cookei* had been extirpated from its natural range; however, the rule noted that critical habitat may be determined at a future date in connection with efforts to reintroduce the species. Currently, there is a single individual of *K. cookei* in cultivation on Oahu, and there are

propagules in captive propagation, with two individuals outplanted on Molokai in a living gardens collection. *Acaena exigua* was listed as endangered in 1992, at which time it was determined that critical habitat was not prudent as it would not provide a benefit to the species (May 15, 1992; 47 FR 20772). When we reconsidered not prudent findings as required by *Conservation Council for Hawaii v. Babbitt*, 2 F. Supp. 2d 1280 (D. Haw. 1998) we found (65 FR 79192, December 18, 2000) that critical habitat for *A. exigua* was not prudent because it had not been seen in the wild, and no genetic material of the species was known to exist. However, as described in our proposed rule (June 11, 2012; 74 FR 34464.), we have reconsidered these findings and now conclude that designation of critical habitat is prudent for these two species. Recovery of these two plants, *K. cookei* and *A. exigua*, neither of which are currently known to occur as wild individuals (*A. exigua* was briefly rediscovered in 1997, and survived until 2000), will require *in-situ* conservation and protection of wild individuals, if rediscovered; enhancement of existing populations with outplantings; and establishment of new populations through outplanting of propagated individuals into potentially suitable habitat within their historical ranges (USFWS 1997, p. 11; USFWS 1998a, pp. 22–23; Orr 2007, in litt., p. 8; Seidman 2007, in litt.). The conservation of these species cannot be achieved unless individuals are reintroduced and eventually populations are reestablished in the wild. Therefore, for the reasons described above, we have determined that critical habitat is prudent and will be of benefit to these species, as suitable habitat within their historical range is essential to their conservation to provide for the reintroduction and reestablishment of the species in the wild.

The primary regulatory effect of critical habitat is the section 7(a)(2) requirement that Federal agencies refrain from taking any action that destroys or adversely modifies critical habitat. We find that the designation of critical habitat for each of the 44 endangered species identified above will benefit it by serving to focus conservation efforts on the restoration and maintenance of ecosystem functions that are essential for attaining its recovery and long-term viability. In addition, the designation of critical habitat serves to inform management and conservation decisions by identifying any additional physical or biological features of the ecosystem that

may be essential for the conservation of certain species, such as the availability of bogs for *Calamagrostis hillebrandii*, *Geranium hanaense*, and *G. hillebrandii*. Therefore, as we have determined that the designation of critical habitat will not likely increase the degree of threat to the species and may provide some measure of benefit, we find that designation of critical habitat is prudent for the following 44 species, as critical habitat would be beneficial and there is no evidence that the designation of critical habitat would result in an increased threat from taking or other human activity for these species:

(1) Plants—*Acaena exigua*, *Bidens campylothea* ssp. *pentamera*, *Bidens campylothea* ssp. *waihoiensis*, *Bidens conjuncta*, *Calamagrostis hillebrandii*, *Canavalia pubescens*, *Cyanea asplenifolia*, *Cyanea duvalliorum*, *Cyanea grimesiana* ssp. *grimesiana*, *Cyanea horrida*, *Cyanea kunthiana*, *Cyanea magnicalyx*, *Cyanea maritae*, *Cyanea mauiensis*, *Cyanea munroi*, *Cyanea obtusa*, *Cyanea profuga*, *Cyanea solanacea*, *Cyrtandra ferripilosa*, *Cyrtandra filipes*, *Cyrtandra oxybapha*, *Festuca molokaiensis*, *Geranium hanaense*, *Geranium hillebrandii*, *Kokia cookei*, *Mucuna sloanei* var. *persericea*, *Myrsine vaccinioides*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *Phyllostegia haliakalae*, *Phyllostegia pilosa*, *Pittosporum halophilum*, *Pleomele fernaldii*, *Santalum haleakalae* var. *lanaiense*, *Schiedea jacobii*, *Schiedea laui*, *Schiedea salicaria*, *Stenogyne kauaulaensis*, and *Wikstroemia villosa*;

(2) Animals—birds: akohekohe and kiwiku; snails: *Newcombia cumingi*, *Partulina semicarinata*, and *Partulina variabilis*.

#### Critical Habitat Determinability for the Listed Plant Species *Cyanea mauiensis* and *Phyllostegia hispida*

As stated above, section 4(a)(3) of the Act requires the designation of critical habitat concurrently with the species' listing "to the maximum extent prudent and determinable." Our regulations at 50 CFR 424.12(a)(2) state that critical habitat is not determinable when one or both of the following situations exist:

(i) Information sufficient to perform required analyses of the impacts of the designation is lacking, or

(ii) The biological needs of the species are not sufficiently well known to permit identification of an area as critical habitat.

When critical habitat is not determinable, the Act provides for an additional year to publish a critical

habitat designation (16 U.S.C. 1533(b)(6)(C)(ii)).

In accordance with section 3(5)(A)(i) of the Act and regulations at 50 CFR 424.12, in determining which areas occupied by the species at the time of listing to designate as critical habitat, we consider those physical and biological features essential to the conservation of the species that may require special management considerations or protection. The primary constituent elements of critical habitat include, but are not limited to:

- (1) Space for individual and population growth, and for normal behavior;
- (2) Food, water, air, light, minerals, or other nutritional or physiological requirements;
- (3) Cover or shelter;
- (4) Sites for breeding, reproduction, rearing (or development) of offspring; and
- (5) Habitats that are protected from disturbance or are representative of the historical geographical and ecological distributions of a species.

We are currently unable to identify the physical and biological features that are considered essential to the conservation of the plant *Cyanea mauiensis*, one of the recently listed species on Maui, because information necessary to understand the life-history needs of the species is not available at this time. Key features of the life history of this plant species, such as flowering cycles, pollination vectors, specific environmental requirements, and limiting factors, remain unknown. Nothing is known of the preferred habitat of, or native species associated with, this species on the island of Maui. *Cyanea mauiensis* was last observed on Maui over 100 years ago, and its habitat has been modified and altered by nonnative ungulates and plants, fire, and stochastic events (e.g., hurricanes, landslides). In addition, predation by nonnative rats, and herbivory by nonnative ungulates and invertebrates, likely led to the extirpation of this species from Maui. Because a century has elapsed since *C. mauiensis* was last observed, the optimal conditions that provide the biological or ecological requisites of this species are not known. As described above, we can surmise that habitat degradation from a variety of factors and predation by a number of nonnative species has contributed to the decline of this species on Maui; however, we do not know the physical or biological features that are essential for *C. mauiensis*. As we are unable to identify the physical and biological features essential to the conservation of this species, we are unable to identify

areas on Maui that contain these features.

Although we have determined that the designation of critical habitat is prudent for the plant *Cyanea mauiensis*, the biological needs of this species are not sufficiently well known to permit identification of the physical or biological features that may be essential for the conservation of the species, or those areas that provide the physical or biological features essential to the conservation of the species. Therefore, we find that critical habitat for *C. mauiensis* is not determinable at this time. We intend to continue gathering information regarding the essential life-history requirements of this plant species to facilitate the identification of those physical or biological features that are essential to the conservation of *C. mauiensis*. We recognize that in the case of a "not determinable" finding the Act provides 1 year from the date of the proposed rule in which such a finding is made to propose critical habitat. As such a proposal would further delay the finalization of critical habitat for the other 135 Maui Nui species addressed in this rule, we will be proposing critical habitat for *C. mauiensis* in a separate rulemaking in the near future.

We listed the plant *Phyllostegia hispida* (NCN), known only from the island of Molokai, as an endangered species on March 17, 2009 (74 FR 11319). At the time of listing, we determined that critical habitat was prudent but not determinable for this species, but acknowledged that for the future designation of critical habitat we would evaluate the needs of *P. hispida* within the ecological context of the ecosystem in which it occurs. We are now designating critical habitat for *P. hispida*, based on the identification of the physical and biological features that contribute to the successful functioning of the ecosystem upon which it depends.

Critical Habitat Designation for 50 Species and Revision of Critical Habitat Designation for 85 Species on Molokai, Lanai, Maui, and Kahoolawe

In this section, we discuss the designation of critical habitat for 50 listed plants and animals on the islands of Maui Nui (39 of the 40 species discussed above in our listing proposal and reevaluation, for which we concluded that critical habitat was both prudent and determinable; 2 listed bird species (akohekohe or crested honeycreeper and kiwiku or Maui parrotbill); and 9 listed plants *Abutilon eremitopetalum*, *Acaena exigua*, *Cyanea gibsonii*, *Kadua cordata* ssp. *remyi*, *Kokia cookei*, *Labordia tinifolia* var.

*lanaiensis*, *Melicope munroi*, *Phyllostegia hispida*, and *Viola lanaiensis*. This section also discusses the currently designated critical habitat for 85 species of plants on the islands of Molokai, Lanai, Maui, and Kahoolawe, which is being revised here based on new information. This information represents the best current scientific information available.

#### Recovery Strategy for Hawaiian Plants

The lack of detailed scientific data on the life history of the 130 plant species in this final rule makes it impossible for us to develop a robust quantitative model (e.g., population viability analysis (National Research Council 1995)) to identify the optimal number, size, and location of critical habitat units to achieve recovery. Based on the best information available at this time, including information on which the listing and recovery plans for most of these species were based, we have concluded that the current size and distribution of the extant populations are not sufficient to provide for the conservation of these plant species (Ellstrand and Elam 1993, pp. 217–238; Reed 2005, pp. 563–568).

For 95 of these plant species, the overall recovery strategy, outlined in the approved recovery plans, includes: (1) Stabilization of existing wild populations; (2) protection and management of habitat; (3) enhancement of existing small populations and reestablishment of new populations within historical range; and (4) research on species biology and ecology (Service Recovery Plan for *Gouania hillebrandii* (Rhamnaceae), July 1990; Recovery Plan for the Kauai Plant Cluster, September 1995; Lanai Plant Cluster Recovery Plan, September 1995; Recovery Plan for *Marsilea villosa*, April 1996; Recovery Plan for the Big Island Plant Cluster, September 1996; Recovery Plan for Molokai Plant Cluster, September 1996; Recovery Plan for the Maui Plant Cluster, July 1997; Recovery Plan for *Kokia cookei*, June 1998; Recovery Plan for the Oahu Plant Cluster, August 1998; Recovery Plan for 4 Hawaiian Ferns, April 1998; Molokai II: Addendum to the Recovery Plan for the Molokai Plant Cluster, May 1998; Recovery Plan for the Multi-Island Plants, July 1999; and Addendum to the Recovery Plan for Multi-Island Plants, September). Although recovery plans have not yet been developed for 35 of the plants in this final rule (*Bidens campylotheca* ssp. *pentamera*, *B. campylotheca* ssp. *waihoiensis*, *B. conjuncta*, *Calamagrostis hillebrandii*, *Canavalia pubescens*, *Cyanea asplenifolia*, *C. duvalliorum*, *C. horrida*, *C. kunthiana*,

*C. magnicalyx*, *C. maritae*, *C. munroi*, *C. obtusa*, *C. profuga*, *C. solanacea*, *Cyrtandra ferripilosa*, *C. filipes*, *C. oxybapha*, *Festuca molokaiensis*, *Geranium hanaense*, *G. hillebrandii*, *Mucuna sloanei* var. *persericea*, *Myrsine vaccinioides*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *P. haliakalae*, *P. pilosa*, *Pittosporum halophilum*, *Pleomele fernaldii*, *Schiedea jacobii*, *S. laui*, *S. salicaria*, *Stenogyne kauaulaensis*, and *Wikstroemia villosa*) listed as endangered on May 28, 2013 (78 FR 32014), or for *Phyllostegia hispida*, listed as endangered on March 17, 2009 (74 FR 11319), and for which we are designating critical habitat in this final rule, we believe it is reasonable to apply this same recovery strategy to these 35 plant species because they have similar life histories, occur in the same habitat, and face the same threats as the 95 plant species with approved recovery plans and addressed in this final rule, including small numbers of individuals and greatly reduced distributions.

The overall recovery goal stated in the recovery plans for each of 95 plant species with approved recovery plans and which we have applied to the 35 plant species without recovery plans, includes the establishment of 8 to 10 populations with a minimum of 100 mature, reproducing individuals per population for long-lived perennials; 300 mature, reproducing individuals per population for short-lived perennials; and 500 mature, reproducing individuals per population for annuals. These are the minimum population targets set for considering delisting of the species, which we consider the equivalent of achieving the conservation of the species as defined in section 3 of the Act (hereafter we refer to these delisting objectives as defined in recovery plans or by the HPPRCC (1998) as simply “recovery objectives”). (There is only one exception to the criteria above, and that is *Marsilea villosa*, a short-lived terrestrial fern dependent on flooding regimes for its reproductive cycle. The recovery plan states that for downlisting, at least six distinct, self-sustaining populations must be maintained over two successive flooding events, and that to delist, the six populations must no longer be in need of active management, and that these criteria should then be reconsidered 5 years following the delisting). To be considered recovered, the populations of multi-island species should be distributed among the islands of its known historical range (Service Recovery Plan for *Gouania hillebrandii* (Rhamnaceae), July 1990; Recovery Plan

for the Kauai Plant Cluster, September 1995; Lanai Plant Cluster Recovery Plan, September 1995; Recovery Plan for *Marsilea villosa*, April 1996; Recovery Plan for the Big Island Plant Cluster, September 1996; Recovery Plan for Molokai Plant Cluster, September 1996; Recovery Plan for the Maui Plant Cluster, July 1997; Recovery Plan for *Kokia cookei*, June 1998; Recovery Plan for the Oahu Plant Cluster, August 1998; Recovery Plan for 4 Hawaiian Ferns, April 1998; Molokai II: Addendum to the Recovery Plan for the Molokai Plant Cluster, May 1998; Recovery Plan for the Multi-Island Plants, July 1999; and Addendum to the Recovery Plan for Multi-Island Plants, September; HPPRCC 1998). A population, for the purposes of this discussion and as defined in the recovery plans for these species, is a unit in which the individuals could be regularly cross-pollinated and influenced by the same small-scale events (such as landslides), and which contains a minimum of 100, 300, or 500 mature, reproducing individuals, depending on whether the species is a long-lived perennial, short-lived perennial, or annual, respectively. For all plant species, propagated and outplanted individuals are generally not initially counted toward recovery, as populations must demonstrate recruitment (the ability to reproduce and generate multiple generations) and viability over an extended period of time to be considered self-sustaining.

By adopting the specific recovery objectives enumerated above, the adverse effects of genetic inbreeding and random environmental events and catastrophes, such as landslides, floods, and hurricanes, which could destroy a large percentage of a species at any one time, may be reduced (Kramer *et al.* 2008, p. 879; Menges 1990, pp. 56–60; Neel and Ellstrand 2003, p. 347). These recovery objectives were initially developed by the HPPRCC and are found in the recovery plans for 95 plant species, and applied to the 35 plant species without approved recovery plans. Further discussion on these recovery objectives can be found in our final critical habitat designations for 3 plants on the island of Lanai (68 FR 1220; January 9, 2003), 41 plants on Molokai (68 FR 12982; March 18, 2003), and 60 plants on the islands of Maui and Kahoolawe (68 FR 25934; May 14, 2003). As stated above, these objectives describe the minimum population criteria to be met, based on the best available scientific data, to ensure adequate population resiliency (population size, growth rate, and connectivity; indicative of ability to

withstand stochastic disturbances), redundancy (spreading the risk among multiple populations over a large geographic area; ability to withstand catastrophic events), and representation (genetic and environmental diversity; ability to adapt to changing conditions over time) to ensure long-term viability and bring these species to the point at which the protections of the Act are no longer necessary (delisting). As this is the definition of conservation under section 3 of the Act, we consider the ability to meet these recovery objectives as essential to the conservation of these species. These population recovery objectives are not necessarily the only recovery criteria for each species, but they served as the guide for our identification of the critical habitat areas essential for the conservation of the Maui Nui species in this rule, in terms of providing the ability to meet the specified population objectives.

In conclusion, for the 130 plant species addressed in this final rule, their conservation is dependent upon the protection of habitat for existing population sites, including room for population growth and expansion, and suitable unoccupied habitat within their historical range to provide for the requisite resiliency, redundancy, and representation of populations through restoration and reintroductions (see Unoccupied Areas, below).

