OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 81 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

[Docket No. APHIS–2014–0088]

RIN 0579–AE05

Mexican Hass Avocado Import Program

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: Commercial consignments of Hass avocado fruit are currently authorized entry into the continental United States, Hawaii, and Puerto Rico from the Mexican State of Michoacán under a systems approach to mitigate against quarantine pests of concern. We are amending the regulations to allow the importation of fresh Hass avocado fruit into the continental United States, Hawaii, and Puerto Rico from all of Mexico, provided individual Mexican States meet the requirements set out in the regulations and the operational workplan. Initially, this action would only apply to the Mexican State of Jalisco. With the exception of a clarification of the language concerning when sealed, insect-proof containers would be required to be used in shipping and the removal of mandatory fruit cutting at land and maritime borders, the current systems approach will not change. The current systems approach, which includes requirements for orchard certification, traceback labeling, pre-harvest orchard surveys, orchard sanitation, post-harvest safeguards, fruit cutting and inspection at the packinghouse, port-of-arrival inspection, and clearance activities, will be required for importation of fresh Hass avocado fruit from all approved areas of Mexico. The fruit will also be required to be imported in commercial consignments and accompanied by a phytosanitary certificate issued by the national plant protection organization of Mexico with an additional declaration stating that the consignment was produced in accordance with the systems approach described in the operational workplan. This final rule will allow for the importation of fresh Hass avocado fruit from Mexico while continuing to provide protection against the introduction of plant pests into the continental United States, Hawaii, and Puerto Rico.

DATES: Effective June 27, 2016.

FOR FURTHER INFORMATION CONTACT: Mr. David B. Lamb, Senior Regulatory Policy Specialist, RPM, PPQ, APHIS, 4700 River Road, Unit 133, Riverdale, MD 20737–1231; (301) 851–2103.

SUPPLEMENTARY INFORMATION:

Background

Under the regulations in ''Subpart—Fruits and Vegetables'' (7 CFR 319.56 through 319.56–75), the Animal and Plant Health Inspection Service (APHIS) prohibits or restricts the importation of fruits and vegetables into the United States from certain parts of the world to prevent plant pests from being introduced into and spread within the United States. The current requirements for allowing importation of fresh Hass avocado fruit into the United States from Michoacán, Mexico, are described in § 319.56–30. No other Mexican States are currently allowed to export fresh Hass avocado fruit into the United States. Those current requirements include pest surveys and pest risk-reducing practices, treatment, packinghouse procedures, inspection, and shipping procedures.

On February 18, 2015, we published in the **Federal Register** (80 FR 8561–8564, Docket No. APHIS–2014–0088) a proposed rule [1] to amend the regulations to allow fresh Hass avocado fruit to be imported from all of Mexico into the continental United States, Hawaii, and Puerto Rico. Any Mexican State wishing to export fresh Hass avocado fruit to the continental United States, Hawaii, and Puerto Rico will be required to meet the requirements set out in the regulations for eligibility to ship fresh Hass avocado fruit into the continental United States, Hawaii, and Puerto Rico. Specifically, these requirements are found in § 319.56–30(c) and include orchard certification, traceback labeling, pre-harvest orchard surveys, orchard sanitation, post-harvest safeguards, and fruit cutting and inspection at the packinghouse. Prior to shipments beginning from any Mexican States other than Michoacán, APHIS will work with the national plant protection organization (NPPO) of Mexico to ensure that any other Mexican States that intend to export meet the requirements of § 319.56–30(c).

Any changes to the review process for approving new Mexican States will be added to the operational workplan as mutually negotiated and agreed on between APHIS and the NPPO of Mexico. An operational workplan is an agreement between APHIS' Plant Protection and Quarantine program, officials of the NPPO of a foreign government, and, when necessary, foreign commercial entities, that specifies in detail the phytosanitary measures that will comply with our regulations governing the import or export of a specific commodity. Operational workplans apply only to the signatory parties and establish detailed procedures and guidance for the day-to-day operations of specific import/export programs. Operational workplans also establish how specific phytosanitary issues are dealt with in the exporting country and make clear who is responsible for dealing with those issues.

In addition to the modifications to the current systems approach set out in the proposed rule, based on comments and our analysis, we are also changing the actions to be taken related to orchard pest detection requirements set forth in § 319.56–30(e). Under the current systems approach, an orchard affected by a pest detection loses its export certification and avocado exports from that orchard are suspended until APHIS and the Mexican NPPO agree that the pest eradication measures taken by the affected orchard have been effective. We have found this remedial action to be overly stringent. In accordance with the commodity import evaluation document (CIED), we are revising paragraph (e) to state that loss of export certification and export suspension may occur. This change from the prior automatic,

[1] To view the proposed rule, supporting documents, and the comments we received, go to *http://www.regulations.gov/#!docketDetail;D=APHIS-2014-0088.*

definitive loss of export certification and export suspension, will allow APHIS the flexibility to determine the scope and nature of the pest detection in order to determine the best and most appropriate level of phytosanitary response required. Quarantine pests and their overall pest risk (as rated in the pest risk analysis (PRA)) will be listed in the operational workplan, along with the consequences of interception at the packinghouse, certified orchard, municipality, and port of entry.

We solicited comments concerning our proposal for 60 days ending April 20, 2015. We received 34 comments by that date. They were from producers, trade associations, representatives of State and foreign governments, and individuals. Of those, 12 comments were supportive of APHIS' proposal and the remaining 22 were either supportive with additional points or opposed. The comments are discussed below by topic.

General Comments

One commenter inquired how the proposed action would apply to the State of Alaska.

Currently, continental United States is defined in § 319.56–2 of the regulations as ''The 48 contiguous States, Alaska, and the District of Columbia.'' The provisions of this rule therefore apply to Alaska.

Another commenter said that harmful pesticides could harm both fresh Hass avocado fruit and avocado consumers.

While the commenter did not provide any specific examples of pesticides of concern, any pesticide harmful to the fresh Hass avocado fruit itself would most likely produce effects visible to inspection either in Mexico or at the port of first arrival into the United States. As for the human health implications of pesticide usage, the U.S. Food and Drug Administration (FDA) samples and tests imported fruits and vegetables for pesticide residues. Yearly monitoring reports and information on the program may be found here: *http://www.fda.gov/Food/FoodborneIllnessContaminants/Pesticides/UCM2006797.htm.*

Two commenters stated that APHIS should consider the effect that the importation of fresh Hass avocado fruit from distant regions of Mexico has on global climate change. The commenters said that both the carbon emissions generated by long-distance shipment as well as the precedent via the purchase availability of non-local produce should be assessed as part of the importation approval process.

Another commenter said that the importation of fresh Hass avocado fruit from other regions in Mexico will affect the prices of avocados in the United States and, resultantly, affect consumer behavior. The commenter argued that the purchase price for fresh Hass avocados does not reflect the impact that the long distance shipping has on global climate change, and that an increased supply of fresh Hass avocado fruit from Mexico would lower the purchase price even further, allowing consumers to purchase greater quantities and thereby exacerbating the problem.

APHIS' proposed action is the expansion of the importation program for fresh Hass avocado fruit from Mexico into the United States. The Country of Origin Labeling (COOL) law, which is administered by the U.S. Department of Agriculture's (USDA) Agricultural Marketing Service, requires retailers, such as full-time grocery stores, supermarkets, and club warehouse stores, to notify their customers with information regarding the source of certain food, including fruits and vegetables. Any fresh Hass avocado fruit imported from Mexico would be subject to such requirements, thus allowing consumers to make any origin-based purchasing choices they may wish.

Another commenter observed that the proposed rule considers imported goods as foreign commerce until they reach the final consumer, thus preempting State and local laws.

APHIS regulations in this part preempt those State and local laws that are inconsistent with the regulations, namely, while the fruit is in foreign commerce.

Comments on Alternatives to the Proposed Action

One commenter stated that approval for the importation of fresh Hass avocado fruit should be made on a State-by-State basis. The commenter argued that this approach would allow local authorities to gain familiarity with the required phytosanitary measures and allow APHIS to thoroughly assess prospective exporters. The commenter concluded that such an approach would also allow domestic avocado producers to adjust to the increased supply.

As stated in the proposed rule, we believe that Jalisco will be the first new Mexican State to meet the requirements set forth in this rule and therefore the first Mexican State apart from Michoacán to be authorized to export fresh Hass avocado fruit to the continental United States, Hawaii, and Puerto Rico. Subsequent Mexican States would not necessarily be approved one at a time, but rather as each demonstrates its ability to meet the standards set out in the regulations. We are confident that we have the review and oversight capacity to approve requesting Mexican States on a simultaneous basis as needed.

Currently, fresh Hass avocado fruit are required to be biometrically sampled and cut in the field, at the packinghouse, and by an inspector at the port of first arrival into the United States. We proposed to allow fruit to be cut at the discretion of the inspector. One commenter suggested that cutting the avocados would help monitor for illegal importation of narcotics and other illegal substances.

Given the lack of quarantine pest interceptions in shipments of avocado fruit from Mexico at the ports of first arrival for the period from 1997 to 2014, we are amending the requirement in order to allow for operational flexibility. Inspections for narcotics in imported materials are also performed by U.S. Customs and Border Protection (CBP) inspectors.

Comments on the Pest List

Specific pests of concern associated with fresh Hass avocado fruit for which mitigations are required are listed in paragraphs (c)(1)(ii), (c)(2)(i), and (e) of § 319.56–30. They are:

- *Conotrachelus aguacatae,* a small avocado seed weevil;
- *Conotrachelus perseae,* a small avocado seed weevil;
- *Copturus aguacatae,* avocado stem weevil;
- *Heilipus lauri,* large avocado seed weevil; and
- *Stenoma catenifer,* avocado seed moth.

We proposed removing these specific pests from the regulations. The pest list would instead be maintained in the operational workplan provided to APHIS for approval by the NPPO of Mexico.

Additionally, based on the findings of the PRA, we proposed to add eight pests to the list of pests of concern to be maintained in the operational workplan. Those pests were:

- Avocado sunblotch viroid;
- *Cryptaspasma perseana,* a tortricid moth;
- *Conotrachelus serpentinus,* a weevil;
- *Maconellicoccus hirsutus* (Green), pink hibiscus mealybug;
- *Pseudophilothrips perseae* (Watson), a thrips;
- *Scirtothrips aceri* (Moulton), a thrips;
- *Scirtothrips perseae* Nakahara, a thrips; and
- *Sphaceloma perseae* Jenkins, avocado scab.

Three commenters stated that these newly listed pests were not previously considered likely to follow the pathway of fresh Hass avocado fruit from Mexico. The commenters observed that the pests have never been intercepted or considered as pests of concern for which mitigations are required. The commenters observed that, as a signatory to the World Trade Organization's Agreement on Sanitary and Phytosanitary Measures (SPS Agreement), the United States has agreed that any prohibitions it places on the importation of fruits and vegetables will be based on scientific evidence related to phytosanitary measures and issues, and will not be maintained without sufficient scientific evidence and concluded that the addition of the eight pests is contrary to this agreement. The commenters said that these pests had not been previously designated as quarantine pests because they already occur in the United States and therefore, according to international standards, cannot be considered to be quarantine pests or pests of concern for which mitigations are required and concluded that avocado sunblotch viroid, *Conotrachelus serpentinus, Scirtothrips aceri, Scirtothrips perseae,* and *Sphaceloma perseae* should be removed as pests of concern for which regulatory action is required.

Upon further consideration, we agree with the commenters' assessment regarding avocado sunblotch viroid, *Conotrachelus serpentinus,* and *Sphaceloma perseae.* These are non-actionable pests that already exist in certain areas of the United States, for which no domestic program exists. We also allow domestic shipments of susceptible species to travel interstate without restriction. Given that our import regulations cannot be more stringent than our domestic regulations, we have removed the pests from the pest list and adjusted the PRA accordingly.

However, we disagree with the commenters' other points regarding, *Scirtothrips aceri* and *Scirtothrips perseae. Scirtothrips aceri* is considered actionable only for those shipments to Hawaii and/or Puerto Rico because that pest is not found in Hawaii and Puerto Rico. It is considered a non-actionable pest for shipments to the continental United States. *Scirtothrips perseae* was dismissed in previous PRAs developed by APHIS as a pest associated with plant parts other than avocado fruit or in rotting fruit on ground. However, the PRA developed in association with this rule[2] cites more recent research indicating that avocado fruit is a host.

The same commenters stated that thrips in general and *Pseudophilothrips perseae* in particular had already been examined by APHIS as part of a previous rulemaking and determined to be unlikely to be in the commercial import pathway because they are not generally associated with mature fruit or remain on mature, harvested fruit. The commenters concluded that regulating thrips does not seem to be supported by relevant science concerning the biology of these pests and the realities of the commercial packing process and requested that *Pseudophilothrips perseae* be removed from the pest list for fresh Hass avocado fruit from Mexico.

As stated previously, recent research, which we consulted in preparing the PRA associated with this rule, indicates that fresh Hass avocado fruit is a potential host for the listed species of thrips. In addition, thrips of the families *Phlaeothripidae* and *Thripidae* have been intercepted with shipments of avocado fruit for consumption, both in commercial shipments and passenger baggage at U.S. ports of entry.

The same commenters questioned the inclusion of *Cryptaspasma perseana* in the list of pests of concern, stating that the tests that supposedly proved the pest's association with avocado fruit on the tree were not performed outside of laboratory conditions. The commenters stated that forced infestation studies in the field, at varying altitudes and cultural conditions, should be conducted to support the conclusion that *Cryptaspasma perseana* is a pest of concern for fresh Hass avocado fruit from Mexico. The commenters concluded that listing this pest as a quarantine pest of commercially produced fresh Hass avocado fruit is premature.

As indicated in the PRA, we determined that the likelihood of introduction for this species is negligible and that the mitigations already in place to provide phytosanitary protection against *Stenoma catenifer* are likely to also detect this species. However, the larvae of the two species can be easily confused and we therefore included *Cryptaspasma perseana* in the list of pests of concern in order to avoid any need for inspectors to distinguish between those larvae, misidentification of which could then lead to entry of *Stenoma catenifer* into the United States. The research cited by the commenters included the conclusion that it is more likely that *Cryptaspasma perseana* lays eggs in trees with the caveat that additional research is required. Without specific evidence that this species does not lay eggs only in trees or on fruit on the ground, no changes will be made at this time due to the potential damage caused by an infestation.

Five commenters stated that *Sphaceloma perseae* is a very common cosmetic problem in Mexico as well as in other countries from which avocados are imported. The commenters observed that *Sphaceloma perseae* is present domestically, in both California and Florida. The commenters wanted to know why the proposed phytosanitary measures included mitigation against *Sphaceloma perseae.*

As stated previously, *Sphaceloma perseae* has been removed from the list of pests of concern since it already exists in certain areas of the United States, domestic shipments of susceptible species are permitted travel interstate without restriction, and our import regulations cannot be more stringent than our domestic regulations.

Comments on Pest Risk

Two commenters said that, as a result of the potential harm these pests represent, the importation of fruits and vegetables should be limited and tightly controlled. The commenters claimed that, due to the eventuality of human error, compliance with the required measures will not be complete and an exponential increase in the importation level of fresh Hass avocado fruit from Mexico therefore represents an exponential phytosanitary risk.

Each organism carries its own risk of following the pathway, and APHIS has been very successful in assessing and mitigating the risks associated with new market access. We have stated in the past that if zero tolerance for pest risk were the standard applied to international trade in agricultural commodities, it is quite likely that no country would ever be able to export a fresh agricultural commodity to any other country. Our pest risk analysis process will identify and assign appropriate and effective mitigations for any identified pest risks. If, based on our PRA, we conclude that the available mitigation measures against identified pest risks are insufficient to provide an appropriate level of protection, then we will not authorize the importation of the particular commodity.

Another commenter said that the studies cited in the proposal and in the PRA did not indicate whether all

[2] To view the PRA and other supporting documents, go to *http://www.regulations.gov/#!docketDetail;D=APHIS-2014-0088.*

Mexican States share the same pests as Michoacán. The commenter questioned the conclusion of the CIED, saying that the import requirements have only been shown to mitigate the phytosanitary risk posed by fresh Hass avocado fruit from Michoacán, Mexico, and does not take into account any unique pest situations that may exist in other Mexican States.

The avocado pests assessed by the PRA were those present in all of Mexico. Pests associated with fresh Hass avocado fruit with a likelihood of introduction of medium or greater were evaluated. We then examined existing mitigation requirements for fresh Hass avocados from Michoacán, Mexico to see if they would provide mitigation against pests from all of Mexico and found that they would provide adequate protection against the importation of the pests of concern.

The same commenter and a second commenter suggested that those Mexican States that cannot meet the import requirements may trade with Mexican States that can. As such, the commenters argued that avocados from unapproved Mexican States could potentially enter the chain of export and thereby introduce pests into the United States.

Paragraph 319.56–30(c)(2)(iv) requires that harvested Hass avocado fruit be placed in field boxes or containers of field boxes that are marked to show the official registration number of the orchard from which they were harvested. Paragraph 319.56–30(c)(3)(v) requires that the identity of the fresh Hass avocado fruit must be maintained from field boxes or containers to the containers in which they will be shipped so the avocados can be traced back to the orchard in which they were grown if pests are found at the packinghouse or the port of first arrival in the United States. These requirements are intended to prevent inclusion of fruit from unauthorized orchards or areas in shipments intended for export to the continental United States, Hawaii, and Puerto Rico.

One commenter requested further information regarding population densities and any required mitigation measures for *Conotrachelus aguacatae* and *Heilipus lauri* from areas in Mexico not currently approved to export fresh Hass avocado fruit.

A second commenter said that APHIS should gather and evaluate current pest population information and mitigation measures being implemented for the pests of concern in other production regions in Mexico prior to importation of fresh Hass avocado fruit into the continental United States, Hawaii, and Puerto Rico from those regions.

Currently, all municipalities within Michoacán are required to be surveyed twice a year and found free of *Conotrachelus aguacatae, Conotrachelus perseae, Heilipus lauri, Stenoma catenifer,* which are the pests capable of inflicting the most damage if they were allowed to become established. APHIS and the Mexican NPPO have agreed that before another Mexican State is eligible to participate in the export program, at least 2 years of survey data establishing that the avocado plant pests and diseases of concern are not present in that region will be provided to APHIS. Mitigation measures for the pests of concern in the remainder of Mexico will be the same as those currently required for fresh Hass avocados from Michoacán, Mexico. Producers will have to demonstrate municipality and orchard freedom from these and other major pests of concern. Shipment of fresh Hass avocado fruit to the continental United States, Hawaii, and Puerto Rico from any additional Mexican areas will not be approved until APHIS and the Mexican NPPO have agreed that those new areas have met the requirements of the systems approach.

Another commenter said that the required pest control measures were not specified in the proposed rule. The commenter asked if those measures will affect the quality of the fresh Hass avocado fruit or represent a threat to consumer health.

As stated in the CIED that accompanied the proposed rule, if any of the avocado pests of concern are detected during the semiannual pest surveys in a packinghouse, certified orchard or areas outside of certified orchards, or via other monitoring or inspection activity in the municipality, the Mexican NPPO must immediately initiate an investigation and take measures to isolate and eradicate the pests. The Mexican NPPO must also provide APHIS with information regarding the circumstances of the infestation and the pest risk mitigation measures taken in response. In accordance with the operational workplan, depending upon the nature of the pest detection, affected orchards may lose their export certification, and avocado exports from that orchard may be suspended until APHIS and the Mexican NPPO agree that the pest eradication measures taken by the affected orchard have been effective. As for the human health implications of pesticide usage, as stated previously, the FDA samples and tests imported fruits and vegetables for pesticide residues that may be harmful to humans. Yearly monitoring reports and information on the program may be found here: *http://www.fda.gov/Food/FoodborneIllnessContaminants/Pesticides/UCM2006797.htm.*

Comments on the Systems Approach

With the exception of a clarification of the language in § 319.56–30, paragraph (c)(3)(vii) concerning when sealed, insect-proof containers would be required to be used in shipping of the fruit and the removal of mandatory fruit cutting at land and maritime borders found in § 319.56–30(f), we did not propose any changes to the systems approach required for the importation of fresh Hass avocado fruit from Michoacán, Mexico, which will be required for the importation of fresh Hass avocado fruit from other approved areas in Mexico. Specifically, these requirements are found in § 319.56–30(c) and include orchard certification, traceback labeling, pre-harvest orchard surveys, orchard sanitation, post-harvest safeguards, and fruit cutting and inspection at the packinghouse.

One commenter stated that discretionary fruit cutting will rely more heavily on inspector expertise to determine whether to perform samplings. The commenter wanted to know whether APHIS or CBP will provide inspectors with training to decide when it is appropriate to perform a fruit cutting on a shipment of fresh Hass avocado fruit from Mexico. If so, the commenter wanted to know how this training would differ from current inspector training.

The operational workplan requires any shipment that arrives with a broken seal to be inspected, which would include fruit cutting. Shipments may also be subject to random sampling as dictated by local CBP port procedures. We are confident that existing inspector training will continue to provide APHIS and CBP inspectors with the necessary expertise.

APHIS is removing specific pest names from the regulations and replacing them with references to the ''avocado pests listed in the operational workplan.'' The same commenter asked what criteria will be considered in adding pests to or removing pests from the list in the operational workplan, whether proposed changes would be subject to public review and comment, and whether the operational workplan would be available to the public for review and, if so, where it would be located.

Generally speaking, we do not list every possible quarantine pest associated with a particular commodity in the regulations, as this would require a lengthy and cumbersome rulemaking

process every time the pest list changed due to factors such as a new pest discovery or emerging research involving a given pest. The regulations governing the importation of fresh Hass avocado fruit from Michoacán, Mexico, did contain the specific names of all pests of concern at the time, however that inclusion was not intended to serve as and was not an all-inclusive pest list. This is consistent with and is in line with our most recent policies to move specifics such as pest names from the regulations to the operational workplan, which provides a greater degree of flexibility in the face of any potential changes to the pest situation in any country. Changes to the list of quarantine pests in the operational workplan governing the importation of fresh Hass avocado fruit from Mexico will require a bilateral agreement between APHIS and the Mexican NPPO and will not involve publication of a **Federal Register** notice with regard to the updated pests. Operational workplans are and will continue to be available upon request.

Another commenter said that mandatory sampling and cutting requirements at U.S. ports of entry should be maintained for a period of 2 years following the acceptance of fresh Hass Avocado fruit from any new Mexican State or production region in order to fully assess the efficacy of the systems approach in those areas.

Since 2004, approximately 181,000 consignments totaling over 3.2 million metric tons of fresh Hass avocado fruit from Michoacán, Mexico, have been imported into the United States. None of the pests listed in the Mexican Hass avocado PRAs (1996, 2004, and 2014) as following the pathway of fresh Hass avocado fruit have ever been intercepted in any commercial consignment since Mexico was granted market access in 1997. This record demonstrates the efficacy of the required phytosanitary measures, which are largely identical to those that will be required to be met by any Mexican States approved after publication of this rule, particularly as the pests of concern for fresh Hass avocado fruit throughout Mexico are identical.

One commenter recommended that a number of provisions specified in the 2011 operational workplan be included in the regulations. The commenter stated that it is not clear whether the conditions of the operational workplan would be required by the regulations. Finally, the commenter said that certain provisions in the 2011 operational workplan related to orchards and packinghouses should be modified.

