This area consists of 462 ac (187 ha) of State land, and 806 ac (326 ha) of privately owned land (partly within The Nature Conservancy's Pelekunu Preserve), along the rim of Pelekunu Valley from Kipapa Ridge to Mapulehu, in central Molokai. These units are occupied by the plants *Clermontia oblongifolia* ssp. *brevipes* and *Phyllostegia hispida*, and include the mixed hermland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see Table 5). These units also contain unoccupied habitat that is essential to the conservation of these species by providing the PCEs necessary for the expansion of the existing wild populations. Although Molokai—Wet Cliff—Unit 2 is not known to be occupied by *Brighamia rockii*, *Canavalia molokaiensis*, *Cyanea grimesiana* ssp. *grimesiana*, *C. munroi*, *Hesperomannia arborescens*, *Hibiscus arnottianus* ssp. *immaculatus*, *Pteris lidgatei*, or *Stenogyne bifida*, or by the forest birds, the akohekohe (*Palmeria dolei*) and kiwikiu (*Pseudonestor xanthophrys*), we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

Molokai—Wet Cliff—Unit 3 consists of 1,137 ac (460 ha) of State land, and 225 ac (91 ha) of privately owned land, along the rim of Wailau Valley from Mapulehu to Kahiwa Gulch, in eastern

Molokai. This unit includes the mixed hermland and shrubland, the moisture regime, and the subcanopy and understory native plant species identified as physical or biological features in the wet cliff ecosystem (see Table 5). Although Molokai—Wet Cliff—Unit 3 is not known to be occupied by *Brighamia rockii*, *Canavalia molokaiensis*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea grimesiana* ssp. *grimesiana*, *C. munroi*, *Hesperomannia arborescens*, *Hibiscus arnottianus* ssp. *immaculatus*, *Phyllostegia hispida*, *Pteris lidgatei*, or *Stenogyne bifida*, we have determined this area to be essential for the conservation and recovery of these wet cliff species because it provides the PCEs necessary for the reestablishment of wild populations within their historical range. Due to their small numbers of individuals or low population sizes, suitable habitat and space for expansion or reintroduction are essential to achieving population levels necessary for recovery.

## IX. Effects of Critical Habitat Designation

### Section 7 Consultation

Section 7(a)(2) of the Act requires Federal agencies, including the Service, to ensure that any action they fund, authorize, or carry out is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of designated critical habitat of such species. In addition, section 7(a)(4) of the Act requires Federal agencies to confer with the Service on any agency action which is likely to jeopardize the continued existence of any species proposed to be listed under the Act or result in the destruction or adverse modification of proposed critical habitat.

Decisions by the 5th and 9th Circuit Courts of Appeals have invalidated our regulatory definition of “destruction or adverse modification” (50 CFR 402.02) (see *Gifford Pinchot Task Force v. U.S. Fish and Wildlife Service*, 378 F. 3d 1059 (9th Cir. 2004) and *Sierra Club v. U.S. Fish and Wildlife Service*, 245 F.3d 434, 442F (5th Cir. 2001)), and we do not rely on this regulatory definition when analyzing whether an action is likely to destroy or adversely modify critical habitat. Under the statutory provisions of the Act, we determine destruction or adverse modification on the basis of whether, with implementation of the proposed Federal action, the affected critical habitat would continue to serve its intended conservation role for the species.

If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency (action agency) must enter into consultation with us. Examples of actions that are subject to the section 7 consultation process are actions on State, local, or private lands that require a Federal permit (such as a permit from the U.S. Army Corps of Engineers under section 404 of the Clean Water Act (33 U.S.C. 1251 *et seq.*) or a permit from the Service under section 10 of the Act) or that involve some other Federal action (such as funding from the Federal Highway Administration, Federal Aviation Administration, or the Federal Emergency Management Agency). Federal actions not affecting listed species or critical habitat, and actions on State, local, or private lands that are not federally funded or authorized, do not require section 7 consultation.

As a result of section 7 consultation, we may issue:

(1) A concurrence letter for Federal actions that may affect, but are not likely to adversely affect, listed species or critical habitat; or

(2) A biological opinion for Federal actions that may affect and are likely to adversely affect, listed species or critical habitat.

When we issue a biological opinion concluding that a project is likely to jeopardize the continued existence of a listed species and/or destroy or adversely modify critical habitat, we provide reasonable and prudent alternatives to the project, if any are identifiable, that would avoid the likelihood of jeopardy and/or destruction or adverse modification of critical habitat. We define "reasonable and prudent alternatives" (at 50 CFR 402.02) as alternative actions identified during consultation that:

(1) Can be implemented in a manner consistent with the intended purpose of the action,

(2) Can be implemented consistent with the scope of the Federal agency's legal authority and jurisdiction,

(3) Are economically and technologically feasible, and

(4) Would, in the Director's opinion, avoid the likelihood of jeopardizing the continued existence of the listed species and/or avoid the likelihood of destroying or adversely modifying critical habitat.

Reasonable and prudent alternatives can vary from slight project modifications to extensive redesign or relocation of the project. Costs associated with implementing a reasonable and prudent alternative are similarly variable.

Regulations at 50 CFR 402.16 require Federal agencies to reinitiate formal consultation on previously reviewed actions in instances where we have listed a new species or subsequently designated critical habitat that may be affected and the Federal agency has retained discretionary involvement or control over the action (or the agency's discretionary involvement or control is authorized by law). Consequently, Federal agencies sometimes may need to request reinitiation of consultation with us on actions for which formal consultation has been completed, if those actions with discretionary involvement or control may affect subsequently listed species or designated critical habitat.

#### *Application of the "Adverse Modification" Standard*

The key factor related to the adverse modification determination is whether, with implementation of the proposed Federal action, the affected critical habitat would continue to serve its intended conservation role for the species, or retain those physical or biological features that relate to the ability of the area to periodically support the species. Activities that may destroy or adversely modify critical habitat are those that alter the physical or biological features to an extent that appreciably reduces the conservation value of the critical habitat network for the 135 species identified in this final rule. As discussed above, the role of critical habitat is to support the life history needs of the species and provide for the conservation of the species.

Section 4(b)(8) of the Act requires us to briefly evaluate and describe, in any proposed or final regulation that designates critical habitat, activities involving a Federal action that may destroy or adversely modify such habitat, or that may be affected by such designation.

Activities that may affect critical habitat, when carried out, funded, or authorized by a Federal agency, should result in consultation for the 125 species. These activities include, but are not limited to:

(1) Federal actions that would appreciably degrade or destroy the physical or biological features for the species including, but not limited to, the following: Overgrazing; maintaining or increasing feral ungulate levels; clearing or cutting native live trees and shrubs (*e.g.*, woodcutting, bulldozing, construction, road building, mining, herbicide application); and taking actions that pose a risk of fire.

(2) Federal actions that would alter watershed characteristics in ways that

would appreciably reduce groundwater recharge or alter natural, wetland, aquatic, or vegetative communities. Such actions include new water diversion or impoundment, excess groundwater pumping, and manipulation of vegetation through activities such as the ones mentioned in (1), above.

(3) Recreational activities that may appreciably degrade vegetation.

(4) Mining sand or other minerals.

(5) Introducing or encouraging the spread of nonnative plant species.

(6) Importing nonnative species for research, agriculture, and aquaculture, and releasing biological control agents.

#### **X. Exemptions**

##### *Application of Section 4(a)(3) of the Act*

Section 4(a)(3)(B)(i) of the Act (16 U.S.C. 1533(a)(3)(B)(i)) provides that: "The Secretary shall not designate as critical habitat any lands or other geographic areas owned or controlled by the Department of Defense, or designated for its use, that are subject to an integrated natural resources management plan [INRMP] prepared under section 101 of the Sikes Act (16 U.S.C. 670a), if the Secretary determines in writing that such plan provides a benefit to the species for which critical habitat is proposed for designation." There are no Department of Defense (DOD) lands with a completed INRMP within the critical habitat designation.

#### **XI. Exclusions**

##### *Application of Section 4(b)(2) of the Act*

Section 4(b)(2) of the Act states that the Secretary shall designate or make revisions to critical habitat on the basis of the best available scientific data after taking into consideration the economic impact, national security impact, and any other relevant impacts of specifying any particular area as critical habitat. The Secretary may exclude an area from critical habitat if she determines that the benefits of such exclusion outweigh the benefits of specifying such area as part of the critical habitat, unless she determines, based on the best scientific data available, that the failure to designate such area as critical habitat will result in the extinction of the species.

In considering whether to exclude a particular area from the designation, we identify the benefits of including the area in the designation, identify the benefits of excluding the area from the designation, and evaluate whether the benefits of exclusion outweigh the benefits of inclusion. If the analysis indicates that the benefits of exclusion outweigh the benefits of inclusion, the

Secretary may exercise her discretion to exclude the area only if such exclusion would not result in the extinction of the species.

When identifying the benefits of inclusion for an area, we consider factors such as the additional regulatory benefits that area would receive from the protection from adverse modification or destruction as a result of actions with a Federal nexus; the educational benefits of mapping essential habitat for recovery of the listed species; and any benefits that may result from a designation due to State or Federal laws that may apply to critical habitat.

When identifying the benefits of exclusion, we consider, among other things, whether exclusion of a specific area is likely to result in the continuation, strengthening, or encouragement of partnerships that will result in future conservation. The Secretary places great weight on demonstrated partnerships, as in many cases they can lead to the implementation of conservation actions that provide benefits to the species and their habitat beyond those that are achievable through the designation of critical habitat and section 7 consultations, particularly on private lands. As most endangered or threatened species in Hawaii occur on private and other non-Federal lands, such conservation partnerships are of heightened importance on the islands of Hawaii.

In the case of the 125 Maui Nui species, the benefits of designating critical habitat include educational benefits resulting from identification of the features essential to the conservation of these species and the delineation of areas important for their recovery. Further, there may be additional benefits realized by providing landowners, stakeholders, and project proponents greater certainty about which specific areas are important for the Maui Nui species. Thus, critical habitat designation increases public awareness of the presence of the Maui Nui species and the importance of habitat protection and, in cases where a Federal nexus exists, increases habitat protection for these species due to the protection from adverse modification or destruction of critical habitat.

When we evaluate whether to include or exclude lands from critical habitat where there is a voluntary conservation partnership, we evaluate the evidence of a cooperative relationship, the likelihood that it will result in meaningful conservation for the species at issue, and the possibility it will encourage others to enter into similar

partnerships. Other factors we may consider include, but are not limited to, whether any management plan that may be under consideration is finalized; how it provides for the conservation of the essential physical or biological features; whether there is a reasonable expectation that the conservation management strategies and actions contained in a management plan will be implemented into the future; whether the conservation strategies in the plan are likely to be effective; and whether the plan contains a monitoring program or adaptive management to ensure that the conservation measures are effective and can be adapted in the future in response to new information.

Management plans or agreements, which may maintain the level of protection for the species or provide greater conservation benefits than would be realized due solely to the regulatory effect of critical habitat, may serve to reduce or eliminate the benefits of designating an area as critical habitat.

After identifying the benefits of inclusion and the benefits of exclusion, we carefully weigh the two sides to evaluate whether the benefits of exclusion outweigh the benefits of inclusion. If our analysis indicates that the benefits of exclusion outweigh the benefits of inclusion, we then determine whether exclusion of the particular area would result in the extinction of the species. If exclusion of an area from critical habitat will result in extinction, it will not be excluded from the designation.

Based on the information provided by entities seeking exclusion, as well as any additional public comments received, we evaluated whether certain lands in the proposed critical habitat were appropriate for exclusion from this final designation pursuant to section 4(b)(2) of the Act. We are excluding a total of 84,891 ac (34,355 ha) of lands on Maui, Molokai, and Lanai that meet the definition of critical habitat from the final critical habitat rule under section 4(b)(2) of the Act, based on conservation partnerships, land and resource management plans, or "other relevant factors." On the islands of Maui and Molokai, approximately 59,478 ac (24,070 ha) are excluded under section 4(b)(2) of the Act. All lands within proposed critical habitat on Lanai (14 proposed plant units and 10 proposed tree snail units; 25,413 ac (10,284 ha)) are excluded from final designation pursuant to section 4(b)(2) of the Act for the reasons described below. No lands on Kahoolawe are excluded from the final critical habitat designation. The Secretary has excluded lands under section 4(b)(2) of the Act upon a

determination that the benefits of excluding such areas outweigh the benefits of including them in critical habitat, and that the exclusion will not result in the extinction of the species.

#### *Exclusions Based on Economic Impacts*

Under section 4(b)(2) of the Act, we consider the economic impacts of specifying any particular area as critical habitat. In order to consider economic impacts, we prepared a draft economic analysis of the proposed critical habitat designation and related factors (IEC 2013). The draft analysis, dated January 14, 2013, was made available for public review from January 31, 2013, through March 4, 2013 (78 FR 6785; January 31, 2013), and was also available during the final comment period, which ran from June 10, 2015, through June 25, 2015 (80 FR 32922). Following the close of the comment period, a final analysis of the potential economic effects of the designation was developed taking into consideration the public comments and any new information received (Final Economic Analysis (FEA) 2015).

The intent of the FEA is to quantify the economic impacts of all potential conservation efforts for the Maui Nui species; some of these costs will likely be incurred regardless of whether we designate critical habitat (such costs are considered "baseline" costs). The economic impact of the final critical habitat designation is analyzed by comparing scenarios both "with critical habitat" and "without critical habitat." The "without critical habitat" scenario represents the baseline for the analysis, considering protections already in place for the species (e.g., under the Federal listing and other Federal, State, and local regulations). The baseline, therefore, represents the costs incurred regardless of whether critical habitat is designated. The "with critical habitat" scenario describes the incremental impacts associated specifically with the designation of critical habitat for the species. The incremental conservation efforts and associated impacts are those not expected to occur absent the designation of critical habitat for the species. In other words, the incremental costs are those attributable solely to the designation of critical habitat above and beyond the baseline costs; these are the costs we consider in the final designation of critical habitat. The economic analysis uses the historical record to inform its assessment of potential future impacts of critical habitat and forecasts both baseline and incremental impacts likely to occur during the 10-year period following the designation of critical habitat. This period was determined to be the

appropriate period for analysis because limited planning information was available for most activities to forecast activity levels for projects beyond a 10-year timeframe.

The FEA also addresses how potential economic impacts are likely to be distributed, including an assessment of any local or regional impacts of habitat conservation and the potential effects of conservation activities on government agencies, private businesses, and individuals. The FEA measures lost economic efficiency associated with residential and commercial development projects and activities, such as economic impacts on small entities and the energy industry. Decision-makers can use this information to assess whether the effects of the designation might unduly burden a particular group or economic sector.

The primary purpose of the economic analysis is to estimate the potential incremental economic impacts associated with the designation of critical habitat for the Maui Nui species. This information is intended to assist the Service in considering whether to exclude any particular areas from critical habitat designation under section 4(b)(2) of the Act. The FEA analyzes economic impacts of the conservation efforts for the Maui Nui species associated with the following categories of activity: Residential and commercial development projects, energy projects, and grazing and farming activities. The FEA estimates approximately \$100,000 in present value incremental impacts over a period of 10 years associated with development and energy projects, or roughly \$20,000 in annualized impacts. A further \$5,000 in total potential impacts were estimated for energy projects in areas considered for exclusion, or roughly \$600 in annualized impacts (IEc 2015, p. ES-7). However, the FEA concluded that the direct effect of designation of critical habitat on any of these activities (*i.e.*, the regulation of these activities through section 7 consultation to avoid adverse modification of critical habitat) is likely to be limited. The costs estimated reflect the cost of additional effort under section 7 consultation and the potential costs of project modifications as a result of critical habitat.

The FEA additionally considered the potential indirect effects of the designation, including, for example, perceptual effects on land values, or the potential for third-party lawsuits. Given the uncertainties surrounding the probability of any such effects occurring, and if so, the magnitude of any such effects, quantification of the

potential indirect effects of the designation was not possible. The FEA acknowledges, however, that these uncertainties result in an underestimate of the quantified impacts of the designation (IEc 2015, p. 5-23).

After reviewing the economic analysis the Secretary is not exercising her discretion to exclude any areas from this designation of critical habitat for the Maui Nui species based on economic impacts.

A copy of the FEA with supporting documents may be obtained by contacting the Pacific Islands Fish and Wildlife Office (see **ADDRESSES**) or by downloading from the Internet at <http://www.regulations.gov>.

#### *Exclusions Based on National Security Impacts*

Under section 4(b)(2) of the Act, we consider whether there are lands owned or managed by the DOD where a national security impact might exist. In preparing this final rule, we have determined that the lands within the designation of critical habitat for the Maui Nui species are not owned or managed by the DOD, therefore we anticipate no impact on national security. Consequently, the Secretary is not exercising her discretion to exclude any areas from this final designation based on impacts on national security.

#### *Exclusions Based on Other Relevant Factors*

Under section 4(b)(2) of the Act, we consider any other relevant impacts, in addition to economic impacts and impacts to national security. We consider a number of factors, including whether the landowners have developed any HCPs or other management plans for the area, or whether there are conservation partnerships that would be encouraged by designation of, or exclusion from, critical habitat.

The establishment and encouragement of strong conservation partnerships with non-Federal landowners is especially important in the State of Hawaii, where there are relatively few lands under Federal ownership; we cannot achieve the conservation and recovery of listed species in Hawaii without the help and cooperation of non-Federal landowners. In some cases we are excluding areas where landowners are already actively participating in the restoration or management of habitats essential to listed species, or taking steps to protect and increase numbers of individuals or populations of listed species that occur on their properties. In other cases, we are excluding areas to support existing partnerships and encourage new ones

that will provide important conservation benefits to the Maui Nui species.

More than 60 percent of the United States is privately owned (Lubowski *et al.* 2006, p. 35), and at least 80 percent of endangered or threatened species occur either partially or solely on private lands (Crouse *et al.* 2002, p. 720). In the State of Hawaii, 84 percent of landownership is non-Federal (U.S. General Services Administration, in Western States Tourism Policy Council, 2009). Stein *et al.* (2008, p. 340) found that only about 12 percent of listed species were found almost exclusively on Federal lands (90 to 100 percent of their known occurrences restricted to Federal lands) and that 50 percent of listed species are not known to occur on Federal lands at all. Given the distribution of listed species with respect to landownership, conservation of listed species in many parts of the United States is dependent upon working partnerships with a wide variety of entities and the voluntary cooperation of many non-Federal landowners (Wilcove and Chen 1998, p. 1,407; Crouse *et al.* 2002, p. 720; James 2002, p. 271). Building partnerships and promoting voluntary cooperation of landowners is essential to understanding the status of species on non-Federal lands and necessary to implement recovery actions, such as the reintroduction of listed species, habitat restoration, and habitat protection.

Many non-Federal landowners derive satisfaction from contributing to endangered species recovery. Conservation agreements with non-Federal landowners, safe harbor agreements, other conservation agreements, easements, and State and local regulations enhance species conservation by extending species protections beyond those available through section 7 consultations. We encourage non-Federal landowners to enter into conservation agreements based on a view that we can achieve greater species conservation on non-Federal lands through such partnerships than we can through regulatory methods alone (USFWS and NOAA 1996c (61 FR 63854, December 2, 1996)).

Many private landowners, however, are wary of the possible consequences of attracting endangered species to their property. Mounting evidence suggests that some regulatory actions by the government, while well intentioned and required by law, can (under certain circumstances) have unintended negative consequences for the conservation of species on private lands (Wilcove *et al.* 1996, pp. 5-6; Bean 2002, pp. 2-3; James 2002, pp. 270-271;

Koch 2002, pp. 2–3). Many landowners fear a decline in their property value due to real or perceived restrictions on land-use options where endangered or threatened species are found. Consequently, harboring endangered species is viewed by many landowners as a liability. This perception results in anti-conservation incentives because maintaining habitats that harbor endangered species represents a risk to future economic opportunities (Main *et al.* 1999, pp. 1,264–1,265; Brook *et al.* 2003, pp. 1,644–1,648).

Because so many important conservation areas for the Maui Nui species occur on lands managed by non-Federal entities, collaborative relationships are essential for their recovery. The Maui Nui species and their habitat are expected to benefit substantially from voluntary land management actions that implement appropriate and effective conservation strategies, or that add to our bank of knowledge about the species and their ecological needs. The conservation benefits of critical habitat, on the other hand, are primarily regulatory or prohibitive in nature. Where consistent with the discretion provided by the Act, the Service believes it is both desirable and necessary to implement policies that provide positive incentives to non-Federal landowners and land managers to voluntarily conserve natural resources and to remove or reduce disincentives to conservation (Wilcove *et al.* 1996, pp. 1–14; Bean 2002, p. 2). Thus, we believe it is imperative for the

recovery of the Maui Nui species to support ongoing positive management efforts with non-Federal conservation partners, and to provide positive incentives for other non-Federal land managers who might be considering implementing voluntary conservation activities but have concerns about incurring incidental regulatory, administrative, or economic impacts. Many landowners perceive critical habitat as an unnecessary and duplicative regulatory burden, particularly if those landowners are already developing and implementing conservation and management plans that benefit listed species on their lands. In certain cases, we believe the exclusion of non-Federal lands that are under positive conservation management is likely to strengthen the partnership between the Service and the landowner, which may encourage other conservation partnerships with that landowner in the future. As an added benefit, by modeling positive conservation partnerships that may result in exclusion from critical habitat, such exclusion may also help encourage the formation of new partnerships with other landowners, with consequent benefits to the listed species. For all of these reasons, we place great weight on the value of conservation partnerships with non-Federal landowners when considering the potential benefits of inclusion versus exclusion of areas in critical habitat.

We are excluding a total of approximately 84,891 ac (34,355 ha) of

lands on Maui, Molokai, and Lanai that meet the definition of critical habitat from the final critical habitat rule under section 4(b)(2) of the Act. We are excluding these non-Federal lands because the development and implementation of management plans, and ability to access private lands necessary for surveys or monitoring designed to promote the conservation of these federally listed plant species and their habitat, as well as provide for other native species of concern, are important outcomes of these conservation partnerships which reduce the benefits of overlying a designation of critical habitat. Importantly, such exclusions also are likely to result in the continuation, strengthening, or encouragement of important conservation partnerships that will contribute to the long-term conservation of the Maui Nui species. The Secretary has determined that the benefits of excluding these areas outweigh the benefits of including them in critical habitat, and that such exclusion will not result in the extinction of the species. The specific areas excluded are detailed in Table 8. As a result of our evaluation of whether the benefits of exclusion outweigh those of inclusion in critical habitat, as detailed below, we have excluded approximately 59,479 ac (24,070 ha) on the islands of Maui and Molokai, and 25,413 ac (10,284 ha) on the island of Lanai (resulting in the exclusion of all lands proposed as critical habitat on Lanai). No lands on Kahoolawe were excluded.

TABLE 9—AREAS EXCLUDED FROM CRITICAL HABITAT DESIGNATION BY CRITICAL HABITAT UNIT AND LANDOWNER FOR THE ISLANDS OF MAUI, MOLOKAI, AND LANAI

Unit Name	Landowner or Land Manager	Area Excluded from Critical Habitat, in Acres (Hectares)	Land Management Plan or Conservation Plan
Maui—Coastal—Unit 7	Kaupo Ranch	71 (29)	Leeward Haleakala Watershed Restoration Partnership Management Plan, East Maui Watershed Partnership Management Plan, Southern Haleakala Forest Restoration Project
Maui—Coastal—Unit 9	Maui Land & Pineapple Company	205 (83)	Puu Kukui Watershed Preserve Management Plan, West Maui Mountains Watershed Partnership, Tree Snail Habitat Protection Agreement

Maui—Lowland Dry—Unit 1	Ulupalakua Ranch; Haleakala Ranch; Nuu Mauka Ranch; Kaupo Ranch	2,672 (1,081) 2,539 (1,028) 1,221 (494) <u>621 (251)</u> 7,053 (2,854)	Leeward Haleakala Watershed Restoration Partnership Management Plan, HCP, Partners for Fish and Wildlife Agreements; East Maui Watershed Partnership Management Plan, Native Watershed Forest Restoration Conservation Plan, Southern Haleakala Forest Restoration Project
Maui—Lowland Dry—Unit 2	Haleakala Ranch	732 (296)	East Maui Watershed Partnership Management Plan, Partners for Fish and Wildlife Agreements
Maui—Lowland Dry—Unit 3	Ulupalakua Ranch	901 (365)	Leeward Haleakala Watershed Restoration Partnership Management Plan, HCP, Partners for Fish and Wildlife Agreements
Maui—Lowland Dry—Unit 5	Wailuku Water Company;	704 (285) 75 (31)	West Maui Mountains Watershed Partnership Management Plan, Partners for Fish and

	Kamehameha Schools; Makila Land Company; Kahoma Land Company	911 (369) <u>0.1 (0.05)</u> 1,690 (685)	Wildlife Agreements

Here we present an overview of each of the areas considered for exclusion, followed by a summary of our analysis of the benefits of inclusion versus exclusion in each case. Maps of each area excluded are provided in our

supporting document “Supplemental Information for the Designation and Nondesignation of Critical Habitat on Molokai, Lanai, Maui, and Kahoolawe for 135 Species,” available at <http://www.regulations.gov> (see ADDRESSES).

The Nature Conservancy

Kapunakea Preserve Operational Plan, Waikamoi Preserve Long-Range Management Plan, Kamakou Preserve Management Plan, and Moomomi Preserve Long-Range Management Plan

In this final designation, the Secretary has exercised her authority to exclude from critical habitat lands owned or managed by The Nature Conservancy, totaling 10,056 ac (4,062 ha) on the islands of Maui and Molokai. The Nature Conservancy (TNC) is a proven conservation partner, as demonstrated, in part, by their ongoing management programs, documented in long-range management plans and yearly operational plans for TNC’s Kapunakea Preserve on west Maui and Waikamoi Preserve on east Maui, and Kamakou Preserve and Moomomi Preserve on Molokai. These preserves were established by grants of perpetual conservation easements from the private landowners to TNC, or are owned by TNC, and are permanently dedicated to conservation. The Nature Conservancy’s management and protection of these areas currently provide significant conservation benefits to 36 plant and 2 forest bird species that are reported from one or more of the preserves and their habitat. These areas also provide for the conservation and recovery of 69 other plant species. For the reasons described below, we have determined that the benefits of excluding these lands owned or managed by The Nature Conservancy outweigh the benefits of including them in critical habitat. The land is distributed among several critical habitat units, as discussed below.

Maui

Kapunakea Preserve encompasses 1,340 ac (542 ha) on west Maui. This preserve was established through a perpetual conservation easement with Pioneer Mill Company, Ltd. (succeeded by Kaanapali Land Management Corp.), in 1992, to protect the natural, ecological, and wildlife features of one of the highest quality native areas on west Maui (TNCH 2008, p. 5). Eleven plant species included in this rule (*Alectryon macrococcus*, *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Cyanea glabra*, *C. lobata*, *Cyrtandra filipes*, *C. munroi*, *Platanthera holochila*, and *Santalum*

*haleakalae* var. *lanaiense*) are reported from the preserve. Kapunakea Preserve falls within four critical habitat units for plants (Maui—Lowland Mesic—Unit 2, Maui—Lowland Wet—Unit 6, Maui—Montane Wet—Unit 6, and Maui—Wet Cliff—Unit 7), and six units for the akohekohe and kiwikiu (*Palmeria dolei*—Unit 7—Lowland Wet, *Pseudonestor xanthophrys*—Unit 7—Lowland Wet, *Palmeria dolei*—Unit 15—Montane Wet, *Pseudonestor xanthophrys*—Unit 15—Montane Wet, *Palmeria dolei*—Unit 36—Wet Cliff, *Pseudonestor xanthophrys*—Unit 36—Wet Cliff). These units are occupied by the plants *Bidens conjuncta*, *Calamagrostis hillebrandii*, *Ctenitis squamigera*, *Cyanea kunthiana*, *Cyrtandra filipes*, *C. munroi*, *Geranium hillebrandii*, *Myrsine vaccinioides*, *Remya maiensis*, *Sanicula purpurea*, *Santalum haleakalae* var. *lanaiense*, and *Zanthoxylum hawaiiense*. This area contains unoccupied habitat that is essential to the conservation of 29 plant species, including *Acaena exigua*, *Alectryon macrococcus*, *Asplenium dielerectum*, *Bidens campylotheca* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Clermontia oblongifolia* ssp. *mauiensis*, *Colubrina oppositifolia*, *Cyanea asplenifolia*, *C. glabra*, *C. lobata*, *C. magnalyx*, *Cyrtandra oxybapha*, *Diplazium molokaiense*, *Dubautia plantaginea* ssp. *humilis*, *Gouania vitifolia*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyrifolium*, *Kadua laxiflora*, *Lysimachia lydgatei*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Plantago princeps*, *Platanthera holochila*, *Pteris lidgatei*, *Tetramolopium capillare*, and *Wikstroemia villosa*, as well as the birds akohekohe and kiwikiu.

Waikamoi Preserve encompasses 5,141 ac (2,080 ha) along the northern boundary of Haleakala National Park on east Maui. The preserve was established in 1983, through a perpetual conservation easement with Haleakala Ranch Company, to protect one of the largest intact native rain forests in Hawaii (TNCH 2006a, p. 3). Eight plant species included in this rule (*Asplenium peruvianum* var. *insulare*, *Bidens campylotheca* ssp. *pentamera*, *Cyanea horrida*, *C. kunthiana*, *Diplazium molokaiense*, *Geranium arboreum*, *G. multiflorum*, and *Phyllostegia pilosa*), and the akohekohe and kiwikiu, are reported from the preserve. Waikamoi Preserve falls within 8 critical habitat units for plants (Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane

Mesic—Unit 1, Maui—Subalpine—Unit 1, Maui—Subalpine—Unit 2, Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 3, and Maui—Wet Cliff—Unit 1), and 16 units for the akohekohe and kiwikiu (*Palmeria dolei*—Unit 10—Montane Wet, *Pseudonestor xanthophrys*—Unit 10—Montane Wet, *Palmeria dolei*—Unit 11—Montane Wet, *Pseudonestor xanthophrys*—Unit 11—Montane Wet, *Palmeria dolei*—Unit 18—Montane Mesic, *Pseudonestor xanthophrys*—Unit 18—Montane Mesic, *Palmeria dolei*—Unit 24—Subalpine, *Pseudonestor xanthophrys*—Unit 24—Subalpine, *Palmeria dolei*—Unit 25—Subalpine, *Pseudonestor xanthophrys*—Unit 25—Subalpine, *Palmeria dolei*—Unit 26—Dry Cliff, *Pseudonestor xanthophrys*—Unit 26—Dry Cliff, *Palmeria dolei*—Unit 27—Dry Cliff, *Pseudonestor xanthophrys*—Unit 27—Dry Cliff, *Palmeria dolei*—Unit 30—Wet Cliff, and *Pseudonestor xanthophrys*—Unit 30—Wet Cliff). These units are occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Asplenium dielerectum*, *A. peruvianum* var. *insulare*, *Bidens campylotheca* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, *Clermontia lindseyana*, *C. samuelii*, *Cyanea copelandii* ssp. *haleakalensis*, *C. duvalliorum*, *C. hamatiflora* ssp. *hamatiflora*, *C. horrida*, *C. kunthiana*, *C. maritae*, *C. mceldowneyi*, *C. obtusa*, *Cyrtandra ferripilosa*, *C. oxybapha*, *Diplazium molokaiense*, *Geranium arboreum*, *G. hanaense*, *G. multiflorum*, *Huperzia mannii*, *Melicope adscendens*, *M. balloui*, *Neraudia sericea*, *Phyllostegia pilosa*, *Schiedea haleakalensis*, and *Wikstroemia villosa*, and the akohekohe and kiwikiu. This area contains unoccupied habitat that is essential to the conservation of 16 other plant species (*Adenophorus perieni*, *Alectryon macrococcus*, *Bidens campylotheca* ssp. *waihoiense*, *Clermontia oblongifolia* ssp. *mauiensis*, *Cyanea glabra*, *Melicope ovalis*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *P. haliakalae*, *P. mannii*, *Plantago princeps*, *Platanthera holochila*, *Santalum haleakalae* var. *lanaiense*, *Schiedea jacobii*, *Solanum incompletum*, and *Zanthoxylum hawaiiense*).

Molokai

Kamakou Preserve is located in the east Molokai mountains and encompasses 2,633 ac (1,066 ha). This preserve was established in 1982, through a perpetual conservation easement with Molokai Ranch, to protect endemic forest bird habitat and is the primary source area for ground and surface water on the island (TNCH 2006b, p. 2). Nineteen plant species

included in this rule (*Adenophorus periens*, *Asplenium dielerectum*, *Bidens wiebkei*, *Canavalia molokaiensis*, *Clermontia oblongifolia* ssp. *brevipes*, *Cyanea mannii*, *C. procera*, *C. solanacea*, *Cyperus fauriei*, *Lysimachia maxima*, *Melicope mucronulata*, *Phyllostegia hispida*, *P. mannii*, *Platanthera holochila*, *Santalum haleakalae* var. *lanaiense*, *Schiedea laui*, *Stenogyne bifida*, *Vigna o-wahuensis*, and *Zanthoxylum hawaiiense*) are reported from the preserve. Kamakou Preserve falls within four critical habitat units for plants (Molokai—Lowland Mesic—Unit 1, Molokai—Montane Wet—Unit 1, Molokai—Montane Mesic—Unit 1, and Molokai—Wet Cliff—Unit 2) and eight units for the akohekohe and kiwikiu (*Palmeria dolei*—Unit 37—Lowland Mesic, *Pseudonestor xanthophrys*—Unit 37—Lowland Mesic, *Palmeria dolei*—Unit 40—Montane Wet, *Pseudonestor xanthophrys*—Unit 40—Montane Wet, *Palmeria dolei*—Unit 42—Montane Mesic, *Pseudonestor xanthophrys*—Unit 42—Montane Mesic, *Palmeria dolei*—Unit 44—Wet Cliff, and *Pseudonestor xanthophrys*—Unit 44—Wet Cliff). These units are occupied by the plants *Alectryon macrococcus*, *Bidens wiebkei*, *Clermontia oblongifolia* ssp. *brevipes*, *Ctenitis squamigera*, *Cyanea dunbariae*, *C. mannii*, *C. profuga*, *Cyperus fauriei*, *Cyrtandra filipes*, *Gouania hillebrandii*, *Labordia triflora*, *Neraudia sericea*, *Phyllostegia hispida*, *Pteris lidgatei*, *Santalum haleakalae* var. *lanaiense*, *S. lydgatei*, *S. sarmentosa*, *Silene alexandri*, *S. lanceolata*, *Spermolepis hawaiiensis*, and *Zanthoxylum hawaiiense*. This area contains unoccupied habitat that is essential for the conservation of 29 other plant species (*Adenophorus periens*, *Asplenium dielerectum*, *Bonania menziesii*, *Brighamia rockii*, *Canavalia molokaiensis*, *Cyanea grimesiana* ssp. *grimesiana*, *C. munroi*, *C. procera*, *C. solanacea*, *Diplazium molokaiense*, *Eugenia koolauensis*, *Festuca molokaiensis*, *Flueggea neowawraea*, *Hesperomannia arborescens*, *Hibiscus arnottianus* ssp. *immaculatus*, *Isodendron pyriformium*, *Kadua laxiflora*, *Lysimachia maxima*, *Melicope mucronulata*, *M. reflexa*, *Phyllostegia haliakalae*, *P. mannii*, *P. pilosa*, *Plantago princeps*, *Platanthera holochila*, *Schiedea laui*, and *Sesbania tomentosa*, *Stenogyne bifida*, and *Vigna o-wahuensis*), as well as the birds akohekohe and kiwikiu.

Moomomi Preserve encompasses 924 ac (374 ha) along the northwest shore of Molokai that are owned by TNC. This preserve was established in 1988, to

protect the most intact coastal ecosystem in Hawaii, with nesting seabirds, nesting green sea turtles, and a variety of native coastal plants (TNCH 2005, pp. 2–3). One plant species included in this rule, *Tetramolopium rockii*, is reported from the preserve. Moomomi Preserve falls within one critical habitat unit, Molokai—Coastal—Unit 2. This unit is occupied by *Marsilea villosa*. This area contains unoccupied habitat that is essential to the conservation of 11 other plant species (*Bidens wiebkei*, *Brighamia rockii*, *Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, *H. brackenridgei*, *Ischaemum byrone*, *Peucedanum sandwicense*, *Pittosporum halophilum*, *Schenkia sebaeoides*, and *Sesbania tomentosa*).

All four preserves were established by grants of perpetual conservation easements from the private landowners to TNC, or are owned by TNC, and are included in the State's Natural Area Partnership (NAP) programs, which provide matching funds for the management of private lands dedicated to conservation (TNCH 2005, pp. 2–3; TNCH 2006a, p. 3; TNCH 2006b, p. 2; TNCH 2008, p. 50). These partnerships with the State began in 1983 (with Haleakala Ranch) for Waikamoi, and were followed in 1992 (with Kaanapali Land Management Corporation) for Kapunakea, in 1995 (with Molokai Ranch) for Kamakou, and in 1995 for Moomomi (TNC-owned). Under the NAP program, the State of Hawaii provides matching funds on a two-for-one basis for management of private lands dedicated to conservation. In order to qualify for this program, the land must be dedicated in perpetuity through transfer of fee title or a conservation easement to the State or a cooperating entity. The land must be managed by the cooperating entity or a qualified landowner according to a detailed management plan approved by the Board of Land and Natural Resources. Once approved, the 6-year partnership agreement between the State and the managing entity is automatically renewed each year so that there are always 6 years remaining in the term, although the management plan is updated and funding amounts are reauthorized by the board at least every 6 years. By April 1 of any year, the managing partner may notify the State that it does not intend to renew the agreement; however, in such case, the partnership agreement remains in effect for the balance of the existing 6-year term, and the conservation easement remains in full effect in perpetuity. The conservation easement may be revoked

by the landowner only if State funding is terminated without the concurrence of the landowner and cooperating entity. Prior to terminating funding, the State must conduct one or more public hearings. The NAP program is funded through real estate conveyance taxes placed in a Natural Area Reserve Fund. Participants in the NAP program must provide annual reports to the DLNR, and the DLNR makes annual inspections of the work in the reserve areas (see State of Hawaii 1999, H.R.S. 195–D; State of Hawaii 1996, H.A.R. 13–210).

Management programs within the preserves are documented in long-range management plans and yearly operational plans. These plans detail management measures that protect, restore, and enhance rare plants and animals and their habitats within the preserves and in adjacent areas. These management measures address factors that pose threats to the Maui Nui species in this final rule, including control of nonnative species of ungulates, rodents, and weeds. In addition, habitat restoration and monitoring are also included in these plans.

The primary management goals for each of the four TNC preserves are to: (1) Prevent degradation of native forest and shrubland by reducing feral ungulate damage; (2) improve or maintain the integrity of native ecosystems in selected areas of the preserve by reducing the effects of nonnative plants; (3) conduct small mammal control and reduce their negative impacts where possible; (4) monitor and track the biological and physical resources in the preserve and evaluate changes in these resources over time, and encourage biological and environmental research; (5) prevent extinction of rare species in the preserve; (6) build public understanding and support for the preservation of natural areas, and enlist volunteer assistance for preserve management; and (7) protect the resources from fires in and around the preserve (applicable to preserves in high fire-risk areas) (TNCH 2005, 148 pp. + appendices; TNCH 2006a, 23 pp. + appendices; TNCH 2006b, 21 pp. + appendices; TNCH 2008, 30 pp.).

The goal of TNC's ungulate program (see (1), above) is to bring feral ungulate populations to zero within the preserves as rapidly as possible, and to prevent domestic livestock from entering a preserve. Specific management actions to address feral ungulate impacts include the construction of fences, including strategic fences (fences placed in proximity to natural barriers such as cliffs); annual monitoring of ungulate

presence in transects; monthly boundary fence inspections; and trained staff and volunteer hunting. As axis deer also pose a threat to the preserves, TNC is a member of the Maui Axis Deer Group (MADG), and TNC meets regularly with MADG to seek management solutions. Ungulate management actions also include working with community hunters in conjunction with watershed partnerships for each island. By monitoring ungulate activity within each of the preserves, the staff is able to assess the success of the hunting program. If increased hunting pressure does not reduce feral ungulate activity in a preserve, preserve staff work with the hunting group to identify and implement alternative methods (TNCH 2005, pp. 7–8; TNCH 2006a, pp. 7–10; TNCH 2006b, pp. 8–9; TNCH 2008, pp. 9–10).

The nonnative plant control program (see (2), above) for each of the four TNC preserves focuses on controlling habitat-modifying nonnative plants (weeds) in intact native communities and preventing the introduction of additional nonnative plants. Based on the degree of threat to native ecosystems, weed priority lists have been compiled for each of the preserves, and control and monitoring of the highest priority species are ongoing. Weeds are controlled manually, chemically, or through a combination of both. Preventive measures (prevention protocol) are required by all who enter each of the preserves. This protocol includes such things as brushing footwear before entering the preserve to remove seeds of nonnative plants. Weeds are monitored along transects annually. Weed priority maps are maintained semi-annually. Staff participate as members of the Melastome Action Committee and the Maui and Molokai Invasive Species committees (MISC and MoMISC), and cooperate with the State Division of Conservation and Resources Enforcement (DOCARE) in marijuana control, as needed (TNCH 2005, pp. 8–9; TNCH 2006a, pp. 11–13; TNCH 2006b, pp. 10–12; TNCH 2008, pp. 11–13).

The Nature Conservancy controls or prevents entry of nonnative mammals such as rats (*Rattus* spp.), cats (*Felis catus*), mongoose (*Herpestes auropunctatus*), and dogs (*Canis familiaris*), on their preserves (see (3), above). These mammals have negative impacts on reproduction and persistence of native plants and animals. Independent studies and research regarding the effects of small nonnative mammals on native

ecosystems on all four preserves is encouraged by TNC. Small mammal trapping is conducted in Moomomi Preserve to protect ground-nesting native seabirds from predation (TNCH 2005, p. 6). While the most effective control methods for rats on TNC preserves are still under investigation, an intensive rat baiting program is in place at Kamakou Preserve to control rats, which prey upon native snails and plants (TNCH 2006a, pp. 2, 6; TNCH 2009b, p. 21). The Nature Conservancy's predator control program is directed by adaptive management (TNCH 2010a, pp. 3–5).

Natural resource monitoring and research address the need to track the biological and physical resources of the preserves and evaluate changes in these resources to guide management programs, and contribute to prevention of extinction of rare species (see (4) and (5), above). Vegetation is monitored throughout each preserve to document long-term ecological changes, and rare plant species are monitored to assess population status. The Nature Conservancy provides logistical and other support to PEPP, including implementing threat abatement measures on their preserves (TNCH 2010a, p. 13). Bird surveys are conducted every 5 years to document the relative abundance of all bird species in the preserves (TNCH 2010b, p. 16). Portions of the four preserves are adjacent to other areas managed to protect natural resources. Agreements with those land managers are used to coordinate management efforts, and to share staff, equipment, and expertise to maximize management efficiency. The Nature Conservancy takes an active part in planning and coordinating conservation actions with, and is a member of, the East Maui Watershed Partnership (EMWP), the West Maui Mountains Watershed Partnership (WMMWP), and the East Molokai Watershed Partnership (EMOWP) (TNCH 2006a, p. 3; TNCH 2008, p. 21; TNCH 2010a, p. 2).

The Nature Conservancy's goal to increase conservation and advocacy for native ecosystems in Hawaii is also implemented through their public outreach program (see (6), above). The Nature Conservancy provides sites and volunteer work for youth groups such as Ho'ikaika and AmeriCorps, and summer internships for youth and young adults (Alu Like, State Summer Youth Employment Program, Molokai Environmental Preservation Organization, and the Natural Resources Academy), providing students with hands-on experience in natural resource conservation. Other community groups,

such as the Molokai Advisory Council, Molokai Hunting Working Group, and Kamalo Conservation Advisors, are encouraged to participate in the decision-making process for TNC's natural resources programs. The Nature Conservancy staff present slide shows and talks as requested by community and school groups, and lead guided hikes in their preserves for public schools and targeted community members. The Nature Conservancy produces a quarterly newsletter distributed on Molokai to inform the local community regarding conservation activities and opportunities (TNCH 2006b, pp. 18–19; TNCH 2008, p. 20).

Fire management is an important goal for two Molokai preserves: Kamakou Preserve on Molokai and Kapunakea Preserve on west Maui (TNCH 2006b, p. 15; TNCH 2008, p. 22) (see (7), above). Wildfire management plans are updated annually. Staff is provided with fire suppression training, roads are maintained for access and as fire breaks, and equipment is supplied as needed to allow immediate response to fire threats (TNCH 2005, p. 13).

Our records indicate that between 2010 until 2015 there were no consultations conducted regarding projects receiving Federal funding on these TNC preserves. We believe that there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. In addition, all of the management actions detailed above will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 105 plant and 2 forest bird species and their habitat.

Maui Land and Pineapple Company, Inc.

Puu Kukui Watershed Preserve Management Plan, West Maui Mountains Watershed Partnership, and Tree Snail Habitat Protection Agreement

In this final designation, the Secretary has exercised her authority to exclude 8,931 ac (3,614 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned and managed by Maui Land and Pineapple Company (ML & P). Maui Land and Pineapple Company is a proven conservation partner with an established track record of voluntary protection and management of listed species as demonstrated, in part, by their ongoing management program for the Puu Kukui Watershed Preserve (Puu Kukui WP), their participation in the WMMWP, and the tree snail habitat protection agreement for ML & P's Puu

Kukui WP on west Maui. Puu Kukui WP, established in 1988, is permanently dedicated to conservation. The actions of ML & P provide for the conservation of 44 plants, 2 forest birds, and Newcomb's tree snail that occur on their lands and their habitat. For the reasons described below, we have determined that the benefits of excluding lands owned by Maui Land and Pineapple Company outweigh the benefits of including them in critical habitat.

Puu Kukui WP is the largest privately owned watershed preserve in the State, and encompasses over 8,600 ac (3,480 ha) of ML & P's lands on west Maui. The forest, shrubland, and bogs within the preserve serve as a significant water source for west Maui residents and industries. Fourteen plant species (*Bidens conjuncta*, *Ctenitis squamigera*, *Cyanea asplenifolia*, *C. kunthiana*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. munroi*, *Hesperomannia arborescens*, *H. arbuscula*, *Myrsine vaccinioides*, *Sanicula purpurea*, *Santalum haleakalae* var. *lanaiense*, and *Sesbania tomentosa*), and the Newcomb's tree snail, occur in this area. The area falls within seven critical habitat units for plants (Maui—Coastal—9, Maui—Lowland Mesic—2, Maui—Lowland Wet—2, Maui—Lowland Wet—3, Maui—Montane Wet—6, Maui—Wet Cliff—5, and Maui—Wet Cliff—7), eight critical habitat units for birds (*Palmeria dolei*—Unit 3—Lowland Wet, *Pseudonestor xanthophrys*—Unit 3—Lowland Wet, *Palmeria dolei*—Unit 4—Lowland Wet, *Pseudonestor xanthophrys*—Unit 4—Lowland Wet, *Palmeria dolei*—Unit 15—Montane Wet, *Pseudonestor xanthophrys*—Unit 15—Montane Wet, *Palmeria dolei*—Unit 34—Wet Cliff, and *Pseudonestor xanthophrys*—Unit 34—Wet Cliff), and one critical habitat for the Newcomb's tree snail (*Newcombia cumingi*—Unit 1—Lowland Wet). These units are occupied by the plants *Alectryon macrococcus*, *Bidens conjuncta*, *Calamagrostis hillebrandii*, *Ctenitis squamigera*, *Cyanea asplenifolia*, *C. kunthiana*, *Cyrtandra munroi*, *Geranium hillebrandii*, *Myrsine vaccinioides*, *Pteris lidgatei*, *Remya mauiensis*, *Sanicula purpurea*, *Santalum haleakalae* var. *lanaiense*, *Schenkia sebaeoides*, *Sesbania tomentosa*, and *Zanthoxylum hawaiiense*, and by the Newcomb's tree snail. This area contains habitat that is unoccupied but essential to the conservation of 28 other plant species (*Acaena exigua*, *Asplenium dielerectum*, *Bidens campylotheca* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Brighamia rockii*,

*Clermontia oblongifolia* ssp. *mauiensis*, *Colubrina oppositifolia*, *Cyanea glabra*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *C. oxybapha*, *Diplazium molokaiense*, *Dubautia plantaginea* ssp. *humilis*, *Gouania vitifolia*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyrifolium*, *Kadua laxiflora*, *Lysimachia lydgatei*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Plantago princeps*, *Platanthera holochila*, *Tetramolopium capillare*, and *Wikstroemia villosa*), and to the akohekohe and kiwikiu.

Maui Land and Pineapple Company understands the importance of this water resource to the community, and recognizes that active management is needed for its protection and conservation, as evidenced by their implementation of an ongoing management program to preserve and protect the Puu Kukui WP. The ML & P Company has proactively managed the Puu Kukui WP since 1988, and joined the State of Hawaii's NAP program in July 1992. The NAP program contract has been continually renewed since that time, and has recently been authorized to continue through Fiscal Year 2018 (ML & P 2010, p. 5; DLNR 2011, in litt.). The primary management goals as outlined in the current Puu Kukui WP management plan for the NAP program, fiscal years 2012–2018 are to: (1) Eliminate ungulate activity in all Puu Kukui WP management units; (2) reduce the range of habitat-modifying weeds and prevent introduction of nonnative plants; (3) track biological and physical resources in the watershed and evaluate changes in these resources over time, including the identification of new threats to the watershed, and provide logistical support to approved research projects that will improve management understanding of the watershed's resources; (4) prevent the extinction of rare species in the watershed; (5) expose the community to projects focusing on preserving and enhancing native plant and animal communities; (6) assist the long-term management of the native ecosystems of west Maui by the WMMWP; and (7) provide adequate manpower and equipment to meet the goals and objectives of the plan. Over 20 years of feral ungulate management has shown that the use of snares and fences has been an effective means of ungulate control, with 60 percent of the preserve not seeing pig activity for 5 or more years. Accessible fences and those with direct ungulate pressure are maintained quarterly. The nonnative plant control program focuses on areas with rare native species, and the maintenance of

the most pristine areas, keeping them as weed-free as possible with manual and mechanical control. The ML & P Company also supports rare plant monitoring and propagule collection by the PEPP. Natural resource monitoring and research address the need to track biological and physical resources in order to guide management programs. Vegetation is monitored through permanent photo points; nonnative species are monitored along permanent transects; and rare, endemic, and indigenous species are also monitored.

The ML & P Company has received funding in eight separate agreements (over \$400,000) with the Service to survey for rare plants on their lands and to build feral ungulate control fences for the protection of listed plants. Additionally, logistical and other support for native bird and invertebrate studies by independent researchers and interagency cooperative agreements is provided.

In our June 11, 2012, proposed rule, we proposed critical habitat in a portion of Puu Kukui WP (534 ac (236 ha)), where the remaining nine wild individuals of Newcomb's tree snail occur (*Newcombia cumingi*—Unit 1—Lowland Wet). This area is overlapped by critical habitat plant unit Maui—Lowland Wet—Unit 2 for plant species. The remaining 65 ac (26 ha) of this unit overlaps State lands. Puu Kukui WP is permanently dedicated to conservation, and the positive management by ML & P of this area has demonstrated their understanding of the importance of this resource to the community, as well as recognition that active management is needed for its protection and conservation. The Service has worked closely with ML & P, and recently established a cooperative agreement for fencing and management for the conservation of this tree snail species; the agreement is in place for 5 years (Service 2012, in litt.). The scope of work for this agreement includes snail surveys; design, placement, and construction of an enclosure fence (to exclude rats and mice) based on fences used to protect Oahu tree snails (*Achatinella* spp.) on Oahu; periodic monitoring; predator control (rats and mice) within the fenced area; and habitat restoration. ML & P has been actively working to develop a solid fence design and plan for installation; the construction of the fence is scheduled to begin in September 2015. Based on our past experience with ML & P and positive conservation partnership to date, we expect the conservation measures provided in this agreement will be continued into the foreseeable future. The Service

anticipates continuing to work with ML & P for the protection and conservation of Newcomb's tree snail on Puu Kukui WP.

The ML & P Company is a member and participant of the WMMWP, established in 1998. Management priorities for the watershed partnership on west Maui include feral animal control, weed control, human activities management, public education and awareness, water and watershed monitoring, and management coordination improvements. The partnership's management actions benefit habitat conservation by: (1) Enabling land managers to construct fences and remove feral ungulates across land ownership boundaries; (2) allowing for more comprehensive conservation planning; (3) expanding the partners' ability to protect forest lands quickly and efficiently; (4) making more efficient use of resources and staff; (5) allowing for greater unity in attaining public funding; and (6) providing greater access to other funding opportunities. The WMMWP provides annual progress reports regarding the success of management actions and benefits provided to species and watershed habitat.

Our records indicate that between 2010 until 2015 there were no consultations conducted regarding projects receiving Federal funding on ML & P lands. We believe that there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. In addition, all of the management actions detailed above will either lead to maintenance or enhancement of habitat for the Maui Nui species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 44 plants, the 2 forest bird species, the tree snail, and their habitat.

#### Ulupalakua Ranch

Leeward Haleakala Watershed Restoration Partnership Management Plan, Habitat Conservation Plan, and Partners for Fish and Wildlife Agreements

In this final designation, the Secretary has exercised her authority to exclude 6,535 ac (2,645 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are under management by Ulupalakua Ranch. Ulupalakua Ranch is a proven partner, as evidenced, in part, by their history of conservation actions including the Auwahi and Puu Makua restoration agreements and ongoing management of Ulupalakua Ranch lands on east Maui, which provide for the

conservation of 46 plants and the 2 forest birds and their habitat. For the reasons described below, we conclude that the benefits of excluding the lands owned by Ulupalakua Ranch outweigh the benefits of designating them as critical habitat.

Eight plant species included in this rule (*Alectryon macrococcus*, *Cenchrus agrimonioides*, *Flueggea neowawraea*, *Hibiscus brackenridgei*, *Melicope adscendens*, *M. knudsenii*, *Santalum haleakalae* var. *lanaiensis*, and *Zanthoxylum hawaiiense*) are reported from Ulupalakua Ranch lands. The area falls within six critical habitat units for plants (Maui—Coastal—Unit 6, Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 3, Maui—Montane Mesic—Unit 1, Maui—Montane Dry—Unit 1, and Maui—Subalpine—Unit 1), and four units for the akohekohe and kiwikiu (*Palmeria dolei*—Unit 18—Montane Mesic, *Pseudonestor xanthophrys*—Unit 18—Montane Mesic, *Palmeria dolei*—Unit 24—Subalpine, and *Pseudonestor xanthophrys*—Unit 24—Subalpine). These units are occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Asplenium dielerectum*, *A. peruvianum* var. *insulare*, *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Canavalia pubescens*, *Cenchrus agrimonioides*, *Clermontia lindseyana*, *Cyanea horrida*, *C. obtusa*, *Cyrtandra ferripilosa*, *C. oxybapha*, *Diplazium molokaiense*, *Flueggea neowawraea*, *Geranium arboreum*, *G. multiflorum*, *Huperzia mannii*, *Melicope adscendens*, *Neraudia sericea*, *Santalum haleakalae* var. *lanaiense*, *Spermolepis hawaiiensis*, and *Vigna o-wahuensis*. This area contains unoccupied habitat that is essential to the conservation of 23 other endangered plant species (*Alectryon macrococcus*, *Bidens campylothea* ssp. *pentamera*, *Brighamia rockii*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Cyanea glabra*, *C. hamatiflora* ssp. *hamatiflora*, *C. kunthiana*, *C. mceldowneyi*, *Cyperus pennatiflorus*, *Hibiscus brackenridgei*, *Ischaemum byrone*, *Melanthera kamolensis*, *Melicope mucronulata*, *Nototrichium humile*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *P. mannii*, *Schiedea haleakalensis*, *Sesbania tomentosa*, *Solanum incompletum*, and *Wikstroemia villosa*, and *Zanthoxylum hawaiiense*), and to the akohekohe and kiwikiu.

Ulupalakua Ranch is involved in several important voluntary conservation agreements with the Service and is currently carrying out activities on their lands for the conservation of rare and endangered

species and their habitats. In 1997 and 1998, respectively, Ulupalakua Ranch entered into the Partners for Fish and Wildlife Auwahi and Puu Makua agreements to protect and restore dryland forest, including construction of ungulate exclosure fences, a greenhouse to propagate rare plants for outplanting, an access road, and propagation and outplanting of native plants. Preservation of habitat in Auwahi and Puu Makua benefits the 48 listed plant and animal species discussed above. Over the last 14 years, the Service has provided funding for 3 projects in the Auwahi area (Auwahi I, II, and III). Labor, material, and technical assistance is provided by Ulupalakua Ranch, U.S. Geological Survey-Biological Resources Division (USGS-BRD), and volunteers. The Auwahi I project area encompasses 10 ac (4 ha) on the southwest slope of Haleakala. Ulupalakua Ranch and its partners built an ungulate exclosure fence; outplanted native plants, including the listed endangered plants *Alectryon macrococcus* var. *auwahiensis* and *Zanthoxylum hawaiiense*; and removed all nonnative plants and feral ungulates within the fenced exclosure. The Auwahi II project area encompasses 23 ac (9 ha) adjacent to Auwahi I, and the Auwahi III project area encompasses an additional 181 ac (73 ha) (Van Dyke 2011, in litt.). Ulupalakua Ranch and its partners built additional ungulate exclosure fences, propagated and outplanted native plants, and removed nonnative plants and feral ungulates within the fenced exclosures (Van Dyke 2011, in litt.). Within 5 years of fence construction and nonnative species management activities, these three areas have been transformed from nonnative grasslands to a native species-dominated, self-sustaining, dryland forest.

Community volunteer participation is a key element to the success of these projects, and monthly volunteer trips often exceed 50 participants from a pool of 700 interested Maui residents, including school groups, Hawaiian native dance groups, canoe clubs, and other special interest groups.

In 1998, Ulupalakua Ranch entered a 10-year partnership with Ducks Unlimited (a private conservation organization) and the Natural Resources Conservation Service's (NRCS) Wetland Reserve Program (WRP) to create four wetland complexes (completed in 2001) suitable for two endangered birds, the Hawaiian goose or nene and Hawaiian duck or koloa (*Anas wyvilliana*) (NRCS 2001, pp. 1–2). While the endangered nene and koloa are not addressed in this rule, the establishment of wetland complexes for these endangered birds

demonstrates the willingness of Ulupalakua Ranch to protect and conserve native plants and animals on their lands, and their value as a conservation partner.

Ulupalakua Ranch is an active member of the LHWRP, a coalition formed in 2003 by 11 private and public landowners and supporting agencies (LHWRP 2011, in litt). The partnership oversees and manages more than 43,000 ac (17,400 ha) of land on the leeward slopes of Haleakala crater, from Makawao to Kaupo, between 3,500 and 6,500 ft (1,067 and 1,980 m) elevation. The partnership's goals are to: (1) Restore native koa forests to provide increased water quantity and quality, (2) conserve unique endemic plants and animals, (3) protect important Hawaiian cultural resources, and (4) allow diversification of Maui's rural economy. The reestablishment of native koa forest will restore habitat for the 46 plants and 2 forest birds. The LHWRP also provides public outreach regarding the importance of watershed and other natural resources protection by supporting volunteers who participate in tree planting, nonnative plant removal, and seed collection activities.

Between 1999 and 2007, the Service and the DOFAW Natural Area Reserves Fund provided funding for habitat restoration at Puu Makua. Ulupalakua Ranch and its partners, which include USGS-BRD, the LHWRP, and volunteers, built a 100-ac (40-ha) ungulate exclosure, removed feral ungulates and controlled nonnative plants within the fenced exclosure, and outplanted native plants. This project provides public outreach through ongoing volunteer participation to control nonnative plants and outplant native plants.

Our records indicate that between 2010 until 2015 there were three informal section 7 consultations conducted regarding projects on Ulupalakua Ranch lands receiving Federal funding. One project, funded through NRCS, was for the development of a riparian conservation plan and riparian restoration, and we concurred that this project was not likely adversely affect the listed Hawaiian hoary bat (*Lasiurus cinereus semotus*), and would not affect any plant critical habitat that was adjacent to the project area. One project, funded through the Emergency Conservation Program, FSA, included actions for restoration of fences, and we concurred that the project was not likely adversely affect the listed Hawaiian hoary bat or the listed Blackburn's sphinx moth (*Manduca blackburni*). The last project, funded through NRCS, was for a second riparian conservation plan,

and we concurred it was not likely to adversely affect any listed species. We did conduct one formal consultation in 2008 on Ulupalakua Ranch lands on the construction of a communications tower funded by the Federal Communications Commission (FCC). The consultation resulted in recommended mitigation measures for the listed Hawaiian hoary bat and Hawaiian petrel (*Pterodroma phaeopygia sandwichensis*), and determined the project was not likely to adversely affect the Maui silversword. The project was not within critical habitat for the Maui silversword.

Because all three of the informal consultations resulted in a not likely to adversely affect determination, we believe that, although there is a likelihood of a Federal nexus, little if any conservation benefit to the species would result from designation of critical habitat. With regard to the one formal consultation, we have no information to suggest that any similar project is likely to occur in this area again, thus we anticipate little if any additional conservation benefit as a result of future section 7 consultation as a result of critical habitat on these lands. In addition, all of the agreements and partnerships discussed above will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 46 plants and the 2 forest bird species, and their habitat.

#### Haleakala Ranch Company

East Maui Watershed Partnership Management Plan and Partners for Fish and Wildlife Agreements

In this final designation, the Secretary has exercised her authority to exclude 8,716 ac (3,527 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are under management by Haleakala Ranch. Haleakala Ranch is a proven conservation partner, as evidenced, in part, by a history of voluntary management actions and agreements that provide for the conservation of 55 plants and the 2 forest birds and their habitat. For the reasons described below, we conclude that the benefits of excluding Haleakala Ranch lands on east Maui outweigh the benefits of including these lands in critical habitat.

Four plant species included in this rule (*Argyroxiphium sandwicense* ssp. *macrocephalum*, *Canavalia pubescens*, *Geranium arboreum*, and *Hibiscus brackenridgei*) and the akohekohe and kiwikiu are reported from this area. The area falls within seven critical habitat units for plants (Maui—Lowland Dry—

Unit 1, Maui—Lowland Dry— Unit 2, Maui—Montane Wet— Unit 1, Maui—Montane Mesic— Unit 1, Maui—Montane Dry— Unit 1, Maui—Subalpine— Unit 1, and Maui—Alpine— Unit 1), and six units for the akohekohe and kiwikiu (*Palmeria dolei*—Unit 10—Montane Wet, *Pseudonestor xanthophrys*—Unit 10—Montane Wet, *Palmeria dolei*—Unit 18—Montane Mesic, *Pseudonestor xanthophrys*—Unit 18—Montane Mesic, *Palmeria dolei*—Unit 24—Subalpine, and *Pseudonestor xanthophrys*—Unit 24—Subalpine). These units are occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Asplenium diellectum*, *A. peruvianum* var. *insulare*, *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Canavalia pubescens*, *Cenchrus agrimonoides*, *Clermontia lindseyana*, *Cyanea duvalliorum*, *C. horrida*, *C. maritae*, *C. mceldowneyi*, *C. obtusa*, *Cyrtandra ferripilosa*, *C. oxybapha*, *Diplazium molokaiense*, *Flueggea neowawraea*, *Geranium arboreum*, *G. multiflorum*, *Hibiscus brackenridgei*, *Huperzia mannii*, *Melicope adscendens*, *M. balloui*, *Neraudia sericea*, *Phyllostegia pilosa*, *Santalum haleakalae* var. *lanaiense*, and *Spermolepis hawaiiensis*, and by the birds akohekohe and kiwikiu. This area contains unoccupied habitat that is essential to *Adenophorus periens*, *Alectryon macrococcus*, *Bidens campylotheca* ssp. *pentamera*, *B. campylotheca* ssp. *waihoiensis*, *Clermontia oblongifolia* ssp. *mauiensis*, *C. samuelii*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Cyanea copelandii* ssp. *haleakalaensis*, *C. glabra*, *C. hamatiflora* ssp. *hamatiflora*, *C. kunthiana*, *Geranium hanaense*, *Melanthera kamolensis*, *Melicope knudsenii*, *M. mucronulata*, *M. ovalis*, *Nototrichium humile*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *P. mannii*, *Platanthera holochila*, *Schiedea haleakalensis*, *S. jacobii*, *Sesbania tomentosa*, *Solanum incompletum*, *Wikstroemia villosa*, and *Zanthoxylum hawaiiense*.

Haleakala Ranch is involved in several important voluntary conservation agreements with the Service and is currently carrying out activities on its lands for the conservation of rare and endangered species and their habitats. Haleakala Ranch is a member of the EMWP, which was formed in 1991, as a model for large-scale forest protection in Hawaii. The members agree to pool resources and implement a watershed management program to protect 100,000 ac (40,469 ha) of forest across east Maui

(EMWP 2009). The management program includes: (1) Control of feral pigs by public hunting in the privately owned lower watershed areas; (2) control of the invasive plant *Miconia*; and (3) construction of ungulate enclosure fences to protect 12,000 ac (4,856 ha) of lowland and montane wet forest (Tri-Isle Resource Conservation and Development Council, Inc. 2011). In partnership with the Division of Forestry and Wildlife (DOFAW), Haleakala Ranch controls feral ungulates (e.g., axis deer and goats) on their lands in lowland dry habitat at Waiopae, on the south coast of east Maui. In addition to feral ungulate control, Haleakala Ranch and DOFAW control invasive plants that threaten wild populations of two endangered plants, *Alectryon macrococcus* and *Melanthera kamolensis*.

In 1999, Haleakala Ranch entered into an agreement with the Partners for Fish and Wildlife, USGS-BRD, and DHHL, for habitat protection at Puu o Kali, on the west slope of Haleakala. This agreement funded management actions to conserve and protect native dryland forest, including construction of a fence to exclude nonnative axis deer and feral goats, nonnative plant control, and propagation and outplanting of native plants. The project area was accessed through cooperation of the landowner, Haleakala Ranch. Currently, 236 ac (96 ha) are protected within the fenced area, and all axis deer and goats were removed from the fenced area. The continued protection of this area and maintenance of the fenced area is assured into the foreseeable future through the combined efforts of multiple partners, including the State, DHHL, and private landowners.

In 2001, the Service and NRCS provided funding for management actions to conserve and protect the endangered plant *Geranium arboreum* and subalpine habitat on Puu Pahu on the northwestern slopes of Haleakala (USFWS 2007b). These management actions include construction of ungulate enclosure fences and removal of ungulates within the fenced area. The first increment of the fence is completed and encloses approximately 670 ac (271 ha) (Higashino 2011, in litt.). Upon project completion, the fenced area will adjoin the fenced area of Haleakala National Park at 7,500 ft (2,290 m), and will exclude ungulates and allow for their removal from an area larger than 670 ac (271 ha) (USFWS 2007b).

In 1983, Haleakala Ranch granted a permanent conservation easement on 5,140 ac (2,080 ha) of ranch lands to TNC for Waikamoi Preserve. The establishment of this preserve

demonstrates the willingness of Haleakala Ranch to protect and conserve native plants and animals on their lands. In addition, in 2009, Haleakala Ranch entered into a safe harbor agreement (SHA) with the Hawaii DLNR and the Service, to establish a population of the endangered Hawaiian goose on their lands at Waiopae. While the endangered nene is not a species addressed in this final rule, the establishment of a SHA for this endangered bird demonstrates the willingness of Haleakala Ranch to protect and conserve native plants and animals on their lands, and is further evidence of their value as a proven conservation partner.

Our records indicate that between 2010 until 2015 there was one informal section 7 consultation conducted regarding a project on Haleakala Ranch lands receiving Federal funding through the East Maui Watershed Partnership, for ungulate and weed control within a fenced area at Puu Pahu. We concurred that their actions would not have any adverse effects to any listed species within the project area. Because there was only one informal consultation, which resulted in a not likely to adversely affect determination, we believe that there is a likelihood of a Federal nexus; however, there would be little conservation benefit resulting from designation of critical habitat. All of these agreements, partnerships, and management actions will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 55 plants and the 2 forest bird species, and their habitat.

East Maui Irrigation Company, Ltd.

East Maui Watershed Partnership Management Plan, Haiku Uka Watershed Protection Project

In this final designation, the Secretary has exercised her authority to exclude 6,721 ac (2,720 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are managed by East Maui Irrigation Company, Ltd. (EMI). East Maui Irrigation Company is a proven conservation partner, as demonstrated, in part, by their ongoing management and restoration agreements for EMI lands at Haiku Uka on east Maui, and their participation in the EMWP, which provide for the conservation of 47 plants and the 2 forest birds and their habitat. For the reasons discussed below, we have determined that the benefits of excluding EMI lands outweigh the benefits of including them in critical habitat.

Nine plant species included in this rule (*Asplenium peruvianum* var. *insulare*, *Cyanea copelandii* ssp. *haleakalensis*, *C. hamatiflora* ssp. *hamatiflora*, *C. horrida*, *C. kunthiana*, *C. mceldowneyi*, *Diplazium molokaiense*, *Geranium multiflorum*, and *Santalum haleakalae* var. *lanaiense*), and the akohekohe and kiwikiu are reported from EMI lands. The area falls within 6 critical habitat units for plants (Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Mesic—Unit 1, Maui—Subalpine—Unit 2, and Maui—Wet Cliff—Unit 1), and 12 critical habitat units for the akohekohe and kiwikiu (*Palmeria dolei*—Unit 2—Lowland Wet, *Pseudonestor xanthophrys*—Unit 2—Lowland Wet, *Palmeria dolei*—Unit 10—Montane Wet, *Pseudonestor xanthophrys*—Unit 10—Montane Wet, *Palmeria dolei*—Unit 11—Montane Wet, *Pseudonestor xanthophrys*—Unit 11—Montane Wet, *Palmeria dolei*—Unit 18—Montane Mesic, *Pseudonestor xanthophrys*—Unit 18—Montane Mesic, *Palmeria dolei*—Unit 25—Subalpine, *Pseudonestor xanthophrys*—Unit 25—Subalpine, *Palmeria dolei*—Unit 30—Wet Cliff, and *Pseudonestor xanthophrys*—Unit 30—Wet Cliff). These units are occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Asplenium dielirectum*, *A. peruvianum* var. *insulare*, *Bidens campylotheca* ssp. *waihoiensis*, *Clermontia lindseyana*, *C. samuelii*, *Cyanea asplenifolia*, *C. copelandii* ssp. *haleakalensis*, *C. duvalliorum*, *C. hamatiflora* ssp. *hamatiflora*, *C. horrida*, *C. kunthiana*, *C. maritae*, *C. mceldowneyi*, *C. obtusa*, *Cyrtandra ferripilosa*, *C. oxybapha*, *Diplazium molokaiense*, *Geranium arboreum*, *G. multiflorum*, *Huperzia mannii*, *Melicope adscendens*, *M. balloui*, *M. ovalis*, *Neraudia sericea*, *Phyllostegia pilosa*, and *Schiedea haleakalensis*, and by the birds akohekohe and kiwikiu. This area contains unoccupied habitat that is essential to the conservation of 20 other plant species (*Adenophorus perieni*, *Alectryon macrococcus*, *Bidens campylotheca* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, *Clermontia oblongifolia* ssp. *mauiensis*, *C. peleana*, *Cyanea glabra*, *Geranium hanaense*, *Mucuna sloanei* var. *persericea*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *P. haliakalae*, *P. mannii*, *Plantago princeps*, *Platanthera holochila*, *Santalum haleakalae* var. *lanaiense*, *Schiedea jacobii*, *Solanum incompletum*, *Wikstroemia villosa*, and *Zanthoxylum hawaiiense*).

East Maui Irrigation Company, Ltd., a subsidiary of Alexander and Baldwin, owns and operates a ditch system that diverts more than 60 billion gallons per year of surface water from east Maui to central Maui for agricultural, domestic, and other uses. In 1991, EMI, along with the major landowners and land managers (TNC, Maui County, DLNR, and private ranches) of the windward slope of east Maui (encompassing approximately 100,000 ac (40,500 ha)), formed the EMWP. The EMWP prepared a management plan in 1993, to protect the biological and water resources within the partnership lands (EMWP 2009, App. B). The plan identified five priority management activities: (1) Watershed resource monitoring, (2) feral animal control, (3) invasive weed control, (4) management infrastructure, and (5) public education and awareness programs.

In 1993, EMI and DLNR entered into a right-of-entry agreement to permit the use of EMI roads by public hunters in the area of Haiku Uka, with the intention of increasing hunting activities to control feral pigs, goats, and axis deer in the Koolau FR. In 1996, constituents of the EMWP prepared an ungulate exclusion fencing strategy to preserve and protect 12,000 ac (4,856 ha) of land (called the core area) on the east Maui slope between Hanawi NAR and Koolau Gap, including the Haiku Uka area, and TNC's Waikamoi Preserve (EMWP 2009, p. 3). Approximately 7,000 ac (2,833 ha) of the core area consists of State forest reserve and EMI lands, and approximately 5,000 ac (2,024 ha) are within TNC's Waikamoi Preserve. In 2005 and 2006, the Service and others provided funding for the construction of an ungulate exclusion fence at 3,600 ft (1,100 m) elevation and for improving hunter access to EMWP lands. The fence extends from Hanawi Natural Area Reserve west to Koolau Gap, and protects approximately 7,000 ac (2,833 ha) of native forest, including forest in Haiku Uka. The Waikamoi Preserve and Haleakala National Park fences provide the upper boundary of the fenced area (TNC 2006). The fence was completed in 2006, and the enclosed area of 7,000 ac (2,833 ha) is divided into five units (Honomanu, Koolau Gap, Wailuanui, Wailuaiki, and Kopiliua), which are managed through the cooperation of landowners, including EMI, and other partners (EMWP 2009, pp. 3–17). Fencing is one of the most effective strategies currently available to address the threat of ungulates, but it is also costly and difficult to install in the steep, mountainous terrain of Hawaii. The

completion of almost 7 mi (11 km) of fencing around an area of 7,000 ac (2,833 ha) for ungulate management represents a significant contribution to the conservation of the Maui Nui species.

The 1993 EMWP management plan was revised in 2006, and included recommendations for improving threat assessment and feral pig control, and developing more cost-effective methods for natural resource assessments. In 2008 and 2009, the Service provided funding for feral pig reduction and fence monitoring on EMI lands in Haiku Uka (USFWS 2008; Van Dyke 2011, in litt.).

The 2006 EMWP management plan was revised in 2009, to provide long-term protection of the east Maui watershed resources such as ground and surface water, native plants and animals and their habitat, hunting opportunities, commercial harvests, cultural resources, and ecotourism. The 2009 EMWP management plan provides detailed management objectives for protection of the east Maui watershed resources, and recommends that the effectiveness of ongoing management actions be evaluated and modified, as needed, after 5 years (EMWP 2009, pp. 3–17, + appendices). The 2009 EMWP management plan describes specific management actions for the protection of the EMWP lands, including Haiku Uka. These management actions include ungulate (*i.e.*, feral pigs) control through hunting, fencing, fence maintenance, and research on effective feral animal control actions; weed control by controlling existing weeds, preventing the introduction of new weeds, and supporting research on weed control; development of a management program for rare and endangered species that includes surveys, species monitoring, propagation and outplanting of rare plants and release of rare birds, as well as implementing threat abatement actions; monitoring changes in vegetation (both native and nonnative), native forest birds, stream animals, stream flow, and rainfall; monitoring changes in cultural resources, and maintaining and expanding public support for the east Maui watershed; and maintaining existing and developing new funding sources (EMWP 2009, pp. 13–17).

As of 2009, the majority of feral ungulates (*i.e.*, feral pigs) were removed from the five management units (described above). In addition, there are few to no feral pigs in Haiku Uka due to their control by hunting and the construction of exclusion fences (Jokiell 2009, pers. comm.). While native forest dominates Haiku Uka, weed control is ongoing, particularly within disturbance

corridors where new weed species are likely to be introduced (*e.g.*, camps, trails, and helicopter landing zones).

Our records indicate that between 2010 until 2015 there were no consultations conducted regarding projects receiving Federal funding on EMI lands. We believe that there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. EMI has allowed access to their lands to encourage public hunting for the control of feral pigs, goats, and axis deer that pose significant threats to the Maui Nui species. They are founders and active members of the EMWP, and have made significant contributions to the protection of the 47 plants and the 2 forest birds on their lands by assisting in the maintenance of enclosure fences and participating in watershed resource monitoring and invasive weed control. EMI allowed the construction of a significant ungulate exclusion fence extending from Hanawi Natural Area Reserve west to Koolau Gap, resulting in substantial conservation benefits to the Maui Nui species and their habitat. All of these management actions will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 47 plants and the 2 forest bird species, and their habitat.

#### Nuu Mauka Ranch

Native Watershed Forest Restoration at Nuu Mauka Conservation Plan, Leeward Haleakala Watershed Restoration Partnership Management Plan, and Southern Haleakala Forest Restoration Project

In this final designation, the Secretary has exercised her authority to exclude 2,094 ac (848 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned by Nuu Mauka Ranch. The ongoing management under the Native Watershed Forest Restoration Conservation Plan, LHWRP management plan, and the Southern Haleakala Forest restoration project agreement for Nuu Mauka Ranch lands on east Maui provide for the conservation of 46 plants and the 2 forest birds and their habitat, and demonstrate the positive benefits of the conservation partnership that has been established with Nuu Mauka Ranch. For the reasons described below, we have determined that the benefits of excluding these lands outweigh the benefits of including them in critical habitat.

The area falls within four critical habitat units for plants (Maui—Lowland

Dry—Unit 1, Maui—Montane Dry—Unit 1, Maui—Montane Mesic—Unit 1, and Maui—Subalpine—Unit 1), and four units for two forest birds, the akohekohe and kiwiku (Palmeria dolei—Unit 18—Montane Mesic, Pseudonestor xanthophrys—Unit 18—Montane Mesic, Palmeria dolei—Unit 24—Subalpine, and Pseudonestor xanthophrys—Unit 24—Subalpine). These units are occupied by the plants *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Asplenium dielerectum*, *A. peruvianum* var. *insulare*, *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Cenchrus agrimonoides*, *Clermontia lindseyana*, *Cyanea horrida*, *C. obtusa*, *Cyrtandra ferripilosa*, *C. oxybapha*, *Diplazium molokaiense*, *Flueggea neowawraea*, *Geranium arboreum*, *G. multiflorum*, *Huperzia mannii*, *Melicope adscendens*, *Neraudia sericea*, *Santalum haleakalae* var. *lanaiense*, and *Spermolepis hawaiiensis*. These areas contain unoccupied habitat that is essential to the conservation of 25 other endangered plant species (*Alectryon macrococcus*, *Bidens campylothea* ssp. *pentamera*, *Brighamia rockii*, *Canavalia pubescens*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Cyanea glabra*, *C. hamatiflora* ssp. *hamatiflora*, *C. kunthiana*, *C. mceldowneyi*, *Cyperus pennatifolius*, *Hibiscus brackenridgei*, *Ischaemum byrone*, *Melanthera kamolensis*, *Melicope mucronulata*, *Nototrichium humile*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *P. mannii*, *Schiedea haleakalensis*, *Sesbania tomentosa*, *Solanum incompletum*, *Vigna o-wahuensis*, *Wikstroemia villosa*, and *Zanthoxylum hawaiiense*), and to the akohekohe and kiwiku. None of these species currently occurs on Nuu Mauka Ranch lands.

Nuu Mauka Ranch is involved in several important voluntary conservation agreements with the Service and other agencies and is currently carrying out activities on their lands for the conservation of rare and endangered species and their habitats. In 2008, the Ranch worked with the USGS-Pacific Island Ecosystem Research Center and NRCS to develop cost-effective, substrate-appropriate restoration methodologies for establishment of native koa forests in degraded pasturelands (Nuu Mauka Ranch and LHWRP 2012, p. 7). Nuu Mauka Ranch is a current partner of the LHWRP, with the main goal of protection and restoration of leeward Haleakala's upland watershed (see "Ulupalakua Ranch," above, for further discussion). In 2012, Nuu Mauka Ranch obtained a conservation district use permit for a watershed protection

project. The ultimate goal of this project is to improve water quality and groundwater recharge through the restoration of degraded agricultural land to a native forest community (Nuu Mauka Ranch and LHWRP 2012, 11 pp.). Nuu Mauka Ranch has contributed approximately \$500,000 of their own funds, and received additional funding through the Service and NRCS, for construction of a 7.6-mile long deer-proof fence to prevent access by deer and goats into a 1,023-ac (414 ha) upper elevation watershed area on the south slopes of leeward Haleakala (Southern Haleakala Forest Restoration Project) (Nuu Mauka Ranch and LHWRP 2012, 11 pp.). Nuu Mauka Ranch has also prepared a conservation plan, "Native Watershed Forest Restoration at Nuu Mauka" (2012), and has appended it to the LHWRP management plan. Restoration activities outlined in the plan include mechanical and chemical control of invasive plant species including *Grevillea robusta* (silk oak), *Schinus terebinthifolius* (Christmas berry), *Tecoma stans* (yellow elder), and *Sphaeropteris cooperi* (Australian tree fern), which are known threats to the 48 species and their habitat. Currently, Nuu Mauka Ranch conducts removal of feral ungulates from all fenced areas, along with fence monitoring and follow-up monitoring to assess erosion rates. Also, with fencing and ungulate removal completed, the plan includes continued restoration activities, such as replanting and seed scattering of common native plant species.

Our records indicate that between 2010 until 2015 there were no consultations conducted regarding projects receiving Federal funding on Nuu Mauka Ranch lands, therefore in general we believe that there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. However, as Federal funding has contributed to conservation projects on Nuu Mauka Ranch lands in the past (fence construction for exclusion of ungulates), it is possible that in the future such a conservation project may trigger consultation under Section 7. As consultation for a project designed to provide conservation benefit is most likely to result in a not likely to adversely affect determination, and the benefit accruing from the funded conservation project would be likely relatively greater than the regulatory benefit of critical habitat, the incremental benefit of critical habitat is reduced under such circumstances. Overall, these conservation actions, the Southern Haleakala Forest Restoration Project, and Nuu Mauka Ranch's

conservation plan will lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 46 plants and the 2 forest bird species, and their habitat.

#### Kaupo Ranch

Leeward Haleakala Watershed Restoration Partnership Management Plan and Southern Haleakala Forest Restoration Project

In this final designation, the Secretary has exercised her authority to exclude 931 ac (377 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned or managed by Kaupo Ranch. Kaupo Ranch has undertaken voluntary conservation measures on their lands, demonstrating their value as a partner through participation in the LHWRP management plans and the Southern Haleakala Forest Restoration Project for Kaupo Ranch lands on east Maui. These actions provide positive conservation benefits for 26 plant species and their habitat. We have determined that the benefits of excluding Kaupo Ranch lands from critical habitat outweigh the benefits of including them, for the reasons discussed below.

Kaupo Ranch lands fall within three critical habitat units for plants (Maui—Lowland Dry—Unit 1, Maui—Montane Dry—Unit 1, and Maui—Coastal—Unit 7). These units are occupied by the plants *Bonamia menziesii*, *Cenchrus agrimonoides*, *Flueggea neowawraea*, *Santalum haleakalae* var. *lanaiense*, and *Spermolepis hawaiiensis*. These areas contain unoccupied habitat that is essential to the conservation of 21 other endangered plant species (*Alectryon macrococcus*, *Bidens micrantha* ssp. *kalealaha*, *Brighamia rockii*, *Canavalia pubescens*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Cyperus pennatifolius*, *Geranium arboreum*, *Hibiscus brackenridgei*, *Ischaemum byrone*, *Melanthera kamolensis*, *Melicope adscendens*, *M. knudsenii*, *M. mucronulata*, *Neraudia sericea*, *Nototrichium humile*, *Peucedanum sandwicense*, *Sesbania tomentosa*, *Solanum incompletum*, *Vigna o-wahuensis*, and *Zanthoxylum hawaiiense*). None of these species currently occurs on Kaupo Ranch lands.

Kaupo Ranch is a current partner of the LHWRP, with the main goal of protection and restoration of leeward Haleakala's upland watershed (LHWRP 2006, 65 pp.). Kaupo Ranch has been a long time cooperator with HNP, providing access to the park's Kaupo Gap hiking trail across their private

lands (Kean 2012, pers. comm.). This trail extends from the park's boundary near the summit of Haleakala through Kaupo Ranch lands to the coast. The Ranch was also a cooperator with the Service in the creation of Nu'u Makai Wetland Reserve, contributing 87 ac (35 ha) of their ranch lands in the coastal area to support landscape-scale wetland protection (The Conservation Registry and USFWS 2012, in litt.). In addition, Kaupo Ranch participated in the construction of an ungulate exclusion fence on the upper portion of their lands, bordering HNP, that protects 50 ac (20 ha) of native montane dry forest habitat (Southern Haleakala Forest Restoration Project) and acts as a buffer to the lower boundary of the montane mesic ecosystem that provides habitat for forest birds (DLNR 2012, in litt.). Additional conservation actions in this fenced area include weed control and outplanting of native plants. While these actions do not directly address the Maui Nui species in this final rule, they demonstrate the willingness of Kaupo Ranch to protect and conserve native habitat on their lands and to provide outreach and support to the neighboring national park, and their value as a partner in conservation.

Our records indicate that between 2010 until 2015 there was one informal consultation conducted regarding a project receiving Federal funding through NRCS's Environmental Quality Incentives Program (EQIP) on Kaupo Ranch lands for brush management and prescribed grazing to improve ranching operations; however, we concurred that the project would not likely adversely affect the listed Hawaiian hoary bat or the listed Hawaiian goose. We believe that there is a low likelihood of a Federal nexus that would provide a benefit to the species from designation of critical habitat, because past history indicates that any action likely to trigger consultation would likely be designed to benefit the species, and would not result in additional conservation measures. In contrast, conservation actions taken through the LHWRP management plan, cooperation with Haleakala National Park to provide additional public access, creation and protection of a wetland, and construction of an ungulate-exclusion fence to protect dry forest habitat, along with other conservation actions by Kaupo Ranch discussed above, will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 25 plants and their habitat.

#### Wailuku Water Company

West Maui Mountains Watershed Partnership Management Plan, and Partners for Fish and Wildlife Agreements

In this final designation, the Secretary has exercised her authority to exclude 7,410 ac (2,999 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned or managed by Wailuku Water Company on west Maui, and under management as part of the West Maui Mountains Watershed Partnership (WMMWP). We believe that the ongoing conservation actions through the WMMWP management plan and Partners for Fish and Wildlife Agreements for Wailuku Water Company lands on west Maui provide important conservation benefits for 51 plants and 2 forest birds and their habitat. We have concluded that the benefits of excluding these lands outweigh the benefit of including them in critical habitat, for the reasons discussed below.

The Wailuku Water Company lands fall within 10 critical habitat units for plants (Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Maui—Lowland Wet—Unit 5, Maui—Montane Wet—Unit 6, Maui—Montane Wet—Unit 7, Maui—Montane Wet—Unit 8, Maui—Montane Mesic—Unit 5, Maui—Montane Mesic—Unit 6, Maui—Dry Cliff—Unit 7, and Maui—Wet Cliff—Unit 6) and 12 critical habitat units for the two forest birds, the akohekohe and kiwikiu (*Palmeria dolei*—Unit 6—Lowland Wet, *Pseudonestor xanthophrys*—Unit 6—Lowland Wet, *Palmeria dolei*—Unit 15—Montane Wet, *Pseudonestor xanthophrys*—Unit 15—Montane Wet, *Palmeria dolei*—Unit 16—Montane Wet, *Pseudonestor xanthophrys*—Unit 16—Montane Wet, *Palmeria dolei*—Unit 22—Montane Mesic, *Pseudonestor xanthophrys*—Unit 22—Montane Mesic, *Palmeria dolei*—Unit 23—Montane Mesic, *Pseudonestor xanthophrys*—Unit 23—Montane Mesic, *Palmeria dolei*—Unit 35—Wet Cliff, and *Pseudonestor xanthophrys*—Unit 35—Wet Cliff). These units are occupied by the plants *Alectryon macrococcus*, *Asplenium dielrectum*, *Bidens campylothecha* ssp. *pentamera*, *B. conjuncta*, *Calamagrostis hillebrandii*, *Cenchrus agrimonoides*, *Ctenitis squamigera*, *Cyanea kunthiana*, *Cyrtandra munroi*, *C. oxybapha*, *Geranium hillebrandii*, *Gouania hillebrandii*, *Hibiscus brackenridgei*, *Kadua coriacea*, *Myrsine vaccinioides*, *Platanthera holochila*, *Remya mauiensis*, *Sanicula purpurea*, *Santalum haleakalae* var. *lanaiense*, *Schiedea salicaria*, *Spermolepis*

*hawaiiensis*, and *Tetramolopium capillare*. These areas contain unoccupied habitat that is essential to the conservation of 29 other endangered plant species (*Acaena exigua*, *B. micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Clermontia oblongifolia* ssp. *mauiensis*, *Cyanea asplenifolia*, *C. glabra*, *C. lobata*, *C. magnicalyx*, *C. obtusa*, *Cyrtandra filipes*, *Diplazium molokaiense*, *Dubautia plantaginea* ssp. *humilis*, *Gouania vitifolia*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyriformis*, *Kadua laxiflora*, *Lysimachia lydgatei*, *Neraudia sericea*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Plantago princeps*, *Pteris lidgatei*, *Sesbania tomentosa*, *Stenogyne kauaulaensis*, *Tetramolopium remyi*, *Wikstroemia villosa*, and *Zanthoxylum hawaiiense*), and the akohekohe and kiwikiu. The plant species *Alectryon macrococcus*, *Cyanea kunthiana*, *C. magnicalyx*, *Cyrtandra oxybapha*, *Dubautia plantaginea* ssp. *humilis*, *Hesperomannia arborescens*, *Plantago princeps*, *Platanthera holochila*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, and *Schiedea salicaria* are reported from Wailuku Water Company lands on west Maui.

Wailuku Water Company is one of the founding members and a funder of the WMMWP, created in 1998. This partnership serves to protect over 47,000 ac (19,000 ha) of forest and watershed vegetation on the summit and slopes of the west Maui mountains (WMMWP 2013). Management priorities of the watershed partnership are: (1) Feral animal control, (2) nonnative plant control, (3) human activities management, (4) public education and awareness, (5) water and watershed monitoring, and (6) management coordination (WMMWP 2013). Four principal streams, Waihee, Waiehu, Iao, and Waikapu, are part of the watershed area owned by the Wailuku Water Company on west Maui, which primarily provide water for agricultural use (WMMWP 2013). Conservation actions described in the WMMWP management plan are partly funded by Service grants through the Partners for Fish and Wildlife Program, with at least three grants recently funding projects on Wailuku Water Company lands (WMMWP 2010, 2011, 2012). Wailuku Water Company's conservation commitments include the following conservation actions: (1) Strategic fencing and removal of ungulates, (2) regular monitoring for ungulates after fencing, (3) monitoring of habitat recovery through photopoints and vegetation succession analyses, and (4)

continued surveys for rare taxa prior to fence installations. In 2009, four strategic fences were installed in Waiehu on Wailuku Water Company lands through a Service Partnership agreement. Funding for animal control checks has been provided, and these checks follow a regular schedule. Decontamination protocols are followed for all equipment used in the field to prevent introduction of nonnative plant species (WMMWP 2010). Wailuku Water Company allows surveys for rare taxa on their lands. Additional conservation actions in this area include weed control and outplanting of native plants (WMMWP 2010).

Our records indicate that between 2010 until 2015 there was one informal consultation conducted regarding a habitat protection project receiving Federal funding through the Service's Partners for Fish and Wildlife program on Wailuku Water Company land; however, we concurred that the project would not likely adversely affect listed plant species. We thus believe there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. The WMMWP management plan and the commitments by Wailuku Water Company to implement the conservation actions listed above will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 51 plants, the 2 forest birds, and their habitat. Through their actions, Wailuku Water Company has enabled the implementation of important conservation activities on their lands, including fencing and removal of ungulates, and weed control and outplanting of native plants. Survey access for rare taxa on private lands allows for the collection of important data regarding these species that would otherwise not be available. These actions demonstrate the willingness of Wailuku Water Company to protect and conserve native habitat and the west Maui watershed on their lands, and their value as a partner in conservation.

County of Maui, Department of Water Supply (DWS)

West Maui Mountains Watershed Partnership Management Plan, and Partners for Fish and Wildlife Agreements

In this final designation, the Secretary has exercised her authority to exclude 3,690 ac (1,493 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned by the County of Maui

DWS on west Maui, and under management as part of the WMMWP. The County of Maui DWS has demonstrated their value as a conservation partner as a founding partner and funder of the WMMWP, which provides for important conservation actions that benefit the Maui Nui species through implementation of the WMMWP management plan on west Maui. The management plans and projects supported by the County of Maui DWS provide for the conservation of 39 plants and the 2 forest birds and their habitat on their lands. For the reasons discussed below, we have determined that the benefits of excluding County of Maui DWS lands outweigh the benefits of including them in critical habitat.

The County of Maui DWS lands fall within three critical habitat units for plants (Maui—Lowland Wet—Unit 4, Maui—Montane Wet—Unit 6, and Maui—Wet Cliff—Unit 6) and six critical habitat units for the two forest birds, the akohekohe and kiwikiu (*Palmeria dolei*—Unit 5—Lowland Wet, *Pseudonestor xanthophrys*—Unit 5—Lowland Wet, *Palmeria dolei*—Unit 15—Montane Wet, *Pseudonestor xanthophrys*—Unit 15—Montane Wet, *Palmeria dolei*—Unit 35—Wet Cliff, and *Pseudonestor xanthophrys*—Unit 35—Wet Cliff). These units are occupied by the plants *Alectryon macrococcus*, *Bidens conjuncta*, *Calamagrostis hillebrandii*, *Ctenitis squamigera*, *Cyanea asplenifolia*, *C. kunthiana*, *Cyrtandra munroi*, *Geranium hillebrandii*, *Myrsine vaccinioides*, *Remya maiensis*, *Sanicula purpurea*, and *Santalum haleakalae* var. *lanaiense*. These areas contain unoccupied habitat that is essential to the conservation of 27 other endangered plant species (*Acaena exigua*, *Asplenium dielerectum*, *Bidens campylotheca* ssp. *pentamera*, *B. micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Clermontia oblongifolia* ssp. *mauiensis*, *Cyanea glabra*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *Cyrtandra oxybapha*, *Diplazium molokaiense*, *Dubautia plantaginea* ssp. *humilis*, *Gouania vitifolia*, *Hesperomannia arborescens*, *H. arbuscula*, *Huperzia mannii*, *Isodendron pyriformium*, *Kadua laxiflora*, *Lysimachia lydgatei*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Plantago princeps*, *Platanthera holochila*, *Pteris lidgatei*, *Tetramolopium capillare*, and *Wikstroemia villosa*), and for the akohekohe and kiwikiu. The plant species *Bidens conjuncta*, *Cyrtandra filipes*, *Hesperomannia arborescens*,

and *Platanthera holochila* are reported from Maui County lands on west Maui.

Our records indicate that between 2010 until 2015 there was one informal consultation conducted regarding a project receiving Federal funding through the Fish and Wildlife Service's Partners for Fish and Wildlife Program on Maui County lands for habitat protection; however, we concurred that the project would not likely adversely affect listed plant species. We believe that there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. Maui County DWS provides water to approximately 35,000 customers on Maui and Molokai combined (Maui County 2012). The DWS is a founding partner and funder of the WMMWP, with the main goal of protection and restoration of west Maui's upland watershed. The Maui County DWS provides financial support to both the Maui and Molokai watershed partnerships, and to other organizations, private landowners, Federal, and State agencies (Maui County 2012). Conservation actions by Maui County DWS conducted through the WMMWP are also partly funded by Service grants through the Partners for Fish and Wildlife Program (WMMWP 2010, 2011, 2012; USFWS 2010). Maui County DWS's conservation commitments include the following conservation actions: (1) Strategic fencing and removal of ungulates and removal of invasive nonnative plants; (2) regular monitoring to detect changes in management programs; (3) reducing the threat of fire; and (4) gaining community support for conservation programs. In addition, the DWS received funding for installation of an ungulate exclusion fence on the upper portion of their lands on west Maui that protects native habitat and acts as a buffer to the lower boundary of the habitat for plants and the two forest birds. The DWS also received funding in 2010 for feral animal removal from their lands (USFWS 2010). Other conservation actions in this fenced area include weed control and outplanting of native plants. The WMMWP management plan and the commitments by Maui County DWS to implement the conservation actions listed above will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 39 plants, the 2 forest birds, and their habitat. These actions demonstrate the willingness of Maui County DWS to protect and conserve native habitat and the west Maui watershed on their lands,

and their value as a conservation partner.

#### Kamehameha Schools

West Maui Mountains Watershed Partnership Management Plan, and Partners for Fish and Wildlife Agreements

In this final designation, the Secretary has exercised her authority to exclude 1,217 ac (492 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned or managed by Kamehameha Schools on west Maui, and under management as part of the WMMWP. Kamehameha Schools is an established conservation partner, and has participated in the development, implementation, and funding of management plans and projects that benefit the Maui Nui species and other listed species throughout the Hawaiian islands. In this case, the ongoing conservation actions through the WMMWP management plan for Kamehameha Schools lands on west Maui provide for the conservation of 43 plants and 2 forest birds and their habitat. We have determined that the benefits of excluding Kamehameha Schools lands outweigh the benefits of including them in critical habitat for the reasons discussed below.

The Kamehameha Schools lands fall within four critical habitat units for plants (Maui—Lowland Dry—Unit 5, Maui—Lowland Mesic—Unit 2, Maui—Montane Wet—Unit 6, and Maui—Wet Cliff—Unit 6) and four critical habitat units for the two forest birds, the akohekohe and kiwikiu (*Palmeria dolei*—Unit 15—Montane Wet, *Pseudonestor xanthophrys*—Unit 15—Montane Wet, *Palmeria dolei*—Unit 35—Wet Cliff, and *Pseudonestor xanthophrys*—Unit 35—Wet Cliff). These units are occupied by the plants *Alectryon macrococcus*, *Asplenium dielirectum*, *Bidens campylotheca* ssp. *pentamera*, *B. conjuncta*, *Calamagrostis hillebrandii*, *Cenchrus agrimoniooides*, *Ctenitis squamigera*, *Cyanea kunthiana*, *C. munroi*, *Geranium hillebrandii*, *Gouania hillebrandii*, *Kadua coriacea*, *Myrsine vaccinioides*, *Remya mauiensis*, *Sanicula purpurea*, *Santalum haleakalae* var. *lanaiense*, *Sesbania tomentosa*, *Spermolepis hawaiiensis*, *Tetramolopium capillare*, and *Zanthoxylum hawaiiense*. These areas contain unoccupied habitat that is essential to the conservation of 24 other endangered plant species (*Acaena exigua*, *Bonamia menziesii*, *Cyanea glabra*, *C. lobata*, *C. magnicalyx*, *C. obtusa*, *Cyrtandra filipes*, *C. oxybapha*, *Dubautia plantaginea* ssp. *humilis*, *Hesperomannia arborescens*, *H.*

*arbuscula*, *Hibiscus brackenridgei*, *Huperzia mannii*, *Isodendron pyrifolium*, *Kadua laxiflora*, *Lysimachia lydgatei*, *Neraudia sericea*, *Phyllostegia bracteata*, *Plantago princeps*, *Platanthera holochila*, *Pteris lidgatei*, *Schiedea salicaria*, *Sesbania tomentosa*, and *Tetramolopium remyi*), and the akohekohe and kiwikiu. *Alectryon macrococcus* is reported from Kamehameha Schools' lands on west Maui.

Kamehameha Schools was established in 1887, through the will of Princess Bernice Pauahi Paki Bishop. The trust is used primarily to operate a college preparatory program; however, part of Kamehameha School's mission is to protect Hawaii's environment through recognition of the significant cultural value of the land and its unique flora and fauna. Kamehameha Schools has established a policy to guide the sustainable stewardship of its lands including natural resources, water resources, and ancestral places (Kamehameha Schools 2013). Kamehameha Schools is a founder and funder of the WMMWP, and also participates in the watershed partnerships for Oahu, Molokai, Kauai, and the island of Hawaii (WMMWP 2013). Conservation actions conducted by the WMMWP are partly funded by Service grants through the Partners for Fish and Wildlife Program (WMMWP 2010, 2011, 2012). Kamehameha Schools' conservation commitments include the following conservation actions: (1) Strategic fencing and removal of ungulates; (2) regular monitoring for ungulates after fencing; (3) monitoring of habitat recovery; and (4) continued surveys for rare taxa prior to new fence installations. In addition, Kamehameha Schools participated in the construction of strategic ungulate exclusion fences on the upper elevations of their lands on west Maui, which protect native habitat and act as a buffer to the lower boundary of the lowland mesic, montane wet, and wet cliff ecosystems. Other conservation actions in this area include weed control and outplanting of native plants. Kamehameha Schools is also conducting voluntary actions to promote the conservation of rare and endangered species and their lowland dry ecosystem habitats on the island of Hawaii, including the installation of fencing to exclude ungulates, restoring habitat, conducting actions to reduce rodent populations, reestablishing native plant species, and conducting activities to reducing the threat of wildfire. The WMMWP management plan and the commitments by

Kamehameha Schools to implement the conservation actions listed above will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 43 plants, the 2 forest birds, and their habitat. Our records indicate that between 2010 until 2015 there were no consultations conducted regarding projects receiving Federal funding on Kamehameha Schools lands, therefore we believe that in general there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. However, as the WMMWP has received Federal funding for conservation projects in the past, it is possible that in the future such a conservation project undertaken on Kamehameha Schools property may trigger consultation under Section 7. As consultation for a project designed to provide conservation benefit is most likely to result in a not likely to adversely affect determination, and the benefit accruing from the funded conservation project would be likely relatively greater than the regulatory benefit of critical habitat, the incremental benefit of critical habitat is reduced under such circumstances. Overall, the actions described above demonstrate the willingness of Kamehameha Schools to protect and conserve native habitat and the watershed on their west Maui lands, and their value as a partner in conservation.

#### Makila Land Company

West Maui Mountains Watershed Partnership Management Plan, and Partners for Fish and Wildlife Agreements

In this final designation, the Secretary has exercised her authority to exclude 3,150 ac (1,275 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned and managed by Makila Land Company on west Maui, and under management as part of the WMMWP. The Makila Land Company is an established partner in the WMMWP, and ongoing conservation actions through the WMMWP management plan for Makila Land Company lands on west Maui provide for the conservation of 47 plants and 2 forest birds and their habitat. For the reasons discussed below, we have determined that the benefits of excluding Makila Land Company lands outweigh the benefits of including them in critical habitat.

The Makila Land Company lands fall within seven critical habitat units for plants (Maui—Lowland Dry—Unit 5,

Maui—Lowland Mesic—Unit 2, Maui—Montane Wet—Unit 6, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Dry Cliff—Unit 5, and Maui—Wet Cliff—Unit 6) and 10 critical habitat units for the two forest birds, the akohekohe and kiwikiu (*Palmeria dolei*—Unit 15—Montane Wet, *Pseudonestor xanthophrys*—Unit 15—Montane Wet, *Palmeria dolei*—Unit 19—Montane Mesic, *Pseudonestor xanthophrys*—Unit 19—Montane Mesic, *Palmeria dolei*—Unit 20—Montane Mesic, *Pseudonestor xanthophrys*—Unit 20—Montane Mesic, *Palmeria dolei*—Unit 29—Dry Cliff, *Pseudonestor xanthophrys*—Unit 29—Dry Cliff, *Palmeria dolei*—Unit 35—Wet Cliff, and *Pseudonestor xanthophrys*—Unit 35—Wet Cliff). These units are occupied by the plants *Alectryon macrococcus*, *Asplenium dielirectum*, *Bidens campylotheca* ssp. *pentamera*, *B. conjuncta*, *Calamagrostis hillebrandii*, *Cenchrus agrimonioides*, *Ctenitis squamigera*, *Cyanea kunthiana*, *C. magnicalyx*, *Cyrtandra filipes*, *Cyrtandra munroi*, *Diplazium molokaiense*, *Geranium hillebrandii*, *Gouania hillebrandii*, *Kadua coriacea*, *Lysimachia lydgatei*, *Myrsine vaccinioides*, *Remya mauiensis*, *Sanicula purpurea*, *Santalum haleakalae* var. *lanaiense*, *Spermolepis hawaiiensis*, *Tetramolopium capillare*, and *Zanthoxylum hawaiiense*. These areas contain unoccupied habitat that is essential to the conservation of 25 other endangered plant species (*Acaena exigua*, *Bonamia menziesii*, *Colubrina oppositifolia*, *Cyanea glabra*, *C. lobata*, *C. obtusa*, *Cyrtandra filipes*, *C. oxybapha*, *Dubautia plantaginea* ssp. *humilis*, *Gouania vitifolia*, *Hesperomannia arborescens*, *H. arbuscula*, *Hibiscus brackenridgei*, *Huperzia mannii*, *Isodendron pyriformium*, *Kadua laxiflora*, *Neraudia sericea*, *Phyllostegia bracteata*, *Plantago princeps*, *Platanthera holochila*, *Pteris lidgatei*, *Schiedea salicaria*, *Sesbania tomentosa*, *Stenogyne kauaulaensis*, and *Tetramolopium remyi*), and the akohekohe and kiwikiu. The plant species *Bidens campylotheca* ssp. *pentamera*, *Gouania hillebrandii*, *Kadua laxiflora*, *Lysimachia lydgatei*, *Plantago princeps*, *Remya mauiensis*, *Stenogyne kauaulaensis*, *Tetramolopium capillare*, and *Zanthoxylum hawaiiense* are reported from on Makila Land Company lands on west Maui.

Makila Land Company has set aside upper elevation areas of their property at Puehuhunui and Kauaula on west Maui for conservation and protection of rare dry to mesic forest communities. Makila Land Company is a long-time

cooperator with the WMMWP. Conservation actions conducted by the WMMWP are partly funded by Service grants through the Partners for Fish and Wildlife Program (WMMWP 2010, 2011, 2012). Makila Land Company's conservation commitments include the following conservation actions: (1) Strategic fencing and removal of ungulates; (2) regular monitoring for ungulates after fencing; (3) vegetation monitoring; and (4) allowing surveys for rare taxa by the State and the Service's Plant Extinction Prevention Program (PEPP) staff. Much of the area is accessible only by helicopter due to waterfalls and steep terrain. The installation of strategic ungulate exclusion fences on the higher elevation portions of its lands protect native habitat and act as a buffer to the boundaries of the montane wet and wet cliff ecosystems' habitat. Additional conservation actions in these fenced areas include weed control and outplanting of native plants. The WMMWP management plan and the commitments by Makila Land Company to implement the conservation actions listed above will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 47 plants and 2 forest birds, and their habitat. Our records indicate that between 2010 until 2015 there were no consultations conducted regarding projects receiving Federal funding on Makila Land Company lands. We believe that there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. The actions described above demonstrate the willingness of Makila Land Company to protect and conserve native habitat and the west Maui watershed on their lands, and their value as a partner in conservation.

#### Kahoma Land Company

West Maui Mountains Watershed Partnership Management Plan, and Partners for Fish and Wildlife Agreements

In this final designation, the Secretary has exercised her authority to exclude 46 ac (19 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned or managed by Kahoma Land Company on west Maui, and under management as part of the WMMWP. The ongoing conservation actions through the WMMWP management plan for Kahoma Land Company lands on west Maui provide for the conservation of 26 plants and 2 forest birds and their habitat. For the

reasons discussed below, we have determined that the benefits of excluding Kahoma Land Company lands outweigh the benefits of including them in critical habitat.

Kahoma Land Company lands fall within three critical habitat units for plants (Maui—Lowland Dry—Unit 5, Maui—Lowland Mesic—Unit 2, and Maui—Wet Cliff—Unit 6) and two critical habitat units for the two forest birds, the akohekohe and kiwikiu (*Palmeria dolei*—Unit 35—Wet Cliff and *Pseudonestor xanthophrys*—Unit 35—Wet Cliff). The area owned by Kahoma Land that is overlapped by Maui—Lowland Dry—Unit 5 is so small (0.1 ac, 0.05 ha) that it will be excluded, but not included in the analysis for lowland dry species here. The two remaining units are occupied by the plants *Alectryon macrococcus*, *Ctenitis squamigera*, *Cyrtandra munroi*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, and *Zanthoxylum hawaiiense*. These areas contain unoccupied habitat that is essential to the conservation of 20 other endangered plant species (*Asplenium dielirectum*, *Bidens campylotheca* ssp. *pentamera*, *B. conjuncta*, *Bonamia menziesii*, *Colubrina oppositifolia*, *Cyanea glabra*, *C. lobata*, *C. magnicalyx*, *Cyrtandra filipes*, *Dubautia plantaginea* ssp. *humilis*, *Gouania vitifolia*, *Hesperomannia arborescens*, *H. arbuscula*, *Isodendron pyriformium*, *Kadua laxiflora*, *Lysimachia lydgatei*, *Plantago princeps*, *Platanthera holochila*, *Pteris lidgatei*, and *Tetramolopium capillare*), and the akohekohe and kiwikiu. None of the plant species discussed in this rule currently occurs on Kahoma Land Company lands on west Maui.

Kahoma Land Company is a coalition of Maui residents formed in June 2000, to acquire former sugar cane land adjacent to Kahoma Valley on west Maui. Kahoma Land Company's long-term management goals for this area include development of land tracts, diversified agriculture, and ecotourism ventures. Approximately 690 ac (279 ha) of the coalition's lands are within the WMMWP boundaries between two State Natural Area Reserves, and 46 ac (19 ha) are within proposed critical habitat. Kahoma Land Company is also a current member of the WMMWP (WMMWP 2013). Kahoma Land Company's conservation actions conducted by the WMMWP are partly funded by Service grants through the Partners for Fish and Wildlife Program (WMMWP 2010, 2011, 2012). Its conservation commitments include the following conservation actions: (1) Strategic fencing and removal of ungulates; (2) regular monitoring for ungulates after fencing;

(3) monitoring of habitat recovery through vegetation succession analyses; and (4) continued surveys for rare taxa prior to new fence installations. The WMMWP management plan includes actions taken on Kahoma lands to control ungulates, including construction of strategic fencing. Ungulate control checks are currently underway on Kahoma lands, with addition of new check installations (WMMWP 2010, p. 1). Additional conservation actions in this area include weed control and outplanting of native plants. The WMMWP management plan and the commitments by Kahoma Land Company to implement the conservation actions listed above will either lead to maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of the 26 plants, the 2 forest birds, and their habitat. Our records indicate that between 2010 until 2015 there was one informal consultation conducted regarding a project receiving Federal funding through the Fish and Wildlife Service's Partners for Fish and Wildlife Program on Kahoma Land lands for habitat protection; however, we concurred that the project would not likely adversely affect listed plant species. We believe that there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. The action described above demonstrate the willingness of Kahoma Land Company to protect and conserve native habitat and the west Maui watershed on their lands, and their value as a partner in conservation.

Lanai Resorts, LLC, and Castle & Cooke Properties, Inc.

Lanai Conservation Plan and Lanai Conservation Memorandum of Understanding Between Lanai Resorts, LLC, Castle & Cooke Properties, Inc., and U.S. Department of the Interior Fish and Wildlife Service and Lanai Natural Resources Plan

In this final designation, the Secretary has exercised her authority to exclude 25,413 ac (10,284 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned by Lanai Resorts, LLC (LR), also known as Pulama Lanai (PL.). Our partnership with PL (and Castle & Cooke Properties, Inc. (CCPI), which holds rights on PL land for the possible development of a wind farm) provides significant conservation benefits to 38 plant and 2 Lanai tree snail species on Lanai, as demonstrated by the ongoing conservation efforts on the island, the

commitment to develop the Lanai Natural Resources Plan (LNRP), and a memorandum of understanding (MOU) between the Service and LR and CCPI. For the reasons discussed below, we have determined that the benefits of excluding these areas outweigh the benefits of including them in critical habitat.

The areas owned by LR and CCPI fall within 14 critical habitat units that were proposed for plants (Lanai—Coastal—Unit 1, Lanai—Coastal—Unit 2, Lanai—Coastal—Unit 3, Lanai—Lowland Dry—Unit 1, Lanai—Lowland Dry—Unit 2, Lanai—Lowland Mesic—Unit 1, Lanai—Lowland Wet—Unit 1, Lanai—Lowland Wet—Unit 2, Lanai—Montane Wet—Unit 1, Lanai—Dry Cliff—Unit 1, Lanai—Dry Cliff—Unit 2, Lanai—Dry Cliff—Unit 3, Lanai—Wet Cliff—Unit 1, and Lanai—Wet Cliff—Unit 2) and 10 critical habitat units that were proposed for 2 Lanai tree snails (*Partulina semicarinata*—Unit 1—Lowland Wet, *Partulina semicarinata*—Unit 2—Lowland Wet, *Partulina semicarinata*—Unit 3—Montane Wet, *Partulina semicarinata*—Unit 4—Wet Cliff, *Partulina semicarinata*—Unit 5—Wet Cliff, *Partulina variabilis*—Unit 1—Lowland Wet, *Partulina variabilis*—Unit 2—Lowland Wet, *Partulina variabilis*—Unit 3—Montane Wet, *Partulina variabilis*—Unit 4—Wet Cliff, and *Partulina variabilis*—Unit 5—Wet Cliff). These units are occupied by the plants *Abutilon eremitopetalum*, *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Ctenitis squamigera*, *Cyanea gibsonii*, *C. lobata*, *C. munroi*, *Cyrtandra munroi*, *Kadua cordata* ssp. *remyi*, *K. laxiflora*, *Labordia tinifolia* var. *lanaiensis*, *Melicope munroi*, *Pleomele fernaldii*, *Santalum haleakalae* var. *lanaiense*, *Schenkia sebaeoides*, *Spermolepis hawaiiensis*, and *Viola lanaiensis*, and by the Lanai tree snails. These areas contain unoccupied habitat that is essential to the conservation of 21 other endangered plant species (*Adenophorus periens*, *Asplenium dielrectum*, *Brighamia rockii*, *Canavalia pubescens*, *Cenchrus agrimonoides*, *Clermontia oblongifolia* ssp. *mauiensis*, *Cyperus fauriei*, *C. trachysanthos*, *Diplazium molokaiense*, *Hesperomannia arborescens*, *Hibiscus brackenridgei*, *Neraudia sericea*, *Phyllostegia haliakalae*, *Portulaca sclerocarpa*, *Sesbania tomentosa*, *Silene lanceolata*, *Solanum incompletum*, *Tetramolopium lepidotum* ssp. *lepidotum*, *T. renyi*, *Vigna o-wahuensis*, and *Zanthoxylum hawaiiense*).

In 2001, the Board of Land and Natural Resources (BLNR) approved its department's (Department of Land and Natural Resources (DLNR) participation

in a Lanai watershed management program that included the Service (through a private stewardship grant), the Hawaii Department of Health, and CCPI, which at the time, was the primary landowner of Lanai (Leone 2001, in litt). In 2002, the Service and CCPI entered into a memorandum of agreement (MOA) for construction of ungulate-proof fence at Lanaihale, intended to prevent entry by ungulates and to protect the watershed and the listed species within the area. The term of the MOA was through 2025. The fencing of the summit at Lanaihale was planned to be constructed in three stages or "increments." In 2004, the DLNR also provided funding through the Landowner Incentive Program to the Bishop Museum to remove nonnative plants and outplant and establish a population of more than 500 individuals of *Bidens micrantha* ssp. *kalealaha* and *Pleomele fernaldii* in Waiapaa Gulch at Lanaihale. Museum staff were to also collect seed for long-term storage and provide educational experiences for local Lanai students (Bishop Museum 2009, pp. 1–2). In 2006, a fire resulted in the loss of half of the remaining wild individuals of *B. micrantha* ssp. *kalealaha*, and by 2007, none remained. Outplanting was conducted within an ungulate-free enclosure at Awehi Gulch. Also in 2007, the west side (Increment II) of the Lanaihale summit fence perimeter was completed; however, ungulates were able to access the fenced area because the gates were not completed (Service 2008, p. 12). In 2008, more wild individuals of *B. micrantha* ssp. *kalealaha* were discovered in Waiapaa Gulch, and many seedlings were grown for outplanting by a student group at the local high school, with a second outplanted population established in 2009. This population was fenced by the Lanai Institute for the Environment (LIFE) (Bishop Museum 2009, pp. 3–4).

In 2012, CCPI sold the fee interest in their lands on Lanai to Larry Ellison. Ellison subsequently developed PL to manage the island's operations and land. In the sale, CCPI retained the rights to pursue the possible development of a wind power facility in the future.

The Service and PL and CCPI signed an expansive MOU on January 26, 2015, with a term that extends through 2028. Amongst the commitments made by PL and CCPI in this MOU are the following: (1) The completion of a Lanai Natural Resources Plan (LNRP) within 18 months of the date of the agreement. Implementation of the LNRP will include identification of priority ecosystems and species, prioritization of

management actions required, and commitment of funding; (2) maintenance and monitoring of the completed existing Lanaihale fences; (3) ungulate eradication within existing Lanaihale fences and control efforts in other priority areas as identified in the LNRP; (4) cooperation with, and support of management and monitoring within, TNC's Kanepuu Preserve units; (5) protection of rare plant clusters; (6) Lanai tree snail protection, management, and monitoring; (7) identification of rare species for immediate protective intervention efforts; (8) protection of coastal areas; and (9) establishment of nearly 7,000 ac (2,800 ha) of "no development areas" as determined by the LNRP, within which enhancement of overall ecological condition and conservation of listed species will be emphasized. PL additionally agrees to provide more than \$200,000 in funding each year toward achievement of the conservation measures described in the MOU.

Under the terms of the MOU, PL will prepare the LNRP. This plan will include a description of detailed management actions with timelines that will benefit and provide protection for 38 plant species, the two Lanai tree snails, and their habitat on the island of Lanai. The MOU provides for the Service to be a member of the LNRP planning and implementation team, and an active participant in the ongoing conservation efforts on the island of Lanai.

PL has committed to implementing certain protective measures in advance of the LNRP to ensure species conversation. Actions currently being implemented include: (1) Planning and construction of an enclosure for the protection of the two Lanai tree snails; (2) planning, construction, and maintenance of fences around three rare plant populations; (3) outplanting of rare species in protected locations; (4) implementation of biosecurity measures to avoid the incursion and spread of invasive species; (5) maintenance of all existing fences; (6) predator control where necessary and appropriate to protect listed species; and (7) identification of other priority actions and sites. These measures are currently underway and being conducted in coordination with the Service.

Our records indicate that between 2010 until 2015 there were no section 7 consultations regarding federally-funded projects on Lanai. We believe that there is a low likelihood of a Federal nexus to provide a benefit to the species from designation of critical habitat. However, we note that CCPI has indicated the possibility of putting forth

a project proposal to develop a wind farm on Lanai. Whether such a proposal may proceed, and when, is unknown at this time. Should this occur, however, there would likely be a Federal nexus that would trigger consultation under section 7 on these lands. The Service has considered this possibility, and noted that the most likely placement of towers and roads for a potential wind farm is largely discontinuous with the areas that were proposed as critical habitat. Because any consultation that may occur under section 7 as a result would involve only a very small proportion of the critical habitat proposed on Lanai, in contrast to the significant and comprehensive nature of the conservation benefits to be accrued from the MOU and LNRP, as well as from our partnership with PL and CCPI, we conclude that even if consultation were to take place in the future for such an activity, we do not anticipate that it would result in benefit to the species that would outweigh the benefits realized through the MOU and LNRP, and our partnership with PL and CCPI. The commitments provided under the terms of the MOU between the Service and PL and CCPI, in the form of management actions that will be included in the LNRP and actions already underway in advance of the LNRP, will lead to protection of individuals from threats and either maintenance or enhancement of habitat for the species, or lead to emergence of suitable habitat where it is not present, thereby benefitting the conservation of 38 plant species, the two Lanai tree snails, and their habitat on the island of Lanai. The development of the MOU with the Service to protect listed species on the island of Lanai, the current conservation efforts underway by PL, and the development of the Lanai Natural Resources Plan by PL demonstrates the willingness of PL and CCPI to contribute to the conservation of listed species and their habitat, and their value as a partner in conservation. The strength of this partnership leads us to anticipate that these benefits will continue into the future.

*Benefits of Inclusion*—We find there are minimal benefits to including the areas described above in critical habitat. As discussed earlier, the designation of critical habitat invokes the provisions of section 7 of the Act. However, in the cases under consideration here, should there be a Federal nexus that would require consultation under section 7, we find the requirement that Federal agencies consult with us and ensure that their actions are not likely to destroy or adversely modify critical habitat will

not result in significant benefits to the species. An evaluation of our consultation history on the islands of Maui Nui demonstrates that there is a low probability of a Federal nexus for many of the areas being excluded; furthermore, when consultation did occur for actions in the excluded areas, the projected outcomes of such actions were that they were not likely to adversely affect the listed species, as the actions in question were generally designed to benefit the species or their habitat. For example, between 2010 and 2015, we conducted 111 consultations for the island of Maui. Only two were formal consultations, one for the Habitat Conservation Plan (HCP) for the Kaheawa Wind Power II project on State land on west Maui, and one (with a reinitiation) for operations (road project) on Federal land in Haleakala National Park (neither of these areas are excluded in this final designation). In both cases we concluded that the project, as proposed, was not likely to destroy or adversely modify critical habitat.

Of the remaining 109 consultations, 25 were informal consultations and 84 were requests for technical assistance or species lists. The majority (19) of these informal consultations were conducted for projects involving road repair or modifications, bridge repairs, or construction of communications towers. Eight of the informal consultations involved projects in areas being excluded from critical habitat; however, we concurred with each agency's determination that the project, as proposed, was not likely to adversely affect listed species. We did conduct a single formal consultation, in 2008, on the construction of a communications tower funded by the FCC. However, the project area did not fall within critical habitat boundaries, and as we have no information to suggest that any similar activity is likely to occur again, there is little benefit that would be gained through the designation of critical habitat. Based on our consultation history on these lands (one formal consultation in 2008, and only 7 informal consultations over the past 5 years) and the fact that most of these informal consultations were for federally funded actions designed to benefit the species, we find it unlikely that the designation of critical habitat would provide significant benefits to the species through section 7 consultation in these particular cases.

In addition, if a Federal nexus were to occur for an action taking place within an area occupied by one or more listed species, section 7 consultation would already be triggered and the Federal agency would consider the effects of its

actions on the species through a jeopardy analysis. Because one of the primary threats to these species is habitat loss and degradation, the consultation process under section 7 of the Act for projects with a Federal nexus will, in evaluating the effects to these species, evaluate the effects of the action on the conservation or function of the habitat for the species regardless of whether critical habitat is designated for these lands. As noted in our economic analysis (IEC 2013, p. 2–11), the Service's recommendations for offsetting adverse project impacts to habitat that is occupied by a listed bird, invertebrate, or plant species under the jeopardy standard are often the same as recommendations we would make to offset adverse impacts to critical habitat, with the exception of the conservation project's location. Although the standards for jeopardy and adverse modification are not the same, any additional conservation that could be attained through the section 7 prohibition on adverse modification analysis would not likely be significant in this case because of the consultation history and conservation agreements already in place.

In addition, the existing conservation programs being implemented by these landowners substantially reduce the regulatory benefits of critical habitat. All of the areas described are managed by proven conservation partners, and have management plans in place that provide significant benefits to the Maui Nui species and their habitat, as detailed above. The designation of critical habitat carries no requirement that non-Federal landowners undertake any proactive conservation measures, for example with regard to the maintenance, restoration, or enhancement of habitat for listed species. Any voluntary action by a non-Federal landowner that contributes to the maintenance, restoration, or enhancement of habitat is therefore a valuable benefit to the listed species, and in the particular cases considered here, is a significant benefit above and beyond that which can be provided by critical habitat designation. Based on the track record of these landowners, it is reasonable to expect that these beneficial conservation efforts will continue into the future and that critical habitat would provide little conservation benefit in comparison.

Another potential benefit of including lands in a critical habitat designation is that the designation can serve to educate landowners, State and local government agencies, and the public regarding the potential conservation value of an area, and may help focus conservation efforts

on areas of high conservation value for certain species. Any information about the Maui Nui species and their habitat that reaches a wider audience, including parties engaged in conservation activities, is valuable. However, in these cases, the educational value of critical habitat is limited because the landowners and land managers in question are already aware of the presence of the species, are knowledgeable about the species, and have furthermore already taken proactive steps to manage for the conservation of these species, as demonstrated by their ongoing conservation efforts and participation in conservation agreements.

There is a long history of critical habitat designation in Hawaii, and neither the State nor county jurisdictions have ever initiated their own additional requirements in areas because they were identified as critical habitat. Therefore, based on this history, we believe this potential benefit of critical habitat is limited.

*Benefits of Exclusion*—The benefits of excluding the areas described above from designated critical habitat are relatively substantial. Excluding the areas owned and managed by these landowners and land managers from critical habitat designation will provide significant benefit in terms of sustaining and enhancing the partnership between the Service and these landowners and partners, with positive consequences for conservation for the species that are the subject of this rule as well as other species that may benefit from such partnerships in the future. As described above, partnerships with non-Federal landowners are vital to the conservation of listed species, especially on non-Federal lands; therefore, the Service is committed to supporting and encouraging such partnerships through the recognition of positive conservation contributions. In the cases considered here, the measures these landowners and land managers have already put in place to enhance species conservation likely exceed any potential benefits that would accrue through section 7 consultation, particularly since the likelihood for a Federal nexus is so minimal on many of these lands. Furthermore, in those cases where a Federal nexus may occur and trigger consultation through section 7, our consultation history demonstrates that most federally funded or authorized actions in these specific areas have been related to conservation actions, thus critical habitat would not result in additional conservation measures, which minimizes or eliminates the

regulatory benefit of critical habitat in these particular cases.

The designation of critical habitat, on the other hand, could have an unintended negative effect on our relationship with non-Federal landowners and land managers due to the perceived imposition of government regulation. According to some researchers, the designation of critical habitat on private lands significantly reduces the likelihood that landowners will support and carry out conservation actions (Main *et al.* 1999, p. 1,263; Bean 2002, p. 2). The magnitude of this negative outcome is greatly amplified in situations where active management measures (such as reintroduction, fire management, and control of invasive species) are necessary for species conservation (Bean 2002, pp. 3–4). We believe the judicious exclusion of specific areas of non-federally owned lands from critical habitat designation can contribute to species recovery and provide a superior level of conservation than critical habitat. Therefore, we consider the positive effect of excluding proven conservation partners from critical habitat to be a significant benefit of exclusion.

*Benefits of Exclusion Outweigh the Benefits of Inclusion*—We have reviewed and evaluated the exclusion of 84,891 ac (34,354 ha) of land owned and managed by 13 landowners on the islands of Maui, Molokai, and Lanai from critical habitat designation (see Table 9). The benefits of including these lands in the designation are comparatively small, as the habitat on the covered lands is already being monitored and managed under various management plans or agreements, as detailed above, to improve the habitat elements that are equivalent to the physical or biological features that are outlined in this critical habitat rule. In addition, we see little likelihood of these areas benefitting from the application of section 7 to critical habitat, as the probability of a non-conservation action with a Federal nexus on these lands is low, as reflected in the consultation history between 2010 and 2015 (and consultation history for the islands of Maui Nui since 2003, as provided in our proposed rule (77 FR 34464, June 11, 2012)). We therefore anticipate little, if any, additional protections through application of the section 7 prohibition on adverse modification or destruction due to the designation of critical habitat on these lands. The potential educational benefits of inclusion are also limited. All of the landowners and land managers under consideration are proven conservation partners, and have

demonstrated their knowledge of the species and their habitat needs. In addition, as described above, they have all developed or participated in an active community outreach program that has increased community awareness of the Maui Nui species, and they contribute to our knowledge of the species through monitoring and adaptive management of their lands.

In contrast, the benefits derived from excluding these owners and enhancing our partnership with these landowners and land managers is significant. The positive conservation results that we believe will be realized through the maintenance of these existing partnerships, as well as through the encouragement of future partnerships for listed species, are a significant benefit of exclusion. In cases such as these, where the benefits of including the areas in question are minimal, the benefits of excluding proven partners with such a positive track record for proactive conservation measures are relatively greater.

For the reasons discussed above, we have determined that the additional regulatory benefit of designating critical habitat, afforded through the section 7(a)(2) consultation process, is minimal because of limited potential for a Federal nexus not related to conservation actions and because conservation measures specifically benefitting the Maui Nui species and their habitat are in place as demonstrated by the provisions of the various management plans and voluntary agreements described above. The positive conservation outcomes provided by these plans and agreements greatly reduce the benefit of critical habitat in the specific cases considered here. In addition, the potential educational and informational benefits of critical habitat designation on lands containing the physical or biological features essential to the conservation of the Maui Nui species would be minimal, because the landowners and land managers under consideration are already making significant contributions to our understanding of these species, and continue to disseminate useful information to the public.

On the other hand, because voluntary conservation efforts for the benefit of listed species on private lands are so valuable, the Service considers the maintenance and encouragement of proven conservation partnerships to be a significant benefit of exclusion. The development and maintenance of effective working partnerships with private landowners for the conservation of listed species is particularly important in areas such as Hawaii, a

State with relatively little Federal landownership but many species of conservation concern. Excluding these areas from critical habitat will help foster the partnership we have developed with the landowners and land managers in question have developed with Federal, State, and local conservation organizations, and will encourage the continued implementation of voluntary conservation actions for the benefit of the Maui Nui species and their habitat on these lands. In addition, these partnerships not only provide a benefit for the conservation of the Maui Nui species, but may also serve as a model and aid in fostering future cooperative relationships with other parties here and in other locations for the benefit of other endangered or threatened species. Therefore, in consideration of the factors discussed above in the *Benefits of Exclusion* section, including the relevant impacts to current and future partnerships, we have determined that the benefits of exclusion of lands owned and managed by the 13 landowners considered here and identified in Table 9 outweigh the benefits of designating these privately owned lands as critical habitat.

#### Summary of Benefits of Exclusion Outweighs the Benefits of Inclusion, by Landowner

*The Nature Conservancy.* In this final designation, the Secretary has exercised her authority to exclude from critical habitat lands owned or managed by The Nature Conservancy, totaling 10,056 ac (4,062 ha) on the islands of Maui and Molokai. The Nature Conservancy (TNC) is a proven conservation partner, as demonstrated, in part, by their ongoing management programs, documented in long-range management plans and yearly operational plans for TNC's Kapunakea Preserve on west Maui and Waikamoi Preserve on east Maui, and Kamakou Preserve and Moomomi Preserve on Molokai. The Nature Conservancy's management and protection of these areas currently provide significant conservation benefits to many of the Maui Nui species and their habitat which lessens the incremental benefit of critical habitat, particularly as there is little likelihood of a Federal nexus on these lands that would potentially trigger the consideration of adverse modification or destruction of critical habitat through section 7 consultation. The landowner and public are already aware of the conservation value of these areas due to their designation as TNC Preserves, and TNC's active outreach program. The benefits of exclusion, on the other hand,

are significant, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of TNC provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with TNC, as well as encourage additional beneficial conservation partnerships in the future. The Secretary has therefore concluded that in this particular case, the benefits of excluding TNC lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Maui Land and Pineapple Company, Inc.* In this final designation, the Secretary has exercised her authority to exclude 8,931 ac (3,614 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned and managed by Maui Land and Pineapple Company (ML & P). Maui Land and Pineapple Company is a proven conservation partner with an established track record of voluntary protection and management of listed species as demonstrated, in part, by their ongoing management program for the Puu Kukui Watershed Preserve (Puu Kukui WP), their participation in the WMMWP, and the tree snail habitat protection agreement for ML & P's Puu Kukui WP on west Maui. ML & P's management and protection of these areas currently provide significant conservation benefits to many of the Maui Nui species and their habitat, which lessens the incremental benefit of critical habitat. The designation of critical habitat would add little, if any, additional benefit beyond that provided by the current management plans, as our consultation history indicates there is little likelihood of a Federal nexus on these lands that would potentially trigger the consideration of adverse modification or destruction of critical habitat through section 7 consultation. The landowner and public are already aware of the conservation value of these

areas, as Puu Kukui is the largest privately owned watershed preserve in the State, and the actions of the WMMWP are well known. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing management plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of ML & P provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with ML & P, as well as encourage additional beneficial conservation partnerships in the future. The Secretary has therefore concluded that in this particular case, the benefits of excluding ML & P lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Ulupalakua Ranch.* In this final designation, the Secretary has exercised her authority to exclude 6,535 ac (2,645 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are under management by Ulupalakua Ranch. Ulupalakua Ranch is a proven partner, as evidenced, in part, by their history of conservation actions including the Auwahi and Puu Makuu restoration agreements and ongoing management of Ulupalakua Ranch lands on east Maui; Ulupalakua Ranch is also an active member of the LHWRP. Ulupalakua Ranch's management and protection of these areas currently provide significant conservation benefits to many of the Maui Nui species and their habitat, which lessens the incremental benefit of critical habitat. Ulupalakua Ranch is currently carrying out activities on their lands for the conservation of rare and endangered species and their habitats; funding for these projects through Federal sources (*e.g.*, from the Service and NRCS) has resulted in a history of informal consultations for this area. These activities, however, were designed either entirely or in part to benefit the listed species or their

habitat, and all resulted in not likely to adversely affect determinations. In addition, one formal consultation did take place on Ulupalakua Ranch lands in 2008, for the construction of a communications tower. However, as the action area did not overlap critical habitat, and we have no information to suggest that such a project is likely to occur again, we conclude there is little if any additional benefit to be gained from the designation of critical habitat on Ulupalakua Ranch lands. Therefore, in this particular case, although there is a likelihood of a Federal nexus, we expect any regulatory benefit realized as a result of critical habitat would be minimal. In addition, the landowner and public are already aware of the conservation value of this area through Ulupalakua Ranch's active volunteer and outreach program. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of Ulupalakua Ranch provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with Ulupalakua Ranch, as well as encourage additional beneficial conservation partnerships in the future. The combination of conservation gained from continuing management actions by this landowner and the importance of maintaining, enhancing, and developing conservation partnerships in this situation are sufficient to outweigh the potential benefits that may be realized through section 7 for these areas. The Secretary has therefore concluded that in this particular case, the benefits of excluding Ulupalakua Ranch lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Haleakala Ranch Company.* In this final designation, the Secretary has exercised her authority to exclude 8,716

ac (3,527 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are under management by Haleakala Ranch. Haleakala Ranch is a proven conservation partner, as evidenced, in part, by a history of significant voluntary management actions and agreements that provide for the conservation of many of the Maui Nui species and their habitat, and by their participation in the EMWP, as detailed above; all of these actions lessen the incremental benefit of critical habitat. Haleakala Ranch is currently carrying out activities on their lands for the conservation of rare and endangered species and their habitats; past funding for these projects through Federal sources (*e.g.*, from the Service and NRCS) has recently resulted in informal consultation under section 7. That consultation was for management actions designed to benefit the species (ungulate and weed control), and resulted in a not likely to adversely affect determination. Therefore, in this particular case, although there is a likelihood of a Federal nexus, we expect any regulatory benefit realized as a result of critical habitat would be minimal. In this case, the landowner and public are aware of the conservation value of this area through the long history of conservation activities that have occurred there. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of Haleakala Ranch provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with Haleakala Ranch, as well as encourage additional beneficial conservation partnerships in the future. The combination of conservation gained from continuing management actions by this landowner and the importance of maintaining, enhancing, and developing conservation partnerships in this situation are sufficient to outweigh the potential benefits that may be realized

through section 7 for these areas. The Secretary has therefore concluded that in this particular case, the benefits of excluding Haleakala Ranch lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*East Maui Irrigation Company, Ltd.* In this final designation, the Secretary has exercised her authority to exclude 6,721 ac (2,720 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are managed by East Maui Irrigation Company, Ltd. (EMI). East Maui Irrigation Company is a proven conservation partner, as demonstrated, in part, by their ongoing management and restoration agreements for EMI lands at Haiku Uka on east Maui, and their founding participation in the EMWP. EMI's management and protection of these areas currently provide significant conservation benefits to many of the Maui Nui species and their habitat; actions have included the facilitation of ungulate control measures and the construction of 7 mi (11 km) of ungulate exclusion fencing in an area of essential habitat, watershed resource monitoring, and invasive weed control. All of these actions lessen the incremental benefit of critical habitat, as the regulatory effect of critical habitat would add little, if any, additional benefit beyond that provided by the current management plans, as our consultation history indicates there is little likelihood of a Federal nexus on these lands that would potentially trigger the consideration of adverse modification or destruction of critical habitat through section 7 consultation. The landowner is already aware of the conservation value of these lands through their conservation history and participation in the EMWP. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of EMI provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant

conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with EMI, as well as encourage additional beneficial conservation partnerships in the future. The Secretary has therefore concluded that in this particular case, the benefits of excluding EMI lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Nuu Mauka Ranch.* In this final designation, the Secretary has exercised her authority to exclude 2,094 ac (848 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned by Nuu Mauka Ranch. Nuu Mauka Ranch's management and protection of these areas currently provide significant conservation benefits to many of the Maui Nui species and their habitat through ongoing management under the Native Watershed Forest Restoration Conservation Plan, LHWRP management plan, and the Southern Haleakala Forest restoration project agreement for Nuu Mauka Ranch lands on east Maui, all of which lessen the incremental benefit of critical habitat. Nuu Mauka Ranch is currently carrying out activities on their lands for the conservation of rare and endangered species and their habitats; past funding for these projects through Federal sources (*e.g.*, from the Service and NRCS) indicates the potential for a Federal nexus on these lands. However, past actions have been designed to benefit the Maui Nui species or their habitat (*e.g.*, construction of an ungulate exclusion fence), therefore in this particular case we expect any regulatory benefit realized as a result of critical habitat would be minimal. The designation of critical habitat would add little, if any, additional benefit beyond that provided by the current management plans, as our consultation history indicates there is little likelihood of a Federal nexus on these lands that would potentially trigger the consideration of adverse modification or destruction of critical habitat through section 7 consultation. The landowner is already aware of the conservation value of these lands through their conservation history and participation in the LHWRP. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived

disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of Nuu Mauka Ranch provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with Nuu Mauka Ranch, as well as encourage additional beneficial conservation partnerships in the future. The combination of conservation gained from continuing management actions by this landowner and the importance of maintaining, enhancing, and developing conservation partnerships in this situation are sufficient to outweigh the potential benefits that may be realized through section 7 for these areas. The Secretary has therefore concluded that in this particular case, the benefits of excluding Nuu Mauka Ranch lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Kaupo Ranch.* In this final designation, the Secretary has exercised her authority to exclude 931 ac (377 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned or managed by Kaupo Ranch. Kaupo Ranch has undertaken voluntary conservation measures on their lands, demonstrating their value as a partner through participation in the LHWRP management plans and the Southern Haleakala Forest Restoration Project for Kaupo Ranch lands on east Maui. Kaupo Ranch's management and protection of these areas currently provide significant conservation benefits to many of the Maui Nui species and their habitat, which lessens the incremental benefit of critical habitat. Kaupo Ranch is currently carrying out activities on their lands for the conservation of rare and endangered species and their habitats; examples include weed control, outplanting of native plants, and the construction of an ungulate exclusion fence. Funding for brush management and prescribed grazing has resulted in one recent informal consultation for this area; this resulted in a not likely to adversely affect determination. Therefore, in this particular case,

although there is some potential for a Federal nexus, we expect any regulatory benefit realized as a result of critical habitat would be minimal, as the most likely trigger for consultation would be actions designed to benefit the species. The landowner is already aware of the conservation value of this area through their active management history, partnership with Haleakala National Park, and participation in the LHWRP. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of Kaupo Ranch provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with Kaupo Ranch, as well as encourage additional beneficial conservation partnerships in the future. The Secretary has therefore concluded that in this particular case, the benefits of excluding Kaupo Ranch lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Wailuku Water Company.* In this final designation, the Secretary has exercised her authority to exclude 7,410 ac (2,999 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned or managed by Wailuku Water Company on west Maui, and under management as part of the West Maui Mountains Watershed Partnership (WMMWP). The ongoing conservation actions through the WMMWP management plan and Partners for Fish and Wildlife Agreements for Wailuku Water Company lands on west Maui provide significant conservation benefits to many of the Maui Nui species and their habitat, which lessens the incremental benefit of critical habitat. Wailuku Water Company is one of the founding members and a funder of the WMMWP, and participates in numerous management actions on their lands that contribute to the conservation

of rare and endangered species and their habitats. In the recent past, Federal funding for habitat restoration on Wailuku Water Company lands through the Service's Partners for Fish and Wildlife Program has led to informal consultation under section 7. However, the outcome was a not likely to adversely affect determination, as the project was designed to benefit the species and their habitat. Therefore, in this particular case, although there is some potential for a Federal nexus, we expect any regulatory benefit realized as a result of critical habitat would be minimal, as the most likely trigger for consultation would be actions designed to benefit the species. The landowner is already aware of the conservation value of this area through their active management history and participation in the WMMWP. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of Wailuku Water Company provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with Wailuku Water Company, as well as encourage additional beneficial conservation partnerships in the future. The combination of conservation gained from continuing management actions by this landowner and the importance of maintaining, enhancing, and developing conservation partnerships in this situation are sufficient to outweigh the potential benefits that may be realized through section 7 for these areas. The Secretary has therefore concluded that in this particular case, the benefits of excluding Wailuku Water Company lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*County of Maui, Department of Water Supply (DWS).* In this final designation,

the Secretary has exercised her authority to exclude 3,690 ac (1,493 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned by the County of Maui DWS on west Maui, and under management as part of the WMMWP. The County of Maui DWS has demonstrated their value as a conservation partner as a founding partner and funder of the WMMWP, which provides for important conservation actions through implementation of the WMMWP management plan on west Maui. The management plans and projects supported by the County of Maui DWS provide significant conservation benefits to many of the Maui Nui species and their habitat, which lessens the incremental benefit of critical habitat. The DWS is a founding partner and funder of the WMMWP, and provides financial support to several partnerships and organizations that contribute to conservation actions benefitting the conservation of rare and endangered species and their habitats. In the recent past, one of their habitat protection projects received Federal funding through the Service's Partners for Fish and Wildlife Program, which led to informal consultation under section 7. However, the outcome was a not likely to adversely affect determination, as the project was designed to benefit the species and their habitat. Therefore, in this particular case, although there is some potential for a Federal nexus, we expect any regulatory benefit realized as a result of critical habitat would be minimal, as the most likely trigger for consultation would be actions designed to benefit the species. The landowner is already aware of the conservation value of this area through their active management history and participation in the WMMWP. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on non-Federal lands. Here the conservation actions of Maui County DWS provide benefits on these lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands,

which will continue and strengthen our positive relationship with Maui County DWS, as well as encourage additional beneficial conservation partnerships in the future. The combination of conservation gained from continuing management actions by this landowner and the importance of maintaining, enhancing, and developing conservation partnerships in this situation are sufficient to outweigh the potential benefits that may be realized through section 7 for these areas. The Secretary has therefore concluded that in this particular case, the benefits of excluding Maui County DWS lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Kamehameha Schools.* In this final designation, the Secretary has exercised her authority to exclude 1,217 ac (492 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned or managed by Kamehameha Schools on west Maui, and under management as part of the WMMWP. Kamehameha Schools is an established conservation partner, and has participated in the development, implementation, and funding of management plans and projects that benefit the Maui Nui species and other listed species throughout the Hawaiian islands. The ongoing conservation actions through the WMMWP management plan for Kamehameha Schools lands on west Maui currently provide significant conservation benefits to many of the Maui Nui species and their habitat, which lessens the incremental benefit of critical habitat. Past funding for WMMWP projects through Federal sources (*e.g.*, from the Service) indicates the potential for a Federal nexus should a project occur on Kamehameha Schools lands. However, such past actions have been designed to benefit the Maui Nui species or their habitat, therefore in this particular case we expect any regulatory benefit realized as a result of critical habitat would be minimal. The designation of critical habitat would add little, if any, additional benefit beyond that provided by the current management plans, as our consultation history indicates there is little likelihood of a Federal nexus on these lands that would potentially trigger the consideration of adverse modification or destruction of critical habitat through section 7 consultation. The landowner is aware of the conservation value of these areas, as Kamehameha Schools has a long history of conservation

actions in partnership with the Service here and in other areas. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing management plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of Kamehameha Schools provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with Kamehameha Schools, as well as encourage additional beneficial conservation partnerships in the future. The Secretary has therefore concluded that in this particular case, the benefits of excluding Kamehameha Schools lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Makila Land Company.* In this final designation, the Secretary has exercised her authority to exclude 3,150 ac (1,275 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned and managed by Makila Land Company on west Maui, and under management as part of the WMMWP. The Makila Land Company is an established partner in the WMMWP, and ongoing conservation actions through the WMMWP management plan for Makila Land Company lands on west Maui currently provide significant conservation benefits to many of the Maui Nui species and their habitat, which lessens the incremental benefit of critical habitat. The designation of critical habitat would add little, if any, additional benefit beyond that provided by the current management plans, as our consultation history indicates there is little likelihood of a Federal nexus on these lands that would potentially trigger the consideration of adverse modification or destruction of critical habitat through section 7 consultation. The landowner is already aware of the conservation value of these areas through their history of conservation actions in partnership with the Service

and participation in the WMMWP. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing management plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of Makila Land Company provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with Makila Land Company, as well as encourage additional beneficial conservation partnerships in the future. The Secretary has therefore concluded that in this particular case, the benefits of excluding Makila Land Company lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Kahoma Land Company.* In this final designation, the Secretary has exercised her authority to exclude 46 ac (19 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned or managed by Kahoma Land Company on west Maui, and under management as part of the WMMWP. The ongoing conservation actions through the WMMWP management plan for Kahoma Land Company lands on west Maui provide significant conservation benefits to many of the Maui Nui species and their habitat, which lessens the incremental benefit of critical habitat. The Kahoma Land Company is a coalition of Maui residents that participate in conservation actions on their lands that contribute to the conservation of rare and endangered species and their habitats, including weed control, outplanting of native plants, strategic fencing, and ungulate removal. In the recent past, Federal funding for habitat restoration on Kahoma Land Company lands through the Service's Partners for Fish and Wildlife Program has led to informal consultation under section 7. However, the outcome was a not likely to adversely affect determination, as the project was designed to benefit the

species and their habitat. Therefore, in this particular case, although there is some potential for a Federal nexus, we expect any regulatory benefit realized as a result of critical habitat would be minimal, as the most likely trigger for consultation would be actions designed to benefit the species. The landowner is already aware of the conservation value of this area through their active management history and participation in the WMMWP. The benefits of exclusion, on the other hand, are significant, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the conservation actions of Kahoma Land Company provide benefits on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with Kahoma Land Company, as well as encourage additional beneficial conservation partnerships in the future. The combination of conservation gained from continuing management actions by this landowner and the importance of maintaining, enhancing, and developing conservation partnerships in this situation are sufficient to outweigh the potential benefits that may be realized through section 7 for these areas. The Secretary has therefore concluded that in this particular case, the benefits of excluding Kahoma Land Company lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Lanai Resorts, LLC, and Castle & Cooke Properties, Inc.* In this final designation, the Secretary has exercised her authority to exclude 25,413 ac (10,284 ha) of lands from critical habitat, under section 4(b)(2) of the Act, that are owned by Lanai Resorts, LLC (LR), also known as Pulama Lanai (PL). Our partnership with PL (and Castle & Cooke Properties, Inc. (CCPI), which holds rights on PL land for the possible development of a wind farm) provides

significant conservation benefits to many of the Maui Nui species and their habitat, as demonstrated by the ongoing conservation efforts on the island, the commitment to develop the Lanai Natural Resources Plan (LNRP), and a memorandum of understanding (MOU) between the Service and LR and CCPI. The terms of the MOU, signed on January 26, 2015, are sweeping, and include a number of substantial management commitments that stand to make significant contributions to the conservation of the listed species on Lanai and their habitat. All of these considerations serve to lessen the incremental benefit of critical habitat. Examples of actions included in the MOU are the identification of priority ecosystems and species, prioritization of management actions required, and commitment of funding to maintain and monitor fences, control ungulates, protect rare plant clusters, protect, manage and monitor the Lanai tree snails, and establish “no development” areas. In addition, PL has committed to implementing certain protective measures in advance of the LNRP to ensure species conservation.

At present, the designation of critical habitat on Lanai would add little, if any, additional benefit beyond that provided by the MOU and LNRP, as our consultation history indicates there is little likelihood of a Federal nexus on these lands that would potentially trigger the consideration of adverse modification or destruction of critical habitat through section 7 consultation. It is possible, however, that consultation may be triggered in the future by a Federal permitting requirement should CCPI decide to pursue their option to develop a wind farm on the island. Even under such a circumstance, however (which currently remains speculative), we believe that consultation would be unlikely to result in benefits to the Maui Nui species greater than those realized through the MOU and LNRP, as critical habitat was not proposed within the potential footprint of the prospective wind farm, and similar consultations in the past have resulted in not likely to destroy or adversely modify findings (see *Benefits of Inclusion*, above). Therefore, we would not expect that critical habitat would result in added benefits to the species through conservation measures, even in the event of a future Federal nexus on these lands; any regulatory benefit realized as a result of critical habitat would likely be minimal compared to the conservation benefits gained through our partnership with PL and CCPI. The landowners are already well aware of

the conservation value of this area through their work with the Service to develop the MOU, as well as their past management efforts.

The benefits of exclusion, on the other hand, are substantial, as excluding areas covered by existing plans and programs can encourage land managers to partner with the Services in the future, by removing any real or perceived disincentives for engaging in conservation activities, and thereby provide a benefit by encouraging future conservation partnerships and beneficial management actions. We give great weight to the benefits of excluding areas where we have demonstrated partnerships, especially on private lands. Here the development of the MOU with the Service to protect listed species on the island of Lanai, the current conservation efforts underway by PL, and the development of the Lanai Natural Resources Plan by PL demonstrates the willingness of PL and CCPI to contribute to the conservation of listed species and their habitat, and their value as a partner in conservation. Their conservation actions provide significant benefits for the Maui Nui species and their habitat on these private lands beyond those that can be achieved through critical habitat and section 7 consultations, and significant conservation benefits would be realized through the exclusion of these lands, which will continue and strengthen our positive relationship with PL and CCPI, as well as encourage additional beneficial conservation partnerships in the future. The combination of conservation gained from continuing management actions by this landowner and the importance of maintaining, enhancing, and developing conservation partnerships in this situation are sufficient to outweigh the potential benefits that may be realized through section 7 for these areas. The Secretary has therefore concluded that in this particular case, the benefits of excluding PL and CCPI lands outweigh those of including them in critical habitat. As detailed below, the Secretary has further determined that such exclusion will not result in the extinction of any of the Maui Nui species in question.

*Exclusion Will Not Result in Extinction of the Species*—We have determined that the exclusion of 84,891 ac (34,354 ha) from the designation of critical habitat for the Maui Nui species on lands on Maui, Molokai, and Lanai owned and managed by the 13 landowners identified here will not result in extinction of the species. In fact, exclusion of these lands is based, in part, on our conclusion that such exclusion will likely result in the

maintenance, restoration, or enhancements of the physical or biological features essential to the conservation of the Maui Nui species. Furthermore, exclusion of these lands is likely to improve our ability to form and maintain conservation partnerships with private landowners in areas essential to the conservation of the Maui Nui species. As discussed above, reintroduction and reestablishment of populations into areas that are not currently occupied by the species will be required to achieve their conservation. Exclusion is not likely to reduce the likelihood that reintroductions would occur or be successful. Exclusion of lands that are managed by private landowners for restoration or maintenance of suitable native habitat is more likely to facilitate robust partnerships with private landowners that would be required to support a reintroduction program that would be effective in conserving many of the Maui Nui species, such as the kiwīkiu. Excluding lands covered by voluntary conservation partnerships is likely to restore, maintain, and increase the strength and number of partnerships with private landowners that are needed to recover the species.

In each case, we have evaluated ongoing conservation efforts that are currently in effect through existing management plans and determined that such efforts will adequately protect the geographical areas containing the physical or biological features essential to the conservation of the species. An important consideration as we evaluate these exclusions and their potential effect on the species in question is that critical habitat does not carry with it a regulatory requirement to restore or actively manage habitat for the benefit of listed species; the regulatory effect of critical habitat is only the avoidance of destruction or adverse modification of critical habitat should an action with a Federal nexus occur. It is therefore advantageous for the conservation of the species to support the proactive efforts of non-Federal landowners who are contributing to the enhancement of essential habitat features for listed species through exclusion. The actions of the non-Federal landowners we have excluded from critical habitat in this final rule provide tangible conservation benefits that reduce the likelihood of extinction for the Maui Nui species and increase the recovery potential of these species.

We have determined that there is a low likelihood of a Federal nexus that would trigger the regulatory protections of critical habitat for many of the areas excluded here. However, for those areas

that may have projects occur with a Federal nexus and affecting any of the listed species in occupied areas, the jeopardy standard of section 7 of the Act, coupled with current land management measures that are not under Federal purview, provides assurances that these species will not go extinct as a result of excluding these lands from the critical habitat designation. For projects that may occur in areas not occupied by any listed species and that have a Federal nexus, there is greater potential for critical habitat to provide some benefit through consultation to assure the avoidance of destruction or adverse modification of critical habitat. However, for the particular areas excluded here, we have analyzed section 7 consultation history and determined that most past Federal actions have been designed to benefit the species or habitat (e.g., habitat restoration activities funded, in part, by the Service's Partners for Fish and Wildlife Program). Furthermore, even if not for a conservation project, all section 7 consultations in the excluded areas have resulted in not likely to adversely affect determinations. In such cases, critical habitat does not provide additional benefits to the species in terms of protecting essential but unoccupied habitat areas. For the specific areas excluded in this final rule, we have concluded that not only would such exclusions not result in the extinction of any of the Maui Nui species, but in fact the exclusion demonstrated conservation partners participating in such federally funded programs for habitat protection, restoration, or enhancement is more likely to increase the probability of species recovery and conservation, by removing real or perceived regulatory constraints and encouraging the implementation of proactive conservation measures that provide significant benefits to the species that would not otherwise be realized.

We particularly considered the potential for extinction as a result of exclusion from critical habitat for those species in this rule which occur only on lands being excluded from the final designation. These include the listed species that occur only on Lanai (the two Lanai tree snails, and the plants *Abutilon eremitopetalum*, *Cyanea gibsonii*, *Kadua cordata* ssp. *remyi*, *Labordia tinifolia* var. *lanaiensis*, *Pleomele fernaldii*, and *Viola lanaiensis*) and the plant *Stenogyne kauaulaensis* that occurs in the wild only in Montane Mesic 2 on the island of Maui. For the Lanai species, as described above, we have determined

that exclusion of all areas proposed as critical habitat on Lanai, owned and managed by PL and CCPI, will provide significant conservation benefits to the species. As noted earlier, the designation of critical habitat carries no requirement that non-Federal landowners undertake any proactive conservation measures, therefore voluntary actions by a private landowner that contribute to active management for the conservation of listed species is a significant benefit above and beyond that which can be provided by critical habitat designation. In this particular case, based on the substantial conservation gains that will be realized through the implementation of our MOU and our partnership with PL and CCPI, we conclude that exclusion of areas proposed as critical habitat on Lanai will not result in the extinction of these species, but will increase the probability of their conservation and recovery. Although there is some potential for future consultation under section 7 on Lanai should CCPI proceed with the development of a potential wind farm, the footprint of that wind farm is not within the areas proposed as critical habitat, and none of the species occur within that area. Any potential effect of the wind farm on the species at issue here is limited to the potential widening of an access road along The Nature Conservancy's Kanepuu Preserve, but as this area is not occupied by any of the listed species, such an action would not be anticipated to contribute to the increased vulnerability to extinction of any of the Lanai species. We similarly conclude that exclusion will not result in the extinction of the plant *Stenogyne kauaulaensis*, with the last remaining wild population on lands on Maui owned by the Makila Land Company. This population is in an area inaccessible to ungulates, and is being monitored by the PEPP; outplantings of the species have occurred in west Maui, in an area that is retained within the final designation in the Panaewa section of the West Maui Natural Area Reserve. As described above, the Makila Land Company is a long-time cooperater in the WMMWP and partner with the Service to fund and implement habitat protection and restoration actions that benefit the species, and has set aside upper elevation areas of their property for conservation and protection of rare dry to mesic forest communities. Proactive conservation actions that occur on these lands include fencing and removal of ungulates, weed control, outplanting of native plants, and allowing monitoring of rare plants by

the State and PEPP. All of these actions provide significant conservation for the last remaining wild population of *Stenogyne kauaulaensis*, and we conclude that exclusion of these lands will likely improve the status and recovery potential of the species, through maintaining and enhancing our positive conservation partnership with Makila Land Company and recognizing the importance of their ongoing management actions.

In addition, the species for which we are excluding critical habitat are subject to other protections as well; these protections remain in effect even absent the designation of critical habitat. Section 195D-4 of Hawaii Revised Statutes (endangered species and threatened species) stipulates that species determined to be endangered or threatened under the Federal Act shall be deemed endangered or threatened under the State law. Under the State law, it is unlawful, with some exceptions, to “take” such species, or to possess, sell, carry or transport them. The statutory protections for this species under State law provide additional assurances that exclusion of this area from critical habitat will not result in extinction of one or more of the Maui Nui species in this final rule that currently occupy, or potentially could occupy, these lands.

We have thoroughly considered the effect of each of the exclusions made in this final rule. In every case, exclusion is based upon the strength of existing conservation actions, commitments, and partnerships, which our analysis demonstrates will provide significant conservation benefits to the Maui Nui species, above and beyond those that would be realized through the designation of critical habitat. Based on

the management plans and agreements in place, and the proven track record of our conservation partners, we reasonably assume these positive actions will continue into the future. For all of these reasons, we conclude not only that exclusion will not result in the extinction of any of the Maui Nui species, but that exclusion will result in the improvement of the status of each species in question, due to the positive conservation efforts taking place in those areas excluded. Therefore, based on all of these considerations, the Secretary has determined that the failure to designate any of the areas proposed as critical habitat as a result of exclusion will not result in the extinction of the species concerned, and is exercising her discretion under section 4(b)(2) of the Act to exclude from this final critical habitat designation portions of the proposed critical habitat units that are within the areas identified in Table 89, totaling 84,891 ac (34,354 ha).

*Summary of Exclusions Based on Other Relevant Factors*

As discussed under *Exclusions Based on Other Relevant Factors*, above, we considered the benefits of excluding areas from critical habitat that are covered by partnerships or voluntary conservation efforts. We believe these exclusions of specific areas of non-federally owned lands can contribute to species recovery and provide a superior level of conservation than designation of critical habitat, that voluntary conservation management by landowners extends species protections beyond those available through section 7 consultations, and that implementation of the conservation measures identified here is consistent

with accepted conservation biology principles, lessening the benefits of critical habitat designation. In addition, we believe that excluding these lands will encourage other conservation partnerships.

We have excluded from the final critical habitat designation a variety of lands for which there is evidence of a conservation partnership with private landowners. We find that the benefits of the critical habitat exclusions outweigh the benefits of including the areas as critical habitat. This is largely due to (1) the important role that conservation of the species’ habitats on private lands will play in the recovery of each species; (2) the need to maintain or develop effective cooperative conservation partnerships with private landowners; and (3) the likely increase in cooperation from a significant proportion of private landowners that will occur as a result of the exclusions from critical habitat.

Maps of areas essential to the conservation of the species covered in this rule, identified through designated critical habitat, or through partnerships and conservation agreements with landowners and land managers but excluded from critical habitat under section 4(b)(2) of the Act, are available in the document “Supplementary Information for the Designation and Nondesignation of Critical Habitat on Molokai, Lanai, Maui, and Kahoolawe for 135 Species,” available on the Internet at <http://www.regulations.gov> under Docket No. FWS-R1-ES-2015-0071.

The total area excluded from critical habitat designation in this rule is summarized by landowner in the following table.

TABLE 10—TOTAL AREA (AC, HA) EXCLUDED FROM CRITICAL HABITAT BY ISLAND AND LAND OWNER OR LAND MANAGER

Island	Land owner or land manager	Area excluded AC (HA)
Maui	County Department of Water Supply	3,690 (1,493)
	East Maui Irrigation Company, Ltd	6,721 (2,720)
	Haleakala Ranch	8,716 (3,527)
	Kahoma Ranch	46 (19)
	Kamehameha Schools	1,217 (492)
	Kaupo Ranch	931 (377)
	Makila Land Company	3,150 (1,275)
	Maui Land & Pineapple Company	8,931 (3,614)
	Nuu Mauka Ranch LLC	2,094 (848)
	The Nature Conservancy	6,481 (2,623)
	Ulupalakua Ranch	6,535 (2,645)
	Wailuku Water Company	7,410 (2,999)
Molokai	The Nature Conservancy	3,557 (1,440)
Lanai	Lanai Resorts (dba Pulama Lanai), Castle & Cooke Properties	25,413 (10,284)

## XII. Required Determinations

### *Regulatory Planning and Review* (Executive Orders 12866 and 13563)

Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant rules. The Office of Information and Regulatory Affairs has determined that this rule is not significant.

Executive Order 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this rule in a manner consistent with these requirements.

### *Regulatory Flexibility Act (5 U.S.C. 601 et seq.)*

Under the Regulatory Flexibility Act (RFA; 5 U.S.C. 601 *et seq.*), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA; 5 U.S.C. 801 *et seq.*), whenever an agency is required to publish a notice of rulemaking for any proposed or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effects of the rule on small entities (*i.e.*, small businesses, small organizations, and small government jurisdictions). However, no regulatory flexibility analysis is required if the head of the agency certifies the rule will not have a significant economic impact on a substantial number of small entities. The SBREFA amended the RFA to require Federal agencies to provide a certification statement of the factual basis for certifying that the rule will not have a significant economic impact on a substantial number of small entities.

According to the Small Business Administration, small entities include small organizations such as independent nonprofit organizations; small governmental jurisdictions, including school boards and city and town governments that serve fewer than 50,000 residents; and small businesses (13 CFR 121.201). Small businesses include manufacturing and mining

concerns with fewer than 500 employees, wholesale trade entities with fewer than 100 employees, retail and service businesses with less than \$5 million in annual sales, general and heavy construction businesses with less than \$27.5 million in annual business, special trade contractors doing less than \$11.5 million in annual business, and agricultural businesses with annual sales less than \$750,000. To determine if potential economic impacts to these small entities are significant, we considered the types of activities that might trigger regulatory impacts under this designation as well as types of project modifications that may result. In general, the term "significant economic impact" is meant to apply to a typical small business firm's business operations.

The Service's current understanding of the requirements under the RFA, as amended, and following recent court decisions, is that Federal agencies are only required to evaluate the potential incremental impacts of rulemaking on those entities directly regulated by the rulemaking itself, and therefore, not required to evaluate the potential impacts to indirectly regulated entities. The regulatory mechanism through which critical habitat protections are realized is section 7 of the Act, which requires Federal agencies, in consultation with the Service, to ensure that any action authorized, funded, or carried by the Agency is not likely to destroy or adversely modify critical habitat. Therefore, under section 7 only Federal action agencies are directly subject to the specific regulatory requirement (avoiding destruction and adverse modification) imposed by critical habitat designation. Consequently, it is our position that only Federal action agencies will be directly regulated by this designation. There is no requirement under RFA to evaluate the potential impacts to entities not directly regulated. Moreover, Federal agencies are not small entities. Therefore, because no small entities are directly regulated by this rulemaking, the Service certifies that, if promulgated, the final critical habitat designation will not have a significant economic impact on a substantial number of small entities.

During the development of this final rule we reviewed and evaluated all information submitted during the comment period that may pertain to our consideration of the probable incremental economic impacts of this critical habitat designation. Based on this information, we affirm our certification that this final critical habitat designation will not have a

significant economic impact on a substantial number of small entities, and a regulatory flexibility analysis is not required.

### *Energy Supply, Distribution, or Use—* *Executive Order 13211*

Executive Order 13211 (Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use) requires agencies to prepare Statements of Energy Effects when undertaking certain actions. OMB has provided guidance for implementing this Executive Order that outlines nine outcomes that may constitute "a significant adverse effect" when compared to not taking the regulatory action under consideration. The economic analysis finds that none of these criteria is relevant to this analysis. As described in the economic analysis (FEA 2015, Chapter 4 and Appendix A), renewable energy projects (*e.g.*, wind and geothermal developments) are expected to be subject to section 7 consultations, and the economic analysis concludes that the impacts of critical habitat designation on these activities are most likely limited to additional administrative costs of section 7 consultation (FEA 2015, Appendix A). Based on information in the economic analysis, energy-related impacts associated with conservation activities for the Maui Nui species within critical habitat are not expected. As such, the designation of critical habitat is not expected to significantly affect energy supplies, distribution, or use. Therefore, this action is not a significant energy action, and no Statement of Energy Effects is required.

### *Unfunded Mandates Reform Act (2 U.S.C. 1501 et seq.)*

In accordance with the Unfunded Mandates Reform Act (2 U.S.C. 1501 *et seq.*), we make the following findings:

(1) This rule will not produce a Federal mandate. In general, a Federal mandate is a provision in legislation, statute, or regulation that would impose an enforceable duty upon State, local, or tribal governments, or the private sector, and includes both "Federal intergovernmental mandates" and "Federal private sector mandates." These terms are defined in 2 U.S.C. 658(5)–(7). "Federal intergovernmental mandate" includes a regulation that "would impose an enforceable duty upon State, local, or tribal governments" with two exceptions. It excludes "a condition of Federal assistance." It also excludes "a duty arising from participation in a voluntary Federal program," unless the regulation "relates

to a then-existing Federal program under which \$500,000,000 or more is provided annually to State, local, and tribal governments under entitlement authority,” if the provision would “increase the stringency of conditions of assistance” or “place caps upon, or otherwise decrease, the Federal Government’s responsibility to provide funding,” and the State, local, or tribal governments “lack authority” to adjust accordingly. At the time of enactment, these entitlement programs were: Medicaid; Aid to Families with Dependent Children work programs; Child Nutrition; Food Stamps; Social Services Block Grants; Vocational Rehabilitation State Grants; Foster Care, Adoption Assistance, and Independent Living; Family Support Welfare Services; and Child Support Enforcement. “Federal private sector mandate” includes a regulation that “would impose an enforceable duty upon the private sector, except (i) a condition of Federal assistance or (ii) a duty arising from participation in a voluntary Federal program.”

The designation of critical habitat does not impose a legally binding duty on non-Federal Government entities or private parties. Under the Act, the only regulatory effect is that Federal agencies must ensure that their actions do not destroy or adversely modify critical habitat under section 7. While non-Federal entities that receive Federal funding, assistance, or permits, or that otherwise require approval or authorization from a Federal agency for an action, may be indirectly impacted by the designation of critical habitat, the legally binding duty to avoid destruction or adverse modification of critical habitat rests squarely on the Federal agency. Furthermore, to the extent that non-Federal entities are indirectly impacted because they receive Federal assistance or participate in a voluntary Federal aid program, the Unfunded Mandates Reform Act would not apply, nor would critical habitat shift the costs of the large entitlement programs listed above onto State governments.

(2) The designation of critical habitat imposes no obligation on State or local governments. By definition, Federal agencies are not considered small entities, although the activities they fund or permit may be proposed or carried out by small entities. Consequently, we do not believe that the critical habitat designation will significantly or uniquely affect small government entities. As such, a Small Government Agency Plan is not required.

#### *Federalism—Executive Order 13132*

In accordance with Executive Order 13132 (Federalism), this rule does not have significant Federalism effects. A federalism summary impact statement is not required. In keeping with Department of the Interior and Department of Commerce policy, we requested information from, and coordinated development of, this critical habitat designation with appropriate State resource agencies in Hawaii. We received comments from Hawaii elected officials; Maui County Council; Hawaii Department of Land and Natural Resources, Division of Forestry and Wildlife; Hawaii Department of Hawaiian Home Lands; Hawaii Department of Agriculture; the University of Hawaii Institute for Astronomy; Maui County Police Department; and, Maui County Planning Department and have addressed them in the Summary of Comments and Recommendations section of the rule. From a federalism perspective, the designation of critical habitat directly affects only the responsibilities of Federal agencies. The Act imposes no other duties with respect to critical habitat, either for States and local governments, or for anyone else. As a result, the rule does not have substantial direct effects either on the States, or on the relationship between national government and the States, or on the distribution of powers and responsibilities among the various levels of government. The designation may have some benefit to these governments because the areas that contain the features essential to the conservation of the species are more clearly defined, and the physical and biological features of the habitat necessary to the conservation of the species are specifically identified. This information does not alter where and what federally sponsored activities may occur. However, it may assist local governments in long-range planning (because these local governments no longer have to wait for case-by-case section 7 consultations to occur).

Where State and local governments require approval or authorization from a Federal agency for actions that may affect critical habitat, consultation under section 7(a)(2) will be required. While non-Federal entities that receive Federal funding, assistance, or permits, or that otherwise require approval or authorization from a Federal agency for an action, may be indirectly impacted by the designation of critical habitat, the legally binding duty to avoid destruction or adverse modification of

critical habitat rests squarely on the Federal agency.

#### *Civil Justice Reform—Executive Order 12988*

In accordance with Executive Order 12988 (Civil Justice Reform), the Office of the Solicitor has determined that the rule does not unduly burden the judicial system and that it meets the requirements of sections 3(a) and 3(b)(2) of the Order. We are designating critical habitat in accordance with the provisions of the Act. To assist the public in understanding the habitat needs of the species, the rule identifies the elements of the physical or biological features essential to the conservation of the Maui Nui species. The designated areas of critical habitat are presented on maps, and the rule provides several options for the interested public to obtain more detailed location information, if desired.

#### *Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.)*

This rule does not contain any new collections of information that require approval by OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.). This rule will not impose recordkeeping or reporting requirements on State or local governments, individuals, businesses, or organizations. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

#### *National Environmental Policy Act (42 U.S.C. 4321 et seq.)*

It is our position that, outside the jurisdiction of the U.S. Court of Appeals for the Tenth Circuit, we do not need to prepare environmental analyses as defined by NEPA (NEPA; 42 U.S.C. 4321 et seq.) in connection with designating critical habitat under the Act. This position was upheld by the U.S. Court of Appeals for the Ninth Circuit (*Douglas County v. Babbitt*, 48 F.3d 1495 (9th Cir. 1995), cert. denied 516 U.S. 1042 (1996)).

The primary authors of this document are the staff members of the Pacific Islands Fish and Wildlife Office.

**List of Subjects in 50 CFR Part 17**

Endangered and threatened species, Exports, Imports, Reporting and recordkeeping requirements, Transportation.

**Regulation Promulgation**

Accordingly, we amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

**PART 17—[AMENDED]**

■ 1. The authority citation for part 17 continues to read as follows:

**Authority:** 16 U.S.C. 1361–1407; 1531–1544; 4201–4245, unless otherwise noted.

■ 2. Amend § 17.11(h) by:

■ a. Revising the entries for “Honeycreeper, crested” and

“Parrotbill, Maui (honeycreeper)” under BIRDS; and

■ b. Revising the entry for “Snail, Newcomb’s tree” under SNAILS.

The revisions read as follows:

**§ 17.11 Endangered and threatened wildlife.**

\* \* \* \* \*  
(h) \* \* \*

Species		Historic range	Vertebrate population where endangered or threatened	Status	When listed	Critical habitat	Special rules
Common name	Scientific name						
* * * * *							
BIRDS							
Honeycreeper, crested (Akohekohe).	<i>Palmeria dolei</i> .....	U.S.A. (HI) .....	Entire .....	E	1	17.95(b)	NA
Parrotbill, Maui (Kiwikiu).	<i>Pseudonestor xanthophrys</i> .	U.S.A. (HI) .....	Entire .....	E	1	17.95(b)	NA
* * * * *							
SNAILS

* * * * *							

■ 3. Amend § 17.12(h) by:

■ a. Removing the entries for *Centaurium sebaeoides*, *Cyanea dunbarii*, *Cyanea macrostegia* ssp. *gibsonii*, *Hedyotis manni*, *Hedyotis schlectendahlia* var. *remyi*, *Lipochaeta kamolensis*, and *Mariscus fauriei* under FLOWERING PLANTS;

■ b. Adding entries for *Cyanea dunbariae*, *Cyanea gibsonii*, *Cyperus fauriei*, *Kadua cordata* ssp. *remyi*, *Kadua laxiflora*, *Melanthera kamolensis*, and *Schenkia sebaeoides* in alphabetical order under FLOWERING PLANTS;

■ c. Revising the entries for *Acaena exigua*, *Bidens campylothea* ssp. *pentamera*, *Bidens campylothea* ssp. *waihoiensis*, *Bidens conjuncta*, *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Calamagrostis hillebrandii*, *Canavalia pubescens*, *Clermontia peleana*, *Cyanea asplenifolia*, *Cyanea duvalliorum*, *Cyanea grimesiana* ssp.

*grimesiana*, *Cyanea horrida*, *Cyanea kunthiana*, *Cyanea magnicalyx*, *Cyanea maritae*, *Cyanea munroi*, *Cyanea obtusa*, *Cyanea profuga*, *Cyanea solanacea*, *Cyperus trachysanthos*, *Cyrtandra ferripilosa*, *Cyrtandra filipes*, *Cyrtandra oxybapha*, *Festuca molokaiensis*, *Geranium hanaense*, *Geranium hillebrandii*, *Gouania hillebrandii*, *Hesperomannia arborescens*, *Hibiscus brackenridgei*, *Kokia cookei*, *Melicope munroi*, *Mucuna sloanei* var. *persericea*, *Myrsine vaccinioides*, *Neraudia sericea*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *Phyllostegia haliakalae*, *Phyllostegia hispida*, *Phyllostegia pilosa*, *Pittosporum halophilum*, *Platanthera holochila*, *Portulaca sclerocarpa*, *Santalum haleakalae* var. *lanaiense*, *Schiedea jacobii*, *Schiedea laui*, *Schiedea salicaria*, *Sesbania tomentosa*, *Solanum incompletum*, *Stenogyne kauaulaensis*,

*Tetramolopium remyi*, *Vigna o-wahuensis*, and *Wikstroemia villosa* under FLOWERING PLANTS;

■ d. Removing the entries for *Asplenium fragile* var. *insulare*, *Diellia erecta*, and *Phlegmariurus* (= *Lycopodium*, = *Huperzia*) *mannii* under FERNS AND ALLIES;

■ e. Adding entries for *Asplenium dielirectum* and *Asplenium peruvianum* var. *insulare* in alphabetical order under FERNS AND ALLIES; and

■ f. Revising the entries for *Adenophorus periens*, *Huperzia* (= *Phlegmariurus*, = *Lycopodium*) *mannii*, *Marsilea villosa*, and *Pteris lidgatei* under FERNS AND ALLIES.

The revisions and additions read as follows:

**§ 17.12 Endangered and threatened plants.**

■ 4. Amend § 17.95 as follows:  
 ■ a. In paragraph (b), by adding entries for “Crested Honeycreeper (Akohekohe) (*Palmeria dolei*)” and “Maui Parrotbill (Kiwikiu) (*Pseudonestor xanthophrys*)” in the same alphabetical order as these species occur in the table at § 17.11(h); and  
 ■ b. In paragraph (f), by adding an entry for “Newcomb’s tree snail (*Newcombia cumingi*),” to the end of the paragraph. The additions read as follows:

**§ 17.95 Critical habitat—fish and wildlife**

\* \* \* \* \*  
 (b) *Birds.*  
 \* \* \* \* \*  
 Crested Honeycreeper (Akohekohe) (*Palmeria dolei*),  
 (1) Critical habitat units are depicted for Maui County, Hawaii, on the maps below.  
 (2) *Primary constituent elements.* (i) In units 1 and 37, the primary constituent elements of critical habitat for the Akohekohe are:  
 (A) Elevation: Less than 3,300 ft (1,000 m).  
 (B) Annual precipitation: 50 to 75 in (130 to 190 cm).  
 (C) Substrate: Shallow soils, little to no herbaceous layer.  
 (D) Canopy: *Acacia, Diospyros, Metrosideros, Myrsine, Pouteria, Santalum.*

(E) Subcanopy: *Dodonaea, Freycinetia, Leptecophylla, Melanthera, Osteomeles, Pleomele, Psydrax.*  
 (F) Understory: *Carex, Dicranopteris, Diplazium, Elaphoglossum, Peperomia.*  
 (ii) In units 2, 3, 4, 5, 6, 7, 8, 9, 38, and 39, the primary constituent elements of critical habitat for the Akohekohe are:  
 (A) Elevation: Less than 3,300 ft (1,000 m).  
 (B) Annual precipitation: Greater than 75 in (190 cm).  
 (C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.  
 (D) Canopy: *Antidesma, Metrosideros, Myrsine, Pisonia, Psychotria.*  
 (E) Subcanopy: *Cibotium, Claoxylon, Kadua, Melicope.*  
 (F) Understory: *Alyxia, Cyrtandra, Dicranopteris, Diplazium, Machaerina, Microlepia.*  
 (iii) In units 10, 11, 12, 13, 14, 15, 16, 40, and 41, the primary constituent elements of critical habitat for the Akohekohe are:  
 (A) Elevation: Between 3,300 and 6,500 ft (1,000 and 2,000 m)  
 (B) Annual precipitation: Greater than 75 in (190 cm).  
 (C) Substrate: Well-developed soils, montane bogs.  
 (D) Canopy: *Acacia, Charpentiera, Cheirodendron, Metrosideros.*

(E) Subcanopy: *Broussaisia, Cibotium, Eurya, Ilex, Myrsine.*  
 (F) Understory: Ferns, *Carex, Coprosma, Leptecophylla, Oreobolus, Rhynchospora, Vaccinium.*  
 (iv) In units 18, 19, 20, 21, 22, and 42, the primary constituent elements of critical habitat for the Akohekohe are:  
 (A) Elevation: Between 3,300 and 6,500 ft (1,000 and 2,000 m).  
 (B) Annual precipitation: Between 50 and 75 in (130 and 190 cm).  
 (C) Substrate: Deep ash deposits, thin silty loams.  
 (D) Canopy: *Acacia, Ilex, Metrosideros, Myrsine, Nestegis, Nothoestrum, Pisonia, Pittosporum, Psychotria, Sophora, Zanthoxylum.*  
 (E) Subcanopy: *Alyxia, Charpentiera, Coprosma, Dodonaea, Kadua, Labordia, Leptecophylla, Phyllostegia, Vaccinium.*  
 (F) Understory: Ferns, *Carex, Peperomia.*  
 (v) In units 24 and 25, the primary constituent elements of critical habitat for the Akohekohe are:  
 (A) Elevation: Between 6,500 and 9,800 ft (2,000 and 3,000 m).  
 (B) Annual precipitation: Between 15 and 40 in (38 and 100 cm).  
 (C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.

(D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.

(F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

(vi) In units 26, 27, 28, and 29, the primary constituent elements of critical habitat for the Akohekohe are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

(vii) In units 30, 31, 32, 33, 35, 36, 43, and 44, the primary constituent elements of critical habitat for the Akohekohe are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

(3) Existing manmade features and structures, such as buildings, roads, railroads, airports, runways, other paved areas, lawns, and other urban landscaped areas, do not contain one or more of the physical or biological features. Federal actions limited to those areas, therefore, would not trigger a consultation under section 7 of the Act unless they may affect the species or physical or biological features in adjacent critical habitat.

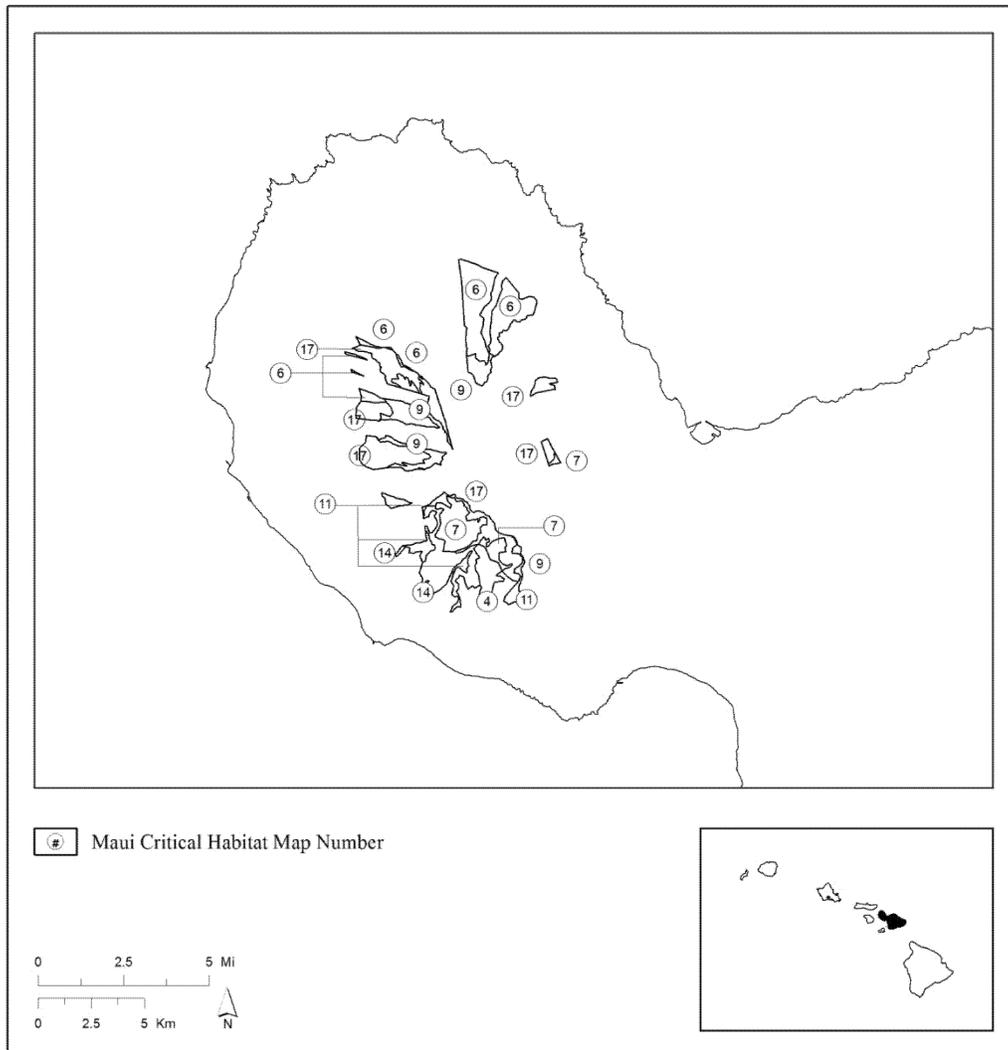

(4) *Critical habitat maps*. Maps were created in GIS, with coordinates in UTM Zone 4, units in meters using North American datum of 1983 (NAD 83).