#### Recovery Strategy for Two Forest Birds

The recovery strategies for the akohekohe and kiwikiu are generally similar because these two birds inhabit similar geographic areas and face common threats (Service 2006, pp. 2–83, 2–143). These recovery strategies, enumerated in the Service's 2006 Revised Recovery Plan for Hawaiian Forest Birds (pp. 2–83, 2–143), include the protection, restoration, and management of native high-elevation habitat on east Maui; research to understand the threats from disease and predation; and reestablishment (through captive propagation (both akohekohe and kiwikiu) or translocation of wild-caught adult birds (kiwikiu)) of a second population of both species in historical habitat on west Maui or east Molokai to reduce the risk of extinction due to catastrophic events, such as hurricanes and disease outbreaks (Service 2006, pp. 2–83, 2–143). Currently, there is only one population each of the akohekohe and kiwikiu, both on the windward side of Haleakala, east Maui. Suitable habitat is needed in other areas to achieve at least two populations or a metapopulation of each species on the islands of Maui Nui. The akohekohe and kiwikiu are known to have occurred on

Molokai. West Maui and Molokai contain intact native forest suitable for both species, except for the presence of mosquitoes and avian diseases. Haleakala supports a population of approximately 3,800 akohekohe that occupy 22 sq mi (58 sq km), and a population of approximately 500 kiwikiu that occupy about 19 sq mi (59 sq km). For each species these areas represent less than 5 percent of the estimated historical ranges on Maui. Both species appear to occupy almost all habitat that is currently suitable, because of disease constraints at lower elevations. To ensure the potential for population increase, additional habitat must be restored from 4,000 to 7,000 ft (1,200 to 2,000 m) on the leeward slopes and from 5,000 to 7,000 ft (1,500 to 2,000 m) on the western slopes, including a lower elevational limit of 2,500 ft (750 m) on windward Haleakala to encompass nonbreeding habitat for some birds following seasonal flowering downslope. A recovery area on west Maui, from 2,500 ft (750 m) to the summit (5,800 ft (1,800 m)) that encompasses suitable forest habitat, most of which is already managed for conservation, with large areas of native forest, would provide a second geographically disjunct population for each of these species. A recovery area on Molokai, from 2,500 ft (750 m) to the summit, would encompass forest habitat suitable for the two forest birds, and currently, upper elevations are managed for conservation, with management still required for control and prevention of avian disease. This would provide for population increases and populations disjunct from the island of Maui, in case of catastrophic events. The establishment of these additional populations in unoccupied but suitable habitat is essential to the conservation of these two bird species, as each remains highly vulnerable to extinction through either a single catastrophic event or a disease epizootic, since each species has been reduced to only a single population.

The recovery plan also provides the recovery criteria for delisting the akohekohe and kiwikiu (*i.e.*, removing the species from protection under the Act). The following criteria must be met over a 30-year time period: (1) Two or more viable populations or a viable metapopulation on Haleakala and either west Maui or Molokai that represent the ecological, morphological, behavioral, and genetic diversity of the species; (2) population viability demonstrated by quantitative surveys or demographic monitoring and total population size not expected to decline by more than 20

percent over a 30-year period; (3) sufficient habitat in recovery areas is protected and managed to achieve criteria 1 and 2; and (4) threats that led to the decline of the species are identified and controlled (Service 2006, pp. x–xi, 3–5).

In conclusion, for both of these birds, their conservation is dependent upon the protection of existing population sites and suitable unoccupied habitat within their historical range. Unoccupied but suitable habitat, as described in the Revised Forest Birds Recovery Plan, is essential for the conservation of both bird species to provide for the expansion of extant populations, as well as sites for translocation or reintroduction to establish additional populations essential to the conservation of the species. Areas both on east and west Maui, and on Molokai, are designated as critical habitat because these areas are necessary to promote natural demographic and evolutionary processes, and to allow the species to expand into potential habitat in a “ring” of suitable forest at upper elevations where mosquitoes (that spread disease) are rare. Reestablishment of these forest birds on west Maui or Molokai is necessary; however, it is uncertain in exactly which area (east or west Maui, or Molokai) a new population of birds might have the most success in reestablishing. Relatively large areas of suitable unoccupied habitat are needed to support the additional populations that are essential to the conservation of each species, based on the large home ranges of the birds, their territorial behavior, and the requisite availability of food sources that are ephemeral on the landscape and therefore shift in geographic location over time (*i.e.*, trees come into flower in different locations at different times).

#### Recovery Strategy for Three Tree Snails

Only one recovery plan is available for listed Hawaiian tree snails, and it is for 41 species on Oahu previously listed as endangered (Service Recovery Plan for Oahu Tree Snails of the Genus *Achatinella* 1992, entire). Although there are no downlisting or delisting criteria for these 41 endangered species of tree snails, the primary interim recovery objective is to stabilize populations in the wild and initiate captive propagation. Additional actions include conducting surveys, assessing and managing threats, protecting habitat, and conducting research. Although recovery plans have not yet been developed for the three tree snails in this final rule, it is reasonable to conclude that their conservation needs

would be similar and apply these same interim recovery objectives to the three Maui Nui tree snails because they are in the same family, have similar life histories (long-lived, low reproductive rates, etc.), occur in similar habitat, and face the same threats as the 41 species of *Achatinella* tree snails that have an approved recovery plan (Browning 2013, in litt.; Sether 2013, in litt.). The essential habitat for the *Achatinella* tree snails was determined by mapping their current and historical ranges on the island of Oahu, and selecting forest areas with suitable vegetation and rainfall within those current and historical ranges. As described in the recovery plan, *Achatinella* sp. had ranges varying from 3 to 150 square kilometers (sq km) (1 to 58 square miles (sq mi)). In the absence of a recovery plan for the three species at issue here, we are following the same delisting objectives as for the *Achatinella* tree snails, *i.e.*, determine their current range on the island of Maui (*Newcombia cumingi*) and Lanai (*Partulina semicarinata* and *P. variabilis*) and select forest areas with suitable vegetation and rainfall within those areas, to stabilize wild populations by managing threats and protecting habitat within suitable forest areas within their current ranges, and to initiate captive propagation for reintroduction to these areas. As each of the three Maui Nui tree snails has been considerably reduced in both range and number (each of the three species is a single-island endemic; on Maui, the last survey for *N. cumingi* in 2012 identified a single individual, and on Lanai, the most recent surveys in 2005 estimated a total of 29 individuals of *P. semicarinata* and 90 of *P. variabilis*), unoccupied but suitable habitat including the forest and rainfall to provide for wet forest habitat within their current range (a total of approximately 10 sq km (4 sq mi) for each *Partulina* sp. and 2.5 sq km (1 sq mi) for *Newcombia*) will be essential to the conservation of each of these species.

In summary, the overall recovery of these 135 Hawaiian species (130 plants, 2 forest birds, and 3 tree snails) in this final rule includes protection of existing populations and their habitat, augmentation of existing populations and reestablishment of new populations within their historical range, control of threats, research on species' biology and ecology, and research on abatement and control of threats that are currently not addressed. Relevant to this designation of critical habitat, the recovery of these 135 Hawaiian species therefore requires a combination of both presently

occupied habitat (to protect existing populations) and unoccupied habitat (for expansion or augmentation of existing populations and reestablishment of new populations within their historical range) (see Occupied Areas and Unoccupied Areas, below).

#### Revision of Critical Habitat for 85 Plants on Molokai, Lanai, Maui, and Kahoolawe

Under section 4(a)(3)(A)(ii) of the Act we may, as appropriate, revise a critical habitat designation. In 1984, we designated critical habitat for a single species of plant, *Gouania hillebrandii*, on 114 ac (46 ha) in four units (49 FR 44753) based on its known location at the time. In 2003, we designated critical habitat for 3 Lanai plants on 789 ac (320 ha) in 6 units (68 FR 1220, January 9, 2003); for 41 Molokai plants on 24,333 ac (9,843 ha) in 88 units (68 FR 12982, March 18, 2003); and for 60 plants on Maui (93,200 ac (37,717 ha)) and Kahoolawe (2,915 ac (1,180 ha)) in 139 units (68 FR 25934, May 14, 2003). All designations were based on the known locations of the species at the time. Based on new scientific data available since 2003, we are revising critical habitat for these 85 plant species on the islands of Molokai, Lanai, Maui, and Kahoolawe (this number differs from the original number of species with critical habitat designations, due to some taxonomic revisions made subsequent to the original designations; in addition, as some species occur on more than one island, they are counted twice if the species are counted on an island-by-island basis; see Table 1). When designating critical habitat in occupied areas, we focus on the essential physical or biological features that may be essential to the conservation of the species and which may require special management considerations or protections. In unoccupied habitat, we focus on whether the area is essential to the conservation of the species. We have determined that the physical or biological features identified in the original critical habitat designations for these 85 plant species can be improved, based on new information that has become available. The physical or biological features for occupied areas as described in this rule, in conjunction with the unoccupied areas needed to expand and reestablish wild populations within their historical range, provide a more accurate picture of the geographic areas needed for the recovery of each species. We believe this information will be helpful to Federal agencies and our other partners,

as we collectively work to recover these imperiled species.

Approximately 64 percent of the area we are designating as critical habitat in this rule overlaps with the areas already designated in the 1984 and 2003 final critical habitat rules. In some areas, the footprint of the revision is larger than the 1984 and 2003 designations, to accommodate the expansion of species' ranges within the particular ecosystem in which they occur (*e.g.*, expansion into currently unoccupied habitat), which may not have been accounted for in the original designations. Based on the best available information, the revision correlates each species' physical or biological requirements with the characteristics of the ecosystems on which they depend (*e.g.*, elevation, rainfall, species associations, etc.), and also includes some areas unoccupied by the species but determined to be essential for the conservation of the species. One ancillary benefit is that the revision should enable managers to focus conservation management efforts on common threats that occur across shared ecosystems and facilitates the restoration of the ecosystem function and species-specific habitat needs for the recovery of each of the 85 species. Another added benefit is that the publication of more comprehensive critical habitat unit maps that should be more useful to the public and conservation managers.

Here we have reevaluated the physical or biological features for each of the 85 plant species for which we are revising critical habitat, based on habitat type using species information from the 1984 and 2003 critical habitat designations, and new scientific information that has become available since that time. As noted above, in 1984 and 2003, the physical or biological features for each plant species were defined on the basis of the habitat features of the areas actually occupied by the plants, which included plant community, associated native plant species, locale information (*e.g.*, steep rocky cliffs, talus slopes, gulches, stream banks), and elevation (49 FR 44753, November 9, 1984; 68 FR 1220, January 9, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003). In this final rule, we are designating critical habitat in areas occupied by the species at the time of listing as well as areas currently unoccupied by the species but determined to be essential for their conservation (*i.e.*, areas necessary to bring the species to the point at which the measures provided under the Act are no longer needed). The physical or biological features have now been more precisely identified for

these 85 plant species, and include elevation, precipitation, substrate, canopy, subcanopy, and understory characteristics. In addition, since 2003, we have found that many areas where these species are currently or recently reported from are marginal habitat and that the species occurs there due to remoteness or inaccessibility to feral ungulates. The physical or biological features essential to the species' conservation have now been more accurately identified for these 85 plant species, and include elevation, precipitation, substrate, canopy, subcanopy, and understory characteristics. In addition, as all of the species addressed in this final rule have been greatly reduced from their former abundance and distribution, a designation limited to the areas currently occupied by these species is inadequate for their conservation, especially if the areas currently occupied represent suboptimal habitats. Therefore, the 1984 and 2003 critical habitat designations may not have included all of the unoccupied areas that are essential for the conservation of the species. When occupied areas were not adequate to achieve essential recovery goals, we also identified some unoccupied areas as critical habitat upon a determination that such areas are essential to the conservation of the species. We concluded that each of the Maui Nui species requires some currently unoccupied areas that are essential to achieve recovery and therefore the conservation of the species. We address this issue under "Unoccupied Areas," below.

## VII. Methods

As required by section 4(b) of the Act, we used the best scientific data available in determining those areas occupied at the time of listing and that contain the physical or biological features essential to the conservation of the 135 species, and those areas that may be unoccupied but are essential to the conservation of the species, by identifying the occurrence data for each species and determining the ecosystems upon which they depend. This information was developed by using:

- The known locations of the 135 species, including site-specific species information from the Hawaii Biodiversity and Mapping Program (HBMP) database (HBMP 2010), the TNC database (TNC 2007), and our own rare plant database;
- Species information from the plant database housed at the National Tropical Botanical Garden (NTBG);
- Maps of habitat essential to the recovery of Hawaiian plants, as

determined by the Hawaii and Pacific Plant Recovery Coordinating Committee (HPPRCC 1998, 32 pp. + appendices);

- Recovery area as determined in the revised Recovery Plan for Hawaiian Forest Birds (USFWS 2006);
- Maps of important habitat for the recovery of plants protected under the Act (USFWS 1999, pp. F8–F11);
- Projections of geographic ranges of plant species in the Hawaiian Islands, including climate data, substrate data, topography, soils, and disturbance, Price *et al.* 2012 (34 pp. + appendices);
- Recovery plans that are available for 95 of the plant species (Recovery Plan for *Gouania hillebrandii* (Rhamnaceae), July 1990; Recovery Plan for the Kauai Plant Cluster, September 1995; Lanai Plant Cluster Recovery Plan, September 1995; Recovery Plan for *Marsilea villosa*, April 1996; Recovery Plan for the Big Island Plant Cluster, September 1996; Recovery Plan for Molokai Plant Cluster, September 1996; Recovery Plan for the Maui Plant Cluster, July 1997; Recovery Plan for *Kokia cookei*, June 1998; Recovery Plan for the Oahu Plant Cluster, August 1998; Recovery Plan for 4 Hawaiian Ferns, April 1998; Molokai II: Addendum to the Recovery Plan for the Molokai Plant Cluster, May 1998; Recovery Plan for the Multi-Island Plants, July 1999; and Addendum to the Recovery Plan for Multi-Island Plants, September);
- Recovery plan for Oahu tree snails (Recovery Plan for Oahu Tree Snails of the Genus *Achatinella*, April 1993);
- The Nature Conservancy's Ecoregional Assessment of the Hawaiian High Islands (2006) and ecosystem maps (TNC 2007);
- Color mosaic 1:19,000 scale digital aerial photographs for the Hawaiian Islands (April to May 2005);
- Island-wide Geographic Information System (GIS) coverage (*e.g.*, Gap Analysis Program (GAP) vegetation data of 2005);
- 1:24,000 scale digital raster graphics of U.S. Geological Survey (USGS) topographic quadrangles;
- Geospatial data sets associated with parcel data from Maui County (includes Molokai, Lanai, Maui, and Kahoolawe) (2010);
- Final critical habitat designations for *Gouania hillebrandii* and for listed plant species on the islands of Lanai, Molokai, Maui, and Kahoolawe (49 FR 44753, November 9, 1984; 68 FR 1220, January 9, 2003; 68 FR 12982, March 18, 2003; 68 FR 25934, May 14, 2003);
- Recent biological surveys and reports; and
- Discussions with qualified individuals familiar with these species and ecosystems.

Based upon all of this data, we determined that one or more of the 11 habitat types described in this rule are currently occupied or were occupied at the time of listing by one or more of the 135 species addressed in this rule and contain the physical or biological features essential to the conservation of the species, or are currently not occupied by one or more of the 135 species but are areas essential for the conservation of the species (coastal (TNC 2006a), lowland dry (TNC 2006b), lowland mesic (TNC 2006c), lowland wet (TNC 2006d), montane wet (TNC 2006e), montane mesic (TNC 2006f), montane dry (TNC 2006g), subalpine (TNC 2006h), alpine (TNC 2006i), dry cliff (TNC 2006j), and wet cliff (TNC 2006k)).

## Occupied Areas

### Essential Physical or Biological Features

In accordance with section 3(5)(A)(i) of the Act, we determine which areas within the geographical area occupied at the time of listing contain the physical and biological features essential to the conservation of the species, and which may require special management considerations or protection. These physical or biological features provide the essential life-history requirements of the species, and include, but are not limited to:

- (1) Space for individual and population growth and for normal behavior;
- (2) Food, water, air, light, minerals, or other nutritional or physiological requirements;
- (3) Cover or shelter;
- (4) Sites for breeding, reproduction, rearing (or development) of offspring, germination, or seed dispersal; and
- (5) Habitats that are protected from disturbance or are representative of the historical geographical and ecological distributions of a species.

For plant species, ecosystems that provide appropriate seasonal wetland and dry land habitats, host species, pollinators, soil types, and associated plant communities are taken into consideration when determining the physical or biological features essential for a species. For the two forest bird species, ecosystems that provide appropriate forest habitat for shelter, breeding, reproduction, rearing (or development) of offspring and nutritional requirements are taken into consideration when determining the physical or biological features essential for both species. For tree snail species, ecosystems that provide appropriate host plant species for shelter, reproduction, and nutritional

requirements are taken into consideration when determining the physical or biological features essential for the three species in this final rule.