As stated previously, APHIS no longer includes highly specific, prescriptive phytosanitary measures in the regulations, but rather we utilize broader requirements. Operational workplans establish how specific phytosanitary issues are dealt with in the exporting country and make clear who is responsible for dealing with those issues. Paragraph 319.56–30(d) requires that all consignments of fresh Hass avocado fruit from Mexico be accompanied by a phytosanitary certificate issued by the Mexican NPPO with an additional declaration certifying that the conditions specified in the regulations have been met. The commenter's suggestions regarding amendments to the 2011 operational workplan are outside the scope of the current regulation as the contents of the operational workplan are agreed upon by APHIS and the NPPO of the exporting country.

Comments on Program Oversight

Two commenters said that APHIS is dependent on local authorities in Mexico to enforce the requirements set forth in the regulations and the operational workplan. The commenters cited the Corruption Perceptions Index issued by Transparency International [3] as proof that corruption within Mexico will most certainly occur in connection with the export of fresh Hass avocado fruit.

Like the United States, Mexico is a signatory to the SPS Agreement. As such, it has agreed to respect the phytosanitary measures the United States imposes on the importation of plants and plant products from Mexico when the United States demonstrates the need to impose these measures in order to protect plant health within the United States. The CIED that accompanied the proposed rule provided evidence of such a need. That being said, as we mentioned in the proposed rule, APHIS will monitor and audit Mexico's implementation of the systems approach for the importation of fresh Hass avocado fruit into the continental United States, Hawaii, and Puerto Rico. If we determine that the systems approach has not been fully implemented or maintained, we will take appropriate remedial action to ensure that the importation of fresh Hass avocado fruit from all of Mexico does not result in the dissemination of plant pests within the United States.

One commenter suggested that APHIS require at least 2 years of survey data establishing that the avocado plant pests and diseases of concern are not present in any potential additional exporting Mexican States or areas. The commenter also suggested that potential additional exporting States or areas demonstrate their ability to successfully adhere to the requirements set out in the regulations via exporting fresh Hass avocado fruit to countries other than the United States for a period of at least 2 years under the those requirements.

We will be requiring 2 years of survey data for the pests of concern from each Mexican area seeking approval to export fresh Hass avocado fruit to the continental United States, Hawaii, and Puerto Rico. The commenter's point about exports of fresh Hass avocado fruit to countries other than the United States under U.S. requirements is not feasible. Every country sets its own requirements for importation of a given commodity and exercises a level of phytosanitary protection at its borders that it deems appropriate. APHIS makes its phytosanitary decisions based on our own research, experience, and expertise.

Two commenters said that adequate oversight of the current program is only possible because the export area was confined to the State of Michoacán, and therefore easy to oversee. The commenters claimed that the entire country of Mexico will prove almost impossible to monitor for compliance with the regulations. The commenter concluded that this will be magnified by the fact that the whole of Mexico will be allowed to export fresh Hass avocado fruit upon the effective date of this final rule.

As stated in the proposed rule, the whole of Mexico will not immediately begin shipment of fresh Hass avocado fruit to the continental United States, Hawaii, and Puerto Rico. Rather, Mexican States will likely be approved piecemeal as they meet the requirements established in the regulations. Currently, only the State of Jalisco is prepared to meet the requirements set out in the regulations for eligibility to ship fresh Hass avocado fruit into the continental United States, Hawaii, and Puerto Rico. APHIS will monitor and audit Mexico's implementation of the systems approach for the importation of fresh Hass avocado fruit from all of Mexico into the continental United States, Hawaii, and Puerto Rico. If we determine that the systems approach has not been fully implemented or maintained, we will take appropriate remedial action to ensure that the importation of fresh avocado fruit from Mexico does not result in the dissemination of plant pests within the United States. In

[3] The Corruption Perceptions Index may be viewed here: *http://www.transparency.org/cpi2014/results.*

addition, APHIS has reviewed its resources and believes it has adequate coverage across the United States to ensure compliance with its regulations, including an expansion of the Mexican avocado import program, as established by this rule. APHIS has Pre-clearance and Offshore Program staff in Mexico monitoring many export programs, including the avocado program.

Comments on the Economic Analysis

We prepared an initial regulatory flexibility analysis (IRFA) in connection with the proposed rule regarding the economic effects of the rule on small entities. We invited comments on any potential economic effects and received a number of comments.

In the initial regulatory flexibility analysis we stated that, ''we do not currently have all the data necessary for a comprehensive analysis of the effects of this proposed rule.'' One commenter said that, since we do not know what the precise economic impact will be, the economic risk is unnecessary. The commenter argued that we do not know if the potential influx of fresh Hass avocado fruit from all of Mexico will prove disastrous for domestic growers.

While it is true that precise, future price impacts of this rule are not known, the additional quantity of fresh Hass avocado fruit that will be imported from Mexico as a result of this rule is expected to be relatively small; price effects are therefore also likely to be small. Michoacán, Mexico, from which all fresh Hass avocado fruit imports from Mexico currently originate, produces 85 percent of Mexico's fresh Hass avocado fruit. Jalisco, the only other Mexican State prepared to meet the phytosanitary requirements necessary to export fresh Hass avocado fruit to the United States, produces 3 percent of Mexico's fresh Hass avocado fruit, and only a fraction of Jalisco's avocado production volume is expected to meet the rigorous phytosanitary requirements necessary for export to the United States.

Another commenter stated that the initial regulatory flexibility analysis is based on the expected impact of a ''fraction'' of the 90,000 pounds of fresh Hass avocado fruit available for immediate yearly importation from the State of Jalisco under the new rule. The commenter claimed that this assumption is unrealistic given that future approved Mexican States are likely to increase that yearly amount.

Our economic analysis is near term, not long term. Even so, future effects of the rule will be limited since, as stated previously, only 15 percent of Mexico's fresh Hass avocado fruit is grown outside of the State of Michoacán (3 percent in Jalisco). Only a fraction of that 15 percent (3 percent in Jalisco) is expected to satisfy U.S. phytosanitary import requirements.

The same commenter observed that the analysis assumes that the exponential increase for the demand of avocados in the United States seen over the last decade will continue indefinitely. The commenter found that assumption unlikely and noted that there are indicators that the rate of increased demand for avocados in the United States has begun, and will continue, to level off.

Although future growth in the U.S. demand for avocado may not match that experienced during the past decade, the factors that contributed to the recent history of expanded consumption—a growing U.S. population generally and a growing Hispanic share of the population, greater awareness of the avocado's health benefits, restaurants incorporating avocados into their menu offerings, a year-round supply of affordable, fresh Hass avocado fruit, and increased disposable income remain the same. We are unaware of any indications that the consumer market for fresh Hass avocado fruit has plateaued and the commenter did not provide a reference for that statement.

Several commenters said that, as pointed out in the IFRA, most of the 7,495 U.S. avocado growers are small entities and that these domestic growers produce roughly 230,000 metric tons of fresh Hass avocado fruit each year at a cost of $1.09 per pound, whereas the United States imports 462,000 metric tons each year from the Mexican State of Michoacán at a cost of $0.87 per pound. The commenters stated that a slowing in the increase of U.S. demand for avocados or an increase in the availability of cheaper imports would reduce the ability of domestic growers to compete in the avocado market, and both occurring at the same time would devastate domestic growers. The commenters concluded that this devastation would be experienced most acutely by small entities, which are generally less able to cut costs than larger growers and asked why we did not consider such losses as a significant economic impact on small entities.

As stated previously, the scale of additional imports makes it highly unlikely that any entities, large or small, will suffer significant economic hardship.

Two commenters observed that, according to the USDA Economic Research Service, imports accounted for 71.1 percent of the domestic fresh avocado consumed in the United States during 2011, down from 72.4 percent the previous year. The commenters argued that producers in California, Florida, Hawaii, and Puerto Rico could benefit via increased production if those import levels were curtailed, given that California, Florida, Hawaii, and Puerto Rico are areas where year-round avocado production may occur.

APHIS' primary responsibility with regard to international import trade is to identify and manage the phytosanitary risks associated with importing commodities. When we determine that the risk associated with the importation of a commodity can be successfully mitigated, it is our responsibility under the trade agreements to which we are signatory to make provisions for the importation of that commodity.

Comments on General Economic Effects

While specific comments on the initial regulatory flexibility analysis are addressed above and in the final regulatory flexibility analysis, we received a number of comments concerning the overall economic effect of the rule as it relates to U.S. trade policies concerning Mexico.

Three commenters argued that allowing for the importation of fresh Hass avocado fruit from Mexico would lead to American job loss. The commenters said that inexpensive imports will drive down prices, decreasing profits for domestic producers, and thereby triggering layoffs. The commenters stated that domestic avocado production is already subject to such limiting factors as high labor costs and droughts and that allowing for importation of fresh Hass avocado fruit from all of Mexico will decrease domestic profits.

Another commenter asked how prices for fresh Hass avocados could be regulated in order to allow domestic producers to fairly compete and thrive given the high volume of Mexican production.

Such actions would be beyond the scope of APHIS' statutory authority under the Plant Protection Act, whereby APHIS may prohibit the importation of a fruit or vegetable into the United States only if we determine that the prohibition is necessary in order to prevent the introduction or dissemination of a plant pest or noxious weed within the United States. Additionally, as a signatory to the SPS Agreement, the United States has agreed that any prohibitions it places on the importation of fruits and vegetables will be based on scientific evidence related to phytosanitary measures and issues, and will not be maintained without sufficient scientific evidence. The price

regulation requested by the second commenter would not be in keeping with this agreement.

We are making two miscellaneous changes to the regulations not mentioned in the proposed rule. Currently, paragraph (c)(2)(iv) requires that harvested fresh Hass avocado fruit be moved from the orchard to the packinghouse within 3 hours of harvest or they must be protected from fruit fly infestation until moved. Given that some production areas are more than 3 hours away from the nearest approved packinghouse, we are altering the language to state that the fresh Hass avocado fruit must be moved to the packinghouse the same day as they are harvested. Given that there have been no interceptions of fruit flies in connection with the current fresh Hass avocado export program and the current PRA states that uninjured, commercially produced fresh Hass avocado fruit do not serve as hosts for fruit flies, we are confident that this change will not impact the phytosanitary efficacy of the program.

We also specify in the regulations that pest surveys must be performed at least semiannually. References to this requirement are found in §§ 319.56–30(c)(1)(ii), 319.56–30(c)(2)(i), and 319.56–30(e). We are amending this requirement slightly to specify that semiannual surveys must be conducted for at least 5 years. Thereafter, only one survey per year will be required provided no pests of concern are discovered during the 5 years of semiannual surveys. We are adding a time limit for the semiannual survey requirement based on the lack of pest discovery and interceptions associated with the importation of fresh Hass avocado fruit from Michoacán, Mexico.

Therefore, for the reasons given in the proposed rule and in this document, we are adopting the proposed rule as a final rule, with the changes discussed in this document.

Executive Order 12866 and Regulatory Flexibility Act

This final rule has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget.

In accordance with 5 U.S.C. 604, we have performed a final regulatory flexibility analysis, which is summarized below, regarding the economic effects of this rule on small entities. Copies of the full analysis are available on the *Regulations.gov* Web site (see footnote 1 in this document for a link to Regulations.gov) or by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**.

Mexican officials have requested that additional States in Mexico be allowed to export fresh Hass avocado fruit to the United States under the same systems approach that currently applies to fresh Hass avocado fruit from approved municipalities in Michoacán. Imports of fresh Hass avocado fruit from Mexico into the United States have increased significantly over the years, from 311 million pounds in 2003 to over 1.1 billion pounds in 2013. A growing U.S. population and growing Hispanic share of the population, greater awareness of the avocado's health benefits, year-round availability of affordable fresh Hass avocado fruit, and greater disposable income have contributed to the increased demand.

The dramatic increase in demand over the past decade has enabled domestic producers to maintain production levels despite the large increase in fresh Hass avocado fruit imports. Annual U.S. avocado production, 2002/03 to 2011/12, averaged 423 million pounds, of which California accounted for 87.5 percent or over 375 million pounds. Nearly all of California's production is of the Hass variety.

Potential economic effects of this rule are estimated using a partial equilibrium model of the U.S. fresh Hass avocado fruit sector. There are 2,653 hectares in Jalisco that are registered in Mexico's SRRC (Contamination Risk Reduction System) as qualified to export fresh Hass avocado fruit to the United States. Avocados are expected to be shipped from one-half of these orchards (1,326.5 hectares) in the first year that this rule is implemented. Assuming an average yield of 10 metric tons (MT) per hectare, we expect fresh Hass avocado fruit imports from Jalisco to total approximately 13,265 MT (29 million pounds) in the first year, and between 13,265 and 26,530 MT (29 to 58 million pounds) in subsequent years.

If the United States were to import between 13,265 and 26,530 MT of fresh Hass avocado fruit from Jalisco and there were no displacement of avocado imports from other sources, the decline in avocado prices may range from 1.7 percent to 3 percent. Consumer welfare gains of about $24 million to $45 million would outweigh producer welfare losses of about $6 million to $11 million, resulting in net welfare gains of about $18 million to $34 million.

More reasonably, partial import displacement would occur, and price and welfare effects would be proportional to the net increase in U.S. fresh Hass avocado imports. If 20 percent of the 13,625 to 26,530 MT of fresh Hass avocado fruit imported from Jalisco were to displace avocado imports from elsewhere (*e.g.,* Chile), including the State of Michoacán in Mexico, then the price decline would be about 1.3 to 2.5 percent; consumer welfare gains of $19 million to $36 million and producer welfare losses of $5 million to $9 million yield net welfare benefits of $14 million to $27 million.

While APHIS does not have information on the size distribution of U.S. avocado producers, according to the Census of Agriculture, there were a total of 93,020 Fruit and Tree Nut farms in the United States in 2012. The average value of agricultural products sold by these farms was less than $274,000, which is well below the Small Business Administration's small-entity standard of $750,000. It is reasonable to assume that most avocado farms qualify as small entities. Between 2002 and 2012, the number of avocado operations in California grew by approximately 17 percent, from 4,801 to 5,602 operations.

Executive Order 12988

This final rule allows fresh Hass avocado fruit to be imported into the United States from all of Mexico. State and local laws and regulations regarding fresh Hass avocado fruit imported under this rule will be preempted while the fruit is in foreign commerce. Fresh fruits and vegetables are generally imported for immediate distribution and sale to the consuming public, and remain in foreign commerce until sold to the ultimate consumer. The question of when foreign commerce ceases in other cases must be addressed on a case-by-case basis. No retroactive effect will be given to this rule, and this rule will not require administrative proceedings before parties may file suit in court challenging this rule.

Paperwork Reduction Act

This final rule contains no new information collection or recordkeeping requirements under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

List of Subjects in 7 CFR Part 319

Coffee, Cotton, Fruits, Imports, Logs, Nursery stock, Plant diseases and pests, Quarantine, Reporting and recordkeeping requirements, Rice, Vegetables.

Accordingly, we are amending 7 CFR part 319 as follows:

PART 319—FOREIGN QUARANTINE NOTICES

■ 1. The authority citation for part 319 continues to read as follows:

Authority: 7 U.S.C. 450, 7701–7772, and 7781–7786; 21 U.S.C. 136 and 136a; 7 CFR 2.22, 2.80, and 371.3.

■ 2. Section 319.56–30 is amended as follows:

■ a. By revising the section heading.

■ b. In the introductory text, by removing the words ''Michoacan, Mexico,'' and adding the word ''Mexico'' in their place.

■ c. By revising paragraph (c), introductory text.

■ d. In paragraph (c)(1)(i), by removing the words ''bilateral work plan'' and adding the words ''operational workplan'' in their place.

■ e. By revising paragraph (c)(1)(ii).

■ f. In paragraph (c)(2), introductory text, by removing the words ''annual work plan'' and adding the words ''operational workplan'' in their place.

■ g. By revising paragraph (c)(2)(i).

■ h. In paragraph (c)(2)(iv), by removing the words ''within 3 hours'' and adding the words ''the day'' in their place.

■ i. In paragraph (c)(3), introductory text, by removing the words ''annual work plan'' and adding the words ''operational workplan'' in their place.

■ j. By revising paragraph (c)(3)(vii).

■ k. In paragraph (c)(3)(viii), by adding two sentences at the end of the paragraph.

■ l. By revising paragraph (e).

■ m. In paragraph (f), by removing the word ''will'' and adding the word ''may'' in its place.

The revisions and additions read as follows:

§ 319.56–30 Hass avocados from Mexico.

* * * * *

(c) *Safeguards in Mexico.* The avocados must have been grown in an orchard located in a municipality that meets the requirements of paragraph (c)(1) of this section. The orchard in which the avocados are grown must meet the requirements of paragraph (c)(2) of this section. The avocados must be packed for export to the United States in a packinghouse that meets the requirements of paragraph (c)(3) of this section. The Mexican national plant protection organization (NPPO) must provide an annual operational workplan to APHIS that details the activities that the Mexican NPPO will, subject to APHIS' approval of the workplan, carry out to meet the requirements of this section. APHIS will be directly involved with the Mexican NPPO in the monitoring and supervision of those activities. The personnel conducting the trapping and pest surveys must be hired, trained, and supervised by the Mexican NPPO or by the State delegate of the Mexican NPPO.

(1) * * *

(ii) The municipality must be surveyed at least semiannually (once during the wet season and once during the dry season) for a period of at least 5 years and found to be free from the avocado pests listed in the operational workplan. Thereafter, the municipality must be surveyed at least once per year provided the municipality remains pest free.

(2) * * *

(i) The orchard and all contiguous orchards and properties must be surveyed semiannually for a period of at least 5 years and found to be free from the avocado pests listed in the operational workplan. Thereafter, the orchard and all contiguous orchards and properties must be surveyed at least once per year provided the orchard and all contiguous orchards and properties remain pest free.

* * * * *

(3) * * *

(vii) The avocados must be packed in clean, new boxes or bulk shipping bins, or in clean plastic reusable crates. The boxes, bins, or crates must be clearly marked with the identity of the grower, packinghouse, and exporter.

(viii) * * * If, at the port of export for consignments shipped by air or sea, the packed avocados are transferred into a non-refrigerated container, the boxes, bins, or crates must be covered with a lid, insect-proof mesh, or other material to protect the avocados from fruit-fly infestation prior to leaving the packinghouse. Those safeguards must be intact at the time the consignment arrives in the United States.

* * * * *

(e) *Pest detection.* If any of the avocado pests listed in the operational workplan are detected during the pest surveys in a packinghouse, certified orchard or areas outside of certified orchards, or other monitoring or inspection activity in the municipality, the Mexican NPPO must immediately initiate an investigation and take measures to isolate and eradicate the pests. The Mexican NPPO must also provide APHIS with information regarding the circumstances of the infestation and the pest risk mitigation measures taken. In accordance with the operational workplan, depending upon the nature of the pest detection, affected orchards may lose their export certification, and avocado exports from that orchard may be suspended until APHIS and the Mexican NPPO agree that the pest eradication measures taken have been effective.

* * * * *

Done in Washington, DC, this 23rd day of May 2016.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410–34–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2016–6628; Directorate Identifier 2016–CE–013–AD; Amendment 39–18514; AD 2016–10–03]

RIN 2120–AA64

Airworthiness Directives; Viking Air Limited Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; correction.

SUMMARY: The FAA is correcting an airworthiness directive (AD) that published in the **Federal Register**. That AD applies to Viking Air Limited Model DHC–3 airplanes that are modified with the Baron Short Take Off and Landing (STOL) kit (Supplemental Type Certificate SA94–114 or SA 00287NY). The Code of Federal Regulations reference for records maintenance cited in last sentence in paragraph (f) is incorrect. This document corrects that error. In all other respects, the original document remains the same; however we are publishing the entire rule in the **Federal Register**.

DATES: This final rule is effective May 31, 2016.

ADDRESSES: You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–6628; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The address for the Docket Office (phone: 800–647–5527) is Document Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Aziz Ahmed, Aerospace Engineer, FAA, New York Aircraft Certification Office (ACO), 1600 Stewart Avenue, Suite 410, Westbury, New York 11590; telephone:

(516) 287–7329; fax: (516) 794–5531; email: *aziz.ahmed@faa.gov.*

SUPPLEMENTARY INFORMATION:

Airworthiness Directive 2016–10–03, Amendment 39–18514 (81 FR 29125, May 11, 2016), requires removing whichever previous revision of the Otter Baron short take-off and landing (STOL) kit installation flight manual supplement (FMS) that is currently being used and incorporate Stolairus Aviation Inc. Flight Manual Supplement #4 for de Havilland DHC–3 Otter with the Baron STOL Kit Installation, Revision 3, dated May 22, 2015, for Viking Air Limited Model DHC–3 airplanes that are modified with the Baron Short Take Off and Landing (STOL) kit (Supplemental Type Certificate SA94–114 or SA 00287NY).

As published, the Code of Federal Regulations (CFR) reference for records maintenance cited in the last sentence in paragraph (f) is incorrect. The published reference is 14 CFR 91.173 or 135.439, and it is should be 14 CFR 91.417, 121.380, or 135.439.

Although no other part of the preamble or regulatory information has been corrected, we are publishing the entire rule in the **Federal Register**.

The effective date of this AD remains May 31, 2016.

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new AD:

2016–10–03 Viking Air Limited: Amendment 39–18514; Docket No. FAA–2016–6628; Directorate Identifier 2016–CE–013–AD.

(a) Effective Date

This airworthiness directive (AD) becomes effective May 31, 2016.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Viking Air Limited Model DHC–3 airplanes, all serial numbers, that are:

(1) Modified with the Baron Short Take Off and Landing (STOL) kit (Supplemental Type Certificate SA94–114 or SA 00287NY); and

(2) certificated in any category.

(d) Subject

Air Transport Association of America (ATA) Code 8: Leveling and Weighing.

(e) Reason

This AD was prompted by mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as an accident report that indicated that the center of gravity was too far aft and contributed to a stall during takeoff. We are issuing this AD to correct the center of gravity and prevent such a stall during takeoff and loss of control during other phases of flight.

(f) Actions and Compliance

Unless already done, within 30 days after May 31, 2016 (the effective date of this AD), remove whichever previous revision of the Otter Baron short take-off and landing (STOL) kit installation flight manual supplement (FMS) that is currently being used and incorporate Stolairus Aviation Inc. Flight Manual Supplement #4 for de Havilland DHC–3 Otter with the Baron STOL Kit Installation, Revision 3, dated May 22, 2015. This action may be performed by the owner/operator (pilot) holding at least a private pilot certificate and must be entered into the aircraft records showing compliance with this AD in accordance with 14 CFR 43.9(a)(1)–(4) and 14 CFR 91.417(a)(2)(v). The record must be maintained as required by 14 CFR 91.417, 121.380, or 135.439.

(g) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, Standards Office, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Aziz Ahmed, Aerospace Engineer, FAA, New York Aircraft Certification Office (ACO), 1600 Stewart Avenue, Suite 410, Westbury, New York 11590; telephone: (516) 287–7329; fax: (516) 794–5531; email: *aziz.ahmed@faa.gov.* Before using any approved AMOC on any airplane to which the AMOC applies, notify your appropriate principal inspector (PI) in the FAA Flight Standards District Office (FSDO), or lacking a PI, your local FSDO.

(2) *Airworthy Product:* For any requirement in this AD to obtain corrective actions from a manufacturer or other source, use these actions if they are FAA-approved. Corrective actions are considered FAA-approved if they are approved by the State of Design Authority (or their delegated agent). You are required to assure the product is airworthy before it is returned to service.