(5) Index maps of critical habitat units for the Akohekohe follow:

Maui Parrotbill (Kiwikiu)  
(*Pseudonestor xanthophrys*)

(1) Critical habitat units are depicted for Maui County, Hawaii, on the maps below.

(2) *Primary constituent elements.* (i) In units 1 and 37, the primary constituent elements of critical habitat for the Kiwikiu are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units 2, 3, 4, 5, 6, 7, 8, 9, 38, and 39, the primary constituent elements of critical habitat for the Kiwikiu are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In units 10, 11, 12, 13, 14, 15, 16, 40, and 41, the primary constituent elements of critical habitat for the Kiwikiu are:

(A) Elevation: Between 3,300 and 6,500 ft (1,000 and 2,000 m)

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iv) In units 18, 19, 20, 21, 22, and 42, the primary constituent elements of critical habitat for the Kiwikiu are:

(A) Elevation: Between 3,300 and 6,500 ft (1,000 and 2,000 m).

(B) Annual precipitation: Between 50 and 75 in (130 and 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(v) In units 24 and 25, the primary constituent elements of critical habitat for the Kiwikiu are:

(A) Elevation: Between 6,500 and 9,800 ft (2,000 and 3,000 m).

(B) Annual precipitation: Between 15 and 40 in (38 and 100 cm).

(C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.

(D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.

(F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

(vi) In units 26, 27, 28, and 29, the primary constituent elements of critical habitat for the Kiwikiu are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

(vii) In units 30, 31, 32, 33, 35, 36, 43, and 44, the primary constituent elements of critical habitat for the Kiwikiu are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

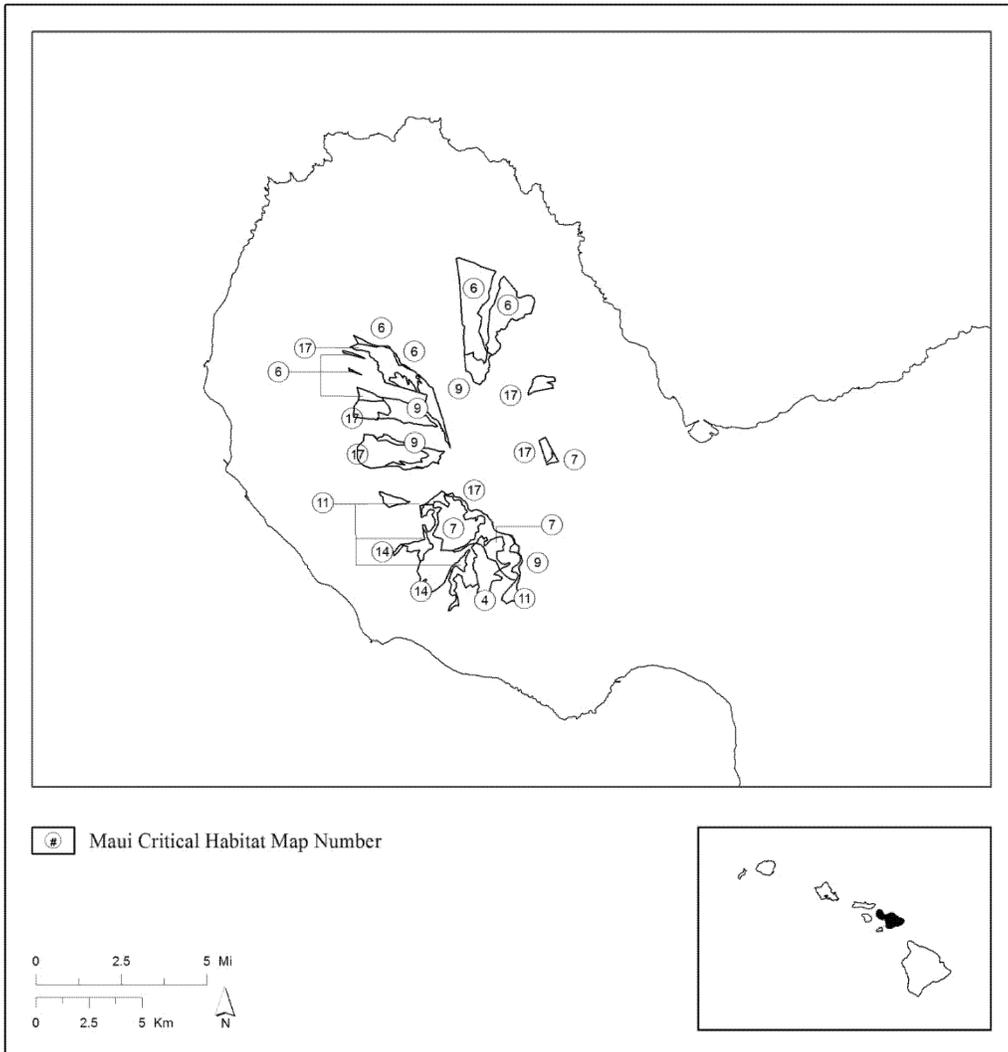

(3) Existing manmade features and structures, such as buildings, roads, railroads, airports, runways, other paved areas, lawns, and other urban landscaped areas, do not contain one or more of the physical or biological features. Federal actions limited to those areas, therefore, would not trigger a consultation under section 7 of the Act unless they may affect the species or physical or biological features in adjacent critical habitat.

(4) *Critical habitat maps*. Maps were created in GIS, with coordinates in UTM Zone 4, units in meters using North American datum of 1983 (NAD 83).

(5) Index maps of critical habitat units for the Kiwikiu follow:

Newcomb's tree snail (*Newcombia cumingi*)

(1) The critical habitat unit is depicted for Maui County, Hawaii, on the map below.

(2) *Primary constituent elements.* In unit 1, the primary constituent elements of critical habitat for the Newcomb's tree snail are:

- (i) Elevation: Less than 3,300 ft (1,000 m).
- (ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(iv) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(v) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(vi) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(3) Existing manmade features and structures, such as buildings, roads, railroads, airports, runways, other paved areas, lawns, and other urban landscaped areas, do not contain one or more of the physical or biological features. Federal actions limited to those

areas, therefore, would not trigger a consultation under section 7 of the Act unless they may affect the species or physical or biological features in adjacent critical habitat.

§ 17.96 [Amended]

■ 5. Amend § 17.96 as follows:

- a. In paragraph (a), by removing the entry for “Family Rhamnaceae: *Gouania hillebrandii*”; and
- b. By removing and reserving paragraph (b).
- 6. Amend § 17.99 as follows:

- a. Revise the section heading.
- b. Amend paragraph (a)(1) by removing the words listed in the “Remove” column below and adding in their place the words listed in the “Add” column below:

Paragraph designation	Remove	Add
(a)(1)(cxxxiv), the introductory text .....	Kauai 11— <i>Centaurium sebaeoides</i> —a .....	Kauai 11— <i>Schenkia sebaeoides</i> —a.
(a)(1)(clxxi), the introductory text .....	Kauai 11— <i>Diellia erecta</i> —a .....	Kauai 11— <i>Asplenium dielirectum</i> —a.

■ c. Amend paragraph (a)(1) by revising paragraphs (a)(1)(cxxxiv)(B) and (a)(1)(clxxi)(B).

■ d. Amend paragraph (a)(1)(cdix), the Table of Protected Species Within Each Critical Habitat Unit for Kauai, by removing the words listed in the

“Remove” column below and adding in their place the words listed in the “Add” column below:

Column heading	Remove	Add
Unit name .....	Kauai 11— <i>Centaurium sebaeoides</i> —a .....	Kauai 11— <i>Schenkia sebaeoides</i> —a.
Species occupied .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
Unit name .....	Kauai 11— <i>Diellia erecta</i> —a .....	Kauai 11— <i>Asplenium dielirectum</i> —a.
Species unoccupied .....	<i>Diellia erecta</i> .....	<i>Asplenium dielirectum</i> .

■ e. Amend paragraph (b)(1) by removing the words listed in the “Remove” column below in all places that they appear and adding in their place the words listed in the “Add” column below:

Remove	Add
Family Gentianaceae: <i>Centaurium sebaeoides</i> (awiwi). Kauai 11— <i>Centaurium sebaeoides</i> —a. <i>Centaurium sebaeoides</i> .	Family Gentianaceae: <i>Schenkia sebaeoides</i> (awiwi). Kauai 11— <i>Schenkia sebaeoides</i> —a.  <i>Schenkia sebaeoides</i> .

■ f. Amend the paragraph (b)(2) by removing the words listed in the “Remove” column below in all places that they appear and adding in their place the words listed in the “Add” column below:

Remove	Add
Family Aspleniaceae: <i>Diellia erecta</i> (no common name).  Kauai 11— <i>Diellia erecta</i> —a.	Family Aspleniaceae: <i>Asplenium dielerectum</i> (asplenium-leaved diellia).  Kauai 11— <i>Asplenium dielerectum</i> —a.

Remove	Add
<i>Diellia erecta</i> .....	<i>Asplenium dielerectum</i> .

■ g. Revise paragraphs (c), (d), (e), and (f).

■ h. Amend paragraph (i) by removing the words listed in the “Remove” column below and adding in their place the words listed in the “Add” column below:

Paragraph designation	Remove	Add
(i)(2)(i) .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
(i)(3)(i) .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
(i)(4)(i) .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
(i)(5)(i) .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
(i)(6)(i) .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
(i)(7)(i) .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
(i)(7)(ii) .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
(i)(8)(i) .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
(i)(16)(i) .....	<i>Diellia erecta</i> .....	<i>Asplenium dielerectum</i> .
(i)(17)(i) .....	<i>Diellia erecta</i> .....	<i>Asplenium dielerectum</i> .
(i)(18)(i) .....	<i>Diellia erecta</i> .....	<i>Asplenium dielerectum</i> .

■ i. Amend paragraph (i)(35), the Table of Protected Species Within Each Critical Habitat Unit for Oahu, by

removing the words listed in the “Remove” column below in all places that they appear and adding in their

place the words listed in the “Add” column below:

Column heading	Remove	Add
Species occupied .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
Species unoccupied .....	<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .
Species unoccupied .....	<i>Diellia erecta</i> .....	<i>Asplenium dielerectum</i> .

■ j. Amend paragraph (j)(1), under the heading FAMILY GENTIANACEAE, by removing the words listed in the

“Remove” column below in all places that they appear and adding in their

place the words listed in the “Add” column below:

Remove	Add
<i>Centaurium sebaeoides</i> (AWIWI) .....	<i>Schenkia sebaeoides</i> (AWIWI).
<i>Centaurium sebaeoides</i> .....	<i>Schenkia sebaeoides</i> .

■ k. Amend paragraph (j)(2), under the heading FAMILY ASPLENIACEAE, by removing the words listed in the

“Remove” column below in all places that they appear and adding in their

place the words listed in the “Add” column below:

Remove	Add
<i>Diellia erecta</i> (ASPLENIUM-LEAVED DIELLIA) .....	<i>Asplenium dielerectum</i> (ASPLENIUM-LEAVED DIELLIA).
<i>Diellia erecta</i> .....	<i>Asplenium dielerectum</i> .

■ l. Amend paragraph (k) by removing the words listed in the “Remove” column below and adding in their place

the words listed in the “Add” column below:

Paragraph designation	Remove	Add
(k)(62), the introductory text .....	Hawaii 17— <i>Diellia erecta</i> —a .....	Hawaii 17— <i>Asplenium dielirectum</i> —a.
(k)(65), the introductory text .....	Hawaii 18— <i>Diellia erecta</i> —b .....	Hawaii 18— <i>Asplenium dielirectum</i> —b.
(k)(70), the introductory text .....	Hawaii 19— <i>Mariscus fauriei</i> —a .....	Hawaii 19— <i>Cyperus fauriei</i> —a.
(k)(77), the introductory text .....	Hawaii 24— <i>Asplenium fragile</i> var. <i>insulare</i> —a	Hawaii 24— <i>Asplenium peruvianum</i> var. <i>insulare</i> —a.

■ m. Amend paragraph (k) by revising paragraphs (k)(62)(ii), (k)(65)(ii), (k)(70)(ii), and (k)(77)(ii).

■ n. Amend paragraph (k)(104), the Table of Protected Species Within Each Critical Habitat Unit for the Island of Hawaii, by removing the words listed in

the “Remove” column below in all places that they appear and adding in their place the words listed in the “Add” column below:

Column heading	Remove	Add
Unit name .....	Hawaii 24— <i>Asplenium fragile</i> var. <i>insulare</i> —a	Hawaii 24— <i>Asplenium peruvianum</i> var. <i>insulare</i> —a.
Species occupied .....	<i>Asplenium fragile</i> var. <i>insulare</i> .....	<i>Asplenium peruvianum</i> var. <i>insulare</i> .
Unit name .....	Hawaii 17— <i>Diellia erecta</i> —a .....	Hawaii 17— <i>Asplenium dielirectum</i> —a.
Unit name .....	Hawaii 18— <i>Diellia erecta</i> —b .....	Hawaii 18— <i>Asplenium dielirectum</i> —b.
Species occupied .....	<i>Diellia erecta</i> .....	<i>Asplenium dielirectum</i> .
Unit name .....	Hawaii 19— <i>Mariscus fauriei</i> —a .....	Hawaii 19— <i>Cyperus fauriei</i> —a.
Species occupied .....	<i>Mariscus fauriei</i> .....	<i>Cyperus fauriei</i> .

■ o. Amend paragraph (l)(1) by removing the words listed in the

“Remove” column below in all places that they appear and adding in their

place the words listed in the “Add” column below:

Remove	Add
Family Cyperaceae: <i>Mariscus fauriei</i> (NCN) .....	Family Cyperaceae: <i>Cyperus fauriei</i> (NCN).
Hawaii 19— <i>Mariscus fauriei</i> —a .....	Hawaii 19— <i>Cyperus fauriei</i> —a.
<i>Mariscus fauriei</i> .....	<i>Cyperus fauriei</i> .

■ p. Amend paragraph (l)(2) by removing the words listed in the

“Remove” column below in all places that they appear and adding in their

place the words listed in the “Add” column below:

Remove	Add
Family Aspleniaceae: <i>Asplenium fragile</i> var. <i>insulare</i> (NCN) .....	Family Aspleniaceae: <i>Asplenium peruvianum</i> var. <i>insulare</i> (NCN).
Hawaii 24— <i>Asplenium fragile</i> var. <i>insulare</i> —a .....	Hawaii 24— <i>Asplenium peruvianum</i> var. <i>insulare</i> —a.
<i>Asplenium fragile</i> var. <i>insulare</i> .....	<i>Asplenium peruvianum</i> var. <i>insulare</i> .
Family Aspleniaceae: <i>Diellia erecta</i> (asplenium-leaved diellia) .....	Family Aspleniaceae: <i>Asplenium dielirectum</i> (asplenium-leaved diellia).
Hawaii 17— <i>Diellia erecta</i> —a .....	Hawaii 17— <i>Asplenium dielirectum</i> —a.
Hawaii 18— <i>Diellia erecta</i> —b .....	Hawaii 18— <i>Asplenium dielirectum</i> —b.
<i>Diellia erecta</i> .....	<i>Asplenium dielirectum</i> .

The revisions and additions read as follows:

**§ 17.99 Critical habitat; plants on the Hawaiian Islands.**

Molokai Critical Habitat—Island Index Map

(2) Molokai—Coastal—Unit 1 (125 ac, 50 ha) and Molokai—Coastal—Unit 2 (977 ac, 396 ha).

(i) These units are critical habitat for *Bidens wiebkei*, *Brighamia rockii*,

*Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, *Hibiscus brackenridgei*, *Ischaemum byrone*, *Marsilea villosa*, *Peucedanum sandwicense*, *Pittosporum halophilum*,

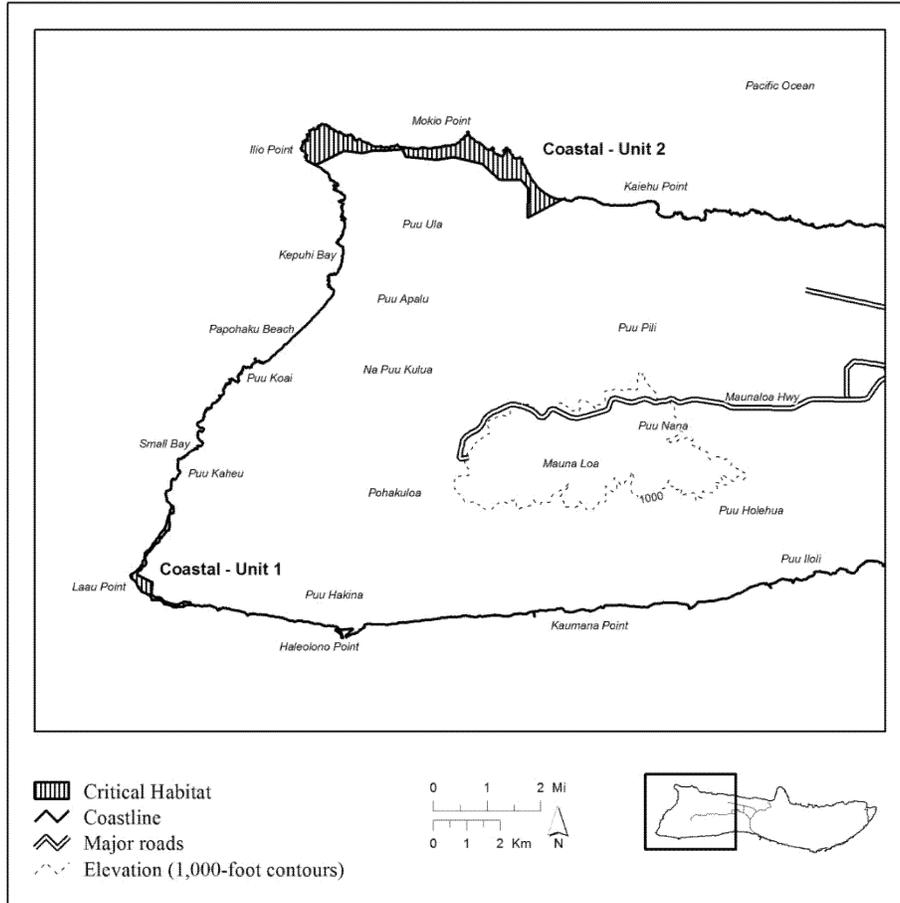

*Schenkia sebaeoides*, *Sesbania tomentosa*, and *Tetramolopium rockii*.

(ii) Map of Molokai—Coastal—Unit 1 and Molokai—Coastal—Unit 2 (Map 2) follows:

Map 2

Molokai—Coastal

Unit 1 and Unit 2

(3) Molokai—Coastal—Unit 3 (805 ac, 325 ha), Molokai—Coastal—Unit 4 (10 ac, 4 ha), and Molokai—Coastal—Unit 5 (1 ac, 0.5 ha).

(i) These units are critical habitat for *Bidens wiebkei*, *Brighamia rockii*,

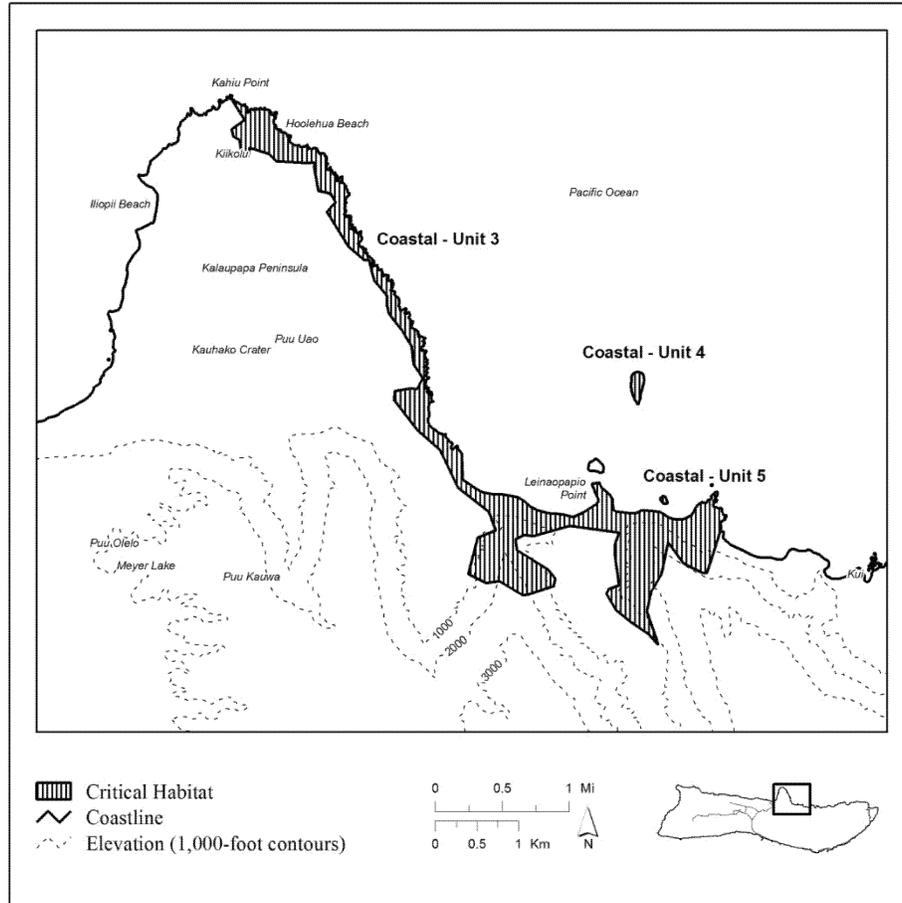

*Canavalia molokaiensis*, *Hibiscus arnottianus* ssp. *immaculatus*, *Hibiscus brackenridgei*, *Ischaemum byrone*, *Marsilea villosa*, *Peucedanum sandwicense*, *Pittosporum halophilum*,

*Schenkia sebaeoides*, *Sesbania tomentosa*, and *Tetramolopium rockii*.  
 (ii) Map of Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, and Molokai—Coastal—Unit 5 (Map 3) follows:

(d) *Plants on Molokai; Constituent elements.*

(1) *Flowering plants.*

**Family Apiaceae**

*Peucedanum sandwicense* (MAKOU)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, Molokai—Coastal—Unit 7, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Peucedanum sandwicense* on Molokai.

(i) In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical

and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

*Spermolepis hawaiiensis* (NCN)

Molokai—Lowland Mesic—Unit 1 and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Spermolepis hawaiiensis* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Asteraceae

*Bidens wiebkei* (KOOKOOLAU)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, Molokai—Coastal—Unit 7, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Bidens wiebkei* on Molokai.

(i) In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iv) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

*Hesperomannia arborescens* (NCN)

Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Hesperomannia arborescens* on Molokai.

(i) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3,

the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Tetramolopium rockii* (NCN)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Tetramolopium rockii* on Molokai. In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(i) Elevation: Less than 980 ft (300 m).

(ii) Annual precipitation: Less than 20 in (50 cm).

(iii) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(iv) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(v) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(vi) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

#### Family Campanulaceae

*Brighamia rockii* (PUA ALA)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—

Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, Molokai—Coastal—Unit 7, Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Brighamia rockii* on Molokai.

(i) In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Clermontia oblongifolia* ssp. *brevipes* (OHA WAI)

Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Clermontia oblongifolia* ssp. *brevipes* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepidia*.

(iii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iv) In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Cyanea dunbariae* (HAHA)

Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyanea dunbariae* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepidia*.

(iii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

*Cyanea grimesiana* ssp. *grimesiana* (HAHA)

Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2,

Molokai—Lowland Wet—Unit 3, Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyanea grimesiana* ssp. *grimesiana* on Molokai.

(i) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Cyanea mannii* (HAHA)

Molokai—Lowland Mesic—Unit 1, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyanea mannii* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### *Cyanea munroi* (HAHA)

Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyanea munroi* on Molokai. In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(i) Elevation: Unrestricted.

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(iv) Canopy: None.

(v) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(vi) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Cyanea procera* (HAHA)

Molokai—Lowland Mesic—Unit 1, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, and Molokai—Montane Mesic—Unit 1,

identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyanea procera* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Fern, *Carex*, *Peperomia*.

#### *Cyanea profuga* (HAHA)

Molokai—Lowland Mesic—Unit 1, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyanea profuga* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

*Cyanea solanacea* (POPOLO, HAHN NUI)

Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyanea solanacea* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iv) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Caryophyllaceae

##### *Schiedea laui* (NCN)

Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Schiedea laui* on Molokai. In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

##### *Schiedea lydgatei* (NCN)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Schiedea lydgatei* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

##### *Schiedea sarmentosa* (NCN)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Schiedea sarmentosa* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

##### *Silene alexandri* (NCN)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Silene alexandri* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

*Silene lanceolata* (NCN)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Silene lanceolata* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### Family Convolvulaceae

*Bonamia menziesii* (NCN)

Molokai—Lowland Dry—Unit 1, Molokai—Lowland Dry—Unit 2, and Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Bonamia menziesii* on Molokai.

(i) In units Molokai—Lowland Dry—Unit 1 and Molokai—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### Family Cyperaceae

*Cyperus fauriei* (NCN)

Molokai—Lowland Mesic—Unit 1 and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyperus fauriei* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

*Cyperus trachysanthos* (PUUKAA)

Molokai—Lowland Dry—Unit 1 and Molokai—Lowland Dry—Unit 2, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyperus trachysanthos* on Molokai. In units Molokai—Lowland Dry—Unit 1 and Molokai—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Euphorbiaceae

*Flueggea neowawraea* (MEHAMEHAME)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Flueggea neowawraea* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### Family Fabaceae

*Canavalia molokaiensis* (AWIKIWIKI)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, Molokai—Coastal—Unit 7, Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Canavalia molokaiensis* on Molokai.

(i) In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes;

weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(iii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iv) In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Sesbania tomentosa* (OHAI)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, Molokai—Coastal—Unit 7, Molokai—Lowland Dry—Unit 1,

Molokai—Lowland Dry—Unit 2, and Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Sesbania tomentosa* on Molokai.

(i) In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Molokai—Lowland Dry—Unit 1 and Molokai—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(iii) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

*Vigna o-wahuensis* (NCN)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in

paragraph (c) of this section, constitutes critical habitat for *Vigna o-wahuensis* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### Family Gentianaceae

*Schenkia sebaeoides* (AWIWI)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Schenkia sebaeoides* on Molokai. In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(i) Elevation: Less than 980 ft (300 m).

(ii) Annual precipitation: Less than 20 in (50 cm).

(iii) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(iv) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(v) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(vi) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

#### Family Gesneriaceae

*Cyrtandra filipes* (HAIWALE)

Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Cyrtandra filipes* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

#### Family Lamiaceae

##### *Phyllostegia haliakalae* (NCN)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Phyllostegia haliakalae* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

##### *Phyllostegia hispida* (NCN)

Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Phyllostegia hispida* on Molokai.

(i) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

##### *Phyllostegia mannii* (NCN)

Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Phyllostegia mannii* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

##### *Phyllostegia pilosa* (NCN)

Molokai—Lowland Mesic—Unit 1, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Phyllostegia pilosa* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.  
(ii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

*Stenogyne bifida* (NCN)

Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, Molokai—Montane Mesic—Unit 1, Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Stenogyne bifida* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iv) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(v) In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Loganiaceae

*Labordia triflora* (KAMAKAHALA)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Labordia triflora* on Molokai. In unit Molokai—Lowland

Mesic—Unit 1, the physical and biological features of critical habitat are:  
(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### Family Malvaceae

*Hibiscus arnottianus* ssp. *immaculatus* (KOKIO KEOKEO)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, Molokai—Coastal—Unit 7, Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Hibiscus arnottianus* ssp. *immaculatus* on Molokai.

(i) In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Hibiscus brackenridgei* (MAO HAU HELE)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, Molokai—Coastal—Unit 7, Molokai—Lowland Dry—Unit 1, and Molokai—Lowland Dry—Unit 2, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Hibiscus brackenridgei* on Molokai.

(i) In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Molokai—Lowland Dry—Unit 1 and Molokai—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

*Kokia cookei* (COOKE'S KOKIO)

Molokai—Lowland Dry—Unit 1 and Molokai—Lowland Dry—Unit 2, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Kokia cookei* on Molokai. In units Molokai—Lowland Dry—Unit 1 and Molokai—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Myrtaceae

*Eugenia koolauensis* (NIOI)

Molokai—Lowland Dry—Unit 1 and Molokai—Lowland Dry—Unit 2, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Eugenia koolauensis* on Molokai. In units Molokai—Lowland Dry—Unit 1 and Molokai—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Orchidaceae

*Platanthera holochila* (NCN)

Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Platanthera holochila* on Molokai. In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### Family Pittosporaceae

*Pittosporum halophilum* (HOAWA)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Pittosporum halophilum* on Molokai. In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(i) Elevation: Less than 980 ft (300 m).

(ii) Annual precipitation: Less than 20 in (50 cm).

(iii) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(iv) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(v) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(vi) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

#### Family Plantaginaceae

*Plantago princeps* (LAUKAHI KUAHIWI)

Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Plantago princeps* on Molokai.

(i) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Poaceae

*Festuca molokaiensis* (NCN)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Festuca molokaiensis* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

*Ischaemum byrone* (HILO ISCHAEMUM)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Ischaemum byrone* on Molokai. In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(i) Elevation: Less than 980 ft (300 m).

(ii) Annual precipitation: Less than 20 in (50 cm).

(iii) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(iv) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(v) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(vi) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

#### Family Primulaceae

*Lysimachia maxima* (NCN)

Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Lysimachia maxima* on Molokai.

(i) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepis*.

(ii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### Family Rhamnaceae

*Gouania hillebrandii* (NCN)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Gouania hillebrandii* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### Family Rubiaceae

*Kadua laxiflora* (PILO)

Molokai—Lowland Mesic—Unit 1 and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Kadua laxiflora* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Rutaceae

*Melicope mucronulata* (ALANI)

Molokai—Lowland Mesic—Unit 1 and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Melicope mucronulata* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are: (A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### *Melicope munroi* (ALANI)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Melicope munroi* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### *Melicope reflexa* (ALANI)

Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Melicope reflexa* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepidia*.

(iii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### *Zanthoxylum hawaiiense* (AE)

Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Zanthoxylum hawaiiense* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepidia*.

(iii) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### Family Santalaceae

##### *Santalum haleakalae* var. *lanaiense* (LANAI SANDALWOOD, ILIAHI)

Molokai—Lowland Mesic—Unit 1 and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Santalum haleakalae* var. *lanaiense* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.  
 (ii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:  
 (A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).  
 (B) Annual precipitation: 50 to 75 in (130 to 190 cm).  
 (C) Substrate: Deep ash deposits, thin silty loams.  
 (D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.  
 (E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.  
 (F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Sapindaceae

##### *Alectryon macrococcus* (MAHOE)

Molokai—Lowland Mesic—Unit 1 and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Alectryon macrococcus* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*,

*Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Urticaceae

##### *Neraudia sericea* (NCN)

Molokai—Lowland Mesic—Unit 1 and Molokai—Montane Mesic—Unit 1,

identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Neraudia sericea* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Violaceae

##### *Isodendron pyrifolium* (WAHINE NOHO KULA)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Isodendron pyrifolium* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(2) *Ferns and fern allies*.

#### Family Adiantaceae

##### *Pteris lidgatei* (NCN)

Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, Molokai—Montane Wet—Unit 3, Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Pteris lidgatei* on Molokai.

(i) In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In units Molokai—Wet Cliff—Unit 1, Molokai—Wet Cliff—Unit 2, and Molokai—Wet Cliff—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Aspleniaceae

##### *Asplenium diellectum* (ASPENIUM-LEAVED DIELLIA)

Molokai—Lowland Mesic—Unit 1, Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, Molokai—Lowland Wet—Unit 3, and Molokai—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Asplenium diellectum* on Molokai.

(i) In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Molokai—Lowland Wet—Unit 1, Molokai—Lowland Wet—Unit 2, and Molokai—Lowland Wet—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In unit Molokai—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### *Ctenitis squamigera* (PAUOA)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Ctenitis squamigera* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### *Diplazium molokaiense* (NCN)

Molokai—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (c) of this section, constitutes critical habitat for *Diplazium molokaiense* on Molokai. In unit Molokai—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Shallow soils, little to no herbaceous layer.

(iv) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(v) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(vi) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### Family Grammitidaceae

##### *Adenophorus periens* (PENDANT KIHIFERN)

Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Adenophorus periens* on Molokai. In units Molokai—Montane Wet—Unit 1, Molokai—Montane Wet—Unit 2, and Molokai—Montane Wet—Unit 3, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### Family Marsileaceae

##### *Marsilea villosa* (IHI IHI)

Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, identified in the legal descriptions in paragraph (c) of this section, constitute critical habitat for *Marsilea villosa* on Molokai. In units Molokai—Coastal—Unit 1, Molokai—Coastal—Unit 2, Molokai—Coastal—Unit 3, Molokai—Coastal—Unit 4, Molokai—Coastal—Unit 5, Molokai—Coastal—Unit 6, and Molokai—Coastal—Unit 7, the physical and biological features of critical habitat are:

(i) Elevation: Less than 980 ft (300 m).

(ii) Annual precipitation: Less than 20 in (50 cm).

(iii) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(iv) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(v) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(vi) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

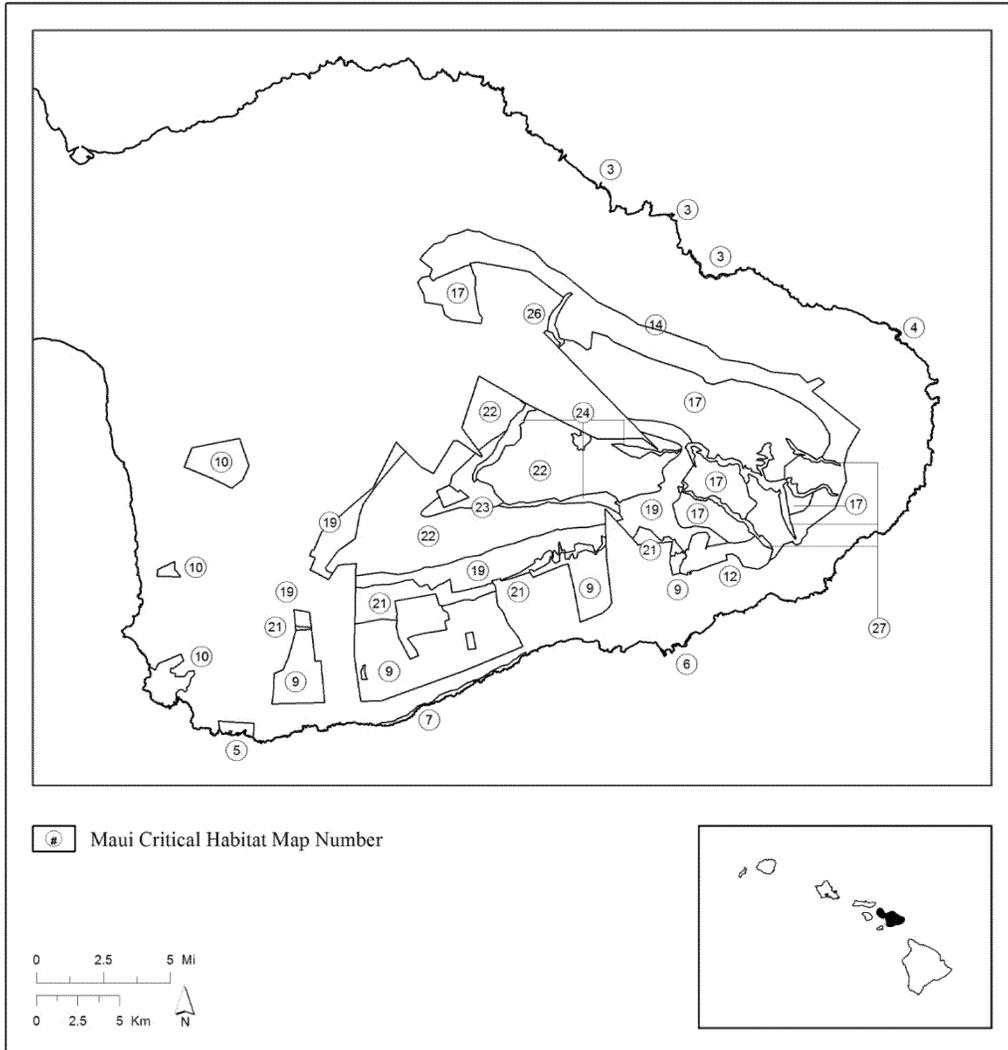

(e) *Maps and critical habitat unit descriptions for the islands of Maui and Kahoolawe, HI.*

(1) *Maui.* Critical habitat units are described below. Coordinates are in UTM Zone 4 with units in meters using North American Datum of 1983 (NAD83). The following maps show the locations of the critical habitat units designated on the island of Maui. Existing manmade features and structures, such as buildings, roads, railroads, airports, runways, other paved areas, lawns, and other urban landscaped areas, do not contain one or more of the physical and biological features. Federal actions limited to those areas, therefore, would not trigger a consultation under section 7 of the Act unless they may affect the species or physical or biological features in adjacent critical habitat.

## Map 8

## Maui—Coastal

## Unit 9, Unit 10, and Unit 11

(ix) Maui—Lowland Dry—Unit 1 (13,537 ac, 5,478 ha).

(A) This unit is critical habitat for *Alectryon macrococcus*, *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Canavalia pubescens*, *Cenchrus agrimonioides*, *Colubrina*

*oppositifolia*, *Ctenitis squamigera*, *Flueggea neowawraea*, *Hibiscus brackenridgei*, *Melanthera kamolensis*, *Melicope adscendens*, *Melicope mucronulata*, *Neraudia sericea*, *Nototrichium humile*, *Santalum*

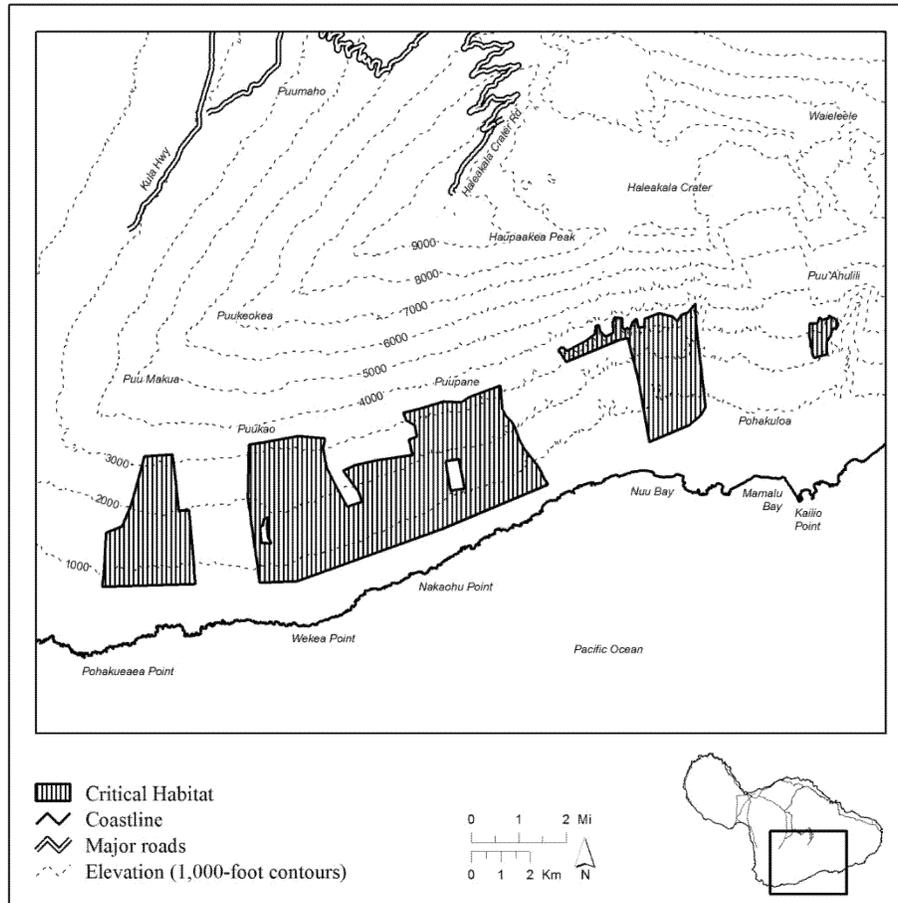

*haleakalae* var. *lanaiense*, *Sesbania tomentosa*, *Solanum incompletum*, *Spermolepis hawaiiensis*, and *Zanthoxylum hawaiiense*.

(B) Map of Maui—Lowland Dry—Unit 1 (Map 9) follows:

## Map 9

## Maui—Lowland Dry

## Unit 1

(x) Maui—Lowland Dry—Unit 2 (1,851 ac, 749 ha), Maui—Lowland Dry—Unit 3 (188 ac, 76 ha), and Maui—Lowland Dry—Unit 4 (1,266 ac, 512 ha).

(A) Maui—Lowland Dry—Unit 2 is critical habitat for *Alectryon macrococcus*, *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Canavalia pubescens*, *Cenchrus agrimonioides*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Flueggea neowawraea*, *Hibiscus brackenridgei*, *Melanthera kamolensis*, *Melicope*

*mucronulata*, *Neraudia sericea*, *Nototrichium humile*, *Santalum haleakalae* var. *lanaiense*, *Sesbania tomentosa*, *Solanum incompletum*, *Spermolepis hawaiiensis*, and *Zanthoxylum hawaiiense*.

(B) Maui—Lowland Dry—Unit 3 and Maui—Lowland Dry—Unit 4 are critical habitat for *Bidens micrantha* ssp. *kalealaha*, *Bonamia menziesii*, *Canavalia pubescens*, *Cenchrus agrimonioides*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Flueggea*

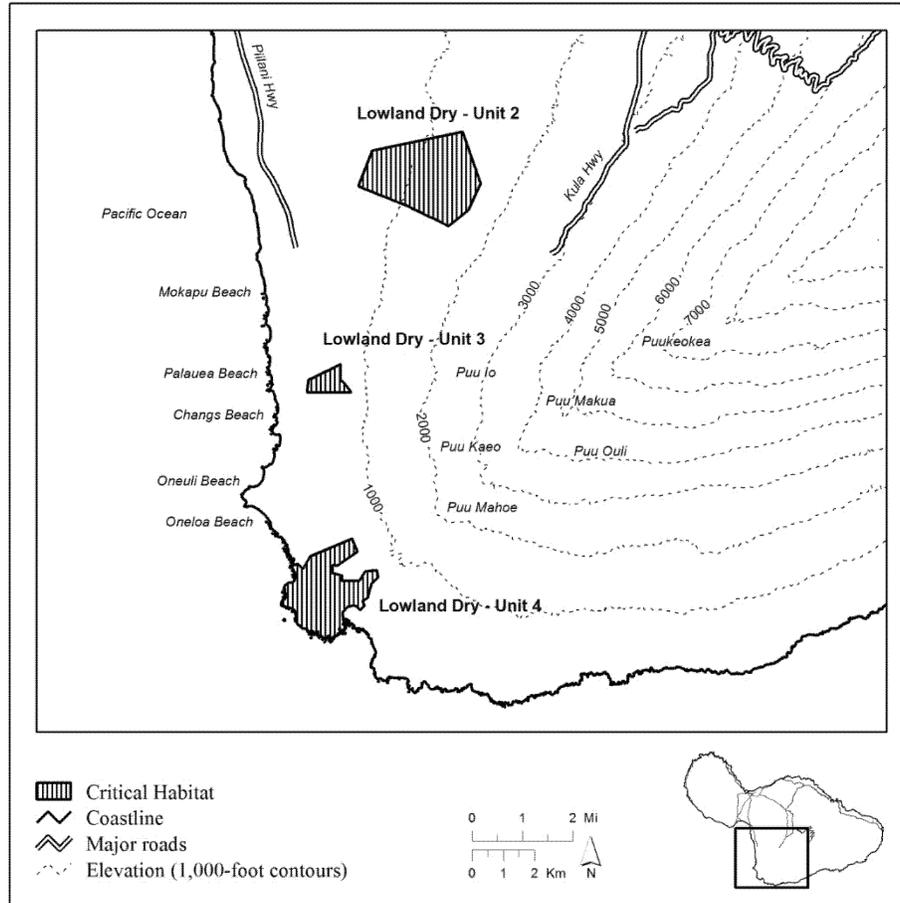

*neowawraea*, *Hibiscus brackenridgei*, *Melanthera kamolensis*, *Melicope mucronulata*, *Neraudia sericea*, *Nototrichium humile*, *Santalum haleakalae* var. *lanaiense*, *Sesbania tomentosa*, *Solanum incompletum*, *Spermolepis hawaiiensis*, and *Zanthoxylum hawaiiense*.

(C) Map of Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4 (Map 10) follows:

## Map 10

## Maui—Lowland Dry

## Unit 2, Unit 3, and Unit 4

(xi) Maui—Lowland Dry—Unit 5 (3,658 ac, 1,480 ha) and Maui—Lowland Dry—Unit 6 (240 ac, 97 ha).

(A) These units are critical habitat for *Asplenium dielrectum*, *Bidens campylothea* ssp. *pentamera*, *Cenchrus agrimonioides*, *Ctenitis squamigera*,

*Cyanea obtusa*, *Gouania hillebrandii*, *Hesperomannia arbuscula*, *Hibiscus brackenridgei*, *Kadua coriacea*, *Lysimachia lydgatei*, *Neraudia sericea*, *Remya maiuensis*, *Santalum haleakalae* var. *lanaiense*, *Schiedea salicaria*,

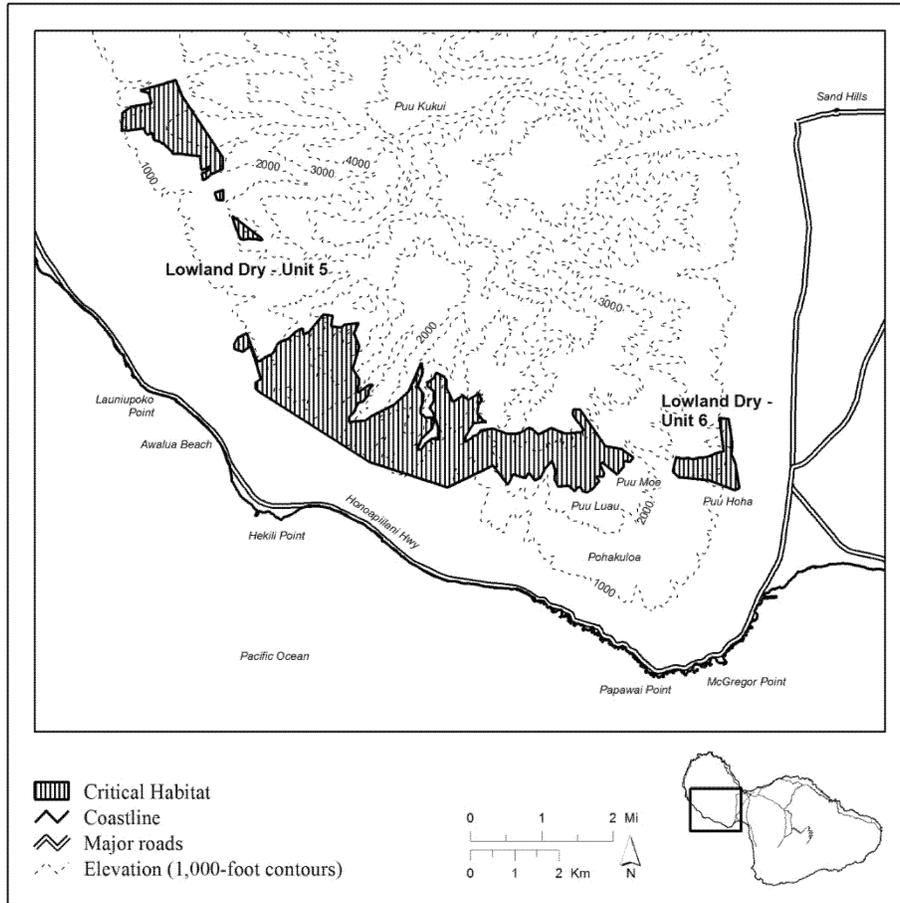

*Sesbania tomentosa*, *Spermolepis hawaiiensis*, *Tetramolopium capillare*, and *Tetramolopium remyi*.

(B) Map of Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6 (Map 11) follows:

Map 11

Maui—Lowland Dry

Unit 5 and Unit 6

(xii) Maui—Lowland Mesic—Unit 1 (1,882 ac, 762 ha).

(A) This unit is critical habitat for *Ctenitis squamigera*, *Cyanea*

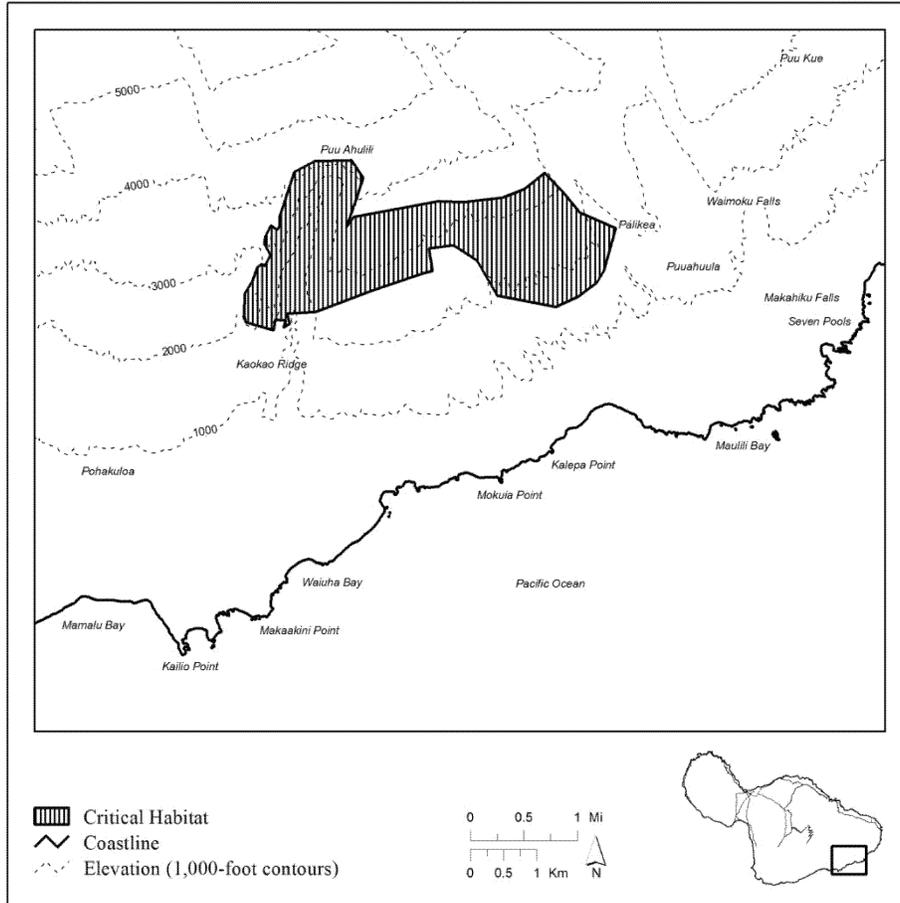

*asplenifolia*, *Cyanea copelandii* ssp. *haleakalaensis*, *Huperzia mannii*, and *Solanum incompletum*.

(B) Map of Maui—Lowland Mesic—Unit 1 (Map 12) follows:

Map 12

Maui—Lowland Mesic

Unit 1

(xiii) Maui—Lowland Mesic—Unit 2 (1,147 ac, 464 ha) and Maui—Lowland Mesic—Unit 3 (477 ac, 193 ha).

(A) These units are critical habitat for *Asplenium dielectum*, *Bidens*

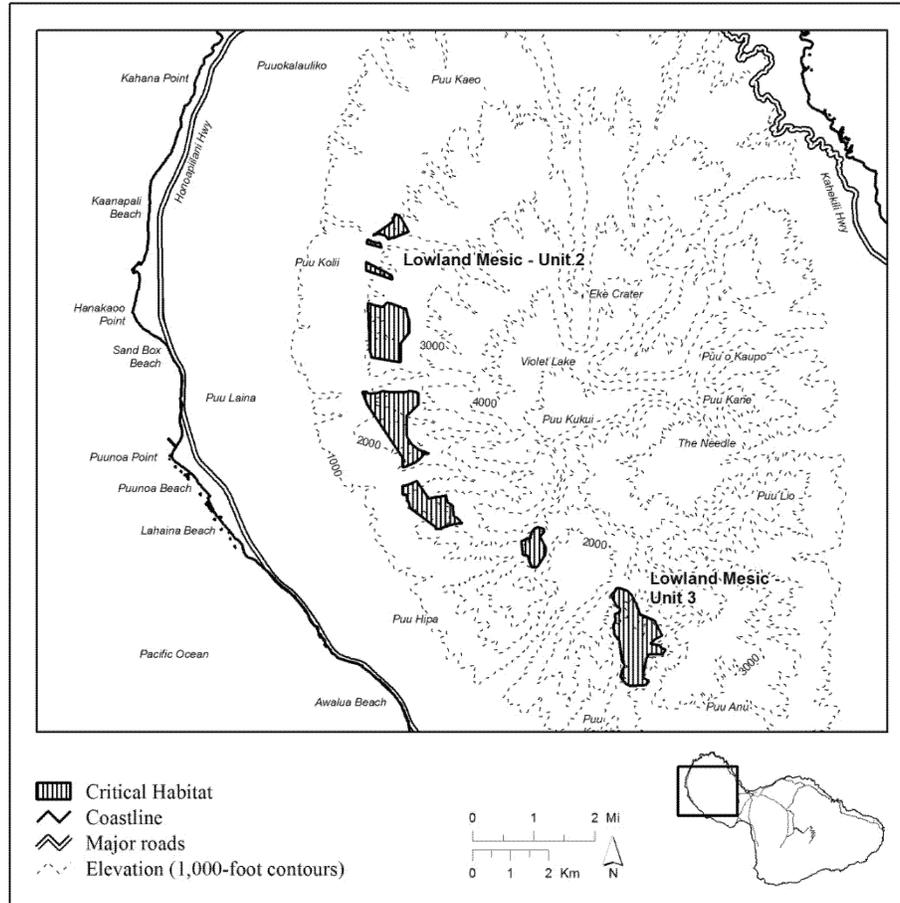

*campylothecha* ssp. *pentamera*, *Colubrina oppositifolia*, *Ctenitis squamigera*, *Remya mauiensis*, *Santalum haleakalae* var. *lanaiense*, and *Zanthoxylum hawaiiense*.

(B) Map of Maui—Lowland Mesic—Unit 2 and Maui—Lowland Mesic—Unit 3 (Map 13) follows:

## Map 13

## Maui—Lowland Mesic

## Unit 2 and Unit 3

(xiv) Maui—Lowland Wet—Unit 1 (16,079 ac, 6,507 ha).

(A) This unit is critical habitat for *Bidens campylotheca* ssp. *waihoiensis*, *Clermontia oblongifolia* ssp. *mauiensis*, *Clermontia peleana*, *Clermontia*

*samuelii*, *Cyanea asplenifolia*, *Cyanea copelandii* ssp. *haleakalaensis*, *Cyanea duvalliorum*, *Cyanea hamatiflora* ssp. *hamatiflora*, *Cyanea kunthiana*, *Cyanea maritae*, *Cyanea mceldowneyi*, *Huperzia mannii*, *Melicope balloui*, *Melicope*

*ovalis*, *Mucuna sloanei* var. *persericea*, *Phyllostegia haliakalae*, and *Wikstroemia villosa*.

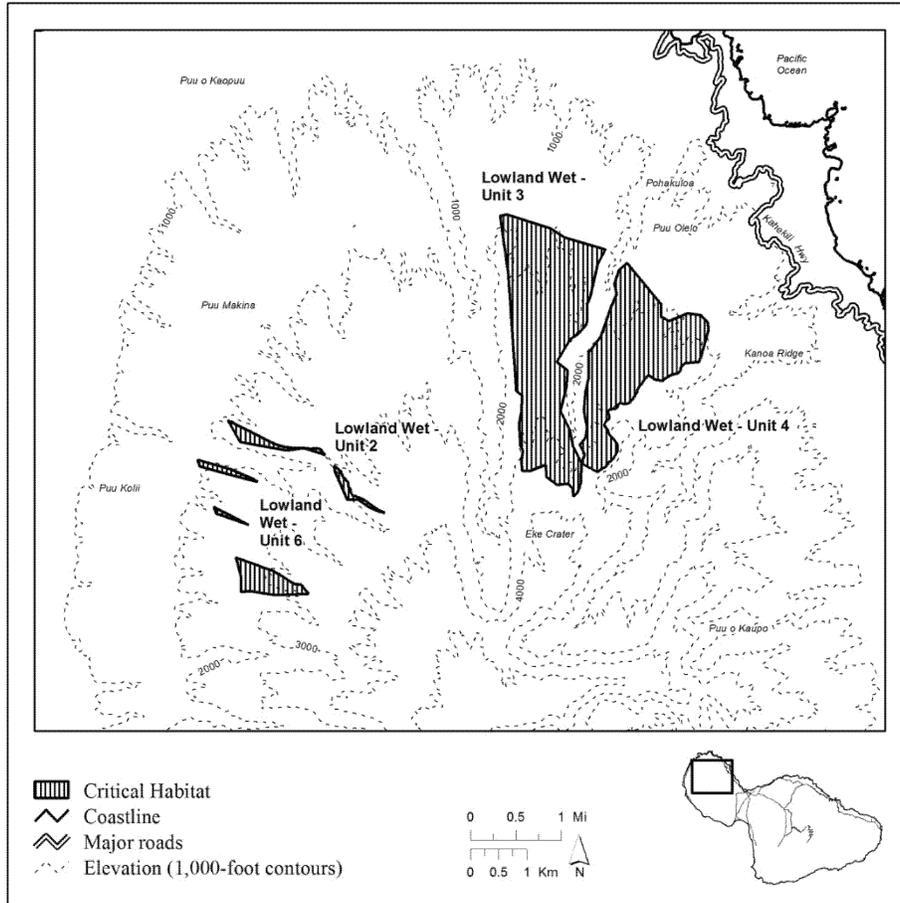

(B) Map of Maui—Lowland Wet—Unit 1 (Map 14) follows:

Map 15

Maui—Lowland Wet

Unit 2, Unit 3, Unit 4, and Unit 6

(xvi) Maui—Lowland Wet—Unit 5 (30 ac, 12 ha), Maui—Lowland Wet—Unit 7 (898 ac, 364 ha), and Maui—Lowland Wet—Unit 8 (230 ac, 93 ha).

(A) These units are critical habitat for *Alectryon macrococcus*, *Asplenium dielrectum*, *Bidens conjuncta*, *Bidens micrantha* ssp. *kalealaha*, *Clermontia oblongifolia* ssp. *mauiensis*, *Ctenitis*

*squamigera*, *Cyanea asplenifolia*, *Cyanea glabra*, *Cyanea kunthiana*, *Cyanea lobata*, *Cyanea magnicalyx*, *Cyrtandra filipes*, *Cyrtandra munroi*, *Diplazium molokaiense*, *Hesperomannia arborescens*, *Hesperomannia arbuscula*, *Huperzia mannii*, *Isodendrion pyriformium*, *Kadua*

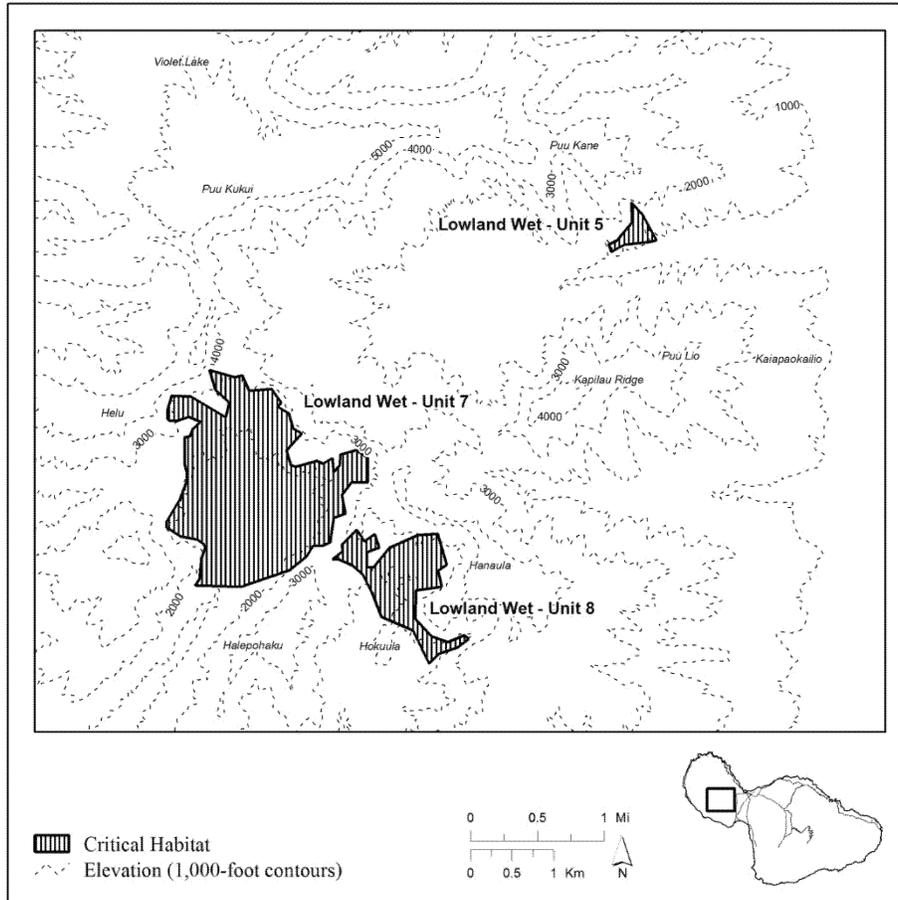

*laxiflora*, *Peucedanum sandwicense*, *Phyllostegia bracteata*, *Pteris lidgatei*, *Remya muiensis*, *Santalum haleakalae* var. *lanaiense*, and *Wikstroemia villosa*.

(B) Map of Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8 (Map 16) follows:

## Map 16

## Maui—Lowland Wet

## Unit 5, Unit 7, and Unit 8

(A) This unit is critical habitat for *Adenophorus periens*, *Asplenium peruvianum* var. *insulare*, *Bidens campylotheca* ssp. *pentamera*, *Bidens campylotheca* ssp. *waihoiensis*, *Clermontia oblongifolia* ssp. *mauiensis*, *Clermontia samuelii*, *Cyanea copelandii* ssp. *haleakalaensis*, *Cyanea duvalliorum*, *Cyanea glabra*, *Cyanea*

*hamatiflora* ssp. *hamatiflora*, *Cyanea horrida*, *Cyanea kunthiana*, *Cyanea maritae*, *Cyanea mceldowneyi*, *Cyrtandra ferripilosa*, *Diplazium molokaiense*, *Geranium hanaense*, *Geranium multiflorum*, *Huperzia mannii*, *Melicope balloui*, *Melicope ovalis*, *Peperomia subpetiolata*, *Phyllostegia bracteata*, *Phyllostegia*

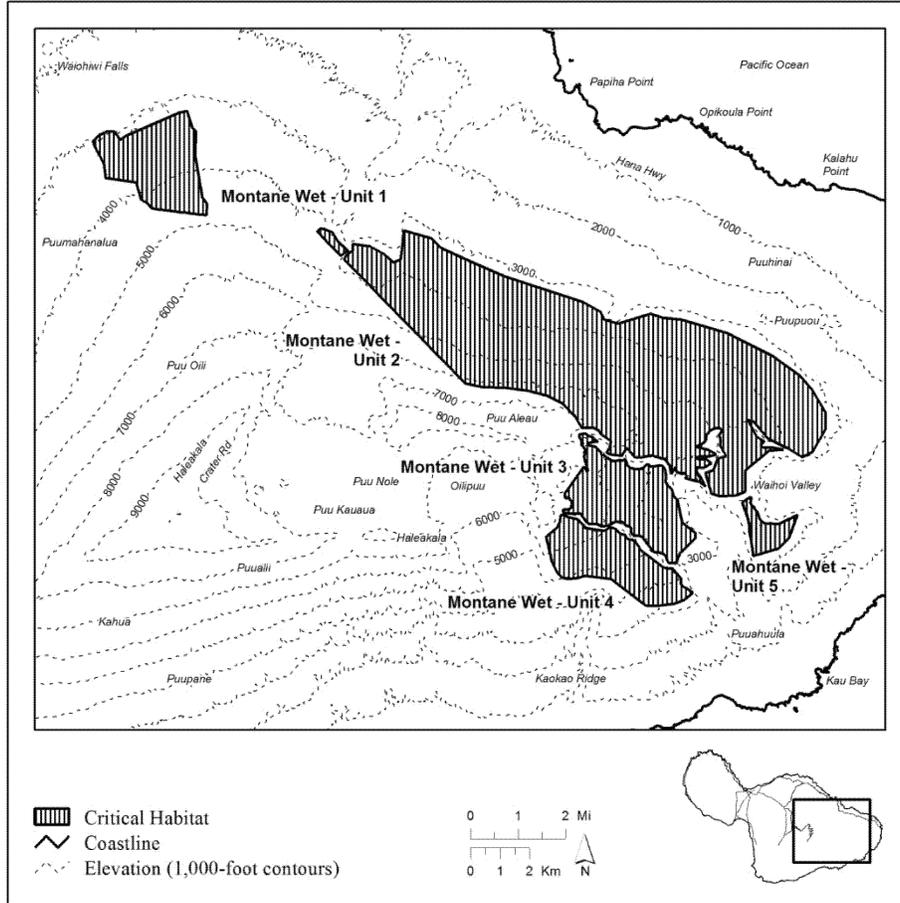

*haliakalae*, *Phyllostegia mannii*, *Phyllostegia pilosa*, *Platanthera holochila*, *Schiedea jacobii*, and *Wikstroemia villosa*.

(B) Map of Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5 (Map 17) follows:

Map 17

Maui—Montane Wet

Unit 1, Unit 2, Unit 3, Unit 4, and Unit 5

(xviii) Maui—Montane Wet—Unit 6 (1,399 ac, 566 ha), and Maui—Montane Wet—Unit 7 (80 ac, 32 ha).

(A) These units are critical habitat for *Acaena exigua*, *Bidens conjuncta*,

*Calamagrostis hillebrandii*, *Cyanea kunthiana*, *Cyrtandra oxybapha*, *Geranium hillebrandii*, *Huperzia mannii*, *Myrsine vaccinioides*,

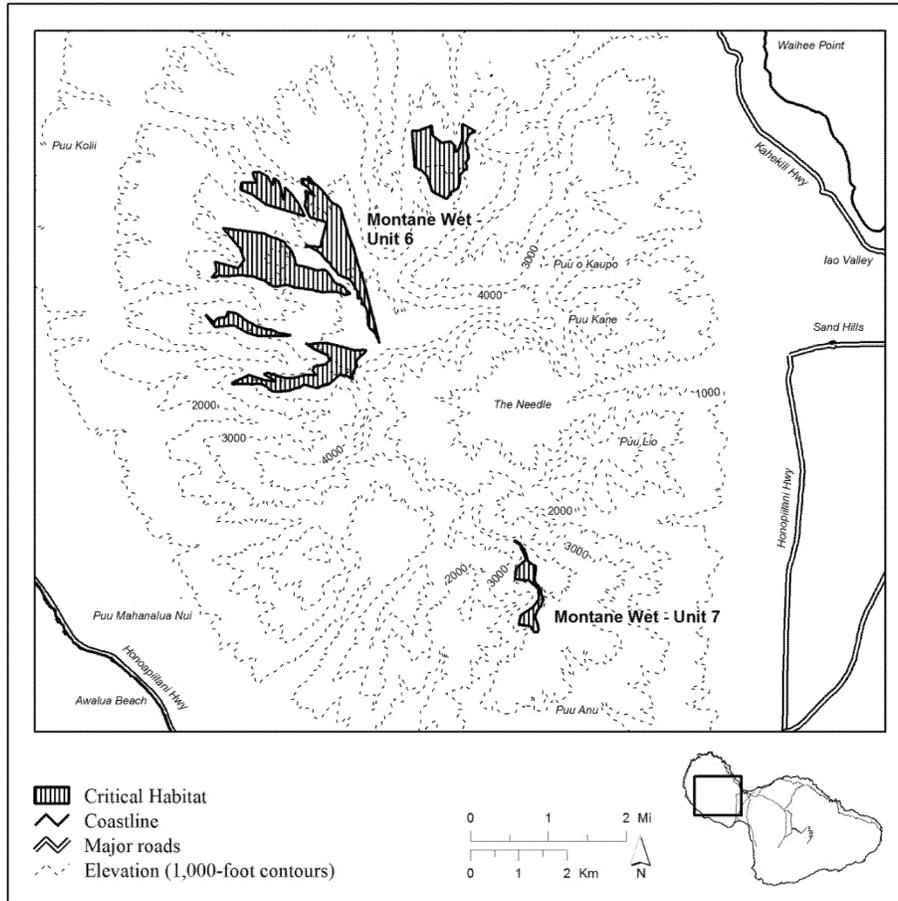

*Phyllostegia bracteata*, *Platanthera holochila*, and *Sanicula purpurea*.

(B) Map of Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7 (Map 18) follows:

## Map 18

## Maui—Montane Wet

## Unit 6 and Unit 7

(xix) Maui—Montane Mesic—Unit 1 (10,972 ac, 4,440 ha).

(A) This unit is critical habitat for *Alectryon macrococcus*, *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Asplenium dielirectum*, *Asplenium peruvianum* var. *insulare*, *Bidens campylothea* ssp. *pentamera*, *Bidens*

*micrantha* ssp. *kalealaha*, *Clermontia lindseyana*, *Cyanea glabra*, *Cyanea hamatiflora* ssp. *hamatiflora*, *Cyanea horrida*, *Cyanea kunthiana*, *Cyanea mceldowneyi*, *Cyanea obtusa*, *Cyrtandra ferripilosa*, *Cyrtandra oxybapha*, *Diplazium molokaiense*, *Geranium arboreum*, *Geranium multiflorum*,

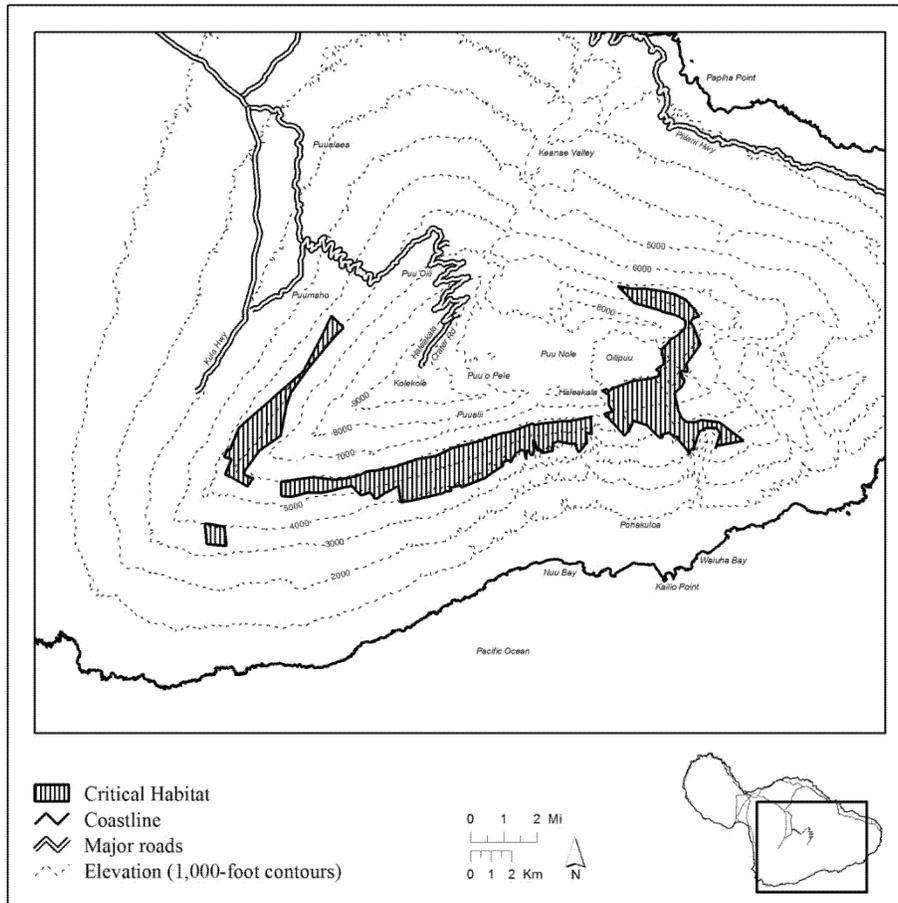

*Huperzia mannii*, *Melicope adscendens*, *Neraudia sericea*, *Phyllostegia bracteata*, *Phyllostegia mannii*, *Santalum haleakalae* var. *lanaiense*, *Wikstroemia villosa*, and *Zanthoxylum hawaiiense*.

(B) Map of Maui—Montane Mesic—Unit 1 (Map 19) follows:

## Map 19

## Maui—Montane Mesic

## Unit 1

(xx) Maui—Montane Mesic—Unit 2 (124 ac, 50 ha), Maui—Montane Mesic—Unit 3 (174 ac; 70 ha), Maui—Montane Mesic—Unit 4 (72 ac, 29 ha), and Maui—Montane Mesic—Unit 5 (170 ac, 69 ha).

(A) These units are critical habitat for *Ctenitis squamigera*, *Cyanea magnicalyx*, *Diplazium molokaiense*, *Geranium hillebrandii*, *Huperzia mannii*, *Lysimachia lydgatei*, *Remya mauiensis*, *Santalum haleakalae* var.

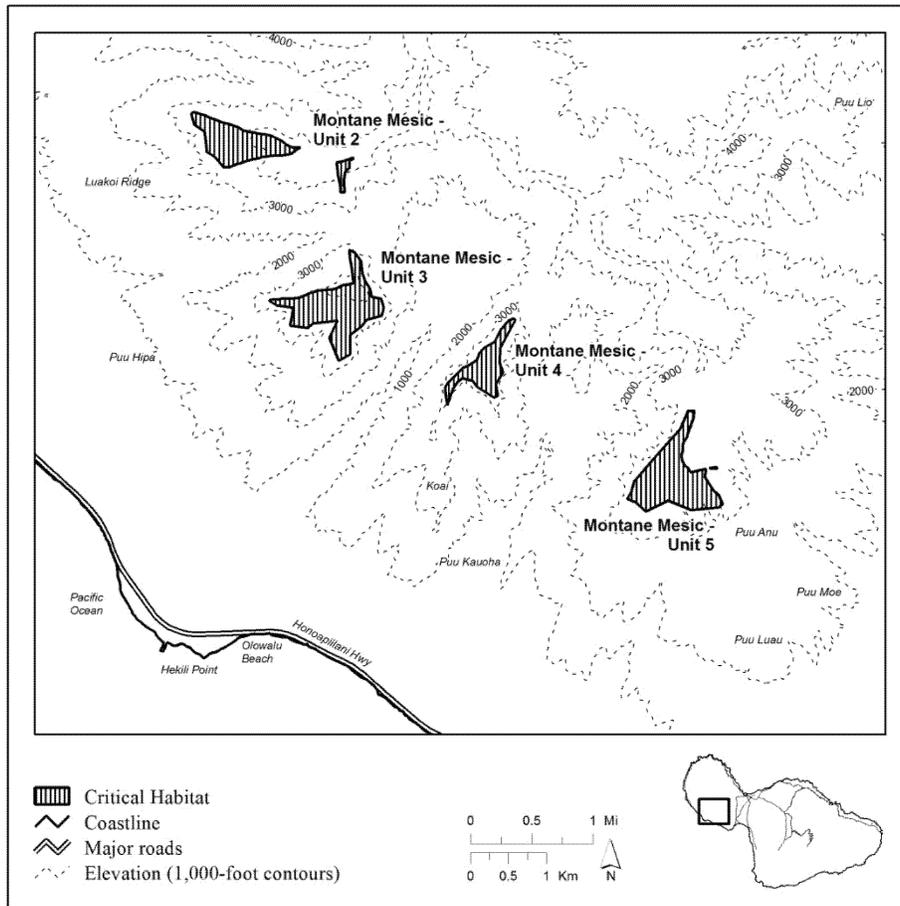

*lanaiense*, *Stenogyne kauaulaensis*, and *Zanthoxylum hawaiiense*.

(B) Map of Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5 (Map 20) follows:

Map 20

Maui—Montane Mesic

Unit 2, Unit 3, Unit 4, and Unit 5

(xxi) Maui—Montane Dry—Unit 1 (3,524 ac, 1,426 ha).

(A) This unit is critical habitat for *Alectryon macrococcus*, *Geranium*

*arboresum*, *Melicope knudsenii*, *Melicope mucronulata*, *Santalum haleakalae* var. *lanaiense*, and *Zanthoxylum hawaiiense*.

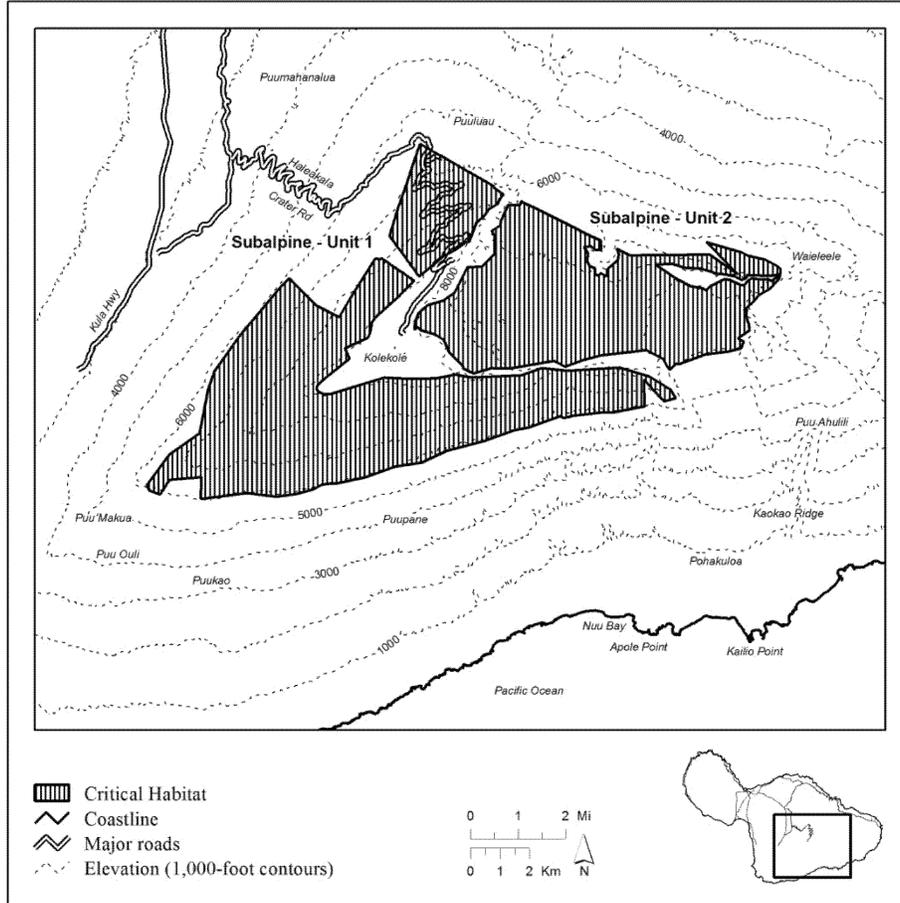

(B) Map of Maui—Montane Dry—Unit 1 (Map 21) follows:

Map 22

Maui—Subalpine

Unit 1 and Unit 2

(xxiii) Maui—Alpine—Unit 1 (1,797 ac, 727 ha).

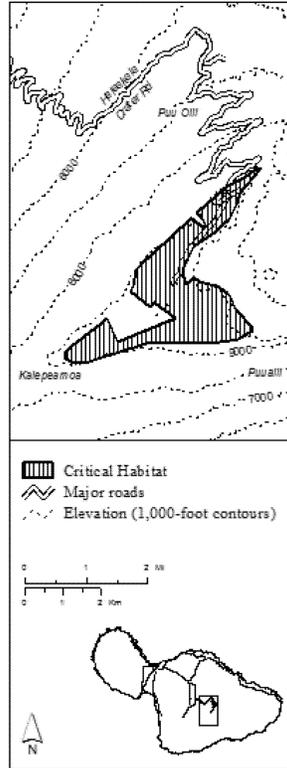

(A) This unit is critical habitat for *Argyroxiphium sandwicense* ssp. *macrocephalum*.

(B) Map of Maui—Alpine—Unit 1 (Map 23) follows:

## Map 23

### Maui-Alpine

#### Unit 1

(xxiv) Maui—Dry Cliff—Unit 1 (755 ac, 305 ha), Maui—Dry Cliff—Unit 2 (688 ac, 279 ha), Maui—Dry Cliff—Unit 3 (200 ac, 81 ha), and Maui—Dry Cliff—Unit 4 (315 ac, 127 ha).

(A) These units are critical habitat for *Argyroxiphium sandwicense* ssp. *macrocephalum*, *Bidens campylotheca* ssp. *pentamera*, *Bidens micrantha* ssp. *kalealaha*, *Diplazium molokaiense*,

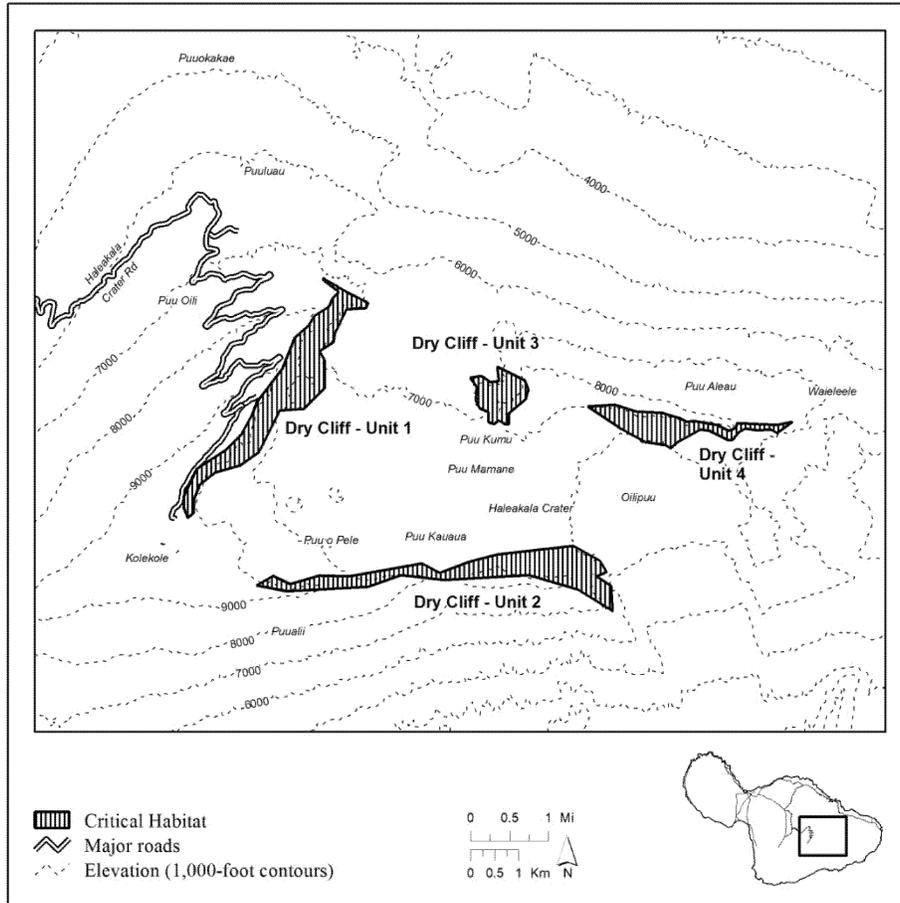

*Geranium multiflorum*, *Plantago princeps*, and *Schiedea haleakalensis*.

(B) Map of Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4 (Map 24) follows:

Map 24

Maui—Dry Cliff

Unit 1, Unit 2, Unit 3, and Unit 4

(xxv) Maui—Dry Cliff—Unit 5 (1,298 ac, 525 ha) and Maui—Dry Cliff—Unit 6 (279 ac, 113 ha).

(A) These units are critical habitat for *Bonamia menziesii*, *Diplazium*

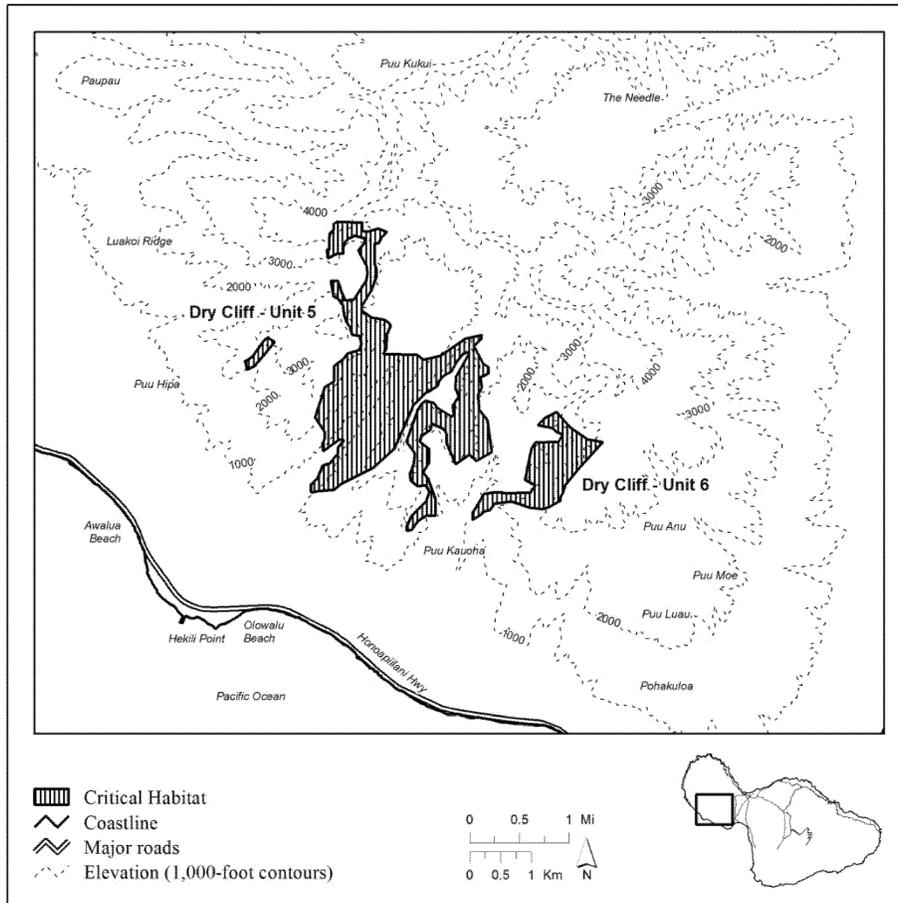

*molokaiense*, *Hesperomannia arbuscula*, *Isodendron pyrifolium*, *Kadua laxiflora*, *Neraudia sericea*, and *Tetramolopium capillare*.

(B) Map of Maui—Dry Cliff—Unit 5 and Maui—Dry Cliff—Unit 6 (Map 25) follows:

Map 25

Maui—Dry Cliff

Unit 5 and Unit 6

(xxvi) Maui—Wet Cliff—Unit 1 (290 ac, 117 ha).

(A) This unit is critical habitat for *Bidens campylotheca* ssp. *pentamera*,

*Bidens campylotheca* ssp. *waihoiensis*,  
*Cyanea copelandii* ssp. *haleakalaensis*,  
*Cyanea horrida*, *Melicope ovalis*,

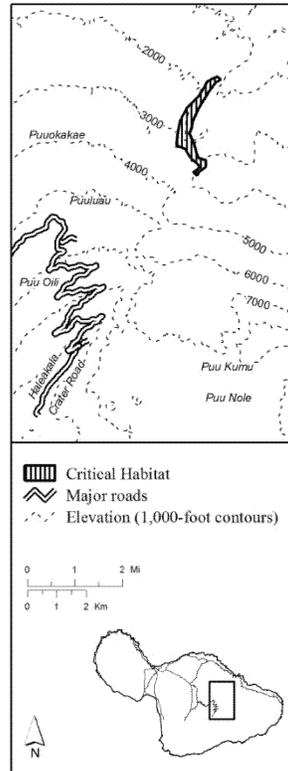

*Phyllostegia bracteata*, *Phyllostegia haliakalae*, and *Plantago princeps*.

(B) Map of Maui—Wet Cliff—Unit 1 (Map 26) follows:

## Map 26

(2) *Kahoolawe*. Critical habitat units are described below. Coordinates are in UTM Zone 4 with units in meters using North American Datum of 1983 (NAD83). The following maps shows the locations of the critical habitat units designated on the island of Kahoolawe.

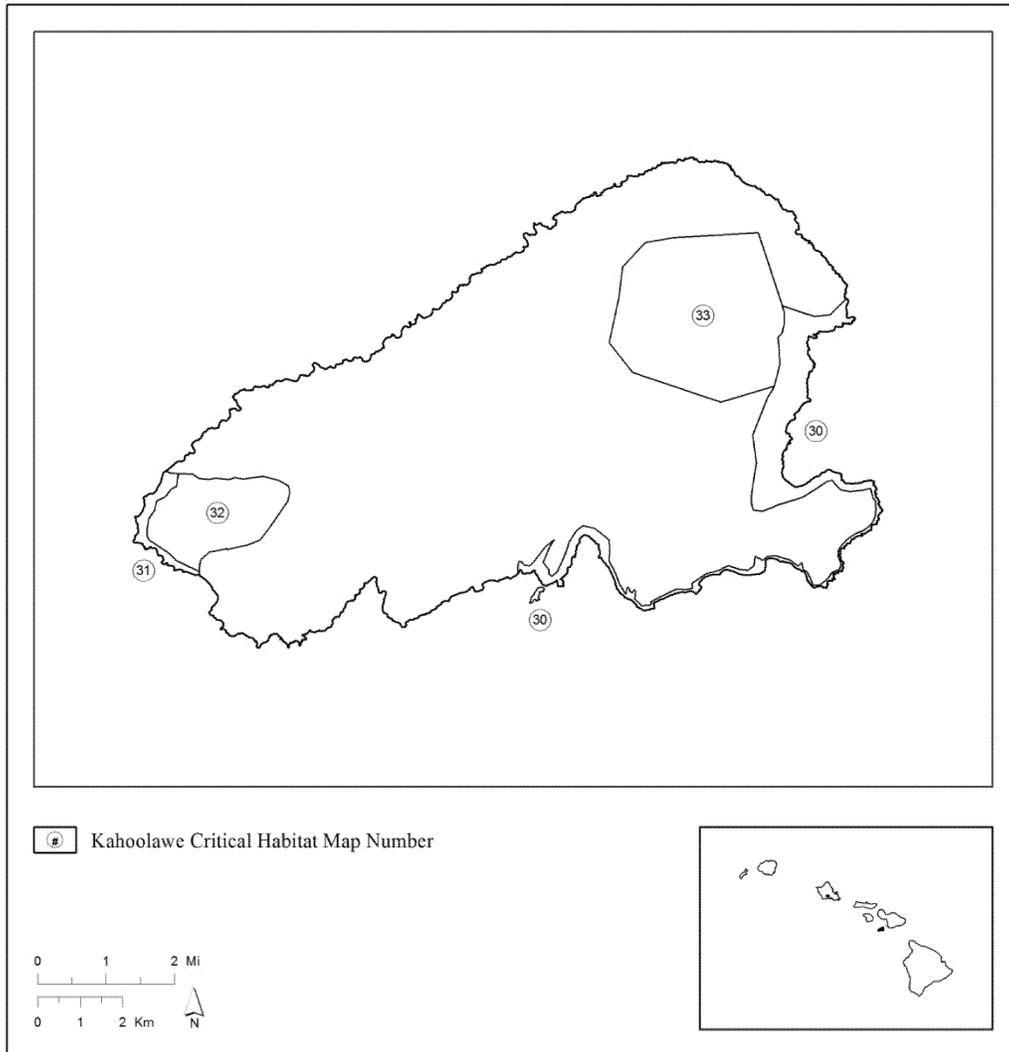

Existing manmade features and structures, such as buildings, roads, railroads, airports, runways, other paved areas, lawns, and other urban landscaped areas, do not contain one or more of the physical and biological features. Federal actions limited to those

areas, therefore, would not trigger a consultation under section 7 of the Act unless they may affect the species or physical or biological features in adjacent critical habitat.

(i) NOTE: Map 29, Kahoolawe Index Map, follows:

Map 29

Kahoolawe Critical Habitat—Island Index Map

(ii) Kahoolawe—Coastal—Unit 1 (1,516 ac, 613 ha) and Kahoolawe—Coastal—Unit 2 (12 ac, 5 ha).

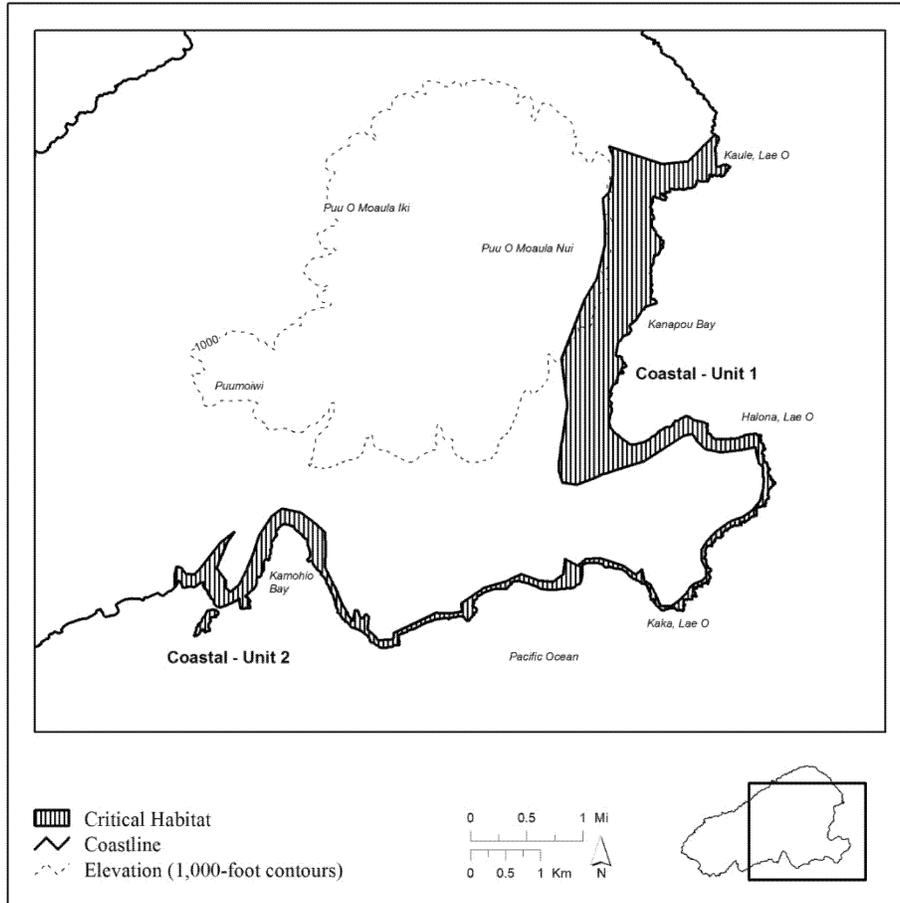

(A) These units are critical habitat for *Kanaloa kahoolawensis*, *Sesbania tomentosa*, and *Vigna o-wahuensis*.

(B) Map of Kahoolawe—Coastal—Unit 1 and Kahoolawe—Coastal—Unit 2 (Map 30) follows:

Map 30

Kahoolawe—Coastal

Unit 1 and Unit 2

(iii) Kahoolawe—Coastal—Unit 3 (189 ac, 76 ha).

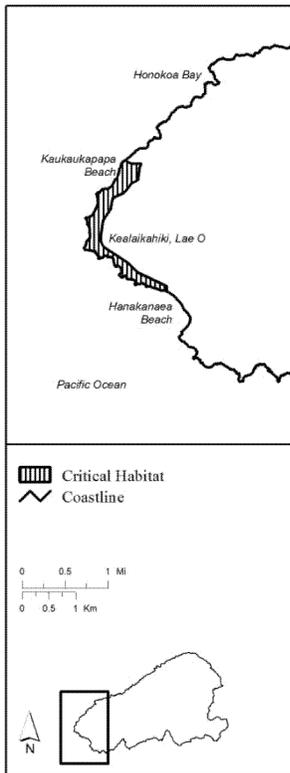

(A) This unit is critical habitat for *Kanaloa kahoolawensis*, *Sesbania tomentosa*, and *Vigna o-wahuensis*.

(B) Map of Kahoolawe—Coastal—Unit 3 (Map 31) follows:

**Map 31**

**Kahoolawe—Coastal**

**Unit 3**

(iv) Kahoolawe—Lowland Dry—Unit 1 (1,220 ac, 494 ha).

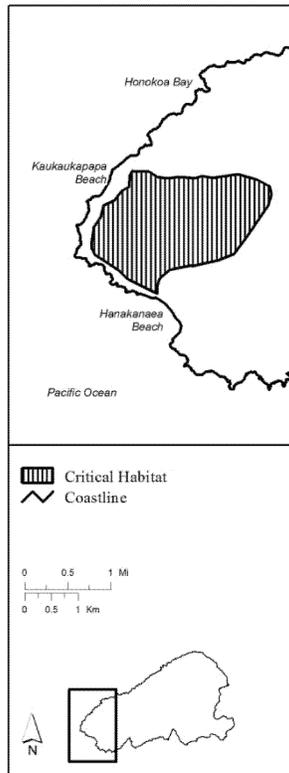

(A) This unit is critical habitat for *Gouania hillebrandii*, *Hibiscus brackenridgei*, *Kanaloa kahoolawensis*, *Neraudia sericea*, *Sesbania tomentosa*, and *Vigna o-wahuensis*.

(B) Map of Kahoolawe—Lowland Dry—Unit 1 (Map 32) follows:

**Map 32**

**Kahoolawe—Lowland Dry**

**Unit 1**

(v) Kahoolawe—Lowland Dry—Unit 2 (3,205 ac, 1,297 ha).

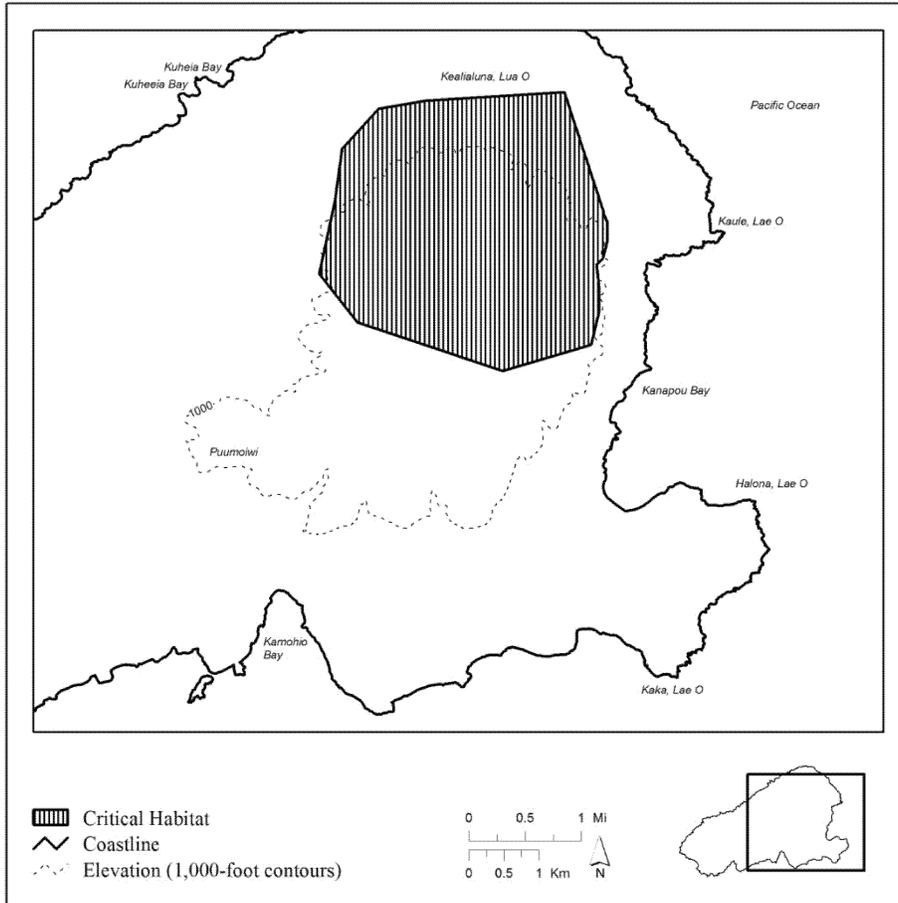

(A) This unit is critical habitat for *Gouania hillebrandii*, *Hibiscus brackenridgei*, *Kanaloa kahoolawensis*, *Neraudia sericea*, *Sesbania tomentosa*, and *Vigna o-wahuensis*.

(B) Map of Kahoolawe—Lowland Dry—Unit 2 (Map 33) follows:

Kahoolawe—Lowland Dry—Unit 2 .....		

(f) *Plants on Maui and Kahoolawe; Constituent elements*—(1) *Flowering plants.*

#### Family Amaranthaceae

*Nototrichium humile* (KULUI)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Nototrichium humile* on Maui. In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

- (i) Elevation: Less than 3,300 ft (1,000 m).
- (ii) Annual precipitation: Less than 50 in (130 cm).
- (iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.
- (iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.
- (v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.
- (vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Apiaceae

*Peucedanum sandwicense* (MAKOU)

Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, Maui—Coastal—Unit 8, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for

*Peucedanum sandwicense* on Maui.

- (i) In units Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, and Maui—Coastal—Unit 8, the physical and biological features of critical habitat are:
  - (A) Elevation: Less than 980 ft (300 m).
  - (B) Annual precipitation: Less than 20 in (50 cm).
  - (C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.
  - (D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

- (A) Elevation: Less than 3,300 ft (1,000 m).
- (B) Annual precipitation: Greater than 75 in (190 cm).
- (C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.
- (D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.
- (E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.
- (F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

*Sanicula purpurea* (NCN)

Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Sanicula purpurea* on Maui. In units Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

- (i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).
- (ii) Annual precipitation: Greater than 75 in (190 cm).
- (iii) Substrate: Well-developed soils, montane bogs.
- (iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.
- (v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.
- (vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

*Spermolepis hawaiiensis* (NCN)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, and Maui—Lowland Dry—Unit 6, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Spermolepis hawaiiensis* on Maui. In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

- (i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Asteraceae

*Argyroxiphium sandwicense* ssp. *macrocephalum* (AHINAHINA)

Maui—Montane Mesic—Unit 1, Maui—Subalpine—Unit 1, Maui—Subalpine—Unit 2, Maui—Alpine—Unit 1, Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Argyroxiphium sandwicense* ssp. *macrocephalum* on Maui.

(i) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

- (A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).
- (B) Annual precipitation: 50 to 75 in (130 to 190 cm).
- (C) Substrate: Deep ash deposits, thin silty loams.
- (D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.
- (E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.
- (F) Understory: Ferns, *Carex*, *Peperomia*.

(ii) In units Maui—Subalpine—Unit 1 and Maui—Subalpine—Unit 2, the physical and biological features of critical habitat are:

- (A) Elevation: 6,500 to 9,800 ft (2,000 to 3,000 m).
- (B) Annual precipitation: 15 to 40 in (38 to 100 cm).
- (C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.
- (D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.
- (E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.
- (F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

(iii) In unit Maui—Alpine—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Greater than 9,800 ft (3,000 m).

(B) Annual precipitation: 30 to 50 in (75 to 125 cm).

(C) Substrate: Barren gravel, debris, cinders.

(D) Canopy: None.

(E) Subcanopy: *Argyroxiphium*, *Dubautia*, *Silene*, *Tetramolopium*.

(F) Understory: None.

(iv) In units Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

*Bidens campylotheca* ssp. *pentamera* (KOOKOOLAU)

Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Maui—Lowland Mesic—Unit 2, Maui—Lowland Mesic—Unit 3, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Mesic—Unit 1, Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, Maui—Dry Cliff—Unit 4, Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, Maui—Wet Cliff—Unit 4, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Bidens campylotheca* ssp. *pentamera* on Maui.

(i) In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Lowland Mesic—Unit 2 and Maui—Lowland Mesic—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(iii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iv) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(v) In units Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

(vi) In units Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, Maui—Wet Cliff—Unit 4, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Bidens campylotheca* ssp. *waihoiensis* (KOOKOOLAU)

Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Bidens campylotheca* ssp. *waihoiensis* on Maui.

(i) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, and the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In units Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Bidens conjuncta* (KOOKOOLAU)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Wet—Unit 6, Maui—Montane Wet—Unit 7, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Bidens conjuncta* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Bidens micrantha* ssp. *kalealaha* (KOOKOOLAU)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Mesic—Unit 1, Maui—Subalpine—Unit 1, Maui—Subalpine—Unit 2, Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Bidens micrantha* ssp. *kalealaha* on Maui.

(i) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iv) In units Maui—Subalpine—Unit 1 and Maui—Subalpine—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: 6,500 to 9,800 ft (2,000 to 3,000 m).

(B) Annual precipitation: 15 to 40 in (38 to 100 cm).

(C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.

(D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.

(F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

(v) In units Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

*Dubautia plantaginea* ssp. *humilis* (NAENAE)

Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal

descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Dubautia plantaginea* ssp. *humilis* on Maui. In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(i) Elevation: Unrestricted.  
(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(iv) Canopy: None.

(v) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(vi) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Hesperomannia arborescens* (NCN)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Hesperomannia arborescens* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Hesperomannia arbuscula* (NCN)

Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Dry Cliff—Unit 5, Maui—Dry Cliff—Unit 6, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Hesperomannia arbuscula* on Maui.

(i) In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In units Maui—Dry Cliff—Unit 5 and Maui—Dry Cliff—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

(iv) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Melanthera kamolensis* (NEHE)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Melanthera kamolensis* on Maui. In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### *Remya mauiensis* (MAUI REMYA)

Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Maui—Lowland Mesic—Unit 2, Maui—Lowland Mesic—Unit 3, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, Maui—Montane Mesic—Unit 5, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Remya mauiensis* on Maui.

(i) In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).  
(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Lowland Mesic—Unit 2 and Maui—Lowland Mesic—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(iii) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iv) In units Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(v) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Tetramolopium capillare* (PAMAKANI)

Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Maui—Dry Cliff—Unit 5, Maui—Dry Cliff—Unit 6, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Tetramolopium capillare* on Maui.

(i) In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Dry Cliff—Unit 5 and Maui—Dry Cliff—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

(iii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Tetramolopium remyi* (NCN)

Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Tetramolopium remyi* on Maui. In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Campanulaceae:

##### *Brighamia rockii* (PUA ALA)

Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, Maui—Coastal—Unit 8, Maui—Coastal—Unit 9, Maui—Coastal—Unit 10, and Maui—Coastal—Unit 11, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Brighamia rockii* on Maui. In units Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, Maui—Coastal—Unit 8, Maui—Coastal—Unit 9, Maui—Coastal—Unit 10, and Maui—Coastal—Unit 11, the physical and biological features of critical habitat are:

(i) Elevation: Less than 980 ft (300 m).

(ii) Annual precipitation: Less than 20 in (50 cm).

(iii) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(iv) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(v) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(vi) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

*Clermontia lindseyana* (OHA WAI)

Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitutes critical habitat for *Clermontia lindseyana* on Maui. In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Deep ash deposits, thin silty loams.

(iv) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(v) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(vi) Understory: Ferns, *Carex*, *Peperomia*.

*Clermontia oblongifolia* ssp. *mauiensis* (OHA WAI)

Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Clermontia oblongifolia* ssp. *mauiensis* on Maui.

(i) In units Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

*Clermontia peleana* (OHA WAI)

Maui—Lowland Wet—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitutes critical habitat for *Clermontia peleana* on Maui. In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(iv) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(v) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(vi) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

*Clermontia samuelii* (OHA WAI)

Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Clermontia samuelii* on Maui.

(i) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

*Cyanea asplenifolia* (HAHA)

Maui—Lowland Mesic—Unit 1, Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea asplenifolia* on Maui.

(i) In unit Maui—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

*Cyanea copelandii* ssp. *haleakalaensis* (HAHA)

Maui—Lowland Mesic—Unit 1, Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea copelandii* ssp. *haleakalaensis* on Maui.

(i) In unit Maui—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iv) In units Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Cyanea duvalliorum* (HAHA)

Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea duvalliorum* on Maui.

(i) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

*Cyanea glabra* (HAHA)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland

Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Mesic—Unit 1, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea glabra* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iv) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Cyanea hamatiflora* ssp. *hamatiflora* (HAHA)

Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea hamatiflora* ssp. *hamatiflora* on Maui.

(i) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*,

*Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

*Cyanea horrida* (HAHA NUI)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Mesic—Unit 1, Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea horrida* on Maui.

(i) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iii) In units Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Cyanea kunthiana* (HAHA)

Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Wet—Unit 6, Maui—Montane Wet—Unit 7, and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea kunthiana* on Maui.

(i) In units Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Wet—Unit 6, and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### *Cyanea lobata* (HAHA)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea lobata* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Cyanea magnicalyx* (HAHA)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, Maui—Montane Mesic—Unit 5, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea magnicalyx* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Cyanea maritae* (HAHA)

Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea maritae* on Maui.

(i) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### *Cyanea mceldowneyi* (HAHA)

Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea mceldowneyi* on Maui.

(i) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### *Cyanea obtusa* (HAHA)

Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyanea obtusa* on Maui.

(i) In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Caryophyllaceae

##### *Schiedea haleakalensis* (NCN)

Maui—Subalpine—Unit 1, Maui—Subalpine—Unit 2, Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Schiedea haleakalensis* on Maui.

(i) In units Maui—Subalpine—Unit 1 and Maui—Subalpine—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: 6,500 to 9,800 ft (2,000 to 3,000 m).

(B) Annual precipitation: 15 to 40 in (38 to 100 cm).

(C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.

(D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.

(F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

(ii) In units Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

##### *Schiedea jacobii* (NCN)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Schiedea jacobii* on Maui. In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Accacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

##### *Schiedea salicaria* (NCN)

Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Schiedea salicaria* on Maui. In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Convolvulaceae

##### *Bonamia menziesii* (NCN)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Dry Cliff—Unit 5, Maui—Dry Cliff—Unit 6, Maui—Wet Cliff—

Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Bonamia menziesii* on Maui.

(i) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Dry Cliff—Unit 5 and Maui—Dry Cliff—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*, *Melanthera*, *Schiedea*.

(iii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Cyperaceae

##### *Cyperus pennatiformis* (NCN)

Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, and Maui—Coastal—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyperus pennatiformis* on Maui. In

units Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, and Maui—Coastal—Unit 8, the physical and biological features of critical habitat are:

(i) Elevation: Less than 980 ft (300 m).

(ii) Annual precipitation: Less than 20 in (50 cm).

(iii) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(iv) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(v) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(vi) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

#### Family Euphorbiaceae

##### *Flueggea neowawraea* (MEHAMEHAME)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Flueggea neowawraea* on Maui. In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Fabaceae

##### *Canavalia pubescens* (AWIKIWIKI)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Canavalia pubescens* on Maui. In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

##### *Kanaloa kahoolawensis* (KOHE MALAMA MALAMA O KANALOA)

Kahoolawe—Coastal—Unit 1, Kahoolawe—Coastal—Unit 2, Kahoolawe—Coastal—Unit 3, Kahoolawe—Lowland Dry—Unit 1, and Kahoolawe—Lowland Dry—Unit 2, identified in the legal descriptions in paragraph (e)(2) of this section, constitute critical habitat for *Kanaloa kahoolawensis* on Kahoolawe.

(i) In units Kahoolawe—Coastal—Unit 1, Kahoolawe—Coastal—Unit 2, and Kahoolawe—Coastal—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Kahoolawe—Lowland Dry—Unit 1 and Kahoolawe—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

##### *Mucuna sloanei* var. *persericea* (SEA BEAN)

Maui—Lowland Wet—Unit 1, identified in the legal descriptions in

paragraph (e)(1) of this section, constitutes critical habitat for *Mucuna sloanei* var. *persericea* on Maui. In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(iv) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(v) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(vi) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

#### *Sesbania tomentosa* (OHAI)

Maui—Coastal—Unit 9, Maui—Coastal—Unit 10, Maui—Coastal—Unit 11, Kahoolawe—Coastal—Unit 1, Kahoolawe—Coastal—Unit 2, Kahoolawe—Coastal—Unit 3, Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Kahoolawe—Lowland Dry—Unit 1, and Kahoolawe—Lowland Dry—Unit 2, identified in the legal descriptions in paragraphs (e)(1) and (e)(2) of this section, constitute critical habitat for *Sesbania tomentosa* on Maui and Kahoolawe.

(i) In units Maui—Coastal—Unit 9, Maui—Coastal—Unit 10, Maui—Coastal—Unit 11, Kahoolawe—Coastal—Unit 1, Kahoolawe—Coastal—Unit 2, and Kahoolawe—Coastal—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Kahoolawe—Lowland Dry—Unit 1, and Kahoolawe—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### *Vigna o-wahuensis* (NCN)

Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, Maui—Coastal—Unit 8, Kahoolawe—Coastal—Unit 1, Kahoolawe—Coastal—Unit 2, Kahoolawe—Coastal—Unit 3, Kahoolawe—Lowland Dry—Unit 1, and Kahoolawe—Lowland Dry—Unit 2, identified in the legal descriptions in paragraphs (e)(1) and (e)(2) of this section, constitute critical habitat for *Vigna o-wahuensis* on Maui and Kahoolawe.

(i) In units Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, Maui—Coastal—Unit 8, Kahoolawe—Coastal—Unit 1, Kahoolawe—Coastal—Unit 2, and Kahoolawe—Coastal—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 980 ft (300 m).

(B) Annual precipitation: Less than 20 in (50 cm).

(C) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(D) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(E) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(F) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

(ii) In units Kahoolawe—Lowland Dry—Unit 1 and Kahoolawe—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Gentianaceae

##### *Schenkia sebaeoides* (AWIWI)

Maui—Coastal—Unit 9, Maui—Coastal—Unit 10, and Maui—Coastal—Unit 11, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Schenkia sebaeoides* on Maui. In units Maui—Coastal—Unit 9, Maui—Coastal—Unit 10, and Maui—Coastal—Unit 11, the physical and biological features of critical habitat are:

(i) Elevation: Less than 980 ft (300 m).

(ii) Annual precipitation: Less than 20 in (50 cm).

(iii) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(iv) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(v) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(vi) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

#### Family Geraniaceae

##### *Geranium arboreum* (HAWAIIAN RED-FLOWERED GERANIUM)

Maui—Montane Mesic—Unit 1, Maui—Montane Dry—Unit 1, Maui—Subalpine—Unit 1, and Maui—Subalpine—Unit 2, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Geranium arboreum* on Maui.

(i) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(ii) In unit Maui—Montane Dry—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Dry cinder or ash soils, loamy volcanic sands, blocky lava, rock outcroppings.

(D) Canopy: *Acacia*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Chamaesyce*, *Coprosma*, *Dodonaea*, *Dubautia*, *Leptecophylla*, *Osteomeles*, *Wikstroemia*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Vaccinium*.

(iii) In units Maui—Subalpine—Unit 1 and Maui—Subalpine—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: 6,500 to 9,800 ft (2,000 to 3,000 m).

(B) Annual precipitation: 15 to 40 in (38 to 100 cm).

(C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.

(D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.

(F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

#### *Geranium hanaense* (NOHOANU)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Geranium hanaense* on Maui. In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### *Geranium hillebrandii* (NOHOANU)

Maui—Montane Wet—Unit 6, Maui—Montane Wet—Unit 7, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, identified in the legal descriptions in

paragraph (e)(1) of this section, constitute critical habitat for *Geranium hillebrandii* on Maui.

(i) In units Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In units Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### *Geranium multiflorum* (NOHOANU)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Mesic—Unit 1, Maui—Subalpine—Unit 1, Maui—Subalpine—Unit 2, Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Geranium multiflorum* on Maui.

(i) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iii) In units Maui—Subalpine—Unit 1 and Maui—Subalpine—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: 6,500 to 9,800 ft (2,000 to 3,000 m).

(B) Annual precipitation: 15 to 40 in (38 to 100 cm).

(C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.

(D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.

(F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

(iv) In units Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

#### Family Gesneriaceae

##### *Cyrtandra ferripilosa* (HAIWALE)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in

paragraph (e)(1) of this section, constitute critical habitat for *Cyrtandra ferripilosa* on Maui.

(i) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### *Cyrtandra filipes* (HAIWALE)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyrtandra filipes* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Cyrtandra munroi* (HAIWALE)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyrtandra munroi* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Cyrtandra oxybapha* (HAIWALE)

Maui—Montane Wet—Unit 6, Maui—Montane Wet—Unit 7, and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cyrtandra oxybapha* on Maui.

(i) In units Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Lamiaceae

##### *Phyllostegia bracteata* (NCN)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Wet—Unit 6, Maui—Montane Wet—Unit 7, Maui—Montane Mesic—Unit 1, Maui—Subalpine—Unit 1, Maui—Subalpine—Unit 2, Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Phyllostegia bracteata* on Maui.

(j) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Wet—Unit 6, and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iv) In units Maui—Subalpine—Unit 1 and Maui—Subalpine—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: 6,500 to 9,800 ft (2,000 to 3,000 m).

(B) Annual precipitation: 15 to 40 in (38 to 100 cm).

(C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.

(D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.

(F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

(v) In units Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Phyllostegia haliakalae* (NCN)

Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Phyllostegia haliakalae* on Maui.

(i) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In units Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Phyllostegia mannii* (NCN)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Phyllostegia mannii* on Maui.

(i) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

*Phyllostegia pilosa* (NCN)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Phyllostegia pilosa* on Maui. In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

*Stenogyne kauaulaensis* (NCN)

Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Stenogyne kauaulaensis* on Maui. In unit Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: 50 to 75 in (130 to 190 cm).

(iii) Substrate: Deep ash deposits, thin silty loams.

(iv) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(v) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(vi) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Malvaceae:

*Hibiscus brackenridgei* (MAO HAU HELE)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Kahoolawe—Lowland Dry—Unit 1, and Kahoolawe—Lowland Dry—Unit 2, identified in the legal descriptions in paragraphs (e)(1) and (e)(2) of this section, constitute critical habitat for *Hibiscus brackenridgei* on Maui and Kahoolawe. In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Kahoolawe—Lowland Dry—Unit 1, and Kahoolawe—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psyrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

#### Family Myrsinaceae

*Myrsine vaccinioides* (KOLEA)

Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Myrsine vaccinioides* on Maui. In units Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### Family Orchidaceae

*Platanthera holochila* (NCN)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane

Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Wet—Unit 6, Maui—Montane Wet—Unit 7, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Platanthera holochila* on Maui.

(i) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Wet—Unit 6, and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Piperaceae

*Peperomia subpetiolata* (ALAALA WAI NUI)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Peperomia subpetiolata* on Maui. In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### Family Plantaginaceae

*Plantago princeps* (LAUKAHI KUAHIWI)

Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, Maui—Dry Cliff—Unit 4, Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, Maui—Wet Cliff—Unit 4, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Plantago princeps* on Maui.

(i) In units Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, and Maui—Dry Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

(ii) In units Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, Maui—Wet Cliff—Unit 4, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Poaceae

*Calamagrostis hillebrandii* (NCN)

Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Calamagrostis hillebrandii* on Maui. In units Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit

7, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

*Cenchrus agrimonioides*

(KAMANOMANO (= SANDBUR, AGRIMONY))

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, and Maui—Lowland Dry—Unit 6, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Cenchrus agrimonioides* on Maui. In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

*Ischaemum byrone* (HILO ISCHAEMUM)

Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, and Maui—Coastal—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Ischaemum byrone* on Maui. In units Maui—Coastal—Unit 1, Maui—Coastal—Unit 2, Maui—Coastal—Unit 3, Maui—Coastal—Unit 4, Maui—Coastal—Unit 5, Maui—Coastal—Unit 6, Maui—Coastal—Unit 7, and Maui—Coastal—Unit 8, the physical and biological features of critical habitat are:

(i) Elevation: Less than 980 ft (300 m).

(ii) Annual precipitation: Less than 20 in (50 cm).

(iii) Substrate: Well-drained, calcareous, talus slopes; dunes; weathered clay soils; ephemeral pools; mudflats.

(iv) Canopy: *Hibiscus*, *Myoporum*, *Santalum*, *Scaevola*.

(v) Subcanopy: *Gossypium*, *Sida*, *Vitex*.

(vi) Understory: *Eragrostis*, *Jacquemontia*, *Lyceum*, *Nama*, *Sesuvium*, *Sporobolus*, *Vigna*.

#### Family Primulaceae

*Lysimachia lydgatei* (NCN)

Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, Maui—Montane Mesic—Unit 5, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Lysimachia lydgatei* on Maui.

(i) In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet

Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Rhamnaceae

##### *Colubrina oppositifolia* (KAUILA)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Mesic—Unit 2, and Maui—Lowland Mesic—Unit 3, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Colubrina oppositifolia* on Maui.

(i) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Lowland Mesic—Unit 2 and Maui—Lowland Mesic—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

##### *Gouania hillebrandii* (NCN)

Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Kahoolawe—

Lowland Dry—Unit 1, and Kahoolawe—Lowland Dry—Unit 2, identified in the legal descriptions in paragraphs (e)(1) and (e)(2) of this section, constitute critical habitat for *Gouania hillebrandii* on Maui and Kahoolawe. In units Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Kahoolawe—Lowland Dry—Unit 1, and Kahoolawe—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

##### *Gouania vitifolia* (NCN)

Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Gouania vitifolia* on Maui. In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(i) Elevation: Unrestricted.

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(iv) Canopy: None.

(v) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(vi) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Rosaceae

##### *Acaena exigua* (LILIWAI)

Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Acaena exigua* on Maui. In units Maui—Montane Wet—Unit 6 and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

#### Family Rubiaceae

##### *Kadua coriacea* (KIOELE)

Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Kadua coriacea* on Maui. In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(i) Elevation: Less than 3,300 ft (1,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(iii) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(iv) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(v) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(vi) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

##### *Kadua laxiflora* (PILO)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Dry Cliff—Unit 5, Maui—Dry Cliff—Unit 6, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Kadua laxiflora* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Dry Cliff—Unit 5 and Maui—Dry Cliff—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

(iii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Rutaceae

##### *Melicope adscendens* (ALANI)

Maui—Lowland Dry—Unit 1 and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Melicope adscendens* on Maui.

(i) In unit Maui—Lowland Dry—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m), but greater than 3,200 ft (914 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

##### *Melicope balloui* (ALANI)

Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Melicope balloui* on Maui.

(i) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

##### *Melicope knudsenii* (ALANI)

Maui—Montane Dry—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitutes critical habitat for *Melicope knudsenii* on Maui. In unit Maui—Montane Dry—Unit 1, the physical and biological features of critical habitat are:

(i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Less than 50 in (130 cm).

(ii) Substrate: Dry cinder or ash soils, loamy volcanic sands, blocky lava, rock outcroppings.

(iv) Canopy: *Acacia*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(v) Subcanopy: *Chamaesyce*, *Coprosma*, *Dodonaea*, *Dubautia*, *Leptecophylla*, *Osteomeles*, *Wikstroemia*.

(vi) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Vaccinium*.

##### *Melicope mucronulata* (ALANI)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, and Maui—Montane Dry—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Melicope mucronulata* on Maui.

(i) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In unit Maui—Montane Dry—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Dry cinder or ash soils, loamy volcanic sands, blocky lava, rock outcroppings.

(D) Canopy: *Acacia*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Chamaesyce*, *Coprosma*, *Dodonaea*, *Dubautia*, *Leptecophylla*, *Osteomeles*, *Wikstroemia*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Vaccinium*.

##### *Melicope ovalis* (ALANI)

Maui—Lowland Wet—Unit 1, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, identified in

the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Melicope ovalis* on Maui.

(i) In unit Maui—Lowland Wet—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In units Maui—Wet Cliff—Unit 1, Maui—Wet Cliff—Unit 2, Maui—Wet Cliff—Unit 3, and Maui—Wet Cliff—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### *Zanthoxylum hawaiiense* (AE)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Mesic—Unit 2, Maui—Lowland Mesic—Unit 3, Maui—Montane Mesic—Unit 1, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, Maui—Montane Mesic—Unit 5, Maui—Montane Dry—Unit 1, Maui—Subalpine—Unit 1, and Maui—

Subalpine—Unit 2, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Zanthoxylum hawaiiense* on Maui.

(i) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Lowland Mesic—Unit 2 and Maui—Lowland Mesic—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(iii) In units Maui—Montane Mesic—Unit 1, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iv) In unit Maui—Montane Dry—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Dry cinder or ash soils, loamy volcanic sands, blocky lava, rock outcroppings.

(D) Canopy: *Acacia*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Chamaesyce*, *Coprosma*, *Dodonaea*, *Dubautia*, *Leptecophylla*, *Osteomeles*, *Wikstroemia*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Vaccinium*.

(v) In units Maui—Subalpine—Unit 1 and Maui—Subalpine—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: 6,500 to 9,800 ft (2,000 to 3,000 m).

(B) Annual precipitation: 15 to 40 in (38 to 100 cm).

(C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.

(D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.

(F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

#### Family Santalaceae

##### *Santalum haleakalae* var. *lanaiense* (LANAI SANDALWOOD, ILIAHI)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Maui—Lowland Mesic—Unit 2, Maui—Lowland Mesic—Unit 3, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Mesic—Unit 1, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, Maui—Montane Mesic—Unit 5, Maui—Montane Dry—Unit 1, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Santalum haleakalae* var. *lanaiense* on Maui.

(i) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Lowland Mesic—Unit 2 and Maui—Lowland Mesic—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(iii) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iv) In units Maui—Montane Mesic—Unit 1, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*,

*Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(v) In unit Maui—Montane Dry—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Dry cinder or ash soils, loamy volcanic sands, blocky lava, rock outcroppings.

(D) Canopy: *Acacia*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Chamaesyce*, *Coprosma*, *Dodonaea*, *Dubautia*, *Leptecophylla*, *Osteomeles*, *Wikstroemia*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Vaccinium*.

(vi) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Sapindaceae

##### *Alectryon macrococcus* (MAHOE)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Mesic—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Mesic—Unit 1, Maui—Montane Dry—Unit 1, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Alectryon macrococcus* on Maui.

(i) In units Maui—Lowland Dry—Unit 1 and Maui—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In unit Maui—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(iii) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iv) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(v) In unit Maui—Montane Dry—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Dry cinder or ash soils, loamy volcanic sands, blocky lava, rock outcroppings.

(D) Canopy: *Acacia*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Chamaesyce*, *Coprosma*, *Dodonaea*, *Dubautia*, *Leptecophylla*, *Osteomeles*, *Wikstroemia*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Vaccinium*.

(vi) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Solanaceae

*Solanum incompletum* (POPOLO KU MAI)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, and Maui—Lowland Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Solanum incompletum* on Maui.

(i) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, and Maui—Lowland Dry—Unit 4, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In unit Maui—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

#### Family Thymelaeaceae

*Wikstroemia villosa* (AKIA)

Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Wikstroemia villosa* on Maui.

(i) In units Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

#### Family Urticaceae

*Neraudia sericea* (NGN)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Kahoolawe—Lowland Dry—Unit 1, Kahoolawe—Lowland Dry—Unit 2, Maui—Montane Mesic—Unit 1, Maui—Dry Cliff—Unit 5, and Maui—Dry Cliff—Unit 6, identified in the legal descriptions in paragraphs (e)(1) and (e)(2) of this section, constitute critical habitat for *Neraudia sericea* on Maui and Kahoolawe.

(i) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Kahoolawe—Lowland Dry—Unit 1, and Kahoolawe—Lowland Dry—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*,

*Nothocestrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iii) In units Maui—Dry Cliff—Unit 5 and Maui—Dry Cliff—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

#### Family Violaceae

*Isodendron pyrifolium* (WAHINE NOHO KULA)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Dry Cliff—Unit 5, Maui—Dry Cliff—Unit 6, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Isodendron pyrifolium* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Dry Cliff—Unit 5 and Maui—Dry Cliff—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*,

*Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

(iii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

(2) *Ferns and allies*.

#### Family Adiantaceae

*Pteris lidgatei* (NCN)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Pteris lidgatei* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.

(D) Canopy: None.

(E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.

(F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

#### Family Aspleniaceae

*Asplenium diellectum* (ASPENIUM-LEAVED DIELLIA)

Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Maui—Lowland Mesic—Unit 2, Maui—Lowland Mesic—Unit 3, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, and Maui—Montane Mesic—Unit 1, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Asplenium diellectum* on Maui.

(i) In units Maui—Lowland Dry—Unit 5 and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Lowland Mesic—Unit 2 and Maui—Lowland Mesic—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(iii) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iv) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

*Asplenium peruvianum* var. *insulare* (NCN)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Mesic—Unit 1, Maui—Subalpine—Unit 1, and Maui—Subalpine—Unit 2, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Asplenium peruvianum* var. *insulare* on Maui.

(i) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(ii) In unit Maui—Montane Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iii) In units Maui—Subalpine—Unit 1 and Maui—Subalpine—Unit 2, the physical and biological features of critical habitat are:

(A) Elevation: 6,500 to 9,800 ft (2,000 to 3,000 m).

(B) Annual precipitation: 15 to 40 in (38 to 100 cm).

(C) Substrate: Dry ash; sandy loam; rocky, undeveloped soils; weathered lava.

(D) Canopy: *Chamaesyce*, *Chenopodium*, *Metrosideros*, *Myoporum*, *Santalum*, *Sophora*.

(E) Subcanopy: *Coprosma*, *Dodonaea*, *Dubautia*, *Geranium*, *Leptecophylla*, *Vaccinium*, *Wikstroemia*.

(F) Understory: Ferns, *Bidens*, *Carex*, *Deschampsia*, *Eragrostis*, *Gahnia*, *Luzula*, *Panicum*, *Pseudognaphalium*, *Sicyos*, *Tetramolopium*.

*Ctenitis squamigera* (PAUOA)

Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, Maui—Lowland Dry—Unit 6, Maui—Lowland Mesic—Unit 1, Maui—Lowland Mesic—Unit 2, Maui—Lowland Mesic—Unit 3, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, Maui—Montane Mesic—Unit 5, Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Ctenitis squamigera* on Maui.

(i) In units Maui—Lowland Dry—Unit 1, Maui—Lowland Dry—Unit 2, Maui—Lowland Dry—Unit 3, Maui—Lowland Dry—Unit 4, Maui—Lowland Dry—Unit 5, and Maui—Lowland Dry—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Less than 50 in (130 cm).

(C) Substrate: Weathered silty loams to stony clay, rocky ledges, little-weathered lava.

(D) Canopy: *Diospyros*, *Myoporum*, *Pleomele*, *Santalum*.

(E) Subcanopy: *Chamaesyce*, *Dodonaea*, *Leptecophylla*, *Osteomeles*, *Psydrax*, *Scaevola*, *Wikstroemia*.

(F) Understory: *Alyxia*, *Artemisia*, *Bidens*, *Chenopodium*, *Nephrolepis*, *Peperomia*, *Sicyos*.

(ii) In units Maui—Lowland Mesic—Unit 1, Maui—Lowland Mesic—Unit 2, and Maui—Lowland Mesic—Unit 3, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomele*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(iii) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iv) In units Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(v) In units Maui—Wet Cliff—Unit 6, Maui—Wet Cliff—Unit 7, and Maui—Wet Cliff—Unit 8, the physical and biological features of critical habitat are:

- (A) Elevation: Unrestricted.
- (B) Annual precipitation: Greater than 75 in (190 cm).
- (C) Substrate: Greater than 65 degree slope, shallow soils, weathered lava.
- (D) Canopy: None.
- (E) Subcanopy: *Broussaisia*, *Cheirodendron*, *Leptecophylla*, *Metrosideros*.
- (F) Understory: Bryophytes, ferns, *Coprosma*, *Dubautia*, *Kadua*, *Peperomia*.

*Diplazium molokaiense* (NCN)

Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Mesic—Unit 1, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, Maui—Montane Mesic—Unit 5, Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, Maui—Dry Cliff—Unit 4, Maui—Dry Cliff—Unit 5, and Maui—Dry Cliff—Unit 6, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Diplazium molokaiense* on Maui.

(i) In units Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

- (A) Elevation: Less than 3,300 ft (1,000 m).
- (B) Annual precipitation: Greater than 75 in (190 cm).
- (C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.
- (D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.
- (E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.
- (F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(ii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

- (A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iii) In units Maui—Montane Mesic—Unit 1, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoecstrum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

(F) Understory: Ferns, *Carex*, *Peperomia*.

(iv) In units Maui—Dry Cliff—Unit 1, Maui—Dry Cliff—Unit 2, Maui—Dry Cliff—Unit 3, Maui—Dry Cliff—Unit 4, Maui—Dry Cliff—Unit 5, and Maui—Dry Cliff—Unit 6, the physical and biological features of critical habitat are:

(A) Elevation: Unrestricted.

(B) Annual precipitation: Less than 75 in (190 cm).

(C) Substrate: Greater than 65 degree slope, rocky talus.

(D) Canopy: None.

(E) Subcanopy: *Antidesma*, *Chamaesyce*, *Diospyros*, *Dodonaea*.

(F) Understory: *Bidens*, *Eragrostis*, *Melanthera*, *Schiedea*.

**Family Grammitidaceae**

*Adenophorus periens* (PENDANT KIHIFERN)

Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Adenophorus periens* on Maui. In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, and Maui—Montane Wet—Unit 5, the physical and biological features of critical habitat are:

- (i) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(ii) Annual precipitation: Greater than 75 in (190 cm).

(iii) Substrate: Well-developed soils, montane bogs.

(iv) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(v) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(vi) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

**Family Lycopodiaceae**

*Huperzia mannii* (WAWAEIOLE)

Maui—Lowland Mesic—Unit 1, Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, Maui—Lowland Wet—Unit 8, Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Wet—Unit 6, Maui—Montane Wet—Unit 7, Maui—Montane Mesic—Unit 1, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, identified in the legal descriptions in paragraph (e)(1) of this section, constitute critical habitat for *Huperzia mannii* on Maui.

(i) In unit Maui—Lowland Mesic—Unit 1, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Shallow soils, little to no herbaceous layer.

(D) Canopy: *Acacia*, *Diospyros*, *Metrosideros*, *Myrsine*, *Pouteria*, *Santalum*.

(E) Subcanopy: *Dodonaea*, *Freycinetia*, *Leptecophylla*, *Melanthera*, *Osteomeles*, *Pleomeles*, *Psydrax*.

(F) Understory: *Carex*, *Dicranopteris*, *Diplazium*, *Elaphoglossum*, *Peperomia*.

(ii) In units Maui—Lowland Wet—Unit 1, Maui—Lowland Wet—Unit 2, Maui—Lowland Wet—Unit 3, Maui—Lowland Wet—Unit 4, Maui—Lowland Wet—Unit 5, Maui—Lowland Wet—Unit 6, Maui—Lowland Wet—Unit 7, and Maui—Lowland Wet—Unit 8, the physical and biological features of critical habitat are:

(A) Elevation: Less than 3,300 ft (1,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Clays; ashbeds; deep, well-drained soils; lowland bogs.

(D) Canopy: *Antidesma*, *Metrosideros*, *Myrsine*, *Pisonia*, *Psychotria*.

(E) Subcanopy: *Cibotium*, *Claoxylon*, *Kadua*, *Melicope*.

(F) Understory: *Alyxia*, *Cyrtandra*, *Dicranopteris*, *Diplazium*, *Machaerina*, *Microlepia*.

(iii) In units Maui—Montane Wet—Unit 1, Maui—Montane Wet—Unit 2, Maui—Montane Wet—Unit 3, Maui—Montane Wet—Unit 4, Maui—Montane Wet—Unit 5, Maui—Montane Wet—Unit 6, and Maui—Montane Wet—Unit 7, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: Greater than 75 in (190 cm).

(C) Substrate: Well-developed soils, montane bogs.

(D) Canopy: *Acacia*, *Charpentiera*, *Cheirodendron*, *Metrosideros*.

(E) Subcanopy: *Broussaisia*, *Cibotium*, *Eurya*, *Ilex*, *Myrsine*.

(F) Understory: Ferns, *Carex*, *Coprosma*, *Leptecophylla*, *Oreobolus*, *Rhynchospora*, *Vaccinium*.

(iv) In units Maui—Montane Mesic—Unit 1, Maui—Montane Mesic—Unit 2, Maui—Montane Mesic—Unit 3, Maui—Montane Mesic—Unit 4, and Maui—Montane Mesic—Unit 5, the physical and biological features of critical habitat are:

(A) Elevation: 3,300 to 6,500 ft (1,000 to 2,000 m).

(B) Annual precipitation: 50 to 75 in (130 to 190 cm).

(C) Substrate: Deep ash deposits, thin silty loams.

(D) Canopy: *Acacia*, *Ilex*, *Metrosideros*, *Myrsine*, *Nestegis*, *Nothoestrnum*, *Pisonia*, *Pittosporum*, *Psychotria*, *Sophora*, *Zanthoxylum*.

(E) Subcanopy: *Alyxia*, *Charpentiera*, *Coprosma*, *Dodonaea*, *Kadua*, *Labordia*, *Leptecophylla*, *Phyllostegia*, *Vaccinium*.

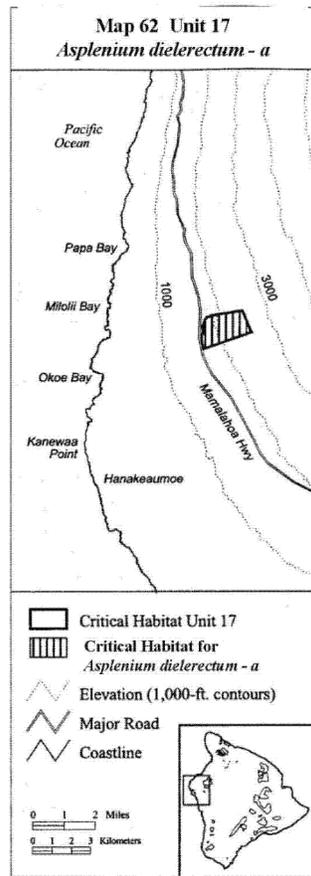

(F) Understory: Ferns, *Carex*, *Peperomia*.

30 CFR Parts 550, 556, 559, et al.

Leasing of Sulfur or Oil and Gas in the Outer Continental Shelf; Final  
Rule

**DEPARTMENT OF THE INTERIOR****Bureau of Ocean Energy Management****30 CFR Parts 550, 556, 559 and 560**

RIN 1010-AD06

[Docket ID: MMS-2007-OMM-0069]

**Leasing of Sulfur or Oil and Gas in the Outer Continental Shelf****AGENCY:** Bureau of Ocean Energy Management (BOEM), Interior.**ACTION:** Final rule.

**SUMMARY:** This final rule updates and streamlines the existing Outer Continental Shelf (OCS) leasing regulations and clarifies implementation of the Federal Oil and Gas Royalty Simplification and Fairness Act of 1996, which amended the Federal Oil and Gas Royalty Management Act of 1982 (FOGRMA). The final rule reorganizes leasing requirements to more effectively communicate the leasing process as it has evolved over the years. The final rule makes changes to regulations which relate to the oil, gas, and sulfur leasing requirements. The final rule does not, however, include substantive changes to regulations which relate to bonding, which will be the subject of a separate new proposed rulemaking.

**DATES:** This final rule will become effective May 31, 2016.

**FOR FURTHER INFORMATION CONTACT:**

List of Subjects

**I. Executive Summary***A. Background*

On May 27, 2009, the Minerals Management Service (MMS) published a proposed rule (Notice of Proposed Rulemaking or NPRM) in the **Federal Register** entitled, “Leasing of Sulphur or Oil and Gas and Bonding Requirements in the Outer Continental Shelf” (74 FR 25177, May 27, 2009). Since that time, the MMS was renamed the Bureau of Ocean Energy Management, Regulation, and Enforcement (BOEMRE) and then was reorganized and divided into three separate bureaus—the Bureau of Ocean Energy Management (BOEM), the Bureau of Safety and Environmental Enforcement (BSEE) and the Office of Natural Resources Revenue (ONRR). The leasing program is under the authority of BOEM, whose regulations reside in 30 CFR Chapter V.

## 1. Why We Need to Publish a Rule

This final rule reorganizes and reorders the parts of the BOEM regulations concerning leasing, adds new sections to standardize or clarify practices in all three BOEM OCS regional offices, and eliminates redundant or otherwise unnecessary text. The final rule also includes regulatory provisions which, during the division of BOEMRE, were inadvertently assigned to an agency other than BOEM, but have proven necessary for BOEM’s use and are therefore added back into these regulations. (In this Preamble, the BOEMRE regulations, as they existed before BOEMRE was divided into BOEM, BSEE, and ONRR, are sometimes referred to as the “pre-split regulations.”)

Additionally, this final rule also updates and clarifies processes required by legislation enacted since BOEM’s regulations were last amended, such as those required by the Federal Oil and Gas Royalty Simplification and Fairness Act of 1996, which amended FOGRMA, or by more recently promulgated regulations, such as the Department of the Interior’s (Department or DOI) non-procurement debarment rules. The final rule also includes changes that will assist BOEM in meeting its stewardship responsibilities and performing its role as a responsible regulator.

## 2. What is covered by the rule?

This final rule revises sections of the regulations at 30 CFR parts 550, “Oil and Gas and Sulfur Operations in the Outer Continental Shelf,” 556, “Leasing

of Sulfur or Oil and Gas in the Outer Continental Shelf,” 559, “Mineral Leasing: Definitions,” and 560, “Outer Continental Shelf Oil and Gas Leasing.”

The changes made in part 550, “Oil and Gas and Sulfur Operations in the Outer Continental Shelf” and those made in part 560, “Outer Continental Shelf Oil and Gas Leasing,” relate primarily to simplifying and clarifying the regulatory language, as well as creating new, and re-establishing pre-split, regulations that had been inadvertently deleted when the former BOEMRE was divided into three new agencies. For example, in October 2010 (as part of the direct final rule RIN 1010-AD70, *Reorganization of Title 30, Code of Federal Regulations* (75 FR 61051, October 4, 2010)), during the first split of the BOEMRE regulations, a regulation related to operating allowances was inadvertently deleted from the BOEM regulations and included only in the ONRR regulations. In order for ONRR’s operating allowance regulations to be effective, however, they must have counterpart provisions in the BOEM regulations. The operating allowance regulation is re-established in BOEM’s regulations by this final rule.

Most of the final rule consists of revisions to part 556. Part 556 includes regulations pertaining to: (1) The oil and gas leasing program; (2) preparing for a lease sale; (3) issuing, maintaining, transferring, and terminating a lease; and (4) bonding requirements. As explained in greater detail below, the final rule addresses the first three components, but the fourth component, bonding, is not addressed in this final rule, except to make minor editorial and conforming changes. Bonding and financial assurance will be further addressed in future rulemakings.

#### B. Abbreviations of Terms and Acronyms

The following are abbreviations of terms used in the preamble:

API American Petroleum Institute

#### C. Final Rule as Adopted and Response to Comments

On May 27, 2009, BOEM published a proposed rule entitled, “Leasing of Sulphur or Oil and Gas and Bonding Requirements in the Outer Continental Shelf” (74 FR 25177). In the six years since the proposed regulation was

published, several developments have brought about the need for the final rule to appear different from the proposed rulemaking. The organization of the final rule is structured differently from that of the proposed rule to make the regulations easier for the public to read and follow. The major reasons for the other differences between the proposed rule and the final rule are explained below:

##### 1. Availability of Public Comments

BOEM received a total of eight comments from the American Petroleum Institute (API), Shell Oil Company, Chevron Oil Company, Anglo Suisse, Dynamic Offshore Resources, RLI Insurance Company, and two citizens, who commented to show their support of OCS leasing and the oil and gas program. Each comment was considered and some resulted in changes to the proposed rule. BOEM’s responses are addressed in this Preamble.

All comments can be viewed at [www.BOEM.gov](http://www.BOEM.gov) under the Regulations section and at [www.regulations.gov](http://www.regulations.gov).

##### 2. Effects of the Reorganization of MMS Into Three Distinct Agencies

###### Background

On May 19, 2010, the Secretary signed Secretarial Order 3299 directing the split of MMS into three new bureaus, BOEM, BSEE, and ONRR. This split was accomplished in two phases. In 2010 MMS was split into two agencies, ONRR and BOEMRE. In 2011 BOEMRE was itself split into two agencies, BOEM and BSEE.

Prior to October 4, 2010, the regulations of BOEM, BSEE, and ONRR were contained in one set of regulations (“pre-split” regulations), which were issued by the MMS. On October 4, 2010, MMS published a final rule in the **Federal Register** (75 FR 61051), moving its regulations related to its royalty and revenue functions from MMS to ONRR and creating a new chapter XII. The name of the remaining organization was changed from the MMS to BOEMRE. On October 18, 2011, DOI published a final rule (76 FR 64432) splitting BOEMRE regulations into separate BOEM and BSEE chapters. Pursuant to that split, BOEM is responsible for the resource evaluation, planning, and leasing functions for offshore oil and gas. BSEE is primarily responsible for the safety and environmental enforcement of offshore oil and gas development activities. BOEM’s regulations were recodified into 30 CFR Chapter V. BSEE’s regulations remained in 30 CFR Chapter II.

## Assignment and Retention of Regulations

As time has passed, it has come to light that some regulations were incorrectly assigned during the split. For example, some of the regulatory provisions assigned to BSEE or ONRR have proven necessary for BOEM. Regulatory provisions that fall into this category have been included in the final rulemaking, as explained in this Preamble. Because of the reorganization of the former MMS, some provisions of the proposed rule are now outside the scope of BOEM's responsibilities and are not included in this final rule.

In addition, there are some regulatory provisions that appear in this final rulemaking that did not appear in the proposed rule. These regulatory provisions are not "substantively new," however. They appeared in the former MMS regulations. The Final Rule also differs from the Proposed Rule in that the Final Rule retains certain provisions that the Proposed Rule suggested deleting. Instances of retention of prior sections of the regulations are also discussed in this Preamble.

## Administrative Changes

There are some wholly administrative changes from the proposed rule that appear in the final rule. These changes were also primarily necessitated by the division of MMS into three separate agencies. For example, the BOEM regulations are now found in a different chapter of Title 30 of the Code of Federal Regulations (CFR) than the chapter in which the BOEMRE regulations were found. Before the BOEMRE regulations were divided into two sets of independent agency regulations, they were all contained in Chapter II of Title 30 of the CFR, within parts 203 through 291. This means that the first digit in the section number of each individual provision was a "2." After the division of the regulations, all BSEE regulations remained in Chapter II, and thus retained the first digit "2." And, because the proposed rule was published before the agency split, its provisions also begin with a "2." After the division, however, the BOEM regulations were moved into Chapter V. Thus, although the proposed rule provisions each began with a "2," all final BOEM rule provisions begin with a "5." Also, in the final rule, internal citations to section numbers were changed to maintain correct and consistent cross-references, and sections were re-numbered to maintain internal numerical order. Whenever appropriate, references to "MMS" from the proposed rule have been changed to "BOEM" in

the final rule. These administrative changes have no effect on the substance of the regulations, and therefore do not require notice and comment, but they do make the regulations clearer, more consistent, and easier to use.

## Removed Provisions

The proposed rule would have added a new "expenses . . . with supporting documentation" reporting requirement to the then-BOEMRE, now-BSEE regulatory sections 250.1717, 250.1729, and 250.1743. Section 250.1717 addresses the information that must be submitted after well plugging and abandonment. Section 250.1729 addresses the information that must be submitted after removal of a platform or other facility, and section 250.1743 addresses the information that must be submitted after site clearance. The proposed rule added new requirements concerning the submittal of information on the costs of decommissioning.

When BOEMRE was divided into two agencies, the operational aspects of decommissioning were placed within BSEE's rather than BOEM's purview. In the final rulemaking, therefore, BOEM decided to remove the three provisions proposing revisions to sections 250.1717, 250.1729, and 250.1743, as BSEE finalized the rule addressing the submittal of information on the costs of decommissioning in their rule entitled "Oil and Gas and Sulphur Operations in the Outer Continental Shelf; Decommissioning Costs," RIN 1014-AA24, published in the **Federal Register** on December 4, 2015.

The other proposed provision that was removed from the final rule was proposed rule section 256.621, concerning the submission of reports about lease term pipelines when requesting BOEM's approval of a lease assignment. As with decommissioning, BSEE has been tasked with the administration of the operational aspects of pipelines on the OCS; therefore, the submission of reports on lease term pipelines is within BSEE's jurisdiction. BSEE has proposed to address the submission of reports concerning lease term pipelines in a rule entitled "Pipelines and Pipeline Right-of-Way Safety," RIN 1014-AA27.

## 3. Definitions

Several definitions have been added in the final rulemaking that did not appear in the proposed rulemaking to clarify the meaning of terms used in the regulations. In each case, the term either was defined in the BOEMRE regulations or its definition is apparent from the context of the prior regulatory language.

## 4. Delayed Provisions

The proposed rule included a subpart E, "Financial Accountability and Risk Management," which contained provisions addressing requirements for general and additional bonding, surety, and third-party indemnity. After the proposed rule was published, BOEM identified possible conflicts between the proposed rule's use/definitions of certain terms and their use/definitions within BOEM's oil spill financial responsibility regulations (30 CFR part 553). Also, after publication of the proposed rule, BOEM began a process of reassessing its bonding and financial assurance policies, leading to a decision to publish this final rule with the text of existing subpart I (Bonding), with only limited conforming changes. This decision will enable BOEM and the regulated public to continue to rely on the existing financial assurance regulations until BOEM is ready to make necessary changes to its policies and to propose and seek comment on separate new regulations specific to bonding and financial assurance to implement these new policies.

## 5. Other Editorial Improvements

A consistent change that was made in the final rule was to add, where appropriate, the word "final" before the phrase "notice of sale." Another change is eliminating any references to "Associate Director," since there are no longer any Associate Directors in BOEM. The word "sulphur" has been replaced with a more contemporary spelling of "sulfur." All cross-references and section numbers within this final rule have been updated.

## II. Derivation Tables

The following derivation tables describe the source(s) of the regulations in the final rule relative to those in the prior regulations and/or those in the proposed rule. These tables are intended only to provide cross-references to the other materials. The section-by-section analysis that follows these derivation tables provides a detailed explanation of the changes made with this final rule.

Most sections of the final rule reflect content from the proposed rule, however, in some cases, the organization of the regulations and the final section numbers have changed since the rule was proposed. The derivation tables compare the location of the various rule sections in the final rule to the prior section numbers in the prior regulations that have been modified and the corresponding section numbers from the proposed rule, if appropriate.

*A. Derivation Table for 30 CFR part 550—Oil and Gas and Sulfur Operations in the Outer Continental Shelf*

Final rule section	Prior regulation that the final rule would modify or replace	Corresponding section number from the proposal (if any)
Subpart A—General Provisions PERFORMANCE STANDARDS: 550.120—This section provides that BOEM will regulate activities under a lease, right-of-use and easement, or right-of-way, to promote the orderly exploration, development, and production of mineral resources, while preventing waste, protecting the environment and ensuring cooperation with other government agencies. 550.121—This section provides that BOEM may require additional measures to ensure the use of Best Available and Safest Technology (BAST) as identified by BSEE to avoid the failure of equipment that would have a significant effect on health, safety, property or the environment when economically feasible.	None .....	This section was in the regulations before the split of MMS into three different agencies and has been reinserted for consistency.  This section was in the regulations before the split of MMS into three different agencies and has been reinserted for consistency.
INFORMATION AND REPORTING REQUIREMENTS: 550.197(b)—This subsection provides that BOEM will generally release geological data and analyzed geological information two years after the required submittal date for such information or 60 days after a lease sale. 550.197(c)—This subsection provides that BOEM will generally release geological data and analyzed geological information to individuals with a need to know that agree to maintain the confidentiality of the relevant information. 550.197(d)—This section provides, in accordance with section 26 of OCSLA, that no proprietary information received by BOEM will be transmitted to any affected State unless the lessee, or the permittee and all persons to whom such permittee has sold such information under promise of confidentiality, agree to such transmittal.	550.197(b) ..... 550.197(c) .....	Section 256.100(b).  Section 256.100(b).
Subpart D—Leasing Maps and Diagrams 550.400—This section provides that any area of the OCS, which has been appropriately platted, may be leased for any mineral not included in an existing lease issued under the Act or meeting the requirements of subsection (a) of section 6 of the Act.	None ..... 556.8 .....	New provision required to conform the regulations to the Outer Continental Shelf Lands Act (OCSLA) (43 U.S.C. 1352(c)).  New subpart. Section 256.202(a).

*B. Derivation Table for 30 CFR Part 556—Leasing of Sulfur or Oil and Gas and Bonding Requirements in the Outer Continental Shelf*

Final rule section	Prior regulation that the final rule would modify or replace	Corresponding section number from the proposal (if any)
Subpart A—General Provisions 556.100—This section states that management of Outer Continental Shelf (OCS) resources is to be conducted in accordance with the findings, purposes, and policy directions provided by the Outer Continental Shelf Lands Act. 556.101—This section sets forth the purpose of the regulations in this part. 556.102—This section lists the statutory authorities for this part ... 556.103—This section lists related regulations ..... 556.104—This section provides the legal basis for BOEM's collection of information in connection with the administration of its OCS oil, gas and sulfur leasing program and describes how BOEM will handle and maintain proprietary information. 556.104(c)—This subsection describes BOEM's treatment of proprietary information received in response to a Call for Information and Nominations. 556.105—This section provides definitions for key terms used throughout this part of the regulations. 556.106—This section identifies administrative fees that BOEM requires for various services.	556.2 ..... 556.1 ..... 556.4 ..... 556.7 ..... 556.0, 556.10 ..... 556.10(a) ..... 556.5, 556.40 ..... 556.63 .....	None. Section 256.102. Undesignated authority section. None. Section 256.100.  Section 256.100(b).  Section 256.103. Section 256.104.

Final rule section	Prior regulation that the final rule would modify or replace	Corresponding section number from the proposal (if any)
556.107—This section sets forth an alternative procedure, to avoid the use of a corporate seal, for those electronic document submissions for which a corporate seal is otherwise required by these regulations.	556.46, 556.54, 556.95 .....	None.
Subpart B—Oil and Gas Five-Year Leasing Program		
556.200—This section reiterates those key provisions of OCSLA that require the Secretary to prepare an oil and gas leasing program that consists of a five-year schedule of proposed lease sales.	None .....	Section 256.200.
556.201—This section reiterates the OCSLA requirement that BOEM consider multiple uses of the OCS in its development of the Five-Year oil and gas leasing program.	None .....	New provision based on 43 U.S.C. 1344(a)(2)(D).
556.202—This section sets forth the steps BOEM takes in initiating the Five-Year program.	556.16 .....	Section 256.202.
556.203—This section provides that BOEM will invite comments from governors on a draft proposed program at least 60-days before it publishes a proposed Five-Year program.	556.17(a) .....	Section 256.203.
556.204—This section states the procedures to be followed to obtain inter-governmental and citizens' comments on the proposed Five-Year program.	556.17(b) .....	Section 256.204.
556.205—This section provides that the Secretary must provide a copy of the proposed Five-Year Program, or any significant revision thereto, to Congress and the President at least 60-days before approving it.	556.17(c) .....	Section 256.205.
Subpart C—Planning and Holding a Lease Sale		
556.300—This section provides that BOEM will prepare a report describing the general geology and potential mineral resources of the area under consideration for a sale.	556.22 .....	None.
556.301—This section outlines the process BOEM uses to collect information to inform its determination as to which areas should be made available for leasing.	556.23 .....	Section 256.300.
556.302—This section explains the process used to arrive at the Area ID.	556.26, 556.10 .....	Section 256.301.
556.303—This section sets forth the information that BOEM will provide to a State when an area proposed for leasing lies within three nautical miles of the seaward boundary of that State.	556.10, 556.25 .....	Section 256.302.
556.304—This section describes the process utilized to prepare a proposed notice of sale.	556.29 .....	Section 256.303.
556.305—This section outlines the process by which BOEM coordinates with affected States following the proposed notice of sale.	556.29, 556.31 .....	Section 256.304.
556.306—This section provides a process for resolving issues or disputes that may arise between a State and the Federal government when a hydrocarbon-bearing area underlies both the Federal OCS and State submerged lands.	556.25(b)–(d) .....	None. Added for consistency with OCSLA section 8(g)(3), as amended in 1986 (43 U.S.C. 1337 (8)(g)(3)).
556.307—This section provides a description of the process that BOEM will use to evaluate comments and recommendations of governors and local governments.	556.31 .....	Section 256.305.
556.308—This section sets forth BOEM's procedures for conducting a lease sale.	556.28, 556.32 .....	Section 256.306.
556.309—This section sets forth BOEM's procedures for conducting a Supplemental Sale.	556.12 .....	Section 256.206.
Subpart D—Qualifications		
QUALIFICATIONS:		
556.400—This section provides that, in order to bid on, own, hold, or operate a lease on the OCS, bidders, record title holders, and operating rights owners must first obtain a qualification number from BOEM.	556.35 .....	Section 256.400.
556.401—This section outlines BOEM's requirements for a prospective lessee to become a qualified bidder.	556.35, 556.46 .....	Section 256.400.
556.402—This section describes the types of evidence that BOEM will require in order to qualify a person to hold leases on the OCS.	556.35 .....	Section 256.401.
556.403—This section describes the circumstances under which a person may be excluded or disqualified from holding a lease on the OCS.	556.35(c), 556.46(h) .....	Section 256.402.
556.404—This section details how to comply with the Department's non-procurement debarment rules.	None .....	Section 256.403.
556.405—This section provides that lessees must notify BOEM of any merger, name change, or change of business form as soon as practicable, but in no case later than one year after the change or action.	585.109 .....	Section 256.404.

Final rule section	Prior regulation that the final rule would modify or replace	Corresponding section number from the proposal (if any)
<b>Subpart E—Issuance of a Lease</b>		
<b>HOW TO BID:</b>		
556.500—This section sets forth the procedures for submitting a bid at a lease sale.	556.46(a)–(b) .....	Section 256.410.
556.501—This section explains what geological and geophysical information must be submitted with a bid at a lease sale.	551.11, 551.12, 580.51 .....	None.
<b>RESTRICTIONS ON JOINT BIDDING:</b>		
556.511—This section prohibits joint bidding by major oil and gas producers under certain circumstances.	556.41 .....	Section 256.411.
556.512—This section provides the circumstances under which a bid for an oil and gas lease will be disqualified and/or rejected.	556.44 .....	Section 256.402.
556.513—This section explains the circumstances under which a lessee must prepare and send to BOEM a statement describing its oil and gas production and what the statement is to contain.	556.40 .....	Section 256.412.
556.514—This section details what production must be counted when determining whether a company should be considered a “restricted bidder”.	556.40, 556.43 .....	Section 256.413.
556.515—This section provides the circumstances under which a person may be exempted from joint bidding restrictions.	556.41(d) .....	Section 256.414.
<b>HOW DOES BOEM ACT ON BIDS:</b>		
556.516—This section outlines the procedures BOEM will follow when reviewing bids received for leases on the OCS and when handling tie bids.	556.47 .....	Section 256.416.
556.517—This section describes the reconsideration procedures that apply in the event that BOEM rejects a high bid.	556.47(e)(1)–(e)(3) .....	Section 256.417.
<b>AWARDING THE LEASE:</b>		
556.520—This section describes the steps involved in the lease award process.	556.47 .....	Section 256.420.
556.521—This section explains when a lease becomes effective ..	556.50 .....	Section 256.421.
556.522—This section provides that the terms and conditions of the lease will be stated in the final notice of sale, as well as in the lease instrument itself.	556.49 .....	Section 256.306(a)(2).
<b>Subpart F—Lease Term and Obligations</b>		
<b>LENGTH OF LEASE:</b>		
556.600—This section sets forth the primary term of an oil and gas lease.	556.37(a)–(b) .....	Section 256.600.
556.601—This section sets forth the methods by which a lessee may maintain its oil and gas lease beyond the primary term.	556.37(a)–(b), 556.70, 556.71, 556.72.	Section 256.601.
556.602—This section sets forth the primary term of a sulfur lease.	556.37(c) .....	Section 256.602.
556.603—This section sets forth the methods by which a lessee may maintain its sulfur lease beyond the primary term.	556.37(c) .....	Section 256.603.
<b>LEASE OBLIGATIONS:</b>		
556.604—This section outlines the rights and obligations of a record title holder of an OCS lease.	550.146, 556.62, 556.64 ....	Sections 256.605 and 256.612.
556.605—This section outlines the rights and obligations of an operating rights owner of an OCS lease.	550.146, 556.62, 556.64 ....	Sections 256.606 and 256.612.
<b>HELIUM:</b>		
556.606—This section provides that BOEM reserves the ownership of, and the right to extract, helium from all gas produced from an OCS lease, and describes what BOEM will do if it requests you to deliver helium from operations associated with a lease.	556.11 .....	Section 256.630.
<b>Subpart G—Transferring All or Part of the Record Title Interest in a Lease</b>		
556.700—This section describes how a company may apply for approval to assign its whole, or a partial, record title interest in its lease, or in any aliquot(s) thereof, or to sublease operating rights.	556.62, 556.64 .....	Sections 256.610, 256.611, and 256.612.
556.701—This section describes the process for obtaining BOEM approval of an assignment of a record title or operating rights interest in an OCS lease.	556.62(a), 556.65 .....	Section 256.611.
556.702—This section describes when an assignment will result in a segregated ( <i>i.e.</i> , new) lease.	556.68 .....	Section 256.613(a)(2).
556.703—This section addresses the effects of a lease segregation.	556.68 .....	Section 256.613(a)(2).
556.704—This section sets forth the circumstances under which BOEM would disapprove an assignment or sublease.	556.62, 556.64 .....	Section 256.611.
556.705—This section outlines the procedures to follow to transfer an interest in an OCS lease from a deceased natural person.	556.64(e)–(g) .....	Section 256.614.
556.706—This section outlines the process for transferring record title interests in more than one lease to different parties.	None .....	Section 256.615.

Final rule section	Prior regulation that the final rule would modify or replace	Corresponding section number from the proposal (if any)
556.707—This section outlines the process for transferring different types of interests in a lease to different parties.	556.67 .....	Section 256.615.
556.708—This section outlines the process for transferring record title interests in more than one lease to the same party.	556.64(a)(8), 556.67 .....	Section 256.615.
556.709—This section outlines the process for transferring the record title interest in one lease to more than one party.	556.64 .....	Section 256.616.
556.710—This section sets forth the effect of an assignment of record title on an assignor’s liability under the lease.	556.64 .....	Section 256.616.
556.711—This section provides that a record title holder who sub-leases operating rights remains liable for later accruing obligations of the lease, but is only secondarily liable for monetary obligations accruing thereafter.	556.64 .....	Section 256.616.
556.712—This section describes the effective legal date of the transfer of a record title interest in a lease.	556.62(c) .....	Section 256.617.
556.713—This section sets forth the effect of an assignment of record title on an assignee’s liability under the lease.	556.62(e) .....	Section 256.618.
556.714—This section describes procedures to be used in assignments between those on the restricted joint bidders list.	556.64(i) .....	Section 256.619.
556.715—This section provides that a lessee may create, transfer, or assign an economic interest in a lease without BOEM approval, but that such transferor must send BOEM a copy of each instrument creating or transferring such a lease interest within 90 days after the last party executes the transfer instrument.	556.64(a)(7) .....	Section 256.620.
556.716—This section provides the circumstances under which the transfer of a record title interest triggers the need to file a new designation of operator form with BOEM.	550.143 .....	Section 256.611.
Subpart H—Transferring All or Part of the Operating Rights in a Lease		
556.800—This section provides that an operating rights owner may assign all or part of its operating rights interests, subject to BOEM approval.	556.62, 556.64 .....	Section 256.612.
556.801—This section describes the process by which an assignor of operating rights must obtain approval of such an assignment.	550.143, 556.64 .....	Section 256.613.
556.802—This section sets forth the circumstances under which BOEM may disapprove an assignment of operating rights.	556.62 .....	Section 256.611.
556.803—This section addresses the assignment of operating rights interests in more than one lease to different parties.	556.67 .....	Section 256.615.
556.804—This section addresses the assignment of operating rights interests in one lease to more than one party.	556.64(a)(8) .....	Section 256.615.
556.805—This section sets forth the effect of an assignment of operating rights on an assignor’s liability under the lease.	556.62(d) .....	Section 256.616.
556.806—This section describes the effective legal date of the transfer of an operating rights interest in a lease.	556.62(c) .....	Section 256.617.
556.807—This section sets forth the effect of an assignment of operating rights on an assignee’s liability under the lease.	556.62, 556.64 .....	Section 256.618.
556.808—This section provides that an operating rights owner may create, transfer, or assign economic interests without BOEM approval, but that for record keeping purposes, the operating rights owner must send BOEM a copy of each instrument creating or transferring such interests within 90 days after the last party executes the transfer instrument.	556.64(a)(7) .....	Section 256.620.
556.809 .....	Reserved .....	None.
556.810—This section provides the circumstances under which the transfer of an operating rights interest triggers the need to file a new designation of operator form with BOEM.	550.143, 556.62 .....	Section 256.611.
Subpart I—Bonding or Other Financial Assurance		
556.900—This section sets forth general bonding/financial assurance requirements for OCS leases.	556.52 .....	Sections 256.500, 256.502, 256.510, and 256.521.
556.901—This section sets forth additional bonding/financial assurance requirements for OCS leases.	556.53 .....	Sections 256. 501 and 256.510.
556.902—This section sets forth the requirements which a bond or other security must meet.	556.54 .....	Sections 256.502 and 256.503.
556.903—This section sets forth what must be done if a bond lapses.	556.55 .....	Section 256.520.
556.904—This section sets forth the procedures for establishing lease abandonment accounts as a method of financial assurance.	556.56 .....	Section 256.512.
556.905—This section sets forth the procedures for using a third-party guarantee as a method of financial assurance.	556.57 .....	Section 256.511.
556.906—This section sets forth the procedures for terminating the period of liability of, and cancelling, a bond.	556.58 .....	Section 256.522 and 256.523.

Final rule section	Prior regulation that the final rule would modify or replace	Corresponding section number from the proposal (if any)
556.907—This section sets forth the procedures for forfeiting a bond or other security.	556.59 .....	Sections 256.524, 256.525, and 256.526.
Subpart J—Bonus or Royalty Credits for Exchange of Certain Leases		
556.1000—This section sets forth the deadline for applying for certain bonus or royalty credits which had been available under the Gulf of Mexico Energy Security Act of 2006 (GOMESA) (43 U.S.C. 1331 note).	556.90–556.95 .....	Sections 256.900–256.905.
Subpart K—Ending a Lease		
556.1100—This section provides the circumstances under which a lease will expire at the end of its primary term.	556.37(b)–(c) .....	Section 256.700.
556.1101—This section sets forth the procedures to follow for relinquishment of a lease.	556.76 .....	Section 256.701.
556.1102—This section provides the circumstances under which BOEM may cancel or void a producing or a non-producing OCS lease.	556.77 .....	Section 256.702.
Subpart L—Leases Maintained Under Section 6 of OCSLA		
556.1200—This section explains the relationship between BOEM’s regulations and leases maintained under section 6 of OCSLA.	556.79 .....	None.
556.1201—This section states that the existence of a lease for other minerals under section 6 of OCSLA in an area does not preclude the issuance of other leases in the same area.	556.80 .....	None.
Subpart M—Environmental Studies		
556.1300—This section provides that BOEM will conduct studies of any area or region included in any oil and gas lease sale, as needed, to assess and manage impacts on the human, marine and coastal environments which may be affected by OCS oil and gas or other mineral activities in such area or region.	556.82 .....	None.

DERIVATION TABLE FOR 30 CFR PART 560—OUTER CONTINENTAL SHELF OIL AND GAS LEASING

Final rule section	Prior regulation that the final rule would modify or replace	Corresponding section number from the proposal (if any)
<b>Subpart A—General Provisions</b>		
560.100—This section describes the authorities applicable to this part.	Undesignated authority section.	Undesignated authority section.
560.101—This section describes the purpose of this part .....	560.1 .....	None.
560.102—This section sets forth the definitions applicable to this part.	559.001—559.002,560.2 ....	None.
560.103—This section describes BOEM’s information collection authority.	560.3 .....	None.
<b>Subpart B—Bidding Systems</b>		
<b>GENERAL PROVISIONS:</b>		
560.200—This section describes the purpose of this subpart .....	560.101 .....	None.
560.201—This section sets forth the definitions applicable to this subpart.	560.102 .....	None.
560.202—This section describes the bidding systems that BOEM may utilize.	560.110 .....	None.
560.203—This section describes the terms and conditions that would apply, depending on the bidding systems that BOEM utilizes.	560.111 .....	None.
<b>ELIGIBLE LEASES:</b>		
560.210—This section describes how royalty suspension volumes could apply to a lease.	560.112 .....	None.
560.211—This section describes when a lease may qualify for royalty suspensions.	560.113 .....	None.
560.212—This section describes how BOEM would assign royalty suspension volumes for eligible leases.	560.114 .....	None.
560.213—This section specifies how long royalty suspension volumes may be effective to eligible leases.	560.115 .....	None.
560.214—This section describes how a lessee should measure the natural gas production on an eligible lease, subject to the royalty suspension volume.	560.116 .....	None.
<b>ROYALTY SUSPENSION LEASES:</b>		
560.220—This section describes how royalty suspensions apply to leases issued in a sale held after November 2000.	560.120 .....	None.
560.221—This section describes when a lease issued in a sale held after November 2000 is entitled to a royalty suspension.	560.121 .....	None.

DERIVATION TABLE FOR 30 CFR PART 560—OUTER CONTINENTAL SHELF OIL AND GAS LEASING—Continued

Final rule section	Prior regulation that the final rule would modify or replace	Corresponding section number from the proposal (if any)
560.222—This section describes how long a royalty suspension volume would be effective for a lease issued in a sale held after November 2000.	560.122 .....	None.
560.223—This section describes how to measure natural gas production for a lease subject to royalty suspension volumes issued in a sale held after November 2000.	560.123 .....	None.
560.224—This section describes how a royalty suspension would apply if BOEM assigns a lease issued in a sale held after November 2000 to a field that has a lease issued before the enactment of the OCS Deep Water Royalty Relief Act. (43 U.S.C. 1337(3)).	560.124 .....	None.
<b>BIDDING SYSTEM SELECTION CRITERIA:</b>		
560.230—This section describes what criteria BOEM uses for selecting bidding systems and bidding system components.	560.130 .....	None.
<b>Subpart C—Operating Allowances</b>		
560.300—This section explains that Operating Allowances can be specified in an oil and gas leases.	206.120 .....	This section was originally part of MMS regulations at section 206.120 and was inadvertently omitted from BOEM regulations during the split of the MMS rules into those of three different agencies. 75 FR 65051.
<b>Subpart D—Joint Bidding</b>		
Reserved .....	560.301—560.303 .....	The proposed rule amended 30 CFR part 260 by removing subpart D, which consisted of prior regulations sections 560.301—560.303.
<b>Subpart E—Electronic Filings</b>		
560.500—This section describes BOEM's electronic document and data transmissions procedures.	None .....	This section is derived in part from proposed rule section 256.503(c).
560.501—This section describes how BOEM will maintain the confidentiality of electronic documents and data.	None .....	None.
560.502—This section describes under what circumstances electronic document filings will be considered legally binding.	None .....	None.

**III. Section-by-Section Analysis of the Final Rulemaking**

*A. Part 550—Oil and Gas and Sulfur Operations in the Outer Continental Shelf*

1. Subpart A—General Provisions

Section 550.120. What standards will BOEM use to regulate leases, rights-of-use and easement, and rights-of-way? This section provides that BOEM will regulate activities under a lease, right-of-use and easement, or right-of-way, to promote the orderly exploration, development, and production of mineral resources, while preventing waste, protecting the environment and ensuring cooperation with other government agencies. Final rule section 550.120 did not appear in the proposed rule, but it was in the pre-split regulations, at 30 CFR 250.106. When BOEMRE was split into two agencies, this regulation was assigned to BSEE, and it therefore still appears at 30 CFR 250.106. As time has passed, however, BOEM has found itself hampered in properly evaluating and approving certain types of plans (such as exploration plans (EPs), development

and production plans (DPPs), or development operations coordination documents (DOCDS)) without this provision in its regulations. This section has therefore been put into the final rule with minor word changes.

Section 550.121. What must I do to protect health, safety, property, and the environment? This section provides that, when economically feasible, BOEM may require additional measures to ensure the use of Best Available and Safest Technology (BAST) as identified by BSEE, to avoid the failure of equipment that would have a significant effect on safety, health, or the environment. Final rule section 550.121 did not appear in the proposed rule, but it was in the pre-split regulations, at 30 CFR 250.107 and tracks section 21(b) of OCSLA. When BOEMRE was split into two agencies, this regulation was assigned to BSEE, and it therefore still appears at 30 CFR 250.107. As time has passed, however, BOEM has found itself hampered in properly evaluating and approving certain types of plans (e.g., EPs) without this provision in the BOEM regulations. It has therefore been put into the final rule with some changes necessary to conform the

provision to the scope of BOEM's enforcement authority.

Section 550.197(b)(5). Data and information to be made available to the public or for limited inspection. This section provides that BOEM will generally release geological data and analyzed geological information two years after the required submittal date for such information or 60 days after a lease sale. This final rule provision did not appear in the proposed rule, but did appear in the pre-split regulations at section 250.197(b)(5) (now BOEM regulation 550.197(b)(5)). However, the prior section, 550.197(b)(5), states “[i]f the primary term specified in the lease is extended under the heading of ‘Suspensions’ under this subpart, the extension applies to this provision.” Since the agency split, the determination whether to grant a suspension is made by BSEE. Because BOEM does not make these determinations, “suspensions” are no longer addressed in this subpart. Accordingly, the text in this final rulemaking changes the statement to say: “[i]f the primary term specified in the lease is extended, the extension applies to this provision,” removing the

reference to “suspensions” and to “this subpart” while retaining the meaning of the earlier provision.

Section 550.197(c). Data and information to be made available to the public or for limited inspection. This section provides that BOEM may allow limited data and information inspection, but only by a person with a direct interest in related BOEM decisions and issues in a specific geographic area, and who agrees in writing to maintain the confidentiality of geological and geophysical (G&G) data and information submitted under this part. Similar to the last-discussed provision, this section did not appear in the proposed rulemaking, but it did appear in the pre-split regulations, at 250.197(c) (now BOEM regulation 550.197(c)). The provision in the final rulemaking changes “MMS” to “BOEM” and deletes a reference to “part 203,” which no longer exists in the regulations at Title 30. The pre-split regulation listed several activities done by MMS. Only the part of that list that is pertinent to BOEM is retained in this final rule section.

Section 550.197(d). Data and information to be made available to the public or for limited inspection. This section provides, in accordance with section 26 of OCSLA, that no proprietary information received by BOEM will be transmitted to any affected State unless the lessee, or the permittee and all persons to whom such permittee has sold such information under promise of confidentiality, agree to such transmittal. The final rule includes this provision, which did not appear in the proposed rule, because section 26(c) of OCSLA requires a regulation providing for maintenance of the confidentiality of privileged or proprietary information received by BOEM. (43 U.S.C. 1352(c)).

## 2. Subpart D—Leasing Maps and Diagrams

This is a new subpart, which is being created as part of this rule.

Section 550.400. Leasing maps and diagrams. This section provides that any area of the OCS, that has been appropriately platted, may be leased for any mineral not included in an existing lease issued under the Act or meeting the requirements of subsection (a) of section 6 of the Act. This section was in the pre-split regulations at section 256.8 (now BOEM regulation 556.8), but was omitted in part from the proposed rule. The Derivation Table in the Preamble to the proposed rule said the language of 256.8 was “simplified” and placed in proposed rule section 256.202. Proposed rule section 256.202, however, is not

sufficient to ensure that the substance of former 256.8 is retained in the regulations. After reviewing these provisions, BOEM has determined that the text of former section 256.8 (now 556.8) should be retained. Hence, it has been included in this final rulemaking as section 550.400, which retains the text from prior section 556.8 without any changes.

## B. Part 556—Leasing of Sulfur or Oil and Gas and Bonding Requirements in the Outer Continental Shelf

### 1. The Table of Contents for Part 556

The Table of Contents for part 556 in the final rulemaking reflects a changed organization and structure from the proposed rule. After publication of the proposed rule, and after BOEMRE was divided into two agencies, BOEM analyzed the organization of part 556 and the way in which information was presented within the sections in the part, and decided to modify the organization of the part.

The first three subparts in the final rule (subpart A—General Provisions, subpart B—Oil and Gas Five Year Leasing Program, and subpart C—Planning and Holding a Lease Sale), contain the same information as the first three subparts in the proposed rule; the fourth subpart, Subpart D, however, includes more significant organizational changes. In the proposed rule, Subpart D—Issuance of a Lease, contained five subtitles within it: Qualifications, How to Bid, Restrictions on Joint Bidding, How Does MMS Act on Bids?, and Awarding the Lease. In the final rule, Subpart D includes only one subtitle: Qualifications. BOEM made this change in order to separate out the qualifications provisions and set them out in a clearer, more sequential manner. Subpart E in the final rule picks up the other four subtitles from the proposed rule’s Subpart D.

In the proposed rule, Subpart E covered bonding and financial assurance. These topics are found in Subpart I in the final rule, but as previously noted, no substantive changes have been made to the provisions in this subpart in the final rule. Instead of adopting the proposed rule sections on these topics, BOEM will retain the prior bonding and financial assurance provisions—which, with minor editorial and conforming revisions, are found at final rule sections 556.900 through 556.907—until such time as a new rulemaking is proposed for these topics.

In the proposed rule, Subpart F was entitled, “Maintaining a Lease,” and it contained four subtitles: Initial Period of

a Lease, Lease Obligations, Transferring Interest in All or Part of a Lease, and Helium. In the final rule, Subpart F contains three subtitles: Length of Lease, Lease Obligations, and Helium. These subtitles cover the same regulatory issues as Subpart F in the proposed rule, with the exception of the proposed rule’s subtitle concerning transfers of interest. In the final rule, regulatory provisions concerning the transfer of a record title interest and those provisions concerning transfers of an operating rights interest have been split into two different Subparts—Subpart G and Subpart H, respectively.

The final rule’s Subpart H was “Reserved” in the proposed rule. In the final rule, Subpart H includes provisions addressing the transfer of operating rights interests. As noted above, final rule Subpart I addresses BOEM’s bonding and financial assurance requirements, which are substantively unchanged from the prior BOEM regulations. Provisions dealing with bonus or royalty credits in exchange for certain leases, found in final rule Subpart J, were found in proposed rule Subpart I. The final rule’s Subpart K—Ending a Lease, was the proposed rule’s Subpart G.

Finally, final rule Subpart L—Leases Maintained under Section 6 of OCSLA (43 U.S.C. 1335), and Subpart M—Environmental Studies, did not appear in the proposed rule. The Derivation Table in the Preamble to the proposed rule proposed to eliminate both subparts as unnecessary, but BOEM has rethought this elimination, and has decided to retain them. We do so because, in the case of Subpart L, there are extant “Section 6 Leases,” and with respect to Subpart M, OCSLA section 20 requires that the Secretary perform environmental studies. (43 U.S.C. 1346).

### 2. Subpart A—General Provisions

Section 556.100. Statement of Policy. This section states that management of Outer Continental Shelf (OCS) resources is to be conducted in accordance with the findings, purposes, and policy directions provided by OCSLA. The corollary to final rule section 556.100 is prior BOEM regulation 556.2. Both sections set forth a general policy statement. The proposed rule did not contain a section setting forth a statement of policy. Although this section is new in the final rule, it is explanatory in nature and does not impose any new requirements on the public. Therefore, BOEM is including it in this final rule without prior public notice and comment.