Under section 4(a)(3)(A)(ii) of the Act we may, as appropriate, revise a critical habitat designation. For the reasons described above, we are revising critical habitat for 85 plants from Molokai, Lanai, Maui, and Kahoolawe, based on new information received since the original designations and the need to designate unoccupied habitat to conserve the species. In addition, the recovery plans for 95 of the plant species (see list, above) identify several actions needed to recover these species (see above, "Recovery Strategy for Hawaiian Plants," "Recovery Strategy for Two Forest Birds," and "Recovery Strategy for Three Tree Snails"), including: (1) Protecting habitat and controlling threats; (2) expanding

existing wild populations; (3) conducting essential research; (4) developing and maintaining monitoring plans; (5) reestablishing wild populations within the historical range; and (6) validating and revising recovery criteria. Of these actions essential for the conservation and recovery of these species, of primary relevance to this designation of critical habitat for the Maui Nui species is the objective of providing for expansion or augmentation of existing wild populations (relevant to consideration of occupied critical habitat) and the need for reintroduction and reestablishment of populations within the historical range (relevant to the consideration of unoccupied critical habitat). For species with recovery plans, recovery criteria have been established, and generally include specific objectives in terms of numbers

of populations and individuals that are needed to achieve the conservation of the species. Where such objectives exist, we considered them in our identification of critical habitat (*i.e.*, whether population expansion, augmentation, or reestablishment is essential to the conservation of the species, in light of its current status). As noted above, most but not all of the plant species included in this final rule have a recovery plan in place. For those plant species without specific recovery goals set forth in a recovery plan, we used the general recovery objective guidelines established by the HPPRC (1998) to help determine what is needed for each species in terms of critical habitat. Although we have described these guidelines earlier, here we summarize them for ease of reference in Table 4.

TABLE 4—RECOVERY OBJECTIVE GUIDELINES FOR HAWAIIAN PLANTS

[Goals presented here are for delisting, which is equivalent to achieving the conservation of the species, as defined in section 3 of the Act. In addition to achieving the numbers shown here, the guidelines stipulate that all populations must be stable, secure, and naturally reproducing]

Life history	Number of populations <sup>2</sup>	Number of individuals per population <sup>3</sup>	Total number of individuals	Time sustained (years)
Long-lived perennials <sup>4</sup> .....	5–10	100–200	500–2,000	10
Short-lived perennials .....	5–10	300–500	1,500–5,000	5–10
Annuals .....	5–10	500–1,000	2,500–10,000	5

We derive the specific physical and biological features required for each of the plant and animal species from studies of the species' habitat, ecology, and life history as described in the Critical Habitat section of the June 11, 2012 (77 FR 34464), proposed rule, and in the information presented below. The consideration of whether space for the expansion or augmentation of current occurrences or populations is needed, in light of the recovery objectives for each species and its current status, was also taken into account in our derivation of the physical or biological features essential to the conservation of the species.

Primary Constituent Elements

Under the Act and its implementing regulations, we are required to identify the physical or biological features essential to the conservation of the 135 species in areas occupied at the time of listing, focusing on the features' primary constituent elements. Primary constituent elements are those specific elements of the physical or biological features that provide for a species' life-

history processes and are essential to the conservation of the species.

The primary constituent elements identified in this final rule take into consideration the habitat types in which each species occurs and reflect a distribution that we believe is essential to achieving the species' recovery needs within those ecosystems. As described above, we considered the current population status of each species, to the extent it is known, and assessed its status relative to the recovery objectives for that species, in terms of population goals (numbers of populations and individuals in each population, which contributes to population resiliency) and distribution (whether the species occurs in habitats representative of its historic geographical and ecological distribution, and are sufficiently redundant to withstand the loss of some populations over time). This assessment informed us as to whether the species requires space for population growth and expansion in areas occupied at the time of listing, or whether additional areas unoccupied at the time of listing

may be required for the reestablishment of populations to achieve conservation.

In this final rule, primary constituent elements for each of the 135 species are defined based on those physical or biological features essential to support the successful functioning of the habitat type upon which each species depends, and which may require special management considerations or protection. As the conservation of each species is dependent upon functioning habitat to provide its fundamental life requirements, such as a certain soil type, minimum level of rainfall, or suitable native host plant, we consider the physical or biological features present in the ecosystems described in this rule to provide the necessary PCEs for each species. These features collectively provide the suite of environmental conditions within each ecosystem essential to meeting the requirements of each species, including space for individual and population growth, and for normal behavior, the appropriate microclimatic conditions for germination and growth of the plants (*e.g.*, light availability, soil nutrients,

<sup>2</sup>Number of populations that must reach stability.

<sup>3</sup>Number of mature, reproducing individuals that must be present in each stable population.

<sup>4</sup>Known to live for more than 10 reproductive years; if no solid information available, assume short-lived.

hydrologic regime, temperature); maintenance of upland habitat to provide for the proper ecological functioning of forest elements for the three tree snails and the two forest birds; and, in all cases, space within the appropriate habitats for population growth and expansion, as well as to maintain the historical geographical and ecological distribution of each species. Due to our limited knowledge of the specific life-history requirements for the species that are little-studied and occur in remote and inaccessible areas, the physical or biological features described in this document that provide for the successful function of the ecosystem that is essential to the conservation of the species represents the best (and, in many cases, the only) scientific information available. Accordingly, for

purposes of this rule, the physical or biological features of a properly functioning ecosystem are, at least in part, the physical or biological features essential to the conservation of these 135 species.

Table 5 identifies the physical or biological features of a functioning ecosystem for each of the habitat types identified in this final rule, and each species identified in this rule requires the physical or biological features for each ecosystem in which that species occurs. These physical or biological features provide the PCEs for the individual species in each ecosystem or habitat type. The physical or biological features are defined here by elevation, annual levels of precipitation, substrate type and slope, and the characteristic native plant genera that are found in the

canopy, subcanopy, and understory levels of the vegetative community where applicable. If further information is available indicating additional, specific life-history requirements for some species, PCEs relating to these requirements are described separately and are termed “species-specific PCEs,” which are identified in Table 6. The PCEs for each species are therefore composed of the physical or biological features found in its functioning ecosystem(s) (Table 5), in combination with additional requirements specific to that species, if any (Table 6). Note that the PCEs identified in Table 6 for each species are directly related to the physical or biological features presented in detail in Table 5; thus, both Tables 5 and 6 must be read together to fully describe all of the PCEs for each species.

TABLE 5—PHYSICAL OR BIOLOGICAL FEATURES IN EACH ECOSYSTEM  
[Read in association with Table 6]

Ecosystem	Elevation	Annual precipitation	Substrate	Supporting one or more of these associated native plant genera		
				Canopy	Subcanopy	Understory
Coastal <sup>1</sup> .....	<980 ft (<300 m)	<20 in (<50 cm) ..	Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.	<i>Hibiscus</i> , <i>Myoporum</i> , <i>Santalum</i> , <i>Scaevola</i> .	<i>Gossypium</i> , <i>Sida</i> , <i>Vitex</i> .	<i>Eragrostis</i> , <i>Jacquemontia</i> , <i>Lyceum</i> , <i>Nama</i> , <i>Sesuvium</i> , <i>Sporobolus</i> , <i>Vigna</i> .
Lowland Dry <sup>2</sup> .....	<3,300 ft (<1,000 m).	<50 in (<130 cm)	Weathered silty loams to stony clay, rocky ledges, little-weathered lava.	<i>Diospyros</i> , <i>Myoporum</i> , <i>Pleomele</i> , <i>Santalum</i> .	<i>Chamaesyce</i> , <i>Dodonaea</i> , <i>Leptecophylla</i> , <i>Osteomeles</i> , <i>Psydrax</i> , <i>Scaevola</i> , <i>Wikstroemia</i> .	<i>Alyxia</i> , <i>Artemisia</i> , <i>Bidens</i> , <i>Chenopodium</i> , <i>Nephrolepis</i> , <i>Peperomia</i> , <i>Sicyos</i> .
Lowland Mesic <sup>3</sup> .....	<3,300 ft (<1,000 m).	50–75 in (130–190 cm).	Shallow soils, little to no herbaceous layer.	<i>Acacia</i> , <i>Diospyros</i> , <i>Metrosideros</i> , <i>Myrsine</i> , <i>Pouteria</i> , <i>Santalum</i> .	<i>Dodonaea</i> , <i>Freycinetia</i> , <i>Leptecophylla</i> , <i>Melanthera</i> , <i>Osteomeles</i> , <i>Pleomele</i> , <i>Psydrax</i> .	<i>Carex</i> , <i>Dicranopteris</i> , <i>Diplazium</i> , <i>Elaphoglossum</i> , <i>Peperomia</i> .
Lowland Wet <sup>4</sup> .....	<3,300 ft (<1,000 m).	>75 in (>190 cm)	Clays; ashbeds; deep, well-drained soils; lowland bogs.	<i>Antidesma</i> , <i>Metrosideros</i> , <i>Myrsine</i> , <i>Pisonia</i> , <i>Psychotria</i> .	<i>Cibotium</i> , <i>Claoxylon</i> , <i>Kadua</i> , <i>Melicope</i> .	<i>Alyxia</i> , <i>Cyrtandra</i> , <i>Dicranopteris</i> , <i>Diplazium</i> , <i>Machaerina</i> , <i>Microlepia</i> .
Montane Wet <sup>5</sup> .....	3,300–6,500 ft (1,000–2,000 m).	>75 in (>190 cm)	Well-developed soils, montane bogs.	<i>Acacia</i> , <i>Charpentiera</i> , <i>Cheirodendron</i> , <i>Metrosideros</i> .	<i>Broussaisia</i> , <i>Cibotium</i> , <i>Eurya</i> , <i>Ilex</i> , <i>Myrsine</i> .	Ferns, <i>Carex</i> , <i>Coprosma</i> , <i>Leptecophylla</i> , <i>Oreobolus</i> , <i>Rhynchospora</i> , <i>Vaccinium</i> .
Montane Mesic <sup>6</sup> .....	3,300–6,500 ft (1,000–2,000 m).	50–75 in (130–190 cm).	Deep ash deposits, thin silty loams.	<i>Acacia</i> , <i>Ilex</i> , <i>Metrosideros</i> , <i>Myrsine</i> , <i>Nestegis</i> , <i>Nothocestrum</i> , <i>Pisonia</i> , <i>Pittosporum</i> , <i>Psychotria</i> , <i>Sophora</i> , <i>Zanthoxylum</i> .	<i>Alyxia</i> , <i>Charpentiera</i> , <i>Coprosma</i> , <i>Dodonaea</i> , <i>Kadua</i> , <i>Labordia</i> , <i>Leptecophylla</i> , <i>Phyllostegia</i> , <i>Vaccinium</i> .	Ferns, <i>Carex</i> , <i>Peperomia</i> .

TABLE 5—PHYSICAL OR BIOLOGICAL FEATURES IN EACH ECOSYSTEM—Continued  
 [Read in association with Table 6]

Ecosystem	Elevation	Annual precipitation	Substrate	Supporting one or more of these associated native plant genera		
				Canopy	Subcanopy	Understory
Montane Dry <sup>7</sup> .....	3,300–6,500 ft (1,000–2,000 m).	<50 in (<130 cm)	Dry cinder or ash soils, loamy volcanic sands, blocky lava, rock outcroppings.	<i>Acacia</i> , <i>Metrosideros</i> , <i>Myoporum</i> , <i>Santalum</i> , <i>Sophora</i> .	<i>Chamaesyce</i> , <i>Coprosma</i> , <i>Dodonaea</i> , <i>Dubautia</i> , <i>Leptecophylla</i> , <i>Osteomeles</i> , <i>Wikstroemia</i> .	<i>Bidens</i> , <i>Eragrostis</i> , <i>Melanthera</i> , <i>Vaccinium</i> .
Subalpine <sup>8</sup> .....	6,500–9,800 ft (2,000–3,000 m).	15–40 in (38–100 cm).	Dry ash, sandy loam, rocky, undeveloped soils, weathered lava.	<i>Chamaesyce</i> , <i>Chenopodium</i> , <i>Metrosideros</i> , <i>Myoporum</i> , <i>Santalum</i> , <i>Sophora</i> .	<i>Coprosma</i> , <i>Dodonaea</i> , <i>Dubautia</i> , <i>Geranium</i> , <i>Leptecophylla</i> , <i>Vaccinium</i> , <i>Wikstroemia</i> .	Ferns, <i>Bidens</i> , <i>Carex</i> , <i>Deschampsia</i> , <i>Eragrostis</i> , <i>Gahnia</i> , <i>Luzula</i> , <i>Panicum</i> , <i>Pseudognaphalium</i> , <i>Sicyos</i> , <i>Tetramolopium</i> .
Alpine <sup>9</sup> .....	>9,800 ft (>3,000 m).	30–50 in (75–125 cm).	Barren gravel, debris, cinders.	none .....	<i>Argyroxiphium</i> , <i>Dubautia</i> , <i>Silene</i> , <i>Tetramolopium</i> .	none.

Some of the species addressed in this final rule occur in more than one ecosystem. The PCEs for these species are described separately for each ecosystem in which they occur. The reasoning behind this approach is that each species requires a different suite of environmental conditions depending upon the ecosystem in which it occurs. For example, *Bidens campylothea* ssp. *pentamera* will occur in association with different native plant species, depending on whether it is found within the lowland dry, lowland mesic, montane wet, montane mesic, dry cliff, or wet cliff ecosystems. Each of the physical or biological features described in each ecosystem in which the species occurs are essential to the conservation of the species, to retain its geographical and ecological distribution across the different ecosystem types in which it may occur. Each physical or biological feature is also essential to retaining the genetic representation that allows this species to successfully adapt to different environmental conditions in various native ecosystems. Although some of these species occur in multiple native ecosystems, their declining abundance in the face of ongoing threats, such as increasing numbers of nonnative plant competitors, indicates that they are not such broad habitat generalists as to be able to persist in highly altered habitats. Based on an analysis of the best available scientific information, functioning native ecosystems provide the fundamental biological requirements for the narrow-range endemics addressed in this rule.

Some examples may help to clarify our approach to describing the PCEs for each individual species. If we want to determine the PCEs for the plant *Abutilon eremitopetalum*, we look at Table 6 and see that the PCEs for *A. eremitopetalum* are provided by the physical or biological features in the lowland dry ecosystem. Table 5 indicates that the physical or biological features in the lowland dry ecosystem include elevations of less than 3,300 ft (1,000 m); annual precipitation of less than 50 in (130 cm); weathered silty loams to stony clay, rocky ledges, and little-weathered lava; and potential habitat for one or more genera of the canopy (*Diospyros*, *Myoporium*, *Pleomele*, and *Santalum*), subcanopy (*Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, and *Wikstroemia*), or understory plants (*Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, and *Sicyos*). As we do not specifically know of any PCEs specific to *A. eremitopetalum* and this plant is found

only in the lowland dry ecosystem, we believe that the physical or biological features for the lowland dry ecosystem best approximate the PCEs for *A. eremitopetalum*. Thus we use the physical and biological features provided in the ecosystem in which *A. eremitopetalum* is found as the PCEs for *A. eremitopetalum*.

As another example, Table 6 indicates the physical or biological features for the plant *Geranium hillebrandii* include the ecosystem-level physical or biological features for the montane wet and montane mesic ecosystems, depending on the locations, and also that this species has a species-specific PCE: Bogs. The PCEs for *G. hillebrandii* are thus composed of the physical or biological features for each of the two ecosystems it occupies, as described in Table 5 for the montane wet and montane mesic ecosystems, as well as bogs, as identified in Table 6. Table 6 is read in a similar fashion in conjunction with Table 5 to describe the PCEs for each of the 125 species for which we are designating critical habitat in this final rule.

#### Special Management Considerations or Protections

When designating critical habitat, we assess whether the specific areas within the geographical area occupied by the species at the time of listing contain features that are essential to the conservation of the species and which may require special management considerations or protection.

In identifying critical habitat in occupied areas, we determine whether those areas that contain the features essential to the conservation of the species require any special management actions. Although the determination that special management may be required is not a prerequisite to designating critical habitat in unoccupied areas, special management is needed throughout all of the critical habitat units in this final rule. The following discussion of special management needs is therefore applicable to each of the Maui Nui species for which we are designating critical habitat in this rule.

In this final rule, we are designating critical habitat for 125 of the 135 species for which we proposed critical habitat. For the reasons described below (see *Exclusions Based on Other Relevant Factors*), we are not designating critical habitat for eight plants (*Abutilon eremitopetalum*, *Cyanea gibsonii*, *Kadua cordata* ssp. *remyi*, *Labordia tinifolia* var. *lanaiensis*, *Pleomele fernaldii*, *Portulaca sclerocarpa*, *Tetramolopium lepidotum* ssp.

*lepidotum*, and *Viola lanaiensis*) and two tree snails (*Partulina semicarinata* and *P. variabilis*). The 125 species for which we are designating critical habitat include 108 plant and animal species that are currently found in the wild on Molokai, Maui, and Kahoolawe; (10 plant species which were historically found on one or more of these islands, but are currently found only on other Hawaiian Islands (*Adenophorus periens*, *Clermontia peleana*, *Cyanea grimesiana* ssp. *grimesiana*, *Cyperus trachysanthos*, *Eugenia koolauensis*, *Gouania vitifolia*, *Isodendron pyrifolium*, *Kadua coriacea*, *Nototrichium humile*, and *Solanum incompletum*), 6 plant species that may not be currently extant in the wild (*Acaena exigua*, *Cyanea glabra*, *Phyllostegia bracteata*, *P. haliakalae*, *Schiedea jacobii*, and *Tetramolopium capillare*), and 1 plant species, *Kokia cookei*, which exists only in cultivation. For each of the 108 species currently found in the wild on Molokai, Maui, and Kahoolawe, we have determined that the features essential to their conservation are those required for the successful functioning of the ecosystem(s) in which they occur (see Tables 5 and 6, above). As described earlier, in some cases, additional species-specific primary constituent elements were also identified (see Table 6, above). Special management considerations or protections are necessary throughout the critical habitat areas designated here to avoid further degradation or destruction of the habitat that provides those features essential to their conservation. The primary threats to the physical or biological features essential to the conservation of all of these species include habitat destruction and modification by nonnative ungulates, competition with nonnative species, hurricanes, landslides, rockfalls, flooding, fire, drought, and climate change. Additionally, the rosy wolf snail poses a threat to the Newcomb's tree snail and mosquito-borne diseases pose threats to the two forest birds. The reduction of these threats will require the implementation of special management actions within each of the critical habitat areas identified in this final rule.