(h) Related Information

Refer to MCAI Transport Canada AD CF–2016–05, dated January 25, 2016, for related information. You may examine the MCAI on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–6628.

(i) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Stolairus Aviation Inc., Flight Manual Supplement #4, de Havilland DHC–3 Otter, Baron STOL Kit Installation, DOT STC # SA 94–114/FAA STC # SA 00287 NY, Revision 3, dated May 22, 2015.

(ii) Reserved.

BILLING CODE 4910–13–P

DEPARTMENT OF STATE

22 CFR Part 171

[Public Notice: 9523]

RIN 1400–AD88

Privacy Act; STATE–81, Office of Foreign Missions Records

AGENCY: Department of State.

ACTION: Final rule.

SUMMARY: The Department of State is issuing a final rule to amend its Privacy Act regulation exempting portions of a system of records from one or more provisions of the Privacy Act of 1974.

DATES: This final rule is effective May 27, 2016.

FOR FURTHER INFORMATION CONTACT: William P. Fischer, Acting Director; Office of Information Programs and Services, A/GIS/IPS; Department of State, SA–2; 515 22nd Street NW., Washington, DC 20522–8001, or at *Privacy@state.gov.*

SUPPLEMENTARY INFORMATION: The system, Office of Foreign Missions Records, designated as STATE–81, supports the Office of Foreign Missions, Department of State, in the implementation of the Foreign Missions

Act, the operation of foreign missions, and the United States' extension of privileges, exemptions, immunities, benefits, and courtesies to foreign government officials, members/employees and officers of foreign missions and certain international organizations in the United States, their immediate family members, and domestic workers who are in the United States in nonimmigrant A–3 or G–5 visa status.

For additional background, see the notice of proposed rulemaking and the system of records notice published on December 17, 2015 (80 FR 78704 and 80 FR 78812, respectively). The Department received no public comment on these documents.

List of Subjects in 22 CFR Part 171

Privacy.

For the reasons stated in the preamble, 22 CFR part 171 is amended as follows:

PART 171—[AMENDED]

■ 1. The authority citation for part 171 continues to read as follows:

Authority: 22 U.S.C. 2651a; 5 U.S.C. 552, 552a; E.O. 12600 (52 FR 23781); Pub. L. 95–521, 92 Stat. 1824 (codified as amended as 5 U.S.C. app. 101–505); 5 CFR part 2634.

§ 171.26—[Amended]

■ 2. Section § 171.26 is amended by adding an entry, in alphabetical order, for ''Office of Foreign Missions Records, STATE–81'' to the list in paragraph (b)(2).

Joyce A. Barr,

Assistant Secretary for Administration, U.S. Department of State.

[Docket No. USCG–2015–1011]

RIN 1625–AA09

Drawbridge Operation Regulation; Broad Creek, Laurel, DE

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard is changing the regulation that governs the operation of the Norfolk Southern Railroad Bridge over Broad Creek, mile 8.0, at Laurel, DE. This final rule changes the current regulation requiring a four-hour advance notice and allows the bridge to remain in the closed to navigation position. This final rule aligns the operating schedule with the observed lack of marine traffic that requires a bridge opening and the operating regulations for the Poplar Street and US Highway 13A, which also cross Broad Creek.

DATES: This rule is effective June 27, 2016.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *http://www.regulations.gov,* type USCG 2015–1011 in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rulemaking.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Mrs. Jessica Shea, Fifth Coast Guard District (dpb), at (757) 398–6422, email *jessica.c.shea2@uscg.mil.*

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
E.O. Executive order
FR Federal Register
NPRM Notice of proposed rulemaking
Pub. L. Public Law
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

On February 3, 2016, we published a notice of proposed rulemaking (NPRM) entitled Drawbridge Operation Regulation; Broad Creek, Laurel, DE in the **Federal Register** (81 FR 5679). We received one comment on this rule.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority 33 U.S.C. 499. The bridge owner, Norfolk Southern, made a request under 33 CFR 117.39 that the operating regulations be revised due to infrequent openings. The Norfolk Southern Railroad Bridge over Broad Creek, mile 8.0, at Laurel, DE, is a swing bridge that has a vertical clearance of fourteen feet above mean high water in the closed to navigation position and is unlimited in the open to navigation position.

Presently, the bridge opens with 4 hour advance notice in accordance with 33 CFR 117.233(a). This final rule changes the status of the Norfolk Southern Broad Creek railroad bridge to need not open for the passage of vessels. There have been no requests for openings from vessels since Norfolk Southern acquired the bridge in 1999. In order to align the operating schedule of the bridge with observed marine traffic, this change amends the regulation to state that the bridge need not open. The lack of requests from vessels for bridge openings since 1999 illustrate that the vessels that use this waterway can safely navigate while the drawbridge is in the closed-to-navigation position.

IV. Discussion of Comments, Changes and the Final Rule

One comment was made in response to the NPRM. The comment was in favor of the need not open status. There were no changes made to the final rule from what was proposed in the NPRM.

This rule changes the status of the Norfolk Southern Railroad Bridge to need not open for the passage of vessels. This action aligns the operating schedule of the bridge with the lack observed marine traffic that requires an opening and with the operating schedule for other drawbridges on this waterway. The change amends the regulation to state that the bridge need not open.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive Orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive Orders, and we discuss First Amendment rights of protesters.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, it has not been reviewed by the Office of Management and Budget. This regulatory action determination is based on the observed lack of marine traffic that requires a bridge opening.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions

with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rule. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the bridge may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator. As discussed in the NPRM, commercial traffic on Broad Creek, DE has not been present since the 1970s. The gradual change in the characteristics of the waterway shows that there will not be a significant economic impact of changing the drawbridge operating regulations on Broad Creek, DE.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Government

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guides the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have made a determination that this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule simply promulgates the operating regulations or procedures for drawbridges. This action is categorically excluded from further review, under figure 2–1, paragraph (32)(e), of the Instruction.

Under figure 2–1, paragraph (32)(e), of the Instruction, an environmental analysis checklist and a categorical exclusion determination are not required for this rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 117

Bridges.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 117 as follows:

PART 117—DRAWBRIDGE OPERATION REGULATIONS

■ 1. The authority citation for part 117 continues to read as follows:

Authority: 33 U.S.C. 499; 33 CFR 1.05–1; and Department of Homeland Security Delegation No. 0170.1.

■ 2. Revise § 117.233 to read as follows:

§ 117.233 Broad Creek.

The draws of the Norfolk Southern bridge, mile 8.0, the Poplar Street Bridge, mile 8.2 and the U.S. 13A Bridge, mile 8.25, all in Laurel, need not open for the passage of vessels.

Dated: May 18, 2016.

Meredith L. Austin,

Rear Admiral, United States Coast Guard, Commander, Fifth Coast Guard District.

37 CFR Part 11

[Docket No.: PTO–C–2015–0018]

RIN 0651–AC99

USPTO Law School Clinic Certification Program

AGENCY: United States Patent and Trademark Office, Commerce.

ACTION: Final rule.

SUMMARY: The United States Patent and Trademark Office (''Office'' or ''USPTO'') is issuing a final rule to comply with a Public Law enacted on December 16, 2014. This law requires the USPTO Director to establish regulations and procedures for application to, and participation in, the USPTO Law School Clinic Certification Program. The program allows students enrolled in a participating law school's clinic to practice patent and trademark law before the USPTO under the direct supervision of an approved faculty clinic supervisor by drafting, filing, and prosecuting patent or trademark applications, or both, on a *pro bono* basis for clients who qualify for assistance from the law school's clinic.

DATES: This rule is effective on June 27, 2016.

FOR FURTHER INFORMATION CONTACT: William R. Covey, Deputy General Counsel and Director of the Office of Enrollment and Discipline (''OED''), by telephone at 571–272–4097.

SUPPLEMENTARY INFORMATION:

Executive Summary

Purpose: This final rule implements Public Law 113–227 (Dec. 16, 2014). The law requires the USPTO Director to establish regulations and procedures for application to, and participation in, the USPTO Law School Clinic Certification Program. The program allows students enrolled in a participating law school's clinic to practice patent and trademark law before the USPTO by drafting, filing, and prosecuting patent or trademark applications, or both, on a *pro bono* basis for clients who qualify for assistance from the law school's clinic. The program provides law students enrolled in a participating clinic the opportunity to practice patent and trademark law before the USPTO under the direct supervision of an approved faculty clinic supervisor. In this way, these student practitioners gain valuable experience drafting, filing, and prosecuting patent and trademark applications that would otherwise be unavailable to them. The program also facilitates the provision of *pro bono* services to trademark and patent applicants who lack the financial resources to pay for legal representation.

Summary of Major Provisions: The USPTO is adding §§ 11.16 and 11.17 to part 11 of title 37 of the Code of Federal Regulations to formalize the process by which law schools, law school faculty, and law school students may participate in the USPTO Law School Clinic Certification Program.

Costs and Benefits: This rulemaking is not economically significant under Executive Order 12866 (Sept. 30, 1993).

Discussion of Specific Rules

The following is a discussion of the amendments to part 11, title 37, of the Code of Federal Regulations in this final rule.

Section 11.1: Section 11.1 is amended to clarify the definition of ''attorney'' or ''lawyer'' by inserting the word ''active'' before ''member,'' inserting the phrase ''of the bar'' before the phrase ''of the highest court,'' and deleting the clause ''including an individual who is in good standing of the highest court of one State and not under an order of any court or Federal agency suspending, enjoining, restraining, disbarring or otherwise restricting the attorney from practice before the bar of another State or Federal agency.''

This revision clarifies that to be considered an ''attorney'' or ''lawyer'' one must be an active member, in good standing, of the highest court of any State, and otherwise eligible to practice law. With such revision the aforementioned clause had become surplusage and was struck for that reason. The term ''State'' is elsewhere defined in § 11.1 to mean any of the 50 states of the United States of America, the District of Columbia, and any Commonwealth or territory of the United States of America.

Section 11.1 is also amended to ensure the term ''practitioner'' includes students admitted to the program by insertion of the following language: ''(4) An individual authorized to practice before the Office under § 11.16(d).''

The USPTO is amending the term ''practitioner'' to specifically include those students authorized to participate in the USPTO Law School Clinic Certification Program. The mechanism by which such students are authorized to participate is through a grant of limited recognition. Once granted limited recognition, students are deemed practitioners for the term of the limited recognition and, as such, are subject to the USPTO Rules of Professional Conduct. By definition, only ''practitioners'' may represent others before the Office. Law school students who are not participating in the USPTO Law School Clinic Certification Program may not practice before the USPTO, unless otherwise authorized to do so.

Section 11.16, previously reserved, is amended to add: Criteria for admission to, and continuing participation in, the USPTO Law School Clinic Certification Program; the qualifications necessary for approval as a Faculty Clinic Supervisor; and the requirements for granting limited recognition to law school students. Schools participating in the program as of the date the final rule is published will not be required to reapply for admission but must apply for renewal at such time as the OED Director establishes. These criteria, deadlines for admission, and any ancillary requirements, are published in a bulletin on OED's law school clinic Web page.

Section 11.16(a) describes the purpose of the program.

Section 11.16(b) establishes rules regarding applying for, and renewing, admission to the program. Law schools already enrolled in the program are not required to submit a new application. Although not required to apply for re-admission, participating law schools seeking to add a practice area (*i.e.,* patents or trademarks) are required to submit an application for such practice area. This section also establishes that all law schools are required to submit a renewal application on a biennial basis.

Section 11.16(c) specifies that Faculty Clinic Supervisors are subject to the USPTO Rules of Professional Conduct, including those governing supervisory practitioners. *See e.g.,* 37 CFR 11.501 and 11.502. As such, Faculty Clinic Supervisors, as well as the respective law school deans, are responsible for ensuring their schools have established a process that identifies potential conflicts of interest.

Generally, the OED Director makes a determination regarding a proposed Faculty Clinic Supervisor's eligibility as part of the process of considering a law school's application for admission to the program. The OED Director may also make a determination whether to approve an additional, or a replacement, supervisor for a currently participating clinic. In determining whether a Faculty Clinic Supervisor candidate possesses the number of years of experience required by paragraphs (c)(1)(ii) and (c)(2)(ii), the OED Director will measure the duration of experience from the date of the candidate's request for approval. Any additional criteria established by the OED Director, as set forth in paragraphs (c)(1)(v) and (c)(2)(v), will be published in a bulletin on the Office of Enrollment and Discipline's law school clinic Web page.

Each practice area must be led by a fully-qualified, USPTO-approved, Faculty Clinic Supervisor. A law school's clinic may include a patent practice, a trademark practice, or both, provided that they are approved by the USPTO. The USPTO does not have a preference whether a law school includes both practice areas in one clinic or separates each discipline into its own clinic. For law school clinics approved to practice in both the patent and trademark practice areas, the USPTO may approve one individual to serve as a Faculty Clinic Supervisor for both practice areas, provided that the individual satisfies the USPTO's criteria to be both a Patent Faculty Clinic Supervisor and a Trademark Faculty Clinic Supervisor.

Section 11.16(d) provides the rules for providing limited recognition to students for the purpose of practicing before the USPTO. It provides that registered patent agents, and attorneys enrolled in a Master of Laws (L.L.M.) program, who wish to participate in a clinic must abide by the same rules and procedures as other students in the program.

Section 11.17 establishes rules concerning the continuing obligations of

schools participating in the USPTO Law School Clinic Certification Program and specifies those circumstances that may result in inactivation or removal of a school from the program.

Section 11.17(a) restates the requirement in Public Law 113–227 that services rendered under the program will be provided on a *pro bono* basis.

Section 11.17(b) establishes procedures for law schools to report their program activities to the USPTO.

Section 11.17(c) establishes procedures for inactivating a law school clinic. Inactive law schools are still considered by the USPTO to be ''participating'' in the program.

Section 11.17(d) establishes procedures for removing a law school from the program and explains the obligations of student practitioners in such event.

Comments and Responses to Comments: The Office published a notice of proposed rulemaking on December 16, 2015, proposing to amend its rules to implement Public Law 113–227 by creating rules governing the Law School Clinic Certification Program. *See USPTO Law School Clinic Certification Program,* 80 FR 78155 (Dec. 16, 2015). Six members of the public submitted comments. Of these commenters, five are currently participating law school clinics. These comments are discussed below.

Comment 1: Five commenters addressed the reporting requirement in § 11.17(b). As proposed, that provision would have required participating schools to provide OED each quarter with: (1) The number of law students participating in each of the patent and trademark practice areas of the school's clinic in the preceding quarter; (2) The number of faculty participating in each of the patent and trademark practice areas of the school's clinic in the preceding quarter; (3) The number of consultations provided to persons who requested assistance from the law school clinic in the preceding quarter; (4) The number of client representations undertaken for each of the patent and trademark practice areas of the school's clinic in the preceding quarter; (5) The identity and number of applications and responses filed in each of the patent and/or trademark practice areas of the school's clinic in the preceding quarter; (6) The number of patents issued, or trademarks registered, to clients of the clinic in the preceding quarter; and (7) any other information specified by the OED Director. Four comments recommended that this information be provided annually or semi-annually. Three commenters pointed out that the Internal Revenue Service's clinical program requires only semi-annual reporting. Two commenters suggested that § 11.17(b) should not require the reporting of information already in the possession of the USPTO. These commenters asserted that the number of participating students and faculty is already known to OED. The commenters also contended that OED can easily use a clinic's customer number(s) to look up patent filings as well as registrations. As for trademark applications, the commenters contended that these are easily identifiable as the school's TMCP tracking code must be included in the application.

Response: After due consideration of the comment, the Office agrees to reduce the reporting requirement to two times per year. The final rule incorporates these commenters' suggestions in this regard but leaves in place the other items required to be reported. Public Law 113–227 requires the USPTO to provide the Committees on the Judiciary of the House of Representatives and the Senate a report on the program that describes the number of law schools and law students participating in the program, the work done through the program, the benefits of the program, and any recommendations of the USPTO Director for modifications to the Program. This reporting requirement is designed to allow the USPTO to satisfy the requirements of the law. Each clinic director should at all times know the number of participating students and faculty, and should be keeping a running tally of the number of client visits, the numbers of filings, and the numbers of patents issued or trademarks registered. Gathering and reporting the information should be of minimal burden.

The recommendation to eliminate the requirement to report participating students is based on an incorrect premise that OED is already in possession of such data. Although OED records the names of clinic students who have been granted limited recognition, students may participate in a clinic without limited recognition. Therefore, OED cannot know the total number of participating students without the assistance of the law schools.

Similarly, OED's ability to measure program success would be made significantly more difficult if the requirement to report trademark and patent filings were eliminated. OED is not resourced to review multiple applications for the purpose of discerning those submitted under the program. Conversely, each participating clinic prosecutes a relatively small number of applications. For 2015, patent clinics filed fewer than five applications, on average. Trademark clinics averaged fewer than 14 applications for the year. The Office notes that the IRS requires a significantly greater amount of information in the semi-annual reports required of its Low Income Taxpayer Clinic programs. IRS clinics must file nearly 20 pages of forms requiring the input of hundreds of data fields. *See* Appendix C, IRS Pub. 3319 (2016). As a final point, the feedback the Office has received from the vast majority of the clinics is that this reporting requirement is not burdensome. For these reasons, the Office does not find that this reporting item is overly burdensome.

Comment 2: Section 11.17(b) would have required law school clinics to report the numbers of consultations and representations undertaken each quarter. Three commenters recommended defining the terms ''consultations'' and ''representations.''

Response: After due consideration of the comment, the Office agrees with the recommendations that the term ''consultation'' be clarified, and has revised the final rule to eliminate any ambiguities. The final rule now eliminates the word ''consultation'' and simply requires reporting the ''number of persons to whom the school's clinic provided assistance in any given patent or trademark matter but with whom no practitioner-client relationship had formed.'' The term ''representation,'' on the other hand, requires no definition. Within the legal field, the term is well-understood as the act of providing legal advice to a client, or serving as an attorney for a client in a proceeding or transaction. For example, clinics should take credit for having undertaken a representation where the clinic has: (1) Issued a client an opinion regarding patentability, infringement, or the registrability of a trademark; (2) given advice, or taken action, regarding a patent or trademark application, or (3) provided any other service directly related to practice before the USPTO.

Comment 3: Four commenters stated that the USPTO should withdraw § 11.17(b)(7), the provision granting the OED Director the authority to ask for additional information not already specified. One commenter also sought to remove or amend §§ 11.16(c)(1)(v), 11.16(c)(2)(v), 11.16(c)(3)(vii), 11.16(d)(2)(ix), and 11.16(d)(3)(viii), as well. These provisions allow the OED Director to establish additional criteria for approving the participation of Faculty Clinic Supervisors and law students. The commenters expressed concern with the open-ended nature of

these provisions. Three commenters argued that any additional information-reporting requirements could serve as a disincentive to law schools from joining the program and could actually cause schools to leave the program rather than comply with the reporting requirement.

Response: After due consideration of the comment, the Office declines to adopt the recommendations. In order to effectively monitor the program and meet Congressional intent, the OED Director must retain flexibility to run the program so as to properly protect the public and gauge program impact. Since the inception of the pilot program in 2008, the OED Director has had wide latitude in this regard. The Office is aware of no law school that was dissuaded from joining the program, or withdrew from the program, because the participation requirements were set by the OED Director rather than by regulation. OED has always sought to minimize administrative burdens on the clinics and will endeavor to do so in the future.

Comment 4: Section 11.16(d)(2)(viii) requires participating students to demonstrate they possess the scientific and technical qualifications necessary for rendering valuable services to patent applicants to obtain limited recognition. One commenter requested that this provision be withdrawn. The commenter argued that there is no harm to granting a non-qualified student limited recognition to practice before the Office in patent matters. The commenter also pointed out that it is difficult to find students with such qualifications. The commenter posited that by allowing non-qualified students to participate, they may become motivated to obtain the requisite scientific and technical competencies.

Response: After due consideration of the comment, the Office declines to adopt the recommendation. The Office appreciates the difficulties law schools face in trying to find technically qualified students for the patent practice area. During the pilot program, OED entertained requests to grant limited recognition, on a case-by-case basis, to students with a strong technical or scientific background where the student needed only a few credit hours to become fully qualified. OED will continue this practice. Any such student who is granted limited recognition must meet all qualifications and requirements before the student may become a registered practitioner. Finally, as discussed above in the response to Comment 1, students without technical or scientific backgrounds may participate in patent clinics. They cannot, however, receive limited recognition, actually file papers with the Office, or be of record in a patent application.

Comment 5: One commenter suggested OED should consider whether Faculty Clinic Supervisors are attorneys when evaluating their fitness. The comment appears to argue that patent agents are not qualified to serve as patent Faculty Clinic Supervisors on account of the fact that they are not necessarily trained in areas of the law that overlap with patent prosecution, such as licensing and corporate organization.

Response: Patent agents are eligible to serve as Faculty Clinic Supervisors provided they meet the criteria set forth in the final rule. With regard to practice in patent prosecution matters before the Office, patent agents and patent attorneys stand on an equal footing. To the extent this comment is proposing to exclude patent agents from service as Faculty Clinic Supervisors, the Office declines to incorporate such revisions in the final rule. Patent agents are fully capable of advising clients on patent matters before the Office and imparting relevant knowledge to their students. *See generally Sperry* v. *Florida,* 373 U.S. 379 (1963); *see also* In re *Queen's Univ. at Kingston,* No. 2015–145 at 14 (Fed. Cir. Mar. 7, 2016) (''patent agents are not simply engaging in law-like activity, they are engaging in the practice of law itself''). The USPTO's interest lies in ensuring that Faculty Clinic Supervisors are qualified to practice in patent matters before the Office. To the extent a law school should seek to supplement the instruction given to its students in other areas of the law, it is free to so act.

Comment 6: One commenter urges the rule to make permanent the ''Request to Make Special Program.'' This program allows patent clinics to submit a predetermined number of requests to make special per semester.

Response: After due consideration of the comment, the Office declines to revise the rule accordingly. Such a revision would be outside the scope of this rulemaking, which is designed to establish the framework for administering the program. This rulemaking is not designed to regulate the manner in which individual patents are to be prosecuted.

Comment 7: One commenter urges the rule to include a provision to grant law school clinics the full six months allowed by 35 U.S.C. 133 to respond to an Office action.

Response: After due consideration of the comment, the Office declines to revise the rule accordingly. Such a revision would be outside the scope of this rulemaking, which is designed to establish the framework for administering the program. The rulemaking is not designed to regulate the manner in which individual patents are to be prosecuted.

Comment 8: One commenter urged revision of § 11.16(c)(1)(iv), (c)(2)(iv), and (c)(3). These provisions keep in place the requirement established in the pilot program that Faculty Clinic Supervisors bear full responsibility for the legal services provided by their clinics. The commenter suggested that Faculty Clinic Supervisors should only bear ''supervisory responsibility'' for the legal services provided.

Response: After due consideration of the comment, the Office declines to revise the rule to include this provision. During the course of prosecution of a patent application, students assisting in the prosecution will enter and depart the program. During the summer months and semester breaks, there may be no students participating in a particular clinic. Only a Faculty Clinic Supervisor has the permanence to be able to properly prosecute an application. Moreover, only a Faculty Clinic Supervisor is a registered patent practitioner. The Office also notes that the fully responsible standard has been in place since the inception of the pilot program.