Section 556.101. Purpose. The proposed rule contained a statement of

purpose at section 256.102, “What does this part cover?” In the final rule, however, BOEM decided to retain the statement of purpose section from the prior regulations, which was found at 556.1.

Section 556.102. Authority. In the final rule, BOEM decided to include a regulatory section setting forth the authority(ies) for the issuance of these regulations, which has been updated to reflect the amendments made to FOGSMA by the Federal Oil and Gas Royalty Simplification and Fairness Act of 1996, (30 U.S.C. 1701 note). The proposed rule did not contain a regulatory section with a list of authorities, but did contain such a list at the end of the proposed rule’s Table of Contents. The list needed to be updated since the publication of the proposed rule.

Section 556.103. Cross references. The proposed rule did not contain a section setting out cross-references. Current BOEM regulations section 556.7 lists pertinent cross-references, and BOEM decided to include a cross-reference section in the final rule. We did so because cross-references enable the reading public to more quickly find related regulations. Cross-references do not impose any new substantive requirements that require prior public notice and comment.

Section 556.104. Information collection and proprietary information. This section has two major provisions. The first provides the legal basis for BOEM’s collection of information in connection with the administration of its OCS oil, gas and sulfur leasing program. The second provision describes how BOEM will handle and maintain proprietary information. Final rule section 556.104 contains the same information as the corresponding proposed rule section, section 256.100. Subsection (b) of the proposed rule provision addressed “proprietary information,” but it was unclear whether the subsection extended to all proprietary information, or only to such information received in response to a Call for Information and Nominations (“Call”). To rectify this situation, we drafted the final rule provision to address proprietary information generally, (section 556.104(b)), and separately, proprietary information received in response to a Call (section 556.104(c)).

Section 556.105. Definitions. This section provides definitions for key terms used throughout this part of the regulations. As explained further below, some of these definitions are retained from the preexisting regulations; others are identical to definitions included in

the proposed rule; and finally, a few definitions are new to this final rule, but they define terms already used in the regulations.

The terms and phrases listed in the next paragraph have been retained from the regulations as they existed before BOEMRE was divided into two agencies, and therefore, as the regulations were constituted at the time of publication of the proposed rule.

The list of terms that have been retained from the pre-split regulations is as follows: Aliquot or Aliquot Part, Authorized officer, Average daily production, Barrel, Crude oil, Development block, Economic interest, Initial period, Lease term pipeline, Lessee, Natural gas, Operating rights, Operator, Outer Continental Shelf (OCS), Outer Continental Shelf Lands Act (OCSLA), Owned, Planning area, Regional Director, Regional Supervisor, Security, Single bid, Six-month bidding period, and Statement of production.

In the following cases, we moved definitions of terms from a substantive regulation to this definitions section, with no change to the meaning expressed.

*Aliquot part.* The definition of the term “aliquot part” from proposed rule section 256.611, which addresses transfers of lease interests, was moved into this definitions section (556.105).

*BOEM.* The term “BOEM” was retained, from the prior regulations, in final rule section 556.105.

*Development block.* The definition of the term “development block” was moved from section 556.12(c)(3) to this definitions section.

*Economic interest.* The definition of the term “economic interest” was moved from section 556.40 to this definitions section.

*Western Planning Area.* Pursuant to a commenter’s recommendation, a definition of “Western Planning Area” was added, in final rule section 556.105.

The following terms were retained unchanged from the prior BOEM regulations, or remain as described in the proposed rule: Act, Affected State, Authorized Officer, Coastal Environment, Coastal Zone, Coastline, Desoto Canyon OPD, Destin Dome OPD, Human Environment, Marine Environment, Pensacola OPD. The term “person” was added to the regulations, utilizing the definition from the proposed rule.

The following definitions have been added in final rule section 556.105 to define terms or concepts already used in the regulations, the definitions of which were apparent from the context of the prior regulatory language: BSEE, crude oil, designated operator, economic

interest, initial period, primary term, joint bid, lease, lease interest, lessee, natural gas, natural gas liquids, operating rights, operating rights owner, operating rights tract, operator, owned, planning area, primary term, regional director, regional supervisor, RUE, ROW, security, single bid, six month bid period, and statement of production. A few of these terms were updated, as follows:

- *Designated operator.* The requirement to designate an operator is set out in prior BOEM regulations at section 550.143. Consistent with the “designated operator” requirements in that section, BOEM is including a definition of the term “designated operator” in the definitions section of the final rule. Prior section 550.143(a) states that “each lessee must submit a Designation of Operator (DOO) form” to designate an operator. As implemented, this requirement applies to all record title owners and to those operating rights owners that own operating rights in the aliquots/depths in which the designated operator, to which the DOO form applies, will be operating. This interpretation is reflected in the definition of “[d]esignated operator” in the final rule.

- *Lease interest.* The term “lease interest” appears, as “interests in . . . leases,” in the first sentence of prior BOEM regulations at section 556.62. The final rule definition lists interests already recognized in the prior regulations.

- *Minerals.* The term has been redefined to better correspond to its meaning in OCSLA.

- *Natural gas liquids.* The definition of “Natural gas liquids” is taken from the prior term “Liquefied petroleum products.” 42 U.S.C. 6213 restricts joint bidding on leases for those producing more than an average worldwide daily production of 1.6 million barrels of crude oil and/or its equivalent in natural gas liquids and natural gas during a 6-month period preceding a lease sale. Previously, regulations implementing 42 U.S.C. 6213 referred to “liquefied petroleum products” rather than “natural gas liquids,” but then defined “liquefied petroleum products” as natural gas liquids. We dropped references to “liquefied petroleum products,” but there is no change in the concept; only the term has been changed.

- *Operating rights owner.* The definition of the term “Operating rights owner” has been added into this definitions section. It is based on the definition of “Operating rights” in prior BOEM regulations at section 550.105.

• *Right-of-use and easement.* The prior BOEM regulations, at 30 CFR 550.105, defined the terms “Easement” and “Right-of-use” separately. But the term that is actually used throughout the prior regulations is “right-of-use and easement.” (See, e.g., 30 CFR 550.16—550.166). The term “right-of-use and easement” is also used in the proposed rule (see, e.g., proposed rule sections 256.502(c), 256.410(a), and 256.511(a)). The term is defined in the final rule because it appears in final rule section 556.104, concerning BOEM’s information collections and its handling of proprietary information.

• *Right-of-way.* The definition of “Right-of-way” in the final rule is based on the definition of “Right-of-way pipelines” in the prior BOEM regulations at section 550.105, but the definition has been updated to make clear that a right-of-way authorization is issued by BSEE.

• *You.* The term “You” was defined in proposed rule provision 256.103 by providing a list of individuals to whom it would apply. This list has been retained in the final rule, but an introductory sentence has been added to the definition that defines the word, rather than merely listing the individuals to whom the term applies.

Section 556.106. Service fees. This section identifies various administrative fees that BOEM requires for various services. The language in the Service Fees section, 256.104(b), of the proposed rulemaking, “payment . . . must accompany . . . submission,” engendered comments as to whether the proposed rule would have required operators to send in checks with their submission(s). BOEM therefore changed the language of this provision in the final rule to reflect that evidence of payment of the required fee(s) via pay.gov must accompany document submission(s) or must be sent to the office identified by BOEM. The fees in this rule are being adjusted to reflect the Implicit Price Deflator change of 3.31 percent (inflation from 2011 through 2013). The fees were last adjusted for inflation through calendar year 2011 (78 FR 5836).

Section 556.107. Corporate Seal requirements. This section sets forth an alternative procedure, to avoid the use of a corporate seal, for those electronic document submissions for which a corporate seal is otherwise required by these regulations. BOEM’s rules require the use of a corporate seal in several instances. The Federal Government is, however, moving rapidly toward an all-electronic filing and records retention system. Because of this, BOEM has added section 556.107 to the final rule,

which permits document submitters to electronically file documents with BOEM using a secure electronic filing system without the use of corporate seals. The filer may choose to file a document electronically; electronic document submission is not required by the final rule.

In order to maintain the legal validity of documents filed electronically without corporate seals, BOEM is requiring that those entities who choose to so file provide BOEM with a one-time filing of a document containing the entity’s corporate seal, signed by an authorized party, and stating that the entity’s filings made through a secure electronic filing system will be legally binding.

Final rule section 556.107 also enables those who choose not to file documents electronically to forego repeated use of the corporate seal by filing a document similar to the document discussed in the last paragraph, which states that future non-electronic filings will be legally binding without the use of a corporate seal.

BOEM further recognizes that not all States issue corporate seals. Therefore, final rule section 556.107 contains a paragraph (c), which states that an entity from a non-corporate seal State may file a document with BOEM stating that its state of incorporation does not use corporate seals. This document must be signed by an authorized party and must state that submissions made by this corporation will be legally binding.

Final rule section 556.107 does not have a counterpart in the proposed rule, but notice and comment on this provision is unnecessary because the provision does not require that any member of the public do anything differently than was already required by the prior regulations. Section 556.107 will, however, reduce the burden on those who choose to use the options it provides by streamlining the document submission process for them. The provision is also in accord with the Federal-Government-wide effort to digitize government services. See, e.g., the Government Paperwork Elimination Act, Public Law 105–277, 112 Stat. 2681 (1998).

### 3. Subpart B—Oil and Gas Five Year Leasing Program

Sections under this subpart detail the steps BOEM takes to develop the Five-Year Oil and Gas Leasing Program. The final rule provisions set forth, sequentially, the stages in the development of the Five Year program, and closely mirror those in the proposed rule.

Proposed rule section 256.206, “Does MMS offer blocks in a sale that is not on the 5-year program schedule?” appeared under this Subpart B in the proposed rule. In the final rule, this section was moved to the next subpart, Subpart C—Planning and Holding a Lease Sale, because the section is substantively concerned with holding a certain type of lease sale, not with the development of the Five Year program. BOEM believes this section is more appropriately placed within Subpart C.

Section 556.200. What is the Five Year leasing program? This section reiterates those key provisions of OCSLA that require the Secretary to prepare an oil and gas leasing program that consists of a five-year schedule of proposed lease sales. Final rule section 556.200(a) substantially repeats proposed rule section 256.200. BOEM received two comments on proposed rule section 256.200 (section 556.200 in the final rule) that part of the section repeated language from OCSLA, and was therefore “inconsistent with the streamlining that MMS has taken with the proposed regulations.” BOEM considered these comments, but decided to retain the statutory language as it is important to explain the goals of the Five Year program. BOEM received no other comments on this subpart.

Section 556.201. Does BOEM consider multiple uses of the OCS? Final rule section 556.201 reiterates the OCSLA requirement that BOEM consider multiple uses of the OCS in its development of the Five Year oil and gas leasing program. This approach derives from a requirement in Section 18 of OCSLA (43 U.S.C. 1344(a)(2)(D)) that the leasing program shall be prepared and maintained in a manner consistent with, among other things, “other uses of the sea and seabed, including fisheries, navigation, existing or proposed sea lanes, potential sites of deepwater ports, and other anticipated uses of the resources and space of the outer Continental Shelf.” Final rule section 556.201 emphasizes that BOEM gathers information about multiple uses of the OCS to assist the Secretary in making decisions on the Five Year program, pursuant to the provisions of 43 U.S.C. 1344. For this purpose, BOEM invites and considers suggestions from States and local governments, industry, and any other interested parties, primarily through public notice and comment procedures. BOEM also invites and considers suggestions from Federal agencies.

Section 256.201 from the proposed rule has been modified in the final rule. As originally worded, proposed rule section 256.201 might have been

considered confusing because it used the word “consult” in the context of the Five Year Program. The term “consult” is a term of art usually associated with consultation under the Endangered Species Act (16 U.S.C. 1531–1544) and government-to-government consultation with Indian tribes. The Endangered Species Act does not require consultation during the preparation of the Five Year program. OCSLA requires that BOEM invite and consider comments and suggestions from other agencies and from States during its Five Year program preparation process, 43 U.S.C. 1344(c), and so the final rule addresses that in sections 556.201 through 556.203.

Section 556.202. How does BOEM start the Five Year preparation process? This section sets forth the steps BOEM takes in initiating the Five Year program. Final rule section 556.202 substantively repeats proposed rule section 256.202, but the final rule changes the statement in the proposed rule that “[a]ny area properly included on the official 5-year diagrams and maps may be offered for lease for any mineral not already leased” by substituting the explanation that any “area not already leased for oil and gas may be offered for lease.” The statement in the proposed rule was inaccurate because the Five Year program applies only to the leasing of oil and gas.

Section 556.203. What does BOEM do before publishing a proposed Five Year program? This section provides that BOEM will invite comments from governors on a draft proposed program at least sixty days before it publishes a proposed Five Year program. Final rule section 556.203 repeats proposed rule section 256.203, with some minor wording changes.

Section 556.204. How do governments and citizens comment on a proposed Five Year program? This section states the procedures to be followed to obtain inter-governmental and citizens’ comments on the proposed Five Year program. Final rule section 556.204 repeats proposed rule section 256.204.

Section 556.205. What does BOEM do before approving a proposed final Five Year program or a significant revision of a previously-approved Five Year program? This section provides that the Secretary must provide a copy of the proposed Five Year Program, or any significant revision thereto, to Congress and the President at least sixty days before approving it. Final rule section 556.205 is substantively the same as proposed rule section 256.205.

#### 4. Subpart C—Planning and Holding a Lease Sale

Sections in this subpart address the process leading up to a lease sale, the conduct of a lease sale, and the circumstances under which a lease sale that is not on the Five Year Program schedule may be held. Subpart C in the final rule generally tracks Subpart C in the proposed rule, with certain differences, described in the following paragraphs, which discuss final rule sections 556.300 through 556.309.

Section 556.300. What reports may BOEM and other Federal agencies prepare before a lease sale? This section provides that BOEM will prepare a report describing the general geology and potential mineral resources of the area under consideration. Although this final rule section did not appear in the proposed rule, it did appear in the prior BOEM regulations, at prior Subpart C—Reports from Federal Agencies, which consists of one section, 556.22, “General.” The Preamble to the proposed rule stated that the precursor to prior regulations section 556.22 (*i.e.*, 256.22) was “[e]liminated as repetitive with [OCSLA].” BOEM has decided to retain the section in the final rule because the regulated public will be looking to the regulations, and not to OCSLA, for guidance on BOEM’s processes and requirements. Final rule section 556.300 is substantively identical to the prior BOEM regulation 556.22.

Section 556.301. What is a Call for Information and Nominations? The formal lease sale process usually begins with BOEM’s publication of a Call for Information and Nominations, sometimes referred to as the “Call.” The Call requests indications of interest from industry in the leasing of specific blocks, and requests comments on other relevant information that BOEM can use in developing a recommendation of leasing areas for the Secretary. This section outlines the process BOEM uses to collect information to inform its determination as to which areas should be made available for leasing.

Final rule section 556.301 is substantively identical to proposed rule section 256.300, except for the addition of an additional topic on which the Call will request comments. The prior regulations, at section 556.23(b), state that the Call “shall also request comments on areas which should receive special concern and analysis.” The proposed rule did not include “areas of special concern and analysis” as one of the topics on which the Call will request comments, but the Preamble to the proposed rule shed no

light on why this topic was omitted, stating only that section 256.23 (now 556.23) was “[r]eorganized.” BOEM sees no reason to omit “areas of special concern and analysis” from the list of topics on which the Call will request comments, and so has retained it in the list of such topics stated in final rule section 556.301.

Section 556.302. What does BOEM do with the information from the Call? Using the information received in response to the Call and further analysis of environmental issues, resource potential, stated interest, potential use conflicts, and other relevant information, the Director will develop a recommendation of the area to be included in a lease sale. This recommendation is often termed the “Area Identification,” or “Area ID.” This section explains the process used to arrive at the Area ID.

BOEM received one comment on proposed rule section 256.301, on which final rule section 556.302 is based. The comment noted that the phrase “as soon as possible,” which appeared in the analogous prior regulation (section 556.26(c)), had been deleted by the proposed rule, resulting in the following statement in section 256.301(b) of the proposed rule: “[w]e inform the public of any additions or deletions from the area proposed for leasing in the 5-year program that result from the call process.” The commenter requested that the phrase be retained in the final rule because whether or not areas have been deleted from a sale area is of great importance to potential bidders that are preparing for lease sales. BOEM agrees with this comment and has re-inserted this phrase in final rule section 556.302(c).

Section 256.301 of the proposed rule addressed the Area ID stage of BOEM’s lease sale preparation, but omitted several aspects that appeared in the prior BOEM regulations at section 556.26. There is no reason given in the proposed rule as to why certain aspects of this stage of the lease sale process were left out, except the statement that prior section 256.26 was “[r]eorganized.” Final rule section 556.302 contains the substance of proposed rule section 256.301, as well as several paragraphs from the prior section 556.26. Specifically, three aspects of prior section 556.26 were not in the proposed rule, but have been retained in section 556.302 of the final rule. First, subparagraph (a)(2) of final rule section 556.302 states that the Director may, on his or her own motion, include in his or her recommendation areas that were not indicated in response to a Call. (*See* section

556.26(a)). Second, the last sentence of final rule section 556.302(b) states that the Director may hold public hearings on the environmental analysis done on the areas identified for leasing. (See section 556.26(b)). Third, subparagraph 556.302(e) of the final rule repeats the last sentence in section 556.26(a), stating that, in the case of a supplemental sale, the Director's recommendation will be replaced with his findings made under this section.

Final rule section 556.302(d) states that the Director may, upon request, provide relative indications of interest in areas received in response to a Call. Paragraph (d) also addresses the potentially confidential nature of such indications of interest and indicates that BOEM will release this information in such a way so as not to compromise the competitive interest of any of the respondents to the Call. The language of this final rule paragraph was found in the prior regulations at section 556.10(d). The substance of this final rule paragraph 556.302(d) was found in the proposed rule at section 256.100(b)(1) and (2), but BOEM believes it is more appropriately placed in this final rule section, which addresses the treatment of information received in response to a Call.

Section 556.303. What does BOEM do if an area proposed for leasing is within three nautical miles of the seaward boundary of a coastal State? Final rule section 556.303 sets forth the information that BOEM will provide to a State when an area proposed for leasing lies within three nautical miles of the seaward boundary of that State. Section 556.303 is the same as proposed rule section 256.302, except that the final rule corrects the language of the provision to be consistent with OCSLA section 8(g) (43 U.S.C. 1337(g)) in its use of the term "nautical miles" instead of the proposed rule's "geographical miles."

Section 556.304. How is a proposed notice of sale prepared? This section describes the process utilized to prepare a proposed notice of sale. Final rule section 556.304 retains all the substance of proposed rule section 256.303, but for clarity divides the proposed rule provision's one paragraph into multiple paragraphs. The final rule provision also has a new title because the proposed rule provision's text and its title—"What happens with an approved proposed notice of sale?"—appears to have addressed an already-approved notice of sale without explaining how the agency arrives at the approved notice. The final rule provision helps clarify this by retaining some of the paragraphs from the analogous section

in the prior regulations, 556.29, which were left out of proposed rule provision 256.303, but which help to explain BOEM's procedures. The Preamble to the proposed rule stated that proposed rule provision 256.303 represented a "[s]implifi[cation]" of section 256.29 (now 556.29), but some steps were left out in the simplifying process, creating gaps in the regulations. These gaps have been eliminated with the retention of certain concepts from the prior regulations in final rule section 556.305.

Final rule section 556.305(a) states that the Director of BOEM may, in consultation with other Federal agencies, develop lease stipulations and conditions, which will appear or be referenced in the proposed notice of sale. Both the prior regulation section 556.29 and proposed rule section 256.303 contained similar language, but the proposed rule provision went further and stated that the proposed notice of sale also includes "the Director's findings, and all comments and recommendations received on the proposal." While reviewing the proposed rule, BOEM realized that these last three items are not *in* the proposed notice of sale, but accompany it when it is presented to the Secretary for approval. This concept that certain items will accompany the proposed notice of sale to the Secretary is correctly expressed in prior section 556.29(b), therefore this language has been used in final rule section 556.304(b).

BOEM received a comment requesting that the lease form be attached to or referenced in the proposed notice of lease sale because "the terms of an oil and gas lease sale are integral to the lessee/lessor relationship and lessees . . . should have the right to know the lease terms in advance of submitting bids." BOEM agrees with this comment insofar as potential bidders should be aware of the lease terms and conditions, to the extent possible, in advance of the lease sale. To that end, final rule provision 556.304(c) makes clear that the proposed notice of sale references the lease form.

Section 556.305. How does BOEM coordinate and consult with States regarding a proposed notice of sale? This section outlines the process by which BOEM coordinates with affected States following the proposed notice of sale. Final rule section 556.305 is substantively the same as proposed rule section 256.304. One change was made to the language of the section in the final rule as a result of a comment. The comment requested that the section "actually reference" the Coastal Zone Management Act (CZMA) (16 U.S.C.

1451–1466) "so that if the CZMA is modified or amended or repealed, [BOEM] can continue to follow the process outlined in the act, rather than risking conflict or inconsistency." BOEM agrees with this suggestion, and has included a reference to the CZMA in final rule section 556.305(b).

Section 556.306. What if a potentially oil-or gas-bearing area underlies both the OCS and lands subject to State jurisdiction? This section provides a process for resolving issues or disputes that may arise between a State and the Federal government when a hydrocarbon-bearing area underlies both the Federal OCS and State submerged lands. This final rule section did not appear in the proposed rule. The substance of the final rule section is, however, found at prior BOEM regulation section 556.25(b)–(d). The Preamble to the proposed rule stated that this section of the prior regulations had been left out in an attempt to simplify the regulations. Upon reconsideration, however, BOEM believes that the proposed rule may have over-simplified the regulations, resulting in a gap. The proposed rule, at section 256.302, addressed potentially leaseable areas "within 3 miles of the seaward boundary of a coastal State." The proposed rule did not, however, address potentially leaseable areas that underlie the Federal/State boundary, resulting in potentially leaseable resources on both sides of this boundary. The two situations are treated differently in OCSLA, at sections 8(g)(2) and 8(g)(3), respectively (43 U.S.C. 1337(g)(2) and 1337(g)(3)). Therefore, BOEM believes that they should be treated separately in the regulations and BOEM has decided to retain the prior regulations' provisions in the final rule, at section 556.306.

Section 556.307. What does BOEM do with comments and recommendations received on the proposed notice of sale? Final rule section 556.307 addresses BOEM's treatment of comments received on the proposed notice of sale, particularly those received from governors and local governments. This section provides a description of the process that BOEM will use to evaluate recommendations of governors and local governments. Section 556.307 is substantively the same as proposed rule section 256.305, but the final rule section has been divided into paragraphs for ease of reading and reference. The final rule section, at paragraph (b), contains one sentence that does not appear in the proposed rule, but did appear in the analogous prior section, 556.31(b). That sentence merely states that the determination of

the “national interest” as meant in this section, will be based on the findings, purposes, and policies of OCSLA.

Section 556.308. How does BOEM conduct a lease sale? Final rule section 556.308 explains that BOEM will publish a final notice of sale at least 30 days before the scheduled date of a lease sale. This final notice of sale will contain all the information needed to place a bid, as well as the terms and conditions of the lease, including any stipulations necessary to mitigate potential adverse impacts on the environment.

Final rule section 556.308, paragraphs (a)–(c), are substantively the same as proposed rule section 256.306. The final rule section includes a new paragraph (d), which was added at the request of a commenter. The commenter requested that “the Notices of Lease Sale should include the lease form that will be used to grant successful bids.” Therefore, final rule section 556.308 (d) states: “[t]he final notice of lease sale references, or provides a link to, the OCS lease form which will be issued to successful bidders.”

Section 556.309. Does BOEM offer blocks in a sale that is not on the Five Year program schedule (called a Supplemental Sale)? Under certain circumstances, detailed in proposed rule section 256.206 and final rule section 556.309, BOEM is authorized to offer blocks in an otherwise unscheduled sale, referred to as a supplemental sale. The proposed and final rule sections are the same.

##### 5. Subpart D—Qualifications

Final rule Subpart D—Qualifications, was a sub-subpart in the proposed rule, under proposed rule Subpart D—Issuance of a Lease. The substance of the provisions in Subpart D of the final rule is the same as that found in sections 256.400 through 256.404 of the proposed rule. BOEM decided, however, that the provisions covering the qualifications necessary to hold leases on the OCS were significant enough to merit a separate subchapter in the final rule. BOEM believes it is logical to place “Qualifications” into its own subpart and to remove it from under the heading “Issuance of a Lease,” where it was found in the proposed rule as one must qualify *before* a lease can be issued.

There are six sections within final rule Subpart D—Qualifications, which generally correspond with the five sections under the subheading “qualifications” in the proposed rule. There are, however, a few minor differences between the sections in the proposed rule and the sections in the final rule, including the lack of a table

in the final rule to set out the type of evidence required by BOEM to demonstrate proof of qualification to hold leases on the OCS. The proposed rule laid out the evidence requirements in a table format, but on reconsideration BOEM found this format too limiting, and opted to remove the table and instead use regulatory text to set forth the evidence requirements for qualification. The substance of the regulations remains the same in the final rule.

Generally, there were some logical gaps in the scheme laid out by the proposed rule sections regarding “Qualification” to hold leases on the OCS, which BOEM has rectified in the final rule. For example, BOEM has been issuing “qualification numbers” to qualified potential lessees for many years, but the fact that such a number must be obtained by a potential lessee as a first step in the leasing process has not been clearly spelled out in the regulations. The lay-out of the proposed rule sections on qualification appeared to assume that the reader knew that he or she must obtain a qualification number from BOEM in order to be “qualified” to hold leases on the OCS, without ever saying how that number would be obtained.

The other minor differences between the proposed and final rule provisions dealing with “Qualifications” are set forth, section-by-section, below.

Section 556.400. When must I demonstrate that I am qualified to hold a lease on the OCS? This section provides that, in order to bid on, own, hold, or operate a lease on the OCS, bidders, record title holders, and operating rights owners must first obtain a qualification number from BOEM. The title of this section was reworded to more clearly describe this purpose.

Final rule section 556.400 is an outgrowth of proposed rule section 256.401(a). Proposed rule section 256.401(a) stated that, a person, in order to show that he or she was qualified to be a lessee, must “provide [his] MMS qualification number.” The proposed rule failed to explain, however, that a potential lessee first had to obtain a qualification number from BOEM. Final rule section 556.400 explains that, “in order to bid, own, hold, or operate a lease on the OCS,” one must obtain a qualification number from BOEM. Final rule section 556.400 also makes clear that a bidder must be qualified in order to bid on OCS leases, as was required by prior section 556.46.

Section 556.401. What do I need to show to become qualified to hold a lease on the OCS and obtain a qualification number? This section outlines BOEM’s

requirements for a prospective lessee to become a qualified bidder. Final rule section 556.401 is essentially proposed rule section 256.400, with a few minor additions, which flow from the language of the proposed rule. Like the proposed rule provision, the final rule provision lists those who may become qualified to hold leases on the OCS, but better describes the entities previously identified only as “associations.” Proposed rule section 256.400(c) listed “[a] private, public or municipal corporation organized under the laws of any State of the U.S., the District of Columbia, or any territory or insular possession subject to U.S. jurisdiction.” A Limited Liability Company (LLC) was not listed in proposed rule section 256.400(c), but LLC was listed in the table in proposed rule section 256.401 as one of the entities that may become qualified to hold leases on the OCS. Therefore, the final rule provision adds to the list in section 556.401 a “Limited Liability Company or Limited Liability Corporation organized under the laws of any State of the United States, the District of Columbia, or any territory or insular possession subject to United States jurisdiction.”

Proposed rule section 556.400(e) listed a “State” as one entity potentially qualified to hold leases on the OCS. The final rule, at section 556.401(a)(5), using language from proposed rule section 256.400(c), instead says: “[a] State, the District of Columbia, or any territory or insular possession subject to United States jurisdiction.” Similarly, proposed rule section 256.400(f) listed a “political subdivision of States” as also potentially qualified to hold leases on the OCS. The final rule, at section 556.401(a)(6) instead says: “[a] political subdivision of a State, the District of Columbia, or any territory or insular possession subject to United States jurisdiction.”

Final rule section 556.401, at paragraph (a)(7) adds “Trust” to the types of entities that are potentially qualified to hold leases on the OCS. A trust is one of the entities listed in the table in proposed rule section 256.401, but it is not among those potentially qualified entities that were listed in proposed rule section 256.400. In order to rectify this oversight, the final rule section adds “Trust” to the list of those potentially qualified set forth in final rule section 556.401, and adds that any such Trust must also be “organized under the laws of any State of the United States, the District of Columbia, or any territory or insular possession subject to United States jurisdiction.”

Final rule section 556.401(c) affirmatively states that BOEM may

issue a qualification number to one who has provided acceptable evidence of qualification. This is a clarification of proposed rule section 256.401(a), which stated: “[p]rovide your . . . qualification number if you have qualified with us.” The final rule merely affirmatively states that BOEM will issue that number, if appropriate.

Section 556.402. How do I make the necessary showing to qualify and obtain a qualification number? This section describes the types of evidence that BOEM will require in order to qualify a person to hold leases on the OCS. Section 556.402 replaces proposed rule section 256.401, including the table in the latter. There are certain minor differences between the proposed and final rule sections, including the following:

Both proposed rule section 256.401 and final rule section 556.402 list the evidence needed to show that one is qualified to hold leases on the OCS. In the final rule, we added that such evidence must be “acceptable to BOEM.” This requirement was implicit in the proposed rule. There would be no point in requiring evidence of qualification if BOEM were obligated to accept evidence that is not sufficient as to form or content to enable BOEM to be certain of the status of the submitter. In order to be certain of this status, it is reasonable to expect that only evidence “acceptable to BOEM” will be accepted.

Final rule section 556.402, subparagraph (c)(3), adds the requirement that an entity seeking to qualify to hold leases on the OCS provide BOEM with a list of persons authorized to bind the entity, and that such list be kept current. This subparagraph reminds the entity that it is up to the entity, (and therefore, not up to BOEM) to determine who in its organization is authorized to bind it. BOEM believes that the requirement to provide a list of persons authorized to bind an organizational entity is a logical extension of the requirement to provide the various documents listed in the proposed rule table at proposed rule section 256.401. BOEM also believes that providing and updating this list of persons, along with the other evidence required by final rule section 556.402, is a simpler and more manageable way to approach the question of who is authorized to bind a specific entity than the prior regulations or the language used in the proposed rule.

Final rule section 556.402 contains several paragraphs that did not appear in the analogous section of the proposed rule (section 256.401). Both proposed rule section 256.401 and final rule section 556.402 address traditional

business entities, such as corporations and partnerships. There are, however, other types of business organizations that are eligible to qualify to hold leases on the OCS, but that would not have been covered by the qualifications provision in the proposed rule.

Paragraph (e) of final rule section 556.402 therefore addresses business entities with non-traditional business forms. Some of these non-traditional business forms do not have standard positions, such as “president” or “secretary.” Accordingly, paragraph (e) of final rule section 556.402 does not name a particular position but states that an individual from the highest level of management of an entity with a non-traditional business form, who is authorized by the entity’s operating agreement or governance documents to submit evidence of eligibility to hold OCS leases, must submit such evidence. Paragraph (e) is a clarification of proposed rule sections 256.401(c)(4) and 256.401(d), both of which sought to ensure that BOEM does business with the person within a qualified organization who has the authority to bind that organization. Paragraph (e) is a general catch-all meant to ensure that there are no gaps in BOEM’s regulations when it comes to the evidence necessary to demonstrate qualification to hold leases on the OCS.

Final rule section 556.402(f) states the entity that obtains a qualification number is responsible for ensuring that the number is used only for the purposes that the entity’s governance documents allow. This was implicit in the proposed rule, but the new final subsection makes it clear that it is not BOEM’s responsibility to ensure that entities are not going beyond their allowed powers in their dealings on the OCS.

Lastly, final rule section 556.402(h) makes it clear that one may not hold leases on the OCS until BOEM has issued a qualification number. This concept was also implicit in the proposed rule and in BOEM’s prior regulations in the requirement to obtain the qualification number.

Section 556.403. Under what circumstances may I be disqualified from holding a lease on the OCS? This section describes the circumstances under which a person may be excluded or disqualified from holding a lease on the OCS. Final rule section 556.403 substantively replicates proposed rule section 256.402, with some minor language changes. The language at final rule section 556.403, paragraph (b), tracks the language of OCSLA more closely than did the language of the corresponding section in the proposed

rule. This was done at the request of a commenter and ensures that paragraph (b) (“You may not hold an OCS lease if . . . The Secretary finds, after notice and hearing, that you or your principals fail to meet due diligence requirements or to exercise due diligence under section 8(d) of OCSLA . . . on any OCS lease”) could not be interpreted to conflict with section 8(d) of OCSLA (“No bid for a lease may be submitted if the Secretary finds, after notice and hearing, that the bidder is not meeting due diligence requirements on other leases.” 43 U.S.C. 1337(d)).

Also, the language at final rule section 556.403, paragraph (c), was revised to make it clear that either BOEM or BSEE could offer notice and opportunity for a hearing to determine whether operating performance is unacceptable, pursuant to either appropriate BOEM regulations or appropriate BSEE regulations. This clarification is necessary because of the division of BOEMRE into two agencies, and the fact that both BOEM and BSEE have a role in determining whether operating performance is unacceptable.

Section 556.404. What do the non-procurement debarment rules require that I do? Final rule section 556.404 details how to comply with the Department’s non-procurement debarment rules, specifically those that relate to entering covered transactions and notifying BOEM if you know that you or your principals are excluded or disqualified, or have been indicted or convicted of a crime. It is substantively the same as proposed rule section 256.403, with minor conforming language changes.

Section 556.405. When must I notify BOEM of mergers, name changes, or changes of business form? This section provides that lessees must notify BOEM of any merger, name change, or change of business form as soon as practicable, but in no case later than one year after the change or action. Final rule section 556.405 is the same as the proposed rule section, 256.404, with one exception. The proposed section stated “[y]ou must immediately notify BOEM of a name change,” but then allowed up to one year within which to do so. A commenter pointed out the inconsistency between the word “immediately” and the one-year period, and BOEM has therefore dropped the word “immediately” from final rule section 556.405 and replaced it with “as soon as practicable.”

This same commenter opined that providing BOEM with name changes or changes of business form would be too burdensome and that BOEM has “multiple ways to learn of a merger or name change.” BOEM does not agree

with these opinions. BOEM has run into difficulties in the past brought about by name changes and/or mergers about which BOEM had not been timely informed. It is not practicable for BOEM to monitor filings of name changes and merger information in each State. BOEM does not see that it is a burden for entities doing business on the OCS to keep BOEM apprised of changes of name or corporate form, such as may occur with a merger.

#### 6. Subpart E—Issuance of a Lease

Subpart E—Issuance of a Lease, is divided into four subdivisions in the final rule: “How to Bid,” “Restrictions on Joint Bidding,” “How Does BOEM Act on Bids?” and “Awarding the Lease.” The regulations in the first subdivision delineate the process of submitting a bid to BOEM and the information that must be submitted with the bid. The next subdivision, “Restrictions on Joint Bidding,” explains the effect of being placed on BOEM’s Restricted Joint Bidders List and the reporting requirements for those placed on the List. “How Does BOEM Act on Bids?” presents information as to BOEM’s acceptance or rejection of bids, the treatment of a tied bid, and the options available to a high bidder whose bid was rejected. The last subdivision of Subpart E, “Awarding the Lease” explains the procedures the bidder must follow after BOEM accepts its bid.

Following is a section-by-section analysis of the sections within Subpart E.

#### How To Bid

Section 556.500. Once qualified, how do I submit a bid? Final rule section 556.500 states generally that each bidder must submit a separate sealed bid for each tract or bidding unit, along with a bid deposit. The final rule section specifies that information regarding the timing of bid submission, and the amount and payment method of bid deposits, will be set forth in the final notice of sale. Final rule section 556.500 appeared at proposed rule section 256.410.

Paragraph (c) of final rule section 556.500 reaffirms the practice from the prior regulations (section 556.46(b)) and the proposed rule (section 256.410(b)) that the final notice of sale will specify the amount of the bid deposit. Paragraph (c) adds, however, that if not so specified, the “default” deposit amount will be twenty percent of the bid, the deposit amount that has been required for many years. As pointed out by a commenter, a bid deposit of twenty percent is the “status quo.” Another commenter noted that the bid deposit is

“typically set at one-fifth of the bonus bid amount.” BOEM finds it unnecessary to seek comments on this “default” language, which merely reflects the “status quo.”

Section 556.501. What information do I need to submit with my bid? Final rule section 556.501 reiterates requirements, found in section 26(a)(1)(A) of OCSLA (43 U.S.C. 1352(a)(1)(A)), to provide geological and geophysical (G&G) data to BOEM upon request. Current BOEM regulations in part 551 of Title 30 of the CFR, “Geological and Geophysical (G&G) Explorations of the Outer Continental Shelf,” already address this requirement, as applied to G&G activities permitted “on unleased lands or on lands leased to a third party,” 30 CFR 551.12(a). Therefore, current part 551 already applies to lands being bid upon, but BOEM has included section 556.501 in this final rule, because part 556 sets forth bidding and leasing procedures/requirements, and the requirement to provide G&G information with a bid logically falls within this comprehensive whole. Including final rule section 556.501 ensures that bidders are aware that they may need to submit requested G&G information at the time of bidding.

#### Restrictions on Joint Bidding

In the prior regulations, there are a series of definitions and other provisions that apply only in the context of restricted joint bidding, which were not in the proposed rule. Prior regulation section 556.40 lists 13 definitions, which help explicate the joint bidding restrictions. The proposed rule Preamble stated that section 256.40 (now 556.40) was “[e]liminated as redundant,” but, upon reviewing the proposed rule and the comments, BOEM decided that these definitions and provisions are not “redundant,” but instructive and helpful to explain the concepts underlying restrictions on joint bidding. The definitions have been retained in the final rule, some in the final rule definitions section, 556.106, and some in the provisions under this subheading of “Restrictions on Joint Bidding,” made up of final rule sections 556.511 to 556.515.

Further, there are several provisions previously found at 556.43(d) and (e), which explain how to measure oil, natural gas liquids, and natural gas, for purposes of determining whether a person’s production has exceeded 1.6 million barrels in the prior period, and thus whether he or she will be on the Restricted Joint Bidders List (sometimes referred to below as the “List”). For example, prior section 556.43(d) stated that: “[a]ll measurements of crude oil

. . . under this section shall be at 60 degrees Fahrenheit.” These important provisions were left out of the proposed rule with no explanation other than that section 256.43 (previously 556.43) was “simplified and reorganized.” BOEM has reconsidered this “simplification and reorganization” and has determined that these measurement-describing provisions should be retained. They appear in final rule section 556.513(d).

Section 556.511. Are there restrictions on bidding with others and do those restrictions affect my ability to bid? This section prohibits joint bidding by major oil and gas producers under certain circumstances. Final rule section 556.511 is substantively the same as proposed rule section 256.411, but the final rule section has one additional paragraph. This additional paragraph, 556.611(d), makes clear that a person on the Restricted Joint Bidders List may not enter into a pre-bidding agreement for the conveyance of any lease interest to another person on the List. The prohibition on pre-bid agreements between persons on the List was addressed in prior section 556.44 (c), but was not addressed in the proposed rule. BOEM has decided to retain this provision because of its continued relevance and applicability.

Section 556.512. What bids may be disqualified? This section provides the circumstances under which a bid for any oil and gas lease will be disqualified and/or rejected. Final rule section 556.512 does not have a counterpart in the proposed rule, but it was found in the prior regulations at section 556.44. The Preamble to the proposed rule stated that section 256.44 (now 556.44) was “simplified,” and the reader was directed to proposed rule section 256.402 in its stead, but this “simplification” would create a discrepancy. Current section 556.44 addresses disqualification of certain types of bids involving persons on the List of Restricted Joint Bidders. Proposed rule section 256.402 has nothing to do with joint bidding, but sets forth three discrete situations where any person may be disqualified from holding a lease (exclusion due to the non-procurement debarment and suspension system, failure to exercise due diligence, or unacceptable operating performance). The substance of prior section 556.44 did not appear anywhere in the proposed rule, but BOEM has decided that it is necessary for a full understanding of the effects and ramifications of being placed on the Restricted Joint Bidders List. Therefore, the text of prior section 556.44 has been retained, verbatim, with only necessary

conforming changes, in final rule section 556.512.

Section 556.513. When must I file a statement of production? This section explains the circumstances under which a lessee must prepare and send to BOEM a statement describing its oil and gas production and what the statement is to contain. Final rule section 556.513 contains the substance of proposed rule section 256.412, as well as three subparagraphs previously found at prior section 556.40(l) and omitted from the proposed rule. Proposed rule section 256.412 explained that a person on the List of Restricted Joint Bidders would have to file a statement of production when its production exceeded 1.6 million barrels of oil, natural gas liquids, and natural gas during the prior production period. The prior regulations had the same provision, but the prior regulations, at section 556.40(l), also defined what "Production" meant with respect to each of these resources. Appropriate portions of the 556.40(l) definitions have been retained in final rule section 556.513 to make clear what is to be included in the measurement of crude oil, natural gas liquids, and natural gas when determining production chargeable to the prior production period.

Section 556.514. How do I determine my production for purposes of the Restricted Joint Bidders List? This section details what production must be counted when determining whether a company should be considered a "restricted bidder." Final rule section 556.514 replicates proposed rule section 256.413, with some concepts included from prior sections 556.40 and 556.43. Section 556.43(d) states that "[a]ll measurements of crude oil and liquefied petroleum products [referred to as natural gas liquids in the final rule] . . . shall be at 60 degrees Fahrenheit." The proposed rule did not include the 60 degree Fahrenheit measurement parameter, but BOEM has decided to retain it as a necessary instruction for those persons who need to determine their production for purposes of the Restricted Joint Bidders List. The measurement parameter is in final rule section 556.514(a)(1).

Also in final rule section 556.514(a)(1) is a reference to the equivalency factors set forth in 42 U.S.C. 6213(b)(2) and (3), which state, respectively: "[o]ne barrel of natural gas equivalent equals 5,626 cubic feet of natural gas measured at 14.73 pounds per square inch [(PSI) relative to the mean sea level, or] (MSL) and 60 degrees Fahrenheit" and "[o]ne barrel of natural gas liquids equivalent equals 1.454 barrels of natural gas liquids at 60 degrees Fahrenheit." These

two equivalencies were found in the prior regulations at section 556.43(e), but were omitted from the proposed rule. BOEM believes that these equivalencies are also necessary instructions for persons attempting to determine whether their production would place them on the Restricted Joint Bidders List.

The final rule, at section 556.514(d), also retains the definition of "subsidiary" found in prior section 556.43(a)(3), but not contained in the proposed rule. Final rule section 556.514(f), which further explains how measurements of resources must be made, was not in the proposed rule, but was found at prior section 556.40(l)(1) and (2).

Final rule section 556.514(e) is a logical extension of the interplay among prior section 556.40's definitions of "economic interest" and "owned" and prior section 556.43(b). The definitions in prior section 556.40 applied to joint bidding and restrictions thereon. The definition of "economic interest" defines certain types of passive interests, such as a royalty interest or a net profits interest. The definition of "owned" in prior 556.40 included "having . . . an economic interest in" the production of crude oil, natural gas, or natural gas liquids. And 556.43(b) stated that a person is chargeable, for purposes of joint bidding restrictions, with production that it "owns." Therefore, reading these provisions logically together, a person's economic interest in production must be counted in that production chargeable to him or her for purposes of determining whether he or she is on the Restricted Joint Bidders List. This concept from the prior regulations is retained in the final rule in section 556.514(e) and the text was not changed from how it was originally proposed.

Section 556.515. May a person be exempted from joint bidding restrictions? This section provides the circumstances under which a person may be exempted from joint bidding restrictions. Final rule section 556.515 is based on proposed rule section 256.414. Proposed section 256.414, however, did not state the specific regulatory sections from which exemption from the joint bidding restrictions or reporting requirements may be granted. These specific designations were found in the prior regulations, at section 556.41(d), and have been retained in final rule section 556.515.

How Does BOEM Act on Bids?

Section 556.516. What does BOEM do with my bid? This section outlines the

procedures BOEM will follow when reviewing bids received for leases on the OCS and when handling tie bids.

Section 556.516 of the final rule is based on proposed rule section 256.416.

Proposed section 256.416(b) stated that BOEM would accept or reject all bids within 90 days, or a longer time if BOEM extended the 90-day period.

Section 556.516(b) of the final rule adds that BOEM will timely notify bidders in writing of a decision to extend the 90-day period. Proposed section 256.416(d) states that the Attorney General may review the results of a sale before BOEM accepts any bid. This requirement is repeated in final rule section 556.516(d), with additional language explaining that the Attorney General must act within 30 days and may consult with the Federal Trade Commission. Both of these strictures are found in section 8(c)(1) of OCSLA (43 U.S.C. 1344(c)(1)).

BOEM received the following comment: "There is no policy reason not to allow co-ownership by agreement of bidders with a tie bid, when the tie bidders are on the restricted joint bidder list. Those parties cannot have communicated or agreed with respect to the bid, but going forward could agree to an assignment creating co-ownership after the lease is awarded." Neither the prior regulations (see 30 CFR 556.47(c)), nor the proposed rule, (see section 256.416(c)), permit tie high bidders who are both (or all) on the Restricted Joint Bidders List to accept a lease jointly. BOEM considered the comment above but concluded that there is no way to know whether tie bidders "communicated or agreed with respect to the bid." Therefore, BOEM has decided that the current policy is a sound one and will not be changed.

There is one significant difference between proposed rule section 256.416 and final rule section 556.516. Proposed rule section 256.416(c) addressed tie bids and stated that if there was no agreement among the bidders as to who would receive the lease, BOEM would "award the lease to the high bidder selected by lot." The prior regulation, at section 556.47(e)(2), did not allow a bid to be awarded by lot, but stated that if an agreement from the tie bidders was not submitted to BOEM within 15 days, "all bids shall be rejected."

BOEM has reconsidered the "award by lot" policy enunciated in the proposed rule, and has decided not to adopt that policy. The policy is inherently unfair to one of the bidders and is inconsistent with BOEM's long-standing policy that if no bids are accepted, the lease will be withheld by BOEM and offered in the next lease sale. This policy affords BOEM the

opportunity to obtain a greater return, furthering OCSLA's goal that BOEM obtain fair market value for OCS leases. See, section 18(a)(4) of OCSLA (43 U.S.C. 1344(a)(4)). BOEM will therefore retain the policy in the existing regulation that all tie bids, for which a timely agreement delineating who will receive the lease has not been submitted to BOEM, will be deemed rejected. This policy is stated in final rule section 556.516(c)(3).

Section 556.517. What may I do if my high bid is rejected? This section describes the reconsideration procedures that apply in the event that a high bid is rejected by BOEM. Proposed rule section 256.417 would have allowed a bidder whose bid was rejected to request reconsideration of that rejection within 15 days, and stated that the bidder would receive a written response. The previous regulations at section 556.47(e), and the proposed rule at section 256.410, stated that the request for reconsideration is to be made to the Secretary. The proposed rule section did not address whether such a request could be appealed, but the previous regulations at 556.47 stated that decisions on high bids are not subject to review by the Department's Office of Hearings and Appeals.

BOEM received a comment on proposed section 256.417 that requested more detail regarding reconsideration of rejection of a high bid, specifically as to the review process for a reconsideration request. In response to the comment, BOEM has added detail to the final rule section to clarify the procedures to be followed by the bidder requesting reconsideration, and those that will be followed by BOEM when it receives such a request. Therefore, final rule section 556.517 states that the decision of the authorized officer on bids is the final action of the Department, and that the request for reconsideration of such a decision must be made to the Director, as the Secretary's delegate, and must include evidence as to why the decision should be reconsidered. The final rule section retains the section 556.47 statement that the decision on the reconsideration is not subject to review by the Department's Office of Hearings and Appeals.

#### Awarding the Lease

Section 556.520. What happens if I am the successful high bidder and BOEM accepts my bid? This section describes the steps involved in the lease award process. BOEM received several comments on proposed section 256.420, which appears at final rule section 556.520, particularly on proposed section 256.420(c). That paragraph

stated that if a successful bidder did not return the executed lease in the prescribed time or if it otherwise failed to comply with the regulations, its deposit would be forfeited "and [BOEM] may take appropriate action to collect the full amount bid." Three commenters pointed out that, traditionally, in the scenario posited above, the bidder's deposit was forfeited, but BOEM had never attempted to collect the full amount bid. One of these commenters stated that "[p]ayment of the one-fifth amount is sufficient penalty," and payment of amounts beyond that "is not warranted." Another of the commenters pointed out that forfeiting the "significant penalty" of the one-fifth deposit "allows lessees to make an informed decision on leasing if information relating to the area becomes available after the bids are made." The third commenter "objected" to the forfeiture of the full bid amount, but also suggested some alternatives for BOEM's implementation of this provision, such as offering the second-highest qualified bidder the lease if the high bidder forfeits.

BOEM generally agrees with the comments. Accordingly, final rule section 556.520 does not include the language that, in a forfeiture situation, BOEM may take action to collect the full amount bid. Nor will BOEM offer the lease to the second-highest bidder, as that could violate BOEM's mandate to obtain fair market value for all leases. Instead, BOEM will retain the current policy, now expressed in the regulations at section 556.47(g), that in the case of forfeiture, the forfeiting bidder will lose its deposit.

BOEM also received a comment on another aspect of proposed section 256.420(c). The comment noted that the proposed section states that a high bidder must "execute and return the lease within 11 business days after receipt" and contrasted that with the prior regulation, which stated that "the bidder shall, not later than the 11th business day after receipt of the lease, execute the lease." See, section 556.47(f). The comment pointed out that while the current language does not specify that the executed lease must be returned to BOEM by the 11th day, the proposed rule section does so specify. The comment asked if this "signif[ies] a change in how the process is administered?" The rule does not signify a change in the interpretation of the regulation or in the administration of the process. The prior regulation was interpreted to mean that the lease must be executed and returned by the 11th business day after it is received, and the proposed and final rules continue this

policy, but make the language more precise.

Section 556.521. When is my lease effective? Final rule section 556.521 and proposed rule section 256.421 are the same. They both state BOEM's long-standing policy that a lease is effective on the first day of the month following the month in which BOEM executes the lease, but that a lessee may request that its lease be made effective as of the first day of the month in which BOEM executes it. The final rule also adds a provision that, if BOEM agrees to make it effective as of the earlier date, it will so indicate when it executes the lease.

Section 556.522. What are the terms and conditions of the lease and when are they published? This section provides that the terms and conditions of the lease will be stated in the final notice of sale, as well as in the lease instrument itself. Final rule section 556.522 is based on prior section 556.49. The prior section stated that oil and gas and sulfur lease forms will be approved by the BOEM Director. The prior section also mentioned forms for other minerals. The section was not included in the proposed rule, the Preamble of which stated that the "[d]iscussion of form[s] for other minerals [was] eliminated as redundant." However, the proposed rule eliminated all of prior section 556.49 and BOEM has decided to retain, in final rule section 556.522, the statement as to forms for oil and gas and sulfur leases. Final rule section 556.522 also echoes final rule section 556.308(a)(2), which states that the terms and conditions of the lease will be found in the final notice of sale.

#### 7. Subpart F—Lease Term and Obligations

##### Length of Lease

Section 556.600. What is the primary term of my oil and gas lease? Final rule section 556.600 (a) and (b) closely follows OCSLA and makes clear that the initial period/primary term of a lease will be five years, unless BOEM determines that a longer initial period/primary term, up to 10 years, is necessary due to unusually deep water or unusually adverse conditions. Proposed section 256.600 stated that an initial period of an oil and gas lease "may range from five to ten years," but provided no clarification as to why there could be such a range. Section 8(b) of OCSLA (43 U.S.C. 1337(b)) states that the initial period of a lease must be for five years, or for up to 10 years, if extension of the lease term is necessary due to unusually deep water or other unusually adverse conditions.

Final rule section 556.600 (a) and (b) follows OCSLA's example, with one slight difference. OCSLA most commonly refers to the initial term of a lease as the "initial period," but also refers to the initial term as the "primary term." See, e.g., section 8(a)(7)(C) of OCSLA (43 U.S.C. 1337(a)(7)(C)). BOEM uses the phrase "primary term" in the final rule.

Proposed rule section 256.600 used the term "initial period" to refer to the originally granted length of a lease. The terms "primary term" and "initial period" were used interchangeably throughout BOEM's prior regulations to mean the same thing (for example, 556.37(a) and (b) refer to "initial period," while 556.68(b) and (c), and 556.70 refer to "primary term") and BOEM has elected to use the phrase "primary term" rather than "initial period" in this final rule in order to better reflect the lease term description that is most commonly used in the U.S. oil and gas industry.

The final rule removes the provision found in BOEM's previous regulations at section 556.37 and proposed rule section 256.600, which stated that, for leases in water depths between 400 and 800 meters, the primary term will be eight years, subject to administrative cancellation if no exploratory well is begun during the first five years after lease issuance. No further notice and comment are required for this change, as BOEM notified the public of the change in 2009 and provided an opportunity to comment, and all lease sales since 2009 have been consistent with this new practice. Specifically, BOEM stopped issuing leases with eight-year primary terms beginning with Central Gulf of Mexico Lease Sale 213, held on March 17, 2010. On November 16, 2009, eight months after the publication of the proposed rule, the MMS published the Proposed Notice of Sale for Lease Sale 213 (PNOS) (74 FR 58975). The PNOS notified the public that BOEM was considering dropping the eight-year primary term, and replacing it with a five-year primary term, which could be extended another three years if certain conditions were met. The PNOS also detailed that this five-year primary term, with a possible three-year extension, would apply in water depths between 0 and 800 meters, whereas a seven-year primary term, with a possible three-year extension, would apply in water depths between 800 and 1600 meters. In more than 1600 meters of water, the PNOS stated that the primary term would be 10 years.

The PNOS also stated that, if a five- or seven-year primary term were not extended, the lease would expire,

removing the need for administrative cancellation. The MMS received comments on the change from an eight-year primary term to a five- or seven-year primary term, as well as on the change from cancellation to expiration. The MMS carefully considered these comments and responded to them in the Final Notice of Sale for Lease Sale 213 (FNOS). In the FNOS, the MMS stated that it had decided to no longer offer leases with eight-year primary terms and to proceed with offering leases in Sale 213 with five- and seven-year primary terms, which would be subject to extension or expiration.

BOEM has offered five- and/or seven-year primary terms in all eight lease sales held since Sale 213 and intends to continue doing so. To avoid any confusion about whether BOEM intends to revert to the pre-2010 practice of issuing leases for eight year terms contingent on drilling in the first five years, however, final rule section 556.600 tracks OCSLA closely in stating that the primary term of all leases will be five years, unless BOEM specifies otherwise. Unlike the prior regulations and the proposed rule, section 556.600 in the final rule does not attempt to "specify otherwise" in the regulation itself. Instead, it states, at subsection 556.600(c), that BOEM will specify the primary term in the final notice of sale and in the lease instrument, giving BOEM flexibility for the future.

The new language will not preclude BOEM from offering eight year leases, nor does the existing regulation mandate eight year leases. Thus, the rule does not change BOEM's current practice. Accordingly, pursuant to 5 U.S.C. 553(b)(3)(B), BOEM, for good cause, finds that notice and public comment are unnecessary. In any event, as noted above, the public had an opportunity to express its views on the underlying policy in response to the PNOS published in the **Federal Register** in 2009.

Section 556.601. How may I maintain my oil and gas lease beyond the primary term? This section lists the ways in which a lessee may maintain its lease for a period of time after the end of the primary term. Final rule section 556.601 is substantively the same as proposed rule section 256.601, with some minor language changes for clarity. Proposed rule section 256.601(a) included, among the ways of maintaining a lease beyond its primary term, the granting of a suspension, but final rule section 556.601(f) retains the more specific language from prior sections 556.37(b) and 556.73 that maintenance of a lease beyond the primary term will not result from a suspension imposed due to gross

negligence or willful violation of a lease provision or regulation.

Section 556.602. What is the primary term of my sulfur lease? As described in proposed rule section 256.602, final rule section 556.602 states that the primary term of a sulfur lease will be not more than 10 years, as mandated by section 8(j) of OCSLA. (43 U.S.C. 1337(j)). Proposed section 256.602 stated that a sulfur lease is subject to administrative cancellation if an exploratory well was not begun in the first five years. BOEM is no longer following the practice of cancelling leases in these circumstances, and this provision has been dropped from the final rule. Instead, final rule 556.602 states that the sulfur lease will expire at the end of the primary term if not maintained in accordance with the regulations.

Section 556.603. How may I maintain my sulfur lease beyond the primary term? This section lists the ways in which a lessee may maintain its sulfur lease after the end of the primary term. Final rule section 556.603 is substantively the same as proposed rule section 256.603, with some minor language changes for clarity. Proposed rule section 256.603 included, among ways of maintaining a lease beyond its primary term, the granting of a suspension, but final rule section 556.603 elaborates that such an extension cannot result from a suspension imposed due to gross negligence or willful violation of a lease provision or regulation, as was stated at prior section 556.73.

#### Lease Obligations

Section 556.604. What are my rights and obligations as a record title owner? This section outlines the rights and obligations of a record title holder of an OCS lease. Final rule section 556.604 includes, with different subsections and some additional language, proposed rule sections 256.605 and 256.612. Proposed rule section 256.605 was entitled, "What are my obligations as a record title owner?" and proposed rule section 256.612 was entitled, "May I assign operating rights?" In the final rule, BOEM has combined these sections, as they both address the rights and obligations of a record title owner.

Proposed rule section 256.612 stated that a record title owner may assign (sever) operating rights, and refers to these assignments as "subleases," which they are. The term "assignment of operating rights" has been used in the past, but is inaccurate when referring to an initial severance of operating rights. Operating rights are a part of the whole of a record title interest. When they are initially severed, they are actually

carved out of the record title and subleased to another party, while the record title owner retains the rest of the record title interest, *i.e.*, that part of the record title from which the operating rights were severed. This is different from a true assignment of a record title interest, wherein the assignor does not retain the corresponding part of the record title interest. And it is also different from a true assignment of an operating rights interest, which would occur when one who owns operating rights transfers his operating rights interest to another. Final rule section 556.604(b) retains the proposed rule's use of the term "sublease" and specifically states that a record title owner may sublease its operating rights to someone else, who is thereby the sublessee, referred to in the regulations as the operating rights owner.

Both proposed rule section 256.612 and final rule sections 556.604(b) and (c) explain that operating rights must be described by officially designated aliquot parts, and that, within any aliquot part, a record title owner may create a maximum of two subleases by depth. The one, or two, subleases may include the entire depth of the lease, but if they do not, any depth intervals not subleased are retained by the lessee/sublessor. Final rule section 556.604(c) elaborates that if two subleases are created by depth level, the two subleases must abut each other, with no gap in between. The "no gap" concept did not appear in the proposed rule, but it is, and has been, BOEM's long-established policy, and imposes no new duty on lessees. Therefore notice and comment is unnecessary.

Both proposed rule section 256.605(a) and final rule section 556.604(d) explain that a record title interest owner is jointly and severally liable, with all other record title owners and all operating rights owners, for all non-monetary obligations of a lease that accrue while it holds record title. Final rule section 556.604(f) also contains the concept that a record title owner who obtained its record title through assignment is responsible for remedying all existing environmental or operational problems on a lease, with subrogation rights against prior lessees. This concept was found in both the prior regulations and in the proposed rule in sections addressing transfers of lease interests, (556.62(e) and 256.618, respectively), as it is in the final rule (556.713 and 556.807), but it is also appropriately included here, as the requirement that an assignee remedy all existing environmental and operational lease problems is an "obligation" of the assignee-record title owner.

Proposed rule section 256.605(b) and final rule section 556.604(f) both also address the responsibility of record title owners for monetary obligations, pursuant to the Federal Oil and Gas Royalty Simplification and Fairness Act. Both sections make clear that, with respect to operating rights retained by a record title owner, the record title owner is primarily liable for monetary obligations, but with respect to those operating rights that have been subleased to others, the record title owner becomes secondarily liable, while the sublessee/operating rights owner is primarily liable.

Section 556.605. What are my rights and obligations as an operating rights owner? Proposed rule section 256.606 and final rule section 556.605 both address the rights and obligations of an operating rights owner, as opposed to a record title owner.

Final rule section 556.605(d) was added as the result of two comments on the proposed rule. The comments pointed out that the proposed rule was inconsistent in that proposed section 256.605(a) stated that operating rights owners were jointly and severally liable with record title owners for all non-monetary obligations, but proposed section 256.606(c) stated that operating rights owners were so liable only with respect to that portion of the lease subject to their operating rights. To make clear that the latter concept is correct, BOEM added final rule section 556.605(d), which states: "[a]n operating rights owner is only liable for obligations arising from that portion of the lease to which its operating rights appertain and that accrue during the period in which the operating rights owner owned the operating rights."

Proposed rule sections 256.606(c) and (d) are essentially repeated in final rule sections 556.605 (e) and (g). In both cases, the former section states that an operating rights owner is jointly and severally liable, with all other operating rights owners and record title owners, for non-monetary obligations. Also in both cases, the latter section states that an operating rights owner is liable for monetary obligations in proportion to its share of operating rights. Final rule section 556.605(g) goes on to point out that operating rights owners are primarily liable for these monetary obligations, while (as stated in final rule section 556.604(f) and pointed out above) record title owners are secondarily liable.

Final rule section 556.605(f) also makes clear that operating rights owners that obtained rights through assignment are responsible for remedying all existing environmental or operational

problems on a lease, with subrogation rights against prior operating rights owners. As mentioned above, this concept was found in both the prior BOEM regulations and in the proposed rule in sections addressing transfers of lease interests, (556.62(e) and 256.618, respectively), as well as in other sections of the final rule (556.712 and 556.807), but it is also appropriately included here, as the requirement that an assignee remedy all existing environmental and operational lease problems is an "obligation" of an assignee of operating rights.

#### Helium

Section 556.606. What must a lessee do if BOEM elects to extract helium from a lease? This section provides that BOEM reserves the ownership of, and the right to extract, helium from all gas produced from an OCS lease, and describes what BOEM will do if it requests you to deliver helium from operations associated with a lease. Final rule section 556.606 repeats proposed rule section 256.630. The final rule makes no changes to the proposed rule, other than conforming changes, such as changing "MMS" to "BOEM."

#### 8. Commentary on Subparts G & H—Transferring Interests in a Lease

The proposed rule followed the general format of the prior regulations in addressing together, in one regulatory subpart, both transfers of record title interests and transfers of operating rights interests. These two types of transfers are not the same, however, and they may have different consequences. Addressing them in the same regulatory sections has sometimes led to confusion and ambiguity. Therefore, in the final rule, BOEM divided the provisions dealing with assignment of different types of lease interests into two different subparts. Subpart G includes those provisions detailing the effects of an assignment of a record title interest, while subpart H includes those provisions detailing the effects of a sublease or subsequent assignment of an operating rights interest. None of the provisions in these subparts contains anything substantively new relative to the prior regulations, but the final rule more clearly separates out and explains the effects of an assignment of each type of lease interest on both the assignor and assignee. Subpart G consists of sections 556.700 through 556.716, and subpart H consists of sections 556.800 through 556.810. A section-by-section analysis of the sections in Subpart G is presented below, followed by a section-by-section analysis of the sections in Subpart H.

### 9. Subpart G—Transferring All or Part of a Record Title Interest in a Lease

Section 556.700. May I assign or sublease all or any part of the record title interest in my lease? This section describes how a company may apply for approval to assign its whole or partial record title interest in its lease, or in any aliquot(s) thereof or to sublease operating rights. Proposed rule sections 256.610, 256.611, and 256.612 were collapsed and subsumed into final rule section 556.700, insofar as they apply to transfers of record title interests. Proposed rule section 256.610 stated that all transfers of lease interests require BOEM approval. Proposed rule section 256.611 and proposed rule section 256.612 repeated this requirement, with respect to transfers of “lease interests,” and operating rights, respectively. The requirement that BOEM approve transfers of record title interests and severances of operating rights interests appears in final rule sections 556.700(a), (b), and (c). Proposed rule sections 256.611 and 256.612 also specified that transfers must be properly described by aliquot parts and/or depth. This requirement of proper description is retained in final rule section 556.700(c).

Proposed rule section 256.611 referred to both “subdivisions” and “aliquot parts” when describing transfers of lease interests, but in final rule section 556.700, we removed the reference to subdivisions, retaining only the reference to aliquot parts, in order to reduce the potential for confusion. We also removed the definition of “aliquot part” from this section and moved it into the definitions section of the rule, section 556.106.

The last sentence of proposed rule section 256.611, stating that BOEM may disapprove a transfer when the assignor or assignee has unsatisfied obligations under this chapter, has been moved to final rule section 556.704, entitled, “When would BOEM disapprove an assignment or sublease of an interest in my lease?” Placement in that final rule section is more appropriate.

Section 556.701. How do I seek approval of an assignment of the record title interest in my lease, or a severance of operating rights from that record title interest? This section describes the process for obtaining BOEM approval of an assignment of a record title or operating rights interest in an OCS lease. Final rule section 556.701(a) was found at proposed rule section 256.613(a). The proposed rule section, at 256.613(a)(1), set out the official form numbers and names that one would use to effectuate and request approval of a

transfer of lease interest. The final rule, however, merely states that the BOEM Regional Director will provide the form to be used to request and record such a transfer. BOEM made this change to retain flexibility as to form name and number in case these identifiers change in the future.

Proposed rule section 256.613(b), which provided that BOEM must consult with and consider the views of the Attorney General before approving a transfer of a lease interest, appears at final rule section 556.701(b). Finally, final rule paragraph 556.701(b) retains from prior section 556.65 the statement that the Secretary may act on a transfer if the Attorney General does not respond to a consultation request within 30 days of that request.

Section 556.702. When will my assignment result in a segregated lease? Final rule section 556.702(a) and proposed rule section 256.613(a)(2) both make clear that a transfer of 100% of the record title interest in one or more aliquots of a lease results in segregating the lease into two leases, both of which are referred to as “segregated leases” and are subject to all the terms and conditions of the original lease. (Although it would be uncommon, it is also possible that a lease could be segregated into more than two leases.)

Final rule section 556.702 also contains a subsection that was not found in the proposed rule and was not in the prior regulations—556.702(b). This provision in the final rule clarifies the principles governing lease segregation. It is an outgrowth and corollary of the lease segregation concept expressed in proposed rule section 256.613(a)(2). Specifically, final rule section 556.702(b) sets forth the direct corollary to section 556.702(a) by making clear that transfer of anything less than 100% of the record title interest in a certain aliquot does not create a new lease, but creates a joint ownership situation between the assignee(s) and assignor(s) in the portion of the lease in which part of the ownership was transferred.

The last sentence of final rule section 556.702(b) states that a transfer of less than 100% of the record title to an aliquot(s) is subject to BOEM approval. This sentence reiterates the principle that all transfers of lease interests are subject to approval by BOEM, pursuant to section 8(e) of OCSLA (43 U.S.C. 1337(e)), the lease terms (see section 20 of the current lease form, Form BOEM–2005), and prior regulations. This sentence was added in the final rule to ensure that there is no doubt as to whether a transfer that creates a joint ownership in a portion of a lease would

constitute a lease transfer necessitating BOEM approval.

Section 556.703. What is the effect of the approval of the assignment of 100 percent of the record title in a particular aliquot(s) of my lease and of the resulting lease segregation? Final rule section 556.703 addresses the effects of a lease segregation (*i.e.*, a transfer of 100% of a record title interest in a particular aliquot of a lease, which creates a new lease to be in effect on the segregated aliquot). It combines part of proposed rule section 256.613(a)(2) with retained parts of BOEM’s prior regulations from section 556.68. Proposed rule section 256.613(a)(2) stated that, in the case of a lease segregation, the requirement to post the requisite financial assurance applies to each new lease. This concept has been carried through into final rule section 556.703(a).

An important clarification is made in final rule section 556.703(c). The proposed rule at section 256.613(a)(2) stated that upon lease segregation, “the newly segregated lease . . . is subject to all the terms and conditions of your original lease.” The ambiguity of this language could give rise to an improper inference in certain circumstances that the terms of the original lease pertaining to any applicable royalty suspension volume (RSV) would apply in full and equally to each of the segregated leases.

BOEM’s prior regulations in section 556.68(a) were more specific than those from the proposed rule’s section 256.613(a)(2), but are still ambiguous on this point. The prior regulation stated that “[r]oyalty, minimum royalty and rental provisions of the original lease shall apply separately to each segregated portion.” The prior regulation mentioned royalty provisions specifically, and stated that such provisions will apply “separately” to each lease, but its relationship to any unused RSV was not clear.

The ambiguity in the prior regulation may have led some to incorrectly infer that when a lease is segregated, each new lease would be allowed the entire amount of remaining available RSV that applied to the original lease. Such an interpretation would not have been justified. In the case of segregation of a deep water lease with an RSV into two leases, for example, that interpretation would have the substantive effect of doubling the remaining volume of royalty-free production. That is not the intent of offering particular leases with specified royalty suspension volumes under the authority of 43 U.S.C. 1337(a)(1)(H) or 1337(a)(3)(C) (the royalty relief provisions of the OCSLA enacted in the Deep Water Royalty

Relief Act of 1995) or 42 U.S.C. 19504 or 19505 (the deep gas and deep water royalty relief provisions in the Energy Policy Act of 2005). The correct interpretation is that if an offshore lease is divided through segregation, any remaining unused RSV must be shared by the segregated leases in a manner not to exceed the total amount of the remaining unused RSV.

Final rule section 556.703(c) clarifies that in a lease segregation, each segregated lease is not individually entitled to the whole remaining RSV allowed to the original lease. Each lease segregation is unique and presents different circumstances that might affect the allocation of RSV. Therefore, paragraph (c) makes clear that BOEM will allocate the RSV among segregated leases on an equitable basis, considering all of the circumstances. Circumstances that may affect that allocation include the reasons for the segregation, whether the lease is producing, the relative production of the leases after segregation, future development plans, etc. The allocation of any remaining RSV will be stated in BOEM's approval of the assignment and segregation.

Final rule section 556.703(c) grows out of the proposed rule's statement at section 256.613(a)(2) that a newly segregated lease "is subject to all the terms and conditions of [the] original lease." The final rule section carries forward the concept that the newly segregated lease is "subject to" any RSV provision that applied to the original lease, but clarifies in what manner that RSV provision will be applied to the two now-segregated leases. The language of final rule section 556.703(c) also clarifies the prior regulation's statement that royalty provisions apply "separately" to each lease. The final rule's language continues to apply the RSV provision "separately" to each segregated lease, but clarifies that "separately" does not mean "equally."

Final rule section 556.703(d) retains from prior section 556.68(b) the principle that each segregated lease continues in effect for the primary term specified in the original lease, unless maintained thereafter pursuant to the regulations. Paragraph (d) makes express the principle that with respect to continuation beyond the primary term, each segregated lease stands on its own. To remain in force after the primary term, each segregated lease must, on its own, meet the requirements of section 556.601, regardless of whether other segregated leases, which were part of the original lease, meet such requirements. Production from one segregated lease will not keep any other lease that was part of the original lease

in effect beyond its primary term (unless, of course, the leases are included within the same unit). BOEM believes that the regulations are more clear with both principles expressly stated in the final rule.

Section 556.704. When would BOEM disapprove an assignment or sublease of an interest in my lease? Final rule section 556.704 sets forth when a transfer of a lease interest may be void or disapproved by BOEM. The final rule section combines parts of proposed rule section 256.611 and section 556.62 from BOEM's prior regulations. The last sentence of proposed rule section 256.611 stated that an assignment could be disapproved if the assignor or assignee had outstanding obligations under this chapter of the regulations. This provision appears at final rule section 556.704(a)(1). Prior section 556.62 voided assignments made pursuant to certain prelease agreements. This provision is found at final rule section 556.704(b).

Final rule section 556.704 also contains two provisions, at paragraphs (a)(2) and (a)(3), which make clear that BOEM may disapprove an assignment that is incorrect as to form or that does not comport with the regulations. Provision 556.704(a)(2) more clearly expresses the intent of proposed rule section 256.613, which listed the names and numbers of the forms that BOEM requires to be used to effectuate a transfer of record title or operating rights interests. Pursuant to the proposed rule, BOEM would accept only transfers submitted on these forms. Implicit in the requirement to use these forms is the requirement to complete them correctly. Transfers attempted to be submitted on other forms, on incorrectly completed forms, or using other documentation would not be accepted.

In order to allow more flexibility and avoid restricting BOEM to a particular form name or number stated in the regulations, the final rule states that the Regional Director will provide a form for use in transfers of record title or operating rights. As in the proposed rule, however, only the form provided by the Regional Director will be accepted by BOEM, and only when completed correctly. Therefore, final rule section 556.704(a)(2) makes clear that a transfer request submitted to BOEM may be rejected if not "acceptable as to form or content." The latter provision, 556.704(a)(3), provides that an attempted transfer that does not comport with the regulations or other applicable law will be disapproved.

Section 556.705. How do I transfer the interest of a deceased natural person

who was a lessee? This section outlines the procedures to follow to transfer an interest in an OCS lease from a deceased natural person. Final rule section 556.705 repeats proposed rule section 256.614, with minor wording changes.

Section 556.706. What if I want to transfer record title interests in more than one lease at the same time, but to different parties? Final rule section 556.706 repeats proposed rule section 256.615 with some minor language changes. Both the proposed and final rule sections address a lessee or other interest holder who desires to transfer interests it owns in different leases to different parties. Both sections note that in this situation, each transfer requires its own instrument, which must be originally executed and filed in duplicate with BOEM.

Section 556.707. What if I want to transfer different types of lease interests (not only record title interests) in the same lease to different parties? This section outlines the process for transferring different types of interests in a lease to different parties. Final rule section 556.707 derives from proposed rule section 256.615. That proposed rule section addressed the situation where interests in *different leases* are being transferred to different parties. The proposed rule said nothing, however, about the corollary situation: Where the interest holder desires to transfer different types of lease interests in the *same lease* to different parties. Final rule section 556.707 was added to cover this corollary situation. It states that even if an interest holder is transferring interests in the same lease, if they are different types of interests and being transferred to different parties, each transfer requires its own separate instrument, which must be duly executed and filed in duplicate with BOEM.

Section 556.708. What if I want to transfer my record title interests in more than one lease to the same party? This final rule section addresses lessees who desire to transfer interests in more than one lease to the same party. Final rule section 556.708 derives from the first sentence of proposed rule section 256.615. As noted by both proposed rule section 256.615 and final rule section 556.708, a lessee may not transfer record title interest in more than one lease using the same instrument. If a lessee wishes to transfer record title interest in more than one lease at the same time, the lessee must submit separate, originally executed forms for each transfer. Final rule section 556.708 also retains the statement from prior section 556.64(a)(8) that a separate fee applies to each individual transfer of interest.

Section 556.709. What if I want to transfer my record title interest in one lease to multiple parties? This section describes the requirements associated with transferring the record title interest in a lease to multiple parties. There is no analogous section in the proposed rule to final rule section 556.709, but the final rule section is a clarification of proposed rule section 256.615. That proposed rule section addressed the situations where interests in *different leases* are being transferred to different parties, or to the same party. The proposed rule did not address, however, the corollary situation, where the interest holder desires to transfer different portions of its record title interest in the *same lease* to multiple parties. Final rule section 556.709 was added to cover this corollary situation. It states that if a record title owner is transferring its record title interests in a single lease to multiple parties, it may use a single instrument. This differs from the circumstance addressed in section 556.707 where transfers of more than one type of interest in the single lease require use of more than one instrument. Final rule section 556.709 also retains the statement from prior section 556.64(a)(8) that where multiple transfers of interest are accomplished, a separate fee applies to each individual transfer of interest.

Section 556.710. What is the effect of an assignment of a lease on an assignor's liability under the lease? Final rule section 556.710 was found at proposed rule section 256.616. Both the proposed and final rule sections state the long-established regulatory concept that after an assignment an assignor remains liable for all monetary and non-monetary obligations that accrued before approval of the assignment. Proposed rule section 256.616 applied to assignments in general, but final rule section 556.710 applies only to transfers of record title interests, and an analogous final rule section, 556.805, applies only to transfers of operating rights interests.

Section 556.711. What is the effect of a record title holder's sublease of operating rights on the record title holder's liability? This section provides that a record title holder who subleases operating rights remains liable for later accruing obligations of the lease, but is only secondarily liable for monetary obligations accruing thereafter. Parts of proposed rule section 256.616 appear at final rule section 556.711, specifically in 556.711(a) and (b). These two paragraphs, along with final rule section 556.709, retain all of proposed rule section 256.616 and make clear the extent of the liability retained by a party

who assigns its record title interest. BOEM received a comment on proposed rule section 256.616 requesting that the final sentence be deleted because it was ambiguous. BOEM agrees with the comment and has deleted that sentence. The scenario it addressed in the proposed rule has been addressed without ambiguity in final rule section 556.711(a).

Final rule section 556.711(c) arises from FOGPMA, and states that a sublessee of operating rights is primarily liable for monetary obligations, but the record title holder, even after the sublease, remains secondarily liable for monetary obligations.

Section 556.712. What is the effective date of a transfer? This section describes the effective date of the transfer of a record title interest in a lease. Final rule section 556.712 is a combination of proposed rule section 256.617 and section 556.62(c) of BOEM's prior regulations. In the proposed rule, section 256.617 stated that an assignment is effective on the first day of the month following the request to assign, not following the date that BOEM approved the assignment. This left open the possibility, for example, that if you made a request to assign in April, it would become effective on the first of May, even if BOEM did not approve it until the fifteenth of May or later. The final rule section clarifies that, unless requested otherwise (see below), the effective date of a transfer of a lease interest is the first day of the next month after BOEM approves the transfer.

Final rule section 556.712, like proposed rule section 256.617, allows the parties to a transfer to specify a date on which their transfer will become effective. The proposed rule stated that BOEM would record the assignment as effective as of the date specified by the parties. The prior regulation, at section 556.62(c), did not affirmatively state that BOEM would accept the date specified by the parties. The prior regulation used the word "request" to refer to the parties' choice of a different effective date, and stated that the effective date would be specified in BOEM's approval. After further consideration of this issue, BOEM has decided to retain the idea in the prior regulation, and to clarify any ambiguity by stating that BOEM must approve a request for a specified effective date for a transfer of record title interest.

Both proposed rule section 256.617 and final rule section 556.712 also make clear that the transferor's obligations continue to accrue until BOEM approves the transfer, no matter when the effective date is specified to be. In

other words, the proposed and final rules clarify that if the parties to a transfer specify an effective date that falls before BOEM's approval of the transfer, this date is "effective" between the parties, but it does not have any effect on the obligations of the transferor to BOEM. The accrual of those obligations is ended only by BOEM's approval of the transfer.

Section 556.713. What is the effect of an assignment of a lease on an assignee's liability under the lease? With respect to an assignee of a record title interest, final rule section 556.713 repeats proposed rule section 256.618. Both sections recite the obligations of an assignee, which include complying with the lease terms and regulations, remedying existing environmental and operational problems, and performing decommissioning.

Section 556.714. As a restricted joint bidder, may I transfer an interest to another restricted joint bidder? Final rule section 556.714 requires a person on the Restricted Joint Bidders List, when transferring less than 100% of its interest in a lease to another person on the same list, to file with BOEM all agreements applicable to the acquisition of the interest transferred. Final rule paragraph 556.714(a) retains the language to this effect found in prior section 556.64(i). This same requirement was also found in proposed rule section 256.619, and it engendered a comment that objected to proposed rule section 256.619 on several grounds. The comment stated that the documents requested by proposed section 256.619 may be "sensitive," *i.e.*, confidential, and that the section is too broad and vague with an "unascertainable" intent. The comment also stated that because BOEM approves assignments, BOEM will be aware of the chain of title through which the assignor received its interest, rendering unnecessary the filing of agreements relating to the assignor's acquisition of that interest. The commenter suggested that BOEM "should only be interested in the timing and nature of the agreement whereby one restricted joint bidder acquired from another restricted joint bidder."

For the most part, BOEM disagrees with this comment. Proposed rule section 256.619 did not introduce a new concept, but restated what was originally in prior section 556.64(i). Nor does BOEM find the section overly vague. The filing of the requested agreements or the provision of the description of the transaction (see below) is necessary to allow the Department of Justice to properly review the antitrust implications of assignments between restricted joint

bidders, as is required for all assignments by section 8(e) of OCSLA (43 U.S.C. 1337(e)). Also, the final rule section does, as one comment noted, demonstrate BOEM's interest in "the timing and nature of the agreement whereby one restricted joint bidder acquired [a lease interest] from another restricted joint bidder." The final rule, by retaining the language from prior section 556.64(i), makes clear that BOEM is seeking information about acquisitions only from a transferor that was on the Restricted Joint Bidders List at the time of its acquisition of the interest, and that is now transferring less than its entire interest to an entity that was on the same list.

In response to the comment, however, BOEM has noted in section 556.714(d) that a person submitting the requested agreements may request they be treated confidentially and BOEM will do so to the extent authorized by its regulations and applicable Departmental regulations. Further, as suggested by the commenter, section 556.714(a) allows the assignor/submitter to choose whether to submit the requested agreements or instead to provide BOEM with a description of the timing and nature of the transfer agreement, together with a statement certifying the truth of this description.

Section 556.715. Are there any interests I may transfer or record without BOEM approval? This section provides that a lessee may create, transfer, or assign an economic interest in a lease without BOEM approval, but that such transferor must send BOEM a copy of each instrument creating or transferring such a lease interest within 90 days after the last party executes the transfer instrument. Final rule section 556.715 (along with final rule section 556.808) is the successor to proposed rule section 256.620. Final rule section 556.715 and proposed section 256.620 are substantively similar, but the language of the proposed section was changed somewhat in the final rule. The proposed rule section stated that a lessee could create or transfer "carried working interests, overriding royalty interests, or payments out of production" without BOEM approval. In the final rule, instead of listing these three types of interests, section 556.715(a) states that a lessee may create, transfer, or assign "economic interests" without BOEM approval. The term "economic interest" is defined in final rule section 556.106 to encompass "any right to, or any right dependent upon, production of crude oil, natural gas, or liquefied petroleum products," and includes, among others, the three

types of interests listed in the proposed section.

Final rule section 556.714 also makes clear that the 90-day deadline set forth in prior section 556.64(a)(2) applies to filings memorializing transfers of economic interests. Prior section 556.64(a)(2) did not explicitly state that the 90-day deadline applies to such filings. The 90-day filing deadline appears in final rule section 556.701 with respect to the filings of transfers of record title interests and the severance of operating rights interests, and the final rule makes clear that the deadline also applies to filings of transfers of economic interests by so stating in final rule section 556.714.

BOEM received one comment on proposed section 256.620, which expressed concerns about confidentiality of documents and asked whether the section intended to require the submission of joint operating agreements to BOEM. The comment notes this provision, *i.e.*, section 256.620, and its requirements are "not [] new," and that is correct—this provision is currently found at section 556.64(a)(7). The final rule section does not impose any new requirements and does not require the filing of joint operating agreements as they do not necessarily create economic interests, only rights to such interests. Once those interests are created, however, documents respecting them must be filed with BOEM. As to confidentiality, documents will be treated in accordance with BOEM's regulation at section 556.104 and any applicable Departmental regulations.

Section 556.716. What must I do with respect to the designation of operator on a lease when a transfer of record title is submitted? This section provides the circumstances under which the transfer of a record title interest triggers the need to file a new designation of operator form with BOEM. Final rule section 556.716 is based on several prior and proposed rule sections. Proposed rule section 256.611 and prior section 556.62 explained how a record title, or other lease interest, may be transferred, but did not mention the need, which often arises upon such a transfer, to file a new designation of operator form. Prior regulation section 550.143 stated that, when there is a change of designated operator, you must file a new designation of operator form with BOEM. Prior section 550.143 was, however, in a part of the regulations that does not address transfers of lease interests. Because, as stated above, the need to file a new designation of operator form often arises when lease interests are transferred, BOEM added

section 556.716 here in part 556, to augment section 550.143 and ensure that parties to a transfer are aware of their duties with respect to designation of an operator.

#### 10. Subpart H—Transferring All or Part of the Operating Rights in a Lease

Section 556.800. As an operating rights owner, may I assign all or part of my operating rights interest? This section provides that an operating rights owner may assign all or part of its operating rights interests, subject to BOEM approval. Final rule section 556.800 repeats proposed rule section 256.612 with minor language changes.

Section 556.801. How do I seek approval of an assignment of my operating rights? This section describes the process by which an assignor of operating rights must obtain approval of such an assignment. Final rule section 556.801 is based on proposed rule section 256.613. The proposed rule section applied to all transfers of lease interests, but final rule section 556.801 applies only to assignments of operating rights from one operating rights owner to another, in accordance with the approach in the final rule to separate regulatory sections concerning transfers of operating rights and those concerning transfers of record title interests.

Both proposed rule section 256.613 and final rule section 556.801 require that BOEM approve transfers of operating rights. Documents memorializing such transfers must be filed within 90 days of the transfer. Both sections also note BOEM may consult with the Attorney General. The final rule section states the Regional Director will provide the form on which to record the transfer of operating rights, instead of citing particular forms as was done in the proposed rule. For the same reasons laid out above in the discussion of final rule section 556.716, final rule section 556.801 reiterates the requirement found at prior regulation section 550.143 that a new operating rights owner must file a designation of operator form.

One paragraph of final rule section 556.801 did not appear in the proposed rule: 556.801(c) states that if an operating rights owner transfers an undivided interest in its operating rights, that transfer creates a joint ownership of the operating rights in the transferor and the transferee. This provision did not appear in the proposed rule, but it is merely a description of the well-accepted legal consequences of such a transfer. As with a record title interest, an operating rights owner can transfer less than 100% of a certain part of its operating

rights interest, retaining some percentage of interest in that part. This is referred to as the transfer of an “undivided interest” and creates co-ownership.

Section 556.802. When would BOEM disapprove the assignment of all or part of my operating rights interest? Final rule section 556.802 sets forth the circumstances under which BOEM would disapprove an assignment of an operating rights interest. The final rule section is based on proposed rule section 256.611. The last sentence of proposed rule section 256.611 stated an assignment could be disapproved if the assignor or assignee had outstanding obligations under this chapter of the regulations. This provision appears at final rule section 556.802(a).

Final rule section 556.802 also contains two provisions, at paragraphs (b) and (c), which make clear that BOEM may disapprove an assignment of operating rights interests that is incorrect as to form or does not comport with the regulations. The former provision, 556.802(b), derives from proposed rule section 256.613, which listed the names and numbers of the forms that BOEM requires to be used to effectuate a transfer of record title or operating rights interests. Pursuant to the proposed rule, BOEM would accept only transfers submitted on—and consistent with—these forms.

In order to allow more flexibility and avoid restricting BOEM to a particular form name or number stated in the regulations, the final rule states the Regional Director will provide a form for use in transfers of record title or operating rights. As in the proposed rule, only the form provided by the Regional Director will be accepted by BOEM and only when completed correctly. Therefore, final rule section 556.802(b) makes clear that a transfer request submitted to BOEM may be rejected if not “acceptable as to form or content.” The latter provision, 556.802(c), provides that an attempted transfer that does not comport with the regulations and/or applicable law will be disapproved.

Section 556.803. What if I want to assign operating rights interests in more than one lease at the same time, but to different parties? This section addresses the assignment of operating rights interests in more than one lease to different parties. Final rule section 556.803 is based on proposed rule section 256.615. Both the first sentence of the proposed rule section and the final rule section address the situation where a lessee or other interest holder desires to transfer interests it owns in different leases to different parties. Final

rule section 556.803, however, applies only to an operating rights owner who desires to simultaneously assign its operating rights in multiple leases. The limited application of final rule section 556.803 is in keeping with the final rule’s separation of regulatory sections concerning transfers of record title by record title holders and those concerning transfers of operating rights by operating rights owners.

Section 556.804. What if I want to assign my operating rights in a lease to multiple parties? This section addresses the assignment of operating rights interests in one lease to more than one party. There was no analogous section in the proposed rule to final rule section 556.804, but the final rule section developed out of proposed rule section 256.615. That proposed rule section, also discussed immediately above, addressed the transfer of interests in *different leases* to different parties, or to the same party. The proposed rule did not address, however, the corollary situation, where the interest holder desires to transfer different portions of its operating rights interests in the *same lease* to multiple parties. Final rule section 556.804 was added to cover this corollary situation. It states that if an operating rights owner is transferring its operating rights in a single lease to multiple parties, it may use a single instrument. Final rule section 556.804 also retains the statement from prior section 556.64(a)(8), which states that where multiple transfers of interest are accomplished using one instrument, a separate fee applies to each individual transfer of interest.

Section 556.805. What is the effect of an operating rights owner’s assignment of operating rights on the assignor’s liability? This final rule section states the long-established regulatory concept that after an assignment, the assignor remains liable for all monetary and non-monetary obligations that accrued before approval of the assignment. Final rule section 556.805 was found at proposed rule section 256.616. That proposed rule section applied to assignments in general, but final rule section 556.805 applies only to assignments of operating rights interests.

Section 556.806. What is the effective date of an assignment of operating rights? This section describes the effective date of the transfer of an operating rights interest in a lease. Final rule section 556.806 is a combination of proposed rule section 256.617 and prior section 556.62(c). In the proposed rule, analogous provision 256.617 stated an assignment is effective on the first day of the month following the request to

assign, not following the date that BOEM approved the assignment. As explained above, in the discussion of final rule section 556.712, this left open the possibility that an assignment could ostensibly become “effective” before it was approved. Final rule section 556.806 clarifies that (unless requested otherwise, see below) the effective date of an assignment of an operating rights interest is the first day of the month after the month in which BOEM approves the transfer.

Final rule section 556.806, like proposed rule section 256.617, allows the parties to a transfer to specify a date on which their transfer will become effective. The proposed rule stated that BOEM would record the assignment as effective as of the date specified by the parties. The prior regulation, at section 556.62(c), did not affirmatively state that BOEM would accept the date specified by the parties. The prior regulation used the word “request” to refer to the parties’ choice of a different effective date, and stated that the effective date would be specified in BOEM’s approval. After further consideration of this issue, BOEM has decided, in the final rule, to retain the idea in the prior regulation, and to clarify any ambiguity by stating that BOEM must approve a request for a specified effective date for a transfer of an operating rights interest.

Both proposed rule section 256.617 and final rule section 556.806 also make clear that the transferor’s obligations do not end until BOEM approves the transfer, no matter when the effective date is specified to be. In other words, the proposed and final rules clarify that if the parties to a transfer specify an effective date that falls before BOEM’s approval of the transfer, this date is “effective” between the parties, but it does not have any effect on the obligations of the transferor to BOEM. The accrual of those obligations is ended only by BOEM’s approval of the transfer.

Section 556.807. What is the effect of an assignment of operating rights on an assignee’s liability? This section recites the obligations of an assignee, which include complying with the lease terms and regulations, remedying existing environmental and operational problems on the leasehold, and performing decommissioning obligations. Final rule section 556.807 repeats proposed rule section 256.618, but only with respect to an assignee of an operating rights interest. Proposed rule section 256.618 addressed both assignees of record title interests and operating rights interests, but consistent with the final rule’s separate treatment

of these two types of interests, this final rule section addresses only the effect of an assignment of operating rights on an assignee's liability.

Section 556.808. As an operating rights owner, are there any interests I may assign without BOEM approval? This section provides that an operating rights owner may create, transfer, or assign economic interests without BOEM approval, but that for record keeping purposes, the operating rights owner must send BOEM a copy of each instrument creating or transferring such interests within 90 days after the last party executes the transfer instrument. Final rule section 556.808 (along with final rule section 556.715) is the successor to proposed rule section 256.620. Final rule section 556.808 is substantively similar to proposed section 256.620, but the final rule section applies to operating rights owners and contains somewhat different language from the proposed section. The proposed rule section stated that you could create or transfer "carried working interests, overriding royalty interests, or payments out of production" without BOEM approval. In the final rule, instead of listing these three types of interests, section 556.808(a) states that you may create, transfer, or assign "economic interests" without BOEM approval. The term "economic interest" is defined in final rule section 556.106 to encompass "any right to, or any right dependent upon, production of crude oil, natural gas, or natural gas liquids," and includes, among others, the three types of interests listed in the proposed section.

Final rule section 556.808 also makes clear that the 90-day deadline set forth in prior regulation section 556.64(a)(2) also applies to filings memorializing transfers of economic interests. Prior section 556.64(a)(2) did not explicitly state that the 90-day deadline applies to such filings. The 90-day filing deadline appears in final rule section 556.801 with respect to the filings of assignments of operating rights interests, and the final rule makes clear that the deadline also applies to filings of transfers of economic interests by so stating in final rule section 556.808.

BOEM received one comment on proposed section 256.620, which expressed concerns about confidentiality of documents and asked whether the section intended to require the submission of joint operating agreements to BOEM. The comment notes that this provision, *i.e.*, 256.620, and its requirements are "not [ ] new" and that is correct—this provision is currently found at 556.64(a)(7). The final rule section does not impose any

new requirements and does not require the filing of joint operating agreements as they do not necessarily create economic interests, only rights to such interests. Once those interests are created, however, documents respecting them must be filed with BOEM. As to confidentiality, documents will be treated in accordance with final rule section 556.104 and any applicable Departmental regulations.

Section 556.810. What must I do with respect to the designation of operator on a lease when a transfer of operating rights ownership is submitted? This section provides the circumstances under which the transfer of an operating rights interest triggers the need to file a new designation of operator form with BOEM. Final rule section 556.810 is a clarification and extension of several prior and proposed rule sections. Proposed rule section 256.611 and section 556.62 from BOEM's previous regulations explained how a record title or operating rights interest may be transferred, but did not mention the need, which often arises upon such a transfer, to file a new designation of operator form. Current section 550.143 states that, when there is a change of designated operator, you must file a new designation of operator form with BOEM. Current section 550.143 is, however, in a part of the regulations that does not address transfers of lease interests. Because the need to file a new designation of operator form often arises when lease interests are transferred, such as operating rights interests, BOEM added section 556.810 here in part 556 to augment prior BOEM regulation section 550.143, and to ensure that parties to an operating rights transfer are aware of their duties with respect to designation of an operator.

#### 11. Subpart I—Bonding or Other Financial Assurance

Part 560, section 560.500(b) in the final rule, addresses the electronic filing of documents concerning bonding or other financial assurance. The substance of final rule section 560.500(b) was in proposed rule section 256.503(c), which established the circumstances under which BOEM may require, rather than request, electronic document submission. The proposed and final rule sections provide that BOEM reserves the right to mandate the submission of financial assurance information electronically after publishing a 90 day-notice to that effect in the **Federal Register**. Submission of financial assurance data electronically would contribute significantly to streamlining the bonding process and facilitate a more efficient transfer of data and

information between BOEM and the regulated community. BOEM received no comments on proposed rule section 256.503(c). Accordingly, although no other substantive changes related to bonding are made in the final rule, this provision was retained from the proposed rule at section 560.500(b).

Other than the electronic filing change that appears in final rule section 560.500(b) and minor administrative changes made to subpart I, as noted below, the regulatory sections in the subpart remain the same as in the prior regulations, where they are located at 30 CFR subpart I, consisting of prior sections 556.52 through 556.59.

Sections 556.900–556.907. These sections establish bonding requirements for the lessee of an OCS oil and gas or sulfur lease. BOEM is not making any substantive changes to Subpart I—Bonding or Other Financial Assurance—relative to the prior regulations. The only changes made to this subpart in the final rule are administrative or conforming changes necessary to avoid inconsistency with the rest of BOEM's regulations. These changes are: (1) Editorial improvement; (2) correction of the inadvertent deletion of cross-references to former MMS regulations now administered by BSEE and ONRR; (3) changes in the section numbers and conforming changes needed in the text due to the section number changes; (4) changing references to "Associate Director" to "Director," as there are no "Associate Directors" within BOEM; and (5) consistently referring to decommissioning obligations as "decommissioning obligations," rather than by listing some or all of the constituent parts of decommissioning.

#### 12. Subpart J—Bonus or Royalty Credits for Exchange of Certain Leases

Section 556.1000. Leases formerly eligible for a bonus or royalty credit. This section provides that bonus or royalty credits issued by BOEM pursuant to the Gulf of Mexico Energy Security Act of 2006 (GOMESA) (43 U.S.C. 1331 note) are no longer available. The deadline for applying for such a bonus or royalty credit was October 14, 2010; therefore, lessees may no longer apply for such credits. The proposed rule contained several sections addressing these credits because it was published in May 2009, before the October 2010 deadline. The final rule has only one section addressing these credits—section 556.1000.

Although the GOMESA lease exchange/credit program is no longer active, section 556.1000 has been included in the final rule because

GOMESA did not specify a deadline to apply for lease credits. The October 14, 2010, deadline was set by BOEM in its regulations, and must be retained to forestall future requests for lease credits under GOMESA.

### 13. Subpart K—Ending a Lease

Section 556.1100. How does a lease expire? This section provides the circumstances under which a lease will expire at the end of its primary term. Final section 556.1100 is substantively the same as proposed rule section 256.700, with minor wording changes. The final rule section is also divided into two paragraphs, one addressing oil and gas leases, and one addressing sulfur leases.

BOEM received one comment noting that proposed section 256.700 listed the ways to maintain a lease beyond the primary term, but failed to list production from unitized leases as one of those ways. The comment suggested that BOEM add in section 256.700 a reference to production from unitized leases as one of the ways to maintain a lease. Final rule section 556.1100 refers back to final rule section 556.601 for the ways in which to maintain a lease beyond the primary term, which includes, at 556.601(e), production from unitized leases.

Section 556.1101. May I relinquish my lease or an aliquot part thereof? Final rule section 556.1101 repeats the substance of proposed rule section 256.701. Both sections name the form that must be filed in triplicate by all lessees to effect a lease relinquishment and both note that the relinquishment is effective on the date of filing. Both sections also make clear that a relinquishment does not relieve the relinquisher(s) of any accrued obligations, but to express this concept the final rule section has retained the language in prior section 556.76, rather than using the proposed language.

Prior section 556.76 also stated that no filing fee is required for a relinquishment. The proposed rule, however, said nothing on this subject. It did not contain the statement in the prior regulations that no filing fee is required, but neither did it say that a filing fee was required for a relinquishment. The final rule retains the “no filing fee” statement from prior regulations at section 556.76.

Section 556.1102. Under what circumstances will BOEM cancel my lease? This section provides the circumstances under which BOEM may cancel a producing or a non-producing OCS lease. Final rule section 556.1102 contains the substance of proposed rule section 256.702, with some minor

wording changes for clarity. Both sections state that failure to comply with a provision of a lease or of the regulations may result in lease cancellation, but the final rule section also makes clear that failure to provide requested financial assurance may result in lease cancellation or assessment of civil penalties. (See final rule section 556.1102(f).) Final rule section 556.1102(f) is a clarification of proposed rule subsections 256.702(b) and (c). Both these subsections state that failure to comply with any provision of the regulations may result in lease cancellation, and this includes failure to comply with those regulations requiring the maintenance of financial assurance.

Proposed rule section 256.702 generally referred to section 5(a) of OCSLA (43 U.S.C. 1334(a)), whereas final rule section 556.1102 was written to more closely follow sections 5(a)(2)(A) and (B) of OCSLA (43 U.S.C. 1334(a)(2)(A) and 1334(a)(2)(B)). Both the final and proposed rule sections repeat section 5(a)'s directive that a lease may be cancelled any time BOEM finds that continued activity will probably cause harm or damage to *inter alia*, life or property, that such threat of harm or damage will not disappear or acceptably decrease in a reasonable time, and that the advantages of lease cancellation outweigh the advantages of continuing the lease. But final rule section 556.1102 paragraphs (d) and (e) also include section 5(a)'s requirements that cancellation pursuant to the terms above must be subsequent to a hearing and may not occur unless and until operations under the lease have been suspended or prohibited by the Department continuously for a period of five years.

### 14. Subpart L—Leases Maintained Under Section 6 of OCSLA

Subpart L consists of two final rule sections, 556.1200 and 556.1201, which have been retained from prior sections 556.79 and 556.80, respectively. These two sections were not in the proposed rule. The Preamble to the proposed rule stated that prior section 256.79 (now 556.79) was “[e]liminated as unnecessary repetition” of OCSLA section 6(b) (43 U.S.C. 1335(b)) and prior section 256.80 (now 556.80) was “covered in 30 CFR part 281” (now part 581).

BOEM has reconsidered its decision to eliminate subpart L from its regulations, and, for the reasons outlined below, has decided to retain it in this final rule.

Section 556.1200. Effect of regulations on lease. Final rule section 556.1200 makes clear the relationship between

BOEM's regulations and the lease provisions of those leases maintained under section 6 of OCSLA (43 U.S.C. 1335). Section 6 of OCSLA applies to a specific group of leases—State-issued OCS leases issued before December 21, 1948.

BOEM has retained this provision, derived from prior section 556.79, even though it includes some repetition of Section 6 of OCSLA. Retaining this in final rule section 556.112 is helpful to BOEM's stakeholders because it clarifies the interplay between BOEM's regulations and Section 6 leases.

Section 556.1201. Section 6(a) leases and leases other than those for oil, gas, or sulfur. BOEM has determined that the proposed rule was incorrect in asserting that prior part 556, subpart L, which consisted of prior sections 556.79 and 556.80, was an unnecessary duplication of provisions in another part of the regulations. BOEM has therefore decided to retain, in final rule section 556.1201, the substance of prior section 556.80. Final rule section 556.1201 states that the existence of a Section 6 oil and gas lease does not preclude the issuance, in the same area, of other types of leases under OCSLA. BOEM has determined that this section should be retained to clarify the circumstances surrounding Section 6 leases.

### 15. Subpart M—Environmental Studies

Section 556.1300. Environmental studies. Subpart M—Environmental Studies consists of section 556.1300 in the final rule and provides that BOEM will conduct studies of any area or region included in any oil and gas lease sale as needed to assess and manage impacts on the human, marine and coastal environments, which may be affected by OCS oil and gas or other mineral activities in such area or region. Subpart M in the previous regulations consisted of section 556.82. The proposed rule deleted subpart M as an “unnecessary recitation of internal procedures,” but section 20(c) of OCSLA specifically states that the “Secretary shall, by regulation, establish procedures for carrying out his duties [to conduct environmental studies] under this section.” (43 U.S.C. 1346(c)). BOEM has determined to retain subpart M to comply with section 20 of OCSLA and to set forth in the regulations, procedures for the conduct of environmental studies with minor revisions to clarify text.

#### C. Part 559—Mineral Leasing: Definitions

Prior part 559 was moved into final rule part 560, as explained below, in the discussion of final rule part 560.

### D. Part 560—Outer Continental Shelf Oil and Gas Leasing

The final rule updates the authority citation for part 560 and amends the Table of Contents for part 560 by removing prior subpart D, reserving the subpart, and adding new subparts C and E.

Also, in this final rule, BOEM has moved the definitions from prior part 559 into final rule part 560 and deleted part 559. Prior part 559 consisted of only two sections. The first section, 559.001, stated that “[t]he purpose of this part 559 is to define various terms appearing in part 560.” The second section, 559.002, listed these definitions. This relocation did not appear in the proposed rule, but it is merely an administrative change, which streamlines the regulations and does not trigger the need for notice and comment.

The wording of the definition of “person” in part 560 has been made consistent with that in part 556, but no change is being made to the other definitions except their re-location within the regulations.

#### 1. Subpart A—General Provisions

Section 560.100. Authority. This section provides a listing of the statutes that provide the legal basis for the regulations promulgated under this part. The authority provisions of part 560 have been revised in this new section, and the titles of the public laws corresponding to the relevant statutes have been added. FOGMA (30 U.S.C. 1701–1759) has been updated to include the amendments made to it by the Federal Oil and Gas Royalty Simplification and Fairness Act of 1996, (FOGRSFA, 30 U.S.C. 1701 note).

Section 560.101. What is the purpose of this part? This final rule section retains the language of section 560.1 in the prior regulations, with no changes, but redesignated.

Section 560.102. What definitions apply to this part? This section consolidates and updates the definitions previously located in part 559 with the definitions previously located in section 560.2.

Section 560.103. What is BOEM’s authority to collect information? This section provides that BOEM may not conduct or sponsor a collection of information unless the information collection displays a currently valid OMB control number, and specifies the circumstances under which comments regarding any aspect of the collection of information under this part may be submitted to BOEM. This section is unchanged from section 560.3 but has been redesignated.

#### 2. Subpart B—Bidding Systems

Sections 560.200–560.230. These provisions establish the bidding systems that BOEM may use to offer and sell Federal leases for the exploration, development, and production of oil and gas resources located on the OCS. No changes were made to this subpart, except that all section numbers have been changed to conform to the numbering convention used throughout the final rule.

#### 3. Subpart C—Operating Allowances

Section 560.300. Operating allowances. The final rule includes a new subpart C, which consists of one section—556.300—that reestablishes a provision concerning operating allowances in the BOEM regulations. Operating allowance provisions were originally added into MMS (later BOEMRE) regulations by RIN 1010–AB93, 61 FR 3800, *Bidding Systems for Leases in the Outer Continental Shelf*. When the MMS was reorganized into ONRR, BOEM, and BSEE, the operating allowance sections of the regulations were moved from the BOEMRE regulations to the ONRR regulations, but the corresponding sections were not included in the BOEM regulations. Under the current organizational structure of the Department, ONRR will collect royalty as calculated using the operating allowance, but BOEM must first issue leases that contain the operating allowance. In order to effectuate the ONRR regulations related to operating allowances, therefore, counterpart provisions must also be re-established within the BOEM regulations.

Subpart C re-establishes the operating allowance provisions in BOEM’s regulations. It does not make any change to the regulatory provisions with respect to what sort of operating allowance would be available or when one might be granted.

#### 4. Subpart D—Joint Bidding

Both the proposed and final rules amend part 560 by removing subpart D, which concerned joint bidding. All the provisions in the prior subpart D have been moved to part 556 in the final rule (see sections 556.511–556.515, and 556.106, definitions of “average daily production,” “barrel,” “crude oil,” “economic interest,” “joint bid,” “natural gas,” “natural gas liquids,” “owned,” “single bid,” “six-month bidding period,” and “statement of production”). The regulation sections that were in part 560, subpart D, more appropriately belong in part 556, subpart E, under the subheading,

“Restrictions on Joint Bidding,” because subpart E contains the full panoply of regulations relating to the restrictions on joint bidding. There is no clear rationale supporting retention of these sections in part 560 as well, and including these provisions twice in the regulations may cause confusion. Therefore, part 560, subpart D is being removed.

#### 5. Subpart E—Electronic Filings

In part 560, the final rule includes a new subpart E, “Electronic Filings,” which provides that BOEM may notify lessees and other parties that it will allow or request the submission of information electronically through BOEM’s secure electronic filing system, through an alternate secure electronic filing system supported and maintained by the Department, or through some other electronic filing system that BOEM has approved for this purpose. This subpart did not appear in the proposed rule, nor did it appear in the prior regulations, but notice and an opportunity to comment on these new provisions are unnecessary because the subpart does not impose any requirements. Rather, it provides that anyone submitting documents to BOEM may do so electronically. The electronic-submittal option will likely reduce the burden on those making the submissions. Moreover, the option furthers the Federal government’s move toward all-electronic document production, submission, and filing, a goal evidenced by the Government Paperwork Elimination Act (GPEA), Public Law 105–277, 112 Stat. 2681 (1998), and the U.S. Office of Management and Budget’s guidance for implementing that Act (Memorandum 00–10 OMB Procedures and Guidance on Implementing the Government Paperwork Elimination Act, April 25, 2000). Because subpart E imposes no requirements on the public, it constitutes a procedural rule that does not require notice and comment.

Subpart E consists of three sections, which are individually addressed below.

Section 560.500. Electronic documents and data transmission. Final rule section 560.500 lists the types of information that may be filed electronically. The section also makes clear that if BOEM sends a document in an electronic format, return of the document using the same format or in print is acceptable (560.500(c)), and that BOEM may electronically approve or execute documents referenced in this section (560.500(d)).

Final rule section 560.500(b) repeats proposed rule section 256.503(c), which

established the circumstances under which BOEM may require, rather than request, electronic document submission. The proposed and final rule sections provide that BOEM reserves the right to mandate the submission of financial assurance information electronically after publishing a 90 day-notice to that effect in the **Federal Register**. Submission of financial assurance data electronically would contribute significantly to streamlining the bonding process and facilitate a more efficient transfer of data and information between BOEM and the regulated community. BOEM received no comments on proposed rule section 256.503(c). Accordingly, although most other changes related to bonding were removed from the final rule, this provision was retained at section 560.500(b).

Section 560.501. How long will the confidentiality of electronic document and data transmissions be maintained? Final rule section 560.501 states that electronically-submitted confidential information will be maintained as confidential for the same amount of time that corresponding non-electronic information would be so maintained.

Section 560.502. Are electronically filed document transmissions legally binding? Final rule section 560.502 has been included to ensure that electronic submission will not be a bar to legal viability. Pursuant to section 560.502, documents that are properly submitted through an approved electronic format will be considered legally binding (assuming they are properly prepared, executed, or whatever else may be necessary in each individual case), without the need to also submit a paper

copy of such document. In other words, if all else has been done properly with regard to a document submission, the fact that it has been submitted electronically will not bar it from being legally binding.

Final rule section 560.502 was not in the proposed rule and is being included in the final rule without a period of notice and comment. The Government Paperwork Elimination Act, found within the Omnibus Consolidated and Emergency Supplemental Appropriations Act of 1999 (Public Law 105-277, 112 Stat. 2681 (1999)), at sections 1701 *et seq.*, authorizes agencies to consider properly submitted electronic submissions as legally binding. The Government Paperwork Elimination Act, at section 1707, specifically addresses the question of whether, and how, electronically filed documents are legally binding. It states: “Electronic records submitted or maintained in accordance with procedures developed under this title, or electronic signatures or other forms of electronic authentication used in accordance with such procedures, shall not be denied legal effect, validity, or enforceability because such records are in electronic form.” Pub. L. 105-277, 112 Stat. 2681-751 (1999).

Further, section 7001(a) of the Electronic Signatures in Global and National Commerce Act (ESIGN) (15 U.S.C. 7001-7031) states: “Notwithstanding any statute, regulation, or other rule of law (other than this subchapter and subchapter II of this chapter), with respect to any transaction in or affecting interstate or foreign commerce—(1) a signature, contract, or other record relating to such

transaction may not be denied legal effect, validity, or enforceability solely because it is in electronic form; and (2) a contract relating to such transaction may not be denied legal effect, validity, or enforceability solely because an electronic signature or electronic record was used in its formation.”

Final rule section 560.502 is administrative and serves to reduce the burden on those submitting filings to BOEM, but more importantly it is necessary to effectuate BOEM’s electronic filing system and to ensure electronic submissions are considered legally valid documents.

**IV. Table of Comments and Responses**

We do not provide responses to comments on subpart I because no substantive changes were made to that subpart as part of this final rule.

*A. General Comment*

*Comment:* In an effort to streamline the regulations, the proposed rule eliminated several sections that repeat provisions of OCSLA. But in other instances, the proposed rule added language that is found in relevant statutes. BOEM should carefully review the proposed rule and eliminate instances in which the substance of statutes is simply repeated. Specifically, BOEM should consider proposed sections 556.101, 556.200 (second sentence), 556.304(b), 556.402(b) in this regard.

*Response:* We kept added statutory language when it was considered necessary for clarity.

*B. Section-Specific Comments*

Proposed rule section (30 CFR)	Comments received	BOEM Response
256.101 .....	The American Petroleum Institute (API) submitted comments on many sections of the proposed rule, which are discussed throughout the following Table. Section 256.101 references 18 U.S.C. 1001, which is unnecessary and potentially creates confusion. In the event 18 U.S.C. 1001 were revised, amended or repealed, MMS would need to do the same here. It's redundant and unnecessary.	BOEM agrees with the comment and has removed the provision referencing 18 U.S.C. 1001 from the final rule.
256.103 .....	The definition for “authorized officer” should be retained in proposed section 256.103, as it is still used in the regulations. The proposal includes definitions for the “Central Planning Area” and the “Eastern Planning Area,” but not for the “Western Planning Area.” For completeness, MMS should consider including a definition for the “Western Planning Area.”	We revised the definition for “Secretary” to include both the terms “official” and “designated employee” who are “authorized to act on behalf of the Secretary.” We have added the definition for the “Western Planning Area.”
256.200 .....	Section 256.200—The second sentence appears to be repeated from OCSLA and its repetition is not necessary. See, 43 U.S.C. 1344(a)(3). Repeating language from the statute is inconsistent with the streamlining approach that MMS has taken with the proposed regulations.	The second sentence is short and explicit and therefore has been retained.

Proposed rule section (30 CFR)	Comments received	BOEM Response
256.301 .....	Section 256.301 eliminates the requirement that MMS inform the public as soon as possible, when areas are deleted from leasing. This requirement should be retained. It should be recognized that deleting areas from leasing is of great importance to lessees who are spending resources in preparing for lease sales, and this information should be published as soon as possible.	We have not deleted this provision. See final rule section 556.302(c), which states: "BOEM will seek to inform the public, as soon as possible, of changes from the area(s) proposed for leasing that occur after the Call process."
256.304(b) .....	Section 256.304(b)—The Coastal Zone Management Act (CZMA) (16 U.S.C. 1451 <i>et seq.</i> ) sets out the process for consistency determinations by the affected States. While MMS may be merely setting out the process it uses in order to ensure consistency with the States, the regulation should actually reference the CZMA so that if the CZMA is modified or amended or repealed, MMS can continue to follow the process outlined in that act, rather than risking conflict or inconsistency.	We cite the CZMA at section 556.305(b), where we refer to the consistency determination.
256.303 .....	Shell Exploration and Production Company (Shell) Comments. Section 256.303—The terms of an oil and gas lease are integral to the lessee/lessor relationship and lessees who are bidding millions of dollars on leases should have the right to know the lease terms in advance of submitting bids. Accordingly, Shell requests that the form of lease on which successful lease bids will be granted be attached to or referenced in the notice of lease sale.	We agree with this suggestion and have incorporated this requirement into sections 556.304(c) and 556.308. The final notice of sale will replicate the terms and conditions in the lease form. The following is a sample statement from a recent notice of sale: "BOEM will use the recently revised Form BOEM–2005 (October 2011) to convey leases; it can be viewed at: <a href="http://www.boem.gov/About-BOEM/Procurement-Business-Opportunities/BOEM-OCS-Operation-Forms/BOEM-OCS-Operation-Forms.aspx">http://www.boem.gov/About-BOEM/Procurement-Business-Opportunities/BOEM-OCS-Operation-Forms/BOEM-OCS-Operation-Forms.aspx</a> . The lease form will be amended with the specific terms, conditions and stipulations applicable to the individual lease."
256.402(b) .....	Section 256.402(b) should clarify that this section does not impact the statutory requirements under OCSLA that provide for a finding by the Secretary that the bidder is not meeting due diligence requirements and that provide for notice and hearing. Section 256.402(c) should cite to the statutory provisions authorizing the prohibition based upon unacceptable operating performance.	We agree with this comment and changed the language, which is now found at final rule section 556.403(b), to more closely track the language of section 8(d) of OCSLA (43 U.S.C. 1337(d)). Section 8(a)(1) of OCSLA (43 U.S.C. 1337(a)(1)) states: "The Secretary is authorized to grant to the highest responsible qualified bidder or bidders by competitive bidding, under regulations promulgated in advance, any oil and gas lease on submerged lands of the outer Continental Shelf . . ." The Secretary has determined through promulgated regulations that acceptable operating performance under 30 CFR parts 250 and 550 on any other OCS lease is necessary to be considered a "responsible" bidder. This provision is not new. The prior regulations, at 30 CFR 556.35(c), provided that, "BOEM may disqualify you from acquiring any new lease holdings or lease assignments if your operating performance is unacceptable according to 30 CFR 550.135." We disagree that the citation to the statutory provisions codified from section 8(a)(1) of the OCSLA is necessary as the regulation is clear and the concept is long-standing in the prior regulations.
256.404 .....	Section 256.404—This new provision will create unnecessary additional administrative burdens. MMS has multiple ways to learn of a merger or name change, including, without limitation, the filing of merger and name change documents with the Secretary of State in most States and the submission of new designation of operator and other MMS forms. This additional obligation need not be imposed on lessees. In addition, MMS should delete "immediately" as it is inconsistent with the one year limit. The API suggested using "as soon as practicable," but not "immediately."	We disagree with this comment, but in final rule section 556.405, we replaced "immediately" with "as soon as practicable." The new provision is needed to address the problems that the Bureau has had in the past with name changes and/or mergers about which BOEM is not informed in a timely fashion. It is not practical for BOEM to monitor all filings with all Secretaries of State in the United States.

Proposed rule section (30 CFR)	Comments received	BOEM Response
256.416(b) .....	Section 256.416(b)—There is no policy reason not to allow co-ownership by agreement of bidders with a tie bid, when the tie bidders are on the restricted joint bidders list. Those parties cannot have communicated or agreed with respect to the bid, but going forward could agree to an assignment creating co-ownership after the lease is awarded.	We disagree with the recommended policy change proffered in this comment. The presumption that an agreement (whether written or oral, formal or informal) could not have been made prior to, or simultaneously with, the submission of bids by two or more bidders on the restricted joint bidders list is flawed. Collusive bidding practices are a possibility that is addressed explicitly in existing regulation, for example, section 556.44 specifically disqualifies bids where collusive bidding is evident. We clarified the language of paragraph (c) of final rule section 556.516 to address the treatment of tie high bids submitted by two bidders on the Restricted Joint Bidders List. Paragraph (c) states that only those tied bidders, “not otherwise prohibited from bidding together” may accept a lease jointly. Because two bidders on the restricted joint bidders list would “otherwise [be] prohibited from bidding together,” this provision retains the current policy of not allowing tied restricted joint bidders to accept a lease jointly. The use of the plural lessee(s) at section 556.516(c)(2) implies that there could be more than two tied bidders and that they could agree to allow more than one of the tied bidders to become lessees. We deleted the words “or they may decide” as the language did not clearly state how to notify us of their decision.
256.417 .....	Section 256.417—The protest procedure has been eliminated entirely. MMS should specify or refer to an appeal process: to whom appeals are made, how long the agency has to make a decision, who will make the decision, and to whom that decision will be appealed.	A procedure to request reconsideration of a rejected bid has been retained in the rule, but the difference in the proposed and prior regulations is that “Secretary” has been replaced by “BOEM Director.”
256.420 .....	Section 256.420—MMS should retain the status quo that the failure to pay the remaining 4/5ths lease bonus results in a forfeiture of the 1/5th payment. Payment of the 1/5th amount is sufficient penalty and MMS may still offer and lease the tract at the next lease sale. Payment of amounts beyond the 1/5th is not warranted. As a result, MMS should strike the words “and MMS may take appropriate action to collect the full amount bid.” In addition, the existing rule, §256.47(g), states that the successful bidder has 11 business days to execute the lease and otherwise comply with the applicable regulations. This proposed rule required that a lessee “execute and return” a lease within 11-business days after receipt (emphasis added.) Can MMS confirm whether the addition of the words “and return” signify a change in how the process is administered? If this does constitute a change, then can MMS explain the rationale behind this change?  As discussed above, API objects to forfeiture of the full bid amount, because forfeiture of the 1/5th payment is sufficient. However, in the event that this option is retained, MMS should consider providing some flexibility within this provision in the event that the full bid amount is collected. The bidder should not suffer forfeiture of the lease if the full bid amount has been paid. MMS should also consider giving the second highest qualified bidder the opportunity to receive the lease in the event that the high bidder forfeits the lease under these provisions.	BOEM agrees with this comment and has decided to limit the penalty for failure to pay the remainder to the amount of the bid deposit. Prior section 556.47(f) stated that “If a bid is accepted, such notice shall transmit three copies of the lease to the successful bidder.” As provided in the prior 30 CFR 1218.155, the bidder shall, not later than the 11th business day after receipt of the lease, execute the lease, pay the first-year’s rental, and unless deferred, pay the balance of the bonus bid.” 30 CFR 1218.155(c) made it clear that the payment must be “. . . received by the Federal Reserve Bank of New York no later than noon, eastern standard time, on the 11th business day after receipt of the lease forms by the successful bidder.” The new regulation makes it clear that the leases must be signed and returned to BOEM within 11-business days after the receipt. This has always been the rule and is not a change of BOEM processes.  Prior BOEM regulation section 556.47(g) said that if a bidder fails to execute the lease as required by the regulations, BOEM will collect or retain only the deposit. The final rulemaking, at section 556.520(c), says the same. Granting the second highest bidder the opportunity to receive the lease in the event that the high bidder forfeits the lease under this provision may not result in BOEM receiving fair market value for the lease (see section 18(A)(4) of OCSLA) and is contrary to the present BOEM policy of offering all blocks that are not awarded in a particular lease sale in the next lease sale for that planning area.
256.420(c) .....	Chevron comments: Chevron does not view section 256.420(c) as a clarification but a significant change. Delete the phrase from section 256.420(c) “and MMS may take appropriate action to collect the full amount bid, if so provided for in the notice of sale.”	Same response as above.

Proposed rule section (30 CFR)	Comments received	BOEM Response
256.605(a) and 256.606(c) ..	<p>Shell comment: MMS should reconsider allowing MMS to collect the full amount bid in the event a successful bidder does not pay the remaining 4/5th of the bid. Currently, lessees are permitted to suffer the significant penalty of forfeiting the 1/5th advance payment and this process allows lessees to make an informed decision on leasing if information relating to the area becomes available after the bids are made.</p> <p>API Comment: Section 256.605(a) is inconsistent with proposed section 256.606(c). In the former, operating rights and record title owners are jointly and severally liable for all non-monetary obligations, but in the latter, operating rights owners are only responsible for liabilities insofar as their interest in the lease.</p>	<p>Same response as above.</p> <p>We separated into two sections those provisions that concern the rights and obligations of record title owners (section 556.604) and those that concern the rights and obligations of operating rights owners (section 556.605).</p>
256.616 .....	<p>Section 256.616—The last sentence is ambiguous. The liabilities for an assignor are covered in section 256.605. The last sentence should be deleted.</p>	<p>We renumbered this item 556.710 and clarified it as follows: “Until there is a BOEM-approved assignment of interest, you, as the assignor, remain liable for the performance of all lease obligations that accrued while you held record title interest, until all such obligations are fulfilled.”</p>
256.619 .....	<p>Shell Comment: MMS should remove the last sentence of Proposed Section 256.616, which is ambiguous and which concept is addressed in Section 256.605. Also, proposed Section 256.605(a) is inconsistent with Section 256.606(c).</p> <p>API Comment: Section 256.619—The new rule poses the question, “As a restricted bidder, may I assign interest to another restricted joint bidder?” The new rule answers in the affirmative but also states that “you must submit to MMS a copy of any agreements relating to the acquisition of the lease or interest,” API is concerned about the submission of commercial agreements under this provision. The types of agreements requested are potentially highly sensitive. MMS should only be interested in the timing and nature of the agreement whereby one restricted joint bidder acquired from another restricted joint bidder. Agreements whereby a restricted joint bidder acquired the interest assigned are irrelevant (unless they came from another restricted joint bidder). Further, because assignments are approved, MMS will already know the chain of title by which the assigning party received the interest. Further, this provision is so broad as to be unascertainable as to the intent, raising further questions about implementation and what documents are sufficient to meet the requirement.</p>	<p>See above.</p> <p>We disagree with the comment. The requirement to provide the agreements between two parties on the restricted joint bidders list is not new, but simply represents a restatement of the prior 30 CFR 556.64(i), which required that “the assignor or transferor shall file a copy, prior to approval of the assignment, of all agreements applicable to the acquisition of that lease or a fractional interest.” The agreements are necessary for the Department of Justice to properly review the antitrust implications of these types of assignments. The new provision, now at final rule section 556.714, adds the option of both parties providing BOEM with “a description of the timing and nature of the agreement(s) by which the assignor or transferor acquired the interest it now wishes to transfer.” Thus, the company on the restricted joint bidders list has a choice of submitting what has previously been required under prior section 30 CFR 556.64(i), or may submit a description of the timing and nature of the agreement, subject to the applicability of 18 U.S.C. 1001. The implementation of this provision will not raise any questions as to which documents are needed as that portion of the provision at issue is not a new requirement of the regulations.</p>
256.620(a) .....	<p>Section 256.620(a)—This is not a new provision, but API questions the effectiveness or the need for filing with MMS contractually created interests that typically are not placed on record in any other public record. Theoretically, any time a co-owner stands out or goes “non-consent” under a joint operating agreement; it assigns its interests in the well until payout. Does MMS intend those joint operating agreements to be filed? We also have concerns about confidentiality of agreements; therefore, this rule should only apply to recorded documents.</p>	<p>This language is essentially identical to the language of the prior section 556.64(a)(7), but it is found at section 556.715 in the final rule. BOEM is not changing any legal requirement except that we may require filing of these interests electronically. Joint Operating Agreements are not required to be filed with BOEM as they do not necessarily create economic interests, only rights to such interests. However, once those interests are created, instruments creating these interests must be filed with BOEM, just as instruments creating these interests were required to be filed under prior section 556.64(a)(8).</p>
256.700 .....	<p>Section 256.700—This provision should reference section 256.601(d), relating to the effect of production from unitized leases, as an additional circumstance that maintains a lease.</p>	<p>We added the reference at final rule section 556.601(e) to clarify the effect of production from a BSEE approved unit on individual lease terms.</p>

Proposed rule section (30 CFR)	Comments received	BOEM Response
N/A .....	Anglo Suisse Offshore Partners comment: NTL (Notice to Lessees) No. 2008–N07 grossly overestimates the amount of supplemental bonding required. NTL No. 2008–N07 also requires MMS staff to recalculate a lessee’s PDP reserve values rather than using third party Securities and Exchange Commission (SEC) reserve reports.	We have noted the comment. BOEM disagrees and has decided not to make any changes at this time to the NTL. There is nothing in the rule that prevents BOEM from taking SEC reserve reports into account, but BOEM is not obligated to use those numbers if it believes that they are inaccurate or insufficiently substantiated.
N/A .....	Additional Issues: <ul style="list-style-type: none"> <li>• Waiver criteria on supplemental bonds .....</li> <li>• Amount of bond vs. net worth .....</li> <li>• Credit for net worth in calculating bonding amounts ..</li> <li>• New surety rules for issuance of bonds .....</li> </ul> Should MMS attempt to value a company, rather than rely on the SEC to do so?	These issues are beyond the scope of the final rule and may be addressed in future rulemaking.

**V. Legal and Regulatory Analyses**

*A. Statutes and Executive Orders*

1. Improving Regulation and Regulatory Review (Executive Order (E.O. 13563))

E.O. 13563, *Improving Regulation and Regulatory Review* (January 18, 2011), together with follow-up memoranda *EO Guidance Memorandum, M–11–10 (February 2, 2011)* and *Retrospective Analysis Guidance Memorandum, M–11–19 (April 25, 2011)*, require that the regulatory system protect public health, welfare, safety, and the environment while promoting economic growth, innovation, competitiveness, and job creation. The regulatory system must be based on the best available science, while allowing public participation and an open exchange of ideas, thus promoting predictability and reducing uncertainty. The regulatory system must identify and use the best, most innovative and least burdensome tools for achieving regulatory ends and it must take into account benefits and costs, both quantitative and qualitative. It must ensure that regulations are accessible, consistent, written in plain language, and easy to understand. It must also measure, and seek to improve, the actual results of regulatory requirements.

E.O. 13563 supplements and reaffirms the principles, structures, and definitions governing contemporary regulatory review that were established in E.O. 12866 of September 30, 1993. As stated in that E.O., and to the extent permitted by law, each agency must, among other things: (1) Propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor its regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to

the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages, distributive impacts, and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing information upon which the public can base choices, or providing economic incentives to encourage the desired behavior, such as user fees or marketable permits.

2. Regulatory Planning and Review (E.O. 12866)

This final rule is not a significant rule, as determined by the Office of Management and Budget (OMB), and is not subject to review under E.O. 12866, *Regulatory Planning and Review* (September 30, 1993). This rule primarily updates existing regulations that govern the Federal leasing process for offshore sulfur and oil and gas subject to the exclusive jurisdiction of the United States. The rule is rewritten in simple, clear language, and reorganized to reflect the steps in the leasing process as they have evolved over time. Minor changes will make certain practices uniform among the OCS regional offices.

(1) This final rule does not have an annual effect of \$100 million or more on the economy. It will not adversely affect in a material way the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities. The rule rewrites 30 CFR part 556 in plain language, as well as portions of 30 CFR parts 550 and 560,

and contains similar reporting and recordkeeping requirements and attendant costs as the prior regulations. A cost-benefit analysis was not performed because this is a rule of administrative procedure for which such an analysis is not required. However, an overall economic analysis was performed pursuant to the Regulatory Flexibility Act.

(2) This rule does not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency.

(3) This rule does not alter the budgetary effects of entitlements, grants, user fees, or loan programs or the rights or obligations of their recipients. Nominal user fees imposed by the rule are not material in size or nature. The final rule includes a new fee for recording certain secondary lease interests, \$29, and continues existing fees for submitting non-required documents, \$29, and requesting approval of the assignment or transfer of certain lease interests, \$198.

(4) This rule does not raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in E.O. 12866. The final rule supersedes the existing regulations.

3. Regulatory Flexibility Act

The Department certifies that this final rule does not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601–612).

The changes in this final rule affect lessees and potential lessees, of which there are approximately 130 different companies. These companies are generally classified under the North American Industry Classification System (NAICS) Code 211111, which includes companies that extract crude petroleum and natural gas. For this NAICS code classification, a small

company is one with fewer than 500 employees. BOEM estimates that of the 130 lessees and operators that explore for and produce oil and gas on the OCS, approximately 90 are small businesses (70 percent).

The costs associated with the information collection (IC) activities related to this rulemaking should not have any significant economic effect on small businesses. This rule contains most of the same burden hour requirements and non-hour cost burdens as were in effect with BOEM's prior regulations. The changes in reporting requirements that are implemented with this rule do not significantly increase the IC burden on respondents—large or small. BOEM estimates an annual cumulative increase of 2,441 hours in the paperwork burden for all lessees over that imposed by the prior regulations. There is also a new \$29 non-hour cost burden for recording certain secondary lease interests resulting in an annual increase of \$20,300 (\$29 × an estimated 700 filings). A regulatory flexibility analysis is not required. Accordingly, a small entity compliance guide is also not required.

#### 4. Small Business Regulatory Enforcement Fairness Act (SBREFA)

This final rule is not a major rule under 5 U.S.C. 801–808), the Small Business Regulatory Enforcement Fairness Act. This rule:

(a) Will not have an annual effect on the economy of \$100 million or more;

(b) Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; and

(c) Will not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises.

#### 5. Comments From Small Businesses

The Small Business and Agriculture Regulatory Enforcement Ombudsman and 10 Regional Fairness Boards were established to receive comments from small businesses about Federal agency enforcement actions. The Ombudsman will annually evaluate the enforcement activities and rate each agency's responsiveness to small business. If you wish to comment on the actions of BOEM, call 1–888–734–3247. You may comment to the Small Business Administration (SBA) without fear of retaliation. Allegations of discrimination/retaliation filed with the Small Business Administration will be investigated for appropriate action.

#### 6. Unfunded Mandates Reform Act

This final rule does not impose an unfunded mandate on State, local, or tribal governments or the private sector of more than \$100 million per year. The final rule does not have a significant or unique effect on State, local, or tribal governments or the private sector. A statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531–1538) is not required.

#### 7. Takings Implication Assessment (E.O. 12630)

Under the criteria in E.O. 12630, *Governmental Action and Interference with Constitutionally-Protected Property Rights* (March 15, 1988), this final rule does not have significant takings implications. The rule is not a governmental action capable of interference with constitutionally-protected property rights. A takings implication assessment is not required.

#### 8. Federalism (E.O. 13132)

Under the criteria in E.O. 13132, *Federalism* (August 4, 1999), this final rule does not have sufficient federalism implications to require a Federalism Assessment. This final rule does not substantially and directly affect the relationship between the Federal and State governments. To the extent that State and local governments play a role in OCS activities, this rule does not affect that role.

#### 9. Civil Justice Reform (E.O. 12988)

This rule complies with the requirements of E.O. 12988, *Civil Justice Reform* (February 7, 1996). Specifically, this rule:

(a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

#### 10. Consultation With Indian Tribal Governments (E.O. 13175)

Under the criteria in E.O. 13175, *Consultation and Coordination with Indian Tribal Governments* (November 9, 2000), we have evaluated this final rule and determined it has no substantial effect on Federally-recognized Indian tribes.

#### 11. Paperwork Reduction Act (PRA)

This rule contains new IC requirements; therefore, a submission to OMB under the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–

3521) was required. The OMB has approved the IC for the final rulemaking and assigned OMB Control Number 1010–0006 for a total of 19,454 burden hours and \$766,053 non-hour cost burdens.

The title of the IC is “Leasing of Sulfur or Oil and Gas in the Outer Continental Shelf (30 CFR part 550, part 556, and part 560)”. Respondents are Federal sulfur or oil and gas lessees and/or operators. Some responses to this IC are required to obtain or retain a benefit, and some are mandatory. The frequency of response varies but is primarily on occasion. The IC does not include questions of a sensitive nature. BOEM will protect proprietary information according to section 26 of OCSLA; the Freedom of Information Act (5 U.S.C. 552), its implementing regulations at 43 CFR part 2; and the regulations at 30 CFR 556.104(b) and 550.197, addressing proprietary data and data and information to be made available to the public or for limited inspection.

This rulemaking is a partial rewrite of 30 CFR part 556, Leasing of Sulfur or Oil and Gas and Bonding Requirements in the Outer Continental Shelf and of 30 CFR part 560, OCS Oil and Gas Leasing. It also refers to, but does not change current requirements and burdens already approved by OMB under 30 CFR part 550, subpart A (1010–0114). BOEM uses the information collected in the rulemaking to help determine specific areas of leasing interest, to determine if applicants are qualified to hold leases in the OCS, to identify parties ineligible to bid jointly, and to track owners of, and operators on, leaseholds.

In response to the proposed rule (74 FR 25177, May 27, 2009), BOEM received comments from the American Petroleum Institute, Shell Exploration and Production Company, Chevron North America Exploration and Production, Anglo Suisse Offshore Partners, LLC. (and Anglo Suisse Texas Offshore Partners, LLC.), Dynamic Offshore Resources, RLI Insurance Company, and two private citizens. Comments that addressed aspects of the information collection for this rulemaking are summarized below. All comments are addressed in detail in the preamble of this final rule.

Commenting on proposed rule section 256.404, one company indicated that it is burdensome to submit merger or name change information and that BOEM can obtain the information from the Secretary of State in most States. In the final rule, BOEM is retaining the requirement to submit such information in order to address the problems that the Bureau has had in the past with name/

merger changes of which BOEM was not timely informed. It is not practical for BOEM to monitor all filings with the Secretaries of State in each State. In final rule section 556.405, however, BOEM replaced the immediate filing with a requirement that the filing be accomplished as soon as practicable. No change in the burden resulted.

Concerning proposed rule sections 256.619 and 256.620, one company questioned submitting commercial agreements relating to certain transfers between restricted joint bidders because of the information's sensitivity. In final rule section 556.714, BOEM provided an option for the submission of a description of the timing and nature of the agreement(s) by which the assignor or transferor acquired the interest it now wishes to transfer. No change in the hour burden resulted. However, partially in response to the comment, BOEM added a general provision to the part (section 556.104(b)) to protect proprietary information (+ 125 hours).

In addition, between the proposed and final rules, several actions occurred that affected the information collection.

- The MMS was reorganized, per Secretarial Orders 3302 and 3299, resulting in a realignment of the regulations, with the leasing regulations going to BOEM, under 30 CFR chapter 5 (e.g., 30 CFR part 256 is now 30 CFR part 556).

- The IC burden for 30 CFR part 550, subpart J, bonding requirements for pipelines and pipeline rights-of-way, was consolidated into the collection being revised for this rulemaking for 30 CFR part 556 (1010–0006) due to the regulations realignment. The consolidation was approved by OMB on 11/14/2011.

- The proposed rule included a total rewrite of 30 CFR part 556; however, the final rule does not make substantive revisions to the regulations for general and supplemental bonding in prior part 556 (subpart I). After the proposed rule was published, questions arose about possible inconsistencies between the revised bonding regulations and p regulations for oil-spill financial responsibility under 30 CFR part 553. Also, since the publication of the proposed rule, BOEM has decided to engage in an overhaul of its financial assurance processes, and subpart I will be revised in a separate rulemaking. Therefore, the regulations and the associated IC burden for 30 CFR part 550, subpart I, will remain in effect, but the sections in subpart I have been renumbered to fit within the numbering scheme of this rule (e.g., prior section 556.52 is now section 556.900).

- In the final rule, BOEM rearranged discussions to make the regulations easier to read and follow. Thus, all rule sections and citations have been renumbered from the proposed rule, as explained in the preamble of the final rule.

- The information collection for prior 30 CFR part 556 regulations (1010–0006) was renewed by OMB, thereby updating burden hours based on public outreach. BOEM has therefore used those updated estimates where relevant instead of those used in the proposed rulemaking.

## 12. Other Changes in the Information Collection (IC) Between the Proposed and Final Rules

- The proposed rule included regulatory text concerning the reporting of decommissioning costs in 30 CFR part 250, subpart Q, and text concerning reports on lease-term pipelines in section 256.621. Due to the realignment of regulations and bureau responsibilities, BOEM removed these requirements from the final rule as they were addressed in the Bureau of Safety and Environmental Enforcement (BSEE) regulations (– 820 hours for removing Subpart Q and – 1,500 hours for removing section 256.621 in the final rule).

- The final rule also removed the provisions under proposed rule sections 256.902(a) and 256.905 for requesting/transferring a bonus or royalty credit, because the program has officially ended (– 2 hours from current collection).

- BOEM also divided the IC requirements for commenting on the 5-Year Program and responding to Calls for Information, etc. (sections 556.201–204 and sections 556.301–302) into general (not considered IC per the PRA) and specific, in accordance with the currently approved collection for part 556 (+ 596 hours). Where applicable, all estimates were updated according to the recent Office of Management and Budget (OMB) approved renewal of the 30 CFR part 556 information collection.

- BOEM also included a burden that was overlooked in the proposed rule (section 256.100, now section 556.302(d)) for requesting a summary of interest on Calls for Information (+ 5 hours).

- The proposed rule (section 256.620) introduced a new cost recovery fee (\$27) for filing required documents for record purposes. In the final rule (section 556.715(a)), the fee has been increased to \$29 in accordance with changes BOEM made, due to inflation, to other such fees on January 28, 2013 (78 FR 5837).

- To make the regulations easier to follow, in the final rule BOEM split the discussion (requirements and associated fee) of assignment/transfer of record title and that of operating rights interests (30 CFR part 256, subpart G, in the proposed rule) into two subparts (30 CFR part 556, subparts G and H). With this reorganization, BOEM discovered that it had not properly counted the number of submissions for transfers of operating rights; therefore, in the final rule, BOEM is reporting an adjustment increase for such transfers of record title/operating rights (+ 421 hours; + \$83,358 non-hour costs).

In addition, to streamline activities, reduce the burden in the future, and assist respondents, the final rule includes:

- A clarification of the proposed rule (section 256.611) and BOEM's prior regulations (section 556.62), which both explained how a record title, or other lease interest may be transferred, but did not mention the need to file a new Designation of Operator form (BOEM–1123, 30 CFR part 550, subpart A), which often arises when a lease interest is transferred. This clarification in part 556 (sections 701(c); 715(b); 801(b); 810(b)) will result in a one-time increase in the number of submissions after the rule becomes effective (+ 80 hours); otherwise the requirement is covered under OMB Control No. 1010–0114.

- A clarification that geophysical statements and maps are included with bid submissions (sections 556.500–501). This requirement and its hour burden have always been part of the bid process but not specifically stated (no change in hour burden).

- A provision (section 556.107) to allow a company's one-time submission of documentation, with a corporate seal, to establish the legal status of future submissions without such seals, where such seals would otherwise be required (+ 67 hours as a one-time burden but expected to reduce the net burden for companies in the future).

- An expansion of a provision from the proposed rule (section 256.503(c)) to allow implementation of electronic submission systems (e.g., for bonding information) (sections 556.107; 560.500) (+ 800 hours as a one-time increase to allow companies to adjust their processes; however, we expect this provision to reduce the hour burden of each affected requirement in the future).

The following table shows the breakdown of the hour and non-hour cost burdens for this final rulemaking.

## 13. Burden Breakdown Table

*Italics show expansion of existing requirements; bold indicates new*

requirements; regular font shows collection are being used instead of current requirements. Where applicable, those in the proposed rulemaking.] updated estimates from the existing

30 CFR part 556 and NTLs	Reporting requirement *	Non-hour cost burdens

106 .....	Cost recovery/service fees; confirmation receipt ...	Cost recovery/service fees and associated documentation are covered under individual requirements throughout the part.		0
107 New .....	Submit required documentation electronically through BOEM-approved system; comply with filing specifications, as directed by notice in the <b>Federal Register</b> in accordance with § 560.500.	Burden covered in § 560.500.		0
107 New .....	File seals, documents, statements, signatures, etc., to establish legal status of all future submissions (paper and/or electronic).	10 min .....	400 .....	67
Subtotal .....	.....	.....	900 .....	192
<b>Subpart B</b>				
201–204 .....	Submit nominations, suggestions, and general comments in response to Request for Information/Comments, proposed 5-year leasing program, etc., including information from States/local governments, Federal agencies, industry, and others.	Not considered IC as defined in 5 CFR 1320.3(h)(4).		0
201–204 .....	Submit nominations & specific information requested in response to Request for Information/Comments, proposed 5-year leasing program, etc., including from States/local governments, Federal agencies, industry, and others.	4 .....	69 .....	276
Subtotal .....	.....	.....	69 .....	276
<b>Subpart C</b>				
301; 302 .....	Submit response & specific information requested in Requests for Industry Interest and Calls for Information and Nominations, etc., on areas proposed for leasing; including information from States/local governments.	4 .....	20 responses/sale × 2 sales/call × 2 calls/year = 80.	320
302(d) New .....	Request summary of interest (nonproprietary information) for Calls for Information/Requests for Interest, etc.	1 .....	5 .....	5
305; 306 .....	States or local governments submit comments, recommendations, and other responses on size, timing, or location of proposed lease sale. Request extension; enter agreement.	4 .....	25 .....	100
Subtotal .....	.....	.....	110 .....	425
<b>Subpart D</b>				
400–402; 405 .....	Establish file for qualification; submit evidence/certification for lessee/bidder qualifications. Provide updates; obtain BOEM approval & qualification number.	2 .....	107 .....	214
403(c) .....	Request hearing on disqualification .....	Requirement not considered IC under 5 CFR 1320.3(h)(9).		0

30 CFR part 556 and NTLs	Reporting requirement *	Non-hour cost burdens		
		Hour burden	Average number of annual responses	Annual burden hours
403; 404 New .....	Notify BOEM if you or your principals are excluded, disqualified, or convicted of a crime—Federal non-procurement debarment and suspension requirements; request exception; enter transaction.	1.5 .....	50 .....	75
405 .....	Notify BOEM of all mergers, name changes, or changes of business.	Requirement not considered IC under 5 CFR 1320.3(h)(1).		0
Subtotal .....	.....	.....	157 .....	289

**Subpart E**

500; 501 .....	Submit bids, deposits, and required information, including GDIS & maps; in manner specified. Make data available to BOEM.	5 .....	2,000 .....	10,000
500(e); 517 .....	Request reconsideration of bid decision .....	Requirement not considered IC under 5 CFR 1320.3(h)(9).		0
501(e) New .....	Apply for reimbursement .....	Burden covered in 1010–0048, 30 CFR part 551.		0
511(b); 517 .....	Submit appeal due to restricted joint bidders list; appeal bid decision.	Requirement not considered IC under 5 CFR 1320.3(h)(9).		0
513; 514 .....	File statement and detailed report of production. Make documents available to BOEM.	2 .....	100 .....	200
515 .....	Request exemption from bidding restrictions; submit appropriate information.	Requirement not considered IC under 5 CFR 1320.3(h)(9).		0
516 .....	Notify BOEM of tie bid decision; file agreement on determination of lessee.	3.5 .....	2 .....	7
520; 521; 600(c) .....	Execute lease (includes submission of evidence of authorized agent/completion and request effective date of lease); submit required data and rental.	1 .....	852 .....	852
520(b) New .....	Provide acceptable bond for payment of a deferred bonus. (We do not expect this to occur, hence minimum burden).	0.25 .....	1 .....	1
Subtotal .....	.....	.....	2,955 .....	11,060

**Subparts F, G, H**

Subpart F, G, H .....	References to requests of approval for various operations or submit plans or applications. Burden included with other approved collections for BOEM 30 CFR part 550 (Subpart A 1010–0114; Subpart B 1010–0151) and for BSEE 30 CFR part 250 (Subpart A 1014–0022; Subpart D 1014–0018).			0
701(c); 716(b); 801(b); 810(b) New.	Submit new designation of operator (BOEM–1123). <i>One-time increase to existing requirements and burdens already covered in 1010–0114. Extra burden will be deleted in next renewal. No fee.</i>	0.5 .....	160 .....	80
700–715 .....	File application and required information for assignment/transfer of record title/lease interest (form BOEM–0150; form is 30 min.) (includes sell, sublease, sever, exchange, transfer); request effective date/confidentiality; provide notifications.	1 .....	1,414 .....	1,414
		\$198 fee × 1,414 forms = \$279,972

\* In the future, BOEM may require electronic filing of certain submissions.

An agency may not conduct or sponsor, and you are not required to respond to, a collection of information unless it displays a currently valid OMB control number. The public may comment, at any time, on the accuracy of the IC burden estimate in this rule and may submit any comments to the Information Collection Clearance Officer, Office of Policy, Regulations, and Analysis; Bureau of Ocean Energy Management; U.S. Department of the Interior; VAM–BOEM DIR; 45600 Woodland Rd, Sterling, Virginia 20166.

14. National Environmental Policy Act of 1969

This rule does not constitute a major Federal action significantly affecting the quality of the human environment.

BOEM has considered the rule under the criteria of the National Environmental Policy Act (NEPA) (42 U.S.C. 4321–4370h) and 516 Departmental Manual 15. This rule meets the criteria set forth in 43 CFR 46.210(5) for a Departmental “categorical exclusion” in that this final rule is “. . . of an administrative, financial, legal, technical, or procedural nature or whose environmental effects are too broad, speculative, or conjectural to lend themselves to meaningful analysis. . . .” This rule also meets the criteria set forth in 516 Departmental Manual 15.4(C)(1) for a BOEM “categorical exclusion” in that its impacts are limited to administrative, economic or technological effects. Further, BOEM has analyzed this rule to

determine if it meets any of the extraordinary circumstances that require an environmental assessment or an environmental impact statement as set forth in 43 CFR 46.215 and has concluded that it does not.

15. Data Quality Act

In developing this rule, we did not conduct or use a study, experiment, or survey requiring peer review under the Data Quality Act (44 U.S.C. 3516–3521), Public Law 106–554, app. C section 515, 114 Stat. 2763, 2763A–153–154).

16. Effects on the Energy Supply (E.O. 13211)

This rule is not a significant energy action under the definition in E.O. 13211, *Actions Concerning Regulations*

*That Significantly Affect Energy Supply, Distribution, or Use* (May 18, 2001). A statement of energy effects is not required.

**List of Subjects**

**30 CFR Part 550**

Administrative practice and procedure, Continental shelf, Environmental impact statements, Environmental protection, Federal lands, Government contracts, Investigations, Mineral resources, Oil and gas exploration, Outer continental shelf, Penalties, Pipelines, Reporting and recordkeeping requirements, Rights-of-way, Sulfur.

**30 CFR Part 556**

Administrative practice and procedure, Continental shelf, Environmental protection, Federal lands, Government contracts, Intergovernmental relations, Oil and gas exploration, Outer continental shelf, Mineral resources, Rights-of-way, Reporting and recordkeeping requirements.

**30 CFR Part 559**

Continental shelf, Federal lands, Federal lease, Gas, Government contracts, Mineral resources, Mineral royalties, Oil and gas exploration, Outer continental shelf, Reporting and recordkeeping requirements.

**30 CFR Part 560**

Continental shelf, Federal lands, Government contracts, Mineral

resources, Mineral royalties, Oil and gas exploration, Outer continental shelf, Reporting and recordkeeping requirements.

Dated: March 10, 2016.

**Amanda C. Leiter,**  
*Acting Assistant Secretary—Land and Minerals Management.*

For the reasons stated in the preamble, the Bureau of Ocean Energy Management, (BOEM) amends 30 CFR parts 550, 556, 559 and 560 as follows:

**PART 550—OIL AND GAS AND SULFUR OPERATIONS IN THE OUTER CONTINENTAL SHELF**

- 1. Revise the authority citation for 30 CFR part 550 to read as follows:

**Authority:** 31 U.S.C. 9701, 43 U.S.C. 1334.

**Subpart A—General Provisions**

- 2. Add § 550.120 to read as follows:

**§ 550.120 What standards will BOEM use to regulate leases, rights-of-use and easement, and rights-of-way?**

BOEM will regulate all activities under a lease, a right-of-use and easement, or a right-of-way to:

- (a) Promote the orderly exploration, development, and production of mineral resources;
- (b) Prevent injury or loss of life;
- (c) Prevent damage to or waste of any natural resource, property, or the environment; and
- (d) Ensure cooperation and consultation with affected States, local

governments, other interested parties, and relevant Federal agencies.

- 3. Add § 550.121 to read as follows:

**§ 550.121 What must I do to protect health, safety, property, and the environment?**

The Director may require additional measures to ensure the use of Best Available and Safest Technology (BAST) as identified by BSEE:

- (a) To avoid the failure of equipment that would have a significant effect on safety, health, or the environment;
- (b) If it is economically feasible; and
- (c) If the incremental benefits justify the incremental costs.

**§§ 550.145 and 550.146 [Redesignated as §§ 550.146 and 550.147]**

- 4. Redesignate §§ 550.145 and 550.146 as §§ 550.146 and 550.147, respectively.
- 5. Amend § 550.197 as follows:
  - a. Revise the first sentence of the introductory text.
  - b. Revise paragraph (b)(5).
  - c. Revise paragraph (c).
  - d. Add paragraph (d).

The revisions and addition read as follows:

**§ 550.197 Data and information to be made available to the public or for limited inspection.**

BOEM will protect data and information that you submit under this chapter, as described in this section.

\* \* \*  
\* \* \* \* \*  
(b) \* \* \*

If	BOEM will release	At this time	Special provisions
(5) Your lease is still in effect and within the primary term specified in the lease.	Geological data, analyzed geological information.	Two years after the required submittal date or 60 days after a lease sale if any portion of an offered lease is within 50 miles of a well, whichever is later.	These release times apply only if the provisions in this table governing high-resolution systems and the provisions in § 552.7 do not apply. If the primary term specified in the lease is extended, this provision applies to the extension.

\* \* \* \* \*

(c) BOEM may allow limited data and information inspection, but only by a person with a direct interest in related BOEM decisions and issues in a specific geographic area, and who agrees in writing to maintain the confidentiality of geological and geophysical (G&G) data and information submitted under this part that BOEM uses to:

- (1) Promote operational safety;
- (2) Protect the environment; or
- (3) Make field determinations.

(d) No proprietary information received by BOEM under 43 U.S.C. 1352 will be transmitted to any affected State unless the lessee, or the permittee and

all persons to whom such permittee has sold such information under promise of confidentiality, agree to such transmittal.

- 6. Add subpart D to part 550 to read as follows:

**Subpart D—Leasing Maps and Diagrams**

**§ 550.400 Leasing maps and diagrams.**

(a) Any area of the OCS, which has been appropriately platted as provided in paragraph (b) of this section, may be leased for any mineral not included in an existing lease issued under the Act or meeting the requirements of

subsection (a) of section 6 of the Act. Before any lease is offered or issued an area may be:

- (1) Withdrawn from disposition pursuant to section 12(a) of the Act; or
- (2) Designated as an area or part of an area restricted from operation under section 12(d) of the Act.

(b) BOEM will prepare leasing maps and official protraction diagrams of areas of the OCS. The areas included in each mineral lease will be in accordance with the appropriate leasing map or official protraction diagram.

- 7. Revise part 556 to read as follows:

## **PART 556—LEASING OF SULFUR OR OIL AND GAS AND BONDING REQUIREMENTS IN THE OUTER CONTINENTAL SHELF**

### **Subpart A—General Provisions**

Sec.

- 556.100 Statement of policy.
- 556.101 Purpose.
- 556.102 Authority.
- 556.103 Cross references.
- 556.104 Information collection and proprietary information.
- 556.105 Acronyms and definitions.
- 556.106 Service fees.
- 556.107 Corporate seal requirements.

### **Subpart B—Oil and Gas Five Year Leasing Program**

- 556.200 What is the Five Year leasing program?
- 556.201 Does BOEM consider multiple uses of the OCS?
- 556.202 How does BOEM start the Five Year program preparation process?
- 556.203 What does BOEM do before publishing a proposed Five Year program?
- 556.204 How do Governments and citizens comment on a proposed Five Year program?
- 556.205 What does BOEM do before approving a proposed final Five Year program or a significant revision of a previously-approved Five Year program?

### **Subpart C—Planning and Holding a Lease Sale**

- 556.300 What reports may BOEM and other Federal agencies prepare before a lease sale?
- 556.301 What is a Call for Information and Nominations?
- 556.302 What does BOEM do with the information from the Call?
- 556.303 What does BOEM do if an area proposed for leasing is within three nautical miles of the seaward boundary of a coastal State?
- 556.304 How is a proposed notice of sale prepared?
- 556.305 How does BOEM coordinate and consult with States regarding a proposed notice of sale?
- 556.306 What if a potentially oil or gas bearing area underlies both the OCS and lands subject to State jurisdiction?
- 556.307 What does BOEM do with comments and recommendations received on the proposed notice of sale?
- 556.308 How does BOEM conduct a lease sale?
- 556.309 Does BOEM offer blocks in a sale that is not on the Five Year program schedule (called a Supplemental Sale)?

### **Subpart D—Qualifications**

- 556.400 When must I demonstrate that I am qualified to hold a lease on the OCS?
- 556.401 What do I need to show to become qualified to hold a lease on the OCS and obtain a qualification number?
- 556.402 How do I make the necessary showing to qualify and obtain a qualification number?

- 556.403 Under what circumstances may I be disqualified from holding a lease on the OCS?
- 556.404 What do the non-procurement debarment rules require that I do?
- 556.405 When must I notify BOEM of mergers, name changes, or changes of business form?

### **Subpart E—Issuance of a Lease**

#### **How To Bid**

- 556.500 Once qualified, how do I submit a bid?
- 556.501 What information do I need to submit with my bid?

#### **Restrictions on Joint Bidding**

- 556.511 Are there restrictions on bidding with others and do those restrictions affect my ability to bid?
- 556.512 What bids may be disqualified?
- 556.513 When must I file a statement of production?
- 556.514 How do I determine my production for purposes of the restricted joint bidders list?
- 556.515 May a person be exempted from joint bidding restrictions?

#### **How does BOEM act on bids?**

- 556.516 What does BOEM do with my bid?
- 556.517 What may I do if my bid is rejected?

#### **Awarding the Lease**

- 556.520 What happens if I am the successful high bidder and BOEM accepts my bid?
- 556.521 When is my lease effective?
- 556.522 What are the terms and conditions of the lease and when are they published?

### **Subpart F—Lease Terms and Obligations**

#### **Length of Lease**

- 556.600 What is the primary term of my oil and gas lease?
- 556.601 How may I maintain my oil and gas lease beyond the primary term?
- 556.602 What is the primary term of my sulfur lease?
- 556.603 How may I maintain my sulfur lease beyond the primary term?

#### **Lease Obligations**

- 56.604 What are my rights and obligations as a record title owner?
- 556.605 What are my rights and obligations as an operating rights owner?

#### **Helium**

- 556.606 What must a lessee do if BOEM elects to extract helium from a lease?

### **Subpart G—Transferring All or Part of the Record Title Interest in a Lease**

- 556.700 May I assign or sublease all or any part of the record title interest in my lease?
- 556.701 How do I seek approval of an assignment of the record title interest in my lease, or a severance of operating rights from that record title interest?
- 556.702 When will my assignment result in a segregated lease?
- 556.703 What is the effect of the approval of the assignment of 100 percent of the

record title in a particular aliquot(s) of my lease and the resulting lease segregation?

- 556.704 When would BOEM disapprove an assignment or sublease of an interest in my lease?
  - 556.705 How do I transfer the interest of a deceased natural person who was a lessee?
  - 556.706 What if I want to transfer record title interests in more than one lease at the same time, but to different parties?
  - 556.707 What if I want to transfer different types of lease interests (not only record title interests) in the same lease to different parties?
  - 556.708 What if I want to transfer my record title interests in more than one lease to the same party?
  - 556.709 What if I want to transfer my record title interest in one lease to multiple parties?
  - 556.710 What is the effect of an assignment of a lease on an assignor's liability under the lease?
  - 556.711 What is the effect of a record title holder's sublease of operating rights on the record title holder's liability?
  - 556.712 What is the effective date of a transfer?
  - 556.713 What is the effect of an assignment of a lease on an assignee's liability under the lease?
  - 556.714 As a restricted joint bidder, may I transfer an interest to another restricted joint bidder?
  - 556.715 Are there any interests I may transfer or record without BOEM approval?
  - 556.716 What must I do with respect to the designation of operator on a lease when a transfer of record title is submitted?
- ### **Subpart H—Transferring Operating Rights in All or Part of a Lease**
- 556.800 As an operating rights owner, may I assign all or part of my operating rights interest?
  - 556.801 How do I seek approval of an assignment of my operating rights?
  - 556.802 When would BOEM disapprove the assignment of all or part of my operating rights interest?
  - 556.803 What if I want to assign operating rights interests in more than one lease at the same time, but to different parties?
  - 556.804 What if I want to assign my operating rights interest in a lease to multiple parties?
  - 556.805 What is the effect of an operating rights owner's assignment of operating rights on the assignor's liability?
  - 556.806 What is the effective date of an assignment of operating rights?
  - 556.807 What is the effect of an assignment of operating rights on an assignee's liability?
  - 556.808 As an operating rights owner, are there any interests I may assign without BOEM approval?
  - 556.809 [Reserved]
  - 556.810 What must I do with respect to the designation of operator on a lease when a transfer of operating rights ownership is submitted?

**Subpart I—Bonding or Other Financial Assurance**

- 556.900 Bond requirements for an oil and gas or sulfur lease.
- 556.901 Additional bonds.
- 556.902 General requirements for bonds.
- 556.903 Lapse of bond.
- 556.904 Lease-specific abandonment accounts.
- 556.905 Using a third-party guarantee instead of a bond.
- 556.906 Termination of the period of liability and cancellation of a bond.
- 556.907 Forfeiture of bonds and/or other securities.

**Subpart J—Bonus or Royalty Credits for Exchange of Certain Leases**

- 556.1000 Leases formerly eligible for a bonus or royalty credit.

**Subpart K—Ending a Lease**

- 556.1100 How does a lease expire?
- 556.1101 May I relinquish my lease or an aliquot part thereof?
- 556.1102 Under what circumstances will BOEM cancel my lease?

**Subpart L—Leases Maintained Under Section 6 of OCSLA**

- 556.1200 Effect of regulations on lease.
- 556.1201 Section 6(a) leases and leases other than those for oil, gas, or sulfur.

**Subpart M—Environmental Studies**

- 556.1300 Environmental studies.

**Authority:** 30 U.S.C. 1701 note, 30 U.S.C. 1711, 31 U.S.C. 9701, 42 U.S.C. 6213, 43 U.S.C. 1331 note, 43 U.S.C. 1334, 43 U.S.C. 1801–1802.

**Subpart A—General Provisions****§ 556.100 Statement of policy.**

The management of Outer Continental Shelf (OCS) resources is to be conducted in accordance with the findings, purposes, and policy directions provided by the Outer Continental Shelf Lands Act Amendments of 1978 (OCSLA or the Act) (43 U.S.C. 1332, 1801, 1802), and other executive, legislative, judicial and departmental guidance. The Secretary of the Interior (the Secretary) will consider available environmental information in making decisions affecting OCS resources.

**§ 556.101 Purpose.**

The purpose of the regulations in this part is to establish the procedures under which the Secretary will exercise the authority to administer a leasing program for oil and gas, and sulfur. The regulations pertaining to the procedures under which the Secretary will exercise the authority to administer a program to grant rights-of-use and easements are found in part 550 of this chapter.

**§ 556.102 Authority.**

(a) The Outer Continental Shelf Lands Act (OCSLA) (43 U.S.C. 1334)

authorizes the Secretary of the Interior to issue, on a competitive basis, leases for oil and gas, and sulfur, in submerged lands of the OCS. The Act authorizes the Secretary to grant rights-of-way and easements through the submerged lands of the OCS.

(b) The Federal Oil and Gas Royalty Management Act of 1982 (FOGRMA) (30 U.S.C. 1711) governs oil and gas royalty management and requires the development of enforcement practices to ensure the prompt and proper collection of oil and gas revenues owed to the U.S.

(c) The Independent Offices Appropriations Act of 1952 (IOAA) (31 U.S.C. 9701) authorizes fees and charges for Federal government services.

(d) The Energy Policy and Conservation Act of 1975 (42 U.S.C. 6213) prohibits joint bidding by major oil and gas producers.

(e) The Gulf of Mexico Energy Security Act of 2006 (GOMESA) (Pub. L. 109–432, 43 U.S.C. 1331 note):

(1) Shares leasing revenues with Gulf producing states and the Land & Water Conservation Fund for coastal restoration projects; and

(2) Allows companies to exchange certain existing leases in moratorium areas for bonus and royalty credits to be used on other Gulf of Mexico leases.

**§ 556.103 Cross references.**

The following includes some of the major regulations relevant to offshore oil and gas development:

(a) For other applicable Bureau of Ocean Energy Management (BOEM) oil and gas regulations, see 30 CFR parts 550 through 560.

(b) For Bureau of Safety and Environmental Enforcement (BSEE) regulations governing exploration, development and production, and oil spill response, see 30 CFR chapter II.

(c) For Office of Natural Resources Revenue (ONRR) regulations related to rentals, royalties, and fees, see 30 CFR chapter XII.

(d) For BOEM regulations governing the appeal of an order or decision issued under the regulations in this part, see 30 CFR part 590.

(e) For regulations on the National Environmental Policy Act (NEPA), see 40 CFR 1500–1508 and 43 CFR part 46.

(f) For ocean dumping sites, see the U.S. Environmental Protection Agency (USEPA) listing—40 CFR part 228.

(g) For air quality, see USEPA regulations at 40 CFR part 55 and BOEM regulations at 30 CFR part 550 subparts B and C.

(h) For related National Oceanic and Atmospheric Administration (NOAA) programs, see:

(1) Marine Sanctuary regulations, 15 CFR part 922;

(2) Fishermen's Contingency Fund, 50 CFR part 296;

(3) Coastal Zone Management Act (CZMA), 15 CFR part 930;

(4) Essential Fish Habitat, 50 CFR 600.90.

(i) For U.S. Coast Guard (USCG) regulations on the oil spill liability of vessels and operators, see 33 CFR parts 132, 135, and 136.

(j) For USCG regulations on port access routes, see 33 CFR part 164.

(k) For Department of Transportation regulations on offshore pipeline facilities, see 49 CFR part 195.

(1) For Department of Defense regulations on military activities on offshore areas, see 32 CFR part 252.

**§ 556.104 Information collection and proprietary information.**

(a) *Information collection.* (1) The Office of Management and Budget (OMB) approved the collection of information under 44 U.S.C. 3501–3521, and assigned OMB Control Number 1010–0006. The title of this collection of information is “Leasing of Sulfur or Oil and Gas in the Outer Continental Shelf (30 CFR part 550, part 556, and part 560).”

(2) BOEM collects this information to determine if an applicant seeking to obtain a lease or right-of-use and easement (RUE) on the OCS is qualified to hold such a lease or RUE and to determine whether any such applicant can meet the monetary and non-monetary requirements associated with a lease or RUE. Responses to this information collection are either required to obtain or retain a benefit or are mandatory under OCSLA (43 U.S.C. 1331–1356a). BOEM will protect proprietary information collected according to section 26 of OCSLA (43 U.S.C. 1352), and this section.

(3) The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) requires us to inform the public that an agency may not conduct or sponsor, and that no one is required to respond to, a collection of information unless it displays a current and valid OMB control number.

(4) Send comments regarding any aspect of the collection of information under this part, including suggestions for reducing the burden, to the Information Collection Clearance Officer, Bureau of Ocean Energy Management, by mail at 45600 Woodland Road, Sterling, VA 20166 or by email to [regulation1@boem.gov](mailto:regulation1@boem.gov), or by phone at (703) 787–1025.

(b) *Proprietary information.* (1) Any proprietary information maintained by BOEM will be subject to the requirements of 43 CFR part 2.

(2) No proprietary information received by BOEM under 43 U.S.C. 1352(c) will be transmitted to any affected State unless the lessee, to whom such information applies, or the permittee and all persons, to whom such permittee has sold such information under promise of confidentiality, agree to such transmittal.

(c) Proprietary information in response to a Call for Information and Nominations (Call).

(1) A specific indication of interest in an area received in response to a Call issued by the Secretary is proprietary information.

(2) Notwithstanding paragraph (c)(1) of this section, BOEM may provide a summary of indications of interest in areas received in response to a Call for a proposed sale.

#### § 556.105 Acronyms and definitions.

(a) Acronyms and terms used in this part have the following meanings:

ASTM American Society for Testing and Materials  
 BAST Best Available and Safest Technology  
 BOEM Bureau of Ocean Energy Management  
 BSEE Bureau of Safety and Environmental Enforcement  
 CFR Code of Federal Regulations  
 CPA Central Planning Area of the GOM  
 CZMA Coastal Zone Management Act  
 DOI Department of the Interior  
 DOCD Development Operations Coordination Document  
 DOO Designation of Operator  
 DPP Development and Production Plan  
 EIA Environmental Impact Analysis  
 EP Exploration Plan  
 EPA Eastern Planning Area of the GOM  
 EPAct Energy Policy Act of 2005

(b) As used in this part, each of the terms and phrases listed below has the meaning given in the Act or as defined in this section.

*Act* means the Outer Continental Shelf Lands Act, as amended (OCSLA) (43 U.S.C. 1331–1356a).

*Affected State* means, with respect to any program, plan, lease sale, or other activity proposed, conducted, or approved pursuant to the provisions of OCSLA, any State:

(i) The laws of which are declared, pursuant to section 4(a)(2) of OCSLA (43 U.S.C. 1333(a)(2)), to be the law of the United States for the portion of the OCS on which such activity is, or is proposed to be, conducted;

(ii) Which is, or is proposed to be, directly connected by transportation facilities to any artificial island or structure referred to in section 4(a)(1) of OCSLA (43 U.S.C. 1333(a)(1));

(iii) Which is receiving, or in accordance with the proposed activity will receive, oil for processing, refining, or transshipment that was extracted from the OCS and transported directly to that State by means of one or more vessels or by a combination of means, including a vessel;

(iv) Which is designated by the Secretary as a State in which there is a substantial probability of significant impact on or damage to the coastal, marine, or human environment; or a State in which there will be significant changes in the social, governmental, or economic infrastructure resulting from the exploration, development, and production of oil and gas anywhere on the OCS; or

(v) In which the Secretary finds that because of such activity, there is, or will be, a significant risk of serious damage, due to factors such as prevailing winds and currents, to the marine or coastal environment in the event of any oil spill, blowout, or release of oil or gas from one or more vessels, pipelines, or other transshipment facilities.

*Aliquot or Aliquot part* means an officially designated subdivision of a lease's area, which can be a half of a lease ( $\frac{1}{2}$ ), a quarter of a lease ( $\frac{1}{4}$ ), a quarter of a quarter of a lease ( $\frac{1}{4} \frac{1}{4}$ ), or a quarter of a quarter of a quarter of a lease ( $\frac{1}{4} \frac{1}{4} \frac{1}{4}$ ).

*Authorized officer* means any person authorized by law or by delegation of authority to or within BOEM to perform the duties described in this part.

*Average daily production* means the total of all production in an applicable production period that is chargeable under § 556.514 divided by the exact number of calendar days in the applicable production period.

*Barrel* means 42 U.S. gallons. All measurements of crude oil and natural gas liquids under this section must be at 60 °F.

(i) For purposes of computing production and reporting of natural gas, 5,626 cubic feet of natural gas at 14.73 pounds per square inch equals one barrel.

(ii) For purposes of computing production and reporting of natural gas liquids, 1,454 barrels of natural gas liquids at 60 °F equals one barrel of crude oil.

*Bidding unit* means one or more OCS blocks, or any portion thereof, that may be bid upon as a single administrative unit and will become a single lease. The term "tract," as defined in this section, may be used interchangeably with the term "bidding unit."

*BOEM* means Bureau of Ocean Energy Management of the U.S. Department of the Interior.

*Bonus or royalty credit* means a legal instrument or other written documentation approved by BOEM, or an entry in an account managed by the Secretary, that a bidder or lessee may use in lieu of any other monetary payment for a bonus or a royalty due on oil or gas production from certain leases, as specified in, and permitted by, the Gulf of Mexico Energy Security Act of 2006, Pub. L. 109–432 (Div. C, Title 1), 120 Stat. 3000 (2006), codified at 43 U.S.C. 1331, note.

*BSEE* means Bureau of Safety and Environmental Enforcement of the U.S. Department of the Interior.

*Central Planning Area (CPA)* means that portion of the Gulf of Mexico that lies southerly of Louisiana, Mississippi, and Alabama. Precise boundary information is available from the BOEM Leasing Division, Mapping and Boundary Branch (MBB).

*Coastal environment* means the physical, atmospheric, and biological components, conditions, and factors that interactively determine the productivity, state, condition, and quality of the terrestrial ecosystem from the shoreline inland to the boundaries of the coastal zone.

*Coastal zone* means the coastal waters (including the lands therein and thereunder) and the adjacent shorelands (including the water therein and

thereunder), strongly influenced by each other and in proximity to the shorelines of one or more of the several coastal States, and includes islands, transition and intertidal areas, salt marshes, wetlands, and beaches, whose zone extends seaward to the outer limit of the United States territorial sea and extends inland from the shore lines to the extent necessary to control shorelands, the uses of which have a direct and significant impact on the coastal waters, and the inland boundaries of which may be identified by the several coastal States, under section 305(b)(1) of the Coastal Zone Management Act (CZMA) of 1972, 16 U.S.C. 1454(b)(1).

*Coastline* means the line of mean ordinary low water along that portion of the coast in direct contact with the open sea and the line marking the seaward limit of inland waters.

*Crude oil* means a mixture of liquid hydrocarbons, including condensate that exists in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities, but does not include liquid hydrocarbons produced from tar sand, gilsonite, oil shale, or coal.

*Designated operator* means a person authorized to act on your behalf and fulfill your obligations under the Act, the lease, and the regulations, who has been designated as an operator by all record title holders and all operating rights owners that own an operating rights interest in the aliquot/depths in which the designated operator, to which the Designation of Operator form applies, will be operating, and who has been approved by BOEM to act as designated operator.

*Desoto Canyon OPD* means the Official Protraction Diagram (OPD) designated as Desoto Canyon that has a western edge located at the universal transverse mercator (UTM) X coordinate 1,346,400 in the North American Datum of 1927 (NAD27).

*Destin Dome OPD* means the Official Protraction Diagram (OPD) designated as Destin Dome that has a western edge located at the Universal Transverse Mercator (UTM) X coordinate 1,393,920 in the NAD27.

*Development block* means a block, including a block susceptible to drainage, which is located on the same general geologic structure as an existing lease having a well with indicated hydrocarbons; a reservoir may or may not be interpreted to extend on to the block.

*Director* means the Director of the BOEM of the U.S. Department of the Interior, or an official authorized to act on the Director's behalf.

*Eastern Planning Area (EPA)* means that portion of the Gulf of Mexico that lies southerly and westerly of Florida. Precise boundary information is available from the BOEM Leasing Division, Mapping and Boundary Branch.

*Economic interest* means any right to, or any right dependent upon, production of crude oil, natural gas, or natural gas liquids and includes, but is not limited to: a royalty interest; an overriding royalty interest, whether payable in cash or kind; a working interest that does not include a record title interest or an operating rights interest; a carried working interest; a net profits interest; or a production payment.

*Human environment* means the physical, social, and economic components, conditions, and factors that interactively determine the state, condition, and quality of living conditions, employment, and health of those affected, directly or indirectly, by activities occurring on the OCS.

*Initial period or primary term* means the initial period referred to in 43 U.S.C. 1337(b)(2).

*Joint bid* means a bid submitted by two or more persons for an oil and gas lease under section 8(a) of the Act.

*Lease* means an agreement that is issued under section 8 or maintained under section 6 of the Act and that authorizes exploration for, and development and production of, minerals on the OCS. The term also means the area covered by that agreement, whichever the context requires.

*Lease interest* means one or more of the following ownership interests in an OCS oil and gas or sulfur lease: a record title interest, an operating rights interest, or an economic interest.

*Lessee* means a person who has entered into a lease with the United States to explore for, develop, and produce the leased minerals and is therefore a record title owner of the lease, or the BOEM-approved assignee-owner of a record title interest. The term lessee also includes the BOEM-approved sublessee- or assignee-owner of an operating rights interest in a lease.

*Marine environment* means the physical, atmospheric, and biological components, conditions, and factors that interactively determine the productivity, state, conditions, and quality of the marine ecosystem, including the waters of the high seas, the contiguous zone, transitional and intertidal areas, salt marshes, and wetlands within the coastal zone and on the OCS.

*Mineral* means oil, gas, and sulfur; it also includes sand, gravel, and salt used to facilitate the development and production of oil, gas, and sulfur.

*Natural gas* means a mixture of hydrocarbons and varying quantities of non-hydrocarbons that exist in the gaseous phase.

*Natural gas liquids* means liquefied petroleum products produced from reservoir gas and liquefied at surface separators, field facilities, or gas processing plants worldwide, including any of the following:

(i) Condensate—natural gas liquids recovered from gas well gas (associated and non-associated) in separators or field facilities; or

(ii) Gas plant products—natural gas liquids recovered from natural gas in gas processing plants and from field facilities. Gas plant products include the following, as classified according to the standards of the Natural Gas Processors Association (NGPA) or the American Society for Testing and Materials (ASTM):

(A) Ethane—C<sub>2</sub>H<sub>6</sub>

(B) Propane—C<sub>3</sub>H<sub>8</sub>

(C) Butane—C<sub>4</sub>H<sub>10</sub>, including all products covered by NGPA specifications for commercial butane, including isobutane, normal butane, and other butanes—all butanes not included as isobutane or normal butane;

(D) Butane-Propane Mixtures—All products covered by NGPA specifications for butane-propane mixtures;

(E) Natural Gasoline—A mixture of hydrocarbons extracted from natural gas, that meets vapor pressure, end point, and other specifications for natural gasoline set by NGPA;

(F) Plant Condensate—A natural gas plant product recovered and separated as a liquid at gas inlet separators or scrubbers in processing plants or field facilities; and

(G) Other Natural Gas plant products meeting refined product standards (*i.e.*, gasoline, kerosene, distillate, etc.).

*Operating rights* means an interest created by sublease out of the record title interest in an oil and gas lease, authorizing the owner to explore for, develop, and/or produce the oil and gas contained within a specified area and depth of the lease (*i.e.*, operating rights tract).

*Operating rights owner* means the holder of operating rights.

*Operating rights tract* means the area within the lease from which the operating rights have been severed on an aliquot basis from the record title interest, defined by a beginning and ending depth.

*Operator* means the person designated as having control or management of operations on the leased area or a portion thereof. An operator may be a lessee, the operating rights owner, or a designated agent of the lessee or the operating rights owner.

*Outer Continental Shelf (OCS)* means all submerged lands lying seaward and outside of the area of lands beneath navigable waters as defined in the Submerged Lands Act (43 U.S.C. 1301–1315) and of which the subsoil and seabed appertain to the United States and are subject to its jurisdiction and control.

*Outer Continental Shelf Lands Act (OCSLA)* means the Outer Continental Shelf Lands Act (43 U.S.C. 1331–1356a), as amended.

*Owned*, as used in the context of restricted joint bidding or a statement of production, means:

(i) With respect to crude oil—having either an economic interest in or a power of disposition over the production of crude oil;

(ii) With respect to natural gas—having either an economic interest in or a power of disposition over the production of natural gas; and

(iii) With respect to natural gas liquids—having either an economic interest in or a power of disposition over any natural gas liquids at the time of completion of the liquefaction process.

*Pensacola OPD* means the Official Protraction Diagram (OPD) designated as Pensacola that has a western edge located at the UTM X coordinate 1,393,920 in the NAD27.

*Person* means a natural person, where so designated, or an entity, such as a partnership, association, State, political subdivision of a State or territory, or a private, public, or municipal corporation.

*Planning area* means a large portion of the OCS, consisting of contiguous OCS blocks, defined for administrative planning purposes.

*Primary term or initial period* means the initial period referred to in 43 U.S.C. 1337(b)(2).

*Regional Director* means the BOEM officer with responsibility and authority for a Region within BOEM.

*Regional Supervisor* means the BOEM officer with responsibility and authority for leasing or other designated program functions within a BOEM Region.

*Right-of-Use and Easement (RUE)* means a right to use a portion of the seabed at an OCS site other than on a lease you own, for the construction and/or use of artificial islands, facilities, installations, and other devices, established to support the exploration, development or production of oil and gas, mineral, or energy resources from an OCS or State submerged lands lease.

*Right-of-Way (ROW)* means an authorization issued by BSEE under the authority of section 5(e) of the OCSLA (43 U.S.C. 1334(e)) for the use of submerged lands of the Outer Continental Shelf for pipeline purposes.

*Secretary* means the Secretary of the Interior or an official or a designated employee authorized to act on the Secretary's behalf.

*Security or securities* means any note, stock, treasury stock, bond, debenture, evidence of indebtedness, certificate of interest or participation in any profit-sharing agreement; collateral-trust certificate; pre-organization certificate or subscription; transferable share; investment contract; voting-trust certificate; certificate of deposit for a security; fractional undivided interest in oil, gas, or other mineral rights; or, in general, any interest or instrument commonly known as a "security" or any certificate of interest or participation in, temporary or interim certificate for, receipt for, guarantee of, or warrant or right to subscribe to or purchase any of the foregoing.

*Single bid* means a bid submitted by one person for an oil and gas lease under section 8(a) of the Act.

*Six-month bidding period* means the 6-month period of time:

(i) From May 1 through October 31; or

(ii) from November 1 through April 30.

*Statement of production* means, in the context of joint restricted bidders, the following production during the applicable prior production period:

(i) The average daily production in barrels of crude oil, natural gas, and natural gas liquids which it owned worldwide;

(ii) The average daily production in barrels of crude oil, natural gas, and natural gas liquids owned worldwide by every subsidiary of the reporting person;

(iii) The average daily production in barrels of crude oil, natural gas, and natural gas liquids owned worldwide by any person or persons of which the reporting person is a subsidiary; and

(iv) The average daily production in barrels of crude oil, natural gas, and natural gas liquids owned worldwide by any subsidiary, other than the reporting person, of any person or persons of which the reporting person is a subsidiary.

*Tract* means one or more OCS blocks, or any leasable portion thereof, that will be part of a single oil and gas lease. The term tract may be used interchangeably with the term "bidding unit."

*We, us, and our* mean BOEM or the Department of the Interior, depending on the context in which the word is used.

*Western Planning Area (WPA)* means that portion of the Gulf of Mexico that lies south and east of Texas. Precise boundary information is available from the Leasing Division, Mapping and Boundary Branch.

*You* means any party that has, or may have, legal obligations to the Federal government with respect to any operations on the OCS in which it is or may become involved. Depending on the context of the regulation, the term "you" may include a lessee (record title owner), an operating rights owner, a designated operator or agent of the lessee, a predecessor lessee, a holder of a State or Federal RUE, or a pipeline ROW holder.

**§ 556.106 Service fees.**

(a) The table in this paragraph shows the fees you must pay to BOEM for the services listed. BOEM will adjust the fees periodically according to the Implicit Price Deflator for Gross Domestic Product and publish a document showing the adjustment in the **Federal Register**. If a significant adjustment is needed to arrive at a new fee for any reason other than inflation, then a proposed rule containing the new fees will be published in the **Federal Register** for comment.

**SERVICE FEE TABLE**

Service—processing of the following:	Fee amount	30 CFR Citation
(1) Assignment of record title interest in Federal oil and gas lease(s) for BOEM approval. ....	\$198	§ 556.701(a)
(2) Sublease or Assignment of operating rights interest in Federal oil and gas lease(s) for BOEM approval. ....	198	§ 556.801(a)
(3) Required document filing for record purpose, but not for BOEM approval. ....	29	§ 556.715(a) § 556.808(a)

SERVICE FEE TABLE—Continued

Service—processing of the following:	Fee amount	30 CFR Citation
(4) Non-required document filing for record purposes. ....	29	§ 556.715(b) § 556.808(b)

(b) Evidence of payment via pay.gov of the fees listed in paragraph (a) of this section must accompany the submission of a document for approval or filing, or be sent to an office identified by the Regional Director.

(c) Once a fee is paid, it is nonrefundable, even if your service request is withdrawn.

(d) If your request is returned to you as incomplete, you are not required to submit a new fee with the amended submission.