All designated critical habitat requires active management to address the ongoing degradation and loss of native habitat caused by nonnative ungulates (pigs, goats, mouflon sheep, axis deer, and cattle). Nonnative ungulates also impact the habitat through predation and trampling. Without this special management, habitat containing the features that are essential for the

conservation of these species will continue to be degraded and destroyed.

All designated critical habitat requires active management to address the ongoing degradation and loss of native habitat caused by nonnative plants. Special management is also required to prevent the introduction of new nonnative plant species into native habitats. Particular attention is required in nonnative plant control efforts to avoid creating additional disturbances that may facilitate the further introduction and establishment of invasive plant seeds. Precautions are also required to avoid the inadvertent trampling of listed plant species in the course of management activities.

The active control of nonnative plant species would help to address the threat posed by fire to 31 of the designated ecosystem critical habitat units in particular: Maui-Coastal—Units 4 through 7; Maui-Lowland Dry—Units 1 through 6; Maui-Lowland Mesic—Units 1 and 2; Maui-Montane Mesic—Units 1, 2, and 5; Maui-Dry Cliff—Units 1, 5, and 7; Kahoolawe-Coastal—Units 1 through 3; Kahoolawe-Lowland Dry—Units 1 and 2; Molokai-Coastal—Units 1, 2, 3, 6, and 7; Molokai-Lowland Dry—Units 1 and 2; and Molokai-Lowland Mesic—Unit 1. This threat is largely a result of the presence of nonnative plant species such as the grasses *Andropogon virginicus* (broomsedge), *Cenchrus* spp. (sandbur, buffelgrass), and *Melinis minutiflora* (molasses grass), that increase the fuel load and quickly regenerate after a fire. These nonnative grass species can outcompete native plants that are not adapted to fire, creating a grass-fire cycle that alters ecosystem functions (D'Antonio and Vitousek 1992, pp. 64–66; Brooks *et al.* 2004, p. 680).

Nine of the ecosystem critical habitat units (Maui-Lowland Wet—Units 1 and 4; Maui-Montane Wet—Units 1 through 3; Maui-Montane Mesic—Unit 2; Maui-Wet Cliff—Units 6 and 7; and Molokai-Montane Wet—Unit 1) may require special management to reduce the threat of landslides, rockfalls, and flooding. These threaten to further degrade habitat conditions in these units and have the potential to eliminate some occurrences of 50 plant species (*e.g.*, *Adenophorus periens*, *Alectryon macrococcus*, *Asplenium peruvianum* var. *insulare*, *Bidens campylotheca* ssp. *pentamera*, *B. campylotheca* ssp. *waihoiensis*, *B. conjuncta*, *B. wiebkei*, *Bonamia menziesii*, *Clermontia oblongifolia* ssp. *brevipes*, *C. oblongifolia* ssp. *mauiensis*, *C. samuelii*, *Ctenitis squamigera*, *Cyanea asplenifolia*, *C. copelandii* ssp. *haleakalaensis*, *C. duvalliorum*, *C.*

*hamatiflora* ssp. *hamatiflora*, *C. horrida*, *C. kunthiana*, *C. magnicalyx*, *C. mannii*, *C. maritae*, *C. mceldowneyi*, *C. profuga*, *C. solanacea*, *Cyrtandra filipes*, *C. munroi*, *Diplazium molokaiense*, *Dubautia plantaginea* ssp. *humilis*, *Geranium hanaense*, *G. multiflorum*, *Hesperomannia arborescens*, *Huperzia mannii*, *Kadua laxiflora*, *Lysimachia lydgatei*, *L. maxima*, *Melicope balloui*, *M. ovalis*, *Phyllostegia hispida*, *P. mannii*, *P. pilosa*, *Plantago princeps*, *Platanthera holochila*, *Pteris lidgatei*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, *Schiedea laui*, *Stenogyne bifida*, *S. kauaualaensis*, *Wikstroemia villosa*, and *Zanthoxylum hawaiiense*) found on steep slopes and cliffs, or in narrow gulches.

#### *Special Management To Address Disease and Disease Vectors*

All of the forest bird critical habitat units may require special management to reduce the threat of mosquitoes. Mosquito-borne disease (*i.e.*, avian pox and malaria) is identified as a threat to both the akohekohe and kiwikiu, and limits distribution of these two birds to their current high-elevation ranges (*i.e.*, above 4,000 ft (1,200 m)). It is believed that the incidence of avian disease is less prevalent above 4,000 ft, where the abundance of mosquito vectors is low and development of the malarial parasite in the mosquito vector is limited by thermal constraints (Service 2006, p. 4–62). The recovery strategy for the akohekohe and kiwikiu calls for the reestablishment of a second population of both species in historical habitat on west Maui or east Molokai in areas that possibly harbor populations of mosquitoes, and therefore will require special management to reduce the threat from mosquito-borne disease.

#### *Special Management To Address Predation by the Nonnative Rosy Wolf Snail*

The only critical habitat unit for the Newcomb's tree snail (*Newcombia cumingi*—Unit 1—Lowland Wet) may require special management to reduce the threat of predation by the nonnative rosy wolf snail (*Euglandina rosea*). This nonnative snail is now found on six of the eight main Hawaiian Islands (its presence on Niihau and Kahoolawe has not been confirmed) and it has expanded its range on those islands to include cooler, mid-elevation forests where many endemic tree snails are found. This nonnative snail is likely responsible for the decline and extinction of many of Hawaii's native tree snails (Stone and Anderson 1988, p. 134; Hadfield *et al.* 1993, p. 621; Hadfield 2010a, in litt.). For the reasons

described below (see *Exclusions Based on Other Relevant Factors*), critical habitat is not designated on the island of Lanai, where the two Lanai tree snails (*Partulina semicarinata* and *P. variabilis*) are found.

In summary, we find that each of the areas we are designating as critical habitat that were occupied at the time of listing contains features essential for the conservation of the species that may require special management considerations or protection to ensure the conservation of 125 Maui Nui species. These special management considerations and protections may be required to preserve and maintain the essential features provided to these species by the ecosystems upon which they depend.

#### *Unoccupied Areas*

Under section 3(5)(A)(ii) of the Act, we may designate as critical habitat specific areas outside the geographical area occupied by the species at the time it is listed upon a determination that such areas are essential for the conservation of the species. Here we have designated critical habitat for 17 plant species that historically occurred on the islands of Maui Nui but are no longer found on these islands. Ten of these plants were historically found on one or more of these islands, but are currently found only on other Hawaiian Islands (*Adenophorus periens*, *Cyanea grimesiana* ssp. *grimesiana*, *Cyperus trachysanthos*, *Eugenia koolauensis*, *Gouania vitifolia*, *Isodendron pyrifolium*, *Kadua coriacea*, *Nototrichium humile*, *Solanum incompletum*, and *Tetramolopium lepidotum* ssp. *lepidotum*), 6 plant species may not be currently extant in the wild (*Acaena exigua*, *Cyanea glabra*, *Phyllostegia bracteata*, *P. haliakalae*, *Schiedea jacobii*, and *Tetramolopium capillare*), and 1 plant species, *Kokia cookei*, which exists only in cultivation. The conservation of these species will be entirely dependent upon suitable but unoccupied habitat for the reestablishment of populations to ensure their conservation and recovery. In addition, because of reduced population sizes and distribution, and because of ongoing threats in the areas currently occupied by the species, all of the Maui Nui species additionally require presently unoccupied but suitable habitat to provide space for the expansion of existing populations and reestablishment of additional populations to achieve the conservation of the species, as guided by the goals set in recovery plans for the species (for 95 of the plant species, the 3 tree snails, and 2 birds) or general recovery

objectives for Hawaiian plants (for 30 of the plant species without specific recovery plans), and to provide resiliency of the populations in the face of ongoing threats.

One of the primary reasons for listing of these 125 species is that their numbers have been so greatly reduced in terms of numbers of individuals, populations, and distribution as to render these species vulnerable to extinction. Based on the current status of each species (see Current Status of 135 Listed Maui Nui Species, above), we have determined that each requires suitable habitat and space for the expansion of existing populations to achieve a level that could approach recovery; in all cases, this requires areas of suitable habitat that are not currently occupied by the species. Most of these species have been reduced to only a few known occurrences with numbers so low that not even a single existing viable population is known; in such cases, suitable but unoccupied habitat is essential for the conservation of the species to both expand and reestablish populations and maintain its historical geographical and ecological distribution. In addition, for plant species in particular, the reintroduction of imperiled species is a relatively new and inexact science (see, e.g., Guerrant and Kaye 2007, entire). Most attempted reintroductions are not successful; a recent global meta-analysis found rare plant reintroductions resulting in recruitment of offspring ranged from only 5 percent to just under 50 percent (Dalrymple *et al.* 2012, p. 39), despite using conditions associated with extant, wild populations to select reintroduction sites (Dalrymple *et al.* 2012, p. 47). For all of the Maui Nui plant species, reintroductions may therefore be needed at a number of sites of potentially suitable habitat greater than the number of sites eventually required to support the minimum number of populations required for recovery (Kaye 2008, p. 316; Dalrymple *et al.* 2012, pp. 48–49). Furthermore, long-term success of a reintroduction will depend not only on initial growth and survival, but ultimately the reintroduced species must be embedded in a larger ecological community that is capable of promoting persistence (Guerrant and Kaye 2008, p. 367).

We have taken all of these factors into account in our designation of unoccupied habitat for the Maui Nui species, and have concluded that more potentially suitable habitat than what would appear to be the minimum required to achieve conservation goals is essential, space is needed between populations, and a stochastic event may

negatively impact one or more populations. Given the need for this redundancy in unoccupied habitat suitable for future reintroductions, because populations must be widely distributed across the range of the species to protect each against extirpation from stochastic events, and because room is needed for expansion of known occurrences, we conclude that all of the unoccupied areas designated here as critical habitat are essential to the conservation of the species, in order to achieve the requisite abundance and distribution of stable, secure, and self-sustaining populations to consider the species recovered. As described above, for similar reasons we have designated unoccupied habitat for the akohekohe and kiwikiu based on the recovery areas identified in the Revised Recovery Plan for Hawaiian Forest Birds (Service 2006), and for future reintroduction sites for the three tree snails based on the interim recovery objectives as identified in the Recovery Plan for Oahu Tree Snails of the Genus *Achatinella* (1992, entire). As we have determined that a designation limited to the current range of the 125 Maui Nui species would be inadequate to achieve their conservation, for all of the reasons outlined above, here we are designating unoccupied critical habitat that we have determined is essential for the conservation of the species.

#### Criteria Used To Identify Critical Habitat

As required by section 4(b)(1)(A) of the Act, we used the best scientific data available to designate critical habitat. We reviewed available information pertaining to the habitat requirements of the species. In accordance with the Act and our implementing regulations at 50 CFR 424.12(e), we review available information pertaining to the habitat requirements of the species and identify occupied areas at the time of listing that contain the features essential to the conservation of the species. If after identifying currently occupied areas, a determination is made that those areas are inadequate to ensure conservation of the species, in accordance with the Act and our implementing regulations at 50 CFR 424.12(e), we then consider whether designating additional areas—outside those currently occupied—are essential for the conservation of the species. We are designating critical habitat in areas outside the geographical area occupied by the species at the time of listing because we have determined that such areas are essential for the conservation of the species.

We considered several factors in the selection of specific boundaries for

critical habitat for the Maui Nui species. We determined critical habitat unit boundaries taking into consideration the known past and present locations of the species, areas determined to be essential to Hawaiian plants (HPPRCC 1998, entire), the recovery areas as determined by species' Recovery Plans (for plants, birds, and tree snails), any previously designated critical habitat for the species, projections of geographic ranges of Hawaiian plant species (Price *et al.* 2012, entire), space to allow for increases in numbers of individuals and for expansion of populations to provide for the minimum numbers required to reach delisting goals (as described in Recovery Plans), space between individual critical habitat units to provide for redundancy of populations across the range of the species in case of catastrophic events such as fire and hurricanes, and critical habitat units on multiple islands for those species known from more than one Hawaiian island (see also Methods, and “Unoccupied Areas,” above). The initial boundaries were superimposed over digital topographic maps of the islands of Molokai, Lanai, Maui, and Kahoolawe and further evaluated. In general, land areas that were identified as highly degraded were removed from the proposed critical habitat units, and natural or manmade features (e.g., ridge lines, valleys, streams, coastlines, roads, obvious land features, etc.) were also used to delineate the final critical habitat boundaries. We are designating critical habitat on lands that contain the physical or biological features essential to conserving multiple species, based on their shared dependence on the functioning ecosystems they have in common. Because the 11 habitat types discussed in this final rule do not form a single contiguous area, they are divided into geographic units on the islands of Molokai, Maui, and Kahoolawe: 82 Plant critical habitat units, 82 forest bird critical habitat units (41 units for each bird), and 1 tree snail critical habitat unit. The forest bird and the tree snail critical habitat units completely overlap the 82 plant critical habitat units.

The critical habitat is a combination of areas currently occupied by the species in that ecosystem, as well as areas that may be currently unoccupied. Due to the extremely remote and inaccessible nature of the area, surveys are relatively infrequent and may be limited in scope; therefore, it is difficult to say with certainty whether individual representatives of a rare species may or may not be present. A properly functioning ecosystem provides the life-

history requirements of the species that make up that ecosystem, and the physical or biological features found in such an ecosystem are the PCEs essential for the conservation of the species that occur there. In other words, the occupied areas provide the physical or biological features essential to the conservation of the species occurring in the ecosystems we analyzed, by providing for the successful functioning of the ecosystem on which the species depend. However, due to the small population sizes, few numbers of individuals, and reduced or lost geographic range of each of the 125 species for which critical habitat is designated, we have determined that a designation limited to the known present range of each species would be inadequate to achieve the conservation of those species because the current populations and range are insufficient to meet recovery goals or to provide sufficient resiliency against ongoing threats to ensure the viability of the species. The areas believed to be unoccupied, and that may have been unoccupied at the time of listing, have been determined to be essential for the conservation and recovery of the species because they provide the physical or biological features necessary for the expansion of existing wild populations and reestablishment of wild populations within the historical range of the species. For 15 of the plant species (*Acaena exigua*, *Cyanea glabra*, *C. grimesiana* ssp. *grimesiana*, *Cyperus trachysanthos*, *Eugenia koolauensis*, *Gouania vitifolia*, *Isodendron pyrifolium*, *Kadua coriacea*, *Kokia cookei*, *Nototrichium humile*, *Phyllostegia bracteata*, *P. haliakalae*, *Schiedea jacobii*, *Solanum incompletum*, and *Tetramolopium capillare*), we are designating unoccupied areas only, as these species are not believed to be extant on Molokai, Maui, or Kahoolawe. Designating unoccupied critical habitat for these species, which once occurred on these islands but are no longer found there, would promote conservation actions to restore their historical, geographical, and ecological representation, which is essential for their recovery. Critical habitat boundaries for all species were delineated to include the habitat features necessary to provide for functioning ecosystems on which they depend; these areas are essential to the conservation of these species since they have been extirpated from these islands and their recovery will be entirely dependent upon their successful

reestablishment in suitable but unoccupied habitat.

In some cases, we have identified areas of critical habitat for species in multiple ecosystem areas. With the exception of *Acaena exigua*, *Cyanea glabra*, *C. grimesiana* ssp. *grimesiana*, *Cyperus trachysanthos*, *Eugenia koolauensis*, *Gouania vitifolia*, *Isodendron pyrifolium*, *Kadua coriacea*, *Kokia cookei*, *Nototrichium humile*, *Phyllostegia bracteata*, *P. haliakalae*, *Schiedea jacobii*, *Solanum incompletum*, and *Tetramolopium capillare*, which are believed to be no longer extant on Molokai, Maui, or Kahoolawe, all of the critical habitat units in these ecosystems contain some areas that are currently unoccupied, and that may have been unoccupied at the time of listing, but have been determined to be essential for the conservation of the species. Because of the small numbers of individuals or low population sizes of each of the 125 species, each requires suitable habitat and space for the expansion of existing populations to achieve a level that could approach recovery. For example, although the plant *Huperzia mannii* is found in multiple critical habitat units across four ecosystem types, its entire distribution is comprised of a total of fewer than 200 wild individuals. The unoccupied areas of each unit are essential for the expansion of this species to achieve viable population numbers and maintain its historical geographical and ecological distribution. This same logic applies to each of the Maui Nui species.