Rulemaking Considerations

A. Administrative Procedure Act: The changes in this final rulemaking involve rules of agency practice and procedure, and/or interpretive rules. *See Perez* v. *Mortg. Bankers Ass'n,* 135 S. Ct. 1199, 1204 (2015) (interpretive rules ''advise the public of the agency's construction of the statutes and rules which it administers'') (citation and internal quotation marks omitted); *Nat'l Org. of Veterans' Advocates* v. *Sec'y of Veterans Affairs,* 260 F.3d 1365, 1375 (Fed. Cir. 2001) (rule that clarifies interpretation of a statute is interpretive); *Bachow Commc'ns Inc.* v. *FCC,* 237 F.3d 683, 690 (D.C. Cir. 2001) (rules governing an application process are procedural under the Administrative Procedure Act); *Inova Alexandria Hosp.* v. *Shalala,* 244 F.3d 342, 350 (4th Cir. 2001) (rules for handling appeals were procedural where they did not change the substantive standard for reviewing claims). The Office received no public comment on this section or any of the other sections under Rulemaking Considerations.

Accordingly, prior notice and opportunity for public comment for the changes in this final rulemaking are not required pursuant to 5 U.S.C. 553(b) or (c), or any other law. *See Perez,* 135 S. Ct. at 1206 (notice-and-comment

procedures are required neither when an agency ''issue[s] an initial interpretive rule'' nor ''when it amends or repeals that interpretive rule''); *Cooper Techs. Co.* v. *Dudas,* 536 F.3d 1330, 1336–37 (Fed. Cir. 2008) (stating that 5 U.S.C. 553, and thus 35 U.S.C. 2(b)(2)(B), does not require notice and comment rulemaking for ''interpretative rules, general statements of policy, or rules of agency organization, procedure, or practice,'' (quoting 5 U.S.C. 553(b)(A)). The Office, however, published proposed changes for comment as it sought the benefit of the public's views on the Office's proposed rule.

B. Regulatory Flexibility Act: The Deputy General Counsel, United States Patent and Trademark Office, has certified to the Chief Counsel for Advocacy, Small Business Administration, that the changes in this final rule will not have a significant economic impact on a substantial number of small entities (Regulatory Flexibility Act, 5 U.S.C. 605(b)). The USPTO Law School Clinic Certification Program is voluntary. Law schools, clinics, and clients may elect whether to participate in the program, and receive the benefits thereof. The primary effect of this rulemaking is not economic, but simply to formalize the requirements and procedures developed and implemented during the pilot phase of the program. The rulemaking implements certain basic semi-annual reporting requirements by participating law school clinics in order to provide information to the Office pertaining to the quality and use of their *pro bono* services. The information required for the report should be readily available to participating law school clinics and presents a minimal administrative burden. Additionally, the Office currently has 47 participating law school clinics, and it is expected that this number may increase slightly. Accordingly, this reporting requirement and the rulemaking will not have a significant economic impact on a substantial number of small entities.

C. Executive Order 12866 (Regulatory Planning and Review): This rulemaking has been determined to be not significant for purposes of Executive Order 12866 (September 30, 1993).

D. Executive Order 13563 (Improving Regulation and Regulatory Review): The Office has complied with Executive Order 13563. Specifically, the Office has, to the extent feasible and applicable: (1) Made a reasoned determination that the benefits justify the costs of the rule; (2) tailored the rule to impose the least burden on society consistent with obtaining the regulatory objectives; (3) selected a regulatory approach that maximizes net benefits; (4) specified performance objectives; (5) identified and assessed available alternatives; (6) involved the public in an open exchange of information and perspectives among experts in relevant disciplines, affected stakeholders in the private sector and the public as a whole, and provided on-line access to the rulemaking docket; (7) attempted to promote coordination, simplification, and harmonization across government agencies and identified goals designed to promote innovation; (8) considered approaches that reduce burdens and maintain flexibility and freedom of choice for the public; and (9) ensured the objectivity of scientific and technological information and processes.

E. Executive Order 13132: This rulemaking does not contain policies with federalism implications sufficient to warrant preparation of a Federalism Assessment under Executive Order 13132 (August 4, 1999).

F. Executive Order 13175 (Tribal Consultation): This rulemaking will not: (1) Have substantial direct effects on one or more Indian tribes; (2) impose substantial direct compliance costs on Indian tribal governments; or (3) preempt tribal law. Therefore, a tribal summary impact statement is not required under Executive Order 13175 (Nov. 6, 2000).

G. Executive Order 13211 (Energy Effects): This rulemaking is not a significant energy action under Executive Order 13211 because this rulemaking is not likely to have a significant adverse effect on the supply, distribution, or use of energy. Therefore, a Statement of Energy Effects is not required under Executive Order 13211 (May 18, 2001).

H. Executive Order 12988 (Civil Justice Reform): This rulemaking meets applicable standards to minimize litigation, eliminate ambiguity, and reduce burden as set forth in sections 3(a) and 3(b)(2) of Executive Order 12988 (Feb. 5, 1996).

I. Executive Order 13045 (Protection of Children): This rulemaking does not concern an environmental risk to health or safety that may disproportionately affect children under Executive Order 13045 (Apr. 21, 1997).

J. Executive Order 12630 (Taking of Private Property): This rulemaking will not effect a taking of private property or otherwise have taking implications under Executive Order 12630 (Mar. 15, 1988).

K. Congressional Review Act: Under the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*), prior to issuing any final rule, the United States Patent and Trademark Office will submit a report containing the final rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the Government Accountability Office. The changes in this final rule are not expected to result in an annual effect on the economy of 100 million dollars or more, a major increase in costs or prices, or significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets. Therefore, this document is not expected to result in a ''major rule'' as defined in 5 U.S.C. 804(2).

L. Unfunded Mandates Reform Act of 1995: The changes in this final rule do not involve a Federal intergovernmental mandate that will result in the expenditure by State, local, and tribal governments, in the aggregate, of 100 million dollars (as adjusted) or more in any one year, or a Federal private sector mandate that will result in the expenditure by the private sector of 100 million dollars (as adjusted) or more in any one year, and will not significantly or uniquely affect small governments. Therefore, no actions are necessary under the provisions of the Unfunded Mandates Reform Act of 1995. *See* 2 U.S.C. 1501 *et seq.*

M. National Environmental Policy Act: This rulemaking will not have any effect on the quality of environment and is thus categorically excluded from review under the National Environmental Policy Act of 1969. *See* 42 U.S.C. 4321 *et seq.*

N. National Technology Transfer and Advancement Act: The requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) are not applicable because this rulemaking does not contain provisions which involve the use of technical standards.

O. Paperwork Reduction Act: The Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) requires that the Office consider the impact of paperwork and other information collection burdens imposed on the public. This rulemaking involves information collection requirements which are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3549). New information will be collected in the Law School Clinic Certification Program, OMB

Control No. 0651–0081. Information about the collection is available at the OMB's Information Collection Review Web site (*www.reginfo.gov/public/do/PRAMain*).

The following item was formerly in a different OMB-approved collection (0651–0012 Admission to Practice): Application by Student to Become a Participant in the Program (PTO–158LS). This form has now been transferred to the Law School Clinic Certification Program (0651–0081). This transfer has consolidated all information collections relating to law student involvement in the Law School Clinic Certification Program into a single collection.

Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty, for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB control number.

List of Subjects in 37 CFR Part 11

Administrative practice and procedure, Inventions and patents, Lawyers, Reporting and recordkeeping requirements.

For the reasons stated in the preamble, 37 CFR part 11 is amended as follows:

PART 11—REPRESENTATION OF OTHERS BEFORE THE UNITED STATES PATENT AND TRADEMARK OFFICE

■ 1. The authority citation for part 11 is revised to read as follows:

Authority: 5 U.S.C. 500; 15 U.S.C. 1123; 35 U.S.C. 2(b)(2), 32, 41; Sec. 1, Pub. L. 113–227, 128 Stat. 2114.

■ 2. In § 11.1, the definitions of ''*Attorney* or *lawyer*'' and ''*Practitioner*'' are revised to read as follows:

§ 11.1 Definitions.

* * * * *

Attorney or *lawyer* means an individual who is an active member in good standing of the bar of the highest court of any State. A *non-lawyer* means a person who is not an attorney or lawyer.

* * * * *

Practitioner means:

(1) An attorney or agent registered to practice before the Office in patent matters;

(2) An individual authorized under 5 U.S.C. 500(b), or otherwise as provided by § 11.14(a), (b), and (c), to practice before the Office in trademark matters or other non-patent matters;

(3) An individual authorized to practice before the Office in a patent case or matters under § 11.9(a) or (b); or

(4) An individual authorized to practice before the Office under § 11.16(d).

* * * * *

■ 3. Add § 11.16 to read as follows:

§ 11.16 Requirements for admission to the USPTO Law School Clinic Certification Program.

(a) The USPTO Law School Clinic Certification Program allows students enrolled in a participating law school's clinic to practice before the Office in patent or trademark matters by drafting, filing, and prosecuting patent or trademark applications on a *pro bono* basis for clients that qualify for assistance from the law school's clinic. All law schools accredited by the American Bar Association are eligible for participation in the program, and shall be examined for acceptance using identical criteria.

(b) *Application for admission and renewal*—(1) *Application for admission.* Non-participating law schools seeking admission to the USPTO Law School Clinic Certification Program, and participating law schools seeking to add a practice area, shall submit an application for admission for such practice area to OED in accordance with criteria and time periods set forth by the OED Director.

(2) *Renewal application.* Each participating law school desiring to continue in the USPTO Law School Clinic Certification Program shall, biennially from a date assigned to the law school by the OED Director, submit a renewal application to OED in accordance with criteria set forth by the OED Director.

(3) The OED Director may refuse admission or renewal of a law school to the USPTO Law School Clinic Certification Program if the OED Director determines that admission, or renewal, of the law school would fail to provide significant benefit to the public or the law students participating in the law school's clinic.

(c) *Faculty Clinic Supervisor.* Any law school seeking admission to or participating in the USPTO Law School Clinic Certification Program must have at least one Faculty Clinic Supervisor for the patent practice area, if the clinic includes patent practice; and at least one Faculty Clinic Supervisor for the trademark practice area, if the clinic includes trademark practice.

(1) *Patent Faculty Clinic Supervisor.* A Faculty Clinic Supervisor for a law school clinic's patent practice must:

(i) Be a registered patent practitioner in active status and good standing with OED;

(ii) Demonstrate at least 3 years experience in prosecuting patent applications before the Office within the 5 years immediately prior to the request for approval as a Faculty Clinic Supervisor;

(iii) Assume full responsibility for the instruction and guidance of law students participating in the law school clinic's patent practice;

(iv) Assume full responsibility for all patent applications and legal services, including filings with the Office, produced by the clinic; and

(v) Comply with all additional criteria established by the OED Director.

(2) *Trademark Faculty Clinic Supervisor.* A Faculty Clinic Supervisor for a law school clinic's trademark practice must:

(i) Be an attorney as defined in § 11.1;

(ii) Demonstrate at least 3 years experience in prosecuting trademark applications before the Office within the 5 years immediately prior to the date of the request for approval as a Faculty Clinic Supervisor;

(iii) Assume full responsibility for the instruction, guidance, and supervision of law students participating in the law school clinic's trademark practice;

(iv) Assume full responsibility for all trademark applications and legal services, including filings with the Office, produced by the clinic; and

(v) Comply with all additional criteria established by the OED Director.

(3) A Faculty Clinic Supervisor under paragraph (c) of this section must submit a statement:

(i) Assuming responsibility for performing conflicts checks for each law student and client in the relevant clinic practice area;

(ii) Assuming responsibility for student instruction and work, including instructing, mentoring, overseeing, and supervising all participating law school students in the clinic's relevant practice area;

(iii) Assuming responsibility for content and timeliness of all applications and documents submitted to the Office through the relevant practice area of the clinic;

(iv) Assuming responsibility for all communications by clinic students to clinic clients in the relevant clinic practice area;

(v) Assuming responsibility for ensuring that there is no gap in representation of clinic clients in the relevant practice area during student turnover, school schedule variations, inter-semester transitions, or other disruptions;

(vi) Attesting to meeting the criteria of paragraph (c)(1) or (2) of this section based on relevant practice area of the clinic; and

(vii) Attesting to all other criteria as established by the OED Director.

(d) *Limited recognition for law students participating in the USPTO Law School Clinic Certification Program.* (1) The OED Director may grant limited recognition to practice before the Office in patent or trademark matters, or both, to law school students enrolled in a clinic of a law school that is participating in the USPTO Law School Clinic Certification Program upon submission and approval of an application by a law student to OED in accordance with criteria established by the OED Director.

(2) In order to be granted limited recognition to practice before the Office in patent matters under the USPTO Law School Clinic Certification Program, a law student must:

(i) Be enrolled in a law school that is an active participant in the USPTO Law School Clinic Certification Program;

(ii) Be enrolled in the patent practice area of a clinic of the participating law school;

(iii) Have successfully completed at least one year of law school or the equivalent;

(iv) Have read the USPTO Rules of Professional Conduct and the relevant rules of practice and procedure for patent matters;

(v) Be supervised by an approved Faculty Clinic Supervisor pursuant to paragraph (c)(1) of this section;

(vi) Be certified by the dean of the participating law school, or one authorized to act for the dean, as: Having completed the first year of law school or the equivalent, being in compliance with the law school's ethics code, and being of good moral character and reputation;

(vii) Neither ask for nor receive any fee or compensation of any kind for legal services from a clinic client on whose behalf service is rendered;

(viii) Have proved to the satisfaction of the OED Director that he or she possesses the scientific and technical qualifications necessary for him or her to render patent applicants valuable service; and

(ix) Comply with all additional criteria established by the OED Director.

(3) In order to be granted limited recognition to practice before the Office in trademark matters under the USPTO Law School Clinic Certification Program, a law student must:

(i) Be enrolled in a law school that is an active participant in the USPTO Law School Clinic Certification Program;

(ii) Be enrolled in the trademark practice area of a clinic of the participating law school;

(iii) Have successfully completed at least one year of law school or the equivalent;

(iv) Have read the USPTO Rules of Professional Conduct and the relevant USPTO rules of practice and procedure for trademark matters;

(v) Be supervised by an approved Faculty Clinic Supervisor pursuant to paragraph (c)(2) of this section;

(vi) Be certified by the dean of the participating law school, or one authorized to act for the dean, as: Having completed the first year of law school or the equivalent, being in compliance with the law school's ethics code, and being of good moral character and reputation;

(vii) Neither ask for nor receive any fee or compensation of any kind for legal services from a clinic client on whose behalf service is rendered; and

(viii) Comply with all additional criteria established by the OED Director.

(4) Students registered to practice before the Office in patent matters as a patent agent, or authorized to practice before the Office in trademark matters under § 11.14, must complete and submit a student application pursuant to paragraph (d)(1) of this section and meet the criteria of paragraph (d)(2) or (3) of this section, as applicable, in order to participate in the program.

■ 4. Add § 11.17 to read as follows:

§ 11.17 Requirements for participation in the USPTO Law School Clinic Certification Program.

(a) Each law school participating in the USPTO Law School Clinic Certification Program must provide its patent and/or trademark services on a *pro bono* basis.

(b) Each law school participating in the USPTO Law School Clinic Certification Program shall, on a semi-annual basis, provide OED with a report regarding its clinic activity during the reporting period, which shall include:

(1) The number of law students participating in each of the patent and trademark practice areas of the school's clinic;

(2) The number of faculty participating in each of the patent and trademark practice areas of the school's clinic;

(3) The number of persons to whom the school's clinic provided assistance in any given patent or trademark matter but with whom no practitioner-client relationship had formed;

(4) The number of client representations undertaken for each of the patent and trademark practice areas of the school's clinic;

(5) The identity and number of applications and responses filed in each of the patent and/or trademark practice areas of the school's clinic;

(6) The number of patents issued, or trademarks registered, to clients of the clinic; and

(7) All other information specified by the OED Director.

(c) *Inactivation of law schools participating in the USPTO Law School Certification Program.* (1) The OED Director may inactivate a patent and/or trademark practice area of a participating law school:

(i) If the participating law school does not have an approved Faculty Clinic Supervisor for the relevant practice area, as described in § 11.16(c);

(ii) If the participating law school does not meet each of the requirements and criteria for participation in the USPTO Law School Clinic Certification Program as set forth in § 11.16, this section, or as otherwise established by the OED Director; or

(iii) For other good cause as determined by the OED Director.

(2) In the event that a practice area of a participating school is inactivated, the participating law school students must:

(i) Immediately cease all student practice before the Office in the relevant practice area and notify each client of such; and

(ii) Disassociate themselves from all client matters relating to practice before the Office in the relevant practice area, including complying with Office and State rules for withdrawal from representation.

(3) A patent or trademark practice area of a law school clinic that has been inactivated may be restored to active status, upon application to and approval by the OED Director.

(d) *Removal of law schools participating in the USPTO Law School Clinic Certification Program.* (1) The OED Director may remove a patent and/or trademark practice area of the clinic of a law school participating in the USPTO Law School Clinic Certification Program:

(i) Upon request from the law school;

(ii) If the participating law school does not meet each of the requirements and criteria for participation in the USPTO Law School Clinic Certification Program as set forth in § 11.16, this section, or as otherwise established by the OED Director; or

(iii) For other good cause as determined by the OED Director.

(2) In the event that a practice area of a participating school is removed by the OED Director, the participating law school students must:

(i) Immediately cease all student practice before the Office in the relevant

practice area and notify each client of such; and

(ii) Disassociate themselves from all client matters relating to practice before the Office in the relevant practice area, including complying with Office and State rules for withdrawal from representation.

(3) A school that has been removed from participation in the USPTO Law School Clinic Certification Program under this section may reapply to the program in compliance with § 11.16.

Dated: May 23, 2016.

Michelle K. Lee,

Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office.

[FR Doc. 2016–12498 Filed 5–26–16; 8:45 am]

BILLING CODE P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

44 CFR Part 64

[Docket ID FEMA–2016–0002; Internal Agency Docket No. FEMA–8433]

Suspension of Community Eligibility

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Final rule.

SUMMARY: This rule identifies communities where the sale of flood insurance has been authorized under the National Flood Insurance Program (NFIP) that are scheduled for suspension on the effective dates listed within this rule because of noncompliance with the floodplain management requirements of the program. If the Federal Emergency Management Agency (FEMA) receives documentation that the community has adopted the required floodplain management measures prior to the effective suspension date given in this rule, the suspension will not occur and a notice of this will be provided by publication in the **Federal Register** on a subsequent date. Also, information identifying the current participation status of a community can be obtained from FEMA's Community Status Book (CSB). The CSB is available at *http://www.fema.gov/fema/csb.shtm.*

DATES: The effective date of each community's scheduled suspension is the third date (''Susp.'') listed in the third column of the following tables.

FOR FURTHER INFORMATION CONTACT: If you want to determine whether a particular community was suspended on the suspension date or for further information, contact Patricia Suber, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646–4149.

SUPPLEMENTARY INFORMATION: The NFIP enables property owners to purchase Federal flood insurance that is not otherwise generally available from private insurers. In return, communities agree to adopt and administer local floodplain management measures aimed at protecting lives and new construction from future flooding. Section 1315 of the National Flood Insurance Act of 1968, as amended, 42 U.S.C. 4022, prohibits the sale of NFIP flood insurance unless an appropriate public body adopts adequate floodplain management measures with effective enforcement measures. The communities listed in this document no longer meet that statutory requirement for compliance with program regulations, 44 CFR part 59. Accordingly, the communities will be suspended on the effective date in the third column. As of that date, flood insurance will no longer be available in the community. We recognize that some of these communities may adopt and submit the required documentation of legally enforceable floodplain management measures after this rule is published but prior to the actual suspension date. These communities will not be suspended and will continue to be eligible for the sale of NFIP flood insurance. A notice withdrawing the suspension of such communities will be published in the **Federal Register**.

In addition, FEMA publishes a Flood Insurance Rate Map (FIRM) that identifies the Special Flood Hazard Areas (SFHAs) in these communities. The date of the FIRM, if one has been published, is indicated in the fourth column of the table. No direct Federal financial assistance (except assistance pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act not in connection with a flood) may be provided for construction or acquisition of buildings in identified SFHAs for communities not participating in the NFIP and identified for more than a year on FEMA's initial FIRM for the community as having flood-prone areas (section 202(a) of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4106(a), as amended). This prohibition against certain types of Federal assistance becomes effective for the communities listed on the date shown in the last column. The Administrator finds that notice and public comment procedures under 5 U.S.C. 553(b), are impracticable and unnecessary because communities listed in this final rule have been adequately notified.

Each community receives 6-month, 90-day, and 30-day notification letters addressed to the Chief Executive Officer stating that the community will be suspended unless the required floodplain management measures are met prior to the effective suspension date. Since these notifications were made, this final rule may take effect within less than 30 days.

National Environmental Policy Act. This rule is categorically excluded from the requirements of 44 CFR part 10, Environmental Considerations. No environmental impact assessment has been prepared.

Regulatory Flexibility Act. The Administrator has determined that this rule is exempt from the requirements of the Regulatory Flexibility Act because the National Flood Insurance Act of 1968, as amended, Section 1315, 42 U.S.C. 4022, prohibits flood insurance coverage unless an appropriate public body adopts adequate floodplain management measures with effective enforcement measures. The communities listed no longer comply with the statutory requirements, and after the effective date, flood insurance will no longer be available in the communities unless remedial action takes place.

Regulatory Classification. This final rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 13132, Federalism. This rule involves no policies that have federalism implications under Executive Order 13132.

Executive Order 12988, Civil Justice Reform. This rule meets the applicable standards of Executive Order 12988.

Paperwork Reduction Act. This rule does not involve any collection of information for purposes of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

List of Subjects in 44 CFR Part 64

Flood insurance, Floodplains.

Accordingly, 44 CFR part 64 is amended as follows:

PART 64—[AMENDED]

■ 1. The authority citation for part 64 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.;* Reorganization Plan No. 3 of 1978, 3 CFR,

1978 Comp.; p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp.; p. 376.

§ 64.6 [Amended]

■ 2. The tables published under the authority of § 64.6 are amended as follows:

BILLING CODE 9110–12–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 25

[IB Docket No. 12–267; FCC 13–111]

Comprehensive Review of Licensing and Operating Rules for Satellite Services; Correction

AGENCY: Federal Communications Commission.

ACTION: Correcting amendment.

SUMMARY: This document corrects a final regulation published in the **Federal Register,** 79 FR 8325, February 12, 2014. The regulation concerns a transmitter identification requirement on digital video transmissions by temporary-fixed earth stations.

DATES: Effective May 27, 2016.

FOR FURTHER INFORMATION CONTACT: Clay DeCell, 202–418–0803.

SUPPLEMENTARY INFORMATION: A final regulation published on February 12, 2014, provides that, as of a certain future date, temporary-fixed earth stations transmitting digital video information must include a signal identifying the source of the transmission. A two-year grace period was adopted for the new regulation, beginning on its effective date. The regulation became effective on September 3, 2014. 79 FR 52224. To accurately reflect this two-year grace period, the date specified in 47 CFR 25.281(b) is corrected from June 1, 2016, to September 3, 2016.

List of Subjects in 47 CFR Part 25

Earth stations.

Accordingly, 47 CFR part 25 is corrected by making the following correcting amendment:

PART 25—SATELLITE COMMUNICATIONS

■ 1. The authority citation for part 25 continues to read as follows:

Authority: Interprets or applies 47 U.S.C. 154, 301, 302, 303, 307, 309, 310, 319, 332, 605, and 721, unless otherwise noted.