(e) The pay.gov Web site is accessible at <https://www.pay.gov/paygov/> or through the BOEM Web site at <http://www.boem.gov/Fees-for-Services>.

(f) The fees listed in the table above apply equally to any document or information submitted electronically pursuant to part 560, subpart E, of this chapter.

**§ 556.107 Corporate seal requirements.**

(a) If you electronically submit to BOEM any document or information referenced in § 560.500 of this chapter, any requirement to use a corporate seal under this chapter will be satisfied, and you will not need to affix your corporate seal to such document or information, if:

(1) You properly file with BOEM a paper, with a corporate seal and the signature of the authorized person(s), stating that electronic submissions made by you will be legally binding, as set forth in § 560.502 of this chapter; and

(2) You make electronic submissions to BOEM through a secure electronic filing system that conforms to the requirements of § 560.500; or,

(b) You may file with BOEM a non-electronic document, containing a corporate seal and the signature of an authorized person(s), attesting that future documents and information filed by you by electronic or non-electronic means will be legally binding without an affixed corporate seal. If you file such a non-electronic attestation document with BOEM, any requirement for use of a corporate seal under the regulations of this chapter will be satisfied, and you will not need to affix your corporate seal to submissions where they would have been otherwise required.

(c) If the State or territory in which you are incorporated does not issue or require corporate seals, the document referred to in paragraphs (a) and (b) of

this section need not contain a corporate seal, but must still contain the signature of the authorized person(s), a statement that the State in which you are incorporated does not issue or require corporate seals, and a statement that submissions made by you will be legally binding.

(d) Any document, or information submitted without corporate seal must still contain the signature of an individual qualified to sign who has the requisite authority to act on your behalf.

(e) Any document or information submitted pursuant to this section is submitted subject to the penalties of 18 U.S.C. 1001, as amended by the False Statements Accountability Act of 1996.

**Subpart B—Oil and Gas Five Year Leasing Program**

**§ 556.200 What is the Five Year leasing program?**

Section 18(a) of OCSLA (43 U.S.C. 1344(a)), requires the Secretary to prepare an oil and gas leasing program that consists of a five-year schedule of proposed lease sales to best meet national energy needs, showing the size, timing, and location of leasing activity as precisely as possible. BOEM prepares the five year schedule of proposed lease sales consistent with the principles set out in section 18(a)(1) and (2)(A)-(H) of OCSLA (43 U.S.C. 1344(a)(1) and (2)(A)-(H)) to obtain a proper balance among the potential for environmental damage, the potential for the discovery of oil and gas, and the potential for adverse impact on the coastal zone, as required by OCSLA section 18(a)(3) (43 U.S.C. 1344(a)(3)).

**§ 556.201 Does BOEM consider multiple uses of the OCS?**

BOEM gathers information about multiple uses of the OCS in order to assist the Secretary in making decisions on the 5-year program pursuant to provisions of 43 U.S.C. 1344. For this purpose, BOEM invites and considers suggestions from States and local governments, industry, and any other interested parties, primarily through public notice and comment procedures. BOEM also invites and considers suggestions from Federal agencies.

**§ 556.202 How does BOEM start the Five Year program preparation process?**

To begin preparation of the Five Year program, BOEM invites and considers nominations for any areas to be included or excluded from leasing, by doing the following:

(a) BOEM prepares and makes public official protraction diagrams and leasing maps of OCS areas. In any area properly included in the official Five Year diagrams and maps, any area not already leased for oil and gas may be offered for lease.

(b) BOEM invites and considers suggestions and relevant information from governors of States, local governments, industry, Federal agencies, and other interested parties, through a publication of a request for information in the **Federal Register**. Any local government must first submit its comments on the request for information to its State governor before sending the comments to BOEM.

(c) BOEM sends a letter to the governor of each affected State asking the governor to identify specific laws, goals, and policies that should be considered. Each State governor, as well as the Department of Commerce, is requested to identify the relationship between any oil and gas activity and the State under sections 305 and 306 of the CZMA, 16 U.S.C. 1454 and 1455.

(d) BOEM asks the Department of Energy for information on regional and national energy markets and transportation networks.

**§ 556.203 What does BOEM do before publishing a proposed Five Year program?**

After considering the comments and information described in § 556.202, BOEM will prepare a draft proposed Five Year program.

(a) At least 60 days before publication of a proposed program, BOEM will send a letter, together with the draft proposed program, to the governor of each affected State, inviting the governor to comment on the draft proposed program.

(b) A governor, whether for purposes of preparing that State's comments or otherwise, may solicit comments from local governments that he determines may be affected by an oil and gas leasing program.

(c) If a governor's comments on the draft proposed program are received by

BOEM at least 15 days before submission of the proposed program to Congress and its publication for comment in the **Federal Register**, BOEM will reply to the governor in writing.

**§ 556.204 How do governments and citizens comment on a proposed Five Year program?**

BOEM publishes the proposed program in the **Federal Register** for comment by the public. At the same time, BOEM sends the proposed program to the governors of the affected States and to Congress and the Attorney General of the United States for review and comment.

(a) Governors are responsible for providing a copy of the proposed program to affected local governments in their States. Local governments may comment directly to BOEM, but must also send their comments to the governor of their State.

(b) All comments from any party are due within 90 days after publication of the request for comments in the **Federal Register**.

**§ 556.205 What does BOEM do before approving a proposed final Five Year program or a significant revision of a previously-approved Five Year program?**

At least 60 days before the Secretary may approve a proposed final Five Year program or a significant revision to a previously approved final Five Year program, BOEM will submit a proposed final program or proposed significant revision to the President and Congress. BOEM will also submit comments received and indicate the reasons why BOEM did or did not accept any specific recommendation of the Attorney General of the United States, the governor of a State, or the executive of a local government.

**Subpart C—Planning and Holding a Lease Sale**

**§ 556.300 What reports may BOEM and other Federal agencies prepare before a lease sale?**

For an oil and gas lease sale in a Five Year program, and as the need arises for other mineral leasing pursuant to part 581 of this chapter, BOEM will prepare a report describing the general geology and potential mineral resources of the area under consideration. The Director may request other interested Federal agencies to prepare reports describing, to the extent known, any other valuable resources contained within the general area and the potential effect of mineral operations upon the resources or upon the total environment or other uses of the area.

**§ 556.301 What is a Call for Information and Nominations?**

BOEM issues a Call for Information and Nominations (“Call”) on an area proposed for leasing in the Five Year program through publication in the **Federal Register** and other publications. A Call may include more than one proposed sale. Comments are requested from industry and the public on:

- (a) Industry interest in the area proposed for leasing, including nominations or indications of interest in specific blocks within the area;
- (b) Geological conditions, including bottom hazards;
- (c) Archaeological sites on the seabed or near shore;
- (d) Potential multiple uses of the proposed leasing area, including navigation, recreation, and fisheries;
- (e) Areas that should receive special concern and analysis; and
- (f) Other socioeconomic, biological, and environmental information.

**§ 556.302 What does BOEM do with the information from the Call?**

(a) Based upon information and nominations received in response to the Call, and in consultation with appropriate Federal agencies, the Director will develop a recommendation of areas proposed for leasing for the Secretary for further consideration for leasing and/or environmental analysis.

(1) In developing the recommendation, the Director will consider available information concerning the environment, conflicts with other uses, resource potential, industry interest, and other relevant information, including comments received from State and local governments and other interested parties in response to the Call.

(2) The Director, on his/her own motion, may include in the recommendation areas in which interest has not been indicated in response to a Call. In making a recommendation, the Director will consider all available environmental information.

(3) Upon approval by the Secretary, the Director will announce the area identified in the **Federal Register**.

(b) BOEM will evaluate the area(s) identified for further consideration for the potential effects of leasing on the human, marine, and coastal environments, and may develop measures to mitigate adverse impacts, including lease stipulations, for the options to be analyzed. The Director may hold public hearings on the environmental analysis after an appropriate notice.

(c) BOEM will seek to inform the public, as soon as possible, of changes

from the area(s) proposed for leasing that occur after the Call process.

(d) Upon request, the Director will provide relative indications of interest in areas, as well as any comments filed in response to a Call for a proposed sale. However, no information transmitted will identify any particular area with the name of any particular party so as not to compromise the competitive position of any participants in the process of indicating interest.

(e) For supplemental sales provided for by § 556.308, the Director’s recommendation will be replaced by a statement describing the results of the Director’s consideration of the factors specified above in this section.

**§ 556.303 What does BOEM do if an area proposed for leasing is within three nautical miles of the seaward boundary of a coastal State?**

For an area proposed for leasing that is within three nautical miles of the seaward boundary of a coastal State, as governed by section 8(g)(1) of OCSLA (43 U.S.C. 1337(g)(1)):

(a) BOEM provides the governor of the coastal State, subject to the confidentiality requirements in this chapter:

- (1) A schedule for leasing; and
- (2) An estimate of the potential oil and gas resources.

(b) At the request of the governor of a coastal State, BOEM will provide to that governor, subject to the confidentiality requirements in this chapter:

- (1) Information concerning geographical, geological, and ecological characteristics; and
- (2) An identification of any field, geological structure, or trap, or portion thereof, that lies within three nautical miles of the State’s boundary.

**§ 556.304 How is a proposed notice of sale prepared?**

(a) The Director will, in consultation with appropriate Federal agencies, develop measures, including lease stipulations and conditions, to mitigate adverse impacts on the environment, which will be contained, or referenced, in the proposed notice of sale.

(b) A proposed notice of sale will be submitted to the Secretary for approval. All comments and recommendations received and the Director’s findings or actions thereon, will also be forwarded to the Secretary.

(c) Upon approval by the Secretary, BOEM will send a proposed notice of sale to the governors of affected States and publish the notice of its availability in the **Federal Register**. The proposed notice of sale references or provides a

link to the lease form, and contains a description of the area proposed for leasing, the proposed lease terms and conditions of sale, and proposed stipulations to mitigate potential adverse impacts on the environment.

**§ 556.305 How does BOEM coordinate and consult with States regarding a proposed notice of sale?**

(a) Within 60 days after receiving the proposed notice of sale, governors of affected States may submit comments and recommendations to BOEM regarding the size, timing, and location of the proposed sale. Local governments may comment to BOEM directly, but must also send their comments to the governor of their State.

(b) BOEM will provide a consistency determination under the Coastal Zone Management Act (CZMA) (16 U.S.C. 1456) to each State with an approved coastal zone management program that will determine whether the proposed sale is consistent, to the maximum extent practicable, with the enforceable policies of the State's approved coastal zone management program.

**§ 556.306 What if a potentially oil- or gas-bearing area underlies both the OCS and lands subject to State jurisdiction?**

(a) Whenever the Director or the governor of a coastal State determines that a common potentially hydrocarbon-bearing area may underlie the Federal OCS and State submerged lands, the Director or the governor will notify the other party in writing of the determination.

(b) Thereafter the Director will provide to the governor of the coastal State, subject to the confidentiality requirements in this chapter:

- (1) An identification of the areas proposed for leasing and a schedule for, leasing; and
- (2) An estimate of the oil and gas resources.

(c) At the request of the governor of the coastal State, the Director will provide to such governor, subject to the confidentiality requirements in this chapter:

- (1) All geographical, geological, and ecological characteristics of the areas proposed for leasing; and
- (2) An identification of any field, geological structure, or trap that lies within 3 miles of the State's seaward boundary.

(d) If BOEM intends to lease such blocks or tracts, the Director and the governor of the coastal State may enter into an agreement for the equitable disposition of the revenues from production of any common potentially hydrocarbon-bearing area, pursuant to

OCSLA section 8(g)(3) (43 U.S.C. 1337(g)(3)). Any revenues received by the United States under such an agreement are subject to the requirements of OCSLA section 8(g)(2) (43 U.S.C. 1337(g)(2)).

(e) If the Director and the governor do not enter into an agreement under paragraph (d) of this section within 90 days, BOEM may nevertheless proceed with the leasing of the tracts, in which case all revenues will be deposited in a separate account in the Treasury of the United States, pending disposition of 27% (twenty-seven percent) of the revenues to the relevant coastal state(s), pursuant to the requirements of OCSLA section 8(g)(2). (43 U.S.C. 1337(g)(2)).

**§ 556.307 What does BOEM do with comments and recommendations received on the proposed notice of sale?**

(a) BOEM will consider all comments and recommendations received in response to the proposed notice of sale.

(b) If the Secretary determines, after providing opportunity for consultation, that a governor's comments, and those of any affected local government, provide a reasonable balance between the national interest and the well-being of the citizens of the State, the Secretary will accept the recommendations of a State and/or local government(s). Any such determination of the national interest will be based on the findings, purposes and policies of the Act set forth in 43 U.S.C. 1332 and 43 U.S.C. 1801.

(c) BOEM will send to each governor written reasons for its determination to accept or reject each governor's recommendation, and/or to implement any alternative means to provide for a reasonable balance between the national interest and the interests of the citizens of the State.

**§ 556.308 How does BOEM conduct a lease sale?**

(a) BOEM publishes a final notice of sale in the **Federal Register** and in other publications, as appropriate, at least 30 days before the date of the sale. The final notice:

- (1) States the place, time, and method for filing bids and the place, date, and hour for opening bids; and
- (2) Contains or references a description of the areas offered for lease, the lease terms and conditions of sale, and stipulations to mitigate potential adverse impacts on the environment.

(b) Oil and gas tracts are offered for lease by competitive sealed bid in accordance with the terms and conditions in the final notice of sale and applicable laws and regulations.

(c) Unless BOEM finds that a larger area is necessary for reasonable

economic production, no individual tract for oil and gas leasing will exceed 5,760 acres in area. If BOEM finds that an area larger than 5,760 acres is necessary in any particular area, the size of any such tract will be specified in the final notice of sale.

(d) The final notice of sale references, or provides a link to, the OCS lease form which will be issued to successful bidders.

**§ 556.309 Does BOEM offer blocks in a sale that is not on the Five Year program schedule (called a Supplemental Sale)?**

(a) Except as provided in paragraph (c) of this section, BOEM may offer a block within a planning area included in the Five Year program in an otherwise unscheduled sale, if the block:

- (1) Received a bid that was rejected in an earlier sale;
- (2) Had a high bid that was forfeited in a scheduled sale; or
- (3) Is a development block subject to drainage.

(b) For an unscheduled sale, BOEM may disclose the classification of the block as a development block.

(c) Blocks in the Central or Western Gulf of Mexico Planning Areas cannot be offered in a sale that is not on the schedule.

**Subpart D—Qualifications**

**§ 556.400 When must I demonstrate that I am qualified to hold a lease on the OCS?**

In order to bid on, own, hold, or operate a lease on the OCS, bidders, record title holders, and operating rights owners must first obtain a qualification number from BOEM.

**§ 556.401 What do I need to show to become qualified to hold a lease on the OCS and obtain a qualification number?**

(a) You may become qualified to hold a lease on the OCS and obtain a qualification number in accordance with § 556.402, if you submit evidence demonstrating that you are:

- (1) A natural person who is a citizen or national of the United States;
- (2) A natural person who is an alien lawfully admitted for permanent residence in the United States, as defined in 8 U.S.C. 1101(a)(20);
- (3) A private, public, or municipal corporation or Limited Liability Company or Limited Liability Corporation (either/both sometimes herein referred to as "LLC") organized under the laws of any State of the United States, the District of Columbia, or any territory or insular possession subject to United States jurisdiction;
- (4) An association of such citizens, nationals, resident aliens, or corporations;

(5) A State, the District of Columbia, or any territory or insular possession subject to United States jurisdiction;

(6) A political subdivision of a State, the District of Columbia, or any territory or insular possession subject to United States jurisdiction; or

(7) A Trust organized under the laws of any State of the United States, the District of Columbia, or any territory or insular possession subject to United States jurisdiction;

(b) Statements and evidence submitted to demonstrate qualification under paragraphs (a)(1) through (6) of this section are subject to the penalties of 18 U.S.C. 1001.

(b) BOEM may issue you a qualification number after you have provided evidence acceptable to BOEM.

**§ 556.402 How do I make the necessary showing to qualify and obtain a qualification number?**

(a) If BOEM has already issued you a qualification number, you may present that number to BOEM. If not, in order to become qualified, you must provide the information in paragraph (b) or (c) of this section before BOEM will issue you a BOEM qualification number.

(b) A natural person must be a citizen or national of the United States, or a resident alien, to qualify. A United States citizen or national must submit written evidence acceptable to BOEM attesting to United States citizenship or national status. A resident alien must submit an original or a photocopy of the United States Citizenship and Immigration Services form evidencing legal status as a resident alien.

(c) A person who is not a natural person must submit evidence (refer to paragraph (d) of this section) acceptable to BOEM that:

(1) It is authorized to conduct business under the laws of a State, the District of Columbia, or any territory or insular possession subject to United States jurisdiction under which it is organized;

(2) Under the operating rules of its business, it is authorized to hold OCS leases; and

(3) Includes an up-to-date list of persons, and their titles, who are authorized to bind the corporation, association or other entity when conducting business on the OCS. It is up to you, in accordance with your organizational structure or rules, to identify the individual, or group of individuals, who has actual authority to bind your organization, and the title(s) they will use when they sign documents to bind the organization. You must maintain and regularly update the information as to who has the authority

to bind the organization whenever that information changes.

(d) Acceptable evidence under paragraph (c) of this section includes, but is not limited to:

(1) For a corporation,

(i) A statement by the Secretary of the corporation, over corporate seal, certifying that the corporation is authorized to hold OCS leases; and

(ii) Evidence of authority of holders of positions entitled to bind the corporation, certified by Secretary of the corporation, over corporate seal, such as:

(A) Certified copy of resolution of the board of directors with titles of officers authorized to bind corporation;

(B) Certified copy of resolutions granting corporate officer authority to issue a power of attorney; or

(C) Certified copy of power of attorney or certified copy of resolution granting power of attorney.

(2) For a Limited or General Partnership,

(i) A statement by an authorized party certifying that the partnership is authorized to hold OCS leases;

(ii) A copy of your signed partnership formation documents, including a partnership agreement;

(iii) A statement from each partner indicating, as appropriate, U.S. citizenship or incorporation or organization under the laws of a State, the District of Columbia, or any territory or insular possession subject to U.S. jurisdiction; and

(iv) Documentation evidencing the existence of the partnership and that it was properly created, either from the Secretary of State of the State in which the partnership is registered or by an equivalent State or governmental office.

(3) For a Limited Liability Company or Limited Liability Corporation,

(i) A certificate of formation of the LLC;

(ii) A statement by an individual authorized to bind the LLC, as listed under (c)(4) above, certifying that the LLC is authorized to hold OCS leases;

(iii) A statement from each member indicating, as appropriate, U.S. citizenship, or incorporation or organization under the laws of a State, the District of Columbia, or any territory or insular possession subject to U.S. jurisdiction; and

(iv) Evidence of authority of holders of positions entitled to bind the LLC, certified by an individual authorized to bind the LLC.

(4) For a Trust,

(i) A copy of the trust agreement or document establishing the trust and all amendments, properly certified by the trustee; and

(ii) A statement indicating the law under which the trust is established and that the trust is authorized to hold OCS leases.

(e) In the event that a person may be eligible to hold OCS leases, but that type of person is not listed in paragraphs (c) or (d) of this section, evidence of such eligibility will be submitted and certified by the highest level of management of the person authorized to do so pursuant to its operating agreement or governance documents.

(f) Any person who obtains a qualification number from BOEM is responsible to ensure that it is not using the qualification number approved by BOEM for any purpose that its operating rules do not allow.

(g) Any evidence submitted in response to paragraphs (c), (d), or (e) of this section is submitted subject to 18 U.S.C. 1001.

(h) A person may not hold leases on the OCS until the evidence requested in this section has been accepted and approved by BOEM and BOEM has issued a qualification number to that person.

(i) If use of a corporate seal is required by this section, you may meet the requirement as specified in § 556.107.

**§ 556.403 Under what circumstances may I be disqualified from holding a lease on the OCS?**

You may not hold an OCS lease if:

(a) You or your principals are excluded or disqualified from participating in a transaction covered by Federal non-procurement debarment and suspension (2 CFR parts 180 and 1400), unless the Department explicitly approves an exception for a transaction pursuant to the regulations in those parts;

(b) The Secretary finds, after notice and hearing, that you or your principals (including in the meaning of "you," for purposes of this subparagraph, a bidder or prospective bidder) fail to meet due diligence requirements or to exercise due diligence under section 8(d) of OCSLA (43 U.S.C. 1337(d)) on any OCS lease; or

(c) BOEM disqualifies you from holding a lease on the OCS based on your unacceptable operating performance. BOEM will give you adequate notice and opportunity for a hearing before imposing a disqualification, unless BSEE has already provided such notice and opportunity for a hearing.

**§ 556.404 What do the non-procurement debarment rules require that I do?**

You must comply with the Department's non-procurement

debarment regulations at 2 CFR parts 180 and 1400.

(a) You must notify BOEM if you know that you or your principals are excluded, disqualified, have been convicted or are indicted of a crime as described in 2 CFR part 180, subpart C. You must make this notification before you sign a lease, sublease, or an assignment of record title interest or operating rights interest, or become a lease or unit operator. This paragraph does not apply if you have previously provided a statement disclosing this information, and you have received an exception from the Department, as described in 2 CFR 180.135 and 2 CFR 1400.137.

(b) If you wish to enter into a covered transaction with another person at a lower tier, as described in 2 CFR 180.200, you must first:

(1) Verify that the person is not excluded or disqualified under 2 CFR part 180; and

(2) Require the person to:

(i) Comply with 2 CFR part 180, subpart C; and

(ii) Include the obligation to comply with 2 CFR part 180, subpart C in its contracts and other transactions.

(c) After you enter into a covered transaction, you must immediately notify BOEM in writing if you learn that:

(1) You failed to disclose pertinent information earlier; or

(2) Due to changed circumstances, you or your principals now meet any of the criteria in 2 CFR 180.800.

**§ 556.405 When must I notify BOEM of mergers, name changes, or changes of business form?**

You must notify BOEM of any merger, name change, or change of business form as soon as practicable, but in no case later than one year after the earlier of the effective date or the date of filing the change or action with the Secretary of State or other authorized official in the State of original registry.

**Subpart E—Issuance of a Lease**

**How To Bid**

**§ 556.500 Once qualified, how do I submit a bid?**

(a) You must submit a separate sealed bid for each tract or bidding unit to the address provided and by the time specified in the final notice of sale. You may not bid on less than an entire tract or bidding unit.

(b) BOEM requires a deposit for each bid. The final notice of sale will specify the amount and method of payment.

(c) Unless otherwise specified in the final notice of sale, the bid deposit

amount will be 20 percent of the amount of the bid for any given tract or bidding unit.

(d) You may not submit a bid on an OCS tract if, after notice and hearing under section 8(d) of OCSLA (43 U.S.C. 1337(d)), the Secretary finds that you are not meeting the diligence requirements on any OCS lease.

(e) If the authorized officer within BOEM rejects your high bid, the decision is final for the Department, subject only to reconsideration upon your written request as set out in § 556.517.

**§ 556.501 What information do I need to submit with my bid?**

In accordance with OCSLA section 18(a)(4) (43 U.S.C. 1344(a)(4)), BOEM must evaluate every bid to ensure that the federal government receives fair market value for every lease. Section 26(a)(1)(A) of OCSLA (43 U.S.C. 1352(a)(1)(A)) provides that, in accordance with regulations prescribed by the Secretary, any lessee or permittee conducting any exploration for, or development or production of, oil or gas must provide the Secretary access to all data and information (including processed, analyzed, and interpreted information) obtained from that activity and must provide copies of that data and information as the Secretary may request.

(a) As part of the lease sale process, every bidder submitting a bid on a tract, or participating as a joint bidder in such a bid, may at the time of bid be required to submit various information, including a Geophysical Data and Information Statement (GDIS) corresponding to that tract, as well as the bidder's exclusive/proprietary geophysical data in order for BOEM to properly evaluate the bid. If a GDIS required, each GDIS must include, as required by § 551.12(b) and (c) of this chapter:

(1) A list of geophysical surveys or other information used as part of the decision to bid or participate in a bid on the block.

(2) An accurate and complete record of each geophysical survey conducted, including digital navigational data and final location maps. The bidder and any joint bidder must include a map for each survey identified in the GDIS that illustrates the actual areal extent of the proprietary geophysical data.

(b) If a bidder is required to submit a GDIS, the GDIS must be submitted even if the bidder did not rely on proprietary geophysical data and information in deciding to bid or participate as a joint bidder in the bid for any particular

block, and must include entries for all such blocks.

(c) The bidder must submit each GDIS in a separate and sealed envelope, or in an electronically readable spreadsheet format, with proprietary seismic data maps also available in an electronic format. Each bidder must submit the GDIS even if its joint bidder or bidders on a specific block also have submitted a GDIS.

(d) If BOEM requires additional information related to bidding, it will describe the additional information requirements in the final notice of sale.

(e) BOEM will reimburse bidders for the costs of complying with the requirements of this section, in accordance with § 550.196 (on lease) and/or § 551.13 (off lease) of this chapter.

(f) Bids that are not made in compliance with this section will be considered incomplete and invalid.

**Restrictions on Joint Bidding**

**§ 556.511 Are there restrictions on bidding with others and do those restrictions affect my ability to bid?**

The Energy Policy and Conservation Act of 1975, 42 U.S.C. 6213, prohibits joint bidding by major oil and gas producers under certain circumstances. BOEM implements 42 U.S.C. 6213 as follows:

(a) BOEM publishes twice yearly in the **Federal Register** a restricted joint bidders list. A person appearing on this list is limited in its ability to submit a joint bid. The list:

(1) Consists of the persons chargeable with an average worldwide daily production in excess of 1.6 million barrels of crude oil and/or its equivalent in natural gas liquids and natural gas for the prior production period; and

(2) Is based upon the statement of production that filed as required by § 556.513.

(b) If BOEM places you on the restricted joint bidders list, BOEM will send you a copy of the order placing you on the list. You may appeal this order to the Interior Board of Land Appeals under 30 CFR part 590, subpart A.

(c) If you are listed in the **Federal Register** in any group of restricted bidders, you may not bid:

(1) Jointly with another person in any other group of restricted bidders for the applicable 6-month bidding period; or

(2) Separately during the 6-month bidding period if you have an agreement with another restricted bidder that will result in joint ownership in an OCS lease.

(d) If you are listed in the **Federal Register** in any group of restricted

bidders, you may not make any pre-bidding agreement for the conveyance of any potential lease interest, whether by assignment, sale, transfer, or other means, to any person on the list of restricted joint bidders.

(e) Even if you are not listed in the **Federal Register** in any group of restricted bidders, you are prohibited from making any pre-bidding agreement for the assignment, sale, transfer, or other conveyance of any potential lease interest to two or more persons in different groups on the list of restricted joint bidders.

(f) As a bidder, you are prohibited from unlawful combination with, or intimidation of, bidders under 18 U.S.C. 1860.

**§ 556.512 What bids may be disqualified?**

The following bids for any oil and gas lease will be disqualified and rejected in their entirety:

(a) A joint bid submitted by two or more persons who are on the effective List of Restricted Joint Bidders; or

(b) A joint bid submitted by two or more persons when:

(1) One or more of those persons is chargeable for the prior production period with an average daily production in excess of 1.6 million barrels of crude oil, natural gas and natural gas liquids and has not filed a Statement of Production, as required by § 556.513 of this part for the applicable 6-month bidding period, or

(2) Any of those persons have failed or refused to file a detailed report of production when required to do so under § 556.513, or

(c) A single or joint bid submitted pursuant to an agreement (whether written or oral, formal or informal, entered into or arranged prior to or simultaneously with the submission of such single or joint bid, or prior to or simultaneously with the award of the bid upon the tract) that provides:

(1) For the assignment, transfer, sale, or other conveyance of less than a 100 percent interest in the entire tract on which the bid is submitted, by a person or persons on the List of Restricted Joint Bidders, effective on the date of submission of the bid, to another person or persons on the same List of Restricted Joint Bidders; or

(2) For the assignment, sale, transfer or other conveyance of less than a 100 percent interest in any fractional interest in the entire tract (which fractional interest was originally acquired by the person making the assignment, sale, transfer or other conveyance, under the provisions of the act) by a person or persons on the List of Restricted Joint Bidders, effective on

the date of submission of the bid, to another person or persons on the same List of Restricted Joint Bidders; or

(3) For the assignment, sale, transfer, or other conveyance of any interest in a tract by a person or persons not on the List of Restricted Joint Bidders, effective on the date of submission of the bid, to two or more persons on the same List of Restricted Joint Bidders; or

(4) For any of the types of conveyances described in paragraphs (c)(1), (2), or (3) of this section where any party to the conveyance is chargeable for the prior production period with an average daily production in excess of 1.6 million barrels of crude oil, natural gas and natural gas liquids and has not filed a Statement of Production pursuant to § 556.513 for the applicable six-month bidding period. Assignments expressly required by law, regulation, lease or lease stipulation will not disqualify an otherwise qualified bid; or

(d) A bid submitted by or in conjunction with a person who has filed a false, fraudulent or otherwise intentionally false or misleading detailed Report of Production.

**§ 556.513 When must I file a statement of production?**

(a) You must file a statement of production if your average worldwide daily production exceeded 1.6 million barrels for the prior production period, as determined using the method set forth in § 556.514. Your statement of production must specify that you were chargeable with an average daily production in excess of 1.6 million barrels for the prior production period.

(b) The prior production periods are as follows:

For the bidding period of	The prior production period is the preceding
(1) May through October.	July through December.
(2) November through April.	January through June.

(c) You must file the statement of production by the following deadlines:

For the bidding period of	You must file the statement by
(1) May through October.	March 17.
(2) November through April.	September 17.

(d) If you are required to file a statement of production, BOEM may require you to submit a detailed report of production.

(1) The detailed report of production must list crude oil, natural gas liquids, and natural gas produced worldwide from reservoirs during the prior production period, and therefore chargeable to the prior production period.

(i) The amount of crude oil chargeable to the prior production period will be established by measurement of volumes delivered at the point of custody transfer (e.g., from storage tanks to pipelines, trucks, tankers, or other media for transport to refineries or terminals), with adjustments for net differences between opening and closing inventories, and basic sediment and water.

(ii) The amount of natural gas liquids chargeable to the prior production period must include gas liquefied at surface separators, field facilities, or gas processing plants.

(iii) The amount of natural gas chargeable to the prior production period must include adjustments, where applicable, to reflect the volume of gas returned to natural reservoirs, and the reduction of volume resulting from the removal of natural gas liquids and non-hydrocarbon gases.

(2) You must submit the detailed report of production within 30 days after receiving BOEM's request.

(3) BOEM may inspect and copy any document, record of production, analysis, and other material to verify the accuracy of any earlier statement of production.

(e) If you submit a statement of production that misrepresents your chargeable production, the Department may cancel any lease awarded in reliance upon the statement.

**§ 556.514 How do I determine my production for purposes of the restricted joint bidders list?**

(a) To determine the amount of production chargeable to you, add together:

(1) Your average daily production in barrels of crude oil, natural gas liquids, and natural gas worldwide, all measured at 60 °F, using the

equivalency or conversion factors for natural gas liquids and natural gas set out in 42 U.S.C. 6213(b)(2) and (3); and

(2) Your proportionate share of the average daily production owned by any person that has an interest in you and/or in which you have an interest.

(b) For the purpose of paragraph (a)(1) of this section, your production includes 100 percent of production owned by:

- (1) You;
- (2) Every subsidiary of yours;
- (3) Every person of which you are a subsidiary; and

(4) Every subsidiary of any person of which you are a subsidiary.

(c) For purposes of paragraph (a)(2) of this section, interest means at least a five percent ownership or control of you or the reporting person and includes any interest:

(1) From ownership of securities or other evidence of ownership; or,

(2) By participation in any contract, agreement, or understanding regarding control of the person or their production of crude oil, natural gas liquids, or natural gas.

(d) For purposes of this section, subsidiary means a person, 50 percent or more of whose stock or other interest having power to vote for the election of a controlling body, such as directors or trustees, is directly or indirectly owned or controlled by another person.

(e) For purposes of this section, production chargeable to you includes, but is not limited to, production obtained as a result of a production payment or a working, net profit, royalty, overriding royalty, or carried interest.

(f) For purposes of this section, production must be measured with appropriate adjustments for:

- (1) Basic sediment and water;
- (2) Removal of natural gas liquids and non-hydrocarbon gases; and
- (3) Volume of gas returned to natural reservoirs.

**§ 556.515 May a person be exempted from joint bidding restrictions?**

BOEM may exempt you from some or all of the reporting requirements listed in § 556.513, and/or some or all of the joint bidding restrictions listed in §§ 556.511 and/or 556.512(a), (b), and/or (c), if, after opportunity for a hearing, BOEM determines that the extremely high costs in an area will preclude exploration and development without an exemption.

**How Does BOEM Act on Bids?**

**§ 556.516 What does BOEM do with my bid?**

(a) BOEM opens the sealed bids at the place, date, and hour specified in the final notice of sale for the sole purpose of publicly announcing and recording the bids. BOEM does not accept or reject any bids at that time.

(b) BOEM reserves the right to reject any and all bids received, regardless of the amount offered. BOEM accepts or rejects all bids within 90 days of opening. BOEM reserves the right to extend that time if necessary, and in that event, BOEM will notify bidder(s) in writing prior to the expiration of the initial 90-day period, or of any extension. Any bid not accepted within

the prescribed 90-day period, or any extension thereof, will be deemed rejected. If your bid is rejected, BOEM will refund any money deposited with your bid, plus any interest accrued.

(c) If the highest bids are a tie, BOEM will notify the bidders who submitted the tie bids. Within 15 days after notification, those bidders, if qualified, and not otherwise prohibited from bidding together, may:

(1) Agree to accept the lease jointly. The bidders must notify BOEM of their decision and submit a copy of their agreement to accept the lease jointly.

(2) Agree between/among themselves which bidder will accept the lease. The bidders must notify BOEM of their decision.

(d) If no agreement is submitted pursuant to paragraph (c) of this section, BOEM will reject all the tie bids.

(e) The Attorney General, in consultation with the Federal Trade Commission, has 30 days to review the results of the lease sale before BOEM may accept the bid(s) and issue the lease(s).

**§ 556.517 What may I do if my high bid is rejected?**

(a) The decision of the authorized officer on bids is the final action of the Department, subject only to reconsideration of the rejection of the high bid by the Director, in accordance with paragraph (b) of this section.

(b) Within 15 days of bid rejection, you may file a written request for reconsideration with the Director, with a copy to the authorized officer. Such request must provide evidence as to why the Director should reconsider your bid. You will receive a written response either affirming or reversing the rejection of your bid.

(c) The Director's decision on the request for reconsideration is not subject to appeal to the Interior Board of Land Appeals in the Department's Office of Hearings and Appeals.

**Awarding the Lease**

**§ 556.520 What happens if I am the successful high bidder and BOEM accepts my bid?**

(a) If BOEM accepts your bid, BOEM will provide you with the appropriate number of copies of the lease for you to execute and return to BOEM. Within 11 business days after you receive the lease copies, you must:

- (1) Execute all copies of the lease;
- (2) Pay the first year's rental;
- (3) Pay the balance of the bonus bid, unless deferred under paragraph (b) below;
- (4) Comply with subpart I of this part; and,

(5) Return all copies of the executed lease, including any required bond or other form of security approved by the Regional Director, to BOEM.

(b) If provided for in the final notice of sale, BOEM may defer any part of the bonus and bid payment for up to five years after the sale according to a schedule included in the final notice of sale. You must provide a bond acceptable to BOEM to guarantee payment of a deferred bonus bid.

(c) If you do not make the required payments and execute and return all copies of the lease and any required bond within 11 business days after receipt, or if you otherwise fail to comply with applicable regulations, your deposit will be forfeited. However, BOEM will return any deposit with interest if the tract is withdrawn from leasing before you execute the lease.

(d) If you use an agent to execute the lease, you must include evidence with the executed copies of the lease that a person who is on the list of persons referenced in § 556.402(c)(3) authorized the agent to act for you.

(e) After you comply with all requirements in this section, and after BOEM has executed the lease, BOEM will send you a fully executed lease.

**§ 556.521 When is my lease effective?**

Your lease is effective on the first day of the month following the date that BOEM executes the lease. You may request in writing, before BOEM executes the lease, that your lease be effective as of the first day of the month in which BOEM executes the lease. If BOEM agrees to make the lease effective as of the earlier date, BOEM will so indicate when it executes the lease.

**§ 556.522 What are the terms and conditions of the lease and when are they published?**

The terms and conditions of the lease will be stated in the final notice of sale and contained in the lease instrument itself. Oil and gas leases and leases for sulfur will be issued on forms approved by the Director.

**Subpart F—Lease Term and Obligations**

**Length of Lease**

**§ 556.600 What is the primary term of my oil and gas lease?**

(a) The primary term of an oil and gas lease will be five years, unless BOEM determines that:

- (1) The lease is located in unusually deep water or involves other unusually adverse conditions; and,
- (2) A lease term longer than five years is necessary to explore and develop the lease.

(b) If BOEM determines that the criteria in paragraphs (a)(1) and (2) of this section are met, it may specify a longer primary term, not to exceed 10 years.

(c) BOEM will specify the primary term in the final notice of sale and in the lease instrument.

(d) The lease will expire at the end of the primary term, unless maintained beyond that term in accordance with the provisions of § 556.601.

**§ 556.601 How may I maintain my oil and gas lease beyond the primary term?**

You may maintain your oil and gas lease beyond the expiration of the primary term as long as:

(a) You are producing oil or gas in paying quantities;

(b) You are conducting approved drilling or well reworking operations with the objective of establishing production in paying quantities, in accordance with 30 CFR 250.180;

(c) You are producing from, or drilling or reworking, an approved well adjacent to or adjoining your lease that extends directionally into your lease in accordance with 30 CFR 256.71;

(d) You make compensatory payments on your lease in accordance with 30 CFR 256.72;

(e) Your lease is included in a BSEE-approved unit, in accordance with 30 CFR part 250, subpart M; or

(f) Your lease is subject to a suspension of production or a suspension of operations, in accordance with 30 CFR 250.168 through 250.180, for reasons other than gross negligence or a willful violation of a provision of your lease or any governing regulations.

**§ 556.602 What is the primary term of my sulfur lease?**

(a) Your sulfur lease will have a primary term of not more than 10 years, as specified in the lease.

(b) BOEM will announce the primary term prior to the lease sale.

(c) The lease will expire at the end of the primary term unless maintained beyond that term in accordance with the provisions of § 556.603.

**§ 556.603 How may I maintain my sulfur lease beyond the primary term?**

You may maintain your sulfur lease after the primary term as long as you are producing sulfur in paying quantities, conducting drilling, well reworking or plant construction, or other operations for the production of sulfur or you are granted a suspension by BSEE; or your lease is subject to a suspension directed by BSEE for reasons other than gross negligence or a willful violation of a provision of your lease or governing regulations.

**Lease Obligations**

**§ 556.604 What are my rights and obligations as a record title owner?**

(a) As a record title owner, you are responsible for all administrative and operating performance on the lease, including paying any rent and royalty due.

(b)(1) A record title owner owns operating rights to the lease, unless and until he or she severs the operating rights by subleasing them to someone else.

(2) A sublease of operating rights from record title may be for a whole or undivided fractional interest in the entire lease or a described aliquot portion of the lease and/or a depth interval. The sublease creates an operating rights interest in the sublessee, herein referred to as the operating rights owner.

(c) Within any given aliquot, the record title owner may sublease operating rights for up to a maximum of two depth divisions, which may result in a maximum of three different depth intervals. But, if the one, or two, depth divisions to which operating rights are subleased do not include the entire depth of the lease, whatever depth division(s) has not been subleased, remains part of the lessee/sublessor's record title interest. The depth intervals for which operating rights are subleased must be defined by a beginning and ending depth and the ending of one depth level must abut the beginning of the next depth level, with no gap in between.

(d) Every current and prior record title owner is jointly and severally liable, along with all other record title owners and all prior and current operating rights owners, for compliance with all non-monetary terms and conditions of the lease and all regulations issued under OCSLA, as well as for fulfilling all non-monetary obligations, including decommissioning obligations, which accrue while it holds record title interest.

(e) Record title owners that acquired their record title interests through assignment from a prior record title owner are also responsible for remedying all existing environmental or operational problems on any lease in which they own record title interests, with subrogation rights against prior lessees.

(f) For monetary obligations, your obligation depends on the source of the monetary obligation and whether you have retained or severed your operating rights.

(1) With respect to those operating rights that you have retained, you are

primarily liable under 30 U.S.C. 1712(a) for your pro-rata share of all other monetary obligations pertaining to that portion of the lease subject to the operating rights you have retained, based on your share of operating rights in that portion of the lease.

(2) With respect to all monetary obligations arising from or in connection with those operating rights that have been severed from your record title interest, your obligation is secondary to that of the sublessee(s) or later assignee(s) of the operating rights that were severed from your record title interest, as prescribed in 30 U.S.C. 1712(a).

**§ 556.605 What are my rights and obligations as an operating rights owner?**

(a) As an operating rights owner, you have the right to enter the leased area to explore for, develop, and produce oil and gas resources, except helium gas, contained within the aliquot(s) and depths within which you own operating rights, according to the lease terms, applicable regulations, and BOEM's approval of the sublease or subsequent assignment of the operating rights.

(b) Unless otherwise prohibited, you have the right to authorize another party to conduct operations on the part of the lease to which your operating rights appertain.

(c) An owner of operating rights who is designating a new designated operator must file a designation of operator under § 550.143 of this chapter.

(d) An operating rights owner is only liable for obligations arising from that portion of the lease to which its operating rights appertain and that accrue during the period in which the operating rights owner owned the operating rights.

(e) You are jointly and severally liable with other operating rights owners and the record title owners for all non-monetary lease obligations pertaining to that portion of the lease subject to your operating rights, which accrued during the time you held your operating rights interest.

(f) An operating rights owner that acquires its operating rights interests through assignment from a prior operating rights owner is also responsible, with subrogation rights against prior operating rights owners, for remedying existing environmental or operational problems, to the extent that such problems arise from that portion of the lease to which its operating rights appertain, on any lease in which it owns operating rights.

(g) You are primarily liable for monetary obligations pertaining to that portion of the lease subject to your

operating rights, and the record title owners are secondarily liable. If there is more than one operating rights owner in a lease, each operating rights owner is primarily liable for its pro-rata share of the monetary obligations that pertain to the portion of the lease that is subject to its operating rights.

## Helium

### **§ 556.606 What must a lessee do if BOEM elects to extract helium from a lease?**

(a) BOEM reserves the ownership of, and the right to extract, helium from all gas produced from your OCS lease. Under section 12(f) of OCSLA (43 U.S.C. 1341(f)), upon our request, you must deliver all or a specified portion of the gas containing helium to BOEM at a point on the leased area or at an onshore processing facility that BOEM designates.

(b) BOEM will determine reasonable compensation and pay you for any loss caused by the extraction of helium, except for the value of the helium itself. BOEM may erect, maintain, and operate on your lease any reduction work and other equipment necessary for helium extraction. Our extraction of helium will be conducted in a manner to not cause substantial delays in the delivery of gas to your purchaser.

## **Subpart G—Transferring All or Part of the Record Title Interest in a Lease**

### **§ 556.700 May I assign or sublease all or any part of the record title interest in my lease?**

(a) With BOEM approval, you may assign your whole, or a partial record title interest in your entire lease, or in any aliquot(s) thereof.

(b) With BOEM approval, you may sever all, or a portion of, your operating rights.

(c) You must request approval of each assignment of a record title interest and each sublease of an operating rights interest. Each instrument that transfers a record title interest must describe, by aliquot parts, the interest you propose to transfer. Each instrument that severs an operating rights interest must describe, by officially designated aliquot parts and depth levels, the interest proposed to be transferred.

### **§ 556.701 How do I seek approval of an assignment of the record title interest in my lease, or a severance of operating rights from that record title interest?**

(a) The Regional Director will provide the form to record an assignment of record title interest in a Federal OCS oil and gas or sulfur lease, or a severance of operating rights from that record title interest. You must submit to BOEM two originals of each instrument that

transfers ownership of record title within 90 days after the last party executes the transfer instrument. You must pay the service fee listed in § 556.106 with your request and your submission must include evidence of payment via pay.gov.

(b) Before BOEM approves an assignment or transfer, it must consult with, and consider the views of, the Attorney General. The Secretary may act on an assignment or transfer if the Attorney General has not responded to a request for consultation within 30 days of said request.

(c) A new record title owner or sublessee must file a designation of operator, in accordance with § 550.143 of this chapter, along with the request for the approval of the assignment.

### **§ 556.702 When will my assignment result in a segregated lease?**

(a) When there is an assignment by all record title owners of 100 percent of the record title to one or more aliquots in a lease, the assigned and retained portions become segregated into separate and distinct leases. In such case, both the new lease and the remaining portion of the original lease are referred to as “segregated leases” and the assignee(s) becomes the record title owner(s) of the new lease, which is subject to all the terms and conditions of the original lease.

(b) If a record title holder transfers an undivided interest, *i.e.*, less than 100 percent of the record title interest in any given aliquot(s), that transfer will not segregate the portions of the aliquots, or the whole aliquots, in which part of the record title was transferred, into separate leases from the portion(s) in which no interest was transferred. Instead, that transfer will create a joint ownership between the assignee(s) and assignor(s) in the portions of the lease in which part of the record title interest was transferred. Any transfer of an undivided interest is subject to approval by BOEM.

### **§ 556.703 What is the effect of the approval of the assignment of 100 percent of the record title in a particular aliquot(s) of my lease and of the resulting lease segregation?**

(a) The bonding/financial assurance requirements of subpart I of this part apply separately to each segregated lease.

(b) The royalty, minimum royalty, and rental provisions of the original lease will apply separately to each segregated lease.

(c) BOEM will allocate among the segregated leases, on a basis that is equitable under the circumstances, any remaining unused royalty suspension

volume or other form of royalty suspension or royalty relief that had been granted to the original lease, not to exceed in aggregate the total remaining amount.

(d) Each segregated lease will continue in full force and effect for the primary term of the original lease and so long thereafter as each segregated lease meets the requirements outlined in § 556.601. A segregated lease that does not meet the requirements of § 556.601 does not continue in force even if another segregated lease, which was part of the original lease, continues to meet those requirements.

### **§ 556.704 When would BOEM disapprove an assignment or sublease of an interest in my lease?**

(a) BOEM may disapprove an assignment or sublease of all or part of your lease interest(s):

(1) When the transferor or transferee has unsatisfied obligations under this chapter or 30 CFR chapters II or XII;

(2) When a transferor attempts a transfer that is not acceptable as to form or content (*e.g.*, not on standard form, containing incorrect legal description, not executed by a person authorized to bind the corporation, transferee does not meet the requirements of § 556.401, etc.); or,

(3) When the transfer does not conform to these regulations, or any other applicable laws or regulations (*e.g.*, departmental debarment rules).

(b) A transfer will be void if it is made pursuant to any prelease agreement that would cause a bid to be disqualified, such as those described in § 556.511(c), (d), or (e).

### **§ 556.705 How do I transfer the interest of a deceased natural person who was a lessee?**

(a) An heir or devisee must submit evidence by means of a certified copy of an appropriate court order or decree that the person is deceased; or, if no court action is necessary, a certified copy of the will and death certificate or notarized affidavits of two disinterested parties with knowledge of the facts.

(b) The heir or devisee, if the lawful successor in interest, must submit evidence that he/she is the person named in the will or evidence from an appropriate judgment of a court or decree that he/she is the lawful successor in interest, along with the required evidence of his/her qualifications to hold a lease under subpart D of this part.

(c) If the heir or devisee does not qualify to hold a lease under subpart D of this part, he/she will be recognized as the successor in interest, but he/she

must divest him/herself of this interest in the lease, to a person qualified to be a hold a lease, within two years.

**§ 556.706 What if I want to transfer record title interests in more than one lease at the same time, but to different parties?**

You may not transfer interests in more than one lease to different parties using the same instrument. If you want to transfer the interest in more than one lease at the same time, you must submit duplicate, originally executed forms for each transfer. The forms used for each transfer must be accompanied by a cover letter executed by one of the parties to the transfer (or an authorized agent thereof) and evidence of payment via pay.gov.

**§ 556.707 What if I want to transfer different types of lease interests (not only record title interests) in the same lease to different parties?**

You may not transfer different types of lease interests in a lease to different parties using the same instrument. You must submit duplicate, originally executed forms for each transfer, to a different party, of a different type of lease interest. The form used to transfer each type of lease interest must be accompanied by a cover letter executed by one of the parties to the transfer (or an authorized agent thereof) and evidence of payment via pay.gov.

**§ 556.708 What if I want to transfer my record title interests in more than one lease to the same party?**

You may not transfer your record title interests in more than one lease to the same party using the same instrument. If you want to transfer record title interests in more than one lease at the same time, you must submit separate, originally executed forms for each transfer. The forms used for each transfer must be accompanied by a cover letter executed by one of the parties to the transfer (or an authorized agent thereof), and evidence of payment via pay.gov. A separate fee applies to each individual transfer of interest.

**§ 556.709 What if I want to transfer my record title interest in one lease to multiple parties?**

You may transfer your record title interest in one lease to multiple parties using the same instrument. That instrument must be submitted in duplicate originals, accompanied by a cover letter executed by one of the parties to the transfer (or an authorized agent thereof). In such a multiple transfer of interests using a single instrument, a separate fee applies to each individual transfer of interest, and

evidence of payment via pay.gov must accompany the instrument.

**§ 556.710 What is the effect of an assignment of a lease on an assignor's liability under the lease?**

If you assign your record title interest, as an assignor you remain liable for all obligations, monetary and non-monetary, that accrued in connection with your lease during the period in which you owned the record title interest, up to the date BOEM approves your assignment. BOEM's approval of the assignment does not relieve you of these accrued obligations. Even after assignment, BOEM or BSEE may require you to bring the lease into compliance if your assignee or any subsequent assignee fails to perform any obligation under the lease, to the extent the obligation accrued before approval of your assignment. Until there is a BOEM-approved assignment of interest, you, as the assignor, remain liable for the performance of all lease obligations that accrued while you held record title interest, until all such obligations are fulfilled.

**§ 556.711 What is the effect of a record title holder's sublease of operating rights on the record title holder's liability?**

(a) A record title holder who subleases operating rights remains liable for all obligations of the lease, including those obligations accruing after BOEM's approval of the sublease, subject to § 556.604(e) and (f).

(b) Neither the sublease of operating rights, nor subsequent assignment of those rights by the original sublessee, nor by any subsequent assignee of the operating rights, alters in any manner the liability of the record title holder for nonmonetary obligations.

(c) Upon approval of the sublease of the operating rights, the sublessee and subsequent assignees of the operating rights become primarily liable for monetary obligations, but the record title holder remains secondarily liable for them, as prescribed in 30 U.S.C. 1712(a) and § 556.604(f)(2).

**§ 556.712 What is the effective date of a transfer?**

Any transfer is effective at 12:01 a.m. on the first day of the month following the date on which BOEM approves your request, unless you request an earlier effective date and BOEM approves that earlier date, but such earlier effective date, if prior to the date of BOEM's approval, does not relieve you of obligations accrued between that earlier effective date and the date of approval.

**§ 556.713 What is the effect of an assignment of a lease on an assignee's liability under the lease?**

As assignee, you and any subsequent assignees are liable for all obligations that accrue after the effective date of your assignment. As assignee, you must comply with all the terms and conditions of the lease and regulations issued under OCSLA, and in addition, you must remedy all existing environmental and operational problems on the lease, properly abandon all wells, and reclaim the site, as required under 30 CFR part 250.

**§ 556.714 As a restricted joint bidder, may I transfer an interest to another restricted joint bidder?**

(a) Where the proposed assignment or transfer is by a person who, at the time of acquisition of an interest in the lease, was on the List of Restricted Joint Bidders, and that assignment or transfer is of less than the entire interest held by the assignor or transferor and to a person or persons on the same List of Restricted Joint Bidders, the assignor or transferor must file, prior to the approval of the assignment, a copy of all agreements applicable to the acquisition of that lease or fractional interest, or a description of the timing and nature of the agreement(s) by which the assignor or transferor acquired the interest it now wishes to transfer.

(b) Such description of the timing and nature of the transfer agreement must be submitted together with a certified statement that attests to the truth and accuracy of any information reported concerning that agreement, subject to the penalties of 18 U.S.C. 1001.

(c) If you wish to transfer less than your entire interest to another restricted joint bidder, BOEM may request the opinion of the Attorney General before acting on your request.

(d) You may request that any submission to BOEM made pursuant to this part be treated confidentially. Please note such a request on your submission. BOEM will treat this request for confidentiality in accordance with the regulations at § 556.104 and the regulations at 43 CFR part 2.

**§ 556.715 Are there any interests I may transfer or record without BOEM approval?**

(a) You may create, transfer, or assign economic interests without BOEM approval. However, for record purposes, you must send BOEM a copy of each instrument creating or transferring such interests within 90 days after the last party executes the transfer instrument. For each lease affected, you must pay the service fee listed in § 556.106 with your documents submitted for record

purposes and your submission must include evidence of payment via pay.gov.

(b) For recordkeeping purposes, you may also submit other legal documents to BOEM for transactions that do not require BOEM approval. If you submit such documents for record purposes not required by this part, you must pay the service fee listed in § 556.106 with your document submissions for each lease affected. Your submission must include evidence of payment via pay.gov.

**§ 556.716 What must I do with respect to the designation of operator on a lease when a transfer of record title is submitted?**

(a) If a transfer of ownership of the record title interest only changes the percentage ownership of the record title, no new parties or new aliquots are involved in the transaction, and no change of designated operator is made, you will not need to submit a new designation of operator form.

(b) In all cases other than that in paragraph (a) of this section, you must submit new designation of operator forms in accordance with § 550.143 of this chapter. In the event that you are transferring multiple record title interests, you must comply with this requirement for each interest that does not fall within paragraph (a) of this section.

**Subpart H—Transferring All or Part of the Operating Rights in a Lease**

**§ 556.800 As an operating rights owner, may I assign all or part of my operating rights interest?**

An operating rights owner may assign all or part of its operating rights interests, subject to BOEM approval. Each instrument that transfers an interest must describe, by officially designated aliquot parts and depth levels, the interest proposed to be transferred.

**§ 556.801 How do I seek approval of an assignment of my operating rights?**

(a) The Regional Director will provide the form to document the assignment of an operating rights interest. You must request approval of each assignment of operating rights and submit to BOEM two originals of each instrument that transfers ownership of operating rights within 90 days after the last party executes the transfer instrument. You must pay the service fee listed in § 556.106 with your request and your submission must include evidence of payment via pay.gov.

(b) A new operating rights owner must file a designation of operator, in accordance with § 550.143, along with

the request for the approval of the assignment.

(c) If an operating rights owner assigns an undivided ownership interest in its operating rights, that assignment creates a joint ownership in the operating rights.

(d) Before BOEM approves a sublease or re-assignment of operating rights, BOEM may consult with and consider the views of the Attorney General.

**§ 556.802 When would BOEM disapprove the assignment of all or part of my operating rights interest?**

BOEM may disapprove an assignment of all or part of your operating rights interest:

(a) When the transferor or transferee has outstanding or unsatisfied obligations under this chapter or 30 CFR chapter II or XII;

(b) When a transferor attempts a transfer that is not acceptable as to form or content (*e.g.*, not on standard form, containing incorrect legal description, not executed in accordance with corporate governance, transferee does not meet the requirements of § 556.401, etc.); or

(c) When the transfer does not conform to these regulations, or any other applicable laws or regulations (*e.g.*, departmental debarment rules).

**§ 556.803 What if I want to assign operating rights interests in more than one lease at the same time, but to different parties?**

You may not assign operating rights interests in more than one lease to different parties using the same instrument. If you want to transfer operating rights interests in more than one lease at the same time, you must submit two originally executed forms for each transfer. Each request for a transfer of operating rights interest must be accompanied by a cover letter executed by one of the parties to the transfer (or an authorized agent thereof) and evidence of payment via pay.gov.

**§ 556.804 What if I want to assign my operating rights interest in a lease to multiple parties?**

You may assign your operating rights interest in one lease to multiple parties using the same instrument. That instrument must be submitted in duplicate originals, accompanied by a cover letter executed by one of the parties to the transfer (or an authorized agent thereof). In such a multiple transfer of interests using a single instrument, a separate fee applies to each individual transfer of interest and evidence of payment via pay.gov must accompany the instrument.

**§ 556.805 What is the effect of an operating rights owner's assignment of operating rights on the assignor's liability?**

An operating rights owner (who does not hold record title) who assigns the operating rights remains liable for all obligations of the lease that accrued during the period in which the assignor owned the operating rights, up to the effective date of the assignment, including decommissioning obligations that accrued during that period. BOEM's approval of the assignment does not alter that liability. Even after assignment, BOEM or BSEE may require the assignor to bring the lease into compliance if the assignee or any subsequent assignee fails to perform any obligation under the lease, to the extent the obligation accrued before approval of the assignment.

**§ 556.806 What is the effective date of an assignment of operating rights?**

An assignment is effective at 12:01 a.m. on the first day of the month following the date on which BOEM approves your request, unless you request an earlier effective date and BOEM approves that earlier date. Such an earlier effective date, if prior to the date of BOEM's approval, does not relieve you of obligations accrued between that earlier effective date and the date of approval.

**§ 556.807 What is the effect of an assignment of operating rights on an assignee's liability?**

As assignee, you and any subsequent assignees are liable for all obligations that accrue after the effective date of your assignment. As assignee, you must comply with all the terms and conditions of the lease and regulations issued under OCSLA. In addition, you must remedy all existing environmental and operational problems on the lease, properly abandon all wells, and reclaim the site, as required under 30 CFR part 250.

**§ 556.808 As an operating rights owner, are there any interests I may assign without BOEM approval?**

(a) You may create, transfer, or assign economic interests without BOEM approval. However, for record purposes, you must send BOEM a copy of each instrument creating or transferring such interests within 90 days after the last party executes the transfer instrument. For each lease affected, you must pay the service fee listed in § 556.106 with your documents submitted for record purposes, and your submission must include evidence of payment via pay.gov.

(b) For record keeping purposes, you may also submit other legal documents

to BOEM for transactions that do not require BOEM approval. If you submit such documents for record purposes that are not required by these regulations, for each lease affected, you must pay the service fee listed in § 556.106 with your document submissions, and your submission must include evidence of payment via pay.gov.

**§ 556.809 [Reserved]**

**§ 556.810 What must I do with respect to the designation of operator on a lease when a transfer of operating rights ownership is submitted?**

(a) If a transfer of ownership of operating rights only changes the percentage ownership; no new parties, new aliquots, or new depths are involved in the transaction; and no change of designated operator is made, you will not need to submit a new designation of operator form.

(b) In all cases other than that in paragraph (a) of this section, you must submit new designation of operator forms, in accordance with § 550.143 of this chapter. In the event that you are transferring multiple operating rights interests, you must comply with this requirement for each interest that does not fall within paragraph (a) of this section.

**Subpart I—Bonding or Other Financial Assurance**

**§ 556.900 Bond requirements for an oil and gas or sulfur lease.**

This section establishes bond requirements for the lessee of an OCS oil and gas or sulfur lease.

(a) Before BOEM will issue a new lease or approve the assignment of an existing lease to you as lessee, you or another record title owner for the lease must:

- (1) Maintain with the Regional Director a \$50,000 lease bond that guarantees compliance with all the terms and conditions of the lease; or
- (2) Maintain a \$300,000 area-wide bond that guarantees compliance with all the terms and conditions of all your oil and gas and sulfur leases in the area where the lease is located; or
- (3) Maintain a lease or area-wide bond in the amount required in § 556.901(a) or (b).

(b) For the purpose of this section, there are three areas. The three areas are:

- (1) The Gulf of Mexico and the area offshore the Atlantic Coast;
- (2) The area offshore the Pacific Coast States of California, Oregon, Washington, and Hawaii; and
- (3) The area offshore the Coast of Alaska.

(c) The requirement to maintain a lease bond (or substitute security instrument) under paragraph (a)(1) of this section and § 556.901(a) and (b) may be satisfied if your operator or an operating rights owner provides a lease bond in the required amount that guarantees compliance with all the terms and conditions of the lease. Your operator or an operating rights owner may use an areawide bond under this paragraph to satisfy your bond obligation.

(d) If a surety makes payment to the United States under a bond or alternative form of security maintained under this section, the surety's remaining liability under the bond or alternative form of security is reduced by the amount of that payment. See paragraph (e) of this section for the requirement to replace the reduced bond coverage.

(e) If the value of your surety bond or alternative security is reduced because of a default or for any other reason, you must provide additional bond coverage sufficient to meet the security required under this subpart within 6 months, or such shorter period of time as the Regional Director may direct.

(f) You may pledge United States Department of the Treasury (Treasury) securities instead of a bond. The Treasury securities you pledge must be negotiable for an amount of cash equal to the value of the bond they replace.

(1) If you pledge Treasury securities under this paragraph (f), you must monitor their value. If their market value falls below the level of bond coverage required under this subpart, you must pledge additional Treasury securities to raise the value of the securities pledged to the required amount.

(2) If you pledge Treasury securities, you must include authority for the Regional Director to sell them and use the proceeds in the event that the Regional Director determines that you fail to satisfy any lease obligation.

(g) You may pledge alternative types of security instruments instead of providing a bond if the Regional Director determines that the alternative security protects the interests of the United States to the same extent as the required bond.

(1) If you pledge an alternative type of security under this paragraph, you must monitor the security's value. If its market value falls below the level of bond coverage required under this subpart, you must pledge additional securities to raise the value of the securities pledged to the required amount.

(2) If you pledge an alternative type of security, you must include authority for the Regional Director to sell the security and use the proceeds when the Regional Director determines that you failed to satisfy any lease obligation.

(h) If you fail to replace a deficient bond or to provide additional bond coverage upon demand, the Regional Director may:

- (1) Assess penalties under part 550, subpart N of this chapter;
- (2) Suspend production and other operations on your leases in accordance with 30 CFR 250.173; and
- (3) Initiate action to cancel your lease.

**§ 556.901 Additional bonds.**

(a) This paragraph explains what bonds you must provide before lease exploration activities commence.

(1)(i) You must furnish the Regional Director a \$200,000 bond that guarantees compliance with all the terms and conditions of the lease by the earliest of:

(A) The date you submit a proposed exploration plan (EP) for approval; or

(B) The date you submit a request for approval of the assignment of a lease on which an EP has been approved.

(ii) The Regional Director may authorize you to submit the \$200,000 lease exploration bond after you submit an EP, but before approval of drilling activities under the EP.

(iii) You may satisfy the bond requirement of this paragraph (a) by providing a new bond or by increasing the amount of your existing bond.

(2) A \$200,000 lease exploration bond pursuant to paragraph (a)(1) of this section need not be submitted and maintained if the lessee either:

(i) Furnishes and maintains an areawide bond in the sum of \$1 million issued by a qualified surety and conditioned on compliance with all the terms and conditions of oil and gas and sulfur leases held by the lessee on the OCS for the area in which the lease is situated; or

(ii) Furnishes and maintains a bond pursuant to paragraph (b)(2) of this section.

(b) This paragraph explains what bonds you (the lessee) must provide before lease development and production activities commence.

(1)(i) You must furnish the Regional Director a \$500,000 bond that guarantees compliance with all the terms and conditions of the lease by the earliest of:

(A) The date you submit a proposed development and production plan (DPP) or development operations coordination document (DOCD) for approval; or

(B) The date you submit a request for approval of the assignment of a lease on

which a DPP or DOCD has been approved.

(ii) The Regional Director may authorize you to submit the \$500,000 lease development bond after you submit a DPP or DOCD, but before he/she approves the installation of a platform or the commencement of drilling activities under the DPP or DOCD.

(iii) You may satisfy the bond requirement of this paragraph by providing a new bond or by increasing the amount of your existing bond.

(2) You need not submit and maintain a \$500,000 lease development bond pursuant to paragraph (b)(1) of this section if you furnish and maintain an areawide bond in the sum of \$3 million issued by a qualified surety and conditioned on compliance with all the terms and conditions of oil and gas and sulfur leases you hold on the OCS for the area in which the lease is located.

(c) If you can demonstrate to the satisfaction of the authorized officer that you can satisfy your decommissioning obligations for less than the amount of lease bond coverage required under paragraph (b)(1) of this section, the authorized officer may accept a lease surety bond in an amount less than the prescribed amount, but not less than the amount of the cost for decommissioning.

(d) The Regional Director may determine that additional security (*i.e.*, security above the amounts prescribed in § 556.900(a) and paragraphs (a) and (b) of this section) is necessary to ensure compliance with the obligations under your lease, the regulations in this chapter, and the regulations in 30 CFR chapters II and XII.

(1) The Regional Director's determination will be based on his/her evaluation of your ability to carry out present and future financial obligations demonstrated by:

(i) Financial capacity substantially in excess of existing and anticipated lease and other obligations, as evidenced by audited financial statements (including auditor's certificate, balance sheet, and profit and loss sheet);

(ii) Projected financial strength significantly in excess of existing and future lease obligations based on the estimated value of your existing OCS lease production and proven reserves for future production;

(iii) Business stability based on five years of continuous operation and production of oil and gas or sulfur in the OCS or in the onshore oil and gas industry;

(iv) Reliability in meeting obligations based on:

(A) Credit rating; or

(B) Trade references, including names and addresses of other lessees, drilling contractors, and suppliers with whom you have dealt; and

(v) Record of compliance with laws, regulations, and lease terms.

(2) You may satisfy the Regional Director's demand for additional security by increasing the amount of your existing bond or by providing additional bond or bonds.

(e) The Regional Director will determine the amount of additional bond required to guarantee compliance. The Regional Director will consider potential underpayment of royalty and cumulative decommissioning obligations.

(f) If your cumulative potential obligations and liabilities either increase or decrease, the Regional Director may adjust the amount of additional bond required.

(1) If the Regional Director proposes an adjustment, the Regional Director will:

(i) Notify you and the surety of any proposed adjustment to the amount of bond required; and

(ii) Give you an opportunity to submit written or oral comment on the adjustment.

(2) If you request a reduction of the amount of additional bond required, you must submit evidence to the Regional Director demonstrating that the projected amount of royalties due the Government and the estimated costs of decommissioning are less than the required bond amount. If the Regional Director finds that the evidence you submit is convincing, the Regional Director may reduce the amount of additional bond required.

#### § 556.902 General requirements for bonds.

(a) Any bond or other security that you, as lessee, operating rights owner or operator, provide under this part must:

(1) Be payable upon demand to the Regional Director;

(2) Guarantee compliance with all of your obligations under the lease, regulations in this chapter, and regulations under 30 CFR chapters II and XII; and

(3) Guarantee compliance with the obligations of all lessees, operating rights owners and operators on the lease.

(b) All bonds and pledges you furnish under this part must be on a form or in a form approved by the Director. Surety bonds must be issued by a surety that the Treasury certifies as an acceptable surety on Federal bonds and that is listed in the current Treasury Circular No. 570. You may obtain a copy of the current Treasury Circular No. 570 from

the Surety Bond Branch, Financial Management Service, Department of the Treasury, East-West Highway, Hyattsville, MD 20782.

(c) You and a qualified surety must execute your bond. When either party is a corporation, an authorized official for the party must sign the bond and attest to it by an imprint of the corporate seal.

(d) Bonds must be non-cancellable, except as provided in § 556.906 of this part. Bonds must continue in full force and effect even though an event occurs that could diminish, terminate, or cancel a surety obligation under State surety law.

(e) Lease bonds must be:

(1) A surety bond;

(2) Treasury securities as provided in § 556.900(f);

(3) Another form of security approved by the Regional Director; or

(4) A combination of these security methods.

(f) You may submit a bond to the Regional Director executed on a form approved under paragraph (b) of this section that you have reproduced or generated by use of a computer. If you do, and if the document omits terms or conditions contained on the form approved by the Director, the bond you submit will be deemed to contain the omitted terms and conditions.

#### § 556.903 Lapse of bond.

(a) If your surety becomes bankrupt, insolvent, or has its charter or license suspended or revoked, any bond coverage from that surety terminates immediately. In that event, you must promptly provide a new bond in the amount required under §§ 556.900 and 556.901 to the Regional Director and advise the Regional Director of the lapse in your previous bond.

(b) You must notify the Regional Director of any action filed alleging that you, your surety, or your guarantor are insolvent or bankrupt. You must notify the Regional Director within 72 hours of learning of such an action. All bonds must require the surety to provide this information to you and directly to BOEM.

#### § 556.904 Lease-specific abandonment accounts.

(a) The Regional Director may authorize you to establish a lease-specific abandonment account in a federally insured institution in lieu of the bond required under § 556.901(d). The account must provide that, except as provided in paragraph (a)(3) of this section, funds may not be withdrawn without the written approval of the Regional Director.

(1) Funds in a lease-specific abandonment account must be payable

upon demand to BOEM and pledged to meet your decommissioning obligations.

(2) You must fully fund the lease-specific abandonment account to cover all decommissioning costs as estimated by BOEM within the timeframe the Regional Director prescribes.

(3) You must provide binding instructions under which the institution managing the account is to purchase Treasury securities pledged to BOEM under paragraph (d) of this section.

(b) Any interest paid on funds in a lease-specific abandonment account will be treated as other funds in the account unless the Regional Director authorizes in writing the payment of interest to the party who deposits the funds.

(c) The Regional Director may allow you to pledge Treasury securities that are made payable upon demand to the Regional Director to satisfy your obligation to make payments into a lease-specific abandonment account.

(d) Before the amount of funds in a lease-specific abandonment account equals the maximum insurable amount as determined by the Federal Deposit Insurance Corporation or the Federal Savings and Loan Insurance Corporation, the institution managing the account must use the funds in the account to purchase Treasury securities pledged to BOEM under paragraph (c) of this section. The institution managing the lease specific-abandonment account will join with the Regional Director to establish a Federal Reserve Circular 154 account to hold these Treasury securities, unless the Regional Director authorizes the managing institution to retain the pledged Treasury securities in a separate trust account. You may obtain a copy of the current Treasury Circular No. 154 from the Surety Bond Branch, Financial Management Service, Department of the Treasury, East-West Highway, Hyattsville, MD 20782.

(e) The Regional Director may require you to create an overriding royalty or

production payment obligation for the benefit of a lease-specific account pledged for the decommissioning of a lease. The required obligation may be associated with oil and gas or sulfur production from a lease other than the lease bonded through the lease-specific abandonment account.

**§ 556.905 Using a third-party guarantee instead of a bond.**

(a) *When the Regional Director may accept a third-party guarantee.* The Regional Director may accept a third-party guarantee instead of an additional bond under § 556.901(d) if:

(1) The guarantee meets the criteria in paragraph (c) of this section;

(2) The guarantee includes the terms specified in paragraph (d) of this section;

(3) The guarantor's total outstanding and proposed guarantees do not exceed 25 percent of its unencumbered net worth in the United States; and

(4) The guarantor submits an indemnity agreement meeting the criteria in paragraph (e) of this section.

(b) *What to do if your guarantor becomes unqualified.* If, during the life of your third-party guarantee, your guarantor no longer meets the criteria of paragraphs (a)(3) and (c)(3) of this section, you must:

(1) Notify the Regional Director immediately; and

(2) Cease production until you comply with the bond coverage requirements of this subpart.

(c) *Criteria for acceptable guarantees.* If you propose to furnish a third party's guarantee, that guarantee must ensure compliance with all lessees' lease obligations, the obligations of all operating rights owners, and the obligations of all operators on the lease. The Regional Director will base acceptance of your third-party guarantee on the following criteria:

(1) The period of time that your third-party guarantor (guarantor) has been in

continuous operation as a business entity where:

(i) Continuous operation is the time that your guarantor conducts business immediately before you post the guarantee; and

(ii) Continuous operation excludes periods of interruption in operations that are beyond your guarantor's control and that do not affect your guarantor's likelihood of remaining in business during exploration, development, production, and decommissioning.

(2) Financial information available in the public record or submitted by your guarantor, on your guarantor's own initiative, in sufficient detail to show to the Regional Director's satisfaction that your guarantor is qualified based on:

(i) Your guarantor's current rating for its most recent bond issuance by either Moody's Investor Service or Standard and Poor's Corporation;

(ii) Your guarantor's net worth, taking into account liabilities under its guarantee of compliance with all the terms and conditions of your lease, the regulations in this chapter and 30 CFR chapters II and XII, and your guarantor's other guarantees;

(iii) Your guarantor's ratio of current assets to current liabilities, taking into account liabilities under its guarantee of compliance with all the terms and conditions of your lease, the regulations in this chapter and 30 CFR chapters II and XII, and your guarantor's other guarantees; and

(iv) Your guarantor's unencumbered fixed assets in the United States.

(3) When the information required by paragraph (c) of this section is not publicly available, your guarantor may submit the information in the following table. Your guarantor must update the information annually within 90 days of the end of the fiscal year or by the date prescribed by the Regional Director.

The guarantor should submit	That
(i) Financial statements for the most recently completed fiscal year,	Include a report by an independent certified public accountant containing the accountant's audit opinion or review opinion of the statements. The report must be prepared in conformance with generally accepted accounting principles and contain no adverse opinion.
(ii) Financial statements for completed quarters in the current fiscal year, and	Your guarantor's financial officer certifies to be correct.
(iii) Additional information as requested by the Regional Director.	Your guarantor's financial officer certifies to be correct.

(d) *Provisions required in all third-party guarantees.* Your third-party guarantee must contain each of the following provisions.

(1) If you, your operator, or an operating rights owner fails to comply

with any lease term or regulation, your guarantor must either:

(i) Take corrective action; or,

(ii) Be liable under the indemnity agreement to provide, within 7 calendar

days, sufficient funds for the Regional Director to complete corrective action.

(2) If your guarantor complies with paragraph (d)(1) of this section, this compliance will not reduce its liability.

(3) If your guarantor wishes to terminate the period of liability under its guarantee, it must:

(i) Notify you and the Regional Director at least 90 days before the proposed termination date;

(ii) Obtain the Regional Director's approval for the termination of the period of liability for all or a specified portion of your guarantor's guarantee; and

(iii) Remain liable for all work and workmanship performed during the period that your guarantor's guarantee is in effect.

(4) You must provide a suitable replacement security instrument before the termination of the period of liability under your third-party guarantee.

(e) *Required criteria for indemnity agreements.* If the Regional Director approves your third-party guarantee, the guarantor must submit an indemnity agreement.

(1) The indemnity agreement must be executed by your guarantor and all persons and parties bound by the agreement.

(2) The indemnity agreement must bind each person and party executing the agreement jointly and severally.

(3) When a person or party bound by the indemnity agreement is a corporate entity, two corporate officers who are authorized to bind the corporation must sign the indemnity agreement.

(4) Your guarantor and the other corporate entities bound by the indemnity agreement must provide the Regional Director copies of:

(i) The authorization of the signatory corporate officials to bind their respective corporations;

(ii) An affidavit certifying that the agreement is valid under all applicable laws; and

(iii) Each corporation's corporate authorization to execute the indemnity agreement.

(5) If your third-party guarantor or another party bound by the indemnity agreement is a partnership, joint venture, or syndicate, the indemnity agreement must:

(i) Bind each partner or party who has a beneficial interest in your guarantor; and

(ii) Provide that, upon demand by the Regional Director under your third-party guarantee, each partner is jointly and severally liable for compliance with all terms and conditions of your lease.

(6) When forfeiture is called for under § 556.907, the indemnity agreement must provide that your guarantor will either:

(i) Bring your lease into compliance; or

(ii) Provide, within 7 calendar days, sufficient funds to permit the Regional Director to complete corrective action.

(7) The indemnity agreement must contain a confession of judgment. It must provide that, if the Regional Director determines that you, your operator, or an operating rights owner is in default of the lease, the guarantor:

(i) Will not challenge the determination; and

(ii) Will remedy the default.

(8) Each indemnity agreement is deemed to contain all terms and conditions contained in this paragraph (e), even if the guarantor has omitted them.

**§ 556.906 Termination of the period of liability and cancellation of a bond.**

This section defines the terms and conditions under which BOEM will terminate the period of liability of a bond or cancel a bond. Terminating the period of liability of a bond ends the period during which obligations continue to accrue, but does not relieve the surety of the responsibility for obligations that accrued during the period of liability. Canceling a bond relieves the surety of all liability. The liabilities that accrue during a period of liability include obligations that started to accrue prior to the beginning of the period of liability and had not been met, and obligations that begin accruing during the period of liability.

(a) When you or the surety under your bond requests termination:

(1) The Regional Director will terminate the period of liability under

your bond within 90 days after BOEM receives the request; and

(2) If you intend to continue operations, or have not met all decommissioning obligations, you must provide a replacement bond of an equivalent amount.

(b) If you provide a replacement bond, the Regional Director will cancel your previous bond and the surety that provided your previous bond will not retain any liability, provided that:

(1) The new bond is equal to or greater than the bond that was terminated, or you provide an alternative form of security, and the Regional Director determines that the alternative form of security provides a level of security equal to or greater than that provided for by the bond that was terminated;

(2) For a base bond submitted under § 556.900(a) or under § 556.901(a) or (b), the surety issuing the new bond agrees to assume all outstanding liabilities that accrued during the period of liability that was terminated; and

(3) For additional bonds submitted under § 556.901(d), the surety issuing the new additional bond agrees to assume that portion of the outstanding liabilities that accrued during the period of liability that was terminated and that the Regional Director determines may exceed the coverage of the base bond, and of which the Regional Director notifies the provider of the bond.

(c) This paragraph applies if the period of liability is terminated for a bond, but the bond is not replaced by a bond of an equivalent amount. The surety that provided your terminated bond will continue to be responsible for accrued obligations:

(1) Until the obligations are satisfied; and

(2) For additional periods of time in accordance with paragraph (d) of this section.

(d) When your lease expires or is terminated, the surety that issued a bond will continue to be responsible, and the Regional Director will retain other forms of security as shown in the following table:

For the following type of bond	The period of liability will end	Your bond will be cancelled
(1) Base bonds submitted under § 556.900(a), § 556.901(a), or (b).	When the Regional Director determines that you have met all of your obligations under the lease,	Seven years after the termination of the lease, 6 years after completion of all bonded obligations, or at the conclusion of any appeals or litigation related to your bonded obligation, whichever is the latest. The Regional Director will reduce the amount of your bond or return a portion of your security if the Regional Director determines that you need less than the full amount of the base bond to meet any possible future problems.

For the following type of bond	The period of liability will end	Your bond will be cancelled
(2) Additional bonds submitted under § 556.901(d).	When the Regional Director determines that you have met all your obligations covered by the additional bond,	When you meet your bonded obligations, unless the Regional Director: (i) Determines that the future potential liability resulting from any undetected problem is greater than the amount of the base bond; and (ii) Notifies the provider of the bond that the Regional Director will wait 7 years before cancelling all or a part of the bond (or longer period as necessary to complete any appeals or judicial litigation related to your bonding obligation).

(e) For all bonds, the Regional Director may reinstate your bond as if no cancellation or release had occurred if:

(1) A person makes a payment under the lease and the payment is rescinded or must be repaid by the recipient because the person making the payment is insolvent, bankrupt, subject to reorganization, or placed in receivership; or

(2) The responsible party represents to BOEM that it has discharged its obligations under the lease, and the representation was materially false when the bond was canceled or released.

#### **§ 556.907 Forfeiture of bonds and/or other securities.**

This section explains how a bond or other security may be forfeited.

(a) The Regional Director will call for forfeiture of all or part of the bond, other form of security, or guarantee you provide under this part if:

(1) You (the party who provided the bond) refuse, or the Regional Director determines that you are unable to comply with any term or condition of your lease; or

(2) You default on one of the conditions under which the Regional Director accepts your bond, third-party guarantee, and/or other form of security.

(b) The Regional Director may pursue forfeiture of your bond without first making demands for performance against any lessee, operating rights owner, or other person authorized to perform lease obligations.

(c) The Regional Director will:

(1) Notify you, the surety on your bond or other form of security, and any third-party guarantor of a determination to call for forfeiture of the bond, security, or guarantee under this section.

(i) This notice will be in writing, and will provide the reason for the forfeiture and the amount to be forfeited.

(ii) The Regional Director must base the amount he/she determines is forfeited upon his/her estimate of the total cost of corrective action to bring your lease into compliance.

(2) Advise you, your third-party guarantor, and any surety that you, your

guarantor, and any surety may avoid forfeiture if, within five working days:

(i) You agree to, and demonstrate that you will bring your lease into compliance within the timeframe that the Regional Director prescribes;

(ii) Your third-party guarantor agrees to and demonstrates that it will complete the corrective action to bring your lease into compliance within the timeframe that the Regional Director prescribes; or

(iii) Your surety agrees to and demonstrates that it will bring your lease into compliance within the timeframe that the Regional Director prescribes, even if the cost of compliance exceeds the face amount of the bond or other surety instrument.

(d) If the Regional Director finds you are in default, he/she may cause the forfeiture of any bonds and other security deposited as your guarantee of compliance with the terms and conditions of your lease and the regulations in this chapter and 30 CFR chapters II and XII.

(e) If the Regional Director determines that your bond and/or other security is forfeited, the Regional Director will:

(1) Collect the forfeited amount; and

(2) Use the funds collected to bring your leases into compliance and to correct any default.

(f) If the amount the Regional Director collects under your bond and other security is insufficient to pay the full cost of corrective actions he/she may:

(1) Take or direct action to obtain full compliance with your lease and the regulations in this chapter; and

(2) Recover from you, any co-lessee, operating rights owner, and/or any third-party guarantor responsible under this subpart all costs in excess of the amount he/she collects under your forfeited bond and other security.

(g) The amount that the Regional Director collects under your forfeited bond and other security may exceed the costs of taking the corrective actions required to obtain full compliance with the terms and conditions of your lease and the regulations in this chapter and 30 CFR chapters II and XII. In this case, the Regional Director will return the excess funds to the party from whom they were collected.

#### **Subpart J—Bonus or Royalty Credits for Exchange of Certain Leases**

##### **§ 556.1000 Leases formerly eligible for a bonus or royalty credit.**

Bonus or royalty credits were available to lessees with leases:

(a) In effect on December 20, 2006, and located in:

(1) The Eastern Planning Area and within 125 miles of the coastline of the State of Florida; or,

(2) The Central Planning Area and within the Desoto Canyon OPD, the Destin Dome OPD, or the Pensacola OPD and within 100 miles of the coastline of the State of Florida.

(b) The deadline for applying for such a bonus or royalty credit was October 14, 2010; therefore, lessees may no longer apply for such credits.

#### **Subpart K—Ending a Lease**

##### **§ 556.1100 How does a lease expire?**

(a) Your oil and gas lease will automatically expire at the end of its primary term unless you have taken action, as set forth in § 556.601, to maintain the lease beyond the primary term.

(b) Your sulfur lease will automatically expire at the end of its primary term unless you have taken action, as set forth in § 556.603, to maintain the lease beyond the primary term.

##### **§ 556.1101 May I relinquish my lease or an aliquot part thereof?**

(a) A record title owner may relinquish a lease or an aliquot part of a lease if all record title owners of a lease or any aliquot part(s) of the lease file three original copies of a request to relinquish with BOEM on Form BOEM-0152, entitled, "Relinquishment of Federal Oil and Gas Lease." No filing fee is required.

(b) A relinquishment will be subject to the continued obligation of the record title owner and the surety to make all payments due, including any accrued rentals, royalties and deferred bonuses, and to abandon all wells and condition or remove all platforms and other facilities on the land to be relinquished to the satisfaction of the Director.

(c) The effective date of the relinquishment is the date on which the relinquishment is filed with the proper BOEM regional office.

**§ 556.1102 Under what circumstances will BOEM cancel my lease?**

(a) BOEM may cancel your non-producing lease if you fail to comply with any provision of OCSLA, the lease, or applicable regulations if the failure continues for 30 days after mailing of notice to your post office address of record by registered mail and you have not requested and been granted any additional time within which to correct the failure. Such cancellation is subject to judicial review under section 23 of OCSLA (43 U.S.C. 1349).

(b) Your producing lease may be cancelled if you fail to comply with any provision of OCSLA, the lease, or applicable regulations. The Secretary will cancel a producing lease after the judicial proceedings required under section 5(d) of OCSLA (43 U.S.C. 1334(d)).

(c) BOEM may cancel your lease if it determines that the lease was obtained by fraud or misrepresentation. You will have notice and an opportunity to be heard before BOEM cancels your lease.

(d) BOEM may cancel your lease at any time if it determines, after a hearing, that continued activity will probably cause serious harm or damage to life (including fish and other aquatic life), property, any mineral, national security or defense, or the marine, coastal, or human environment; that the threat of harm or damage will not disappear or decrease to an acceptable level within a reasonable period of time; and the advantages of cancellation outweigh the advantages of continuing the lease.

(e) BOEM may cancel your lease at any time after operations under the lease have been suspended or temporarily prohibited by the Department continuously for a period of five years pursuant to paragraph (d) of this section, absent your request for a shorter period.

(f) If, upon demand, you fail to provide a bond, or alternative type of security instrument acceptable to BOEM, the Regional Director may assess penalties or cancel your lease in accordance with part 550, subpart N of this chapter;

(g) Title 30, part 550, subpart A of the CFR provides the procedures for lease cancellation and compensation, if applicable.

**Subpart L—Leases Maintained Under Section 6 of OCSLA**

**§ 556.1200 Effect of regulations on lease.**

(a) All regulations in this part, insofar as they are applicable, will supersede the provisions of any lease that is maintained under section 6(a) of the Act. However, the provisions of a lease relating to area, minerals, rentals, royalties (subject to sections 6(a)(8) and (9) of the Act), and term (subject to section 6(a)(10) of the Act and, as to sulfur, subject to section 6(b)(2) of the Act) will continue in effect, and, in the event of any conflict or inconsistency, will take precedence over these regulations.

(b) A lease maintained under section 6(a) of the Act is also subject to all operating and conservation regulations applicable to the OCS. In addition, the regulations relating to geophysical and geological exploratory operations and to pipeline ROW(s) are applicable, to the extent that those regulations are not contrary to or inconsistent with the lease provisions relating to area, minerals, rentals, royalties and term. The lessee must comply with any provision of the lease as validated, the subject matter of which is not covered in the regulations in this part.

**§ 556.1201 Section 6(a) leases and leases other than those for oil, gas, or sulfur.**

The existence of an oil and gas lease maintained under section 6(a) of the Act precludes only the issuance in the same area of an oil and gas lease under OCSLA, but does not preclude the issuance of other types of leases under OCSLA. However, no other lease may authorize or permit the lessee thereunder unreasonably to interfere with or endanger operations under the existing lease. The United States will not grant any sulfur leases on any area that is included in a lease covering sulfur under section 6(b) of the Act.

**Subpart M—Environmental Studies**

**§ 556.1300 Environmental studies.**

(a) The Director will conduct a study or studies of any area or region included in any oil and gas lease sale or other lease in order to establish information needed for assessment and management of impacts on the human, marine and coastal environments which may be affected by OCS oil and gas or other mineral activities in such area or region. The purposes of such studies will include, to the extent practicable, analyses of the impacts of pollutants introduced into the environments and impacts of offshore activities on the seabed and affected coastal areas.

(b) Studies will be planned and carried out in cooperation with the affected States and interested parties and, to the extent possible, will not duplicate studies done under other laws. Where appropriate, the Director will, to the maximum extent practicable, coordinate with the National Oceanic and Atmospheric Administration (NOAA) in executing its environmental studies responsibilities. The Director may also make agreements for the coordination with, or the use of the services or resources of, any other Federal, State or local government agency in the conduct of such studies.

(c) Any study of an area or region required by paragraph (a) of this section for a lease sale will be commenced not later than six months prior to holding a lease sale for that area. The Director may use information collected in any prior study. The Director may initiate studies for an area or region not identified in the leasing program.

(d) After the leasing and developing of any area or region, the Director will conduct such studies as are deemed necessary to establish additional information and will monitor the human, marine and coastal environments of such area or region in a manner designed to provide information, which can be compared with the results of studies conducted prior to OCS oil and gas development. This will be done to identify any significant changes in the quality and productivity of such environments, to establish trends in the area studies, and to design experiments identifying the causes of such changes. Findings from such studies will be used to recommend modifications in practices that are employed to mitigate the effects of OCS activities and to enhance the data/information base for predicting impacts which might result from a single lease sale or cumulative OCS activities.

(e) Information available or collected by the studies program will, to the extent practicable, be provided in a form and in a timeframe that can be used in the decision-making process associated with a specific leasing action or with longer term OCS minerals management responsibilities.

**PART 559—[REMOVED]**

■ 8. Under the authority of section 5(a) of OCSLA (43 U.S.C. 1334(a)), remove part 559.

**PART 560—OUTER CONTINENTAL SHELF OIL AND GAS LEASING**

■ 9. The authority citation for part 560 continues to read as follows:

**Authority:** Section 104, Public Law 97–451, 96 Stat. 2451 (30 U.S.C. 1714), Public Law 109–432, Div C, Title I, 120 Stat. 3000; 30 U.S.C. 1751; 31 U.S.C. 9701; 43 U.S.C. 1334; 33 U.S.C. 2704, 2716; E.O. 12777, as amended; 43 U.S.C. 1331 *et seq.*, 43 U.S.C. 1337.

- 10. Revise the Table of Contents for 30 CFR part 560 to read as follows:

#### Subpart A—General Provisions

- 560.100 Authority
- 560.100 What is the purpose of this part?
- 560.102 What definitions apply to this part?
- 560.103 What is BOEM's authority to collect information?

#### Subpart B—Bidding Systems

##### General Provisions

- 560.200 What is the purpose of this subpart?
- 560.201 What definitions apply to this subpart?
- 560.202 What bidding systems may BOEM use?
- 560.203 What conditions apply to the bidding systems that BOEM uses?

##### Eligible Leases

- 560.210 How do royalty suspension volumes apply to eligible leases?
- 560.211 When does an eligible lease qualify for a royalty suspension volume?
- 560.212 How does BOEM assign and monitor royalty suspension volumes for eligible leases?
- 560.213 How long will a royalty suspension volume for an eligible lease be effective?
- 560.214 How do I measure natural gas production on my eligible lease?

##### Royalty Suspensions (RS) Leases

- 560.220 How does royalty suspension apply to leases issued in a sale held after November 2000?
- 560.221 When does a lease issued in a sale held after November 2000 get a royalty suspension?
- 560.222 How long will a royalty suspension volume be effective for a lease issued in a sale held after November 2000?
- 560.223 How do I measure natural gas production for a lease issued in a sale held after November 2000?
- 560.224 How will royalty suspension apply if BOEM assigns a lease issued in a sale held after November 2000 to a field that has a pre-Act lease?

##### Bidding System Selection Criteria

- 560.230 What criteria does BOEM use for selecting bidding systems and bidding system components?

##### Subpart C—Operating Allowances

- 560.300 Operating allowances.

##### Subpart D—[Reserved]

##### Subpart E—Electronic Filings

- 560.500 Electronic document and data transmissions.
- 560.501 How long will the confidentiality of electronic document and data transmissions be maintained?
- 560.502 Are electronically filed document transmissions legally binding?

#### Subpart B—Bidding Systems

- 11. Redesignate §§ 560.101, 560.102, 560.110 and 560.111 as §§ 560.200, 560.201, 560.202 and 560.203, respectively.
- 12. Redesignate §§ 560.112, 560.113, 560.114, 560.115 and 560.116 as §§ 560.210, 560.211, 560.212, 560.213 and 560.214, respectively.
- 13. Redesignate §§ 560.120, 560.121, 560.122, 560.123 and 560.124 as §§ 560.220, 560.221, 560.222, 560.223 and 560.224, respectively.
- 14. Redesignate § 560.130 as § 560.230.

#### Subpart A—General Provisions

- 15. Add § 560.100 as follows:

##### § 560.100 Authority.

(a) The Outer Continental Shelf Lands Act (OCSLA) (43 U.S.C. 1334) (“Outer Continental Shelf Lands Act Amendments of 1978”).

(b) The Federal Oil and Gas Royalty Management Act, as amended (FOGRMA) (30 U.S.C. 1711), including the Federal Oil and Gas Royalty Simplification and Fairness Act of 1996, (30 U.S.C. 1701 note).

(c) The Independent Offices Appropriations Act of 1952 (31 U.S.C. 9701).

(d) Public Law 89–554, 1966 (5 U.S.C. 301).

##### § 560.1 [Redesignated as § 560.101]

- 16. Redesignate § 560.1 as § 560.101.
- 17. Redesignate § 560.2 as § 560.102, and revise redesignated § 560.2 to read as follows:

##### § 560.102 What definitions apply to this part?

(a) Terms used in this part have the meaning given in the Act and as defined in this part.

(b) The following definitions apply to this part:

*Area or region* means the geographic area or region over which the BOEM authorized officer has jurisdiction, unless the context in which those words are used indicates that a different meaning is intended.

*BOEM* means Bureau of Ocean Energy Management.

*Designated official* means a representative of DOI subject to the direction and supervisory authority of the Directors, BOEM, and the appropriate Regional Manager of the BOEM authorized and empowered to supervise and direct all oil and gas operations and to perform other duties prescribed in this chapter.

*Director* means Director, BOEM, DOI.

*DOI* means the Department of the Interior, including the Secretary of the Interior, or his or her delegate.

*Federal lease* means an agreement which, for consideration, including, but not limited to, bonuses, rents or royalties conferred, and covenants to be observed, authorizes a person to explore for, or develop, or produce (or to do any or all of these) oil and gas, coal, oil shale, tar sands, and geothermal resources on lands or interests in lands under Federal jurisdiction.

*Gas or Natural Gas* means a mixture of hydrocarbons and varying quantities of non-hydrocarbons that exist in the gaseous phase.

*Oil* means a mixture of hydrocarbons that exists in a liquid or gaseous phase in an underground reservoir and which remains or becomes liquid at atmospheric pressure after passing through surface separating facilities, including condensate recovered by means other than a manufacturing process.

*Outer Continental Shelf (OCS)* means all submerged lands lying seaward and outside of the area of lands beneath navigable waters as defined in the Submerged Lands Act (43 U.S.C. 1301–1315) and of which the subsoil and seabed appertain to the United States and are subject to its jurisdiction and control.

*OCSLA* means the Outer Continental Shelf Lands Act, as amended (Act of August 7, 1953, Ch. 345, 67 Stat. 462, 43 U.S.C. 1331–1356a, as amended by Pub. L. 95–372, 92 Stat. 629).

*Person* means a natural person, where so designated, or an entity, such as a partnership, association, State, political subdivision of a State or territory, or a private, public, or municipal corporation.

*We* means the Bureau of Ocean Energy Management (BOEM).

*You* means the lessee or operating rights owner.

##### § 560.3 [Redesignated as § 560.103]

- 18. Redesignate § 560.3 as § 560.103.
- 19. Add a new subpart C to read as follows:

#### Subpart C—Operating Allowances

##### § 560.300 Operating allowances.

Notwithstanding any other provision in the regulations in this part, BOEM may issue a lease containing an operating allowance when so specified in the final notice of sale and the lease. The allowance amount or formula will be specified in the final notice of sale and in the lease.

**Subpart D—[Removed and Reserved]**

- 20. Remove and reserve subpart D.
- 21. Add a new subpart E to read as follows:

**Subpart E—Electronic Filings**

560.500 Electronic document and data transmissions.

560.501 How long will the confidentiality of electronic document and data transmissions be maintained?

560.502 Are electronically filed document transmissions legally binding?

**Subpart E—Electronic Filings****§ 560.500 Electronic document and data transmissions.**

(a) BOEM may notify you that it will allow or request you to submit the following information electronically through BOEM's secure electronic filing system, through an alternate secure electronic filing system supported and maintained by the Department, or through some other electronic filing system that BOEM has approved for this purpose:

(1) Any document(s) or information described in the Qualifications section of part 556 of this chapter, as specified in subpart E. Such information would include, but not be limited to, the official name of the qualifying person, its legal and business address or addresses, its legal form and status, and the names and contact information of a person or organization authorized to act on the person's behalf.

(2) Any document(s) or information required to obtain BOEM's approval of an assignment or sublease, including any form or instrument that creates or transfers ownership of a lease interest.

(3) Any document(s) or information required to obtain BOEM's approval of your relinquishment of all, or any aliquot part of your lease, as specified in § 556.1101 of this chapter.

(4) Any document(s) creating, transferring or assigning economic interests, as specified in §§ 556.715 and 556.808 of this chapter.

(5) Any document(s) related to a bond, U.S. Treasury note or other security provided to BOEM, which is required to guarantee your compliance with terms and conditions of a lease.

(6) Any document(s) or information necessary to bid for an OCS lease.

(7) Any forms, document(s) or information necessary to determine worst case oil-spill discharge volume(s), or to provide evidence demonstrating oil spill financial responsibility, or to guarantee such financial responsibility or to comply with any other requirements of the Oil Spill Financial Responsibility Program, as described in part 553 of this chapter.

(b) BOEM reserves the right to require the electronic filing of any document(s) or information addressed in paragraph (a)(5) of this section upon a 90-day notice published in the **Federal Register**; if BOEM mandates that you transmit such document(s) or

information electronically, the **Federal Register** notice will specify the filing details necessary to comply with this regulation.

(c) In the event BOEM sends documents to you in a secure electronic format, you may either return the document(s) in an electronic format utilizing the same secure transmission mechanism or print the document(s) and return them.

(d) BOEM may electronically acknowledge, approve, sign, or execute any document(s) referenced in this section.

**§ 560.501 How long will the confidentiality of electronic document and data transmissions be maintained?**

The confidentiality of any electronically submitted information will be maintained for the same proprietary term that would apply to the corresponding non-electronic confidential submission, pursuant to § 556.104(b) of this chapter.

**§ 560.502 Are electronically filed document transmissions legally binding?**

Any document or information referenced in § 560.500 which is submitted to BOEM through a secure electronic filing system that is approved by BOEM will be legally binding, without the need for a paper copy thereof.

Federal Aviation Administration

14 CFR Part 60

Flight Simulation Training Device Qualification Standards for Extended Envelope and Adverse Weather Event Training Tasks; Final Rule

**DEPARTMENT OF TRANSPORTATION****Federal Aviation Administration****14 CFR Part 60**

[Docket No.: FAA-2014-0391; Amdt. No. 60-4]

RIN 2120-AK08

**Flight Simulation Training Device Qualification Standards for Extended Envelope and Adverse Weather Event Training Tasks**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Final rule.

**SUMMARY:** The FAA has determined this rule is necessary to amend the Qualification Performance Standards for flight simulation training devices (FSTDs) for the primary purpose of improving existing technical standards and introducing new technical standards for full stall and stick pusher maneuvers, upset recognition and recovery maneuvers, maneuvers conducted in airborne icing conditions, takeoff and landing maneuvers in gusting crosswinds, and bounced landing recovery maneuvers. These new and improved technical standards are intended to fully define FSTD fidelity requirements for conducting new flight training tasks introduced through recent changes to the air carrier training requirements, as well as to address various National Transportation Safety Board (NTSB) and Aviation Rulemaking Committee recommendations. This final rule also updates the FSTD technical standards to better align with the current international FSTD evaluation guidance and introduces a new FSTD level that expands the number of qualified flight training tasks in a fixed-base flight training device. These changes will ensure that the training and testing environment is accurate and realistic, will codify existing practice, and will provide greater harmonization with international guidance for simulation. The amendments will not apply to previously qualified FSTDs with the exception of the FSTD Directive, which codifies the new FSTD technical standards for specific training tasks.

**DATES:** Effective May 31, 2016. The compliance date of FSTD Directive No. 2 is March 12, 2019. After this date, any FSTD being used to conduct specific training tasks as defined in FSTD Directive No. 2 must be evaluated and qualified in accordance with the Directive.

**ADDRESSES:** For information on where to obtain copies of rulemaking documents and other information related to this final rule, see “How To Obtain Additional Information” in the **SUPPLEMENTARY INFORMATION** section of this document.

**FOR FURTHER INFORMATION CONTACT:** For technical questions concerning this action, contact Larry McDonald, Air Transportation Division/National Simulator Program Branch, AFS-205, Federal Aviation Administration, P.O. Box 20636, Atlanta, GA 30320; telephone (404) 474-5620; email [larry.e.mcdonald@faa.gov](mailto:larry.e.mcdonald@faa.gov).

**SUPPLEMENTARY INFORMATION:**

**Authority for This Rulemaking**

The Federal Aviation Administration’s (FAA’s) authority to issue rules on aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106(f) describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority.

This rulemaking is promulgated under the authority described in 49 U.S.C. 44701(a)(5), which requires the Administrator to promulgate regulations and minimum standards for other practices, methods, and procedures necessary for safety in air commerce and national security. This amendment to the regulation is within the scope of that authority because it prescribes an accepted method for testing and evaluating flight simulation training devices used to train and evaluate flightcrew members.

In addition, the Airline Safety and Federal Aviation Administration Extension Act of 2010 (Pub. L. 111-216) specifically required the FAA to conduct rulemaking to ensure that all flightcrew members receive flight training in recognizing and avoiding stalls, recovering from stalls, and recognizing and avoiding upset of an aircraft, as well as the proper techniques to recover from upset. This rulemaking is within the scope of the authority in Public Law 111-216 and is necessary to fully implement the training requirements recently adopted in the Qualification, Service, and Use of Crewmembers and Aircraft Dispatchers final rule (Crewmember and Aircraft Dispatcher Training final rule), RIN 2120-AJ00. See 78 FR 67800 (Nov. 12, 2013).

**I. Overview of Final Rule**

This rulemaking defines simulator fidelity requirements for new training tasks to be conducted in Level A through D full flight simulators (FFS) that were mandated for air carrier training programs by Public Law 111–216 and incorporated into 14 CFR part

121. It also addresses the potential lack of simulator fidelity as identified in several NTSB safety recommendations. This final rule establishes new and updated FSTD technical evaluation standards for full stall and stick pusher maneuvers, upset prevention and recovery maneuvers, flight in airborne icing conditions, takeoff and landing maneuvers in gusting crosswinds, and bounced landing recovery maneuvers. This final rule also partially aligns the technical standards for Level C and D (fixed wing) FSTDs that are defined in 14 CFR part 60 with the current international FSTD evaluation guidelines published in the International Civil Aviation Organization (ICAO) document 9625, Edition 4, *Manual of Criteria for the Qualification of Flight Simulation Training Devices*.

This final rule will affect sponsors of previously qualified FSTDs if the devices will be used to conduct the specific training tasks defined in FSTD Directive No. 2. The FSTD sponsor has the discretion to determine if a device needs to be qualified based on whether it will be used for training the defined tasks in FSTD Directive No. 2. Additionally, because many of the technical FSTD evaluation standards in the final rule will become minimum requirements for some newly qualified FSTDs, this final rule will also affect sponsors of Level 7, Level C, and Level D FSTDs that are initially qualified after the effective date of the final rule. In addition to FSTD sponsors, this final rule will also affect data providers, FSTD manufacturers, and other entities that provide products and support to FSTD sponsors in the qualification of FSTDs for training. This final rule does not affect aviation training devices that are evaluated and approved for use outside of 14 CFR part 60.

A general summary of the applicability, compliance dates, and processes used to qualify FSTDs as defined in this rule are included in the following table:

Issue	Rule requirements
How does a sponsor determine if a previously qualified FSTD must be evaluated and qualified for stall, UPRT, engine and airframe icing, bounced landing recovery, and gusting crosswind training tasks as defined in FSTD Directive No. 2?	<p>A previously qualified FSTD that will be used to obtain training, testing, or checking credit in an FAA approved flight training program, regardless of operational rule part, must be evaluated and qualified for the following maneuvers:</p> <p>Full Stall: Training maneuvers in the recognition cues and recovery procedures from a fully stalled flight condition (including recovery from a stick pusher activation) at angles of attack beyond the activation of the stall warning system.</p>

Issue	Rule requirements
How does a sponsor obtain qualification for stall, UPRT, icing, bounced landing recovery, or takeoff and landing in gusting crosswinds on a previously qualified FSTD?	<p>UPRT: Upset recovery maneuvers and unusual attitude maneuvers that are intended to exceed the parameters of an aircraft upset as defined in the Airplane Upset Recovery Training Aid (pitch attitudes greater than 25 degrees nose up; pitch attitudes greater than 10 degrees nose down, and bank angles greater than 45 degrees).</p> <p>Engine and Airframe Icing: Flight training maneuvers that demonstrate the recognition cues and effects of engine and airframe ice accretion.</p> <p>Takeoff and Landing in Gusting Crosswinds. Bounced Landing Recovery Training.</p>
How do you determine what portions of the updated qualification performance standards (QPS) appendices are applicable to previously qualified FSTDs?	<p>FSTD Directive No. 2 contains all of the evaluation requirements for the qualification of these individual tasks on previously qualified FSTDs. FSTD sponsors will conduct the evaluations and modifications as described in the Directive and submit any required Statements of Compliance and objective testing results to the National Simulator Program (NSP) using the standard FSTD modification/notification process. The NSP will issue additional FSTD qualification for these tasks once compliance with the applicable sections of the Directive are verified and any necessary FSTD evaluations have been conducted.</p>
What are the compliance dates associated with this final rule for previously qualified FSTDs?	<p>As described in § 60.17(a), unless specified by an FSTD Directive, previously qualified (grandfathered) FSTDs will retain their original qualification basis under which they were originally evaluated, regardless of sponsor. All retroactive evaluation requirements for previously qualified FSTDs in this final rule are fully described in FSTD Directive No. 2.</p>
How do you determine what changes in this final rule are applicable to new FSTDs that will be initially qualified after the final rule becomes effective?	<p>After March 12, 2019, any FSTD being used to conduct the specific training maneuvers (as described in FSTD Directive No. 2) in an FAA approved training program must be issued additional FSTD qualification in accordance with the Directive.</p>
What is the compliance date associated with this final rule for new FSTDs that will be initially qualified after the rule becomes effective?	<p>With the exception of the full stall evaluation requirements, all FSTDs that are initially qualified or upgraded in qualification level after the effective date of the final rule must meet all new standards in this final rule as applicable for the particular FSTD qualification level requested.</p> <p>The qualification of full stall training tasks will be optional as requested by the sponsor to support FAA approved training being conducted in the FSTD. The qualification of full stall training tasks will be included as part of the list of qualified tasks on the FSTD's Statement of Qualification (SOQ).</p>
What is the process to qualify an FSTD using another standard in lieu of the part 60 QPS as permitted by the deviation authority in § 60.15?	<p>In general, all changes to the part 60 QPS will be effective for all FSTDs that are initially qualified after the effective date of the final rule except as permitted by § 60.15(c).</p>
What is the process to qualify an FSTD using another standard in lieu of the part 60 QPS as permitted by the deviation authority in § 60.15?	<p>Requests for deviation from the part 60 QPS are made to the National Simulator Program Manager (NSPM) and must include justification that demonstrates an equivalent level of safety as compared to the FSTD evaluation requirements of the part 60 QPS. Approved deviations and the supporting evaluation standards will become a part of the permanent qualification basis of the FSTD.</p>

The FAA estimates that it will cost \$72.7 million to make the necessary modifications to previously qualified FSTDs which will enable training required by the new Crewmember and Aircraft Dispatcher Training final rule. The training cost for the Crewmember and Aircraft Dispatcher Training final rule provides rental revenue to

simulator sponsors which will fully compensate them for their FSTD modification expenses. These simulator revenues were accounted for as costs of the additional training and were fully justified by the benefits in that final rule. The FAA estimates it will cost \$1.3 million for the evaluation and modification of engine and airframe

icing models which will enhance existing training requirements. If these modifications prevent only one severe injury the benefits will exceed the costs. The estimated cost of \$6.9 million to align standards with ICAO will result in improved safety and cost savings.

The costs and benefits of this rule are presented in the table below.

		Present value at a 7% rate	Present value at a 3% rate
FSTD Modifications for New Training Requirements:			
Cost .....	\$72,716,590	\$63,610,049	\$68,562,049
Benefits .....	Rational simulator owner will choose to comply.		
Icing provisions:			
Cost .....	\$1,256,250	\$1,098,926	\$1,184,476

		Present value at a 7% rate	Present value at a 3% rate
Benefits .....	Only one prevented severe injury valued at \$2.5 million makes the icing benefits exceed the costs.		
Aligning Standards with ICAO: Cost .....	\$6,875,000	\$5,356,979	\$6,132,690
Benefits .....	Improved safety and cost savings.		
Total Cost .....	\$80,847,840	\$70,065,954	\$75,879,215

**II. Background**

*A. Statement of the Problem*

In order to mitigate aircraft loss of control accidents and to comply with the requirements of Public Law 111–216, the FAA has issued new and revised flight training requirements in the Crewmember and Aircraft Dispatcher Training final rule for flight maneuvers such as full stall and upset recovery training. In support of this effort, the FAA participated in a number of collaborative industry and government working groups that examined loss of control training requirements and the flight simulation training device (FSTD) fidelity needed to support such training. These working groups included the International Committee on Aviation Training in Extended Envelopes (ICATEE), the Industry Stall and Stick Pusher Working Group, the Stick Pusher and Adverse Weather Event Training Aviation Rulemaking Committee (SPAW ARC), and the Loss of Control Avoidance and Recovery Training (LOCART) Working Group.

Through participation in these working groups and in consideration of the formal recommendations received from the SPAW ARC, the FAA determined that many existing FSTDs that could be used by air carriers to conduct such training may not adequately represent the simulated aircraft for the required training tasks. Additionally, the FAA evaluated several recent air carrier accidents and associated NTSB accident reports and determined that low FSTD fidelity or the lack of ability for an FSTD to adequately conduct certain training tasks may have been a contributing factor in these accidents.<sup>1</sup> A potential lack of simulator fidelity could contribute to inaccurate or incomplete training on new training tasks that are

required by the Crewmember and Aircraft Dispatcher Training final rule, which could lead to a safety risk.

Furthermore, since the initial publication of the part 60 final rule in 2008, the international FSTD qualification guidance published in the ICAO 9625 document has been updated to incorporate general improvements to new aircraft and simulation technology and the introduction of new FSTD levels that better align FSTD fidelity with required training tasks. The ICAO 9625 document is an internationally recognized set of FSTD evaluation guidelines that was developed by government and industry experts on flight simulation training and technology and has been used as a basis for national regulation and guidance material for FSTD evaluation in many countries. Internationally aligned FSTD standards facilitate cost savings for FSTD operators because they can reduce the number of different FSTD designs, as well as reduce the amount of redundant supporting documentation that are required to meet multiple national regulations and standards for FSTD qualification.

This final rule was developed using recommendations from the SPAW ARC<sup>2</sup> and the international FSTD qualification guidelines that are published in ICAO 9625, Edition 3 and the newly published ICAO 9625, Edition 4.<sup>3</sup> The requirements in this final rule are primarily directed at improving the fidelity of FSTDs that will be used in air carrier pilot training to conduct extended envelope training tasks, but will also have an added benefit of improving the fidelity of all FSTDs initially qualified after the final rule becomes effective.

*B. National Transportation Safety Board (NTSB) Recommendations*

This proposal will incorporate changes into part 60 that address, at

least in part, the following NTSB Safety Recommendations through improved FSTD evaluation standards to support required training tasks:

1. Stall training and/or stick pusher training (Recommendations A–10–22, A–10–23, A–97–47, A–07–3, and A–10–24);
2. Upset Recognition and recovery training (Recommendations A–04–62 and A–96–120);
3. Engine and airframe icing training (Recommendations A–11–46 and A–11–47)
4. Takeoff and landing training in gusting crosswind conditions (Recommendations A–10–110 and A–10–111); and
5. Bounced landing training (Recommendations A–00–93 and A–11–69).

*C. Airline Safety and Federal Aviation Administration Extension Act of 2010 (Pub. L. 111–216) and the Crewmember and Aircraft Dispatcher Training Final Rule*

On August 1, 2010, President Obama signed into law Public Law 111–216. In addition to extending the FAA’s authorization, Public Law 111–216 included provisions to improve airline safety and pilot training. Specifically, section 208 of Public Law 111–216, Implementation of NTSB Flight Crewmember Training Recommendations, pertains directly to this rulemaking in that stall training and upset recovery training were mandated for part 121 air carrier flightcrew members.

On November 12, 2013, the FAA published the Crewmember and Aircraft Dispatcher Training final rule, adding the training tasks required by Public Law 111–216 that specifically target extended envelope training, recovery from bounced landings, enhanced runway safety training, and enhanced training on crosswind takeoffs and landings with gusts, which further requires that these maneuvers be completed in an FSTD. As a result, revisions to all part 121 training programs will be necessary prior to March 12, 2019 and the revisions to part

<sup>1</sup> Some of these accidents include the 1996 Airborne Express DC–8–63 loss of control accident, the 2001 American Airlines flight 587 A300 loss of control accident, the 2009 Colgan Air flight 3407 DHC–8–400 loss of control accident, and the 2008 Continental flight 1404 Boeing 737–500 runway excursion accident.

<sup>2</sup> A copy of the SPAW ARC final report has been placed in the docket for this rulemaking.

<sup>3</sup> International Civil Aviation Organization (ICAO) publications can be located on their public internet site at: <http://www.icao.int/>.

60 in this final rule are required to ensure FSTDs are properly evaluated in order to fully implement the flight training required in the Crewmember and Aircraft Dispatcher Training final rule.

*D. Summary of the Notice of Proposed Rulemaking (NPRM)*

On July 10, 2014, the FAA published an NPRM (79 FR 39461), proposing changes to the flight simulation training device (FSTD) technical evaluation standards. The primary purpose of the NPRM was to establish and update FSTD technical evaluation standards to address new training tasks required by the Crewmember and Dispatcher Training final rule, including full stall training, upset prevention and recovery training, and other new training tasks. Additionally, the NPRM proposed the incorporation of FSTD evaluation criteria as defined in the International Civil Aviation Organization (ICAO) 9625, *Manual of Criteria for the Qualification of Flight Simulation Training Devices* (Edition 3) document. Significant changes to the part 60 qualification performance standards (QPS) were proposed in the following areas:

1. *Full Stall Evaluation:* Minimum requirements were introduced to include aerodynamic modeling of a full stall and stick pusher activation (where equipped) up to ten degrees of angle of attack (AOA) beyond the stall AOA, subject matter expert (SME) pilot evaluation of the FSTD's stall characteristics, and improved objective testing to validate the FSTD's performance and handling qualities in the stall maneuver.

2. *Upset Recognition and Recovery:* New requirements were proposed for the qualification of upset recognition and recovery training tasks including the evaluation of a minimum set of upset recovery maneuvers against the defined FSTD validation envelope, providing a means to record and playback upset recovery maneuvers

conducted in the FSTD, and providing the instructor with a minimum set of feedback tools on the instructor operating station (IOS) that gives information on the FSTD's expected fidelity, aircraft operational limitations, and student flight control inputs.

3. *Engine and Airframe Icing:* Modifications were proposed to the existing part 60 Level C and Level D FSTD qualification requirements for engine and airframe icing. The proposed amendments included requirements for ice accretion models based upon aircraft original equipment manufacturer (OEM) data or other analytical methods that incorporate the aerodynamic effects of icing as well as objective tests on the FSTD that demonstrate the effects of icing.

4. *Takeoff and Landing in Gusting Crosswinds:* New amendments were proposed that would require that realistic gusting crosswind profiles must be available to the instructor and the profiles must be tuned in intensity and variation to require pilot intervention to avoid runway departure during takeoff or landing roll. A Statement of Compliance (SOC) would be required to describe the source data used to develop the crosswind profiles.

5. *Bounced Landing Recovery:* New requirements were proposed to complement existing part 60 ground reaction requirements to support bounced landing recovery training. The updated requirements added that the effects of a bounced landing must be modeled and evaluated and include the effects of nosewheel exceedances and tail strike where appropriate.

6. *ICAO 9625 Alignment:* In the NPRM, the FAA proposed alignment with the updated ICAO 9625, Edition 3, FSTD evaluation document for similar FSTD levels that are defined in the part 60 QPS (Appendices A and B). This included incorporating updated technical standards for Level C and Level D FSTDs to align with that of the ICAO Type VII FSTD and creating a new high fidelity fixed-base flight training

device (the Level 7 FTD) that is based upon the similar Type V device as defined in the ICAO document. This alignment also included adopting the ICAO language and numbering format for some of the technical requirements tables as well as integrating the existing legacy part 60 FSTD levels into these tables to maintain continuity with the current part 60 defined hierarchy of FSTD levels.

In general, the proposed amendments to the part 60 QPS would only be applicable to FSTDs that are initially qualified or upgraded in qualification level after the final rule becomes effective. Because many previously qualified FSTDs will likely be used to accomplish the training tasks required by the Crewmember and Dispatcher Training final rule, the FAA also proposed an FSTD Directive in order to retroactively apply evaluation requirements for those previously qualified FSTDs that will be used to conduct certain training tasks, including full stall, upset prevention and recovery training, engine and airframe icing, takeoff and landing in gusting crosswinds, and bounced landing recovery training.

On September 16, 2014, the FAA extended the comment period of the NPRM for an additional 90 days (79 FR 55407). The comment period closed on January 6, 2015. The FAA received approximately 675 individual comments in response to the NPRM. Commenters included air carriers, simulator training providers, FSTD data providers, FSTD manufacturers, the NTSB, labor organizations, trade associations, aircraft manufacturers, and individuals.

*E. Differences Between the NPRM and the Final Rule*

As a result of the comments received on the NPRM, the FAA made several changes to the final rule. A summary of significant changes as a result of comments are highlighted in the following table:

Issue	Significant changes
Full Stall Evaluation .....	<ul style="list-style-type: none"> <li>(a) Improved the definition of the stall AOA for the purposes of defining the required aerodynamic modeling range. Clarifies specific issues concerning stick pusher equipped aircraft and envelope protected aircraft.</li> <li>(b) Made clarifications concerning acceptable source data for stall aerodynamic models. Clarified that data sources other than the aircraft manufacturer may be acceptable if they meet the modeling and SME pilot evaluation requirements.</li> <li>(c) Improved the qualification requirements for subject matter expert (SME) pilots that subjectively evaluate the stall model. Adds deviation authority if an acceptable SME pilot cannot be located. Allows for SME evaluation to be conducted on an engineering or development simulator where objective proof-of-match test cases are provided that verifies the model implementation on the FSTD.</li> <li>(d) Removed the proposed requirement for all newly qualified FSTDs to be evaluated and qualified for full stall training tasks. Full stall qualification will only be required for FSTDs that will be used to conduct this training as requested by the FSTD sponsor.</li> </ul>

Issue	Significant changes
Upset Prevention and Recovery Training (UPRT) Evaluation.	<p>(e) (Previously qualified FSTDs) Removed the proposed objective testing requirements for stall maneuvers where validation data may not exist for some older FSTD data packages (cruise and turning flight stall). These conditions will still require aerodynamic modeling and subjective evaluation by a SME pilot.</p> <p>(a) Removed the proposed minimum FSTD evaluation requirements for Level A and Level B FSTDs.</p> <p>(b) Removed the proposed specific requirements for features and malfunctions necessary to drive upset scenarios.</p> <p>(c) Removed the proposed requirement for audio and video record/playback functionality.</p> <p>(d) Improved the definition of required instructor operating station (IOS) parameters and feedback mechanisms. Allows for methods other than graphical displays to be used where the required parameters are provided to support the training program.</p> <p>(e) Expands the definition of UPRT to include unusual attitude training in which scenarios are introduced that are intended to exceed the defined parameters of an aircraft upset. This change better differentiates UPRT from the existing part 60 unusual attitude evaluation requirement in Table A1B.</p>
Engine and Airframe Icing Evaluation.	<p>(a) Clarified that specific icing effects are only required to be introduced where such effects are representative of the particular aircraft being simulated.</p> <p>(b) Revised the existing part 60 engine and airframe icing special effects test (Table A3F) to remove references to gross weight increments and to better align with the updated requirements.</p> <p>(c) Clarified that flight test data is not necessarily required for the development of icing models. Engineering and analytical methods may be used to develop representative icing models.</p> <p>(d) Added provisions to allow for supplemental tuning of icing models using an SME pilot assessment.</p>
Gusting Crosswind Evaluation.	<p>(a) Removed references to the windshear training aid for gusting crosswind model development. Recommend use of gusting crosswind profiles provided by the FAA in guidance material.</p>
Bounced Landing Recovery Evaluation.	<p>(b) Removed the proposed minimum qualification requirement for Level A and Level B FSTDs.</p> <p>(a) Removed the proposed ground reaction requirement to compute nosewheel exceedances.</p> <p>(b) Clarified the requirements to emphasize the effects and indications of ground contact due to landing in an abnormal aircraft attitude and that aircraft dynamics in a bounced landing recovery maneuver are already adequately covered in the existing part 60 rule.</p>
Alignment with the ICAO 9625 Document.	<p>(a) Restored the general requirements table (Tables A1A and B1A) format, numbering system, and content to the existing part 60 versions. Appended the proposed ICAO 9625 (Edition 3) requirements from the NPRM into their applicable sections.</p> <p>(b) Restored the existing part 60 visual system field of view (180°x40°) and system geometry requirements for Level C and Level D FSTDs.</p> <p>(c) Adopted the less restrictive visual system lightpoint brightness tolerance (5.8 ft.-lamberts) from the updated ICAO 9625, Edition 4, document.</p> <p>(d) Adopted the less restrictive transport delay tolerances (100 ms for instrument and motion system response; 120 ms for visual system response) from the updated ICAO 9625, Edition 4, document.</p> <p>(e) Modified the objective motion cueing test (OMCT) description to not require testing for continuing qualification evaluations, removed minimum tolerances, and further moved much of the technical test details into guidance material.</p> <p>(f) Aligned language where practical for similar stall, UPRT, and icing requirements from the ICAO 9625, Edition 4, document.</p> <p>(g) Added deviation authority for the FAA to accept alternate FSTD evaluation standards where no adverse impact to the fidelity of the FSTD can be demonstrated.</p> <p>(h) Reorganized the flight training device (FTD) requirements in Appendix B to restore the existing part 60 table structure and better separate requirements for the new Level 7 FTD and the legacy part 60 FTD levels.</p> <p>(i) Clarified the Level 7 FTD's minimum qualified training tasks in Table B1B to better align with the ICAO 9625 guidelines.</p> <p>(j) Removed minimum requirements for extended envelope training tasks for the Level 7 FTD that are not included in the ICAO 9625, Edition 4 document for the Type V device.</p>

#### F. Related Actions

As a result of information gathered from various working groups, the FAA has taken action on loss of control training and simulator fidelity deficiencies by issuing the following voluntary guidance material:

1. FAA Safety Alert for Operators (SAFO 10012)—Possible Misinterpretation of the Practical Test Standards (PTS) Language “Minimal Loss of Altitude.” The purpose of this alert bulletin is to clarify the meaning of the approach to stall evaluation criteria as it relates to “minimal loss of altitude” in the Airline Transport Pilot PTS;

2. FAA Information for Operators Bulletin (InFO 10010)—Enhanced Upset Recovery Training. This information

bulletin recommends the incorporation of the material in the AURTA into flightcrew training. The AURTA contains guidance for upset recovery training programs for air carrier flightcrews, as well as the evaluation guidance for FSTDs used in such training;

3. FAA Information for Operators Bulletin (InFO 15004)—Use of Windshear Models in FAA Qualified Flight Simulation Training Devices (FSTDs);

4. FAA National Simulator Program (NSP) Guidance Bulletin No. 11-04—FSTD Modeling and Evaluation Recommendations for Engine and Airframe Icing;

5. FAA National Simulator Program (NSP) Guidance Bulletin No. 11-05—

FSTD Evaluation Recommendations for Upset Recovery Training Maneuvers;

6. FAA National Simulator Program (NSP) Guidance Bulletin No. 14-01—FSTD Evaluation Guidelines for Full Stall Training Maneuvers;

7. AC 120-109A—Stall and Stick Pusher Training;

8. AC 120-111—Upset Prevention and Recovery Training; and

9. Airline Transport Pilot Practical Test Standards (Change 4).

Portions of the above guidance material provide FSTD operators with recommended evaluation methods to improve FSTD fidelity for selected training tasks. To ensure that all FSTDs used to conduct such training are evaluated and modified to a consistent standard, the applicable part 60

technical requirements must be modified as described in this final rule.

### III. Discussion of Public Comments and Final Rule

#### A. Evaluation Requirements for Full Stall Training Tasks

The existing FSTD evaluation requirements for stall maneuvers are generally limited to the evaluation of stall speeds with little emphasis on the actual aircraft performance and handling characteristics as the aircraft exceeds the stall warning AOA. As a result, FSTDs used for such training may not provide the necessary cues and associated performance degradation needed to train flight crews in the recognition of an impending stall as well as training the techniques needed to recover from a stalled flight condition. In the NPRM, the FAA proposed updated general requirements, objective testing requirements, and functions and subjective testing requirements for the evaluation of full stall training maneuvers to support air carrier training as required in the Crewmember and Aircraft Dispatcher Training final rule.

##### 1. Aerodynamic Modeling Range

###### a. Aerodynamic Modeling Beyond the Stall AOA

In order to support the required training objectives, the proposal included requirements for the modeling and evaluation of the FSTD's stall characteristics up to 10 degrees beyond the stall AOA.

CAE, Inc. (CAE) commented that the 10 degrees beyond the stall AOA requirement should be further reviewed, since application of the recovery should immediately lead to a reduction in AOA and therefore is inappropriate to relate the requirement to the 10 degrees beyond the stall AOA. CAE recommended that the 10 degree requirement be removed where rationale is provided for the upper limit of AOA modeling in the required SOC.

The NTSB is generally supportive of the modeling requirements, citing that a peak AOA growth of about 10 degrees beyond the stall is typical for most incidents and accidents it has investigated. However, it did note that stick pusher response dynamics could cause a higher AOA overshoot and this dynamic behavior is a "critical cue to a stall, which pilots must be trained to recognize." The NTSB also noted in its comments that the Colgan flight 3407 accident resulted in an AOA that extended to 13 degrees beyond the stall

AOA.<sup>4</sup> In addition, the NTSB stated that the required aerodynamic modeling for aircraft equipped with a stick pusher should not be limited to that of the stick pusher activation and that the aerodynamic modeling range include the flight dynamics that may occur where a pilot resists the stick pusher in training.

The FAA disagrees with CAE that the 10 degree requirement be removed in select cases. The 10 degree AOA range was initially recommended by the SPAW ARC as necessary to accomplish full stall training. Furthermore, this 10 degree AOA range is currently a recommended practice for simulator aerodynamic modeling in the International Air Transport Association (IATA) Flight Simulation Training Device Design and Performance Data Requirements document<sup>5</sup> and has been a recommended practice since the second edition of the IATA document that was published in 1986. Finally, the FAA notes that an unpublished simulator investigation conducted by ICATEE in conjunction with NASA on their Enhanced Upset Recovery model showed that the 10 degree AOA range should be sufficient to capture most overshoots in AOA during various stall recovery maneuvers.

The FAA agrees with the NTSB that pilots can benefit from experiencing the aircraft dynamics involved in a stick pusher activation and recovery maneuver in training. The FAA has reviewed the NTSB accident reports and supporting data on two loss of control accidents in which pilots resisted the activation of a stick pusher and encountered an aerodynamic stall. In the Pinnacle Airlines Flight 3701 accident, the initial stick pusher activation occurred at approximately 10.5 degrees AOA at the start of the aircraft upset and the AOA subsequently oscillated from approximately -6 degrees to +14 degrees over three successive stick pusher activations with some instability evident in the roll axis.<sup>6</sup> Only until just before the fourth activation of the stick

pusher system (approximately eleven seconds after the initial stick pusher activation) did the AOA exceed the proposed aerodynamic modeling range (of 10 degrees beyond the stall AOA) for FSTD evaluation purposes.<sup>7</sup>

In the Colgan 3407 accident, aerodynamic stall occurred before the stick pusher activation<sup>8</sup> at approximately 14 degrees AOA which included an initial roll off to about 50 degrees of bank angle. After the initial stick pusher activation at about 17.5 degrees AOA, the subsequent AOA overshoot remained within 24 degrees as the aircraft rolled through 100 degrees of bank angle in the opposite direction of the initial roll off. The peak AOA value of approximately 27 degrees (10 degrees of AOA beyond the stick pusher activation where stall identification should have occurred) was not recorded until after multiple incorrect column responses by the pilot against the stick pusher over a time period of 30 seconds after the pilot's initial incorrect response to the stall warning.

The FAA considered the comments and based on a review of industry recommendations and best practices, has determined that aerodynamic modeling to at least 10 degrees beyond the stall AOA is necessary so that the modeling does not abruptly end should the pilot overshoot the stall recognition and recovery in training. The FAA recognizes that the 10 degree AOA range may not be sufficient to capture all of the flight dynamics involved with multiple severe divergent pitch oscillations where the pilot repeatedly resists a stick pusher system; however, training should not normally be allowed to continue significantly beyond the point where a trainee initially resists the stick pusher before recognizing the stall identification cues and executing the recovery procedures. As demonstrated by the AOA oscillations experienced in the Colgan and Pinnacle accidents, the FAA has determined that aerodynamic modeling to 10 degrees beyond the stall AOA should be sufficient to capture aircraft dynamics in instances where a pilot initially resists the stick pusher activation in training. The data from these accidents suggests that the 10 degree AOA aerodynamic modeling requirement would adequately cover an

<sup>4</sup> See NTSB accident report, Loss of Control on Approach, Continental Connection Flight 3407, February 12, 2009, NTSB Accident Report, NTSB/AAR-10/01; page 87, "After the stall, the AOA oscillated between 10 deg and 27 deg . . . ."

<sup>5</sup> International Air Transport Association (IATA) Flight Simulation Training Device Design and Performance Data Requirements Document, 7th Edition (2009), sections 3.1.1.2 and 3.1.1.3 addresses stall entry and recovery as well as required angle of attack ranges for supporting data.

<sup>6</sup> See NTSB accident report, Crash of Pinnacle Airlines Flight 3701, October 14, 2004, NTSB Accident Report, NTSB/AAR-07/01 and supporting flight data recorder factual report on the NTSB public docket (NTSB accident identification number DCA05MA003).

<sup>7</sup> For this aircraft, since the aerodynamic stall occurs after the stick pusher is designed to activate, the stall identification is provided by the stick pusher system activation and aerodynamic modeling would be required up to at least 20.5 degrees AOA for this configuration.

<sup>8</sup> According to the NTSB accident report, the stick pusher on this aircraft is designed to activate after the aerodynamic stall.

AOA range that includes several seconds of inappropriate pilot responses to a stick pusher activation. The FAA has determined this range is sufficient to meet the training objective of teaching a pilot to not resist a stick pusher system activation.

#### b. Definition of the Stall AOA

In the NPRM, the FAA defined the required aerodynamic model validity range for full stall qualification as 10 degrees of AOA beyond the stall/critical AOA and not as a function of when the stall identification cues are present.

Airbus commented that the definition of stall or full stall should emphasize “heavy buffet” as an important cue. Airbus further cited the ICAO 9625, Edition 4, document<sup>9</sup> states that a stalled flight condition may be recognized by continuous stall warning activation accompanied by at least one of the following: (1) Buffeting, which could be heavy at times; (2) lack of pitch authority and/or roll control; or (3) inability to arrest the descent rate.

The FAA concurs with Airbus’ comment that heavy buffet can be an important cue of a stall. The FAA has further considered the definition of stall as described in the ICAO 9625 document to determine an appropriate definition for stall with respect to the modeling requirements necessary to support the training objectives. The FAA does not fully agree, however, with the ICAO 9625 definition of stall; specifically the criteria of “lack of pitch authority and/or roll control” to define the stall since the part 25 airplane certification requirements state that the pilot must be able to control the aircraft in pitch and roll up to the stall. While control effectiveness can be reduced, it would be incorrect to say that it is lacking for certified airplanes.

Two fundamental objectives of the stall training requirements are to train pilots to recognize the cues of an impending stall as well as to reinforce to pilots that the stall recovery procedures learned during stall prevention training are the same recovery procedures needed to recover from an unintentional full stall. To determine the extent of FSTD aerodynamic modeling necessary to conduct this training, the stall identification AOA must be defined as the point in which the pilot should recognize that the aircraft has stalled and that the stall recovery procedures must be initiated. The FAA has considered both the aircraft certification

(part 25) definition of a “clear and distinctive” indication of a stall, as well as the ICAO 9625, Edition 4, stall definition. In order to provide a more consistent definition of the stall AOA to ensure that the required aerodynamic modeling range covers potential overshoots in AOA during stall training, the FAA has amended the final rule to better define stall identification:

- i. No further increase in pitch occurs when the pitch control is held on the aft stop for 2 seconds, leading to an inability to arrest descent rate;
- ii. An uncommanded nose down pitch that cannot be readily arrested, which may be accompanied by an uncommanded rolling motion;
- iii. Buffeting of a magnitude and severity that is a strong and effective deterrent to further increase in AOA; and
- iv. The activation of a stick pusher.

Since AOA awareness is a fundamental element of stall training, the instructor must be provided with feedback at the IOS concerning the aircraft’s current AOA as well as the stall identification AOA. This feedback will not only provide the instructor with additional awareness concerning the aircraft’s current AOA and proximity to the stall, but will also assist the instructor in determining when the aircraft has stalled and that the stall recognition cues have been provided as necessary to support the training objectives. In the final rule, the FAA has amended the IOS feedback requirements for upset prevention and recovery training to include AOA and stall identification AOA parameters.

The FAA further notes that the stall identification cues exhibited by an aircraft can, and often do, vary depending upon the aircraft’s configuration (e.g. weight, center of gravity, and flap setting) and how the stall is entered (turning flight or wings level stall entry). Where differing stall identification cues are present on the aircraft, the FSTD’s aerodynamic model should be capable of providing these cues and variation of stall characteristics for training purposes. The FAA also points out that, while this requirement was implied in the stall model evaluation requirements in the NPRM, ICAO 9625, Edition 4, further clarifies this issue with additional language which states that “. . . the model should be capable of capturing the variations seen in the stall characteristics of the aeroplane (e.g., the presence or absence of a pitch break).” The FAA has determined that the ability to show these variations would be valuable in training and has included

similar clarifying language in Table A1A, section 2.m. of the final rule.

#### 2. Envelope Protected Aircraft

##### a. Model Validity Ranges and Associated Objective Testing

In the NPRM, the FAA included provisions that did not specifically require objective validation testing at an AOA beyond the activation of a stall identification (stick pusher) system through recovery. The primary purpose of including this provision was to not require the collection of flight test validation data at an AOA that could result in an unrecoverable and dangerous stalled flight condition.

Empresa Brasileira de Aeronautica S.A. (Embraer), Airbus, and an individual commenter questioned why computer controlled aircraft with stall envelope protection systems are treated differently from aircraft equipped with stick pusher systems with respect to model validity ranges and associated objective testing. Delta Airlines, Inc. (Delta) further questioned whether such modeling and testing will be required for an Airbus A350 aircraft that has part 25 special conditions on stall testing for airplane certification.

The FAA notes that Public Law 111–216 and the Crewmember and Aircraft Dispatcher Training final rule require training to be conducted to a stall. The primary purpose for the training is to provide flight crews with experience in recognizing the cues of an impending stall, as well as reinforcing the recovery techniques learned in stall prevention training. To expose flight crews to these stall identification cues, envelope protection systems must typically be disabled in training. Unlike most envelope protection systems, stick pushers are typically installed to either compensate for an inability of the aircraft to meet the part 25 stalling definitions in § 25.201 or the stall characteristics requirements in § 25.203. Where a stick pusher is installed to meet the stall identification requirements of § 25.201, the activation of the stick pusher provides the pilot with a clear and distinctive indication to cease any further increase in AOA. This “clear and distinctive” indication of a stall is necessary to accomplish the training objectives and simply reaching the AOA limits of the envelope protection or “alpha floor” on an envelope protected aircraft will not provide the stall recognition cues that a pilot needs to learn to prevent and recover from a full stall in the event that the envelope protection systems fail. The accident and incident record contains multiple instances of stall envelope protection

<sup>9</sup> See section III.F.3 concerning changes made to address the recently published ICAO 9625, Edition 4 document.

system failures in the past, some of which progressed into a full stall situation where recognition cues of the stall were not identified by the flight crews.<sup>10</sup>

The FAA further notes that the FSTD qualification requirement for objective and subjective testing of the stall is not new with this rulemaking. The part 60 standard published in 2008 contains both objective and subjective testing of the stall to include the “g-break” and is required for computer controlled aircraft in a non-normal operational mode.<sup>11</sup> Furthermore, the FAA’s FSTD qualification standards dating back to AC 121–14C (1980) have also had both objective and subjective testing requirements for stall.<sup>12</sup> As a result, virtually all of the currently qualified Level C and Level D FSTDs for transport category aircraft have objective testing already in place for stall maneuvers in their FAA approved Master Qualification Test Guide (MQTG) and most of these objective tests are validated against flight test data collected up to and including the stall. The FAA finds that reducing these requirements would not support the full stall training requirements in the Crewmember and Aircraft Dispatcher Training final rule and therefore maintains that the requirements set forth in this final rule are necessary.

#### b. Validation of Stall Characteristics Using Flight Test Data

In the NPRM, the FAA proposed objective testing of stall characteristics for computer controlled aircraft in both normal mode and non-normal mode flight conditions up to the full stall through recovery to normal flight.

Embraer commented that during the developmental flight test campaign, full aerodynamic stalls that are considered

hazardous or impractical can only be done if the aircraft is equipped with additional safety features, such as a tail parachute or other equivalent device, and those features obviously change the aircraft behavior during stall recovery if they are employed. Additionally, Embraer emphasized that for safety reasons in the certification flight test campaign, depending upon the aircraft’s aerodynamic characteristics during stalls; full aerodynamic stall flight tests are not done in control states in which the stall protection system is not available. Embraer recommended that flight testing for validation should not be required for objective testing in non-normal control states where the stall protection system is not available.

As previously stated, the non-normal control mode objective testing to a full stall has been required in the existing part 60 stall characteristics objective tests as well as in previous FSTD evaluation standards dating back several years and the FAA has not significantly changed this requirement in this rulemaking. The FAA agrees with Embraer that aerodynamic stall flight testing may be hazardous or impractical to conduct in some circumstances (on both envelope protected and non-envelope protected aircraft) and this rulemaking has not specifically required additional flight test validation data to be collected at an AOA beyond where it is reasonably safe to do so.

As described in the NPRM, the FAA has included allowances for aerodynamic stall models to be developed and validated using engineering and analytical methods. While the FAA agrees with the commenter that some airplane certification flight test data collected in a stall maneuver may not be suitable for simulator modeling and validation purposes (such as where a tail parachute has been deployed as mentioned by the commenter), other flight testing conducted to investigate the stall characteristics of the airplane during the aircraft certification program may be used to develop engineering simulator models. Where significant safety issues would prevent flight testing at an AOA beyond the activation of a stall protection system, engineering simulator validation data will be acceptable for FSTD objective testing purposes. The FAA has made amendments in the final rule to make this clarification.

#### c. Required AOA Range for Normal Mode Objective Testing

In the NPRM, the FAA did not specify a particular AOA range to support the normal mode testing requirements for

stall characteristics on computer controlled aircraft.

Delta and Airlines for America (A4A) requested clarification on what will be the required AOA range for objective testing on aircraft with highly automated systems where the aircraft does not reach aerodynamic stall in “normal control state.”

The FAA has not specified a particular AOA range to support the normal mode testing requirements in this final rule, as this will be a subset of the AOA range required for non-normal mode testing. Public Law 111–216 and part 121, subparts N and O, require training for recoveries from stalls and stick pusher activations, if equipped. In order to conduct stall recovery training, the protections of an envelope-protected aircraft must be disabled. As such, aerodynamics outside of the envelope protections up to ten degrees beyond the stall AOA must be considered to allow for stall recovery training in the event the envelope protections fail.

### 3. Data Sources for Model Development and Validation

#### a. Define Best Available Data

In the NPRM, the FAA proposed that where limited data is available to model and validate the stall characteristics of the aircraft, the data provider is expected to develop a stall model through analytical methods and the utilization of the “best available data”.

Bihrl Applied Research (Bihrl), A4A, and an anonymous commenter stated that the term, “best available data” (with regards to the aerodynamic data used to model and validate the stall model) is ambiguous and open to interpretation. American Airlines (American), FlightSafety International (FlightSafety), A4A, JetBlue Airways (JetBlue), and Delta further requested clarification from the FAA on whether a “non-OEM” provided source of data would be acceptable to the FAA to meet the representative stall model requirements.

The FAA notes that there is not a specific requirement currently in part 60, nor has a new requirement been introduced in this final rule that mandates FSTD sponsors use the original equipment [aircraft] manufacturer’s (OEM) data to develop and validate the aerodynamic and flight control models in qualified FSTDs. As described in § 60.13(b), “The validation data package may contain flight test data from a source in addition to or independent of the aircraft manufacturer’s data in support of an FSTD qualification . . .” There are

<sup>10</sup> One such example is the June 2009 crash of Air France flight 447, an Airbus A330–203 that experienced failure of the high angle of attack (stall) protection system due to the loss of airspeed data as a result of pitot probe blockage. See “Final report on the accident on 1 June 2009 to the Airbus A330–203 registered F–GZCP operated by Air France flight AF 447 Rio de Janeiro—Paris”; Bureau d’Enquêtes et d’Analyses (BEA); Paris, France. Another example is the December 2014 crash of Indonesia Air Asia flight 8501, an Airbus A320–216, where flightcrew actions to correct a malfunctioning flight augmentation system resulted in the loss of stall protection. See “Aircraft Accident Investigation Report; PT. Indonesia Air Asia; Airbus A320–216; PK–AXC”; Komite Nasional Keselamatan Transportasi (KNKT), Republic of Indonesia 2015.

<sup>11</sup> See 14 CFR part 60 (2008), Appendix A, Table A2A, test 2.c.8 (Stall Characteristics) and Table A3A, test 6.a. (High angle of attack, approach to stalls, stall warning, buffet, and g-break . . .).

<sup>12</sup> Advisory Circular (AC) 121–14C (1980), “Aircraft Simulator and Visual System Evaluation and Approval”.

numerous FSTDs that have been qualified up through Level D where the FSTD manufacturer or other third party data provider has instrumented and flight tested an aircraft in order to collect flight test data to develop and validate their own aerodynamic and flight control models to support FSTD evaluation and qualification.

The FAA has considered the issues involved with requiring aircraft OEM data to develop and validate stall models for the purpose of conducting full stall training. While flight test data collected by the aircraft manufacturer will generally be the preferred source of data to model and validate FSTDs for training, the FAA has determined that “non-OEM” sources of aerodynamic data must be considered for the following reasons:

i. Restricting the development of stall models to that of the airplane manufacturers could impose a high cost on the FSTD sponsors and may not be possible in some instances where the airplane manufacturer does not support a simulator data package or is no longer in existence;

ii. Recommendations by the SPAW ARC, ICATEE, and other working groups have supported the use of analytically developed “type representative” stall models for training purposes; and

iii. An FAA simulator study<sup>13</sup> has supported the SPAW ARC’s findings and found that analytically derived “type representative” stall models that are developed by third party data sources and thoroughly evaluated by a SME pilot can be effectively used to support stall training tasks in a simulator.

For these reasons, the FAA finds that it would not be practical to require FSTD sponsors to use an aircraft manufacturer’s high AOA/stall model to meet the requirements of this final rule and other source data may be acceptable. Furthermore, Boeing, A4A, and an anonymous commenter stated that “flight test data should be noted as the preferred source of data, if available, with other data sources to be used if acceptable to the FAA.” The FAA concurs with this statement. To manage unknown risks, an aircraft manufacturer provided stall model developed with flight test data will generally be the preferred source of data; however, the FAA has concluded that there is not sufficient evidence to warrant mandating a particular source of data for

model development. The FAA acknowledges that the term, “best available data” is ambiguous and has removed that language in the final rule.

#### b. Post Stall “Type Representative” Modeling

In the NPRM, FAA indicated that flight crews should be provided with practical experience in recognizing a full stall should the stall warning system become ineffective. To support this objective, the FSTD must provide critical aircraft type-specific stall recognition cues to enable the crew to recognize the onset of a stalled flight condition. Where data limitations and aircraft behavior may prevent conducting precise objective validation of post-stall behavior in the FSTD, the FAA included provisions in the proposal for “type representative” modeling and validation. To distinguish between the objectively validated “type specific” pre-stall modeling and post-stall modeling that may be developed through engineering analysis and SME pilot evaluation, the FAA used the term “type representative” in the NPRM.

Delta, FlightSafety, and A4A requested that the FAA better define the term, “type representative” with regards to post stall model fidelity.

In defining the FSTD fidelity requirements for full stall behavior, the FAA considered the primary training objectives for such training. The first objective of stall training is to provide flight crews with practical experience in recognizing a full stall should the stall warning system become ineffective (either through malfunction or human error). To support this objective, the FSTD must provide critical aircraft “type specific” recognition cues of an impending stall. Examples include cues such as reduced lateral/directional stability, deterrent stall buffet, and reduced pitch control if the particular aircraft has these cues.

The second objective of stall training is to reinforce to flight crews that the recovery procedures learned during stall prevention training are the same procedures needed to recover from a full stall. From an aerodynamic modeling standpoint, this presents a more significant challenge for two reasons. First, aircraft behavior in an aerodynamic stall may not be stable and is often sensitive to initial conditions, which creates the impression of non-repeatable chaotic behavior. Second, because this occurs in a flight regime with reduced stability, there can be practical limitations on the amount of flight test data that can be safely collected for simulator modeling and validation purposes. It is for these

reasons that objectively validated “type specific” behavior at an AOA beyond the aerodynamic stall may not be a reasonable goal for defining fidelity in a training simulator.

The FAA has determined that the primary training objective for stall training is to have a pilot learn the proper stall recovery procedure in response to the variety of stall cues that a particular aircraft presents. Owing to the reduced stability, unsteady aerodynamics, and surface and rigging variations that occur with use, an aircraft will respond differently from stall to stall. However, the physics of what can happen in a stall are known, accepting that they can differ from aircraft to aircraft. The FAA has concluded that if a pilot can demonstrate applying the stall recovery technique for the general characteristics of what might occur for an aircraft type, the precise characteristics are not required. That is, if an airplane typically rolls 10 degrees left or 20 degrees right in a stall does not matter as long as the pilot does not incorrectly apply the stall recovery technique by responding to that roll before reducing AOA. What is important is to present roll if an aircraft has rolling tendencies to ensure that a pilot responds properly.

In order to avoid confusion with other uses of the word “representative” with respect to simulator fidelity, and to remain consistent with the ICAO 9625 definitions, the FAA has changed the description of the post-stall fidelity requirements to “sufficiently exemplar of the airplane being simulated to allow successful completion of the stall entry and recovery training tasks.” For the purposes of stall maneuver evaluation, the term “exemplar” is defined as a level of fidelity that is type-specific of the simulated airplane to the extent that the training objectives can be satisfactorily accomplished.

#### c. Use of Flight Test Data and Availability

In consideration of the recommendations of the SPAW ARC as well as the results of the FAA stall study, the FAA proposed that the necessary levels of simulator fidelity (including type specific pre-stall behavior and type representative post-stall behavior) can be achieved through a combination of engineering analysis, SME pilot assessment, and improved pre-stall objective testing through the use of existing stall flight test data that is already required by part 60 and

<sup>13</sup> Schroeder, J.A., Burki-Cohen, J., Shikany, D.A., Gingras, D.R., & Desrochers, P. (2014). An Evaluation of Several Stall Models for Commercial Transport Training. *AIAA Modeling and Simulation Technologies Conference*.

previous simulator standards.<sup>14</sup> Furthermore, the FAA proposed additional objective testing requirements for stall characteristics to include turning flight stall and high altitude cruise stall. In the proposal, these tests were also included in the FSTD Directive as applicable to previously qualified FSTDs.

Dassault Aviation (Dassault) commented on the availability of full stall flight tests and that flight test points may not be available for some conditions where aircraft certification does not require them. Dassault further commented that corresponding flight test points might be implemented in the devices where partial data is available; however, no extension or extrapolation should be considered as type representative because this might lead to a very different behavior. An anonymous commenter made similar comments in that “unless there is a source of flight test data in every possible combination of conditions that might exist in a full stall, a demonstration of recovery techniques in a given set of conditions is the only plausible solution.”

FlightSafety further questioned whether there would be a release from liability should a stall model developed through engineering judgment and analytical methods prove to be inadequate.

As stated in previous sections, the FSTD qualification standards have had objective testing requirements for flight maneuvers up to and including full stall since 1980, so nearly all currently qualified full flight simulators (FFS) already have full stall flight test points that are used for simulator validation purposes. For previously qualified FSTDs, this data could be used to further improve existing stall models to meet the requirements of this final rule. The FAA does recognize, as Dassault points out, that additional flight test validation data may not readily exist to validate the new stall maneuvers introduced in the objective testing requirements (e.g., cruise stall and turning flight stall). To address this concern, the FAA has amended the FSTD Directive for previously qualified FSTDs to remove the objective testing requirements for both the cruise condition and the turning flight stall condition and replaced them with subjective evaluation by an SME pilot. The remaining required objective testing stall characteristics tests (second

segment climb and approach or landing conditions) are already required under the existing part 60 rule and should have existing validation data that can be used to meet the new objective testing requirements. Where limitations exist in the stall aerodynamic model due to the lack of data or reliable analytical methods, the data provider may declare these limitations as part of the required aerodynamic modeling SOC for the purposes of restricting the FSTD to certain stall maneuvers.

In response to FlightSafety’s comment, the FAA notes that engineering judgment and analytical methods are used extensively in other areas of a simulation model besides stall and these models are used for training in conditions and situations that vary from the flight conditions used to validate the model. This practice has proven satisfactory, as known physical principles are used by FSTD manufacturers and data providers to represent the training conditions that vary from the flight-validated conditions. The FAA issues standards for FSTD evaluation, but generally does not prescribe specific methods for developing simulation models. The FAA does not have the authority to declare a release from liability.

#### 4. Qualification on FSTD Levels Other Than Level C and Level D

In the NPRM, the FAA proposed modifications to the Level A and Level B stall qualification requirements to include stick pusher system force objective testing and updated objective and subjective testing requirements for the approach to stall flight conditions for newly qualified FSTDs.

Boeing, Delta, and A4A commented that while the FAA proposed modifications to the Level A and Level B stall qualification requirements, the Crewmember and Aircraft Dispatcher Training final rule does not permit such training in these devices and therefore these requirements should be removed. Delta and Boeing had additional comments concerning new requirements proposed for the “approach to stall” objective tests on Level A and Level B simulators (including additional configurations, tolerances, and subjective testing of the autoflight/stall protection systems) with one commenter stating that there is no apparent explanation why the approach to stall characteristics objective test has changed for Level A and Level B simulators and it should remain unchanged to be consistent with the ICAO 9625 document.

The FAA concurs with the commenters in that § 121.423 requires

extended envelope training be conducted in a Level C or Level D simulator and has removed the associated minimum requirements for full stall on Level A and Level B simulators. However, the FAA notes that such devices are qualified to conduct stall prevention training at AOA below that of the activation of the stall warning system and improving the validation of these FSTDs in the approach to stall flight condition would be beneficial to this training. Where new testing requirements were proposed for Level C and Level D simulators for AOA below the activation of the stall warning system, these testing requirements were carried over to Level A and Level B simulators to provide better validation of the simulator to conduct stall prevention training tasks. The FAA further notes that these requirements for Level A and Level B simulators are not retroactive requirements defined in the FSTD Directive and will only be required for Level A and Level B simulators that are initially qualified after this final rule becomes effective. The FAA does not believe these changes for Level A and Level B FSTDs will have an impact on the alignment with the ICAO document since the Level A and Level B FSTD levels in part 60 have no equivalent ICAO device level.

#### 5. Motion Cueing System Limitations

In the NPRM, the FAA included provisions to allow the FSTD manufacturer to limit the maximum buffet based on “motion platform capabilities and limitations” (see Table A2A, Entry No. 2.c.8). A similar provision was also included in the ICAO 9625, Edition 4.

The FAA received several comments that the FSTD sponsors, in addition to the device manufacturers, should be allowed to limit maximum buffet based upon motion platform capabilities and limitations. Furthermore, Delta, Boeing, FlightSafety, A4A, JetBlue, and United Parcel Service (UPS) commented that FSTD sponsors should have the ability to tune down or otherwise reduce motion vibrations due to maintenance and reliability aspects, personnel safety, and limitations of other simulator components, such as visual display systems and other hardware onboard the simulator. Boeing additionally commented that other simulator systems, such as the visual system, may also limit the buffet levels.

With regards to reducing or otherwise limiting motion vibrations that are within the motion platform’s capabilities and limitations, the FAA has determined not to include specific

<sup>14</sup> 14 CFR part 60 (2008) currently requires stall characteristics objective testing that extends to the full stall and “g-break”. Similar requirements exist for grandfathered simulator standards dating back to AC 121-14C (1980).

provisions to allow for arbitrary reductions in stall buffet from the levels that are evaluated through SME pilot assessment or objective testing. On many aircraft, the stall buffet is an important cue of an impending stall and, in some cases, may be the only distinctive cue a pilot will receive before or during an actual stall. In an FAA stall study on its B737-800 simulator<sup>15</sup> in which the magnitude of the stall buffet cues had been modified and increased significantly, all ten of the participating test pilots who had stalled the B737 noted the importance of accurately presenting the strong buffet cues as a stall progresses. Furthermore, the importance of stall buffet in training has been emphasized numerous times by the various working groups that provided recommendations to the FAA on stall training and associated simulator fidelity. As such, the FAA has determined that to accomplish the intended training objectives to provide flight crews with accurate recognition cues of an impending stall, the stall buffet characteristics should be provided in the FSTD at a level that is representative of the aircraft as evaluated by an SME pilot.

Furthermore, as cited in A4A's and American's comments, Schroeder did acknowledge in his paper that buffet levels are sometimes reduced in a simulator to extend component life; however, no such reduction in stall buffet was implemented for this experiment. In fact, overall buffet gains were increased by a factor of 2.5 in the simulator with no adverse effects noted after the completion of the five week experiment.<sup>16</sup>

The FAA acknowledges that the potential exists for increased maintenance and reliability issues due to the repeated exposure of the FSTD to stall buffet. The FAA concurs with Boeing's comment in that other simulator systems (e.g., visual systems) may limit the maximum buffet levels that are possible in a simulator and the FAA has made changes in the final rule to reflect this. Particularly with visual display systems, notch filters are

frequently employed to reduce the vibration output of the motion platform at or around a resonant frequency that would cause damage to visual system components such as a Mylar mirror. These methods have been employed in the past and will continue to be permissible to protect the simulator and its occupants from known system limitations where damage is likely to occur or occupant safety may be compromised.

Furthermore, given that these standards may be applied to previously qualified FSTDs where the original FSTD manufacturer may not be accomplishing and evaluating the modifications of the FSTD, the FAA agrees with the commenters that the ability to limit the maximum buffet due to motion platform and other simulator system capabilities and limitations should be extended to the FSTD sponsor. The FAA has amended the final rule to allow for the FSTD manufacturer or the FSTD sponsor to limit the maximum motion buffet levels as described in this section.

#### 6. Subject Matter Expert Pilot Evaluation and Qualification

##### a. SME Qualifications and Experience

In the NPRM the FAA proposed that the SME pilot who conducts the subject evaluation of the FSTD's stall characteristics must have “. . . acceptable supporting documentation and/or direct experience of the stall characteristics of the aircraft being simulated” and have “knowledge of the training requirements to conduct the stall training tasks.” The additional requirements proposed in Attachment 7 of the NPRM further stated that that the SME pilot must have experience in conducting stalls in the type of aircraft being simulated and, where not available, experience in an aircraft with similar stall characteristics.

The FAA received several comments concerning the experience and qualification requirements for SME pilots. American, A4A, Delta, and FlightSafety requested clarification on whether the required SME must be a pilot who has flown a full stall in the airplane or a pilot who only has knowledge of training requirements to conduct the stall tasks. Delta and A4A also questioned whether there are any other SME experience requirements beyond conducting stalls in the aircraft being simulated, or in an aircraft with similar stall characteristics. A4A, Delta, and FlightSafety, further requested clarification on whether an SME pilot can gain the necessary stall experience in an audited engineering simulator or

on another Level D FFS that has already been qualified for stall maneuvers.

The FAA maintains that the subjective evaluation of the aerodynamic stall model is a critical component in ensuring that the FSTD's stall characteristics are representative of the aircraft and support the training objectives. The FAA further maintains that for such a subjective assessment to have credibility, the pilot must have direct experience in conducting stall maneuvers in the aircraft being simulated or in a similar aircraft that is expected to share the same general stall characteristics.

The FAA acknowledges that the SME requirements in the NPRM were not clearly defined and has revised Attachment 7 of Appendix A of the final rule to better define these requirements. In particular, rather than just stating the stall experience must be in the “type of aircraft being simulated”, the FAA clarified this by stating that the experience must be “. . . direct experience in conducting stall maneuvers in an airplane that shares a common type rating with the simulated aircraft.” In instances where the stall experience is in a different make, model, and series of aircraft within a common type rating, the FAA clarified that differences in aircraft specific stall recognition cues and handling characteristics must be addressed using available documentation such as aircraft operating manuals, aircraft manufacturer flight test reports, or other documentation that describes the stall characteristics of the aircraft.

Particularly for aircraft that are no longer in production, the FAA recognizes that there may be practical limits in finding SME pilots with the required experience to conduct the stall model evaluations. In instances where an acceptable SME cannot be reasonably located, the FAA has included deviation authority in the final rule for a sponsor to propose alternate methods in conducting the SME pilot evaluation of an FSTD's stall model.

In response to the comments concerning whether the SME pilot is required to have experience in the stall characteristics of the aircraft or knowledge of the training requirements to conduct the stall training tasks, the FAA has determined that the SME pilot must have both aircraft experience and knowledge of the training requirements, with the exceptions on experience as noted previously. While an important element of the subjective assessment is the comparison of the FSTD's performance against that of the aircraft, knowledge of the training tasks to be conducted in the FSTD should be

<sup>15</sup> Schroeder, J.A., Burki-Cohen, J., Shikany, D.A., Gingras, D.R., & Desrochers, P. (2014). An Evaluation of Several Stall Models for Commercial Transport Training. AIAA Modeling and Simulation Technologies Conference.

<sup>16</sup> The FAA's CAE simulator was operated for an average of 8 hours per day for five weeks to conduct approximately 700 stall maneuvers which had significant buffet levels. The FAA estimated that this simulator was exposed to approximately 67 total minutes of stall buffet over this five week period of time, which is comparable to what a typical part 121 carrier's simulator may be exposed to over an entire year under the new training rule. There were no reports of equipment damage after the completion of the experiment.

considered when conducting these evaluations. The recognition cues and handling qualities of an airplane can change significantly as a function of the aircraft configuration and how the stall is entered. To ensure the model can support the training objectives as well as to communicate any known or potential deficiencies in the model, the SME pilot conducting this subjective evaluation should focus the evaluation on those general aircraft configurations and stall entry methods that will likely be used in training. The FAA has clarified this language in the SME pilot evaluation requirements in Attachment 7.

The FAA has considered whether an SME pilot can gain experience in an audited engineering simulator or another Level D FFS that has been qualified for full stall maneuvers and has concerns that the effectiveness of an SME pilot evaluation may be diminished when making such comparisons from simulator to simulator without an objective measure to ensure that the aerodynamic model from the engineering simulator has been properly implemented on the training simulator. For these reasons, the FAA maintains that the SME pilot conducting the subjective evaluation of the FSTD or associated stall model must have direct experience of the stall in the aircraft. A pilot cannot gain the necessary aircraft experience required to be a SME in an engineering simulator or another FFS that has been qualified for full stalls.

#### b. Model Validation Conducted by the Data Provider

Boeing and Airbus commented that in lieu of an SME pilot evaluation being conducted on the individual FSTDs for initial and recurrent evaluations, the model validation with the SME pilot can be conducted by the data provider where objective stall data is provided to validate the individual FSTDs. Delta and A4A made similar comments. The FAA agrees with the commenters and notes that provisions to conduct the SME pilot evaluation on an engineering simulator were included in the proposal in Attachment 7 to Appendix A. The FAA maintains that where objective proof of match tests are provided to verify the models have been properly implemented on the training FSTD (including stall characteristics and stall buffet objective testing), the FAA will accept an SOC from the data provider that confirms the integrated stall model has been evaluated by an SME pilot on an engineering simulator or other simulator acceptable to the FAA. Furthermore, there is no intent to require that this SME evaluation be

conducted annually, and the SOC that confirms this SME assessment has taken place will remain valid as long as the stall model remains unmodified.

#### c. NSPM Process for Evaluating and Accepting an SME Pilot

In the NPRM, the FAA proposed that an SOC be provided to the FAA that confirms that the FSTD has been evaluated by an SME pilot. This requirement was proposed to apply to both newly qualified FSTDs as well as previously qualified FSTDs that are evaluated under the requirements of FSTD Directive No. 2.

Delta and A4A requested clarification on this process that the NSPM follows to evaluate and accept an SME pilot.

As described in FSTD Directive No. 2 and Attachment 7 to Appendix A, the process for the qualification of stall maneuvers requires that the sponsor submit an SOC to the NSPM confirming that the FSTD has been evaluated by a SME pilot with the required experience. The NSPM will review this SOC to verify that the evaluating SME pilot has the required experience as specified in the rule before issuing additional qualification for full stall training tasks. Additionally, requests for deviation from the SME experience requirements as described in Attachment 7 should be submitted to the NSPM when requesting additional qualification for full stall training tasks. Where specific questions arise, the NSPM will contact the sponsor or data provider directly for clarification.

#### 7. Alignment With ICAO 9625, Edition 4, on Stall and Stick Pusher Requirements

The FAA's proposal for the stall and stick pusher requirements were primarily based upon the recommendations from the SPAW ARC, as well as other working groups such as ICATEE and the LOCART working group. After the FAA first initiated this rulemaking, the ICATEE recommendations that were considered by the FAA in developing the proposal were also considered by ICAO for updating the ICAO 9625 document to include FSTD evaluation standards for stall and upset prevention and recovery training.

The FAA received numerous comments that some of the general requirements and objective testing requirements in the proposal did not align with the ICAO 9625, Edition 4 requirements, which became available following the publication of the NPRM. A4A, Boeing, and an anonymous commenter indicated that the stick pusher requirements (Table A1A, Entry

No. 2.1.7.S) in the NPRM should be relocated to the flight controls section where they are more applicable. Boeing and A4A also commented that the stall buffet onset measurements in the stall characteristics objective tests (Table A2A, Entry No. 2.c.8) are based upon speed rather than AOA like ICAO 9625, Edition 4. Delta, A4A, and an anonymous commenter indicated that the control force tolerances in the stall characteristics test should be applicable only to aircraft with reversible flight control systems. Finally, A4A and Boeing commented that the required test conditions for the stall buffet motion characteristics test (test 3.f.8 in Table A2A of the NPRM) do not include the same conditions as ICAO 9625, Edition 4.

The FAA was unable to fully participate in the ICAO deliberations due to ex parte concerns as the agency was engaged in this rulemaking proceeding. The FAA has had an opportunity to review the final release of the ICAO 9625, Edition 4, document and has found that only minor differences exist with regards to the stall qualification requirements as compared to the final rule. As such, in order to maintain alignment with the ICAO document as identified by the commenters, the FAA has incorporated the ICAO language into the final rule to the maximum extent possible. The FAA has amended the final rule by adopting much of the ICAO language for high AOA/stall modeling minimum requirements (Table A1A, Entry No. 2.m. in the final rule) as well as the stall characteristics objective test tolerances and flight conditions (Table A2A, Entry No. 2.c.8.a in the final rule).

The FAA did not, however, amend the required conditions for the stall buffet tests to align with the ICAO 9625 standard. As recommended by the SPAW ARC report, stall buffet evaluation should include a broader range of flight conditions than what is currently evaluated. The FAA has determined that the inclusion of the second segment climb condition is important to evaluate the differences in stall buffet vibrations at high power settings, particularly for turboprop airplanes. As a result, the FAA has maintained this as a required condition for the stall buffet characteristic vibrations test (Table A2A, Entry No. 3.f.5).

While the FAA has aligned a majority of the general requirements and the objective testing requirements with the ICAO document, specific differences must be maintained in the final rule to address comments received on the proposal as well as retroactive FSTD

evaluation requirements that are required to support the mandated training for United States (U.S.) air carriers.

#### 8. Requirements for Previously Qualified FSTDs

##### a. Stall Buffet Objective Testing

In the proposal, the retroactive requirements for previously qualified FSTDs, as described in FSTD Directive No. 2., did not include objective testing for stall buffets.

Boeing, Delta, A4A, and an anonymous commenter stated that the general requirement and objective testing requirements (Table A1A and Table A2A, respectively) for stall buffet vibration measurement state that these tests are required for all FSTDs qualified for stall training tasks. This is in conflict with the proposed FSTD Directive No. 2, which specifically states that stall buffet objective vibration testing is not required for previously qualified FSTDs.

In recognizing the potentially high cost of gathering additional flight test validation data for stall buffets, the FAA did not include this requirement in the proposed FSTD Directive No. 2 retroactive requirements for previously qualified FSTDs. Since changes to the QPS tables are not typically applicable to previously qualified FSTDs, changes to Table A1A or Table A2A are not necessary since all of the retroactive requirements are defined in FSTD Directive No. 2. The FAA has added language in FSTD Directive No. 2 in the final rule to clarify the retroactive testing requirements.

##### b. FSTD Directive No. 2 and Grandfather Rights

In FSTD Directive No. 2, previously qualified FSTDs that will be used to conduct full stall, UPRT, and other specific training tasks will be required to meet certain sections of the general requirements, objective testing requirements, and subjective testing requirements of the updated QPS tables in order to obtain qualification for these training tasks.

A4A requested clarification on whether FSTDs that are “upgraded” to provide extended envelope training would also have to comply with the proposed ICAO alignment requirements as well (such as the new visual display system requirements). American and A4A further noted that some sections within the QPS tables appear to have been mistakenly applied to all simulators instead of those qualified after the effective date of the final rule.

The FAA notes that the only new QPS requirements applicable for previously

qualified FSTDs are those that are described in FSTD Directive No. 2. As described in § 60.17 and paragraph 13 of Appendix A, previously qualified FSTDs will continue to hold grandfather rights and the changes to the QPS tables will not generally be applicable to previously qualified devices unless specifically stated in an FSTD Directive. The FAA has reviewed FSTD Directive No. 2 and made amendments in the final rule to clarify which sections of the QPS appendices will be applicable to previously qualified devices.

The FAA further notes that an “upgrade,” as defined by part 60, is an “improvement or enhancement of an FSTD for the purpose of achieving a higher qualification level.” FSTDs that are upgraded in qualification level will generally have to comply with the standard that is in effect at the time of the upgrade. It is important to note, however, that compliance with FSTD Directive No. 2 does not require a change in qualification level and is not considered an “upgrade” under part 60. As a result, the other changes made to the QPS appendices, including the general changes made to align with the ICAO document, will not be applicable to previously qualified FSTDs unless upgrading in FSTD qualification level.

#### 9. Applicability of Stall and UPRT Requirements on Newly Qualified FSTDs

In the NPRM, the FAA proposed that the minimum requirements for the evaluation of full stall maneuvers and UPRT maneuvers would be applicable for all fixed wing Level C and Level D FSTDs that are initially qualified after the final rule becomes effective.

Dassault commented that while UPRT and full stall training will become mandatory for part 121 operators, it is not clear if this applies to part 135 and part 91 operators as well. Dassault further questioned whether the objective testing requirements for full stall maneuvers would be required for an FSTD that will not be used for full stall training. Finally, Dassault commented that they would prefer the requirements to be applied to new or modified aircraft types instead of new FSTDs since this would allow collecting necessary data at the time of the type certification flight tests.

CAE made similar comments that point out that the FSTD Directive (for previously qualified devices) is only applicable for those FSTDs that will be used to conduct such (UPRT and stall) training, however, the requirements in the QPS appendices are mandatory for newly qualified FSTDs regardless of whether they are used in an air carrier

or a non-air carrier training program. CAE recommended that operators of newly qualified FSTDs (that are initially qualified after the final rule becomes effective) who are not subject to the Crewmember and Aircraft Dispatcher Training final rule should also be given the same option on whether or not to invest in the additional features that support extended envelope and other tasks as required under the final rule. CAE further stated that this would provide an option to those operators who may have multiple devices to limit such updates to certain equipment that will be utilized to conduct such training.

FAA agrees with the commenters that the requirement for FSTD modifications and data collection should not be imposed on sponsors who will not use those FSTDs to conduct full stall training and have no mandate to conduct such training. Similar to the FSTD Directive for previously qualified FSTDs, the FAA has amended the final rule to make the qualification of full stall maneuvers optional for newly qualified FSTDs. This will allow flexibility for operators to decide how many FSTDs need to be evaluated for full stall maneuvers to support training requirements.

FAA has, however, maintained the minimum requirements for UPRT evaluation on newly qualified Level C and Level D FFSs. The FAA has estimated that the addition of such IOS feedback tools to support UPRT would add little to no incremental cost to that of a newly qualified FSTD and will enhance instructor awareness in support of the existing part 60 unusual attitude qualification requirement.<sup>17</sup>

In order to ensure that only FFSs that are evaluated and qualified for stall training tasks are used for such training, compliance with the stall and UPRT evaluation requirements will be tracked by the FAA through modifications to the FSTD’s Statement of Qualification (SOQ).

#### 10. General Comments on Stall Requirements

##### a. Testing and Checking of Stall Maneuvers

Boeing commented that stall training beyond the stick shaker activation does not require testing or checking in part 121 and references made to testing and checking in FSTD Directive No. 2 should be removed.

<sup>17</sup> 14 CFR part 60, Appendix A, Table A1B, Entry No. 3.f., “Recovery From Unusual Attitudes”. This minimum qualification requirement covers maneuvers that are “within the normal flight envelope supported by applicable simulation validation data.”

FAA agrees with Boeing's comment and has modified the language in FSTD Directive No. 2 accordingly.

**b. Interim FSTD Qualification for Stall Training**

A4A commented that the FSTD Directive (for previously qualified FSTDs) requires evaluation by the NSPM for additional qualification and should allow a draft SOQ to be issued until the next scheduled evaluation.

FAA notes that FSTD Directive No. 2 does not require an update to the FSTD's permanent SOQ before stall training can be conducted in an FAA approved training program. A positive response from the NSPM to the FSTD modification notification confirming that the requirements of the Directive have been met will, in most cases, serve as an interim update to the FSTD's SOQ until the next scheduled FSTD evaluation. In some instances, however, additional FSTD evaluations conducted by the FAA may be required before the modified FSTD is placed into service. FAA has added clarifying language to the FSTD Directive that this response will serve as interim FSTD qualification for stall training tasks until the next scheduled FSTD evaluation where additional FSTD evaluations conducted by the FAA have been determined to not be required.

**c. Aerodynamic Modeling Considerations**

Frasca International (Frasca) commented that AOA rate is a significant contributor to stall behavior and should be considered as part of the requirement for aerodynamic stall modeling. FAA agrees with Frasca's comment and has added AOA rate to the list of aerodynamic modeling considerations in Attachment 7.

**B. Evaluation Requirements for Upset Prevention and Recovery Training Tasks**

In order to support UPRT that was introduced in the Crewmember and Aircraft Dispatcher Training final rule, the FAA proposed new FSTD evaluation requirements for these training tasks. The proposed requirements were based upon recommendations from the LOCART and ICATEE working groups as well as from the guidance in the Airplane Upset Recovery Training Aid (AURTA), and included new standards to better define the FSTD's aerodynamic validation envelope. The proposal also included requirements to improve the feedback at the instructor operating station (IOS) concerning the FSTD validation envelope limits, aircraft operational limits, and flight control inputs by the trainee.

**1. UPRT Qualification on Lower Level FSTDs**

In the NPRM, the FAA proposed minimum qualification requirements for full stall and UPRT in the newly defined Level 7 flight training device (FTD) (Table B1A of Appendix B).

TRU Simulation and A4A commented that the proposal requires extended envelope modeling for the Level 7 FTD, but the part 121 training requirements have a minimum requirement that this training must be conducted in a Level C or higher simulator. In addition, A4A commented that this is inconsistent with ICAO 9625, Edition 4, where UPRT training is only qualified on a Type VII device. Finally, Air Line Pilots Association, International (ALPA) commented that training could be negatively impacted if allowed to be conducted on a Level A or Level B FFS as the proposal states and this is inconsistent with the recommendations of the SPAW ARC.

FAA agrees with A4A and TRU Simulation regarding UPRT qualification on a Level 7 FTD. This was an error in the proposal and the FAA has amended the final rule to remove minimum qualification requirements for both full stall and UPRT on the Level 7 FTD.

The FAA has reconsidered the qualification of Level A and Level B FFSs for UPRT tasks that involve no bank angle excursions, such as nose-high or nose-low upsets, as defined in the NPRM, and amended the final rule by removing references to full stall and UPRT evaluation requirements for Level A and Level B FFSs in the FSTD Directive.

The FAA notes that the primary differences between the Level A and Level B minimum qualification requirements compared to the Level C and Level D qualification requirements are generally limited to ground reaction modeling, visual system field of view requirements, and minimum motion cueing requirements. The ground reaction modeling requirements have no impact on UPRT or stall training given that training is typically conducted well outside of ground effect. There are significant differences in the motion cueing abilities between Level A and Level B FFSs versus Level C and Level D FFSs that impact the ability for effective full stall and upset training to be conducted in the lower level devices. Level A and Level B FFSs have a 3 degree-of-freedom (DOF) motion cueing system compared to the 6-DOF motion cueing requirement for Level C and Level D FFSs. Typically, a 3-DOF motion cueing system includes motion

cues in the pitch, roll, and heave axes.<sup>18</sup> For wings-level maneuvers, such as the nose-high or nose-low upsets, the dominant motion cues during the stimulation of such an upset will typically be limited to the pitch and heave axis with little activity in the other axes. Because there may be considerable variation in how each pilot responds to an upset in training, other cues may be introduced during the recovery maneuver that are outside of the capability of a Level A or Level B FFS. Furthermore, a wings-level stall entry may result in considerable lateral-directional accelerations on airplanes that are unstable at the stall. These cues will generally be outside the capability for a Level A or Level B FFS with a 3-DOF motion cueing platform to reproduce; therefore, evaluation of full stall and upset in these devices would not be appropriate in most cases.

FAA adds that while the qualification of extended envelope training tasks will generally be applicable only to Level C and Level D simulators, operators of other FFSs have the option to apply for FAA consideration of a deviation from the use of a Level C or Level D simulator for extended envelope training tasks as described in § 121.423(e). Since the approval of such a deviation will be linked to the training program and the alternate means that are proposed to achieve the required learning objectives, approvals to deviate from the Level C or higher requirements in § 121.423 will have to be reviewed on a case-by-case basis under the deviation authority.

**2. Record and Playback Requirements for UPRT**

In its proposal, the FAA included minimum requirements for a means to record and playback audio and video as well as a means to record and playback certain parameters for the qualification of UPRT maneuvers.

American, Boeing, Delta, A4A, FedEx, JetBlue, and an anonymous commenter stated that the requirement for record and playback functionality is outside the scope of the part 60 rule and does not provide additional benefits to the training scenario. While the commenters generally agreed with having parameters available to the instructor during the scenario, such as the aerodynamic validation envelope and the aircraft operational limits, the recording and playback of parameters, particularly the recording and playback of audio and video, should be left to the discretion of the operator. Both ALPA and A4A further commented that there are union and collective bargaining agreements to

<sup>18</sup> See 14 CFR part 60, Table A1A, entry 5.b.

consider with videotaping flight crews in training. Additionally, several commenters noted that there is a high cost burden with requiring the audio and video playback functionality and the requirement should be removed.

The FAA has reconsidered the instructor feedback requirements and agrees with the commenters that effective UPRT can be conducted without audio and video playback capabilities or with the use of an instructor off-board debriefing system located outside of the simulator for the purposes of replaying the training scenario after its conclusion. While the use of off-board debriefing tools and audio/video playback may enhance such training, the FAA recognizes that operators can still conduct effective training without them and has amended the final rule to remove the audio and video record and playback requirements.

### 3. Instructor Operating Station (IOS) Requirements

In the NPRM, the FAA proposed minimum requirements for a feedback mechanism, located on the IOS and available to the instructor, that provides a minimum set of parameters to display to determine expected FSTD fidelity, aircraft structural/performance limitations, and student flight control inputs. The FAA provided example IOS feedback displays in the information section of Attachment 7 to Appendix A. The proposal also included requirements for features or malfunctions to support the training of crew awareness, recognition, and recovery from an aircraft upset.

American and A4A commented that the UPRT requirements for upset “awareness” and “recognition” features and/or malfunctions are outside of the scope of the rule and emphasis should be placed on recovery from an upset. JetBlue made similar comments on this topic. Boeing further commented that how the training requirements are met should be at the discretion of the training program and is not pertinent to FSTD qualification. Since these features are not prescribed, they should appear in the information/notes column and not in the requirements column of Table A1A. Frasca additionally questioned what would be some examples of relevant data sources with respect to externally driven upset scenarios.

Regarding the IOS requirement to display “Cl-max”, A4A, Boeing, and an anonymous commenter stated that “Cl-max” is not an explicit output of most aerodynamic models and is not available for plotting on the IOS display. Similar comments concerning the use of

“Cl-max” as an example of a limit were made by the NTSB. Boeing and FlightSafety also recommended changing the IOS feedback requirement from showing “aircraft structural/performance limitations” to showing “aircraft operating limits”. FlightSafety further commented that aircraft structural and performance limitations are not likely to be known or provided to simulator manufacturers or operators. Delta commented that as an alternative to the record and playback functionality, enhancing existing IOS functionality to include “FSTD crash” and freeze when g-load or control input parameters are exceeded would provide immediate information to the instructor. UPS made similar comments in that a flag could be added to the IOS for envelope excursion and a maximum load indication and that other feedback mechanisms are cost prohibitive and not needed.

The FAA agrees with the commenters in that mandating specific features and malfunctions to drive upset scenarios is generally outside the scope of part 60 and has removed these requirements in the final rule. The FAA further notes that specific guidance material on developing UPRT scenarios has been published as part of Advisory Circular (AC) 120–111, Upset Prevention and Recovery Training.

The FAA maintains that minimum feedback requirements have been found necessary to provide meaningful information to the instructor in training and evaluating pilots in UPRT maneuvers. The FAA recognizes that FSTD sponsors and operators may have other means to display this information and the example IOS displays provided in Attachment 7 are included in an information section as guidance material and are intended to be examples that could be used if desired. Digital or discrete IOS feedback mechanisms may prove to be acceptable for some or all parameters as Delta and UPS have suggested and, consequently, the FAA has not mandated a particular solution. The FAA has amended the final rule to allow FSTD sponsors the discretion to determine a feedback mechanism design that provides the required parameters needed for UPRT and supports their particular training programs and FSTD capabilities.

The FAA has further amended the final rule to remove the “structural/performance limitations” terminology and replaced it with “aircraft operational limitations” as suggested by the commenters. Additionally, the FAA has removed the feedback parameter, “Cl-max” as suggested by the commenters and replaced it with “stall

speed” and “stall identification angle of attack” since these are more useful parameters for instructors to directly provide feedback to crew members when conducting UPRT and stall maneuvers.

### 4. Aerodynamic Source Data and Range of the FSTD Validation Envelope

#### a. FSTD Validation Envelope and Training Maneuvers

In the NPRM, the FAA proposed requirements to define the limits of the FSTD’s validation envelope and test the FSTD against a minimum set of standard upset recovery maneuvers as defined in the AURTA.

Boeing, A4A, and an anonymous commenter stated that the term “extended envelope” in the general requirements is redundant because “modeling to the extent necessary. . . .” defines the requirement adequately. Boeing further commented that this phrase is a misnomer and implies that the flight model may need to be extended. For some upset recovery training, the existing model may be sufficient to support the training needs. A4A made similar comments stating that its experience has shown that the current data appears to be sufficient for conducting upset recovery training.

Airbus further commented that the evaluation of the FSTD should take into consideration the training practices recommended by the aircraft OEM. An anonymous commenter additionally stated that it is imperative that the validation limits are defined by the aerodynamic data provider since they are the only credible source for these limits.

FAA agrees that the term, “extended envelope” may be redundant in this particular context and has amended the final rule accordingly. The FAA recognizes that many aerodynamic models on existing FSTDs may currently be capable of conducting UPRT maneuvers within their AOA versus sideslip validation envelope with no need to be extended further as the commenters suggest. However, the range of validation envelopes can vary significantly between FSTDs as a function of the extent of flight test data, wind tunnel data, and other data used to develop the model. Since those validation envelopes have not been transmitted by the data providers to the FSTD operators in most cases, the FAA has determined that the comments are unsupported and have concluded that operators need to obtain the validation envelopes and ensure that their training maneuvers remain within them.

The FAA agrees with Airbus in that the evaluation of the FSTD should consider the training that will be conducted in the device. However, this rulemaking only addresses FSTD qualification standards and the FSTD evaluation requirements were primarily developed to support training as required by the Crewmember and Aircraft Dispatcher Training final rule and public law. In developing the FSTD evaluation standards for UPRT, the SPAW ARC recommendations, as well as the AURTA recommendations, were reviewed to define a standard set of upset recovery maneuvers that were needed to minimally qualify an FSTD for such training. This set of maneuvers is considered to be the minimum required for FSTD qualification that will provide a baseline evaluation of the FSTD's capabilities to conduct UPRT, but in no way limits an FSTD sponsor's decisions concerning which upset recovery maneuvers they incorporate into their training programs.