On Maui, there are two distinct geographic areas separated by an isthmus (east and west Maui mountains) with geological and evolutionary age differences. Sixty-three of the plant species and the tree snail *Newcombia cumingi*, for which we are designating critical habitat on the islands of Maui Nui, are historically known from only east Maui or only west Maui. In the case of those species endemic to either east or west Maui, we are designating critical habitat only in the geographic area of historical occurrence on this island. Thirty-eight plant species (*Adenophorus periens*, *Alectryon macrococcus* var. *auwahiensis*, *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Asplenium peruvianum* var. *insulare*, *Bidens campylothea* ssp. *waihoiensis*, *Canavalia pubescens*, *Clermontia lindseyana*, *C. peleana*, *C. samuelii*, *Cyanea copelandii* ssp. *haleakalaensis*, *C. duvalliorum*, *C. hamatiflora* ssp. *hamatiflora*, *C. horrida*, *C. maritae*, *C. mcelandowneyi*, *Cyperus pennatifloris*, *Cyrtandra ferripilosa*, *Flueggea neowawraea*, *Geranium arboreum*, *G.*

*hanaense*, *G. multiflorum*, *Ischaemum byrone*, *Melanthera kamolensis*, *Melicope adscendens*, *M. balloui*, *M. knudsenii*, *M. mucronulata*, *M. ovalis*, *Mucuna sloanei* var. *persericea*, *Nototrichium humile*, *Peperomia subpetiolata*, *Phyllostegia haliakalae*, *P. mannii*, *P. pilosa*, *Schiedea haleakalensis*, *S. jacobii*, *Solanum incompletum*, and *Vigna o-wahuensis*) are known only from the east Maui mountains, and 26 plant species (*Acaena exigua*, *Bidens conjuncta*, *Calamagrostis hillebrandii*, *Cyanea lobata* ssp. *lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. munroi*, *Dubautia plantaginea* ssp. *humilis*, *Geranium hillebrandii*, *Gouania hillebrandii*, *G. vitifolia*, *Hesperomannia arborescens*, *H. arbuscula*, *Isodendron pyrifolium*, *Kadua coriacea*, *K. laxiflora*, *Lysimachia lydgatei*, *Myrsine vaccinioides*, *Pteris lydgatei*, *Remyi mauiensis*, *Sanicula purpurea*, *Schenkia sebaeoides*, *Schiedea salicaria*, *Stenogyne kauaulaensis*, *Tetramolopium capillare*, and *T. remyi*), and the tree snail *Newcombia cumingi*, are known only from the west Maui mountains.

The critical habitat areas described below constitute our best assessment of the physical or biological features essential for the recovery and conservation of 125 Maui Nui species, and the unoccupied areas needed for the expansion or augmentation of reduced populations or reestablishment of populations. The approximate size of each of the 82 plant critical habitat units, the 82 forest bird critical habitat units (41 units for each bird), and the tree snail critical habitat unit, and the status of their land ownership, are identified in Tables 7A through 7F. The ecosystems in which critical habitat for each of the plant, forest bird, and tree snail species is designated are identified in Tables 8A through 8C, along with areas excluded from critical habitat designation under section 4(b)(2) of the Act (see Exclusions, below). All forest bird and tree snail critical habitat units overlap areas designated as plant critical habitat.

When determining critical habitat boundaries within this final rule, we made every effort to avoid including developed areas such as lands covered by buildings, pavement, and other structures because such lands lack the physical or biological features essential for the conservation of the 125 Maui Nui species. The scale of the maps we prepared under the parameters for publication within the Code of Federal Regulations may not reflect the exclusion of such developed lands. Any such lands inadvertently left inside critical habitat boundaries shown on the

maps of this final rule have been excluded by text in the rule and are not designated as critical habitat. Therefore, a Federal action involving these lands will not trigger section 7 consultation with respect to critical habitat and the requirement of no adverse modification unless the action would affect the physical or biological features in the adjacent critical habitat.

The critical habitat designation is defined by the map or maps, as

modified by any accompanying regulatory text, presented at the end of this document in the regulatory portion of this final rule. The coordinates or plot points or both on which each map is based are available to the public on <http://www.regulations.gov> at Docket No. FWS-R1-ES-2015-0071, on our Internet site (<http://www.fws.gov/pacificislands/>), and at the field office responsible for the designation (see **FOR FURTHER INFORMATION CONTACT** above).

Units are designated based on sufficient elements of physical or biological features being present to support the species' life processes. Some units contain all of the identified elements of physical or biological features and supported multiple life processes. Some units contain only some elements of the physical or biological features necessary to support the species' particular use of that habitat.

TABLE 8C—TREE SNAIL SPECIES FOR WHICH CRITICAL HABITAT IS DESIGNATED IN EACH ECOSYSTEM, AND AREAS EXCLUDED UNDER 4(B)(2)

Species	Ecosystem										Excluded from critical habitat ac (ha)	Total critical habitat designated ac (ha)	
	Coastal	Lowland dry	Lowland mesic	Lowland wet	Montane wet	Montane mesic	Montane dry	Subalpine	Alpine	Dry cliff			Wet cliff
TREE SNAIL													
<i>Newcombia cumingi</i> .....				WMA .....								534 (216)	65 (26)
<i>Partulina semicarinata</i> .....				LA .....	LA .....							1,815 (735)	0 (0)
<i>Partulina variabilis</i> .....				LA .....	LA .....							1,815 (735)	0 (0)

WMA = West Maui.

LA = Lanai.

The area known to be occupied by species for which the unit is designated also provides area essential to the conservation of all of the species that occur in that particular ecosystem, even if the area is currently unoccupied by those species. Those areas provide the space and appropriate environmental conditions for activities such as food gathering and reproduction that will serve to expand the existing populations.

## VIII. Final Critical Habitat Designation

We are designating 157,002 ac (63,537 ha) as critical habitat in 11 ecosystem types for 125 species. The critical habitat is composed of 82 critical habitat units for the plant species, 41 critical habitat units for each of the 2 forest birds (82 total), and one critical habitat unit for the Newcomb's tree snail (see Tables 7A–7F, above, for details). The critical habitat includes land under State, County of Maui, Federal (Haleakala National Park; Kalaupapa National Historical Park (NHP), Department of Homeland Security—Coast Guard), and private ownership. The critical habitat units we describe below constitute our current best assessment of those areas that meet the definition of critical habitat for 125 of the 135 Maui Nui species of plants and animals. Critical habitat was proposed but is not designated for 10 species that occur on Lanai (the plants *Abutilon eremitopetalum*, *Cyanea gibsonii*, *Kadua cordata* ssp. *remyi*, *Labordia tinifolia* var. *lanaiensis*, *Pleomele fernaldii*, *Portulaca sclerocarpa*, *Tetramolopium lepidotum* ssp. *lepidotum*, and *Viola lanaiensis*; and the tree snails *Partulina semicarinata* and *P. variabilis*). Although the areas proposed are still considered essential for the conservation of these species, we have determined under section 4(b)(2) of the Act that the benefit of excluding these areas outweighs the benefit of including them in critical habitat, for the reasons discussed below (see the Exclusions section of this document).

### Descriptions of Critical Habitat Units

Critical habitat for the 125 plant species, the 2 forest birds, and the Newcomb's tree snail *Newcombia cumingi* are published in separate sections of the Code of Federal Regulations (CFR). Critical habitat is set forth at 50 CFR 17.99(c) and (d) for plants on Molokai, 50 CFR 17.99(e)(1) and (f) for plants on Maui, and 50 CFR 17.99(e)(2) and (f) for plants on Kahoolawe; at 50 CFR 17.95(b) for the two forest birds; and at 50 CFR 17.95(f) for the tree snail species. However, the designated critical habitat for plants, birds, and tree snail overlap each other in many areas of Molokai and Maui. For example, “Maui-Lowland Wet—Unit 1” and the forest bird units “*Palmeria dolei*—Unit 2—Lowland Wet” and “*Pseudonestor xanthophrys*—Unit 2—Lowland Wet” correspond to the same geographic area. Therefore, because the unit boundaries are the same, we are describing them only once to avoid redundancy and reduce publication

costs for this final rule, as indicated by “(and)” following the unit name.

Maui—UCoastal—Unit 1 consists of 2 ac (1 ha) on Keopuka Rock on the northern coast of east Maui. This unit is State-owned, and is classified as a State Seabird Sanctuary. It is occupied by the plant *Peucedanum sandwicense* and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui-Coastal—Unit 1 is not known to be occupied by *Brighamia rockii*, *Cyperus pennatiformis*, *Ischaemum byrone*, or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Coastal—Unit 2 consists of 16 ac (6 ha) of State land, and 9 ac (4 ha) of privately owned land, from Wahinepee Stream to Moiki Point on the northern coast of east Maui. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). Although Maui—Coastal—Unit 2 is not currently occupied by *Brighamia rockii*, *Cyperus pennatiformis*, *Ischaemum byrone*, *Peucedanum sandwicense*, or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the physical or biological features necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, these species require suitable habitat and space for expansion or reintroduction to achieve population levels that could achieve recovery.

Maui—Coastal—Unit 3 consists of 10 ac (4 ha) of privately owned land at Pauwalu Point on the northern coast of east Maui. This unit is occupied by the plant *Ischaemum byrone* and includes the mixed herbland and shrubland, the moisture regime, and canopy,

subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Coastal—Unit 3 is not known to be occupied by *Brighamia rockii*, *Cyperus pennatiformis*, *Peucedanum sandwicense*, or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Coastal—Unit 4 consists of 40 ac (16 ha) of State land, and 35 ac (14 ha) of privately owned land, from Papiha Point to Honolulu Nui Bay on the northeastern coast of east Maui. This unit is occupied by the plant *Cyperus pennatiformis* and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Coastal—Unit 4 is not known to be occupied by *Brighamia rockii*, *Ischaemum byrone*, *Peucedanum sandwicense*, or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Coastal—Unit 5 consists of 26 ac (11 ha) of State land from Keakulikuli Point to Pailoa Bay on the northeastern coast of east Maui. This unit is occupied by the plant *Ischaemum byrone* and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This

unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Coastal—Unit 5 is not known to be occupied by *Brighamia rockii*, *Cyperus pennatiformis*, *Peucedanum sandwicense*, or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Coastal—Unit 6 consists of 356 ac (144 ha) of State land at Kamanamana on the southern coast of East Maui. This unit is occupied by the plant *Vigna o-wahuensis* and includes the mixed hermland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Coastal—Unit 6 is not known to be occupied by *Brighamia rockii*, *Cyperus pennatiformis*, *Ischaemum byrone*, or *Peucedanum sandwicense*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Coastal—Unit 7 consists of 30 ac (12 ha) of State land, and 15 ac (6 ha) of privately owned land, from Kailio Point to Waiuha Bay, on the southern coast of east Maui. This unit includes the mixed hermland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). Although Maui—Coastal—Unit 7 is not currently occupied by *Brighamia rockii*, *Cyperus pennatiformis*, *Ischaemum byrone*, *Peucedanum sandwicense*, or *Vigna o-wahuensis*, we have determined this

area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Coastal—Unit 8 consists of 493 ac (199 ha) of State land from Kiakeana Point to Manawainui on the southern coast of east Maui. This unit includes the mixed hermland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). Although Maui—Coastal—Unit 8 is not currently occupied by *Brighamia rockii*, *Cyperus pennatiformis*, *Ischaemum byrone*, *Peucedanum sandwicense*, or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Coastal—Unit 9 consists of 170 ac (69 ha) of State land and 0.3 ac (0.1 ha) of privately owned land, from Poelua Bay to Mokolea Point on the northwestern coast of west Maui. This unit is occupied by the plants *Schenkia sebaeoides* and *Sesbania tomentosa*, and includes the mixed hermland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Coastal—Unit 9 is not known to be occupied by *Brighamia rockii*, we have determined this area to be essential for the conservation and recovery of this coastal species because it provides the PCEs necessary for the reestablishment of wild populations within its historical range. Due to the small numbers of individuals or low population sizes, this species requires suitable habitat and space for expansion or reintroduction to achieve population levels that could approach recovery.

Maui—Coastal—Unit 10 consists of 147 ac (60 ha) of State land and 26 ac (10 ha) of privately owned land, from Kahakuloa Head to Waihee Point on the northeastern coast of west Maui. This unit is occupied by the plant *Schenkia sebaeoides*, and includes the mixed hermland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Coastal—Unit 10 is not known to be occupied by *Brighamia rockii* or *Sesbania tomentosa*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within its historical range. Due to the small numbers of individuals or low population sizes, this species requires suitable habitat and space for expansion or reintroduction to achieve population levels that could approach recovery.

Maui—Coastal—Unit 11 consists of 6 ac (3 ha) of State land on Mokeehia Island on the northeastern coast of west Maui. This unit includes the mixed hermland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). Although Maui—Coastal—Unit 11 is not currently occupied by *Brighamia rockii*, *Schenkia sebaeoides*, or *Sesbania tomentosa*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Dry—Unit 1 consists of 11,465 ac (4,640 ha) of State land, 2,069 ac (837 ha) of federally owned land, and 3 ac (1 ha) of privately owned land, from Kanaio to Kahualau Gulch on the southern slopes of east Maui. This unit is occupied by the plants *Bonamia menziesii*, *Cenchrus agrimonioides*, *Flueggea neowawraea*, *Melicope adscendens*, *Santalum haleakalae* var. *lanaiense*, and *Spermolepis hawaiiensis*, and includes the mixed hermland and

shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Dry—Unit 1 is not known to be occupied by *Alectryon macrococcus*, *Bidens micrantha* ssp. *kalealaha*, *Canavalia pubescens*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Hibiscus brackenridgei*, *Melanthera kamolensis*, *Melicope mucronulata*, *Neraudia sericea*, *Nototrichium humile*, *Sesbania tomentosa*, *Solanum incompletum*, or *Zanthoxylum hawaiiense*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Dry—Unit 2 consists of 1,851 ac (749 ha) of State land at Keokea on the southern slopes of east Maui. This unit is occupied by the plants *Bonamia menziesii*, *Canavalia pubescens*, and *Hibiscus brackenridgei*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Dry—Unit 2 is not known to be occupied by *Alectryon macrococcus*, *Bidens micrantha* ssp. *kalealaha*, *Cenchrus agrimonioides*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Flueggea neowawraea*, *Melanthera kamolensis*, *Melicope mucronulata*, *Neraudia sericea*, *Nototrichium humile*, *Santalum haleakalae* var. *lanaiense*, *Sesbania tomentosa*, *Solanum incompletum*, *Spermolepis hawaiiensis*, or *Zanthoxylum hawaiiense*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations

within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Dry—Unit 3 consists of 188 ac (76 ha) of privately owned land, at Keauhou on the southern slopes of east Maui. This unit is occupied by the plant *Canavalia pubescens*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Dry—Unit 3 is not known to be occupied by *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Cenchrus agrimonioides*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Flueggea neowawraea*, *Hibiscus brackenridgei*, *Melanthera kamolensis*, *Melicope mucronulata*, *Neraudia sericea*, *Nototrichium humile*, *Santalum haleakalae* var. *lanaiense*, *Sesbania tomentosa*, *Solanum incompletum*, *Spermolepis hawaiiensis*, or *Zanthoxylum hawaiiense*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Dry—Unit 4 consists of 1,266 ac (512 ha) of State land (including the Department of Land and Natural Resources) at Ahihi-Kinaiu Natural Area Reserve on the southern slopes of east Maui. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). Although Maui—Lowland Dry—Unit 4 is not currently occupied by *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Canavalia pubescens*, *Cenchrus agrimonioides*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Flueggea neowawraea*, *Hibiscus brackenridgei*, *Melanthera kamolensis*, *Melicope*

*mucronulata*, *Neraudia sericea*, *Nototrichium humile*, *Santalum haleakalae* var. *lanaiense*, *Sesbania tomentosa*, *Solanum incompletum*, *Spermolepis hawaiiensis*, or *Zanthoxylum hawaiiense*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Dry—Unit 5 consists of 3,615 ac (1,463 ha) of State land, and 43 ac (17 ha) of privately owned land, from Panaewa to Manawainui on the western and southern slopes of west Maui. This unit is occupied by the plants *Asplenium dielerectum*, *Bidens campylotheca* ssp. *pentamera*, *Cenchrus agrimonioides*, *Gouania hillebrandii*, *Kadua coriacea*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, and *Spermolepis hawaiiensis*, and *Tetramolopium capillare*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Dry—Unit 5 is not known to be occupied by *Ctenitis squamigera*, *Cyanea obtusa*, *Hesperomannia arbuscula*, *Hibiscus brackenridgei*, *Lysimachia lydgatei*, *Neraudia sericea*, *Schiedea salicaria*, *Sesbania tomentosa*, or *T. remyi*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Dry—Unit 6 consists of 3 ac (1 ha) of State land, and 237 ac (96 ha) of privately owned land, from Paleaahu Gulch to Puu Hona on the southern slopes of west Maui. This unit is occupied by the plants *Hibiscus brackenridgei* and *Schiedea salicaria*, and includes the mixed herbland and shrubland, the moisture regime, and

canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Dry—Unit 6 is not known to be occupied by *Asplenium dielerectum*, *Bidens campylotheca* ssp. *pentamera*, *Cenchrus agrimonoides*, *Ctenitis squamigera*, *Cyanea obtusa*, *Gouania hillebrandii*, *Hesperomannia arbuscula*, *Kadua coriacea*, *Lysimachia lydgatei*, *Neraudia sericea*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, *Sesbania tomentosa*, *Spermolepis hawaiiensis*, *Tetramolopium capillare*, or *T. remyi*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Mesic—Unit 1 consists of 1,147 ac (464 ha) of State land, 241 ac (97 ha) of privately owned land, and 494 ac (200 ha) of federally owned land (Haleakala National Park), from Manawainui Valley to Kukuuiula on the eastern slopes of east Maui. This unit is occupied by the plants *Cyanea asplenifolia*, *C. copelandii* ssp. *haleakalaensis*, and *Huperzia mannii*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland mesic ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Mesic—Unit 1 is not known to be occupied by *Ctenitis squamigera* or *Solanum incompletum*, we have determined this area to be essential for the conservation and recovery of these lowland mesic species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving

population levels necessary for recovery.