§ 25.281 [Corrected]

■ 2. In the introductory text of § 25.281(b), remove ''June 1'' and add, in its place, ''September 3''.

Dated: May 20, 2016.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

[FR Doc. 2016–12482 Filed 5–26–16; 8:45 am]

BILLING CODE 6712–01–P

DEPARTMENT OF STATE

48 CFR Part 633

[Public Notice: 9539]

RIN 1400–AD92

Department of State Acquisition Regulation; Technical Amendments; Correction

AGENCY: Department of State.

ACTION: Correcting amendment.

SUMMARY: The Department of State published in the **Federal Register** of April 27, 2016 a rule amending the Department of State Acquisition Regulation (DOSAR) to make non-substantive corrections and editorial changes. It mistakenly added a section heading as a subpart heading. This document corrects that error.

DATES: Effective May 27, 2016.

FOR FURTHER INFORMATION CONTACT: Ms. Colleen Kosar, Policy Division, Office of the Procurement Executive, A/OPE, 2201 C Street NW., Suite 1060, State Annex Number 15, Washington, DC 20520. Telephone: 703–516–1685. Email: *KosarCM@state.gov.*

SUPPLEMENTARY INFORMATION: In rule FR Doc. 2016–09570 published on April 27, 2016 (81 FR 24706), in instruction 12 on page 24707, section 633.214 was inadvertently added as a subpart. This correcting amendment removes the subpart heading for 633.214 and adds a section heading for 633.214.

List of Subjects in 48 CFR Part 633

Administrative practice and procedure, Government procurement.

For the reasons stated in the preamble, the Department of State corrects 48 CFR chapter 6 by making the following correcting amendments:

PART 633—PROTESTS, DISPUTES, AND APPEALS

■ 1. The authority citation for 48 CFR part 633 continues to read as follows:

Authority: 22 U.S.C. 2651a, 40 U.S.C. 121(c) and 48 CFR chapter 1.

Subpart 633.214—[Amended]

■ 2. Remove the subpart heading for 633.214.

■ 3. Add a section heading for 633.214 to read as follows:

633.214 Alternative dispute resolution (ADR).

Dated: May 19, 2016.

Corey M. Rindner,

Procurement Executive, Department of State.

BILLING CODE 1505–01–D

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 635

[Docket No. 150413357–5999–02]

RIN 0648–XE634

Atlantic Highly Migratory Species; Commercial Blacknose Sharks and Non-Blacknose Small Coastal Sharks in the Atlantic Region South of 34° N. Latitude; Closure

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is closing the fisheries for commercial blacknose sharks and non-blacknose small coastal sharks (SCS) in the Atlantic region south of 34°00′ N. lat. This action is necessary because the commercial landings of Atlantic blacknose sharks for the 2016 fishing season are projected to exceed 80 percent of the available commercial quota as of May 27, 2016, and the blacknose shark and non-blacknose SCS fisheries south of 34°00′ N. lat. are quota-linked under current regulations.

DATES: The commercial fisheries for blacknose sharks and non-blacknose SCS in the Atlantic region south of 34°00′ N. lat. are closed effective 11:30 p.m. local time May 29, 2016, until the end of the 2016 fishing season on December 31, 2016, or until and if NMFS announces via a notice in the **Federal Register** that additional quota is available and the season is reopened.

FOR FURTHER INFORMATION CONTACT: Guỳ DuBeck or Karyl Brewster-Geisz 301–427–8503; fax 301–713–1917.

SUPPLEMENTARY INFORMATION: The Atlantic shark fisheries are managed under the 2006 Consolidated Highly Migratory Species (HMS) Fishery Management Plan (FMP), its amendments, and implementing regulations (50 CFR part 635) issued under authority of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801 *et seq.*).

Under § 635.5(b)(1), dealers must electronically submit reports on sharks that are first received from a vessel on a weekly basis through a NMFS-approved electronic reporting system. Reports must be received by no later than midnight, local time, of the first Tuesday following the end of the reporting week unless the dealer is otherwise notified by NMFS. The quotas for blacknose sharks and the non-blacknose SCS management group south of 34°00′ N. lat. in the Atlantic region are linked (§ 635.28(b)(4)(iv)). Under § 635.28(b)(3), when NMFS calculates that the landings for any species and/or management group of a linked group has reached or is projected to reach 80 percent of the available quota, NMFS will file for publication with the Office of the Federal Register a notice of closure for all of the species and/or management groups in a linked group that will be effective no fewer than 5 days from date of filing. From the effective date and time of the closure until and if NMFS announces, via a notice in the **Federal Register**, that additional quota is available and the season is reopened, the fisheries for all linked species and/or management groups are closed, even across fishing years.

On December 1, 2015 (80 FR 74999), NMFS announced that for the Atlantic region, the 2016 commercial Atlantic blacknose shark quota is 15.7 metric tons (mt) dressed weight (dw) (34,653 lb dw), and the non-blacknose SCS quota is 264.1 mt dw (582,333 lb dw). At § 635.27(b)(1), the boundary between the Atlantic region and the Gulf of Mexico region is defined as a line beginning on the East Coast of Florida at the mainland at 25°20.4′ N. lat, proceeding due east. Any water and land to the north and east of that boundary is considered, for the purposes of monitoring and setting quotas, to be within the Atlantic region.

Dealer reports received through May 23, 2016, indicated that 9.3 mt dw or 59 percent of the available Atlantic blacknose shark quota had been landed and 31.5 mt dw or 12 percent of the available Atlantic non-blacknose SCS quota had been landed. Based on catch rates from these dealer reports, NMFS estimates that the 80-percent limit specified for closure for blacknose sharks will be exceeded as of May 27, 2016. Accordingly, NMFS is closing both the commercial blacknose shark fishery and non-blacknose SCS management group in the Atlantic region south of 34°00′ N. lat. as of 11:30 p.m. local time May 29, 2016. All other shark species or management groups that are currently open in the Atlantic region will remain open, including the commercial Atlantic non-blacknose SCS management group north of 34°00′ N. lat.

During the closure, retention of blacknose sharks and non-blacknose SCS in the Atlantic region south of 34°00′ N. lat. is prohibited for persons fishing aboard vessels issued a commercial shark limited access permit (LAP) under § 635.4. However, persons aboard a commercially permitted vessel that is also properly permitted to operate as a charter vessel or headboat for highly migratory species (HMS) and is engaged in a for-hire trip could fish under the recreational retention limits for sharks and ''no sale'' provisions (§ 635.22(a) and (c)).

During this closure, a shark dealer issued a permit pursuant to § 635.4 may not purchase or receive blacknose sharks in the Atlantic region from a vessel issued a shark LAP, except that a permitted shark dealer or processor may possess blacknose sharks and/or non-blacknose SCS in the Atlantic region south of 34°00′ N. lat. that were harvested, off-loaded, and sold, traded, or bartered prior to the effective date of the closure and were held in storage consistent with § 635.28(b)(6) and non-blacknose SCS that were harvested in the Atlantic region north of 34°00′ N. lat. Similarly, a shark dealer issued a permit pursuant to § 635.4, in accordance with relevant state regulations, may purchase or receive blacknose sharks and/or non-blacknose SCS in the Atlantic region if the sharks were harvested, off-loaded, and sold, traded, or bartered from a vessel that fishes only in state waters and that has not been issued a shark LAP, HMS Angling permit, or HMS Charter/Headboat permit pursuant to § 635.4.

Classification

Pursuant to 5 U.S.C. 553(b)(B), the Assistant Administrator for Fisheries, NOAA (AA), finds that providing prior notice and public comment for this action is impracticable and contrary to the public interest because the fisheries are currently underway and any delay in this action would result in overharvest of the Atlantic blacknose quota and be inconsistent with management requirements and objectives. Similarly, affording prior notice and opportunity for public comment on this action is contrary to the public interest because if the quota is exceeded, the stock may be negatively affected and fishermen ultimately could experience reductions in the available quota and a lack of fishing opportunities in future seasons. For these reasons, the AA also finds good cause to waive the 30-day delay in effective date pursuant to 5 U.S.C. 553(d)(3).

This action is required under § 635.28(b)(3) and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: May 24, 2016.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2016–12631 Filed 5–24–16; 4:15 pm]

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 81, No. 103
Friday, May 27, 2016

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 29

[Docket No. FAA–2016–6939; Notice No. 29–038–SC]

Special Conditions: Bell Helicopter Textron, Inc. (BHTI), Model 525 Helicopters; Interaction of Systems and Structures

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed special conditions.

SUMMARY: We propose special conditions for the BHTI Model 525 helicopter. This helicopter will have a novel or unusual design feature associated with fly-by-wire flight control system (FBW FCS) functions that affect the structural integrity of the rotorcraft. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These proposed special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: Send your comments on or before July 11, 2016.

ADDRESSES: Send comments identified by docket number FAA–2016–6939] using any of the following methods:

☐ *Federal eRegulations Portal: Go to http://www.regulations.gov* and follow the online instructions for sending your comments electronically.

☐ *Mail:* Send comments to Docket Operations, M–30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

☐ *Hand Delivery of Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 8 a.m., and 5 p.m., Monday through Friday, except Federal holidays.

☐ *Fax:* Fax comments to Docket Operations at 202–493–2251.

Privacy: The FAA will post all comments it receives, without change, to *http://www.regulations.gov,* including any personal information the commenter provides. Using the search function of the docket Web site, anyone can find and read the electronic form of all comments received into any FAA docket, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477–19478), as well as at *http://DocketsInfo.dot.gov.*

Docket: Background documents or comments received may be read at *http://www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m., and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Martin R. Crane, Aviation Safety Engineer, Safety Management Group, Rotorcraft Directorate, FAA, 10101 Hillwood Pkwy, Fort Worth, TX 76177; telephone (817) 222–5110; email *martin.r.crane@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

We will consider all comments we receive on or before the closing date for comments. We will consider comments filed late if it is possible to do so without incurring expense or delay. We may change these special conditions based on the comments we receive.

Background

On December 15, 2011, BHTI applied for a type certificate for a new transport category helicopter designated as the Model 525. The aircraft is a medium twin engine rotorcraft. The design maximum takeoff weight is 20,000 pounds, with a maximum capacity of 16 passengers and a crew of 2.

The BHTI Model 525 helicopter will be equipped with a FBW FCS. The control functions of the FBW FCS and its related systems affect the structural integrity of the rotorcraft. Current regulations do not take into account loads for the rotorcraft due to the effects of systems on structural performance including normal operation and failure conditions with strength levels related to probability of occurrence. Special conditions are needed to account for these features.

Type Certification Basis

Under the provisions of 14 CFR 21.17, BHTI must show that the Model 525 helicopter meets the applicable provisions of part 29, as amended by Amendment 29–1 through 29–55 thereto. The BHTI Model 525 certification basis date is December 15, 2011, the date of application to the FAA.

If the Administrator finds that the applicable airworthiness regulations (*i.e.,* 14 CFR part 29) do not contain adequate or appropriate safety standards for the BHTI Model 525 because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same or similar novel or unusual design feature, the special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, the BHTI Model 525 helicopter must comply with the noise certification requirements of 14 CFR part 36, and the FAA must issue a finding of regulatory adequacy under § 611 of Public Law 92–574, the ''Noise Control Act of 1972.''

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type-certification basis under § 21.17(a)(2).

Novel or Unusual Design Features

The BHTI Model 525 helicopter will incorporate the following novel or unusual design features: FBW FCS, and

its related systems (stability augmentation system, load alleviation system, flutter control system, and fuel management system), with control functions that affect the structural integrity of the rotorcraft. Current regulations are inadequate for considering the effects of these systems and their failures on structural performance. The general approach of accounting for the effect of system failures on structural performance would be extended to include any system where partial or complete failure, alone or in combination with any other system's partial or complete failure, would affect structural performance.

Discussion

Active flight control systems are capable of providing automatic responses to inputs from sources other than the pilots. Active flight control systems have been expanded in function, effectiveness, and reliability to the point that FBW FCS systems are being installed on new rotorcraft. As a result of these advancements in flight control technology, 14 CFR part 29 does not provide a basis to achieve an acceptable level of safety for rotorcraft so equipped. Certification of these systems requires issuing special conditions under the provisions of § 21.16.

In the past, traditional rotorcraft flight control system designs have incorporated power-operated systems, stability or control augmentation with limited control authority, and autopilots that were certificated partly under § 29.672 with guidance from Advisory Circular 29–2C, Section AC 29.672. These systems are integrated into the primary flight controls and are given sufficient control authority to maneuver the rotorcraft up to its structural design limits in 14 CFR part 29 subparts C and D. The FBW FCS advanced technology with its full authority necessitates additional requirements to account for the interaction of control systems and structures.

The regulations defining the loads envelope in 14 CFR part 29 do not fully account for the effects of systems on structural performance. Automatic systems may be inoperative or they may operate in a degraded mode with less than full system authority and associated built-in protection features. Therefore, it is necessary to determine the structural factors of safety and operating margins such that the probability of structural failures due to application of loads during FBW FCS malfunctions is not greater than that found in rotorcraft equipped with traditional flight control systems. To achieve this objective and to ensure an acceptable level of safety, it is necessary to define the failure conditions and their associated frequency of occurrence.

Traditional flight control systems provide two states, either fully functioning or completely inoperative. These conditions are readily apparent to the flight crew. Newer active flight control systems have failure modes that allow the system to function in a degraded mode without full authority and associated built-in protection features. As these degraded modes are not readily apparent to the flight crew, monitoring systems are required to provide an annunciation of degraded system capability.

Applicability

As discussed above, these special conditions are applicable to the BHTI Model 525 helicopter. Should BHTI apply at a later date for a change to the type certificate to include another model incorporating the same novel or unusual design feature, the special conditions would apply to that model as well.

Conclusion

This action affects only certain novel or unusual design features on one model of rotorcraft. It is not a rule of general applicability.

List of Subjects in 14 CFR Part 29

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Proposed Special Conditions

Accordingly, the Federal Aviation Administration (FAA) proposes the following special conditions as part of the type certification basis for Bell Helicopter Textron, Inc., Model 525 helicopters:

Interaction of Systems and Structures

For rotorcraft equipped with systems that affect structural performance, either directly or as a result of a failure or malfunction, the influence of these systems and their failure conditions must be taken into account when showing compliance with the requirements of Title 14, Code of Federal Regulations (14 CFR) part 29 subparts C and D.

The following criteria must be used for showing compliance with these special conditions for rotorcraft equipped with FCSs, autopilots, stability augmentation systems, load alleviation systems, flutter control systems, fuel management systems, and other systems that either directly or as a result of failure or malfunction affects structural performance. If these special conditions are used for other systems, it may be necessary to adapt the criteria to the specific system.

(a) The criteria defined herein only address the direct structural consequences of the system responses and performance. They cannot be considered in isolation but should be included in the overall safety evaluation of the rotorcraft. These criteria may in some instances duplicate standards already established for this evaluation. These criteria are only applicable to structure whose failure could prevent continued safe flight and landing. Specific criteria that define acceptable limits on handling characteristics or stability requirements when operating in the system degraded or inoperative mode are not provided in these special conditions.

(b) Depending upon the specific characteristics of the rotorcraft, additional studies may be required that go beyond the criteria provided in this special condition in order to demonstrate the capability of the rotorcraft to meet other realistic conditions such as alternative gust or maneuver descriptions for a rotorcraft equipped with a load alleviation system.

(c) The following definitions are applicable to these special conditions:

(1) *Structural performance:* Capability of the rotorcraft to meet the structural requirements of 14 CFR part 29.

(2) *Flight limitations:* Limitations that can be applied to the rotorcraft flight conditions following an in-flight occurrence and that are included in the flight manual (*e.g.,* speed limitations and avoidance of severe weather conditions).

(3) *Operational limitations:* Limitations, including flight limitations, which can be applied to the rotorcraft operating conditions before dispatch (*e.g.,* fuel, payload, and Master Minimum Equipment List limitations).

(4) *Probabilistic terms:* The terms ''improbable'' and ''extremely improbable'' are the same as those used in § 29.1309.

(5) *Failure condition:* The term ''failure condition'' is the same as that used in § 29.1309; however, these special conditions apply only to system failure conditions that affect the structural performance of the rotorcraft (*e.g.,* system failure conditions that induce loads, change the response of the rotorcraft to inputs such as gusts or pilot actions, or lower flutter margins).

Effects of Systems on Structures

(a) *General.* The following criteria will be used in determining the influence of a system and its failure conditions on the rotorcraft structure.

(b) *System fully operative.* With the system fully operative, the following apply:

(1) Limit loads must be derived in all normal operating configurations of the system from all the limit conditions specified in Subpart C (or defined by special condition or equivalent level of safety in lieu of those specified in Subpart C), taking into account any special behavior of such a system or associated functions or any effect on the structural performance of the rotorcraft that may occur up to the limit loads. In particular, any significant nonlinearity (rate of displacement of control surface, thresholds or any other system nonlinearities) must be accounted for in a realistic or conservative way when deriving limit loads from limit conditions.

(2) The rotorcraft must meet the strength requirements of part 29 (static strength, residual strength), using the specified factors to derive ultimate loads from the limit loads defined above. The effect of nonlinearities must be investigated beyond limit conditions to ensure the behavior of the system presents no anomaly compared to the behavior below limit conditions. However, conditions beyond limit conditions need not be considered when it can be shown that the rotorcraft has design features that will not allow it to exceed those limit conditions.

(3) The rotorcraft must meet the flutter and divergence requirements of § 29.629.

(c) *System in the failure condition.* For all system failure conditions shown to be not extremely improbable, the following apply:

(1) At the time of occurrence. Starting from 1-g level flight conditions, a realistic scenario, including pilot corrective actions, must be established to determine the loads occurring at the time of failure and immediately after the failure.

(i) For static strength substantiation, these loads multiplied by an appropriate factor of safety that is related to the probability of occurrence of the failure are the ultimate loads that must be considered for design. The factor of safety is defined in Figure 1.

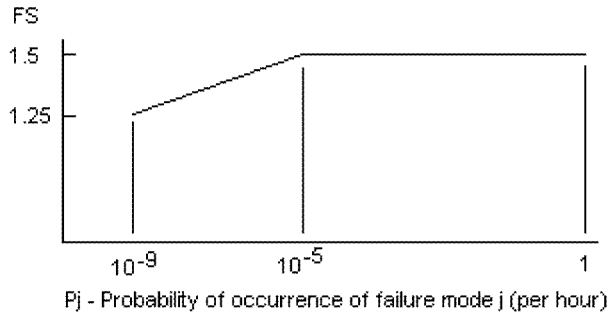

Figure 1: Factor of safety at the time of occurrence

(ii) For residual strength substantiation, the rotorcraft must be able to withstand two-thirds of the ultimate loads defined in paragraph (c)(1)(i) of these special conditions.

(iii) Freedom from flutter and divergence must be shown under all conditions of operation including:

(A) Airspeeds up to 1.11 V_{NE} (power on and power off).

(B) Main rotor speeds from 0.95 multiplied by the minimum permitted speed up to 1.05 multiplied by the maximum permitted speed (power on and power off).

(C) The critical combinations of weight, center of gravity position, load factor, and altitude.

(iv) For failure conditions that result in excursions beyond operating limitations, freedom from flutter and divergence must be shown to increased speeds, so that the margins intended by paragraph (c)(1)(iii) of these special conditions are maintained.

(v) Failures of the system that result in forced structural vibrations (oscillatory failures) must not produce loads that could result in detrimental deformation of primary structure.

(2) For the continuation of the flight. For the rotorcraft in the system failed state, and considering all appropriate reconfiguration and flight limitations, the following apply:

(i) The loads derived from the following conditions (or defined by special conditions or equivalent level of safety in lieu of the following conditions) at speeds up to V_{NE} (power on and power off) (or the speed limitation prescribed for the remainder of the flight) and at the minimum and maximum main rotor speeds, if applicable, must be determined:

(A) The limit maneuvering conditions specified in §§ 29.337 and 29.339.

(B) The limit gust conditions specified in § 29.341.

(C) The limit yaw maneuvering conditions specified in § 29.351.

(D) The limit unsymmetrical conditions specified in § 29.427.

(E) The limit ground loading conditions specified in § 29.473.

(ii) For static strength substantiation, each part of the structure must be able to withstand the loads in paragraph (c)(2)(i) of these special conditions multiplied by a factor of safety depending on the probability of being in this failure state. The factor of safety is defined in Figure 2.

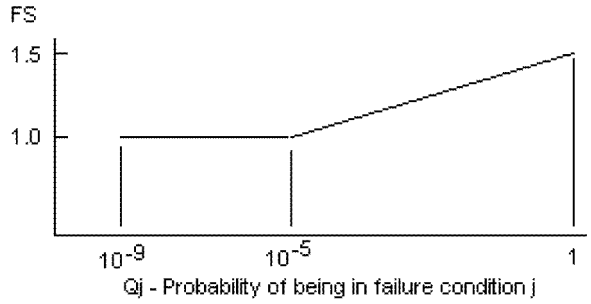

Figure 2: Factor of safety for continuation of flight

$Q_j = (T_j)(P_j)$

Where:

T_j = Average time spent in failure condition j (in hours)

P_j = Probability of occurrence of failure mode j (per hour)

Note: If P_j is greater than 10^{-3} per flight hour, then a 1.5 factor of safety must be applied to all limit load conditions specified in Subpart C.

(iii) For residual strength substantiation, the rotorcraft must be able to withstand two-thirds of the ultimate loads defined in paragraph (c)(2)(ii) of these special conditions.

(iv) If the loads induced by the failure condition have a significant effect on fatigue or damage tolerance, then their effects must be taken into account.

(v) Freedom from flutter and divergence must be shown up to 1.11 V_{NE} (power on and power off).

(vi) Freedom from flutter and divergence must also be shown up to 1.11 V_{NE} (power on and power off) for all probable system failure conditions combined with any damage required or considered under § 29.571(g) or § 29.573(d)(3).

(3) Consideration of certain failure conditions may be required by other sections of 14 CFR part 29 regardless of calculated system reliability. Where the failure analysis shows the probability of these failure conditions to be less than 10^{-9}, criteria other than those specified in this paragraph may be used for structural substantiation to show continued safe flight and landing.

(d) *Failure indications.* For system failure detection and indication, the following apply:

(1) The system must be checked for failure conditions, not extremely improbable, that degrade the structural capability below the level required by 14 CFR part 29 or that significantly reduce the reliability of the remaining operational portion of the system. As far as reasonably practicable, the flight crew must be made aware of these failures before flight. Certain elements of the control system, such as mechanical and hydraulic components, may use special periodic inspections, and electronic components may use daily checks, in lieu of detection and indication systems to achieve the objective of this requirement. These other means of detecting failures before flight will become part of the certification maintenance requirements (CMRs) and must be limited to components that are not readily detectable by normal detection and indication systems, and where service history shows that inspections will provide an adequate level of safety.

(2) The existence of any failure condition, shown to be not extremely improbable, during flight that could significantly affect the structural capability of the rotorcraft and for which the associated reduction in airworthiness can be minimized by suitable flight limitations, must be signaled to the flight crew. For example, failure conditions that result in a factor of safety between the rotorcraft strength and the loads of Subpart C below 1.25, or flutter and divergence margins below 1.11 V_{NE} (power on and power off), must be signaled to the crew during flight.