The FAA further notes that the qualification requirements for UPRT in this final rule exceeds the current part 60 FSTD qualification requirement for "recoveries from unusual attitudes" which limits maneuvers to "within the normal flight envelope supported by applicable simulation validation data."<sup>19</sup> If a training provider, regardless of operational rule part, performs unusual attitude training<sup>20</sup> maneuvers that exceed the parameters that define an aircraft upset, that FSTD must be evaluated and qualified for UPRT. The FAA does not believe this will impose an additional cost burden on sponsors of previously qualified FSTDs since UPRT qualification is only required if the training provider chooses to conduct unusual attitude training that exceeds the defined upset conditions.

The FAA generally agrees that the validation limits are best defined by the aerodynamic data provider and has provided clarification in Attachment 7 in Appendix A of the final rule; however, there may be instances where the original aerodynamic data provider cannot directly provide this information (the original data provider is either no longer in business or no longer supports the model) and the FSTD sponsor must determine the validation envelope using data supplied with the original aerodynamic data package. The FSTD sponsor will be required to define such

aerodynamic data sources in the required SOC.

b. Expansion of the FSTD Validation Envelope Using Existing Flight Test Data

In the existing part 60 rule, the objective testing requirements found in Attachment 2 of Appendix A requires that testing be conducted in weights and centers of gravity (CG) conditions that are typical of normal operations. Furthermore, where such testing is conducted at one extreme weight or CG condition, a second test must be provided at "mid-conditions" or as close as possible to the other extreme condition.

Airbus and Boeing commented that the existing part 60 requirement for objective testing to be predominately conducted in mid-weight/mid-CG flight conditions is outdated and a wider coverage of the alpha/beta (*e.g.*, AOA versus sideslip) envelope may be accomplished using critical flight conditions testing during aircraft certification at extreme weight and CG combinations. Boeing additionally stated that while the current regulation supports this, it requires testing at the opposite extreme conditions which increases the burden on the sponsor. Airbus additionally commented that there is no need to have a global requirement for this because the weight/CG requirements can be specified for each test where relevant. CAE made similar comments on this issue.

FAA agrees with the commenters and supports allowing flexibility in providing the best range of data to support not only extended envelope training, but all training conducted in an FSTD. Where weight and CG configuration is critical for validating a particular flight maneuver (such as in some of the takeoff objective tests), those conditions are described as a test requirement for that particular test. In general, the FAA recognizes that weight and CG effects on the aerodynamic model are well known and requiring redundant test conditions at varying weight and CG ranges has questionable benefit for FSTD validation in some required objective tests. The FAA has amended the final rule as recommended by the commenters to allow for greater flexibility in determining appropriate weight and CG conditions for some of the required objective tests that do not have specific requirements contained within Table A2A.

5. General Comments on UPRT

a. FSTD Qualification and FAA Oversight

ALPA commented that while they support the requirements associated with the simulator providing feedback to the instructors and evaluators, they believe that only simulators that can perform all aspects of the new training required in the Crewmember and Aircraft Dispatcher Training final rule should be qualified. In addition, ALPA further stated that since the proposed rule only requires FSTD evaluation for those FSTDs used to conduct the additional training tasks, a robust oversight system will be needed to ensure that only the simulators qualified for this training are used in the required training.

In developing the proposed requirements in the NPRM, the FAA considered the economic costs and benefits of mandating FSTD modifications and evaluations to support training requirements. With the considerable cost in the implementation of new aerodynamic stall models on previously qualified FSTDs, the FAA could not justify imposing this cost on FSTD sponsors who currently do not have a mandate to conduct such training. Furthermore, the FAA determined that some FSTD sponsors that do have a training mandate for stall and UPRT may realize some cost savings by not having to qualify all of their FSTDs where the training can be accomplished on a lesser number of devices. Finally, with the large number of FSTDs that will require evaluation to meet the part 121 compliance date of March 2019, this may provide some practical relief in having to qualify all FSTDs within a relatively short amount of time.

The FAA appreciates ALPA's concern for proper FAA oversight to ensure that the FSTDs are evaluated and qualified before extended envelope training is conducted. The FAA notes that an oversight system to track FSTD qualifications is already in place with the list of qualified tasks that is currently required on the part 60 required SOQ for all FAA qualified FSTDs.<sup>21</sup> In the final rule, the FAA maintained the requirement in FSTD Directive No. 2 that the individual training tasks are to be reflected on the FSTD's SOQ once qualified. The FSTD's SOQ will then serve as a tracking mechanism to ensure the FSTD has been properly evaluated and qualified by the FAA NSP to conduct the individual training tasks. Furthermore, the FAA

<sup>19</sup> 14 CFR part 60, Appendix A, Table A1B, Entry No. 3.f., "Recovery From Unusual Attitudes".

<sup>20</sup> Unusual attitude training is required training for an instrument rating, an airline transport pilot certificate, and an aircraft type rating.

<sup>21</sup> See § 60.17(b)

will coordinate internally with Principal Operations Inspectors (POIs) to ensure that only FSTDs that are qualified in accordance with FSTD Directive No. 2 are approved for use in training those specific tasks as part of an FAA approved training program.

#### b. Maintenance Concerns

A4A commented that further testing is needed to ensure that the reliability and availability of FSTDs due to maintenance issues is unchanged with the addition of UPRT training.

The potential for stall vibrations to cause FSTD maintenance issues has been acknowledged and discussed in a previous section on stall buffet. The FAA acknowledges that conducting UPRT maneuvers in an FSTD can produce significant motion system excursions, however, the FAA is not aware of any evidence that the addition of general UPRT maneuvers will introduce significant maintenance issues that would affect the overall reliability and availability of an FSTD beyond what is normally seen in existing training. As with motion system tuning in general, the FAA expects that FSTD sponsors will employ limits and protections within their motion system hardware and software that will protect the FSTD from dangerous excursions that could damage the FSTD's equipment or injure its occupants. The exposure to stall buffet likely has the greatest potential for affecting an FSTD's reliability and the FAA has addressed this issue in the stall requirements sections.

#### C. Evaluation Requirements for Engine and Airframe Icing Training Tasks

In the NPRM, the FAA proposed changes to the general requirements for engine and airframe icing qualification as well as adding a new objective demonstration test for ice accretion effects for newly qualified FSTDs. The changes were based upon new icing requirements in the ICAO 9625 document, as well as recommendations made by the SPAW ARC, and were intended to improve upon the existing engine and airframe icing requirements in part 60. The proposed changes focused on requirements for improved ice accretion models that represent the aerodynamic effects of icing rather than estimating icing effects through gross weight increments.

##### 1. Objective Demonstration Testing

###### a. Objective Demonstration Testing for Previously Qualified FSTDs

In the proposal, the FAA introduced new objective testing requirements for the demonstration of icing effects on

Level C and Level D FFSs. The objective tests are intended to demonstrate that the aerodynamic effects of ice accretion are present in the simulation with the icing model active as compared to the simulation where no ice is present. Due to the potential cost impact for previously qualified FSTDs, these tests were not retroactively required in FSTD Directive No. 2.

Boeing commented that the objective demonstration test for engine and airframe icing is not required in FSTD Directive No. 2 (for previously qualified FSTDs) and recommended that text should be added to Table A2A (Entry No. 2.i.) to clarify that this test is not required for previously qualified FSTDs.

FAA agrees with Boeing in that this demonstration test for engine and airframe icing is not required for previously qualified FSTDs and has added clarifying language in FSTD Directive No. 2. As with comments in previous sections concerning stall buffet testing, previously qualified FSTDs will maintain grandfather rights and the modifications to Table A2A will generally not be applicable to previously qualified FSTDs unless specified in an FSTD Directive. As a result, FAA has not added additional text in Table A2A concerning previously qualified FSTDs because it will be adequately addressed in the FSTD Directive.

###### b. Icing Effects and Recognition Cues

In the proposed icing effects objective demonstration test, the FAA included specific icing effects that may be present and evaluated as applicable to the particular airplane type. This list included both aerodynamic effects of ice accretion as well as engine effects that may also be present with the icing model activated in the simulation.

Boeing commented that the objective demonstration test for icing includes engine effects, but the general requirement for icing does not specifically identify engine effects and this should be removed from the objective testing requirement. An anonymous commenter stated that it may be necessary to show engine effects and airframe effects of icing separately because the test will not differentiate between thrust losses and drag increases. Another anonymous commenter pointed out that changes in control effectiveness and control forces are limited mainly to reversible systems on certain airframe configurations and the FSTD should only introduce these changes when they are representative of the specific make and model of aircraft. Additionally, an anonymous commenter stated that there is "very little guidance

on what engine icing effects should be represented and most manufacturers state there are little effects on engine indications for current turboprops. Based upon the data we do have for engine inlet icing, the effects are often very subtle, yet the requirements seem to ask for something more dramatic. If we modify our icing models to favor dramatic effects, do we risk training pilots to miss looking for the subtle indications?"

Concerning Boeing's comment, the general requirement for engine and airframe icing (Table A1A, Entry No. 2.j.) does include modeling the effects of icing on the engine, where appropriate, as does the current requirement in part 60. While the information section in the demonstration test does state "aerodynamic parameters," the intent of the test is to demonstrate the effects of the icing model integrated into the simulation. If the sponsor designated icing model used for the demonstration test has an effect on relevant engine parameters (such as thrust reduction or other effects), these effects should also be shown as part of the test. FAA has amended the test details in the table to clarify this. Other icing models that may be optionally developed by the FSTD sponsor to train recognition of engine effects due to icing will not require separate objective demonstration testing.

The FAA agrees that icing effects should only be introduced where representative of the specific make and model of aircraft and has clarified this in Table A2A (test 2.i.) and Attachment 7 of the final rule. The FAA does not intend for a simulator operator to artificially insert dramatic icing effects that are not representative of the aircraft. While the FAA is aware that the cues of ice accretion can vary significantly depending upon the nature of the icing event and the aircraft's characteristics, the icing models developed for simulation and training purposes should support the general recognition of icing cues that are typical for the aircraft being simulated.

##### 2. Requirements for Lower Level FTDs

In the NPRM, the FAA proposed general requirements and objective demonstration testing for engine and airframe icing as part of the new Level 7 FTD requirements in Appendix B.

TRU Simulation commented that in the proposal for ICAO 9625, Edition 4, only a Type VII is allowed for use in UPRT and this item (icing) is identified as only being required on devices where UPRT will be trained. TRU Simulation requested that the FAA confirm applicability on a Level 7 FTD and

remove the requirement if not. TRU Simulation and A4A further commented that the objective demonstration test for icing is not required for an ICAO 9625 Type V device and should be removed from the Level 7 FTD requirements. TRU Simulation and A4A additionally commented that a new requirement for Level 6 FTD was introduced to have the anti-icing system operate with appropriate effects upon ice formation on airframe, engines, and instrument sensors.

FAA reviewed ICAO 9625 Edition 4 and found that the general requirement for the modeling of icing (Appendix A, Entry No. 2.1.S.e.) is a minimum requirement for an ICAO 9625 Type V device and has therefore maintained this requirement for the FAA Level 7 FTD. FAA confirms that the objective demonstration testing for icing is not required for an ICAO 9625 Type V device and therefore has removed this requirement for the FAA Level 7 FTD in Table B2A to maintain consistency with the ICAO document.

Regarding the addition of anti-icing effects to a Level 6 FTD, FAA has removed the ICAO numbering system in the general requirements table that was published with the NPRM and restored the existing part 60 requirements for Level 6 FTDs. The FAA notes, however, that the existing part 60 functions and subjective testing requirements for Level 6 FTDs includes “operations during icing conditions” and “effects of airframe/engine icing” in Table B3A of Appendix B. The FAA has not changed these requirements in the final rule.

### 3. Existing Engine and Airframe Icing Requirements in Part 60

In the existing part 60, the subjective evaluation requirements in Appendix A includes a table of special effects (Table A3F) that contains additional requirements for the qualification of engine and airframe icing. In the NPRM, the FAA maintained this table with no changes to it.

Boeing, A4A, and NTSB commented that the requirements for icing evaluation in Table A3F (special effects) include the evaluation of increased gross weight due to ice accumulation. The commenters noted that the pilot has no means to recognize if the simulated aircraft’s weight has increased and an increased gross weight due to ice accumulation is typically an insignificant effect of icing. Boeing further commented that this test requires a “nominal altitude and cruise airspeed and is likely to result in a flight condition where icing does not occur for large commercial transport category airplanes. This flight condition will also

likely result in trimming at a low AOA where the effects of ice, even with the anti-ice system deactivated, are small (a few tenths change in pitch attitude or a few percent change in thrust to maintain level flight). In the lower AOA range, the aerodynamic effects of ice are relatively small. For large commercial transports one might expect to see a few tenths of a degree change in pitch attitude or a few percent change in thrust to maintain level flight with the addition of ice. This proposed new test will likely result in generating unnecessary questions when the expected (larger) results are not seen.”

FAA agrees with the commenters and has removed references to increased gross weight in the final rule as that table entry for icing special effects (Table A3F, Entry No. 2) was inadvertently retained in the proposal. Furthermore, the FAA has amended this table to remove the “nominal altitude and cruise airspeed” requirement and made additional changes to better align this section with the general requirements for engine and airframe icing in Table A1A, Entry No. 2.j.

### 4. Applicability in Training Programs

In the NPRM, the proposed updated requirements for engine and airframe icing were applied to all Level C and Level D FFSs, regardless of the type of aircraft or operator. This is consistent with the engine and airframe icing requirements in the existing part 60 and previous FSTD evaluation standards. The FAA notes that “engine and airframe icing” simulation is not a new FSTD qualification requirement that was introduced by this rulemaking. In fact, the “effects of airframe icing” has been a minimum FSTD qualification requirement for Level D (Phase III) FFSs since the publication of AC 121–14C, Aircraft Simulator and Visual System Evaluation and Approval, published in 1980. Similarly, the “effects of airframe and engine icing” is currently an FSTD qualification requirement in the existing part 60 rule (published in 2008) for Level C and Level D FFSs.

Delta commented that the de-icing and anti-icing systems are very effective on turbojet airplanes. The accidents referenced in NTSB reports are turboprops with significantly less performance available. Delta added there are no useful training objectives to be taught to pilots of commercial turbojet airplanes in icing conditions. A4A commented that stall ice effects are not required by Public Law 111–216 or the Crewmember and Aircraft Dispatcher Training final rule and should be deleted from this final rule. Delta, A4A, and FlightSafety further

questioned whether the FAA has a specific list of airframes that are impacted by icing or are vulnerable to a specific type of ice accretion.

The FAA points out that Section 208(b)(1) of Public Law 111–216 addressed increasing the familiarity of flight crewmembers with, and improving the response of flight crewmembers to icing conditions. However, irrespective of statutory direction, the FAA believes the understanding of the effects of icing on aircraft performance is essential for professional crewmembers particularly as it relates to stall AOA.

The FAA agrees with Delta that de-icing and anti-icing systems are generally very effective on turbojet airplanes. However, every airplane is susceptible to icing to some extent and therefore, there are useful training objectives to be taught to pilots of turbojet aircraft. While the FAA recognizes that turboprop airplanes are generally more susceptible to ice accretion, accidents and incidents on turbojet aircraft have occurred in the past. In the case of the Circuit City Cessna 560 (a turbojet aircraft) accident in Pueblo, Colorado on February 16, 2005,<sup>22</sup> the flight crew did not comply with de-icing procedures during approach which led to an aerodynamic stall from which they did not recover. While it is unknown if the crew recognized the effects of icing before the aerodynamic stall occurred, enhanced simulator training on de-icing and/or anti-icing procedures with representative effects of ice accretion may have increased their awareness that ice accretion was occurring.

With respect to engines, while turboprop and propeller aircraft engines are generally more susceptible to the effects of ice accretion than turbojet engines, power loss events due to core icing have been known to occur on multiple models of aircraft and engines (including large turbojet aircraft). In research conducted in 2009, it was found that engine power loss events due to ice accretion were occurring at a rate of about one event every 4 months.<sup>23</sup> While these events often occurred in conditions that pilots considered benign with no airframe ice accreted, there were recognition cues present and it was noted that each engine appeared to

<sup>22</sup> Crash During Approach to Landing; Circuit City Stores, Inc.; Cessna Citation 560, Pueblo, Colorado, February 16, 2005. Accident Report NTSB/AAR–07/02. National Transportation Safety Board.

<sup>23</sup> Mason, J., “Current Perspectives on Jet Engine Power Loss in Ice Crystal Conditions: Engine Icing,” Presentation at 2008 AIAA Atmospheric and Space Environments, June 23rd, 2009.

have a different manifestation of the icing event. While this final rule does not require specific engine icing models such as these, providing flight crews with representative cues of engine icing, where present during a typical in-flight ice accretion event, could aid in its recognition during line operations.

The FAA has not prescribed specific types of ice accretion models to be implemented in the final rule. The intent is to provide flight crews with representative recognition cues of ice accretion for the aircraft being simulated. Where the accident and incident record indicates that a particular airframe may be susceptible to a particular type of ice accretion, the simulation of the cues associated with that type of icing should be considered when developing a representative icing model. While the accident record has some general examples of this (such as supercooled large droplet icing or tailplane icing on some aircraft), the aircraft manufacturer will likely be the best source of information as to a particular type of icing scenario that may enhance training in recognizing and exiting icing conditions for that aircraft.

#### 5. Data Sources and Tuning of Ice Accretion Models

In the proposal, the FAA introduced updated engine and airframe icing requirements that included a requirement to use "aircraft OEM data or other acceptable analytical methods" to develop ice accretion models.

An anonymous commenter stated that the cost of purchasing icing data, if it exists, could be prohibitive. Due to the availability of SME's who have flown the subject aircraft in icing conditions, the requirement should allow SME pilot validation of icing models. Both A4A and CAE made similar comments that some SME pilot tuning and validation of icing models should be allowed in the requirements.

Dassault further commented that flight test data obtained through the aircraft certification process is limited with larger amounts of ice accretion. Engineering tests might be conducted in those conditions; however, Dassault claimed it would be unable to provide an SOC because there is no flight test data to support it.

The FAA maintains that icing models may be developed using analytical or other engineering methods, incorporating flight test data where available. This process may include supplemental SME pilot assessment to tune and subjectively validate the models. Furthermore, the objective demonstration test does not require the

use of flight test data or other data to validate the model. The demonstration test is for the purpose of demonstrating that the expected icing recognition cues are present as compared to the simulation with no ice present. The FAA has added clarifying language in Table A1A and Attachment 7.

The FAA agrees with Dassault that flight test data gathered during the aircraft certification process will generally be limited to ice shape testing conducted to demonstrate performance limits. Like the current part 60 requirements for the simulation of airframe and engine icing, engineering and analytical methods may be used to develop representative icing models that support the intended training objectives. While the use of flight test data would certainly assist in developing such models, engineering analysis supported with subjective assessment and tuning of the icing models for the expected recognition cues will be acceptable in lieu of flight test developed models and should not be as costly.

#### *D. Evaluation Requirements for Takeoff and Landing in Gusting Crosswinds*

In order to support the new gusting crosswind training requirements in the Crewmember and Aircraft Dispatcher Training final rule, the FAA proposed new minimum requirements for Levels A, B, C, and D FFSs to include the programming of realistic gusting crosswind profiles. The FAA notes that in the existing part 60 and previous FSTD evaluation standards, there is no requirement for any FSTD to simulate gusting crosswinds. These proposed requirements also included updated ground handling characteristics to be evaluated with crosswinds and gusting crosswinds up to the aircraft's maximum demonstrated crosswind component. The FAA further included guidance material in the information section of the proposal that recommended the use of the Windshear Training Aid or other acceptable source data in the development of the gusting crosswind profiles.

##### 1. Applicability on Lower Level FSTDs

In the proposal, FSTD evaluation requirements for gusting crosswind profiles were made applicable for all FFS levels in Appendix A as well as the Level 7 FTD defined in Appendix B.

TRU Simulation and A4A commented that a new gusting crosswind requirement was added for the Level 7 FTD and questioned whether this was appropriate for a Level 7 FTD. Boeing additionally commented that the requirement for gusting crosswinds are proposed for Levels A, B, C, and D FFSs,

but crosswind takeoff and landing tasks are not minimum requirements for Level A simulators in Table A1B. Finally, A4A and Delta commented that gusting crosswind requirements have been added for both Level A and B simulators, but should be removed due to lack of alignment with the ICAO 9625 FSTD device type categories.

With regards to the Level 7 FTD, FAA has examined the ICAO 9625 requirements for the Type V device and found that instructor control of "surface wind speed, direction, and gusts" is a minimum requirement for this device level (see ICAO 9625, Appendix A, section 11.4.R,G). In order to maintain consistency and alignment with the similar ICAO device, FAA has maintained this requirement in the general requirements and functions and subjective testing tables for the Level 7 FTD, but removed the more detailed requirement for realistic gusting crosswind profiles and the associated SOC that was proposed in the NPRM.

FAA agrees with Boeing's comment concerning the qualification of the Level A simulator for takeoff and landing tasks and has removed this requirement in the final rule. Additionally, due to the lack of required side force motion cueing in a Level B simulator that would enhance the simulation of a realistic and dynamic gusting crosswind scenario, the FAA has also removed this minimum requirement for Level B simulators in the final rule.

##### 2. Gusting Crosswind Profile Data Sources

In the NPRM, the FAA proposed requirements for FSTD sponsors to develop a realistic gusting crosswind profile for use in training. The FAA was not prescriptive in this requirement and only required that the profile be "realistic" and "tuned in intensity and variation to require pilot intervention to avoid runway departure during takeoff or landing roll." The FAA additionally provided guidance in the information column of the proposal recommending the use of the Windshear Training Aid or other acceptable data sources to develop the gusting crosswind profiles.

The FAA received several comments concerning the data sources needed to develop realistic gusting crosswind profiles to meet the rule requirements. American, JetBlue, and A4A commented that FAA should provide an appropriate gusting crosswind model as recommended by the NTSB in its safety recommendation. Boeing commented that the Windshear Training Aid does not provide the necessary data to effectively model gusting crosswinds. Delta and A4A further commented that

the FAA should define “other acceptable source data” to help sponsors be consistent in programming the gusting crosswind scenarios. Additionally, A4A commented that the FAA should permit carriers to use crosswinds with gust data from multiple sources because doing so will provide flexibility, more compliance options, and reduce compliance burdens. Finally, an anonymous commenter stated that all references in the NPRM to “gusting crosswinds” lack definition of what is considered a “gust”. “Without a definition such as “10 percent increase over steady state wind speed for x seconds, repeated randomly”, this is an entirely subjective condition and as such is subject to every inspector’s idea of what a wind gust should or could be. If the FAA cannot provide subjective guidance similar to the Windshear Training Aid, which does not provide adequate information for this scenario, the gusting crosswind scenarios should be treated as ‘demonstration only’ and not for training credit.”

While the FAA would generally agree that a defined wind gust model could provide standardization for FSTD qualification purposes, such a generic model may not be realistic unless tuned for the particular aircraft and training scenario. Similar to the Windshear Training Aid’s windshear profiles, subjective tuning would be required to adjust the model as a function of the aircraft type/configuration and ambient conditions to provide the cues and aircraft performance needed to accomplish the training objectives. In the proposal, the FAA required that such wind gust models be “realistic” and have been “tuned in intensity and variation to require pilot intervention to avoid runway departure.” Like many other areas in the simulator qualification standards, this allows for the FSTD sponsor to develop solutions that meet the needs of their particular training program without the FAA prescribing a specific solution. While realistic baseline wind gust models may be derived from aircraft operational data, meteorological data, or other data, a certain amount of subjective tuning will be required in many cases to ensure the gusts are adequate enough to require pilot intervention to avoid runway departure or otherwise do not exceed the crosswind capabilities of the simulated aircraft and supporting aerodynamic and ground model data. Due to the wide range of aircraft and associated crosswind capabilities, the FAA has found that specifying a certain gust characteristic for FSTD

qualification would not be practical and has maintained the requirements as proposed.

In response to the NTSB safety recommendation<sup>24</sup> and commenters’ requests for an FAA developed gusting crosswind model, the FAA conducted an analysis of the extracted wind data from the Continental (CO) 1404 accident<sup>25</sup> and developed two wind gust models that may be used by FSTD sponsors to meet the requirements for a realistic gusting crosswind model. The first model was developed using the CO 1404 accident data to closely replicate the wind gust that was experienced by the flight crew in that accident. While this model was tested by FAA on a Boeing B737–800 simulator and was found to provide a subjectively acceptable training scenario, it is expected that the model will need to be tuned by the sponsor for different aircraft and operator specific training scenarios.

A second model was developed using a simplified linear estimation of the CO 1404 accident data using maximum wind rates of change as referenced in the Windshear Training Aid and the Joint Airport Weather Studies (JAWS)<sup>26</sup>. Similar to the continuous wind gust model, this model may also require tuning by the sponsor for different aircraft and operator specific training scenarios.

FAA recognizes that sponsors may desire to implement their own wind models that may be more suitable for their particular training programs and has not mandated the above described wind gust models as a condition of FSTD qualification. These models will be provided with the final rule as guidance material in a National Simulator Program (NSP) Guidance Bulletin and may be used as one method to develop realistic gusting crosswind profiles to satisfy the requirements of the rule. As suggested by A4A, this will provide operators with flexibility to develop other wind gust models from multiple sources to meet the FSTD qualification requirements.

### 3. Maximum Demonstrated Crosswind

In the proposal, the FAA included general requirements for Level C and Level D FFSs that included ground

<sup>24</sup> NTSB safety recommendation no. A–10–110.

<sup>25</sup> Runway Side Excursion During Attempted Takeoff in Strong and Gusty Crosswind Conditions, Continental Flight 1404, December 20, 2008, NTSB Final Report, NTSB/AAR–10/04.

<sup>26</sup> The maximum wind rates published in the Windshear Training Aid are based upon the Joint Airport Weather Studies (JAWS) and were calculated from accident flight data recorder and Doppler radar measurements of microburst events.

handling characteristics for crosswinds and gusting crosswinds up to the aircraft’s maximum demonstrated crosswind component.

Delta and A4A requested clarification if the maximum demonstrated crosswind value includes the gusting component, or is the intent to require the gusting component in addition to the maximum demonstrated crosswind value.

The FAA has not prescribed a specific wind magnitude and direction to be implemented in the gusting crosswind model requirements. The wind gust models that will be provided by the FAA in guidance material were designed to allow for tuning of the gust characteristics as needed for the particular training scenarios (such as steady state wind conditions and runway direction) and aircraft type being simulated. The tuning of gust models should be conducted in consideration of the maximum crosswind capabilities of the aircraft in order to provide operationally realistic scenarios that are survivable in training. The specific aircraft crosswind capabilities, to include the addition of gust factors, are determined by the aircraft OEM. If this information is not clear in the aircraft flight manual, the FSTD sponsor should consult with the aircraft OEM. Additionally, the FSTD sponsor should coordinate with the data provider to ensure that gust models do not exceed the capabilities of the simulator’s aerodynamic and ground models. The FAA has added information material in Table A1A (entry no. 2.d.3) to the final rule for clarification.

### 4. Requirements for Previously Qualified FSTDs

In the proposal, the updated ground handling and ground reaction requirements in Table A1A included information that stated “tests required” for these particular sections. The FAA notes that this text was derived from the similar sections in the ICAO 9625 document as part of the alignment process.

Delta and A4A pointed out that the general requirement for gusting crosswind (Table A1A, Entry No. 3.1.S in the NPRM) states “tests required” and requested clarification if additional objective testing is required under the FSTD Directive for previously qualified FSTDs.

In the final rule, since the FAA restored the existing part 60 format for the general requirements table as compared to the ICAO format in the proposal (including sections for ground reaction and ground handling

characteristics), the text for “tests required” was removed from the ground handling requirements in Table A1A, Entry No. 2.d.3. in the final rule. No additional objective testing for ground reaction and ground handling characteristics was intended for previously qualified FSTDs in FSTD Directive No. 2. The FAA further notes that all required objective testing is fully described in Table A2A, making any such “tests required” notations in the information column redundant.

#### *E. Evaluation Requirements for Bounced Landing Recovery Training Tasks*

In the proposal, the FAA included updated FSTD evaluation requirements for ground reaction characteristics to support the bounced landing recovery training task that is required in the Crewmember and Aircraft Dispatcher Training final rule. The new requirements included ground reaction modeling to simulate the effects of a bounced or skipped landing as well as the indications of a tail strike or nosewheel exceedances as appropriate for the simulated aircraft and conditions.

##### 1. Applicability to Lower Level FSTDs

In the proposal, the new requirements for bounced landing recovery evaluation were included for Level C and Level D FSTDs in Appendix A as well as for the new Level 7 FTD in Appendix B.

TRU Simulation and A4A commented that the bounced landing requirements were added for the Level 7 FTD and questioned whether it was appropriate for this device.

Given the Crewmember and Aircraft Dispatcher Training final rule requirement that a Level C or higher FSTD be used to conduct bounced landing recovery training tasks, the FAA has removed the additional FSTD evaluation requirements in the final rule for bounced landing recovery from the Level 7 FTD minimum requirements in Appendix B.

##### 2. Bounced Landing Modeling and Evaluation

###### a. Nosewheel Exceedances

As part of the bounced landing recovery requirements in the proposal, the FAA included requirements to include indications of a tail strike and nosewheel exceedances.

Boeing commented that the requirement for “nosewheel exceedances” needs to be more clearly defined (*e.g.*, limit, yield, or ultimate loads) and suggested changing the rule text to read “effects and indications of ground contact. . .”. An anonymous commenter further stated that

calculation of structural loads on the nose gear is not a common feature in current FSTDs. Any nose first landing is considered abnormal and could be flagged on the IOS.

The FAA agrees with the commenters and has removed the nosewheel exceedances requirement from the final rule as it is not necessary to accomplish the training objectives for bounced landing recovery training tasks. This language was replaced with “the effects and indications of ground contact due to landing in an abnormal aircraft attitude . . .” since information on aircraft attitude during the landing and go-around sequence will be more useful to the instructor in evaluating bounced landing recovery training tasks.

###### b. Use of Existing Ground Reaction Modeling

In the NPRM, the FAA proposed that ground reaction modeling must simulate “. . . the effects of a bounced or skipped landing (to include indications of a tail strike or nosewheel exceedances) as appropriate for the simulated aircraft and conditions”.

Delta and A4A commented that the existing part 60 requires verification of ground reaction and ground effects by minimum unstuck speed, ground effects, and takeoff and landing performance objective tests. An SOC from the data provider and an affirmation that the model has been implemented correctly should be adequate. There is no need for additional subjective verification by a qualified pilot. A4A further commented that at least one data provider has implied that their current data and model meets the proposed requirements. CAE commented that the strut system simulation (damper/spring) and its geometry are already properly modeled and should provide the appropriate forces and moments during a bounce.

As described in the proposal, the FAA agrees with the commenters that much of the aerodynamic and ground reaction modeling is currently required and validated in several required objective tests for FSTD qualification. As such, the FAA has not required any additional objective testing for the qualification of bounced landing recovery training tasks in this final rule. In order to support bounced landing recovery training, the FSTD must have the ability to provide the instructor with the effects and indications of ground contact as a result of the FSTD being landed or conducting a go-around at an improper aircraft attitude. In addition to pitch attitude information, other parameters such as indications of nosewheel contact and indications of a tailstrike would provide

useful information to the instructor in evaluating a bounced landing recovery maneuver. FAA agrees with the commenters that the use of a qualified SME pilot to evaluate these indications may be of limited value because they may not have any direct experience in the indications of a tailstrike in the airplane to base such an evaluation on. The FAA does recognize, however, that a tailstrike and other indications of ground contact can be computed in software using the geometric dimensions of the airplane and these indications will provide the instructor with additional feedback to assist in determining whether the aircraft landed in or a go-around was attempted in an unusual aircraft attitude. These indications and the ability of the modified FSTD to perform the intended training tasks are what should be evaluated by the sponsor’s designated pilot as described in the FSTD Directive and § 60.16(a)(1).

The FAA has reviewed the current part 60 ground reaction and ground handling requirements along with associated objective testing that are already required for Level B through Level D FFSs and has determined that adequate requirements already exist in part 60 to evaluate and validate the aircraft dynamics necessary to support bounced landing recovery training tasks.<sup>27</sup> In order to improve the instructor’s evaluation of an abnormal aircraft attitude during the bounced landing recovery maneuver, the FAA has amended the current ground reaction requirement for Level B through Level D FFSs to include appropriate effects during bounced or skipped landings, including the effects and indications of ground contact due to landing in an abnormal aircraft attitude.

##### 3. Alignment With Training Requirements

As noted in the NPRM, the FSTD evaluation requirements for bounced landing recovery maneuvers were introduced both to support new requirements in the Crewmember and Aircraft Dispatcher Training final rule as well as to address comments concerning potential deficiencies in FSTD fidelity in this flight regime.

An anonymous commenter stated that “there is no bounced landing training task listed in Table A1B (Table of Tasks v. Simulator Level). It is agreed that a

<sup>27</sup> In addition to objective testing requirements for maneuvers such as takeoff, landing, minimum unstuck speed, and ground effect, the current part 60 ground reaction general requirements (Table A1A, Entry No. 2.d.2.) already requires ground reaction modeling that generally supports bounced landing recovery training.

Level D simulation should produce a bounced landing if appropriate, however that does not translate into a training requirement. There is currently no approved pilot training program that includes bounced landing. At most, it could be a required demonstration element, but it should not be a required training maneuver.”

A4A commented that Boeing has already addressed the bounced landing recognition and recovery procedure in their operating manuals and in recurrent simulator training and that the FAA should review simulator data it currently receives to determine if recurrent training programs implemented due to the NTSB recommendations were effective. A4A and JetBlue further commented that “the training final rule limits new training requirements to recovery from bounced landing because carrier training programs currently include bounced landing training as recommended in FAA’s InFO 08029 . . . simulator modeling for this final rule should be limited to enhancement to train recovery methods; it should avoid introducing elements that might induce negative training associated with ‘teaching to bounce’.” In addition, CAE made similar comments concerning the potential of a transfer of negative training in introducing a bounced condition during landing.

The FAA notes that bounced landing recovery is a training requirement for air carriers under § 121.423. While the minimum qualified task list in Table A1B does not specifically list bounced landing tasks, the final rule will require an amendment to the FSTD’s SOQ that the FSTD has been evaluated for bounced landing recovery training tasks. As addressed in the Crewmember and Aircraft Dispatcher Training final rule, the FAA is aware of the incorporation of bounced landing recovery training by operators in response to the FAA’s InFO and SAFO bulletins. To support the new training requirements in § 121.423 for bounced landing recovery training, the FSTD qualification standards were revised in this rule to ensure the FSTDs used to conduct such training have been properly evaluated for the training tasks.

The FAA agrees with commenters in that the purpose of bounced landing recovery training is to train bounced landing recovery methods and not to teach a pilot how to bounce the aircraft. While the simulation should support the ability to reproduce a bounce where the flight conditions dictate, the primary objective of training is to train recovery techniques should the landing result in an inadvertent bounce. The FAA agrees with the commenters in that these

recovery techniques can be taught without stimulating an actual bounce during the landing sequence and rather “calling a bounce” to initiate the recovery maneuver. The FAA has amended the final rule to emphasize that the FSTD evaluation requirements are on the aircraft dynamics resulting from the bounced landing recovery and not in stimulating a bounce during the landing sequence.

The FAA further emphasizes that the FSTD evaluation requirements in the final rule that support bounced landing recovery training tasks are essentially a consolidation of existing requirements within part 60<sup>28</sup> and will further support the instructor evaluation of other landing training tasks where the simulator may be inadvertently landed in an abnormal aircraft attitude.

#### 4. Requirements for Previously Qualified FSTDs

Delta, FlightSafety, and A4A pointed out that the general requirement for ground reaction modeling (Table A1A, Entry No. 3.1.S in the NPRM) states “tests required” and requested clarification if additional objective testing is required under the FSTD Directive for previously qualified FSTDs.

In the final rule, since the FAA restored the existing part 60 format for the general requirements table as compared to the ICAO format in the proposal (including sections for ground reaction and ground handling characteristics), the text for “tests required” was removed from the ground reaction requirements in Table A1A, Entry No. 2.d.2. No additional objective testing for ground reaction and ground handling characteristics was intended for previously qualified FSTDs in FSTD Directive No. 2. The FAA further notes that all required objective testing is fully described in Table A2A, making any such “tests required” notations in the information column redundant.

#### F. Alignment With the ICAO 9625 International FSTD Evaluation Document

In order to promote harmonization of FSTD evaluation standards with that of other national aviation authorities, the FAA proposed alignment of the part 60 Qualification Performance Standards (QPS) with the latest international FSTD evaluation guidance in the ICAO 9625, Edition 3, document. Unlike previous alignment efforts the FAA undertook

<sup>28</sup> See 14 CFR part 60 (2008), Appendix A: Table A1A, Entry No. 2.d.2 (ground reaction modeling); and Table A3D (motion system effects), Entry no. 7 (main and nose gear touchdown cues), and Entry No. 13 (tail strikes and engine pod strikes).

with earlier versions of the ICAO 9625 document that only contained one level of FSTD, this alignment effort proved to be more complex because the Edition 3 document contained many other FSTD levels that do not share an equivalent fidelity level in part 60 and other FAA training regulations and guidance material. Furthermore, since the main purpose of this rulemaking was to define new FSTD evaluation standards for new training tasks introduced by the Crewmember and Aircraft Dispatcher Training final rule, practical time limits prevented the FAA from conducting the significant updates to other regulations and guidance material to support a complete change in the existing hierarchy of FSTD levels. For these reasons, a full alignment with all of the FSTD levels in the ICAO 9625 document was not proposed with this rulemaking and only portions of the technical guidance material from ICAO were incorporated where practical.

#### 1. Partial Alignment With the ICAO 9625 Document

For reasons cited above, the FAA did not propose complete alignment with ICAO 9625, Edition 3. In lieu of conducting a full alignment, the FAA proposed partial alignment with the ICAO document where significant overlap existed between the FAA FSTD fidelity levels in the part 60 QPS and the ICAO document. This included alignment of the part 60 Level C and D FFS evaluation standards with that of the highest level of ICAO device (the Type VII device) as well as adding a new Level 7 FTD to align with the ICAO Type V device.

FAA received several general comments concerning the proposed partial alignment with the ICAO 9625 FSTD evaluation guidance document. A4A commented that the “incorporation of 9625 is not required to meet §§ 121.423 and 121.434. We are not opposed to harmonizing part 60 with the international standards but this piecemeal approach to incorporating the ICAO STD does not provide additional benefits for flight training”. A4A further stated that “the FAA should consider incorporating ICAO 9625 as the standard for flight training in its entirety. Until this approach for part 121 training can be adopted, incorporating pieces of the standard into part 60 is only providing additional burden without benefit.” American and Alaska Airlines made similar comments that there is no training value in adopting the ICAO standard as presented and recommended that the FAA should not adopt the ICAO standard unless doing so in its entirety. ALPA generally

supported the incorporation of the ICAO 9625 guidance into part 60, but expressed concern regarding the introduction of a fixed-base (non-motion) FTD for flightcrew training. Also, ICAO generally supported the incorporation of the ICAO 9625 document and further noted that the fourth edition of the ICAO 9625 document was recently published on the ICAO internet site for regulatory authorities.

The FAA notes that the primary purpose of this rulemaking was to update the FSTD evaluation standards to address the new extended envelope training introduced by the Crewmember and Aircraft Dispatcher Training final rule. Because the FAA and industry were integrally involved in the development of the ICAO 9625 FSTD evaluation guidance material, and much of the current part 60 and grandfathered FSTD standards are based upon previous versions of the ICAO 9625 document, the FAA proposed updating the current part 60 standard for certain FSTD levels that overlapped with similar FSTD levels defined in the ICAO 9625 document. Unlike previous versions of the ICAO 9625 document, ICAO 9625, Edition 3, introduced several new FSTD levels that have no direct equivalent in the part 60 rule. Because of the time critical nature of the extended envelope training requirements, it was determined that redefining all of the FAA FSTD levels to align with the ICAO document would not be practical because of the numerous other training rules and guidance material that would be affected if we made significant changes to the part 60 qualification standards and FSTD level definitions.

The benefits of general ICAO alignment are not readily quantifiable since they primarily focus on improving the overall simulation environment and not on specific safety issues. From an international harmonization standpoint, FSTD manufacturers and data providers can benefit from developing FSTDs and supporting data packages that meet a single internationally recognized standard. Despite statements made by one commenter concerning "illusory benefits from internationally aligned FSTD standards," the FAA believes there is anecdotal evidence that supports the benefits of international harmonization. Based upon past experience with the previous international alignment efforts, the FAA points out that over 250 FSTDs (including FSTDs qualified by A4A air carriers) were voluntarily qualified against the more stringent ICAO 9625, Edition 2, JAR-STD 1A, Amendment

3,<sup>29</sup> and Draft AC 120-40C internationally harmonized standards during the 1995 to 2008 timeframe before part 60 became effective in 2008.

Due to the time critical nature of the extended envelope training requirements, complete alignment with the ICAO 9625 document was not considered in this rulemaking. Most of the device levels defined in ICAO are not within the scope of part 60 (all but two FSTD levels in ICAO 9625 are for generic or representative devices that are not defined in part 60) and would require significant rulemaking and policy changes outside of part 60 to address a new hierarchy of device levels. The FAA considers the ICAO alignment conducted in this rulemaking as a significant step in maintaining harmonization with the international FSTD evaluation standards and will continue to look for opportunities to further expand the alignment with the ICAO 9625 document where practical.

## 2. New Requirements Introduced by the Proposed ICAO Alignment

Several commenters pointed out that some of the new requirements introduced in the proposed ICAO 9625 alignment would add to the cost of a new Level C or Level D FFS with no demonstrated value to training. The FAA partially agrees with the commenters in that it is difficult to quantify specific safety benefits from some of the new and updated standards introduced as a result of the ICAO alignment. Most of these changes in the ICAO alignment target the improvement of objective testing tolerances, the incorporation of testing requirements for new technology that is not currently addressed in the simulator standards, and improvement of the overall simulation environment.

### a. Visual System Field of View

A4A, JetBlue, Delta, and an anonymous commenter stated that the increased visual system field of view requirement from 180 degree  $\times$  40 degree in the existing part 60 general requirements to 200 degree  $\times$  40 degree in the proposal would introduce significant cost to a new simulator and has no demonstrated benefit to crew training. In addition, A4A and JetBlue further commented that the justification for this proposal is harmonizing with ICAO standards; there is no statutory or regulatory requirement or NTSB recommendation on this topic. The increased field of view for newly

qualified FSTDs does not demonstrate any improved training value; the existing field of view has been used successfully in training programs worldwide for well over a decade. Increasing the field by 10 degrees on each side would add no value in taxiing or on the circling approach and there is no data or industry trend to indicate that pilots are experiencing difficulty performing these maneuvers using the current systems. Most part 121 air carriers train to Visual Flight Rules (VFR) minimums for a circling approach and in fact most flight schools that offer Airline Transport Pilot qualification courses now require only demonstration at a VFR level. A simulator field of view expansion to 200 degrees would not change practices at other facilities.

Concerning the cost of this new requirement, A4A further commented that the expense associated with this field of view expansion would add an estimated 20 to 30 percent to the cost of a visual system for the purchasing of a newly qualified FSTD, depending on the manufacturer. In most cases this would require the addition of at least one and possibly two image generators, very similar to helicopter simulators. In addition, changing the field of view standard for newly qualified FSTDs will prevent carriers from obtaining existing simulators that reside outside the United States (U.S.) that have a 180 degree field of view, and have not yet been qualified in the U.S. This would force carriers to purchase new simulators instead of purchasing used simulators; it will cost more and impose less efficient training options.

The FAA concurs with the commenters in that little evidence suggests that increasing the visual system field of view requirements to 200 degrees (horizontal) will have a quantifiable safety benefit. In order to avoid incurring significant additional cost as a result of the ICAO 9625 alignment as identified by the commenters, the visual system field of view requirements will remain at the existing part 60 requirement of 180 degrees  $\times$  40 degrees for Level C and Level D FFSs in the final rule.

### b. Visual System Lightpoint Brightness Testing

In the NPRM, the FAA proposed the addition of a new objective visual lightpoint brightness test as part of the ICAO 9625 alignment. The addition of this test addresses inherent system limitations in fixed matrix visual display systems (such as LCD systems) and their ability to display lightpoints as compared to older calligraphic display systems. American, A4A, and an

<sup>29</sup>JAR-STD 1A was a publication by the Joint Aviation Authorities that provided FSTD qualification standards for European countries.

anonymous commenter stated that the tolerance for this test should be reduced from the 8.8 foot-lamberts as proposed in the NPRM to 5.8 foot-lamberts as proposed in the updated ICAO 9625, Edition 4, document because it has no technical advantage and is not achievable with current technology over long periods of time. CAE further stated that this requirement cannot currently be met with light emitting diode (LED) based visual projectors and this issue has been subsequently addressed in ICAO 9625, Edition 4. Similar comments were made by TRU Simulation. Frasca commented that, with regards to the surface brightness test, a modern display system cannot boost the brightness for light points only. If the system just meets the display brightness requirement, it will not pass the light point brightness requirement. This would only be possible using calligraphic projectors, which are no longer in regular use for simulation.

The FAA concurs with the commenters and has reviewed the updated ICAO 9625, Edition 4, document as suggested. In that document, the light point brightness test tolerance has been amended to be less restrictive (5.8 foot-lamberts) as compared to the Edition 3 document due to the inherent limitations of solid state illuminators (such as LEDs). In these types of systems, the benefit of improved temporal stability justifies the inherently lower brightness that an LED can produce as compared to a standard lamp illuminator. To support the alignment of the part 60 technical requirements with the ICAO document, as well as to address the commenters concerns, the FAA has amended this objective test (Table A2A and Table B2A, Entry No. 4.a.7.) in the final rule as recommended by the commenters.

#### c. Transport Delay Testing

In the NPRM, the FAA proposed to reduce the transport delay tolerances from 150 millisecond (ms) to a more restrictive 100 ms tolerance for the purposes of aligning with ICAO 9625, Edition 3 as well as improving the overall simulation environment with faster simulation induced response times. The FAA received many comments on this issue which generally recommended that the FAA should not adopt these tighter tolerances. Boeing, FedEx, Delta, A4A, and American commented that while ICAO 9625 Edition 3 recommends a more restrictive tolerance than what is currently in part 60, there appears to be no evidence that timing below 150 ms provides better crew training. Boeing further

commented that those values have been hard to achieve in industry, costing substantial amounts of money to meet this requirement. A4A further commented that “the FAA should not change the transport delay standard because there have been no reports of pilot induced oscillation due to a throughput (transport) delay tolerance being too high. The current transport delay tolerance of 150 ms has proven to be adequate for all Level D FFSs with no known problems to date. The tolerance has no impact on safety and is a technical limitation of the software and hardware. Carriers have operated with the 150 ms for decades with no measurable degradation in training. In addition, the ICAO standard is being revised and will change in 2015; an FAA change to 100 ms will result in misaligned U.S. and ICAO standards starting next year. Therefore, to require adjustment of the delay to 100 ms would provide no additional benefit to pilot training and it is recommended that 150 ms tolerance be retained.” Frasca, American, Boeing, and CAE made similar comments concerning the less restrictive 120 ms tolerance that has been amended in ICAO 9625, Edition 4.

While the FAA would concur that it is difficult to quantify transfer of training benefits with transport delay tolerances reduced to lower than 150 ms, it has been well established through multiple research studies that transport delay in simulation can significantly affect pilot performance. The FAA maintains that the proposed 100 ms tolerance is not a significant technical limitation of simulators and has, in fact, been a minimum FSTD qualification requirement for helicopter simulators since 1994.<sup>30</sup> Furthermore, the FAA conducted a random sampling of currently qualified FSTDs that were initially evaluated within the past 10 years and found that 44 percent of these FSTDs would have met the ICAO 9625, Edition 3, tolerance of 100 ms and 83 percent of these FSTDs would have met the ICAO 9625, Edition 4, tolerances (100 ms for motion/instrument and 120 ms for visual system response) with no modification.<sup>31</sup> These numbers generally support the commenters’ concerns that the 100 ms transport delay

tolerance in the NPRM may not be easily attainable with current technology that is implemented on previously qualified fixed wing FSTDs.

To address these concerns and to maintain consistency with the international guidance material, the FAA has amended the final rule to incorporate the updated ICAO 9625, Edition 4, transport delay tolerances of 100 ms for motion system/instrument response and 120 ms for visual system response as recommended by many commenters.

#### d. Objective Motion Cueing Fidelity Test

As part of the ICAO 9625 alignment proposed in the NPRM, the FAA included objective motion cueing fidelity testing (OMCT) as a minimum requirement for FSTD qualification.

The FAA received several comments on the adoption of the ICAO 9625 OMCT test. American commented that the OMCT in the ICAO 9625 document is still a work in progress with some testing details that are still under consideration as more experience is gained with conducting the test. American further questioned what source data was used to define the motion fidelity tolerances that are associated with the test as well as the lack of a time-domain test that was supposed to complement the frequency-domain test in the ICAO document. Additionally, American stated that the purpose of including an incomplete set of tests in the ICAO standard is to collect data and that a final rule is not appropriate vehicle to ‘gather data’. Finally, American recommended against replacing the existing motion cueing signature (MCPS) tests with the OMCT, however, if it were to be adopted in the final rule, it should be limited to an SOC issued by the training device manufacturer stating compliance. A4A and JetBlue made similar comments opposing the adoption of the proposed OMCT.

The FAA agrees that the proposed OMCT from ICAO 9625, Edition 3, primarily consisted of a testing method with no specific fidelity standard applied to the test results. The FAA further notes that the recently published ICAO 9625, Edition 4, document has improved the OMCT method and has added recommended tolerances to the test results that were based upon “. . . the statistical results of reliable OMCT measurements of eight Level D or Type VII FSTDs.” The FAA maintains that a significant weakness in today’s FSTD evaluation standards is the lack of a consistent method to measure and apply motion cueing in crew training

<sup>30</sup> See Advisory Circular (AC) 120-63, “Helicopter Simulator Qualification” (1994); Appendix 2, test 5.a.; and 14 CFR part 60 (2008), Appendix C, Table C2A, test 4.a.2.

<sup>31</sup> The FAA conducted a random sampling of transport delay test results from the Master Qualification Test Guides (MQTGs) of 18 currently qualified FSTDs that were initially evaluated within the past 10 years. Eight out the 18 FSTDs would have met the 100 ms transport delay tolerance for all axes. Fifteen of the 18 FSTDs would have met the 100/120 ms tolerance.

simulators. An industry-led group developed the objective motion cueing test, and it represents a marked improvement over today's subjective-only assessments. While the FAA concurs that a specific fidelity requirement needs development, applying the OMCT and comparing the results against representative responses will promote useful standardization and improvement of overall motion cueing.

To address the commenters concerns, the FAA has amended the final rule so as to not require OMCT results in the MQTG for annual continuing qualification evaluation purposes. Instead, OMCT results will only be required once during the initial qualification of the FSTD and included in an SOC from the FSTD manufacturer. Furthermore, the FAA will not require a specific tolerance to be met for this test and only require that the FSTD manufacturer use the OMCT to document the overall performance of the motion system and use its results to aid in the tuning of the motion cueing algorithms. Finally, because the technical details of this testing method are multifaceted and not suitable for inclusion in the final rule's text, the FAA will issue guidance material with the final rule on how to apply the OMCT to meet the part 60 requirements.

e. Sound Directionality Requirement

A4A commented that the directional sound requirements (incorporated from the ICAO 9625 document) are not cost/benefit justified and are not required to meet any existing or proposed training requirement.

The FAA notes that the requirement for "sound directionality" was introduced as part of the ICAO 9625 alignment proposed in the NPRM.<sup>32</sup> After review of this requirement, the FAA will maintain the proposed requirement in the final rule. FAA has found that it is essentially a codification of existing practice where FSTDs are subjectively evaluated for flight maneuvers, including engine failures and other malfunctions, which would result in directionally representative

sound cueing in the FSTD. FAA further notes that the accident record has documented instances where flight crews have inadvertently shut down the wrong engine while diagnosing an engine malfunction in flight. This additional sound cueing in the simulator may enhance training in recognizing and verifying the cues of an actual engine failure in flight.

3. Alignment With the Recently Published ICAO 9625, Edition 4, Document

Concurrent with the development of the part 60 NPRM, an international working group was convened to review and update the ICAO 9625, Edition 3, document to incorporate FSTD evaluation requirements to address full stall training, UPRT, and icing. This working group was essentially operating in parallel with the part 60 rulemaking effort and used a similar set of recommendations issued from the ICATEE working group to incorporate FSTD evaluation standards into the ICAO 9625 document. In addition to the changes made to support UPRT and stall evaluation, this working group also made general changes to the ICAO 9625 document that addressed known issues with the Edition 3 document. These included changes that addressed technological improvements, changes that updated various test tolerances which were relieving in nature, as well as editorial changes to correct or clarify the requirements in the Edition 3 document. Since the FAA proposed alignment with ICAO 9625, Edition 3, many of the known issues identified with that document were also present in the NPRM.

The FAA received several comments, including various comments from A4A, Boeing, CAE, Frasca, ICAO, and TRU Simulation that recommended the use of the draft ICAO 9625, Edition 4, document in order to correct specific problems introduced from ICAO 9625, Edition 3, into the NPRM. Several commenters also recommended aligning the FAA requirements for the extended envelope training tasks with that of the

updated ICAO document. Many of these comments have been discussed in previous sections of this document.

Since the publication of the NPRM and subsequent close of the comment period, ICAO has published the final version of the ICAO 9625, Edition 4, document. The FAA has reviewed its contents for potential incorporation of the changes into the final rule as recommended by several commenters and has found that the changes made to the ICAO document in the Edition 4 release were relatively limited in scope and have some overlap with the requirements published in the NPRM in the following areas:

1. Introduced "extended envelope" FSTD evaluation requirements for full stall, UPRT, and airframe icing.

2. Changes to testing requirements and tolerances to improve and correct issues in ICAO 9625, Edition 3, including transport delay testing tolerances, visual lightpoint brightness tolerances, objective motion cueing testing tolerances, and other changes that were generally less restrictive.

3. Other editorial and technical changes to improve the document and clarify existing requirements.

The FAA agrees with the commenters that alignment with the latest edition of the ICAO 9625 document would be desirable, particularly with evaluation requirements that have been found to be problematic in ICAO 9625, Edition 3. The FAA has incorporated many of these changes into the final rule; however, some differences were maintained to address public comments to the NPRM, as well as to address FAA specific training requirements and FSTD grandfathering rights. Where the more restrictive requirements were introduced in ICAO 9625, Edition 4, that were not included in the NPRM for public comment, the FAA included these in the final rule within non-regulatory "information" sections as recommended practices. The following table summarizes the sections that were modified in the final rule to incorporate changes made in ICAO 9625, Edition 4:

Change	ICAO 9625 Section	Final rule entry No.	Comments
<b>General Requirements</b>			
<b>Appendix A (ICAO)/Table A1A</b>			
Icing effects .....	2.1.S.e .....	2.j .....	Alignment of language with the equivalent ICAO section.

<sup>32</sup> ICAO 9625 (Edition 3), Part II, Appendix A, section 6.5.R requires that "sound should be directionally representative."

Change	ICAO 9625 Section	Final rule entry No.	Comments
High Angle of Attack Modeling .....	2.1.S.f .....	2.m .....	Alignment of language with the equivalent ICAO section.
Stick Pusher Systems .....	2.1.S.g .....	3.f .....	Alignment of language with the equivalent ICAO section.
Stall Buffet Sounds .....	5.1.S.b .....	7.c .....	Added to information column as recommended practice.
Stall Buffet Motion Effects .....	6.1.R .....	5.e.1 .....	Added to information column as recommended practice.
(Buffet as first indication of stall or lack of stall buffet).	8.3.R(8) .....	8. (Table A3D) ..	Added to information column as recommended practice.
Stall Buffet Amplitude and Frequency Content .....	8.4.R(5) .....	2.n .....	Alignment of language with the equivalent ICAO section.
UPRT .....	13.2.1.S .....	2.g.2 .....	Updates transport delay tolerance to less restrictive values.
Transport Delay .....	13.2.2.S .....		
	13.8.S .....		

**Objective Testing**

**Appendix B (ICAO)/Table A2A**

Static Flight Control Checks .....	2.a. ....	2.a. ....	Moved test description text to ensure it is not improperly applied to dynamic control checks.
Stick Pusher Calibration .....	2.a.10 .....	2.a.10 .....	Alignment with equivalent ICAO test.

Additional FSTD Evaluations Requirements for Stall, Upset Recovery, and Icing.	Attachment P ....	Attachment 7 (Appendix A).	Alignment with equivalent ICAO language.

**4. Integration of ICAO Requirements With the Part 60 Table Structure**

The FAA received several comments concerning the integration of the ICAO requirements within the tables of the part 60 QPS appendices. Several commenters pointed out that while there were requirements introduced into the tables for the purpose of aligning with the ICAO equivalent FSTD levels, many of these requirements were carried over to lower level FSTDs that were not specifically targeted in the alignment (e.g., Level A and Level B FFSs that do not have an ICAO equivalent device). These differences were most apparent in the general requirements tables (Table A1A and Table B1A) where the ICAO format, language, and numbering system significantly differs from the existing part 60 format. Additionally, A4A commented that the incorporation of the ICAO format extends the overall structure of the document, is not value added, and creates repeated requirements.

The FAA agrees with the commenters in that the integration of the ICAO numbering system into some of the part

60 tables resulted in some overlapping requirements with FSTD levels that were not subject to the alignment. The main reason for this overlap was to avoid the addition of redundant table entries for the aligned Level C and Level D devices and the non-aligned Level A and Level B devices in cases where they substantially share the same requirement. Other changes were carried over to the Level A and Level B requirements simply because the requirements represented existing practice, and the FAA found it unlikely that a new FSTD would be initially qualified that could not meet these requirements. For example, one commenter noted that the requirement in Table A3B for taxiway edge lights to be of a correct color was a new requirement introduced for a Level A and Level B FFS. While this is a new requirement as compared to the current part 60, the FAA finds it very unlikely that any new FSTD would be initially qualified with a visual display system that could not produce taxiway edge lights of the correct color.

To address the commenters concerns as well as to reduce the overall

complexity of the general requirements tables, the FAA has reverted back to the existing part 60 structure and format in the final rule for the general requirements tables in Appendix A and Appendix B (Tables A1A and A1B). Where specific changes were proposed in the ICAO alignment process, corresponding changes were made to the existing sections within the current part 60 general requirements tables for the appropriate FSTD levels. This will eliminate unintentional carryover of requirements into the other FSTD levels that were not subject to the proposed ICAO alignment.

Additionally, the FAA has examined other tables impacted by the ICAO alignment and has corrected other specific testing requirements as identified by the commenters that were unintentionally carried over to FSTD levels not subject to the ICAO alignment.

Finally, to address comments concerning the integration of the functions and subjective testing tables for all FTD levels in Appendix B, the FAA has separated the Level 7 FTD requirements into different tables and

restored the functions and subjective testing tables for Levels 4, 5, and 6 FTDs back to their original format and contents in the final rule. This change will address commenters concerns and provide a clear distinction between the new Level 7 FTD requirements and the other FTD levels. The reorganized tables will be renumbered as follows in the final rule:

#### Tables of Functions and Subjective Testing

Table B3A (Level 6 FTD)  
Table B3B (Level 5 FTD)  
Table B3C (Level 4 FTD)  
Table B3D (Level 7 FTD)

#### Level 7 FTD Specific Tables

Table B3E (Airport Modeling Requirements)  
Table B3F (Sound System)  
Table B3G (IOS Requirements)

#### 5. Deviation From the Part 60 QPS Using the ICAO 9625 Document

CAE commented that the FAA should “consider the adoption of the ICAO 9625 document technical standards through Incorporation by Reference as allowed by statute and in accordance with 1 CFR part 51, and allow for the qualification of devices using the ICAO technical standard as an Alternate Means of Compliance (AMOC).” An individual commenter recommended that since the “fast track” process for part 60 QPS revisions has never come to fruition, the FAA should conduct separate rulemaking to remove the part 60 QPS appendices and replace them with an industry consensus standard.

The FAA notes that due to the high level of interest in this rulemaking with regards to supporting other significant rulemaking work and Public Law, it was determined that it would not be appropriate for the FAA to use the streamlined process as described by the commenter<sup>33</sup> and this particular part 60 rulemaking would have to proceed in accordance with the agency’s normal rulemaking procedures. While the FAA agrees with the commenter that using a voluntary consensus standard may allow for faster changes to the FSTD evaluation standards, the incorporation of a consensus standard would be outside of the scope of this rulemaking. The FAA will consider this topic for future rulemaking as suggested by the commenter.

Regarding CAE’s comment concerning the use of the ICAO 9625 document as

an AMOC to the part 60 standards, the FAA agrees that allowing the use of other technical FSTD evaluation standards (such as ICAO 9625 or other FSTD evaluation standards issued by a national aviation authority) to initially qualify a new FSTD may allow for a more refined approach to incorporating future changes to the FSTD technical standards. The FAA agrees that where updated internationally recognized FSTD evaluation standards have been published and have been determined to provide an equivalent or higher level of safety (e.g. does not adversely impact the fidelity of the device) as compared to the part 60 standards, the voluntary use of these standards to initially qualify new FSTDs should be considered. Particularly with updates to the ICAO 9625 document, deliberations on changes to this document are conducted through international working groups with representation from many sectors of the training and simulation industry, including FSTD manufacturers, air carriers, training providers, aircraft manufacturers, government agencies, and other organizations. In addition to making changes to the FSTD evaluation standards that address safety related issues, other changes are made to improve the overall FSTD evaluation process, as well as addressing new simulation and aircraft technology that has not been adequately addressed in the existing standards.

Furthermore, the ability for the FAA to recognize equivalent FSTD evaluation standards issued by ICAO and national aviation authorities will support the qualification of FSTDs located in other countries and promote existing bilateral agreements which may result in cost savings for FSTD sponsors, manufacturers, and data providers. Particularly with FSTDs that are qualified by multiple national aviation authorities, the ability to recognize an equivalent international standard can reduce redundant testing requirements and documentation that would otherwise be needed to demonstrate compliance with multiple international standards. The FAA additionally points out that a similar process was successfully used prior to the initial publication of part 60 in 2008 where over 250 FSTDs were initially qualified on a voluntary basis using updated international FSTD evaluation standards (including ICAO and European FSTD evaluation standards) in lieu of the then current FAA evaluation standards in Advisory Circular (AC) 120-40B.

Where such new and updated standards are available, potential safety benefits, as well as cost savings, can be

quickly realized through the recognition of new standards ahead of the formal rulemaking process. As with most of the past updates to the international standards, there are significant delays of months and even years in integrating updated ICAO standards into regulation. This results in a continuous lag between advances in simulation technology and the regulatory standards.

In order for the agency to be more responsive to changes in the international FSTD evaluation criteria as well as to provide additional options to sponsors of FSTDs that are qualified by multiple national aviation authorities, the FAA has included deviation authority in § 60.15(c) of the final rule to accept FSTD evaluation standards (such as ICAO 9625 or other FSTD evaluation standards issued by a national aviation authority). Such deviations must demonstrate that there will be no adverse impact to the fidelity or the capabilities of the FSTD as compared to the part 60 QPS. Deviations may be granted to an FSTD sponsor or to an FSTD manufacturer for application on multiple FSTDs. Where an FSTD has been initially qualified under the deviation authority, the evaluation standard will become a part of the FSTD’s permanent qualification basis and recorded in the FSTD’s MQTG and SOQ. The FAA will issue guidance material with this final rule in the form of an NSP guidance bulletin that explains the process for submitting and reviewing deviation requests under § 60.15(c).

#### 6. Level 7 FTD Requirements and Usage in Training

As part of the ICAO 9625 alignment process, the FAA introduced a new FSTD level to the fixed wing FSTD evaluation standards in the NPRM. This FSTD level was based upon the ICAO 9625 Type V device and was intended to define requirements for a high fidelity, fixed-base FTD that could be used to conduct additional introductory training tasks beyond what the Level 6 FTD is currently qualified to do. Furthermore, the addition of this FTD level to the fixed wing standards in part 60 Appendix B would align with the current Level 7 helicopter FTD evaluation requirements that are already in Appendix D of part 60.

Boeing commented that the Level 7 FTD requirements exceed those for Level A and Level B FFSSs. The Level 7 FTD will offer no additional training credit and appears to have no additional benefit to the industry. CAE further commented that while the Level 7 FTD is introduced and is based upon the ICAO Type V device, the applicable

<sup>33</sup>This streamlined process delegates the authority for final review and issuance of the part 60 QPS documents from the FAA Administrator to the Director of the Flight Standards Service (see 71 FR 63392).

flight crew licensing regulations should include provisions for training credits for this device.

The FAA notes that the corresponding “Tasks vs. Simulator/FTD Level” tables (Tables A1A and B1B) define the particular tasks that a particular FSTD level is qualified to conduct. Table B1B was updated in the NPRM to include the Level 7 FTD and adds several tasks that Level A and Level B FFSs are not currently qualified to conduct. The addition of this FSTD level was based upon the ICAO recommendations to create a high fidelity, fixed-base FTD in which introductory training could be conducted in lieu of a higher cost FFS. The part 60 FSTD qualification standards do not currently define such a high fidelity FTD<sup>34</sup> and the addition of the Level 7 FTD fills this gap. The FAA agrees with Boeing and CAE in that the FSTD qualification standards do not fully address the allowable training credit for this new FTD level and the FAA is currently reviewing supporting training guidance material to make corresponding updates to address this new FSTD level.

Furthermore, the FAA notes that a similar device level was introduced for helicopter training (a helicopter Level 7 FTD) with the initial publication of part 60 in 2008. The FAA has qualified several of these Level 7 helicopter FTDs since the initial publication of part 60 and these devices continue to be used within operator’s training programs.

ALPA commented that while they support the incorporation of the ICAO 9625, Edition 3, guidance, they are concerned with the intention to increase use of non-motion devices at the expense of more realistic training in higher fidelity devices with motion. In addition, ALPA stated that they are “concerned with the stated rationale for adopting the ICAO Doc 9625, Edition 3 Type V simulator guidance. The NPRM indicates this guidance will be used to introduce a new Level VII simulator for the purposes of increasing the opportunities to utilize fixed base, non-motion simulators. Some use of fixed based simulators is appropriate. However, the higher the simulator fidelity is, and the more realistic the training environment is, the better the transfer of learning to actual flight will be.”

ALPA went on to state that the “highest-level flight simulators need to be used to the maximum extent possible. It is imperative that all end-

level evaluations be conducted in full flight simulators (FFS) with six degree of freedom motion cues. Maneuver-based validation points required by airline-specific AQP documentation must be conducted in a FFS with six degree of freedom motion cues also. In addition, these FFSs should be used extensively in advance of evaluations and validation points to provide significant opportunity to prepare.”

The FAA notes that the concept of the Level 7 FTD was based primarily upon the recommendations made in the ICAO 9625 document. In this document, through the work of an industry and government working group, it was determined that the introduction of many training tasks could be conducted in a high fidelity, fixed-base FTD where the continuation and completion of that training task (training to proficiency) is conducted in a FFS with motion cueing. The FAA shares the commenter’s concerns regarding the use of FFSs for end-level evaluations and in advance of evaluations and validations points. In the proposal, the FAA attempted to capture this ICAO concept in the “Table of Tasks v. FTD Level” (Table B1B), which defines the minimum qualified tasks for a specific FSTD level. The FAA has made additional amendments in the final rule to better define the differences in “training” and “training to proficiency” in Table B1B to maintain consistency with ICAO 9625.

Finally, the FAA notes that the part 60 FSTD qualification standards only define what training tasks an FSTD is qualified to conduct and does not define how the FSTD will be approved for use in a training program. The FAA is currently reviewing supporting training guidance material and will take these comments into consideration when making corresponding updates to address this new FSTD level.

### G. General Comments

#### 1. Compliance Period for Previously Qualified FSTDs

In the proposal, the FAA requested comment on the proposed three year compliance period for previously qualified FSTDs as described in the FSTD Directive. This request was to determine if the three year compliance period was adequate to conduct the necessary modifications to FSTDs in consideration of the March 2019 compliance date for the extended envelope provisions in the Crewmember and Aircraft Dispatcher Training final rule.

Delta, American, and A4A commented that the three year compliance date proposed in FSTD

Directive No. 2 should be aligned with the air carrier training rule’s compliance date of March 12, 2019, for the extended envelope training provisions. Delta and A4A additionally commented that there would not be enough lead time to develop supplemental data for legacy aircraft within the proposed three year compliance period and recommended that the compliance period be changed to a firm date of March 12, 2019, to align with the air carrier training rule. American and A4A also recommended that the due date of the FSTD Directive be 90 days prior to March 12, 2019, for incorporation and review by the local training authority.

The FAA agrees with the commenters in that the compliance period of the FSTD Directive should be changed to a firm date that aligns to the Crewmember and Aircraft Dispatcher Training final rule compliance date of March 12, 2019, and has made this change in the final rule. The FAA is aware that some aircraft manufacturers and third party data providers have already made substantial progress in the development of simulator data packages to meet the requirements of the proposed FSTD Directive and additional data packages will likely become available for many FSTD sponsors soon after the publication date of this final rule. Finally, it was not the intent of the FAA that all FSTDs must be modified and evaluated by the compliance dates proposed in this rule. As described in the proposal, only those FSTDs that will be used to conduct certain training tasks will require compliance with the FSTD Directive. This should provide FSTD sponsors with some flexibility in determining which FSTDs to modify as well as determining a timeline for the FSTD modifications that meets their training requirements.

#### 2. Alternative Data Sources for Level 5 FTDs

TRU Simulation and A4A commented that the authorized performance range tables for Level 5 FTDs in Appendix B (Table B2B, B2C, B2D, and B2E) are incorrect for the change force maneuvers. For each maneuver, the stick force directions are reversed from the direction as needed to maintain airspeed as described. This error exists in the current part 60 and exists for all sets of aircraft. TRU Simulation and A4A further commented that the alternative data source tables for Level 5 FTDs are invaluable, especially when flight test data is difficult to come by. However, there are no data tables published in the current part 60 for turbofan/turbojet aircraft. These are the aircraft where such tables would have

<sup>34</sup> The current Level 6 FTD as defined in part 60 is not validated for most ground maneuvers (including takeoff and landing tasks) and does not require a visual system.

the biggest positive impact, since the flight test data gathering is the most expensive for those aircraft. Following the release of Change 1 (of part 60), there was a statement made that the only reason they were not included in Change 1 was that there was no time to prepare them.

The FAA concurs with the commenters and has amended the authorized performance range tables in Appendix B in the final rule to correct the stated errors in Tables B2B, B2C, B2D, and B2E. While the FAA agrees with the commenters that such additional alternative source data for turbofan/turbojet aircraft could provide for less expensive data collection and validation of Level 5 FTDs, the FAA did not propose modifications to these tables and making significant additions and modifications to these tables would be out of scope for this rulemaking.

### 3. Objective Testing for Continuing Qualification

CAE commented that the requirement for the objective test sequence that is part of the quarterly inspections requires that all of the objective tests as defined in the applicable QPS are included in the content of the complete annual evaluation. There are certain tests, however, such as visual geometry and motion frequency domain tests, that primarily serve to confirm or baseline the system performance at the initial evaluation. These tests are significantly time consuming to run and require special resources and equipment and do not necessarily provide value or benefit as part of the quarterly test sequence.

The FAA agrees with the commenter in that some tests specified in the table of objective tests may be time consuming and require special equipment to run on an annual basis as part of the quarterly test sequence. Concerning the objective motion cueing test as stated by the commenter, the FAA concurs that it would not be reasonable to conduct this test on an annual basis and has amended the final rule to only require this test be run at the initial evaluation.

With regards to the visual geometry test, the FAA has found that there is some benefit to verifying that the FSTD's visual system geometry has not been changed over time. As with the currently accepted practice for visual geometry testing, the FAA has not required FSTD sponsors to verify the visual system geometry on an annual basis using a theodolite since this requires special equipment and resources that most sponsors do not have. In lieu of conducting such detailed visual geometry testing on

continuing qualification evaluations, provisions were added in the NPRM (Attachment 2, paragraph 18) that were consistent with the ICAO requirements allowing for the use of a "hand-held optical checking device" to check that the relative positioning is maintained. Due to this comment and other comments concerning the complexity of the visual system geometry test as well as the fact that the ICAO visual system geometry test was specified assuming a 200 x 40 degree field of view system, the FAA has maintained the existing part 60 existing visual geometry test in the final rule. The FAA has further added clarifying language in the test requirement (Table A2A, test 4.a.2) that allows for methods to quickly check the visual system geometry for continuing qualification evaluations.

### 4. Windshear Qualification Requirements

In the proposal, the FAA amended the windshear qualification requirements as a result of recommendations received from the SPAW ARC concerning improvements to windshear training. These proposed changes included requirements for complex windshear models to be available on the FSTD, the addition of realistic levels of turbulence associated with windshear, and requiring that all IOS selectable windshear profiles have a method to ensure the FSTD is properly configured for the selected windshear profile.

With regards to the updated windshear qualification requirements, A4A, Boeing, and an anonymous commenter stated that the proposal requires all required windshear models to be selectable and clearly labeled on the IOS. Additionally, they pointed out that all IOS selectable windshear models must employ a method, such as a simulator preset, to ensure that the FFS is properly configured for use in training. This method must address variables such as windshear intensity, aircraft configurations (weights, flap settings, etc.), and ambient conditions to ensure that the proper windshear recognition cues and training objectives are present as originally qualified. The commenters went on to state that this implies that all windshear training scenarios will have to be evaluated for some specific condition that is not specified and that this is a far reaching requirement and should be removed. The commenters suggested that a more definitive requirement to have a method to repeatedly establish a survivable and a non-survivable windshear scenario would make more sense and meet the desired requirement.

The FAA notes that this particular proposed change to the windshear qualification requirements was made to ensure that the windshear models which are available on the IOS are properly set up for use in training as recommended by the SPAW ARC. Specifically, the SPAW ARC recommended that all required windshear models should be selectable and clearly labeled on the IOS. The SPAW ARC determined that the labeling of available windshear models is not standardized in many FSTDs and instructors may lack the necessary information to ensure that the windshear recognition cues in a particular training scenario will occur as desired.

While the FAA agrees that the use of presets in the simulator should be at the discretion of the sponsor, there should be a method employed by the operator to ensure repeatability of the windshear training profiles if the instructor has the ability to change basic parameters of the aircraft or conditions that would affect the outcome of the windshear maneuver (e.g. aircraft gross weight, ambient conditions, etc.). As described in the Windshear Training Aid, most windshear profiles are tuned to produce specific recognition cues and performance characteristics for consistent training scenarios. If the basic aircraft configuration and ambient conditions are changed, the instructor cannot be guaranteed that the windshear recognition cues and performance during the escape maneuver will be present as originally evaluated and qualified. Since this rulemaking was originally proposed, the FAA has issued guidance material<sup>35</sup> to operators recommending the use of simulator presets or providing instructor guidance to ensure that windshear profiles are set up correctly in training. The FAA believes that the publication of this guidance material will sufficiently address this issue and has amended this section in the final rule, as suggested by the commenters, to recommend that a method to ensure the repeatability of the windshear required survivable and non-survivable scenarios be employed in the FSTD.

### 5. Miscellaneous Comments

#### a. Approved Location for Objective and Subjective Testing

With regards to the changes proposed for § 60.15(e), Delta, A4A, and an anonymous commenter noted that while

<sup>35</sup> Information for Operators (InFO) Number 15004, "Use of Windshear Models in FAA Qualified Flight Simulation Training Devices", published March 13, 2015.

the NPRM states that the subjective tests that form the basis for the statements described in paragraph (b) of this section and the objective tests referenced in paragraph (f) of this section must be accomplished at the FSTD's permanent location, except as provided for in the applicable QPS, we recommend changing FSTD's "permanent location" to FSTD's "sponsor designated facility" as an FSTD may be moved from one location to another over time. Frasca further commented that current FAA guidance allows for objective testing to be run at the FSTD manufacturer's facility as an option for submitting the required qualification test guide (QTG) prior to the initial evaluation.

The FAA concurs with the commenters and has amended the final rule to state that this testing "must be accomplished at the sponsor's training facility or other sponsor designated location where training will take place, except as provided for in the applicable QPS." With regards to Frasca's comment, the ability to submit QTG test results conducted at the manufacturer's facility is defined in the applicable QPS (see Appendix A, paragraph 11.h.) and has not changed in this rulemaking. The submission of QTG test results in this manner will remain acceptable as described in the applicable QPS.

#### b. Increasing the Credit for Time in a Simulator

An individual commented that general aviation needs more extensive use of simulators rather than less. Reducing the number of hours a simulator can be used towards a private or instrument rating is bad for aviation and the flying community. Letters of authorization should increase the usage of simulator training allowed.

The FAA notes that this rulemaking has not reduced the number of hours that a FSTD can be used for a private pilot or instrument rating. The FAA believes the commenter is referring to training devices not covered under part 60. Those devices are referred to as aviation training devices. An approved aviation training device, if determined to meet the standards in AC 61-136A,<sup>36</sup> will receive a letter of authorization from the FAA, which specifies the amount of credit a pilot may take for training time in that specific device towards a pilot certificate or rating. Revising the amount of credit a pilot can take for training in any aviation training

device or FSTD is outside the scope of this rulemaking.

#### H. Economic Evaluation

In July 2014, the FAA conducted a preliminary regulatory evaluation to estimate the costs and benefits of the provisions proposed in the NPRM. This regulatory evaluation was posted on the public docket with the NPRM. The agency received several comments on the NPRM from air carriers, FSTD manufacturers, and trade associations.

##### 1. Cost of Aerodynamic Modeling and Implementation

An individual commenter questioned whether the FAA factored in the costs associated with the acquisition of OEM data needed to comply with the new requirements; the costs associated with obtaining licenses for third party implementation of data; and the costs associated with the loss of FFS utilization/revenue for the changes, design, implementation, installation, validation and actual FAA qualification activities. American, Delta, JetBlue, and A4A made similar comments on the basis of the simulator modification costs and how the FAA can provide an estimate if data licensing pricing and implementation costs are unknown. American and A4A additionally commented that the FAA needs to provide their assumptions used for the cost analysis. In addition, A4A further commented that the cost estimate for implementation of UPRT is not realistic, is understated, and will depend upon the host and software architecture of the device being updated. A4A also stated that once more definitive data is developed the FAA should prepare a supplemental regulatory impact analysis (RIA) to update the cost estimate for upgrading FSTDs and provide more detail on the assumptions used in the analysis.

The FAA notes that in the preliminary RIA, the estimated cost of aerodynamic model development included all modifications needed to meet the standards proposed for full stall, UPRT, and icing evaluation. This cost was estimated on a per model basis for grandfathered FSTDs and was further broken down into "complex" and "simple" projects that were based upon the likelihood that existing data was available to support the necessary modifications. This cost was estimated based upon feedback from an industry questionnaire which estimated the cost of a "complex" model development at \$100,000 and a "simple" model development at \$60,000. Since many FSTDs share a common aerodynamic model developed by a common source,

it was assumed that the costs of aerodynamic model development would be distributed amongst the purchasers of the model. Section II.d. of the RIA that was published with the NPRM, fully explained the agency's assumptions and rationale used to develop the cost estimates.

With regards to implementation costs, the FAA calculated this separately from the aerodynamic model development costs on a per unit basis since implementation costs would impact individual FSTDs and not be distributed amongst several FSTDs. The FAA estimated the per unit costs as \$77,307 per FSTD to include implementation costs, lost productivity/revenue, SME pilot testing, and hardware modifications. This estimate includes 45 hours of lost training time at \$500 per hour to conduct these activities. This estimate was based upon the responses from an industry questionnaire and is fully explained in the RIA that was placed on the public docket with the NPRM. The FAA did not receive any cost estimates in the public comments concerning additional licensing fees for the implementation of data by a third party.

An individual commenter further questioned the cost basis for the icing modifications and that the summary is not based on any factual, verifiable analysis. The commenter further stated that assumptions are made that icing upgrades can be accomplished at the same time as non-icing upgrades and that there is no basis in fact for this statement and because of that, the costs are artificially low. A4A and American made similar comments concerning the cost of the required modifications for icing.

The FAA notes that the costs for the aerodynamic modeling development necessary for both the full stall requirements and the icing requirements were estimated based upon the responses from an industry questionnaire. Since most simulators for transport category aircraft currently use icing models that are supplied by a common source as that of the aerodynamic model, the FAA assumed the updated models for both full stall and icing would likely be developed concurrently by the data provider and subsequently installed by the FSTD sponsors as a package in most cases. The agency's rationale for the breakdown of aerodynamic modeling costs for both stall and icing are described in the regulatory evaluation that was published with the NPRM.

In response to these comments, the FAA has revised its cost estimates for the final rule to include additional

<sup>36</sup> Advisory Circular (AC) 61-136A, FAA Approval of Aviation Training Devices and Their Use for Training and Experience (2014).

information gathered from air carriers, FSTD manufacturers, and data providers to better estimate the cost of this rule. One aircraft OEM simulator data provider has indicated that the estimated cost of an enhanced stall model would be in the area of \$25,000 per FSTD. Furthermore, this data provider stated that in order to support the installation of an enhanced stall model, FSTDs running certain versions of their data package would need to be brought up to the latest revision or blockpoint before this installation can take place. The FAA also obtained a cost estimate from a third party provider to implement its model on FSTDs.

As a result of this additional information as well as further analysis conducted on FAA FSTD qualification records, the FAA was able to group the FSTDs into seven different categories. The groups were based upon the estimated cost components to implement the modifications needed to meet the requirements of FSTD Directive No. 2. The estimated costs are separated by various factors such as the anticipated source of the aerodynamic data, whether the FSTD will need a standard data revision before further modifications can occur, whether the FSTD could potentially need a significant hardware update, and other factors that might affect the overall cost to meet the requirements of this final rule. This refined granularity for categorizing the FSTDs as well as the estimated cost for each category of FSTD is fully explained in the final RIA that is published with this final rule.

## 2. Cost of Instructor Operation Station (IOS) Replacement

American commented that the cost to bring an FSTD into compliance with FSTD Directive No. 2 is low by many orders of magnitude. Older simulators will need new IOSs since many FSTDs cannot support the required graphics capabilities and would have to be replaced. American further commented that they have a rough estimate from one vendor that it will cost \$250,000 alone for IOS update/replacement. A4A made similar comments that older simulators would need IOS replacement at an estimated cost of \$250,000 in order to meet the instructor feedback mechanism requirements for UPRT. A4A further commented that this underestimated cost is a concern because there is no benefit to this element of the proposal as there are other methods available to provide instructors with the information necessary to evaluate a pilot's skills during simulator sessions that are used successfully today. The record and

playback function should be left as an option available to FSTD customers, but it should be removed from this proposed rule.

The FAA notes that the requirements for UPRT in the proposal and in the final rule do not specifically require the use of graphical displays to provide the necessary feedback. The FAA provided some example displays in Attachment 7 of Appendix A, but these examples are within an "information" section as recommendations, but are not regulatory. The FAA acknowledges that the instructor feedback that is necessary for UPRT could potentially be accomplished using methods other than graphical displays (such as numerical or discrete feedback at the IOS) and the agency has not been overly prescriptive in the final rule that requires a single solution. The FAA further notes that the requirement for video and audio recording and playback has been removed in the final rule as discussed in previous sections and this should provide some cost relief in meeting the requirements for UPRT. Finally, the FAA agrees with American and A4A in that there are a small number of older simulators still in operation which may have IOS display systems that cannot meet the requirements for UPRT without extensive modification or replacement. The FAA has made adjustments to the final RIA to account for the additional cost of replacing old IOS display systems for some older FSTDs.

## 3. Affected FSTDs and Sponsors

American commented that ". . . the FAA indicates cost savings by Sponsors not modifying all FSTDs, just part of the fleet. This is not an option for [American] and we believe all sponsors. This would impose scheduling complexity. Cost and other factors should be reviewed in the context of modifying all part 121 flight simulators. It is not feasible to only modify part of a simulator fleet and efficiently schedule crews. Our plan is to modify all FSTDs in our fleet. This will drive the costs higher with increase data licenses, implementation costs, and training impact. This does not provide additional cost relief for the sponsors." Similar comments were made by A4A. An individual commenter stated that it appears that the effect on the industry could include a larger number of Level C and Level D FFSs than the 322 cited in the RIA and asked if the FAA calculated total costs if all currently FAA qualified Level C and Level D devices were to comply with FSTD Directive No. 2. This commenter further questioned whether the FAA calculated

the cost to a sponsor if an FFS were to not comply with FSTD Directive No. 2.

The FAA notes that the cost estimates for FSTD Directive No. 2 included the cost to update and evaluate all Level C and Level D FFSs that could potentially be used to meet the part 121 extended envelope training requirements. The FAA assumed that all part 121 Level C and Level D FFSs would require updating and did not include any cost reductions in the RIA. These assumptions and the associated rationale were fully described in the RIA that was published with the NPRM.

The FAA further notes that the costs for previously qualified FSTDs were derived solely from the proposed FSTD Directive for full stall, upset recovery, icing, bounced landing recovery, and gusting crosswind FSTD evaluation requirements in the NPRM. Compliance with this Directive is only required for sponsors of FSTDs that will be used to deliver such training. The only operators required to conduct such training are air carriers operating under part 121. The estimated 322 FSTDs were derived from those currently qualified FSTDs that simulate an aircraft that is likely to be used in a U.S. part 121 air carrier's training program. Since the NPRM was published, the number of FSTDs that could be impacted by the air carrier training requirements has increased from 322 to 335 FSTDs. We assumed that the cost of modifying the previously qualified FSTDs that are not used in part 121 training are not a cost of this rule because these operators are not required to conduct such training for these particular tasks. If a sponsor chooses not to offer the training defined in the FSTD Directive, there are no additional requirements or costs imposed by this rule for previously qualified FSTDs.

American and A4A commented that the provisions included in the NPRM for Level A and Level B FFSs have no applied cost savings for sponsors since there are no Level A or Level B FFSs for part 121 sponsors.

The FAA notes that as of the close of the comment period of the NPRM, one Level A and one Level B FFS are still in operation and actively sponsored by part 121 operators. No cost savings were applied in the RIA for Level A and Level B FFSs as stated by the commenters.

Frasca commented that the NPRM stated that only sponsors are affected by this rule and FSTD sponsors are air carriers who own simulators to train their pilots or training centers that own simulators and sell simulator training time. Frasca went on to state that this statement assumes only part 119 and part 142 organizations, implying part

141 sponsors were not considered in the analysis. The FAA should consider reevaluating the analysis of small entities taking into consideration part 141 organizations that sponsor FSTDs. CAE further commented that FSTD manufacturers, aircraft OEMs and other data providers are also affected by these requirements.

The FAA acknowledges CAE's comment in that other entities beyond the FSTD sponsor may be indirectly affected by this rule; however, the part 60 requirements apply to FSTD sponsors and not directly to the FSTD manufacturers and data providers. The FAA concurs with Frasca's comment in that all affected FSTD sponsors should be considered in the cost analysis of the rule. The FAA points out that the cost estimates in the RIA considered all FSTDs and sponsors that may be affected by this rulemaking, regardless of the certificate held by the sponsor.<sup>37</sup> For previously qualified FSTDs that will have to meet the requirements of FSTD Directive No. 2 to conduct extended envelope training tasks, these estimates were based upon an analysis of FSTDs that could potentially be used in part 121 training programs to meet the air carrier training requirements, regardless of the sponsor's operating certificate. For newly qualified Level C and Level D FFSs that will be required to meet the updated requirements that were aligned with the ICAO 9625 document, this estimate was conducted using historical data on all new Level C and Level D FFSs that the FAA has initially qualified within the last 10 years. The specific impact on small entities was fully explained and accounted for in the RIA.

#### 4. Costs and Benefits of ICAO Alignment

A4A commented that, in the NPRM, the FAA states that "Internationally aligned FSTD standards facilitate cost savings for FSTD operators because they effectively reduce the number of different FSTD designs that are required." A4A further stated that "We can find no simulator manufacturer information in the docket to substantiate this statement. The FAA should explain and provide the basis for this statement. Based on past experience, the A4A believes that simulator manufacturers will continue to differentiate their product features instead of adopting one design due to aligned standards. Unless simulator manufacturers can provide product pricing information that proves otherwise, there will be no savings for

purchasers of FSTDs as a result of the alignment proposed in this rule. A final or supplemental RIA must therefore eliminate reference to or quantification of illusory benefits from internationally-aligned FSTD standards."

The FAA notes that while the NPRM and RIA references qualitative benefits and potential cost savings due to internationally aligned FSTD evaluation standards, there were no quantified benefits included in the preliminary or final RIA. The FAA acknowledges that there will be a small cost associated with updating the part 60 FSTD evaluation standards to the latest ICAO 9625 document. In the RIA that was published with the NPRM, the FAA estimated the cost of compliance to initially qualify a new FSTD under the proposed standards that were aligned with ICAO 9625, Edition 3. Based upon the responses to a questionnaire that was distributed to industry for the purposes of determining these costs, the FAA estimated the recurring and non-recurring cost of compliance with the internationally aligned standards to be approximately \$30,431.82 per FSTD. Considering that the cost of a new Level C or Level D FSTD can range from \$8 million or more, the incremental cost of compliance with the internationally aligned standards will represent less than 0.5 percent of the cost of a new FSTD. Furthermore, as a result of the comments received on the NPRM as discussed in previous sections, the FAA has removed and/or modified some of the more costly requirements in the final rule which were introduced by the ICAO alignment (e.g., the visual field-of-view requirement and the transport delay requirement). This will further reduce the estimated incremental cost of ICAO alignment that was estimated in the NPRM. The final rule estimate does not include these potential cost savings and therefore likely over estimates costs.

The FAA maintains that alignment with updated international FSTD evaluation standards benefits industry in a number of ways. Because updates made to the ICAO document are typically conducted by working groups with a significant amount of industry participation, many of those changes are made to correct problems with the existing standards that result in requirements that are sometimes less restrictive, deal with new technology that is not adequately addressed in existing standards, and clarifies requirements that are ambiguous in nature and left to subjective assessment. For example, in the current part 60, objective tests that are validated against engineering simulation data are generally required to meet tighter

tolerances than that of objective tests that are validated against flight test data.<sup>38</sup> Due to practical issues with evaluating FSTDs against such tighter tolerances, ICAO 9625, Edition 3, provided relief to this requirement which now allows up to 40 percent of flight test tolerances to be used to evaluate engineering simulation validated objective tests. This is a less restrictive requirement that corrected an issue that was found to be problematic by FSTD sponsors, FSTD manufacturers, data providers, and regulators. As a result of the ICAO alignment, corresponding changes were proposed for the part 60 QPS. Several other examples exist in the ICAO 9625 alignment where less restrictive objective test tolerances were proposed or new objective evaluation requirements were introduced to replace subjective assessments (e.g., standards for liquid crystal display (LCD) or liquid crystal on silicon (LCoS) visual display systems). In many cases, objective tolerances are preferable to industry because they eliminate the inherent variance amongst inspectors and evaluators when conducting a subjective assessment.

Additionally, international alignment can reduce redundant testing requirements and documentation for sponsors of FSTDs that are qualified by multiple national aviation authorities. A long standing requirement for the qualification of FSTDs by the FAA and many other national aviation authorities is the development of a MQTG which documents that the FSTD meets the evaluation requirements and any required objective testing of the FSTD as compared to flight test or other validation data. Where FSTDs are qualified by different countries and national aviation authorities under different standards, the FSTD sponsor is sometimes required to create redundant documentation and conduct additional testing to meet each individual qualification standard. This usually results in complex differences matrices and, in some cases, completely different MQTG documents for each qualifying authority. Where standards are aligned on an international basis, this redundant documentation and testing burden can be significantly reduced. Furthermore, because much of the flight test data needed to validate the individual objective test cases is supplied by common data sources, the burden on the simulation data providers can

<sup>37</sup> § 60.7(a) requires that an FSTD sponsor holds or is an applicant for a certificate under part 119, 141, or 142.

<sup>38</sup> 14 CFR part 60, Appendix A, Attachment 2, paragraph 11 "Validation Test Tolerances" recommends that 20% of the corresponding flight test tolerances should be used.

potentially be reduced through a reduction of flight test data collection needed to meet the requirements of multiple different FSTD evaluation standards.

Finally, as mentioned previously in this document, the FAA believes that a large portion of industry looks favorably on international alignment and has demonstrated a willingness to adopt such standards in the past. Since the publication of ICAO 9625, Edition 3, in 2009, the FAA has received numerous inquiries and requests from many sectors of the industry (including air carriers, trade associations, FSTD manufacturers, and FSTD data providers) requesting the adoption of this updated document. Prior to this rulemaking, previous versions of the FAA and European FSTD evaluation standards were developed and aligned with previous versions of the ICAO 9625 document. This included the FAA's (draft) AC 120-40C which was aligned with the ICAO 9625, Edition 1, document as well as the existing (2008) part 60 standard, which was aligned with the ICAO 9625, Edition 2, document. Further demonstrating industry's desire to maintain alignment with the latest international FSTD evaluation standards, during the time period between 1995 and 2010 before the initial part 60 rule became effective, industry requested and the FAA qualified over 250 FSTDs using more

stringent internationally aligned FSTD evaluation standards on a completely voluntary basis.<sup>39</sup> The FAA believes this is strongly indicative that many sectors of the industry have found benefits in using internationally aligned FSTD evaluation standards to initially qualify new FSTDs.

**IV. Regulatory Notices and Analyses**

*A. Regulatory Evaluation*

Changes to Federal regulations must undergo several economic analyses. First, Executive Order 12866 and Executive Order 13563 direct that each Federal agency shall propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs. Second, the Regulatory Flexibility Act of 1980 (Pub. L. 96-354) requires agencies to analyze the economic impact of regulatory changes on small entities. Third, the Trade Agreements Act (Pub. L. 96-39) prohibits agencies from setting standards that create unnecessary obstacles to the foreign commerce of the United States. In developing U.S. standards, this Trade Act requires agencies to consider international standards and, where appropriate, that they be the basis of U.S. standards. Fourth, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4) requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final

rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of \$100 million or more annually (adjusted for inflation with base year of 1995). This portion of the preamble summarizes the FAA's analysis of the economic impacts of this final rule. We suggest readers seeking greater detail read the full regulatory evaluation, a copy of which we have placed in the docket for this rulemaking.

In conducting these analyses, the FAA has determined that this final rule: (1) Has benefits that justify its costs, (2) is not an economically "significant regulatory action" as defined in section 3(f) of Executive Order 12866, (3) is not "significant" as defined in DOT's Regulatory Policies and Procedures; (4) will not have a significant economic impact on a substantial number of small entities; (5) will not create unnecessary obstacles to the foreign commerce of the United States; and (6) will not impose an unfunded mandate on state, local, or tribal governments, or on the private sector by exceeding the threshold identified above. These analyses are summarized below.

**Total Benefits and Costs of This Rule**

The table below summarizes the estimated costs and benefits of this proposal.

		Present value at a 7% rate	Present value at a 3% rate
FSTD Modifications for New Training Requirements:			
Cost .....	\$72,716,590	\$63,610,049	\$68,562,049
Benefits .....	Rational simulator owner will choose to comply.		
Icing provisions:			
Cost .....	\$1,256,250	\$1,098,926	\$1,184,476
Benefits .....	Only one prevented severe injury valued at \$2.5 million makes the icing benefits exceed the costs.		
Aligning Standards with ICAO:			
Cost .....	\$6,875,000	\$5,356,979	\$6,132,690
Benefits .....	Improved safety and cost savings		
<b>Total Cost .....</b>	<b>\$80,847,840</b>	<b>\$70,065,954</b>	<b>\$75,879,215</b>

**Costs**

Within each of the estimates we estimated three separate sets of costs, and later in the document provide

separate benefit bases. These three sets include:

*Modifications of Previously Qualified FSTDs for New Training Requirements.* The first set of costs will be incurred to make the necessary modifications to the

FSTDs to enable training required by the new Crewmember and Aircraft Dispatcher Training final rule. A potential lack of full flight simulator (FFS) fidelity could contribute to inaccurate or incomplete training for

<sup>39</sup> Before part 60 was initially published, the FAA authorized the use of other FSTD evaluation standards as an alternate means of compliance to AC 120-40B. The FAA initially qualified 166

FSTDs against the (draft) AC 120-40C and the ICAO 9625 (edition 2) documents. Another 90 FSTDs were initially qualified under the European JAR STD-1A (amendment 3) standard which was also

substantially harmonized with the ICAO 9625 (edition 2) document.

“extended envelope” training tasks in the new training rule, therefore FSTDs will require evaluation and modification as defined in the FSTD Directive of this part 60 final rule.

*Icing Provisions.* The second set of costs will be incurred for the evaluation and modification of engine and airframe icing models which will enhance existing training requirements for operations using anti-icing/de-icing equipment. This improvement is based on NTSB safety recommendations, recommendations from the International Committee on Aviation Training in Extended Envelopes (ICATEE) and the Stick Pusher and Adverse Weather Event Training Aviation Rulemaking Committee (SPAW ARC), and it aligns with the updated International Civil Aviation Organization (ICAO) 9625 standards. Most of the models that will be installed to update STDs for new training requirements will meet the icing requirements as well. However, the FAA estimates about 15 percent of all of the FSTDs may need additional icing updates to be compliant with the final rule and we estimate the costs of these additional updates.

*Aligning Standards with ICAO.* Lastly there are a set of changes to the part 60 Qualification Performance Standards (QPS) appendices which will align the FSTD standards for some FSTD levels with those of the latest ICAO FSTD

evaluation guidance. This last set of changes will only apply to newly qualified FSTDs.

Assumptions:

A. Estimates are in 2012 \$.

B. The estimated number of previously qualified FSTDs that will potentially be affected by the rule (335) includes all FSTDs that are capable of providing training for part 121 operations and as such are likely to be an overestimate of the number of FSTDs that will be affected by this rule, as some devices may not be used for the training.

C. As in the NPRM Regulatory Impact Analysis for newly qualified FSTDs, we expect minimal incremental cost to meet the standards for the new tasks in the Crewmember and Aircraft Dispatcher Training final rule and the standards for icing.

Who is Potentially Affected by This Rule?

Sponsors of flight simulation training devices.

Changes to Costs From the NPRM to the Final Rule

The FAA made two major changes in the final rule that might be cost relieving, although the FAA did not include these cost savings in the estimated costs.

A. Removal of audio/video record and playback capability requirement;

B. Removal/adjustment of the visual system field of view (FOV) and the transport delay requirements.

The FAA has also revised its cost estimates for the final rule to include additional information gathered from air carriers, FSTD manufacturers, and data providers to better estimate the cost of this rule. One aircraft OEM simulator data provider has indicated that the estimated cost of an enhanced stall model would be in the area of \$25,000 per FSTD. Furthermore, this data provider stated that in order to support the installation of an enhanced stall model, FSTDs running certain versions of their data package would need to be brought up to the latest revision or blockpoint before this installation can take place. The FAA also obtained a cost estimate from a third party provider to implement its model on FSTDs. As a result of this additional information and data and comments received, the FAA has updated its cost estimates for the final rule. Details on the analysis can be found in the Regulatory Impact Analysis accompanying this final rule.

The table below shows the estimates derived during the NPRM phase, and the final rule updated cost estimate from data obtained after NPRM publication. The table indicates the three separate sets of costs incurred over a ten year period.

	NPRM Estimate	Final rule cost estimate	NPRM Present value at a 7% rate	Final rule cost estimate present value at a 7% rate	NPRM Present value at a 3% rate	Final rule cost estimate present value at a 3% rate
FSTD modifications for New Training Requirements:						
Cost .....	\$45,215,480	\$72,716,590	\$32,286,867	\$63,610,049	\$39,014,931	\$68,562,049
Icing provisions:						
Cost .....	468,000	1,256,250	334,183	1,098,926	403,822	1,184,476
Aligning Standards with ICAO:						
Cost .....	6,695,000	6,875,000	4,273,464	5,356,979	5,473,924	6,132,690
Total Cost .....	52,378,480	80,847,840	36,894,514	70,065,954	44,892,676	75,879,215

Benefits of This Rule

Modifying FSTDs To Support the Crewmember and Aircraft Dispatcher Training Final Rule

The best way to understand the benefits of this final rule is to view them in conjunction with the new Crewmember and Aircraft Dispatcher Training final rule. In that rule, the cost/benefit analysis assumed that the new extended envelope training tasks would be conducted in a FSTD capable of producing the flight characteristics of an

aircraft in a stall or upset condition. The Crewmember and Aircraft Dispatcher Training final rule estimated a \$500 hourly FSTD rental rate that included all modifications expected to be required by this final rule. Alternative sensitivity analyses used \$550 and \$600 hourly FSTD rates to reflect the possibility of additional costs for the modifications. The costs generated by either hourly rate were justified and captured by the benefits of that rule.

This final rule takes the next step to develop qualification standards for

updating these FSTDs to ensure the extended envelope training provided is conducted in a realistic, accurate training environment. These modifications require FSTD owners<sup>40</sup> to purchase and install updated data packages, the costs of which are a cost of this rule. Revenues received by FSTD owners for providing a modified FSTD required by the new training tasks are

<sup>40</sup> We use the term owner here and elsewhere rather than sponsor because in isolated instances the FSTD sponsor may not be the owner of the device.

costs previously accounted for in the Crewmember and Aircraft Dispatcher Training final rule and justified by the benefits of that rule. This revenue over time exceeds the cost of this final rule.

The part 60 standards and FSTD modification expense supporting the new training is \$72.7 million (\$63.6 million in present value at 7 percent) and has been fully justified by the new Crewmember and Aircraft Dispatcher Training final rule.

**Icing Provisions**

The second area for benefits is for the icing update. Although this update is not in response to a new training requirement, it will enhance existing training requirements for operations involving anti-icing/de-icing equipment and further address NTSB, <sup>41</sup> <sup>42</sup> ICATEE and SPAW ARC recommendations to the FAA. It also aligns with the updated ICAO 9625 standards. These costs are minor at approximately \$1.3 million dollars and are expected to comprise a small percentage of the total cost of compliance with the FSTD Directive. One avoided severe injury would justify the minor costs of complying with these icing requirements. We received no comments on this benefit discussed in the proposed rule.

**Aligning Standards With ICAO**

Lastly, we have not quantified benefits of aligning part 60 qualification standards with ICAO guidance, but we expect aligned FSTD standards to contribute to improved safety as they are developed by a broad coalition of experts with a combined pool of knowledge and experience. The FAA expects more realistic training to result from these changes. The changes are expected to improve overall FSTD fidelity by enhancing the evaluation standards for visual display resolution, system transport delay, sound direction, and motion cueing.

Furthermore, internationally aligned FSTD standards for FSTD sponsors can reduce the redundant testing and documentation that are required to meet multiple national regulations and standards for FSTD qualification, potentially resulting in cost savings.

The addition of the Level 7 FTD through the ICAO alignment will provide training providers with more options that do not exist today to conduct training at lower cost. If the sponsor chooses to qualify a level 7 FTD, it is because they expect the

benefits to exceed the costs. We have not quantified these costs and benefits.

**B. Regulatory Flexibility Determination**

The Regulatory Flexibility Act of 1980 (Pub. L. 96-354) (RFA) establishes “as a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of the businesses, organizations, and governmental jurisdictions subject to regulation. To achieve this principle, agencies are required to solicit and consider flexible regulatory proposals and to explain the rationale for their actions to assure that such proposals are given serious consideration.” The RFA covers a wide-range of small entities, including small businesses, not-for-profit organizations, and small governmental jurisdictions.

Agencies must perform a review to determine whether a rule will have a significant economic impact on a substantial number of small entities. If the agency determines that it will, the agency must prepare a regulatory flexibility analysis as described in the RFA.

However, if an agency determines that a rule is not expected to have a significant economic impact on a substantial number of small entities, section 605(b) of the RFA provides that the head of the agency may so certify and a regulatory flexibility analysis is not required. The certification must include a statement providing the factual basis for this determination, and the reasoning should be clear. The FAA made such a certification for the initial regulatory flexibility analysis, received no comments, and provides the factual basis below for such a determination in this final regulatory flexibility analysis.

**Description and Estimate of the Number of Small Entities**

Only FSTD sponsors are affected by this rule. FSTD sponsors are air carriers that own FSTDs to train their pilots or training centers that own FSTDs and sell FSTD training time. To identify FSTD sponsors that could be affected retroactively by the FSTD directive,<sup>43</sup> the FAA subjected the 876 FSTDs with an active qualification by the FAA to qualifying criteria designed to eliminate FSTDs not likely to be used in a part 121 training program for the applicable

training tasks (*i.e.*, stall training, upset recovery training, etc.). The remaining list of 335 FSTDs (included in Appendix A of the regulatory evaluation), were sponsored by the 29 companies presented in the table below.

FSTD Sponsor	# of FSTDs
A.T.S. Inc. ....	1
ABX Air, Inc. ....	2
AIMS Community College ....	1
Airbus .....	6
Alaska Airlines .....	4
Allegiant Airlines .....	1
American Airlines .....	50
Atlas Air, Inc .....	3
Boeing Training and Flight Services .....	42
CAE SimuFlite Inc. ....	9
Compass Airlines, LLC .....	1
Delta Air Lines, Inc. ....	27
Embry Riddle Aeronautical Univ. ....	1
Endeavor Air .....	2
ExpressJet Airlines, Inc. ....	3
Federal Express Corp. ....	19
FlightSafety International .....	69
Global One Training Group, LLC .....	1
Hawaiian Airlines, Inc. ....	1
JetBlue Airways .....	6
Kalitta Air, LLC .....	2
Pan Am International Flight Academy .....	26
Sierra Academy of Aeronautics .....	2
Southwest Airlines .....	10
Spirit Airlines, Inc. ....	3
Strategic Simulation Solutions L.L.C. ....	3
Sun Country Airlines .....	1
United Airlines .....	31
United Parcel Service .....	8
<b>Total .....</b>	<b>335</b>

To determine which of the 29 organizations listed in the previous table are small entities, the FAA consulted the U.S. Small Business Administration Table of Small Business Size Standards Matched to North American Industry Classification System Codes.<sup>44</sup> For flight training (NAICS Code 611512) the threshold for small business is revenue of \$25.5 million or less. The size standard for scheduled passenger air transportation (NAICS Code 481111) and scheduled freight air transportation (NAICS Code 481112) and non-scheduled charter passenger air transportation (NAICS Code 481211) is 1,500 employees. After consulting the World Aviation Directory, and other on-line sources, for employees and annual revenues, the FAA identified eight companies that are qualified as small entities. In this

<sup>41</sup> NTSB recommendations A-11-46 and A-11-47 address engine and airframe icing.

<sup>42</sup> www.nts.gov.

<sup>43</sup> Part 60 contains grandfather rights for previously qualified FSTD so the FAA would invoke an FSTD Directive to require modification of previously qualified devices. The FSTD Directive process has provisions for mandating modifications to FSTDs retroactively for safety of flight reasons. See 14 CFR part 60, § 60.23(b).

<sup>44</sup> [http://www.sba.gov/sites/default/files/files/Size\\_Standards\\_Table.pdf](http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf).

instance, the FAA considers eight a substantial number of small entities.

#### Economic Impact

The economic impact of this rule applies differently to previously qualified FSTD sponsors than it would to newly qualified FSTD sponsors. Below is a summary of the two separate analyses performed. One determines the impact of the final rule on small entities that will have to update their previously qualified devices and the other analysis determines the impact on those that would have to purchase a newly qualified device.

#### Economic Impact of Upgrading Previously Qualified FSTDs

Five of the eight small entities are training providers. They are expected to offer this new required training as there would be increased demand for training time in their FSTDs because in addition to current requirements for training, all part 121 PICs and SICs must have two hours of additional training in the first year and additional training time in the future. The FAA found that costs that will be incurred by these small entities in order to train pilots in the tasks required by the new training rule, range from \$122,300 to \$335,842<sup>45</sup> per FSTD and can be recovered by renting the FSTD for 245 hours<sup>46</sup> to 672 hours.<sup>47</sup> To recover modification costs within one year the training company would have to rent the most expensive modified FSTD for 7 two-hour sessions per week (14 hours/week) and 2 hour two-hour sessions per week (4 hours/week) in the case of the least expensive modification. In fact, the owners of these FSTDs will have guaranteed revenue for the life of the airplane used in part 121 operations. Therefore, the rule provides additional profit and would not impose a significant economic impact on these companies. Further, if the training company does not expect to recoup its costs in a reasonable amount of time for a particular FSTD it has the option not to offer the new part 121 training in that FSTD. Therefore, it will not have to incur the modification cost for that device.

<sup>45</sup> There are higher estimated per FSTD costs to update the FSTDs to meet the new training requirements, but these higher costs are for FSTDs owned by large entities.

<sup>46</sup> (\$122,300 divided by \$500 = 245 hours, resulting in 123 two hour sets—(245/2). If the training company offered 2 two hour sets per week it would recover its costs within a year (123/52 = 2).

<sup>47</sup> (\$335,842/\$500 = 672 hours, resulting in 336 two hour sets—(672/2). If the training company offered 6 two hour sets per week it would recover its costs within a year (336/52 = 6).

Three of the companies identified as small businesses are part 121 air carriers. They have to comply with the Crewmember and Aircraft Dispatcher Training final rule by training their pilots in FSTDs that meet the standards of this part 60 rule. The additional pilot training cost in a modified FSTD was accounted for and justified in that training final rule. This part 60 rule simply specifies how the FSTDs need to be modified such that the new training will be in compliance with the Crewmember and Aircraft Dispatcher Training final rule. These part 121 operators have two options. They can purchase training time for their pilots at a qualified training center. Alternatively they could choose to comply with the FSTD Directive by modifying their own FSTDs to train their pilots for the new training tasks. For these operators who already own FSTDs, the cost of complying with the FSTD Directive is estimated to be less than the cost of renting time at a training center to comply with the new requirements. Therefore, we expect that they will choose to modify their devices because it will be less costly to offer training in-house than to send pilots out to training centers. The cost to train pilots in the tasks required by the training rule is a cost of the training rule and not this rule. Thus, the rule will not impose a significant economic impact on these companies, because by modifying their FSTDs these operators will lower their costs.

An estimated 50 of the FSTDs (15 percent) may require additional modifications to comply with the icing requirements of the final rule. We do not know how many are small businesses however the estimated cost of these additional icing modifications (\$25,000) are less than 0.3 percent of the estimated \$10 million cost of a FSTD, which is not a significant impact.

#### Economics of Newly Qualified Devices

It is unknown how many sponsors of newly qualified FSTDs in the future may qualify as small entities, but we expect it will be a substantial number as it could include some or all of the eight identified above. The FAA expects the final rule requirements that address the new training tasks and modify the icing FSTD requirements to be included in future training packages, the revenues obtained from training will exceed the costs, and the cost will be minimal for a newly qualified FSTD. The requirement to align with ICAO guidance however, will result in some cost. The FAA does not know who in the future will be purchasing and qualifying FSTDs after the rule becomes

effective. The FAA estimates that the incremental cost per newly qualified FSTD will be approximately \$33,000. This is less than 0.5 percent of the cost of a new FSTD, which generally costs \$10 million or more. Therefore we do not believe the final rule will have a significant economic impact on a substantial number of small entities that purchase newly qualified FSTDs after the rule is in effect.

Thus this final rule is expected to impact a substantial number of small entities, but not impose a significant negative economic impact. We made a similar determination in the initial regulatory flexibility analysis and received no comments. Therefore, as provided in section 605(b), the head of the FAA certifies that this rulemaking will not result in a significant economic impact on a substantial number of small entities.

#### C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. The FAA has assessed the potential effect of this final rule and determined that the rule will provide improved safety training and will use international standards as its basis and does not create unnecessary obstacles to the foreign commerce of the United States, and the purpose of this rule is the protection of safety.

#### D. Unfunded Mandates Assessment

Title II of the Unfunded Mandates Reform Act of 1995 (Public Law 104–4) requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in an expenditure of \$100 million or more (in 1995 dollars) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector; such a mandate is deemed to be a “significant regulatory action.” The FAA currently

uses an inflation-adjusted value of \$155.0 million in lieu of \$100 million.

#### *E. Paperwork Reduction Act*

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires that the FAA consider the impact of paperwork and other information collection burdens imposed on the public. According to the 1995 amendments to the Paperwork Reduction Act (5 CFR 1320.8(b)(2)(vi)), an agency may not collect or sponsor the collection of information, nor may it impose an information collection requirement unless it displays a currently valid Office of Management and Budget (OMB) control number.

This final rule will impose the following amended information collection requirements. As required by the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)), the FAA has submitted these information collection amendments to OMB for its review. Notice of OMB approval for this information collection will be published in a future **Federal Register** document.

*Summary:* As a result of this final rule, an increase in the currently approved information collection requirements<sup>48</sup> will be imposed on Sponsors of previously qualified FSTDs that require modification for the qualification of certain training tasks as defined in FSTD Directive No. 2. These Sponsors will be required to report FSTD modifications to the FAA as described in §§ 60.23 and 60.16, which would result in a one-time information collection. Additionally, because compliance with the FSTD Directive (for previously qualified FSTDs) and the new QPS requirements (for newly qualified FSTDs) will increase the overall amount of objective testing necessary to maintain FSTD qualification under § 60.19, a slight increase in annual information collection will be required to document such testing.

Additionally, the FAA added deviation authority to § 60.15(c)(5) in the final rule to allow for an FSTD sponsor to deviate from the technical requirements in the part 60 QPS. For FSTD sponsors requesting such a deviation, this will impose a small amount of additional information collection burden.

*Public comments:* The FAA did not receive any substantive comments on the amended information collection requirements as a result of this final rule.

*Use:* For previously qualified FSTDs, the information collection will be used to determine that the requirements of the FSTD Directive have been met. The FAA will use this information to issue amended SOQs for those FSTDs that have been found to meet those requirements and also to determine if the FSTDs annual inspection and maintenance requirements have been met as currently required by part 60.

For FSTD sponsors requesting a deviation as described in § 60.15(c)(5), the information collection will be used to evaluate and track the approval of deviations to support the initial evaluation of FSTDs.

*Respondents (including number of):* The additional information collection burden in this proposal is limited to those FSTD Sponsors that will require specific FSTD qualification for certain training tasks as defined in FSTD Directive 2. Approximately 335 previously qualified FSTDs<sup>49</sup> may require evaluation as described in the FSTD Directive to support the Crewmember and Aircraft Dispatcher Training final rule. The number of respondents would be limited to those Sponsors that maintain FSTDs which may require additional qualification in accordance with the FSTD Directive. Currently, there are 29 FSTD sponsors that may request additional FSTD qualification to support the training requirements in the Crewmember and Aircraft Dispatcher Training final rule.

*Frequency:* This additional information collection would include both a one-time event to report FSTD modifications as required by the FSTD Directive as well as a slight increase to the annual part 60 information collection requirements.

*Annual Burden Estimate:* The FAA estimates that for each additional qualified task required in accordance with FSTD Directive No. 2, the one-time information collection burden to each FSTD Sponsor would be approximately 0.85 hours per FSTD for each additional qualified task.<sup>50</sup> Assuming all five of the additional qualified tasks would be required for each of the estimated 335 FSTDs (including qualification for full stall training, upset recovery training, airborne icing training, takeoff and

landing in gusting crosswinds, and bounced landing training), the cumulative one-time information collection burden would be approximately 1,424 hours. This collection burden would be distributed over a time period of approximately 3 years. This 3 year time period represents the compliance period of the proposed FSTD Directive.

The one-time information collection burden to the Federal government is estimated at approximately 0.6 hours per FSTD for each qualified task to include Aerospace Engineer review and preparation of an FAA response.<sup>51</sup> Assuming all five of the additional qualified tasks will be required for each of the estimated 335 FSTDs, the cumulative one-time information collection burden to the Federal government will be approximately 1,005 hours. The modification of the FSTD's SOQ would be incorporated with the FSTD's next scheduled evaluation, so this will not impose additional burden.

Because the number of objective tests required to maintain FSTD qualification would increase slightly with this proposal, the annual information collection burden would also increase under the FSTD inspection and maintenance requirements of § 60.19. This additional information collection burden is estimated by increasing the average number of required objective tests for Level C and Level D FFSs by four tests.<sup>52</sup> For the estimated 335 FSTDs that may be affected by the FSTD Directive, this will result in an additional 134 hours of annual information collection burden to FSTD Sponsors. This additional collection burden is based upon 0.1 hours<sup>53</sup> per test for a simulator technician to document as required by § 60.19. The additional information collection burden to the Federal government will also increase by approximately 45 hours<sup>54</sup> due to the additional tests that may be sampled and reviewed by the

<sup>51</sup> The 0.6 hour burden on the Federal government is also derived from the existing Part 60 Paperwork Reduction Act supporting statement (OMB-2120-0680), Table 5 (§ 60.16).

<sup>52</sup> For previously qualified FSTDs, the requirements of FSTD Directive No. 2 will add a maximum of four additional objective test cases to the existing requirements.

<sup>53</sup> The 0.1 hour burden is derived from the existing Part 60 Paperwork Reduction Act supporting statement (OMB-2120-0680), Table 6 (§ 60.19) and includes estimated time for the FSTD Sponsor's staff to document the completion of required annual objective testing.

<sup>54</sup> This information collection burden is based upon 0.1 hours per test required for FAA personnel to review. These four additional tests are subject to the approximately 33% of which may be spot checked by FAA personnel on site during a continuing qualification evaluation.

<sup>48</sup> Office of Management and Budget (OMB) control number 2120-0680.

<sup>49</sup> The FAA estimated this from the number of previously qualified FSTDs that simulate aircraft which are currently used in U.S. part 121 air carrier operations. This number of FSTDs has increased from 322 to 335 since the publication of the NPRM.

<sup>50</sup> The 0.85 hour burden is derived from the existing Part 60 Paperwork Reduction Act supporting statement (OMB-2120-0680), Table 5 (§ 60.16) and includes estimated time for the FSTD Sponsor's staff to draft and send the letter as well as estimated time for updating the approved MQTG with new test results.

FAA during continuing qualification evaluations.  
 For new FSTDs qualified after the proposal becomes effective, the changes to the QPS appendices proposed to align with ICAO 9625 as well as the new requirements for the evaluation of stall and icing training maneuvers would result in an estimated average increase

of four objective tests<sup>55</sup> that would require annual documentation as described in § 60.19. For the estimated 23 new<sup>56</sup> Level C and Level D FFSs that may be initially qualified annually by the FAA, this will result in an additional 9 hours of annual information collection burden to FSTD Sponsors and an additional 3 hours of

annual information collection burden to the Federal government. For newly qualified FSTDs, this proposal does not increase the frequency of reporting for FSTD sponsors.  
 The total additional information collection burden for FSTD sponsors as a result of this final rule is summarized in the following tables:

§ 60.16 Private sector burden (One-time cost)	Hours per notification	Hours	Hourly rate	Cost
<b>Additional Tasks/Modifications.</b>				
Number of notifications—1675.				
Management Rep hours to draft letter .....	0.5	838	\$73.74	\$61,794
Management Rep hours to make/insert MQTG change .....	0.25	419	73.74	30,897
Clerk hours to prepare/mail letter .....	0.1	168	29.70	4,990
<b>Total .....</b>		<b>1425</b>		<b>97,681</b>
§ 60.19 Private sector burden (Annual cost)		Hours	Hourly rate	Cost
Simulator technician (FSTD Directive No. 2) .....		134	\$42.39	\$5,680
Simulator technician (ICAO Alignment) .....		9	42.39	382
<b>Total .....</b>		<b>143</b>	<b>42.39</b>	<b>6,062</b>

The total additional information collection burden for the Federal government as a result of this final rule is summarized in the following tables:

§ 60.16 Federal burden (One-time cost)	Hours per notification	Hours	Hourly rate	Cost
<b>Number of Notifications—1675.</b>				
Engineer/Pilot (equivalent of GS14, Step 1) .....	0.5	838	\$65.96	\$55,274
Clerk (equivalent of GS10, Step 1) .....	0.1	168	35.64	5,988
<b>Total .....</b>		<b>1006</b>		<b>61,262</b>
§ 60.19 Federal burden (Annual cost)		Hours	Hourly rate	Cost
Federal Aviation Safety Inspector Review (FSTD Directive No. 2) .....		45	\$65.96	\$2,968
Federal Aviation Safety Inspector Review (ICAO Alignment) .....		3	65.96	198
<b>Total .....</b>		<b>48</b>	<b>65.96</b>	<b>3,166</b>

Additionally, as a result of public comments filed in response to the NPRM for this rule, the FAA added deviation authority to § 60.15(c)(5). The primary purpose for including this deviation authority is to allow for FSTD sponsors to initially qualify a new FSTD using internationally recognized FSTD evaluation standards, including those issued by the ICAO or another national aviation authority. This will improve international harmonization of FSTD evaluation standards as well as reduce redundant FSTD qualification documentation in instances where an FSTD is qualified by multiple national

aviation authorities or evaluated under a bilateral agreement. Because an FSTD sponsor will have to submit a request to the FAA for the approval of a deviation, there will be an information collection burden for those FSTD sponsors or manufacturers that choose to request deviation authority. Since such deviations will generally be applicable only to those FSTDs that are undergoing an initial evaluation, and the total number of initial FSTD evaluations the FAA conducts averages around 50 per year, the burden for this information collection is expected to be very small. Furthermore, it is expected that most of

these deviations will be submitted by FSTD manufacturers for the initial evaluation of multiple FSTDs as provisioned for in the deviation authority section of the final rule. As a result, the number of deviation requests received by the FAA will be mainly limited to a few FSTD manufacturers and will result in a negligible information collection burden.

*F. International Compatibility and Cooperation*

(1) In keeping with United States (U.S.) obligations under the Convention on International Civil Aviation, it is FAA policy to conform to International

<sup>55</sup> These four additional tests were estimated through comparison between the current and proposed list of objective tests required for qualification (Table A2A). Note that the total

number of tests can vary between FSTDs as a function of aircraft type, test implementation, and the employment of certain technologies that would require additional testing.

<sup>56</sup> Based upon internal records review, the FAA calculated the number of newly qualified fixed-wing Level C and Level D FSTDs at approximately 23 per year over a ten year period.

Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. The FAA has determined that there are no ICAO Standards and Recommended Practices that correspond to these proposed regulations.

(2) Executive Order (EO) 13609, Promoting International Regulatory Cooperation, (77 FR 26413, May 4, 2012) promotes international regulatory cooperation to meet shared challenges involving health, safety, labor, security, environmental, and other issues and reduce, eliminate, or prevent unnecessary differences in regulatory requirements. The FAA has analyzed this action under the policy and agency responsibilities of Executive Order 13609, Promoting International Regulatory Cooperation. The agency has determined that this action would reduce differences between U.S. aviation standards and those of other civil aviation authorities by aligning the part 60 FSTD qualification standards with that of the latest international FSTD qualification guidance document (ICAO 9625) for equivalent FSTD levels.

(3) Harmonization. The FSTD evaluation standards that have been codified in this final rule were the result of numerous recommendations received from working groups that the FAA participated in on a collaborative basis. Many of these working groups had significant international presence from both industry and international regulatory authorities. Furthermore, much of the foundation of this final rule has been based upon the guidance material developed by the International Civil Aviation Organization which provides such material to promote international harmonization on aviation safety issues.

#### G. Environmental Analysis

FAA Order 1050.1F identifies FAA actions that are categorically excluded from preparation of an environmental assessment or environmental impact statement under the National Environmental Policy Act in the absence of extraordinary circumstances. The FAA has determined this rulemaking action qualifies for the categorical exclusion identified in paragraph 5–6.6.(f) and involves no extraordinary circumstances.

### V. Executive Order Determinations

#### A. Executive Order 13132, Federalism

The FAA has analyzed this final rule under the principles and criteria of Executive Order 13132, Federalism. The agency determined that this action will not have a substantial direct effect on

the States, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, does not have Federalism implications.

#### B. Executive Order 13211, Regulations that Significantly Affect Energy Supply, Distribution, or Use

The FAA analyzed this final rule under Executive Order 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). The agency has determined that it is not a “significant energy action” under the executive order and it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

### VI. How To Obtain Additional Information

#### A. Rulemaking Documents

An electronic copy of a rulemaking document may be obtained by using the Internet—

1. Search the Federal eRulemaking Portal (<http://www.regulations.gov>);
2. Visit the FAA’s Regulations and Policies Web page at [http://www.faa.gov/regulations\\_policies/](http://www.faa.gov/regulations_policies/) or
3. Access the Government Printing Office’s Web page at <http://www.gpo.gov/fdsys/>.

Copies may also be obtained by sending a request (identified by notice, amendment, or docket number of this rulemaking) to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue SW., Washington, DC 20591, or by calling (202) 267–9680.

#### B. Comments Submitted to the Docket

Comments received may be viewed by going to <http://www.regulations.gov> and following the online instructions to search the docket number for this action. Anyone is able to search the electronic form of all comments received into any of the FAA’s dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.).

#### C. Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996 requires FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. A small entity with questions regarding this document, may contact its local FAA official, or the person listed under the **FOR FURTHER INFORMATION CONTACT**

heading at the beginning of the preamble. To find out more about SBREFA on the Internet, visit [http://www.faa.gov/regulations\\_policies/rulemaking/sbre\\_act/](http://www.faa.gov/regulations_policies/rulemaking/sbre_act/).

### List of Subjects in 14 CFR Part 60

Air Carriers, Aircraft, Aviation safety, Reporting and recordkeeping requirements, Safety Transportation.

### The Amendment

For the reasons set forth in the preamble, amend part 60 of title 14 of the Code of Federal Regulations as follows:

### PART 60—FLIGHT SIMULATION TRAINING DEVICE INITIAL AND CONTINUING QUALIFICATION AND USE

- 1. The authority citation for part 60 is revised to read as follows:

**Authority:** 49 U.S.C. 106(f), 106(g), 40113, and 44701; Pub. L. 111–216, 124 Stat. 2348 (49 U.S.C. 44701 note)

- 2. Amend § 60.15 by adding paragraph (c)(5), revising paragraph (e), and adding paragraph (g)(7) to read as follows:

#### § 60.15 Initial Qualification requirements.

\* \* \* \* \*

(c) \* \* \*

(5) An FSTD sponsor or FSTD manufacturer may submit a request to the Administrator for approval of a deviation from the QPS requirements as defined in Appendix A through Appendix D of this part.

(i) Requests for deviation must be submitted in a form and manner acceptable to the Administrator and must provide sufficient justification that the deviation meets or exceeds the testing requirements and tolerances as specified in the part 60 QPS or will otherwise not adversely affect the fidelity and capability of the FSTDs evaluated and qualified under the deviation.

(ii) The Administrator may consider deviation from the minimum requirements tables, the objective testing tables, the functions and subjective testing tables, and other supporting tables and requirements in the part 60 QPS.

(iii) Deviations may be issued to an FSTD manufacturer for the initial qualification of multiple FSTDs, subject to terms and limitations as determined by Administrator. Approved deviations will become a part of the permanent qualification basis of the individual FSTD and will be noted in the FSTD’s Statement of Qualification.

(iv) If the FAA publishes a change to the existing part 60 standards as

described in paragraph (c)(1) of this section or issues an FSTD Directive as described in § 60.23(b), which conflicts with or supersedes an approved deviation, the Administrator may terminate or revise a grant of deviation authority issued under this paragraph.

(e) The subjective tests that form the basis for the statements described in paragraph (b) of this section and the objective tests referenced in paragraph (f) of this section must be accomplished at the sponsor's training facility or other sponsor designated location where training will take place, except as provided for in the applicable QPS.

(g) (7) A statement referencing any deviations that have been granted and included in the permanent qualification basis of the FSTD.

■ 3. Amend § 60.17 by revising paragraph (a) to read as follows:

§ 60.17 Previously qualified FSTDs.

(a) Unless otherwise specified by an FSTD Directive, further referenced in the applicable QPS, or as specified in paragraph (e) of this section, an FSTD qualified before May 31, 2016 will retain its qualification basis as long as it continues to meet the standards, including the objective test results recorded in the MQTG and subjective tests, under which it was originally evaluated, regardless of sponsor. The sponsor of such an FSTD must comply with the other applicable provisions of this part.

■ 4. Amend § 60.19 by revising paragraphs (b)(4) through (6) to read as follows:

§ 60.19 Inspection, continuing qualification evaluation, and maintenance requirements.

(b) (4) The frequency of NSPM-conducted continuing qualification evaluations for each FSTD will be established by the NSPM and specified in the Statement of Qualification.

(5) Continuing qualification evaluations conducted in the 3 calendar months before or after the calendar month in which these continuing qualification evaluations are required will be considered to have been conducted in the calendar month in which they were required.

(6) No sponsor may use or allow the use of or offer the use of an FSTD for flight crewmember training or

evaluation or for obtaining flight experience for the flight crewmember to meet any requirement of this chapter unless the FSTD has passed an NSPM-conducted continuing qualification evaluation within the time frame specified in the Statement of Qualification or within the grace period as described in paragraph (b)(5) of this section.

■ 5. Amend § 60.23 by revising paragraph (a)(2) to read as follows:

§ 60.23 Modifications to FSTDs.

(2) Changes are made to either software or hardware that are intended to impact flight or ground dynamics; changes are made that impact performance or handling characteristics of the FSTD (including motion, visual, control loading, or sound systems for those FSTD levels requiring sound tests and measurements); or changes are made to the MQTG. Changes to the MQTG which do not affect required objective testing results or validation data approved during the initial evaluation of the FSTD are not considered modifications under this section.

- 6. Amend Appendix A by:
■ A. Revising paragraph 1.b.;
■ B. Revising paragraph 1.d.(22);
■ C. Revising paragraph 1.d.(25);
■ D. Revising paragraph 1.d.(26);
■ E. Revising paragraph 11.b.(2);
■ F. Removing and reserving paragraph 11.e.(2);
■ G. Revising paragraph 11.h;
■ H. Revising paragraph 13.b; and
■ I. Revising paragraph 13.d.

The revisions read as follows:

Appendix A to Part 60—Qualification Performance Standards for Airplane Full Flight Simulators

1. Introduction.

b. Questions regarding the contents of this publication should be sent to the U.S. Department of Transportation, Federal Aviation Administration, Flight Standards Service, National Simulator Program Staff, AFS-205, P.O. Box 20636, Atlanta, Georgia, 30320. Telephone contact numbers for the NSP are: phone, 404-474-5620; fax, 404-474-5656. The NSP Internet Web site address is: http://www.faa.gov/about/initiatives/ntp/. On this Web site you will find an NSP personnel list with telephone and email contact information for each NSP staff member, a list of qualified flight simulation devices, advisory circulars (ACs), a description of the qualification process, NSP policy, and an NSP "In-Works" section. Also

linked from this site are additional information sources, handbook bulletins, frequently asked questions, a listing and text of the Federal Aviation Regulations, Flight Standards Inspector's handbooks, and other FAA links.

(22) International Air Transport Association document, "Flight Simulation Training Device Design and Performance Data Requirements," as amended.

(25) International Civil Aviation Organization (ICAO) Manual of Criteria for the Qualification of Flight Simulation Training Devices, as amended.

(26) Aeroplane Flight Simulation Training Device Evaluation Handbook, Volume I, as amended and Volume II, as amended, The Royal Aeronautical Society, London, UK.

11. Initial (and Upgrade) Qualification Requirements (§ 60.15).

(2) Unless otherwise authorized through prior coordination with the NSPM, a confirmation that the sponsor will forward to the NSPM the statement described in § 60.15(b) in such time as to be received no later than 5 business days prior to the scheduled evaluation and may be forwarded to the NSPM via traditional or electronic means.

h. The sponsor may elect to complete the QTG objective and subjective tests at the manufacturer's facility or at the sponsor's training facility (or other sponsor designated location where training will take place). If the tests are conducted at the manufacturer's facility, the sponsor must repeat at least one-third of the tests at the sponsor's training facility in order to substantiate FFS performance. The QTG must be clearly annotated to indicate when and where each test was accomplished. Tests conducted at the manufacturer's facility and at the sponsor's designated training facility must be conducted after the FFS is assembled with systems and sub-systems functional and operating in an interactive manner. The test results must be submitted to the NSPM.

13. Previously Qualified FFSs (§ 60.17).

b. Simulators qualified prior to May 31, 2016, are not required to meet the general simulation requirements, the objective test requirements or the subjective test requirements of attachments 1, 2, and 3 of this appendix as long as the simulator continues to meet the test requirements contained in the MQTG developed under the original qualification basis.

d. Simulators qualified prior to May 31, 2016, may be updated. If an evaluation is deemed appropriate or necessary by the NSPM after such an update, the evaluation will not require an evaluation to standards

beyond those against which the simulator was originally qualified.

\* \* \* \* \*

■ 7. Amend Attachment 1 to Appendix A:

■ A. By revising Table A1A;

■ B. In Table A1B, “Table of Tasks vs. Simulator Level by:

■ i. Revising text of entry 3.b.;

■ ii. Adding entry 3.b.1;

■ iii. Adding entry 3.b.2; and

■ iv. Adding entry 3.g..

The revisions and additions read as follows:

**Appendix A to Part 60—Qualification Performance Standards for Airplane Full Flight Simulators**

\* \* \* \* \*

**Attachment 1 to Appendix A to Part 60—GENERAL SIMULATOR REQUIREMENTS**

\* \* \* \* \*

Table A1A – Minimum Simulator Requirements						
QPS REQUIREMENTS					INFORMATION	
Entry Number	General Simulator Requirements	Simulator Levels				Notes
		A	B	C	D	

1. General Flight Deck Configuration.						
1.a.	<p>The simulator must have a flight deck that is a replica of the airplane simulated with controls, equipment, observable flight deck indicators, circuit breakers, and bulkheads properly located, functionally accurate and replicating the airplane. The direction of movement of controls and switches must be identical to the airplane. Pilot seats must allow the occupant to achieve the design “eye position” established for the airplane being simulated. Equipment for the operation of the flight deck windows must be included, but the actual windows need not be operable. Additional equipment such as fire axes, extinguishers, and spare light bulbs must be available in the FFS but may be relocated to a suitable location as near as practical to the original position. Fire axes, landing gear pins, and any similar purpose instruments need only be represented in silhouette.</p> <p>The use of electronically displayed images with physical overlay or masking for simulator instruments and/or instrument panels is acceptable provided:</p> <ol style="list-style-type: none"> <li>(1) All instruments and instrument panel layouts are dimensionally correct with differences, if any, being imperceptible to the pilot;</li> <li>(2) Instruments replicate those of the airplane including full instrument functionality and embedded logic;</li> <li>(3) Instruments displayed are free of quantization (stepping);</li> <li>(4) Instrument display characteristics replicate those of the airplane including: resolution, colors, luminance, brightness, fonts, fill patterns, line styles and symbology;</li> <li>(5) Overlay or masking, including bezels and bugs, as applicable, replicates the airplane panel(s);</li> <li>(6) Instrument controls and switches replicate and operate with the same technique, effort, travel and in the same direction as those in the airplane;</li> <li>(7) Instrument lighting replicates that of the airplane and is operated from</li> </ol>	X	X	X	X	<p>For simulator purposes, the flight deck consists of all that space forward of a cross section of the flight deck at the most extreme aft setting of the pilots' seats, including additional required crewmember duty stations and those required bulkheads aft of the pilot seats. For clarification, bulkheads containing only items such as landing gear pin storage compartments, fire axes and extinguishers, spare light bulbs, and aircraft document pouches are not considered essential and may be omitted.</p>

						payload for each condition.
<b>2.b.</b>	The simulator must have the computer capacity, accuracy, resolution, and dynamic response needed to meet the qualification level sought.  An SOC is required.	X	X	X	X	
<b>2.c.</b>	Surface operations must be represented to the extent that allows turns within the confines of the runway and adequate controls on the landing and roll-out from a crosswind approach to a landing.	X				
<b>2.d.</b>	Ground handling and aerodynamic programming must include the following:					
<b>2.d.1.</b>	Ground effect.		X	X	X	Ground effect includes modeling that accounts for roundout, flare, touchdown, lift, drag, pitching moment, trim, and power while in ground effect.
<b>2.d.2.</b>	Ground reaction.  Ground reaction modeling must produce the appropriate effects during bounced or skipped landings, including the effects and indications of ground contact due to landing in an abnormal aircraft attitude (e.g. tailstrike or nosewheel contact). An SOC is required.		X	X	X	Ground reaction includes modeling that accounts for strut deflections, tire friction, and side forces. This is the reaction of the airplane upon contact with the runway during landing, and may differ with changes in factors such as gross weight, airspeed, or rate of descent on touchdown.
<b>2.d.3.</b>	Ground handling characteristics, including aerodynamic and ground reaction modeling including steering inputs, operations with crosswind, braking, thrust reversing, deceleration, and turning radius.		X	X	X	In developing gust models for use in training, the FSTD sponsor should coordinate with the data provider to ensure that

	<p>Aerodynamic and ground reaction modeling to support training in crosswinds and gusting crosswinds up to the aircraft’s maximum demonstrated crosswind component. Realistic gusting crosswind profiles must be available to the instructors that have been tuned in intensity and variation to require pilot intervention to avoid runway departure during takeoff or landing roll.</p> <p>An SOC is required describing source data used to construct gusting crosswind profiles.</p>			X	X	the gust models do not exceed the capabilities of the aerodynamic and ground models.
2.e.	<p>If the aircraft being simulated is one of the aircraft listed in § 121.358, Low-altitude windshear system equipment requirements, the simulator must employ windshear models that provide training for recognition of windshear phenomena and the execution of recovery procedures. Models must be available to the instructor/evaluator for the following critical phases of flight:</p> <ul style="list-style-type: none"> <li>(1) Prior to takeoff rotation;</li> <li>(2) At liftoff;</li> <li>(3) During initial climb; and</li> <li>(4) On final approach, below 500 ft AGL.</li> </ul> <p>The QTG must reference the FAA Windshear Training Aid or present alternate airplane related data, including the implementation method(s) used. If the alternate method is selected, wind models from the Royal Aerospace Establishment (RAE), the Joint Airport Weather Studies (JAWS) Project and other recognized sources may be implemented, but must be supported and properly referenced in the QTG. Only those simulators meeting these requirements may be used to satisfy the training requirements of part 121 pertaining to a certificate holder’s approved low-altitude windshear flight training program as described in § 121.409.</p> <p>The addition of realistic levels of turbulence associated with each required windshear profile must be available and selectable to the instructor.</p>			X	X	<p>If desired, Level A and B simulators may qualify for windshear training by meeting these standards; see Attachment 5 of this appendix. Windshear models may consist of independent variable winds in multiple simultaneous components. The FAA Windshear Training Aid presents one acceptable means of compliance with simulator wind model requirements.</p> <p>The simulator should employ a method to ensure the required survivable and non-survivable windshear scenarios are repeatable in the training environment.</p>

	In addition to the four basic windshear models required for qualification, at least two additional “complex” windshear models must be available to the instructor which represent the complexity of actual windshear encounters. These models must be available in the takeoff and landing configurations and must consist of independent variable winds in multiple simultaneous components. The Windshear Training Aid provides two such example “complex” windshear models that may be used to satisfy this requirement.					
<b>2.f.</b>	The simulator must provide for manual and automatic testing of simulator hardware and software programming to determine compliance with simulator objective tests as prescribed in Attachment 2 of this appendix.  An SOC is required.			<b>X</b>	<b>X</b>	Automatic “flagging” of out-of-tolerance situations is encouraged.
<b>2.g.</b>	Relative responses of the motion system, visual system, and flight deck instruments, measured by latency tests or transport delay tests. Motion onset should occur before the start of the visual scene change (the start of the scan of the first video field containing different information) but must occur before the end of the scan of that video field. Instrument response may not occur prior to motion onset. Test results must be within the following limits:					The intent is to verify that the simulator provides instrument, motion, and visual cues that are, within the stated time delays, like the airplane responses. For airplane response, acceleration in the appropriate, corresponding rotational axis is preferred.
<b>2.g.1.</b>	300 milliseconds of the airplane response.	<b>X</b>	<b>X</b>			
<b>2.g.2.</b>	100 milliseconds of the airplane response (motion and instrument cues) 120 milliseconds of the airplane response (visual system cues)			<b>X</b>	<b>X</b>	
<b>2.h.</b>	The simulator must accurately reproduce the following runway conditions: (1) Dry; (2) Wet; (3) Icy; (4) Patchy Wet; (5) Patchy Icy; and			<b>X</b>	<b>X</b>	

	(6) Wet on Rubber Residue in Touchdown Zone;  An SOC is required.					
<b>2.i.</b>	The simulator must simulate: (1) brake and tire failure dynamics, including antiskid failure; and (2) decreased brake efficiency due to high brake temperatures, if applicable.  An SOC is required			<b>X</b>	<b>X</b>	Simulator pitch, side loading, and directional control characteristics should be representative of the airplane.
<b>2.j.</b>	Engine and Airframe Icing Modeling that includes the effects of icing, where appropriate, on the airframe, aerodynamics, and the engine(s). Icing models must simulate the aerodynamic degradation effects of ice accretion on the airplane lifting surfaces including loss of lift, decrease in stall angle of attack, change in pitching moment, decrease in control effectiveness, and changes in control forces in addition to any overall increase in drag. Aircraft systems (such as the stall protection system and autoflight system) must respond properly to ice accretion consistent with the simulated aircraft.  Aircraft OEM data or other acceptable analytical methods must be utilized to develop ice accretion models. Acceptable analytical methods may include wind tunnel analysis and/or engineering analysis of the aerodynamic effects of icing on the lifting surfaces coupled with tuning and supplemental subjective assessment by a subject matter expert pilot.  SOC and tests required. See objective testing requirements (Attachment 2, test 2.i.).			<b>X</b>	<b>X</b>	SOC should be provided describing the effects which provide training in the specific skills required for recognition of icing phenomena and execution of recovery. The SOC should describe the source data and any analytical methods used to develop ice accretion models including verification that these effects have been tested.  Icing effects simulation models are only required for those airplanes authorized for operations in icing conditions.  See Attachment 7 of this Appendix for further guidance material.
<b>2.k.</b>	The aerodynamic modeling in the simulator must include:				<b>X</b>	See Attachment 2 of this

	<p>(1) Low-altitude level-flight ground effect;  (2) Mach effect at high altitude;  (3) Normal and reverse dynamic thrust effect on control surfaces;  (4) Aeroelastic representations; and  (5) Nonlinearities due to sideslip.</p> <p>An SOC is required and must include references to computations of aeroelastic representations and of nonlinearities due to sideslip.</p>				<p>appendix, paragraph 5, for further information on ground effect.</p>	
<b>2.l.</b>	<p>The simulator must have aerodynamic and ground reaction modeling for the effects of reverse thrust on directional control, if applicable.</p> <p>An SOC is required.</p>		<b>X</b>	<b>X</b>	<b>X</b>	
<b>2.m.</b>	<p><b>High Angle of Attack Modeling</b>  Aerodynamic stall modeling that includes degradation in static/dynamic lateral-directional stability, degradation in control response (pitch, roll, and yaw), uncommanded roll response or roll-off requiring significant control deflection to counter, apparent randomness or non-repeatability, changes in pitch stability, Mach effects, and stall buffet, as appropriate to the aircraft type.</p> <p>The aerodynamic model must incorporate an angle of attack and sideslip range to support the training tasks. At a minimum, the model must support an angle of attack range to ten degrees beyond the stall identification angle of attack. The stall identification angle of attack is defined as the point where the behavior of the airplane gives the pilot a clear and distinctive indication through the inherent flight characteristics or the characteristics resulting from the operation of a stall identification device (e.g., a stick pusher) that the airplane has stalled.</p> <p>The model must be capable of capturing the variations seen in the stall characteristics of the airplane (e.g., the presence or absence of a pitch break,</p>			<b>X</b>	<b>X</b>	<p>The requirements in this section only apply to those FSTDs that are qualified for full stall training tasks. Sponsors may elect to not qualify an FSTD for full stall training tasks; however, the FSTD's qualification will be restricted to approach to stall training tasks that terminate at the activation of the stall warning system.</p> <p>Specific guidance should be available to the instructor which clearly communicates the flight configurations and stall maneuvers that have been evaluated in the FSTD for use</p>

	<p>deterrent buffet, or other indications of a stall where present on the aircraft). The aerodynamic modeling must support stall training maneuvers in the following flight conditions:</p> <ol style="list-style-type: none"> <li>(1) Stall entry at wings level (1g);</li> <li>(2) Stall entry in turning flight of at least 25° bank angle (accelerated stall);</li> <li>(3) Stall entry in a power-on condition (required only for propeller driven aircraft); and</li> <li>(4) Aircraft configurations of second segment climb, high altitude cruise (near performance limited condition), and approach or landing.</li> </ol> <p>A Statement of Compliance (SOC) is required which describes the aerodynamic modeling methods, validation, and checkout of the stall characteristics of the FSTD. The SOC must also include verification that the FSTD has been evaluated by a subject matter expert pilot acceptable to the FAA. See Attachment 7 of this Appendix for detailed requirements.</p> <p>Where known limitations exist in the aerodynamic model for particular stall maneuvers (such as aircraft configurations and stall entry methods), these limitations must be declared in the required SOC.</p> <p>FSTDs qualified for full stall training tasks must also meet the instructor operating station (IOS) requirements for upset prevention and recovery training (UPRT) tasks as described in section 2.n. of this table. See Attachment 7 of this Appendix for additional requirements.</p>				<p>in training.</p> <p>See Attachment 7 of this Appendix for additional guidance material.</p>	
<b>2.n.</b>	<p>Upset Prevention and Recovery Training (UPRT).  Aerodynamics Evaluation: The simulator must be evaluated for specific upset recovery maneuvers for the purpose of determining that the combination of angle of attack and sideslip does not exceed the range of flight test validated data or wind tunnel/analytical data while performing the recovery maneuver.</p>			<b>X</b>	<b>X</b>	<p>This section generally applies to the qualification of airplane upset recovery training maneuvers or unusual attitude training maneuvers that exceed</p>

	<p>The following minimum set of required upset recovery maneuvers must be evaluated in this manner and made available to the instructor/evaluator. Other upset recovery scenarios as developed by the FSTD sponsor must be evaluated in the same manner:</p> <ul style="list-style-type: none"> <li>(1) A nose-high, wings level aircraft upset;</li> <li>(2) A nose-low aircraft upset; and</li> <li>(3) A high bank angle aircraft upset.</li> </ul> <p>Upset Scenarios: IOS selectable dynamic airplane upsets must provide guidance to the instructor concerning the method used to drive the FSTD into an upset condition, including any malfunction or degradation in the FSTD’s functionality required to initiate the upset. The unrealistic degradation of simulator functionality (such as degrading flight control effectiveness) to drive an airplane upset is generally not acceptable unless used purely as a tool for repositioning the FSTD with the pilot out of the loop.</p> <p>Instructor Operating System (IOS): The simulator must have a feedback mechanism in place to notify the instructor/evaluator when the simulator’s validated aerodynamic envelope and aircraft operating limits have been exceeded during an upset recovery training task. This feedback mechanism must include:</p> <ul style="list-style-type: none"> <li>(1) FSTD validation envelope. This must be in the form of an alpha/beta envelope (or equivalent method) depicting the “confidence level” of the aerodynamic model depending on the degree of flight validation or source of predictive methods. The envelopes must provide the instructor real-time feedback on the simulation during a maneuver. There must be a minimum of a flaps up and flaps down envelope available;</li> <li>(2) Flight control inputs. This must enable the instructor to assess the</li> </ul>			<p>one or more of the following conditions:</p> <ul style="list-style-type: none"> <li>▪ Pitch attitude greater than 25 degrees, nose up</li> <li>▪ Pitch attitude greater than 10 degrees, nose down</li> <li>▪ Bank angle greater than 45 degrees</li> <li>▪ Flight at airspeeds inappropriate for conditions.</li> </ul> <p>FSTDs used to conduct upset recovery maneuvers at angles of attack above the stall warning system activation must meet the requirements for high angle of attack modeling as described in section 2.m.</p> <p>Special consideration should be given to the motion system response during upset prevention and recovery maneuvers. Notwithstanding the limitations of simulator motion, specific emphasis should be placed on tuning out motion system responses.</p>
--	--	--	--	---

	<p>pilot's flight control displacements and forces (including fly-by-wire as appropriate); and</p> <p>(3) Airplane operational limits. This must display the aircraft operating limits during the maneuver as applicable for the configuration of the airplane.</p> <p>Statement of Compliance (SOC): An SOC is required that defines the source data used to construct the FSTD validation envelope. The SOC must also verify that each upset prevention and recovery feature programmed at the instructor station and the associated training maneuver has been evaluated by a suitably qualified pilot using methods described in this section. The statement must confirm that the recovery maneuver can be performed such that the FSTD does not exceed the FSTD validation envelope, or when exceeded, that it is within the realm of confidence in the simulation accuracy.</p>					<p>Consideration should be taken with flight envelope protected airplanes as artificially positioning the airplane to a specified attitude may incorrectly initialize flight control laws.</p> <p>See Attachment 7 of this Appendix for further guidance material.</p>
<b>3. Equipment Operation.</b>						
<b>3.a.</b>	<p>All relevant instrument indications involved in the simulation of the airplane must automatically respond to control movement or external disturbances to the simulated airplane; e.g., turbulence or windshear. Numerical values must be presented in the appropriate units.</p> <p>For Level C and Level D simulators, instrument indications must also respond to effects resulting from icing.</p>	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>3.b.</b>	<p>Communications, navigation, caution, and warning equipment must be installed and operate within the tolerances applicable for the airplane.</p> <p>Instructor control of internal and external navigational aids. Navigation aids must be usable within range or line-of-sight without restriction, as applicable to the geographic area.</p>	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	<p>See Attachment 3 of this appendix for further information regarding long-range navigation equipment.</p>
<b>3.b.1.</b>	<p>Complete navigation database for at least 3 airports with corresponding precision and non-precision approach procedures, including navigational</p>			<b>X</b>	<b>X</b>	

	database updates.					
<b>3.b.2.</b>	Complete navigation database for at least 1 airport with corresponding precision and non-precision approach procedures, including navigational database updates.	X	X			
<b>3.c.</b>	<p>Simulated airplane systems must operate as the airplane systems operate under normal, abnormal, and emergency operating conditions on the ground and in flight.</p> <p>Once activated, proper systems operation must result from system management by the crew member and not require any further input from the instructor's controls.</p>	X	X	X	X	<p>Airplane system operation should be predicated on, and traceable to, the system data supplied by the airplane manufacturer, original equipment manufacturer or alternative approved data for the airplane system or component.</p> <p>At a minimum, alternate approved data should validate the operation of all normal, abnormal, and emergency operating procedures and training tasks the FSTD is qualified to conduct.</p>
<b>3.d.</b>	<p>The simulator must provide pilot controls with control forces and control travel that correspond to the simulated airplane. The simulator must also react in the same manner as in the airplane under the same flight conditions.</p> <p>Control systems must replicate airplane operation for the normal and any non-normal modes including back-up systems and should reflect failures of associated systems.</p> <p>Appropriate cockpit indications and messages must be replicated.</p>	X	X	X	X	
<b>3.e.</b>	Simulator control feel dynamics must replicate the airplane. This must be			X	X	

	determined by comparing a recording of the control feel dynamics of the simulator to airplane measurements. For initial and upgrade qualification evaluations, the control dynamic characteristics must be measured and recorded directly from the flight deck controls, and must be accomplished in takeoff, cruise, and landing flight conditions and configurations.					
<b>3.f.</b>	For aircraft equipped with a stick pusher system, control forces, displacement, and surface position must correspond to that of the airplane being simulated.  A Statement of Compliance (SOC) is required verifying that the stick pusher system has been modeled, programmed, and validated using the aircraft manufacturer's design data or other acceptable data source. The SOC must address, at a minimum, stick pusher activation and cancellation logic as well as system dynamics, control displacement and forces as a result of the stick pusher activation.  Tests required.			<b>X</b>	<b>X</b>	See Appendix A, Table A2A, test 2.a.10 (stick pusher system force calibration) for objective testing requirements.  The requirements in this section only apply to those FSTDs that are qualified for full stall training tasks.
<b>4. Instructor or Evaluator Facilities.</b>						
<b>4.a.</b>	In addition to the flight crewmember stations, the simulator must have at least two suitable seats for the instructor/check airman and FAA inspector. These seats must provide adequate vision to the pilot's panel and forward windows. All seats other than flight crew seats need not represent those found in the airplane, but must be adequately secured to the floor and equipped with similar positive restraint devices.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	The NSPM will consider alternatives to this standard for additional seats based on unique flight deck configurations.
<b>4.b.</b>	The simulator must have controls that enable the instructor/evaluator to control all required system variables and insert all abnormal or emergency conditions into the simulated airplane systems as described in the sponsor's FAA-approved training program; or as described in the relevant operating manual as appropriate.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>4.c.</b>	The simulator must have instructor controls for all environmental effects expected to be available at the IOS; e.g., clouds, visibility, icing,	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	

	precipitation, temperature, storm cells and microbursts, turbulence, and intermediate and high altitude wind speed and direction.					
<b>4.d.</b>	The simulator must provide the instructor or evaluator the ability to present ground and air hazards.			<b>X</b>	<b>X</b>	For example, another airplane crossing the active runway or converging airborne traffic.
<b>5. Motion System.</b>						
<b>5.a.</b>	The simulator must have motion (force) cues perceptible to the pilot that are representative of the motion in an airplane.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	For example, touchdown cues should be a function of the rate of descent (RoD) of the simulated airplane.
<b>5.b.</b>	The simulator must have a motion (force cueing) system with a minimum of three degrees of freedom (at least pitch, roll, and heave).  An SOC is required.	<b>X</b>	<b>X</b>			
<b>5.c.</b>	The simulator must have a motion (force cueing) system that produces cues at least equivalent to those of a six-degrees-of-freedom, synergistic platform motion system (i.e., pitch, roll, yaw, heave, sway, and surge).  An SOC is required.			<b>X</b>	<b>X</b>	
<b>5.d.</b>	The simulator must provide for the recording of the motion system response time.  An SOC is required.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>5.e.</b>	The simulator must provide motion effects programming to include:					
<b>5.e.1.</b>	(1) Thrust effect with brakes set; (2) Runway rumble, oleo deflections, effects of ground speed, uneven runway, centerline lights, and taxiway characteristics; (3) Buffets on the ground due to spoiler/speedbrake extension and thrust reversal; (4) Bumps associated with the landing gear;		<b>X</b>	<b>X</b>	<b>X</b>	If there are known flight conditions where buffet is the first indication of the stall, or where no stall buffet occurs, this characteristic should be included in the model.

	(5) Buffet during extension and retraction of landing gear; (6) Buffet in the air due to flap and spoiler/speedbrake extension; (7) Approach-to-stall buffet and stall buffet (where applicable); (8) Representative touchdown cues for main and nose gear; (9) Nosewheel scuffing, if applicable; (10) Mach and maneuver buffet; (11) Engine failures, malfunctions, and engine damage (12) Tail and pod strike;					
<b>5.e.2.</b>	(13) Taxiing effects such as lateral and directional cues resulting from steering and braking inputs; (14) Buffet due to atmospheric disturbances (e.g. buffets due to turbulence, gusting winds, storm cells, windshear, etc.) in three linear axes (isotropic); (15) Tire failure dynamics; and (16) Other significant vibrations, buffets and bumps that are not mentioned above (e.g. RAT), or checklist items such as motion effects due to pre-flight flight control inputs.			X	X	
<b>5.f.</b>	The simulator must provide characteristic motion vibrations that result from operation of the airplane if the vibration marks an event or airplane state that can be sensed in the flight deck.				X	The simulator should be programmed and instrumented in such a manner that the characteristic buffet modes can be measured and compared to airplane data.
<b>6. Visual System.</b>						
<b>6.a.</b>	The simulator must have a visual system providing an out-of-the-flight deck view.	X	X	X	X	
<b>6.b.</b>	The simulator must provide a continuous collimated field-of-view of at least 45° horizontally and 30° vertically per pilot seat or the number of degrees necessary to meet the visual ground segment requirement, whichever is greater. Both pilot seat visual systems must be operable simultaneously. The minimum horizontal field-of-view coverage must be plus and minus one-half	X	X			Additional field-of-view capability may be added at the sponsor's discretion provided the minimum fields of view are retained.

	(1/2) of the minimum continuous field-of-view requirement, centered on the zero degree azimuth line relative to the aircraft fuselage.  An SOC is required and must explain the system geometry measurements including system linearity and field-of-view.					
<b>6.c.</b>	(Reserved)					
<b>6.d.</b>	The simulator must provide a continuous collimated visual field-of-view of at least 176° horizontally and 36° vertically or the number of degrees necessary to meet the visual ground segment requirement, whichever is greater. The minimum horizontal field-of-view coverage must be plus and minus one-half (1/2) of the minimum continuous field-of-view requirement, centered on the zero degree azimuth line relative to the aircraft fuselage.  An SOC is required and must explain the system geometry measurements including system linearity and field-of-view.			X	X	The horizontal field-of-view is traditionally described as a 180° field-of-view. However, the field-of-view is technically no less than 176°. Additional field-of-view capability may be added at the sponsor's discretion provided the minimum fields of view are retained.
<b>6.e.</b>	The visual system must be free from optical discontinuities and artifacts that create non-realistic cues.	X	X	X	X	Non-realistic cues might include image "swimming" and image "roll-off," that may lead a pilot to make incorrect assessments of speed, acceleration, or situational awareness.
<b>6.f.</b>	The simulator must have operational landing lights for night scenes. Where used, dusk (or twilight) scenes require operational landing lights.	X	X	X	X	
<b>6.g.</b>	The simulator must have instructor controls for the following:  (1) Visibility in statute miles (km) and runway visual range (RVR) in ft.(m); (2) Airport selection; and (3) Airport lighting.	X	X	X	X	

<b>6.h.</b>	The simulator must provide visual system compatibility with dynamic response programming.	X	X	X	X	
<b>6.i.</b>	The simulator must show that the segment of the ground visible from the simulator flight deck is the same as from the airplane flight deck (within established tolerances) when at the correct airspeed, in the landing configuration, at the appropriate height above the touchdown zone, and with appropriate visibility.	X	X	X	X	This will show the modeling accuracy of RVR, glideslope, and localizer for a given weight, configuration, and speed within the airplane's operational envelope for a normal approach and landing.
<b>6.j.</b>	The simulator must provide visual cues necessary to assess sink rates (provide depth perception) during takeoffs and landings, to include: (1) Surface on runways, taxiways, and ramps; and (2) Terrain features.		X	X	X	
<b>6.k.</b>	The simulator must provide for accurate portrayal of the visual environment relating to the simulator attitude.	X	X	X	X	Visual attitude vs. simulator attitude is a comparison of pitch and roll of the horizon as displayed in the visual scene compared to the display on the attitude indicator.
<b>6.l.</b>	The simulator must provide for quick confirmation of visual system color, RVR, focus, and intensity.  An SOC is required.			X	X	
<b>6.m.</b>	The simulator must be capable of producing at least 10 levels of occulting.			X	X	
<b>6.n.</b>	Night Visual Scenes. When used in training, testing, or checking activities, the simulator must provide night visual scenes with sufficient scene content to recognize the airport, the terrain, and major landmarks around the airport. The scene content must allow a pilot to successfully accomplish a visual landing. Scenes must include a definable horizon and typical terrain characteristics such as fields, roads and bodies of water and surfaces illuminated by airplane landing lights.	X	X	X	X	

<p><b>6.o.</b></p>	<p>Dusk (or Twilight) Visual Scenes. When used in training, testing, or checking activities, the simulator must provide dusk (or twilight) visual scenes with sufficient scene content to recognize the airport, the terrain, and major landmarks around the airport. The scene content must allow a pilot to successfully accomplish a visual landing. Dusk (or twilight) scenes, as a minimum, must provide full color presentations of reduced ambient intensity, sufficient surfaces with appropriate textural cues that include self-illuminated objects such as road networks, ramp lighting and airport signage, to conduct a visual approach, landing and airport movement (taxi). Scenes must include a definable horizon and typical terrain characteristics such as fields, roads and bodies of water and surfaces illuminated by airplane landing lights. If provided, directional horizon lighting must have correct orientation and be consistent with surface shading effects. Total night or dusk (twilight) scene content must be comparable in detail to that produced by 10,000 visible textured surfaces and 15,000 visible lights with sufficient system capacity to display 16 simultaneously moving objects.</p> <p>An SOC is required.</p>			<p>X</p>	<p>X</p>	
<p><b>6.p.</b></p>	<p>Daylight Visual Scenes. The simulator must provide daylight visual scenes with sufficient scene content to recognize the airport, the terrain, and major landmarks around the airport. The scene content must allow a pilot to successfully accomplish a visual landing. Any ambient lighting must not “washout” the displayed visual scene. Total daylight scene content must be comparable in detail to that produced by 10,000 visible textured surfaces and 6,000 visible lights with sufficient system capacity to display 16 simultaneously moving objects. The visual display must be free of apparent and distracting quantization and other distracting visual effects while the simulator is in motion.</p> <p>An SOC is required.</p>			<p>X</p>	<p>X</p>	
<p><b>6.q.</b></p>	<p>The simulator must provide operational visual scenes that portray physical</p>			<p>X</p>	<p>X</p>	<p>For example: short runways,</p>

	relationships known to cause landing illusions to pilots.					landing approaches over water, uphill or downhill runways, rising terrain on the approach path, unique topographic features.
<b>6.r.</b>	The simulator must provide special weather representations of light, medium, and heavy precipitation near a thunderstorm on takeoff and during approach and landing. Representations need only be presented at and below an altitude of 2,000 ft. (610 m) above the airport surface and within 10 miles (16 km) of the airport.			<b>X</b>	<b>X</b>	
<b>6.s.</b>	The simulator must present visual scenes of wet and snow-covered runways, including runway lighting reflections for wet conditions, partially obscured lights for snow conditions, or suitable alternative effects.			<b>X</b>	<b>X</b>	
<b>6.t.</b>	The simulator must present realistic color and directionality of all airport lighting.			<b>X</b>	<b>X</b>	
<b>6.u.</b>	The following weather effects as observed on the visual system must be simulated and respective instructor controls provided. <ul style="list-style-type: none"> <li>(1) Multiple cloud layers with adjustable bases, tops, sky coverage and scud effect;</li> <li>(2) Storm cells activation and/or deactivation;</li> <li>(3) Visibility and runway visual range (RVR), including fog and patchy fog effect;</li> <li>(4) Effects on ownship external lighting;</li> <li>(5) Effects on airport lighting (including variable intensity and fog effects);</li> <li>(6) Surface contaminants (including wind blowing effect);</li> <li>(7) Variable precipitation effects (rain, hail, snow);</li> <li>(8) In-cloud airspeed effect; and</li> <li>(9) Gradual visibility changes entering and breaking out of cloud.</li> </ul>			<b>X</b>	<b>X</b>	Scud effects are low, detached, and irregular clouds below a defined cloud layer.  Atmospheric model should support representative effects of wake turbulence and mountain waves as needed to enhance UPRT training.  The mountain wave model should support the atmospheric climb, descent, and roll rates which can be encountered in mountain wave and rotor conditions.

6.v.	The simulator must provide visual effects for: (1) Light poles; (2) Raised edge lights as appropriate; and (3) Glow associated with approach lights in low visibility before physical lights are seen,			X	X	Visual effects for light poles and raised edge lights are for the purpose of providing additional depth perception during takeoff, landing, and taxi training tasks. Three dimensional modeling of the actual poles and stanchions is not required.
<b>7. Sound System.</b>						
7.a.	The simulator must provide flight deck sounds that result from pilot actions that correspond to those that occur in the airplane.	X	X	X	X	
7.b.	The volume control must have an indication of sound level setting which meets all qualification requirements.	X	X	X	X	For Level D simulators, this indication should be readily available to the instructor on or about the IOS and is the sound level setting required to meet the objective testing requirements as described in Table A2A of this Appendix.  For all other simulator levels, this indication is the sound level setting as evaluated during the simulator's initial evaluation.
7.c.	The simulator must accurately simulate the sound of precipitation, windshield wipers, and other significant airplane noises perceptible to the pilot during normal and abnormal operations, and include the sound of a crash (when the simulator is landed in an unusual attitude or in excess of the structural gear limitations); normal engine and thrust reversal sounds; and the sounds of flap,			X	X	For simulators qualified for full stall training tasks, sounds associated with stall buffet should be replicated if significant in the airplane.

	<p>gear, and spoiler extension and retraction.</p> <p>Sounds must be directionally representative.</p> <p>A SOC is required.</p>					
<b>7.d.</b>	<p>The simulator must provide realistic amplitude and frequency of flight deck noises and sounds. Simulator performance must be recorded, compared to amplitude and frequency of the same sounds recorded in the airplane, and be made a part of the QTG. .</p>				<b>X</b>	

* * * * *					
<b>3. Inflight Maneuvers.</b>					
* * * * *					
<b>3.b.</b>	High Angle of Attack Maneuvers				
<b>3.b.1</b>	Approaches to Stall	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>
<b>3.b.2</b>	Full Stall			<b>X</b>	<b>X</b>
<p>Stall maneuvers at angles of attack above the activation of the stall warning system.</p> <p>Required only for FSTDs qualified to conduct full stall training tasks as indicated on the Statement of Qualification.</p>					
* * * * *					
<b>3.g.</b>	Upset Prevention and Recovery Training (UPRT)			<b>X</b>	<b>X</b>
<p>Upset recovery or unusual attitude training maneuvers within the FSTD's validation envelope that are intended to exceed pitch attitudes greater than 25 degrees nose up; pitch attitudes greater than 10 degrees nose down, and bank angles greater than 45 degrees.</p>					
* * * * *					

■ 8. Amend Attachment 2 to Appendix A by revising:

■ A. Paragraph 2.e.;  
 ■ B. Table A2A;

■ C. Paragraph 6.b.;  
 ■ D. Paragraph 6.d.;

- E. Paragraph 11.a.(1);
- F. Paragraph 11.b.(5);
- G. Paragraph 12.a.;

The revisions read as follows:

**Appendix A to Part 60—Qualification  
Performance Standards for Airplane  
Full Flight Simulators**

\* \* \* \* \*

**Attachment 2 to Appendix A to Part 60—FFS  
OBJECTIVE TESTS**

\* \* \* \* \*

2. \* \* \*

\* \* \* \* \*

e. It is not acceptable to program the FFS so that the mathematical modeling is correct only at the validation test points. Unless otherwise noted, simulator tests must

represent airplane performance and handling qualities at operating weights and centers of gravity (CG) typical of normal operation. Simulator tests at extreme weight or CG conditions may be acceptable where required for concurrent aircraft certification testing. Tests of handling qualities must include validation of augmentation devices.

\* \* \* \* \*

1. Performance.									
1.a.	Taxi.								
1.a.1	Minimum radius turn.	±0.9 m (3 ft) or ±20% of airplane turn radius.	Ground.	Plot both main and nose gear loci and key engine parameter(s). Data for no brakes and the minimum thrust required to maintain a steady turn except for airplanes requiring asymmetric thrust or braking to achieve the minimum radius turn.		X	X	X	
1.a.2	Rate of turn versus nosewheel steering angle (NWA).	±10% or ±2°/s of turn rate.	Ground.	Record for a minimum of two speeds, greater than minimum turning radius speed with one at a typical taxi speed, and with a spread of at least 5 kt.		X	X	X	
1.b.	<b>Takeoff.</b>								
					<i>Note.— All airplane manufacturer commonly-used certificated take-off flap settings must be demonstrated at least once either in minimum unstick speed (1.b.3), normal take-off (1.b.4), critical engine failure on take-off (1.b.5) or crosswind take-off (1.b.6).</i>				
1.b.1	Ground acceleration time and distance.	±1.5 s or ±5% of time; and ±61 m (200 ft) or ±5% of distance.	Takeoff.	Acceleration time and distance must be recorded for a minimum of 80% of the total time from brake release to $V_r$ . Preliminary aircraft certification data may be used.	X	X	X	X	May be combined with normal takeoff (1.b.4.) or rejected takeoff (1.b.7.). Plotted data should be shown using appropriate scales for each portion of the maneuver.
1.b.2	Minimum control speed, ground ( $V_{mcg}$ ) using aerodynamic controls only per applicable airworthiness requirement or alternative engine inoperative test to demonstrate ground control characteristics.	±25% of maximum airplane lateral deviation reached or ±1.5 m (5 ft).  For airplanes with reversible flight control systems:  ±2.2 daN (5 lbf) or ±10% of rudder pedal force.	Takeoff.	Engine failure speed must be within ±1 kt of airplane engine failure speed. Engine thrust decay must be that resulting from the mathematical model for the engine applicable to the FSTD under test. If the modeled engine is not the same as the airplane manufacturer's flight test engine, a further test may be run with the same initial conditions using the thrust from the flight test data as the driving parameter.	X	X	X	X	If a $V_{mcg}$ test is not available, an acceptable alternative is a flight test snap engine deceleration to idle at a speed between $V_1$ and $V_1-10$ kt, followed by control of heading using aerodynamic control only and recovery should be achieved with the main gear on the ground.  To ensure only aerodynamic control, nosewheel steering should be disabled (i.e. castored) or the nosewheel held slightly off the ground.
1.b.3	Minimum unstick speed ( $V_{mi}$ ) or equivalent test to	±3 kt airspeed. ±1.5° pitch angle.	Takeoff.	Record time history data from 10 knots before start of rotation until at least 5 seconds after the occurrence of main gear lift-off.	X	X	X	X	$V_{mi}$ is defined as the minimum speed at which the

	demonstrate early rotation take-off characteristics.								last main landing gear leaves the ground. Main landing gear strut compression or equivalent air/ground signal should be recorded. If a $V_{mu}$ test is not available, alternative acceptable flight tests are a constant high-altitude takeoff run through main gear lift-off or an early rotation takeoff.  If either of these alternative solutions is selected, aft body contact/tail strike protection functionality, if present on the airplane, should be active.
<b>1.b.4</b>	Normal take-off.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±6 m (20 ft) height.</p> <p>For airplanes with reversible flight control systems:</p> <p>±2.2 daN (5 lbf) or ±10% of column force.</p>	Takeoff.	<p>Data required for near maximum certificated takeoff weight at mid center of gravity location and light takeoff weight at an aft center of gravity location. If the airplane has more than one certificated takeoff configuration, a different configuration must be used for each weight.</p> <p>Record takeoff profile from brake release to at least 61 m (200 ft) AGL.</p>	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	<p>The test may be used for ground acceleration time and distance (1.b.1).</p> <p>Plotted data should be shown using appropriate scales for each portion of the maneuver.</p>
<b>1.b.5</b>	Critical engine failure on take-off.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±6 m (20 ft) height.</p> <p>±2° roll angle.</p> <p>±2° side-slip angle.</p> <p>±3° heading angle.</p> <p>For airplanes with reversible flight control systems:</p>	Takeoff.	<p>Record takeoff profile to at least 61 m (200 ft) AGL.</p> <p>Engine failure speed must be within ±3 kt of airplane data.</p> <p>Test at near maximum takeoff weight.</p>	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	

		<p>±2.2 daN (5 lbf) or ±10% of column force; ±1.3 daN (3 lbf) or ±10% of wheel force; and ±2.2 daN (5 lbf) or ±10% of rudder pedal force.</p>							
<b>1.b.6</b>	Crosswind takeoff.	<p>± 3 kt airspeed. ±1.5° pitch angle. ±1.5° AOA. ±6 m (20 ft) height. ±2° roll angle. ±2° side-slip angle. ±3° heading angle.  Correct trends at ground speeds below 40 kt for rudder/pedal and heading angle.  For airplanes with reversible flight control systems:  ±2.2 daN (5 lbf) or ±10% of column force;  ±1.3 daN (3 lbf) or ±10% of wheel force; and  ±2.2 daN (5 lbf) or ±10% of rudder pedal force.</p>	Takeoff.	<p>Record takeoff profile from brake release to at least 61 m (200 ft) AGL.  This test requires test data, including wind profile, for a crosswind component of at least 60% of the airplane performance data value measured at 10 m (33 ft) above the runway.  Wind components must be provided as headwind and crosswind values with respect to the runway.</p>	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	In those situations where a maximum crosswind or a maximum demonstrated crosswind is not known, contact the NSPM.
<b>1.b.7.</b>	Rejected Takeoff.	±5% of time or ±1.5 s.	Takeoff.	Record at mass near maximum takeoff weight.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	Autobrakes will be used

		±7.5% of distance or ±76 m (250 ft).		Speed for reject must be at least 80% of V <sub>1</sub> .  Maximum braking effort, auto or manual.  Where a maximum braking demonstration is not available, an acceptable alternative is a test using approximately 80% braking and full reverse, if applicable.  Time and distance must be recorded from brake release to a full stop.					where applicable.
<b>1.b.8.</b>	Dynamic Engine Failure After Takeoff.	±2°/s or ±20% of body angular rates.	Takeoff.	Engine failure speed must be within ±3 kt of airplane data.  Engine failure may be a snap deceleration to idle.  Record hands-off from 5 s before engine failure to +5 s or 30° roll angle, whichever occurs first.  CCA: Test in Normal and Non-normal control state.			X	X	For safety considerations, airplane flight test may be performed out of ground effect at a safe altitude, but with correct airplane configuration and airspeed.
<b>1.c.</b>	<b>Climb.</b>								
<b>1.c.1.</b>	Normal Climb, all engines operating.	±3 kt airspeed.  ±0.5 m/s (100 ft/ min) or ±5% of rate of climb.	Clean.	Flight test data are preferred; however, airplane performance manual data are an acceptable alternative.  Record at nominal climb speed and mid initial climb altitude.  FSTD performance is to be recorded over an interval of at least 300 m (1 000 ft).	X	X	X	X	
<b>1.c.2.</b>	One-engine-inoperative 2nd segment climb.	±3 kt airspeed.  ±0.5 m/s (100 ft/ min) or ±5% of rate of climb, but not less than airplane performance data requirements.	2nd segment climb.	Flight test data is preferred; however, airplane performance manual data is an acceptable alternative.  Record at nominal climb speed.  FSTD performance is to be recorded over an interval of at least 300 m (1,000 ft).  Test at WAT (weight, altitude or temperature) limiting condition.	X	X	X	X	

<b>1.c.3.</b>	One Engine Inoperative En route Climb.	±10% time, ±10% distance, ±10% fuel used	Clean	Flight test data or airplane performance manual data may be used.  Test for at least a 1,550 m (5,000 ft) segment.			<b>X</b>	<b>X</b>	
<b>1.c.4.</b>	One Engine Inoperative Approach Climb for airplanes with icing accountability if provided in the airplane performance data for this phase of flight.	±3 kt airspeed.  ±0.5 m/s (100 ft/ min) or ±5% rate of climb, but not less than airplane performance data.	Approach	Flight test data or airplane performance manual data may be used.  FSTD performance to be recorded over an interval of at least 300 m (1,000 ft).  Test near maximum certificated landing weight as may be applicable to an approach in icing conditions.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	Airplane should be configured with all anti-ice and de-ice systems operating normally, gear up and go-around flap.  All icing accountability considerations, in accordance with the airplane performance data for an approach in icing conditions, should be applied.
<b>1.d.</b>	<b>Cruise / Descent.</b>								
<b>1.d.1.</b>	Level flight acceleration	±5% Time	Cruise	Time required to increase airspeed a minimum of 50 kt, using maximum continuous thrust rating or equivalent.  For airplanes with a small operating speed range, speed change may be reduced to 80% of operational speed change.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>1.d.2.</b>	Level flight deceleration.	±5% Time	Cruise	Time required to decrease airspeed a minimum of 50 kt, using idle power.  For airplanes with a small operating speed range, speed change may be reduced to 80% of operational speed change.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>1.d.3.</b>	Cruise performance.	±.05 EPR or ±3% N1 or ±5% of torque.  ±5% of fuel flow.	Cruise.	The test may be a single snapshot showing instantaneous fuel flow, or a minimum of two consecutive snapshots with a spread of at least 3 minutes in steady flight.			<b>X</b>	<b>X</b>	
<b>1.d.4.</b>	Idle descent.	±3 kt airspeed.  ±1.0 m/s (200 ft/min) or ±5% of rate of descent.	Clean.	Idle power stabilized descent at normal descent speed at mid altitude.  FSTD performance to be recorded over an interval of at least 300 m (1,000 ft).	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>1.d.5.</b>	Emergency descent.	±5 kt airspeed.  ±1.5 m/s (300 ft/min) or ±5% of rate of descent.	As per airplane performance data.	FSTD performance to be recorded over an interval of at least 900 m (3,000 ft).	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	Stabilized descent to be conducted with speed brakes extended if applicable, at mid altitude and near V <sub>mo</sub> or according to emergency

									descent procedure.
<b>1.e.</b>	<b>Stopping.</b>								
<b>1.e.1.</b>	Deceleration time and distance, manual wheel brakes, dry runway, no reverse thrust.	±1.5 s or ±5% of time.  For distances up to 1,220 m (4, 000 ft), the smaller of ±61 m (200 ft) or ±10% of distance.  For distances greater than 1,220 m (4, 000 ft), ±5% of distance.	Landing.	Time and distance must be recorded for at least 80% of the total time from touchdown to a full stop.  Position of ground spoilers and brake system pressure must be plotted (if applicable).  Data required for medium and near maximum certificated landing mass.  Engineering data may be used for the medium mass condition.	X	X	X	X	
<b>1.e.2.</b>	Deceleration time and distance, reverse thrust, no wheel brakes, dry runway.	±1.5 s or ±5% of time; and  the smaller of ±61 m (200 ft) or ±10% of distance.	Landing	Time and distance must be recorded for at least 80% of the total time from initiation of reverse thrust to full thrust reverser minimum operating speed.  Position of ground spoilers must be plotted (if applicable).  Data required for medium and near maximum certificated landing mass.  Engineering data may be used for the medium mass condition.	X	X	X	X	
<b>1.e.3.</b>	Stopping distance, wheel brakes, wet runway.	±61 m (200 ft) or ±10% of distance.	Landing.	Either flight test or manufacturer's performance manual data must be used, where available.  Engineering data, based on dry runway flight test stopping distance and the effects of contaminated runway braking coefficients, are an acceptable alternative.			X	X	
<b>1.e.4.</b>	Stopping distance, wheel brakes, icy runway.	±61 m (200 ft) or ±10% of distance.	Landing.	Either flight test or manufacturer's performance manual data must be used, where available.  Engineering data, based on dry runway flight test stopping distance and the effects of contaminated runway braking coefficients, are an acceptable alternative.			X	X	
<b>1.f.</b>	<b>Engines.</b>								

1.f.1.	Acceleration.	±10% T <sub>i</sub> or ±0.25 s; and ±10% T <sub>t</sub> or ±0.25 s.	Approach or landing	Total response is the incremental change in the critical engine parameter from idle power to go-around power.	X	X	X	X	See Appendix F of this part for definitions of T <sub>i</sub> and T <sub>t</sub> .
1.f.2.	Deceleration.	±10% T <sub>i</sub> or ±0.25 s; and ±10% T <sub>t</sub> or ±0.25 s.	Ground	Total response is the incremental change in the critical engine parameter from maximum takeoff power to idle power.	X	X	X	X	See Appendix F of this part for definitions of T <sub>i</sub> and T <sub>t</sub> .
<b>2. Handling Qualities.</b>									
2.a.	<b>Static Control Tests.</b>								
	<p><i>Note 1 — Testing of position versus force is not applicable if forces are generated solely by use of airplane hardware in the FSTD.</i></p> <p><i>Note 2 — Pitch, roll and yaw controller position versus force or time should be measured at the control. An alternative method in lieu of external test fixtures at the flight controls would be to have recording and measuring instrumentation built into the FSTD. The force and position data from this instrumentation could be directly recorded and matched to the airplane data. Provided the instrumentation was verified by using external measuring equipment while conducting the static control checks, or equivalent means, and that evidence of the satisfactory comparison is included in the MQTG, the instrumentation could be used for both initial and recurrent evaluations for the measurement of all required control checks. Verification of the instrumentation by using external measuring equipment should be repeated if major modifications and/or repairs are made to the control loading system. Such a permanent installation could be used without any time being lost for the installation of external devices. Static and dynamic flight control tests should be accomplished at the same feel or impact pressures as the validation data where applicable.</i></p> <p><i>Note 3 — FSTD static control testing from the second set of pilot controls is only required if both sets of controls are not mechanically interconnected on the FSTD. A rationale is required from the data provider if a single set of data is applicable to both sides. If controls are mechanically interconnected in the FSTD, a single set of tests is sufficient.</i></p>								
2.a.1.a.	Pitch controller position versus force and surface position calibration.	±0.9 daN (2 lbf) breakout. ±2.2 daN (5 lbf) or ±10% of force. ±2° elevator angle.	Ground.	Record results for an uninterrupted control sweep to the stops.	X	X	X	X	Test results should be validated with in-flight data from tests such as longitudinal static stability, stalls, etc.
2.a.1.b.	<b>(Reserved)</b>								
2.a.2.a.	Roll controller position versus force and surface position calibration.	±0.9 daN (2 lbf) breakout. ±1.3 daN (3 lbf) or ±10% of force. ±2° aileron angle. ±3° spoiler angle.	Ground.	Record results for an uninterrupted control sweep to the stops.	X	X	X	X	Test results should be validated with in-flight data from tests such as engine-out trims, steady state side-slips, etc.
2.a.2.b.	<b>(Reserved)</b>								
2.a.3.a.	Rudder pedal position versus force and surface position	±2.2 daN (5 lbf) breakout.	Ground.	Record results for an uninterrupted control sweep to the stops.	X	X	X	X	Test results should be validated with in-flight data from tests such as engine-out

	calibration.	±2.2 daN (5 lbf) or ±10% of force.  ±2° rudder angle.							trims, steady state side-slips, etc.
<b>2.a.3.b.</b>	<b>(Reserved)</b>								
<b>2.a.4.</b>	Nosewheel Steering Controller Force and Position Calibration.	±0.9 daN (2 lbf) breakout.  ±1.3 daN (3 lbf) or ±10% of force.  ±2° NWA.	Ground.	Record results of an uninterrupted control sweep to the stops.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>2.a.5.</b>	Rudder Pedal Steering Calibration.	±2° NWA.	Ground.	Record results of an uninterrupted control sweep to the stops.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>2.a.6.</b>	Pitch Trim Indicator vs. Surface Position Calibration.	±0.5° trim angle.	Ground.		<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	The purpose of the test is to compare FSTD surface position and indicator against the flight control model computed value.
<b>2.a.7.</b>	Pitch Trim Rate.	±10% of trim rate (°/s) or  ±0.1°/s trim rate.	Ground and approach.	Trim rate to be checked at pilot primary induced trim rate (ground) and autopilot or pilot primary trim rate in-flight at go-around flight conditions.  For CCA, representative flight test conditions must be used.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>2.a.8.</b>	Alignment of cockpit throttle lever versus selected engine parameter.	When matching engine parameters:  ±5° of TLA.  When matching detents:  ±3% N1 or ±.03 EPR or ±3% torque, or equivalent.  Where the levers do not have angular travel, a tolerance of ±2 cm (±0.8 in) applies.	Ground.	Simultaneous recording for all engines. The tolerances apply against airplane data.  For airplanes with throttle detents, all detents to be presented and at least one position between detents/ endpoints (where practical). For airplanes without detents, end points and at least three other positions are to be presented.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	Data from a test airplane or engineering test bench are acceptable, provided the correct engine controller (both hardware and software) is used.  In the case of propeller-driven airplanes, if an additional lever, usually referred to as the propeller lever, is present, it should also be checked. This test may be a series of snapshot tests.
<b>2.a.9.</b>	Brake pedal position versus force and	±2.2 daN (5 lbf) or	Ground.	Relate the hydraulic system pressure to pedal	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	FFS computer output results may be used to show

	brake system pressure calibration.	±10% of force.  ±1.0 MPa (150 psi) or ±10% of brake system pressure.		position in a ground static test.  Both left and right pedals must be checked.					compliance.
2.a.10	Stick Pusher System Force Calibration (if applicable)	±10% or ±5 lb (2.2 daN) Stick/Column force	Ground or Flight	Test is intended to validate the stick/column transient forces as a result of a stick pusher system activation.  This test may be conducted in an on-ground condition through stimulation of the stall protection system in a manner that generates a stick pusher response that is representative of an in-flight condition.			X	X	Aircraft manufacturer design data may be utilized as validation data as determined acceptable by the NSPM.  Test requirement may be met through column force validation testing in conjunction with the Stall Characteristics test (2.c.8.a.).  This test is required only for FSTDs qualified to conduct full stall training tasks.
2.b.	<b>Dynamic Control Tests.</b>								
	<i>Note.— Tests 2.b.1, 2.b.2 and 2.b.3 are not applicable for FSTDs where the control forces are completely generated within the airplane controller unit installed in the FSTD. Power setting may be that required for level flight unless otherwise specified. See paragraph 4 of this attachment..</i>								
2.b.1.	Pitch Control.	<b>For underdamped systems:</b>  T(P <sub>0</sub> ) ±10% of P <sub>0</sub> or ±0.05 s.  T(P <sub>1</sub> ) ±20% of P <sub>1</sub> or ±0.05 s.  T(P <sub>2</sub> ) ±30% of P <sub>2</sub> or ±0.05 s.  T(P <sub>n</sub> ) ±10*(n+1)% of P <sub>n</sub> or ±0.05 s.  T(A <sub>n</sub> ) ±10% of A <sub>max</sub> , where A <sub>max</sub> is the largest amplitude or ±0.5% of the total control travel	Takeoff, Cruise, and Landing.	Data must be for normal control displacements in both directions (approximately 25% to 50% of full throw or approximately 25% to 50% of maximum allowable pitch controller deflection for flight conditions limited by the maneuvering load envelope).  Tolerances apply against the absolute values of each period (considered independently).			X	X	n = the sequential period of a full oscillation.  Refer to paragraph 4 of this Attachment.  For overdamped and critically damped systems, see Figure A2B of Appendix A for an illustration of the reference measurement.