Maui—Lowland Mesic—Unit 2 consists of 1,034 ac (419 ha) of State land, and 113 ac (46 ha) of privately owned land, from Honokohau to Launiupoko on the western slopes of west Maui. This unit is occupied by the plants *Ctenitis squamigera*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, and *Zanthoxylum hawaiiense*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland mesic ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Mesic—Unit 2 is not known to be occupied by *Asplenium dielerectum*, *Bidens campylotheca* ssp. *pentamera*, or *Colubrina oppositifolia*, we have determined this area to be essential for the conservation and recovery of these lowland mesic species because it provides the PCEs necessary for the reestablishment of wild populations within its historical range. Due to its small numbers of individuals or low population sizes, this species requires suitable habitat and space for expansion or reintroduction to achieve population levels that could approach recovery.

Maui—Lowland Mesic—Unit 3 (and)

Palmeria dolei—Unit 1—Lowland Mesic (and)

Pseudonestor xanthophrys—Unit 1—Lowland Mesic

This area consists of 477 ac (193 ha) of State land at Ukumehame on the southern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland mesic ecosystem (see Table 5). Although Maui—Lowland Mesic—Unit 3 is not currently occupied by the plants *Asplenium dielerectum*, *Bidens campylotheca* ssp. *pentamera*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, or *Zanthoxylum hawaiiense*, or by the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland mesic species because it provides the PCEs for the reestablishment of wild populations

within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Wet—Unit 1 (and)

Palmeria dolei—Unit 2—Lowland Wet (and)

Pseudonestor xanthophrys—Unit 2—Lowland Wet

This area consists of 6,616 ac (2,677 ha) of State land, 7,425 ac (3,005 ha) of privately owned land, and 2,038 ac (825 ha) of federally owned land (Haleakala National Park), from Haiku Uka to Kipahulu Valley on the northern and eastern slopes of east Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). These units are occupied by the plants *Bidens campylotheca* ssp. *waihoiensis*, *Clermontia samuelii*, *Cyanea asplenifolia*, *C. copelandii* ssp. *haleakalaensis*, *C. duvalliorum*, *C. hamatiflora* ssp. *hamatiflora*, *C. kunthiana*, *C. maritae*, *C. mceldowneyi*, *Huperzia mannii*, *Melicope balloui*, and *M. ovalis*. These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Wet—Unit 1 is not known to be occupied by the plants *Clermontia oblongifolia* ssp. *mauiensis*, *C. peleana*, *Mucuna sloanei* var. *persericea*, *Phyllostegia haliakalae*, or *Wikstroemia villosa*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Wet—Unit 2 (and)

*Palmeria dolei*—Unit 3—Lowland Wet (and)

*Pseudonestor xanthophrys*—Unit 3—Lowland Wet (and)

*Newcombia cumingi*—Unit 1—Lowland Wet

This area consists of 65 ac (26 ha) of State land at Moomoku, on the northwestern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). These units are occupied by the plant *Santalum haleakalae* var. *lanaiense*. Although Maui—Lowland Wet—Unit 2 is not currently occupied by the plants *Alectryon macrococcus*, *Asplenium dielerectum*, *Bidens conjuncta*, *B. micrantha* ssp. *kalealaha*, *Clermontia oblongifolia* ssp. *mauiensis*, *Ctenitis squamigera*, *Cyanea asplenifolia*, *C. glabra*, *C. kunthiana*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. munroi*, *Diplazium molokaiense*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyriformis*, *Kadua laxiflora*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Pteris lidgatei*, *Remya mauiensis*, or *Wikstroemia villosa*, by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), or by the Newcomb's tree snail (*Newcombia cumingi*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Wet—Unit 3 (and)

*Palmeria dolei*—Unit 4—Lowland Wet (and)

*Pseudonestor xanthophrys*—Unit 4—Lowland Wet

This area consists of 1,247 ac (505 ha) of State land at Honanana Gulch on the northeastern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). They are occupied by the plants *Bidens*

*conjuncta*, *Cyanea asplenifolia*, and *Pteris lidgatei*. These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Wet—Unit 3 is not known to be occupied by the plants *Alectryon macrococcus*, *Asplenium dielerectum*, *Bidens micrantha* ssp. *kalealaha*, *Clermontia oblongifolia* ssp. *mauiensis*, *Ctenitis squamigera*, *Cyanea glabra*, *C. kunthiana*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. munroi*, *Diplazium molokaiense*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyriformis*, *Kadua laxiflora*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, or *Wikstroemia villosa*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Wet—Unit 4 (and)

*Palmeria dolei*—Unit 5—Lowland Wet (and)

*Pseudonestor xanthophrys*—Unit 5—Lowland Wet

This area consists of 864 ac (350 ha) of State land at Kahakuloa Valley on the northeastern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). They are occupied by the plants *Bidens conjuncta* and *Cyanea asplenifolia*. These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Wet—Unit 4 is not known to be occupied by the plants *Alectryon macrococcus*, *Asplenium dielerectum*, *Bidens conjuncta*, *B. micrantha* ssp. *kalealaha*, *Clermontia oblongifolia* ssp. *mauiensis*, *Ctenitis squamigera*, *Cyanea glabra*, *C. kunthiana*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C.*

*munroi*, *Diplazium molokaiense*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyriformis*, *Kadua laxiflora*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Pteris lidgatei*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, or *Wikstroemia villosa*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Wet—Unit 5 (and)

*Palmeria dolei*—Unit 6—Lowland Wet (and)

*Pseudonestor xanthophrys*—Unit 6—Lowland Wet

This area consists of 30 ac (12 ha) of State land at Iao Valley on the eastern side of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). Although Maui—Lowland Wet—Unit 5 is not known to be occupied by the plants *Alectryon macrococcus*, *Asplenium dielerectum*, *Bidens conjuncta*, *B. micrantha* ssp. *kalealaha*, *Clermontia oblongifolia* ssp. *mauiensis*, *Ctenitis squamigera*, *Cyanea asplenifolia*, *C. glabra*, *C. kunthiana*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. munroi*, *Diplazium molokaiense*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyriformis*, *Kadua laxiflora*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Pteris lidgatei*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, or *Wikstroemia villosa*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to

achieving population levels necessary for recovery.

Maui—Lowland Wet—Unit 6 (and)

*Palmeria dolei*—Unit 7—Lowland Wet (and)

*Pseudonestor xanthophrys*—Unit 7—Lowland Wet

This area consists of 136 ac (55 ha) of State land at Honokowai and Wahikuli valleys on the western slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). These units are occupied by the plant *Santalum haleakalae* var. *lanaiense*. These units also contain unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Wet—Unit 6 is not currently occupied by the plants *Alectryon macrococcus*, *Asplenium dielerectum*, *Bidens conjuncta*, *Bidens micrantha* ssp. *kalealaha*, *Clermontia oblongifolia* ssp. *mauiensis*, *Ctenitis squamigera*, *Cyanea asplenifolia*, *C. glabra*, *C. kunthiana*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. munroi*, *Diplazium molokaiense*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyrifolium*, *Kadua laxiflora*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Pteris lidgatei*, *Remya mauiensis*, or *Wikstroemia villosa*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Wet—Unit 7 (and)

*Palmeria dolei*—Unit 8—Lowland Wet (and)

*Pseudonestor xanthophrys*—Unit 8—Lowland Wet

This area consists of 898 ac (364 ha) of State land at Olowalu Valley, on the southern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory

native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). These units are occupied by the plant *Alectryon macrococcus*. These units also contain unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Lowland Wet—Unit 7 is not currently occupied by the plants *Asplenium dielerectum*, *Bidens conjuncta*, *B. micrantha* ssp. *kalealaha*, *Clermontia oblongifolia* ssp. *mauiensis*, *Ctenitis squamigera*, *Cyanea asplenifolia*, *C. glabra*, *C. kunthiana*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. munroi*, *Diplazium molokaiense*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyrifolium*, *Kadua laxiflora*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Pteris lidgatei*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, or *Wikstroemia villosa*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Lowland Wet—Unit 8 (and)

*Palmeria dolei*—Unit 9—Lowland Wet (and)

*Pseudonestor xanthophrys*—Unit 9—Lowland Wet

This area consists of 230 ac (93 ha) of State land at upper Ukumehame Gulch, on the southern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). Although Maui—Lowland Wet—Unit 8 is not currently occupied by the plants *Alectryon macrococcus*, *Asplenium dielerectum*, *Bidens conjuncta*, *B. micrantha* ssp. *kalealaha*, *Clermontia oblongifolia* ssp. *mauiensis*, *Ctenitis squamigera*, *Cyanea asplenifolia*, *C. glabra*, *C. kunthiana*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. munroi*, *Diplazium molokaiense*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyrifolium*, *Kadua laxiflora*,

*Peucedanum sandwicense*, *Phyllostegia bracteata*, *Pteris lidgatei*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, or *Wikstroemia villosa*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Wet—Unit 1 (and)

*Palmeria dolei*—Unit 10—Montane Wet (and)

*Pseudonestor xanthophrys*—Unit 10—Montane Wet

This area consists of 1,313 ac (531 ha) of State land and 798 ac (323 ha) of privately owned land, at Haiku Uka on the northern slopes of east Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). These units are occupied by the plants *Cyanea duvalliorum*, *C. maritae*, *C. mceldowneyi*, *Huperzia mannii*, *Melicope balloui*, and *Phyllostegia pilosa*, and by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*). These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Wet—Unit 1 is not known to be occupied by the plants *Adenophorus periens*, *Asplenium peruvianum* var. *insulare*, *Bidens campylothea* ssp. *pentamera*, *B. campylothea* ssp. *waihoiensis*, *Clermontia oblongifolia* ssp. *mauiensis*, *C. samuelii*, *Cyanea copelandii* ssp. *haleakalaensis*, *C. glabra*, *C. hamatiflora* ssp. *hamatiflora*, *C. horrida*, *C. kunthiana*, *Cyrtandra ferripilosa*, *Diplazium molokaiense*, *Geranium hanaense*, *G. multiflorum*, *Melicope ovalis*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *P. haliakalae*, *P. mannii*, *Platanthera holochila*, *Schiedea jacobii*, or *Wikstroemia villosa*, we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the

reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Wet—Unit 2 (and)

*Palmeria dolei*—Unit 11—Montane Wet (and)

*Pseudonestor xanthophrys*—Unit 11—Montane Wet

This area consists of 4,075 ac (1,649 ha) of State land, 9,633 ac (3,898 ha) of privately owned land, and 875 ac (354 ha) of federally owned land (Haleakala National Park), from Haiku Uka to Puukaukanu and upper Waihoi Valley, on the northern and northeastern slopes of east Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). These units are occupied by the plants *Bidens campylotheca* ssp. *pentamera*, *Clermontia samuelii*, *Cyanea copelandii* ssp. *haleakalaensis*, *C. duvalliorum*, *C. hamatiflora* ssp. *hamatiflora*, *C. horrida*, *C. kunthiana*, *C. mceldowneyi*, *Geranium hanaense*, *G. multiflorum*, and *Wikstroemia villosa*, and by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*). These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Wet—Unit 2 is not known to be occupied by the plants *Adenophorus periens*, *Asplenium peruvianum* var. *insulare*, *Bidens campylotheca* ssp. *waihoiensis*, *Clermontia oblongifolia* ssp. *mauiensis*, *Cyanea glabra*, *C. maritae*, *Cyrtandra ferripilosa*, *Diplazium molokaiense*, *Huperzia mannii*, *Melicope balloui*, *M. ovalis*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *P. haliakalae*, *P. mannii*, *P. pilosa*, *Platanthera holochila*, and *Schiedea jacobii*, we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving

population levels necessary for recovery.

Maui—Montane Wet—Unit 3 (and)

*Palmeria dolei*—Unit 12—Montane Wet (and)

*Pseudonestor xanthophrys*—Unit 12—Montane Wet

This area consists of 2,228 ac (902 ha) of federally owned land (Haleakala National Park) in Kipahulu Valley, on the northeastern slopes of east Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). These units are occupied by the plants *Bidens campylotheca* ssp. *pentamera*, *B. campylotheca* ssp. *waihoiensis*, *Cyanea copelandii* ssp. *haleakalaensis*, *C. hamatiflora* ssp. *hamatiflora*, *C. maritae*, and *Melicope ovalis*, and by the forest bird, kiwikiu (*Pseudonestor xanthophrys*). These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Wet—Unit 3 is not known to be occupied by the plants *Adenophorus periens*, *Asplenium peruvianum* var. *insulare*, *Clermontia oblongifolia* ssp. *mauiensis*, *C. samuelii*, *Cyanea duvalliorum*, *C. glabra*, *C. horrida*, *C. kunthiana*, *C. mceldowneyi*, *Cyrtandra ferripilosa*, *Diplazium molokaiense*, *Geranium hanaense*, *G. multiflorum*, *Huperzia mannii*, *Melicope balloui*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *P. haliakalae*, *P. mannii*, *P. pilosa*, *Platanthera holochila*, *Schiedea jacobii*, or *Wikstroemia villosa*, or by the forest bird, the akohekohe (*Palmeria dolei*), we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Wet—Unit 4 (and)

*Palmeria dolei*—Unit 13—Montane Wet (and)

*Pseudonestor xanthophrys*—Unit 13—Montane Wet

This area consists of 180 ac (73 ha) of State land and 1,653 ac (669 ha) of federally owned land (Haleakala

National Park), in Kaapahu Valley on the northeastern slopes of east Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). These units are occupied by the plants *Clermontia samuelii*, *Cyanea copelandii* ssp. *haleakalaensis*, *C. hamatiflora* ssp. *hamatiflora*, *C. horrida*, *C. kunthiana*, *C. maritae*, *Cyrtandra ferripilosa*, and *Huperzia mannii*. These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Wet—Unit 4 is not known to be occupied by the plants *Adenophorus periens*, *Asplenium peruvianum* var. *insulare*, *Bidens campylotheca* ssp. *pentamera*, *B. campylotheca* ssp. *waihoiensis*, *Clermontia oblongifolia* ssp. *mauiensis*, *Cyanea duvalliorum*, *C. glabra*, *C. mceldowneyi*, *Diplazium molokaiense*, *Geranium hanaense*, *G. multiflorum*, *Melicope balloui*, *M. ovalis*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *P. haliakalae*, *P. mannii*, *P. pilosa*, *Platanthera holochila*, *Schiedea jacobii*, or *Wikstroemia villosa*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Wet—Unit 5 (and)

*Palmeria dolei*—Unit 14—Montane Wet (and)

*Pseudonestor xanthophrys*—Unit 14—Montane Wet

This area consists of 222 ac (90 ha) of State land, and 165 ac (67 ha) of federally owned land (Haleakala National Park), near Kaumakani on the eastern slopes of east Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). These units are occupied by the plant *Bidens campylotheca* ssp. *pentamera*. These units also contain unoccupied

habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Wet—Unit 5 is not currently occupied by the plants *Adenophorus periens*, *Asplenium peruvianum* var. *insulare*, *Bidens campylotheca* ssp. *waihoiensis*, *Clermontia oblongifolia* ssp. *mauiensis*, *C. samuelii*, *Cyanea copelandii* ssp. *haleakalaensis*, *C. duvalliorum*, *C. glabra*, *C. hamatiflora* ssp. *hamatiflora*, *C. horrida*, *C. kunthiana*, *C. maritae*, *C. mceldowneyi*, *Cyrtandra ferripilosa*, *Diplazium molokaiense*, *Geranium hanaense*, *G. multiflorum*, *Huperzia mannii*, *Melicope balloui*, *M. ovalis*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *P. haliakalae*, *P. mannii*, *P. pilosa*, *Platanthera holochila*, *Schiedea jacobii*, or *Wikstroemia villosa*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the reestablishment of wild populations within the historical ranges of the species. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Wet—Unit 6 (and)

*Palmeria dolei*—Unit 15—Montane Wet (and)