(e) *Dispatch with known failure conditions.* If the rotorcraft is to be dispatched in a known system failure condition that affects structural performance, or that affects the reliability of the remaining operational portion of the system to maintain structural performance, then the provisions of these special conditions must be met, including the provisions of paragraph (b) for the dispatched condition and paragraph (c) for subsequent failures. Expected operational limitations may be taken into account in establishing P_j as the probability of failure occurrence for determining the safety margin in Figure 1 of these special conditions. Flight limitations and expected operational limitations may be taken into account in establishing Q_j as the combined probability of being in the dispatched failure condition and the subsequent failure condition for the safety margins in Figure 2 of these special conditions. These limitations must be such that the probability of being in this combined failure state and then subsequently encountering limit load conditions is extremely improbable. No reduction in these safety margins is allowed if the subsequent system failure rate is greater than 10^{-3} per hour.

Issued in Fort Worth, Texas, on May 18, 2016.

Jorge Castillo,

Acting Manager, Rotorcraft Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2016–0733; Directorate Identifier 2015–SW–040–AD]

RIN 2120–AA64

Airworthiness Directives; Robinson Helicopter Company Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for Robinson Helicopter Company (Robinson) Model R44, R44 II, and R66 helicopters. This proposed AD would require a visual inspection of the main rotor blade (MRB) and either removing or altering it. This proposed AD is prompted by a report that a fatigue crack was found at an MRB's trailing edge and a determination that some MRBs may have reduced blade thickness due to blending out corrosion. The proposed

actions are intended to prevent an MRB fatigue crack, which could lead to MRB failure and subsequent loss of helicopter control.

DATES: We must receive comments on this proposed AD by July 26, 2016.

ADDRESSES: You may send comments by any of the following methods:

- *Federal eRulemaking Docket:* Go to *http://www.regulations.gov.* Follow the online instructions for sending your comments electronically.
- *Fax:* 202–493–2251.
- *Mail:* Send comments to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590–0001.
- *Hand Delivery:* Deliver to the ''Mail'' address between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2016–0733, or in person at the Docket Operations Office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the economic evaluation, any comments received, and other information. The street address for the Docket Operations Office (telephone 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

For service information identified in this proposed rule, contact Robinson Helicopter Company, 2901 Airport Drive, Torrance, CA 90505; telephone (310) 539–0508; fax (310) 539–5198; or at *http://www.robinsonheli.com.* You may review the referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177.

FOR FURTHER INFORMATION CONTACT: Fred Guerin, Aviation Safety Engineer, Los Angeles Aircraft Certification Office, Transport Airplane Directorate, FAA, 3960 Paramount Blvd., Lakewood, California 90712; telephone (562) 627–5232; email *fred.guerin@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to participate in this rulemaking by submitting written comments, data, or views. We also invite comments relating to the economic, environmental, energy, or federalism impacts that might result from adopting the proposals in this document. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should send only one copy of written comments, or if comments are filed electronically, commenters should submit only one time.

We will file in the docket all comments that we receive, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, we will consider all comments we receive on or before the closing date for comments. We will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. We may change this proposal in light of the comments we receive.

Discussion

We propose to adopt a new AD for Robinson Model R44 and R44 II helicopters with an MRB part number (P/N) C016–7, Revisions N/C, A through Z, and AA through AE; and Model R66 helicopters with an MRB P/N F016–2, Revisions A through E. The proposed AD would require a one-time inspection of the MRB for a crack, corrosion, dent, nick, or scratch, and either altering the MRB or removing it from service.

On February 23, 2015, we issued Special Airworthiness Information Bulletin (SAIB) SW–15–08 for Robinson Model R44 and R44 II helicopters with part numbered C016–7 MRBs. SAIB SW–15–08 was prompted by a report of an in-flight failure of a MRB on a Robinson Model R44 II helicopter, which resulted in severe MRB vibration that prompted an emergency landing. SAIB SW–15–08 recommended daily pre-flight visual checks of the MRB trailing edge and having a qualified technician examine any damage before further flight. SAIB SW–15–08 also recommended, if unusual rotor system vibration was detected in flight, landing immediately and having a qualified mechanic examine the MRBs.

After we issued SAIB SW–15–08, Robinson published R44 Service Bulletin SB–89, dated March 30, 2015 (SB–89), and R66 Service Bulletin SB–13, dated March 30, 2015 (SB–13), recommending inspecting and modifying the MRB trailing edge. Therefore, on March 31, 2015, we revised the SAIB and issued SAIB SW–15–08R1 to advise that the MRB trailing edge has a corner where the blade chord begins to increase that can result in high stresses. SAIB SW–15–08R1 recommends inspecting and modifying the MRB by following the actions in the service information.

When the SAIBs were issued, we did not consider the reported incident to be an airworthiness concern that would warrant AD action. The FAA subsequently determined that some of the affected blades have been repaired by blending out corrosion in the area of the crack site radius, resulting in a reduced blade thickness. Also, reports to Robinson following the SB–89 and SB–13 inspections revealed corrosion remaining undetected between scheduled maintenance intervals. The presence of corrosion and a reduction in blade thickness could result in the development of a fatigue crack on the trailing edge at the transition radius before the MRB reaches its retirement life. Altering the MRB by smoothing the transition at the chord increase, as specified in SB–89 and SB–13, reduces the stress concentration and corrects this unsafe condition. The proposed actions are intended to prevent a fatigue crack, which could lead to failure of the MRB and subsequent loss of helicopter control.

FAA's Determination

We are proposing this AD because we evaluated all known relevant information and determined that an unsafe condition exists and is likely to exist or develop on other products of these same type designs.

Related Service Information Under 1 CFR Part 51

We reviewed SB–89 for Model R44 and R44 II helicopters and SB–13 for Model R66 helicopters. SB–89 and SB–13 provide a one-time procedure to inspect each MRB for cracks, corrosion, and damage that may indicate a crack. If there is a crack, corrosion, or any damage, SB–89 and SB–13 specify removing the MRB from service and contacting Robinson. Otherwise, SB–89 and SB–13 describe procedures to smooth the transition at the chord increase of each MRB to reduce the stress concentration.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Proposed AD Requirements

This proposed AD would require within 100 hours time-in-service (TIS) or at the next annual inspection, whichever occurs first, cleaning the MRB and visually inspecting it for a crack, nick, corrosion, scratch, or dent.

If there is any crack, nick, corrosion, scratch or dent, this proposed AD would require repairing it or removing the MRB from service. If the MRB is repaired, or if there are no cracks, nicks, corrosion, scratches, or dents, this proposed AD would require altering the MRB.

Differences Between This Proposed AD and the Service Information

This proposed AD would require compliance within the next 100 hours TIS or at the next annual inspection, whichever occurs first. The service information recommends compliance within 15 hours TIS or by May 31, 2015, whichever occurs first, for the R44 and R44II helicopters and 10 hours TIS or by May 31, 2015, whichever occurs first, for the R66 helicopters.

Costs of Compliance

We estimate that this proposed AD would affect 2,236 helicopters of U.S. Registry and that labor costs average $85 per work hour. Based on these estimates, we expect the following costs:

- The visual inspection would require 1 work hour. No parts would be needed, so the cost per helicopter would total $85. The cost for the U.S. fleet would total $190,060.
- Altering each MRB, if necessary, would require 2 work hours and $65 for parts. We estimate a total cost of $235 per helicopter and $525,460 for the U.S. fleet.
- Replacing a MRB, if necessary, would require 3 work hours. Parts would cost $19,900 for the Model R44 and R44 II and $20,900 for the R66 helicopter for a total cost of $20,155 and $21,155, respectively, per MRB.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII, Part A, Subpart III, Section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866;

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);

3. Will not affect intrastate aviation in Alaska to the extent that it justifies making a regulatory distinction; and

4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

We prepared an economic evaluation of the estimated costs to comply with this proposed AD and placed it in the AD docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Robinson Helicopter Company: Docket No. FAA–2016–0733; Directorate Identifier 2015–SW–040–AD.

(a) Applicability

This AD applies to Robinson Helicopter Company (Robinson) Model R44 and R44 II helicopters with a main rotor blade (MRB) part number (P/N) C016–7 Revision N/C, A through Z, and AA through AE installed; and Model R66 helicopters with a MRB P/N F016–2 Revision A through E installed; certificated in any category.

(b) Unsafe Condition

This AD defines the unsafe condition as a fatigue crack on an MRB. This condition could result in failure of an MRB and loss of helicopter control.

(c) Comments Due Date

We must receive comments by July 26, 2016.

(d) Compliance

You are responsible for performing each action required by this AD within the specified compliance time unless it has already been accomplished prior to that time.

(e) Required Actions

Within 100 hours time-in-service or at the next annual inspection, whichever occurs first:

(1) Clean each MRB in the area depicted in Figure 1 of Robinson R44 Service Bulletin SB–89, dated March 30, 2015 (SB–89), or Robinson R66 Service Bulletin SB–13, dated March 30, 2015 (SB–13), as applicable to your model helicopter.

(2) Using 10X or higher power magnification and a light, visually inspect the upper and lower MRB surfaces and trailing edge as depicted in Figure 1 of SB–89 or SB–13 for a crack, a nick, a scratch, a dent, or corrosion. If there is a crack, a nick, a scratch, a dent, or any corrosion, repair the MRB to an airworthy configuration if the damage is within the maximum repair damage limits or remove the MRB from service.

(3) Alter the MRB in accordance with Compliance Procedure, paragraphs 4 through 19, of SB–89 or SB–13, as applicable to your model helicopter. Equivalent tubing may be used for R7769–1 and R7769–6 tubes. Power tools may not be used for this procedure.

(f) Alternative Methods of Compliance (AMOC)

(1) The Manager, Los Angeles Aircraft Certification Office, FAA, may approve AMOCs for this AD. Send your proposal to: Fred Guerin, Aviation Safety Engineer, Los Angeles Aircraft Certification Office, Transport Airplane Directorate, FAA, 3960 Paramount Blvd., Lakewood, California 90712; telephone (562) 627–5232; email *9-ANM-LAACO-AMOC-REQUESTS@faa.gov.*

(2) For operations conducted under a 14 CFR part 119 operating certificate or under 14 CFR part 91, subpart K, we suggest that you notify your principal inspector, or lacking a principal inspector, the manager of the local flight standards district office or certificate holding district office before operating any aircraft complying with this AD through an AMOC.

(g) Subject

Joint Aircraft Service Component (JASC) Code: 6210, Main Rotor Blades.

Issued in Fort Worth, Texas, on May 19, 2016.

Scott A. Horn,

Acting Manager, Rotorcraft Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Supplemental notice of proposed rulemaking (NPRM); reopening of comment period.

SUMMARY: We are revising an earlier proposed airworthiness directive (AD) for certain The Boeing Company Model 767–300 and 767–300F series airplanes. The NPRM proposed to require modification and installation of components in the main equipment center. For certain other airplanes, the NPRM proposed to require modification, replacement, and installation of flight deck air relief system (FDARS) components. The NPRM was prompted by reports of malfunctions in the flight deck display units, which resulted in blanking, blurring, or loss of color on the display. This action revises the NPRM by revising the applicability; adding certain modifications; and clarifying certain requirements. We are proposing this supplemental NPRM (SNPRM) to prevent malfunctions of the flight deck display units, which could affect the ability of the flightcrew to read the displays for airplane attitude, altitude, or airspeed, and consequently reduce the ability of the flightcrew to maintain control of the airplane. Since these actions impose an additional burden over that proposed in the NPRM, we are reopening the comment period to allow the public the chance to comment on these proposed changes.

DATES: We must receive comments on this SNPRM by July 11, 2016.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this SNPRM, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H–65, Seattle, WA 98124–2207; telephone: 206–544–5000, extension 1; fax: 206–766–5680; Internet *https://www.myboeingfleet.com.* You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221. It is also available on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2013–0797.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2013–0797; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Francis Smith, Aerospace Engineer, Cabin Safety and Environmental Controls Branch, ANM–150S, FAA, Seattle Aircraft Certification Office, 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–6596; fax: 425–917–6590; email: *francis.smith@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2013–0797; Directorate Identifier 2013–NM–007–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We issued an NPRM to amend 14 CFR part 39 by adding an AD that would apply to certain The Boeing Company Model 767–300 and 767–300F series airplanes. The NPRM published in the **Federal Register** on September 25, 2013 (78 FR 58970) (''the NPRM''). The NPRM proposed to require modification and installation of components in the main equipment center. For certain other airplanes, the NPRM proposed to require modification, replacement, and installation of FDARS components.

Actions Since the NPRM Was Issued

Since we issued the NPRM, we have reviewed Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013 (for Model 767–300F series airplanes). We referred to Boeing Alert Service Bulletin 767–21–0245, Revision 1, dated September 30, 2010, as an appropriate source of service information for accomplishing certain actions specified in the NPRM. Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013, adds instructions for modifications to reduce noise in the flight compartment when the 3-way valve is operating by removing flex ducts that connect the center and aft parts of the air distribution diffuser in the main deck cargo compartment, installing caps and an orifice assembly in the area forward of the main equipment center and under the flight deck floor, and installing an FDARS. Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013, also identifies concurrent actions (relay installation and related wiring changes). Those concurrent actions are described in Boeing Service Bulletin 767–21–0235, dated October 8, 2009; and Boeing Service Bulletin 767–21–0235, Revision 1, dated July 29, 2011.

We have also reviewed Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013 (for Model 767–300F series airplanes). We referred to Boeing Alert Service Bulletin 767–21A0247, dated October 10, 2011, as an appropriate source of service information for accomplishing certain actions specified in the NPRM. Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013, adds airplanes to the effectivity of the service bulletin and includes procedures for

changes to the 3-way valve control logic, modifications to reduce noise in the flight compartment and main cargo air distribution system (MCADS), and installation of an FDARS. The service bulletin also adds concurrent actions (relay installation and related wiring changes) for a certain group of airplanes. Those concurrent actions are described in Boeing Service Bulletin 767–21–0235, dated October 8, 2009; and Boeing Service Bulletin 767–21–0235, Revision 1, dated July 29, 2011.

We also have reviewed Boeing Service Bulletin 767–31–0073, dated October 12, 1995, which is referred to as concurrent service information in Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010 (which is referred to as an appropriate source of service information for changing the 3-way valve control logic and installing a cooling system for the flight deck display equipment). Boeing Service Bulletin 767–31–0073, dated October 12, 1995, describes procedures for installation of an in-flight engine indication and crew alerting system (EICAS) for the maintenance data selection system.

We have revised paragraphs (c)(2), (h)(1), and (j) of this proposed AD to refer to Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013. We have also revised paragraphs (c)(3) and (h)(2) of this proposed AD to refer to Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013.

In addition, we removed paragraph (k) of the proposed AD (in the NPRM), ''Credit for Previous Actions,'' from this proposed AD because operators that have accomplished the actions in Boeing Service Bulletin 767–21–0245, dated April 16, 2010; or Boeing Alert Service Bulletin 767–21A0245, Revision 1, dated September 30, 2010; must do additional work when accomplishing the procedures specified in Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013. We have redesignated paragraph (j) of the proposed AD (in the NPRM), ''Concurrent Requirements,'' as paragraph (k)(1) of this proposed AD. In addition, we have added a new paragraph (k)(2) to this proposed AD to address the concurrent actions (relay installation and related wiring changes) identified in Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013.

Also since the issuance of the NPRM, we have reviewed Boeing Alert Service Bulletin 767–21A0254, dated June 7, 2013 (which was not referenced in the NPRM). Boeing Alert Service Bulletin 767–21A0254, dated June 7, 2013, describes procedures for installing the FDARS and activating the 3-way valve control logic change for certain Model 767–300F series airplanes. We have redesignated paragraph (g) of the proposed AD (in the NPRM) as paragraph (g)(1) of this proposed AD, and added a new paragraph (g)(2) to this proposed AD to require the actions in Boeing Alert Service Bulletin 767–21A0254, dated June 7, 2013.

Comments

We gave the public the opportunity to comment on the NPRM. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Clarify the Applicability of the Proposed AD (in the NPRM)

Boeing requested we state that the proposed AD (in the NPRM) does not apply to Model 767–300 (passenger) series airplanes. Boeing explained that the 3-way valve control logic for Model 767–300 (passenger) series airplanes is significantly different from the 3-way valve control logic for Model 767–300F and Model 767–300BCF (Boeing Converted Freighter) series airplanes. Boeing indicated that, on Model 767–300 (passenger) series airplanes, pack air (which is a moisture source on the freighter airplanes) to the flight deck instruments and equipment is rarely used. Boeing added that Model 767–300 (passenger) series airplanes only utilize airplane pack air during override and fuel jettison modes, and there have not been reports of moisture-related display blanking on these airplanes.

We find that clarification is necessary. This proposed AD applies to Model 767–300 and 767–300F series airplanes, as identified in certain service information. ''Model 767–300 series airplanes'' could include both passenger and BCF series airplanes. According to the U.S. type certificate data sheet for Model 767 airplanes, a Model 767–300BCF series airplane is a Model 767–300 (passenger) series airplane that has been modified in accordance with specific service information to operate in a freighter configuration. The service information identified in the applicability of this proposed AD addresses Model 767–300BCF series airplanes and Model 767–300F series airplanes—not passenger airplanes. Therefore, this proposed AD does not apply to Model 767–300 (passenger) series airplanes. We have added this clarification to paragraphs (c), (i), and (k)(3) of this proposed AD.

Request To Revise the Proposed AD (in the NPRM) To Remove Certain Service Information References

Boeing asked that all references to Boeing Service Bulletin 767–21–0240 be removed from the NPRM, including the applicability statement. Boeing stated that the intent of this service information is to incorporate display improvements on Model 767–300BCF series airplanes. Boeing has confirmed that the actions to prevent display unit blanking included in Boeing Service Bulletin 767–21–0240 have already been incorporated on Model 767–300BCF series airplanes during the conversion, prior to re-delivery.

Boeing also asked that all references to Boeing Service Bulletin 767–21–0244 be removed from the NPRM, including the applicability statement. Boeing stated that the intent of this service information is also to incorporate display improvements on Model 767–300BCF series airplanes. Boeing has confirmed that the actions to prevent display unit blanking included in Boeing Service Bulletin 767–21–0244 have already been incorporated on Model 767–300BCF series airplanes in advance of this proposed AD.

Since Boeing Service Bulletin 767–21–0240 has been incorporated on the affected airplanes during the conversion and prior to re-delivery, we agree with the commenter's request to remove references to that service bulletin from this proposed AD. Paragraph (c) of this proposed AD has been revised to omit Boeing Service Bulletin 767–21–0240, Revision 1, dated November 12, 2009, from paragraph (c)(1), and subsequent subparagraphs in paragraph (c) have been redesignated accordingly.

However, we do not agree with the commenter's request to remove references to Boeing Service Bulletin 767–21–0244 from this proposed AD. The commenter has not submitted documentation to the FAA for verification that the affected operators of Model 767–300BCF series airplanes have accomplished the actions to prevent display unit blanking that are included in Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010. Therefore, Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010, is still referenced in this proposed AD.

Paragraph (h)(3) of the proposed AD (in the NPRM) has been omitted from this proposed AD because it referred to Boeing Service Bulletin 767–21–0240, Revision 1, dated November 12, 2009 (which affects airplanes on which the service information has been done during the conversion and prior to re-

delivery), and the airplanes identified in this service information have been removed from the applicability of this proposed AD, as explained previously. However, the requirements for the remaining Model 767–300BCF series airplanes (*i.e.,* those subject to accomplishment of Boeing Service Bulletin 767–21–0244) have been moved from paragraph (h)(3) of the proposed AD (in the NPRM) to new paragraph (i) of this proposed AD. Paragraph (k) of this proposed AD, which correlates to paragraph (j) of the proposed AD (in the NPRM), has been revised to remove the concurrent requirements for Model 767–300BCF series airplanes identified in Boeing Service Bulletin 767–21–0240, Revision 1, dated November 12, 2009. The concurrent requirements for Model 767–300BCF series airplanes identified in Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010, are retained in paragraph (k)(3) of this proposed AD.

Request To Clarify the Requirements of the Proposed AD (in the NPRM)

Boeing requested that the requirements of the proposed AD for Model 767–300BCF versus Model 767–300F series airplanes be clarified. Boeing stated that the intended function of the 3-way valve control logic change is to provide moisture control to mitigate display blanking; however, the intended function of the FDARS is to mitigate the noise that resulted from the 3-way valve control logic change, not to control moisture and mitigate display blanking. Boeing stated that the proposed 3-way valve control logic change and addition of the FDARS should be required for Model 767–300F series airplanes, and only the 3-way valve control logic change should be required for Model 767–300BCF series airplanes.

We agree to clarify the requirements of this proposed AD. In light of the commenter's remarks, we revised paragraphs (g)(1) and (g)(2) of this proposed AD to state that, for Model 767–300F series airplanes, the required actions include the installation of an FDARS and activation of or change to the 3-way valve control logic. We also revised the heading for paragraph (g) of this proposed AD accordingly.

In addition, we revised paragraphs (h)(1) and (h)(2) of this proposed AD to state that, for Model 767–300F series airplanes identified in Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013, and Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013, respectively, the required actions include a change of the 3-way valve control logic and MCADS, and installation of an FDARS. We also revised the heading for paragraph (h) of this proposed AD accordingly.

As previously discussed, a new paragraph (i) is included in this proposed AD. This paragraph specifies that, for Model 767–300BCF series airplanes, only the installation of the 3-way valve control logic and flight deck display equipment cooling system is required. The subsequent paragraphs have been redesignated accordingly.

Request To Revise the Number of Affected Airplanes

Boeing requested that the number of affected airplanes be changed from 43 to 58. Boeing stated that based on its current records of operators, there are 58 Model 767–300F series airplanes of U.S. registry.

Based on the number of affected Model 767–300 and 767–300F series airplanes currently on the U.S. Register, we changed the number of affected airplanes to 52 in the ''Costs of Compliance'' section of this SNPRM. We also made additional changes to the ''Costs of Compliance'' section to account for any added requirement of this proposed AD.

Effect of Winglets on Accomplishment of the Proposed Actions

Aviation Partners Boeing stated that the installation of winglets per Supplemental Type Certificate (STC) ST01920SE (*http://rgl.faa.gov/Regulatory_and_Guidance_Library/rgstc.nsf/0/59027f43b9a7486e86257b1d006591ee/$FILE/ST01920SE.pdf*) does not affect the accomplishment of the manufacturer's service instructions.

We agree with the commenter that STC ST01920SE (*http://rgl.faa.gov/Regulatory_and_Guidance_Library/rgstc.nsf/0/59027f43b9a7486e86257b1d006591ee/$FILE/ST01920SE.pdf*) does not affect the accomplishment of the manufacturer's service instructions. Therefore, the installation of STC ST01920SE does not affect the ability to accomplish the actions required by this AD. We have not changed this SNPRM in this regard.

Additional Change Made to This Proposed AD

We incorrectly referred to the original issue date of Boeing Service Bulletin 767–21–0235 as July 29, 2011, throughout the NPRM. We have specified the correct date of the original issue of Boeing Service Bulletin 767–21–0235 as October 8, 2009, in paragraphs (j) and (k) of this proposed AD.

Related Service Information Under 1 CFR Part 51

We reviewed the following service information.

- Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013. The service information describes procedures for changing the 3-way valve control logic and MCADS, and installing an FDARS.
- Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013. The service information describes procedures for changing the 3-way valve control logic and MCADS and installing an FDARS.
- Boeing Alert Service Bulletin 767–21A0253, dated October 12, 2012. The service information describes procedures for replacing the existing duct, installing an FDARS, changing the 3-way valve control logic, and installing a new altitude switch and pitot tube.
- Boeing Alert Service Bulletin 767–21A0254, dated June 7, 2013. The service information describes procedures for replacing the existing duct with a new duct; installing an FDARS; and activating the 3-way valve control logic.
- Boeing Service Bulletin 767–21–0235, dated October 8, 2009; and Boeing Service Bulletin 767–21–0235, Revision 1, dated July 29, 2011. The service information describes procedures for the relay installation and related wiring changes.
- Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010. The service information describes procedures for changing the 3-way valve control logic and installing a cooling system for the flight deck display equipment.
- Boeing Service Bulletin 767–31–0073, dated October 12, 1995. The service information describes procedures for installation of an in-flight EICAS for the maintenance data selection system.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

We are proposing this SNPRM because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design. Certain changes described above expand the scope of the NPRM. As a result, we have determined that it is necessary to reopen the

comment period to provide additional opportunity for the public to comment on this SNPRM.

Requirements of This Proposed AD

This proposed AD would require, depending on airplane model and configuration, the following actions:

- Replacing the existing duct with a new duct.
- Installing an FDARS.
- Changing or activating the 3-way valve control logic.
- Installing a new altitude switch and pitot tube.
- Changing the 3-way valve control logic and MCADS.
- Installing a flight deck display equipment cooling system.
- Doing a relay installation and related wiring changes.
- Installing an in-flight EICAS for the maintenance data selection system.

Refer to the service information described previously for details on the procedures and compliance times.

Costs of Compliance

We estimate that this proposed AD affects 52 airplanes of U.S. registry.

We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
3-way valve control logic and MCADS change, and installation of an FDARS (Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013; Groups 2 and 3 airplanes).	46 work-hours × $85 per hour = $3,910.	$21,865	$25,775	$1,185,650 (46 airplanes).
3-way valve control logic and MCADS change, and installation of an FDARS (Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013).	64 work-hours × $85 per hour = $5,440.	18,315	23,755	47,510 (2 airplanes).
Replacement of the existing duct, installation of an FDARS, 3-way valve control logic change, and installation of a new altitude switch and pitot tube (Boeing Alert Service Bulletin 767–21A0253, dated October 12, 2012).	76 work-hours × $85 per hour = $6,460.	55,663	62,123	248,492 (4 airplanes).
3-way valve control logic change and installation of a flight deck display equipment cooling system (Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010).	33 work-hours × $85 per hour = $2,805.	0	2,805	8,415 (3 airplanes).
Relay installation and related wiring changes (Boeing Service Bulletin 767–21–0235, dated October 8, 2009; or Boeing Service Bulletin 767–21–0235, Revision 1, dated July 29, 2011).	Up to 10 work-hours × $85 per hour = up to $850.	Up to $955	Up to $1,805 ..	Up to $88,445 (49 airplanes).
Installing an in-flight EICAS for the maintenance data selection system (Boeing Service Bulletin 767–31–0073, dated October 12, 1995).	Up to 13 work-hours	Up to $3,535	Up to $4,640 ..	Up to $13,920 (3 airplanes).
Replacement of the existing duct, installation of an FDARS and activation of 3-way valve control logic (Boeing Alert Service Bulletin 767–21A0254, dated June 7, 2013).	51 work-hours × $85 per hour = $4,335.	16,338	20,673	(0 airplanes).

According to the manufacturer, some of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected individuals. We do not control warranty coverage for affected individuals. As a result, we have included all costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

The Boeing Company: Docket No. FAA–2013–0797; Directorate Identifier 2013–NM–007–AD.

(a) Comments Due Date

We must receive comments by July 11, 2016.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 767–300 and 767–300F series airplanes, certificated in any category; as identified in the service information specified in paragraphs (c)(1) through (c)(5) of this AD. This AD does not apply to The Boeing Company Model 767–300 (passenger) series airplanes.

(1) Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010.

(2) Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013.

(3) Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013.

(4) Boeing Alert Service Bulletin 767–21A0253, dated October 12, 2012.

(5) Boeing Alert Service Bulletin 767–21A0254, dated June 7, 2013.

(d) Subject

Air Transport Association (ATA) of America Code 21, Air Conditioning.

(e) Unsafe Condition

This AD was prompted by reports of malfunctions in the flight deck display units resulting in blanking, blurring, or loss of color on the display. We are issuing this AD to prevent malfunctions of the flight deck display units, which could affect the ability of the flightcrew to read the displays for airplane attitude, altitude, or airspeed, and consequently reduce the ability of the flightcrew to maintain control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Installation of Flight Deck Air Relief System (FDARS), 3-Way Valve Control Logic Change or Activation, and Additional Actions

(1) For Model 767–300F series airplanes, as identified in Boeing Alert Service Bulletin 767–21A0253, dated October 12, 2012: Within 72 months after the effective date of this AD, in the main equipment center and the area under the left and right sides of the flight deck floor, replace the existing duct with a new duct; install an FDARS (including the installation of mounting brackets, ducts, orifice, outlet valve, and screen); change the 3-way valve control logic (including modification of the associated wiring and related actions); and install a new altitude switch and pitot tube; in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 767–21A0253, dated October 12, 2012.

(2) For Model 767–300F series airplanes, as identified in Boeing Alert Service Bulletin 767–21A0254, dated June 7, 2013: Within 72 months after the effective date of this AD, in the main equipment center and the area under the left and right sides of the flight deck floor, replace the existing duct with a new duct; install an FDARS (including the installation of mounting brackets, ducts, orifice, outlet valve, and screen); and activate the 3-way valve control logic (including modification of the associated wiring and related actions); in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 767–21A0254, dated June 7, 2013.

(h) Installation of FDARS and a 3-Way Valve Control Logic and Main Cargo Air Distribution System (MCADS) Change

(1) For Model 767–300F series airplanes, as identified in Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013: Within 72 months after the effective date of this AD, in the main equipment center and the area under the left and right sides of the flight deck floor, change the 3-way valve control logic and MCADS, and install an FDARS, in accordance with the Accomplishment Instruction of Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013, except as provided by paragraph (j) of this AD.

(2) For Model 767–300F series airplanes, as identified in Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013: Within 72 months after the effective date of this AD, change the 3-way valve control logic and MCADS and install an FDARS, in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013.

(i) Installation of a Flight Deck Display Equipment Cooling System and a 3-Way Valve Control Logic Change

For Model 767–300 series airplanes that have been converted by Boeing to Model 767–300BCF (Boeing Converted Freighter) airplanes, as identified in Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010: Within 72 months after the effective date of this AD, change the 3-way valve control logic and install a flight deck display equipment cooling system, in accordance with the Accomplishment Instructions of Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010.

(j) Exception to Paragraph (h)(1) of This AD

For Model 767–300F series airplanes, as identified in Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013: If the 3-way valve control logic change specified in Boeing Service Bulletin 767–21–0235, dated October 8, 2009; or Revision 1, dated July 29, 2011; is done prior to or concurrent with the actions required by paragraph (h)(1) of this AD, operators need to do only the functional test, FDARS installation, and flex duct change, in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013. Operators do not need to do the other actions specified in the Accomplishment Instructions of Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013, if the actions in the Accomplishment Instructions of Boeing Service Bulletin 767–21–0235, dated October 8, 2009; or Revision 1, dated July 29, 2011; are done concurrently. If the functional test fails, before further flight, do corrective actions that are approved in accordance with the procedures specified in paragraph (l) of this AD.

(k) Concurrent Requirements

(1) For Groups 1 and 3 airplanes, as identified in Boeing Alert Service Bulletin 767–21A0245, Revision 2, dated September 27, 2013: Prior to or concurrently with accomplishing the requirements of paragraph (h)(1) of this AD, do the relay installation and related wiring changes specified in, and in accordance with, the Accomplishment Instructions of Boeing Service Bulletin 767–21–0235, dated October 8, 2009; or Boeing Service Bulletin 767–21–0235, Revision 1, dated July 29, 2011.

(2) For Group 1 airplanes, as identified in Boeing Alert Service Bulletin 767–21A0247, Revision 1, dated April 9, 2013: Prior to or concurrently with accomplishing the requirements of paragraph (h)(2) of this AD, do the relay installation and related wiring changes specified in, and in accordance with, the Accomplishment Instructions of Boeing Service Bulletin 767–21–0235, dated October 8, 2009; or Boeing Service Bulletin 767–21–0235, Revision 1, dated July 29, 2011.

(3) For Model 767–300 series airplanes that have been converted by Boeing to Model 767–300BCF airplanes, as identified in Boeing Service Bulletin 767–21–0244, Revision 1, dated March 8, 2010: Prior to or concurrently with accomplishing the requirements of paragraph (i) of this AD, do the installation of an in-flight engine indication and crew alerting system (EICAS) for the maintenance data selection system specified in, and in accordance with, the Accomplishment Instructions of Boeing Service Bulletin 767–31–0073, dated October 12, 1995.

(l) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Seattle Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (m)(1) of this AD. Information may be emailed to: *9-ANM-Seattle-ACO-AMOC-Requests@faa.gov*.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by the Boeing Commercial Airplanes Organization Designation Authorization (ODA) that has been authorized by the Manager, Seattle ACO, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane and the approval must specifically refer to this AD.

(m) Related Information

(1) For more information about this AD, contact Francis Smith, Aerospace Engineer, Cabin Safety and Environmental Controls Branch, ANM–150S, FAA, Seattle ACO, 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–6596; fax: 425–917–6590; email: *francis.smith@faa.gov*.

(2) For service information identified in this AD, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H–65, Seattle, WA 98124–2207; telephone: 206–544–5000, extension 1; fax: 206–766–5680; Internet *https://www.myboeingfleet.com*. You may review copies of the referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on May 17, 2016.

Dionne Palermo,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Coast Guard

33 CFR Part 165

[Docket Number USCG–2016–0323]

RIN 1625–AA00

Safety Zone; Allegheny River Mile 43.5 to 44.5, Kittanning, Pennsylvania

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard proposes to establish a temporary safety zone for all navigable waters of the Allegheny River from mile 43.5 to mile 44.5. The safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created from a barge-based firework display. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port Pittsburgh or a designated representative. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must be received by the Coast Guard on or before June 27, 2016.

ADDRESSES: You may submit comments identified by docket number USCG–2016–0323 using the Federal eRulemaking Portal at *http://www.regulations.gov*. See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email MST1 Jennifer Haggins, Marine Safety Unit Pittsburgh, U.S. Coast Guard; telephone 412–221–0807, email *Jennifer.L.Haggins@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

On March 10, 2016, the Fort Armstrong Folk Festival notified the Coast Guard that it will be conducting a 30-minute fireworks display between 9 p.m. and 10 p.m. on August 6, 2016. The fireworks will be launched from a barge in the vicinity of Allegheny River mile 43.5 to mile 44.5. Hazards from fireworks displays include accidental discharge of fireworks, dangerous projectiles, and falling hot embers or other debris.

The purpose of this rulemaking is to ensure the safety of vessels and the navigable waters before, during, and after the scheduled event by establishing a 90-minute safety zone beginning 30 minutes before the display until 30 minutes after the display is over during the hours of 8 p.m. to 11 p.m. on the same date. The Coast Guard proposes this rulemaking under authority in 33 U.S.C. 1231.

III. Discussion of Proposed Rule

The Captain of the Port Pittsburgh (COTP) proposes to establish a safety zone lasting 90 minutes between the hours of 8 p.m. and 11 p.m. on August 6, 2016. The safety zone would cover all navigable waters of the Allegheny River from mile 43.5. to mile 44.5. The duration of the zone is intended to ensure the safety of vessels and these navigable waters before, during, and after the fireworks display scheduled to take place for 30 minutes between 9 p.m. and 10 p.m. on the same date. No vessel or person would be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. The regulatory text we are proposing appears at the end of this document.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This NPRM has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget.

This regulatory action determination is based on the size, location, and duration, of the safety zone and the low traffic nature of this area. The safety zone will close a small section of the Allegheny River for less than two hours. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule would allow other waterway users to seek permission to enter the zone. Requests to transit the safety zone area would be considered on a case-by-case basis.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not

have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section IV.A. above this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves a safety zone lasting less than two hours that would prohibit entry into the safety zone. Normally such actions are categorically excluded from further review under paragraph 34(g) of Figure 2–1 of Commandant Instruction M16475.lD. A preliminary environmental analysis checklist and Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal eRulemaking Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

We accept anonymous comments. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Documents mentioned in this NPRM as being available in the docket, and all public comments, will be in our online docket at *http://www.regulations.gov* and can be viewed by following that Web site's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted or a final rule is published.

List of Subjects in 33 CFR Part 165

Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T08–0323 under the undesignated center heading Eighth Coast Guard District to read as follows:

§ 165.T08–0323 Safety Zone; Allegheny River Mile 43.5 to Mile 44.5, Kittanning, PA

(a) *Location.* The following area is a safety zone: All navigable waters of the Allegheny River from mile 43.5 to mile 44.5.

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol

Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Pittsburgh (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in § 165.23, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative at 412–221–0807. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(d) *Enforcement period.* This section will be enforced for 90 minutes during the hours of 9 p.m. to 11 p.m. on August 6, 2016.

(e) *Informational broadcasts.* The COTP or a designated representative will inform the public through broadcast notices to mariners of the enforcement period for the safety zone as well as any changes in the enforcement period.

Dated: April 25, 2016.

L. McClain, Jr.,

Commander, U.S. Coast Guard, Captain of the Port Pittsburgh.

BILLING CODE 9110–04–P

DEPARTMENT OF COMMERCE

Patent and Trademark Office

37 CFR Parts 2 and 7

[Docket No. PTO–T–2016–0005]

RIN 0651–AD08

Trademark Fee Adjustment

AGENCY: United States Patent and Trademark Office, Commerce.

ACTION: Notice of proposed rulemaking.

SUMMARY: The United States Patent and Trademark Office (Office or USPTO) proposes to set or increase certain trademark fees, as authorized by the Leahy-Smith America Invents Act (AIA). The proposed fees will allow the Office to recover the aggregate estimated cost of Trademark and Trademark Trial and Appeal Board (TTAB) operations and USPTO administrative services that support Trademark operations. The proposals will further USPTO strategic objectives by: Better aligning fees with the full cost of products and services; protecting the integrity of the register by incentivizing more timely filing or examination of applications and other filings and more efficient resolution of appeals and trials; and promoting the efficiency of the process, in large part through lower-cost electronic filing options.

DATES: Written comments must be received on or before July 11, 2016.

ADDRESSES: The USPTO prefers that comments be submitted via electronic mail message to *TMFRNotices@uspto.gov.* Written comments also may be submitted by mail to the Commissioner for Trademarks, P.O. Box 1451, Alexandria, VA 22313–1451, attention Jennifer Chicoski; by hand delivery to the Trademark Assistance Center, Concourse Level, James Madison Building-East Wing, 600 Dulany Street, Alexandria, VA 22314, attention Jennifer Chicoski; or by electronic mail message via the Federal eRulemaking Portal. See the Federal eRulemaking Portal Web site (*http://www.regulations.gov*) for additional instructions on providing comments via the Federal eRulemaking Portal. All comments submitted directly to the USPTO or provided on the Federal eRulemaking Portal should include the docket number (PTO–T–2016–0005).

The comments will be available for public inspection on the USPTO's Web site at *http://www.uspto.gov,* on the Federal eRulemaking Portal, and at the Office of the Commissioner for Trademarks, Madison East, Tenth Floor, 600 Dulany Street, Alexandria, VA 22314. Because comments will be made available for public inspection, information that is not desired to be made public, such as an address or phone number, should not be included.

FOR FURTHER INFORMATION CONTACT: Jennifer Chicoski, Office of the Deputy Commissioner for Trademark Examination Policy, by email at *TMPolicy@uspto.gov,* or by telephone at (571) 272–8943.

SUPPLEMENTARY INFORMATION:

Purpose: Section 10 of the AIA (Section 10) authorizes the Director of the USPTO (Director) to set or adjust by rule any fee established, authorized, or charged under the Trademark Act of 1946, 15 U.S.C. 1051 *et seq.,* as amended (the Trademark Act or the Act) for any services performed by, or materials furnished by, the Office. *See* section 10 of the AIA, Public Law 112–29, 125 Stat. 284, 316–17. Section 10 prescribes that fees may be set or adjusted only to recover the aggregate estimated costs to the Office for processing, activities, services, and materials relating to trademarks, including administrative costs to the Office with respect to such Trademark and TTAB operations. The Director may set individual fees at, below, or above their respective cost. Section 10 authority includes flexibility to set individual fees in a way that furthers key policy considerations, while taking into account the cost of the respective services. Section 10 also establishes certain procedural requirements for setting or adjusting fee regulations, such as public hearings and input from the Trademark Public Advisory Committee (TPAC) and oversight by Congress. Accordingly, on October 14, 2015, the Director notified the TPAC of the Office's intent to set or adjust trademark fees and submitted a preliminary trademark fee proposal with supporting materials. The preliminary trademark fee proposal and associated materials are available at *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.* The fee proposal had three objectives to achieve the goals of recovering prospective aggregate costs of operation while furthering key policy considerations: (1) To better align fees with full costs; (2) to protect the integrity of the register; and (3) to promote the efficiency of the trademark process.

The TPAC held a public hearing in Alexandria, Virginia on November 3, 2015. Transcripts of this hearing and comments submitted to the TPAC in writing are available for review at *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.* The TPAC released its report regarding the preliminary proposed fees on November 30, 2015. The report can be found online at *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.* The Office has considered the comments, advice, and recommendations received from the TPAC and the public in setting the fees proposed herein.

In the report, the TPAC expressed general support for an increase in fees in order to recover full costs and maintain a sufficient operating reserve. The TPAC also expressed concerns over some of the fee increases and the potential impact on customers and included alternative fee proposals. The USPTO has reviewed the report and has amended the initial fee proposal to address some of the concerns, where possible, so as to remain consistent with the rulemaking goals and objectives.

The TPAC expressed general support for the stated goals of full cost recovery with an increase in certain trademark fees and, in particular, for the goal of recovering more of the costs for TTAB operations. The report specifically expressed uniform support for the

proposal to increase paper filing fees to encourage applicants to commit to complete electronic processing, due to the additional costs of processing paper filings as well as the availability of lower-cost electronic filing options. However, the TPAC report did recommend that the USPTO provide a mechanism to enable applicants to request a waiver of the surcharge incurred for paper filings in the event of system outages or if the nature of the submission renders the use of electronic systems impossible. Although this comment refers to a matter that is outside the scope of this proposed rulemaking, which is intended to set or increase certain trademark fees, the USPTO notes that the appropriate mechanism for requesting a waiver of a rule is to file a petition to the Director under 37 CFR 2.146. The report noted no opposition to the proposed increases in paper and electronic fees for filing a Petition to the Director. The TPAC also suggested increasing the fee for filing a regular Trademark Electronic Application System (TEAS) application in order to further encourage complete electronic filing.

A general lack of support was expressed for the proposal to increase the fees for electronically filing a request for extension of time for filing a statement of use. The TPAC, as well as comments made by the public, noted that the current fee adequately covers the USPTO's costs for processing these filings, that the increased fees would raise the fee burden placed on U.S.-based filers, who are not able to utilize either the Paris Convention or the Madrid Protocol, placing them at a disadvantage compared to filers from other countries, and that the increased fee could negatively impact pro se and small-business applicants in particular by making it more expensive to maintain a trademark application while preparing to bring a new product or service to the market as reasons for not increasing this pre-registration fee that only impacts filers under the intent-to-use filing basis. Concerns were also expressed regarding the proposed increases to the fees for requests to divide applications and notices of ex parte appeal, as well as the proposed new fees for filing a request for an extension of time to oppose a published trademark application. The report states that the increase to the fee for a request to divide adds costs to intent-to-use filers and will discourage them from filing a statement of use sooner for the goods/services in use, where possible, and could thereby deprive third parties searching the Register from gaining information about actual use of the relevant mark. The TPAC recommended establishing a fee increase that will have a more even impact on all filers. Regarding the proposed increased fee for filing a notice of appeal, the TPAC proposed that rather than increasing the current fee, a new fee for submission of an appeal brief be added. As to the proposed new fees for filing a request for an extension of time to oppose a published mark, the TPAC report noted that although some members raised concerns over the proposed fees, the TPAC held the majority view that such fees would be beneficial, as attaching a reasonable fee to obtaining extensions of time to oppose after the initial 30-day extension should both encourage potential opposers to engage more quickly in an analysis of the potential dispute and to seek resolution earlier in the process.

The USPTO appreciates the overall support for an increase in fees to meet sufficient funding levels. After careful consideration of the comments and suggestions provided in the report, and keeping in mind the goals of this rulemaking, the USPTO has made some changes to the initial fee proposal, which are reflected in this proposed rulemaking. For example, in furtherance of the goal to encourage applicants to commit to complete electronic processing, the suggested increase in the fee for the regular TEAS application has been added. In addition, the increase would also apply to TEAS requests for transformation of an extension of protection to the United States into a U.S. application, filed pursuant to 37 CFR 7.31. Additionally, due to the concerns expressed by the TPAC, the proposed fees for a request to divide and a request for an extension of time to file a statement of use have been increased for such requests filed on paper, but will remain at the current fee levels for those filed electronically. In addition, the USPTO proposes to increase the fees for affidavits under sections 8 and 71 of the Act. This increase will help recover increasing costs to review these filings. Furthermore, increasing this fee will affect all filers post registration, which should address some of the concerns expressed by the TPAC regarding a possible increased burden placed predominantly on U.S. filers of applications. Detailed explanations for these and the other proposed fee increases can be found in the ''Rulemaking Goals and Strategies'' and ''Individual Fee Rationale'' sections of this rulemaking.

The fee schedule proposed in this rulemaking will recover the aggregate estimated costs to the Office while achieving strategic and operational goals, such as maintaining an operating reserve, implementing measures to maintain trademark pendency and high quality, modernizing the trademark information technology (IT) systems, continuing programs for stakeholder and public outreach, and enhancing operations of the TTAB.

The USPTO protects consumers and provides benefits to businesses by effectively and efficiently carrying out the trademark laws of the United States. The Office estimates that the additional aggregate revenue derived from the proposed fee schedule will achieve sustainable funding, mitigate the risk of immediate unplanned financial disruptions, and fund necessary upgrades to IT systems. The proposed rule will also advance key policy considerations, while taking into account the cost of individual services. For example, the proposal includes increased fees for paper filings, which aims to better align the required fees with the cost of processing paper filings and incentivize electronic filings to promote efficiency of the registration process. Other trademark fees were increased to encourage timely filings and notices to further promote the efficiency of the process.