		<p>(stop to stop).</p> <p><math>T(A_d) \pm 5\%</math> of <math>A_d =</math> residual band or <math>\pm 0.5\%</math> of the maximum control travel = residual band.</p> <p><math>\pm 1</math> significant overshoots (minimum of 1 significant overshoot).</p> <p>Steady state position within residual band.</p> <p><i>Note 1.— Tolerances should not be applied on period or amplitude after the last significant overshoot.</i></p> <p><i>Note 2.— Oscillations within the residual band are not considered significant and are not subject to tolerances.</i></p> <p><b>For overdamped and critically damped systems only</b>, the following tolerance applies:  <math>T(P_0) \pm 10\%</math> of <math>P_0</math> or <math>\pm 0.05</math> s.</p>							
2.b.2.	Roll Control.	Same as 2.b.1.	Takeoff, Cruise, and Landing.	Data must be for normal control displacement (approximately 25% to 50% of full throw or approximately 25% to 50% of maximum allowable roll controller deflection for flight conditions limited by the maneuvering load envelope).			X	X	Refer to paragraph 4 of this Attachment.  For overdamped and critically damped systems, see Figure A2B of Appendix A for an illustration of the reference measurement.
2.b.3.	Yaw Control.	Same as 2.b.1.	Takeoff, Cruise, and	Data must be for normal control displacement			X	X	Refer to paragraph 4 of this

			Landing.	(approximately 25% to 50% of full throw).				Attachment. For overdamped and critically damped systems, see Figure A2B of Appendix A for an illustration of the reference measurement.
2.b.4.	Small Control Inputs – Pitch.	±0.15°/s body pitch rate or ±20% of peak body pitch rate applied throughout the time history.	Approach or Landing.	Control inputs must be typical of minor corrections made while established on an ILS approach (approximately 0.5 to 2°/s pitch rate).  Test in both directions.  Show time history data from 5 s before until at least 5 s after initiation of control input.  If a single test is used to demonstrate both directions, there must be a minimum of 5 s before control reversal to the opposite direction.  CCA: Test in normal and non-normal control state.			X	X
2.b.5.	Small Control Inputs – Roll.	±0.15°/s body roll rate or ±20% of peak body roll rate applied throughout the time history.	Approach or landing.	Control inputs must be typical of minor corrections made while established on an ILS approach (approximately 0.5 to 2°/s roll rate).  Test in one direction. For airplanes that exhibit non-symmetrical behavior, test in both directions.  Show time history data from 5 s before until at least 5 s after initiation of control input.  If a single test is used to demonstrate both directions, there must be a minimum of 5 s before control reversal to the opposite direction.  CCA: Test in normal and non-normal control state.			X	X
2.b.6.	Small Control Inputs – Yaw.	±0.15°/s body yaw rate or ±20% of peak body yaw rate applied throughout the time history.	Approach or landing.	Control inputs must be typical of minor corrections made while established on an ILS approach (approximately 0.5 to 2°/s yaw rate).  Test in both directions.			X	X

				<p>Show time history data from 5 s before until at least 5 s after initiation of control input.</p> <p>If a single test is used to demonstrate both directions, there must be a minimum of 5 s before control reversal to the opposite direction.</p> <p><b>CCA:</b> Test in normal and non-normal control state.</p>					
<b>2.c.</b>	<b>Longitudinal Control Tests.</b>								
	Power setting is that required for level flight unless otherwise specified.								
<b>2.c.1.</b>	Power Change Dynamics.	±3 kt airspeed. ±30 m (100 ft) altitude. ±1.5° or ±20% of pitch angle.	Approach.	<p>Power change from thrust for approach or level flight to maximum continuous or go-around power.</p> <p>Time history of uncontrolled free response for a time increment equal to at least 5 s before initiation of the power change to the completion of the power change + 15 s.</p> <p><b>CCA:</b> Test in normal and non-normal control mode</p>	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>2.c.2.</b>	Flap/Slat Change Dynamics.	±3 kt airspeed. ±30 m (100 ft) altitude. ±1.5° or ±20% of pitch angle.	Takeoff through initial flap retraction, and approach to landing.	<p>Time history of uncontrolled free response for a time increment equal to at least 5 s before initiation of the reconfiguration change to the completion of the reconfiguration change + 15 s.</p> <p><b>CCA:</b> Test in normal and non-normal control mode</p>	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>2.c.3.</b>	Spoiler/Speedbrake Change Dynamics.	±3 kt airspeed. ±30 m (100 ft) altitude. ±1.5° or ±20% of pitch angle.	Cruise.	<p>Time history of uncontrolled free response for a time increment equal to at least 5 s before initiation of the configuration change to the completion of the configuration change + 15 s.</p> <p>Results required for both extension and retraction.</p> <p><b>CCA:</b> Test in normal and non-normal control mode</p>	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>2.c.4.</b>	Gear Change	±3 kt airspeed.	Takeoff (retraction), and	Time history of uncontrolled free response for a	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	

	Dynamics.	±30 m (100 ft) altitude.  ±1.5° or ±20% of pitch angle.	Approach (extension).	time increment equal to at least 5 s before initiation of the configuration change to the completion of the configuration change + 15 s.  CCA: Test in normal and non-normal control mode					
2.c.5.	Longitudinal Trim.	±1° elevator angle.  ±0.5° stabilizer or trim surface angle.  ±1° pitch angle.  ±5% of net thrust or equivalent.	Cruise, Approach, and Landing.	Steady-state wings level trim with thrust for level flight. This test may be a series of snapshot tests.  CCA: Test in normal or non-normal control mode, as applicable.	X	X	X	X	
2.c.6.	Longitudinal Maneuvering Stability (Stick Force/g).	±2.2 daN (5 lbf) or ±10% of pitch controller force.  Alternative method:  ±1° or ±10% of the change of elevator angle.	Cruise, Approach, and Landing.	Continuous time history data or a series of snapshot tests may be used.  Test up to approximately 30° of roll angle for approach and landing configurations. Test up to approximately 45° of roll angle for the cruise configuration.  Force tolerance not applicable if forces are generated solely by the use of airplane hardware in the FSTD.  Alternative method applies to airplanes which do not exhibit stick-force-per-g characteristics.  CCA: Test in normal or non-normal control mode	X	X	X	X	
2.c.7.	Longitudinal Static Stability.	±2.2 daN (5 lbf) or ±10% of pitch controller force.  Alternative method:  ±1° or ±10% of the change of elevator angle.	Approach.	Data for at least two speeds above and two speeds below trim speed. The speed range must be sufficient to demonstrate stick force versus speed characteristics.  This test may be a series of snapshot tests.  Force tolerance is not applicable if forces are generated solely by the use of airplane hardware in the FSTD.	X	X	X	X	

				<p>Alternative method applies to airplanes which do not exhibit speed stability characteristics.</p> <p>CCA: Test in normal or non-normal control mode, as applicable.</p>					
2.c.8.a	Stall Characteristics	<p>±3 kt airspeed for stall warning and stall speeds.</p> <p>±2.0° angle of attack for buffet threshold of perception and initial buffet based upon Nz component.</p> <p>Control inputs must be plotted and demonstrate correct trend and magnitude.</p> <p>Approach to stall: ±2.0° pitch angle; ±2.0° angle of attack; and ±2.0° bank angle</p> <p>Stall warning up to stall: ±2.0° pitch angle; ±2.0° angle of attack; and Correct trend and magnitude for roll rate and yaw rate.</p> <p>Stall Break and Recovery: SOC Required (see Attachment 7)</p> <p>Additionally, for those simulators with reversible flight control systems or equipped with stick pusher</p>	Second Segment Climb, High Altitude Cruise (Near Performance Limited Condition), and Approach or Landing	<p>Each of the following stall entries must be demonstrated in at least one of the three flight conditions:</p> <ul style="list-style-type: none"> <li>▪ Stall entry at wings level (1g)</li> <li>▪ Stall entry in turning flight of at least 25° bank angle (accelerated stall)</li> <li>▪ Stall entry in a power-on condition (required only for propeller driven aircraft)</li> </ul> <p>The cruise flight condition must be conducted in a flaps-up (clean) configuration. The second segment climb flight condition must use a different flap setting than the approach or landing flight condition.</p> <p>Record the stall warning signal and initial buffet, if applicable. Time history data must be recorded for full stall through recovery to normal flight. The stall warning signal must occur in the proper relation to buffet/stall. FSTDs of airplanes exhibiting a sudden pitch attitude change or “g break” must demonstrate this characteristic. FSTDs of airplanes exhibiting a roll off or loss of roll control authority must demonstrate this characteristic.</p> <p>Numerical tolerances are not applicable past the stall angle of attack, but must demonstrate correct trend through recovery. See Attachment 7 for additional requirements and information concerning data sources and required angle of attack ranges.</p> <p>CCA: Test in normal and non-normal control states. For CCA aircraft with stall envelope protection systems, the normal mode testing is only required to an angle of attack range necessary to demonstrate the correct operation of the system. These tests may be used to satisfy the required</p>			X	X	<p>Buffet threshold of perception should be based on 0.03 g peak to peak normal acceleration above the background noise at the pilot seat. Initial buffet to be based on normal acceleration at the pilot seat with a larger peak to peak value relative to buffet threshold of perception (some airframe manufacturers have used 0.1 g peak to peak). Demonstrate correct trend in growth of buffet amplitude from initial buffet to stall speed for normal and lateral acceleration.</p> <p>The FSTD sponsor/FSTD manufacturer may limit maximum buffet based on motion platform capability/limitations or other simulator system limitations.</p> <p>Tests may be conducted at centers of gravity and weights typically required for airplane certification stall testing.</p> <p>This test is required only for FSTDs qualified to conduct full stall training tasks.</p> <p>In instances where flight test validation data is limited due to safety of flight considerations, engineering simulator validation data may</p>

		systems: $\pm 10\%$ or $\pm 5$ lb (2.2 daN)) Stick/Column force (prior to the stall angle of attack).		(angle of attack) flight maneuver and envelope protection tests (test 2.h.6.). Non-normal control states must be tested through stall identification and recovery.				be used in lieu of flight test validation data for angles of attack that exceed the activation of a stall protection system or stick pusher system.  Where approved engineering simulation validation is used, the reduced engineering tolerances (as defined in paragraph 11 of this appendix) do not apply.
2.c.8.b	Approach to Stall Characteristics	$\pm 3$ kt airspeed for stall warning speeds.  $\pm 2.0^\circ$ angle of attack for initial buffet.  Control displacements and flight control surfaces must be plotted and demonstrate correct trend and magnitude.  $\pm 2.0^\circ$ pitch angle; $\pm 2.0^\circ$ angle of attack; and $\pm 2.0^\circ$ bank angle  Additionally, for those simulators with reversible flight control systems: $\pm 10\%$ or $\pm 5$ lb (2.2 daN)) Stick/Column force	Second Segment Climb, High Altitude Cruise (Near Performance Limited Condition), and Approach or Landing	Each of the following stall entries must be demonstrated in at least one of the three flight conditions: <ul style="list-style-type: none"> <li>Approach to stall entry at wings level (1g)</li> <li>Approach to stall entry in turning flight of at least <math>25^\circ</math> bank angle (accelerated stall)</li> <li>Approach to stall entry in a power-on condition (required only for propeller driven aircraft)</li> </ul> <p>The cruise flight condition must be conducted in a flaps-up (clean) configuration. The second segment climb flight condition must use a different flap setting than the approach or landing flight condition.</p> <p><b>CCA:</b> Test in Normal and Non-normal control states. For CCA aircraft with stall envelope protection systems, the normal mode testing is only required to an angle of attack range necessary to demonstrate the correct operation of the system. These tests may be used to satisfy the required (angle of attack) flight maneuver and envelope protection tests (test 2.h.6.).</p>	X	X		Tests may be conducted at centers of gravity and weights typically required for airplane certification stall testing.  Tolerances on stall buffet are not applicable where the first indication of the stall is the activation of the stall warning system (i.e. stick shaker).
2.c.9.	Phugoid Dynamics.	$\pm 10\%$ of period.  $\pm 10\%$ of time to one half or double amplitude or $\pm 0.02$ of damping ratio.	Cruise.	Test must include three full cycles or that necessary to determine time to one half or double amplitude, whichever is less.  <b>CCA:</b> Test in non-normal control mode.	X	X	X	X
2.c.10	Short Period Dynamics.	$\pm 1.5^\circ$ pitch angle or $\pm 2^\circ/\text{s}$ pitch rate.	Cruise.	<b>CCA:</b> Test in normal and non-normal control mode.	X	X	X	X

		±0.1 g normal acceleration							
2.c.11.	(Reserved)								
2.d.	<b>Lateral Directional Tests.</b>								
	Power setting is that required for level flight unless otherwise specified.								
2.d.1.	Minimum control speed, air ( $V_{mca}$ ) or landing ( $V_{mcl}$ ), per applicable airworthiness requirement or low speed engine-inoperative handling characteristics in the air.	±3 kt airspeed.	Takeoff or Landing (whichever is most critical in the airplane).	Takeoff thrust must be set on the operating engine(s).  Time history or snapshot data may be used.  CCA: Test in normal or non-normal control state, as applicable.	X	X	X	X	Minimum speed may be defined by a performance or control limit which prevents demonstration of $V_{mca}$ or $V_{mcl}$ in the conventional manner.
2.d.2.	Roll Response (Rate).	±2°/s or ±10% of roll rate.  For airplanes with reversible flight control systems:  ±1.3 daN (3 lbf) or ±10% of wheel force.	Cruise, and Approach or Landing.	Test with normal roll control displacement (approximately one-third of maximum roll controller travel).  This test may be combined with step input of flight deck roll controller test 2.d.3.	X	X	X	X	
2.d.3.	Step input of flight deck roll controller.	±2° or ±10% of roll angle.	Approach or Landing.	This test may be combined with roll response (rate) test 2.d.2.  CCA: Test in normal and non-normal control mode	X	X	X	X	With wings level, apply a step roll control input using approximately one-third of the roll controller travel. When reaching approximately 20° to 30° of bank, abruptly return the roll controller to neutral and allow approximately 10 seconds of airplane free response.
2.d.4.	Spiral Stability.	Correct trend and ±2° or ±10% of roll angle in 20 s.  If alternate test is used: correct trend and ±2° aileron angle.	Cruise, and Approach or Landing.	Airplane data averaged from multiple tests may be used.  Test for both directions. As an alternative test, show lateral control required to maintain a steady turn with a roll angle of approximately 30°.	X	X	X	X	

				CCA: Test in non-normal control mode.					
2.d.5.	Engine Inoperative Trim.	±1° rudder angle or ±1° tab angle or equivalent rudder pedal.  ±2° side-slip angle.	Second Segment Climb, and Approach or Landing.	This test may consist of snapshot tests.	X	X	X	X	Test should be performed in a manner similar to that for which a pilot is trained to trim an engine failure condition.  2nd segment climb test should be at takeoff thrust. Approach or landing test should be at thrust for level flight.
2.d.6.	Rudder Response.	±2°/s or ±10% of yaw rate.	Approach or Landing.	Test with stability augmentation on and off.  Test with a step input at approximately 25% of full rudder pedal throw.  CCA: Test in normal and non-normal control mode	X	X	X	X	
2.d.7.	Dutch Roll	±0.5 s or ±10% of period.  ±10% of time to one half or double amplitude or ±.02 of damping ratio.  ±1 s or ±20% of time difference between peaks of roll angle and side-slip angle.	Cruise, and Approach or Landing.	Test for at least six cycles with stability augmentation off.  CCA: Test in non-normal control mode.		X	X	X	
2.d.8.	Steady State Sideslip.	For a given rudder position:  ±2° roll angle;  ±1° side-slip angle;  ±2° or ±10% of aileron angle; and	Approach or Landing.	This test may be a series of snapshot tests using at least two rudder positions (in each direction for propeller-driven airplanes), one of which must be near maximum allowable rudder.	X	X	X	X	

		<p>±5° or ±10% of spoiler or equivalent roll controller position or force.</p> <p>For airplanes with reversible flight control systems:</p> <p>±1.3 daN (3 lbf) or ±10% of wheel force.</p> <p>±2.2 daN (5 lbf) or ±10% of rudder pedal force.</p>							
<b>2.e.</b>	<b>Landings.</b>								
<b>2.e.1.</b>	Normal Landing.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±3 m (10 ft) or ±10% of height.</p> <p>For airplanes with reversible flight control systems:</p> <p>±2.2 daN (5 lbf) or ±10% of column force.</p>	Landing.	<p>Test from a minimum of 61 m (200 ft) AGL to nosewheel touchdown.</p> <p><b>CCA:</b> Test in normal and non-normal control mode, if applicable.</p>		<b>X</b>	<b>X</b>	<b>X</b>	Two tests should be shown, including two normal landing flaps (if applicable) one of which should be near maximum certificated landing mass, the other at light or medium mass.
<b>2.e.2.</b>	Minimum Flap Landing.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±3 m (10 ft) or ±10% of height.</p> <p>For airplanes with</p>	Minimum Certified Landing Flap Configuration.	<p>Test from a minimum of 61 m (200 ft) AGL to nosewheel touchdown.</p> <p>Test at near maximum certificated landing weight.</p>			<b>X</b>	<b>X</b>	

		<p>reversible flight control systems:</p> <p>±2.2 daN (5 lbf) or ±10% of column force.</p>							
2.e.3.	Crosswind Landing.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±3 m (10 ft) or ±10% of height.</p> <p>±2° roll angle.</p> <p>±2° side-slip angle.</p> <p>±3° heading angle.</p> <p>For airplanes with reversible flight control systems:</p> <p>±2.2 daN (5 lbf) or ±10% of column force.</p> <p>±1.3 daN (3 lbf) or ±10% of wheel force.</p> <p>±2.2 daN (5 lbf) or ±10% of rudder pedal force.</p>	Landing.	<p>Test from a minimum of 61 m (200 ft) AGL to a 50% decrease in main landing gear touchdown speed.</p> <p>Test data is required, including wind profile, for a crosswind component of at least 60% of airplane performance data value measured at 10 m (33 ft) above the runway.</p> <p>Wind components must be provided as headwind and crosswind values with respect to the runway.</p>		X	X	X	In those situations where a maximum crosswind or a maximum demonstrated crosswind is not known, contact the NSPM.
2.e.4.	One Engine Inoperative Landing.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±3 m (10 ft) or ±10% of height.</p>	Landing.	<p>Test from a minimum of 61 m (200 ft) AGL to a 50% decrease in main landing gear touchdown speed.</p>		X	X	X	

		±2° roll angle. ±2° side-slip angle. ±3° heading angle.							
2.e.5.	Autopilot landing (if applicable).	±1.5 m (5 ft) flare height. ±0.5 s or ± 10% of Tf. ±0.7 m/s (140 ft/min) rate of descent at touchdown. ±3 m (10 ft) lateral deviation during roll-out.	Landing.	If autopilot provides roll-out guidance, record lateral deviation from touchdown to a 50% decrease in main landing gear touchdown speed.  Time of autopilot flare mode engage and main gear touchdown must be noted.		X	X	X	See Appendix F of this part for definition of T <sub>f</sub> .
2.e.6.	All-engine autopilot go-around.	±3 kt airspeed. ±1.5° pitch angle. ±1.5° AOA.	As per airplane performance data.	Normal all-engine autopilot go-around must be demonstrated (if applicable) at medium weight.		X	X	X	
2.e.7.	One engine inoperative go around.	±3 kt airspeed. ±1.5° pitch angle. ±1.5° AOA. ±2° roll angle. ±2° side-slip angle.	As per airplane performance data.	Engine inoperative go-around required near maximum certificated landing weight with critical engine inoperative.  Provide one test with autopilot (if applicable) and one without autopilot.  CCA: Non-autopilot test to be conducted in non-normal mode.		X	X	X	
2.e.8.	Directional control (rudder effectiveness) with symmetric reverse thrust.	±5 kt airspeed. ±2°/s yaw rate.	Landing.	Apply rudder pedal input in both directions using full reverse thrust until reaching full thrust reverser minimum operating speed.		X	X	X	
2.e.9.	Directional control (rudder effectiveness) with asymmetric reverse thrust.	±5 kt airspeed. ±3° heading angle.	Landing.	With full reverse thrust on the operating engine(s), maintain heading with rudder pedal input until maximum rudder pedal input or thrust reverser minimum operation speed is reached.		X	X	X	
2.f.	<b>Ground Effect.</b>								

	Test to demonstrate Ground Effect.	±1° elevator angle. ±0.5° stabilizer angle. ±5% of net thrust or equivalent. ±1° AOA. ±1.5 m (5 ft) or ±10% of height. ±3 kt airspeed. ±1° pitch angle.	Landing.	A rationale must be provided with justification of results.  CCA: Test in normal or non-normal control mode, as applicable.		X	X	X	See paragraph 5 of this Attachment for additional information.
<b>2.g.</b>	<b>Windshear.</b>								
	Four tests, two takeoff and two landing, with one of each conducted in still air and the other with windshear active to demonstrate windshear models.	See Attachment 5 of this appendix.	Takeoff and Landing.	Requires windshear models that provide training in the specific skills needed to recognize windshear phenomena and to execute recovery procedures. See Attachment 5 of this appendix for tests, tolerances, and procedures.			X	X	See Attachment 5 of this appendix for information related to Level A and B simulators.
<b>2.h.</b>	<b>Flight Maneuver and Envelope Protection Functions.</b>								
	<i>Note. — The requirements of 2.h are only applicable to computer-controlled airplanes. Time history results of response to control inputs during entry into each envelope protection function (i.e. with normal and degraded control states if their function is different) are required. Set thrust as required to reach the envelope protection function.</i>								
<b>2.h.1.</b>	Overspeed.	±5 kt airspeed.	Cruise.			X	X	X	
<b>2.h.2.</b>	Minimum Speed.	±3 kt airspeed.	Takeoff, Cruise, and Approach or Landing.			X	X	X	
<b>2.h.3.</b>	Load Factor.	±0.1g normal load factor	Takeoff, Cruise.			X	X	X	
<b>2.h.4.</b>	Pitch Angle.	±1.5° pitch angle	Cruise, Approach.			X	X	X	
<b>2.h.5.</b>	Bank Angle.	±2° or ±10% bank angle	Approach.			X	X	X	
<b>2.h.6.</b>	Angle of Attack.	±1.5° angle of attack	Second Segment Climb, and Approach or Landing.			X	X	X	
<b>2.i.</b>	<b>Engine and Airframe Icing Effects</b>								
<b>2.i.</b>	Engine and Airframe Icing Effects Demonstration (High Angle of Attack)		Takeoff or Approach or Landing  [One flight condition –	Time history of a full stall and initiation of the recovery. Tests are intended to demonstrate representative aerodynamic effects caused by in-flight ice accretion. Flight test validation data is			X	X	Tests will be evaluated for representative effects on relevant aerodynamic and other parameters such as

			two tests (ice on and off)]	<p>not required.</p> <p>Two tests are required to demonstrate engine and airframe icing effects. One test will demonstrate the FSTDs baseline performance without ice accretion, and the second test will demonstrate the aerodynamic effects of ice accretion relative to the baseline test.</p> <p>The test must utilize the icing model(s) as described in the required Statement of Compliance in Table A1A, Section 2.j. Test must include rationale that describes the icing effects being demonstrated. Icing effects may include, but are not limited to, the following effects as applicable to the particular airplane type:</p> <ul style="list-style-type: none"> <li>▪ Decrease in stall angle of attack</li> <li>▪ Changes in pitching moment</li> <li>▪ Decrease in control effectiveness</li> <li>▪ Changes in control forces</li> <li>▪ Increase in drag</li> <li>▪ Change in stall buffet characteristics and threshold of perception</li> <li>▪ Engine effects (power reduction/variation, vibration, etc. where expected to be present on the aircraft in the ice accretion scenario being tested)</li> </ul>					<p>angle of attack, control inputs, and thrust/power settings.</p> <p>Plotted parameters must include:</p> <ul style="list-style-type: none"> <li>• Altitude</li> <li>• Airspeed</li> <li>• Normal acceleration</li> <li>• Engine power</li> <li>• Angle of attack</li> <li>• Pitch attitude</li> <li>• Bank angle</li> <li>• Flight control inputs</li> <li>• Stall warning and stall buffet onset</li> </ul>
<b>3. Motion System.</b>									
<b>3.a.</b>	<b>Frequency response.</b>								
		As specified by the sponsor for FSTD qualification.	Not applicable.	Appropriate test to demonstrate required frequency response.	X	X	X	X	See paragraph 6 of this Attachment.
<b>3.b.</b>	<b>Turn-around check.</b>								
		As specified by the sponsor for FSTD qualification.	Not applicable.	Appropriate test to demonstrate required smooth turn-around.	X	X	X	X	See paragraph 6 of this Attachment.
<b>3.c.</b>	<b>Motion effects.</b>								
					X	X	X	X	Refer to Attachment 3 of this Appendix on subjective testing.
<b>3.d.</b>	<b>Motion system repeatability.</b>								
	Motion system repeatability	±0.05 g actual platform linear accelerations.	None.		X	X	X	X	Ensure that motion system hardware and software (in normal FSTD operating

									mode) continue to perform as originally qualified. Performance changes from the original baseline can be readily identified with this information.  See paragraph 6.c. of this Attachment.	
<b>3.e.</b>	<b>Motion cueing fidelity</b>									
<b>3.e.1.</b>	Motion cueing fidelity – Frequency-domain criterion.	As specified by the FSTD manufacturer for initial qualification.	Ground and flight.	For the motion system as applied during training, record the combined modulus and phase of the motion cueing algorithm and motion platform over the frequency range appropriate to the characteristics of the simulated aircraft.  This test is only required for initial FSTD qualification.				X	X	Testing may be accomplished by the FSTD manufacturer and results provided as a statement of compliance.
<b>3.e.2.</b>	Reserved									
<b>3.f</b>	Characteristic motion vibrations. The following tests with recorded results and an SOC are required for characteristic motion vibrations, which can be sensed at the flight deck where applicable by airplane type.	None.	Ground and flight.						X	The recorded test results for characteristic buffets should allow the comparison of relative amplitude versus frequency.  See also paragraph 6.e. of this Attachment.
<b>3.f.1.</b>	Thrust effect with brakes set.	The FSTD test results must exhibit the overall appearance and trends of the airplane data, with at least three (3) of the predominant frequency “spikes” being present within $\pm 2$ Hz of the airplane data.	Ground.	Test must be conducted at maximum possible thrust with brakes set.					X	
<b>3.f.2.</b>	Buffet with landing gear extended.	The FSTD test results must exhibit the overall appearance and trends of the airplane data.	Flight.	Test condition must be for a normal operational speed and not at the gear limiting speed.					X	

		with at least three (3) of the predominant frequency “spikes” being present within $\pm 2$ Hz of the airplane data.							
3.f.3.	Buffet with flaps extended.	The FSTD test results must exhibit the overall appearance and trends of the airplane data, with at least three (3) of the predominant frequency “spikes” being present within $\pm 2$ Hz of the airplane data.	Flight.	Test condition must be at a normal operational speed and not at the flap limiting speed.				X	
3.f.4.	Buffet with speedbrakes deployed.	The FSTD test results must exhibit the overall appearance and trends of the airplane data, with at least three (3) of the predominant frequency “spikes” being present within $\pm 2$ Hz of the airplane data.	Flight.	Test condition must be at a typical speed for a representative buffet.				X	
3.f.5.	Stall buffet	The FSTD test results must exhibit the overall appearance and trends of the airplane data, with at least three (3) of the predominant frequency “spikes” being present within $\pm 2$ Hz of the airplane data.	Cruise (High Altitude), Second Segment Climb, and Approach or Landing	Tests must be conducted for an angle of attack range between the buffet threshold of perception to the pilot and the stall angle of attack. Post stall characteristics are not required.			X	X	If stabilized flight data between buffet threshold of perception and the stall angle of attack are not available, PSD analysis should be conducted for a time span between initial buffet and the stall angle of attack.  Test required only for FSTDs qualified for full stall training tasks or for those aircraft which exhibit stall buffet before the activation of the stall warning system.
3.f.6.	Buffet at high airspeeds or high Mach.	The FSTD test results must exhibit the overall appearance and trends of the airplane data, with at least three (3) of the predominant	Flight.					X	Test condition should be for high-speed maneuver buffet/wind-up-turn or alternatively Mach buffet.

		frequency "spikes" being present within $\pm 2$ Hz of the airplane data.							
3.f.7.	In-flight vibrations for propeller driven airplanes.	The FSTD test results must exhibit the overall appearance and trends of the airplane data, with at least three (3) of the predominant frequency "spikes" being present within $\pm 2$ Hz of the airplane data.	Flight (clean configuration).					X	Test should be conducted to be representative of in-flight vibrations for propeller-driven airplanes.
<b>4. Visual System.</b>									
4.a.	<b>Visual scene quality</b>								
4.a.1.	Continuous collimated cross-cockpit visual field of view.	Cross-cockpit, collimated visual display providing each pilot with a minimum of 176° horizontal and 36° vertical continuous field of view.	Not applicable.	Required as part of MQTG but not required as part of continuing evaluations.				X	X
	Continuous collimated cross-cockpit visual field of view.	Continuous collimated field-of-view providing at least 45° horizontal and 30° vertical field-of-view for each pilot seat. Both pilot seat visual systems must be operable simultaneously.	Not applicable.	Required as part of MQTG but not required as part of continuing evaluations.	X	X			A vertical field-of-view of 30° may be insufficient to meet visual ground segment requirements.
4.a.2.	System geometry	5° even angular spacing within $\pm 1^\circ$ as measured from either pilot eye point and within 1.5° for adjacent squares.	Not applicable.	The angular spacing of any chosen 5° square and the relative spacing of adjacent squares must be within the stated tolerances.	X	X	X	X	The purpose of this test is to evaluate local linearity of the displayed image at either pilot eye point. System geometry should be measured using a visual test pattern filling the entire visual scene (all channels) with a matrix of black and white 5° squares

									with light points at the intersections.  For continuing qualification testing, the use of an optical checking device is encouraged. This device should typically consist of a hand-held go/no go gauge to check that the relative positioning is maintained.
4.a.3	Surface resolution (object detection).	Not greater than 2 arc minutes.	Not applicable.	An SOC is required and must include the relevant calculations and an explanation of those calculations.  This requirement is applicable to any level of simulator equipped with a daylight visual system.			X	X	Resolution will be demonstrated by a test of objects shown to occupy the required visual angle in each visual display used on a scene from the pilot's eyepoint.  The object will subtend 2 arc minutes to the eye.  This may be demonstrated using threshold bars for a horizontal test.  A vertical test should also be demonstrated.
4.a.4	Light point size.	Not greater than 5 arc minutes.	Not applicable.	An SOC is required and must include the relevant calculations and an explanation of those calculations.  This requirement is applicable to any level of simulator equipped with a daylight visual system.			X	X	Light point size should be measured using a test pattern consisting of a centrally located single row of white light points displayed as both a horizontal and vertical row.  It should be possible to move the light points relative to the eyepoint in all axes.  At a point where modulation is just discernible in each visual channel, a calculation should be made to determine the light spacing.
4.a.5	Raster surface contrast ratio.	Not less than 5:1.	Not applicable.	This requirement is applicable to any level of simulator equipped with a daylight visual system.			X	X	Surface contrast ratio should be measured using a raster

									<p>drawn test pattern filling the entire visual scene (all channels).</p> <p>The test pattern should consist of black and white squares, 5° per square, with a white square in the center of each channel.</p> <p>Measurement should be made on the center bright square for each channel using a 1° spot photometer. This value should have a minimum brightness of 7 cd/m<sup>2</sup> (2 ft-lamberts). Measure any adjacent dark squares.</p> <p>The contrast ratio is the bright square value divided by the dark square value.</p> <p><i>Note 1. — During contrast ratio testing, FSTD aft-cab and flight deck ambient light levels should be as low as possible.</i></p> <p><i>Note 2. — Measurements should be taken at the center of squares to avoid light spill into the measurement device.</i></p>
4.a.6	Light point contrast ratio.	Not less than 25:1.	Not applicable.	An SOC is required and must include the relevant calculations.			X	X	<p>Light point contrast ratio should be measured using a test pattern demonstrating an area of greater than 1° area filled with white light points and should be compared to the adjacent background.</p> <p><i>Note. — Light point</i></p>

								<p><i>modulation should be just discernible on calligraphic systems but will not be discernible on raster systems.</i></p> <p>Measurements of the background should be taken such that the bright square is just out of the light meter FOV.</p> <p><i>Note. — During contrast ratio testing, FSTD aft-cab and flight deck ambient light levels should be as low as practical.</i></p>	
	Light point contrast ratio.	Not less than 10:1.	Not applicable.		X	X			
4.a.7	Light point brightness.	Not less than 20 cd/m <sup>2</sup> (5.8 ft-lamberts).	Not applicable.				X	X	<p>Light points should be displayed as a matrix creating a square.</p> <p>On calligraphic systems the light points should just merge.</p> <p>On raster systems the light points should overlap such that the square is continuous (individual light points will not be visible).</p>
4.a.8	Surface brightness.	Not less than 20 cd/m <sup>2</sup> (5.8 ft-lamberts) on the display.	Not applicable.	This requirement is applicable to any level of simulator equipped with a daylight visual system.			X	X	<p>Surface brightness should be measured on a white raster, measuring the brightness using the 1° spot photometer.</p> <p>Light points are not acceptable.</p> <p>Use of calligraphic capabilities to enhance raster brightness is acceptable.</p>
4.a.9	Black level and	Black intensity:	Not applicable.		X	X	X	X	All projectors should be

	sequential contrast.	<p>Background brightness – Black polygon brightness &lt; 0.015 cd/m<sup>2</sup> (0.004 ft-lamberts).</p> <p>Sequential contrast:</p> <p>Maximum brightness – (Background brightness – Black polygon brightness) &gt; 2,000:1.</p>						<p>turned off and the cockpit environment made as dark as possible. A background reading should be taken of the remaining ambient light on the screen.</p> <p>The projectors should then be turned on and a black polygon displayed. A second reading should then be taken and the difference between this and the ambient level recorded.</p> <p>A full brightness white polygon should then be measured for the sequential contrast test.</p> <p>This test is generally only required for <b>light valve projectors</b>.</p>	
4.a.10	Motion blur.	When a pattern is rotated about the eyepoint at 10°/s, the smallest detectable gap must be 4 arc min or less.	Not applicable.		X	X	X	X	<p>A test pattern consists of an array of 5 peak white squares with black gaps between them of decreasing width.</p> <p>The range of black gap widths should at least extend above and below the required detectable gap, and be in steps of 1 arc min.</p> <p>The pattern is rotated at the required rate.</p> <p>Two arrays of squares should be provided, one rotating in heading and the other in pitch, to provide testing in both axes.</p> <p>A series of stationary</p>

									numbers identifies the gap number.  <i>Note.— This test can be limited by the display technology. Where this is the case the NSPM should be consulted on the limitations.</i>  This test is generally only required for <b>light valve projectors</b> .
4.a.11	Speckle test.	Speckle contrast must be < 10%.	Not applicable.	An SOC is required describing the test method.	X	X	X	X	This test is generally only required for <b>laser projectors</b> .
4.b	<b>Head-Up Display (HUD)</b>								
4.b.1	Static Alignment.	Static alignment with displayed image.  HUD bore sight must align with the center of the displayed image spherical pattern.  Tolerance +/- 6 arc min.	N/A				X	X	Alignment requirement applies to any HUD system in use or both simultaneously if they are used simultaneously for training.
4.b.2	System display.	All functionality in all flight modes must be demonstrated.	N/A				X	X	A statement of the system capabilities should be provided and the capabilities demonstrated
4.b.3	HUD attitude versus FSTD attitude indicator (pitch and roll of horizon).	Pitch and roll align with aircraft instruments.	Flight.				X	X	
4.c	<b>Enhanced Flight Vision System (EFVS)</b>								
4.c.1	Registration test.	Alignment between EFVS display and out of the window image must represent the alignment typical of the aircraft and system type.	Takeoff point and on approach at 200 ft.				X	X	<i>Note.— The effects of the alignment tolerance in 4.b.1 should be taken into account.</i>

4.c.2	EFVS RVR and visibility calibration.	The scene represents the EFVS view at 350 m (1,200 ft) and 1,609 m (1 sm) RVR including correct light intensity.	Flight.				X	X	Infra-red scene representative of both 350 m (1,200 ft), and 1,609 m (1 sm) RVR.  Visual scene may be removed.
4.c.3	Thermal crossover.	Demonstrate thermal crossover effects during day to night transition.	Day and night.				X	X	The scene will correctly represent the thermal characteristics of the scene during a day to night transition.
4.d	<b>Visual ground segment</b>								
4.d.1	Visual ground segment (VGS).	Near end: the correct number of approach lights within the computed VGS must be visible.  Far end: ±20% of the computed VGS.  The threshold lights computed to be visible must be visible in the FSTD.	Trimmed in the landing configuration at 30 m (100 ft) wheel height above touchdown zone on glide slope at an RVR setting of 300 m (1,000 ft) or 350 m (1,200 ft).	This test is designed to assess items impacting the accuracy of the visual scene presented to a pilot at DH on an ILS approach. These items include:  1) RVR/Visibility;  2) glide slope (G/S) and localizer modeling accuracy (location and slope) for an ILS;  3) for a given weight, configuration and speed representative of a point within the airplane's operational envelope for a normal approach and landing; and  4) Radio altimeter.  <i>Note. — If non-homogeneous fog is used, the vertical variation in horizontal visibility should be described and included in the slant range visibility calculation used in the VGS computation.</i>	X	X	X	X	
4.e	<b>Visual System Capacity</b>								
4.e.1	System capacity – Day mode.	Not less than: 10,000 visible textured surfaces, 6,000 light points, 16 moving models.	Not applicable.				X	X	Demonstrated through use of a visual scene rendered with the same image generator modes used to produce scenes for training.  The required surfaces, light

									points, and moving models should be displayed simultaneously.
4.e.2	System capacity – Twilight/night mode.	Not less than: 10,000 visible textured surfaces, 15,000 light points, 16 moving models.	Not applicable.				X	X	Demonstrated through use of a visual scene rendered with the same image generator modes used to produce scenes for training.  The required surfaces, light points, and moving models should be displayed simultaneously.
<p><b>5. Sound System.</b>  The sponsor will not be required to repeat the airplane tests (i.e., tests 5.a.1. through 5.a.8. (or 5.b.1. through 5.b.9.) and 5.c., as appropriate) during continuing qualification evaluations if frequency response and background noise test results are within tolerance when compared to the initial qualification evaluation results, and the sponsor shows that no software changes have occurred that will affect the airplane test results. If the frequency response test method is chosen and fails, the sponsor may elect to fix the frequency response problem and repeat the test or the sponsor may elect to repeat the airplane tests. If the airplane tests are repeated during continuing qualification evaluations, the results may be compared against initial qualification evaluation results or airplane master data. All tests in this section must be presented using an unweighted 1/3-octave band format from band 17 to 42 (50 Hz to 16 kHz). A minimum 20 second average must be taken at the location corresponding to the airplane data set. The airplane and flight simulator results must be produced using comparable data analysis techniques.</p>									
5.a.	<b>Turbo-jet airplanes.</b>								<p>All tests in this section should be presented using an unweighted 1/3-octave band format from at least band 17 to 42 (50 Hz to 16 kHz).</p> <p>A measurement of minimum 20 s should be taken at the location corresponding to the approved data set.</p> <p>The approved data set and FSTD results should be produced using comparable data analysis techniques.</p> <p>Refer to paragraph 7 of this Attachment</p>
5.a.1.	Ready for engine start.	Initial evaluation: ± 5 dB per 1/3 octave band.	Ground.	Normal condition prior to engine start.  The APU should be on if appropriate.				X	For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB tolerance but not more than 2

		<p>Recurrent evaluation: cannot exceed <math>\pm 5</math> dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.</p>						<p>that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.</p>
5.a.2.	All engines at idle.	<p>Initial evaluation: <math>\pm 5</math> dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed <math>\pm 5</math> dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.</p>	Ground.	Normal condition prior to takeoff.				<p><b>X</b></p> <p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of <math>\pm 5</math> dB tolerance but not more than 2 that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.</p>
5.a.3.	All engines at maximum allowable thrust with brakes set.	<p>Initial evaluation: <math>\pm 5</math> dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed <math>\pm 5</math> dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent</p>	Ground.	Normal condition prior to takeoff.				<p><b>X</b></p> <p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of <math>\pm 5</math> dB tolerance but not more than 2 that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective</p>

		evaluation results cannot exceed 2 dB.							tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.
5.a.4.	Climb	Initial evaluation: ± 5 dB per 1/3 octave band.  Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	En-route climb.	Medium altitude.				X	For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB tolerance but not more than 2 that are consecutive and in any case within ± 7 dB from approved reference data, providing that the overall trend is correct.  Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.
5.a.5.	Cruise	Initial evaluation: ± 5 dB per 1/3 octave band.  Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	Cruise.	Normal cruise configuration.				X	For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB tolerance but not more than 2 that are consecutive and in any case within ± 7 dB from approved reference data, providing that the overall trend is correct.  Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.
5.a.6.	Speed brake/spoilers extended (as appropriate).	Initial evaluation: ± 5 dB per 1/3 octave band.	Cruise.	Normal and constant speed brake deflection for descent at a constant airspeed and power setting.				X	For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB

		<p>Recurrent evaluation: cannot exceed <math>\pm 5</math> dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.</p>						<p>tolerance but not more than 2 that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.</p>
5.a.7	Initial approach.	<p>Initial evaluation: <math>\pm 5</math> dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed <math>\pm 5</math> dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.</p>	Approach.	Constant airspeed, gear up, flaps/slats as appropriate.				<p><b>X</b></p> <p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of <math>\pm 5</math> dB tolerance but not more than 2 that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.</p>
5.a.8	Final approach.	<p>Initial evaluation: <math>\pm 5</math> dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed <math>\pm 5</math> dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between</p>	Landing.	Constant airspeed, gear down, landing configuration flaps.				<p><b>X</b></p> <p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of <math>\pm 5</math> dB tolerance but not more than 2 that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation</p>

		initial and recurrent evaluation results cannot exceed 2 dB.						employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.
5.b	<b>Propeller-driven airplanes</b>							<p>All tests in this section should be presented using an unweighted 1/3-octave band format from at least band 17 to 42 (50 Hz to 16 kHz).</p> <p>A measurement of minimum 20 s should be taken at the location corresponding to the approved data set.</p> <p>The approved data set and FSTD results should be produced using comparable data analysis techniques.</p> <p>Refer to paragraph 3.7 of this Appendix.</p>
5.b.1.	Ready for engine start.	<p>Initial evaluation: <math>\pm 5</math> dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed <math>\pm 5</math> dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.</p>	Ground.	<p>Normal condition prior to engine start.</p> <p>The APU should be on if appropriate.</p>			<b>X</b>	<p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of <math>\pm 5</math> dB tolerance but not more than 2 that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.</p>

5.b.2	All propellers feathered, if applicable.	<p>Initial evaluation: <math>\pm 5</math> dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed <math>\pm 5</math> dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.</p>	Ground.	Normal condition prior to takeoff.				<p><b>X</b></p> <p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of <math>\pm 5</math> dB tolerance but not more than 2 that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.</p>
5.b.3.	Ground idle or equivalent.	<p>Initial evaluation: <math>\pm 5</math> dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed <math>\pm 5</math> dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.</p>	Ground.	Normal condition prior to takeoff.				<p><b>X</b></p> <p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of <math>\pm 5</math> dB tolerance but not more than 2 that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.</p>

Normal condition prior to takeoff.				<p><b>X</b></p> <p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of <math>\pm 5</math> dB tolerance but not more than 2 that are consecutive and in any case within <math>\pm 7</math> dB from approved reference data,</p>

		consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.						providing that the overall trend is correct.  Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.
5.b.5	All engines at maximum allowable power with brakes set.	Initial evaluation: ± 5 dB per 1/3 octave band.  Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	Ground.	Normal condition prior to takeoff.			X	For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB tolerance but not more than 2 that are consecutive and in any case within ± 7 dB from approved reference data, providing that the overall trend is correct.  Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.
5.b.6	Climb.	Initial evaluation: ± 5 dB per 1/3 octave band.  Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	En-route climb.	Medium altitude.			X	For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB tolerance but not more than 2 that are consecutive and in any case within ± 7 dB from approved reference data, providing that the overall trend is correct.  Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.

5.b.7	Cruise	<p>Initial evaluation: ± 5 dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.</p>	Cruise.	Normal cruise configuration.				X	<p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB tolerance but not more than 2 that are consecutive and in any case within ± 7 dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.</p>
5.b.8	Initial approach.	<p>Initial evaluation: ± 5 dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.</p>	Approach.	Constant airspeed, gear up, flaps extended as appropriate, RPM as per operating manual.				X	<p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB tolerance but not more than 2 that are consecutive and in any case within ± 7 dB from approved reference data, providing that the overall trend is correct.</p> <p>Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.</p>
5.b.9	Final approach.	<p>Initial evaluation: ± 5 dB per 1/3 octave band.</p> <p>Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the</p>	Landing.	Constant airspeed, gear down, landing configuration flaps, RPM as per operating manual.				X	<p>For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB tolerance but not more than 2 that are consecutive and in any case within ± 7 dB from approved reference data, providing that the overall trend is correct.</p>

		average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.						Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations.
5.c.	<b>Special cases.</b>	Initial evaluation: ± 5 dB per 1/3 octave band.  Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	As appropriate.				<b>X</b>	This applies to special steady-state cases identified as particularly significant to the pilot, important in training, or unique to a specific airplane type or model.  For initial evaluation, it is acceptable to have some 1/3 octave bands out of ± 5 dB tolerance but not more than 2 that are consecutive and in any case within ± 7 dB from approved reference data, providing that the overall trend is correct.  Where initial evaluation employs approved subjective tuning to develop the approved reference standard, recurrent evaluation tolerances should be used during recurrent evaluations
5.d	<b>FSTD background noise</b>	Initial evaluation: background noise levels must fall below the sound levels described in Paragraph 7.c (5) of this Attachment.  Recurrent evaluation: ±3 dB per 1/3 octave band compared to initial evaluation.		Results of the background noise at initial qualification must be included in the QTG document and approved by the NSPM. The measurements are to be made with the simulation running, the sound muted and a dead cockpit.			<b>X</b>	The simulated sound will be evaluated to ensure that the background noise does not interfere with training.  Refer to paragraph 7 of this Attachment.  This test should be presented using an unweighted 1/3 octave band format from band 17 to 42 (50 Hz to 16 kHz).

5.e	<b>Frequency response</b>	Initial evaluation: not applicable.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	Ground (static with all systems switched off)					<b>X</b>	Only required if the results are to be used during continuing qualification evaluations in lieu of airplane tests.  The results must be approved by the NSPM during the initial qualification.  This test should be presented using an unweighted 1/3 octave band format from band 17 to 42 (50 Hz to 16 kHz).	
6	<b>SYSTEMS INTEGRATION</b>									
6.a.	<b>System response time</b>									
6.a.1	Transport delay.	Motion system and instrument response: 100 ms (or less) after airplane response.  Visual system response: 120 ms (or less) after airplane response.	Pitch, roll and yaw.					<b>X</b>	<b>X</b>	One separate test is required in each axis.  Where EFVS systems are installed, the EFVS response should be within + or - 30 ms from visual system response, and not before motion system response.  <i>Note.— The delay from the airplane EFVS electronic elements should be added to the 30 ms tolerance before comparison with visual system reference.</i>
	Transport delay.	300 milliseconds or less after controller movement.	Pitch, roll and yaw.			<b>X</b>	<b>X</b>			

\* \* \* \* \*  
6. Motion System.\* \* \* \* \*  
b. Motion System Checks. The intent of test 3a, Frequency Response, and test 3b, Turn-

Around Check, as described in the Table of Objective Tests, are to demonstrate the performance of the motion system hardware, and to check the integrity of the motion set-up with regard to calibration and wear. These tests are independent of the motion cueing software and should be considered robotic tests.

\* \* \* \* \*

d. Objective Motion Cueing Test—  
Frequency Domain

(1) Background. This test quantifies the response of the motion cueing system from the output of the flight model to the motion platform response. Other motion tests, such as the motion system frequency response, concentrate on the mechanical performance of the motion system hardware alone. The intent of this test is to provide quantitative frequency response records of the entire motion system for specified degree-of-freedom transfer relationships over a range of frequencies. This range should be representative of the manual control range for that particular aircraft type and the simulator as set up during qualification. The measurements of this test should include the combined influence of the motion cueing algorithm, the motion platform dynamics, and the transport delay associated with the motion cueing and control system implementation. Specified frequency responses describing the ability of the FSTD to reproduce aircraft translations and rotations, as well as the cross-coupling relations, are required as part of these measurements. When simulating forward aircraft acceleration, the simulator is accelerated momentarily in the forward direction to provide the onset cueing. This is considered the direct transfer relation. The simulator is simultaneously tilted nose-up due to the low-pass filter in order to generate a sustained specific force. The tilt associated with the generation of the sustained specific force, and the angular rates and angular accelerations associated with the initiation of the sustained specific force, are considered cross-coupling relations. The specific force is required for the perception of the aircraft

sustained specific force, while the angular rates and accelerations do not occur in the aircraft and should be minimized.

(2) Frequency response test. This test requires the frequency response to be measured for the motion cueing system. Reference sinusoidal signals are inserted at the pilot reference position prior to the motion cueing computations. The response of the motion platform in the corresponding degree-of-freedom (the direct transfer relations), as well as the motions resulting from cross-coupling (the cross-coupling relations), are recorded. These are the tests that are important to pilot motion cueing and are general tests applicable to all types of airplanes.

(3) This test is only required to be run once for the initial qualification of the FSTD and will not be required for continuing qualification purposes. The FAA will accept test results provided by the FSTD manufacturer as part of a Statement of Compliance confirming that the objective motion cueing tests were used to assist in the tuning of the FSTD's motion cueing algorithms.

\* \* \* \* \*

11. Validation Test Tolerances

\* \* \* \* \*

a. \* \* \*

(1) If engineering simulator data or other non-flight-test data are used as an allowable form of reference validation data for the objective tests listed in Table A2A of this attachment, the data provider must supply a well-documented mathematical model and testing procedure that enables a replication of the engineering simulation results within 40% of the corresponding flight test tolerances.

b. \* \* \*

\* \* \* \* \*

(5) The tolerance limit between the reference data and the flight simulator results is generally 40 percent of the corresponding 'flight-test' tolerances. However, there may be cases where the simulator models used are of higher fidelity, or the manner in which they

are cascaded in the integrated testing loop have the effect of a higher fidelity, than those supplied by the data provider. Under these circumstances, it is possible that an error greater than 40 percent may be generated. An error greater than 40 percent may be acceptable if simulator sponsor can provide an adequate explanation.

\* \* \* \* \*

12. Validation Data Roadmap

a. Airplane manufacturers or other data suppliers should supply a validation data roadmap (VDR) document as part of the data package. A VDR document contains guidance material from the airplane validation data supplier recommending the best possible sources of data to be used as validation data in the QTG. A VDR is of special value when requesting interim qualification, qualification of simulators for airplanes certificated prior to 1992, and qualification of alternate engine or avionics fits. A sponsor seeking to have a device qualified in accordance with the standards contained in this QPS appendix should submit a VDR to the NSPM as early as possible in the planning stages. The NSPM is the final authority to approve the data to be used as validation material for the QTG.

\* \* \* \* \*

■ 9. Amend Attachment 3 to Appendix A by revising:

- A. Table A3A;
- B. Table A3B;
- C. Table A3D; and
- D. Table A3F;

The revisions read as follows:

**Appendix A to Part 60—Qualification Performance Standards for Airplane Full Flight Simulators**

\* \* \* \* \*

**Attachment 3 to Appendix A to Part 60—SIMULATOR SUBJECTIVE EVALUATION**

\* \* \* \* \*

	Tasks in this table are subject to evaluation if appropriate for the airplane simulated as indicated in the SOQ Configuration List or the level of simulator qualification involved. Items not installed or not functional on the simulator and, therefore, not appearing on the SOQ Configuration List, are not required to be listed as exceptions on the SOQ.				
<b>1.</b>	<b>Preparation For Flight</b>				
<b>1.a.</b>	<b>Pre-flight.</b> Accomplish a functions check of all switches, indicators, systems, and equipment at all crew members' and instructors' stations and determine that:				
<b>1.a.1</b>	The flight deck design and functions are identical to that of the airplane being simulated.	X	X	X	X
<b>1.a.2</b>	Reserved				
<b>1.a.3</b>	Reserved				
<b>2.</b>	<b>Surface Operations (pre-flight).</b>				
<b>2.a.</b>	<b>Engine Start</b>				
<b>2.a.1.</b>	Normal start	X	X	X	X
<b>2.a.2.</b>	Alternate start procedures	X	X	X	X
<b>2.a.3.</b>	Abnormal starts and shutdowns (e.g., hot/hung start, tail pipe fire)	X	X	X	X
<b>2.b.</b>	<b>Taxi</b>				
<b>2.b.1</b>	Pushback/powerback		X	X	X
<b>2.b.2.</b>	Thrust response	X	X	X	X
<b>2.b.3.</b>	Power lever friction	X	X	X	X
<b>2.b.4.</b>	Ground handling	X	X	X	X
<b>2.b.5.</b>	Nosewheel scuffing			X	X
<b>2.b.6.</b>	Taxi aids (e.g. taxi camera, moving map)			X	X
<b>2.b.7.</b>	Low visibility (taxi route, signage, lighting, markings, etc.)			X	X
<b>2.c.</b>	<b>Brake Operation</b>				
<b>2.c.1.</b>	Brake operation (normal and alternate/emergency)	X	X	X	X
<b>2.c.2.</b>	Brake fade (if applicable)	X	X	X	X
<b>2.d</b>	<b>Other</b>				
<b>3.</b>	<b>Take-off.</b>				
<b>3.a.</b>	<b>Normal</b>				
<b>3.a.1.</b>	Airplane/engine parameter relationships, including run-up	X	X	X	X
<b>3.a.2.</b>	Nosewheel and rudder steering	X	X	X	X
<b>3.a.3.a</b>	Crosswind (maximum demonstrated)	X	X	X	X
<b>3.a.3.b</b>	Gusting crosswind			X	X
<b>3.a.4.</b>	Special performance				
<b>3.a.4.a</b>	Reduced V <sub>1</sub>	X	X	X	X
<b>3.a.4.b</b>	Maximum engine de-rate	X	X	X	X
<b>3.a.4.c</b>	Soft surface			X	X
<b>3.a.4.d</b>	Short field/short take-off and landing (STOL) operations	X	X	X	X
<b>3.a.4.e</b>	Obstacle (performance over visual obstacle)			X	X
<b>3.a.5.</b>	Low visibility take-off	X	X	X	X
<b>3.a.6.</b>	Landing gear, wing flap leading edge device operation	X	X	X	X
<b>3.a.7.</b>	Contaminated runway operation			X	X
<b>3.a.8.</b>	Other				
<b>3.b.</b>	<b>Abnormal/emergency</b>				
<b>3.b.1.</b>	Rejected Take-off	X	X	X	X
<b>3.b.2.</b>	Rejected special performance (e.g., reduced V <sub>1</sub> , max de-rate, short field operations)	X	X	X	X

<b>3.b.3.</b>	Rejected take-off with contaminated runway			<b>X</b>	<b>X</b>
<b>3.b.4.</b>	Takeoff with a propulsion system malfunction (allowing an analysis of causes, symptoms, recognition, and the effects on aircraft performance and handling) at the following points: (i) Prior to V1 decision speed; (ii) Between V1 and Vr (rotation speed); and (iii) Between Vr and 500 feet above ground level.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>
<b>3.b.5.</b>	Flight control system failures, reconfiguration modes, manual reversion and associated handling.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>
<b>3.b.6.</b>	Other				
<b>4.</b>	<b>Climb.</b>				
<b>4.a.</b>	Normal.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>
<b>4.b.</b>	One or more engines inoperative.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>
<b>4.c.</b>	Approach climb in icing (for airplanes with icing accountability).	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>

<b>5.b.9.</b>	In flight engine shutdown and restart (assisted and windmill)	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>
<b>5.b.10.</b>	Maneuvering with one or more engines inoperative, as appropriate	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>
<b>5.b.11.</b>	Specific flight characteristics (e.g. direct lift control)	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>

5.b.12.	Flight control system failures, reconfiguration modes, manual reversion and associated handling	X	X	X	X
5.b.13	Gliding to a forced landing			X	X
5.b.14	Visual resolution and FSTD handling and performance for the following (where applicable by aircraft type and training program):				
5.b.14.a	Terrain accuracy for forced landing area selection;			X	X
5.b.14.b	Terrain accuracy for VFR Navigation;			X	X
5.b.14.c	Eights on pylons (visual resolution);			X	X
5.b.14.d	Turns about a point; and			X	X
5.b.14.e	S-turns about a road or section line.			X	X
5.b.15	Other.				
6.	<b>Descent.</b>				
6.a.	Normal	X	X	X	X
6.b.	Maximum rate/emergency (clean and with speedbrake, etc.).	X	X	X	X
6.c.	With autopilot.	X	X	X	X
6.d.	Flight control system failures, reconfiguration modes, manual reversion and associated handling.	X	X	X	X
6.e.	Other				
7.	<b>Instrument Approaches And Landing.</b> Those instrument approach and landing tests relevant to the simulated airplane type are selected from the following list. Some tests are made with limiting wind velocities, under windshear conditions, and with relevant system failures, including the failure of the Flight Director. If Standard Operating Procedures allow use autopilot for non-precision approaches, evaluation of the autopilot will be included. Level A simulators are not authorized to credit the landing maneuver.				
7.a.	<b>Precision approach</b>				
7.a.1	CAT I published approaches.				
7.a.1.a	Manual approach with/without flight director including landing.	X	X	X	X
7.a.1.b	Autopilot/autothrottle coupled approach and manual landing.	X	X	X	X
7.a.1.c	Autopilot/autothrottle coupled approach, engine(s) inoperative.	X	X	X	X
7.a.1.d	Manual approach, engine(s) inoperative.	X	X	X	X
7.a.1.e	HUD/EFVS			X	X
7.a.2	CAT II published approaches.				
7.a.2.a	Autopilot/autothrottle coupled approach to DH and landing (manual and autoland).	X	X	X	X
7.a.2.b	Autopilot/autothrottle coupled approach with one-engine-inoperative approach to DH and go-around (manual and autopilot).	X	X	X	X
7.a.2.c	HUD/EFVS			X	X
7.a.3	CAT III published approaches.				
7.a.3.a	Autopilot/autothrottle coupled approach to landing and roll-out (if applicable) guidance (manual and autoland).	X	X	X	X
7.a.3.b	Autopilot/autothrottle coupled approach to DH and go-around (manual and autopilot).	X	X	X	X
7.a.3.c	Autopilot/autothrottle coupled approach to land and roll-out (if applicable) guidance with one engine inoperative	X	X	X	X

	(manual and autoland).				
<b>7.a.3.d</b>	Autopilot/autothrottle coupled approach to DH and go-around with one engine inoperative (manual and autopilot).	X	X	X	X
<b>7.a.3.e</b>	HUD/EFVS			X	X
<b>7.a.4</b>	Autopilot/autothrottle coupled approach (to a landing or to a go-around):				
<b>7.a.4.a</b>	With generator failure;	X	X	X	X
<b>7.a.4.b.1</b>	With maximum tail wind component certified or authorized;			X	X
<b>7.a.4.b.2</b>	With 10 knot tail wind;	X	X		
<b>7.a.4.c.1</b>	With maximum crosswind component demonstrated or authorized; and			X	X
<b>7.a.4.c.2</b>	With 10 knot crosswind.	X	X		
<b>7.a.5</b>	PAR approach, all engine(s) operating and with one or more engine(s) inoperative	X	X	X	X
<b>7.a.6</b>	MLS, GBAS, all engine(s) operating and with one or more engine(s) inoperative	X	X	X	X
<b>7.b.</b>	<b>Non-precision approach.</b>				
<b>7.b.1</b>	Surveillance radar approach, all engine(s) operating and with one or more engine(s) inoperative	X	X	X	X
<b>7.b.2</b>	NDB approach, all engine(s) operating and with one or more engine(s) inoperative	X	X	X	X
<b>7.b.3</b>	VOR, VOR/DME, TACAN approach, all engines(s) operating and with one or more engine(s) inoperative	X	X	X	X
<b>7.b.4</b>	RNAV / RNP / GNSS (RNP at nominal and minimum authorized temperatures) approach, all engine(s) operating and with one or more engine(s) inoperative	X	X	X	X
<b>7.b.5</b>	ILS LLZ (LOC), LLZ back course (or LOC-BC) approach, all engine(s) operating and with one or more engine(s) inoperative	X	X	X	X
<b>7.b.6</b>	ILS offset localizer approach, all engine(s) operating and with one or more engine(s) inoperative	X	X	X	X
<b>7.c</b>	<b>Approach procedures with vertical guidance (APV), e.g. SBAS, flight path vector</b>				
<b>7.c.1</b>	APV/baro-VNAV approach, all engine(s) operating and with one or more engine(s) inoperative			X	X
<b>7.c.2</b>	Area navigation (RNAV) approach procedures based on SBAS, all engine(s) operating and with one or more engine(s) inoperative			X	X
<b>8.</b>	<b>Visual Approaches (Visual Segment) And Landings.</b>  Flight simulators with visual systems, which permit completing a special approach procedure in accordance with applicable regulations, may be approved for that particular approach procedure.				
<b>8.a.</b>	Maneuvering, normal approach and landing, all engines operating with and without visual approach aid guidance	X	X	X	X
<b>8.b.</b>	Approach and landing with one or more engines inoperative	X	X	X	X
<b>8.c.</b>	Operation of landing gear, flap/slats and speedbrakes (normal and abnormal)	X	X	X	X
<b>8.d.1</b>	Approach and landing with crosswind (max. demonstrated)	X	X	X	X

<b>8.d.2</b>	Approach and landing with gusting crosswind			X	X
<b>8.e.</b>	Approach and landing with flight control system failures, reconfiguration modes, manual reversion and associated handling (most significant degradation which is probable)	X	X	X	X
<b>8.e.1.</b>	Approach and landing with trim malfunctions	X	X	X	X
<b>8.e.1.a</b>	Longitudinal trim malfunction	X	X	X	X
<b>8.e.1.b</b>	Lateral-directional trim malfunction	X	X	X	X
<b>8.f.</b>	Approach and landing with standby (minimum) electrical/hydraulic power	X	X	X	X
<b>8.g.</b>	Approach and landing from circling conditions (circling approach)	X	X	X	X
<b>8.h.</b>	Approach and landing from visual traffic pattern	X	X	X	X
<b>8.i.</b>	Approach and landing from non-precision approach	X	X	X	X
<b>8.j.</b>	Approach and landing from precision approach	X	X	X	X
<b>8.k.</b>	Other				
<b>9.</b>	<b>Missed Approach.</b>				
<b>9.a.</b>	All engines, manual and autopilot.	X	X	X	X
<b>9.b.</b>	Engine(s) inoperative, manual and autopilot.	X	X	X	X
<b>9.c.</b>	Rejected landing			X	X
<b>9.d.</b>	With flight control system failures, reconfiguration modes, manual reversion and associated handling	X	X	X	X
<b>9.e.</b>	Bounced landing recovery			X	X
<b>10.</b>	<b>Surface Operations (landing, after-landing and post-flight).</b>				
<b>10.a</b>	<b>Landing roll and taxi</b>				
<b>10.a.1</b>	HUD/EFVS			X	X
<b>10.a.2.</b>	Spoiler operation	X	X	X	X
<b>10.a.3.</b>	Reverse thrust operation	X	X	X	X
<b>10.a.4.</b>	Directional control and ground handling, both with and without reverse thrust		X	X	X
<b>10.a.5.</b>	Reduction of rudder effectiveness with increased reverse thrust (rear pod-mounted engines)		X	X	X
<b>10.a.6.</b>	Brake and anti-skid operation				
<b>10.a.6.a</b>	Brake and anti-skid operation with dry, patchy wet, wet on rubber residue, and patchy icy conditions			X	X
<b>10.a.6.b</b>	Reserved				
<b>10.a.6.c</b>	Brake operation	X	X		
<b>10.a.6.d</b>	Auto-braking system operation	X	X	X	X

<b>11.b.4.</b>	Effects of airframe ice			X	X

This table specifies the minimum airport model content and functionality to qualify a simulator at the indicated level. This table applies only to the airport models required for simulator qualification; i.e., one airport model for Level A and Level B simulators; three airport models for Level C and Level D simulators.					
<b>Begin QPS Requirements</b>					
<b>1.</b>	<b>Functional test content requirements for Level A and Level B simulators.</b> The following is the minimum airport model content requirement to satisfy visual capability tests, and provides suitable visual cues to allow completion of all functions and subjective tests described in this attachment for simulators at Levels A and B.				
<b>1.a.</b>	A minimum of one (1) representative airport model. This model identification must be acceptable to the sponsor's TPAA, selectable from the IOS, and listed on the SOQ.	<b>X</b>	<b>X</b>		
<b>1.b.</b>	The fidelity of the airport model must be sufficient for the aircrew to visually identify the airport; determine the position of the simulated airplane within a night visual scene; successfully accomplish take-offs, approaches, and landings; and maneuver around the airport on the ground as necessary.	<b>X</b>	<b>X</b>		
<b>1.c.</b>	Runways:	<b>X</b>	<b>X</b>		
<b>1.c.1.</b>	Visible runway number.	<b>X</b>	<b>X</b>		
<b>1.c.2.</b>	Runway threshold elevations and locations must be modeled to provide sufficient correlation with airplane systems (e.g., altimeter).	<b>X</b>	<b>X</b>		
<b>1.c.3.</b>	Runway surface and markings.	<b>X</b>	<b>X</b>		
<b>1.c.4.</b>	Lighting for the runway in use including runway edge and centerline.	<b>X</b>	<b>X</b>		
<b>1.c.5.</b>	Lighting, visual approach aid and approach lighting of appropriate colors.	<b>X</b>	<b>X</b>		
<b>1.c.6.</b>	Representative taxiway lights.	<b>X</b>	<b>X</b>		
<b>2.a.</b>	<b>Additional functional test content requirements</b>				
<b>2.a.1</b>	<b>Airport scenes</b>				
<b>2.a.1.a</b>	A minimum of three (3) real-world airport models to be consistent with published data used for airplane operations and capable of demonstrating all the visual system features below. Each model should be in a different visual scene to permit assessment of FSTD automatic visual scene changes. The model identifications must be acceptable to the sponsor's TPAA, selectable from the IOS, and listed on the SOQ.			<b>X</b>	<b>X</b>
<b>2.a.1.b</b>	Reserved				
<b>2.a.1.c</b>	Reserved				
<b>2.a.1.d</b>	<b>Airport model content.</b> For circling approaches, all tests apply to the runway used for the initial approach and to the runway of intended landing. If all runways in an airport model used to meet the requirements of this attachment are not designated as "in use," then the "in use" runways must be listed on the SOQ (e.g., KORD, Rwy 9R, 14L, 22R). Models of airports with more than one runway must have all significant runways not "in-use" visually depicted for airport and runway recognition purposes. The use of white or off white light strings that identify the runway threshold, edges, and ends for twilight and night scenes are acceptable for this requirement.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>

	Rectangular surface depictions are acceptable for daylight scenes. A visual system's capabilities must be balanced between providing airport models with an accurate representation of the airport and a realistic representation of the surrounding environment. Airport model detail must be developed using airport pictures, construction drawings and maps, or other similar data, or developed in accordance with published regulatory material; however, this does not require that such models contain details that are beyond the design capability of the currently qualified visual system. Only one "primary" taxi route from parking to the runway end will be required for each "in-use" runway.				
<b>2.a.2</b>	<b>Visual scene fidelity.</b>				
<b>2.a.2.a</b>	The visual scene must correctly represent the parts of the airport and its surroundings used in the training program.	X	X	X	X
<b>2.a.2.b</b>	Reserved				
<b>2.a.2.c</b>	Reserved				
<b>2.a.3</b>	<b>Runways and taxiways.</b>				
<b>2.a.3.a</b>	Airport specific runways and taxiways.	X	X	X	X
<b>2.a.3.b</b>	Reserved				
<b>2.a.3.c</b>	Reserved				
<b>2.a.4</b>	If appropriate to the airport, two parallel runways and one crossing runway displayed simultaneously; at least two runways must be capable of being lit simultaneously.			X	X
<b>2.a.5</b>	Runway threshold elevations and locations must be modeled to provide correlation with airplane systems (e.g. HUD, GPS, compass, altimeter).			X	X
<b>2.a.6</b>	Slopes in runways, taxiways, and ramp areas must not cause distracting or unrealistic effects, including pilot eye-point height variation.			X	X
<b>2.a.7</b>	<b>Runway surface and markings for each "in-use" runway must include the following, if appropriate:</b>				
<b>2.a.7.a</b>	Threshold markings.	X	X	X	X
<b>2.a.7.b</b>	Runway numbers.	X	X	X	X
<b>2.a.7.c</b>	Touchdown zone markings.	X	X	X	X

<b>2.a.11</b>	<b>Required visual model correlation with other aspects of the airport environment simulation.</b>				
<b>2.a.11.a</b>	The airport model must be properly aligned with the navigational aids that are associated with operations at the runway “in-use”.	X	X	X	X
<b>2.a.11.b</b>	The simulation of runway contaminants must be correlated with the displayed runway surface and lighting.				X
<b>2.a.12</b>	<b>Airport buildings, structures and lighting.</b>				
<b>2.a.12.a</b>	Buildings, structures and lighting:				
<b>2.a.12.a.1</b>	Airport specific buildings, structures and lighting.			X	X
<b>2.a.12.a.2</b>	Reserved				
<b>2.a.12.a.3</b>	Reserved				
<b>2.a.12.b</b>	At least one useable gate, set at the appropriate height (required only for those airplanes that typically operate from terminal gates).			X	X
<b>2.a.12.c</b>	Representative moving and static airport clutter (e.g. other airplanes, power carts, tugs, fuel trucks, additional gates).			X	X
<b>2.a.12.d</b>	Gate/apron markings (e.g. hazard markings, lead-in lines, gate numbering), lighting and gate docking aids or a marshaller.			X	X
<b>2.a.13</b>	<b>Terrain and obstacles.</b>				
<b>2.a.13.a</b>	Terrain and obstacles within 46 km (25 NM) of the reference airport.			X	X
<b>2.a.13.b</b>	Reserved				
<b>2.a.14</b>	<b>Significant, identifiable natural and cultural features and moving airborne traffic.</b>				
<b>2.a.14.a</b>	Significant, identifiable natural and cultural features within 46 km (25 NM) of the reference airport.			X	X

	<i>Note.— This refers to natural and cultural features that are typically used for pilot orientation in flight. Outlying airports not intended for landing need only provide a reasonable facsimile of runway orientation.</i>				
<b>2.a.14.b</b>	Reserved				
<b>2.a.14.c</b>	Representative moving airborne traffic (including the capability to present air hazards – e.g. airborne traffic on a possible collision course).			X	X
<b>2.b</b>	<b>Visual scene management.</b>				
<b>2.b.1</b>	All airport runway, approach and taxiway lighting and cultural lighting intensity for any approach must be capable of being set to six (6) different intensities (0 to 5); all visual scene light points should fade into view appropriately.			X	X
<b>2.b.2</b>	Airport runway, approach and taxiway lighting and cultural lighting intensity for any approach must be set at an intensity representative of that used in training for the visibility set; all visual scene light points should fade into view appropriately.	X	X		
<b>2.b.3</b>	The directionality of strobe lights, approach lights, runway edge lights, visual landing aids, runway center line lights, threshold lights, and touchdown zone lights on the runway of intended landing must be realistically replicated.	X	X	X	X
<b>2.c</b>	<b>Visual feature recognition.</b> <i>Note.— The following are the minimum distances at which runway features should be visible. Distances are measured from runway threshold to an airplane aligned with the runway on an extended 3-degree glide slope in suitable simulated meteorological conditions. For circling approaches, all tests below apply both to the runway used for the initial approach and to the runway of intended landing.</i>				
<b>2.c.1</b>	Runway definition, strobe lights, approach lights, and runway edge white lights from 8 km (5 sm) of the runway threshold.	X	X	X	X
<b>2.c.2</b>	<b>Visual approach aids lights.</b>				
<b>2.c.2.a</b>	Visual approach aids lights from 8 km (5 sm) of the runway threshold.			X	X
<b>2.c.2.b</b>	Visual approach aids lights from 4.8 km (3 sm) of the runway threshold.	X	X		
<b>2.c.3</b>	Runway center line lights and taxiway definition from 4.8 km (3 sm).	X	X	X	X
<b>2.c.4</b>	Threshold lights and touchdown zone lights from 3.2 km (2 sm).	X	X	X	X
<b>2.c.5</b>	Runway markings within range of landing lights for night scenes; as required by the surface resolution test on day scenes.	X	X	X	X
<b>2.c.6</b>	For circling approaches, the runway of intended landing and associated lighting must fade into view in a non-distracting manner.	X	X	X	X
<b>2.d</b>	<b>Selectable airport visual scene capability for:</b>				
<b>2.d.1</b>	Night.	X	X	X	X
<b>2.d.2</b>	Twilight.			X	X
<b>2.d.3</b>	Day.			X	X
<b>2.d.4</b>	Dynamic effects — the capability to present multiple ground and air hazards such as another airplane crossing the active runway or converging airborne traffic; hazards should be selectable via controls at the instructor station.			X	X

2.d.5	Illusions — operational visual scenes which portray representative physical relationships known to cause landing illusions, for example short runways, landing approaches over water, uphill or downhill runways, rising terrain on the approach path and unique topographic features. <i>Note.— Illusions may be demonstrated at a generic airport or at a specific airport.</i>				X
2.e	<b>Correlation with airplane and associated equipment.</b>				
2.e.1	Visual cues to relate to actual airplane responses.	X	X	X	X
2.e.2	<b>Visual cues during take-off, approach and landing.</b>				
2.e.2.a	Visual cues to assess sink rate and depth perception during landings.		X	X	X
2.e.2.b	Visual cueing sufficient to support changes in approach path by using runway perspective. Changes in visual cues during take-off, approach and landing should not distract the pilot.	X	X	X	X
2.e.3	Accurate portrayal of environment relating to airplane attitudes.	X	X	X	X
2.e.4	The visual scene must correlate with integrated airplane systems, where fitted (e.g. terrain, traffic and weather avoidance systems and HUD/EFVS).			X	X
2.e.5	The effect of rain removal devices must be provided.			X	X
2.f	<b>Scene quality.</b>				
2.f.1	<b>Quantization.</b>				
2.f.1.a	Surfaces and textural cues must be free from apparent quantization (aliasing).			X	X
2.f.1.b	Surfaces and textural cues must not create distracting quantization (aliasing).	X	X		
2.f.2	System capable of portraying full color realistic textural cues.			X	X
2.f.3	The system light points must be free from distracting jitter, smearing or streaking.	X	X	X	X
2.f.4	System capable of providing representative focus effects that simulate rain (e.g. reduced visibility and object resolution in the out the window view as a result of rain).			X	X
2.f.5	System capable of providing light point perspective growth (e.g. relative size of runway and taxiway edge lights increase as the lights are approached).			X	X
2.g	<b>Environmental effects.</b>				
2.g.1	The displayed scene must correspond to the appropriate surface contaminants and include runway lighting reflections for wet, partially obscured lights for snow, or suitable alternative effects.			X	X
2.g.2	Special weather representations which include the sound, motion and visual effects of light, medium and heavy precipitation near a thunderstorm on take-off, approach and landings at and below an altitude of 600 m (2 000 ft) above the airport surface and within a radius of 16 km (10 sm) from the airport.			X	X
2.g.3	One airport with a snow scene to include terrain snow and snow-covered taxiways and runways.			X	X
2.g.4	In-cloud effects such as variable cloud density, speed cues and ambient changes should be provided.			X	X
2.g.5	The effect of multiple cloud layers representing few, scattered, broken and overcast conditions giving partial or complete			X	X

	obstruction of the ground scene.				
<b>2.g.6</b>	Gradual break-out to ambient visibility/RVR, defined as up to 10% of the respective cloud base or top, 20 ft ≤ transition layer ≤ 200 ft; cloud effects should be checked at and below a height of 600 m (2 000 ft) above the airport and within a radius of 16 km (10 sm) from the airport. Transition effects should be complete when the IOS cloud base or top is reached when exiting and start when entering the cloud, i.e. transition effects should occur within the IOS defined cloud layer.			<b>X</b>	<b>X</b>
<b>2.g.7</b>	Visibility and RVR measured in terms of distance. Visibility/RVR must be checked at and below a height of 600 m (2 000 ft) above the airport and within a radius of 16 km (10 sm) from the airport.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>
<b>2.g.8</b>	Patchy fog (sometimes referred to as patchy RVR) giving the effect of variable RVR. The lowest RVR should be that selected on the IOS, ie. variability is only greater than the IOS RVR.			<b>X</b>	<b>X</b>
<b>2.g.9</b>	Effects of fog on airport lighting such as halos and defocus.			<b>X</b>	<b>X</b>
<b>2.g.10</b>	Effect of ownship lighting in reduced visibility, such as reflected glare, to include landing lights, strobes, and beacons.			<b>X</b>	<b>X</b>
<b>2.g.11</b>	Wind cues to provide the effect of blowing snow or sand across a dry runway or taxiway should be selectable from the instructor station.			<b>X</b>	<b>X</b>
<b>End QPS Requirement</b>					
<b>Begin Information</b>					
<b>3.</b>	An example of being able to “combine two airport models to achieve two “in-use” runways: One runway designated as the “in use” runway in the first model of the airport, and the second runway designated as the “in use” runway in the second model of the same airport. For example, the clearance is for the ILS approach to Runway 27, Circle to Land on Runway 18 right. Two airport visual models might be used: the first with Runway 27 designated as the “in use” runway for the approach to runway 27, and the second with Runway 18 Right designated as the “in use” runway. When the pilot breaks off the ILS approach to runway 27, the instructor may change to the second airport visual model in which runway 18 Right is designated as the “in use” runway, and the pilot would make a visual approach and landing. This process is acceptable to the FAA as long as the temporary interruption due to the visual model change is not distracting to the pilot, does not cause changes in navigational radio frequencies, and does not cause undue instructor/evaluator time.				
<b>4.</b>	Sponsors are not required to provide every detail of a runway, but the detail that is provided should be correct within the capabilities of the system.				
<b>End Information</b>					

<p>This table specifies motion effects that are required to indicate when a flight crewmember must be able to recognize an event or situation. Where applicable, flight simulator pitch, side loading and directional control characteristics must be representative of the airplane.</p>						
1.	<p><b>Taxiing effects such as lateral, longitudinal, and directional cues resulting from steering and braking inputs. Runway contamination with associated anti-skid and taxiway characteristics.</b></p>			X	X	
2.	<p><b>Runway rumble, oleo deflection, ground speed, uneven runway, runway/taxiway centerline light characteristics:</b></p> <p>Procedure: After the airplane has been pre-set to the takeoff position and then released, taxi at various speeds with a smooth runway and note the general characteristics of the simulated runway rumble effects of oleo deflections. Repeat the maneuver with a runway roughness of 50%, then with maximum roughness. Note the associated motion vibrations affected by ground speed and runway roughness.</p>		X	X	X	<p>Different gross weights can also be selected, which may also affect the associated vibrations depending on airplane type. The associated motion effects for the above tests should also include an assessment of the effects of rolling over centerline lights, surface discontinuities of uneven runways, and various taxiway characteristics.</p>
3.	<p><b>Buffets on the ground due to spoiler/speedbrake extension and reverse thrust:</b></p> <p>Procedure: Perform a normal landing and use ground spoilers and reverse thrust – either individually or in combination – to decelerate the simulated airplane. Do not use wheel braking so that only the buffet due to the ground spoilers and thrust reversers is felt.</p>	X	X	X	X	
4.	<p><b>Bumps associated with the landing gear:</b></p> <p>Procedure: Perform a normal take-off paying special attention to the bumps that could be perceptible due to maximum oleo</p>	X	X	X	X	

	extension after lift-off. When the landing gear is extended or retracted, motion bumps can be felt when the gear locks into position.					
<b>5.</b>	<b>Buffet during extension and retraction of landing gear:</b>  Procedure: Operate the landing gear. Check that the motion cues of the buffet experienced represent the actual airplane.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>6.</b>	<b>Buffet in the air due to flap and spoiler/speedbrake extension:</b>  Procedure: Perform an approach and extend the flaps and slats with airspeeds deliberately in excess of the normal approach speeds. In cruise configuration, verify the buffets associated with the spoiler/speedbrake extension. The above effects can also be verified with different combinations of spoiler/speedbrake, flap, and landing gear settings to assess the interaction effects.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>7.</b>	<b>Buffet due to atmospheric disturbances</b> (e.g. buffet due to turbulence, windshear, proximity to thunderstorms, gusting winds, etc.).			<b>X</b>	<b>X</b>	
<b>8.</b>	<b>Approach to stall buffet and stall buffet (where applicable):</b>  Procedure: Conduct an approach-to-stall with engines at idle and a deceleration of 1 knot/second. Check that the motion cues of the buffet, including the level of buffet increase with decreasing speed, are representative of the actual airplane.	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	For FSTDs qualified for full stall training tasks, modeling that accounts for any increase in buffet amplitude from initial buffet threshold of perception to critical angle of attack or deterrent buffet as a function of angle of attack. The stall buffet modeling should include effects of Nz, as well as Nx and Ny if relevant.

<p><b>9.</b></p>	<p><b>Touchdown cues for main and nose gear:</b></p> <p>Procedure: Conduct several normal approaches with various rates of descent. Check that the motion cues for the touchdown bumps for each descent rate are representative of the actual airplane.</p>	<p>X</p>	<p>X</p>	<p>X</p>	<p>X</p>	
<p><b>10.</b></p>	<p><b>Nosewheel scuffing:</b></p> <p>Procedure: Taxi at various ground speeds and manipulate the nosewheel steering to cause yaw rates to develop that cause the nosewheel to vibrate against the ground (“scuffing”). Evaluate the speed/nosewheel combination needed to produce scuffing and check that the resultant vibrations are representative of the actual airplane.</p>		<p>X</p>	<p>X</p>	<p>X</p>	
<p><b>11.</b></p>	<p><b>Thrust effect with brakes set:</b></p> <p>Procedure: Set the brakes on at the take-off point and increase the engine power until buffet is experienced. Evaluate its characteristics. Confirm that the buffet increases appropriately with increasing engine thrust.</p>	<p>X</p>	<p>X</p>	<p>X</p>	<p>X</p>	<p>This effect is most discernible with wing-mounted engines.</p>
<p><b>12.</b></p>	<p><b>Mach and maneuver buffet:</b></p> <p>Procedure: With the simulated airplane trimmed in 1 g flight while at high altitude, increase the engine power so that the Mach number exceeds the documented value at which Mach buffet is experienced. Check that the buffet begins at the same Mach number as it does in the airplane (for the same configuration) and that buffet levels are representative of the actual airplane. For certain airplanes, maneuver buffet can also be verified for the same effects. Maneuver buffet can occur during turning flight at conditions greater than 1 g, particularly</p>		<p>X</p>	<p>X</p>	<p>X</p>	

\*  
\*  
\*  
\*  
\*

	at higher altitudes.					
<b>13.</b>	<p><b>Tire failure dynamics:</b></p> <p>Procedure: Simulate a single tire failure and a multiple tire failure.</p>			<b>X</b>	<b>X</b>	<p>The pilot may notice some yawing with a multiple tire failure selected on the same side. This should require the use of the rudder to maintain control of the airplane. Dependent on airplane type, a single tire failure may not be noticed by the pilot and should not have any special motion effect. Sound or vibration may be associated with the actual tire losing pressure.</p>
<b>14.</b>	<p><b>Engine failures, malfunction, engine, and airframe structural damage:</b></p> <p>Procedure: The characteristics of an engine malfunction as stipulated in the malfunction definition document for the particular flight simulator must describe the special motion effects felt by the pilot. Note the associated engine instruments varying according to the nature of the malfunction and note the replication of the effects of the airframe vibration.</p>		<b>X</b>	<b>X</b>	<b>X</b>	
<b>15.</b>	<p><b>Tail strikes, engine pod/propeller, wing strikes:</b></p> <p>Procedure: Tail-strikes can be checked by over-rotation of the airplane at a speed below <math>V_r</math> while performing a takeoff. The effects can also be verified during a landing.</p> <p>Excessive banking of the airplane during its take-off/landing roll can cause a pod strike.</p>		<b>X</b>	<b>X</b>	<b>X</b>	<p>The motion effect should be felt as a noticeable bump. If the tail strike affects the airplane angular rates, the cueing provided by the motion system should have an associated effect.</p>

This table specifies the minimum special effects necessary for the specified simulator level.					
1.	<p><b>Braking Dynamics:</b> Representations of the dynamics of brake failure (flight simulator pitch, side-loading, and directional control characteristics representative of the airplane), including antiskid and decreased brake efficiency due to high brake temperatures (based on airplane related data), sufficient to enable pilot identification of the problem and implementation of appropriate procedures.</p>			X	X
2.	<p><b>Effects of Airframe and Engine Icing: Required only for those airplanes authorized for operations in known icing conditions.</b></p> <p>Procedure: With the simulator airborne, autopilot on and auto-throttles off, engine and airfoil anti-ice/de-ice systems deactivated; activate icing conditions at a rate that allows monitoring of simulator and systems response. Icing recognition will typically include airspeed decay, change in simulator pitch attitude, change in engine performance indications (other than due to airspeed changes), and change in data from pitot/static system. Activate heating, anti-ice, or de-ice systems independently. Recognition will include proper effects of these systems, eventually returning the simulated airplane to normal flight. See Table A1A, section 2.j. and Attachment 7 for additional requirements.</p>			X	X

**Appendix A to Part 60—Qualification Performance Standards for Airplane Full Flight Simulators—[Amended]**

■ 10. Amend Attachment 4 to Appendix A by removing and reserving Figure A4H.

■ 11. Amend Attachment 6 to Appendix A by adding the text for FSTD Directive No. 2 in sequential order after FSTD Directive No. 1 to read as follows:

**Appendix A to Part 60—Qualification Performance Standards for Airplane Full Flight Simulators**

\* \* \* \* \*

*Flight Simulation Training Device (FSTD) Directive*

FSTD Directive 2. Applicable to all airplane Full Flight Simulators (FFS), regardless of the original qualification basis and qualification date (original or upgrade), used to conduct full stall training, upset recovery training, airborne icing training, and other flight training tasks as described in this Directive.

Agency: Federal Aviation Administration (FAA), DOT.

Action: This is a retroactive requirement for any FSTD being used to obtain training, testing, or checking credit in an FAA approved flight training program for the specific training maneuvers as defined in this Directive.

Summary: Notwithstanding the authorization listed in paragraph 13b in Appendix A of this Part, this FSTD Directive requires that each FSTD sponsor conduct additional subjective and objective testing,

conduct required modifications, and apply for additional FSTD qualification under § 60.16 to support continued qualification of the following flight training tasks where training, testing, or checking credit is being sought in a selected FSTD being used in an FAA approved flight training program:

- a. Recognition of and Recovery from a Full Stall
- b. Upset Prevention and Recovery
- c. Engine and Airframe Icing
- d. Takeoff and Landing with Gusting Crosswinds
- e. Recovery from a Bounced Landing

The FSTD sponsor may elect to apply for additional qualification for any, all, or none of the above defined training tasks for a particular FSTD. After March 12, 2019, any FSTD used to conduct the above training tasks must be evaluated and issued additional qualification by the National Simulator Program Manager (NSPM) as defined in this Directive.

Dates: FSTD Directive No. 2 becomes effective on May 31, 2016.

For Further Information Contact: Larry McDonald, Air Transportation Division/ National Simulator Program Branch, AFS-205, Federal Aviation Administration, P.O. Box 20636, Atlanta, GA 30320; telephone (404) 474-5620; email [larry.e.mcdonald@faa.gov](mailto:larry.e.mcdonald@faa.gov).

**Specific Requirements**

- 1. Part 60 requires that each FSTD be:
  - a. Sponsored by a person holding or applying for an FAA operating certificate under Part 119, Part 141, or Part 142, or holding or applying for an FAA-approved training program under Part 63, Appendix C, for flight engineers, and

b. Evaluated and issued a Statement of Qualification (SOQ) for a specific FSTD level.

2. The evaluation criteria contained in this Directive is intended to address specific training tasks that require additional evaluation to ensure adequate FSTD fidelity.

3. The requirements described in this Directive define additional qualification criteria for specific training tasks that are applicable only to those FSTDs that will be utilized to obtain training, testing, or checking credit in an FAA approved flight training program. In order to obtain additional qualification for the tasks described in this Directive, FSTD sponsors must request additional qualification in accordance with § 60.16 and the requirements of this Directive. FSTDs that are found to meet the requirements of this Directive will have their Statement of Qualification (SOQ) amended to reflect the additional training tasks that the FSTD has been qualified to conduct. The additional qualification requirements as defined in this Directive are divided into the following training tasks:

- a. Section I—Additional Qualification Requirements for Full Stall Training Tasks
- b. Section II—Additional Qualification Requirements for Upset Prevention and Recovery Training Tasks
- c. Section III—Additional Qualification Requirements for Engine and Airframe Icing Training Tasks
- d. Section IV—Additional Qualification Requirements for Takeoff and Landing in Gusting Crosswinds
- e. Section V—Additional Qualification Requirements for Bounced Landing Recovery Training Tasks

4. A copy of this Directive (along with all required Statements of Compliance and objective test results) must be filed in the MQTG in the designated FSTD Directive Section, and its inclusion must be annotated on the Index of Effective FSTD Directives chart. See Attachment 4, Appendix A for a sample MQTG Index of Effective FSTD Directives chart.

#### Section I—Evaluation Requirements for Full Stall Training Tasks

1. This section applies to previously qualified Level C and Level D FSTDs being used to obtain credit for stall training maneuvers beyond the first indication of a stall (such as stall warning system activation, stick shaker, etc.) in an FAA approved training program.

2. The evaluation requirements in this Directive are intended to validate FSTD fidelity at angles of attack sufficient to identify the stall, to demonstrate aircraft performance degradation in the stall, and to demonstrate recovery techniques from a fully stalled flight condition.

3. After March 12, 2019, any FSTD being used to obtain credit for full stall training maneuvers in an FAA approved training program must be evaluated and issued additional qualification in accordance with this Directive and the following sections of Appendix A of this Part:

- a. Table A1A, General Requirements, Section 2.m. (High Angle of Attack Modeling)
- b. Table A1A, General Requirements, Section 3.f. (Stick Pusher System) [where applicable]
- c. Table A2A, Objective Testing Requirements, Test 2.a.10 (Stick Pusher Force Calibration) [where applicable]
- d. Table A2A, Objective Testing Requirements, Test 2.c.8.a (Stall Characteristics)
- e. Table A2A, Objective Testing Requirements, Test 3.f.5 (Characteristic Motion Vibrations—Stall Buffet) [See paragraph 4 of this section for applicability on previously qualified FSTDs]
- f. Table A3A, Functions and Subjective Testing Requirements, Test 5.b.1.b. (High Angle of Attack Maneuvers)
- g. Attachment 7, Additional Simulator Qualification Requirements for Stall, Upset Prevention and Recovery, and Engine and Airframe Icing Training Tasks (High Angle of Attack Model Evaluation)

4. For FSTDs initially qualified before May 31, 2016, including FSTDs that are initially qualified under the grace period conditions as defined in § 60.15(c):

- a. Objective testing for stall characteristics (Table A2A, test 2.c.8.a.) will only be required for the (wings level) second segment climb and approach or landing flight conditions. In lieu of objective testing for the high altitude cruise and turning flight stall conditions, these maneuvers may be subjectively evaluated by a qualified subject matter expert (SME) pilot and addressed in the required statement of compliance.
- b. Where existing flight test validation data in the FSTD's Master Qualification Test Guide (MQTG) is missing required parameters or is otherwise unsuitable to

fully meet the objective testing requirements of this Directive, the FAA may accept alternate sources of validation, including subjective validation by an SME pilot with direct experience in the stall characteristics of the aircraft.

- c. Objective testing for characteristic motion vibrations (Stall buffet—Table A2A, test 3.f.5) is not required where the FSTD's stall buffets have been subjectively evaluated by an SME pilot. For previously qualified Level D FSTDs that currently have objective stall buffet tests in their approved MQTG, the results of these existing tests must be provided to the FAA with the updated stall and stall buffet models in place.
- d. As described in Attachment 7 of this Appendix, the FAA may accept a statement of compliance from the data provider which confirms the stall characteristics have been subjectively evaluated by an SME pilot on an engineering simulator or development simulator that is acceptable to the FAA. Where this evaluation takes place on an engineering or development simulator, additional objective "proof-of-match" testing for all flight conditions as described in tests 2.c.8.a. and 3.f.5. will be required to verify the implementation of the stall model and stall buffets on the training FSTD.

5. Where qualification is being sought to conduct full stall training tasks in accordance with this Directive, the FSTD Sponsor must conduct the required evaluations and modifications as prescribed in this Directive and report compliance to the NSPM in accordance with § 60.23 using the NSP's standardized FSTD Sponsor Notification Form. At a minimum, this form must be accompanied with the following information:

- a. A description of any modifications to the FSTD (in accordance with § 60.23) necessary to meet the requirements of this Directive.
- b. Statements of Compliance (High Angle of Attack Modeling/Stick Pusher System)—See Table A1A, Section 2.m., 3.f., and Attachment 7
- c. Statement of Compliance (SME Pilot Evaluation)—See Table A1A, Section 2.m. and Attachment 7
- d. Copies of the required objective test results as described above in sections 3.c., 3.d., and 3.e.

6. The NSPM will review each submission to determine if the requirements of this Directive have been met and respond to the FSTD Sponsor as described in § 60.23(c). Additional NSPM conducted FSTD evaluations may be required before the modified FSTD is placed into service. This response, along with any noted restrictions, will serve as interim qualification for full stall training tasks until such time that a permanent change is made to the Statement of Qualification (SOQ) at the FSTD's next scheduled evaluation.

#### Section II—Evaluation Requirements for Upset Prevention and Recovery Training Tasks

1. This section applies to previously qualified FSTDs being used to obtain training, testing, or checking credits for upset

prevention and recovery training tasks (UPRT) as defined in Appendix A, Table A1A, Section 2.n. of this part. Additionally, FSTDs being used for unusual attitude training maneuvers that are intended to exceed the parameters of an aircraft upset must also be evaluated and qualified for UPRT under this section. These parameters include pitch attitudes greater than 25 degrees nose up; pitch attitudes greater than 10 degrees nose down, and bank angles greater than 45 degrees.

2. The requirements contained in this section are intended to define minimum standards for evaluating an FSTD for use in upset prevention and recovery training maneuvers that may exceed an aircraft's normal flight envelope. These standards include the evaluation of qualified training maneuvers against the FSTD's validation envelope and providing the instructor with minimum feedback tools for the purpose of determining if a training maneuver is conducted within FSTD validation limits and the aircraft's operating limits.

3. This Directive contains additional subjective testing that exceeds the evaluation requirements of previously qualified FSTDs. Where aerodynamic modeling data or validation data is not available or insufficient to meet the requirements of this Directive, the NSPM may limit additional qualification to certain upset prevention and recovery maneuvers where adequate data exists.

4. After March 12, 2019, any FSTD being used to obtain training, testing, or checking credit for upset prevention and recovery training tasks in an FAA approved flight training program must be evaluated and issued additional qualification in accordance with this Directive and the following sections of Appendix A of this part:

- a. Table A1A, General Requirements, Section 2.n. (Upset Prevention and Recovery)
- b. Table A3A, Functions and Subjective Testing, Test 5.b.3. (Upset Prevention and Recovery Maneuvers)
- c. Attachment 7, Additional Simulator Qualification Requirements for Stall, Upset Prevention and Recovery, and Engine and Airframe Icing Training Tasks (Upset Prevention and Recovery Training Maneuver Evaluation)

5. Where qualification is being sought to conduct upset prevention and recovery training tasks in accordance with this Directive, the FSTD Sponsor must conduct the required evaluations and modifications as prescribed in this Directive and report compliance to the NSPM in accordance with § 60.23 using the NSP's standardized FSTD Sponsor Notification Form. At a minimum, this form must be accompanied with the following information:

- a. A description of any modifications to the FSTD (in accordance with § 60.23) necessary to meet the requirements of this Directive.
- b. Statement of Compliance (FSTD Validation Envelope)—See Table A1A, Section 2.n. and Attachment 7
- c. A confirmation statement that the modified FSTD has been subjectively evaluated by a qualified pilot as described in § 60.16(a)(1)(iii).

6. The NSPM will review each submission to determine if the requirements of this Directive have been met and respond to the FSTD Sponsor as described in § 60.23(c). Additional NSPM conducted FSTD evaluations may be required before the modified FSTD is placed into service. This response, along with any noted restrictions, will serve as an interim qualification for upset prevention and recovery training tasks until such time that a permanent change is made to the Statement of Qualification (SOQ) at the FSTD's next scheduled evaluation.

### Section III—Evaluation Requirements for Engine and Airframe Icing Training Tasks

1. This section applies to previously qualified Level C and Level D FSTDs being used to obtain training, testing, or checking credits in maneuvers that demonstrate the effects of engine and airframe ice accretion.

2. The requirements in this section are intended to supersede and improve upon existing Level C and Level D FSTD evaluation requirements on the effects of engine and airframe icing. The requirements define a minimum level of fidelity required to adequately simulate the aircraft specific aerodynamic characteristics of an in-flight encounter with engine and airframe ice accretion as necessary to accomplish training objectives.

3. This Directive contains additional subjective testing that exceeds the evaluation requirements of previously qualified FSTDs. Where aerodynamic modeling data is not available or insufficient to meet the requirements of this Directive, the NSPM may limit qualified engine and airframe icing maneuvers where sufficient aerodynamic modeling data exists.

4. After March 12, 2019, any FSTD being used to conduct training tasks that demonstrate the effects of engine and airframe icing must be evaluated and issued additional qualification in accordance with this Directive and the following sections of Appendix A of this part:

- a. Table A1A, General Requirements, Section 2.j. (Engine and Airframe Icing)
- b. Attachment 7, Additional Simulator Qualification Requirements for Stall, Upset Prevention and Recovery, and Engine and Airframe Icing Training Tasks (Engine and Airframe Icing Evaluation; Paragraphs 1, 2, and 3). Objective demonstration tests of engine and airframe icing effects (Attachment 2, Table A2A, test 2.i. of this Appendix) are not required for previously qualified FSTDs.

5. Where continued qualification is being sought to conduct engine and airframe icing training tasks in accordance with this Directive, the FSTD Sponsor must conduct the required evaluations and modifications as prescribed in this Directive and report compliance to the NSPM in accordance with § 60.23 using the NSP's standardized FSTD Sponsor Notification Form. At a minimum, this form must be accompanied with the following information:

- a. A description of any modifications to the FSTD (in accordance with § 60.23) necessary to meet the requirements of this Directive;

b. Statement of Compliance (Ice Accretion Model)—See Table A1A, Section 2.j., and Attachment 7; and

c. A confirmation statement that the modified FSTD has been subjectively evaluated by a qualified pilot as described in § 60.16(a)(1)(iii).

6. The NSPM will review each submission to determine if the requirements of this Directive have been met and respond to the FSTD Sponsor as described in § 60.23(c). Additional NSPM conducted FSTD evaluations may be required before the modified FSTD is placed into service. This response, along with any noted restrictions, will serve as an interim update to the FSTD's Statement of Qualification (SOQ) until such time that a permanent change is made to the SOQ at the FSTD's next scheduled evaluation.

### Section IV—Evaluation Requirements for Takeoff and Landing in Gusting Crosswind

1. This section applies to previously qualified FSTDs that will be used to obtain training, testing, or checking credits in takeoff and landing tasks in gusting crosswinds as part of an FAA approved training program. The requirements of this Directive are applicable only to those Level B and higher FSTDs that are qualified to conduct takeoff and landing training tasks.

2. The requirements in this section introduce new minimum simulator requirements for gusting crosswinds during takeoff and landing training tasks as well as additional subjective testing that exceeds the evaluation requirements of previously qualified FSTDs.

3. After March 12, 2019, any FSTD that is used to conduct gusting crosswind takeoff and landing training tasks must be evaluated and issued additional qualification in accordance with this Directive and the following sections of Appendix A of this part:

- a. Table A1A, General Requirements, Section 2.d.3. (Ground Handling Characteristics);
- b. Table A3A, Functions and Subjective Testing Requirements, test 3.a.3 (Takeoff, Crosswind—Maximum Demonstrated and Gusting Crosswind); and
- c. Table A3A, Functions and Subjective Testing Requirements, test 8.d. (Approach and landing with crosswind—Maximum Demonstrated and Gusting Crosswind).

4. Where qualification is being sought to conduct gusting crosswind training tasks in accordance with this Directive, the FSTD Sponsor must conduct the required evaluations and modifications as prescribed in this Directive and report compliance to the NSPM in accordance with § 60.23 using the NSP's standardized FSTD Sponsor Notification Form. At a minimum, this form must be accompanied with the following information:

- a. A description of any modifications to the FSTD (in accordance with § 60.23) necessary to meet the requirements of this Directive.
- b. Statement of Compliance (Gusting Crosswind Profiles)—See Table A1A, Section 2.d.3.
- c. A confirmation statement that the modified FSTD has been subjectively evaluated by a

qualified pilot as described in § 60.16(a)(1)(iii).

5. The NSPM will review each submission to determine if the requirements of this Directive have been met and respond to the FSTD Sponsor as described in § 60.23(c). Additional NSPM conducted FSTD evaluations may be required before the modified FSTD is placed into service. This response, along with any noted restrictions, will serve as an interim qualification for gusting crosswind training tasks until such time that a permanent change is made to the Statement of Qualification (SOQ) at the FSTD's next scheduled evaluation.

### Section V—Evaluation Requirements for Bounced Landing Recovery Training Tasks

1. This section applies to previously qualified FSTDs that will be used to obtain training, testing, or checking credits in bounced landing recovery as part of an FAA approved training program. The requirements of this Directive are applicable only to those Level B and higher FSTDs that are qualified to conduct takeoff and landing training tasks.

2. The evaluation requirements in this section are intended to introduce new evaluation requirements for bounced landing recovery training tasks and contains additional subjective testing that exceeds the evaluation requirements of previously qualified FSTDs.

3. After March 12, 2019, any FSTD that is used to conduct bounced landing training tasks must be evaluated and issued additional qualification in accordance with this Directive and the following sections of Appendix A of this Part:

- a. Table A1A, General Requirements, Section 2.d.2. (Ground Reaction Characteristics)
- b. Table A3A, Functions and Subjective Testing Requirements, test 9.e. (Missed Approach—Bounced Landing)

4. Where qualification is being sought to conduct bounced landing training tasks in accordance with this Directive, the FSTD Sponsor must conduct the required evaluations and modifications as prescribed in this Directive and report compliance to the NSPM in accordance with § 60.23 using the NSP's standardized FSTD Sponsor Notification Form. At a minimum, this form must be accompanied with the following information:

- a. A description of any modifications to the FSTD (in accordance with § 60.23) necessary to meet the requirements of this Directive; and
- b. A confirmation statement that the modified FSTD has been subjectively evaluated by a qualified pilot as described in § 60.16(a)(1)(iii).

5. The NSPM will review each submission to determine if the requirements of this Directive have been met and respond to the FSTD Sponsor as described in § 60.23(c). Additional NSPM conducted FSTD evaluations may be required before the modified FSTD is placed into service. This response, along with any noted restrictions, will serve as an interim qualification for bounced landing recovery training tasks until such time that a permanent change is made to the Statement of Qualification (SOQ) at the FSTD's next scheduled evaluation.

■ 12. In appendix A to part 60, add Attachment 7 to read as follows:

**Appendix A to Part 60—Qualification Performance Standards for Airplane Full Flight Simulators**

\* \* \* \* \*

**Attachment 7 to Appendix A to Part 60—Additional Simulator Qualification Requirements for Stall, Upset Prevention and Recovery, and Engine and Airframe Icing Training Tasks**

**Begin QPS Requirements**

*A. High Angle of Attack Model Evaluation (Table A1A, Section 2.m.)*

1. **Applicability:** This attachment applies to all simulators that are used to satisfy training requirements for stall maneuvers that are conducted at angles of attack beyond the activation of the stall warning system. This attachment is not applicable for those FSTDs that are only qualified for approach to stall maneuvers where recovery is initiated at the first indication of the stall. The material in this section is intended to supplement the general requirements, objective testing requirements, and subjective testing requirements contained within Tables A1A, A2A, and A3A, respectively.

2. **General Requirements:** The requirements for high angle of attack modeling are intended to evaluate the recognition cues and performance and handling qualities of a developing stall through the stall identification angle-of-attack and recovery. Strict time-history-based evaluations against flight test data may not adequately validate the aerodynamic model in an unsteady and potentially unstable flight regime, such as stalled flight. As a result, the objective testing requirements defined in Table A2A do not prescribe strict tolerances on any parameter at angles of attack beyond the stall identification angle of attack. In lieu of mandating such objective tolerances, a Statement of Compliance (SOC) will be required to define the source data and methods used to develop the stall aerodynamic model.

3. **Fidelity Requirements:** The requirements defined for the evaluation of full stall training maneuvers are intended to provide the following levels of fidelity:

- a. Airplane type specific recognition cues of the first indication of the stall (such as the stall warning system or aerodynamic stall buffet);
- b. Airplane type specific recognition cues of an impending aerodynamic stall; and
- c. Recognition cues and handling qualities from the stall break through recovery that are sufficiently exemplar of the airplane being simulated to allow successful completion of the stall recovery training tasks.

For the purposes of stall maneuver evaluation, the term “exemplar” is defined as a level of fidelity that is type specific of the simulated airplane to the extent that the training objectives can be satisfactorily accomplished.

4. **Statement of Compliance (Aerodynamic Model):** At a minimum, the following must be addressed in the SOC:

- a. **Source Data and Modeling Methods:** The SOC must identify the sources of data used to develop the aerodynamic model. These data sources may be from the airplane original equipment manufacturer (OEM), the original FSTD manufacturer/data provider, or other data provider acceptable to the FAA. Of particular interest is a mapping of test points in the form of alpha/beta envelope plot for a minimum of flaps up and flaps down aircraft configurations. For the flight test data, a list of the types of maneuvers used to define the aerodynamic model for angle of attack ranges greater than the first indication of stall must be provided per flap setting. In cases where it is impractical to develop and validate a stall model with flight-test data (*e.g.*, due to safety concerns involving the collection of flight test data past a certain angle of attack), the data provider is expected to make a reasonable attempt to develop a stall model through the required angle of attack range using analytical methods and empirical data (*e.g.*, wind-tunnel data);
- b. **Validity Range:** The FSTD sponsor must declare the range of angle of attack and sideslip where the aerodynamic model remains valid for training. For stall recovery training tasks, satisfactory aerodynamic model fidelity must be shown through at least 10 degrees beyond the stall identification angle of attack. For the purposes of determining this validity range, the stall identification angle of attack is defined as the angle of attack where the pilot is given a clear and distinctive indication to cease any further increase in angle of attack where one or more of the following characteristics occur:
  - i. No further increase in pitch occurs when the pitch control is held at the full aft stop for 2 seconds, leading to an inability to arrest descent rate;
  - ii. An uncommanded nose down pitch that cannot be readily arrested, which may be accompanied by an uncommanded rolling motion;
  - iii. Buffeting of a magnitude and severity that is a strong and effective deterrent to further increase in angle of attack; and
  - iv. Activation of a stick pusher.

The model validity range must also be capable of simulating the airplane dynamics as a result of a pilot initially resisting the stick pusher in training. For aircraft equipped with a stall envelope protection system, the model validity range must extend to 10 degrees of angle of attack beyond the stall identification angle of attack with the protection systems disabled or otherwise degraded (such as a degraded flight control mode as a result of a pitot/static system failure).

- c. **Model Characteristics:** Within the declared range of model validity, the SOC must address, and the aerodynamic model must incorporate, the following stall characteristics where applicable by aircraft type:
  - i. Degradation in static/dynamic lateral-directional stability;
  - ii. Degradation in control response (pitch, roll, yaw);

- iii. Uncommanded roll acceleration or roll-off requiring significant control deflection to counter;
- iv. Apparent randomness or non-repeatability;
- v. Changes in pitch stability;
- vi. Stall hysteresis;
- vii. Mach effects;
- viii. Stall buffet; and
- ix. Angle of attack rate effects.

An overview of the methodology used to address these features must be provided.

5. **Statement of Compliance (Subject Matter Expert Pilot Evaluation):** The sponsor must provide an SOC that confirms the FSTD has been subjectively evaluated by a subject matter expert (SME) pilot who is knowledgeable of the aircraft's stall characteristics. In order to qualify as an acceptable SME to evaluate the FSTD's stall characteristics, the SME must meet the following requirements:

- a. Has held a type rating/qualification in the aircraft being simulated;
- b. Has direct experience in conducting stall maneuvers in an aircraft that shares the same type rating as the make, model, and series of the simulated aircraft. This stall experience must include hands on manipulation of the controls at angles of attack sufficient to identify the stall (*e.g.*, deterrent buffet, stick pusher activation, etc.) through recovery to stable flight;
- c. Where the SME's stall experience is on an airplane of a different make, model, and series within the same type rating, differences in aircraft specific stall recognition cues and handling characteristics must be addressed using available documentation. This documentation may include aircraft operating manuals, aircraft manufacturer flight test reports, or other documentation that describes the stall characteristics of the aircraft; and
- d. Must be familiar with the intended stall training maneuvers to be conducted in the FSTD (*e.g.*, general aircraft configurations, stall entry methods, etc.) and the cues necessary to accomplish the required training objectives. The purpose of this requirement is to ensure that the stall model has been sufficiently evaluated in those general aircraft configurations and stall entry methods that will likely be conducted in training.

This SOC will only be required once at the time the FSTD is initially qualified for stall training tasks as long as the FSTD's stall model remains unmodified from what was originally evaluated and qualified. Where an FSTD shares common aerodynamic and flight control models with that of an engineering simulator or development simulator that is acceptable to the FAA, the FAA will accept an SOC from the data provider that confirms the stall characteristics have been subjectively assessed by an SME pilot on the engineering or development simulator.

An FSTD sponsor may submit a request to the Administrator for approval of a deviation from the SME pilot experience requirements in this paragraph. This request for deviation must include the following information:

- a. An assessment of pilot availability that demonstrates that a suitably qualified pilot

meeting the experience requirements of this section cannot be practically located; and

- b. Alternative methods to subjectively evaluate the FSTD's capability to provide the stall recognition cues and handling characteristics needed to accomplish the training objectives.

**B. Upset Prevention and Recovery Training (UPRT) Maneuver Evaluation (Table A1A, Section 2.n.)**

1. Applicability: This attachment applies to all simulators that are used to satisfy training requirements for upset prevention and recovery training (UPRT) maneuvers. For the purposes of this attachment (as defined in the Airplane Upset Recovery Training Aid), an aircraft upset is generally defined as an airplane unintentionally exceeding the following parameters normally experienced in line operations or training:

- a. Pitch attitude greater than 25 degrees nose up;
- b. Pitch attitude greater than 10 degrees nose down;
- c. Bank angles greater than 45 degrees; and
- d. Within the above parameters, but flying at airspeeds inappropriate for the conditions.

FSTDs that will be used to conduct training maneuvers where the FSTD is either repositioned into an aircraft upset condition or an artificial stimulus (such as weather phenomena or system failures) is applied that is intended to result in a flightcrew entering an aircraft upset condition must be evaluated and qualified in accordance with this section.

2. General Requirements: The general requirement for UPRT qualification in Table A1A defines three basic elements required for qualifying an FSTD for UPRT maneuvers:

- a. FSTD Training Envelope: Valid UPRT should be conducted within the high and moderate confidence regions of the FSTD validation envelope as defined in paragraph 3 below.
- b. Instructor Feedback: Provides the instructor/evaluator with a minimum set of feedback tools to properly evaluate the trainee's performance in accomplishing an upset recovery training task.
- c. Upset Scenarios: Where dynamic upset scenarios or aircraft system malfunctions are used to stimulate the FSTD into an aircraft upset condition, specific guidance must be available to the instructor on the IOS that describes how the upset scenario is driven along with any malfunction or degradation in FSTD functionality that is required to stimulate the upset.

3. FSTD Validation Envelope: For the purposes of this attachment, the term "flight envelope" refers to the entire domain in which the FSTD is capable of being flown with a degree of confidence that the FSTD responds similarly to the airplane. This envelope can be further divided into three

subdivisions (see Appendix 3–D of the *Airplane Upset Recovery Training Aid*):

- a. Flight test validated region: This is the region of the flight envelope which has been validated with flight test data, typically by comparing the performance of the FSTD against the flight test data through tests incorporated in the QTG and other flight test data utilized to further extend the model beyond the minimum requirements. Within this region, there is high confidence that the simulator responds similarly to the aircraft. Note that this region is not strictly limited to what has been tested in the QTG; as long as the aerodynamics mathematical model has been conformed to the flight test results, that portion of the mathematical model can be considered to be within the flight test validated region.
- b. Wind tunnel and/or analytical region: This is the region of the flight envelope for which the FSTD has not been compared to flight test data, but for which there has been wind tunnel testing or the use of other reliable predictive methods (typically by the aircraft manufacturer) to define the aerodynamic model. Any extensions to the aerodynamic model that have been evaluated in accordance with the definition of an exemplar stall model (as described in the stall maneuver evaluation section) must be clearly indicated. Within this region, there is moderate confidence that the simulator will respond similarly to the aircraft.
- c. Extrapolated: This is the region extrapolated beyond the flight test validated and wind tunnel/analytical regions. The extrapolation may be a linear extrapolation, a holding of the last value before the extrapolation began, or some other set of values. Whether this extrapolated data is provided by the aircraft or simulator manufacturer, it is a "best guess" only. Within this region, there is low confidence that the simulator will respond similarly to the aircraft. Brief excursions into this region may still retain a moderate confidence level in FSTD fidelity; however, the instructor should be aware that the FSTD's response may deviate from the actual aircraft.

4. Instructor Feedback Mechanism: For the instructor/evaluator to provide feedback to the student during UPRT maneuver training, additional information must be accessible that indicates the fidelity of the simulation, the magnitude of trainee's flight control inputs, and aircraft operational limits that could potentially affect the successful completion of the maneuver(s). At a minimum, the following must be available to the instructor/evaluator:

- a. FSTD Validation Envelope: The FSTD must employ a method to display the FSTD's expected fidelity with respect to

the FSTD validation envelope. This may be displayed as an angle of attack vs sideslip (alpha/beta) envelope cross-plot on the Instructor Operating System (IOS) or other alternate method to clearly convey the FSTD's fidelity level during the maneuver. The cross-plot or other alternative method must display the relevant validity regions for flaps up and flaps down at a minimum. This validation envelope must be derived by the aerodynamic data provider or derived using information and data sources provided by the original aerodynamic data provider.

- b. Flight Control Inputs: The FSTD must employ a method for the instructor/evaluator to assess the trainee's flight control inputs during the upset recovery maneuver. Additional parameters, such as cockpit control forces (forces applied by the pilot to the controls) and the flight control law mode for fly-by-wire aircraft, must be portrayed in this feedback mechanism as well. For passive sidesticks, whose displacement is the flight control input, the force applied by the pilot to the controls does not need to be displayed. This tool must include a time history or other equivalent method of recording flight control positions.
- c. Aircraft Operational Limits: The FSTD must employ a method to provide the instructor/evaluator with real-time information concerning the aircraft operating limits. The simulated aircraft's parameters must be displayed dynamically in real-time and also provided in a time history or equivalent format. At a minimum, the following parameters must be available to the instructor:
  - i. Airspeed and airspeed limits, including the stall speed and maximum operating limit airspeed (Vmo/Mmo);
  - ii. Load factor and operational load factor limits; and
  - iii. Angle of attack and the stall identification angle of attack. See section A, paragraph 4.b. of this attachment for additional information concerning the definition of the stall identification angle of attack. This parameter may be displayed in conjunction with the FSTD validation envelope.

**End QPS Requirements**

**Begin Information**

An example FSTD "alpha/beta" envelope display and IOS feedback mechanism are shown below in Figure 1 and Figure 2. The following examples are provided as guidance material on one possible method to display the required UPRT feedback parameters on an IOS display. FSTD sponsors may develop other methods and feedback mechanisms that provide the required parameters and support the training program objectives.

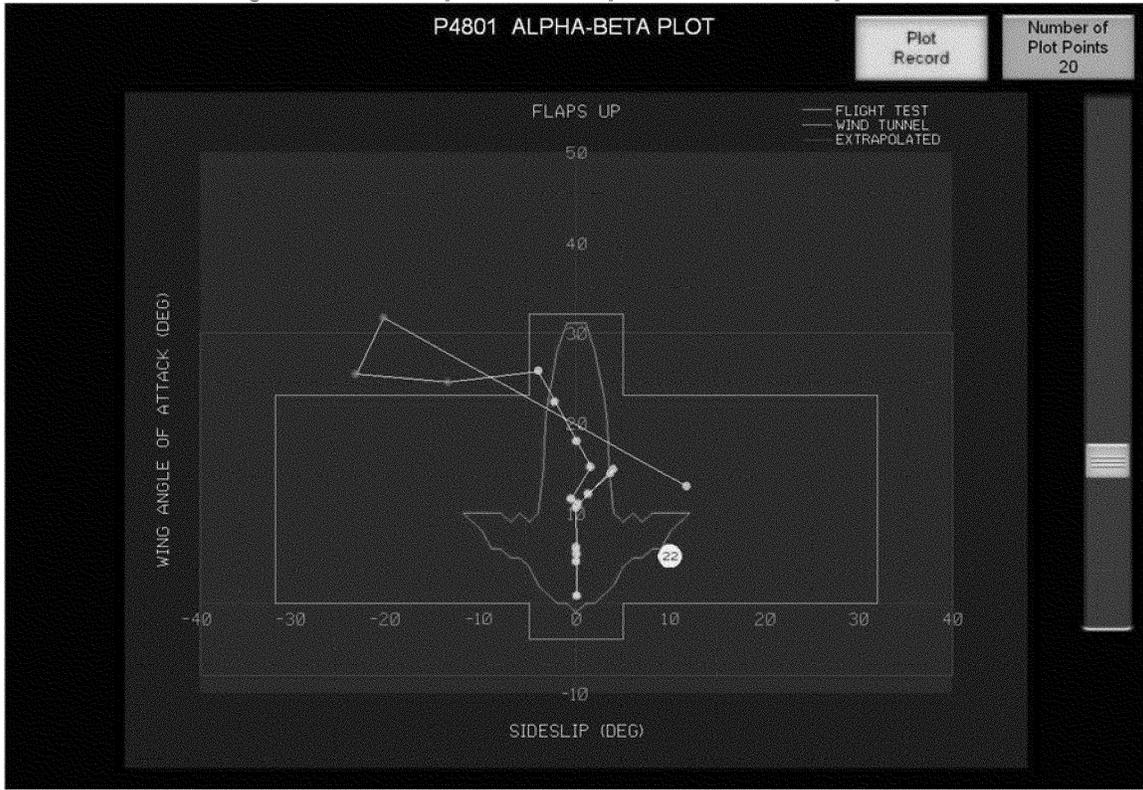

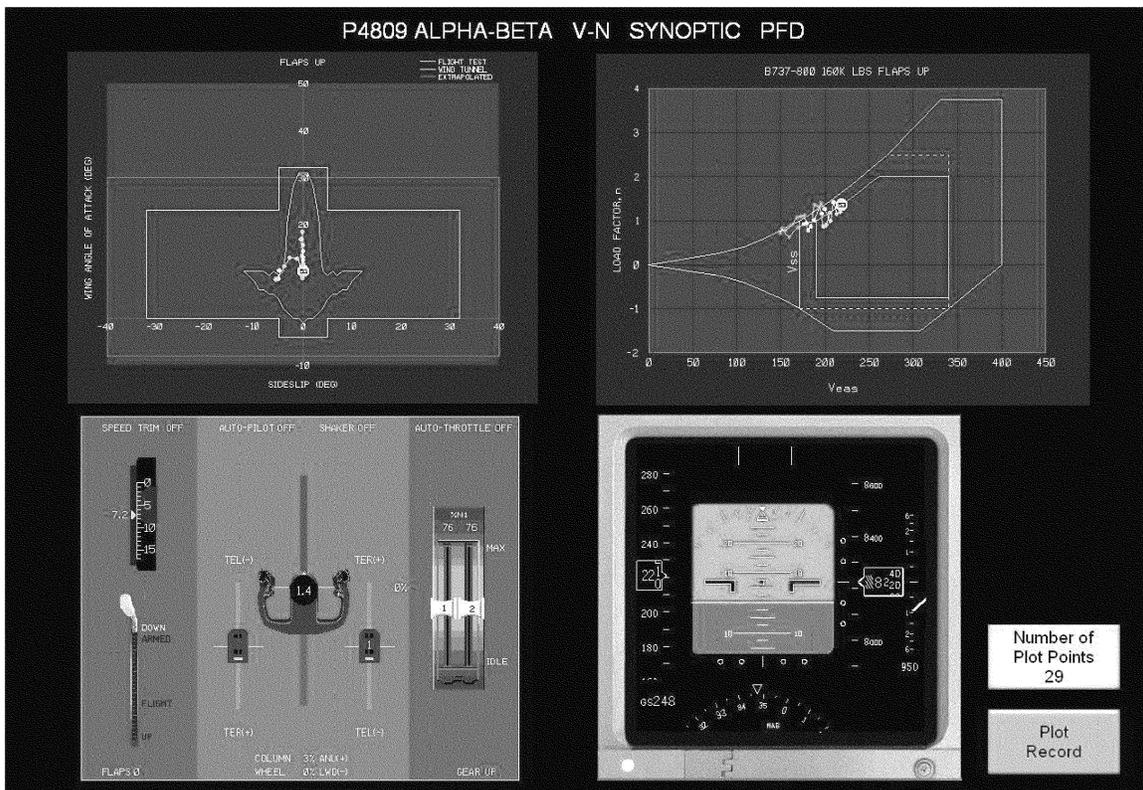

Figure 2 – Example IOS Instructor UPRT Feedback Display

End Information

Begin QPS Requirements

C. Engine and Airframe Icing Evaluation (Table A1A, Section 2.j.)

1. Applicability: This section applies to all FSTDs that are used to satisfy training requirements for engine and airframe icing. New general requirements and objective requirements for simulator qualification have been developed to define aircraft specific icing models that support training objectives for the recognition and recovery from an in-flight ice accretion event.

2. General Requirements: The qualification of engine and airframe icing consists of the following elements that must be considered when developing ice accretion models for use in training:

a. Ice accretion models must be developed to account for training the specific skills required for recognition of ice accumulation and execution of the required response.

b. Ice accretion models must be developed in a manner to contain aircraft specific recognition cues as determined with aircraft OEM supplied data or other suitable analytical methods.

c. At least one qualified ice accretion model must be objectively tested to demonstrate that the model has been implemented correctly and generates the correct cues as necessary for training.

3. Statement of Compliance: The SOC as described in Table A1A, Section 2.j. must contain the following information to support FSTD qualification of aircraft specific ice accretion models:

a. A description of expected aircraft specific recognition cues and degradation effects due to a typical in-flight icing encounter. Typical cues may include loss of lift, decrease in stall angle of attack, changes in pitching moment, decrease in control effectiveness, and changes in control forces in addition to any overall increase in drag. This description must be based upon relevant source data, such as aircraft OEM supplied data, accident/incident data, or other acceptable data sources. Where a particular airframe has demonstrated vulnerabilities to a specific type of ice accretion (due to accident/incident history) which requires specific training (such as supercooled large-droplet icing or tailplane icing), ice accretion models must be developed that address the training requirements.

b. A description of the data sources utilized to develop the qualified ice accretion models. Acceptable data sources may be, but are not limited to, flight test data, aircraft certification data, aircraft OEM engineering simulation data, or other analytical methods based upon established engineering principles.

4. Objective Demonstration Testing: The purpose of the objective demonstration test is to demonstrate that the ice accretion models as described in the Statement of Compliance have been implemented correctly and demonstrate the proper cues and effects as defined in the approved data sources. At least one ice accretion model must be selected for testing and included in the Master Qualification Test Guide (MQTG). Two tests are required to demonstrate engine

and airframe icing effects. One test will demonstrate the FSTDs baseline performance without icing, and the second test will demonstrate the aerodynamic effects of ice accretion relative to the baseline test.

a. Recorded Parameters: In each of the two required MQTG cases, a time history recording must be made of the following parameters:

- i. Altitude;
ii. Airspeed;
iii. Normal Acceleration;
iv. Engine Power/settings;
v. Angle of Attack/Pitch attitude;
vi. Bank Angle;
vii. Flight control inputs;
viii. Stall warning and stall buffet onset; and
ix. Other parameters as necessary to demonstrate the effects of ice accretions.

b. Demonstration maneuver: The FSTD sponsor must select an ice accretion model as identified in the SOC for testing. The selected maneuver must demonstrate the effects of ice accretion at high angles of attack from a trimmed condition through approach to stall and "full" stall as compared to a baseline (no ice buildup) test. The ice accretion models must demonstrate the cues necessary to recognize the onset of ice accretion on the airframe, lifting surfaces, and engines and provide representative degradation in performance and handling qualities to the extent that a recovery can be executed. Typical recognition cues that may be present depending upon the simulated aircraft include:

- i. Decrease in stall angle of attack;
ii. Increase in stall speed;
iii. Increase in stall buffet threshold of perception speed;
iv. Changes in pitching moment;
v. Changes in stall buffet characteristics;
vi. Changes in control effectiveness or control forces; and
vii. Engine effects (power variation, vibration, etc.);

The demonstration test may be conducted by initializing and maintaining a fixed amount of ice accretion throughout the maneuver in order to consistently evaluate the aerodynamic effects.

End QPS Requirements

13. Amend Appendix B by:

- A. Revising paragraph 1.b.;
■ B. Revising paragraph 1.d.(21);
■ C. Revising paragraph 1.d.(24);
■ D. Revising paragraph 1.d.(25);
■ E. Revising paragraph 11.b.(2);
■ F. Removing and reserving paragraph 11.e.(2);
■ G. Revising paragraph 11.h.;
■ H. Revising paragraph 13.b.;
■ I. Revising paragraph 13.d.; and
■ J. Adding paragraph 24.a.(4)

The revisions and addition read as follows:

Appendix B to Part 60—Qualification Performance Standards for Airplane Flight Training Devices

(25) Aeroplane Flight Simulation Training Device Evaluation Handbook, Volume I, as amended and Volume II, as amended, The Royal Aeronautical Society, London, UK.

\* \* \* \* \*

11. Initial (and Upgrade) Qualification Requirements (§ 60.15)

\* \* \* \* \*

b. \* \* \*

(2) Unless otherwise authorized through prior coordination with the NSPM, a confirmation that the sponsor will forward to the NSPM the statement described in § 60.15(b) in such time as to be received no later than 5 business days prior to the scheduled evaluation and may be forwarded to the NSPM via traditional or electronic means.

\* \* \* \* \*

h. The sponsor may elect to complete the QTG objective and subjective tests at the manufacturer's facility or at the sponsor's training facility (or other sponsor designated location where training will take place). If the tests are conducted at the manufacturer's facility, the sponsor must repeat at least one-third of the tests at the sponsor's training facility in order to substantiate FTD performance. The QTG must be clearly annotated to indicate when and where each test was accomplished. Tests conducted at the manufacturer's facility and at the sponsor's designated training facility must be conducted after the FTD is assembled with systems and sub-systems functional and operating in an interactive manner. The test results must be submitted to the NSPM.

\* \* \* \* \*

**13. Previously Qualified FTDs (§ 60.17)**

\* \* \* \* \*

b. FTDs qualified prior to May 31, 2016, and replacement FTD systems, are not required to meet the general FTD requirements, the objective test requirements, and the subjective test requirements of Attachments 1, 2, and 3 of this appendix as long as the FTD continues to meet the test requirements contained in the MQTG developed under the original qualification basis.

\* \* \* \* \*

d. FTDs qualified prior to May 31, 2016, may be updated. If an evaluation is deemed appropriate or necessary by the NSPM after such an update, the evaluation will not require an evaluation to standards beyond

those against which the FTD was originally qualified.

\* \* \* \* \*

**24. Levels of FTD**

\* \* \* \* \*

a. \* \* \*

(4) Level 7. A Level 7 device is one that has an enclosed airplane-specific flight deck and aerodynamic program with all applicable airplane systems operating and control loading that is representative of the simulated airplane throughout its ground and flight envelope and significant sound representation. All displays may be flat/LCD panel representations or actual representations of displays in the aircraft, but all controls, switches, and knobs must physically replicate the aircraft in control

operation. It also has a visual system that provides an out-of-the-flight deck view, providing cross-flight deck viewing (for both pilots simultaneously) of a field-of-view of at least 180° horizontally and 40° vertically.

\* \* \* \* \*

■ 14. In appendix B to part 60, amend Attachment 1 to Appendix B by revising Tables B1A and B1B to read as follows:

**Appendix B to Part 60—Qualification Performance Standards for Airplane Flight Training Devices**

\* \* \* \* \*

**Attachment 1 to Appendix B to Part 60—General FTD REQUIREMENTS**

\* \* \* \* \*

<b>1. General Flight deck Configuration.</b>						
<b>1.a.</b>	<p>The FTD must have a flight deck that is a replica of the airplane simulated with controls, equipment, observable flight deck indicators, circuit breakers, and bulkheads properly located, functionally accurate and replicating the airplane. The direction of movement of controls and switches must be identical to that in the airplane. Pilot seat(s) must afford the capability for the occupant to be able to achieve the design “eye position.” Equipment for the operation of the flight deck windows must be included, but the actual windows need not be operable. Fire axes, extinguishers, and spare light bulbs must be available in the flight FTD, but may be relocated to a suitable location as near as practical to the original position. Fire axes, landing gear pins, and any similar purpose instruments need only be represented in silhouette.</p> <p>The use of electronically displayed images with physical overlay or masking for FTD instruments and/or instrument panels is acceptable provided:</p> <ol style="list-style-type: none"> <li>(1) All instruments and instrument panel layouts are dimensionally correct with differences, if any, being imperceptible to the pilot;</li> <li>(2) Instruments replicate those of the airplane including full instrument functionality and embedded logic;</li> <li>(3) Instruments displayed are free of quantization (stepping);</li> <li>(4) Instrument display characteristics replicate those of the airplane including: resolution, colors, luminance, brightness, fonts, fill patterns, line styles and symbology;</li> <li>(5) Overlay or masking, including bezels and bugs, as applicable, replicates the airplane panel(s);</li> <li>(6) Instrument controls and switches replicate and operate with the same technique, effort, travel and in the same direction as those in the airplane;</li> <li>(7) Instrument lighting replicates that of the airplane and is operated from the FSTD control for that lighting and, if applicable, is at a level</li> </ol>			<b>X</b>	<b>X</b>	<p>For FTD purposes, the flight deck consists of all that space forward of a cross section of the fuselage at the most extreme aft setting of the pilots' seats including additional, required flight crewmember duty stations and those required bulkheads aft of the pilot seats. For clarification, bulkheads containing only items such as landing gear pin storage compartments, fire axes and extinguishers, spare light bulbs, aircraft documents pouches are not considered essential and may be omitted.</p> <p>For Level 6 FTDs, flight deck window panes may be omitted where non-distracting and subjectively acceptable to conduct qualified training tasks.</p>

<p><b>1.b.</b></p>	<p>commensurate with other lighting operated by that same control; and  (8) As applicable, instruments must have faceplates that replicate those in the airplane; and</p> <p>Level 7 FTD only;  The display image of any three dimensional instrument, such as an electro-mechanical instrument, should appear to have the same three dimensional depth as the replicated instrument. The appearance of the simulated instrument, when viewed from the principle operator’s angle, should replicate that of the actual airplane instrument. Any instrument reading inaccuracy due to viewing angle and parallax present in the actual airplane instrument should be duplicated in the simulated instrument display image. Viewing angle error and parallax must be minimized on shared instruments such and engine displays and standby indicators.</p> <p>The FTD must have equipment (e.g., instruments, panels, systems, circuit breakers, and controls) simulated sufficiently for the authorized training/checking events to be accomplished. The installed equipment must be located in a spatially correct location and may be in a flight deck or an open flight deck area. Additional equipment required for the authorized training/checking events must be available in the FTD, but may be located in a suitable location as near as practical to the spatially correct position. Actuation of equipment must replicate the appropriate function in the airplane. Fire axes, landing gear pins, and any similar purpose instruments need only be represented in silhouette.</p>	<p>X</p>	<p>X</p>			
<p><b>1.c.</b></p>	<p>Those circuit breakers that affect procedures or result in observable flight deck indications must be properly located and functionally accurate.</p>				<p>X</p>	
<p><b>2. Programming.</b></p>						
<p><b>2.a.1</b></p>	<p>The FTD must provide the proper effect of aerodynamic changes for the combinations of drag and thrust normally encountered in flight. This must include the effect of change in airplane attitude, thrust, drag, altitude, temperature, and configuration.</p>		<p>X</p>	<p>X</p>		

	<p>Level 6 additionally requires the effects of changes in gross weight and center of gravity. Level 5 requires only generic aerodynamic programming.</p> <p>An SOC is required.</p>					
<b>2.a.2</b>	<p>A flight dynamics model that accounts for various combinations of drag and thrust normally encountered in flight must correspond to actual flight conditions, including the effect of change in airplane attitude, thrust, drag, altitude, temperature, gross weight, moments of inertia, center of gravity location, and configuration.</p> <p>The effects of pitch attitude and of fuel slosh on the aircraft center of gravity must be simulated.</p> <p>An SOC is required.</p>				<b>X</b>	
<b>2.b.</b>	<p>The FTD must have the computer capacity, accuracy, resolution, and dynamic response needed to meet the qualification level sought.</p> <p>An SOC is required.</p>	<b>X</b>	<b>X</b>	<b>X</b>	<b>X</b>	
<b>2.c.1</b>	<p>Relative responses of the flight deck instruments must be measured by latency tests, or transport delay tests, and may not exceed 300 milliseconds. The instruments must respond to abrupt input at the pilot's position within the allotted time, but not before the time when the airplane responds under the same conditions.</p> <p>(1) Latency: The FTD instrument and, if applicable, the motion system and the visual system response must not be prior to that time when the airplane responds and may respond up to 300 milliseconds after that time under the same conditions.</p> <p>(2) Transport Delay: As an alternative to the Latency requirement, a transport delay objective test may be used to demonstrate that the FTD system does not exceed the specified limit. The sponsor must measure</p>		<b>X</b>	<b>X</b>		<p>The intent is to verify that the FTD provides instrument cues that are, within the stated time delays, like the airplane responses. For airplane response, acceleration in the appropriate, corresponding rotational axis is preferred. Additional information regarding Latency and Transport Delay testing may be found in Appendix A,</p>

	all the delay encountered by a step signal migrating from the pilot's control through all the simulation software modules in the correct order, using a handshaking protocol, finally through the normal output interfaces to the instrument display and, if applicable, the motion system, and the visual system.				Attachment 2, paragraph 15.
<b>2.c.2.</b>	Relative responses of the motion system, visual system, and flight deck instruments, measured by latency tests or transport delay tests. Motion onset should occur before the start of the visual scene change (the start of the scan of the first video field containing different information) but must occur before the end of the scan of that video field. Instrument response may not occur prior to motion onset. Test results must be within the following limits:  100 ms for the motion (if installed) and instrument systems; and 120 ms for the visual system.				<b>X</b> The intent is to verify that the FTD provides instrument, motion, and visual cues that are, within the stated time delays, like the airplane responses. For airplane response, acceleration in the appropriate, corresponding rotational axis is preferred.
<b>2.d.</b>	Ground handling and aerodynamic programming must include the following:				
<b>2.d.1.</b>	Ground effect.				<b>X</b> Ground effect includes modeling that accounts for roundout, flare, touchdown, lift, drag, pitching moment, trim, and power while in ground effect.
<b>2.d.2.</b>	Ground reaction.				<b>X</b> Ground reaction includes modeling that accounts for strut deflections, tire friction, and side forces. This is the reaction of the airplane upon contact with the runway during landing, and may differ with changes in factors such as gross weight, airspeed, or rate

					of descent on touchdown.
<b>2.d.3.</b>	Ground handling characteristics, including aerodynamic and ground reaction modeling including steering inputs, operations with crosswind, gusting crosswind, braking, thrust reversing, deceleration, and turning radius.				<b>X</b>
<b>2.e.</b>	<p>If the aircraft being simulated is one of the aircraft listed in § 121.358, Low-altitude windshear system equipment requirements, the FTD must employ windshear models that provide training for recognition of windshear phenomena and the execution of recovery procedures. Models must be available to the instructor/evaluator for the following critical phases of flight:</p> <p>(1) Prior to takeoff rotation;  (2) At liftoff;  (3) During initial climb; and  (4) On final approach, below 500 ft AGL.</p> <p>The QTG must reference the FAA Windshear Training Aid or present alternate airplane related data, including the implementation method(s) used. If the alternate method is selected, wind models from the Royal Aerospace Establishment (RAE), the Joint Airport Weather Studies (JAWS) Project and other recognized sources may be implemented, but must be supported and properly referenced in the QTG.</p> <p>The addition of realistic levels of turbulence associated with each required windshear profile must be available and selectable to the instructor.</p> <p>In addition to the four basic windshear models required for qualification, at least two additional “complex” windshear models must be available to the instructor which represent the complexity of actual windshear encounters. These models must be available in the takeoff and landing configurations and must consist of independent variable winds in multiple simultaneous components. The Windshear Training Aid provides two such example “complex” windshear models that may be used to satisfy this requirement.</p>				<p><b>X</b></p> <p>Windshear models may consist of independent variable winds in multiple simultaneous components. The FAA Windshear Training Aid presents one acceptable means of compliance with FTD wind model requirements.</p> <p>The FTD should employ a method to ensure the required survivable and non-survivable windshear scenarios are repeatable in the training environment.</p> <p>For Level 7 FTDs, windshear training tasks may only be qualified for aircraft equipped with a synthetic stall warning system. The qualified windshear profile(s) are evaluated to ensure the synthetic stall warning (and not the stall buffet) is first indication of the stall.</p>
<b>2.f.</b>	The FTD must provide for manual and automatic testing of FTD hardware				<b>X</b>

	and software programming to determine compliance with FTD objective tests as prescribed in Attachment 2 of this appendix.  An SOC is required.					of-tolerance situations is encouraged.
<b>2.g.</b>	The FTD must accurately reproduce the following runway conditions: (1) Dry; (2) Wet; (3) Icy; (4) Patchy Wet; (5) Patchy Icy; and (6) Wet on Rubber Residue in Touchdown Zone.  An SOC is required.				<b>X</b>	
<b>2.h.</b>	The FTD must simulate: (1) brake and tire failure dynamics, including antiskid failure; and (2) decreased brake efficiency due to high brake temperatures, if applicable.  An SOC is required				<b>X</b>	FTD pitch, side loading, and directional control characteristics should be representative of the airplane.
<b>2.i.</b>	Engine and Airframe Icing Modeling that includes the effects of icing, where appropriate, on the airframe, aerodynamics, and the engine(s). Icing models must simulate the aerodynamic degradation effects of ice accretion on the airplane lifting surfaces including loss of lift, decrease in stall angle of attack, change in pitching moment, decrease in control effectiveness, and changes in control forces in addition to any overall increase in drag. Aircraft systems (such as the stall protection system and autoflight system) must respond properly to ice accretion consistent with the simulated aircraft.  Aircraft OEM data or other acceptable analytical methods must be utilized to develop ice accretion models that are representative of the simulated aircraft's performance degradation in a typical in-flight icing encounter. Acceptable				<b>X</b>	SOC should be provided describing the effects which provide training in the specific skills required for recognition of icing phenomena and execution of recovery. The SOC should describe the source data and any analytical methods used to develop ice accretion models including verification that these effects have been tested.

	<p>analytical methods may include wind tunnel analysis and/or engineering analysis of the aerodynamic effects of icing on the lifting surfaces coupled with tuning and supplemental subjective assessment by a subject matter expert pilot.</p> <p>SOC required.</p>					<p>Icing effects simulation models are only required for those airplanes authorized for operations in icing conditions. Icing simulation models should be developed to provide training in the specific skills required for recognition of ice accumulation and execution of the required response.</p> <p>See Attachment 7 of this Appendix for further guidance material.</p>
<b>2.j.</b>	<p>The aerodynamic modeling in the FTD must include:</p> <ul style="list-style-type: none"> <li>(1) Low-altitude level-flight ground effect;</li> <li>(2) Mach effect at high altitude;</li> <li>(3) Normal and reverse dynamic thrust effect on control surfaces;</li> <li>(4) Aeroelastic representations; and</li> <li>(5) Nonlinearities due to sideslip.</li> </ul> <p>An SOC is required and must include references to computations of aeroelastic representations and of nonlinearities due to sideslip.</p>				<b>X</b>	<p>See Attachment 2 of this appendix, paragraph 5, for further information on ground effect.</p>
<b>2.k.</b>	<p>The FTD must have aerodynamic and ground reaction modeling for the effects of reverse thrust on directional control, if applicable.</p> <p>An SOC is required.</p>				<b>X</b>	
<b>3. Equipment Operation.</b>						
<b>3.a.</b>	<p>All relevant instrument indications involved in the simulation of the airplane must automatically respond to control movement or external disturbances to the simulated airplane; e.g., turbulence or windshear. Numerical values must</p>		<b>X</b>	<b>X</b>	<b>X</b>	

	<p>be presented in the appropriate units.</p> <p>For Level 7 FTDs, instrument indications must also respond to effects resulting from icing.</p>					
<b>3.b.1.</b>	<p>Navigation equipment must be installed and operate within the tolerances applicable for the airplane.</p> <p>Levels 6 must also include communication equipment (inter-phone and air/ground) like that in the airplane and, if appropriate to the operation being conducted, an oxygen mask microphone system.</p> <p>Level 5 need have only that navigation equipment necessary to fly an instrument approach.</p>		X	X		
<b>3.b.2.</b>	<p>Communications, navigation, caution, and warning equipment must be installed and operate within the tolerances applicable for the airplane.</p> <p>Instructor control of internal and external navigational aids. Navigation aids must be usable within range or line-of-sight without restriction, as applicable to the geographic area.</p>				X	See Attachment 3 of this appendix for further information regarding long-range navigation equipment.
<b>3.b.3.</b>	<p>Complete navigation database for at least 3 airports with corresponding precision and non-precision approach procedures, including navigational database updates.</p>				X	
<b>3.c.1.</b>	<p>Installed systems must simulate the applicable airplane system operation, both on the ground and in flight. Installed systems must be operative to the extent that applicable normal, abnormal, and emergency operating procedures included in the sponsor's training programs can be accomplished.</p> <p>Level 6 must simulate all applicable airplane flight, navigation, and systems operation.</p> <p>Level 5 must have at least functional flight and navigational controls, displays, and instrumentation.</p> <p>Level 4 must have at least one airplane system installed and functional.</p>	X	X	X		
<b>3.c.2.</b>	<p>Simulated airplane systems must operate as the airplane systems operate</p>				X	Airplane system operation

	<p>under normal, abnormal, and emergency operating conditions on the ground and in flight.</p> <p>Once activated, proper systems operation must result from system management by the crew member and not require any further input from the instructor's controls.</p>					<p>should be predicated on, and traceable to, the system data supplied by the airplane manufacturer, original equipment manufacturer or alternative approved data for the airplane system or component.</p> <p>At a minimum, alternate approved data should validate the operation of all normal, abnormal, and emergency operating procedures and training tasks the FSTD is qualified to conduct.</p>
<b>3.d.</b>	The lighting environment for panels and instruments must be sufficient for the operation being conducted.	X	X	X	X	Back-lighted panels and instruments may be installed but are not required.
<b>3.e.</b>	<p>The FTD must provide control forces and control travel that corresponds to the airplane being simulated. Control forces must react in the same manner as in the airplane under the same flight conditions.</p> <p>For Level 7 FTDs, control systems must replicate airplane operation for the normal and any non-normal modes including back-up systems and should reflect failures of associated systems. Appropriate cockpit indications and messages must be replicated.</p>			X	X	
<b>3.f.</b>	The FTD must provide control forces and control travel of sufficient precision to manually fly an instrument approach.		X			
<b>3.e.</b>	FTD control feel dynamics must replicate the airplane. This must be determined by comparing a recording of the control feel dynamics of the FTD				X	

	to airplane measurements. For initial and upgrade qualification evaluations, the control dynamic characteristics must be measured and recorded directly from the flight deck controls, and must be accomplished in takeoff, cruise, and landing flight conditions and configurations.					
<b>4. Instructor or Evaluator Facilities.</b>						
<b>4.a.1.</b>	In addition to the flight crewmember stations, suitable seating arrangements for an instructor/check airman and FAA Inspector must be available. These seats must provide adequate view of crewmember's panel(s).	X	X	X		These seats need not be a replica of an aircraft seat and may be as simple as an office chair placed in an appropriate position.
<b>4.a.2.</b>	In addition to the flight crewmember stations, the FTD must have at least two suitable seats for the instructor/check airman and FAA inspector. These seats must provide adequate vision to the pilot's panel and forward windows. All seats other than flight crew seats need not represent those found in the airplane, but must be adequately secured to the floor and equipped with similar positive restraint devices.				X	The NSPM will consider alternatives to this standard for additional seats based on unique flight deck configurations.
<b>4.b.1.</b>	The FTD must have instructor controls that permit activation of normal, abnormal, and emergency conditions as appropriate. Once activated, proper system operation must result from system management by the crew and not require input from the instructor controls.	X	X	X		
<b>4.b.2.</b>	The FTD must have controls that enable the instructor/evaluator to control all required system variables and insert all abnormal or emergency conditions into the simulated airplane systems as described in the sponsor's FAA-approved training program; or as described in the relevant operating manual as appropriate.				X	
<b>4.c.</b>	The FTD must have instructor controls for all environmental effects expected to be available at the IOS; e.g., clouds, visibility, icing, precipitation, temperature, storm cells and microbursts, turbulence, and intermediate and high altitude wind speed and direction.				X	
<b>4.d.</b>	The FTD must provide the instructor or evaluator the ability to present ground				X	For example, another airplane

	and air hazards.					crossing the active runway or converging airborne traffic.
<b>5. Motion System.</b>						
<b>5.a.</b>	The FTD may have a motion system, if desired, although it is not required. If a motion system is installed and additional training, testing, or checking credits are being sought on the basis of having a motion system, the motion system operation may not be distracting and must be coupled closely to provide integrated sensory cues. The motion system must also respond to abrupt input at the pilot's position within the allotted time, but not before the time when the airplane responds under the same conditions.		X	X	X	The motion system standards set out in part 60, Appendix A for at least Level A simulators is acceptable.
<b>5.b.</b>	If a motion system is installed, it must be measured by latency tests or transport delay tests and may not exceed 300 milliseconds. Instrument response may not occur prior to motion onset.			X	X	The motion system standards set out in part 60, Appendix A for at least Level A simulators is acceptable.
<b>6. Visual System.</b>						
<b>6.a.</b>	The FTD may have a visual system, if desired, although it is not required. If a visual system is installed, it must meet the following criteria:	X	X	X		
<b>6.a.1.</b>	The visual system must respond to abrupt input at the pilot's position. An SOC is required.		X	X		
<b>6.a.2.</b>	The visual system must be at least a single channel, non-collimated display. An SOC is required.	X	X	X		
<b>6.a.3.</b>	The visual system must provide at least a field-of-view of 18° vertical / 24° horizontal for the pilot flying. An SOC is required.	X	X	X		
<b>6.a.4.</b>	The visual system must provide for a maximum parallax of 10° per pilot. An SOC is required.	X	X	X		
<b>6.a.5.</b>	The visual scene content may not be distracting. An SOC is required.	X	X	X		
<b>6.a.6.</b>	The minimum distance from the pilot's eye position to the surface of a direct view					

	display may not be less than the distance to any front panel instrument. An SOC is required.					
<b>6.a.7.</b>	The visual system must provide for a minimum resolution of 5 arc-minutes for both computed and displayed pixel size. An SOC is required.	<b>X</b>	<b>X</b>	<b>X</b>		
<b>6.b.</b>	If a visual system is installed and additional training, testing, or checking credits are being sought on the basis of having a visual system, a visual system meeting the standards set out for at least a Level A FFS (see Appendix A of this part) will be required. A “direct-view,” non-collimated visual system (with the other requirements for a Level A visual system met) may be considered satisfactory for those installations where the visual system design “eye point” is appropriately adjusted for each pilot’s position such that the parallax error is at or less than 10° simultaneously for each pilot. An SOC is required.			<b>X</b>		Directly projected, non-collimated visual displays may prove to be unacceptable for dual pilot applications.
<b>6.c.</b>	The FTD must have a visual system providing an out-of-the-flight deck view.				<b>X</b>	
<b>6.d.</b>	The FTD must provide a continuous visual field-of-view of at least 176° horizontally and 36° vertically or the number of degrees necessary to meet the visual ground segment requirement, whichever is greater. The minimum horizontal field-of-view coverage must be plus and minus one-half (½) of the minimum continuous field-of-view requirement, centered on the zero degree azimuth line relative to the aircraft fuselage.  An SOC is required and must explain the system geometry measurements including system linearity and field-of-view.  Collimation is not required but parallax effects must be minimized (not greater than 10° for each pilot when aligned for the point midway between the left and right seat eyepoints).				<b>X</b>	The horizontal field-of-view is traditionally described as a 180° field-of-view. However, the field-of-view is technically no less than 176°. Additional field-of-view capability may be added at the sponsor’s discretion provided the minimum fields of view are retained.
<b>6.e.</b>	The visual system must be free from optical discontinuities and artifacts that create non-realistic cues.				<b>X</b>	Non-realistic cues might include image “swimming”

						and image “roll-off,” that may lead a pilot to make incorrect assessments of speed, acceleration, or situational awareness.
<b>6.f.</b>	The FTD must have operational landing lights for night scenes. Where used, dusk (or twilight) scenes require operational landing lights.					<b>X</b>
<b>6.g.</b>	The FTD must have instructor controls for the following:  (1) Visibility in statute miles (km) and runway visual range (RVR) in ft.(m); (2) Airport selection; and (3) Airport lighting.					<b>X</b>
<b>6.h.</b>	The FTD must provide visual system compatibility with dynamic response programming.					<b>X</b>
<b>6.i.</b>	The FTD must show that the segment of the ground visible from the FTD flight deck is the same as from the airplane flight deck (within established tolerances) when at the correct airspeed, in the landing configuration, at the appropriate height above the touchdown zone, and with appropriate visibility.					<b>X</b> This will show the modeling accuracy of RVR, glideslope, and localizer for a given weight, configuration, and speed within the airplane's operational envelope for a normal approach and landing.
<b>6.j.</b>	The FTD must provide visual cues necessary to assess sink rates (provide depth perception) during takeoffs and landings, to include: (1) Surface on runways, taxiways, and ramps; and (2) Terrain features.					<b>X</b>
<b>6.k.</b>	The FTD must provide for accurate portrayal of the visual environment relating to the FTD attitude.					<b>X</b> Visual attitude vs. FTD attitude is a comparison of pitch and roll of the horizon as displayed in the visual scene compared to the display on the attitude indicator.

6.l.	The FTD must provide for quick confirmation of visual system color, RVR, focus, and intensity.  An SOC is required.				X	
6.m.	The FTD must be capable of producing at least 10 levels of occulting.				X	
6.n.	Night Visual Scenes. When used in training, testing, or checking activities, the FTD must provide night visual scenes with sufficient scene content to recognize the airport, the terrain, and major landmarks around the airport. The scene content must allow a pilot to successfully accomplish a visual landing. Scenes must include a definable horizon and typical terrain characteristics such as fields, roads and bodies of water and surfaces illuminated by airplane landing lights.				X	
6.o.	Dusk (or Twilight) Visual Scenes. When used in training, testing, or checking activities, the FTD must provide dusk (or twilight) visual scenes with sufficient scene content to recognize the airport, the terrain, and major landmarks around the airport. The scene content must allow a pilot to successfully accomplish a visual landing. Dusk (or twilight) scenes, as a minimum, must provide full color presentations of reduced ambient intensity, sufficient surfaces with appropriate textural cues that include self-illuminated objects such as road networks, ramp lighting and airport signage, to conduct a visual approach, landing and airport movement (taxi). Scenes must include a definable horizon and typical terrain characteristics such as fields, roads and bodies of water and surfaces illuminated by airplane landing lights. If provided, directional horizon lighting must have correct orientation and be consistent with surface shading effects. Total night or dusk (twilight) scene content must be comparable in detail to that produced by 10,000 visible textured surfaces and 15,000 visible lights with sufficient system capacity to display 16 simultaneously moving objects.  An SOC is required.				X	

<p><b>6.p.</b></p>	<p>Daylight Visual Scenes. The FTD must provide daylight visual scenes with sufficient scene content to recognize the airport, the terrain, and major landmarks around the airport. The scene content must allow a pilot to successfully accomplish a visual landing. Any ambient lighting must not “washout” the displayed visual scene. Total daylight scene content must be comparable in detail to that produced by 10,000 visible textured surfaces and 6,000 visible lights with sufficient system capacity to display 16 simultaneously moving objects. The visual display must be free of apparent and distracting quantization and other distracting visual effects while the FTD is in motion.</p> <p>An SOC is required.</p>				<p>X</p>	
<p><b>6.q.</b></p>	<p>The FTD must provide operational visual scenes that portray physical relationships known to cause landing illusions to pilots.</p>				<p>X</p>	<p>For example: short runways, landing approaches over water, uphill or downhill runways, rising terrain on the approach path, unique topographic features.</p>
<p><b>6.r.</b></p>	<p>The FTD must provide special weather representations of light, medium, and heavy precipitation near a thunderstorm on takeoff and during approach and landing. Representations need only be presented at and below an altitude of 2,000 ft. (610 m) above the airport surface and within 10 miles (16 km) of the airport.</p>				<p>X</p>	
<p><b>6.s.</b></p>	<p>The FTD must present visual scenes of wet and snow-covered runways, including runway lighting reflections for wet conditions, partially obscured lights for snow conditions, or suitable alternative effects.</p>				<p>X</p>	
<p><b>6.t.</b></p>	<p>The FTD must present realistic color and directionality of all airport lighting.</p>				<p>X</p>	
<p><b>6.u.</b></p>	<p>The following weather effects as observed on the visual system must be simulated and respective instructor controls provided.</p> <p>(1) Multiple cloud layers with adjustable bases, tops, sky coverage and</p>				<p>X</p>	<p>Scud effects are low, detached, and irregular clouds below a defined cloud layer.</p>

	scud effect; (2) Storm cells activation and/or deactivation; (3) Visibility and runway visual range (RVR), including fog and patchy fog effect; (4) Effects on ownship external lighting; (5) Effects on airport lighting (including variable intensity and fog effects); (6) Surface contaminants (including wind blowing effect); (7) Variable precipitation effects (rain, hail, snow); (8) In-cloud airspeed effect; and (9) Gradual visibility changes entering and breaking out of cloud.					
<b>6.v.</b>	The simulator must provide visual effects for: (1) Light poles; (2) Raised edge lights as appropriate; and (3) Glow associated with approach lights in low visibility before physical lights are seen,				<b>X</b>	Visual effects for light poles and raised edge lights are for the purpose of providing additional depth perception during takeoff, landing, and taxi training tasks. Three dimensional modeling of the actual poles and stanchions is not required.
<b>7. Sound System.</b>						
<b>7.a.</b>	The FTD must provide flight deck sounds that result from pilot actions that correspond to those that occur in the airplane.				<b>X</b>	<b>X</b>
<b>7.b.</b>	The volume control must have an indication of sound level setting which meets all qualification requirements.				<b>X</b>	This indication is of the sound level setting as evaluated during the FTD's initial evaluation.
<b>7.c.</b>	The FTD must accurately simulate the sound of precipitation, windshield wipers, and other significant airplane noises perceptible to the pilot during normal and abnormal operations, and include the sound of a crash (when the				<b>X</b>	

	<p>FTD is landed in an unusual attitude or in excess of the structural gear limitations); normal engine and thrust reversal sounds; and the sounds of flap, gear, and spoiler extension and retraction.</p> <p>Sounds must be directionally representative.</p> <p>An SOC is required.</p>					
<b>7.d.</b>	<p>The FTD must provide realistic amplitude and frequency of flight deck noises and sounds. FTD performance must be recorded, subjectively assessed for the initial evaluation, and be made a part of the QTG. .</p>				<b>X</b>

---

Note 1: An “A” in the table indicates that the system, task, or procedure, although not required to be present, may be examined if the appropriate airplane system is simulated in the FTD and is working properly.

Note 2: Items not installed or not functional on the FTD and not appearing on the SOQ Configuration List, are not required to be listed as exceptions on the SOQ.

Note 3: A “T” in the table indicates that the task may only be qualified for introductory initial or recurrent qualification training. These tasks may not be qualified for proficiency testing or checking credits in an FAA approved flight training program.

■ 15. Amend Attachment 2 to Appendix B as follows:

- A. Revise paragraph 2.e.;
- B. Revise Table B2A;

- C. In Table B2B;
- D. In Table B2C;
- E. In Table B2D; and
- F. In Table B2E.

The revisions and additions read as follows:

**Appendix B to Part 60—Qualification Performance Standards for Airplane Flight Training Devices**

\* \* \* \* \*

**Attachment 2 to Appendix B to Part 60—FFS OBJECTIVE TESTS**

\* \* \* \* \*  
2. \* \* \*  
\* \* \* \* \*

e. It is not acceptable to program the FTD so that the mathematical modeling is correct only at the validation test points. Unless otherwise noted, FTD tests must represent airplane performance and handling qualities at operating weights and centers of gravity

(CG) typical of normal operation. FTD tests at extreme weight or CG conditions may be acceptable where required for concurrent aircraft certification testing. Tests of handling qualities must include validation of augmentation devices.

\* \* \* \* \*

1. Performance.							
1.a.	Taxi.						
1.a.1	Minimum radius turn.	±0.9 m (3 ft) or ±20% of airplane turn radius.	Ground.	Plot both main and nose gear loci and key engine parameter(s). Data for no brakes and the minimum thrust required to maintain a steady turn except for airplanes requiring asymmetric thrust or braking to achieve the minimum radius turn.			X
1.a.2	Rate of turn versus nosewheel steering angle (NWA).	±10% or ±2°/s of turn rate.	Ground.	Record for a minimum of two speeds, greater than minimum turning radius speed with one at a typical taxi speed, and with a spread of at least 5 kt.			X
1.b.	Takeoff.			<i>Note.— For Level 7 FTD, all airplane manufacturer commonly-used certificated take-off flap settings must be demonstrated at least once either in minimum unstick speed (1.b.3), normal take-off (1.b.4), critical engine failure on take-off (1.b.5) or crosswind take-off (1.b.6).</i>			
1.b.1	Ground acceleration time and distance.	±1.5 s or ±5% of time; and ±61 m (200 ft) or ±5% of distance.  For Level 6 FTD: ±1.5 s or ±5% of time.	Takeoff.	Acceleration time and distance must be recorded for a minimum of 80% of the total time from brake release to $V_r$ . Preliminary aircraft certification data may be used.		X	X May be combined with normal takeoff (1.b.4.) or rejected takeoff (1.b.7.). Plotted data should be shown using appropriate scales for each portion of the maneuver.  For Level 6 FTD, this test is required only if RTO training credit is sought.
1.b.2	Minimum control speed, ground ( $V_{mcg}$ ) using aerodynamic controls only per applicable airworthiness requirement or alternative engine inoperative test to demonstrate ground control characteristics.	±25% of maximum airplane lateral deviation reached or ±1.5 m (5 ft).  For airplanes with reversible flight control systems:  ±10% or ±2.2 daN (5 lbf) rudder pedal force.	Takeoff.	Engine failure speed must be within ±1 kt of airplane engine failure speed. Engine thrust decay must be that resulting from the mathematical model for the engine applicable to the FTD under test. If the modeled engine is not the same as the airplane manufacturer's flight test engine, a further test may be run with the same initial conditions using the thrust from the flight test data as the driving parameter.			X If a $V_{mcg}$ test is not available, an acceptable alternative is a flight test snap engine deceleration to idle at a speed between $V_1$ and $V_1-10$ kt, followed by control of heading using aerodynamic control only and recovery should be achieved with the main gear on the ground.  To ensure only aerodynamic control, nosewheel steering must be disabled (i.e. castored) or the nosewheel held slightly off the ground.
1.b.3	Minimum unstick speed ( $V_{mu}$ ) or	±3 kt airspeed. ±1.5° pitch angle.	Takeoff.	Record time history data from 10 knots before start of rotation until at least 5 seconds after the			X $V_{mu}$ is defined as the minimum speed at which the last main

	equivalent test to demonstrate early rotation take-off characteristics.			occurrence of main gear lift-off.			landing gear leaves the ground. Main landing gear strut compression or equivalent air/ground signal should be recorded. If a $V_{min}$ test is not available, alternative acceptable flight tests are a constant high-altitude takeoff run through main gear lift-off or an early rotation takeoff.  If either of these alternative solutions is selected, aft body contact/tail strike protection functionality, if present on the airplane, should be active.
<b>1.b.4</b>	Normal take-off.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±6 m (20 ft) height.</p> <p>For airplanes with reversible flight control systems:</p> <p>±2.2 daN (5 lbf) or ±10% of column force.</p>	Takeoff.	<p>Data required for near maximum certificated takeoff weight at mid center of gravity location and light takeoff weight at an aft center of gravity location. If the airplane has more than one certificated take-off configuration, a different configuration must be used for each weight.</p> <p>Record takeoff profile from brake release to at least 61 m (200 ft) AGL.</p>			<p><b>X</b></p> <p>The test may be used for ground acceleration time and distance (1.b.1).</p> <p>Plotted data should be shown using appropriate scales for each portion of the maneuver.</p>
<b>1.b.5</b>	Critical engine failure on take-off.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±6 m (20 ft) height.</p> <p>±2° roll angle.</p> <p>±2° side-slip angle.</p> <p>±3° heading angle.</p> <p>For airplanes with reversible flight control systems:</p>	Takeoff.	<p>Record takeoff profile to at least 61 m (200 ft) AGL.</p> <p>Engine failure speed must be within ±3 kt of airplane data.</p> <p>Test at near maximum takeoff weight</p>			<p><b>X</b></p>

		<p>±2.2 daN (5 lbf) or ±10% of column force;</p> <p>±1.3 daN (3 lbf) or ±10% of wheel force;</p> <p>and</p> <p>±2.2 daN (5 lbf) or ±10% of rudder pedal force.</p>						
<b>1.b.6</b>	Crosswind take-off.	<p>± 3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±6 m (20 ft) height.</p> <p>±2° roll angle.</p> <p>±2° side-slip angle.</p> <p>±3° heading angle.</p> <p>Correct trends at ground speeds below 40 kt for rudder/pedal and heading angle.</p> <p>For airplanes with reversible flight control systems:</p> <p>±2.2 daN (5 lbf) or ±10% of column force;</p> <p>±1.3 daN (3 lbf) or ±10% of wheel force;</p> <p>and</p> <p>±2.2 daN (5 lbf) or ±10% of rudder pedal force.</p>	Takeoff.	<p>Record takeoff profile from brake release to at least 61 m (200 ft) AGL.</p> <p>This test requires test data, including wind profile, for a crosswind component of at least 60% of the airplane performance data value measured at 10 m (33 ft) above the runway.</p> <p>Wind components must be provided as headwind and crosswind values with respect to the runway.</p>			<b>X</b>	In those situations where a maximum crosswind or a maximum demonstrated crosswind is not known, contact the NSPM.
<b>1.b.7.a.</b>	Rejected Takeoff.	±5% of time or ±1.5 s.	Takeoff.	Record at mass near maximum takeoff weight.			<b>X</b>	Autobrakes will be used where

		±7.5% of distance or ±76 m (250 ft).  For Level 6 FTD: ±5% of time or ±1.5 s.		Speed for reject must be at least 80% of V <sub>1</sub> .  Maximum braking effort, auto or manual.  Where a maximum braking demonstration is not available, an acceptable alternative is a test using approximately 80% braking and full reverse, if applicable.  Time and distance must be recorded from brake release to a full stop.				applicable.
<b>1.b.7.b.</b>	Rejected Takeoff.	±5% of time or ±1.5 s.	Takeoff	Record time for at least 80% of the segment from initiation of the rejected takeoff to full stop.		<b>X</b>		For Level 6 FTD, this test is required only if RTO training credit is sought.
<b>1.b.8.</b>	Dynamic Engine Failure After Takeoff.	±2°/s or ±20% of body angular rates.	Takeoff.	Engine failure speed must be within ±3 kt of airplane data.  Engine failure may be a snap deceleration to idle.  Record hands-off from 5 s before engine failure to +5 s or 30° roll angle, whichever occurs first.  CCA: Test in Normal and Non-normal control state.			<b>X</b>	For safety considerations, airplane flight test may be performed out of ground effect at a safe altitude, but with correct airplane configuration and airspeed.
<b>1.c.</b>	<b>Climb.</b>							
<b>1.c.1.</b>	Normal Climb, all engines operating.	±3 kt airspeed.  ±0.5 m/s (100 ft/ min) or ±5% of rate of climb.	Clean.	Flight test data are preferred; however, airplane performance manual data are an acceptable alternative.  Record at nominal climb speed and mid initial climb altitude.  FTD performance is to be recorded over an interval of at least 300 m (1,000 ft).	<b>X</b>	<b>X</b>	<b>X</b>	For Level 5 and Level 6 FTDs, this may be a snapshot test result.
<b>1.c.2.</b>	One-engine-inoperative 2nd segment climb.	±3 kt airspeed.  ±0.5 m/s (100 ft/ min) or ±5% of rate of climb, but not less than airplane performance data requirements.	2nd segment climb.	Flight test data is preferred; however, airplane performance manual data is an acceptable alternative.  Record at nominal climb speed.  FTD performance is to be recorded over an interval of at least 300 m (1,000 ft).  Test at WAT (weight, altitude or temperature)			<b>X</b>	

				limiting condition.				
<b>1.c.3.</b>	One Engine Inoperative En route Climb.	±10% time, ±10% distance, ±10% fuel used	Clean	Flight test data or airplane performance manual data may be used.  Test for at least a 1,550 m (5,000 ft) segment.			<b>X</b>	
<b>1.c.4.</b>	One Engine Inoperative Approach Climb for airplanes with icing accountability if provided in the airplane performance data for this phase of flight.	±3 kt airspeed.  ±0.5 m/s (100 ft/min) or ±5% rate of climb, but not less than airplane performance data.	Approach	Flight test data or airplane performance manual data may be used.  FTD performance to be recorded over an interval of at least 300 m (1,000 ft).  Test near maximum certificated landing weight as may be applicable to an approach in icing conditions.			<b>X</b>	Airplane should be configured with all anti-ice and de-ice systems operating normally, gear up and go-around flap.  All icing accountability considerations, in accordance with the airplane performance data for an approach in icing conditions, should be applied.
<b>1.d.</b>	<b>Cruise / Descent.</b>							
<b>1.d.1.</b>	Level flight acceleration	±5% Time	Cruise	Time required to increase airspeed a minimum of 50 kt, using maximum continuous thrust rating or equivalent.  For airplanes with a small operating speed range, speed change may be reduced to 80% of operational speed change.			<b>X</b>	
<b>1.d.2.</b>	Level flight deceleration.	±5% Time	Cruise	Time required to decrease airspeed a minimum of 50 kt, using idle power.  For airplanes with a small operating speed range, speed change may be reduced to 80% of operational speed change.			<b>X</b>	
<b>1.d.3.</b>	Cruise performance.	±.05 EPR or ±3% N1 or ±5% of torque.  ±5% of fuel flow.	Cruise.	The test may be a single snapshot showing instantaneous fuel flow, or a minimum of two consecutive snapshots with a spread of at least 3 minutes in steady flight.			<b>X</b>	
<b>1.d.4.</b>	Idle descent.	±3 kt airspeed.  ±1.0 m/s (200 ft/min) or ±5% of rate of descent.	Clean.	Idle power stabilized descent at normal descent speed at mid altitude.  FTD performance to be recorded over an interval of at least 300 m (1,000 ft).			<b>X</b>	
<b>1.d.5.</b>	Emergency descent.	±5 kt airspeed.  ±1.5 m/s (300 ft/min) or ±5% of rate of descent.	As per airplane performance data.	FTD performance to be recorded over an interval of at least 900 m (3,000 ft).			<b>X</b>	Stabilized descent to be conducted with speed brakes extended if applicable, at mid altitude and near $V_{mo}$ or

		±10% Ti or ±0.25 s; and ±10% Tt or ±0.25 s.  For Level 6 FTD: ±10% Tt or ±0.25 s.  For Level 5 FTD: ±1 s		critical engine parameter from idle power to go-around power.				definitions of T <sub>i</sub> and T <sub>t</sub> .
1.f.2.	Deceleration.	For Level 7 FTD: ±10% Ti or ±0.25 s; and ±10% Tt or ±0.25 s.  For Level 6 FTD: ±10% Tt or ±0.25 s.  For Level 5 FTD: ±1 s	Ground	Total response is the incremental change in the critical engine parameter from maximum take-off power to idle power.	X	X	X	See Appendix F of this part for definitions of T <sub>i</sub> and T <sub>t</sub> .
<b>2. Handling Qualities.</b>								
2.a.	<b>Static Control Tests.</b>							
<p><i>Note 1 — Testing of position versus force is not applicable if forces are generated solely by use of airplane hardware in the FTD.</i></p> <p><i>Note 2 — Pitch, roll and yaw controller position versus force or time should be measured at the control. An alternative method in lieu of external test fixtures at the flight controls would be to have recording and measuring instrumentation built into the FTD. The force and position data from this instrumentation could be directly recorded and matched to the airplane data. Provided the instrumentation was verified by using external measuring equipment while conducting the static control checks, or equivalent means, and that evidence of the satisfactory comparison is included in the MQTG, the instrumentation could be used for both initial and recurrent evaluations for the measurement of all required control checks. Verification of the instrumentation by using external measuring equipment should be repeated if major modifications and/or repairs are made to the control loading system. Such a permanent installation could be used without any time being lost for the installation of external devices. Static and dynamic flight control tests should be accomplished at the same feel or impact pressures as the validation data where applicable.</i></p> <p><i>Note 3 — (Level 7 FTD only) FTD static control testing from the second set of pilot controls is only required if both sets of controls are not mechanically interconnected on the FTD. A rationale is required from the data provider if a single set of data is applicable to both sides. If controls are mechanically interconnected in the FTD, a single set of tests is sufficient.</i></p>								
2.a.1.a.	Pitch controller position versus force and surface position calibration.	±0.9 daN (2 lbf) breakout.  ±2.2 daN (5 lbf) or ±10% of force.  ±2° elevator angle.	Ground.	Record results for an uninterrupted control sweep to the stops.		X	X	Test results should be validated with in-flight data from tests such as longitudinal static stability, stalls, etc.
2.a.1.b.	Pitch controller position versus force	±0.9 daN (2 lbf) breakout.  ±2.2 daN (5 lbf) or ±10% of force.	As determined by sponsor	Record results during initial qualification evaluation for an uninterrupted control sweep to the stops. The recorded tolerances apply to subsequent comparisons on continuing qualification evaluations.	X			Applicable only on continuing qualification evaluations. The intent is to design the control feel for Level 5 to be able to manually fly an instrument approach; and not to compare results to flight test or other such data.

2.a.2.a.	Roll controller position versus force and surface position calibration.	±0.9 daN (2 lbf) breakout. ±1.3 daN (3 lbf) or ±10% of force. ±2° aileron angle. ±3° spoiler angle.	Ground.	Record results for an uninterrupted control sweep to the stops.		X	X	Test results should be validated with in-flight data from tests such as engine-out trims, steady state side-slips, etc.
2.a.2.b.	Roll controller position versus force	±0.9 daN (2 lbf) breakout. ±1.3 daN (3 lbf) or ±10% of force.	As determined by sponsor	Record results during initial qualification evaluation for an uninterrupted control sweep to the stops. The recorded tolerances apply to subsequent comparisons on continuing qualification evaluations.	X			Applicable only on continuing qualification evaluations. The intent is to design the control feel for Level 5 to be able to manually fly an instrument approach; and not to compare results to flight test or other such data.
2.a.3.a.	Rudder pedal position versus force and surface position calibration.	±2.2 daN (5 lbf) breakout. ±2.2 daN (5 lbf) or ±10% of force. ±2° rudder angle.	Ground.	Record results for an uninterrupted control sweep to the stops.		X	X	Test results should be validated with in-flight data from tests such as engine-out trims, steady state side-slips, etc.
2.a.3.b.	Rudder pedal position versus force	±2.2 daN (5 lbf) breakout. ±2.2 daN (5 lbf) or ±10% of force.	As determined by sponsor	Record results during initial qualification evaluation for an uninterrupted control sweep to the stops. The recorded tolerances apply to subsequent comparisons on continuing qualification evaluations.	X			Applicable only on continuing qualification evaluations. The intent is to design the control feel for Level 5 to be able to manually fly an instrument approach; and not to compare results to flight test or other such data.
2.a.4.a.	Nosewheel Steering Controller Force and Position Calibration.	±0.9 daN (2 lbf) breakout. ±1.3 daN (3 lbf) or ±10% of force. ±2° NWA.	Ground.	Record results of an uninterrupted control sweep to the stops.			X	
2.a.4.b.	Nosewheel Steering Controller Force	±0.9 daN (2 lbf) breakout. ±1.3 daN (3 lbf) or	Ground.	Record results of an uninterrupted control sweep to the stops.		X		

		±10% of force.					
2.a.5.	Rudder Pedal Steering Calibration.	±2° NWA.	Ground.	Record results of an uninterrupted control sweep to the stops.		X	X
2.a.6.	Pitch Trim Indicator vs. Surface Position Calibration.	±0.5° trim angle.	Ground.			X	X
							The purpose of the test is to compare FSTD surface position indicator against the FSTD flight controls model computed value.
2.a.7.	Pitch Trim Rate.	±10% of trim rate (°/s) or ±0.1°/s trim rate.	Ground and approach.	Trim rate to be checked at pilot primary induced trim rate (ground) and autopilot or pilot primary trim rate in-flight at go-around flight conditions.  For CCA, representative flight test conditions must be used.			X
2.a.8.	Alignment of cockpit throttle lever versus selected engine parameter.	When matching engine parameters: ±5° of TLA.  When matching detents: ±3% N1 or ±.03 EPR or ±3% torque, or ±3% maximum rated manifold pressure, or equivalent.  Where the levers do not have angular travel, a tolerance of ±2 cm (±0.8 in) applies.	Ground.	Simultaneous recording for all engines. The tolerances apply against airplane data.  For airplanes with throttle detents, all detents to be presented and at least one position between detents/ endpoints (where practical). For airplanes without detents, end points and at least three other positions are to be presented.		X	X
							Data from a test airplane or engineering test bench are acceptable, provided the correct engine controller (both hardware and software) is used.  In the case of propeller-driven airplanes, if an additional lever, usually referred to as the propeller lever, is present, it should also be checked. This test may be a series of snapshot tests.
2.a.9.a.	Brake pedal position versus force and brake system pressure calibration.	±2.2 daN (5 lbf) or ±10% of force.  ±1.0 MPa (150 psi) or ±10% of brake system pressure.	Ground.	Relate the hydraulic system pressure to pedal position in a ground static test.  Both left and right pedals must be checked.			X
							FTD computer output results may be used to show compliance.
2.a.9.b.	Brake pedal position versus force	±2.2 daN (5 lbf) or ±10% of force.	Ground.	Two data points are required: zero and maximum deflection. Computer output results may be used to show compliance.		X	
							FTD computer output results may be used to show compliance.  Test not required unless RTO credit is sought.