*Pseudonestor xanthophrys*—Unit 15—Montane Wet

This area consists of 1,113 ac (451 ha) of State land, and 286 ac (116 ha) of privately owned land, at the summit and surrounding areas on west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). They are occupied by the plants *Bidens conjuncta*, *Calamagrostis hillebrandii*, *Cyanea kunthiana*, *Geranium hillebrandii*, *Myrsine vaccinioides*, and *Sanicula purpurea*. These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Wet—Unit 6 is not known to be occupied by the plants *Acaena exigua*, *Cyrtandra oxybapha*, *Huperzia mannii*, *Phyllostegia bracteata*, or *Platanthera holochila*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu

(*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Wet—Unit 7 (and)

*Palmeria dolei*—Unit 16—Montane Wet (and)

*Pseudonestor xanthophrys*—Unit 16—Montane Wet

This area consists of 80 ac (32 ha) of State land near Hanaula and Pohakea Gulch on the southeastern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). They are occupied by the plants *Cyrtandra oxybapha* and *Platanthera holochila*, and contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Wet—Unit 7 is not known to be occupied by the plants *Acaena exigua*, *Bidens conjuncta*, *Calamagrostis hillebrandii*, *Cyanea kunthiana*, *Geranium hillebrandii*, *Huperzia mannii*, *Myrsine vaccinioides*, *Phyllostegia bracteata*, or *Sanicula purpurea*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Mesic—Unit 1 (and)

*Palmeria dolei*—Unit 18—Montane Mesic (and)

*Pseudonestor xanthophrys*—Unit 18—Montane Mesic

This area consists of 6,593 ac (2,668 ha) of State land, 707 ac (286 ha) of privately owned land, and 3,672 ac

(1,486 ha) of federally owned land (Haleakala National Park), from Kealahou to Puuualae, nearly circumscribing the summit of Haleakala on east Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane mesic ecosystem (see Table 5). They are occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Asplenium dielerectum*, *A. peruvianum* var. *insulare*, *Clermontia lindseyana*, *Cyanea horrida*, *C. obtusa*, *Cyrtandra ferripilosa*, *C. oxybapha*, *Diplazium molokaiense*, *Geranium arboreum*, *G. multiflorum*, *Huperzia mannii*, *Melicope adscendens*, and *Neraudia sericea*. These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Mesic—Unit 1 is not known to be occupied by the plants *Alectryon macrococcus*, *Bidens campylotheca* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, *Cyanea glabra*, *C. hamatiflora* ssp. *hamatiflora*, *C. kunthiana*, *C. mceldowneyi*, *Phyllostegia bracteata*, *P. mannii*, *Santalum haleakalae* var. *lanaiense*, *Wikstroemia villosa*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane mesic species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Mesic—Unit 2 (and)

*Palmeria dolei*—Unit 19—Montane Mesic (and)

*Pseudonestor xanthophrys*—Unit 19—Montane Mesic

This area consists of 124 ac (50 ha) of State land at Helu and the upper reaches of Puehuehunui on the southern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane mesic ecosystem (see Table 5). They are occupied by the plants *Ctenitis squamigera*, *Cyanea magnicalyx*,

*Diplazium molokaiense*, *Lysimachia lydgatei*, *Remya mauiensis*, and *Santalum haleakalae* var. *lanaiense*. These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Mesic—Unit 2 is not known to be occupied by the plants *Geranium hillebrandii*, *Huperzia mannii*, *Stenogyne kauaulaensis*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane mesic species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Mesic—Unit 3 (and)

*Palmeria dolei*—Unit 20—Montane Mesic (and)

*Pseudonestor xanthophrys*—Unit 20—Montane Mesic

This area consists of 174 ac (70 ha) of State land at Lihau on the southwestern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane mesic ecosystem (see Table 5). They are occupied by the plant *Geranium hillebrandii*, and contain unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Mesic—Unit 3 is not known to be occupied by the plants *Ctenitis squamigera*, *Cyanea magnicalyx*, *Diplazium molokaiense*, *Huperzia mannii*, *Lysimachia lydgatei*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, *Stenogyne kauaulaensis*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane mesic species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes,

suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Mesic—Unit 4 (and)

*Palmeria dolei*—Unit 21—Montane Mesic (and)

*Pseudonestor xanthophrys*—Unit 21—Montane Mesic

This area consists of 72 ac (29 ha) of State land at Halepohaku on the southern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane mesic ecosystem (see Table 5). Although Maui—Montane Mesic—Unit 4 is not known to be occupied by the plants *Ctenitis squamigera*, *Cyanea magnicalyx*, *Diplazium molokaiense*, *Geranium hillebrandii*, *Huperzia mannii*, *Lysimachia lydgatei*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, *Stenogyne kauaulaensis*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane mesic species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Mesic—Unit 5 (and)

*Palmeria dolei*—Unit 22—Montane Mesic (and)

*Pseudonestor xanthophrys*—Unit 22—Montane Mesic

This area consists of 170 ac (69 ha) of State land at the upper reaches of Manawainui Gulch on the southeastern slopes of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane mesic ecosystem (see Table 5). They are occupied by the plants *Remya mauiensis* and *Santalum haleakalae* var. *lanaiense*, and contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Montane Mesic—Unit 5 is not known to be

occupied by the plants *Ctenitis squamigera*, *Cyanea magnicalyx*, *Diplazium molokaiense*, *Geranium hillebrandii*, *Huperzia mannii*, *Lysimachia lydgatei*, *Stenogyne kauaulaensis*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane mesic species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Montane Dry—Unit 1 consists of 2,962 ac (1,199 ha) of State land, and 563 ac (228 ha) of federally owned land (Haleakala National Park), from Kanaio to Naholoku and Kaupo Gap along the southern slopes of east Maui. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane dry ecosystem (see Table 5). Although Maui—Montane Dry—Unit 1 is not known to be occupied by the plants *Alectryon macrococcus*, *Geranium arboreum*, *Melicope knudsenii*, *M. mucronulata*, *Santalum haleakalae* var. *lanaiense*, or *Zanthoxylum hawaiiense*, we have determined this area to be essential for the conservation and recovery of these montane dry species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Subalpine—Unit 1 (and)

*Palmeria dolei*—Unit 24—Subalpine (and)

*Pseudonestor xanthophrys*—Unit 24—Subalpine

This area consists of 10,785 ac (4,365 ha) of State land, 1,622 ac (656 ha) of privately owned land, and 3,568 ac (1,444 ha) of federally owned land (Haleakala National Park), from Kanaio north to Puu Niania on east Maui. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as

physical or biological features in the subalpine ecosystem (see Table 5). They are occupied by the plants *Bidens micrantha* ssp. *kalealaha* and *Geranium arboreum*, and contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Subalpine—Unit 1 is not known to be occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Asplenium peruvianum* var. *insulare*, *Geranium multiflorum*, *Phyllostegia bracteata*, *Schiedea haleakalensis*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these subalpine species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Subalpine—Unit 2 (and)

*Palmeria dolei*—Unit 25—Subalpine (and)

*Pseudonestor xanthophrys*—Unit 25—Subalpine

This area consists of 50 ac (20 ha) of privately owned land, and 9,836 ac (3,981 ha) of federally owned land (Haleakala National Park), from the summit north to Koolau Gap and east to Kalapawili Ridge on east Maui. These units include the mixed hermland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the subalpine ecosystem (see Table 5). They are occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Geranium multiflorum*, and *Schiedea haleakalensis*, and by the forest bird, the akohekohe (*Palmeria dolei*). These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Subalpine—Unit 2 is not known to be occupied by the plants *Asplenium peruvianum* var. *insulare*, *Bidens micrantha* ssp. *kalealaha*, *Geranium arboreum*, *Phyllostegia bracteata*, or *Zanthoxylum hawaiiense*, or by the forest bird, the kiwikiu (*Pseudonestor xanthophrys*), we have determined this

area to be essential for the conservation and recovery of these subalpine species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Alpine—Unit 1 consists of 475 ac (192 ha) of State land, 411 ac (166 ha) of privately owned land, and 911 ac (369 ha) of federally owned land (Haleakala National Park), at the summit of Haleakala on east Maui. This unit includes the mixed hermland and shrubland, the moisture regime, and the subcanopy native plant species identified as physical or biological features in the alpine ecosystem (see Table 5). This unit is occupied by the plant *Argyroxiphium sandwicense* ssp. *macrocephalum*, and contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Due to its small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Dry Cliff—Unit 1 (and)

*Palmeria dolei*—Unit 26—Dry Cliff (and)

*Pseudonestor xanthophrys*—Unit 26—Dry Cliff

This area consists of 755 ac (305 ha) of federally owned land (Haleakala National Park), from Pakaoao to Koolau Gap on east Maui. These units include the mixed hermland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the dry cliff ecosystem (see Table 5). Although Maui—Dry Cliff—Unit 1 is not known to be occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Bidens campylothea* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, *Diplazium molokaiense*, *Geranium multiflorum*, *Plantago princeps*, or *Schiedea haleakalensis*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these dry cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low

population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Dry Cliff—Unit 2 consists of 688 ac (279 ha) of federally owned land (Haleakala National Park) from Haupaakea Peak to Kaupo Gap on east Maui. This unit includes the mixed hermland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the dry cliff ecosystem (see Table 5). It is occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Geranium multiflorum*, *Plantago princeps*, and *Schiedea haleakalensis*, and contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Dry Cliff—Unit 2 is not known to be occupied by the plants *Bidens campylothea* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, or *Diplazium molokaiense*, we have determined this area to be essential for the conservation and recovery of these dry cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Dry Cliff—Unit 3 (and)

*Palmeria dolei*—Unit 27—Dry Cliff (and)

*Pseudonestor xanthophrys*—Unit 27—Dry Cliff

This area consists of 200 ac (81 ha) of federally owned land (Haleakala National Park) near Papaanui on east Maui. These units include the mixed hermland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the dry cliff ecosystem (see Table 5). It is occupied by the plant *Plantago princeps*, and contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Dry Cliff—Unit 3 is not currently occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Bidens campylothea* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, *Diplazium molokaiense*, *Geranium multiflorum*, or

*Schiedea haleakalensis*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these dry cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Dry Cliff—Unit 4 (and)

*Palmeria dolei*—Unit 28—Dry Cliff (and)

*Pseudonestor xanthophrys*—Unit 28—Dry Cliff

This area consists of 315 ac (127 ha) federally owned land (Haleakala National Park), along Kalapawili Ridge on east Maui. These units include the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the dry cliff ecosystem (see Table 5). Although Maui—Dry Cliff—Unit 4 is not currently occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Bidens campylotheca* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, *Diplazium molokaiense*, *Geranium multiflorum*, *Plantago princeps*, or *Schiedea haleakalensis*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these dry cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Dry Cliff—Unit 5 (and)

*Palmeria dolei*—Unit 29—Dry Cliff (and)

*Pseudonestor xanthophrys*—Unit 29—Dry Cliff

This area consists of 1,298 ac (525 ha) of State land, from Helu and across Olowalu to Ukumehame Gulch, on west Maui. These units include the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the dry cliff ecosystem (see

Table 5). They are occupied by the plant *Tetramolopium capillare*, and contain unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Dry Cliff—Unit 5 is not currently occupied by the plants *Bonamia menziesii*, *Diplazium molokaiense*, *Hesperomannia arbuscula*, *Isodendron pyrifolium*, *Kadua laxiflora*, or *Neraudia sericea*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these dry cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Dry Cliff—Unit 6 consists of 279 ac (113 ha) of State land along the east wall of Ukumehame Gulch on west Maui. This unit includes the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the dry cliff ecosystem (see Table 5). Although Maui—Dry Cliff—Unit 6 is not currently occupied by the plants *Bonamia menziesii*, *Diplazium molokaiense*, *Hesperomannia arbuscula*, *Isodendron pyrifolium*, *Kadua laxiflora*, *Neraudia sericea*, or *Tetramolopium capillare*, we have determined this area to be essential for the conservation and recovery of these dry cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Wet Cliff—Unit 1 (and)

*Palmeria dolei*—Unit 30—Wet Cliff (and)

*Pseudonestor xanthophrys*—Unit 30—Wet Cliff

This area consists of 290 ac (117 ha) of privately owned land along the wall of Keanae Valley on the northern slopes of east Maui. These units include the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see

Table 5). Although Maui—Wet Cliff—Unit 1 is not currently occupied by the plants *Bidens campylotheca* ssp. *pentamera*, *B. campylotheca* ssp. *waihoiensis*, *Cyanea copelandii* ssp. *haleakalaensis*, *Cyanea horrida*, *Melicope ovalis*, *Phyllostegia bracteata*, *P. haliakalae*, or *Plantago princeps*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Wet Cliff—Unit 2 (and)

*Palmeria dolei*—Unit 31—Wet Cliff (and)

*Pseudonestor xanthophrys*—Unit 31—Wet Cliff

This area consists of 475 ac (192 ha) of State land, 20 ac (8 ha) of privately owned land, and 912 ac (369 ha) of federally owned land (Haleakala National Park), from Kalapawili Ridge along Kipahulu Valley and north to Puuhoolio, on the northeastern slopes of east Maui. These units include the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see Table 5). They are occupied by the plants *Bidens campylotheca* ssp. *waihoiensis*, *Cyanea copelandii* ssp. *haleakalaensis*, *Melicope ovalis*, *Phyllostegia bracteata*, and *Plantago princeps*. These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Wet Cliff—Unit 2 is not known to be occupied by the plants *Bidens campylotheca* ssp. *pentamera*, *Cyanea horrida*, or *Phyllostegia haliakalae*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction

are essential to achieving population levels necessary for recovery.

Maui—Wet Cliff—Unit 3 (and)

*Palmeria dolei*—Unit 32—Wet Cliff (and)

*Pseudonestor xanthophrys*—Unit 32—Wet Cliff

This area consists of 5 ac (2 ha) of State land and 433 ac (175 ha) federally owned land (Haleakala National Park) along the south rim of Kipahulu Valley on east Maui. These units include the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see Table 5). Although Maui—Wet Cliff—Unit 3 is not currently occupied by the plants *Bidens campylothea* ssp. *pentamera*, *B. campylothea* ssp. *waihoiensis*, *Cyanea copelandii* ssp. *haleakalaensis*, *C. horrida*, *Melicope ovalis*, *Phyllostegia bracteata*, *P. haliakalae*, or *Plantago princeps*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Wet Cliff—Unit 4 (and)

*Palmeria dolei*—Unit 33—Wet Cliff (and)

*Pseudonestor xanthophrys*—Unit 33—Wet Cliff

This area consists of 184 ac (75 ha) of State land along the north wall of Waihoi Valley, on the northeastern slopes of east Maui. These units include the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see Table 5). They are occupied by the plant *Bidens campylothea* ssp. *pentamera* and *B. campylothea* ssp. *waihoiensis*, and contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Wet Cliff—Unit 4 is not known to be occupied by the plants *Cyanea copelandii* ssp. *haleakalaensis*, *C. horrida*, *Melicope ovalis*, *Phyllostegia*

*bracteata*, *P. haliakalae*, or *Plantago princeps*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Wet Cliff—Unit 6 (and)

*Palmeria dolei*—Unit 35—Wet Cliff (and)

*Pseudonestor xanthophrys*—Unit 35—Wet Cliff

This area consists of 1,858 ac (752 ha) of State land, and 253 ac (102 ha) of privately owned land, at the summit ridges of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see Table 5). They are occupied by the plants *Alectryon macrococcus*, *B. conjuncta*, *Ctenitis squamigera*, *Cyrtandra munroi*, *Remya mauiensis*, and *Santalum haleakalae* var. *lanaiense*. These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Wet Cliff—Unit 6 is not known to be occupied by the plants *Bidens campylothea* ssp. *pentamera*, *Bonamia menziesii*, *Cyanea glabra*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *Dubautia plantaginea* ssp. *humilis*, *Gouania vitifolia*, *Hesperomannia arborescens*, *H. arbuscula*, *Isodendron pyriformium*, *Kadua laxiflora*, *Lysimachia lydgatei*, *Plantago princeps*, *Platanthera holochila*, *Pteris lidgatei*, or *Tetramolopium capillare*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Wet Cliff—Unit 7 (and)

*Palmeria dolei*—Unit 36—Wet Cliff (and)

*Pseudonestor xanthophrys*—Unit 36—Wet Cliff

This area consists of 556 ac (225 ha) of State land along Honokowai ridge on the northwestern side of west Maui. These units include the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see Table 5). These units are occupied by the plants *Cyrtandra filipes* and *C. munroi*, and contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Maui—Wet Cliff—Unit 7 is not known to be occupied by the plants *Alectryon macrococcus*, *Bidens campylothea* ssp. *pentamera*, *B. conjuncta*, *Bonamia menziesii*, *Ctenitis squamigera*, *Cyanea glabra*, *C. lobata*, *C. magnicalyx*, *Dubautia plantaginea* ssp. *humilis*, *Gouania vitifolia*, *Hesperomannia arborescens*, *H. arbuscula*, *Isodendron pyriformium*, *Kadua laxiflora*, *Lysimachia lydgatei*, *Plantago princeps*, *Platanthera holochila*, *Pteris lidgatei*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, or *Tetramolopium capillare*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Maui—Wet Cliff—Unit 8 consists of 337 ac (137 ha) of State land along Kahakuloa ridge on the north side of west Maui. This unit includes the mixed herbland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see Table 5). Although Maui—Wet Cliff—Unit 8 is not known to be occupied by the plants *Alectryon macrococcus*, *Bidens campylothea* ssp. *pentamera*, *B. conjuncta*, *Bonamia menziesii*, *Ctenitis squamigera*, *Cyanea glabra*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. munroi*, *Dubautia plantaginea* ssp. *humilis*, *Gouania vitifolia*,

*Hesperomannia arborescens*, *H. arbuscula*, *Isodendron pyriforme*, *Kadua laxiflora*, *Lysimachia lidgatei*, *Platago princeps*, *Platanthera holochila*, *Pteris lidgatei*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, or *Tetramolopium capillare*, we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Kahoolawe—Coastal—Unit 1 consists of 1,516 ac (613 ha) of State land from Kaneloa to Lae o Kaule, including Aleale, along the southern and eastern coast of Kahoolawe. It is occupied by the plant *Kanaloa kahoowawensis* and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Kahoolawe—Coastal—Unit 1 is not known to be occupied by the plants *Sesbania tomentosa* or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the physical or biological features necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Kahoolawe—Coastal—Unit 2 consists of 12 ac (5 ha) of State land on Puukoae, an islet off the southern coast of Kahoolawe. It is occupied by the plant *Sesbania tomentosa* and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Kahoolawe—Coastal—Unit 2 is not known to be

occupied by *Kanaloa kahoowawensis* or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Kahoolawe—Coastal—Unit 3 consists of 189 ac (76 ha) of State land from Laepaki to Honokanaia along the western coast of Kahoolawe. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). Although Kahoolawe—Coastal—Unit 3 is not known to be occupied by *Kanaloa kahoowawensis*, *Sesbania tomentosa*, or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Kahoolawe—Lowland Dry—Unit 1 consists of 1,220 ac (494 ha) of State land, north of Waihonu Gulch on west Kahoolawe. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). Although Kahoolawe—Lowland Dry—Unit 1 is not known to be occupied by *Gouania hillebrandii*, *Hibiscus brackenridgei*, *Kanaloa kahoowawensis*, *Neraudia sericea*, *Sesbania tomentosa*, or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Kahoolawe—Lowland Dry—Unit 2 consists of 3,205 ac (1,297 ha) of State land from Lua o Kealialuna to Puu o Moaulaiki and Luamakika on the

eastern side of Kahoolawe. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). Although Kahoolawe—Lowland Dry—Unit 2 is not known to be occupied by *Gouania hillebrandii*, *Hibiscus brackenridgei*, *Kanaloa kahoowawensis*, *Neraudia sericea*, *Sesbania tomentosa*, or *Vigna o-wahuensis*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Coastal—Unit 1 consists of 70 ac (28 ha) of privately owned land, and 54 ac (22 ha) of federally owned land (U.S. Coast Guard) at Laau Point, from Kahaiawa to Keawakalani, along the western coast of Molokai. This unit is occupied by the plant *Marsilea villosa*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Coastal—Unit 1 is not known to be occupied by *Bidens wiebkei*, *Brighamia rockii*, *Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, *H. brackenridgei*, *Ischaemum byrone*, *Peucedanum sandwicense*, *Pittosporum halophilum*, *Schenkia sebaeoides*, *Sesbania tomentosa*, or *Tetramolopium rockii*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Coastal—Unit 2 consists of 263 ac (106 ha) of State land, and 710 ac (287 ha) of privately owned land, from Ilio Point to Kaa Gulch, along the northwestern coast of Molokai. This

unit is occupied by the plant *Marsilea villosa* and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Coastal—Unit 2 is not known to be occupied by *Bidens wiebkei*, *Brighamia rockii*, *Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, *H. brackenridgei*, *Ischaemum byrone*, *Peucedanum sandwicense*, *Pittosporum halophilum*, *Schenkia sebaeoides*, *Sesbania tomentosa*, or *Tetramolopium rockii*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Coastal—Unit 3 consists of 794 ac (321 ha) of State land, and 3 ac (1 ha) of federally owned land (Kalaupapa National Historical Park), from Kahiu Point to Wainene, along the north-central coast of Molokai. This unit is occupied by the plants *Pittosporum halophilum*, *Schenkia sebaeoides*, and *Tetramolopium rockii*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Coastal—Unit 3 is not known to be occupied by *Bidens wiebkei*, *Brighamia rockii*, *Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, *H. brackenridgei*, *Ischaemum byrone*, *Marsilea villosa*, *Peucedanum sandwicense*, or *Sesbania tomentosa*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes,

suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Coastal—Unit 4 consists of 10 ac (4 ha) on Mokapu Island on the northern coast of Molokai. This area is State-owned, and is classified as a State Seabird Sanctuary. This unit is occupied by the plants *Peucedanum sandwicense* and *Pittosporum halophilum*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Coastal—Unit 4 is not known to be occupied by *Bidens wiebkei*, *Brighamia rockii*, *Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, *H. brackenridgei*, *Ischaemum byrone*, *Marsilea villosa*, *Schenkia sebaeoides*, *Sesbania tomentosa*, or *Tetramolopium rockii*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Coastal—Unit 5 consists of 1 ac (0.5 ha) on Huelo islet on the northern coast of Molokai. This area is State-owned, and is classified as a State Seabird Sanctuary. This unit is occupied by the plants *Brighamia rockii*, *Peucedanum sandwicense*, and *Pittosporum halophilum*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Coastal—Unit 5 is not known to be occupied by *Bidens wiebkei*, *Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, *H. brackenridgei*, *Ischaemum byrone*, *Marsilea villosa*, *Schenkia sebaeoides*, *Sesbania tomentosa*, or *Tetramolopium rockii*, we have determined this area to be essential

for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Coastal—Unit 6 consists of 190 ac (77 ha) of State land, and 1,685 ac (682 ha) of privately owned land, from Kaholaiiki Bay to Halawa Bay, on the northeastern coast of Molokai. This unit is occupied by the plants *Bidens wiebkei*, *Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, and *Ischaemum byrone*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Coastal—Unit 6 is not known to be occupied by *Brighamia rockii*, *Hibiscus brackenridgei*, *Marsilea villosa*, *Peucedanum sandwicense*, *Pittosporum halophilum*, *Schenkia sebaeoides*, *Sesbania tomentosa*, or *Tetramolopium rockii*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Coastal—Unit 7 consists of 49 ac (20 ha) of privately owned land from Alanuipuhipaka Ridge to Kalanikaula, on the northeastern coast of Molokai. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the coastal ecosystem (see Table 5). Although Molokai—Coastal—Unit 7 is not known to be occupied by *Bidens wiebkei*, *Brighamia rockii*, *Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, *H. brackenridgei*, *Ischaemum byrone*, *Marsilea villosa*, *Peucedanum sandwicense*, *Pittosporum halophilum*, *Schenkia sebaeoides*, *Sesbania tomentosa*, or *Tetramolopium*

*rockii*, we have determined this area to be essential for the conservation and recovery of these coastal species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Lowland Dry—Unit 1 consists of 24 ac (10 ha) of privately owned land, in a small gulch northwest of Mahana, in west-central Molokai. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). Although Molokai—Lowland Dry—Unit 1 is not known to be occupied by *Bonamia menziesii*, *Cyperus trachysanthos*, *Eugenia koolauensis*, *Hibiscus brackenridgei*, *Kokia cookei*, or *Sesbania tomentosa*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Lowland Dry—Unit 2 consists of 589 ac (238 ha) of State land at Kamilolooa on the southern slopes of Molokai. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland dry ecosystem (see Table 5). Although Molokai—Lowland Dry—Unit 2 is not known to be occupied by *Bonamia menziesii*, *Cyperus trachysanthos*, *Eugenia koolauensis*, *Hibiscus brackenridgei*, *Kokia cookei*, or *Sesbania tomentosa*, we have determined this area to be essential for the conservation and recovery of these lowland dry species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Lowland Mesic—Unit 1 (and *Palmeria dolei*—Unit 37—Lowland Mesic (and)

*Pseudonestor xanthophrys*—Unit 37—Lowland Mesic

This area consists of 3,489 ac (1,412 ha) of State land, and 5,281 ac (2,137 ha) of privately owned land, from Waiianui Gulch to Mapulehu, in central Molokai. These units are occupied by the plants *Alectryon macrococcus*, *Ctenitis squamigera*, *Cyanea dunbariae*, *C. mannii*, *C. profuga*, *Cyperus fauriei*, *Cyrtandra filipes*, *Gouania hillebrandii*, *Labordia triflora*, *Neraudia sericea*, *Santalum haleakalae* var. *lanaiense*, *Schiedea lydgatei*, *S. sarmentosa*, *Silene alexandri*, *S. lanceolata*, *Spermolepis hawaiiensis*, and *Zanthoxylum hawaiiense*, and include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland mesic ecosystem (see Table 5). These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Lowland Mesic—Unit 1 is not known to be occupied by *Asplenium dielirectum*, *Bonamia menziesii*, *Canavalia molokaiensis*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea procera*, *C. solanacea*, *Diplazium molokaiense*, *Festuca molokaiensis*, *Flueggea neowawraea*, *Isodendron pyrifolium*, *Kadua laxiflora*, *Melicope mucronulata*, *M. munroi*, *M. reflexa*, *Phyllostegia haliakalae*, *P. mannii*, *P. pilosa*, *Sesbania tomentosa*, *Stenogyne bifida*, or *Vigna o-wahuensis*, or the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland mesic species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Lowland Wet—Unit 1 (and *Palmeria dolei*—Unit 38—Lowland Wet (and)

*Pseudonestor xanthophrys*—Unit 38—Lowland Wet

This area consists of 2,195 ac (888 ha) of State land, and 754 ac (305 ha) of privately owned land (partly within The

Nature Conservancy's Pelekunu Preserve), from Pelekunu Valley to Wailau Valley, in north-central Molokai. These units are occupied by the plant *Cyrtandra filipes*, and include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). These units also contain unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Lowland Wet—Unit 1 is not known to be occupied by *Asplenium dielirectum*, *Bidens wiebkei*, *Canavalia molokaiensis*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea dunbariae*, *C. grimesiana* ssp. *grimesiana*, *C. solanacea*, *Lysimachia maxima*, *Melicope reflexa*, *Peucedanum sandwicense*, *Phyllostegia hispida*, *P. mannii*, *Plantago princeps*, *Stenogyne bifida*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Lowland Wet—Unit 2 (and)

*Palmeria dolei*—Unit 39—Lowland Wet (and)

*Pseudonestor xanthophrys*—Unit 39—Lowland Wet

This area consists of 1,356 ac (549 ha) of State land and 594 ac (241 ha) of privately owned land, from Kahanui to Pelekunu Valley, in north-central Molokai. These units are occupied by the plant *Lysimachia maxima*, and include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). These units also contain unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Lowland Wet—Unit 2 is not known to be occupied by *Asplenium dielirectum*,

*Bidens wiebkei*, *Canavalia molokaiensis*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea dunbariae*, *C. grimesiana* ssp. *grimesiana*, *C. solanacea*, *Cyrtandra filipes*, *Melicope reflexa*, *Peucedanum sandwicense*, *Phyllostegia hispida*, *P. mannii*, *Plantago princeps*, *Stenogyne bifida*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Lowland Wet—Unit 3 consists of 94 ac (38 ha) of State land, and 3,125 ac (1,265 ha) of privately owned land, from Waiahookalo gulch to Moaula stream and Puniuohua, on eastern Molokai. This unit includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the lowland wet ecosystem (see Table 5). Although Molokai—Lowland Wet—Unit 3 is not known to be occupied by *Asplenium dielrectum*, *Bidens wiebkei*, *Canavalia molokaiensis*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea dunbariae*, *C. grimesiana* ssp. *grimesiana*, *C. solanacea*, *Cyrtandra filipes*, *Lysimachia maxima*, *Melicope reflexa*, *Peucedanum sandwicense*, *Phyllostegia hispida*, *P. mannii*, *Plantago princeps*, *Stenogyne bifida*, or *Zanthoxylum hawaiiense*, we have determined this area to be essential for the conservation and recovery of these lowland wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Montane Wet—Unit 1 (and) *Palmeria dolei*—Unit 40—Montane Wet (and)

*Pseudonestor xanthophrys*—Unit 40—Montane Wet

This area consists of 1,545 ac (625 ha) of State land, and 1,851 ac (749 ha) of privately owned land, from the headwaters of Waialelia Stream and

above Pelekunu Valley, eastward along the summit area to Mapulehu, in north-central Molokai. These units are occupied by the plants *Bidens wiebkei*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea mannii*, *C. profuga*, *Phyllostegia hispida*, and *Pteris lidgatei*, and include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Montane Wet—Unit 1 is not known to be occupied by *Adenophorus periens*, *Cyanea procera*, *C. solanacea*, *Hesperomannia arborescens*, *Lysimachia maxima*, *Melicope reflexa*, *Phyllostegia mannii*, *P. pilosa*, *Platanthera holochila*, *Schiedea laui*, *Stenogyne bifida*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Montane Wet—Unit 2 (and) *Palmeria dolei*—Unit 41—Montane Wet (and)

*Pseudonestor xanthophrys*—Unit 41—Montane Wet

This area consists of 871 ac (353 ha) of State land, and 39 ac (16 ha) of privately owned land, from Honukaupu to Olokui (between Pelekunu and Wailau valleys), in north-central Molokai. These units include the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). Although Molokai—Montane Wet—Unit 2 is not known to be occupied by *Adenophorus periens*, *Bidens wiebkei*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea mannii*, *C. procera*, *C. profuga*, *C. solanacea*, *Hesperomannia arborescens*, *Lysimachia maxima*, *Melicope reflexa*, *Phyllostegia hispida*, *P. mannii*, *P. pilosa*, *Platanthera holochila*, *Pteris*

*lidgatei*, *Schiedea laui*, *Stenogyne bifida*, or *Zanthoxylum hawaiiense*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Montane Wet—Unit 3 consists of 77 ac (31 ha) of State land, and 726 ac (294 ha) of privately owned land, above the east rim of Wailau Valley on eastern Molokai. This unit is occupied by the plant *Melicope reflexa*, and includes the mixed herbland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane wet ecosystem (see Table 5). This unit also contains unoccupied habitat that is essential to the conservation of this species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Montane Wet—Unit 3 is not known to be occupied by *Adenophorus periens*, *Bidens wiebkei*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea mannii*, *C. procera*, *C. profuga*, *C. solanacea*, *Hesperomannia arborescens*, *Lysimachia maxima*, *Phyllostegia hispida*, *P. mannii*, *P. pilosa*, *Platanthera holochila*, *Pteris lidgatei*, *Schiedea laui*, *Stenogyne bifida*, or *Zanthoxylum hawaiiense*, we have determined this area to be essential for the conservation and recovery of these montane wet species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Montane Mesic—Unit 1 (and) *Palmeria dolei*—Unit 42—Montane Mesic (and)

*Pseudonestor xanthophrys*—Unit 42—Montane Mesic

This area consists of 257 ac (104 ha) of State land, and 559 ac (226 ha) of privately owned land from Kamiloloa to Makolelau in central Molokai. These

units are occupied by the plants *Alectryon macrococcus*, *Bidens wiebkei*, *Santalum haleakalae* var. *lanaiense*, and *Spermolepis hawaiiensis*, and include the mixed hermland and shrubland, the moisture regime, and canopy, subcanopy, and understory native plant species identified as physical or biological features in the montane mesic ecosystem (see Table 5). These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Montane Mesic—Unit 1 is not known to be occupied by *Asplenium dielirectum*, *Cyanea dunbariae*, *C. mannii*, *C. procerca*, *C. solanacea*, *Cyperus fauriei*, *Kadua laxiflora*, *Melicope mucronulata*, *Neraudia sericea*, *Plantago princeps*, or *Stenogyne bifida*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these montane mesic species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Wet Cliff—Unit 1 (and)

*Palmeria dolei*—Unit 43—Wet Cliff (and)

*Pseudonestor xanthophrys*—Unit 43—Wet Cliff

This area consists of 1,395 ac (565 ha) of State land, and 212 ac (86 ha) of privately owned land, and encircles the plateau between Pelekunu and Wailau valleys, in north-central Molokai. These units are occupied by the plants *Brighamia rockii*, *Canavalia molokaiensis*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea munroi*, and *Hibiscus arnottianus* ssp. *immaculatus*, and include the mixed hermland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see Table 5). These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Wet Cliff—Unit 1 is not known to be occupied by *Cyanea grimesiana* ssp. *grimesiana*, *Hesperomannia arborescens*, *Phyllostegia hispida*, *Pteris*

*lidgatei*, or *Stenogyne bifida*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Wet Cliff—Unit 2 (and)

*Palmeria dolei*—Unit 44—Wet Cliff (and)

*Pseudonestor xanthophrys*—Unit 44—Wet Cliff