2.b.	<b>Dynamic Control Tests.</b>							
	<i>Note.— Tests 2.b.1, 2.b.2 and 2.b.3 are not applicable for FTDs where the control forces are completely generated within the airplane controller unit installed in the FTD. Power setting may be that required for level flight unless otherwise specified. See paragraph 4 of Appendix A, Attachment 2.</i>							
2.b.1.	Pitch Control.	<p><b>For underdamped systems:</b></p> <p><math>T(P_0) \pm 10\%</math> of <math>P_0</math> or <math>\pm 0.05</math> s.</p> <p><math>T(P_1) \pm 20\%</math> of <math>P_1</math> or <math>\pm 0.05</math> s.</p> <p><math>T(P_2) \pm 30\%</math> of <math>P_2</math> or <math>\pm 0.05</math> s.</p> <p><math>T(P_n) \pm 10*(n+1)\%</math> of <math>P_n</math> or <math>\pm 0.05</math> s.</p> <p><math>T(A_n) \pm 10\%</math> of <math>A_{max}</math>, where <math>A_{max}</math> is the largest amplitude or <math>\pm 0.5\%</math> of the total control travel (stop to stop).</p> <p><math>T(A_d) \pm 5\%</math> of <math>A_d =</math> residual band or <math>\pm 0.5\%</math> of the maximum control travel = residual band.</p> <p><math>\pm 1</math> significant overshoots (minimum of 1 significant overshoot).</p> <p>Steady state position within residual band.</p> <p><i>Note 1.— Tolerances should not be applied on period or amplitude after the last significant overshoot.</i></p>	Takeoff, Cruise, and Landing.	<p>Data must be for normal control displacements in both directions (approximately 25% to 50% of full throw or approximately 25% to 50% of maximum allowable pitch controller deflection for flight conditions limited by the maneuvering load envelope).</p> <p>Tolerances apply against the absolute values of each period (considered independently).</p>			<b>X</b>	<p><math>n</math> = the sequential period of a full oscillation.</p> <p>Refer to paragraph 4 of Appendix A, Attachment 2 for additional information.</p> <p>For overdamped and critically damped systems, see Figure A2B of Appendix A for an illustration of the reference measurement.</p>

		<p><i>Note 2.— Oscillations within the residual band are not considered significant and are not subject to tolerances.</i></p> <p><b>For overdamped and critically damped systems only,</b> the following tolerance applies:  <math>T(P_0) \pm 10\%</math> of <math>P_0</math> or <math>\pm 0.05</math> s.</p>						
2.b.2.	Roll Control.	Same as 2.b.1.	Takeoff, Cruise, and Landing.	Data must be for normal control displacement (approximately 25% to 50% of full throw or approximately 25% to 50% of maximum allowable roll controller deflection for flight conditions limited by the maneuvering load envelope).			X	<p>Refer to paragraph 4 of Appendix A, Attachment 2 for additional information.</p> <p>For overdamped and critically damped systems, see Figure A2B of Appendix A for an illustration of the reference measurement.</p>
2.b.3.	Yaw Control.	Same as 2.b.1.	Takeoff, Cruise, and Landing.	Data must be for normal control displacement (approximately 25% to 50% of full throw).			X	<p>Refer to paragraph 4 of Appendix A, Attachment 2 for additional information.</p> <p>For overdamped and critically damped systems, see Figure A2B of Appendix A for an illustration of the reference measurement.</p>
2.b.4.	Small Control Inputs – Pitch.	$\pm 0.15^\circ/\text{s}$ body pitch rate or $\pm 20\%$ of peak body pitch rate applied throughout the time history.	Approach or Landing.	<p>Control inputs must be typical of minor corrections made while established on an ILS approach (approximately 0.5 to 2°/s pitch rate).</p> <p>Test in both directions.</p> <p>Show time history data from 5 s before until at least 5 s after initiation of control input.</p> <p>If a single test is used to demonstrate both directions, there must be a minimum of 5 s before</p>			X	

				control reversal to the opposite direction. <b>CCA:</b> Test in normal and non-normal control state.				
2.b.5.	Small Control Inputs – Roll.	±0.15°/s body roll rate or ±20% of peak body roll rate applied throughout the time history.	Approach or landing.	Control inputs must be typical of minor corrections made while established on an ILS approach (approximately 0.5 to 2°/s roll rate).  Test in one direction. For airplanes that exhibit non-symmetrical behavior, test in both directions.  Show time history data from 5 s before until at least 5 s after initiation of control input.  If a single test is used to demonstrate both directions, there must be a minimum of 5 s before control reversal to the opposite direction.  <b>CCA:</b> Test in normal and non-normal control state.			X	
2.b.6.	Small Control Inputs – Yaw.	±0.15°/s body yaw rate or ±20% of peak body yaw rate applied throughout the time history.	Approach or landing.	Control inputs must be typical of minor corrections made while established on an ILS approach (approximately 0.5 to 2°/s yaw rate).  Test in both directions.  Show time history data from 5 s before until at least 5 s after initiation of control input.  If a single test is used to demonstrate both directions, there must be a minimum of 5 s before control reversal to the opposite direction.  <b>CCA:</b> Test in normal and non-normal control state.			X	
2.c.	<b>Longitudinal Control Tests.</b>							
	Power setting is that required for level flight unless otherwise specified.							
2.c.1.a.	Power Change Dynamics.	±3 kt airspeed. ±30 m (100 ft) altitude. ±1.5° or ±20% of pitch angle.	Approach.	Power change from thrust for approach or level flight to maximum continuous or go-around power.  Time history of uncontrolled free response for a			X	

				time increment equal to at least 5 s before initiation of the power change to the completion of the power change + 15 s.  CCA: Test in normal and non-normal control mode				
2.c.1.b.	Power Change Force.	±5 lb (2.2 daN) or, ±20% pitch control force.	Approach.	May be a series of snapshot test results. Power change dynamics test as described in test 2.c.1.a. will be accepted. CCA: Test in Normal and Non-normal control mode.	X	X		
2.c.2.a.	Flap/Slat Change Dynamics.	±3 kt airspeed.  ±30 m (100 ft) altitude.  ±1.5° or ±20% of pitch angle.	Takeoff through initial flap retraction, and approach to landing.	Time history of uncontrolled free response for a time increment equal to at least 5 s before initiation of the reconfiguration change to the completion of the reconfiguration change + 15 s.  CCA: Test in normal and non-normal control mode			X	
2.c.2.b.	Flap/Slat Change Force.	±5 lb (2.2 daN) or, ±20% pitch control force.	Takeoff through initial flap retraction, and approach to landing.	May be a series of snapshot test results. Flap/Slat change dynamics test as described in test 2.c.2.a. will be accepted. CCA: Test in Normal and Non-normal control mode.	X	X		
2.c.3.	Spoiler/Speedbrake Change Dynamics.	±3 kt airspeed.  ±30 m (100 ft) altitude.  ±1.5° or ±20% of pitch angle.	Cruise.	Time history of uncontrolled free response for a time increment equal to at least 5 s before initiation of the configuration change to the completion of the configuration change +15 s.  Results required for both extension and retraction.  CCA: Test in normal and non-normal control mode			X	
2.c.4.a.	Gear Change Dynamics.	±3 kt airspeed.  ±30 m (100 ft) altitude.  ±1.5° or ±20% of pitch angle.	Takeoff (retraction), and Approach (extension).	Time history of uncontrolled free response for a time increment equal to at least 5 s before initiation of the configuration change to the completion of the configuration change + 15 s.  CCA: Test in normal and non-normal control mode			X	
2.c.4.b.	Gear Change Force.	±5 lb (2.2 daN) or,	Takeoff (retraction) and	May be a series of snapshot test results. Gear	X	X		

		±20% pitch control force.	Approach (extension).	change dynamics test as described in test 2.c.4.a. will be accepted. <b>CCA:</b> Test in Normal and Non-normal control mode.				
2.c.5.	Longitudinal Trim.	±1° elevator angle.  ±0.5° stabilizer or trim surface angle.  ±1° pitch angle.  ±5% of net thrust or equivalent.	Cruise, Approach, and Landing.	Steady-state wings level trim with thrust for level flight. This test may be a series of snapshot tests.  Level 5 FTD may use equivalent stick and trim controllers in lieu of elevator and trim surface.  <b>CCA:</b> Test in normal or non-normal control mode, as applicable.	X	X	X	
2.c.6.	Longitudinal Maneuvering Stability (Stick Force/g).	±2.2 daN (5 lbf) or ±10% of pitch controller force.  Alternative method:  ±1° or ±10% of the change of elevator angle.	Cruise, Approach, and Landing.	Continuous time history data or a series of snapshot tests may be used.  Test up to approximately 30° of roll angle for approach and landing configurations. Test up to approximately 45° of roll angle for the cruise configuration.  Force tolerance not applicable if forces are generated solely by the use of airplane hardware in the FTD.  Alternative method applies to airplanes which do not exhibit stick-force-per-g characteristics.  <b>CCA:</b> Test in normal or non-normal control mode		X	X	
2.c.7.	Longitudinal Static Stability.	±2.2 daN (5 lbf) or ±10% of pitch controller force.  Alternative method:  ±1° or ±10% of the change of elevator angle.	Approach.	Data for at least two speeds above and two speeds below trim speed. The speed range must be sufficient to demonstrate stick force versus speed characteristics.  This test may be a series of snapshot tests.  Force tolerance is not applicable if forces are generated solely by the use of airplane hardware in the FTD.  Alternative method applies to airplanes which do not exhibit speed stability characteristics.	X	X	X	

				Level 5 must exhibit positive static stability, but need not comply with the numerical tolerance.  CCA: Test in normal or non-normal control mode, as applicable.				
2.c.8.a.	Approach to Stall Characteristics	±3 kt airspeed for initial buffet, stall warning, and stall speeds.  Control inputs must be plotted and demonstrate correct trend and magnitude.  ±2.0° pitch angle ±2.0° angle of attack ±2.0° bank angle ±2.0° sideslip angle  Additionally, for those simulators with reversible flight control systems: ±10% or ±5 lb (2.2 daN)) Stick/Column force (prior to “g break” only).	Second Segment Climb, High Altitude Cruise (Near Performance Limited Condition), and Approach or Landing	Each of the following stall entry methods must be demonstrated in at least one of the three required flight conditions: <ul style="list-style-type: none"> <li>▪ Stall entry at wings level (1g)</li> <li>▪ Stall entry in turning flight of at least 25° bank angle (accelerated stall)</li> <li>▪ Stall entry in a power-on condition (required only for turboprop aircraft)</li> </ul> The required cruise condition must be conducted in a flaps-up (clean) configuration. The second segment climb and approach/landing conditions must be conducted at different flap settings.  For airplanes that exhibit stall buffet as the first indication of a stall, for qualification of this task, the FTD must be equipped with a vibration system that meets the applicable subjective and objective requirements in Appendix A of this Part.			X	Tests may be conducted at centers of gravity typically required for airplane certification stall testing.
2.c.8.b.	Stall Warning (actuation of stall warning device.)	±3 kts. airspeed, ±2° bank for speeds greater than actuation of stall warning device or initial buffet.	Second Segment Climb, and Approach or Landing.	The stall maneuver must be entered with thrust at or near idle power and wings level (1g). Record the stall warning signal and initial buffet if applicable.  CCA: Test in Normal and Non-normal control states.	X	X		
2.c.9.a.	Phugoid Dynamics.	±10% of period.  ±10% of time to one half or double amplitude or ±0.02 of damping ratio.	Cruise.	Test must include three full cycles or that necessary to determine time to one half or double amplitude, whichever is less.  CCA: Test in non-normal control mode.		X	X	
2.c.9.b.	Phugoid Dynamics.	±10% period, Representative damping.	Cruise.	The test must include whichever is less of the following: Three full cycles (six overshoots after the input is completed), or the number of cycles sufficient to determine representative damping.	X			

				CCA: Test in non-normal control mode.				
2.c.10	Short Period Dynamics.	±1.5° pitch angle or ±2%/s pitch rate.  ±0.1 g normal acceleration	Cruise.	CCA: (Level 7 FTD) Test in normal and non-normal control mode.  (Level 6 FTD) Test in non-normal control mode.		X	X	
2.c.11.	(Reserved)							
2.d.	<b>Lateral Directional Tests.</b>							
	Power setting is that required for level flight unless otherwise specified.							
2.d.1.	Minimum control speed, air ( $V_{mca}$ ) or landing ( $V_{mcl}$ ), per applicable airworthiness requirement or low speed engine-inoperative handling characteristics in the air.	±3 kt airspeed.	Takeoff or Landing (whichever is most critical in the airplane).	Takeoff thrust must be set on the operating engine(s).  Time history or snapshot data may be used.  CCA: Test in normal or non-normal control state, as applicable.			X	Minimum speed may be defined by a performance or control limit which prevents demonstration of $V_{mca}$ or $V_{mcl}$ in the conventional manner.
2.d.2.	Roll Response (Rate).	±2%/s or ±10% of roll rate.  For airplanes with reversible flight control systems (Level 7 FTD only):  ±1.3 daN (3 lbf) or ±10% of wheel force.	Cruise, and Approach or Landing.	Test with normal roll control displacement (approximately one-third of maximum roll controller travel).  This test may be combined with step input of flight deck roll controller test 2.d.3.	X	X	X	
2.d.3.	Step input of flight deck roll controller.	±2° or ±10% of roll angle.	Approach or Landing.	This test may be combined with roll response (rate) test 2.d.2.  CCA: (Level 7 FTD) Test in normal and non-normal control mode.  (Level 6 FTD) Test in non-normal control mode.		X	X	With wings level, apply a step roll control input using approximately one-third of the roll controller travel. When reaching approximately 20° to 30° of bank, abruptly return the roll controller to neutral and allow approximately 10 seconds of airplane free response.
2.d.4.a.	Spiral Stability.	Correct trend and ±2° or ±10% of roll angle in 20 s.	Cruise, and Approach or Landing.	Airplane data averaged from multiple tests may be used.			X	

		If alternate test is used: correct trend and $\pm 2^\circ$ aileron angle.		Test for both directions. As an alternative test, show lateral control required to maintain a steady turn with a roll angle of approximately $30^\circ$ .  CCA: Test in non-normal control mode.				
2.d.4.b.	Spiral Stability.	Correct trend and $\pm 3^\circ$ or $\pm 10\%$ of roll angle in 20 s.	Cruise	Airplane data averaged from multiple tests may be used.  Test for both directions. As an alternative test, show lateral control required to maintain a steady turn with a roll angle of approximately $30^\circ$ .  CCA: Test in non-normal control mode.		X		
2.d.4.c.	Spiral Stability.	Correct trend	Cruise	Airplane data averaged from multiple tests may be used.  CCA: Test in non-normal control mode.	X			
2.d.5.	Engine Inoperative Trim.	$\pm 1^\circ$ rudder angle or $\pm 1^\circ$ tab angle or equivalent rudder pedal.  $\pm 2^\circ$ side-slip angle.	Second Segment Climb, and Approach or Landing.	This test may consist of snapshot tests.			X	Test should be performed in a manner similar to that for which a pilot is trained to trim an engine failure condition.  2nd segment climb test should be at takeoff thrust. Approach or landing test should be at thrust for level flight.
2.d.6.a.	Rudder Response.	$\pm 2^\circ/s$ or $\pm 10\%$ of yaw rate.	Approach or Landing.	For Level 7 FTD: Test with stability augmentation on and off.  Test with a step input at approximately 25% of full rudder pedal throw.  Not required if rudder input and response is shown in Dutch Roll test (test 2.d.7).  CCA: Test in normal and non-normal control mode		X	X	
2.d.6.b.	Rudder Response.	Roll rate $\pm 2^\circ/sec$ , bank angle $\pm 3^\circ$ .	Approach or Landing.	May be roll response to a given rudder deflection.	X			May be accomplished as a yaw response test, in which case the

				CCA: Test in Normal and Non-normal control states.				procedures and requirements of test 2.d.6.a. will apply.
2.d.7.	Dutch Roll	<p>±0.5 s or ±10% of period.</p> <p>±10% of time to one half or double amplitude or ±.02 of damping ratio.</p> <p>(Level 7 FTD only): ±1 s or ±20% of time difference between peaks of roll angle and side-slip angle.</p>	Cruise, and Approach or Landing.	<p>Test for at least six cycles with stability augmentation off.</p> <p>CCA: Test in non-normal control mode.</p>		X	X	
2.d.8.	Steady State Sideslip.	<p>For a given rudder position:</p> <p>±2° roll angle;</p> <p>±1° side-slip angle;</p> <p>±2° or ±10% of aileron angle; and</p> <p>±5° or ±10% of spoiler or equivalent roll controller position or force.</p> <p>For airplanes with reversible flight control systems (Level 7 FTD only):</p> <p>±1.3 daN (3 lbf) or ±10% of wheel force.</p> <p>±2.2 daN (5 lbf) or ±10% of rudder pedal force.</p>	Approach or Landing.	<p>This test may be a series of snapshot tests using at least two rudder positions (in each direction for propeller-driven airplanes), one of which must be near maximum allowable rudder.</p> <p>(Level 5 and Level 6 FTD only): Sideslip angle is matched only for repeatability and only on continuing qualification evaluations.</p>	X	X	X	

<b>2.e.</b>	<b>Landings.</b>							
<b>2.e.1.</b>	Normal Landing.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±3 m (10 ft) or ±10% of height.</p> <p>For airplanes with reversible flight control systems:</p> <p>±2.2 daN (5 lbf) or ±10% of column force.</p>	Landing.	<p>Test from a minimum of 61 m (200 ft) AGL to nosewheel touchdown.</p> <p><b>CCA:</b> Test in normal and non-normal control mode, if applicable.</p>			<b>X</b>	Two tests should be shown, including two normal landing flaps (if applicable) one of which should be near maximum certificated landing mass, the other at light or medium mass.
<b>2.e.2.</b>	Minimum Flap Landing.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±3 m (10 ft) or ±10% of height.</p> <p>For airplanes with reversible flight control systems:</p> <p>±2.2 daN (5 lbf) or ±10% of column force.</p>	Minimum Certified Landing Flap Configuration.	<p>Test from a minimum of 61 m (200 ft) AGL to nosewheel touchdown.</p> <p>Test at near maximum certificated landing weight.</p>			<b>X</b>	
<b>2.e.3.</b>	Crosswind Landing.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±3 m (10 ft) or ±10% of height.</p> <p>±2° roll angle.</p>	Landing.	<p>Test from a minimum of 61 m (200 ft) AGL to a 50% decrease in main landing gear touchdown speed.</p> <p>It requires test data, including wind profile, for a crosswind component of at least 60% of airplane performance data value measured at 10 m (33 ft) above the runway.</p> <p>Wind components must be provided as headwind</p>			<b>X</b>	In those situations where a maximum crosswind or a maximum demonstrated crosswind is not known, contact the NSPM.

		<p>±2° side-slip angle.</p> <p>±3° heading angle.</p> <p>For airplanes with reversible flight control systems:</p> <p>±2.2 daN (5 lbf) or ±10% of column force.</p> <p>±1.3 daN (3 lbf) or ±10% of wheel force.</p> <p>±2.2 daN (5 lbf) or ±10% of rudder pedal force.</p>		and crosswind values with respect to the runway.				
2.e.4.	One Engine Inoperative Landing.	<p>±3 kt airspeed.</p> <p>±1.5° pitch angle.</p> <p>±1.5° AOA.</p> <p>±3 m (10 ft) or ±10% of height.</p> <p>±2° roll angle.</p> <p>±2° side-slip angle.</p> <p>±3° heading angle.</p>	Landing.	Test from a minimum of 61 m (200 ft) AGL to a 50% decrease in main landing gear touchdown speed.			X	
2.e.5.	Autopilot landing (if applicable).	<p>±1.5 m (5 ft) flare height.</p> <p>±0.5 s or ± 10% of T<sub>f</sub>.</p> <p>±0.7 m/s (140 ft/min) rate of descent at touchdown.</p>	Landing.	<p>If autopilot provides roll-out guidance, record lateral deviation from touchdown to a 50% decrease in main landing gear touchdown speed.</p> <p>Time of autopilot flare mode engage and main gear touchdown must be noted.</p>			X	See Appendix F of this part for definition of T <sub>f</sub> .

		±3 m (10 ft) lateral deviation during roll-out.						
2.e.6.	All-engine autopilot go-around.	±3 kt airspeed. ±1.5° pitch angle. ±1.5° AOA.	As per airplane performance data.	Normal all-engine autopilot go-around must be demonstrated (if applicable) at medium weight.			X	
2.e.7.	One engine inoperative go around.	±3 kt airspeed. ±1.5° pitch angle. ±1.5° AOA. ±2° roll angle. ±2° side-slip angle.	As per airplane performance data.	Engine inoperative go-around required near maximum certificated landing weight with critical engine inoperative.  Provide one test with autopilot (if applicable) and one without autopilot.  CCA: Non-autopilot test to be conducted in non-normal mode.			X	
2.e.8.	Directional control (rudder effectiveness) with symmetric reverse thrust.	±5 kt airspeed. ±2°/s yaw rate.	Landing.	Apply rudder pedal input in both directions using full reverse thrust until reaching full thrust reverser minimum operating speed.			X	
2.e.9.	Directional control (rudder effectiveness) with asymmetric reverse thrust.	±5 kt airspeed. ±3° heading angle.	Landing.	With full reverse thrust on the operating engine(s), maintain heading with rudder pedal input until maximum rudder pedal input or thrust reverser minimum operation speed is reached.			X	
2.f.	<b>Ground Effect.</b>							
	Test to demonstrate Ground Effect.	±1° elevator angle. ±0.5° stabilizer angle. ±5% of net thrust or equivalent. ±1° AOA. ±1.5 m (5 ft) or ±10% of height. ±3 kt airspeed. ±1° pitch angle.	Landing.	A rationale must be provided with justification of results.  CCA: Test in normal or non-normal control mode, as applicable.			X	See paragraph on Ground Effect in this attachment for additional information.

2.g.	Reserved						
2.h.	Flight Maneuver and Envelope Protection Functions.						
	<i>Note. — The requirements of 2.h are only applicable to computer-controlled airplanes. Time history results of response to control inputs during entry into each envelope protection function (i.e. with normal and degraded control states if their function is different) are required. Set thrust as required to reach the envelope protection function.</i>						
2.h.1.	Overspeed.	±5 kt airspeed.	Cruise.			X	
2.h.2.	Minimum Speed.	±3 kt airspeed.	Takeoff, Cruise, and Approach or Landing.			X	
2.h.3.	Load Factor.	±0.1g normal load factor	Takeoff, Cruise.			X	
2.h.4.	Pitch Angle.	±1.5° pitch angle	Cruise, Approach.			X	
2.h.5.	Bank Angle.	±2° or ±10% bank angle	Approach.			X	
2.h.6.	Angle of Attack.	±1.5° angle of attack	Second Segment Climb, and Approach or Landing.			X	
<b>3. Reserved</b>							
<b>4. Visual System.</b>							
4.a.	Visual scene quality						
4.a.1.	Continuous cross-cockpit visual field of view.	Visual display providing each pilot with a minimum of 176° horizontal and 36° vertical continuous field of view.	Not applicable.	Required as part of MQTG but not required as part of continuing evaluations.		X	Field of view should be measured using a visual test pattern filling the entire visual scene (all channels) consisting of a matrix of black and white 5° squares.  Installed alignment should be confirmed in an SOC (this would generally consist of results from acceptance testing).
4.a.2.	System Geometry	Geometry of image should have no distracting discontinuities.				X	
4.a.3.	Surface resolution (object detection).	Not greater than 4 arc minutes.	Not applicable.			X	Resolution will be demonstrated by a test of objects shown to occupy the required visual angle in each visual display used on a scene from the pilot's eyepoint.  The object will subtend 4 arc minutes to the eye.  This may be demonstrated using threshold bars for a horizontal

								test. A vertical test should also be demonstrated. The subtended angles should be confirmed by calculations in an SOC.
<b>4.a.4</b>	Light point size.	Not greater than 8 arc minutes.	Not applicable.				<b>X</b>	Light point size should be measured using a test pattern consisting of a centrally located single row of white light points displayed as both a horizontal and vertical row.  It should be possible to move the light points relative to the eyepoint in all axes.  At a point where modulation is just discernible in each visual channel, a calculation should be made to determine the light spacing.  An SOC is required to state test method and calculation.
<b>4.a.5</b>	Raster surface contrast ratio.	Not less than 5:1.	Not applicable.				<b>X</b>	Surface contrast ratio should be measured using a raster drawn test pattern filling the entire visual scene (all channels).  The test pattern should consist of black and white squares, 5° per square, with a white square in the center of each channel.  Measurement should be made on the center bright square for each channel using a 1° spot photometer. This value should have a minimum brightness of 7 cd/m <sup>2</sup> (2 ft-lamberts). Measure any adjacent dark squares.

							<p>The contrast ratio is the bright square value divided by the dark square value.</p> <p><i>Note 1. — During contrast ratio testing, FTD aft-cab and flight deck ambient light levels should be as low as possible.</i></p> <p><i>Note 2. — Measurements should be taken at the center of squares to avoid light spill into the measurement device.</i></p>
4.a.6	Light point contrast ratio.	Not less than 10:1.	Not applicable.			X	<p>Light point contrast ratio should be measured using a test pattern demonstrating an area of greater than 1° area filled with white light points and should be compared to the adjacent background.</p> <p><i>Note. — Light point modulation should be just discernible on calligraphic systems but will not be discernable on raster systems.</i></p> <p>Measurements of the background should be taken such that the bright square is just out of the light meter FOV.</p> <p><i>Note. — During contrast ratio testing, FTD aft-cab and flight deck ambient light levels should be as low as practical.</i></p>
4.a.7	Light point brightness.	Not less than 20 cd/m <sup>2</sup> (5.8 ft-lamberts).	Not applicable.			X	<p>Light points should be displayed as a matrix creating a square.</p> <p>On calligraphic systems the light points should just merge.</p>

								On raster systems the light points should overlap such that the square is continuous (individual light points will not be visible).
<b>4.a.8</b>	Surface brightness.	Not less than 14 cd/m <sup>2</sup> (4.1 ft-lamberts) on the display.	Not applicable.					<b>X</b> Surface brightness should be measured on a white raster, measuring the brightness using the 1° spot photometer.  Light points are not acceptable.  Use of calligraphic capabilities to enhance raster brightness is acceptable.
<b>4.b</b>	<b>Head-Up Display (HUD)</b>							
<b>4.b.1</b>	Static Alignment.	Static alignment with displayed image.  HUD bore sight must align with the center of the displayed image spherical pattern.  Tolerance +/- 6 arc min.						<b>X</b> Alignment requirement only applies to the pilot flying.
<b>4.b.2</b>	System display.	All functionality in all flight modes must be demonstrated.						<b>X</b> A statement of the system capabilities should be provided and the capabilities demonstrated
<b>4.b.3</b>	HUD attitude versus FTD attitude indicator (pitch and roll of horizon).	Pitch and roll align with aircraft instruments.	Flight					<b>X</b> Alignment requirement only applies to the pilot flying.
<b>4.c</b>	<b>Enhanced Flight Vision System (EFVS)</b>							
<b>4.c.1</b>	Registration test.	Alignment between EFVS display and out of the window image must represent the alignment typical of the aircraft	Takeoff point and on approach at 200 ft.					<b>X</b> Alignment requirement only applies to the pilot flying.  <i>Note.— The effects of the alignment tolerance in 4.b.1</i>

		and system type.						<i>should be taken into account.</i>
4.c.2	EFVS RVR and visibility calibration.	The scene represents the EFVS view at 350 m (1,200 ft) and 1,609 m (1 sm) RVR including correct light intensity.	Flight					X Infra-red scene representative of both 350 m (1,200 ft), and 1,609 m (1 sm) RVR.  Visual scene may be removed.
4.c.3	Thermal crossover.	Demonstrate thermal crossover effects during day to night transition.	Day and night					X The scene will correctly represent the thermal characteristics of the scene during a day to night transition.
4.d	<b>Visual ground segment</b>							
4.d.1	Visual ground segment (VGS).	Near end: the correct number of approach lights within the computed VGS must be visible.  Far end: ±20% of the computed VGS.  The threshold lights computed to be visible must be visible in the FTD.	Trimmed in the landing configuration at 30 m (100 ft) wheel height above touchdown zone on glide slope at an RVR setting of 300 m (1,000 ft) or 350 m (1,200 ft).	This test is designed to assess items impacting the accuracy of the visual scene presented to a pilot at DH on an ILS approach. These items include:  1) RVR/Visibility;  2) glide slope (G/S) and localizer modeling accuracy (location and slope) for an ILS;  3) for a given weight, configuration and speed representative of a point within the airplane's operational envelope for a normal approach and landing; and  4) Radio altimeter.  <i>Note. — If non-homogeneous fog is used, the vertical variation in horizontal visibility should be described and included in the slant range visibility calculation used in the VGS computation.</i>				X Pre-position for this test is encouraged but may be achieved via manual or autopilot control to the desired position.
4.e	<b>Visual System Capacity</b>							
4.e.1	System capacity – Day mode.	Not less than: 10,000 visible textured surfaces, 6,000 light points, 16 moving models.	Not applicable					X Demonstrated through use of a visual scene rendered with the same image generator modes used to produce scenes for training.  The required surfaces, light points, and moving models

								should be displayed simultaneously.
<b>4.e.2</b>	System capacity – Twilight/night mode.	Not less than: 10,000 visible textured surfaces, 15,000 light points, 16 moving models.	Not applicable					<p><b>X</b></p> <p>Demonstrated through use of a visual scene rendered with the same image generator modes used to produce scenes for training.</p> <p>The required surfaces, light points, and moving models should be displayed simultaneously.</p>
<p><b>5. Sound System.</b>  The sponsor will not be required to repeat the operational sound tests (i.e., tests 5.a.1. through 5.a.8. (or 5.b.1. through 5.b.9.) and 5.c., as appropriate) during continuing qualification evaluations if frequency response and background noise test results are within tolerance when compared to the initial qualification evaluation results, and the sponsor shows that no software changes have occurred that will affect the FTD's sound system. If the frequency response test method is chosen and fails, the sponsor may elect to fix the frequency response problem and repeat the test or the sponsor may elect to repeat the operational sound tests. If the operational sound tests are repeated during continuing qualification evaluations, the results may be compared against initial qualification evaluation results. All tests in this section must be presented using an unweighted 1/3-octave band format from band 17 to 42 (50 Hz to 16 kHz). A minimum 20 second average must be taken at a common location from where the initial evaluation sound results were gathered.</p>								
<b>5.a.</b>	<b>Turbo-jet airplanes.</b>							<p>All tests in this section should be presented using an unweighted 1/3-octave band format from at least band 17 to 42 (50 Hz to 16 kHz).</p> <p>A measurement of minimum 20 s should be taken at the location corresponding to the approved data set.</p> <p>Refer to paragraph 7 of Appendix A, Attachment 2.</p>
<b>5.a.1.</b>	Ready for engine start.	<p>Initial evaluation: Subjective assessment of 1/3 octave bands.</p> <p>Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the</p>	Ground. The APU must be on if appropriate.			<b>X</b>	

		differences between initial and recurrent evaluation results cannot exceed 2 dB.						
<b>5.b.2</b>	All propellers feathered, if applicable.	Initial evaluation: Subjective assessment of 1/3 octave bands.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	Ground.	Normal condition prior to take-off.			<b>X</b>	
<b>5.b.3.</b>	Ground idle or equivalent.	Initial evaluation: Subjective assessment of 1/3 octave bands.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	Ground.	Normal condition prior to takeoff.			<b>X</b>	
<b>5.b.4</b>	Flight idle or equivalent.	Initial evaluation: Subjective assessment of 1/3 octave bands.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute	Ground.	Normal condition prior to takeoff.			<b>X</b>	

		differences between initial and recurrent evaluation results cannot exceed 2 dB.						
5.b.5	All engines at maximum allowable power with brakes set.	Initial evaluation: Subjective assessment of 1/3 octave bands.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	Ground.	Normal condition prior to takeoff.			X	
5.b.6	Climb.	Initial evaluation: Subjective assessment of 1/3 octave bands.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	En-route climb.	Medium altitude.			X	
5.b.7	Cruise	Initial evaluation: Subjective assessment of 1/3 octave bands.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute	Cruise.	Normal cruise configuration.			X	

		differences between initial and recurrent evaluation results cannot exceed 2 dB.						
<b>5.b.8</b>	Initial approach.	Initial evaluation: Subjective assessment of 1/3 octave bands.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	Approach.	Constant airspeed, gear up, flaps extended as appropriate, RPM as per operating manual.			<b>X</b>	
<b>5.b.9</b>	Final approach.	Initial evaluation: Subjective assessment of 1/3 octave bands.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.	Landing.	Constant airspeed, gear down, landing configuration flaps, RPM as per operating manual.			<b>X</b>	
<b>5.c.</b>	<b>Special cases.</b>	Initial evaluation: Subjective assessment of 1/3 octave bands.  Recurrent evaluation: cannot exceed $\pm 5$ dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute	As appropriate.				<b>X</b>	This applies to special steady-state cases identified as particularly significant to the pilot, important in training, or unique to a specific airplane type or model.

		differences between initial and recurrent evaluation results cannot exceed 2 dB.						
5.d	<b>FTD background noise</b>	Initial evaluation: background noise levels must fall below the sound levels described in Appendix A, Attachment 2, Paragraph 7.c (5).  Recurrent evaluation: ±3 dB per 1/3 octave band compared to initial evaluation.		Results of the background noise at initial qualification must be included in the QTG document and approved by the NSPM. The measurements are to be made with the simulation running, the sound muted and a dead cockpit.			<b>X</b>	The simulated sound will be evaluated to ensure that the background noise does not interfere with training.  Refer to paragraph 7 of this Appendix A, Attachment 2.  This test should be presented using an unweighted 1/3 octave band format from band 17 to 42 (50 Hz to 16 kHz).
5.e	<b>Frequency response</b>	Initial evaluation: not applicable.  Recurrent evaluation: cannot exceed ±5 dB difference on three consecutive bands when compared to initial evaluation and the average of the absolute differences between initial and recurrent evaluation results cannot exceed 2 dB.					<b>X</b>	Only required if the results are to be used during continuing qualification evaluations in lieu of airplane tests.  The results must be approved by the NSPM during the initial qualification.  This test should be presented using an unweighted 1/3 octave band format from band 17 to 42 (50 Hz to 16 kHz).
<b>6</b>	<b>SYSTEMS INTEGRATION</b>							
6.a.	<b>System response time</b>							
6.a.1	Transport delay.	Instrument response: 100 ms (or less) after airplane response.  Visual system response: 120 ms (or less) after airplane response.	Pitch, roll and yaw.				<b>X</b>	One separate test is required in each axis.  Where EFVS systems are installed, the EFVS response should be within + or - 30 ms from visual system response,

							and not before motion system response.  <i>Note.— The delay from the airplane EFVS electronic elements should be added to the 30 ms tolerance before comparison with visual system reference.</i>
<b>6.a.2</b>	Transport delay.	300 milliseconds or less after controller movement.	Pitch, roll and yaw.		<b>X</b>	<b>X</b>	If transport delay is the chosen method to demonstrate relative responses, the sponsor and the NSPM will use the latency values to ensure proper FTD response when reviewing those existing tests where latency can be identified (e.g., short period, roll response, rudder response).

\*

<b>1.</b>	<b>Performance.</b>	
<b>1.c</b>	<b>Climb.</b>	
<b>1.c.1.</b>	Normal climb with nominal gross weight, at best rate-of-climb airspeed.	Climb rate = 500 - 1200 fpm (2.5 - 6 m/sec).
<b>1.f.</b>	<b>Engines.</b>	
<b>1.f.1.</b>	Acceleration; idle to takeoff power.	2 - 4 Seconds.
<b>1.f.2.</b>	Deceleration; takeoff power to idle.	2 - 4 Seconds.
<b>2.</b>	<b>Handling Qualities.</b>	
<b>2.c.</b>	<b>Longitudinal Tests.</b>	
<b>2.c.1.</b>	Power change force.	
	(a) Trim for straight and level flight at 80% of normal cruise airspeed with necessary power. Reduce power to flight idle. Do not change trim or configuration. After stabilized, record column force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Push).
	<b>OR</b>	
	(b) Trim for straight and level flight at 80 percent of normal cruise airspeed with necessary power. Add power to maximum setting. Do not change trim or configuration. After stabilized, record column force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Pull).
<b>2.c.2.</b>	Flap/slat change force.	
	(a) Trim for straight and level flight with flaps fully retracted at a constant airspeed within the flaps-extended airspeed range. Do not adjust trim or power. Extend the flaps to 50 percent of full flap travel. After stabilized, record stick force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Push).
	<b>OR</b>	
	b) Trim for straight and level flight with flaps extended to 50% of full flap travel, at a constant airspeed within the flaps-extended airspeed range. Do not adjust trim or power. Retract the flaps to zero. After stabilized, record stick force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Pull).
<b>2.c.4.</b>	Gear change force.	

	(a) Trim for straight and level flight with landing gear retracted at a constant airspeed within the landing gear-extended airspeed range. Do not adjust trim or power. Extend the landing gear. After stabilized, record stick force necessary to maintain original airspeed.	2 - 12 lbs (0.88 - 5.3 daN) of force (Push).
	<b>OR</b>	
	(b) Trim for straight and level flight with landing gear extended, at a constant airspeed within the landing gear-extended airspeed range. Do not adjust trim or power. Retract the landing gear. After stabilized, record stick force necessary to maintain original airspeed.	2 - 12 lbs (0.88 - 5.3 daN) of force (Pull).
<b>2.c.5.</b>	Longitudinal trim.	Must be able to trim longitudinal stick force to “zero” in each of the following configurations: cruise; approach; and landing.
<b>2.c.7.</b>	Longitudinal static stability.	Must exhibit positive static stability.
<b>2.c.8.</b>	Stall warning (actuation of stall warning device) with nominal gross weight; wings level; and a deceleration rate of not more than three (3) knots per second.	
	a) Landing configuration.	40 - 60 knots; $\pm 5^\circ$ of bank.
	b) Clean configuration.	Landing configuration speed + 10 - 20%.
<b>2.c.9.b.</b>	Phugoid dynamics.	Must have a phugoid with a period of 30 - 60 seconds. May not reach $\frac{1}{2}$ or double amplitude in less than 2 cycles.
<b>2.d.</b>	<b>Lateral Directional Tests.</b>	
<b>2.d.2.</b>	Roll response (rate). Roll rate must be measured through at least 30 degree of roll. Aileron control must be deflected 1/3 (33.3 percent) of maximum travel.	Must have a roll rate of $4^\circ - 25^\circ/\text{second}$ .
<b>2.d.4.b.</b>	Spiral stability. Cruise configuration and normal cruise airspeed. Establish a 20 degree - 30 degree bank. When stabilized, neutralize the aileron control and release. Must be completed in both directions of turn.	Initial bank angle ( $\pm 5^\circ$ ) after 20 seconds.
<b>2.d.6.b.</b>	Rudder response. Use 25 percent of maximum rudder deflection. (Applicable to approach or landing configuration.)	$2^\circ - 6^\circ / \text{second}$ yaw rate.
<b>2.d.8.</b>	Steady state sideslip. Use 50 percent rudder deflection. (Applicable to approach and landing configurations.)	2 percent – 10 percent of bank; 4 percent - 10 percent of sideslip; and 2 percent -10 percent of aileron.

<b>6.</b>	FTD System Response Time.	
<b>6.a.</b>	Flight deck instrument systems response to an abrupt pilot controller input. One test is required in each axis (pitch, roll, yaw).	300 milliseconds or less.

<b>1.</b>	<b>Performance.</b>	
<b>1.c</b>	<b>Climb.</b>	
<b>1.c.1.</b>	Normal climb with nominal gross weight, at best rate-of-climb airspeed.	Climb airspeed = 95 – 115 knots. Climb rate = 500 – 1500 fpm (2.5 – 7.5 m/sec)
<b>1.f.</b>	<b>Engines.</b>	
<b>1.f.1.</b>	Acceleration; idle to takeoff power.	2 - 5 Seconds.
<b>1.f.2.</b>	Deceleration; takeoff power to idle.	2 - 5 Seconds.
<b>2.</b>	<b>Handling Qualities.</b>	
<b>2.c.</b>	<b>Longitudinal Tests.</b>	
<b>2.c.1.</b>	Power change force.	
	(a) Trim for straight and level flight at 80 percent of normal cruise airspeed with necessary power. Reduce power to flight idle. Do not change trim or configuration. After stabilized, record column force necessary to maintain original airspeed.	10 - 25 lbs (2.2 - 6.6 daN) of force (Push).
	<b>OR</b>	
	(b) Trim for straight and level flight at 80 percent of normal cruise airspeed with necessary power. Add power to maximum setting. Do not change trim or configuration. After stabilized, record column force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Pull).
<b>2.c.2.</b>	Flap/slat change force.	
	(a) Trim for straight and level flight with flaps fully retracted at a constant airspeed within the flaps-extended airspeed range. Do not adjust trim or power. Extend the flaps to 50 percent of full flap travel. After stabilized, record stick force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Push).
	<b>OR</b>

Retract the flaps to zero. After stabilized, record stick force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Pull).
<b>2.c.4.</b>	Gear change force.	

	(a) Trim for straight and level flight with landing gear retracted at a constant airspeed within the landing gear-extended airspeed range. Do not adjust trim or power. Extend the landing gear. After stabilized, record stick force necessary to maintain original airspeed.	2 - 12 lbs (0.88 - 5.3 daN) of force (Push).
	<b>OR</b>	
	(b) Trim for straight and level flight with landing gear extended, at a constant airspeed within the landing gear-extended airspeed range. Do not adjust trim or power. Retract the landing gear. After stabilized, record stick force necessary to maintain original airspeed.	2 - 12 lbs (0.88 - 5.3 daN) of force (Pull).
<b>2.c.5.</b>	Longitudinal trim.	Must be able to trim longitudinal stick force to “zero” in each of the following configurations: cruise; approach; and landing.
<b>2.c.7.</b>	Longitudinal static stability.	Must exhibit positive static stability.
<b>2.c.8.</b>	Stall warning (actuation of stall warning device) with nominal gross weight; wings level; and a deceleration rate of not more than three (3) knots per second.	
	(a) Landing configuration.	60 - 90 knots; ± 5 degree of bank.
	(b) Clean configuration.	Landing configuration speed + 10 - 20%.
<b>2.c.9.b.</b>	Phugoid dynamics.	Must have a phugoid with a period of 30 - 60 seconds. May not reach ½ or double amplitude in less than 2 cycles.
<b>2.d.</b>	<b>Lateral Directional Tests.</b>	
<b>2.d.2.</b>	Roll response. Roll rate must be measured through at least 30 degree of roll. Aileron control must be deflected 1/3 (33.3 percent) of maximum travel.	Must have a roll rate of 4- 25 degree /second.
<b>2.d.4.b.</b>	Spiral stability. Cruise configuration and normal cruise airspeed. Establish a 20 degree – 30 degree bank. When stabilized, neutralize the aileron control and release. Must be completed in both directions of turn.	Initial bank angle (± 5 degree) after 20 seconds.
<b>2.d.6.b.</b>	Rudder response. Use 25 percent of maximum rudder deflection. (Applicable to approach or landing configuration.)	3 - 6 degree /second yaw rate.
<b>2.d.8.</b>	Steady state sideslip.	2 - 10 degree of bank; 4 - 10 degrees of sideslip; and

	Use 50 percent rudder deflection. (Applicable to approach and landing configurations.)	2 - 10 degree of aileron.
<b>6.</b>	<b>FTD System Response Time.</b>	
<b>6.a.</b>	Flight deck instrument systems response to an abrupt pilot controller input. One test is required in each axis (pitch, roll, yaw).	300 milliseconds or less.

<b>1.</b>	<b>Performance.</b>	
<b>1.c</b>	<b>Climb.</b>	
<b>1.c.1.</b>	Normal climb with nominal gross weight, at best rate-of-climb airspeed.	Climb airspeed = 95 – 115 knots. Climb rate = 800 – 1800 fpm (4 - 9 m/sec)
<b>1.f.</b>	<b>Engines.</b>	
<b>1.f.1.</b>	Acceleration; idle to takeoff power.	4 - 8 Seconds.
<b>1.f.2.</b>	Deceleration; takeoff power to idle.	3 - 7 Seconds.
<b>2.</b>	<b>Handling Qualities.</b>	
<b>2.c.</b>	<b>Longitudinal Tests.</b>	
<b>2.c.1.</b>	Power change force.	
	a) Trim for straight and level flight at 80 percent of normal cruise airspeed with necessary power. Reduce power to flight idle. Do not change trim or configuration. After stabilized, record column force necessary to maintain original airspeed.	8 lbs (3.5 daN) of Push force – 8 lbs (3.5 daN) of Pull force.
	OR	
	b) Trim for straight and level flight at 80 percent of normal cruise airspeed with necessary power. Add power to maximum setting. Do not change trim or configuration. After stabilized, record column force necessary to maintain original airspeed.	12 - 22 lbs (5.3 – 9.7 daN) of force (Pull).
<b>2.c.2.</b>	Flap/slat change force.	
	a) Trim for straight and level flight with flaps fully retracted at a constant airspeed within the flaps-extended airspeed range. Do not adjust trim or power. Extend the flaps to 50 percent of full flap travel. After stabilized, record stick force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Push).
	OR

	a) Trim for straight and level flight with flaps fully retracted at a constant airspeed within the flaps-extended airspeed range. Do not adjust trim or power. Extend the flaps to 50 percent of full flap travel. After stabilized, record stick force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Push).
	<b>OR</b>	
	b) Trim for straight and level flight with flaps extended to 50 percent of full flap travel, at a constant airspeed within the flaps-extended airspeed range. Do not adjust trim or power. Retract the flaps to zero. After stabilized, record stick force necessary to maintain original airspeed.	5 - 15 lbs (2.2 - 6.6 daN) of force (Pull).
<b>2.c.4.</b>	Gear change force.	

	a) Trim for straight and level flight with landing gear retracted at a constant airspeed within the landing gear-extended airspeed range. Do not adjust trim or power. Extend the landing gear. After stabilized, record stick force necessary to maintain original airspeed.	2 - 12 lbs (0.88 - 5.3 daN) of force (Push).
	<b>OR</b>	
	b) Trim for straight and level flight with landing gear extended, at a constant airspeed within the landing gear-extended airspeed range. Do not adjust trim or power. Retract the landing gear. After stabilized, record stick force necessary to maintain original airspeed.	2 - 12 lbs (0.88 - 5.3 daN) of force (Pull).
<b>2.c.5.</b>	Longitudinal trim.	Must be able to trim longitudinal stick force to “zero” in each of the following configurations: cruise; approach; and landing.
<b>2.c.7.</b>	Longitudinal static stability.	Must exhibit positive static stability.
<b>2.c.8.</b>	Stall warning (actuation of stall warning device) with nominal gross weight; wings level; and a deceleration rate of not more than three (3) knots per second.	
	a) Landing configuration.	80 - 100 knots; $\pm 5^\circ$ of bank.
	b) Clean configuration.	Landing configuration speed + 10 - 20 percent.
<b>2.c.9.b.</b>	Phugoid dynamics.	Must have a phugoid with a period of 30 - 60 seconds. May not reach $\frac{1}{2}$ or double amplitude in less than 2 cycles.
<b>2.d.</b>	<b>Lateral Directional Tests.</b>	
<b>2.d.2.</b>	Roll response. Roll rate must be measured through at least 30 degree of roll. Aileron control must be deflected 1/3 (33.3 percent) of maximum travel.	Must have a roll rate of 4 - 25 degree /second.
<b>2.d.4.b.</b>	Spiral stability. Cruise configuration and normal cruise airspeed. Establish a 20 - 30 degree bank. When stabilized, neutralize the aileron control and release. Must be completed in both directions of turn.	Initial bank angle ( $\pm 5^\circ$ ) after 20 seconds.
<b>2.d.6.b.</b>	Rudder response. Use 25 percent of maximum rudder deflection. (Applicable to approach or landing configuration.)	3 - 6 degree /second yaw rate.
<b>2.d.8.</b>	Steady state sideslip. Use 50 percent rudder deflection.	2 - 10 degree of bank; 4 - 10 degree of sideslip; and

	(Applicable to approach and landing configurations.)	2 -10 degree of aileron.
<b>6.</b>	<b>FTD System Response Time.</b>	
<b>6.a.</b>	Flight deck instrument systems response to an abrupt pilot controller input. One test is required in each axis (pitch, roll, yaw).	300 milliseconds or less.

\* \* \* \* \*

■ 16. Amend Attachment 3 to Appendix B by adding Tables B3D, B3E, B3F, and B3G to read as follows:

**Appendix B to Part 60—Qualification Performance Standards for Airplane Flight Training Devices**

\* \* \* \* \*

**Attachment 3 to Appendix B to Part 60—Flight Training Device (FTD) Subjective Evaluation**

\* \* \* \* \*

**BILLING CODE 4910-13-P**

	Tasks in this table are subject to evaluation if appropriate for the airplane simulated as indicated in the SOQ Configuration List or the level of FTD qualification involved. Items not installed or not functional on the FTD and, therefore, not appearing on the SOQ Configuration List, are not required to be listed as exceptions on the SOQ.
<b>1.</b>	<b>Preparation For Flight</b>
<b>1.a.</b>	<b>Pre-flight.</b> Accomplish a functions check of all switches, indicators, systems, and equipment at all crew members' and instructors' stations and determine that:
<b>1.a.1</b>	The flight deck design and functions are identical to that of the airplane simulated.
<b>2.</b>	<b>Surface Operations (pre-flight).</b>
<b>2.a.</b>	<b>Engine Start.</b>
<b>2.a.1.</b>	Normal start.
<b>2.a.2.</b>	Alternate start procedures.
<b>2.a.3.</b>	Abnormal starts and shutdowns (e.g., hot/hung start, tail pipe fire).
<b>2.b.</b>	<b>Taxi.</b>
<b>2.b.1</b>	Pushback/powerback
<b>2.b.2.</b>	Thrust response.
<b>2.b.3.</b>	Power lever friction.
<b>2.b.4.</b>	Ground handling.
<b>2.b.5.</b>	Reserved
<b>2.b.6.</b>	Taxi aids (e.g. taxi camera, moving map)
<b>2.b.7.</b>	Low visibility (taxi route, signage, lighting, markings, etc.)
<b>2.c.</b>	<b>Brake Operation</b>
<b>2.c.1.</b>	Brake operation (normal and alternate/emergency).
<b>2.c.2.</b>	Brake fade (if applicable).
<b>3.</b>	<b>Take-off.</b>
<b>3.a.</b>	<b>Normal.</b>
<b>3.a.1.</b>	Airplane/engine parameter relationships, including run-up.
<b>3.a.2.</b>	Nosewheel and rudder steering.
<b>3.a.3.</b>	Crosswind (maximum demonstrated and gusting crosswind).
<b>3.a.4.</b>	Special performance
<b>3.a.4.a</b>	Reduced $V_1$
<b>3.a.4.b</b>	Maximum engine de-rate.
<b>3.a.4.c</b>	Soft surface.
<b>3.a.4.d</b>	Short field/short take-off and landing (STOL) operations.
<b>3.a.4.e</b>	Obstacle (performance over visual obstacle).
<b>3.a.5.</b>	Low visibility take-off.
<b>3.a.6.</b>	Landing gear, wing flap leading edge device operation.
<b>3.a.7.</b>	Contaminated runway operation.
<b>3.b.</b>	<b>Abnormal/emergency.</b>
<b>3.b.1.</b>	Rejected Take-off.
<b>3.b.2.</b>	Rejected special performance (e.g., reduced $V_1$ , max de-rate, short field operations).
<b>3.b.3.</b>	Rejected take-off with contaminated runway.

<b>3.b.4.</b>	Takeoff with a propulsion system malfunction (allowing an analysis of causes, symptoms, recognition, and the effects on aircraft performance and handling) at the following points: . (iii) Prior to V1 decision speed. (iv) Between V1 and Vr (rotation speed). (iii) Between Vr and 500 feet above ground level.
<b>3.b.5.</b>	Flight control system failures, reconfiguration modes, manual reversion and associated handling.
<b>4.</b>	<b>Climb.</b>
<b>4.a.</b>	Normal.
<b>4.b.</b>	One or more engines inoperative.
<b>4.c.</b>	Approach climb in icing (for airplanes with icing accountability).
<b>5.</b>	<b>Cruise.</b>
<b>5.a.</b>	<b>Performance characteristics (speed vs. power, configuration, and attitude)</b>
<b>5.a.1.</b>	Straight and level flight.
<b>5.a.2.</b>	Change of airspeed.
<b>5.a.3.</b>	High altitude handling.
<b>5.a.4.</b>	High Mach number handling (Mach tuck, Mach buffet) and recovery (trim change).
<b>5.a.5.</b>	Overspeed warning (in excess of $V_{mo}$ or $M_{mo}$ ).
<b>5.a.6.</b>	High IAS handling.
<b>5.b.</b>	<b>Maneuvers.</b>
<b>5.b.1.</b>	High Angle of Attack
<b>5.b.1.a</b>	High angle of attack, approach to stalls, stall warning, and stall buffet (take-off, cruise, approach, and landing configuration) including reaction of the autoflight system and stall protection system.
<b>5.b.1.b</b>	Reserved
<b>5.b.2.</b>	Slow flight
<b>5.b.3.</b>	Reserved
<b>5.b.4.</b>	Flight envelope protection (high angle of attack, bank limit, overspeed, etc.).
<b>5.b.5.</b>	Turns with/without speedbrake/spoilers deployed.
<b>5.b.6.</b>	Normal and standard rate turns.
<b>5.b.7.</b>	Steep turns
<b>5.b.8.</b>	Performance turn
<b>5.b.9.</b>	In flight engine shutdown and restart (assisted and windmill).
<b>5.b.10.</b>	Maneuvering with one or more engines inoperative, as appropriate.
<b>5.b.11.</b>	Specific flight characteristics (e.g., direct lift control).
<b>5.b.12.</b>	Flight control system failures, reconfiguration modes, manual reversion and associated handling.
<b>5.b.13</b>	Gliding to a forced landing.
<b>5.b.14</b>	Visual resolution and FSTD handling and performance for the following (where applicable by aircraft type and training program):
<b>5.b.14.a</b>	Terrain accuracy for forced landing area selection.
<b>5.b.14.b</b>	Terrain accuracy for VFR Navigation.
<b>5.b.14.c</b>	Eights on pylons (visual resolution).
<b>5.b.14.d</b>	Turns about a point.
<b>5.b.14.e</b>	S-turns about a road or section line.
<b>6.</b>	<b>Descent.</b>
<b>6.a.</b>	Normal.

<b>6.b.</b>	Maximum rate/emergency (clean and with speedbrake, etc.).
<b>6.c.</b>	With autopilot.
<b>6.d.</b>	Flight control system failures, reconfiguration modes, manual reversion and associated handling.
<b>7.</b>	<b>Instrument Approaches And Landing.</b> Those instrument approach and landing tests relevant to the simulated airplane type are selected from the following list. Some tests are made with limiting wind velocities, under windshear conditions, and with relevant system failures, including the failure of the Flight Director. If Standard Operating Procedures allow use autopilot for non-precision approaches, evaluation of the autopilot will be included.
<b>7.a.</b>	<b>Precision approach</b>
<b>7.a.1</b>	CAT I published approaches.
<b>7.a.1.a</b>	Manual approach with/without flight director including landing.
<b>7.a.1.b</b>	Autopilot/autothrottle coupled approach and manual landing.
<b>7.a.1.c</b>	Autopilot/autothrottle coupled approach, engine(s) inoperative.
<b>7.a.1.d</b>	Manual approach, engine(s) inoperative.
<b>7.a.1.e</b>	HUD/EFVS
<b>7.a.2</b>	CAT II published approaches.
<b>7.a.2.a</b>	Autopilot/autothrottle coupled approach to DH and landing (manual and autoland).
<b>7.a.2.b</b>	Autopilot/autothrottle coupled approach with one-engine-inoperative approach to DH and go-around (manual and autopilot).
<b>7.a.2.c</b>	HUD/EFVS
<b>7.a.3</b>	CAT III published approaches.
<b>7.a.3.a</b>	Autopilot/autothrottle coupled approach to landing and roll-out (if applicable) guidance (manual and autoland).
<b>7.a.3.b</b>	Autopilot/autothrottle coupled approach to DH and go-around (manual and autopilot).
<b>7.a.3.c</b>	Autopilot/autothrottle coupled approach to land and roll-out (if applicable) guidance with one engine inoperative (manual and autoland).
<b>7.a.3.d</b>	Autopilot/autothrottle coupled approach to DH and go-around with one engine inoperative (manual and autopilot).
<b>7.a.3.e</b>	HUD/EFVS
<b>7.a.4</b>	Autopilot/autothrottle coupled approach (to a landing or to a go-around):
<b>7.a.4.a</b>	With generator failure.
<b>7.a.4.b.1</b>	With maximum tail wind component certified or authorized.
<b>7.a.4.b.2</b>	Reserved
<b>7.a.4.c.1</b>	With maximum crosswind component demonstrated or authorized.
<b>7.a.4.c.2</b>	Reserved
<b>7.a.5</b>	PAR approach, all engine(s) operating and with one or more engine(s) inoperative.
<b>7.a.6</b>	MLS, GBAS, all engine(s) operating and with one or more engine(s) inoperative.
<b>7.b.</b>	<b>Non-precision approach.</b>
<b>7.b.1</b>	Surveillance radar approach, all engine(s) operating and with one or more engine(s) inoperative.
<b>7.b.2</b>	NDB approach, all engine(s) operating and with one or more engine(s) inoperative.

7.b.3	VOR, VOR/DME, TACAN approach, all engine(s) operating and with one or more engine(s) inoperative.
7.b.4	RNAV / RNP / GNSS (RNP at nominal and minimum authorized temperatures) approach, all engine(s) operating and with one or more engine(s) inoperative.
7.b.5	ILS LLZ (LOC), LLZ back course (or LOC-BC) approach, all engine(s) operating and with one or more engine(s) inoperative.
7.b.6	ILS offset localizer approach, all engine(s) operating and with one or more engine(s) inoperative.
7.c	<b>Approach procedures with vertical guidance (APV), e.g. SBAS, flight path vector.</b>
7.c.1	APV/baro-VNAV approach, all engine(s) operating and with one or more engine(s) inoperative.
7.c.2	Area navigation (RNAV) approach procedures based on SBAS, all engine(s) operating and with one or more engine(s) inoperative.
8.	<b>Visual Approaches (Visual Segment) And Landings.</b>  Flight simulators with visual systems, which permit completing a special approach procedure in accordance with applicable regulations, may be approved for that particular approach procedure.
8.a.	Maneuvering, normal approach and landing, all engines operating with and without visual approach aid guidance.
8.b.	Approach and landing with one or more engines inoperative.
8.c.	Operation of landing gear, flap/slats and speedbrakes (normal and abnormal).
8.d.	Approach and landing with crosswind (max. demonstrated and gusting crosswind).
8.e.	Approach and landing with flight control system failures, reconfiguration modes, manual reversion and associated handling (most significant degradation which is probable).
8.e.1.	Approach and landing with trim malfunctions.
8.e.1.a	Longitudinal trim malfunction.
8.e.1.b	Lateral-directional trim malfunction.
8.f.	Approach and landing with standby (minimum) electrical/hydraulic power.
8.g.	Approach and landing from circling conditions (circling approach).
8.h.	Approach and landing from visual traffic pattern.
8.i.	Approach and landing from non-precision approach.
8.j.	Approach and landing from precision approach.
9.	<b>Missed Approach.</b>
9.a.	All engines, manual and autopilot.
9.b.	Engine(s) inoperative, manual and autopilot.
9.c.	Rejected landing
9.d.	With flight control system failures, reconfiguration modes, manual reversion and associated handling.
9.e.	Reserved
10.	<b>Surface Operations (landing, after-landing and post-flight).</b>
10.a	<b>Landing roll and taxi.</b>
10.a.1	HUD/EFVS.
10.a.2.	Spoiler operation.
10.a.3.	Reverse thrust operation.
10.a.4.	Directional control and ground handling, both with and without reverse thrust.

10.a.5.	Reduction of rudder effectiveness with increased reverse thrust (rear pod-mounted engines).
10.a.6.	Brake and anti-skid operation
10.a.6.a	Brake and anti-skid operation with dry, patchy wet, wet on rubber residue, and patchy icy conditions.
10.a.6.b	Reserved
10.a.6.c	Reserved
10.a.6.d	Auto-braking system operation.
10.b	<b>Engine shutdown and parking.</b>
10.b.1	Engine and systems operation.
10.b.2	Parking brake operation.
11.	<b>Any Flight Phase.</b>
11.a.	<b>Airplane and engine systems operation (where fitted).</b>
11.a.1.	Air conditioning and pressurization (ECS).
11.a.2.	De-icing/anti-icing.
11.a.3.	Auxiliary power unit (APU).
11.a.4.	Communications.
11.a.5.	Electrical.
11.a.6.	Fire and smoke detection and suppression.
11.a.7.	Flight controls (primary and secondary).
11.a.8.	Fuel and oil
11.a.9.	Hydraulic
11.a.10.	Pneumatic
11.a.11.	Landing gear.
11.a.12.	Oxygen.
11.a.13.	Engine.
11.a.14.	Airborne radar.
11.a.15.	Autopilot and Flight Director.
11.a.16.	Terrain awareness warning systems and collision avoidance systems (e.g. EGPWS, GPWS, TCAS).
11.a.17.	Flight control computers including stability and control augmentation.
11.a.18.	Flight display systems.
11.a.19.	Flight management computers.
11.a.20.	Head-up displays (including EFVS, if appropriate).
11.a.21.	Navigation systems
11.a.22.	Stall warning/avoidance
11.a.23.	Wind shear avoidance/recovery guidance equipment
11.a.24.	Flight envelope protections
11.a.25.	Electronic flight bag
11.a.26.	Automatic checklists (normal, abnormal and emergency procedures).
11.a.27.	Runway alerting and advisory system.
11.b.	<b>Airborne procedures.</b>
11.b.1.	Holding.
11.b.2.	Air hazard avoidance (traffic, weather, including visual correlation).
11.b.3.	Windshear.
11.b.3.a	Prior to take-off rotation.
11.b.3.b	At lift-off
11.b.3.c	During initial climb.
11.b.3.d	On final approach, below 150 m (500 ft) AGL.

11.b.4.	Reserved

This table specifies the minimum airport model content and functionality to qualify a simulator at the indicated level. This table applies only to the airport models required for FTD qualification.	
<b>Begin QPS Requirements</b>	
<b>1.</b>	<b>Reserved</b>
<b>2.a.</b>	<b>Functional test content requirements</b>
<b>2.a.1</b>	<b>Airport scenes</b>
<b>2.a.1.a</b>	A minimum of three (3) real-world airport models to be consistent with published data used for airplane operations and capable of demonstrating all the visual system features below. Each model should be in a different visual scene to permit assessment of FSTD automatic visual scene changes. The model identifications must be acceptable to the sponsor's TPAA, selectable from the IOS, and listed on the SOQ.
<b>2.a.1.b</b>	Reserved
<b>2.a.1.c</b>	Reserved
<b>2.a.1.d</b>	<b>Airport model content.</b> For circling approaches, all tests apply to the runway used for the initial approach and to the runway of intended landing. If all runways in an airport model used to meet the requirements of this attachment are not designated as "in use," then the "in use" runways must be listed on the SOQ (e.g., KORD, Rwys 9R, 14L, 22R). Models of airports with more than one runway must have all significant runways not "in-use" visually depicted for airport and runway recognition purposes. The use of white or off white light strings that identify the runway threshold, edges, and ends for twilight and night scenes are acceptable for this requirement. Rectangular surface depictions are acceptable for daylight scenes. A visual system's capabilities must be balanced between providing airport models with an accurate representation of the airport and a realistic representation of the surrounding environment. Airport model detail must be developed using airport pictures, construction drawings and maps, or other similar data, or developed in accordance with published regulatory material; however, this does not require that such models contain details that are beyond the design capability of the currently qualified visual system. Only one "primary" taxi route from parking to the runway end will be required for each "in-use" runway.
<b>2.a.2</b>	<b>Visual scene fidelity.</b>
<b>2.a.2.a</b>	The visual scene must correctly represent the parts of the airport and its surroundings used in the training program.
<b>2.a.2.b</b>	Reserved
<b>2.a.2.c</b>	Reserved
<b>2.a.3</b>	<b>Runways and taxiways.</b>
<b>2.a.3.a</b>	Reserved
<b>2.a.3.b</b>	Representative runways and taxiways.
<b>2.a.3.c</b>	Reserved
<b>2.a.4</b>	Reserved
<b>2.a.5</b>	Runway threshold elevations and locations must be modeled to provide correlation with airplane systems (e.g. HUD, GPS, compass, altimeter).
<b>2.a.6</b>	Reserved
<b>2.a.7</b>	<b>Runway surface and markings for each "in-use" runway must include the following, if appropriate:</b>
<b>2.a.7.a</b>	Threshold markings.
<b>2.a.7.b</b>	Runway numbers.
<b>2.a.7.c</b>	Touchdown zone markings.
<b>2.a.7.d</b>	Fixed distance markings.

2.a.7.e	Edge markings.
2.a.7.f	Center line markings.
2.a.7.g	Reserved
2.a.7.h	Reserved
2.a.7.i	Windsock that gives appropriate wind cues.
2.a.8	<b>Runway lighting of appropriate colors, directionality, behavior and spacing for the “in-use” runway including the following:</b>
2.a.8.a	Threshold lights.
2.a.8.b	Edge lights.
2.a.8.c	End lights.
2.a.8.d	Center line lights.
2.a.8.e	Touchdown zone lights.
2.a.8.f	Lead-off lights.
2.a.8.g	Appropriate visual landing aid(s) for that runway.
2.a.8.h	Appropriate approach lighting system for that runway.
2.a.9	<b>Taxiway surface and markings (associated with each “in-use” runway):</b>
2.a.9.a	Edge markings
2.a.9.b	Center line markings.
2.a.9.c	Runway holding position markings.
2.a.9.d	ILS critical area markings.
2.a.9.e	Reserved
2.a.10	<b>Taxiway lighting of appropriate colors, directionality, behavior and spacing (associated with each “in-use” runway):</b>
2.a.10.a	Edge lights.
2.a.10.b	Center line lights.
2.a.10.c	Runway holding position and ILS critical area lights.
2.a.11	<b>Required visual model correlation with other aspects of the airport environment simulation.</b>
2.a.11.a	The airport model must be properly aligned with the navigational aids that are associated with operations at the runway “in-use”.
2.a.11.b	Reserved
2.a.12	<b>Airport buildings, structures and lighting.</b>
2.a.12.a	Buildings, structures and lighting:
2.a.12.a.1	Reserved
2.a.12.a.2	Representative airport buildings, structures and lighting.
2.a.12.a.3	Reserved
2.a.12.b	Reserved
2.a.12.c	Representative moving and static airport clutter (e.g. other airplanes, power carts, tugs, fuel trucks, additional gates).
2.a.12.d	Reserved
2.a.13	<b>Terrain and obstacles.</b>
2.a.13.a	Reserved
2.a.13.b	Representative depiction of terrain and obstacles within 46 km (25 NM) of the reference airport.
2.a.14	<b>Significant, identifiable natural and cultural features.</b>
2.a.14.a	Reserved
2.a.14.b	Representative depiction of significant and identifiable natural and cultural features within 46 km (25 NM) of the reference airport. <i>Note.— This refers to natural and cultural features that are typically used for pilot orientation</i>

	<i>in flight. Outlying airports not intended for landing need only provide a reasonable facsimile of runway orientation.</i>
<b>2.a.14.c</b>	Representative moving airborne traffic (including the capability to present air hazards – e.g. airborne traffic on a possible collision course).
<b>2.b</b>	<b>Visual scene management.</b>
<b>2.b.1</b>	Reserved
<b>2.b.2</b>	Airport runway, approach and taxiway lighting and cultural lighting intensity for any approach should be set at an intensity representative of that used in training for the visibility set; all visual scene light points must fade into view appropriately.
<b>2.b.3</b>	Reserved
<b>2.c</b>	<b>Visual feature recognition.</b> <i>Note.— The following are the minimum distances at which runway features should be visible. Distances are measured from runway threshold to an airplane aligned with the runway on an extended 3-degree glide slope in suitable simulated meteorological conditions. For circling approaches, all tests below apply both to the runway used for the initial approach and to the runway of intended landing.</i>
<b>2.c.1</b>	Runway definition, strobe lights, approach lights, and runway edge white lights from 8 km (5 sm) of the runway threshold.
<b>2.c.2</b>	<b>Visual approach aids lights.</b>
<b>2.c.2.a</b>	Reserved
<b>2.c.2.b</b>	Visual approach aids lights from 4.8 km (3 sm) of the runway threshold.
<b>2.c.3</b>	Runway center line lights and taxiway definition from 4.8 km (3 sm).
<b>2.c.4</b>	Threshold lights and touchdown zone lights from 3.2 km (2 sm).
<b>2.c.5</b>	Reserved
<b>2.c.6</b>	For circling approaches, the runway of intended landing and associated lighting must fade into view in a non-distracting manner.
<b>2.d</b>	<b>Selectable airport visual scene capability for:</b>
<b>2.d.1</b>	Night.
<b>2.d.2</b>	Twilight.
<b>2.d.3</b>	Day.
<b>2.d.4</b>	Dynamic effects — the capability to present multiple ground and air hazards such as another airplane crossing the active runway or converging airborne traffic; hazards must be selectable via controls at the instructor station.
<b>2.d.5</b>	Reserved
<b>2.e</b>	<b>Correlation with airplane and associated equipment.</b>
<b>2.e.1</b>	Visual cues to relate to actual airplane responses.
<b>2.e.2</b>	<b>Visual cues during take-off, approach and landing.</b>
<b>2.e.2.a</b>	Visual cues to assess sink rate and depth perception during landings.
<b>2.e.2.b</b>	Reserved
<b>2.e.3</b>	Accurate portrayal of environment relating to airplane attitudes.
<b>2.e.4</b>	The visual scene must correlate with integrated airplane systems, where fitted (e.g. terrain, traffic and weather avoidance systems and HUD/EFVS).
<b>2.e.5</b>	Reserved
<b>2.f</b>	<b>Scene quality.</b>
<b>2.f.1</b>	<b>Quantization.</b>
<b>2.f.1.a</b>	Surfaces and textural cues must be free from apparent quantization (aliasing).
<b>2.f.1.b</b>	Reserved
<b>2.f.2</b>	System capable of portraying full color realistic textural cues.
<b>2.f.3</b>	The system light points must be free from distracting jitter, smearing or streaking.

2.f.4	Reserved
2.f.5	System capable of providing light point perspective growth (e.g. relative size of runway and taxiway edge lights increase as the lights are approached).
2.g	<b>Environmental effects.</b>
2.g.1	Reserved
2.g.2	Reserved
2.g.3	Reserved
2.g.4	Reserved
2.g.5	Reserved
2.g.6	Reserved
2.g.7	Visibility and RVR measured in terms of distance. Visibility/RVR must be checked at and below a height of 600 m (2 000 ft) above the airport and within a radius of 16 km (10 sm) from the airport.
2.g.8	Reserved
2.g.9	Reserved
2.g.10	Reserved
2.g.11	Reserved
<b>End QPS Requirement</b>	
<b>Begin Information</b>	
3.	<p>An example of being able to “combine two airport models to achieve two “in-use” runways:</p> <p>One runway designated as the “in use” runway in the first model of the airport, and the second runway designated as the “in use” runway in the second model of the same airport. For example, the clearance is for the ILS approach to Runway 27, Circle to Land on Runway 18 right. Two airport visual models might be used: the first with Runway 27 designated as the “in use” runway for the approach to runway 27, and the second with Runway 18 Right designated as the “in use” runway. When the pilot breaks off the ILS approach to runway 27, the instructor may change to the second airport visual model in which runway 18 Right is designated as the “in use” runway, and the pilot would make a visual approach and landing. This process is acceptable to the FAA as long as the temporary interruption due to the visual model change is not distracting to the pilot, does not cause changes in navigational radio frequencies, and does not cause undue instructor/evaluator time.</p>
4.	<p>Sponsors are not required to provide every detail of a runway, but the detail that is provided should be correct within the capabilities of the system.</p> <p style="text-align: center;"><b>End Information</b></p>

The following checks are performed during a normal flight profile.	
1.	Precipitation.
2.	Reserved
3.	Significant airplane noises perceptible to the pilot during normal operations.
4.	Abnormal operations for which there are associated sound cues including, engine malfunctions, landing gear/tire malfunctions, tail and engine pod strike and pressurization malfunction.
5.	Sound of a crash when the flight simulator is landed in excess of limitations.

**I. Executive Summary**

This final rule addresses the application to Medicaid and the Children’s Health Insurance Program (CHIP) of certain mental health parity requirements added to the Public Health Service Act (PHS Act) by the Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) (Pub. L. 110–343, enacted on October 3, 2008). Specifically, this final rule addresses the application of MHPAEA parity requirements to: (1) Medicaid managed care organizations (MCOs) as described in section 1903(m) of the Social Security Act (the Act); (2) Medicaid benchmark and benchmark-equivalent plans (referred to in this rule as Medicaid Alternative Benefit Plans (ABPs)) as described in section 1937 of the Act; and (3) Children’s Health Insurance Program (CHIP) under title XXI of the Act.

Under section 1932(b)(8) of the Act, Medicaid MCOs are required to comply with the requirements of subpart 2 of part A of title XXVII of the PHS Act, to the same extent that those requirements apply to a health insurance issuer that offers group health insurance. Subpart 2 includes mental health parity requirements added by MHPAEA that are now found at section 2726 of the PHS Act (as renumbered; formerly section 2705 of the PHS Act).

Under section 1937(b)(6) of the Act, Medicaid ABPs that are not offered by an MCO and that provide both medical and surgical benefits and mental health or substance use disorder (MH/SUD) benefits are required to ensure that financial requirements and treatment limitations for such benefits comply with the mental health parity requirements of the PHS Act (renumbered section 2726(a) of the PHS Act), in the same manner as such requirements apply to a group health plan. The section 1937 provision applies only to ABPs that are not offered by MCOs; ABPs offered by MCOs are already required to comply with these requirements under section 1932(b)(8) of the Act.

Section 2103(c)(6) of the Act requires that state CHIP plans that provide both medical and surgical benefits and MH/SUD benefits shall ensure that financial requirements and treatment limitations for such benefits comply with mental

health parity requirements of the PHS Act (referencing renumbered section 2726(a) of the PHS Act) to the same extent as such requirements apply to a group health plan. In addition, section 2103(f)(2) of the Act requires that CHIP benchmark or benchmark equivalent plans comply with all of the requirements of subpart 2 of part A of the title XXVII of the PHS Act, which includes the mental health parity requirements of the PHS Act, insofar as such requirements apply to health insurance issuers that offer group health insurance coverage.

These final rules incorporate these requirements into our regulations.

## II. Background

### A. Legislative History

On September 26, 1996, the Congress enacted the Mental Health Parity Act of 1996 (Pub. L. 104–204) (MHPA), which required parity in aggregate lifetime and annual dollar limits for mental health benefits and medical/surgical benefits. Those mental health parity provisions were codified in section 712 of ERISA, section 2726 of the PHS Act (renumbered under section 1001 of the Affordable Care Act), and section 9812 of the Code, and applied to employment-related group health plans and health insurance coverage offered in connection with a group health plan. The Balanced Budget Act of 1997 (Pub. L. 105–33, enacted on August 5, 1997) (BBA) added sections 1932(b)(8) and 2103(f)(2) of the Act to generally apply certain aspects of MHPA, including the provisions of section 2726 of the PHS Act, to Medicaid MCOs and CHIP benefits.

MHPAEA was enacted as sections 511 and 512 of the Tax Extenders and Alternative Minimum Tax Relief Act of 2008 (Division C of Pub. L. 110–343) (the 2008 Extenders Act). MHPAEA amended the Employee Retirement Income Security Act of 1974 (ERISA), the PHS Act, and the Internal Revenue Code of 1986 (the Code). The changes made by MHPAEA consist of new standards, including parity for coverage of substance use disorder benefits, as well as amendments to the existing mental health parity provisions enacted in MHPA.

In 2009, section 502 of the Children's Health Insurance Program Reauthorization Act of 2009 (Pub. L. 111–3) (CHIPRA) amended section 2103(c) of the Act by adding paragraph (6), which requires that CHIP plans that provide both medical and surgical benefits and MH/SUD benefits comply with the provisions of section 2705(a) of the PHS Act, as amended by MHPAEA,

in the same manner as a group health plan.

The Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted on March 23, 2010 and the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) was enacted on March 30, 2010 (collectively referred to as the "Affordable Care Act"). Section 1001 of the Affordable Care Act reorganized and renumbered certain provisions of the PHS Act, including renumbering section 2705 of the PHS Act as section 2726 of the PHS Act. The Affordable Care Act did not make conforming changes to cross-references to the renumbered provisions; instead, it contained new cross-references to the former section numbers. However, there was no indication that Congress intended to alter the meaning of the existing cross-references. As a result, we read the cross-references to continue to refer to the same section originally referenced, as renumbered. We believe it is clear that the new cross-references were also intended to refer to the renumbered provisions.

The Affordable Care Act expanded the application of section 2705(a) of the PHS Act, as amended by MHPAEA, and renumbered as section 2726(a) of the PHS Act, to benefits in Medicaid ABPs delivered outside of a MCO. ABPs delivered through an MCO would already have to comply with these requirements under section 1932(b)(8) of the Act. Also, section 2001(c) of the Affordable Care Act modified the benefit provisions of section 1937 of the Act. Specifically, section 2001(c) of the Affordable Care Act added mental health benefits and prescription drug coverage to the list of benefits that must be included in benchmark-equivalent coverage; required the inclusion of essential health benefits (EHBs) beginning in 2014; and directed that plans described in section 1937 of the Act (now known as ABPs) that include medical/surgical benefits and MH/SUD benefits ensure that the financial requirements and treatment limitations applicable to such MH/SUD benefits comply with the mental health parity provisions of the PHS Act.

The Departments of Health and Human Services (HHS), Labor, and the Treasury (collectively the Departments) published interim final regulations implementing MHPAEA on February 2, 2010 (75 FR 5410), and final regulations applicable to group health plans and health insurance issuers on November 13, 2013 (78 FR 68240) (MHPAEA final regulations).<sup>1</sup> The MHPAEA final

<sup>1</sup> The MHPAEA final regulations generally apply to group health plans and health insurance issuers

regulations do not apply to Medicaid MCOs, ABPs, or CHIP state plans.

In 2013, we released a State Health Official (SHO) letter that provided guidance to states regarding the implementation of requirements under MHPAEA to Medicaid benchmark and benchmark-equivalent plans (referred to in the letter as ABPs) as described in section 1937 of the Act, CHIP under title XXI of the Act, and MCOs as described in section 1903(m) of the Act.<sup>2</sup> We previously issued a SHO letter on November 4, 2009, concerning the application of section 502 of CHIPRA.<sup>3</sup>

In April 2015, we published a proposed rule on the Medicaid and Children's Health Insurance Programs; Mental Health Parity and Addiction Equity Act of 2008; the Application of Mental Health Parity Requirements to Coverage Offered by Medicaid Managed Care Organizations, the Children's Health Insurance Program (CHIP), and ABPs (80 FR 19418–19452). In this rule, we are finalizing regulations to address how the MHPAEA requirements in section 2726 of the PHS Act, as implemented in the MHPAEA final regulations, apply to MCOs, ABPs, and CHIP. For a more detailed description of the proposed provisions, please refer to the proposed rule (80 FR 19418).

### B. Stakeholder Input

We received a total of 158 comments from state agencies, advocacy groups, health care providers, health insurers, health care associations, and the general public. The comments ranged from general support or opposition (to various provisions in the proposed rule) to very specific questions or comments regarding the proposed changes. After consideration of the comments and feedback received from stakeholders, we are adopting these final regulations. The following are brief summaries of each proposed provision, a summary of public comments received, and our responses to the comments. Comments related to the paperwork burden and the impact analyses are addressed in the "Collection of Information

on the first day of the first plan year beginning on or after July 1, 2014. The preamble to the MHPAEA final regulations stated that each plan or issuer subject to the interim final regulations, issued on February 2, 2010 (75 FR 5410), must continue to comply with the applicable provisions of the interim final regulations until the corresponding provisions of these final regulations become applicable to that plan or issuer (78 FR 68252 and 253). Note: for ease of reference, the citations to provisions of the MHPAEA final rules throughout this document will only refer to the provisions adopted by HHS in 45 CFR part 146.

Requirements” and “Regulatory Impact Analysis” sections in this preamble.

### III. Provisions of the Final Rule and Analysis of and Responses to Public Comments

The provisions of this final rule generally mirror the policies set forth in the MHPAEA final regulations to implement the statutory provisions that require MCOs, ABPs and CHIP to comply with certain requirements of section 2726 of the PHS Act (mental health parity requirements).

The following sections, arranged by subject area, include a summary of the public comments that we received, and our responses.

#### A. Definitions (§ 438.900, § 440.395, § 457.496)

The definitions of terms in the proposed rule and in this final rule include most terms included in the MHPAEA final regulation at 45 CFR 146.136(a). The proposed rule modified or added several terms to reflect the terminology used in the Medicaid program and CHIP statutes, regulations or policies. Some terms that are not relevant to the Medicaid program or CHIP were not included in the proposed rule. There were also several proposed terms that modified, added or deleted language from those definitions in the MHPAEA final regulations. For example:

- We proposed to add the terms ABP and Early and Periodic Screening, Diagnostic and Treatment (EPSDT) benefits since these terms are unique to the Medicaid program.
- We proposed to add the definition of “essential health benefits”, since Medicaid benchmark and benchmark-equivalent plans (now also known as ABPs) must cover EHBs and MH/SUD services provided as an EHB must be compliant with parity.
- We proposed a different definition for the term “medical/surgical benefits,” to reflect that the state defines these benefits in the Medicaid and CHIP contexts. Under existing law, the state has the responsibility of identifying what is a covered benefit for Medicaid and CHIP; MCOs, PIHPs or PAHPs are responsible for providing the covered benefits identified by the state. This is different from the MHPAEA final regulations, where medical/surgical benefits are defined under the terms of the group health plan or health insurance coverage and in accordance with applicable federal or state law.
- We also proposed that the definitions of “medical/surgical benefits,” “mental health benefits,” and “substance use disorder benefits” would

clearly exclude long term care services in the Medicaid and CHIP context. We stated that this clarification was consistent with the intent of the MHPAEA final regulations, given that the kinds of long term care services included in benefit packages for Medicaid and CHIP beneficiaries were not commonly provided in the commercial market as part of health benefits coverage. We sought comments on our proposal to exclude long term care services from the definitions of “medical/surgical benefits,” “mental health benefits,” and “substance use disorder benefits.”

*Comment:* We received many comments on the proposal to exclude long term care services from the definitions of “medical/surgical benefits,” “mental health benefits,” and “substance use disorder benefits.” A few commenters supported the proposal to exclude long term care services from the definitions of “medical/surgical benefits,” “mental health benefits,” and “substance use disorder benefits” as used in this rule. The commenters requested that additional guidance regarding the definition of long term care services be provided to ensure consistency in states’ and plans’ parity analyses.

However, a large majority of commenters opposed this approach, and recommended that the final rule apply parity protections to long term MH/SUD benefits. Commenters who opposed the proposed rule approach provided three general concerns. First, many commenters noted that Medicaid is the nation’s largest provider of benefits coverage for individuals with MH/SUD conditions and the only benefits coverage for most disabled individuals with these conditions; these commenters stated that parity protections in Medicaid should be at least as strong as the rules governing the commercial market. The commenters also discussed the importance of access to long term care services for the effective treatment of many MH/SUD conditions, particularly within the populations served by Medicaid and CHIP programs.

Second, several commenters noted that commercial plans typically do cover some forms of long term care services for both MH/SUD and medical/surgical conditions, including skilled nursing, inpatient rehabilitation, and home health services. From this perspective, commenters stated that CMS is prohibited from excluding the application of parity to long term care services because section 1932(b)(8) of the Act requires Medicaid MCOs to comply with the requirements of

MHPAEA “to the same extent that those requirements apply to a health insurance issuer that offers group health insurance.” Underlying this claim from commenters is the view that commercial insurers of group health plans would be obligated to meet parity requirements in connection with coverage of long term care services in order to comply with PHS Act section 2726. To the extent that Medicaid coverage does differ from the commercial market, commenters stated that the regulations must reflect the differences between commercial insurance and Medicaid and CHIP, as well as the different needs of the populations that each type of health coverage serves. These commenters stated that the proposed rule’s approach misconstrues the intent and substance of the parity requirements if parity requirements only apply to Medicaid and CHIP services that are also covered by commercial insurance. Commenters suggested that there is no statutory basis for the interpretation underlying the proposed rule on this point and the corresponding application that long term services be excluded from the parity analysis. Commenters also stated that there are many services covered in the commercial plans that are comparable to long term services covered by Medicaid such as personal care, where the services might be covered for medical-surgical conditions, but not for MH/SUD because they are defined as “long term care.” This opens the door for decisions to exclude coverage or impose different financial or treatment limitations that would be otherwise prohibited by this rule but are wholly justified on any plausible rationale that characterizes the services as long term care.

Third, and finally, many commenters also identified the difficulty of formulating clear and consistent standards to distinguish between long term care services and other services across treatment settings, from both a definitional and an operational perspective; they stated that it would be administratively difficult to implement a policy that carved these services out of medical, surgical, MH/SUD benefits to exclude long term care services from parity protections. Many commenters also raised concerns that adopting this exclusion without providing a regulatory definition of long term care services would allow states and plans to declare a number of services to be long term care and thus not subject to parity in an inconsistent manner. Having no consistent definition of long term service would create disparate policies across states as to which services would

not be subject to parity and therefore would have allowable quantitative and nonquantitative treatment limits on services that were needed on a long term basis. In addition, some services that may be currently considered intermediate and subject to parity may be intentionally classified by states or MCOs, PIHPs or PAHPs to be long term services and excluded from parity. Commenters stated that if all long term care services are excluded from parity protections, MCOs, PIHPs and PAHPs may financially benefit from the anticipated cost savings of shifting away from acute care to long term care and have no obligation to ensure that there is mental health parity within long term care benefits. This may also preclude any systematic basis to audit MCOs, PIHPs or PAHPs compliance with relevant MHPAEA requirements applied to long term services.

For these reasons, most commenters requested that parity requirements under this final rule be applied to long term care services that are within the scope of medical/surgical or mental health/substance use disorder services, or that if the exclusion were to be maintained, that very clear definitions and guidelines be provided regarding the services to be characterized as long term care services that are excluded from these other classification of services set forth in this rule.

*Response:* We agree with the commenters and have revised this final rule to include long term care services in the definitions of medical/surgical, mental health, and substance use disorder benefits, and, thus, to apply parity protections under this final rule to long term care services. Therefore, long term care services will need to be included in the appropriate classification(s) of benefits provided for in this rule for the purposes of the parity analysis. We intend to provide additional information to states regarding the application of parity to long term services. This information will assist states in determining how various medical/surgical and MH/SUD long term services would be classified in the four areas (inpatient, outpatient, pharmacy and emergency).

We believe this change will reduce the likelihood that states would have disparate policies regarding which services would be subject to parity and could ensure that beneficiaries have similar protections regardless of where they live. In addition, this prevents states from applying treatment limits to long term care services needed for MH/SUD conditions more restrictively than treatment limits are applied for long term care services for medical/surgical

conditions. We also believe that by requiring the categorization of long term services used to treat MH/SUD conditions, this final rule could improve beneficiary access to needed MH/SUD benefits. Finally, finalizing the regulations in this final rule with this change will provide MCOs and states with needed clarity regarding the application of parity to these services.

*Comment:* Many commenters supported the guidance provided in the proposed rule regarding state-defined MH/SUD benefits. Commenters noted that requiring state definitions to be consistent with generally recognized independent standards of current medical practice will help ensure Medicaid managed care beneficiaries receive clinically appropriate levels of care. However, several commenters offered specific recommendations regarding the scope of definitions for medical/surgical services and MH/SUD services in the proposed rule. For instance, one commenter recommended that CMS define the scope of MH/SUD to be consistent with the psychiatric diagnoses listed in the new DSM-5 and in the Diagnostic Classification of Mental Health and Developmental Disorders Infancy and Early Childhood. Several commenters also cautioned that Medicaid's medical/surgical benefits should be defined specifically for the child and adolescent population to ensure consistent implementation.

Several other commenters recommended that CMS provide a non-exhaustive list of "mental health conditions" that must be included within a state's definition of "mental health condition". They added that simply stating that this term must be defined consistent with generally recognized independent standards of medical practice does not provide sufficient clarity and guidance to states. Commenters suggested that a non-exhaustive list would give greater clarity and uniformity among states, thus facilitating the collection and analysis of data and outcomes measures.

*Response:* We believe that requiring states to include specific diagnosis or providing a non-exhaustive list of mental health conditions in a state's definition of mental health conditions is beyond the scope of this regulation and CMS authority. Since Medicaid is a state and federal partnership, we believe that the state, and not CMS, should identify which conditions are considered medical/surgical and MH/SUD conditions. Therefore, we do not provide a list (either exhaustive or non-exhaustive) of mental health conditions in this final rule. The language in the final regulation provides states guidance

regarding generally recognized independent standards of current medical practice to determine what conditions are medical/surgical, mental health, and substance use disorders.

*Comment:* One commenter suggested that CMS should clarify that quantitative visit limits do not apply to required services such as services provided by clinical psychologists and clinical social workers in FQHCs.

*Response:* We believe that the current regulation provides sufficient information regarding the application of parity standards to treatment limits imposed on MH/SUD services. To the extent permissible under existing law, states and MCOs may impose quantitative treatment limits for MH/SUD benefits, so long as these limits are no more restrictive than the predominant limits applied to substantially all medical/surgical benefits in each classification; if existing law prohibits the imposition of any treatment limitation on a service covered by a Medicaid or CHIP state plan, this rule does not provide authority to impose such limits merely because parity standards would be met. This rule allows states to apply quantitative treatment limits, consistent with other law, to services regardless of the type of practitioner that renders either a medical/surgical service or MH/SUD service so long as the parity requirements are met. A discussion of the mandatory coverage requirements for Medicaid and CHIP is otherwise outside the scope of this final rule.

*Comment:* Another commenter recommended that CMS should clarify that utilization management and prior authorization or concurrent review can function as "soft limits" that allow for an individual to exceed medical/surgical or MH/SUD benefit limits based on medical necessity.

*Response:* We are clarifying in this final rule that benefit limits that allow for an individual to exceed numerical limits for medical/surgical or MH/SUD benefits based on medical necessity are not considered to be quantitative treatment limits under this rule, but are subject to the provisions of this rule governing Nonquantitative Treatment Limitations (NQTLs) for medical/surgical or MH/SUD benefits. The processes, strategies, evidentiary standards, or other considerations that are used to determine whether to apply a soft limit must be comparable to and applied no more stringently than factors used in applying the limitation for medical surgical/benefits in the classification.

*Comment:* Another commenter suggested that CMS include a list of

terms that have different meanings in Medicaid and commercial plans and clarify how these meanings apply in the context of parity protections provided in Medicaid and the commercial market.

*Response:* We appreciate the commenter's suggestion. However, we believe that we provide adequate discussion of the similarities and differences in the use of terms in Medicaid and commercial plans in the text of this regulation and other regulations governing Medicaid, CHIP and the commercial health insurance market.

For the reasons described in the proposed rule and in consideration of the comments received, we are finalizing the provisions proposed in § 438.900, § 440.395, and § 457.496 of the proposed rule with modification. We are finalizing revised definitions of medical/surgical, mental health, and substance use disorder services so that they include, rather than exclude, long term care services. Additional modifications to the definitions proposed in § 457.496 are discussed in section III.G of this final rule.

#### *B. Parity Requirements for Aggregate Lifetime and Annual Dollar Limits (§ 438.905 and § 457.496(c))*

In proposed § 438.905 and § 457.496(c), we addressed the parity requirements for aggregate lifetime and annual dollar limits for MCOs (including PIHPs and PAHPs when providing coverage for MCO enrollees) and CHIP. As noted above, the application of these requirements under this rule is generally the same as under the MHPAEA final regulations (45 CFR 146.136(b)). If a regulated entity applies an aggregate lifetime or annual dollar limit to at least two-thirds of all medical/surgical benefits, it must either apply the aggregate limit to both to medical/surgical benefits and to MH/SUD benefits in a manner that does not distinguish between the medical/surgical and MH/SUD benefits, or not include an aggregate lifetime or annual dollar limit on MH/SUD benefits that is less than the aggregate limit on medical/surgical benefits. If a regulated entity does not include an aggregate lifetime or annual dollar limit on medical/surgical benefits or includes a limit that applies to less than one-third of all medical/surgical benefits, it may not impose an aggregate lifetime or annual dollar limit, respectively, on MH/SUD benefits. If a regulated entity applies an aggregate lifetime or annual dollar limit to between one-third and two-thirds of all medical/surgical benefits, it must either impose no aggregate lifetime or annual dollar limit on MH/SUD benefits, or

impose an aggregate lifetime or annual dollar limit on MH/SUD benefits that is no more restrictive than the average limit for medical/surgical benefits. These requirements do not address the provisions of section 2711 of the PHS Act, which prohibit imposing lifetime and annual limits on the dollar value of essential health benefits.

We noted in the proposed rule that for managed care arrangements, we are using our authority in section 1902(a)(4) of the Act to require PIHPs and PAHPs to comply with mental health parity requirements when providing coverage for MCO enrollees. The proposed regulations included definitions of "aggregate lifetime dollar limit" and "annual dollar limit" at § 438.900, § 440.395(a), and § 457.496(a).

*Comment:* One commenter suggested that CMS should consider including a definition of "coverage unit" that mirrors the definitions in the MHPAEA final regulations.

*Response:* We did not include a definition of coverage unit in this rule because in Medicaid and CHIP programs, the coverage unit will always be the individual beneficiary, regardless of marital or family status.

*Comment:* Another commenter requested that CMS provide clarification on the use of aggregate lifetime and annual dollar limits in the context of section 2711 of the PHS Act, as added by section 1001 of the Affordable Care Act, which generally prohibits lifetime and annual limits on the dollar amount of EHB, including MH/SUD services.

*Response:* Section 2711 of the PHS Act, as added by the Affordable Care Act, generally prohibits lifetime and annual limits on the dollar amount of EHB in group health plans and health insurance coverage. As set forth in section 1302(b) of the Affordable Care Act, the definition of EHB includes "mental health and substance use disorder services, including behavioral health treatment."<sup>4</sup> Thus, notwithstanding the provisions of MHPAEA that permit aggregate lifetime and annual dollar limits with respect to MH/SUD benefits as long as those limits are in accordance with the parity requirements for such limits, such dollar limits are prohibited with respect to MH/SUD benefits that are covered as EHB, regardless of the service delivery system within Medicaid Alternative Benefit Plans.

Section 2711 of the PHS Act is applied to Medicaid MCOs by section 1932(b)(8) of the Act and to CHIP benchmark or benchmark-equivalent

plans by section 2103(f)(2) of the Act (as section 2711 is part of subpart 2 of part A of title XXVII of the PHS Act). ABP and CHIP benefits that are offered through an MCO, or through a PIHP or PAHP that provides coverage to MCO enrollees are also subject to the prohibition on lifetime and annual limits. However, the prohibition on annual and lifetime limits in section 2711 of the PHS Act does not apply to ABPs that are not offered by an MCO or by a PIHP, or PAHP to enrollees of an MCO.

Regardless of whether services are delivered in managed care or non-managed care arrangements, all Medicaid ABPs (including benchmark equivalent and Secretary-approved benchmark plans) and CHIP plans are statutorily required by sections 1937(b)(6) and 2103(c)(6) of the Act to meet the financial requirements and treatment limitations components of the mental health parity provisions set forth at section 2726(a) of the PHS Act.

*Comment:* One commenter indicated that CMS should consider the extent to which § 438.905 appears to sanction aggregate lifetime or annual dollar limits in the Medicaid program. For example, paragraph (c) discusses a Medicaid MCO with an annual or lifetime dollar limit on two-thirds of all medical and surgical benefits. The commenter further states that it is difficult to imagine how a lifetime limit on two-thirds of all medical and surgical benefits would meet the sufficiency, access and comparability requirements of Medicaid.

*Response:* This final rule neither sanctions nor prohibits aggregate lifetime and annual dollar limits; this rule merely provides the standards for applying parity requirements to such limits if the limits are otherwise authorized. While we agree that a lifetime limit on two-thirds of all medical and surgical benefits would not likely meet the sufficiency, access, and comparability requirements of Medicaid, sufficiency, access, and comparability requirements are outside of the scope of this final rule.

*Comment:* One commenter noted that the use of the phrase "in states that cover both medical and surgical benefits and mental health and substance use disorder benefits under their State plan" is not necessary. All state Medicaid programs contain at least some mental health and SUD benefits, because hospital and physician services are mandatory benefits that include mental health and SUD treatment.

*Response:* We agree that inpatient hospital and physician services are mandatory state plan services that

<sup>4</sup> See section 1302(b)(1)(E) of the Affordable Care Act.

furnish services to address MH/SUD. However, as noted, under section 1932(b)(8) of the Act, Medicaid MCOs are required to comply with mental health parity requirements in section 2726 of the PHS Act to the same extent that those requirements apply to a health insurance issuer that offers group health insurance. The parity requirements in section 2726 of the PHS Act are limited to group health plans or health insurance issuers offering group or individual health insurance coverage that provides both medical and surgical benefits and MH/SUD benefits. Similarly, section 2103(c)(6) of the Act requires that state CHIP plans that provide both medical and surgical benefits and MH/SUD benefits shall ensure that financial requirements and treatment limitations for such benefits comply with mental health parity requirements of section 2726(a) of the PHS Act to the same extent as such requirements apply to a group health plan. Therefore, we are retaining the clarifying language in §§ 438.905(a), 438.910(b), 457.496(d)(2), and 457.496(f) of this final rule that these requirements apply to states that offer both medical and surgical and MH/SUD benefits.

We are finalizing the provisions at §§ 438.905 and 457.496(c) about aggregate lifetime and annual limits for Medicaid MCOs and CHIP as proposed. In the proposed rule, we included under § 438.905 the title of “General” under paragraph (a), with paragraph of “General parity requirement” under (a)(1). As we do not intend to use paragraph (a)(2), in the final rule we have removed the paragraph numbering for (a)(1) and named “General parity requirement” simply under paragraph (a) of this section, rather than including “General” in the title.

### *C. Parity Requirements for Financial Requirements and Treatment Limitations (§§ 438.910, 440.395(b), and 457.496(d))*

Sections 438.910, 440.395(b), and 457.496(d) of the proposed rule set forth parity requirements for financial requirements and treatment limitations.

#### 1. Clarification of Terms

In the proposed rule, we indicated that “classification of benefits” means a classification as described in § 438.910, § 440.395(b), and § 457.496(d), which describe parity requirements for financial requirements and treatment limitations. Specifically, we proposed to modify the classifications of benefits set forth in the regulations that were adopted by the Departments in the 2010 MHPAEA final rule (as discussed in section III.C.2). As in the MHPAEA final

regulations, we proposed in this Medicaid and CHIP rule that parity requirements for financial requirements and treatment limitations be applied on a classification by classification basis.

We proposed the term “type” to refer to financial requirements and treatment limitations of the same nature. Different types of financial requirements and treatment limitations include copayments, coinsurance, annual visit limits, and episode visit limits. We proposed that a financial requirement or treatment limitation must be compared only to financial requirements or treatment limitations of the same type within a classification.

In addition, we proposed the term “level” to refer to the magnitude (such as the dollar, percentage, day, or visit amount) of the financial requirement or treatment limitation. We did not receive any comments on the definitions of terms described at § 438.910, § 440.395(b), and § 457.496(d) and are finalizing these terms as proposed.

#### 2. General Parity Requirement for Financial Requirements and Treatment Limitations

At proposed § 438.910(b), § 440.395(b)(2), and § 457.496(d)(2), we included general parity provisions to prohibit a MCO, PIHP or PAHP (when providing benefits to an MCO enrollee), ABP (when used in a non-managed care arrangement), or CHIP state plan from applying any financial requirement or treatment limitation to MH/SUD benefits in any classification that is more restrictive than the predominant financial requirement or treatment limitation of that type that is applied to substantially all medical/surgical benefits in the same classification. For this purpose, the general parity requirement of MHPAEA would apply separately for each type of financial requirement or treatment limitation (for example, unit limits are compared to unit limits, or co-pays are compared to co-pays).

We noted in the proposed rule that the MHPAEA final regulations at § 146.136(c)(2)(ii) set forth the following classifications of benefits: inpatient in-network; inpatient out-of-network; outpatient in-network; outpatient out-of-network; emergency care; and prescription drugs. We proposed to follow the general structure of the classifications used in the MHPAEA final regulations with a significant distinction. Specifically, we proposed to eliminate the in-network and out-of-network distinctions for the inpatient and outpatient classifications, and therefore to provide four classifications:

inpatient; outpatient; emergency care; and prescription drugs.

As discussed in this final rule, we maintain this classification structure. The four classifications in this final rule are the only classifications to be used for purposes of applying the parity requirements of MHPAEA to Medicaid and CHIP. Moreover, these classifications must be used for all financial requirements and treatment limitations to the extent that a MCO, PIHP, PAHP, ABP, or CHIP provides benefits in a classification and imposes any separate financial requirement or treatment limitation (or separate level of a financial requirement or treatment limitation) for benefits in the classification. Similar to the MHPAEA final rule, this final rule does not define what services are included in the inpatient, outpatient, or emergency care classifications. These terms are subject to the design of a state’s managed care program and their meanings may differ depending on the benefit packages.

For the purposes of applying parity requirements to Medicaid, we proposed that the classifications of benefits should relate to how states construct and manage their Medicaid benefits. All Medicaid benefits provided should fall into one of the classifications of benefits. We noted that the MHPAEA final regulations discussed the application of parity requirements to intermediate services (such as residential treatment, partial hospitalization, and intensive outpatient treatment) provided under the health plan. Specifically, the MHPAEA final regulations required group health plans and issuers to assign covered intermediate MH/SUD benefits to a benefit classification in the same manner that they assign comparable intermediate medical/surgical benefits to a classification. The MHPAEA final regulations do not specifically define intermediate services; nor do current statutory and regulatory provisions governing the Medicaid and CHIP programs define intermediate services within state plan benefits. Therefore, we did not propose to specify an intermediate classification to be used in the parity analysis for Medicaid or CHIP programs. As in the MHPAEA final rule, we proposed to allow the applicable regulated entity (the MCO, PIHP or PAHP, or state in connection with the ABP, and CHIP) to assign intermediate level services to any of the classifications listed, but require that assignment to those classifications be done using the same standards for both medical/surgical services and MH/SUD services (see § 438.910(b)(2), § 440.395(b)(2)(ii), and

§ 457.496(d)(2)(ii)). This final rule also requires that the method used to assign services to the four classifications be reasonable.

We note that similar concerns may arise regarding the classification of long term care services, given the revised definitions of mental health benefits and substance use disorder benefits set forth in this final rule. We did not propose and do not finalize any specific rules for the classification of long term care services. This final rule allows the applicable regulated entity (the MCO, PIHP or PAHP, or state in connection with the ABP, a carve-out managed care delivery system, and CHIP) to assign long term care services to any of the four listed classifications, but, as with intermediate and other services, requires that assignment to those classifications be done using the same reasonable standards for both medical/surgical services and MH/SUD services.

*Comment:* Many commenters provided feedback on this approach. Some commenters requested that CMS create a new intermediate level services classification and clarify that intermediate services for MH/SUD must be covered if similar types of services are covered for medical/surgical conditions. However, most commenters supported the consistency of the proposed approach with the MHPAEA final rules, and appreciated that this approach would give some flexibility to states and health plans to assign intermediate level services to the four classifications in the proposed rule. Commenters noted that consistency with the MHPAEA final rules would make it easier for states and plans to comply. Since other aspects of the benefit, including financial requirements and NQTLs, are influenced by the classification a service is put into, this flexibility would allow states and plans to determine the most appropriate classification for intermediate services based on the entire benefit package that is offered.

*Response:* Similar to the MHPAEA final rule, this final rule does not define what services are included in the inpatient, outpatient, or emergency care classifications. Similar to the reasoning provided in the MHPAEA final regulations, we did not intend to impose a benefit mandate through the parity requirement in order to require greater benefits for mental health conditions and substance use disorders than for medical/surgical conditions. In addition, as noted above, current statutory and regulatory provisions governing the Medicaid and CHIP programs do not define intermediate services within state plan benefits. The

definitions of the four classifications used by this rule are subject to the design of a state's managed care program, and their meanings may differ depending on the benefit packages. State health insurance laws may define these terms, and in the event that these are not defined, we expect each regulated entity within a state to define these classifications in a similar manner. Further, each regulated managed care plan (MCOs, PIHPs and PAHPs) or the state in connection with ABP, or CHIP, must apply these terms uniformly for both medical/surgical benefits and MH/SUD benefits under § 438.910(b)(2), § 440.395(b)(2)(ii) and § 457.496(d)(2)(ii). Therefore, we are not including a new intermediate level services classification in this final rule.

*Comment:* Some commenters requested that the final rule clearly state that intermediate services offered in Medicaid and CHIP are subject to the parity requirements. The commenters urged CMS to provide guidance regarding MH/SUD intermediate care services and provide examples and resources that mirror the provisions included in the MHPAEA final rule. Many commenters also requested guidance on the types of factors and processes that should be used to classify intermediate care services into the benefit classifications for parity assessments to ensure consistency across payers in the application of parity to these services. Many commenters requested additional examples of intermediate services that can be classified as inpatient or outpatient. Commenters expressed particular concern about the need to define intermediate services clearly if long term care services were excluded from the final rule. Given the similarities and overlap between many intermediate services and long term care services, commenters expressed concern that plans would be able to classify services as long term care and exclude them from parity protections.

*Response:* We reiterate that all Medicaid services provided should be placed into one of the classifications of benefits for the purposes of this final rule. This final rule does not provide any authority for a medical/surgical or mental health/substance use disorder benefit to be classified or characterized as something other than the four classifications in § 438.910(b)(2), § 440.395(b)(2)(ii) and § 457.496(d)(2)(ii). In addition, as noted in section III.A, this final rule includes long term care services in the definitions of "medical/surgical benefits," "mental health benefits," and "substance use disorder benefits."

Therefore, the distinction between intermediate services and long term care services is not material to the application or enforcement of this final rule. However, we have amended the provisions at §§ 438.910(b)(2), 440.395(b)(2)(ii) and 457.496(d)(2)(ii) to note that the factors used to classify services in the four classifications must be reasonable in addition to being the same for medical/surgical and MH/SUD services. We believe that this reasonableness requirement should help to allay concerns that services could be classified according to arbitrary factors in an attempt to permit the application of discriminatory limitations to MH/SUD services under this rule.

*Comment:* One commenter emphasized the difficulty of ensuring parity requirements across delivery platforms, especially as they relate to NQTLs and intermediate services. The commenter noted that the line between intermediate services and long term care services is not always clear, and stated that medical necessity criteria would need to be established to differentiate levels of care within long term care services. The commenter requested additional guidance on how to address parity requirements for services that are unique to Medicaid and for which comparable services on the medical/surgical side do not exist.

*Response:* As noted above, this final rule applies parity requirements to all intermediate and long term care services. Medical necessity determinations for long term care services or other services are an NQTL that must comply with the requirements of this rule. The parity analysis does not require a one-to-one comparison of a MH/SUD service to a medical/surgical service, but instead requires that a NQTL may not be imposed for a MH/SUD benefit in any classification unless, under the terms of the coverage, as written and in operation, any factors used in applying the NQTL to the MH/SUD benefit are comparable to and applied no more stringently than factors used in applying the same NQTL to medical/surgical benefits in the classification; we address NQTL standards in greater detail in section F. If questions persist regarding the development and use of medical necessity criteria under this rule, and/or methodologies for classifying intermediate and long term care services into the four benefit classifications provided in this rule, we may develop further guidance or provide technical assistance as needed.

*Comment:* One commenter requested guidance to the states on developing clinically appropriate intensity of

service and licensure expectations of facilities that provide behavioral health services which are not readily classifiable.

*Response:* This final rule clarifies that mental health parity requirements under this final rule do not apply to state licensure laws, and therefore such guidance is beyond the scope of this final regulation. Clinical determinations regarding medical necessity, such as the intensity of services that is medically necessary for an individual, are subject to the NQTL requirements set forth in this final rule. In addition, any processes, strategies, evidentiary standards, or other considerations that are used to guide clinical determinations concerning the appropriate intensity of service are also subject to the NQTL requirements set forth in this final rule.

As indicated in the responses to comments, we are finalizing these provisions mostly as proposed. We are finalizing §§ 438.910(b)(2), 440.395(b)(2)(ii) and 457.496(d)(2)(ii) with a modification that requires that the standards used to assign benefits to a classification be reasonable as well as the same for both medical/surgical and MH/SUD benefits.

**3. Applying the General Parity Requirement to Financial Requirements and Quantitative Treatment Limitations (§§ 438.910(c), 440.395(b)(3), and 457.496(d)(3))**

At proposed §§ 438.910(c), 440.395(b)(3) and, 457.496(d)(3), we addressed the application of the general parity requirement of MHPAEA to

financial requirements and quantitative treatment limitations in MCOs, PIHPs, PAHPs, ABP and CHIP state plans. The general parity requirement at proposed §§ 438.910(b), 440.395(b)(2), and 457.496(d)(2) and now finalized in this rule would prohibit a MCO, PIHP or PAHP (in connection with coverage provided to an MCO enrollee), or ABP state plan (when used in a non-managed care arrangement), or CHIP state plan or MCE contracting with a CHIP state plan from applying any financial requirement or treatment limitation to MH/SUD benefits in any classification that is more restrictive than the “predominant” financial requirement or treatment limitation of that type applied to “substantially all” medical/surgical benefits in the same classification. In the proposed regulation text (that is, §§ 438.910(c), 440.395(b)(3) and 457.496(d)(3)), we proposed standards that are the same as those in the MHPAEA final regulations for determining the portion of medical/surgical benefits subject to a financial requirement or quantitative treatment limitation for purposes of the parity analysis. Under the proposed and now final rule, the portion of medical/surgical benefits in a classification subject to a financial requirement or quantitative treatment limitation would be based on the dollar amount of all payments for medical/surgical benefits in the classification expected to be paid during a specific year. For MCOs, PIHPs and PAHPs, this means dollar amounts for payment during a contract year. For ABPs and CHIP state plans, this means dollar amounts for the year starting the

effective date of the approved ABP or CHIP state plan; effective dates for these plans will vary based on the date the ABP or CHIP state plan was approved by CMS. For purposes of this calculation, the MCOs (when such organizations are responsible for coverage of MH/SUD benefits) or the state (in cases where PIHPs and PAHPs are used in conjunction with MCOs) must determine the total amount projected to be expended to determine the two-thirds threshold.

We included a detailed example to illustrate how our proposal would work:

*Example. Facts.* A state is providing a comprehensive service package through an MCO. The MCO is currently providing coverage of services with limits that are consistent with the approved state plan. The MCO benefit package includes:

- Inpatient Hospital services for medical/surgical—30 days per year limit.
- Inpatient Hospital services for MH/SUD—30 days per year limit.
- Primary Care Physician Services for medical/surgical—unlimited.
- Specialist Physician Services for medical/surgical—50 visits per year.
- Outpatient MH services—20 visits per year limit.
- Physical Therapy—20 visits per year limit.
- Occupational Therapy—20 visits per year limit.
- Emergency Services—Unlimited for medical/surgical or MH/SUD

The MCO projects its payments as follows for medical/surgical benefits:

TABLE 1—EXAMPLE OF QUANTITATIVE TREATMENT LIMIT

Benefit/classification—Medical/Surgical	Projected payment	Percent of total costs	Percent of classification subject to a limit
Inpatient Hospital .....	\$400x	100	100
Inpatient total .....	400x	100	100
Physician Services .....	150x	27	0
Specialist Services .....	250x	46	46
Physical Therapy .....	75x	13.5	13.5
Occupational Therapy .....	75x	13.5	13.5
Outpatient total .....	550x	100	73
Emergency Services .....	100x	100	0
Emergency total .....	100x	100	0

*Example. Conclusion.* In this example, the MCO would be able to maintain some level of day and visit limits on benefits in both the inpatient and outpatient MH/SUD classifications

because both classifications meet the “substantially all” standard—in other words, more than two-thirds of the medical/surgical benefits in each classification are subject to those types

of limits (100 percent of all medical/surgical inpatient benefits are subject to a day limit, and 73 percent of all medical/surgical outpatient benefits are subject to a visit limit).

With regards to the level of the quantitative treatment limitation on inpatient MH/SUD services, the MCO may maintain its 30 day limit because 100 percent of all inpatient medical/surgical benefits are also subject to a 30 day limit, making it the predominant level.

However, with regards to the level of the quantitative treatment limitation on outpatient MH/SUD services, the MCO may not maintain its current limit of 20 visits per year. Of the total amount of outpatient medical/surgical benefits subject to a visit limit (\$400x), 62.5 percent (\$250x) are subject to a 50 visit limit (specialist services), and only 37.5 percent (\$150x) are subject to a 20 visit limit (physical therapy and occupational therapy). Because the 20 visit limitation is not the predominant level (that is, it does not apply to at least 50 percent of the medical/surgical benefits in the classification subject to the visit limit), the MCO would need to either remove the visit limits altogether on outpatient MH/SUD services or increase the visit limitation to at least 50 visits per year to align with the least restrictive level of visit limits on outpatient medical/surgical benefits. Lastly, because there are currently unlimited emergency visits under the medical/surgical benefits, the MCO would need to maintain unlimited visits for emergency services for MH/SUD, and would not be able to impose any limits on MH/SUD unless limits were also imposed on medical/surgical services and such limits were consistent with parity requirements.

We received no comments on applying the general parity requirement to financial requirements and quantitative treatment limitations as described in §§ 438.910(c), 440.395(b)(3), and 457.496(d)(3). We are finalizing these provisions as proposed.

#### 4. Special Rules for Multi-Tiered Prescription Drug Benefits and Other Benefits (§§ 438.910(c)(2), 440.395(b)(3)(ii), 457.496(d)(3)(ii))

The MHPAEA final regulations at 45 CFR 146.136(c)(3)(iii)(A) permit plans under certain circumstances to apply different levels of financial requirements to different tiers of prescription drugs and still satisfy the parity requirements. The proposed rule would allow a MCO, PIHP, PAHP, ABP, or CHIP state plan to subdivide the prescription drug classification into tiers based on reasonable factors as described in the proposed regulations and without regard to whether a drug is generally prescribed for medical/surgical benefits or for MH/SUD benefits.

The MHPAEA final regulations at 45 CFR 146.136(c)(3)(iii)(C) permit a subclassification for office visits, separate from other outpatient items and services. Other subclassifications not specifically permitted, such as separate sub-classifications for generalists and specialists, cannot be used for purposes of determining parity. As proposed and finalized in this rule, we will retain this approach to subclassifications in the application of these parity requirements established in parts 438, 440 and 457 (that is, to services provided to enrollees in Medicaid MCOs, and to ABPs and CHIP). After the subclassification is established, a MCO, PIHP, PAHP, ABP, or CHIP state plan may not impose any financial requirement or quantitative treatment limitation on MH/SUD benefits in any sub-classification (for example, office visits or non-office visits) that is more restrictive than the predominant financial requirement or quantitative treatment limitation that applies to substantially all medical/surgical benefits in the sub-classification, using the parity analysis for financial requirements and quantitative treatment limitations.

In the MHPAEA final regulations, the Departments recognized that tiered provider networks have become an important tool for health plan efforts to manage care and control costs. Therefore, for purposes of applying the financial requirement and treatment limitation rules under MHPAEA, the MHPAEA final regulations provide that if a plan (or health insurance coverage) provides benefits through multiple tiers of in-network providers (such as an in-network tier of preferred providers with more generous cost-sharing to participants than a separate in-network tier of participating providers in any classification), the plan may divide its benefits furnished on an in-network basis into sub-classifications that reflect those network tiers, if the tiering is done without regard to whether a provider is a MH/SUD provider or a medical/surgical provider. While network tiers may also be used in Medicaid managed care, we do not believe that the parity standards for Medicaid managed care need to address such network structures so we did not propose regulation text to address financial limitations (for example, different cost-sharing requirements) in that context in this rule. Medicaid cost-sharing rules apply regardless of network status. Any quantitative treatment limitation outlined in the contract must be applied to the service broadly and therefore cannot have separate limitations based on network tiers. We recognize there

may be network tiers used to commonly refer enrollees or for purposes of building the network and have varying payment rates to providers, but the use of multiple network tiers in the context of NQTLs is discussed in section III.E. of this final rule.

*Comment:* One commenter stated that network adequacy provisions in § 438.206 are not specific enough and encouraged CMS to provide more specificity in the number, types of providers that must be in network, as well as time and distance requirements in current Medicaid managed care regulations.

*Response:* We believe that providing standards that specify the number and types of providers that must be in the network is beyond the scope of this rule. These standards are addressed in existing regulations at § 438.206 and § 438.207.<sup>5</sup> The parity proposed rule stated that a plan complying with the network adequacy requirements of § 438.206(b)(4) will be deemed in compliance with § 438.910(d)(3). In this final rule we removed the provision to deem compliance with §§ 438.910(d)(3) and 457.496(d)(5) of this rule (regarding parity requirements for access to out-of-network providers) where an MCO, PIHP, PAHP, or CHIP state plan is found to be in compliance with the provider network standard found in § 438.206(b)(4).

As indicated in the responses to the comments, we are finalizing the provisions regarding multi-tiered prescription drug benefits and other benefits at §§ 438.910(c)(2), 440.395(b)(3)(ii), 457.496(d)(3)(ii) as proposed.

#### D. Cumulative Financial Requirements (§ 438.910(c)(3), § 440.395(b)(3)(iii), § 457.496(d)(3)(iii))

While financial requirements such as copayments and coinsurance generally apply separately to each covered expense, other financial requirements (in particular, deductibles) accumulate across covered expenses. In the case of deductibles, generally an amount of otherwise covered expenses must be accumulated before the plan pays benefits. Financial requirements that determine whether and to what extent benefits are provided based on accumulated amounts were defined in the proposed rules as cumulative

<sup>5</sup> We note that CMS proposed changes to §§ 438.206 and 438.207 that we believe are consistent with the intent of these final rules in CMS-2390-P Medicaid and CHIP Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, Medicaid and CHIP Comprehensive Quality Strategies, and Revisions Related to Third Party Liability.

financial requirements. As in the MHPAEA final rule at § 146.136(c)(v), we proposed and are finalizing in this final rule that separate cumulative financial requirements (separate for mental health, substance use or medical/surgical) will not be permitted for entities subject to our proposed requirements (namely, MCOs, PIHPs and PAHPs in connection with coverage provided to MCO enrollees, and in ABP and CHIP).

However, unlike the MHPAEA final rule for insurers of group health plans, in the Medicaid and CHIP proposed rule we proposed to permit quantitative treatment limitations to accumulate separately for medical/surgical and MH/SUD services as long as they comply with the general parity requirement. We proposed to allow this separate accumulation of treatment limits in Medicaid and CHIP for several reasons. First, benefits for MCO beneficiaries must be provided in at least the same amount, duration, and scope as set forth in the state plan. Requiring plans to have cumulative limits across medical/surgical benefits and MH/SUD benefits within a classification may incentivize MCOs to retain the quantitative treatment limitation level applied on the medical/surgical benefits in the state plan as the total cumulative limit for both medical/surgical and MH/SUD benefits. This would comply with the requirements of parity, but would not meet the requirements of providing at least what is in the state plan. In addition, we believe that requiring quantitative treatment limitations within a classification of benefits to accumulate jointly toward a unified limit level may not benefit the enrollee. Specifically, if there were a combined visit or treatment limit individuals that have co-occurring disorders may not be able to use the same level of MH/SUD services they would have been able to use if benefits accumulated separately. In recognition of the positive beneficiary impact, we proposed and are finalizing in this rule to permit the MCO, PIHP, or PAHP to maintain separate quantitative treatment limitations, provided that any such limit for MH/SUD benefits is no more restrictive than the predominant limit applied to substantially all medical/surgical benefits in a given classification.

However, as noted in this section, to align with the MHPAEA final regulations, we are retaining the proposal that separate cumulative financial requirements will not be permitted. This is because we also believe that a unified cumulative deductible is also more beneficial for the beneficiary and is in recognition that

Medicaid programs generally do not have financial requirements that are cumulative, such as deductibles, and that financial requirements such as co-pays, which are common in Medicaid programs, do not typically include cumulative limits. While we recognize the potential for ABPs to include deductibles, we note that nearly all group health plans and insurers had eliminated the use of separate deductibles for MH/SUD benefits by 2011.<sup>6</sup>

*Comment:* A few commenters supported the proposal to follow the general approach in the MHPAEA final rule, but to allow entities subject to our proposed requirements to maintain separate accumulation of quantitative treatment limits. Commenters noted that unified quantitative treatment limitations that accumulate across entities would be very difficult for Medicaid managed care plans to administer, particularly if they do not have contractual relationships with other entities, and also supported that view that this provision is necessary to address the complex health needs of Medicaid and CHIP populations.

*Response:* We appreciate the comments in support of our approach.

As indicated in the response to comments, we are finalizing §§ 438.910(c)(3), 440.395(b)(3)(iii), 457.496(d)(3)(iii) as proposed.

#### *E. Compliance With Other Cost-Sharing Rules (§ 438.910(c)(4))*

States and the MCOs, PIHPs and PAHPs that contract with states are bound by the existing Medicaid and CHIP cost-sharing rules (§ 438.108 and part 457, subpart E). As previously indicated, the Medicaid program and CHIP are held to strict cost-sharing requirements for both managed care and non-managed care delivery systems. In the proposed rule, we emphasized that all financial requirements included in a MHPAEA analysis must also be in compliance with both existing cost-sharing rules and the requirements of this rule. Compliance with the parity requirements does not mean that a state, or MCO, PIHP or PAHP can violate existing cost-sharing requirements. Therefore, some cost-sharing structures in a state's Medicaid program or CHIP

may need to change to be compliant with the MHPAEA parity standards addressed in this rule. To clarify this, in § 438.910(c)(4) we reiterated that requirement with a cross-reference to the cost-sharing rules applicable to MCOs, PIHPs and PAHPs.

We received no comments on this specific proposal and are finalizing § 438.910(c)(4) as proposed.

#### *F. Nonquantitative Treatment Limitations (NQTLs) (§ 438.910(d), § 440.395(b)(4), and § 457.496(d)(4) and (d)(5))*

MCOs, PIHPs, PAHPs, ABP and CHIP state plans may impose a variety of limits affecting the scope or duration of benefits that are not expressed numerically. Nonetheless, such nonquantitative provisions are also treatment limitations affecting the scope or duration of benefits. As proposed and now finalized, §§ 438.910(d), 440.395(b)(4), and 457.496(d)(4) prohibit the imposition of any nonquantitative treatment limitation (NQTL) to MH/SUD benefits unless certain requirements are met. In addition, the proposed provisions and this final rule provide an illustrative list of NQTLs, including medical management standards; prescription drug formulary design; standards for provider admission to participate in a network; and conditioning benefits on completion of a course of treatment.

Under the MHPAEA final regulations at § 146.136(c)(4), a NQTL may not be imposed for MH/SUD benefits in any classification unless, under the terms of the plan (or health insurance coverage) as written and in operation, any factors used in applying the NQTL to MH/SUD benefits in a classification are comparable to and applied no more stringently than factors used in applying the limitation for medical surgical/benefits in the classification. For these purposes, factors mean the processes, strategies, evidentiary standards, or other considerations used in determining limitations on coverage of services.

We proposed to adopt the same approach to NQTLs in the application of parity requirements to Medicaid MCOs, PIHPs and PAHPs providing services to MCO enrollees, ABPs, and CHIP state plans. For states that are using a non-managed care delivery system for their ABPs and CHIP, the state (through its ABP and CHIP state plan) may only impose a NQTL on a MH/SUD benefit in any classification if it has written and operable processes, strategies, evidentiary standards or other factors used in applying—to MH/SUD benefits in that classification—the NQTL that are

<sup>6</sup> Final Report: Consistency of Large Employer and Group Health Plan Benefits with Requirements of the Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008. NORC at the University of Chicago for the Office of the Assistant Secretary for Planning and Evaluation. This study analyzed information on large group health plan benefit designs from 2009 through 2011 in several databases maintained by benefits consulting firms that advise plans on compliance with MHPAEA as well as other requirements.

comparable to or less restrictive and applied no more stringently than any processes, strategies, evidentiary standards, or other factors used in applying the limitation for medical/surgical services in that classification. The phrase “applied no more stringently” requires that any processes, strategies, evidentiary standards, or other factors that are comparable on their face be applied in the same manner to medical/surgical benefits and MH/SUD benefits.

We proposed and are finalizing in this rule an example of an NQTL regarding standards for accessing out-of-network providers. As discussed earlier, in the context of CHIP or ABPs that use a FFS delivery system or other non-managed care arrangement, absent a waiver, beneficiaries may choose from any qualified provider that has signed a Medicaid or CHIP provider agreement and are not limited to a network. In a Medicaid managed care environment, if a provider network is unable to provide necessary services covered under the contract to a particular enrollee, the MCO, PIHP or PAHP must adequately (and on a timely basis) cover these services out-of-network for the enrollee for as long as the MCO, PIHP or PAHP is unable to provide them in-network.<sup>7</sup> The proposed rule specified that the standard for providing access to out-of-network services (when they cannot be provided in-network) is considered to be an NQTL for the purposes of this rule. The proposed regulation stated that regulated entities providing access to out-of-network providers for medical/surgical benefits within a classification must use the same processes, strategies, evidentiary standards, or other factors in determining access to out-of-network providers for MH/SUD benefits within the same classification. As discussed further, we are revising the proposed regulation in this final rule for consistency with the general NQTL standard, to require that the factors used in determining access to out-of-network providers for MH/SUD benefits be comparable to and applied no more stringently than the factors used in determining access to out-of-network providers for medical/surgical benefits in the classification, rather than requiring that the *same* factors be applied to both sets of benefits.

Finally, the proposed rule provided that if MCOs, PIHPs or PAHPs, ABPs and CHIP State plans provided through managed care are found to be in compliance with § 438.206(b)(4), that would be evidence that they are in compliance with § 438.910(d)(3) and

§ 457.496(d)(5), although the state will want to review how the plan is doing this in practice. We noted that the additional example of a NQTL regarding out-of-network providers is not relevant for states that are using a non-managed care delivery system for ABPs and CHIP state plan, since providers must be enrolled in Medicaid or CHIP and would not be considered out-of-network. As discussed below, we are not finalizing this approach to deemed compliance in this final rule in §§ 438.910(d)(3) and 457.496(d)(5), and instead are clarifying that regulated entities must comply with both sets of requirements.

We included in the proposed rule the examples, which have been modified slightly for greater clarity below, to illustrate the operation of the requirements for NQTLs.

*Example 1. Facts.* A MCO requires prior authorization that a treatment is medically necessary for all inpatient medical/surgical benefits and for all inpatient MH/SUD benefits. In practice, inpatient benefits for medical/surgical conditions are routinely approved for 7 days, after which a treatment plan must be submitted by the patient’s attending provider and approved by the MCO. Conversely, for inpatient MH/SUD benefits, routine approval is given only for 1 day, after which a treatment plan must be submitted by the beneficiary’s attending provider and approved by the MCO.

*Example 1. Conclusion.* In this example, the MCO violates the NQTL provision of this rule (§ 438.910(d)) because it is applying a stricter NQTL in practice to MH/SUD benefits than is applied to medical/surgical benefits.

*Example 2. Facts.* A MCO applies concurrent review to inpatient care where there are high levels of variation in length of stay (as measured by a coefficient of variation exceeding 0.8). In practice, the application of this standard affects 60 percent of MH/SUDs, but only 30 percent of medical/surgical conditions.

*Example 2. Conclusion.* In this example, the MCO complies with the NQTL provisions of this rule because the evidentiary standard used by the MCO is applied no more stringently for MH/SUD benefits than for medical/surgical benefits, even though it results in an overall difference in the application of concurrent review for MH/SUDs than for medical/surgical conditions.

*Example 3. Facts.* A MCO requires prior approval that a course of treatment is medically necessary for outpatient medical/surgical and MH/SUD benefits and uses comparable criteria in

determining whether a course of treatment is medically necessary. For MH/SUD treatments that do not have prior approval, no benefits will be paid; for medical/surgical treatments that do not have prior approval, providers will only receive a 25 percent reduction in payments for these treatments from the MCO.

*Example 3. Conclusion.* In this example, the MCO violates the NQTL provision of this rule. Although the same NQTL—medical necessity—is applied both to MH/SUD benefits and to medical/surgical benefits for outpatient services, it is not applied in a comparable way. The penalty for failure to obtain prior approval for MH/SUD benefits is not comparable to the penalty for failure to obtain prior approval for medical/surgical benefits.

*Example 4. Facts.* A MCO generally covers medically appropriate treatments. For both medical/surgical benefits and MH/SUD benefits, evidentiary standards used in determining whether a treatment is medically appropriate are based on recommendations made by panels of experts with appropriate training and experience in the fields of medicine involved. The evidentiary standards are applied in a manner that is based on clinically appropriate standards of care for a condition.

*Example 4. Conclusion.* In this example, the MCO complies with the NQTL provision of the rule because the processes for developing the evidentiary standards used to determine medical appropriateness and the application of these standards to MH/SUD benefits are comparable to and are applied no more stringently than for medical/surgical benefits. This is the result even if the application of the evidentiary standards does not result in similar numbers of visits, days of coverage, or other benefits utilized for MH/SUDs as it does for any particular medical/surgical condition, so long as the outcomes are the result of consistent application of the guidelines.

*Example 5. Facts.* Training and state licensing requirements often vary among types of providers. An MCO applies a general standard that any provider must meet the minimum requirement related to supervised clinical experience under applicable state licensure laws to participate in the MCO’s provider network. State law requires master’s level general medical providers to have post-degree, supervised clinical experience; therefore the MCO requires all master’s level providers in its network (including mental health providers) to have post-degree, supervised clinical experience.

<sup>7</sup> See § 438.206(b)(4).

State law does not require master's level mental health therapists to have post-degree, supervised clinical experience; therefore the MCO requirement to participate in the network is effectively higher than state law for master's level mental health therapists.

*Example 5. Conclusion.* In this example, the MCO complies with the provision of this rule pertaining to NQTLs. The requirement that all master's-level providers (including mental health providers) must have supervised post-degree supervised clinical experience to join the network is permissible because the MCO is consistently applying the same standard to all providers, even though it may have a disparate impact on certain mental health providers.

*Example 6. Facts.* A state contracts with an external utilization review entity to review inpatient admissions for all beneficiaries participating in its ABP. All inpatient services in the ABP are delivered on a FFS basis. The state's utilization review contractor considers a wide array of factors in designing medical management techniques for both MH/SUD and medical/surgical inpatient benefits, such as cost of treatment; high cost growth; variability in cost and quality; elasticity of demand; provider discretion in determining diagnosis, or type or length of treatment; clinical efficacy of any proposed treatment or service; licensing and accreditation of providers; and claim types with a high percentage of fraud. Based on application of these factors in a comparable fashion, prior authorization is required for some (but not all) inpatient MH/SUD benefits, as well as for some (but not all) medical/surgical benefits. The evidence considered in developing its medical management techniques includes consideration of a wide array of recognized medical literature and professional standards and protocols (including comparative effectiveness studies and clinical trials). This evidence and how it was used to develop these medical management techniques is also well documented by the state's utilization review organization.

*Example 6. Conclusion.* In this example, the state and its utilization review contractor comply with the NQTL rules. Under the terms of the ABP as written and in operation, the processes, strategies, evidentiary standards, and other factors considered by the contractor in implementing the prior authorization requirement for MH/SUD inpatient benefits are comparable to, and applied no more stringently

than, those applied to medical/surgical benefits.

*Example 7. Facts.* A MCO provides coverage for medically appropriate medical/surgical benefits, as well as MH/SUD benefits. The MCO excludes coverage for inpatient SUD services when obtained outside of the state. There is no similar exclusion for medical/surgical benefits within the same classification.

*Example 7. Conclusion.* In this example, the MCO violates the NQTL provisions of this rule. The MCO is imposing a NQTL that restricts benefits based on geographic location. Because there is no comparable exclusion that applies to medical/surgical benefits, this exclusion may not be applied to MH/SUD benefits.

*Example 8. Facts.* A state's CHIP program requires prior authorization for all outpatient MH/SUD services after the ninth visit and will only approve up to 5 additional visits per authorization. For outpatient medical/surgical benefits, the state's CHIP program allows an initial visit without prior authorization. After the initial visit, benefits must be pre-approved based on the individual treatment plan recommended by the attending provider based on that individual's specific medical condition. There is no explicit, predetermined cap on the amount of additional visits approved per authorization.

*Example 8. Conclusion.* In this example, the state's CHIP program violates the NQTL provisions of the rule. Although the same NQTL—prior authorization to determine medical appropriateness—is applied to both MH/SUD benefits and medical/surgical benefits for outpatient services, it is not applied in a comparable way. While the state CHIP plan is more generous in the number of visits initially provided without pre-authorization for MH/SUD benefits, treating all MH/SUDs in the same manner, while providing for individualized treatment of medical conditions, is not a comparable application of this NQTL.

*Example 9. Facts.* A state provides an ABP that is compliant with EHB requirements, including the provision of MH/SUD services. The state aligns its ABP's outpatient benefits with those described in the state plan and applies the same prior authorization requirements. For outpatient MH/SUD services, prior authorization is required for each individual treatment session. In contrast, for outpatient medical/surgical services, a series of treatments is provided under a single authorization.

*Example 9. Conclusion.* In this example, the state's ABP design does not comply with the NQTL provisions

of this rule. Although the same NQTL—prior authorization to determine medical appropriateness—is applied to both MH/SUD benefits and medical/surgical benefits for outpatient services, it is not applied in a comparable way.

*Example 10. Facts.* A state's ABP requires preauthorization for all outpatient substance use disorder services. The state ABP does not require preauthorization for any medical/surgical services.

*Example 10. Conclusion.* The state ABP does not comply with the NQTL requirements in this rule. If a state ABP requires preauthorization for each outpatient SUD service it cannot remain in compliance if there is no comparable limitation on medical/surgical services.

*Example 11. Facts.* In cases where an MCO is unable to provide necessary outpatient services to a particular enrollee, the MCO requires that the enrollee must get prior approval in order to see any outpatient out-of-network provider. The MCO approves the use of an out-of-network provider for medical/surgical outpatient services if there is not an in-network provider within 10 miles of the person's residence. Approval of an out-of-network provider for outpatient MH/SUD services is only authorized if there is not an in-network provider within 30 miles of a person's residence.

*Example 11. Conclusion.* In this example, the MCO violates the NQTL provisions of this rule. The MCO is imposing a restriction that limits access to out-of-network providers. Although the same nonquantitative treatment limitation is applied to both the MH/SUD benefits and to medical/surgical benefits for outpatient services, it is not applied in a comparable way.

*Example 12. Facts.* A state contracts with MCO A to provide coverage for inpatient and outpatient mental health services to its Medicaid enrollees. MCO A requires prior authorization in person from MCO A's staff for all inpatient admissions for any mental health condition. The state provides medical/surgical benefits to its Medicaid enrollees through a separate MCO ("MCO B"). MCO B does not require prior authorization in person but instead provides that authorization for an inpatient admission may be obtained from MCO B over the phone. The in-person prior authorization process for MCO A imposes a higher administrative burden on providers than the telephonic prior authorization, and in many cases also involves a longer waiting period for approval.

*Example 12. Conclusion.* In this example, MCO A violates the NQTL provisions of this rule. The in-person

prior authorization requirement in MCO A applies to all inpatient mental health benefits whereas prior authorization may be obtained more easily and quickly over the phone for inpatient medical/surgical benefits in MCO B. MCO A is applying a stricter NQTL in practice to mental health and substance use disorder benefits than is applied to medical/surgical benefits.

*Example 13. Facts.* An MCO includes buprenorphine, a medication for treating opioid dependence, on its formulary. However, coverage is limited to one year total over a beneficiary's lifetime. The MCO does not apply this type of limit (a lifetime limit) to any other prescription drugs.

*Example 13. Conclusion.* In this example, the MCO violates the parity requirements for financial requirements and treatment limitations in this rule. The lifetime limit on coverage of this medication does not apply to substantially all medical/surgical benefits in the prescription drug classification.

*Comment:* A few commenters proposed additional, very specific criteria for determinations of whether a NQTL is applied to a given service. For example, one commenter suggested that the final rule stipulate that criteria including the following would justify the application of an NQTL to a MH/SUD service in a classification where similar NQTLs are not applied to medical/surgical services:

- Treatments involving multiple services per session, with an increasing likelihood of medically unnecessary services with the higher number of services per session;
- Services with highly variable rates of progress for individuals patients; and
- Services with highly variable treatment approaches among providers.

*Response:* We believe that the standards proposed and finalized in this rule and illustrated in the examples above in this section strike an appropriate balance between the need for clarity and the need to provide flexibility to regulated entities to determine the most effective way to structure the covered benefits: a NQTL may not be imposed for MH/SUD benefits in any classification unless, under the policies and procedures of the MCO, PIHP, or PAHP, or under the terms of the ABP or CHIP state plan, as written and in operation, any factors used in applying the NQTL to MH/SUD benefits in a classification are comparable to and applied no more stringently than factors used in applying the limitation for medical surgical/benefits in the classification. For these purposes, factors mean the processes,

strategies, evidentiary standards, or other considerations used in determining limitations on coverage of services. Therefore, we are not providing additional criteria for determination of whether an NQTL is applied to a given service. If questions arise about the appropriateness of criteria that are being used to apply NQTLs to MH/SUD benefits, we will consider whether additional subregulatory guidance or further rulemaking is needed.

*Comment:* Many commenters requested additional details to clarify what constitutes an NQTL and additional examples of typical parity violations. Most commenters also requested supplementary materials to provide further guidance, including information regarding typical violations as they are identified, along with regular and ongoing technical assistance to states and plans to help them implement the requirements of parity regarding NQTLs and to minimize the administrative burden related to this analysis.

*Response:* We clarify that all NQTLs imposed on MH/SUD benefits by regulated entities are to be applied in accordance with the requirements of this rule. We believe that the illustrative list of NQTLs provided in this final rule (§§ 438.910(d)(2), 440.395(b)(4)(ii), and 457.496(d)(4)(ii)) is sufficient to provide an understanding of the NQTLs that are commonly used in current health care practices. Given our attempts to align these provisions with the requirements of the MHPAEA final rules, we encourage interested parties to review guidance issued by Department of Labor (DOL), Department of Health and Human Services (HHS) and Department of the Treasury (Treasury) about application of the parity standards to group health plans and health insurance issuers. In addition, we will provide technical assistance to states regarding the implementation of these provisions and questions or issues that may arise. We will develop educational materials about the requirements of parity for Medicaid managed care, ABPs and CHIP programs, and about effective quality control strategies to ensure that managed care contracts include provisions that reflect best practices and promote quality of care in the context of parity. We will also identify and promote best practices and quality control strategies for states to help managed care organizations ensure that their benefits and service delivery strategies adhere to the requirements of parity.

*Comment:* Many commenters requested additional clarity on the

application of parity requirements to provider networks, including additional examples. A few commenters noted that the proposed regulatory language regarding access to out-of-network providers differed slightly from the language of the general rule for NQTLs. Proposed § 438.910(d)(3) provided that any MCO, PIHP or PAHP providing access to out-of-network providers for medical/surgical benefits within a classification, must use the *same* processes, strategies, evidentiary standards, or other factors in determining access to out-of-network providers for MH/SUD benefits. In contrast, for other NQTLs the proposed rule required only that the factors used in applying the NQTL to MH/SUD benefits be *comparable to* and applied no more stringently than factors used in applying the limitation to medical/surgical benefits in the classification.

*Response:* We have revised this requirement in the final regulatory language. This final rule has been revised to require that the factors used to apply the limitation to MH/SUD benefits be “comparable to” and applied no more stringently than the factors used in applying the limitation to medical/surgical benefits in the classification. This language is in alignment with the general NQTL standard. We believe that it will reduce administrative burden on regulated entities and simplify enforcement to apply the same standard to all NQTLs. This final rule clarifies that the types of factors used to apply the NQTL will depend on the nature of both the NQTL and the benefit, and that in some cases it may be appropriate to use the same factors to apply the NQTL for both medical/surgical and MH/SUD benefits, whereas in other cases there may not be a single factor or set of factors that can practically be applied to both medical/surgical and MH/SUD benefits, and instead factors that are comparable may need to be used.

*Comment:* Many commenters requested that the rule address access to in-network providers. Several commenters also requested clarification regarding the interplay between proposed § 438.910(d)(3) of the parity rule and § 438.206(b)(4) of the existing managed care rule. The parity proposed rule stated that a plan complying with the network adequacy requirements of § 438.206(b)(4) will be deemed in compliance with § 438.910(d)(3), but commenters noted that § 438.206(b)(4) does not stipulate the same requirements regarding parity in determining access to MH/SUD and medical/surgical providers. For this reason, commenters stated that finding

provider networks to be in compliance with parity based only on adherence to § 438.206(b)(4) would thwart the intent of the MHPAEA statute. Commenters also stated that it is unclear what the purpose of § 438.910(d)(3) is if it requires nothing more than compliance with existing law.

*Response:* We agree and in this final rule, we removed the provision to deem compliance with §§ 438.910(d)(3) and 457.496(d)(5) of this rule (regarding parity requirements for access to out-of-network providers) where an MCO, PIHP, PAHP, or CHIP state plan is found to be in compliance with the provider network standard found in § 438.206(b)(4). We clarify that compliance with § 438.910(d)(3) and/or § 457.496(d)(5) does not affect the requirement to comply with § 438.206(b)(4). We may provide additional guidance or technical assistance to states regarding the requirements of §§ 438.206(b)(4) and 438.910(d)(3) and 457.496(d)(5) if questions persist. In response to the comments requesting that the rule address access to in-network providers, we also note that §§ 438.910(d)(2)(iii) and 457.496(d)(4)(ii)(C) include the example of an NQTL pertaining to network design for MCOs, PIHPs and PAHPs with multiple network tiers because although network tiers may not be used to impose financial requirements or quantitative treatment limitations in Medicaid and CHIP, we recognize that MCOs, PIHPs and PAHPs may still use them in developing NQTLs. For example, the MCO, PIHP, or PAHP may use network tiers when recommending providers to enrollees, or how they structure their provider directories. MCOs, PIHPs and PAHPs with multiple network tiers should be constructing them and providing beneficiary access to them in a way that is consistent with the parity standard for NQTLs.

*Comment:* Many commenters expressed concerns about the ability of regulated entities to manage utilization of MH/SUD services under the proposed requirements. For example, one commenter requested that MCOs be provided the flexibility to require prior authorization of inpatient benefits for psychiatric admissions directly from emergency departments to ensure that enrollees have access to alternative crisis stabilization options, even where a parallel review is not needed for medical/surgical admissions.

*Response:* We disagree and we are finalizing this provision as discussed. The factors used to determine whether and when the use of prior authorization is appropriate must be comparable and

applied no more stringently for MH/SUD benefits than they are for medical/surgical conditions.

*Comment:* Some commenters raised concerns about situations where medical/surgical services are provided through FFS and MH/SUD services are provided by an MCO, PIHP, or PAHP. The commenters expressed concern that because FFS delivery systems typically use extremely limited NQTL management of benefits, the MCO, PIHP, or PAHP will not be able to use any strategies to manage the utilization of MH/SUD services.

*Response:* Under this final rule, states have the flexibility to offer benefits through a variety of service delivery systems, and to employ financial requirements, quantitative treatment limits, and NQTLs as appropriate in alignment with the requirements of this rule. As stated earlier, we do not apply mental health parity requirements to state plan services provided to beneficiaries covered only through a FFS or PCCM delivery system, even if care for other beneficiaries is delivered through a managed care delivery system. However, as indicated in our 2013 SHO letter, we strongly encourage states to consider changes to the state plan benefit package to comport with the mental health parity requirements of section 2726 of the PHS Act. Benefits provided to an individual enrolled in an ABP or CHIP program are subject to parity regardless of how they receive their services, as explained in sections G and I.

We understand there could be instances where an MCO enrollee receives the majority of his or her services through a FFS delivery system. In those cases, the MCO will still need to deliver any MH/SUD services in compliance with these regulations; even if that means that the ability to use NQTLs is limited. However, states that contract with MCOs typically use them to deliver a comprehensive set of medical/surgical benefits.

*Comment:* Some commenters noted that in some delivery systems, the use of multiple delivery options (MCO, PIHP, and PAHP) results in segmentation of management of the benefit amongst different delivery system mechanisms. For example, a state may provide outpatient mental health benefits through the MCOs for the first 20 visits per year, but provide all additional visits through the FFS system.

*Response:* In this situation, because coverage for the service remains available to the beneficiary, we do not believe that this arrangement constitutes a quantitative treatment limit. Any

requirements for prior authorization, concurrent review, or other NQTLs that are applied when the beneficiary begins receiving outpatient mental health services under FFS would be subject to the general parity analysis given this beneficiary is an enrollee of an MCO.

*Comment:* Some commenters requested clarification regarding the use of NQTLs for MH/SUD services where Diagnosis-Related Group (DRG) based reimbursement is used for medical/surgical services. Commenters stated that DRG-based reimbursement typically functions as an alternative to the use of NQTLs, and stated that it is not commonly used for MH/SUD benefits due to factors including higher variability in outcomes, lower predictability of length of stay, and related considerations regarding payment for MH/SUD services. Commenters questioned whether NQTLs may be used to manage utilization of MH/SUD services when DRG-based reimbursement is being used for medical/surgical services.

*Response:* The application of NQTLs to MH/SUD services is subject to the requirements of parity under this final rule. Thus, the use of concurrent review (a type of NQTL) for MH/SUD services in a classification would have to be based on processes, strategies, evidentiary standards or other factors that are comparable to and applied no more stringently than those used by the plan to determine when to use concurrent review for a medical service in the same classification. Some acceptable factors may include variability in outcomes and lower predictability in length of stay. In this scenario, the regulated entity would need to apply comparable criteria to medical/surgical services in a classification to determine whether to apply concurrent review to a MH/SUD service in that classification.

*Comment:* Many commenters recommended that no restrictions be allowed for MH/SUD medications that do not exist for medications used for medical/surgical treatment, including tiered drug formularies and other mechanisms used to limit access. Other commenters simply requested clarification regarding the application of the NQTL standard to prescription drugs, including formulary tiering standards that include off-label use. Commenters noted that Medicaid programs often impose limits on medications for MH/SUD, including limits on dosage, exclusion of certain medications used to treat SUD, lifetime limits on medications used to treat SUD, and complex initial prior authorization requirements.

*Response:* We note that all of these restrictions constitute quantitative or nonquantitative treatment limits that are subject to the parity analysis. However, we are not prohibiting the use of all quantitative or nonquantitative treatment limits for MH/SUD medications, as we believe these may be important tools for ensuring the appropriate management and delivery of effective MH/SUD treatments and services.

*Comment:* Many commenters requested that Medicare Part D standards be integrated into this final rule to ensure non-discriminatory access to medications used for the treatment of mental illness and substance use disorders.

*Response:* While we agree that beneficiaries should have access to appropriate medications used for their treatment of medical/surgical and MH/SUD conditions, MHPAEA does not mandate the coverage of specific treatments, services, or drugs, and instead governs the limitations imposed on benefits that are offered. We believe that existing protections in Medicaid and CHIP programs are sufficient to ensure non-discriminatory access to medications used for the treatment of MH/SUD conditions. We also note that prescription drug coverage standards under Medicare Part D arise from different statutory provisions, funding mechanisms, and program requirements, than Medicaid and CHIP programs, and therefore are beyond the scope of this final regulation.

*Comment:* Many commenters requested the inclusion of additional examples to demonstrate the application of NQTL requirements to provider reimbursement, noting that reimbursement rates affect the sufficiency of network adequacy, which can limit access to care. One commenter noted that Medicaid and CHIP inpatient general acute services are typically reimbursed using methods tied to diagnosis and severity rather than category of service, but that this reimbursement methodology is not typically used for MH/SUD services.

*Response:* Similar to the guidance provided in the MHPAEA final rule, we clarify that regulated entities may consider a wide array of factors in determining provider reimbursement methodologies and rates for both medical/surgical services and MH/SUD services, such as service type; geographic market; demand for services; supply of providers; provider practice size; Medicare reimbursement rates; and training, experience and licensure of providers. The NQTL provisions require that these or other factors be applied

comparably to and no more stringently than those applied for medical/surgical services, noting that disparate results alone do not mean that the NQTLs in use fail to comply with these requirements.

After consideration of the comments received and further analysis of the reasons described in the proposed rule, we are revising the provisions proposed in § 438.910(d)(3) and § 457.496(d)(5) by finalizing them without the language to deem compliance with § 438.910(d)(3) and § 457.496(d)(5) of this final rule (regarding parity requirements for access to out-of-network providers) where an MCO, PIHP, or PAHP is found to be in compliance with the provider network standard found in § 438.206(b)(4). We are also revising the provisions in §§ 438.910(d)(3) and 457.496(d)(5) to require that the factors used to apply the limitation to MH/SUD benefits be “comparable to” and applied no more stringently than the factors used in applying the limitation to medical/surgical benefits in the classification, rather than requiring that the “same” factors be applied to both sets of benefits. We are also finalizing a technical change in the punctuation and the placement of the word “and” in § 457.496(d)(4)(ii)(G) and (H) to increase clarity in the final rule regulation text. With the exception of these revisions, as indicated in the response to comments, we are finalizing the provisions regarding NQTLs at §§ 438.910(d), 440.395(b)(4), and 457.496(d)(4) and (5) as proposed.

#### *G. Parity for Mental Health and Substance Use Disorder Benefits in CHIP Programs Covering EPSDT (§ 457.496(b))*

Consistent with section 2103(c)(6)(B) of the Act, we proposed at § 457.496(b) to deem a separate CHIP compliant with mental health parity requirements if the state provides EPSDT in accordance with section 1905(r) of the Act. Proposed § 457.496(a) included a definition of EPSDT by cross reference to section 1905(r) of the Act, which specifies the scope of services and supports that must be provided as well as the medical necessity standard applicable to individuals entitled to EPSDT. However, to be deemed compliant with the mental health parity requirements, section 2103(c)(6)(B) of the Act also requires that a separate CHIP provide EPSDT benefits in accordance with section 1902(a)(43) of the Act. This requirement was not adequately addressed in the proposed regulation. Therefore, as discussed below in this final rule, we are modifying § 457.496(b) in the final rule

to reflect that compliance with the requirements at section 1902(a)(43) of the Act is also necessary in order for a separate CHIP to be deemed compliant with parity provisions. We are also revising several proposed definitions set forth in § 457.496(a) as discussed later in this section of the final rule.

We received the following comments on these proposed provisions.

*Comment:* The majority of commenters were generally supportive of the application of parity requirements related to mental health/substance use disorder (MH/SUD) benefits to CHIP. However, many commenters expressed concern about deeming CHIP programs compliant based solely on coverage of EPSDT benefits. In particular, they emphasized the need for greater oversight of states’ compliance with providing the full range of services included within the scope of EPSDT, citing lawsuits in which children enrolled in Medicaid allegedly have been denied access to MH/SUD treatment even though the state is required to cover MH/SUD services as part of the EPSDT benefit. Some commenters noted that a few separate CHIP plans indicate that they provide EPSDT benefits, but in fact, apply limitations or exclude benefits that must be covered under the EPSDT benefit in Medicaid. Commenters recommended that CMS scrutinize the coverage under CHIP to ensure that programs deemed compliant are in fact providing EPSDT benefits as defined under the Medicaid statute. Commenters were particularly concerned about the application of treatment limitations, including NQTLs, to MH/SUD benefits compared to medical/surgical benefits for children enrolled in separate CHIPs that cover EPSDT under the CHIP state plan. Some commenters suggested not providing for deemed compliance at all.

A few commenters were supportive of deeming separate CHIPs as compliant with MHPAEA strictly based on the state plan indicating that EPSDT benefits are covered for the population, and were opposed to considering other criteria, such as an examination of treatment limits, cost sharing, and NQTLs.

*Response:* We agree that EPSDT is a critical benefit that ensures children, adolescents, and young adults under age 21 have access to a comprehensive benefit package and other medically necessary services tailored to meet their needs. While we understand some commenters are concerned that implementation of EPSDT in Medicaid may not fulfill the requirements of the statute across all states, implementation of EPSDT in state Medicaid programs is

a compliance issue that is beyond the scope of this regulation.

However, we appreciate commenters' concerns that it is not sufficient that the state plan only indicate coverage of EPSDT under a separate CHIP in order to be deemed compliant with mental health parity requirements. We also agree with commenters that separate CHIPs that exclude benefits or place limits on benefits that are not consistent with the scope of EPSDT under the Medicaid statute should not be considered eligible for deemed compliance with mental health parity requirements. Section 2103(c)(6)(B) of the Act provides that CHIPs covering EPSDT benefits are deemed compliant with parity requirements under MHPAEA. Specifically, section 2103(c)(6)(B) provides that a separate CHIP which provides EPSDT benefits and services consistent with sections 1905(r) and 1902(a)(43) of the Act are deemed compliant with the mental health parity requirements, and we have retained that statutorily-prescribed policy in the final regulation.

Section 1905(r) of the Act requires states to provide screening and diagnostic services as well as any medically necessary health care services, or treatments covered under section 1905(a) of the Act needed to correct or ameliorate defects and mental and physical illnesses or conditions, regardless of whether the service is covered under the Medicaid state plan. This allows for a broad array of services to be available under EPSDT such as rehabilitative and therapy services, counseling, personal care services, immunizations, periodic comprehensive well-child checkups and screenings for vision, hearing, and dental care, even if not covered for adults under the Medicaid state plan. Section 1905(r) of the Act also requires states to provide screening services at intervals that align with periodicity schedules that meet reasonable standards of medical or dental practice. Section 1902(a)(43) of the Act requires states to provide and arrange for these medically necessary screenings, diagnostic services, and treatments, and to inform individuals under 21 in Medicaid about the availability of the full range of EPSDT services available to them. Separate CHIP programs that comply with these statutory requirements will be considered to provide "full" EPSDT in their separate CHIPs and will be deemed compliant with the parity requirements. Separate CHIPs that do not comply with all of the statutory requirements in sections 1905(r) and 1902(a)(43) of the Act will not be deemed compliant; compliance for these programs will be

based on satisfaction of the standards set forth in § 457.496.

In response to commenters' concerns that separate CHIPs will be deemed compliant with MHPAEA without providing the full scope of EPSDT benefits and supports, we are modifying § 457.496(b) of the final regulation to provide, with new language at paragraph (b)(1), that to be deemed compliant with the mental health parity requirements under § 457.496, a state must elect in its state plan to cover all EPSDT services required under section 1905(r) of the Act, as well as meet the informing and administrative requirements under section 1902(a)(43) of the Act and the approved State Medicaid plan. We are also adding new language at paragraph (b)(2) to require that the child health plan include a description of how the state will comply with the applicable Medicaid statute and the requirements of paragraph (b)(1)(i). The exclusion of services for particular conditions or diagnoses is also not permitted under section 1905(r) of the Act for individuals under 21 entitled to EPSDT services. Therefore, we have added a provision at § 457.496(b)(1)(ii) to preclude separate CHIPs from excluding any particular condition, disorder, or diagnosis under EPSDT benefits. We are also revising the meaning of EPSDT at § 457.496(a) to include references to both sections 1905(r) and 1902(a)(43) of the Act. We are not finalizing the proposed text that referred to "expansion of Medicaid programs" which we believe was confusing since the regulation applies only to separate CHIP programs.

In evaluating whether a state is fully compliant with the statutory requirements governing EPSDT benefits with respect to children enrolled in its separate CHIP, we will consider whether there are any outstanding compliance issues associated with the state's provision of EPSDT in its Medicaid program. While we recognize that in some states, the Medicaid and CHIP programs may not be identical and/or administered by different agencies, what is critical to be deemed compliant with the mental health parity requirements is that the provision of EPSDT in CHIP is compliant with the requirements in sections 1902(a)(43) and 1905(r) of the Act. For example, if a separate CHIP covers all benefits identified in section 1905(a) of the Act in accordance with the requirements set forth in section 1905(r)(5) of the Act, we would deem compliance with parity requirements in this final rule only if the separate CHIP also had procedures to inform individuals of the availability of those services, provide or arrange for

screening services, and assure necessary transportation as part of the administration of those benefits as required by section 1902(a)(43) of the Act.

States that elect to apply any type of NQTLs under their separate program must ensure that such limits are consistent with EPSDT requirements at section 1905(r)(5) of the Act. We will closely review states' NQTLs to ensure that they meet deemed compliance standards under § 457.496(b). For example, states will have the discretion to exclude some experimental services, and this type of NQTL would be unlikely to present a barrier to deemed compliance. Conversely, annual and lifetime limits are not consistent with Medicaid and/or EPSDT, and this practice would preclude a state from deemed compliance.

Finally, we have added paragraph (b)(3) to § 457.496 to be clear that if a state has elected in its state child health plan to cover EPSDT benefits only for certain children eligible under the state child health plan, the state is deemed compliant with this section only with respect to such children.

*Comment:* Some commenters recommended that the states should submit documentation beyond state plan assurances to show how they plan to meet parity requirements. Furthermore, commenters were concerned that separate CHIPs deemed compliant with parity regulations would apply NQTLs to MH/SUD benefits in a manner that is not comparable to or is more restrictive than the NQTLs applied to medical/surgical benefits.

*Response:* We will develop a state plan amendment (SPA) template for states to use in indicating how they will comply with the requirements of § 457.496. For states that report providing EPSDT, we anticipate asking them to attest that the full EPSDT benefits being offered to children in the separate CHIP, as described in section 1905(r) of the Act, are being provided in a manner that is compliant with section 1902(a)(43) of the Act.

States will also be required to affirm in their state plan that the processes, strategies, evidentiary standards, or other factors used in applying NQTLs to MH/SUD benefits are comparable to and applied no more stringently than those used in applying the limitation to medical/surgical benefits. As a part of the review process, we will work closely with states to ensure compliance with the parity requirements and assist states in their efforts to address any inconsistencies discovered during the review process.

*Comment:* Commenters expressed concern about how states not providing EPSDT in CHIP would document compliance with MHPAEA. One commenter asked for clarification about the assurances states will provide when submitting their CHIP state plan amendments to CMS.

*Response:* For CHIP programs that do not provide full EPSDT benefits (and therefore do not meet the deeming requirements), a full benefit and cost sharing analysis of the CHIP state plan must be conducted by the state to determine compliance with the parity standards in this final rule. The state's parity analysis must also include an examination of the processes, strategies, evidentiary standards, and other factors used in the application of NQTLs to MH/SUD benefits. The state must ensure these factors are comparable to and applied no more stringently than those used in applying NQTLs to medical/surgical benefits in the same classification. We will develop a state plan template to facilitate this analysis.

*Comment:* Another commenter expressed concerns about lack of current tracking of certain mental health benefits that are required under EPSDT because they are not reported on the CMS-416 form.

*Response:* The CMS-416 mandatory reporting form does not include a measure specific to any mental health screenings, diagnostic methods, or treatments. The CMS-416 is primarily focused on defining the number of children eligible for EPSDT, the overall number of screenings these children receive, and oral health and dental care measurements. However, section 401 of the CHIPRA required that the HHS Secretary develop a standardized set of measures for voluntary state use relating to a variety of topics within children's health. The initial Child Core Set was published in February 2011 and has been expanded to include measures specific to behavioral health. We will continue our efforts to collaborate with states to improve the quality of the behavioral health measures data. Additional information on the Child Core Measurement Set is available at <http://www.medicaid.gov/Medicaid-CHIP-Program-Information/By-Topics/Quality-of-Care/CHIPRA-Initial-Core-Set-of-Childrens-Health-Care-Quality-Measures.html>.

*Comment:* Many commenters recommended clarifying what medically necessary services separate CHIP programs are required to provide through EPSDT, such as home services and intensive care coordination.

*Response:* EPSDT is a required Medicaid benefit for categorically needy

individuals under age 21 that entitles these individuals to medically necessary services, as described in section 1905(a) of the Act, to treat physical or mental illnesses or conditions, whether or not these services are otherwise covered under the Medicaid state plan. Under section 1905(r)(5) of the Act, the EPSDT benefit includes services necessary to correct or ameliorate defects and physical or mental illnesses and conditions discovered by screening services. To be deemed compliant with the parity requirements under § 457.496(b) of the final regulations, the coverage of EPSDT under a separate CHIP requires the same scope of coverage that a child covered by Medicaid would receive—that is, a CHIP enrollee would have to be entitled to all benefits and services described in section 1905(a) of the Act if medically necessary and consistent with section 1905(r) of the Act. We believe that including a list of specific services that are required to be provided under EPSDT is outside of the scope of this regulation. Additional information on the scope of benefits required under the EPSDT benefit can be found in “EPSDT—A Guide for States: Coverage in the Medicaid Benefit for Children and Adolescents,” available at [http://www.medicaid.gov/medicaid-chip-program-information/by-topics/benefits/downloads/epsdt\\_coverage\\_guide.pdf](http://www.medicaid.gov/medicaid-chip-program-information/by-topics/benefits/downloads/epsdt_coverage_guide.pdf).

*Comment:* One commenter noted that applied behavior analysis (ABA) is another service that is considered a medically necessary service that must be provided under EPSDT.

*Response:* Whether or not a specific service is medically necessary for a particular child is beyond the scope of this final rule. However, we direct the commenter to the CMCS Informational Bulletin “Clarification of Medicaid Coverage of Services to Children with Autism” at <https://www.medicaid.gov/Federal-Policy-Guidance/Downloads/CIB-07-07-14.pdf>, and the frequently asked question issuance entitled “Services to Address Autism”, which discusses the provision of ABA therapy under EPSDT, available at <http://www.medicaid.gov/Federal-Policy-Guidance/downloads/FAQ-09-24-2014.pdf>.

*Comment:* Many commenters expressed concern that the exclusion of coverage for services related to specific diagnoses is not considered a treatment limitation under this rule. Commenters believed that excluding benefits for certain diagnoses or conditions would directly conflict with current Medicaid regulations that prohibit discrimination based on diagnosis and could lead to states not fulfilling their obligations.

Many commenters believed that states would view the proposed regulation as superseding current regulations. To avoid this confusion, many commenters suggested adding clarifying language that the proposed regulation does not trump the state's obligation to comply with current Medicaid regulations regarding discrimination based on diagnosis or other legislation such as the Americans with Disabilities Act (ADA). Other commenters recommended not including the exclusion in the final regulations.

*Response:* In this final rule we maintain the definition of “treatment limitation” set forth at § 457.496(a) in the proposed rule under which a permanent exclusion of all benefits for a particular condition or disorder is not a treatment limitation. This definition aligns with the definition of “treatment limitation” provided in the MHPAEA final regulations (the final rules applicable outside of Medicaid and CHIP, as defined in section II of this final rule). As previously discussed, we agree that states providing EPSDT benefits in their separate CHIP must be compliant with the all requirements associated with EPSDT in the Medicaid statute. Exclusion of treatment for any conditions is not permitted under section 1905(r) of the Act for individuals under age 21 who are enrolled in Medicaid, so if a separate CHIP excludes coverage for particular conditions, disorders, or diagnoses, that separate CHIP will not be considered as providing EPSDT benefits consistent with section 1905(r)(5) of the Act. Therefore, states which exclude treatment for particular conditions, disorders, or diagnoses cannot be deemed compliant with the mental health parity requirements under § 457.496(b) of the final regulations. In response to comments, we have added language in § 457.496(b)(1)(ii) to expressly provide that a separate CHIP cannot be deemed compliant with mental health parity requirements under the final regulation if it excludes benefits for a particular condition, disorder, or diagnosis.

In considering the comments received, we are finalizing the provisions proposed in § 457.496(a) with modifications to revise the definition of EPSDT benefits to specify that, for the purposes of § 457.496, EPSDT benefits means benefits defined in section 1905(r) of the Act that are provided in accordance with section 1902(a)(43) of the Act to mirror the statutory requirement in section 2103(c)(6)(B) of the Act regarding deemed compliance. Additional changes to proposed definitions in

paragraph (a) include the modification of “CHIP State Plan” to “State Plan” in order to use terminology consistent with existing CHIP regulations.

Furthermore, § 457.496(b) is being finalized with substantive changes and a technical change to clarify the standards which must be met to be deemed compliant with § 457.496, including the provision of all EPSDT benefits as defined in section 1905(r) of the Act, and compliance with requirements for providing EPSDT benefits in accordance with section 1902(a)(43) of the Act. Additional language is also being incorporated to clarify that the state plan must include a description of how the state will comply with the EPSDT deeming requirements in § 457.496(b).

#### *H. Availability of Information* (§ 438.915, § 440.395(d), § 457.496(e))

Under the MHPAEA final regulations at § 146.136 (d)(1), the criteria for medical necessity determinations made under a group health plan or health insurance coverage for MH/SUD benefits must be made available by the plan administrator or the health insurance issuer offering such coverage in accordance with regulations to any current or potential participant, beneficiary, or contracting provider upon request, in accordance with section 2726(a)(4) of the PHS Act. Under the same authority, the MHPAEA final regulations also require at § 146.136(d)(2) that the reason for any denial under a group health plan or health insurance coverage of reimbursement or payment for services for MH/SUD benefits in the case of any participant or beneficiary be made available, upon request or as otherwise required, by the plan administrator or the health insurance issuer to the participant or beneficiary. The proposed rule also addressed these issues.

We proposed to apply these disclosure requirements imposed on the health insurance issuer under MHPAEA and the MHPAEA final regulations regarding availability of information in a similar manner to MCOs and to PIHPs and PAHPs that provide coverage to MCO enrollees. As proposed and finalized in this rule in § 438.915(a), MCOs, PIHPs, and PAHPs subject to parity requirements must make their medical necessity criteria for MH/SUD benefits available to any enrollee, potential enrollee or contracting provider upon request. We proposed that MCOs, PIHPs, and PAHPs found to be in compliance with § 438.236(c), which requires dissemination by MCOs, PIHPs and PAHPs of practice guidelines to all

affected providers, and, upon request to enrollees and potential enrollees, will be deemed to meet this requirement. In addition, we proposed in § 438.915(b) to require MCOs, PIHPs, or PAHPs to make available the reason for any denial of reimbursement or payment for services for MH/SUD benefits to the enrollee. As noted in the proposed rule, § 438.210(c) already requires each contract with an MCO, PIHP, or PAHP to provide for the MCO, PIHP, or PAHP to notify the requesting provider and give the enrollee written notice of any decision by the MCO, PIHP, or PAHP to deny a service authorization request or to authorize a service in an amount, duration, or scope that is less than requested.

Although the statute that applies MHPAEA to ABPs does not include specific provisions regarding the availability of plan information, in the proposed rule we proposed to use our authority under section 1902(a)(4) of the Act to extend this provision to all ABPs, as well as those ABPs with services delivered through MCOs, PIHPs and all PAHP. This final rule retains this provision. At § 440.395(c)(1), we proposed that all states delivering ABP services through a non-MCO must make available to beneficiaries and contracting providers on request the criteria for medical necessity determinations for MH/SUD benefits. Similarly, § 440.395(c)(2) in the proposed rule required the state to make available to the enrollee the reason for any denial of reimbursement or payment for services for MH/SUD benefits. For the same reasons, using our authority under section 2101(a) of the Act, we proposed at § 457.496(e) to require disclosure, upon request, to any current or potential CHIP enrollee or contracting provider of the criteria for medical necessity determinations and to require that the reason for any denial of reimbursement or payment for MH/SUD benefits be made available to the enrollee. As proposed, the CHIP rule would also apply to managed care plans, so we included a provision in that proposal for deeming compliance with the parity disclosure requirement if the managed care entity complied with § 438.236(c) disclosure requirements. We also proposed for CHIP plans that other laws requiring disclosure would still apply.

The MHPAEA final regulations at § 146.136(d)(2) state that non-federal governmental group health plans (or health insurance coverage offered in connection with such plans) that provide the reason for claim denial in a form and manner consistent with the requirements of 29 CFR 2560.503–1 for

group health plans will be found in compliance with the MHPAEA disclosure requirements for denials.<sup>8</sup> The standards at 29 CFR 2560.503–1 do not themselves apply to Medicaid; we did not propose in this rule to make them applicable as a condition for deemed compliance because similar requirements are already applicable under existing law. MCOs, PIHPs, PAHPs and states are required to give a “reason” for any adverse benefit determinations under requirements for notices in, respectively, § 438.404 and § 431.210. The information provided in this disclosure of the reason for the adverse benefit determination must be made in compliance with these and all other provisions of applicable federal or state law.

For similar reasons, the proposed rule did not make claim denial requirements of 29 CFR 2560.503–1 a condition of deemed compliance for CHIP programs. CHIP enrollees have an opportunity for an external review of denials, reduction or suspension of health services under § 457.1130.

We requested comments on any additional provisions concerning the availability of plan information or notice of adverse determinations that may be necessary to facilitate compliance with MHPAEA for MCOs, PIHPs, PAHPs, ABPs, and CHIP.

*Comment:* Some commenters expressed concern that the requirements for MCOs, PIHPs, and PAHPs that are specific to parity compliance were less stringent than the disclosure requirements that apply to commercial plans under the final MHPAEA rule. The commenters recommended that the final rule be revised to set more specific standards for the release of medical necessity determinations.

*Response:* We disagree and believe the proposed rule set forth the same standards regarding availability of medical necessity information for MCOs and to PIHPs and PAHPs that provide coverage to MCO enrollees that are imposed on the health insurance issuer through section 2726 of the PHS Act and the MHPAEA final regulations. We proposed and are finalizing the regulation at § 438.915(a) to provide that MCOs, PIHPs and PAHPs subject to MHPAEA requirements must make their medical necessity criteria for MH/SUD benefits available to any enrollee,

<sup>8</sup> The requirements of 29 CFR 2560.503–1 are applicable to ERISA plans, as well as all non-grandfathered group health plans and health insurance issuers in the group and individual markets, through the claims and appeals regulations adopted under the Affordable Care Act. See 78 FR 68247 for a full discussion.

potential enrollee or contracting provider upon request.

*Comment:* Some commenters were concerned that the proposed rule did not have the same claims denial requirements as required for group health plans. The commenters recommended that CMS require MCOs, PIHPs, and PAHPs to provide the reason for a claim denial in a form and manner consistent with the requirements of 29 CFR 2560.503-1. In addition, some commenters suggested that CMS establish a firm timeframe for the release of such information and for the release of claims denials. Several commenters recommended that CMS establish penalties for Medicaid MCOs, CHIP plans and ABPs that fail to make plan information available in a timely and easily accessible manner.

*Response:* As we stated in the proposed rule, the provisions under 29 CFR 2560.503-1 do not themselves apply to Medicaid and CHIP and we did not see a reason to propose to extend those provisions to Medicaid and CHIP. There is a disclosure requirement applicable in Medicaid and CHIP. MCOs, PIHPs, PAHPs and states are required to give a "reason" for any adverse benefit determinations under requirements for notices in, respectively, § 438.404 and § 431.210. CHIP enrollees have an opportunity for an external review of denials, reduction or suspension of health services under § 457.1130. There are current rules that do require states to provide notice of adverse action within certain timeframes and (§ 432.211 and § 432.213). In addition, there is specific information that must be included in a notice of action to a beneficiary including: The action, reason for the action, right to appeal and the right to continue benefits pending the result of the appeal (§ 438.404). Therefore, we do not believe it is necessary or appropriate to adopt additional general disclosure standards in this rule.

*Comment:* Many commenters expressed concern that the proposed rule would not provide beneficiaries, providers and stakeholders with comparable information regarding medical necessity standards for medical/surgical service, and therefore, would not provide sufficient information to compare medical necessity requirements for MH/SUD against similar requirements for medical/surgical services. The commenters recommended the rule should specify that information about criteria used for making medical necessity determinations for comparable medical/surgical treatment should be

provided to plan beneficiaries and providers upon request.

*Response:* The current managed care rules § 438.236 do require Medicaid managed care plans to provide practice guidelines (including medical/surgical and MH/SUD) to enrollees and potential enrollees. Additionally, § 431.210 and § 438.404 require MCOs, PIHPs, PAHPs and states (for state fair hearings) to provide the reason for a denial. In addition, under § 438.404 beneficiaries can be provided medical necessity criteria for medical/surgical benefits as well as MH/SUD benefits. In addition, § 438.402 allows providers acting on behalf of beneficiaries to file a grievance to request and receive information.

In regards to CHIP, under § 457.1130 and § 457.1180, beneficiaries have the right to an external review related to health service matters and must receive a notice that includes the reasons why a determination was made. We believe these requirements allow beneficiaries to request and receive the necessary medical necessity information especially in terms of a denial to make a determination that access to the service is in compliance with these rules.

*Comment:* Some commenters expressed concern that transparency should not be predicated upon Medicaid and CHIP beneficiaries having the knowledge and wherewithal to request information from health plans after specific services have been denied. These commenters made several recommendations to improve this transparency. Some commenters recommended that plans be required to provide beneficiaries and, when appropriate, providers with written criteria for medical necessity determinations whenever requests for MH/SUD services are denied rather than requiring beneficiaries request this information.

*Response:* We agree that transparency is important and we would like to remind beneficiaries and providers that they can request that information at any time. However, providing written criteria for medical necessity determinations to all beneficiaries when services are denied may be overwhelming for all beneficiaries and may be administratively burdensome for states and MCOs, PIHPs and PAHPs. Therefore, we are not imposing a requirement in this final rule to provide beneficiaries and, when appropriate, providers with written criteria for medical necessity determinations whenever requests for MH/SD services are denied.

*Comment:* Commenters recommended that MCOs, PIHPs, and PAHPs should

be required to publish their medical necessity criteria for MH/SUD treatment and medical/surgical treatment on their Web sites and in other formats easily accessible to consumers, families, and treatment providers including requirements for persons with limited English proficiency or disabilities. Some commenters made other recommendations to improve health plans' transparency, including a request that MCOs, PIHPs, and PAHPs should be required to periodically publish information about denial rates for inpatient and outpatient MH/SUD treatment and denial rates for inpatient and outpatient medical/surgical treatment which would allow states to identify possible issues with parity compliance and to take necessary actions to ensure that the provisions of this rule are enforced.

*Response:* We believe that existing requirements in § 438.236 (governing the adoption, dissemination and application of practice guidelines by MCOs, PIHPs and PAHPs) as well as the requirements in § 438.10 mandating that member materials be provided in alternative formats is sufficient for providing the necessary information to beneficiaries. We also believe that the language in § 438.10 can be interpreted to include posting information on the Web site as that modality becomes more available to individuals enrolled in Medicaid. However, we would encourage states to post this information regarding practice guidelines on their Web site. We are providing technical assistance to states regarding the data and information that would be helpful to review to identify possible issues with plans' efforts to understand and comply with parity. Further, we believe that data regarding denial rates across classifications will be important information for states to analyze and determine if there are potential issues with complying with the provisions of this rule and taking corrective action when appropriate with their MCOs, PIHPs, or PAHPs.

*Comment:* Several commenters raised concerns that additional requirements regarding the availability of information could have unintended consequences. One example of such consequences included duplicating or complicating existing efforts to ensure transparency and adequate information to enrollees; another example suggested that additional requirements would make it more difficult for members to navigate the available information and could also divert plan resources away from Medicaid beneficiaries who were enrolled in managed care. Several commenters noted that current

Medicaid regulations already provide sufficient protections for Medicaid and CHIP enrollees regarding medical necessity determinations indicating that CMS already requires Medicaid MCOs to notify the requesting provider and/or give the enrollee written notice of any decision to deny a service authorization request or to authorize a service in an amount, duration, or scope that is less than requested. In addition, the commenters indicated that the Medicaid program already has disclosure requirements concerning the availability of plan information and notice of adverse determinations and those should be followed instead of increasing the administrative burden for states and plans by creating new requirements specific to parity. The commenters stated that creating additional or new requirements would increase the administrative and operational burden for both plans and states. One commenter recommended that if additional guidance was needed, subregulatory guidance, such as a State Medicaid Director Letter, could address some of the complexities around availability of information such as medical necessity and adverse determination notices. Another commenter recommended that CMS engage states, accreditation organizations, and Medicaid managed care plans to better understand activities already occurring before layering on additional monitoring requirements on states and plans.

*Response:* We believe that current Medicaid and CHIP regulations provide sufficient disclosure to current beneficiaries; the proposed regulation solidifies a provider's ability to obtain medical necessity information. The current provisions require MCOs, PIHPs or PAHPs to provide their medical necessity criteria for mental health and substance disorder benefits to beneficiaries and affected providers. We proposed and are finalizing § 438.915(a) that will require the plan administrators to provide such medical necessity criteria to any contracting provider. We believe that an affected provider in § 438.236(c) is consistent with this definition because given certain referral practices in place within an MCO, PIHP or PAHP; providers may need to understand practice guidelines for more than their area of expertise.

*Comment:* One commenter expressed concern regarding issues with sharing medical necessity criteria because the proposed provisions (and this final rule) require provision of medical necessity criteria or practice guidelines to enrollees and prospective enrollees as well as participating providers.

Specifically, this commenter recommended that CMS specify that licensed and proprietary criteria should not be made available unless such criteria are relevant to specific treatments or services and are requested by current or prospective insured patients, or healthcare providers with appropriate notice of disclosure of confidential and proprietary information.

*Response:* We agree with the commenter that this final rule requires information regarding the medical necessity criteria for specific treatments be made available upon request to current or prospective beneficiaries or health care provider; this final rule does not require that this information be more broadly disseminated to the general public.

*Comment:* Another commenter recommended that CMS require states to engage all stakeholders in an open and public process on the state's plans to comply with the parity requirements.

*Response:* While the regulation requires states to post information on their parity analysis on the state Web site, the proposed rule did not address stakeholder engagement regarding states' efforts to determine if MCOs or other delivery systems were parity compliant. Without prior notice and opportunity for comment, we do not believe it appropriate to finalize a requirement that states develop stakeholder engagement processes regarding their efforts to review compliance with the final regulation. However, we do encourage states to undertake these efforts and to include stakeholders as much as possible.

*Comment:* One commenter recommended that CMS require states to educate both beneficiaries and providers regarding any new benefit changes.

*Response:* We agree that beneficiary education is important which is shown in current managed care regulations under § 438.10. Section 438.10(f) currently specifies that enrollees must be notified of their benefits available under the MCO, PIHP or PAHP contract, how to obtain a prior authorization, how the enrollee can obtain benefits including benefits that are available under the state plan but not covered under the contract. Enrollees must be notified at the time of enrollment and also at any time a change to the benefits or processes listed here is considered significant.

*Comment:* Another commenter recommended CMS consider including, or clarifying, the ability of a Medicaid beneficiary to designate a personal representative with the legal authority to request information from the MCOs

regarding medical necessity criteria and the basis of service denials.

*Response:* Currently parents or legal guardians of children participating in the Medicaid or CHIP program may request the medical necessity criteria or receive information on service denials. Individuals that have a power of attorney for an individual would also have authority to make these requests. In addition, § 438.406(b)(4) provides that the enrollee and his or her representative must be included in the appeals process.

As indicated in the response to comments, we are finalizing the provisions regarding availability of information at § 438.915, § 440.395(d), § 457.496(e) as proposed with a technical change in § 457.496(e)(1) to use the term "deemed" in place of "determined." There was an oversight of an inconsistency between the corresponding Medicaid regulations at § 438.915 that has been corrected in this final rule.

#### *I. Application to EHBs and Other ABP Benefits (§ 440.395(c), § 440.395(e)(1))*

Section 1937(b)(6) of the Act, as added by section 2001(c) of the Affordable Care Act, and implemented through regulations at § 440.345(c) directs that ABPs that provide both medical and surgical benefits and MH or SUD benefits must comply with certain parity requirements. Further, ABPs must provide the 10 EHBs, including MH/SUD services. As states determine their ABP service package, states must use all of the EHB services from the base-benchmark plan selected by the state to define EHBs, consistent with the applicable requirements in 45 CFR part 156.

Section 1937 of the Act offers flexibility for states to provide medical assistance by designing different benefit packages, including other services beyond the EHBs for different groups of eligible individuals, as long as each benefit package contains all of the EHBs and meets certain other requirements, including parity provisions under section 2726 of the PHS Act.

While we did not request comment specifically on this section, we did receive many comments on ABPs. For the reasons set forth below, we are finalizing the proposed provisions at paragraphs (c) and (e)(1), with modification, which we describe below.

*Comment:* Several commenters remarked on various topics regarding the intersections between MHPAEA requirements and ABPs. Several commenters requested that we clarify if parity requirements differ by type of ABP such as ABPs that offer only state

plan benefits or ABPs that serve medically frail beneficiaries and have benefits that are more than the state plan benefits.

*Response:* Consistent with the proposed rule, the final regulation requires every approved ABP to meet parity requirements, regardless of the benefit package offered by the ABP. In final § 440.395, we address ABPs that are provided other than through a managed care delivery system and in final § 438.900 through § 438.930, we address ABPs that are delivered through MCOs, PIHPs and PAHPs. As noted throughout this rule, the parity standards are virtually identical in these different regulations.

*Comment:* Additional commenters noted that section 1937(b)(6)(B) of the Act specifies that ABP coverage providing EPSDT should be deemed compliant with parity.

*Response:* We agree with the commenter. We are therefore finalizing § 440.395(c) to implement the statutory deeming provision for ABPs.

*Comment:* Many commenters believed that CMS afforded states too much discretion regarding how parity analyses are conducted for EHB in ABPs and provided too little oversight of state processes used and how services are offered (that is, whether services are offered through managed care contracts or in fee for service (FFS) arrangements). Several commenters requested that CMS provide more structured requirements or a mandatory methodology for such analyses in ABPs; one commenter wanted CMS to conduct a comprehensive review of EHBs in all ABPs with special attention on intermediate behavioral healthcare services.

*Response:* We are not adding additional requirements or a mandatory methodology in this final rule with regard to our proposal that states oversee the parity analysis for EHBs in ABPs. This final rule provides that states have oversight responsibility for ensuring parity in ABPs, similar to their responsibility for ensuring parity in managed care contracts. However, we will provide technical assistance to states regarding the implementation of these provisions and questions or issues that may arise. This technical assistance may include the identification and promotion of best practices, tools, and/or other assistance for analyzing ABPs for compliance with the requirements of this rule.

*Comment:* One commenter noted that the proposed rule NQTL requirements for ABPs mirrors the requirements for group health insurance plans, offering

states flexibility in designing NQTLs on a benefit by benefit basis.

*Response:* We appreciate the commenter's feedback and agree this was the intent of the proposed rule and is maintained in the final rule.

*Comment:* One commenter asked CMS to confirm that § 440.396 Benchmark and Benchmark-Equivalent Coverage that was reviewed and approved by CMS has been determined to be in compliance with parity.

*Response:* We have reviewed all approved ABPs for parity compliance and states have attested to their compliance with MHPAEA in the ABP SPAs. New SPA applications that are submitted to create ABPs will be reviewed by CMS to determine if the plan complies with this final rule.

*Comment:* Many commenters requested clarification and examples about how parity applied to long term services and supports in ABPs for EHB. The commenters believe that many of the EHBs in ABPs include long term services and that the Affordable Care Act does not allow such long term benefits offered for SUD/mental health to be more restrictive than long term medical/surgical benefits.

*Response:* We have included long term services and supports in the definition of medical/surgical benefits, mental health benefits and substance use disorder benefits as such terms are defined and used in this final rule. (See section III.A. of this final rule for a more detailed discussion). Therefore, this rule is clear that parity standards apply to these services.

As indicated in the response to comments, we are finalizing the substance of the applicability standard as proposed in § 440.395(d)(1); we note that this provision is being designated as § 440.395(e)(1) in this final rule because of the addition of regulation text to address EPSDT in the context of ABPs and the parity requirements. In addition, a comma was added to this text (which follows the word "PAHP") for grammatical reasons. Further, we are finalizing regulation text, in § 440.395(c), to deem compliance with the parity provisions when an ABP covers EPSDT.

#### *J. ABP State Plan Requirements (§ 440.395(e)(3))*

We proposed to require states using ABPs to provide sufficient information in the ABP state plan amendment to assure and document compliance with parity provisions. The requirement was included in the proposed rule at § 440.395(d)(3) and is being re-designated as § 440.395(e)(3) in the final rule.

*Comment:* Some commenters stated that there is no stipulation in the preamble or proposed regulations that define a required methodology and/or documentation of the analysis to determine if an ABP complied with parity where ABPs are provided on a FFS basis. The commenters maintained that the state has no responsibility to the public to disclose its documentation of compliance other than providing sufficient information to CMS.

*Response:* To clarify, where ABPs are provided on a FFS basis, this regulation would require states to provide sufficient information in the ABP state plan amendment request to assure and document compliance with parity requirements. We will review the plan amendment to assure compliance with parity requirements and EHB anti-discrimination provisions.

We are finalizing this provision as proposed, with a different designation, at § 440.395(e)(3).

#### *K. Application of Parity Requirements to the Medicaid State Plan*

The provisions of section 2726 of the PHS Act that are incorporated through sections 1932 and 1937 of the Act do not apply directly to the benefit design for Medicaid fee-for-service and non-ABP state plan services. Under the proposed rule, the requirements would apply to the benefits offered by the MCO (or, as discussed above, if benefits are carved out, to all benefits provided to MCO enrollees regardless of service delivery system) but did not apply to all Medicaid state plan benefit designs; for states that did not use an MCO at all in connection with delivery of services, the proposed rule at § 438.900 through § 438.930 would have not been applicable. States that have individuals enrolled in MCOs and have MH/SUD services offered through FFS would, under the proposed rule, have the option of amending their non-ABP state plan to be consistent with the proposed regulations or offering MH/SUD services through a managed care delivery system (MCOs, PIHPs, and/or PAHPs) to be compliant with the proposed rules.

As noted in the proposed rule, for beneficiaries who are not enrolled in a MCO, and thus not covered by section 1932(b)(8) of the Act, this rule would not affect coverage (other than when the services are part of an ABP). However, we encourage states to provide state plan benefits in a way that comports with the mental health parity requirements of section 2726 of the PHS Act.

*Comment:* Many commenters expressed gratitude to CMS for including important language in the

proposed rule encouraging states to provide state Medicaid plan benefits in compliance with parity even when they are not required to do so under the MHPAEA or regulations. Many commenters supported application of parity requirements to all benefits for Medicaid managed care enrollees, including benefits that are provided by PIHPs, PAHPs, or FFS. Some commenters recommended that CMS work closely with states to ensure that all Medicaid beneficiaries have strong coverage for MH/SUD services.

*Response:* We will to continue to provide support and technical assistance to states to strengthen coverage of MH/SUD services for all Medicaid participants even when states are not required to do so through this rule.

*Comment:* Many commenters encouraged CMS to apply parity protections beyond what is required under federal law. The commenters indicated that CMS should encourage states to apply parity benefits equally for all Medicaid enrollees, regardless of whether they are enrolled in managed care, ABPs or traditional FFS. Some commenters were concerned that individuals being served entirely in the FFS environment are being denied the same protections as individuals who get some portion of their care through a managed care arrangement. The commenters maintained that the proposed rule did not promote a level playing field between managed care arrangements and FFS. In addition, the commenters stated that exempting Medicaid FFS from the proposed mental health parity requirements will create inequality in service delivery for Medicaid beneficiaries and could have serious implication for the viability of Medicaid managed care plans. A commenter suggested that requiring Medicaid FFS to comply with the parity requirements outlined in the proposed rule would allow for continuity of care, increased access to care and services, care coordination and improved quality of MH/SUD services for all beneficiaries.

*Response:* We acknowledge that this final rule does not provide the same protections to Medicaid beneficiaries receiving only FFS benefits as it does for those enrolled in MCOs. However, section 1932(b)(8) of the Act does not provide authority to apply parity protections to beneficiaries who are not enrolled in an MCO and section 1937 of the Act limits the application of parity requirements to ABPs.

While the provisions of this rule do not apply directly to the benefit design for Medicaid non-ABP state plan

services, the requirements would apply to all benefits provided to the majority of Medicaid participants because that majority of enrollees are MCO enrollees. The rule, as proposed and as finalized, imposes parity requirements in terms of the total benefits package provided to MCO enrollees, regardless of service delivery system. States that have individuals enrolled in MCOs and have MH/SUD services offered through FFS will have the option of amending their non-ABP state plan to be consistent with these regulations or offering MH/SUD services through a managed care delivery system (MCOs, PIHPs, and/or PAHPs) to be compliant with these final rules. We also encourage states that have some beneficiaries not enrolled in an MCO to offer these beneficiaries the protections afforded under parity.

*Comment:* Some commenters strongly suggested that CMS work with states and other interested parties to find alternative means to ensuring quality and access to MH/SUD services in states that have chosen to provide those services outside of a managed care product.

*Response:* As indicated above, the provisions of the Act impose parity requirements in limited cases. Therefore, we can only encourage states to take the necessary actions to apply parity to MH/SUD benefits for FFS beneficiaries. States can choose to maintain these services on a FFS basis in their state plan and make the necessary changes to their state plan to comply with this final regulation. Nothing in this final regulation prohibits states from including additional MH/SUD services in their state plan or in managed care arrangements.

*Comment:* Many commenters stated that CMS's proposed mental health parity rules impermissibly encroach on states' flexibility to decide how to operate their Medicaid programs. The commenters indicated that the various delivery system arrangements that states use will become significantly more complex and difficult to administer under CMS's proposal to apply the mental health parity standards to state plan services delivered outside of a Medicaid MCO. Specifically, in some states, the administrative complexity of applying the rules to services delivered outside of an MCO may drive behavioral health services into the MCO contracts to the detriment of a longstanding, publicly operated service delivery system. Another commenter indicated that requiring that all state plan MH/SUD services to be included in all MCO contracts diminishes the state's flexibility and ability to develop new

and innovative programs based on new evidence-based models. The commenter suggested that the state's flexibility to develop new models should be preserved.

*Response:* We disagree that the proposed mental health parity rules impermissibly encroach on states' flexibility to decide how to operate their Medicaid programs. We maintain that applying various parity provisions across the different delivery systems would allow states the most flexibility in designing delivery systems while ensuring that parity in coverage of medical/surgical and MH/SUD services is provided to MCO enrollees. Under this final rule, parity requirements apply to the entire package of services MCO enrollees receive, whether from the MCO, PIHP, PAHP, or FFS. If states carve out some MH/SUD services from the MCO contract and furnish those services by PIHPs, PAHPs, or through FFS, we are applying the parity requirements to the entire package of services MCO enrollees receive. Requiring the standards for parity to be applied to the overall package of benefits received by MCO enrollees will allow MCOs to comply with MHPAEA requirements without requiring inclusion of additional MH/SUD benefits in the MCO benefit package, as long as these MH/SUD benefits are provided elsewhere within the delivery system. In states where MH/SUD benefits are provided across multiple delivery systems (including FFS), states are required under § 438.920(b)(1) to review the full scope of benefits provided to MCO enrollees to ensure compliance with the parity requirements. As part of complying with this regulation, we expect states to work with their MCOs (or PIHPs and PAHPs) to determine the best method of achieving compliance with parity requirements for benefits provided to the MCO enrollees. Based on the commenter noting that services may be driven into the MCO and in light of our policy in this final rule, we reviewed the proposed § 438.920(b)(2) and discovered that proposed (b)(2) was written to indicate a state responsibility only when some services are carved out of the MCO. We finalize this rule without that limitation; all states, regardless of how services are delivered to MCO enrollees; have the responsibility to ensure that the program is in compliance with these requirements. We believe that because of this oversight requirement and the flexibility found in these final rules, the state should not have incentives to either move benefits into the MCO or

outside of the MCO for purposes of complying with these rules. Because of these reasons we are finalizing § 438.920(b)(2) in the final rule with revisions to require states to monitor the program in any instance where an enrollee is receiving benefits through an MCO.

For MH/SUD benefits offered through FFS, states would not necessarily be required to amend their non-ABP state plan to meet parity requirements, but could use their existing state plan or waiver services to achieve parity when individuals are receiving some benefits (whether MH/SUD or medical/surgical) from a MCO and also some benefits through FFS (or through PIHPs or PAHPs)). However, if a state did not have MH/SUD benefits in every classification in which medical/surgical benefits are provided across all authorities, the state would have to choose either to offer these services through a MCO, PIHP or PAHP or amend its state plan (or a waiver of its state plan) to include these benefits to achieve compliance with proposed § 438.920(a) and (b).

*Comment:* Several commenters indicated that the Medicaid statute provides that each Medicaid managed care organization shall comply with the mental health parity requirements. The commenters indicated that Congress did not mean for the statute to be interpreted the way it was in the proposed rule and that only individuals that received all of their services through the MCO would be subject to the requirements in these rules. The commenters stated that CMS acknowledges the Congress' intent, but nonetheless applies the mental health parity rules more broadly based on the section 1902(a)(4) authority to provide for methods of administration that are necessary for the proper and efficient operation of the Medicaid state plan. The commenters stated that CMS cannot use its section 1902(a)(4) authority to specify Medicaid methods of administration that are inconsistent with a clear congressional directive.

*Response:* We disagree that this rule is contrary to the purpose of section 1932(b)(8) of the Act. We also disagree that the authority of section 1902(a)(4) cannot be employed to link the delivery systems that would furnish MH/SUD services to individuals enrolled in a Medicaid MCO to ensure that enrollees in an MCO receive benefits that are consistent with the parity standards. To ensure that the goal of parity is met and avoid incentives to carve out all MH/SUD services from an MCO contract, we are requiring, through our authority in section 1902(a)(4) of the Act to specify

methods necessary for the proper and efficient operation of the state plan, that if MH/SUD state plan services are provided to MCO enrollees through a PIHP, PAHP, or under FFS Medicaid (because such services are carved out of the MCO contract scope), MCO enrollees will still receive the MHPAEA parity protections with respect to MH/SUD state plan services. We are committed to and agree with commenters' recommendations to work with states and other interested parties to ensure quality and access to mental health and SUD services in states that have chosen to provide those services outside of a managed care product.

*Comment:* Several commenters requested CMS to clarify in the final rule that only beneficiaries receiving both their MH/SUD and medical surgical benefits through a FFS delivery system are not provided parity protections.

*Response:* To clarify, the rule does not apply to Medicaid state plan beneficiaries who are not enrolled in an MCO, and thus, not covered by section 1932(b)(8) of the Act. However, this rule does apply to all beneficiaries enrolled in ABPs and CHIP, regardless of the benefit delivery system. We encourage states to provide all state plan benefits in a way that comports with the mental health parity requirements of section 2726 of the PHS Act.

*Comment:* A commenter recommended CMS develop a chart for beneficiaries, providers, authorized representatives and plans to explain which insurance arrangements must meet parity and which do not. The commenter indicated there is much confusion among beneficiaries about whether MHPAEA applies to such plans as Medicare, Department of Defense and Federal Employee Health Benefits Program.

*Response:* We appreciate the commenters' recommendations for CMS to provide further guidance to states on ensuring and applying parity requirements through all service delivery systems in Medicaid and CHIP programs, including to individuals receiving services as part of an ABP. We will be providing additional information and technical assistance to states and MCOs regarding this final rule. Medicare, Department of Defense, and the Federal Employee Health Benefits Programs are outside the scope of this rule.

*Comment:* A few commenters requested further guidance for ensuring parity for services authorized as part of a mental health rehabilitation and mental health targeted case management as a package of services and when

services needed outside of the package are referred to the MCO organization for prior authorization.

*Response:* In this final regulation we are requiring states to apply parity to all MH/SUD services offered in their non-ABP state plan for individuals that are enrolled in an MCO.

As indicated throughout this final rule, we are finalizing the overall scope of the parity requirements as proposed. Specifically, the parity requirements will apply to benefits provided to MCO enrollees (regardless of the delivery system of those benefits), to ABPs and to CHIP. As discussed in the responses to comment, § 438.920(b)(2) is being finalized with changes to require states to monitor the program in any instance where an enrollee is receiving benefits through an MCO.

*L. Scope and Applicability of the Final Rule (§ 438.920(a) and (b), § 440.395(e)(2), and § 457.496(f)(1))*

Sections 438.920, 440.395(d), and 457.496(f) of the proposed rule addressed the applicability and scope of the rule. Specifically:

- Section 438.920(a) proposed that the requirements of the subpart apply to delivery of Medicaid services when an MCO is used to deliver some or all of the Medicaid services; section 438.920(b) proposed state responsibilities when the MCO delivers only some of the Medicaid services. Section 438.920(b)(1) proposed that in the cases where some services are delivered outside of the MCO, the state must complete the parity analysis and provide evidence to the public. States completing the parity analysis must do so consistently with the parameters discussed in this rule, meaning they need to review the MH/SUD benefits to ensure they are included in the contracts with limitations or financial requirements that are no more stringent than the predominant limitations or financial requirements applied to substantially all of the medical/surgical benefits provided to the MCO enrollees. Under section 439.920(b)(2), we proposed that the state must ensure that MCO enrollees receive services in compliance with subpart K when the MCO did not provide all medical/surgical and mental health/substance use disorder benefits. Our proposal contemplated that these responsibilities could be met through appropriate reporting from the MCOs in order for the state to adequately oversee the program.

- Proposed § 440.395(d)(1) indicated that § 440.395 applied to ABPs that are not delivered through managed care.

- Proposed § 457.496(f)(1) indicated that § 457.496 applied to CHIP state plans, including when benefits are furnished under a contract with MCEs.

The tri-Department MHPAEA final rules state that if a group health plan or health insurance coverage provides MH/SUD benefits in any classification of benefits, MH/SUD benefits must be provided in every classification in which medical/surgical benefits are provided. Under our proposed amendments to part 438, for parity standards to apply, a beneficiary must be enrolled in an MCO, as defined in § 438.2, under a Medicaid contract. Enrollment in a PIHP or PAHP alone would not be sufficient for parity to apply if a beneficiary were not also enrolled in an MCO. The proposed rule noted that whether the MCO provides medical/surgical or MH/SUD benefits under that contract is irrelevant for the MCO coverage to trigger parity requirements.

While many Medicaid MCOs are contracted to offer benefits in each of the classifications of benefits described in this rule, there are other state-initiated “carve out” arrangements (for example, PIHPs, PAHPs, or FFS) in which the MCOs are only contracted to provide benefits in one MH/SUD classification, while PIHPs, PAHPs, FFS, or a combination of all three provide coverage of benefits in other classifications; the division of coverage might be across the classifications identified in § 438.910(b), § 440.395(b)(2)(ii), and § 457.496(d)(2) or might be based on the nature of services as medical/surgical services, mental health services or substance use disorder services. For example, MCOs in these carve-out arrangements could have contracts that include MH/SUD benefits in the prescription drug and emergency care classifications of benefits, but some or all of the MH/SUD outpatient or inpatient benefits may be covered instead through a PIHP, PAHP, or FFS delivery system.

In instances where the MH/SUD services are delivered through multiple managed care delivery vehicles, we proposed in § 438.920(a) that parity provisions apply across the managed care delivery systems; this rule was proposed to apply for managed care delivery in the Medicaid program and in CHIP. Coverage parity requirements would apply to the entire package of services MCO enrollees receive, whether from the MCO, PIHP, PAHP, or FFS. If states carve out some MH/SUD services from the MCO contract and furnish those services by PIHPs, PAHPs, or FFS, we proposed to apply the foregoing parity requirements to the entire

package of services MCO enrollees receive. Requiring the standards for parity to be applied to the overall package of benefits received by MCO enrollees allows MCOs to comply with these requirements without requiring inclusion of additional MH/SUD benefits in the MCO benefit package, as long as these MH/SUD benefits are provided elsewhere within the delivery system. In states where MH/SUD benefits are provided across multiple delivery systems (including FFS), we proposed in § 438.920(b)(1) that states would be required to review the full scope of benefits provided to MCO enrollees to ensure compliance with the requirements of this rule. We noted that we would expect states to work with their MCOs (or PIHPs and PAHPs) to determine the best method of achieving compliance with these parity requirements for benefits provided to the MCO enrollees. For MH/SUD benefits offered through FFS, states would not be required under the proposed rule to amend their non-ABP state plan to meet parity requirements, but could use their existing state plan or waiver services to achieve parity when individuals are receiving some MH/SUD benefits from a MCO (including PIHPs or PAHPs) and also some benefits through FFS. However, if a state does not have MH/SUD benefits in every classification in which medical/surgical benefits are provided across all authorities, the state would have to choose either to offer these services through a MCO, PIHP or PAHP or to amend its state plan (or a waiver of its state plan) to include these benefits to achieve compliance with proposed § 438.920(a) and (b). Applying various parity provisions across the different delivery system allows states the most flexibility in designing delivery systems while ensuring that parity in medical/surgical and MH/SUD services is provided to MCO enrollees. Given that there are many different delivery system configurations that carve out MH/SUD services, this allows compliance with parity requirements while reducing incentives for states to completely carve in all MH/SUD benefits to a MCO or carve out or terminate coverage of MH/SUD services.

In states where the MCO has responsibility for offering all medical/surgical and MH/SUD benefits, we noted in the proposed rule that compliance with our proposal would mean that the MCO is responsible for undertaking the parity analysis and working with the state on changes found to be necessary to the MCO contract for it to be compliant with parity

requirements. Underlying our proposal was an anticipation that states would need to include contract provisions in these MCO contracts to make sure they can see the results of the parity analysis completed by the MCO and have adequate oversight of the program to ensure that enrollees are receiving services in compliance with these rules so they can be in compliance with the rules as amended in § 438.920(b)(2). In states where some or all MH/SUD benefits are provided to MCO enrollees through PIHPs, PAHPs, or FFS, we proposed in § 438.920(b)(1) that the state would have the responsibility for undertaking the parity analysis across these delivery systems and determining if the existing benefits and any financial or treatment limitations are consistent with MHPAEA. The state, based on this analysis, would have to make the necessary changes to ensure compliance with parity requirements for its Medicaid MCO enrollees. We also proposed in § 438.920(b)(1) that the state provide documentation of its compliance with this analysis to the general public within 18 months of the effective date of this rule.

For ABPs and CHIP state plans, we proposed to require states to apply the provisions of this rule across all delivery systems to ensure that beneficiaries have access to MH/SUD benefits in every classification in which medical/surgical benefits are provided. If states offer services through an ABP or CHIP state plan with various delivery systems (managed care and non-managed care), the state must apply the provisions of the rule across the delivery systems utilized for its ABP and CHIP state plan. The proposed rule included an example of how the proposal would apply across the delivery system in Medicaid:

*Example 1. Facts.* A Medicaid MCO enrollee can access Medicaid benefits in the following way at any given time during their MCO enrollment:

- The MCO comprehensive benefits include inpatient medical/surgical benefits; outpatient medical/surgical benefits; emergency for medical/surgical and MH/SUD benefits; and prescription drugs for medical/surgical and MH/SUD benefits.
- The PIHP carve out benefits include inpatient MH benefit and the outpatient MH benefit.
- The PAHP carve out benefits include outpatient SUD benefits.
- The FFS system provides access to inpatient SUD benefits.

For purposes of this example, we assume there are no financial requirements or treatment limitations

imposed on any of the benefits in any of the delivery systems noted above.

*Example 1. Conclusion.* In this example, the MCO, PIHP or PAHP would not need to add any additional services to its benefit package because the MCO enrollee has access to MH/SUD services through PIHPs, PAHPs and FFS. The state is responsible for undertaking the parity analysis across delivery systems and making sure the coverage complies with parity requirements under § 438.920(a) and (b). The example would apply in the same way to a CHIP enrollee.

*Comment:* We received several comments regarding the proposal to apply the protections of MHPAEA to all MCO enrollees regardless of the delivery system for MH/SUD services. Most comments received were in support of CMS' interpretation and expressed that if CMS limited the protections of MHPAEA to apply only to the benefits provided by the MCO, this would not fulfill the intent of the law. In contrast, some commenters did not support CMS' interpretation and felt that the rule should require all services for both medical/surgical and MH/SUD conditions to be provided by the MCO, based primarily on the premise that it is easier to provide a level of care coordination that is appropriate for the needs of people requiring intensive levels of MH/SUD services if all benefits are provided by one entity.

*Response:* We appreciate the comments related to the application of this rule to all MCO enrollees regardless of how the MH/SUD services are delivered. We believe that our interpretation is in line with the intent of section 1932(b)(8) of the Act and allows the most flexibility to states to determine the best delivery system in their state. Therefore, we are maintaining this interpretation in the final rule. In any system that the state chooses, we recommend that the state pay close attention to the care coordination aspects of the program to ensure that medical/surgical services and MH/SUD services are coordinated and integrated to the greatest extent possible.

*Comment:* One commenter suggested CMS require parity compliance for all managed care entities that contract with a PIHP or PAHP to deliver behavioral health services. This would include primary care case management (PCCM) entities or providers.

*Response:* While we encourage states to apply parity broadly across the state plan and to any service delivery system, section 1932(b)(8) of the Act only applies MHPAEA parity requirements to MCOs; therefore, we cannot extend its

reach to services provided to beneficiaries who do not enroll with MCOs. In situations where a state uses a PCCM program to provide medical/surgical services and uses a PIHP or PAHP to provide MH/SUD services (meaning that the state does not use an MCO at all), the state would not be required to meet the requirements in part 438 this final rule. Similarly, accountable care collaborative models using managed FFS authority such as PCCM are not considered MCO contracts under the definition provided in § 438.2, and therefore, are not required to comply with part 438, subpart K. However, as noted above, we do encourage states to consider applying the MHPAEA protections to the state plan so that individuals using a PCCM will still benefit from provisions in this final rule.

*Comment:* Some commenters were unclear if parity requirements were applicable, and if so how those requirements would be applied, to section 1115 demonstrations and other waiver authorities. Commenters were concerned because many states use these programs to provide a variety of services to vulnerable populations or to treat specific behavioral health conditions, such as autism spectrum disorder.

*Response:* Parity requirements set forth in this final regulation apply to MCOs and ABP regardless of the authority a state employs for its Medicaid program. While we welcome Demonstrations and other Waivers that that seek better outcomes for beneficiaries in need of MH/SUD, we believe these parity requirements are necessary to provide adequate protections for beneficiaries enrolled in demonstration and waiver programs. Therefore, we will not approve any Waivers of the parity requirements set forth in this final regulation in a request for an 1115 Waiver.

*Comment:* We received several comments about who should be responsible for the parity analysis in varying situations. Some commenters believed that the state should be able to delegate the responsibility to other parties when using a carve-out system, such as the entities themselves or county agencies, whereas other commenters believed that the state Medicaid Agency should be the sole party completing the parity analyses, even in the case where the MCO is providing all medical/surgical and MH/SUD benefits within its contract. Some comments expressed concern that even in the case of a carve-out system, the MCO will end up needing to do the parity analysis, which commenters

believe will create delays in the 18-month timeline for compliance.

*Response:* We considered affording the state the option of choosing who would have responsibility for the parity analysis in situations when the MCO does not provide all MH/SUD services, but we were concerned about the timeliness and consistency of the parity reviews if the state was not responsible for this analysis under the regulation. Therefore, we are finalizing text in § 438.920(b)(1) to require the state to perform the parity analysis when the MCO is not providing all MH/SUD services to Medicaid beneficiaries; this is the scope and intent of the regulation text requiring states to review all services to ensure compliance with the rule and implicit in the requirement for the state to provide documentation of that compliance. The state may use third parties to gather information and make a preliminary parity analysis on its behalf, but the state must review and accept that preliminary analysis. And, the state will be responsible for providing documentation supporting compliance with these rules when submitting the MCO contracts to us for review and approval. To the extent that a state chooses to use contractor or other resources to complete the analysis, we would expect the state to answer any questions about the analysis and we will hold the state accountable for its accuracy and completeness.

When the MCO provides all medical/surgical and MH/SUD benefits, the statute imposes the parity compliance on the MCO. It is implicit in our final rule, at § 438.920(a), that the MCO perform the analysis in those circumstances. We believe that states should be aware of the timeframe for completing the parity analysis and the outcomes when the MCO does it to be sure the state oversees the delivery of benefits in a manner that is compliant with these rules, including implementing any appropriate contract changes. States should be sure to include contract provisions in their MCO contracts in these cases to be sure they get the necessary reporting during the 18-month implementation period.

*Comment:* One commenter stated that, in cases where an MCO does the parity analysis, the MCO could simply provide an assurance of compliance. This commenter noted that the proposed rule did not require the MCO to tell the state Medicaid Agency what changes needed to be made to their contracts, and that the state Medicaid Agency would need to determine those changes based on their regulatory oversight.

*Response:* While we agree that the final rule does not require specific

documentation from the MCOs when they complete the parity analysis, we believe that it would be in the interest of the states to require the MCOs to report the findings and the analysis that they complete. We encourage states to include contract provisions that they believe are necessary during the implementation period to get the information necessary to make changes to the contract that would demonstrate compliance with these rules. We are not including any additional regulatory reporting requirements in this rule as we believe states should be at liberty to collect the appropriate reporting they deem necessary for the oversight and implementation of their programs consistent with these requirements. We are available to help states consider contract language to achieve this if necessary during the 18 month transition period.

*Comment:* The proposed rule would have required states to provide documentation to CMS with their contract submission in cases where some or all MH/SUD benefits are provided to MCO enrollees through PIHPs, PAHPs, or FFS. We received several comments requesting guidance on what documents must be provided with contracts and state plan amendments to document compliance with the requirements of this rule. Some commenters requested that these documents be required to be submitted on an annual basis. Commenters also raised concerns about situations where the MCO provides the full scope of services, stating that an assurance of parity compliance from the state in these cases is insufficient and creates inconsistency in documentation of compliance requirements. Another commenter requested that CMS provide technical assistance to states as they complete their parity analyses in order to give "best practices" in determining compliance.

*Response:* We will provide technical assistance and tools for states and MCOs that clarify expectations around the types of documentation that must be submitted with the MCO contracts and ABP state plan amendments to demonstrate compliance with parity. MCO contracts are typically submitted on an annual basis, and should include materials that demonstrate that the state is confident in the parity analysis. We do not believe that the parity analysis needs to be completed on an annual basis if the state can show that the plans or state did not change their operations in a way that would affect compliance with this rule. We will use the submitted documentation as part of our MCO contract review and approval

process. As noted in a previous response, states should consider including provisions in their contract for MCOs to report on the outcome of the parity analysis to ensure that parity is achieved and can be overseen appropriately. States may want to consider requiring the MCOs to complete the analysis in a way that is consistent with how the state completes the analysis for its ABP or CHIP state plans.

*Comment:* We received some comments noting that, in the proposed rule, states were only required to review MH/SUD services to ensure the full scope of services meets the requirements. Commenters believed that states need to review both the medical/surgical criteria and the MH/SUD criteria to determine full compliance with this rule.

*Response:* We agree with the commenters, and in the final rule we have revised to § 438.920(b)(1) to provide that the state must review both medical/surgical and MH/SUD benefits provided to determine compliance with the final rules where in the proposed rule we only indicated that the state would review the MH/SUD benefits. States should consider including contract provisions in all MCO and applicable PIHP and PAHP contracts to achieve this requirement.

*Comment:* One commenter expressed concern over the term "scope of services," citing the fact that it has become a term of art within the context of parity and may be misconstrued when reviewing the regulation text in § 438.920(b).

*Response:* We appreciate that "scope of services" may have different meanings in different contexts, but we believe that for the purposes of this regulation, it is sufficiently clear that we mean the full set of benefits available to the Medicaid beneficiary.

*Comment:* We received several comments that requested that CMS require states to publicly report on the progress of compliance during the 18-month period between the publication date of the final rule and date of compliance, and to make sure states engage the public on the progress towards compliance with the requirements of this rule. Several commenters urged CMS to develop a common methodology for federal and state regulators to provide identifiable transparent information on parity compliance investigations to encourage uniform compliance practices. Commenters requested that CMS post the compliance plans on Medicaid.gov and on state Medicaid Web sites, and to closely monitor states on their progress.

*Response:* To make compliance information available to the public more quickly, and to simplify compliance deadlines across requirements for MCOs, ABPs, and CHIP, we have changed the date by which states must provide such information from 18 months from the effective date of the final rule to 18 months from the publication date of the final rule. Because the provisions of the final rule do not become effective until 60 days after publication, this change will ensure that information regarding states' compliance with this subpart becomes available to the public in a timely manner.

As specified in § 438.920(b)(1) of this final rule, states must make documentation available to the public within 18 months after the publication of this final rule about compliance with these rules; this means that states must report how they are complying in order to document compliance. We have clarified in the final regulation at § 438.920(b)(1) that this documentation must be updated when benefits change.

We do not require through regulation that states consult with stakeholders on how to comply with these rules because in doing so we believe we would have needed to specify how and when that public input process occurred which could create further delays in the implementation timeline, making it longer than 18 months. Although we are not requiring states to work with stakeholders and other public interests to determine the best way to comply with these rules, we believe that states will need to discuss options with stakeholders in their current delivery systems to be able to ascertain the best delivery system for any additional benefits that may be required. We also encourage states to have discussions with stakeholders other than their providers and plans to ensure they achieve compliance in the best way for their beneficiaries. We do not believe we also need to post the materials on Medicaid.gov, as states will be posting their documentation on their own Web sites. Posting on state Web sites is more targeted and would be more effective in facilitating discussions with the stakeholders in that state. We are not mandating the use of a common methodology for state oversight of parity compliance, given the diversity of approaches that states use to structure their treatment delivery systems, and given our desire to provide states flexibility to tailor their administrative processes to the context and needs in their state. However, as noted in other sections, we will make technical

assistance available to states that wish to discuss compliance strategies.

*Comment:* We received comments about the use of a Web site for the location of where states make the documentation of compliance available to the public. One commenter noted that the use of a Web site would be too administratively burdensome on states and questioned why this particular provision would be called out when others do not require to be posted on a state's Web site. Another commenter requested that CMS clarify in the text of the regulation that the state must use a Web site, noting that the proposed language only indicates that the state must make the documentation available but did not specify the location.

*Response:* We believe that the use of a Web site operated by the state is consistent with other managed care proposed rules and in line with other requirements. Therefore, we are modifying the regulation in this final rule to require, in § 438.920(b)(1), that the documents demonstrating compliance must be made available to the general public through the state's Web site.

As indicated in the response to comments here and in other sections, we are finalizing these provisions in § 438.920(a) and (b), § 440.395(e), and § 457.496(f)(1) as proposed with several revisions. We revised § 438.920(b)(1) to clarify that the state must review both medical/surgical and MH/SUD services delivered to MCO enrollees to determine compliance with the final rules and we revised § 438.920(b)(2) to clarify that the state needs to complete oversight to ensure enrollees receive services in compliance with these rules in every instance that there is an enrollee of an MCO. The requirements of § 457.496(f)(1) were also modified to require states to indicate in their state plan the standard used, such as state guidelines or the most current versions of the DSM or ICD, when classifying benefits into their respective category as a medical/surgical, mental health, or substance abuse disorder benefit. The intent of this requirement is to capture this information within the state plan in order to increase transparency and facilitate our understanding of the state's parity analysis during our review of their compliance SPA. Furthermore, the collection of this standard is consistent with the approach taken in CHIP to describe other required benefits provided in separate CHIPs. We are also finalizing § 438.920(b)(1) with a change in the date by which the state must publish the documentation of its compliance with part 438, subpart K

and a requirement for the state to update its analysis and documentation.

*M. Scope of Services (§ 438.920(c), § 440.395(e)(2), § 457.496(f)(2))*

In the proposed rule, we included provisions relating to the scope of the parity requirements for Medicaid MCOs and CHIP state plans that were similar to the provisions set forth in the MHPAEA final regulations (§ 146.136(e)(3)). Specifically, the proposed regulations did not require a MCO, PIHP, or PAHP to provide any MH/SUD benefits for conditions or disorders beyond the conditions or disorders that are covered as required by their contract with the state. For MCOs, PIHPs, or PAHPs that provide benefits for one or more specific MH conditions or SUDs under their contracts, the proposed regulations did not require the MCO, PIHP, or PAHP to provide benefits for additional MH conditions or SUDs. The proposed regulations did not affect the terms and conditions relating to the amount, duration, or scope of MH/SUD benefits under the MCO, PIHP or PAHP contract except as specifically provided in § 438.905 and § 438.910 of part K. For states providing benefits through ABPs, we clarified in proposed § 440.395(d)(2) (which is being re-designated as § 440.395(e)(2) in this final rule), that § 440.395 does not require a state to provide any specific MH/SUD benefits; however in providing coverage through an ABP, the state must include EHBs based on the applicable EHB reference benchmark plan, including the ten EHBs specifically required in § 440.347.

*Comment:* We received comments requesting that CMS strengthen its requirements around prescription drug coverage for MH/SUD conditions and require that the full range of mental health and addiction medications approved by the FDA must be covered.

*Response:* Under Federal Medicaid law, states are required to comply with the requirements of section 1927(g)(1) of the Act to the extent that they provide assistance for covered outpatient drugs under their Medicaid FFS programs or Medicaid managed care plans. Therefore, states are required to provide coverage of all drugs that meet the definition of covered outpatient drugs as outlined in section 1927 of the Act, when such drugs are prescribed for medically accepted indications, including those indicated for the treatment of mental health conditions and substance use disorders. Consistent with section 1927(d) of the Act, state Medicaid FFS programs and Medicaid managed care plans have the discretion to establish certain utilization

management techniques that include preferred drug lists and prior authorization processes for the coverage of covered outpatient drugs.

However, under the requirements of this rule, a regulated entity may not impose NQTLs (including prior authorization or other utilization management strategies) for drugs used to treat MH/SUD conditions unless any processes, strategies, evidentiary standards, or other factors used in applying the NQTL to the MH/SUD benefit are comparable to, and are applied no more stringently than, the processes, strategies, evidentiary standards, or other factors used in applying the limitation for medical/surgical benefits in the same classification. Similarly, under certain circumstances, regulated entities may apply different levels of financial requirements and treatment limitations to different tiers of prescription drugs and still satisfy the parity requirements. Regulated entities may subdivide the prescription drug classification into tiers based on reasonable factors as described in this rule and without regard to whether a drug is generally prescribed for medical/surgical benefits or for MH/SUD benefits.

*Comment:* We received a few comments that wanted CMS to encourage states to cover MH/SUD services through a broad range of providers as a way to ensure adequate access to services.

*Response:* Although we believe that this comment is outside the scope of this rule, we have issued guidance over the past several years and provided states with information to encourage access to mental health and substance use services, including clarifications regarding additional agencies and practitioners that can render MH/SUD services.

*Comment:* One commenter expressed concern with language at § 438.920(c)(1) that stated that MCOs are not required to provide any services beyond what is described in their contract. This commenter believed that this could provide a loophole for MCOs looking to reduce benefits.

*Response:* We included this provision based on the ability of the state to determine compliance with the requirements in Subpart K of 42 CFR part 438 across multiple delivery systems. If a state is using a PIHP, PAHP, or FFS benefits to comply with these rules, the MCO should not also have to provide additional benefits on the basis that its contract, on its own, does not comply with the requirements in this subpart. We believe that other areas of 42 CFR part 438 protect against

the MCO arbitrarily reducing benefits, most notably § 438.210, which provides that the MCO may not arbitrarily deny or reduce the amount, duration or scope of a required service solely because of the diagnosis of a beneficiary.

As indicated in the response to comments, we are finalizing the provisions regarding scope of services at § 438.920(c), § 440.395(e)(2), and § 457.496(f)(2) as proposed.

#### *N. Increased Cost Exemption*

The proposed rule did not include an increased cost exemption for MCOs, PIHPs, or PAHPs. However, the proposed rule did include changes to payment provisions in part 438 to allow states to include the cost of providing additional services or removing or aligning treatment limitations in their actuarially sound rate methodology where such costs are necessary to comply with the MHPAEA parity provisions. These proposed changes to the managed care rate setting process would give states and MCOs the ability to fully comply with these mental health parity requirements by giving them flexibility to provide services compliant with this regulation or remove or align service limits. We stated that the Medicaid program rather than the plan should bear the costs of these changes, and proposed to provide up to 18 months after the date of the publication of the final rule for states to establish compliance with the provisions of this final rule (see discussion in section P: “Applicability and Compliance”). This would allow states to take the actions to make the policy and budgetary changes needed for compliance. The proposed rule also excluded permission for states delivering services through an ABP or CHIP State plan to apply for a cost exemption due to the mandatory delivery of EHB and the requirement that ABPs be compliant with MHPAEA.

*Comment:* Many commenters agreed that an increased cost exemption for parity was not needed. The commenters supported building in increased costs associated with parity into the state’s rate setting structure. In addition, the commenters recommended that the regulation require a behavioral health medical loss ratio of 90 percent for clinical services, MH/SUD services and activities that improve health care quality in their MCO contracts. One commenter recommended that CMS allow cost exemptions for administrative expenses to MCOs in instances where states may not develop rates that adequately support the additional care management and

coordination required to ensure compliance with parity requirements.

*Response:* We affirm that this rule does not include an increased cost exemption for MCOs, PIHPs, or PAHPs. We do not expect Medicaid managed care entities to incur any net increase in costs because we are finalizing a provision stating that the costs of complying with parity requirements may be taken into account within an actuarially sound payment methodology. However, recommendations regarding requirements for medical loss ratios or reimbursement rates are beyond the scope of this final regulation.

*Comment:* Many commenters disagreed with denying states access to a cost exemption. The commenters maintained that MHPAEA allows group health plans and insurance issuers to seek a cost exemption, and the Medicaid statute specifies that the mental health requirements apply to Medicaid MCOs, ABPs, and CHIP “insofar as such requirements apply and are effective with respect to a health insurance issuer that offers group health insurance coverage,” or “in the same manner as such requirements apply to a group health plan.” The commenters explained that there was no basis for CMS to apply MHPAEA to Medicaid and CHIP, but then for CMS to refuse to apply MHPAEA’s cost exemption provision.

The commenters suggested that although MCOs may receive increased capitation payments to comply with the parity requirements in this final rule, there is still an increased cost for the state (and the federal government). In addition, the commenters indicated that it does not make sense to prevent ABPs from accessing the cost exemption simply because they must cover EHBs and must comply with parity requirements. The commenters reasoned that Federal law also requires commercial group plans to comply with MHPAEA, and it requires commercial small group and individual plans to cover EHBs, but that does not exclude them from seeking for a cost exemption under MHPAEA. The commenters applied the same logic to CHIP.

*Response:* As we proposed, we are not extending the cost exemption provision to MCOs, PIHPs, PAHPs, or states. We require MCOs to be paid on an actuarially sound basis, which would include the cost of adding services or removing or aligning treatment limitations in managed care benefits so long as those additional benefits are necessary to comply with mental health parity requirements. States have the ability to make changes to their

capitation payments during the course of the contract year to account for unexpected changes in benefits, costs, and utilization if they find that the assumptions included in the initial rate development are different than actual experience. This final rule authorizes states, in instances where they choose not to change their state plan, to include the cost of services that are necessary to comply with this rule but are beyond what is specified in the state plan into the development of actuarially sound rates. This is different from the circumstances of the commercial market and removes the rationale for an increased cost exemption for Medicaid MCOs, PIHPs, and PAHPs. States may also choose to use a risk mitigation strategy in their rates the first year(s) that the additional benefits are added to a MCO, PIHP, or PAHP contract. This would ensure that any over- or under-payments are reconciled at the end of the year and give the state a more accurate sense of the utilization of services for future years of rate setting.

As indicated in the response to comments, as proposed, we do not include provisions in the final rule for an increased cost exemption.

#### *O. Enforcement, Managed Care Rate Setting (§ 438.6(e)) and Contract Review and Approval (§ 438.6(n))*

Proposed § 438.6(e) allowed a state’s rate-setting structure to account for services covered by an MCO, PIHP, or PAHP in excess of services and/or treatment limits that are listed in the State plan if such services are necessary for the MCO, PIHP or PAHP to comply with this rule. However, the proposed rule only allowed the state to adjust its capitation rates to provide for additional services to the extent that these services would not be included but for the requirements of this rule.

Proposed § 438.6(n) required states to include contract provisions requiring compliance with parity requirements in all applicable MCO, PIHP, and PAHP contracts. We noted that we expected states, in order to comply with the proposal, to include a methodology for the MCO, PIHP, or PAHP to establish and demonstrate compliance with parity requirements within the contracts. This methodology would have to provide a mechanism for all MCOs, PIHPs, or PAHPs included in the delivery system to work together to ensure that any MCO enrollee in a state is provided access to a set of benefits that meets the requirements of this rule regardless of the MH/SUD benefits provided by the MCO. If it was not shown through the MCO contract itself that an enrollee has access to parity-compliant MH/SUD

services in each classification in which medical and surgical services are provided, the state would be asked to provide supplemental materials to the MCO contract or an amendment to the contract to demonstrate that the standards provided here are met.

If a state did not adequately demonstrate that an MCO's contract and practices are in compliance with the proposed rule, CMS proposed to defer federal financial participation (FFP) on expenditures for the MCO contract because compliance with section 1932 is a requirement for FFP payment under section 1903(m)(2)(A)(xii) of the Act. Where there are services outside of the MCO contract that are needed to demonstrate compliance, the state would be required to show how the MCO enrollees are provided all the services needed to comply with the requirements in this rule.

*Comment:* We received a number of comments in support of CMS's proposal to allow states to include the costs of coming into compliance with the requirements of this rule into the actuarially sound capitation rates paid to the MCO, PIHP or PAHP providing MH/SUD services under § 438.6(e). One commenter noted that CMS can use its review and approval of managed care contracts to ensure FFP is being used solely for state plan items and services and those services necessary to satisfy the parity requirements. Commenters further stated that they believe the costs of coming into compliance will be minimal, and over time may save money as timely access to MH/SUD services may reduce the need for costly emergency and crisis care. One commenter added that this was an opportunity for plans to enhance care coordination, to the extent that these requirements ensure access to a wider range of specialists than previously covered. Some commenters requested that CMS require states to include the cost of any additional services in § 438.6(e)(3) rather than providing states the option to adjust these rates. Other commenters believed that the language was too broad and CMS should follow the guidance issued in the 2013 State Health Official letter which encouraged states to make changes to their state plan. Finally, others thought that the language was sufficiently clear and strongly requested that CMS refrain from adopting more prescriptive language regarding what additional benefits may be included because it is clear that the services need to be included to ensure parity.

*Response:* We believe that allowing capitation rates to reflect additional compliance costs related to non-state

plan services was necessary for plans and states to meet the requirements of Subpart K when changes to the Medicaid state plan are not required by federal law. We do not agree that it is necessary to explicitly amend § 438.6(e)(3) as suggested by the commenter to achieve this result, because we believe it will be inherent in 438.6(n). If services are necessary beyond what is included in the state plan to ensure compliance with this rule, states and their actuaries must take the expected reasonable and appropriate cost of those additional services into consideration while setting actuarially sound rates. In addition, as noted in other areas of the rule, states have the flexibility to include those additional services either through the MCO, PIHP, or PAHP benefit package, or they can add them to the state plan by completing a state plan amendment. To make the payment rate adjustment under § 438.6(e)(3) a requirement could prohibit states from making changes to their state plan which could allow for a broader application of parity than is required through this rule.

*Comment:* We received several comments requesting model contract language that states can use to be able to demonstrate compliance with these rules. Contract language is requested to clarify which additional MH/SUD services plans would be required to provide when a carve-out approach is used, and to require states to reimburse the plan in an actuarially sound manner.

*Response:* Considering there are a number of different models the states can choose to demonstrate compliance, we would not be able to provide model contract language for every situation. However, we are working with a contractor to develop technical assistance materials, and we are available to states during the transition period if states would like to discuss their plans for compliance and possible contract language.

*Comment:* We received a number of comments requesting CMS to provide more clarity on what documentation it expects states to provide to show that it complies with the regulations when submitting MCO contracts.

*Response:* We will release subregulatory guidance around documentation that will be required to show compliance with these regulations. Additionally, we are working with a contractor to develop tools and provide technical assistance to states in completing the analysis of their delivery systems to ensure the benefit design and medical management

techniques meet the requirements of these rules.

*Comment:* We received some comments requesting CMS clarify its role in oversight of these regulations and urged CMS to improve enforcement in the commercial market, as well as for Medicaid and CHIP.

*Response:* Oversight of commercial products and compliance with the tri-Department MHPAEA final rules are outside the scope of this final rule.

As with other Medicaid MCO contracts and state plan amendments, we will review associated and relevant documents submitted by the state. This will include the review of the MCO contracts and SPA documents, as well as any documentation of the parity analysis the state has done to determine that their system and/or benefit design meet the requirements of this rule. States will be the primary oversight entity to ensure that services are delivered in compliance with these rules. Beneficiaries and/or stakeholders should first direct any issues related to compliance with this rule to the state. We are willing to accept complaints around compliance with this rule and we may discuss these issues with states to determine if any corrective actions need to take place.

*Comment:* There were several comments that CMS should specify that CMS, states, MCOs, PIHPs, and PAHPs pay particular attention to MH/SUD parity requirements for children and adolescents as a distinct population group. The commenters encouraged CMS and states, when assessing compliance with these rules, to obtain input on delivery of services from child and adolescent MH/SUD providers, including pediatric medical providers. In addition, the commenters strongly suggested CMS regularly monitor pediatric MH/SUD network adequacy, access standards for children and adolescents (including inpatient admission), EPSDT service coverage mandate and prior authorization criteria, data showing the number of reasons for child and adolescent denials, and pre- and post-utilization patterns by children of intensive home and community based services, and inpatient MH/SUD services.

*Response:* This final rule does not create specific oversight requirements for distinct population groups, nor does it provide for access reviews to needed services. States are required to ensure compliance with the requirements of this rule for all enrollees whose benefits are subject to this rule. However, we will provide technical assistance to states upon request to assist with the implementation of this rule. If questions

or confusion persist about the requirements of this rule for pediatric populations, we may provide tools or guidance to respond to those questions. CHIP and ABP programs that include full coverage of EPSDT, in the same manner as in regular Medicaid coverage, will be deemed compliant with this rule in accordance with the statutory authority. However, we will review a state's assurance carefully as a part of the CHIP or ABP SPA review process to ensure compliance with all EPSDT requirements, including the methods and procedures for implementing the EPSDT benefit. We also anticipate providing clarification through subregulatory guidance to states about the proper implementation of the EPSDT benefit. With regard to the comments on the issue of monitoring access to services that issue is outside the scope of this final rule. We are engaged in separate rulemaking to strengthen state and federal reviews of beneficiary access to needed services.

*Comment:* We received a number of comments that requested CMS strengthen its oversight role of the rate setting process to ensure that rates are set on an actuarially sound basis when services beyond the state plan are included. These comments included a variety of suggested approaches and requirements, including: Not requiring MCOs to cover additional services until actuarially sound rates are in place; greater transparency about how states will accommodate the additional costs of compliance in their rate setting approaches; requirements that rates be set based on the specific benefit set instead of a historical look-back; development of a template that translates service changes into rate-setting formulations; annual end-of-year reconciliations of the increased costs associated with the additional benefits added to be in compliance with this rule compared to capitation rates; requiring states to consult with MCOs to select appropriate proxy data prior to development of the capitation rates; or requiring a robust analysis of past and projected claims experience.

*Response:* We believe that these comments stem from a perceived lack of transparency on the rate setting process in general, and that the majority of these concerns are not specific to this rule. These issues are beyond the scope of this rule; we note that we are working to increase the transparency and oversight of Medicaid managed care rate setting. We believe that the suggestions included in the comments are all helpful, but that no single approach will be appropriate for all states, and therefore, decline to require a specific

methodology for including additional services required by parity into the capitation rates. States should work with their MCOs, PIHPs and PAHP as well as their actuaries when they develop their rates, which are required to be actuarially sound.

*Comment:* One commenter expressed concern that the rate setting provisions in this rule may limit states' ability to pursue innovation, and stated that states should remain free to continue to allow MCOs to provide additional non-covered services, in-lieu of covered benefits, or value added additional benefits with their savings.

*Response:* We do not believe that this rule limits a state's ability to pursue innovation by allowing MCOs to offer additional services not specified under the state plan or contract, commonly referred to as in-lieu of benefits or value added benefits. States and MCOs are still permitted to provide these benefits under this rule. This final rule only specifies that states must include the cost of additional benefits necessary for compliance with parity in the capitation rate development process. Comments about the rate setting process in general are outside the scope of this final rule.

*Comment:* CMS should articulate penalties for violations of parity and publish announcements about the remedies implemented and sanctions imposed to deter parity non-compliance.

*Response:* In the proposed rule and as remains in the final rule, where there are services outside of the MCO contract that are needed to demonstrate compliance, the state is required to show how the MCO enrollees are expected to receive all the services needed to comply with the requirements in this rule. States would be able to do this by providing evidence of the other services provided through a FFS system, or included in contracts with other types of managed care entities such as through a PIHP or a PAHP. We would also expect that the state provide the analysis that shows services provided through the MCO meet the requirements of this final rule. We clarify our intent that this demonstration would be a precondition to CMS approval of the MCO contract under § 438.6. If the state cannot provide evidence of this compliance outside of the MCO contract, then the state has not demonstrated that the contract complies with parity requirements and we will not approve the contract until evidence of compliance is provided. We may defer claims for FFP in expenditures for capitation rates paid based on unapproved MCO contracts in this circumstance.

*Comment:* Some commenters expressed concern about the potential to defer FFP on MCO contracts when a carve-out delivery system is in place and the MCO is not the party that is determined to be out of compliance. These commenters requested that in these cases states be required to continue to pay the contracting plan actuarially sound capitation payments.

*Response:* Payment obligations under contracts between the state and the MCO are governed by state law, and contracts are subject to CMS approval. States and plans will want to discuss payment arrangements to ensure both parties understand if and when payments to the MCOs may or may not be paid which could include instances where a compliance issue with these rules is discovered either in the MCO contract or another delivery system that the MCO enrollee receives services from.

*Comment:* Several commenters recommend that CMS instruct states to establish specific capitation rates for children and adolescents due to concerns about assuring network participation for appropriate providers for that age range, recognizing other pediatric providers not typically considered MH/SUD providers, and accounting for appropriate utilization of MH/SUD services through EPSDT in those specific rate cells.

*Response:* Current rules, at § 438.6(c)(3)(iii), require that when states set actuarially sound rates they must apply rate cells by eligibility category, age, gender, locality and risk adjustment or explain why they are not applicable. We do not require states to use a specific rate cell structure when developing their rates for MCOs, PIHPs, and PAHPs. States will want to consider all factors of their program when determining their rate cell structure and ensure that it is done in compliance with the managed care rules and in consideration of anticipated utilization of a benefit package in compliance with this final rule.

*Comment:* We received several comments about care coordination when states are using a carve-out system. This includes ensuring there is appropriate care coordination with providers of all types, including pediatric primary care providers, other managed care entities, and MH/SUD providers. Commenters urged CMS to consider care coordination as service costs to ensure they are included in the costs when developing actuarially sound capitation rates.

*Response:* Care coordination is typically considered part of the non-benefit costs when developing

actuarially sound capitation payments, though states have some ability to include care coordination as a service if they include targeted case management in the benefit package. When states develop their non-benefit costs, including care coordination, states should consider the costs directly related to providing the services covered by the contract. Additionally, when states include targeted case management as a benefit, they must adequately price the service. Requiring states to account for care coordination as a service is outside the scope of this regulation.

*Comment:* Some commenters requested that CMS provide additional guidance on care coordination with pediatric primary care providers and how states should require their plans to coordinate with these provider types.

*Response:* We do not believe there is any one way to provide appropriate care coordination for individuals with MH/SUD conditions. However, we do agree that when services are better coordinated and all providers caring for the individual are informed of treatment planning, the beneficiary is likely to have better outcomes. Therefore, we encourage states to include contract provisions to ensure that MCOs, PIHPs and PAHPs work to coordinate among themselves and with providers to deliver an integrated set of benefits to enrollees. For more detail regarding care coordination in a Medicaid managed care environment, please refer to § 438.208.

*Comment:* We received several comments requesting that CMS prioritize oversight and transparency in the delivery of services, including pharmacy services and formulary design/benefit tiering. Commenters requested that CMS carefully monitor claims data to quickly identify and remedy any problems.

*Response:* States provide the first level of oversight under this rule, and we expect states to monitor all aspects of service delivery to ensure compliance with this rule. We are always available for technical assistance to states for assistance in monitoring and if necessary to develop corrective action plans if issues are identified. In addition, we will review all areas of compliance with this rule, including whether the delivery of pharmacy services is compliant with parity requirements. As with other service classifications under this rule, states will be required to provide evidence that covered pharmacy benefits meet the requirements of this rule. We may consider using data reported through CMS claims and encounter data reporting systems to monitor service

delivery, and we will work with states if any issues are identified.

*Comment:* Some commenters expressed concern that plans and states may put in place additional administrative measures or limits on medical/surgical benefits as a way to comply with these rules. Commenters requested that we put in place a maintenance-of-effort provision, or a requirement that states and plans can only comply with this rule by reducing restrictions on MH/SUD services to ensure that plans are not able to use administrative processes to deny access to services.

*Response:* MCOs must provide benefits in the same amount, duration, and scope as the benefits offered under the state plan. States may have some restrictions on services provided under their state plan, particularly services that are optional. If a state chooses to reduce or restrict the amount, duration or scope of covered medical/surgical services it must do so through an amendment to its state plan. When reducing benefits in the state plan, a state must meet sufficiency requirements, so any reduction in medical/surgical benefits must be reviewed and approved by CMS. Consistent with the experience we have seen in the commercial market around reductions of benefits, we believe that states will not typically choose to go through the state plan amendment process to reduce medical/surgical benefits in order to make it easier for MCO coverage to meet the requirements of this rule. As some commenters noted previously, states may also realize savings over time because of increased access to MH/SUD services.

*Comment:* One commenter requested that CMS undertake an annual state-by-state analysis of benefit packages to determine that states and MCOs are in compliance with the requirements of this rule.

*Response:* Although we agree that regular monitoring of the provisions of this rule is important, we do not agree that this needs to be done on an annual basis. All managed care contracts must be reviewed and approved to be in compliance with these rules. However, mature programs do not make frequent changes in their operation that would cause them to come out of compliance with this final rule. We may ask a state to affirm that the delivery system is still in compliance at any time, including during the state plan amendment process and annual contract reviews; further we will undertake reviews as needed. However, states will be permitted to attest that there are no changes in benefit design or

requirements that affect parity compliance.

*Comment:* A few commenters requested that additional reporting requirements be included to increase health plan transparency and enhance enforcement for NQTLs.

*Response:* We believe that sufficient guidance exists regarding the recording of NQTLs in plan materials to provide transparency to beneficiaries and the public. We will make technical assistance available to states to help them develop strategies for providing proper oversight of parity requirements regarding the application of NQTLs to MH/SUD benefits.

*Comment:* One commenter requested that CMS require states to share with MCOs the methodology the state used to determine that the delivery system was in compliance with this rule.

*Response:* As states will be required to report publicly, under § 438.920(b)(1), how they are complying with the requirements in this final rule in cases where not all benefits are provided through the MCO, we believe that MCOs will be able to see the information just as other stakeholders do. As plans in that delivery system (such as MCOs, PIHPs and PAHPs) will be reporting information to the state for the state to complete the analysis, the plans will have an opportunity to discuss the methodology with the state to report information; we anticipate that discussions will occur as the nature and extent of the analysis will determine the nature and scope of the underlying data needed from plans. We do not believe our regulation should require states to share the methodology with the plans just as we are not requiring the MCOs to share their methodology with the state in instances where all benefits are provided through the MCO through this rule.

*Comment:* One commenter was concerned that CMS did not propose to include additional administrative funding within the capitated rate setting process to cover the costs of providing the additional services through the MCO, PIHP or PAHP.

*Response:* As part of an actuarially sound rate setting process, states should cover the costs of providing what is included in the contract. If a state believes that additional administrative funding is necessary on the part of the MCO, PIHP or PAHP to provide any additional services necessary to comply with this rule, those costs should be included as part of their regular rate setting process.

*Comment:* One commenter requested that CMS revise § 438.6(n) to state that contracts must “specify that services

must be provided in compliance with Subpart K” as opposed to requiring that they “ensure that enrollees receive services that are compliant with subpart K.”

*Response:* We agree that the use of “ensure” when discussing contract provisions is not consistent with other provisions in § 438.6 and that it is more appropriate to target the requirement on the provision, rather than the receipt, of services. To be consistent with the phrasing throughout § 438.6 and to address the commenter’s concern that a contract cannot ensure that appropriate services are received, we are finalizing § 438.6(n) with modifications to state that contracts must provide for services to be delivered in compliance with subpart K.

*Comment:* One commenter encouraged state departments of insurance to take a stronger role in monitoring parity compliance. For example, the commenter requested that a report be made to the state department of insurance when a plan has medical necessity criteria that are more stringent than generally accepted medical standards.

*Response:* We believe that states may choose to use a number of ways to monitor compliance with these rules. A state Medicaid agency may choose to use the state department of insurance to help monitor compliance, but we are not requiring this approach. It is not within the scope of this final rule to address how state departments of insurance may have a role in monitoring compliance by private insurers or group health plans with the tri-Department MHPAEA rules.

*Comment:* One commenter requested CMS postpone the application of these rules until there is an opportunity for stakeholders to comment on the combined impact of these changes with the proposed changes to rate setting requirements included in the proposed rule titled “Medicaid and Children’s Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, Medicaid and CHIP Comprehensive Quality Strategies, and Revisions Related to Third Party Liability” (80 FR 31098 through 31297).

*Response:* We do not believe that an opportunity for states and stakeholders to comment on the combination of these two proposed rules is needed. The changes proposed to Medicaid managed care rate setting in the proposed rule entitled “Medicaid and Children’s Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, Medicaid and CHIP Comprehensive

Quality Strategies, and Revisions Related to Third Party Liability” (80 FR 31098 through 31297) are intended to increase the overall transparency of the rate setting process and should not impact the specific provisions of this rule. We have included the rate setting provisions that are specific to compliance with parity standards in this final rule.

*Comment:* One commenter requested that CMS broaden the scope of the payment for services to MCOs so that it also includes payment to providers.

*Response:* We believe that payment to providers is addressed through our discussion of NQTLs in this rule. Payments for services are negotiated between the health care provider and the MCO, PIHP, or PAHP, and plans and providers have the autonomy to negotiate payment rates so long as they are adequate to cover services in an amount, duration and scope that is at least equal to what is provided in the state plan which is consistent with § 438.210.

As indicated in the response to comments, we are finalizing the provisions regarding enforcement and managed care rate setting at § 438.6(e) and the provisions regarding contract review and approval at § 438.6(n) as proposed, with the exception of the revision in § 438.6(n) to target contract requirements on the provision, rather than the receipt, of services.

#### *P. Applicability and Compliance* (§ 438.930, § 440.395(d), § 457.496(f))

The proposed rule noted that MCOs, PIHPs, PAHPs, and states would have up to 18 months after publication of the final rule to establish compliance with the provisions of the final rule before we would take enforcement action.

Specifically, we proposed as follows:

- *Managed care:* Although the requirements of MHPAEA have applied to Medicaid MCOs through section 1932(b)(8) of the Act since 2008, for Medicaid MCOs, PIHPs, or PAHPs with existing contracts, states would have to establish compliance with the specific provisions in this final rule no later than the beginning of the contract year starting 18 months after the publication of the final rule. New managed care contracts, or amendments, would be required to be compliant.
- *ABPs:* Although the requirements of MHPAEA have applied since January 1, 2014, states would have up to 18 months after the publication of the final rule to establish that its ABPs are compliant with provisions in the final rule.
- *CHIP:* The requirements of MHPAEA have applied to CHIP since

October 1, 2009, however, states would have up to 18 months after the publication date of the final rule for CHIP plans to establish compliance with provisions in the final rule.

*Comment:* Commenters recommended a range of timeframes for states to come into compliance with these final regulations from 6 months to 24 months. Many of these commenters suggested that states that illustrate that they are making a good faith effort at compliance should be granted an extension no matter what the final rule states in terms of timeline for compliance. Several commenters noted that they believed the 18-month timeline would be sufficient to come into compliance. One commenter noted that the rules lacked a timeline for CMS to complete its review and approval process for state compliance. Depending on policies and structures, states will need to conduct thorough policy analysis and may need state plan amendments, systems changes and contract revisions.

An overwhelming number of commenters urged CMS to shorten the timeframe for states to come into compliance with the parity rules. Many referenced the fact that the proposed rule comes more than 5 years after the MHPAEA parity protections were applied to MCOs in 2008. States have been aware since passage of MHPAEA that its requirements apply to Medicaid MCOs and CHIP programs. Additionally states have known that these requirements apply to Medicaid ABPs since the passage of the Affordable Care Act in 2010. Recommendations to CMS from these commenters proposed a range of 6 to 12 months for states to come into compliance with this final regulation.

Several commenters recommended to CMS that health plans and their subcontractors not be penalized as a result of a state Medicaid agency experiencing delays in implementing the final rule in the required timeline. Additionally, it was requested that CMS allow plans an additional six months after a state has completed the parity analysis and developed the necessary standards to come into compliance.

*Response:* We are finalizing § 438.930 with a modification from the proposed text; § 438.930, as finalized, states that contracts with MCOs, PIHPs, and PAHPs offering Medicaid state plan services to enrollees, and those entities, must comply with the requirements of this subpart no later than 18 months after the date of publication of this final rule. The proposed rule required such compliance no later than the beginning of the contract year starting 18 months after the date of publication of this final

rule. Because a contract year could begin just before the date of publication of this final rule, the proposed rule could potentially have allowed a plan an additional period of up to 12 months beyond expected compliance date (that is, roughly 18 months after the publication date of this final rule) before being subject to any CMS enforcement action. Therefore, this change responds to commenter concerns about delays in implementation by ensuring that necessary changes are implemented no more than 18 months after the date of publication of this final rule. This change also aligns the compliance date for MCOs, PIHPs, and PAHPs with the compliance dates proposed for ABPs and CHIP, finalized here in § 440.395(e)(4) and § 457.496(g). We note that it is common practice for states to amend MCO contracts mid-year, so we do not anticipate that it will cause an undue burden to states to make any needed changes to their MCO, PIHP, or PAHP contracts by the stated compliance date.

For ABPs and CHIP, we will finalize the proposed policy to allow 18 months from the publication date of this final rule for states to establish compliance with the provisions of this final rule. While we understand that many commenters believe that states and MCOs should be complying with parity given the statute and subregulatory guidance, we believe that the regulations will require states and plans to make additional changes to their benefits and how they manage these benefits. In addition, the major reasons for allowing states 18 months to establish compliance with these rules are still relevant, including states' ability to get the necessary information to perform the parity analysis across delivery systems. As noted in other sections of the preamble, we may decline to approve MCO contracts and defer FFP if the state cannot establish that the benefits and delivery system are compliant with these rules. States may want to consider including penalties in their contracts if it is found that one of the managed care plans is the reason for the non-compliance.

*Comment:* Many commenters suggested that CMS include in the final rule language describing the CMS process for review and oversight of state attestations of compliance including benchmarks for states to follow for complying with this final regulation. The commenters recommended that benchmarks include the state's actions to bring coverage into compliance with the final regulation. Recommended actions included having all MCO contracts implemented or renewed prior

to the deadline in order to fully comply, ensuring that all FFS CHIP and ABP coverage meets parity and that states have taken all steps for compliance except some of the more time consuming steps such as renegotiating MCO contracts or passing authorizing legislation.

*Response:* We understand the utility of providing states with guidance about the states' role in ensuring that compliance is achieved in a timely manner. We have procured a contractor to provide technical assistance as requested by the states that may include toolkits or guidance regarding the creation of a parity implementation plan.

As indicated in the response to comments, we are finalizing the provisions regarding applicability and compliance at § 438.930, § 440.395(d), § 457.496(f) as proposed, with two exceptions. First, we are finalizing the ABP compliance provision with a different paragraph designation, § 440.395(e). Second, we are modifying the MCO compliance provision to align with the timing in final § 440.395(e) and § 457.496(g), applicable to ABPs and CHIP respectively.

#### *Q. Utilization Control*

Current Medicaid regulations concerning utilization control include requirements for the review of need for admission into mental hospitals (§ 456.171). These regulations specifically require medical and other professionals within the Medicaid agency (or its designee) to evaluate each beneficiary's need for admission into inpatient services in a mental hospital. There is not a similar requirement for the Medicaid agency to review each beneficiary's medical/surgical admission to other hospitals. States have indicated that this regulation presents challenges to achieving parity for inpatient services rendered in a mental hospital. We proposed to eliminate § 456.171 (namely, the current regulatory language that requires Medicaid agencies to evaluate each applicant's or beneficiary's need for admission into inpatient services in a mental hospital by reviewing and assessing the hospital's medical, psychiatric and social evaluations). A state could continue these evaluations, but would have to ensure that the standards and processes are consistent with the provisions in this regulation regarding nonquantitative treatment limits when parity requirements under this rule are applicable.

*Comment:* Several commenters supported the elimination of the requirement at § 456.171 regarding the

Medicaid agency review of the need for admission to a mental hospital. The commenters supported the elimination of required review for inpatient admissions because the requirement would be inconsistent with the proposed rule's provisions that utilization management techniques need to be applied in a comparable and no more restrictive manner with respect to mental health and substance use services as compared to medical/surgical services.

*Response:* This final rule removes the Medicaid regulation at § 456.171 which prescribed requirements for medical and other professionals within the Medicaid agency (or its designee) evaluating the need for admission of each applicant or beneficiary into inpatient services in a mental hospital. The Medicaid agency (or its designee) was required to review and assess the hospital's medical, psychiatric, and social evaluations. There was not a similar requirement for the Medicaid agency to review the hospital's evaluation of each applicant's or beneficiary's need for medical/surgical admissions. As a result, this requirement presented a challenge to achieving parity for inpatient services rendered in a mental hospital.

*Comment:* Some commenters opposed the elimination of the requirement at § 456.171. Specifically, the commenters believed in the importance of this pre-admission evaluation to protect individual rights, which is also required under state law. The commenters recognized that the proposed rule allowed states to continue these evaluations as long as the standards and processes for nonquantitative treatment limitations are also met, but were concerned that this may prove difficult to impossible to do. The commenters were concerned that removing the ability for appropriate evaluation of inpatient admissions could remove a certain level of protection for the individual that the regulation currently provides.

Another commenter recommended against the elimination of evaluations of medical necessity of inpatient psychiatric hospital admissions proposed within the proposed regulations. The commenter maintained that the elimination of these evaluations could compromise states' and MCOs' ability to ensure that the services provided are necessary and appropriate within the context of the entire spectrum of behavioral health care provided within the state.

*Response:* This final rule eliminates the requirement at § 456.171. Eliminating this requirement will still allow states to evaluate individuals

need for admission to inpatient psychiatric facilities. However the factors used in states' reviews of the inpatient hospital evaluations for admission must be comparable to and applied no more stringently than factors used in applying the limitation for medical surgical/benefits in the classification. As stated in this final regulation, factors mean the processes, strategies, evidentiary standards, or other considerations used in determining limitations on coverage of services. The phrase "applied no more stringently" requires that any processes, strategies, evidentiary standards, or other factors that are comparable on their face be applied in the same manner to medical/surgical benefits and MH/SUD benefits.

*Comment:* One commenter recommended removing the federal preadmission requirement from 42 CFR part 441 Subpart D, Inpatient Psychiatric Services for Individuals Under Age 21 in Psychiatric Facilities or Programs. In addition, this commenter requested CMS use precise language to avoid confusion and misperceptions that Institution for Mental Disease (IMD) exclusion does not apply to children under 21.

*Response:* To clarify, the final rule does not make changes to the certification of need and other requirements applicable to the Inpatient Psychiatric Services for Individuals under Age 21 benefit described at § 440.160 and Subpart D § 441.150 through 441.182. The Inpatient Psychiatric Services for Individuals under Age 21 benefit remains an exception to the IMD exclusion.

As indicated in the response to comments, we are finalizing the removal of § 456.171 as proposed.

#### *R. Institutions for Mental Disease*

The IMD exclusion is a statutory prohibition on providing Medicaid matching funds for services provided to individuals aged 21 to 64 who are inpatients in IMDs. IMDs are defined in statute as any hospital, nursing facility, or other institution of more than 16 beds, that is primarily engaged in providing diagnosis, treatment, or care of persons with mental diseases, including medical attention, nursing care, and related services. This exclusion has been in place since Medicaid was established in 1965 and was based on amendments to the statute that predated Medicaid and prohibited cash assistance payments for services for individuals in IMDs. The proposed regulation did not address the IMD payment exclusion. We received several comments on the applicability of this

regulation on our IMD payment policy. While we understand commenters' concerns, we are not making changes to this rule on this topic for the reasons set forth below.

*Comment:* Many commenters suggested that CMS revisit IMD policies. The commenters stated that the Medicaid payment exclusion for services in IMDs is a barrier to equitable access to inpatient behavioral health services. The commenters indicated that federal action is needed to remove this obstacle to parity and ensure Medicaid programs can meet the needs of beneficiaries with mental health and substance use disorders across the continuum of care. Several commenters recommended that CMS pursue congressional action to repeal or grant exceptions to the IMD exclusion for psychiatric patients admitted emergently to acute, short-stay psychiatric hospitals regardless of their bed size. A few commenters recommended that the final rule should clearly state that the IMD exclusion does not or should not apply to SUD residential or detoxification services or psychiatric patients admitted to crisis stabilization or other short-term residential rehabilitation services regardless of bed size. Another commenter indicated that the IMD exclusion precludes providers from creating specialized, centers of excellence for treating mental health and substance use disorders when 24-hour care is needed.

*Response:* The text following section 1905(a)(29) of the Act provides that FFP is not available for any medical assistance under title XIX for services provided to an individual ages 21 to 64 who is a patient in an IMD facility. Under this broad exclusion, FFP is generally unavailable for the cost of services (regardless of whether the services address physical or mental health) provided either inside or outside the IMD while the individual is a patient in the facility.

*Comment:* Several commenters were concerned about the IMD exclusion from a parity standpoint because there is no comparable restriction for medical/surgical benefits, and therefore, the exclusion unnecessarily serves to limit access to services based upon a quantitative restriction. Other commenters requested guidance about how to apply the IMD exclusion alongside this rule's guidance that restrictions based on facility type are a NQTL. Commenters also requested information about how parity protections apply to the full range of MH/SUD services typically provided in

facilities that fall under the IMD exclusion.

*Response:* The payment exclusion for Medicaid services provided to beneficiaries in IMDs is a statutory requirement established by the Congress in 1965 and therefore beyond the scope of this regulation. The full range of covered services, including MH/SUD services, could be provided to beneficiaries when they are in facilities that are not IMDs.

*Comment:* Several commenters recommended reconciling the IMD exclusion with the parity rules in the ABP context by interpreting the Medicaid statute as not applying the IMD exclusion to ABPs. The commenters maintained that CMS's current position is inconsistent with section 1937 of the Act, which provides that ABP coverage is provided notwithstanding \* \* \* any other provision of Title XIX that "would be directly contrary to [section 1937]." These commenters also state that section 1937 of the Act requires that ABPs cover EHBs, which must include MH/SUD services based on the benefits in a commercial benchmark plan that is likely to cover some services in psychiatric hospitals or other facilities that would be considered IMDs.

*Response:* States must offer services under ABPs that reflect the ten EHB categories, including MH/SUD services (42 CFR 440.347). As this final rule states, we did not intend to require states to include specific services within EHB categories offered through an ABP. Nor did we specifically require coverage of any particular inpatient or residential mental health services or treatment settings as part of "inpatient services" provided that the coverage complies with MHPAEA parity requirements. States may, however, be required to provide inpatient or residential mental health services that are included in the section 1937 coverage plan that is the basis for the ABP, or that are included in the base-benchmark plan selected by states to define EHBs for Medicaid. We clarified in the preamble of the final rule 42 CFR part 440 published in the **Federal Register** on July 15, 2013 (78 FR 42197) and we clarify for this rule that the IMD payment exclusion applies to all medical assistance, even medical assistance furnished through an ABP. To provide required coverage, a state may thus have to demonstrate that the coverage of inpatient (residential) mental health services is provided in integrated environments that include treatment of both physical and mental health conditions and patients. Finally, we clarify that the requirement that all ABPs comply with MHPAEA parity

requirements includes compliance with MHPAEA requirements regarding treatment limits.

*Comment:* Many commenters requested that CMS clarify how parity could be achieved given the coverage and payment exclusion for services to individuals in IMDs. The commenters requested clarification on access to out-of-network benefits where networks are inadequate.

*Response:* To clarify, in a Medicaid managed care environment, if a provider network is unable to provide necessary services covered under the contract to a particular enrollee, the MCO, PIHP, or PAHP must adequately (and on a timely basis) cover these services out-of-network for the enrollee as long as the MCO, PIHP, or PAHP is unable to provide them in-network. Therefore if a beneficiary needs a specific service covered under the contract but the service or provider is not available in the current network, such as inpatient mental health services, the MCO, PIHP, or PAHP will need to cover such services in a non-network hospital that provides inpatient mental health services. However, the IMD payment exclusion would apply regardless of whether the facility that provides inpatient mental health services is in network or out-of-network.

*Comment:* Several commenters requested guidance about how to align parity requirements with policies that will be finalized regarding IMDs in the Medicaid managed care proposed rule.

*Response:* Because the proposed rule, Medicaid and Children's Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, Medicaid and CHIP Comprehensive Quality Strategies, and Revisions Related to Third Party Liability (80 FR 31098 through 31297) has not yet been finalized, we are unable to comment on the alignment of those requirements with this final rule at this time. When the Medicaid managed care rule is finalized, CMS will provide guidance and technical assistance as needed to help states understand the interplay between the requirements of these rules.

*Comment:* A few commenters urged CMS to continue to examine, through the Medicaid Emergency Psychiatric Demonstration project, whether eliminating or restricting the scope of the IMD exclusion can improve access to care and help reduce costs.

*Response:* In December 2013, we provided an interim Report to Congress on the Medicaid Emergency Psychiatric

Demonstration project,<sup>9</sup> and we will submit a final report in 2016. This report will provide information on the impact that this demonstration project had on access to care and the cost of these services.

For the reasons indicated in the response to comments, we do not include provisions in the final rule that are specific to IMDs.

#### *S. Medicare-Medicaid Dual Eligible Beneficiaries*

We received a number of comments about individuals who are dually eligible for both Medicaid and Medicare and the provision of both Medicaid and Medicare benefits to such beneficiaries. Mental health parity requirements under section 2726 of the PHS Act do not apply to Medicare Parts A, B, or D services covered by Medicaid MCOs, such as those covered by integrated plans for Medicare-Medicaid beneficiaries. The proposed rule noted that Medicare benefits are controlled by the Medicare statute and regulations, which are not within the scope of this rule.

*Comment:* Several commenters stated that it would be impractical, if not impossible, to isolate Medicare benefits from Medicaid benefits for the purposes of determining which aspects of a Medicare-Medicaid integrated care model must comply with MHPAEA. Other commenters noted that administrative difficulties that could arise under the proposed policy, including the complexity of applying NQTL standards to drugs covered by Medicaid but not covered by Medicare Part D. The commenters raised concerns that situations like this could result in increased fragmentation at a time when CMS has taken steps to better integrate coverage for Medicare-Medicaid beneficiaries. The commenters encouraged CMS to ensure that a beneficiary's entire benefit package of items and services meets parity standards, regardless of the entity or program that is responsible for financing the care, stating that this approach would ensure equitable access to MH/SUD by beneficiaries across all programs, and would also support issuers and states in meeting compliance standards.

*Response:* The MHPAEA statute does not apply to Medicare, and we lack the statutory authority to apply this rule to Medicare benefits. In states participating in the CMS Financial Alignment Initiative that are implementing a

capitated model in which beneficiaries are enrolled in managed care plans, we will provide technical assistance as needed about how to structure and assess those plans for compliance with MHPAEA.

For the reasons indicated in the response to comments, we do not include provisions in the final rule that are specific to coverage provided to Medicare-Medicaid beneficiaries.

#### **IV. Summary of Changes**

For the most part, this rule finalizes the provisions of the proposed rule. Those provisions of this final rule that differ from the proposed rule are as follows:

- We have revised the definitions in § 438.900, § 440.395(a) and § 457.496(a) so that long term services are included in the definition of medical/surgical benefits, mental health benefits, and substance use disorder benefits and that the provisions of this final regulation apply to these services.

- We are finalizing § 438.910(b)(2), § 440.395(b)(2)(ii) and § 457.496(d)(2)(ii) with a modification that requires the standards used to assign mental health/substance use disorder benefits to a classification be reasonable as well as the same as the standards used for medical/surgical benefits.

- We have revised § 438.910(d)(3) and § 457.496(d)(5) to eliminate the deeming provision; as finalized these rules do not provide that MCOs or CHIP state plans will be deemed in compliance with parity solely based on adherence to § 438.206(b)(4); this revision clarifies that the requirements of these two provisions are complementary.

- We have also revised the language in § 438.910(d)(3) and § 457.496(d)(5), as proposed it included a requirement to use the "same" standards regarding access to out-of-network providers, to more closely align with the general requirement for NQTLs; the rule is finalized to require the use of "comparable" standards.

- We have revised § 438.6(n) to require MCO contracts to provide for services to be delivered in compliance with this rule and new subpart K, rather than requiring those contracts to ensure that enrollees actually receive such services.

- We have modified § 438.905(a) to change the heading and delete designation of (a)(1).

- We have revised § 438.920(b)(1) to clarify that states have to review both medical/surgical benefits and MH/SUD benefits when completing the parity analysis. We have also specified in § 438.920(b)(1) that information on compliance with the rule must be made

<sup>9</sup>This interim report can be accessed online at [http://innovation.cms.gov/files/reports/mepd\\_rtc.pdf](http://innovation.cms.gov/files/reports/mepd_rtc.pdf).

available on a state’s Web site, that such documentation must be provided within 18 months of the date of publication of this final rule, and that the documentation must be updated with any change in MCO, PIHP, PAHP or Medicaid state plan benefits. Minor revisions have also been made to the wording of this provision.

- We have revised § 438.920(b)(2) to require the state to ensure that all services be delivered to the enrollees of the MCO in compliance with this rule, regardless of whether the MCO covers all services or only a portion of the services.
- We have modified § 438.930 to provide that contracts with MCOs, PIHPs, and PAHPs offering Medicaid state plan services to enrollees, and those entities, must comply with the requirements of this subpart no later than 18 months after the date of publication of this final rule, regardless whether that date is the start or middle of a contract year.
- Consistent with the statute, we have added a new provision at § 440.395(c) to state that when ABPs are offering EPSDT services, they will be deemed in compliance with parity. We have also redesignated the remaining paragraphs and references accordingly.
- We have modified § 440.935(d)(1) to replace “Alternative Benefit Plans” with “ABPs” in the heading.
- We have revised 440.395(e)(2) to reflect that Essential Health Benefits are defined to potentially include more than the minimum 10 EHBs.
- We have modified § 457.496 throughout to replace “CHIP state plans” with “state plan.”
- We have added clarifying language to the definition of EPSDT benefits within § 457.496(a) to indicate that states must provide services described in section 1905(r) of the Act in manner that is compliant with section 1902(a)(43) of the Act.
- We have modified § 457.496(b) to specify the requirements states must

follow in order for their separate CHIP to be deemed compliant with the MHPAEA parity requirements. These modifications include not excluding benefits on the basis of condition or diagnosis, and including a description of their efforts to comply with the deeming requirements within the state plan.. We also provide that if a state has elected in its state child health plan to cover EPSDT benefits only for certain children eligible under the state child health plan, the state is deemed compliant with this section only with respect to such children.

- We have modified § 457.496(d)(5) to refer to “providers for mental health or substance use disorder benefits” instead of “providers for mental health and substance use disorder benefits.”
- We have modified § 457.496(f)(1) to specify that states must describe the standard being used to define medical/ surgical, MH, and SUD benefits in their state plan.
- We have modified § 457.496(f)(1) to replace “State Medicaid agency” with “State.”
- We have added a new § 457.496(f)(1)(i) and (ii) and redesignated the remaining provisions of this section.
- We have revised the regulatory text as applicable throughout to replace the acronym “MH/SUD” with the full phrase “mental health and substance use disorder” or “mental health or substance use disorder”

**V. Collection of Information Requirements**

Under the Paperwork Reduction Act of 1995 (PRA), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that

we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In our April 10, 2015, proposed rule (80 FR 19418) we solicited public comment on each of the section 3506(c)(2)(A) required issues for the following information collection requirements. PRA-related comments were received as indicated below in section V.D. under “Comments Associated with the Proposed Collection of Information Requirements.” While the changes that were made as a result of these comments did not revise the majority of the proposed requirements and burden estimates, burden for the requirements under § 438.920 (specific to performing and posting the parity analysis on the state’s Web site) have been added to this final rule based on the comments received. Commenters raised concerns that the cost analysis of the proposed rule fails to consider the administrative cost to the states of providing MH/SUD services through MCOs and through FFS delivery systems. The proposed rule did not set forth such burden since we requested comments on our proposed approach.

*A. Wage Estimates*

To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ (BLS) May 2014 National Occupational Employment and Wage Estimates for all salary estimates ([www.bls.gov/oes/current/oes\\_nat.htm](http://www.bls.gov/oes/current/oes_nat.htm)). In this regard, Table 2 presents the mean hourly wage, the cost of fringe benefits, and the adjusted hourly wage.

TABLE 2—HOURLY WAGE ESTIMATES \*

Occupation title	Occupation code	Mean hourly wage	Fringe benefit (at 100%) (per hour)	Adjusted hourly wage
Business Operations Specialists .....	13–1000	\$33.69	\$33.69	\$67.38
Medical Secretaries .....	43–6013	16.12	16.12	32.24
Social Scientists and Related Workers .....	19–3099	38.48	38.48	76.96

\* The wage estimates from the proposed rule have been revised to account for more recent BLS data.

We have adjusted all our employee hourly wage estimates by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits

and overhead costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study.

Nonetheless, there is no practical alternative and we believe that doubling the hourly wage to estimate total cost is

a reasonably accurate estimation method.

*B. Information Collection Requirements (ICRs)*

1. ICRs Regarding the Availability of Information and the Criteria for Medical Necessity Determinations (§ 438.915(a), § 440.395(c)(1), and § 457.496(e)(1))

Sections 438.915(a), 440.395(c)(1), and 457.496(e)(1) require that the medical necessity determination criteria used by regulated entities for MH/SUD benefits be made available to potential participants, beneficiaries, or contracting providers upon request.

In the tri-Department MHPAEA final rule, the regulatory impact analysis (78 FR 68253 through 68266) quantified the costs for health insurance issuers and group health plans to disclose medical necessity criteria. For consistency and comparability, we are using the same method for determining this rule's disclosure costs, with adjustments to account for Medicaid MCOs, PIHPs and PAHPs, ABPs and CHIP, and the population covered.

*Labor Costs for Medical Necessity Disclosures.* Consistent with our proposed rule, we are unable to estimate with certainty the number of requests for medical necessity criteria disclosures that will be received by

regulated entities. While we did not receive any public comments on this point, the MHPAEA final rule's impact analysis set forth assumptions that we believe are relevant for calculating costs for the Medicaid and CHIP program. The impact analysis assumed that each plan would receive 3 medical necessity criteria disclosure requests for every 1,000 beneficiaries. This assumption equated to 0.003 requests per enrollee which was applied to the number of beneficiaries enrolled in Medicaid MCOs (33.1 million), ABP (8.7 million) and CHIP (5.7 million) to project 142,403 expected requests (99,328 for MCOs + 26,100 for ABPs +16,975 for CHIP).

To estimate the time it will take medical staff to respond to each request, we used the assumption in the MHPAEA final rule's impact analysis. Specifically, we assumed that it took a staff member (in this case, a medical secretary) 5 minutes to respond to the request. In this rule, this results in a total annual burden of 11,867 hours (142,403 requests × 5 min/60) at a cost of \$382,592.08 (11,867 hours × \$32.24/hour) for all Medicaid and CHIP programs. The state costs for this burden is \$153,037 (state match is 40 percent of costs).

*Mailing and Supply Costs.* The MHPAEA final rule's impact analysis

estimated that 38 percent of the requests would be delivered electronically with *de minimis* cost. The remaining requests would require materials, printing, and postage amounting to approximately 66 cents per request. We believe that the same mailing and supply costs per request will apply to the disclosure requirements of this rule. As shown in Table 3, mailing and supply costs are \$58,272 (88,291 responses × \$.66). State share for this cost is \$23,309. Total state share costs are \$176,346 (\$153,037 in labor costs and \$23,309 in mailing costs)

Table 3 also displays the added burden estimates, nationally and per program, for Medicaid MCOs and CHIP to comply with the medical necessity determination criteria's disclosure procedures. These estimates reflect the requests for medical necessity determination criteria's disclosure procedures by beneficiaries or contracting providers. The number of enrollees for MCOs/HIOs is based on the CMS national breakout as of July 2012 while the number for ABPs is based on the estimated enrollment growth due to Medicaid expansion ("National Health Expenditure Projections 2012–2022," CMS).<sup>10</sup> CHIP enrollment is based on Medicaid and CHIP Payment and Access Commission's 2014 estimates.

TABLE 3—NATIONAL AND PER PROGRAM BURDEN FOR THE MEDICAL NECESSITY DETERMINATION CRITERIA'S DISCLOSURE REQUIREMENTS

Plan type	Number of enrollees	Number of expected requests (0.003 requests per enrollee)	Time (@ 5 min/response) (hours)	Labor cost (\$) @ \$32.24/hr	Mailed responses (62% of expected enrollees)	Mailing and supply cost (\$) @ \$0.66/ mailing	Total cost	State costs *
MCO/HIO .....	33,109,462	99,328	8,277	\$266,850.48	61,584	\$40,645	\$307,496	\$122,998
ABP .....	8,700,000	26,100	2,175	70,122.00	16,182	10,680	80,802	32,321
CHIP .....	5,658,460	16,975	1,415	45,619.60	10,525	6,947	52,567	21,027
Total .....	47,467,922	142,403	11,867	382,592.08	88,291	58,272	440,865	176,346

*Submitting Requests for Medical Necessity Disclosures (Potential Participants, Beneficiaries, and Contracting Providers).* Table 4 displays the added burden estimates, nationally and per program, for Medicaid and

CHIP potential participants, beneficiaries and providers to request the medical necessity determination criteria. It is difficult to determine the financial impact on providers since the proportion of providers that would

submit this request is unknown and the staff costs in these agencies would vary based on the level of professional (physician, licensed clinician, or medical claims staff) that may request this information.

<sup>10</sup> Estimates are based on the most recent data available at the time of the analysis.

TABLE 4—NATIONAL AND PER POTENTIAL PARTICIPANT, BENEFICIARIES AND PROVIDER BURDEN FOR THE MEDICAL NECESSITY DETERMINATION CRITERIA'S DISCLOSURE REQUIREMENTS

Plan type	Number of enrollees	Number of expected requests (0.003 requests per enrollee)	Time (@ 15 min/request) (hours)
MCO/HIO .....	33,109,462	99,328	24,832
ABP .....	8,700,000	26,100	6,525
CHIP .....	5,658,460	16,975	4,244
Total .....	47,467,922	142,403	35,601

The aforementioned requirements and burden will be submitted to OMB for approval under control number 0938–1280 (CMS–10556).

#### 2. ICRs Regarding the Availability of Information and Reason for Any Denial (§§ 438.915(b), 440.395(c)(2), and 457.496(e)(2))

MHPAEA requires that the reason for any denial—under a group health plan or health insurance coverage—of reimbursement or payment for MH/SUD benefits must be made available (upon request or as otherwise required) by the plan administrator (or the health insurance issuer) to the beneficiary in accordance with MHPAEA regulations (45 CFR 146.136(d)(2)).

This final rule only addresses disclosure of information concerning the denial of reimbursement or payment for MH/SUD benefits. We believe that these requirements are already met by complying with existing disclosure requirements in parts 438 and 431, and therefore, do not create any new or revised requirements or burden beyond what is currently approved by OMB under control number 0938–1080 (CMS–10307). We also believe that these requirements are already met for CHIP by complying with existing notification and disclosure requirements in § 457.110 and § 457.1130, and therefore, do not create any requirements or burden beyond what is currently approved by OMB under control number 0938–1148 (CMS–10398 #34) (formerly, CMS–R–211, control number 0938–0707). For ABPs, these provisions do not create any new or revised third-party disclosure requirements beyond what is currently approved by OMB under control number 0938–1188 (CMS–10434).

#### 3. ICRs Regarding Parity in Mental Health and Substance Use Disorder Benefits in Alternative Benefit Plans (§ 440.395)

When a state plan provides for an ABP, the state must provide sufficient information in an ABP state plan

amendment (§ 440.300) request to assure compliance with the requirements of (§ 440.395(e)(3)), including the application of parity to treatment limitations as addressed in this rule. The ABP state Plan Application is employed by states to identify benefits offered to Medicaid beneficiaries receiving services under section 1937 of the Act. The application requires that states identify the MH/SUD services that will be offered under the plan. The plan also collects information on any limitations (quantitative and nonquantitative treatment limitations) and financial requirements across all benefit categories (including all medical/surgical services).

The parity requirements in § 440.395 do not impose any new or revised reporting, recordkeeping, or third-party disclosure requirements for 10 or more states since only one state and three territories operates their ABP state plan in FFS, and therefore, do not require additional OMB review under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). These states that operate the ABP programs in a fee-for-service only delivery system would not have to perform an additional parity analysis across the various delivery systems. States that operate their ABP programs through a managed care arrangement would be required to attest that they are compliant with parity, and to solicit comments on their ABP state plan (which includes requests for comments on this attestation), but that attestation is in an existing PRA: OMB under control number 0938–1188 (CMS–10434). While states are required to solicit public comment, we maintain that the information collection requirement is exempt from the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) since we estimate fewer than ten annual respondents (5 CFR 1320.3(c)). As ABPs are most often used by states to expand Medicaid to the adult population, we project that this would

apply to no more than 1 to 2 states per year.

#### 4. ICRs Regarding State Plan Amendments (SPAs)

This rule does not impose any new or revised SPA-specific reporting, recordkeeping, or third-party disclosure requirements and therefore does not require additional OMB review under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). The rule does not require a state to amend its current non-ABP SPA since states have the option of including additional services necessary to meet parity requirements in the MCO, PIHP or PAHP contracts. The burden for amending such contracts is set out below under § 438.6(n).

The currently approved ABP SPA template was designed to capture the MHPAEA final rule classifications and identify if there are specific treatment limitations or financial requirements. The ABP SPA template's information collection requirements and burden are not affected by this rule and are approved by OMB under control number 0938–1188 (CMS–10434).

States are required to review their respective CHIP state plans to determine if they are in compliance with federal law, and states must submit a CHIP SPA to make the necessary changes to the state plan to comply with changes in federal law as described in § 457.60(a). Section 502 of the CHIPRA amended section 2103(c) of the Act, which was described in SHO letters #09–014 and #13–001. Many states have performed parity analyses based on that guidance and submitted SPAs to come into compliance with MHPAEA.

However, as described in section III. G of this final rule, we plan on developing state plan pages specific to MHPAEA, so all states with a separate CHIP must submit a SPA to update their state plan. We anticipate that up to 42 states will need to submit a SPA, which may add up to 160 hrs. of additional burden on states based on the estimated burden of submitting a SPA (80 hrs.)

approved by OMB under control number 0938-1148 (CMS-10398 #34) (formerly CMS-R-211, control number 0938-0707). This additional SPA burden is estimated to cost \$12,313.60 (160 hrs × \$76.96/hr.) for a social science analyst to submit a complete SPA package; however, the final costs for the states will be much lower because in CHIP it is important to take into account the Federal government's contribution to the cost of administering CHIP. States receive an enhanced FMAP for administering their CHIP program that now includes a 23 percentage increase beginning in FFY 2016, which was maintained through the passage of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA). The average enhanced FMAP has increased to 92.7 percent, decreasing the state's share of this additional burden to a nominal cost of \$898.89 (\$12,313.60 × 0.073). When ready, the SPA template along with the associated requirements and burden will be submitted to OMB for approval under control number 0938-1148 (CMS-10398 #34). This is a preliminary estimate that is based on our experience with existing SPA templates.

5. ICRs Regarding State Health Official (SHO) Letters SHO #09-014 (November 4, 2009) and SHO #13-001 (January 16, 2013)

The January 2013 SHO letter addressed the application of the MHPAEA requirements in Medicaid and expanded upon the CHIP guidance that

was provided in the November 2009 letter regarding section 502 of CHIPRA. Since the letters are discussed in section II.A. of this final rule (as background), we wish to clarify that this rule does not include any new or revised reporting, recordkeeping, or third-party disclosure requirements pertaining to either of the letters. Consequently, the PRA does not apply.

6. ICRs Regarding Contract Requirements (§ 438.6(n))

In § 438.6(n), states are now required to include contract provisions in all applicable MCO, PIHP, and PAHP contracts to comply with part 438, subpart K. We estimate a one-time state burden of 30 minutes at \$67.38/hour for a business operations specialist to amend each contract with provisions that implement the requirements outlined in part 438, subpart K. Applicable to 36 states (which is the number of states that have an MCO model), and to a total of 602 contracts in those states, in aggregate we estimate 301 hours (602 contracts × 0.5 hours) and \$20,281 (301 hours × \$67.38/hr.). State costs for this burden is \$8,112 (40 percent of costs are state match). The requirements and burden will be submitted to OMB for approval under control number 0938-1280 (CMS-10556).

7. ICRs for State Responsibilities (§ 438.920)

In any instance where the full scope of medical/surgical and MH/SUD

services are not provided through the MCO, § 438.920 specifies that the state must review the MH/SUD and medical/surgical benefits provided through the MCO, PIHP, PAHP, and fee-for service (FFS) coverage to ensure that the full scope of services available to all enrollees of the MCO complies with the requirements in this subpart K. The state is also expected to review the parity analysis provided by an MCO that is responsible for delivering all MH/SUD Medicaid services. The state must provide documentation of compliance with the requirements under this subpart to the general public and post this information on the state's Medicaid Web site. The 36 states that have an MCO model would be responsible for developing or reviewing the benefits offered by MCOs, PIHPs, PAHPs and FFS to ensure the benefits offered to enrollees of the MCO comply with requirements in this subpart. We estimate a state burden of 8 hours at \$67.38/hour for a business operations specialist to perform this analysis and document compliance and, on an ongoing basis, update the documentation. In aggregate, we estimate 384 hours (36 states × 8 hours) and \$19,405 (288 hours × \$67.38/hr.). State costs for this burden is \$7,762. The requirements and burden will be submitted to OMB for approval under control number 0938-1280 (CMS-10556).

C. Summary of Burden Estimates

TABLE 5—ANNUAL RECORDKEEPING AND REPORTING REQUIREMENTS

Regulation section(s) under title 42 of the CFR	OMB control No.	Potential respondents	Total responses	Burden per response	Total annual burden (hours)	Hourly labor cost of reporting (\$/hr)	Total labor cost of reporting	Total mailing and supply costs*	Total cost	State share
438.915(a), 440.395(c)(1), and 457.496(e)(1) (States and Plans).	0938-1280	602	142,403	5 min .....	11,867	32.24	\$382,592	\$58,272	\$440,864	176,346
438.915(a), 440.395(c)(1), and 457.496(e)(1) (Potential participants, beneficiaries and providers).	0938-1280	47,467,922	142,403	15 min .....	35,601	N/A	N/A	N/A	N/A	.....

457.496 (State Plan Amendments).	0938-1148	42	2	80 hours .....	160	76.96	12,314	0	12,314	899
Total .....	.....	47,468,638	285,446	88 hrs 50 min	48,217	.....	434,592	58,272	492,864	193,119

\* This rule does not set forth any capital/maintenance costs.

D. Comments Associated With the Proposed Collection of Information Requirements

Comment: Two commenters expressed concerns that the cost

analysis of the proposed rule fails to consider the administrative cost to the states of providing MH/SUD services through MCOs and through FFS delivery systems. They stated that significant administrative costs would

be associated with creating new ongoing reporting mechanisms for states and MCOs to provide detailed information on their quantitative and nonquantitative limits across multiple MCOs and the FFS structure, perform

the parity analysis, post on the states Web site and report to CMS. Commenters also stated that these requirements would require state staff to review the rule, review each contract, develop appropriate language needed in each contract, and process the amended contract through the administrative channels. The actual time needed to address this would be many times greater than the proposed estimate.

*Response:* We recognize that the administrative burden of implementing this rule will vary across states and MCOs, and intend for the numbers cited above are a national estimate of burden across all impacted entities. We note that efficiencies can be achieved regarding implementation of this rule through the use of standardized processes, and that technical assistance provided to states is intended to help to reduce the administrative burden. However, we do agree with the commenters that there will be an additional burden to states to perform and/or review the parity analysis, document compliance and post it to the state's Web site. We have included the projections of this additional burden in section V.B.7 of this final rule.

#### *E. Submission of PRA-Related Comments*

We submitted a copy of this final rule's information collection and recordkeeping requirements to OMB for review and approval. The requirements are not effective until they have been formally approved by the OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections discussed above, please visit CMS' Web site at [www.cms.hhs.gov/Paperwork@cms.hhs.gov](http://www.cms.hhs.gov/Paperwork@cms.hhs.gov), or call the Reports Clearance Office at 410-786-1326.

We invite public comments on these potential information collection requirements. If you wish to comment, please identify the rule (CMS-2333-F) and submit your comments to the OMB desk officer via one of the following transmissions:

*Mail:* OMB, Office of Information and Regulatory Affairs; Attention: CMS Desk Officer.

*Fax Number:* 202-395-5806 OR

*Email:* [OIRA\\_submission@omb.eop.gov](mailto:OIRA_submission@omb.eop.gov).

ICR-related comments are due April 29, 2016.

## **VI. Regulatory Impact Analysis**

### *A. Statement of Need*

This final rule addresses the applicability of the requirements under the MHPAEA to Medicaid non-managed

care benchmark and benchmark-equivalent plans (referred to in this final rule as Medicaid ABPs) as described in section 1937 of the Act, CHIP under title XXI of the Act, and Medicaid MCOs as described in section 1932 of the Act.

In 2013, we released a SHO letter that provided guidance to states regarding the implementation of requirements under MHPAEA to Medicaid benchmark and benchmark-equivalent plans (referred to in this letter as ABPs), CHIP, and Medicaid MCOs.

Final regulations implementing MHPAEA were published in the tri-Department MHPAEA final regulations that do not apply to Medicaid MCOs, ABPs, or CHIP state plans.

We believe that in absence of a regulation specific to the application of the parity requirements under MHPAEA to Medicaid and CHIP, states would not be compelled to implement the necessary changes to these programs, resulting in an inequity between beneficiaries who have MH/SUD conditions in the commercial market (including the state and federal marketplace) and Medicaid and CHIP. Even for states that are attempting to comply with parity requirements under MHPAEA, the absence of regulation could lead to inconsistent state-specific policies.

This final rule provides the specificity and clarity needed to effectively implement the policies set forth by MHPAEA and prevent the use of prohibited limits on coverage, including nonquantitative treatment limitations that disproportionately limit coverage of treatment for MH/SUD conditions. The Department's assessment of the expected economic effects of this final rule is discussed in detail below.

### *B. Overall Impact*

We have examined the impacts of this final rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic,

environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a "significant regulatory action" as an action that is likely to result in a rule: (1) (Having an annual effect on the economy of \$100 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as "economically significant")); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimate that this final rule is "economically significant" as measured by the \$100 million threshold, and hence, also a major rule under the Congressional Review Act. Accordingly, we have prepared a RIA, which to the best of our ability presents the costs and benefits of the rulemaking.

Because the application of parity requirements to ABPs; MCOs and PIHPs and PAHPs providing services to MCO enrollees; and the CHIP is likely to have an effect on the economy of \$100 million or more in any given year, this final rule is economically significant within the meaning of section 3(f)(1) of the Executive Order as elaborated below, we believe the benefits of the rule justify the costs.

### *C. Anticipated Effects*

This final rule would benefit approximately 22.3 million Medicaid beneficiaries and 880,000 CHIP beneficiaries in 2016, based on service utilization estimates from 2012 Medicaid and CHIP enrollment. We expect that a significant benefit associated with the application of the parity requirements under MHPAEA and these final regulations will be derived from applying parity requirements to the quantitative treatment limits such as annual or lifetime day or visit limits. Applying parity requirements to visit or stay limits will help ensure that vulnerable populations—those accessing substantial amounts of MH/SUD

services—have better access to appropriate care. Among adults aged 18 through 64 with Medicaid coverage, approximately 9.6 percent have a serious mental illness, 30.5 percent have any mental illness, and 11.9 percent have a substance use disorder.<sup>11</sup> Among CHIP beneficiaries, approximately 8 percent of children experience serious behavioral or emotional difficulties.<sup>12</sup>

Evidence-based treatment for severe and persistent mental illness, and for substance use disorders, often requires prolonged (possibly lifetime) treatment that consists of pharmacotherapy, supportive counseling, and often rehabilitative services. Individuals with severe MH/SUD conditions often quickly exhaust their benefits under Medicaid managed care. In addition, CHIP programs may restrict coverage, such as covering only 40 hours of psychotherapy or 5 days of detoxification per year. These coverage restrictions often result in people forgoing outpatient treatment and a higher likelihood of non-adherence to treatment regimes, which produce poor health and welfare outcomes and create the potential for increased hospitalization costs.<sup>13 14</sup> For those with substance use disorders, treatment retention is of key importance when assessing outcomes, where those who stayed in treatment longer had more success in decreasing their substance use.<sup>15 16</sup> In 2011, approximately 8 percent of adults with Medicaid coverage reported at least one occurrence in the past 12 months of feeling the need for MH/SUD treatment or counseling but not receiving it.<sup>17</sup>

<sup>11</sup> Calculations were based on the Substance Abuse and Mental Health Services Administration (SAMHSA) National Survey of Drug Use and Health.

Between 2007 and 2009, approximately 72 percent of children in Medicaid with a potential mental health need did not receive mental health services.<sup>18</sup> The most frequently cited reasons for not seeking MH/SUD treatment are cost and/or a lack of health insurance coverage, low perceived need, stigma, or structural barriers (for example, no transportation, did not know where to go).<sup>19 20</sup> Removing quantitative limits on treatment may be particularly beneficial for individuals with severe mental illness and substance use disorders who may need to receive more services than the average individual.<sup>21 22</sup> Improved coverage may also reduce the financial burden on individuals and families, particularly those families of children with mental health service needs.<sup>23</sup> Finally, improving coverage of MH/SUD treatment may also improve employment, productivity, and earnings among those with these conditions.<sup>24</sup> Wang, *et al*, found that implementing a care program for those identified with depression yielded not only enhanced clinical outcomes relative to depression, but also produced positive outcomes relative to decreased sick leave and increased productivity.<sup>25</sup> Similarly, the State of Washington implemented a substance abuse treatment program for those receiving Aid to Families with Dependent Children (AFDC), and found

that access to treatment increased earnings for those with jobs, as well as increased rates of employment.<sup>26</sup>

Application of parity requirements may also result in changes to payers' utilization management approaches, specifically when requiring preauthorization of mental health services. It was found that even when approval for continued access to mental health services was in essence guaranteed, patients required to obtain prior approval sought out less treatment, perhaps believing they “should not” access further needed treatment.<sup>27</sup> Hodgkin, *et al*, found that removal of utilization management approaches (including preauthorization for the first set of mental health visits) increased use of mental health services.<sup>28</sup> Cuffel, *et al*, note that there are various reasons for why an approach like preauthorization can impact provider behavior relative to mental health service. Providers may believe that the preauthorization process is too laborious and not worth their time; they may fear that those reviewing the request will penalize them for submitting a preauthorization request; they may assume that the set limits on services preclude additional requests for services; providers may believe that the initial limits are in place as an implied recommendation towards shorter treatment cycles; and some may believe requests for preauthorization simply will not be approved at all.<sup>29</sup> Liu, *et al*, found a significant correlation between preauthorization processes and the probability of ending mental health treatment prematurely.<sup>30</sup>

Application of parity requirements under MHPAEA may also have benefits in terms of reduced medical costs. Mental health and physical health are interrelated, and individuals with poor mental health are likely to have physical

health problems as well.<sup>31 32 33</sup> Increased access to and utilization of MH/SUD benefits may result in a reduction of medical and surgical costs for individuals with mental health conditions and substance use disorders (so called “medical cost offsets”). For example, after receiving treatment, individuals with substance use disorders may experience fewer hospitalizations and emergency room visits stemming from unintended injuries such as accidents and drug overdose. The evidence that treatment results in medical care offsets is stronger for substance abuse treatment than for mental health treatment. For example, an evaluation on the expansion of substance abuse treatment in Washington State’s Medicaid program found per member per month savings of \$160 to \$385 depending on the welfare cohort.<sup>34</sup> Another study done on welfare clients in Washington State found that those accessing substance use disorder treatment had on average \$2500 less in medical costs than those who did not access treatment. This estimated savings equaled the cost of SUD treatment for individuals accessing SUD treatment.<sup>35</sup> While a similar reduction in medical costs may be expected from mental health treatment, most empirical studies have not found a significant medical cost offset from mental health treatment.<sup>36 37</sup>

## 1. Costs

### a. Cost Associated With Increased Utilization of MH/SUD Benefits

A primary objective of Congress in enacting MHPAEA was to eliminate barriers that impeded access to and

utilization of MH/SUD benefits. Cost increases and increases in capitated rates may occur as a result of increased access and utilization from the application of parity requirements and these regulations, but the evidence suggests that any increases will not be large. The impact of parity requirements will depend on the extent to which MCOs, ABPs, and CHIP plans lack benefits in some classifications or manage these benefits inconsistent with such parity requirements.

In the April 30, 2010 final rule on State Flexibility for Medicaid Benefit Packages (75 FR 23068), the assumptions utilized in modeling the estimated economic impact of the associated provisions took into account the costs of the benefit package for the new adult group served through ABPs. Coverage of these benefits was already accounted for in the April 30, 2010 final rule, and therefore, does not need to be repeated here. Because we approved ABPs only after ensuring compliance with MHPAEA, we project that this regulation will result in no additional costs to ABPs.

#### (1) Effect of Removing Non-Compliant Quantitative Treatment Limitations

A review of Medicaid managed care benefits in all 50 states and the District of Columbia revealed that a subset of states (18 states) had Medicaid managed care plans that imposed quantitative treatment limits on outpatient visits, inpatient stays, and intermediate services (for example, intensive outpatient treatment). As indicated in the preamble, some of these quantitative treatment limits are a result of what is currently in a state’s Medicaid plan.

A review of CHIP plans indicated that most are already compliant with MHPAEA. CHIP plans that include Medicaid EPSDT are already required to cover mental health and substance abuse services as needed and they are deemed compliant with MHPAEA parity requirements for financial requirements and treatment limitations. It is not permissible to apply annual or lifetime limits to the EPSDT benefit. CHIP stand-alone programs are also already compliant with MHPAEA because of changes to treatment limitations for both MH/SUD benefits and medical and surgical benefits required under the Affordable Care Act.<sup>38</sup> Among CHIP plans that are Medicaid expansion plans, we found

only one to have an explicit quantitative limit.<sup>39</sup>

We conducted an analysis to determine how the use of services might increase if quantitative limits on Medicaid MCO and CHIP programs were eliminated. Where quantitative limits exist that are non-compliant with parity requirements, states also have the option to align these limits for MH/SUD and medical/surgical benefits consistent with the provisions of this final rule. However, to estimate the highest possible cost impact that could be expected, we simulated the effect of removing visit and day limits in states with limits for treatment users by anticipating that utilization would increase for beneficiaries who were near or exceeded current limits to equal utilization patterns observed in states without limits for Medicaid managed care beneficiaries. This simulation indicated the maximum impact of removing quantitative day and visit limits on MH/SUD services by Medicaid MCOs to be \$109.0 million nationwide (including federal and state costs) in undiscounted dollars in 2016. Using a similar approach, we estimated the maximum impact of removing quantitative limits on CHIP expenditures to be \$42.1 million in undiscounted dollars in 2016.

However, these estimates are the largest possible cost impacts and the actual impact is likely to be lower. One reason is that some states with quantitative limits may have mechanisms in place for beneficiaries to obtain hospital days or outpatient visits beyond the state’s limit if such care is determined to be medically necessary. In practice, we anticipate a potentially lower impact than estimated currently, given that quantitative limits may already be routinely exceeded. We found that in most of the 18 states with visit limits, a number of recipients (ranging from 5 to 20 percent) used services beyond the treatment limit, suggesting that exceptions to the quantitative limits may occur in these states. This does not appear to be the case in all states, because in a few states with visit limits ranging from approximately 24 to 40 visits, only 1 or 2 percent of recipients exceeded the limit.

There are no studies to date on how the application of federal parity requirements affects Medicaid spending.

<sup>38</sup> Sarata AK. Mental health parity and the Patient Protection and Affordable Care Act of 2010. Washington, DC: Congressional Research Service; 2011.

However information from states that have passed state-specific parity legislation (which includes application to Medicaid) provides additional support for the projected impact of these regulations on service utilization and spending. For instance, an evaluation of the Oregon parity law found no significant increases in aggregate behavioral health spending or in the percent of individuals using behavioral health services associated with its implementation.<sup>40</sup> The evaluators surmised that the flexibility in quantitative limits prior to the parity law may be one reason that the implementation of parity did not lead to large increases in spending. Specifically, they found that prior to the implementation of the state parity law; approximately 5 percent of beneficiaries with any behavioral health visits exceeded the specified limits of that plan.

Vermont’s parity law is also very similar to MHPAEA. A study of Vermont’s parity law found that the share of spending on mental and substance use disorders increased from 2.30 percent to 2.47 percent of total spending for one health plan.<sup>41</sup>

Finally, a recent evaluation of the effect of MHPAEA on the commercial market revealed a modest increase in spending on substance use disorder treatment per enrollee (\$9.99, 95 percent CI: 2.54, 18.21), but no significant change in the percent of individuals using substance use disorder services.<sup>42</sup>

(2) Effect of Classification of Services Requirements

This final rule requires that if the state provides for MH/SUD services under the state plan, MH/SUD services must be provided to MCO enrollees in every classification in which medical/surgical benefits are provided. After reviewing the MH/SUD services provided under Medicaid managed care plans, we

identified only two states providing for MH/SUD services under the state plan in which MH/SUD services were excluded from a classification in which medical/surgical benefits are provided. In both states, the excluded services were substance abuse inpatient services. For the purposes of this analysis, we assumed that substance abuse inpatient services would need to be included to the extent that they were provided in a distinct part or unit of a general hospital or facility with 16 or fewer beds. Using data on current use of Medicaid substance use disorder inpatient services and the cost of those services from Medicaid claims data, we estimated that the additional coverage for these services would have led to an increase of \$11.7 million nationwide in undiscounted dollars in 2012.

Table 6 displays the total costs of removing non-compliant QTLs by service and meeting classification of services requirements in 2012.

TABLE 6—DETAILS OF ESTIMATED COSTS OF MEETING QTL AND CLASSIFICATION OF SERVICES REQUIREMENTS IN 2012

Inpatient	Outpatient	Intermediate	Administrative	Total
<b>Mental Health—Medicaid (\$million/year)</b>				
\$19.8	\$62.3	\$0	\$0.3	\$82.4
<b>Mental Health—CHIP (\$million/year)</b>				
\$0	30.8	0.4	0.04	31.2
<b>Substance Use Disorder—Medicaid (\$million/year)</b>				
\$11.7	0	0	0	11.7
<b>Substance Use Disorder—CHIP (\$million/year)</b>				
\$0	0	0	0	0
Total Costs of Removing Quantitative Limits in 2012 (\$million/year)				125.3

**Note:** Administrative costs are listed once for Medicaid and CHIP because the expense is all-inclusive for each program; costs are not broken down by service.

Costs for complying with parity rules for each service category were estimated based on a simulation of additional utilization states may incur as a result of removing quantitative treatment limits.<sup>43</sup> For the analysis of intermediate services, we examined limits on partial hospitalization and intensive outpatient care.

These figures are calculated based on 2012 Medicaid and CHIP expenditures, which equate to approximately \$125.3 million in additional costs as a result of parity compliance. Given that total Medicaid and CHIP expenditures in 2012 were \$552.6 billion, the impact of this rule would increase Medicaid and CHIP spending by about 0.02 percent each year. As total Medicaid and CHIP

expenditures increase over time, the cost impact of mental health parity is expected to rise proportionally. Accordingly, to determine the anticipated impact of mental health parity in cost in future years, we applied growth in Medicaid and CHIP expenditures from the mid-session review of the President’s FY 2016 budget to this cost.<sup>44</sup> Due to the

<sup>40</sup> McConnell KJ, Gast SH, Ridgely MS, Wallace N, Jacuzzi N, Rieckmann T, McFarland BH, McCarty D. Behavioral health insurance parity: does Oregon’s experience presage the national experience with the Mental Health Parity and Addiction Equity Act? *Am J Psychiatry* 2012 Jan;169(1):31–8.

<sup>43</sup> We chose to estimate the cost of removing these limits rather than the cost of aligning these limits with the predominant level of the quantitative limit that applies to substantially all medical/surgical

benefits in the classification for simplicity, given the complexity of applying the full analysis to every benefit in every state, and because in most cases, less than two-thirds of the medical/surgical benefits in that classification are subject to a quantitative limit.

<sup>44</sup> President’s Budget for Fiscal Year 2016, available at <http://www.whitehouse.gov/omb/budget>.

complexity and uncertainty of predicting changes to Medicaid enrollment and spending if CHIP

authorization expires, our estimate assumes that CHIP will be reauthorized in its present form through FY2020.

Costs for 2016 through 2020 are displayed in Table 7.

TABLE 7—ESTIMATED COSTS OF CMS–2333 FY 2016–2020

[In millions]

	FY 2016	FY2017	FY 2018	FY 2019	FY 2020
Federal .....	116.0	121.9	128.7	137.1	131.8
State .....	50.5	53.3	56.5	59.7	76.5
Total .....	166.5	175.2	185.3	196.8	208.3

### (3) Effect of Medical Cost Offsets

As described above, the cost of improving access to MH/SUD treatment may be offset by a decline in the expenditures on treatments for medical conditions resulting from substance use disorders. There is strong evidence from Medicaid programs to assume a cost offset resulting from improved access to substance use disorder benefits. In contrast, the evidence for cost offset resulting from improved access to mental health benefits is weaker. We anticipate that, on balance, costs stemming from increased utilization of substance use disorder services resulting from application of parity requirements will be largely offset by the savings from reduced medical costs, yielding very little increase in overall costs from increased utilization of substance use disorder services. However, given the difficulty of quantifying the precise cost impact of this reduced use of medical services that is expected to result from enhanced access to substance use disorder services, we have not included any cost offset in our estimates.

*Comment:* One commenter believed that proper implementation of parity may save money as more beneficiaries will be able to access appropriate care for their conditions, resulting in fewer emergency department visits and hospitalizations as well as improved physical health.

*Response:* As noted above, we agree that in many cases, additional spending on MH/SUD services may result in savings from reduced medical/surgical costs.

### b. Effect of Aligning NQTLs

Under the MHPAEA final rules, medical management can be applied to MH/SUD benefits if the processes, strategies, evidentiary standards, or other factors used in applying medical management are comparable to, and are applied no more stringently than, the processes, strategies, evidentiary standards, or other factors used in applying medical management to

medical and surgical benefits. It is difficult to determine whether, at baseline, Medicaid MCOs, PIHPs, PAHPs, ABPs and CHIP programs are applying medical management more stringently to MH/SUD benefits than to medical and surgical benefits. A state-by-state search of available Medicaid documents indicated that most states that use inpatient utilization management techniques for MH/SUD services, such as prior approval or continuing utilization review for inpatient stays, have similar restrictions for medical and surgical conditions. Surveys of commercial plans have also found that inpatient managed care restrictions, such as pre-admission prior approval, are common for medical and surgical admissions.<sup>45 46</sup> There may be important distinctions in the processes, strategies, evidentiary standards, or other factors between MH/SUD services and medical and surgical services, but current data do not indicate that this is the case in a way that would lead to a clear cost impact.

Moreover, if some Medicaid plans have stricter management controls for MH/SUD services than for medical services, there is scant evidence at this time as to how utilization management will evolve with the application of parity requirements and whether stricter controls would result in higher costs.<sup>47</sup> For example, stricter controls may lead to underutilization of sub-acute levels of care for MH/SUD conditions, leading to the worsening of both MH/SUD conditions and medical or surgical conditions that ultimately require more costly acute levels of care. Studies of the

effect of utilization review and prior approval on MH/SUD inpatient services have revealed mixed results, with some studies showing that these managed care techniques result in lower costs, quantities of treatment, or both, and other studies finding only weak or no effects, or effects that are short term.<sup>48 49 50 51</sup> As noted above, the studies of Oregon and Vermont, whose parity laws include similar restrictions on medical management, have not shown increases in costs resulting from application of these laws. There is uncertainty regarding the level of increased costs that will result from application of the parity requirement for NQTLs, but there is evidence that any increases may be small.

### 2. Transfers Resulting From Increased Access Under Medicaid

Transfer payments are monetary payments from one group to another that do not affect total resources available to society. There is a potential that application of parity requirements under MHPAEA will result in transfers among different government entities. MH/SUD services receive greater funding from public sources, such as Medicaid, federal government block grants, state government general funds, and local government funding, than do medical and surgical services.<sup>52</sup> Over time, MH/SUD spending has been shifting away from state and local

funding, toward federal financing, especially Medicaid.<sup>53</sup> The potential increase in the availability of MH/SUD services under Medicaid and CHIP as a result of the MHPAEA parity requirements may result in a reduction in use of, and spending on, services financed by other public sources such as state and local governments and federal block grants.<sup>54</sup> Limited sound evidence exists about the size of this effect on states.

#### D. Alternatives Considered

We considered several other approaches for providing guidance to states regarding the application of the MHPAEA to Medicaid MCOs, ABPs, and CHIP. As stated in the preamble of this final rule, under our current policies, there is no way to ensure that MCO enrollees receive state plan benefits in a way that fully complies with MHPAEA. This is because section 1932(b)(8) of the Act does not apply to the design of the traditional Medicaid state plan, and state plans thus may be designed in a way that does not comply with MHPAEA requirements. Under current guidance, we have said that if an MCO is simply properly applying state plan benefits, there is no violation of section 1932(b)(8) of the Act even if that benefit design does not conform to MHPAEA, because the MCO did not adopt that benefit design and thus was not at fault in its non-compliance. As explained above, we do not believe that this policy effectuates Congressional intent in enacting section 1932(b)(8) of the Act. Further, we believe that implementation of the statute requires that MCO enrollees receive benefits in a manner that complies with MHPAEA.

We considered requiring that all state plan MH/SUD services be included under MCO contracts as the way to ensure that MCO enrollees receive the full protections of MHPAEA. However, we believe that this final rule allows states the most flexibility when applying mental health parity requirements to their Medicaid services across delivery systems. Given that there are many different delivery system configurations that carve out MH/SUD

services, this approach allows states to comport with parity requirements for MCO enrollees without completely carving out MH/SUD services from their MCO or dropping MH/SUD coverage altogether.

Also, under current statutes, regulations and policies, states would not be required under federal law to apply MHPAEA provisions to PIHPs and PAHPs (many of which provide MH/SUD services) since these arrangements were not specifically addressed in section 1932(b)(8) of the Act, and MHPAEA does not directly apply to such contracts. Consideration of these unique state MH/SUD delivery systems is an important distinction in Medicaid when compared to the commercial market. Further, because the statutory provisions making mental health parity requirements applicable to MCOs do not explicitly address these situations, additional interpretation is needed.

In addition to the delivery system issues, states would not be required to remove or align limits on services that were in the state plan for individuals enrolled in an MCO. As stated previously in this regulation, these limits are carried through in the development of rates, and cost of services outside of the state plan or a waiver of the state plan cannot be included. Without the change in this rule, individuals enrolled in an MCO could still be subject to treatment limitations that are not compliant with parity requirements, which we believe is inconsistent with the intent of Congress in requiring in section 1932(b)(8) of the Act that MCOs deliver services in a manner consistent with MHPAEA requirements and the policies regarding application of MHPAEA to ABPs and CHIP that operate in a FFS arrangement. In addition, without these changes to the managed care rate setting process, it will be difficult for MCOs to comply with statutory requirements regarding financial requirements and treatment limitations.

Finally, there are mental health parity provisions that are not applicable to the FFS delivery systems for Medicaid ABP benefits; these include annual and lifetime dollar limits, availability of plan information, and access to out-of-network providers.

In addition, we considered the ability to provide guidance and enforce the provisions of MHPAEA's application to Medicaid and CHIP through sub-regulatory guidance. Over the past 6

years, we have used two SHO letters to provide guidance to states regarding MHPAEA and Medicaid and CHIP. While states and other stakeholders found this guidance useful, there were many questions or concerns regarding the lack of specificity regarding application of MHPAEA parity requirements to Medicaid and CHIP. There were several issues that states raised regarding this sub-regulatory guidance. One issue was the actuarial soundness requirements, which mandate that MCO payments be based on services as covered under state plans. Another was additional clarification of NQTLs and states' concerns regarding existing federal and state policies that required utilization management strategies that were inconsistent with the intent of MHPAEA. States also raised additional questions regarding application of MHPAEA parity requirements to other delivery systems including PIHPs, PAHPs, and FFS. We do not believe that additional subregulatory guidance would provide the necessary authority for MCOs and states to implement or enforce MHPAEA parity requirements for Medicaid beneficiaries enrolled in an MCO.

#### E. Accounting Statement and Table

As required by OMB Circular A-4 (available at [http://www.whitehouse.gov/omb/circulars\\_a004\\_a-4/](http://www.whitehouse.gov/omb/circulars_a004_a-4/)), in Table 8 we have prepared an accounting statement showing the classification of the impacts associated with implementation of this final rule.

The projected impact on costs in 2016 was calculated by multiplying the percent anticipated increase in cost due to the application of parity requirements by expected Medicaid expenditures in 2016. Based on our analysis, the parity rule will lead to an increase of approximately 0.03 percent in total Medicaid spending each year over 10 years. In 2016, Medicaid expenditures overall are projected to equal approximately \$540.3 billion.<sup>55</sup> Thus, the undiscounted cost of the rule is estimated to be \$178.1 million in 2016, and to rise proportionate to the growth in overall Medicaid spending in future years. These costs are split between the federal and state governments based on the population covered and the statutory matching rate.

TABLE 8—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED BENEFIT, COSTS, AND TRANSFERS

Category	Estimates	Units		
		Year dollar	Discount rate (%)	Period covered
<b>Transfers From Federal Government to Providers</b>				
Annualized Monetized (\$million/year) .....	126.5	2016	7	2016–2020
	126.8	2016	3	2016–2020
<b>Transfers From State Government to Providers</b>				
Annualized Monetized (\$million/year) .....	58.5	2016	7	2016–2020
	59.0	2016	3	2016–2020

**Note.** The displayed numbers are rounded to the nearest thousand and therefore may not add up to the totals.

*F. Regulatory Flexibility Act (RFA)*

The RFA requires agencies to analyze options for regulatory relief for small entities, if a rule has a significant impact on a substantial number of small entities. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than \$7.5 million to \$38.5 million in any 1 year). States are not included in the definition of a small entity. This final rule does not change the rates at which providers would be reimbursed for any additional treatments and services that may be required, and MCOs, PIHPs, and PAHPs will be paid on an actuarially sound basis for any additional coverage that they will be required to provide. As indicated previously in this final rule, the increased costs will be borne by states and the federal government, which are not considered small entities. Therefore, the Secretary has determined that this final rule will not have a significant economic impact on a substantial number of small entities as that term is used in the RFA.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. The Secretary has determined that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

*G. Unfunded Mandates Reform Act (UMRA)*

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA)

also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. Currently, that is approximately \$144 million. UMRA does not address the total cost of a rule. Rather, it focuses on certain categories of cost, mainly those “Federal mandate” costs resulting from (A) imposing enforceable duties on state, local, or tribal governments, or on the private sector, or (B) increasing the stringency of conditions in, or decreasing the funding of, state, local, or tribal governments under entitlement programs. The average state share of total Medicaid spending in 2016 is projected to be 38.2 percent. The total cost impact of this rule is estimated to be \$178.1 million in 2016. Therefore, the total cost to states is projected to be approximately \$68.0 million. Therefore, this final rule is not subject to UMRA.

*H. Federalism*

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a final rule that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has federalism implications.

In the Secretary’s view, this final rule has Federalism implications, because it has direct effects on the states, the relationship between the federal government and states, or on the distribution of power and responsibilities among various levels of government. However, in the Secretary’s view, the Federalism implications of this final rule are substantially mitigated because, with regards to MCOs, ABPs, and CHIP, the Secretary expects that many states already offer benefits under their state plan and MCO contracts that meet or exceed the Federal mental health parity standards that would be implemented in this rule.

Throughout the process of developing these regulations, to the extent feasible within the relevant provisions of the Act, PHS Act and MHPAEA, the Secretary has attempted to balance the latitude for states to structure their state plan services and MCO contracts according to the needs and preferences of the state, and the Congress’ intent to provide uniform minimum protections to Medicaid and CHIP beneficiaries in every state. By doing so, it is the Secretary’s view that this final rule complies with the requirements of Executive Order 13132.

*I. Conclusion*

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

**List of Subjects**

*42 CFR Part 438*

Grant programs—health, Medicaid, Reporting and recordkeeping requirements.

*42 CFR Part 440*

Grant programs—health, Medicaid reporting.

*42 CFR Part 456*

Administrative practice and procedure, Drugs, Grant programs—health, Health facilities, Medicaid, Reporting and recordkeeping requirements.

*42 CFR Part 457*

Administrative practice and procedure, Grant programs—health, Health insurance, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

**PART 438—MANAGED CARE**

- 1. The authority citation for part 438 continues to read as follows:  
**Authority:** Sec. 1102 of the Social Security Act (42 U.S.C. 1302).
- 2. Section 438.6 is amended by revising paragraph (e) and adding paragraph (n) to read as follows:

**§ 438.6 Contract requirements.**

\* \* \* \* \*

(e) *Additional services that may be covered by a MCO, PIHP, or PAHP.* A MCO, PIHP, or PAHP may cover, for enrollees, services that are in addition to those covered under the state plan as follows:

(1) Any services necessary for compliance by the MCO, PIHP, or PAHP with the requirements of subpart K of this part and only to the extent such services are necessary for the MCO, PIHP, or PAHP to comply with § 438.910; and

(2) Any services that the MCO, PIHP, or PAHP voluntarily agrees to provide.

(3) Only the costs associated with services in paragraph (e)(1) of this section may be included when determining the payment rates under paragraph (c) of this section.

\* \* \* \* \*

(n) *Parity in mental health and substance use disorder benefits.* (1) All MCO contracts, and any PIHP and PAHP contracts providing services to MCO enrollees, must provide for services to be delivered in compliance with the requirements of subpart K of this part insofar as those requirements are applicable.

(2) Any State providing any services to MCO enrollees using a delivery system other than the MCO delivery system must provide documentation of how the requirements of subpart K of this part are met with the submission of the MCO contract for review and approval under paragraph (a) of this section.

- 3. Subpart K is added to part 438 to read as follows:

**Subpart K—Parity in Mental Health and Substance Use Disorder Benefits**

- Sec.
- 438.900 Meaning of terms.
- 438.905 Parity requirements for aggregate lifetime and annual dollar limits.
- 438.910 Parity requirements for financial requirements and treatment limitations.
- 438.915 Availability of information.
- 438.920 Applicability.
- 438.930 Compliance dates.

**Subpart K—Parity in Mental Health and Substance Use Disorder Benefits**

**§ 438.900 Meaning of terms.**

For purposes of this subpart, except where the context clearly indicates otherwise, the following terms have the meanings indicated:

*Aggregate lifetime dollar limit* means a dollar limitation on the total amount of specified benefits that may be paid under a MCO, PIHP, or PAHP.

*Annual dollar limit* means a dollar limitation on the total amount of specified benefits that may be paid in a 12-month period under a MCO, PIHP, or PAHP.

*Cumulative financial requirements* are financial requirements that determine whether or to what extent benefits are provided based on accumulated amounts and include deductibles and out-of-pocket maximums. (However, cumulative financial requirements do not include aggregate lifetime or annual dollar limits because these two terms are excluded from the meaning of financial requirements.)

*Early and Periodic Screening, Diagnostic and Treatment (EPSDT) benefits* are benefits defined in section 1905(r) of the Act.

*Financial requirements* include deductibles, copayments, coinsurance, or out-of-pocket maximums. Financial requirements do not include aggregate lifetime or annual dollar limits.

*Medical/surgical benefits* means benefits for items or services for medical conditions or surgical procedures, as defined by the State and in accordance with applicable Federal and State law, but do not include mental health or substance use disorder benefits. Any condition defined by the State as being or as not being a medical/surgical condition must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the International Classification of Diseases (ICD) or State guidelines). Medical/surgical benefits include long term care services.

*Mental health benefits* means benefits for items or services for mental health conditions, as defined by the State and in accordance with applicable Federal and State law. Any condition defined by the State as being or as not being a mental health condition must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the Diagnostic and Statistical Manual of Mental Disorders (DSM), the most current version of the ICD, or State

guidelines). Mental health benefits include long term care services.

*Substance use disorder benefits* means benefits for items or services for substance use disorders, as defined by the State and in accordance with applicable Federal and State law. Any disorder defined by the State as being or as not being a substance use disorder must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the DSM, the most current version of the ICD, or State guidelines). Substance use disorder benefits include long term care services.

*Treatment limitations* include limits on benefits based on the frequency of treatment, number of visits, days of coverage, days in a waiting period, or other similar limits on the scope or duration of treatment. Treatment limitations include both quantitative treatment limitations, which are expressed numerically (such as 50 outpatient visits per year), and nonquantitative treatment limitations, which otherwise limit the scope or duration of benefits for treatment under a plan or coverage. (See § 438.910(d)(2) for an illustrative list of nonquantitative treatment limitations.) A permanent exclusion of all benefits for a particular condition or disorder, however, is not a treatment limitation for purposes of this definition.

**§ 438.905 Parity requirements for aggregate lifetime and annual dollar limits.**

(a) *General parity requirement.* Each MCO, PIHP, and PAHP providing services to MCO enrollees must comply with paragraphs (b), (c), or (e) of this section for all enrollees of a MCO in States that cover both medical/surgical benefits and mental health or substance use disorder benefits under the State plan. This section details the application of the parity requirements for aggregate lifetime and annual dollar limits.

(b) *MCOs, PIHPs, or PAHPs with no limit or limits on less than one-third of all medical/surgical benefits.* If a MCO, PIHP, or PAHP does not include an aggregate lifetime or annual dollar limit on any medical/surgical benefits or includes an aggregate lifetime or annual dollar limit that applies to less than one-third of all medical/surgical benefits provided to enrollees through a contract with the State, it may not impose an aggregate lifetime or annual dollar limit, respectively, on mental health or substance use disorder benefits.

(c) *MCOs, PIHPs, or PAHPs with a limit on at least two-thirds of all medical/surgical benefits.* If a MCO,

PIHP, or PAHP includes an aggregate lifetime or annual dollar limit on at least two-thirds of all medical/surgical benefits provided to enrollees through a contract with the State, it must either—

(1) Apply the aggregate lifetime or annual dollar limit both to the medical/surgical benefits to which the limit would otherwise apply and to mental health or substance use disorder benefits in a manner that does not distinguish between the medical/surgical benefits and mental health or substance use disorder benefits; or

(2) Not include an aggregate lifetime or annual dollar limit on mental health or substance use disorder benefits that is more restrictive than the aggregate lifetime or annual dollar limit, respectively, on medical/surgical benefits.

(d) *Determining one-third and two-thirds of all medical/surgical benefits.*

For purposes of this section, the determination of whether the portion of medical/surgical benefits subject to an aggregate lifetime or annual dollar limit represents one-third or two-thirds of all medical/surgical benefits is based on the total dollar amount of all combinations of MCO, PIHP, and PAHP payments for medical/surgical benefits expected to be paid under the MCO, PIHP, or PAHP for a contract year (or for the portion of a contract year after a change in benefits that affects the applicability of the aggregate lifetime or annual dollar limits). Any reasonable method may be used to determine whether the dollar amount expected to be paid under the MCOs, PIHPs, and PAHPs will constitute one-third or two-thirds of the dollar amount of all payments for medical/surgical benefits.

(e) *MCO, PIHP, or PAHP not described in this section—(1) In general.* A MCO, PIHP, or PAHP that is not described in paragraph (b) or (c) of this section for aggregate lifetime or annual dollar limits on medical/surgical benefits, must either—

(i) Impose no aggregate lifetime or annual dollar limit, on mental health or substance use disorder benefits; or

(ii) Impose an aggregate lifetime or annual dollar limit on mental health or substance use disorder benefits that is no more restrictive than an average limit calculated for medical/surgical benefits in the following manner. The average limit is calculated by taking into account the weighted average of the aggregate lifetime or annual dollar limits, as appropriate, that are applicable to the categories of medical/surgical benefits. Limits based on delivery mechanisms, such as inpatient/outpatient treatment or normal

treatment of common, low-cost conditions (such as treatment of normal births), do not constitute categories for purposes of this paragraph (e)(1)(ii). In addition, for purposes of determining weighted averages, any benefits that are not within a category that is subject to a separately-designated dollar limit under the contract are taken into account as a single separate category by using an estimate of the upper limit on the dollar amount that a MCO, PIHP, or PAHP may reasonably be expected to incur for such benefits, taking into account any other applicable restrictions.

(2) *Weighting.* For purposes of this paragraph (e), the weighting applicable to any category of medical/surgical benefits is determined in the manner set forth in paragraph (d) of this section for determining one-third or two-thirds of all medical/surgical benefits.

**§ 438.910 Parity requirements for financial requirements and treatment limitations.**

(a) *Clarification of terms—(1) Classification of benefits.* When reference is made in this section to a classification of benefits, the term “classification” means a classification as described in paragraph (b)(2) of this section.

(2) *Type of financial requirement or treatment limitation.* When reference is made in this section to a type of financial requirement or treatment limitation, the reference to type means its nature. Different types of financial requirements include deductibles, copayments, coinsurance, and out-of-pocket maximums. Different types of quantitative treatment limitations include annual, episode, and lifetime day and visit limits. See paragraph (d)(2) of this section for an illustrative list of nonquantitative treatment limitations.

(3) *Level of a type of financial requirement or treatment limitation.* When reference is made in this section to a level of a type of financial requirement or treatment limitation, level refers to the magnitude of the type of financial requirement or treatment limitation.

(b) *General parity requirement—(1) General rule and scope.* Each MCO, PIHP and PAHP providing services to MCO enrollees in a State that covers both medical/surgical benefits and mental health or substance use disorder benefits under the State plan, must not apply any financial requirement or treatment limitation to mental health or substance use disorder benefits in any classification that is more restrictive than the predominant financial requirement or treatment limitation of

that type applied to substantially all medical/surgical benefits in the same classification furnished to enrollees (whether or not the benefits are furnished by the same MCO, PIHP, or PAHP). Whether a financial requirement or treatment limitation is a predominant financial requirement or treatment limitation that applies to substantially all medical/surgical benefits in a classification is determined separately for each type of financial requirement or treatment limitation. The application of the rules of this paragraph (b) to financial requirements and quantitative treatment limitations is addressed in paragraph (c) of this section; the application of the rules of this paragraph (b) to nonquantitative treatment limitations is addressed in paragraph (d) of this section.

(2) *Classifications of benefits used for applying rules.* If an MCO enrollee is provided mental health or substance use disorder benefits in any classification of benefits described in this paragraph (b)(2), mental health or substance use disorder benefits must be provided to the enrollee in every classification in which medical/surgical benefits are provided. In determining the classification in which a particular benefit belongs, a MCO, PIHP, or PAHP must apply the same reasonable standards to medical/surgical benefits and to mental health or substance use disorder benefits. To the extent that a MCO, PIHP, or PAHP provides benefits in a classification and imposes any separate financial requirement or treatment limitation (or separate level of a financial requirement or treatment limitation) for benefits in the classification, the rules of this section apply separately for that classification for all financial requirements or treatment limitations. The following classifications of benefits are the only classifications used in applying the rules of this section:

(i) *Inpatient.* Benefits furnished on an inpatient basis.

(ii) *Outpatient.* Benefits furnished on an outpatient basis. See special rules for office visits in paragraph (c)(2) of this section.

(iii) *Emergency care.* Benefits for emergency care.

(iv) *Prescription drugs.* Benefits for prescription drugs. See special rules for multi-tiered prescription drug benefits in paragraph (c)(2) of this section.

(c) *Financial requirements and quantitative treatment limitations—(1) Determining “substantially all” and “predominant”—(i) Substantially all.* For purposes of this section, a type of financial requirement or quantitative treatment limitation is considered to

apply to substantially all medical/surgical benefits in a classification of benefits if it applies to at least two-thirds of all medical/surgical benefits in that classification. If a type of financial requirement or quantitative treatment limitation does not apply to at least two-thirds of all medical/surgical benefits in a classification, then that type cannot be applied to mental health or substance use disorder benefits in that classification.

(ii) *Predominant.* (A) If a type of financial requirement or quantitative treatment limitation applies to at least two-thirds of all medical/surgical benefits in a classification as determined under paragraph (c)(1)(i) of this section, the level of the financial requirement or quantitative treatment limitation that is considered the predominant level of that type in a classification of benefits is the level that applies to more than one-half of medical/surgical benefits in that classification subject to the financial requirement or quantitative treatment limitation.

(B) If, for a type of financial requirement or quantitative treatment limitation that applies to at least two-thirds of all medical/surgical benefits in a classification, there is no single level that applies to more than one-half of medical/surgical benefits in the classification subject to the financial requirement or quantitative treatment limitation, the MCO, PIHP, or PAHP may combine levels until the combination of levels applies to more than one-half of medical/surgical benefits subject to the financial requirement or quantitative treatment limitation in the classification. The least restrictive level within the combination is considered the predominant level of that type in the classification. (For this purpose, a MCO, PIHP, or PAHP may combine the most restrictive levels first, with each less restrictive level added to the combination until the combination applies to more than one-half of the benefits subject to the financial requirement or treatment limitation.)

(iii) *Portion based on MCO, PIHP or PAHP payments.* For purposes of this section, the determination of the portion of medical/surgical benefits in a classification of benefits subject to a financial requirement or quantitative treatment limitation (or subject to any level of a financial requirement or quantitative treatment limitation) is based on the total dollar amount of all combinations of MCO, PIHP, and PAHP payments for medical/surgical benefits in the classification expected to be paid under the MCOs, PIHPs, and PAHPs for a contract year (or for the portion of a

contract year after a change in benefits that affects the applicability of the financial requirement or quantitative treatment limitation).

(iv) *Clarifications for certain threshold requirements.* For any deductible, the dollar amount of MCO, PIHP, or PAHP payments includes all payments for claims that would be subject to the deductible if it had not been satisfied. For any out-of-pocket maximum, the dollar amount of MCO, PIHP, or PAHP payments includes all payments associated with out-of-pocket payments that are taken into account towards the out-of-pocket maximum as well as all payments associated with out-of-pocket payments that would have been made towards the out-of-pocket maximum if it had not been satisfied. Similar rules apply for any other thresholds at which the rate of MCO, PIHP, or PAHP payment changes.

(v) *Determining the dollar amount of MCO, PIHP, or PAHP payments.* Subject to paragraph (c)(1)(iv) of this section, any reasonable method may be used to determine the dollar amount expected to be paid under a MCO, PIHP, or PAHP for medical/surgical benefits subject to a financial requirement or quantitative treatment limitation (or subject to any level of a financial requirement or quantitative treatment limitation).

(2) *Special rules—(i) Multi-tiered prescription drug benefits.* If a MCO, PIHP, or PAHP applies different levels of financial requirements to different tiers of prescription drug benefits based on reasonable factors determined in accordance with the rules in paragraph (d)(1) of this section (relating to requirements for nonquantitative treatment limitations) and without regard to whether a drug is generally prescribed for medical/surgical benefits or for mental health or substance use disorder benefits, the MCO, PIHP, or PAHP satisfies the parity requirements of this section for prescription drug benefits. Reasonable factors include cost, efficacy, generic versus brand name, and mail order versus pharmacy pick-up/delivery.

(ii) *Sub-classifications permitted for office visits, separate from other outpatient services.* For purposes of applying the financial requirement and treatment limitation rules of this section, a MCO, PIHP, or PAHP may divide its benefits furnished on an outpatient basis into the two sub-classifications described in this paragraph (c)(2)(ii). After the sub-classifications are established, the MCO, PIHP or PAHP may not impose any financial requirement or quantitative treatment limitation on mental health or substance use disorder benefits in any

sub-classification that is more restrictive than the predominant financial requirement or quantitative treatment limitation that applies to substantially all medical/surgical benefits in the sub-classification using the methodology set forth in paragraph (c)(1) of this section. Sub-classifications other than these special rules, such as separate sub-classifications for generalists and specialists, are not permitted. The two sub-classifications permitted under this paragraph (c)(2)(ii) are:

(A) Office visits (such as physician visits); and

(B) All other outpatient items and services (such as outpatient surgery, facility charges for day treatment centers, laboratory charges, or other medical items).

(3) *No separate cumulative financial requirements.* A MCO, PIHP, or PAHP may not apply any cumulative financial requirement for mental health or substance use disorder benefits in a classification that accumulates separately from any established for medical/surgical benefits in the same classification.

(4) *Compliance with other cost-sharing rules.* Each MCO, PIHP, and PAHP must meet the cost-sharing requirements in § 438.108 when applying Medicaid cost-sharing.

(d) *Nonquantitative treatment limitations—(1) General rule.* A MCO, PIHP, or PAHP may not impose a nonquantitative treatment limitation for mental health or substance use disorder benefits in any classification unless, under the policies and procedures of the MCO, PIHP, or PAHP as written and in operation, any processes, strategies, evidentiary standards, or other factors used in applying the nonquantitative treatment limitation to mental health or substance use disorder benefits in the classification are comparable to, and are applied no more stringently than, the processes, strategies, evidentiary standards, or other factors used in applying the limitation for medical/surgical benefits in the classification.

(2) *Illustrative list of nonquantitative treatment limitations.* Nonquantitative treatment limitations include –

(i) Medical management standards limiting or excluding benefits based on medical necessity or medical appropriateness, or based on whether the treatment is experimental or investigative;

(ii) Formulary design for prescription drugs;

(iii) For MCOs, PIHPs, or PAHPs with multiple network tiers (such as preferred providers and participating providers), network tier design;

(iv) Standards for provider admission to participate in a network, including reimbursement rates;

(v) MCO, PIHP, or PAHP methods for determining usual, customary, and reasonable charges;

(vi) Refusal to pay for higher-cost therapies until it can be shown that a lower-cost therapy is not effective (also known as fail-first policies or step therapy protocols);

(vii) Exclusions based on failure to complete a course of treatment;

(viii) Restrictions based on geographic location, facility type, provider specialty, and other criteria that limit the scope or duration of benefits for services provided under the MCO, PIHP, or PAHP; and

(ix) Standards for providing access to out-of-network providers.

(3) *Application to out-of-network providers.* Any MCO, PIHP or PAHP providing access to out-of-network providers for medical/surgical benefits within a classification, must use processes, strategies, evidentiary standards, or other factors in determining access to out-of-network providers for mental health or substance use disorder benefits that are comparable to, and applied no more stringently than, the processes, strategies, evidentiary standards, or other factors in determining access to out-of-network providers for medical/surgical benefits.

#### § 438.915 Availability of information.

(a) *Criteria for medical necessity determinations.* The criteria for medical necessity determinations, made by a MCO or by a PIHP or PAHP providing services to an MCO enrollee, for mental health or substance use disorder benefits must be made available by the MCO, PIHP, or PAHP administrator to any enrollee, potential enrollee, or contracting provider upon request. MCOs, PIHPs, and PAHPs operating in compliance with § 438.236(c) will be deemed compliant with the requirements in this paragraph (a).

(b) *Reason for any denial.* The reason for any denial by a MCO, PIHP, or PAHP of reimbursement or payment for services for mental health or substance use disorder benefits in the case of any enrollee must be made available by the MCO, PIHP, or PAHP administrator to the enrollee.

(c) *Provisions of other law.* Compliance with the disclosure requirements in paragraphs (a) and (b) of this section is not determinative of compliance with any other provision of applicable Federal or State law.

#### § 438.920 Applicability.

(a) *MCOs, PIHPs, and PAHPs.* The requirements of this subpart apply to each MCO, PIHP, and PAHP offering services to enrollees of a MCO, in States covering medical/surgical and mental health or substance use disorder services under the State plan. These requirements regarding coverage for services that must be provided to enrollees of an MCO apply regardless of the delivery system of the medical/surgical, mental health, or substance use disorder services under the State plan.

(b) *State responsibilities.* (1) In any instance where the full scope of medical/surgical and mental health and substance use disorder services are not provided through the MCO, the State must review the mental health and substance use disorder and medical/surgical benefits provided through the MCO, PIHP, PAHP, and fee-for service (FFS) coverage to ensure the full scope of services available to all enrollees of the MCO complies with the requirements in this subpart. The State must provide documentation of compliance with requirements in this subpart to the general public and post this information on the State Medicaid Web site by October 2, 2017. Such documentation must be updated prior to any change in MCO, PIHP, PAHP or FFS State plan benefits.

(2) The State must ensure that all services are delivered to the enrollees of the MCO in compliance with this subpart.

(c) *Scope.* This subpart does not—

(1) Require a MCO, PIHP, or PAHP to provide any mental health benefits or substance use disorder benefits beyond what is specified in its contract, and the provision of benefits by a MCO, PIHP, or PAHP for one or more mental health conditions or substance use disorders does not require the MCO, PIHP or PAHP to provide benefits for any other mental health condition or substance use disorder;

(2) Require a MCO, PIHP, or PAHP that provides coverage for mental health or substance use disorder benefits only to the extent required under 1905(a)(4)(D) of the Act to provide additional mental health or substance use disorder benefits in any classification in accordance with this section; or

(3) Affect the terms and conditions relating to the amount, duration, or scope of mental health or substance use disorder benefits under the Medicaid MCO, PIHP, or PAHP contract except as specifically provided in §§ 438.905 and 438.910.

#### § 438.930 Compliance dates.

In general, contracts with MCOs, PIHPs, and PAHPs offering Medicaid State plan services to enrollees, and those entities, must comply with the requirements of this subpart no later than October 2, 2017.

### PART 440—SERVICES: GENERAL PROVISIONS

■ 4. The authority citation for part 440 continues to read as follows:

**Authority:** Sec. 1102 of the Social Security Act (42 U.S.C. 1302).

■ 5. Section 440.395 is added to read as follows:

#### § 440.395 Parity in mental health and substance use disorder benefits.

(a) *Meaning of terms.* For purposes of this section, except where the context clearly indicates otherwise, the following terms have the meanings indicated:

*Aggregate lifetime dollar limit* means a dollar limitation on the total amount of specified benefits that may be paid under an ABP.

*Annual dollar limit* means a dollar limitation on the total amount of specified benefits that may be paid in a 12-month period under an ABP.

*Alternative Benefit Plans (ABPs)* mean benefit packages in one or more of the benchmark coverage packages described in §§ 440.330(a) through (c) and 440.335. Benefits may be delivered through managed care and non-managed care delivery systems. Consistent with the requirements of § 440.385, States must comply with the managed care provisions at section 1932 of the Act and part 438 of this chapter, if benchmark and benchmark-equivalent benefits are provided through a managed care entity.

*Cumulative financial requirements* are financial requirements that determine whether or to what extent benefits are provided based on accumulated amounts and include deductibles and out-of-pocket maximums. (However, cumulative financial requirements do not include aggregate lifetime or annual dollar limits because these two terms are excluded from the meaning of financial requirements.)

*EPSDT* means benefits defined in section 1905(r) of the Act.

*Financial requirements* include deductibles, copayments, coinsurance, or out-of-pocket maximums. Financial requirements do not include aggregate lifetime or annual dollar limits.

*Medical/surgical benefits* means benefits for items or services for medical conditions or surgical procedures, as

defined by the State under the terms of the ABP and in accordance with applicable Federal and State law, but does not include mental health or substance use disorder benefits. Any condition defined by the state as being or as not being a medical/surgical condition must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the International Classification of Diseases (ICD) or State guidelines). Medical/surgical benefits include long term services.

*Mental health benefits* means benefits for items or services for mental health conditions, as defined by the State under the terms of the ABP and in accordance with applicable Federal and State law. Any condition defined by the State as being or as not being a mental health condition must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the Diagnostic and Statistical Manual of Mental Disorders (DSM), the most current version of the ICD, or State guidelines). Mental health benefits include long term care services.

*Substance use disorder benefits* means benefits for items or services for substance use disorder, as defined by the State under the terms of the ABP and in accordance with applicable Federal and State law. Any disorder defined by the State as being or as not being a substance use disorder must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the DSM, the most current version of the ICD, or State guidelines). Substance use disorder benefits include long term care services.

*Treatment limitations* include limits on benefits based on the frequency of treatment, number of visits, days of coverage, days in a waiting period, or other similar limits on the scope or duration of treatment. Treatment limitations include both quantitative treatment limitations, which are expressed numerically (such as 50 outpatient visits per year), and nonquantitative treatment limitations, which otherwise limit the scope or duration of benefits for treatment under an ABP. (See paragraph (b)(4)(ii) of this section for an illustrative list of nonquantitative treatment limitations.) A permanent exclusion of all benefits for a particular condition or disorder, however, is not a treatment limitation for purposes of this definition.

(b) *Parity requirements for financial requirements and treatment limitations*—(1) *Clarification of terms*—

(i) *Classification of benefits.* When reference is made in this paragraph (b) to a classification of benefits, the term “classification” means a classification as described in paragraph (b)(2)(ii) of this section.

(ii) *Type of financial requirement or treatment limitation.* When reference is made in this paragraph (b) to a type of financial requirement or treatment limitation, the reference to type means its nature. Different types of financial requirements include deductibles, copayments, coinsurance, and out-of-pocket maximums. Different types of quantitative treatment limitations include annual, episode, and lifetime day and visit limits. See paragraph (b)(4)(ii) of this section for an illustrative list of nonquantitative treatment limitations.

(iii) *Level of a type of financial requirement or treatment limitation.* When reference is made in this paragraph (b) to a level of a type of financial requirement or treatment limitation, level refers to the magnitude of the type of financial requirement or treatment limitation.

(2) *General parity requirement*—(i) *General rule.* A State may not apply within an ABP any financial requirement or treatment limitation to mental health or substance use disorder benefits in any classification that is more restrictive than the predominant financial requirement or treatment limitation of that type applied to substantially all medical/surgical benefits in the same classification. Whether a financial requirement or treatment limitation is a predominant financial requirement or treatment limitation that applies to substantially all medical/surgical benefits in a classification is determined separately for each type of financial requirement or treatment limitation. The application of the rules of this paragraph (b)(2) to financial requirements and quantitative treatment limitations is addressed in paragraph (b)(3) of this section; the application of the rules of this paragraph (b)(2) to nonquantitative treatment limitations is addressed in paragraph (b)(4) of this section.

(ii) *Classifications of benefits used for applying rules.* ABPs must include benefits in every classification of benefits described in this paragraph (b)(2)(ii) in which medical/surgical benefits are provided. In determining the classification in which a particular benefit belongs, the State must apply the same reasonable standards to medical/surgical benefits and to mental health or substance use disorder benefits. To the extent that a State provides ABP

benefits in a classification and imposes any separate financial requirement or treatment limitation (or separate level of a financial requirement or treatment limitation) for benefits in the classification, the rules of this paragraph (b) apply separately for that classification for all financial requirements or treatment limitations.

The following classifications of benefits are the only classifications used in applying the rules of this paragraph (b):

(A) *Inpatient.* Benefits furnished on an inpatient basis.

(B) *Outpatient.* Benefits furnished on an outpatient basis. See special rules for office visits in paragraph (b)(3)(ii)(B)(1) of this section.

(C) *Emergency care.* Benefits for emergency care.

(D) *Prescription drugs.* Benefits for prescription drugs. See special rules for multi-tiered prescription drug benefits in paragraph (b)(3)(i) of this section.

(3) *Financial requirements and quantitative treatment limitations*—(i) *Determining “substantially all” and “predominant”*—(A) *Substantially all.* For purposes of this paragraph (b), a type of financial requirement or quantitative treatment limitation is considered to apply to substantially all medical/surgical benefits in a classification of benefits if it applies to at least two-thirds of all medical/surgical benefits in that classification. If a type of financial requirement or quantitative treatment limitation does not apply to at least two-thirds of all medical/surgical benefits in a classification, then that type cannot be applied to mental health or substance use disorder benefits in that classification.

(B) *Predominant*—(1) If a type of financial requirement or quantitative treatment limitation applies to at least two-thirds of all medical/surgical benefits in a classification as determined under paragraph (b)(3)(i)(A) of this section, the level of the financial requirement or quantitative treatment limitation that is considered the predominant level of that type in a classification of benefits is the level that applies to more than one-half of medical/surgical benefits in that classification subject to the financial requirement or quantitative treatment limitation.

(2) If, for a type of financial requirement or quantitative treatment limitation that applies to at least two-thirds of all medical/surgical benefits in a classification, there is no single level that applies to more than one-half of medical/surgical benefits in the classification subject to the financial requirement or quantitative treatment

limitation, the State may combine levels until the combination of levels applies to more than one-half of medical/surgical benefits subject to the financial requirement or quantitative treatment limitation in the classification. The least restrictive level within the combination is considered the predominant level of that type in the classification. (For this purpose, a State may combine the most restrictive levels first, with each less restrictive level added to the combination until the combination applies to more than one-half of the benefits subject to the financial requirement or treatment limitation.)

(C) *Portion based on ABP payments.* For purposes of this paragraph (b), the determination of the portion of medical/surgical benefits in a classification of benefits subject to a financial requirement or quantitative treatment limitation (or subject to any level of a financial requirement or quantitative treatment limitation) is based on the dollar amount of all ABP payments for medical/surgical benefits in the classification expected to be paid under the ABP for the plan year (or for the portion of the plan year after a change in ABP benefits that affects the applicability of the financial requirement or quantitative treatment limitation).

(D) *Clarifications for certain threshold requirements.* For any deductible, the dollar amount of ABP payments includes all payments for claims that would be subject to the deductible if it had not been satisfied. For any out-of-pocket maximum, the dollar amount of ABP payments includes all payments associated with out-of-pocket payments that are taken into account towards the out-of-pocket maximum as well as all payments associated with out-of-pocket payments that would have been made towards the out-of-pocket maximum if it had not been satisfied. Similar rules apply for any other thresholds at which the rate of payment changes.

(E) *Determining the dollar amount of ABP payments.* Subject to paragraph (b)(3)(i)(D) of this section, any reasonable method may be used to determine the dollar amount expected to be paid for medical/surgical benefits subject to a financial requirement or quantitative treatment limitation (or subject to any level of a financial requirement or quantitative treatment limitation).

(ii) *Special rules—(A) Multi-tiered prescription drug benefits.* If a State or plan administrator applies different levels of financial requirements to different tiers of prescription drug benefits based on reasonable factors determined in accordance with the rules

in paragraph (b)(4)(i) of this section (relating to requirements for nonquantitative treatment limitations) and without regard to whether a drug is generally prescribed for medical/surgical benefits or for mental health or substance use disorder benefits, the ABP satisfies the parity requirements of this paragraph (b) for prescription drug benefits. Reasonable factors include cost, efficacy, generic versus brand name, and mail order versus pharmacy pick-up/delivery.

(B) *Sub-classifications permitted for office visits, separate from other outpatient services.* For purposes of applying the financial requirement and treatment limitation rules of this paragraph (b), a State may divide its benefits furnished on an outpatient basis into the two sub-classifications described in this paragraph (b)(3)(ii)(B). After the sub-classifications are established, the State may not impose any financial requirement or quantitative treatment limitation on mental health or substance use disorder benefits in any sub-classification that is more restrictive than the predominant financial requirement or quantitative treatment limitation that applies to substantially all medical/surgical benefits in the sub-classification using the methodology set forth in paragraph (b)(3)(i) of this section. Sub-classifications other than these special rules, such as separate sub-classifications for generalists and specialists, are not permitted. The two sub-classifications permitted under this paragraph (b)(3)(ii)(B) are:

(1) Office visits (such as physician visits); and

(2) All other outpatient items and services (such as outpatient surgery, laboratory services, or other medical items).

(iii) *No separate cumulative financial requirements.* A State may not apply any cumulative financial requirement for mental health or substance use disorder benefits in a classification that accumulates separately from any established for medical/surgical benefits in the same classification.

(iv) *Compliance with other cost-sharing rules.* States must meet the requirements of §§ 447.50 through 447.57 of this chapter when applying Medicaid cost-sharing.

(4) *Nonquantitative treatment limitations—(i) General rule.* A State may not impose a nonquantitative treatment limitation for mental health or substance use disorder benefits in any classification unless, under the terms of the ABP as written and in operation, any processes, strategies, evidentiary standards, or other factors used in

applying the nonquantitative treatment limitation to mental health or substance use disorder benefits in the classification are comparable to, and are applied no more stringently than, the processes, strategies, evidentiary standards, or other factors used in applying the limitation for medical/surgical benefits in the classification.

(ii) *Illustrative list of nonquantitative treatment limitations.* Nonquantitative treatment limitations include—

(A) Medical management standards limiting or excluding benefits based on medical necessity or medical appropriateness, or based on whether the treatment is experimental or investigative;

(B) Formulary design for prescription drugs;

(C) Standards for provider admission to participate in a network, including reimbursement rates;

(D) Methods for determining usual, customary, and reasonable charges;

(E) Refusal to pay for higher-cost therapies until it can be shown that a lower-cost therapy is not effective (also known as fail-first policies or step therapy protocols);

(F) Exclusions based on failure to complete a course of treatment; and

(G) Restrictions based on geographic location, facility type, provider specialty, and other criteria that limit the scope or duration of benefits or services provided under the ABP.

(c) *ABP providing EPSDT benefits.* An ABP that provides EPSDT benefits is deemed to be compliant with the parity requirements for financial requirements and treatment limitations with respect to individuals entitled to such benefits. Annual or lifetime limits are not permissible in EPSDT benefits.

(d) *Availability of information—(1) Criteria for medical necessity determinations.* The criteria for medical necessity determinations made by the State for beneficiaries served through the ABP for mental health or substance use disorder benefits must be made available by the State to any beneficiary or Medicaid provider upon request.

(2) *Reason for any denial.* The reason for any denial made by the State in the case of a beneficiary served through an ABP of reimbursement or payment for services for mental health or substance use disorder benefits must be made available by the State to the beneficiary.

(3) *Provisions of other law.* Compliance with the disclosure requirements in paragraphs (d)(1) and (2) of this section is not determinative of compliance with any other provision of applicable Federal or State law.

(e) *Applicability—(1) ABPs.* The requirements of this section apply to

States providing benefits through ABPs. For those States providing ABPs through an MCO, PIHP, or PAHP, the rules of 42 CFR part 438, subpart K also apply, and approved contracts will be viewed as evidence of compliance with the requirements of this section.

(2) *Scope.* This section does not—

(i) Require a State to provide any specific mental health benefits or substance use disorder benefits; however, in providing coverage through an ABP, the State must include EHBs, including the ten EHBs as required in § 440.347, which include mental health and substance use disorder benefits; or

(ii) Affect the terms and conditions relating to the amount, duration, or scope of mental health or substance use disorder benefits under the ABP except as specifically provided in paragraph (b) of this section.

(3) *State plan requirement.* If a State plan provides for an ABP, the State must provide sufficient information in ABP State plan amendment requests to assure compliance with the requirements of this subpart.

(4) *Compliance dates—(i) In general.* ABP coverage offered by States must comply with the requirements of this section no later than October 2, 2017.

(ii) [Reserved]

#### PART 456—UTILIZATION CONTROL

■ 6. The authority citation for part 456 continues to read as follows:

**Authority:** Sec. 1102 of the Social Security Act (42 U.S.C. 1302), unless otherwise noted.

##### § 456.171 [Removed and Reserved]

■ 7. Section 456.171 is removed and reserved.

#### PART 457—ALLOTMENTS AND GRANTS TO STATES

■ 8. The authority citation for part 457 continues to read as follows:

**Authority:** Section 1102 of the Social Security Act (42 U.S.C. 1302).

■ 9. Section 457.496 is added to subpart D to read as follows:

##### § 457.496 Parity in mental health and substance use disorder benefits.

(a) *Meaning of terms.* For purposes of this section, except where the context clearly indicates otherwise, the following terms have the meanings indicated:

*Aggregate lifetime dollar limit* means a dollar limitation on the total amount of specified benefits that may be paid under a State plan or a Managed Care Entity (MCE) (as defined at § 457.10) that contracts with the State plan. State plans must meet the requirements of § 457.480.

*Annual dollar limit* means a dollar limitation on the total amount of specified benefits that may be paid in a 12-month period under a State plan or a MCE that contracts with a State plan. State plans must meet the requirements at § 457.480.

*Cumulative financial requirements* are financial requirements that determine whether or to what extent benefits are provided based on accumulated amounts and include deductibles and out-of-pocket maximums. (However, cumulative financial requirements do not include aggregate lifetime or annual dollar limits because these two terms are excluded from the meaning of financial requirements.)

*Early and Periodic Screening, Diagnostic and Treatment (EPSDT) benefits* has the meaning defined in section 1905(r) of the Act and must be provided in accordance with section 1902(a)(43) of the Act.

*Financial requirements* include deductibles, copayments, coinsurance, or out-of-pocket maximums. Financial requirements do not include aggregate lifetime or annual dollar limits.

*Medical/surgical benefits* means benefits for items or services for medical conditions or surgical procedures, as defined under the terms of the State plan in accordance with applicable Federal and State law, but does not include mental health or substance use disorder benefits. Any condition defined by the State plan as being or not being a medical/surgical condition must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the International Classification of Diseases (ICD) or generally applicable State guidelines). Medical/surgical benefits include long term care services.

*Mental health benefits* means benefits for items or services that treat or otherwise address mental health conditions, as defined under the terms of the State plan in accordance with applicable Federal and State law, and consistent with generally recognized independent standards of current medical practice. Standards of current medical practice can be based on the most current version of the DSM, the most current version of the ICD, or generally applicable State guidelines. The term includes long term care services.

*State Plan* has the meaning assigned at § 457.10 and § 457.50.

*Substance use disorder benefits* means benefits for items or services for substance use disorder, as defined under the terms of the State plan in

accordance with applicable Federal and State law, and consistent with generally recognized independent standards of current medical practice. Standards of current medical practice can be based on the most current version of the DSM, the most current version of the ICD, or generally applicable State guidelines. The term includes long term care services.

*Treatment limitations* include limits on benefits based on the frequency of treatment, number of visits, days of coverage, days in a waiting period, or other similar limits on the scope or duration of treatment. Treatment limitations include both quantitative treatment limitations, which are expressed numerically (such as 50 outpatient visits per year), and nonquantitative treatment limitations, which otherwise limit the scope or duration of benefits for treatment under the State plan. (See paragraph (d)(4)(ii) of this section for an illustrative list of nonquantitative treatment limitations.) A permanent exclusion of all benefits for a particular condition or disorder, however, is not a treatment limitation for purposes of this definition.

(b) *State plan providing EPSDT benefits.* (1) A State child health plan is deemed to be in compliance with this section if—

(i) The State elects in the State child health plan to cover Secretary-approved coverage defined in § 457.450(a) that includes all EPSDT benefits, as defined in section 1905(r) of the Act, in accordance with the requirement applied under section 1905(r)(5) of the Act to provide necessary health care, diagnostic services, treatment, and other measures described in section 1905(a) of the Act to correct or ameliorate defects and physical and mental illnesses and conditions discovered by the screening services, as well as the informing and administrative requirements under 1902(a)(43) of the Act and the approved State Medicaid plan; and

(ii) The State child health plan does not exclude EPSDT benefits for any particular condition, disorder, or diagnosis.

(2) The child health plan must include a description of how the State will comply with paragraph (b)(1)(i) of this section.

(3) If a State has elected in its state plan to cover EPSDT benefits only for certain populations enrolled in the state child health plan, the State is deemed compliant with this section only with respect to such children.

(c) *Parity requirements for aggregate lifetime and annual dollar limits.* This paragraph (c) details the application of the parity requirements for aggregate

lifetime and annual dollar limits. A State plan that provides both medical/surgical benefits and mental health or substance use disorder benefits must comply with paragraph (c)(1), (2), or (4) of this section.

(1) *Plan with no limit or limits on less than one-third of all medical/surgical benefits.* If a State plan does not include an aggregate lifetime or annual dollar limit on any medical/surgical benefits or includes an aggregate lifetime or annual dollar limit that applies to less than one-third of all medical/surgical benefits, it may not impose an aggregate lifetime or annual dollar limit, respectively, on mental health or substance use disorder benefits.

(2) *State plans with a limit on at least two-thirds of all medical/surgical benefits.* If a State plan includes an aggregate lifetime or annual dollar limit on at least two-thirds of all medical/surgical benefits, it must either—

(i) Apply the aggregate lifetime or annual dollar limit both to the medical/surgical benefits to which the limit would otherwise apply and to mental health or substance use disorder benefits in a manner that does not distinguish between the medical/surgical benefits and mental health or substance use disorder benefits; or

(ii) Not include an aggregate lifetime or annual dollar limit on mental health or substance use disorder benefits that is more restrictive than the aggregate lifetime or annual dollar limit, respectively, on medical/surgical benefits. (For cumulative limits other than aggregate lifetime or annual dollar limits, see paragraph (d)(3)(iii) of this section prohibiting separately accumulating cumulative financial requirements.)

(3) *Determining one-third and two-thirds of all medical/surgical benefits.* For purposes of this paragraph (c), the determination of whether the portion of medical/surgical benefits subject to an aggregate lifetime or annual dollar limit represents one-third or two-thirds of all medical/surgical benefits is based on the dollar amount of all plan payments for medical/surgical benefits expected to be paid under the State plan for the State plan year (or for the portion of the plan year after a change in plan benefits that affects the applicability of the aggregate lifetime or annual dollar limits). Any reasonable method may be used to determine whether the dollar amount expected to be paid under the State plan will constitute one-third or two-thirds of the dollar amount of all plan payments for medical/surgical benefits.

(4) *Plan not described in this section—(i) In general.* A State plan that is not described in paragraph (c)(1) or

(2) of this section for aggregate lifetime or annual dollar limits on medical/surgical benefits, must either—

(A) Impose no aggregate lifetime or annual dollar limit, as appropriate, on mental health or substance use disorder benefits; or

(B) Impose an aggregate lifetime or annual dollar limit on mental health or substance use disorder benefits that is no more restrictive than an average limit calculated for medical/surgical benefits in the following manner. The average limit is calculated by taking into account the weighted average of the aggregate lifetime or annual dollar limits, as appropriate, that are applicable to the categories of medical/surgical benefits. Limits based on delivery systems, such as inpatient/outpatient treatment or normal treatment of common, low-cost conditions (such as treatment of normal births), do not constitute categories for purposes of this paragraph (c)(4)(i)(B). In addition, for purposes of determining weighted averages, any benefits that are not within a category that is subject to a separately-designated dollar limit under the plan are taken into account as a single separate category by using an estimate of the upper limit on the dollar amount that a plan may reasonably be expected to incur for such benefits, taking into account any other applicable restrictions under the plan.

(ii) *Weighting.* For purposes of this paragraph (c)(4), the weighting applicable to any category of medical/surgical benefits is determined in the manner set forth in paragraph (c)(3) of this section for determining one-third or two-thirds of all medical/surgical benefits.

(d) *Parity requirements for financial requirements and treatment limitations—(1) Clarification of terms—*

(i) *Classification of benefits.* When reference is made in this paragraph (d) to a classification of benefits, the term “classification” means a classification as described in paragraph (d)(2)(ii) of this section.

(ii) *Type of financial requirement or treatment limitation.* When reference is made in this paragraph (d) to a type of financial requirement or treatment limitation, the reference to type means its nature. Different types of financial requirements include deductibles, copayments, coinsurance, and out-of-pocket maximums. Different types of quantitative treatment limitations include annual, episode, and lifetime day and visit limits. See paragraph (d)(4)(ii) of this section for an illustrative list of nonquantitative treatment limitations.

(iii) *Level of a type of financial requirement or treatment limitation.* When reference is made in this paragraph (d) to a level of a type of financial requirement or treatment limitation, level refers to the magnitude of the type of financial requirement or treatment limitation.

(2) *General parity requirement—(i) General rule.* A State plan or a MCE that contracts with CHIP through its State plan that provides both medical/surgical benefits and mental health or substance use disorder benefits, including when such benefits are delivered through an MCE, may not apply any financial requirement or treatment limitation to mental health or substance use disorder benefits in any classification that is more restrictive than the predominant financial requirement or treatment limitation of that type applied to substantially all medical/surgical benefits in the same classification. Whether a financial requirement or treatment limitation is a predominant financial requirement or treatment limitation that applies to substantially all medical/surgical benefits in a classification is determined separately for each type of financial requirement or treatment limitation. The application of the rules of this paragraph (d)(2) to financial requirements and quantitative treatment limitations is addressed in paragraph (d)(3) of this section; the application of the rules of this paragraph (d)(2) to nonquantitative treatment limitations is addressed in paragraph (d)(4) of this section.

(ii) *Classifications of benefits used for applying rules.* If a State plan provides mental health or substance use disorder benefits in any classification of benefits described in this paragraph (d)(2)(ii), mental health or substance use disorder benefits must be provided in every classification in which medical/surgical benefits are provided. In determining the classification in which a particular benefit belongs, the same reasonable standards must apply to medical/surgical benefits and to mental health or substance use disorder benefits. To the extent that a State plan provides benefits in a classification and imposes any separate financial requirement or treatment limitation (or separate level of a financial requirement or treatment limitation) for benefits in the classification, the rules of this paragraph (d) apply separately for that classification for all financial requirements or treatment limitations. The following classifications of benefits are the only classifications used in applying the rules of this paragraph (d):

(A) *Inpatient.* Benefits furnished on an inpatient basis.

(B) *Outpatient*. Benefits furnished on an outpatient basis. See special rules for office visits in paragraph (d)(3)(iii) of this section.

(C) *Emergency care*. Benefits for emergency care.

(D) *Prescription drugs*. Benefits for prescription drugs. See special rules for multi-tiered prescription drug benefits in paragraph (d)(3)(iii) of this section.

(3) *Financial requirements and quantitative treatment limitations*—(i) *Determining “substantially all” and “predominant”*—(A) *Substantially all*. For purposes of this paragraph (d), a type of financial requirement or quantitative treatment limitation is considered to apply to substantially all medical/surgical benefits in a classification of benefits if it applies to at least two-thirds of all medical/surgical benefits in that classification. If a type of financial requirement or quantitative treatment limitation does not apply to at least two-thirds of all medical/surgical benefits in a classification, then that type cannot be applied to mental health or substance use disorder benefits in that classification.

(B) *Predominant*. (1) If a type of financial requirement or quantitative treatment limitation applies to at least two-thirds of all medical/surgical benefits in a classification as determined under paragraph (d)(3)(i)(A) of this section, the level of the financial requirement or quantitative treatment limitation that is considered the predominant level of that type in a classification of benefits is the level that applies to more than one-half of medical/surgical benefits in that classification subject to the financial requirement or quantitative treatment limitation.

(2) If, for a type of financial requirement or quantitative treatment limitation that applies to at least two-thirds of all medical/surgical benefits in a classification, there is no single level that applies to more than one-half of medical/surgical benefits in the classification subject to the financial requirement or quantitative treatment limitation, the State plan (or health insurance issuer) may combine levels until the combination of levels applies to more than one-half of medical/surgical benefits subject to the financial requirement or quantitative treatment limitation in the classification. The least restrictive level within the combination is considered the predominant level of that type in the classification. (For this purpose, a State plan may combine the most restrictive levels first, with each less restrictive level added to the combination until the combination

applies to more than one-half of the benefits subject to the financial requirement or treatment limitation.)

(C) *Portion based on plan payments*. For purposes of this paragraph (d), the determination of the portion of medical/surgical benefits in a classification of benefits subject to a financial requirement or quantitative treatment limitation (or subject to any level of a financial requirement or quantitative treatment limitation) is based on the dollar amount of all State plan payments and combinations of MCE payments for medical/surgical benefits in the classification expected to be paid under the plan or MCE or combination that contracts with the State plan for the plan year (or for the portion of the plan year after a change in plan benefits that affects the applicability of the financial requirement or quantitative treatment limitation).

(D) *Clarifications for certain threshold requirements*. For any deductible, the dollar amount of a State plan payments includes all plan payments for claims that would be subject to the deductible if it had not been satisfied. In accordance with the cumulative cost-sharing maximum in § 457.560, or any other out-of-pocket maximum in the State plan, the dollar amount of plan payments includes all State plan payments associated with out-of-pocket payments that are taken into account towards the out-of-pocket maximum as well as all plan payments associated with out-of-pocket payments that would have been made towards the out-of-pocket maximum if it had not been satisfied. Similar rules apply for any other thresholds at which the rate of health plan payment changes.

(E) *Determining the dollar amount of State plan payments*. Subject to paragraph (d)(3)(i)(D) of this section, any reasonable method may be used to determine the dollar amount expected to be paid under a State plan for medical/surgical benefits subject to a financial requirement or quantitative treatment limitation (or subject to any level of a financial requirement or quantitative treatment limitation).

(ii) *Special rules*—(A) *Multi-tiered prescription drug benefits*. If a State plan applies different levels of financial requirements to different tiers of prescription drug benefits based on reasonable factors determined in accordance with the rules in paragraph (d)(4)(i) of this section (relating to requirements for nonquantitative treatment limitations) and without regard to whether a drug is generally prescribed for medical/surgical benefits or for mental health or substance use disorder benefits, the health plan

satisfies the parity requirements of this paragraph (d) for prescription drug benefits. Reasonable factors include cost, efficacy, generic versus brand name, and mail order versus pharmacy pick-up/delivery.

(B) *Sub-classifications permitted for office visits, separate from other outpatient services*. For purposes of applying the financial requirement and treatment limitation rules of this paragraph (d), a State plan may divide its benefits furnished on an outpatient basis into the two sub-classifications described in this paragraph (d)(3)(ii)(B). After the sub-classifications are established, the State plan may not impose any financial requirement or quantitative treatment limitation on mental health or substance use disorder benefits in any sub-classification that is more restrictive than the predominant financial requirement or quantitative treatment limitation that applies to substantially all medical/surgical benefits in the sub-classification using the methodology set forth in paragraph (d)(3)(i) of this section. Sub-classifications other than these special rules, such as separate sub-classifications for generalists and specialists, are not permitted. The two sub-classifications permitted under this paragraph (d)(3)(ii)(B) are:

(1) Office visits (such as physician visits); and

(2) All other outpatient items and services (such as outpatient surgery, facility charges for day treatment centers, laboratory charges, or other medical items).

(iii) *No separate cumulative financial requirements*. A State plan may not apply any cumulative financial requirement for mental health or substance use disorder benefits in a classification that accumulates separately from any established for medical/surgical benefits in the same classification.

(4) *Nonquantitative treatment limitations*—(i) *General rule*. A State plan may not impose a nonquantitative treatment limitation for mental health or substance use disorder benefits in any classification unless, under the terms of the CHIP State plan as written and in operation, any processes, strategies, evidentiary standards, or other factors used in applying the nonquantitative treatment limitation to mental health or substance use disorder benefits in the classification are comparable to, and are applied no more stringently than, the processes, strategies, evidentiary standards, or other factors used in applying the limitation for medical/surgical benefits in the classification.

(ii) *Illustrative list of nonquantitative treatment limitations.* Nonquantitative treatment limitations include—

(A) Medical management standards limiting or excluding benefits based on medical necessity or medical appropriateness, or based on whether the treatment is experimental or investigative;

(B) Formulary design for prescription drugs;

(C) For plans with multiple network tiers (such as preferred providers and participating providers), network tier design;

(D) Standards for provider admission to participate in a network, including reimbursement rates;

(E) Plan methods for determining usual, customary, and reasonable charges;

(F) Refusal to pay for higher-cost therapies until it can be shown that a lower-cost therapy is not effective (also known as fail-first policies or step therapy protocols);

(G) Exclusions based on failure to complete a course of treatment;

(H) Restrictions based on geographic location, facility type, provider specialty, and other criteria that limit the scope or duration of benefits for services provided under the plan or coverage; and

(I) Standards for providing access to out-of-network providers.

(5) *Application to out-of-network providers.* Any State plan providing access to out-of-network providers for medical/surgical benefits within a classification must use processes, strategies, evidentiary standards, or other factors in determining access to out-of-network providers for mental health or substance use disorder benefits that are comparable to, and applied no more stringently than, the processes, strategies, evidentiary standards, or other factors in

determining access to out-of-network providers for medical/surgical benefits.

(e) *Availability of plan information—*

(1) *Criteria for medical necessity determinations.* The criteria for medical necessity determinations made under a State plan including when benefits are furnished through a MCE contractor for mental health or substance use disorder benefits must be made available by the plan administrator (or the State offering the coverage) to any current enrollee or potential enrollee or contracting provider upon request. Health plans operating in compliance with § 438.236(c) of this chapter will be deemed compliant with the requirements in this paragraph (e).

(2) *Reason for any denial.* The reason for any denial under a health plan of reimbursement or payment for services for mental health or substance use disorder benefits in the case of any enrollee must be made available by the plan administrator or the State to the enrollee.

(3) *Provisions of other law.* Compliance with the disclosure requirements in paragraphs (e)(1) and (2) of this section is not determinative of compliance with any other provision of applicable Federal or State law.

(f) *Applicability—*(1) *State plans.* The requirements of this section apply to State plans offering medical/surgical benefits and mental health or substance use disorder benefits to their enrollees including when benefits are furnished under a contract with MCEs. If, under an arrangement or arrangements to provide State plan benefits any enrollee can simultaneously receive coverage for medical/surgical benefits and coverage for mental health or substance use disorder benefits, then the requirements of this section apply separately for each combination of medical/surgical benefits and of mental health or

substance use disorder benefits that any enrollee can simultaneously receive from the State.

(i) *Standard for defining benefits.* States must indicate the standard used for defining the following benefits in the State plan:

(A) Medical/surgical benefits.

(B) Mental health benefits.

(C) Substance use disorder benefits.

(ii) [Reserved]

(2) *Scope.* This section does not—

(i) Require a State plan or a MCE that contracts with a State plan to provide any mental health benefits or substance use disorder benefits, and the provision of benefits by a State plan or a MCE that contracts with a State plan for one or more mental health conditions or substance use disorders does not require the plan or health insurance coverage under this section to provide benefits for any other mental health condition or substance use disorder;

(ii) Affect the terms and conditions relating to the amount, duration, or scope of mental health or substance use disorder benefits under the State plan or a MCE that contracts with a CHIP State plan except as specifically provided in paragraphs (c) and (d) of this section.

(g) *Compliance dates—*(1) *In general.* State plans (including those that contract with a MCE) must comply with the requirements of this section no later than October 2, 2017.

(2) [Reserved].

Dated: February 4, 2016.

**Andrew M. Slavitt,**

*Acting Administrator, Centers for Medicare & Medicaid Services.*

Dated: February 22, 2016.

**Sylvia M. Burwell,**

*Secretary, Department of Health and Human Services.*

**Public Laws Electronic Notification Service (PENS)**

---

**PENS** is a free electronic mail notification service of newly

enacted public laws. To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html>

**Note:** This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