Summary of Major Provisions: The Office proposes to set or adjust 44 trademark processing fees. The proposed fee structure would increase the per-class fee for an initial application filed on paper by $225 to $600, and would increase the fees for 31 other paper filings by between $100 and $200 (per class, where applicable). The per-class fee for an initial application filed using the regular TEAS option would increase by $75 to $400. This increase would also apply to requests for extension of protection and subsequent designations filed under the Madrid Protocol. 15 U.S.C. 1141e; Madrid Protocol Article 8(7)(a). The proposed rule increases the fee for filing affidavits under sections 8 and 71 of the Act for both paper and electronic filings. In addition, ten TTAB-related fees are established or revised in the proposed rule, six of which would increase the fees for initiating a proceeding filed electronically or on paper, and four that would establish electronic and paper filing fees for requests to extend time to file a notice of opposition in certain circumstances. A full list of current and proposed fees including the unit cost by fee from fiscal years 2013, 2014, and 2015 is available in the Table of Trademark Fees—Current Proposed and Unit Cost at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

Rulemaking Goals and Strategies: Consistent with the Office's goals and obligations under the AIA, the overall objective of this rulemaking is to ensure the fee schedule generates sufficient revenue to recover the prospective aggregate costs of Trademark and TTAB operations and the associated administrative costs. Fees must be set at levels projected to cover future budgetary requirements and maintain an operating reserve. A record number of over 500,000 classes were filed in fiscal year (FY) 2015, and the Office projects this trend of increased filings to continue for the foreseeable future. Additionally, to maintain trademark pendency and quality goals with the increased filings, the Office must ensure it has adequate resources and systems to support future requirements. The Office is in the midst of a multi-year IT systems and infrastructure upgrade, which is critical to the future of the U.S. trademark registration system.

Maintaining the current fee schedule is unlikely to meet future budgetary requirements, including expenses resulting from the projected increases in filings; the full costs necessary to support Trademark and TTAB operations, necessary investments in IT systems, intellectual property (IP) policy, and USPTO programs; and the cost of maintaining sufficient operating reserves. Under the current fee schedule, these costs will exceed available revenues and operating reserve optimal balances through 2021. The USPTO FY 2017 President's Budget includes two revenue estimates: (1) The current fee schedule; and (2) the initial fee proposal as submitted to the TPAC and discussed in their public hearing and report. Additional information on estimated cost may be found in the USPTO FY 2017 President's Budget (Figure #4 page 23) at *http://www.uspto.gov/sites/default/files/documents/fy17pbr.pdf.* Managing without an adequate operating reserve would put the USPTO in jeopardy of being unable to respond to emergency situations—such as unexpected economic downturns—thereby increasing the risk for dire short-term financial actions, such as halting investment in IT development projects that are crucial to operations and customer support. An adequate operating reserve also allows the USPTO to continue serving its users in the event of a short-term lapse in Congressional appropriations.

The Office notes that because the FY 2017 President's Budget was submitted prior to the USPTO making final decisions on the proposed fee adjustments, the operating reserve amounts for FY 2017–FY 2021 included in that document differ from what would be generated by this NPRM. Given that the Office reduced several fees from the initial proposal in response to comments from the TPAC and the public, the aggregate revenue collected under the proposed fee schedule in this rule, and subsequently the amount expected to be allocated to the operating reserve, is lower than what appears in the President's Budget. With the proposed fee schedule, optimal operating reserves are projected by FY 2019. The USPTO would use its existing authority going forward to adjust fees to cover budgetary requirements and to maintain the optimal operating reserve balance. If the projected operating reserve exceeds the estimated optimal level by 15 percent for two consecutive years, the USPTO would consider lowering fees.

Another goal of this rulemaking is to set individual fees to further key IP protection policy considerations while taking into account the cost of the particular service. The Office seeks to enhance trademark protection for IP rights holders by offering application processing options and promoting Administration innovation strategies.

The proposal has three objectives to achieve the goals of recovering prospective aggregate costs of operation while furthering key policy considerations: (1) To better align fees with full costs; (2) to protect the integrity of the register; and (3) to promote the efficiency of the trademark process. Aggregate costs are estimated through the USPTO budget-formulation process with the annual preparation of a five-year performance-based budget request. Revenues are estimated based on the projected demand for trademark products and services and fee rates.

These fee-schedule objectives are consistent with strategic goals and objectives detailed in the USPTO 2014–2018 Strategic Plan (Strategic Plan) that is available at *http://www.uspto.gov/sites/default/files/documents/USPTO_2014–2018_Strategic_Plan.pdf.* The Strategic Plan defines the USPTO's mission and long-term goals and presents the actions the Office will take to realize those goals. The significant actions the Office describes in the Strategic Plan that are specifically related to the goals of this rulemaking are ensuring optimal IT service to all users, maintaining trademark pendency and high quality, continuing and enhancing stakeholder and public outreach, and enhancing operations of the TTAB.

Better Align Fees with Cost: The first fee-setting objective is to set and adjust trademark fees to better align those fees with the full costs of providing the relevant services. The overall goal is to achieve aggregate cost recovery. In determining which fees to set or adjust, the fee proposal targets changes to fees where the gap between the cost of the service and the current fee rate is the greatest. Paper filings are generally more expensive to process than electronic filings. Currently, however, most fees for paper filings are not set at full cost; instead they are subsidized by electronic filers. Because of this, across-the-board increases in fees for paper filings are proposed to bring the respective fees closer to the actual cost of processing paper filings and incentivize lower-cost electronic options. Additionally, adjustments to TTAB fees, which have not been adjusted, depending on the fee, for 15–25 years, have been proposed to bring the fees closer to current processing costs, and new fees for extensions of time to file a notice of opposition will allow recovery of some of the cost of processing these filings.

Improve the Accuracy of the Trademark Register: The second fee-setting objective is to set or adjust fees to further the policy objective of improving the accuracy of the trademark register by incentivizing timely filings, examination, and efficient trial and appeal resolutions. These fees are used to encourage actions that help to facilitate efficient processing and encourage the prompt conclusion of application prosecution. An accurate register allows the public to rely on the register to determine potential trademark rights. Filings that may result in a less-accurate register, including those to maintain registrations that may include goods or services no longer in use, are among those filings targeted under this objective.

Improve the Efficiency of the Trademark Process: The third fee-setting objective pertains to furthering key policy objectives by improving the efficiency of the trademark process, primarily by incentivizing electronic filings. To reach this objective, the fee proposal targets changes to fees that could administratively improve application processing by encouraging more electronic filing. Electronic filing expedites processing, shortens pendency, minimizes manual processing and the potential for data-entry errors, and is more efficient for both the filer and the USPTO. The Office believes that the proposed increase in fees for paper filings, in conjunction with such prior rulemakings as the TEAS Reduced Fee (TEAS RF) rulemaking that took effect

in January, 2015 (79 FR 74633 (Dec. 16, 2014)) and increased electronic filing options at lower rates, will continue to result in a greater percentage of electronic filings that will improve the efficiency of the trademark process.

The trademark fee schedule proposed here will achieve the goals of recovering prospective aggregate costs of operation while furthering the key policy considerations of better aligning fees with full costs, protecting the integrity of the register, and promoting the efficiency of the trademark process in FY 2017 and beyond. It will also create a better and fairer cost-recovery system that balances subsidizing costs to encourage broader usage of IP rights protection mechanisms and participation by more trademark owners.

FEES FOR PAPER FILINGS

37 CFR	Fee code	Description	Current fee	Proposed fee	Change
2.6(a)(1)(i)	6001	Filing an Application on Paper, per Class	$375	$600	$225
2.6(a)(19)(i)	6006	Request to Divide an Application Filed on Paper, per New Application Created.	100	200	100
2.6(a)(1)(v)	6008	Additional Processing Fee under § 2.22(c) or § 2.23(c), per Class	50	125	75
2.6(a)(5)(i)	6201	Filing an Application for Renewal of a Registration on Paper, per Class.	400	500	100
2.6(a)(6)(i)	6203	Additional Fee for Filing a Renewal Application During the Grace Period on Paper, per Class.	100	200	100
2.6(a)(21)(i)	6204	Correcting a Deficiency in a Renewal Application via Paper Filing	100	200	100
2.6(a)(12)(i)	6205	Filing an Affidavit under sec. 8 of the Act on Paper, per Class	100	250	150
2.6(a)(14)(i)	6206	Additional Fee for Filing a sec. 8 Affidavit During the Grace Period on Paper, per Class.	100	200	100
2.6(a)(20)(i)	6207	Correcting a Deficiency in a sec. 8 Affidavit via Paper Filing	100	200	100
2.6(a)(13)(i)	6208	Filing an Affidavit under sec. 15 of the Act on Paper, per Class	200	300	100
2.6(a)(7)(i)	6210	Filing to Publish a Mark under sec. 12(c) of the Act on Paper, per Class.	100	200	100
2.6(a)(8)(i)	6211	Issuing New Certificate of Registration upon Request of Registrant, Request Filed on Paper.	100	200	100
2.6(a)(9)(i)	6212	Certificate of Correction of Registrant's Error, Request Filed on Paper.	100	200	100
2.6(a)(10)(i)	6213	Filing a Disclaimer to a Registration, on Paper	100	200	100
2.6(a)(11)(i)	6214	Filing an Amendment to a Registration, on Paper	100	200	100
2.6(a)(2)(i)	6002	Filing an Amendment to Allege Use under sec. 1(c) of the Act on Paper, per Class.	100	200	100

2.6(a)(4)(i)	6004	Filing a Request under sec. 1(d)(2) of the Act for a Six-Month Extension of Time for Filing a Statement of Use under sec. 1(d)(1) of the Act on Paper, per Class.	150	250	100
7.6(a)(1)(i)	6901	Certifying an International Application Based on a Single Application or Registration, Filed on Paper, per Class.	100	200	100
7.6(a)(2)(i)	6902	Certifying an International Application Based on More Than One Basic Application or Registration Filed on Paper, per Class.	150	250	100
7.6(a)(4)(i)	6903	Transmitting a Request to Record an Assignment or Restriction, or Release of a Restriction, under § 7.23 or § 7.24 Filed on Paper.	100	200	100
7.6(a)(5)(i)	6904	Filing a Notice of Replacement under § 7.28 on Paper, per Class	100	200	100
7.6(a)(6)(i)	6905	Filing an Affidavit under sec. 71 of the Act on Paper, per Class	100	250	150
7.6(a)(7)(i)	6906	Surcharge for Filing an Affidavit under sec. 71 of the Act During Grace Period on Paper, per Class.	100	200	100
7.6(a)(3)(i)	6907	Transmitting a Subsequent Designation under § 7.21, Filed on Paper.	100	200	100
7.6(a)(8)(i)	6908	Correcting a Deficiency in a sec. 71 Affidavit Filed on Paper	100	200	100
2.6(a)(16)(i)	6401	Filing a Petition to Cancel on Paper, per Class	300	500	200
2.6(a)(17)(i)	6402	Filing a Notice of Opposition on Paper, per Class	300	500	200
2.6(a)(18)(i)	6403	Ex Parte Appeal to the Trademark Trial and Appeal Board Filed on Paper, per Class.	100	300	200
2.6(a)(22)(i)	New	Filing a Request for an Extension of Time to File a Notice of Opposition under § 2.102(c)(3) on Paper.	.....	200	n/a
2.6(a)(23)(i)	New	Filing a Request for an Extension of Time to File a Notice of Opposition under § 2.102(c)(1)(ii) or (c)(2) on Paper.	.....	300	n/a
2.6(a)(15)(i)	6005	Petitions to the Director Filed on Paper	100	200	100

Individual Fee Rationale: The Office projects the aggregate revenue generated from current and proposed trademark fees will recover the prospective aggregate cost, including the operating reserve of its Trademark and TTAB operations. In addition, as described above, some of the proposed fees are set to balance several key policy factors, and executing these policy factors in the trademark fee schedule is consistent with the goals and objectives outlined in the Strategic Plan. Once the key policy factors are considered, fees are set at, above, or below individual cost-

recovery levels for the service provided. For more information regarding the cost methodologies used to derive the historical fee unit expenses, please refer to USPTO Fee Setting—Activity Based Information and Trademark Fee Unit Expense Methodology available at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting*.

Fees for Paper Filings: The proposed rulemaking increases the fees for paper filings in order to meet two objectives: Better aligning fees with costs and improve the efficiency of the trademark process. The fee for filing a trademark application for registration on paper would rise by $225, from $375 per International Class to $600 per International Class. Additionally, all trademark processing fees for paper filings would increase by $100 to $200 more than current fees (per class, when applicable).

The costs of processing paper filings are generally higher than electronic filings and higher than current fee schedules. A full list of current and proposed fees including the unit cost by fee from fiscal years 2013, 2014, and 2015 is available in the Table of Trademark Fees—Current Proposed and Unit Cost at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting*. An increase in the fees for these filings will help to offset the higher processing costs and come closer to recovering the total processing costs. Furthermore, setting a higher fee for paper filings incentivizes electronic filings, which are more cost efficient for the Office to process and which reduce the possibility of data-entry errors. As a result, adjustments of 5–10% in the estimated number of paper filings have been made in projecting filings and estimating revenue considering the impact of the fee increase on the behavior of applicants and resulting revenues. The rationale behind this fee increase is consistent with prior fee reductions for electronic filings.

A majority of comments received from the TPAC expressed support for increasing all paper filing fees, acknowledging the additional cost of processing paper filings and the fairly small impact on the overall system given the availability of lower-fee, more-efficient electronic alternatives. At present, the vast majority of filings are electronic. For example, in FY 2015, only 0.4% of initial applications for registration were filed on paper. With two exceptions, more than 95% of all fee-paid requests were filed electronically in FY 2015. Thus, an increase in all paper filing fees would have virtually no impact on the vast majority of applicants and registrants who file documents electronically.

Other Trademark-Processing Fees: The Office also proposes to increase certain other trademark processing fees in order to further key policy considerations, as discussed below. The proposed rulemaking increases the per-class fee for an initial application filed through TEAS from $325 to $400. This fee increase would apply to both U.S. and foreign filers as well as to applications submitted under the Madrid Protocol as requests for extension of protection and subsequent designation. The proposal also increases the processing fee for failure to meet the requirements for a TEAS Plus or TEAS RF filing from $50 to $125 per International Class to better align the resulting total charge with the fee for filing a regular TEAS application. The proposed rule sets out increases to the fees for affidavits under sections 8 and 71 of the Act in the amount of $50 per class for electronic filings and $150 per class for paper filings.

Initial Application Filed Through TEAS: The proposed rule increases the fee for an initial application filed through TEAS as a regular TEAS application in order to better align the fee with the costs and to incentivize subsequent electronic filing and communications. The fee is increased from $325 to $400 to bring the fee closer to the full processing cost. Unlike the TEAS Plus and TEAS RF application options, the regular TEAS application does not require the applicant to commit to communicating electronically with the Office throughout the course of prosecution of the application. Increasing the fee for this application option will encourage applicants to commit to complete electronic processing using one of the lower-cost application options. Corresponding increases to the individual fee for requests for protection of an International Registration through the Madrid Protocol would also be affected by invoking the relevant provisions under the Protocol and its Common Regulations to adjust fees at the request of a contracting party.

OTHER TRADEMARK-PROCESSING FEES

[Initial application filed through TEAS]

37 CFR	Fee code	Description	Current fee	Proposed fee	Change
2.6(a)(1)(ii)	7001	Filing and Application through TEAS, per Class	$325	$400	$75

(1) Processing Fee for Failure to Meet Requirements for TEAS Plus or TEAS RF: The proposed rule increases the fee for failure to meet TEAS Plus or TEAS RF filing requirements in order to promote the efficiency of the trademark application process by incentivizing electronic filings and communication. Both TEAS Plus and TEAS RF feature reduced filing fees in exchange for meeting certain requirements, including a requirement to file certain documents electronically. Applicants who fail to meet the requirements are charged a per-class processing fee. This fee is proposed to be increased from $50 to $125 to address the difference between the filing fees for these applications and the proposed filing fee for a regular TEAS application, and to further encourage applicants to maintain the discounted application status by meeting all TEAS Plus and TEAS RF requirements to avoid being assessed the additional processing fee. Thus, the Office will continue to promote use of electronic filings, which are more efficient and cost-effective to review.

OTHER TRADEMARK-PROCESSING FEES

[Processing fee for failure to meet requirements for TEAS Plus or TEAS RF]

37 CFR	Fee code	Description	Current fee	Proposed fee	Change
2.6(a)(1)(v)	6008	Additional Processing Fee under § 2.22(c) or § 2.23(c), per Class (paper).	$50	$125	$75
2.6(a)(1)(v)	7008	Additional Processing Fee under § 2.22(c) or § 2.23(c), per Class (electronic).	50	125	75

(2) Affidavits under sections 8 and 71 of the Act: In addition to aligning the fees with full costs, the increase in fees for submitting affidavits under sections 8 and 71 will help to ensure the accuracy and integrity of the trademark register. Costs are set to increase for these filings as a result of the need for increased legal examination. In 2012, the USPTO began the Post Registration Proof of Use Pilot Program, during which 500 registrations (for which section 8 or 71 Declarations of Use were filed) were reviewed to assess the accuracy and integrity of the trademark register as to the actual use of the mark with the goods and/or services identified in the registration. The findings of the pilot program demonstrated a need for ongoing measures for additional review of these filings on a permanent basis. Such additional measures, which are currently under development in a separate rulemaking, will help identify and remove registrations with insufficient maintenance filings, thereby reducing the number of invalid registrations, and resulting in a more accurate trademark register. Increased fees will be required to support the additional review.

OTHER TRADEMARK-PROCESSING FEES

[Affidavits under § 8 and § 71 of the Act]

37 CFR	Fee code	Description	Current fee	Proposed fee	Change
2.6(a)(12)(i)	6205	Filing an Affidavit under sec. 8 of the Act on Paper, per Class.	$100	$250	$150
2.6(a)(12)(ii)	7205	Filing an Affidavit under sec. 8 of the Act through TEAS, per Class.	100	150	50
7.6(a)(6)(i)	6905	Filing an Affidavit under sec. 71 of the Act on Paper, per Class.	100	250	150
7.6(a)(6)(ii)	7905	Filing an Affidavit under sec. 71 of the Act through TEAS, per Class.	100	150	50

Trademark Service Fees: The proposed rule discontinues two trademark service fees and replaces two ''at-cost'' service fees with a set fee. The proposal discontinues the deposit account set-up fee because the process will be handled electronically, thus reducing the cost to process. The proposed rule also discontinues the self-service copy fees because the service will be provided by a third-party vendor. Finally, the unspecified labor fees are being replaced with a set fee of $160 for expedited service and $40 for overnight delivery. The proposed fees are based on an average hourly cost of $40 per hour and the additional time estimated to fulfill the type of request.

TRADEMARK SERVICE FEES

37 CFR	Fee code	Description	Current fee	Proposed fee	Change
2.6(b)(11)	8524	Unspecified Other Services, Excluding Labor	At cost	n/a	n/a
2.6(b)(8)	New	Marginal Cost, Paid in Advance, For Each Hour of Terminal Session Time, Including Print Time, Using X-Search Capabilities, Prorated for the Actual Time Used. The Director May Waive the Payment by an Individual for Access to X-Search upon a Showing of Need or Hardship, and if Such Waiver is in the Public Interest.	.....	$40	n/a
2.6(b)(13)(i)	9201	Establish Deposit Account	$10	n/a	n/a
2.6(b)(9)	8902	Self-Service Copy Charge, per Page Copishare Card	$0.25	n/a	n/a
2.6(b)(10)	8523	Labor Charges for Services, per Hour or Fraction Thereof.	$40	n/a	n/a
2.6(b)(10)	New	Additional Fee for Expedited Service	.....	$160	n/a
2.6(b)(9)	New	Additional Fee for Overnight Delivery	.....	$40	n/a

Existing Fees at the TTAB: This proposed rule also increases ex parte (*i.e.,* appeal) fees, which have not been adjusted in more than 25 years, and inter partes (*i.e.,* trial) fees, which have not been adjusted in 15 years. The proposal includes a $100 per-class increase in fees for electronic filings for petitions for cancellation, notices of opposition, and ex parte appeals. A $200 increase, per class, is proposed for paper filings for the same requests. Currently, the cost of TTAB operations is heavily subsidized by revenue from other trademark processing fees. The

proposed increases will not recover the full costs of TTAB operations, but will bring the fees closer to the full costs in order to bring better alignment between costs and fees. Furthermore, the increased fees for paper filings will incentivize lower-cost electronic filing in order to improve the efficiency of processing and reduce total costs. In general, TPAC commenters supported these fee increases because of the recognized costs for processing.

EXISTING FEES AT THE TTAB

37 CFR	Fee code	Description	Current fee	Proposed fee	Change
2.6(a)(16)(i)	6401	Filing a Petition to Cancel on Paper, per Class	$300	$500	$200
2.6(a)(16)(ii)	7401	Filing a Petition to Cancel through ESTTA, per Class	300	400	100
2.6(a)(17)(i)	6402	Filing a Notice of Opposition on Paper, per Class	300	500	200
2.6(a)(17)(ii)	7402	Filing a Notice of Opposition through ESTTA, per Class	300	400	100
2.6(a)(18)(i)	6403	Ex Parte Appeal to the Trademark Trial and Appeal Board Filed on Paper, per Class.	100	300	200
2.6(a)(18)(ii)	7403	Ex Parte Appeal to the Trademark Trial and Appeal Board Filed through ESTTA, per Class.	100	200	100

Establish Fees for Extensions of Time at the TTAB: New fees are proposed for requests for extensions of time to file a notice of opposition in order to better align the fees with the processing costs as well as to protect the integrity of the trademark register. The public has 30 days from the date of publication of an application to file a notice of opposition with the TTAB. However, a potential opposer has available to it several types of extensions, which currently have no fee, that allows the opposer to delay an application or delay making a decision regarding whether to file an opposition. Currently, there is no fee associated with extensions of time to file a notice of opposition. The rulemaking proposes a tiered fee structure for these filings. Under the proposed structure, applicants may request: (1) An initial 30-day extension for no fee; (2) a subsequent 60-day extension for a fee of $100 for electronic filings and $200 for paper filings; and (3) a final 60-day extension for a fee of $200 for electronic filings and $300 for paper filings.

ESTABLISH FEES FOR EXTENSIONS OF TIME AT THE TTAB

37 CFR	Fee code	Description	Current fee	Proposed fee	Change
2.6(a)(22)(i)	New	Filing a Request for an Extension of Time to File a Notice of Opposition under § 2.102(c)(3) on Paper.	.....	$200	n/a
2.6(a)(22)(ii)	New	Filing a Request for an Extension of Time to File a Notice of Opposition under § 2.102(c)(3) through ESTTA.	.....	100	n/a
2.6(a)(23)(i)	New	Filing a Request for an Extension of Time to File a Notice of Opposition under § 2.102(c)(1)(ii) or (c)(2) on Paper.	.....	300	n/a
2.6(a)(23)(ii)	New	Filing a Request for an Extension of Time to File a Notice of Opposition under § 2.102(c)(1)(ii) or (c)(2) through ESTTA.	.....	200	n/a

These fees would yield efficiencies by encouraging potential opposers to make decisions regarding filing an opposition sooner, thus reducing delays to applicants. Additionally, for those that file the notice of opposition, the fee will result in faster conclusion of TTAB cases by encouraging earlier decisions to initiate proceedings. This should also help to protect the integrity of the trademark register by encouraging timely decisions and filings to ensure that the rights of other applicants and the public are not adversely affected.

The TPAC commenters expressed some concern over the establishment of these fees, noting that it may result in a higher number of oppositions being filed because the decision is rushed. Given that the fee for the notice of opposition has also been increased, the Office believes that the fees should encourage earlier calculated decisions based on all of the available information and fees. Furthermore, implementing a tiered-fee structure will reduce the number of potential opposers that use the extensions merely to delay applications.

Finally, these fees will help offset the processing costs. In FY 2015, the Office received 17,000 requests for extensions of time to file a notice of opposition, but there has been no fee to cover the costs to process these filings. It is customary for requests that delay processing of records, such as extensions, to require a fee to contribute to the cost of processing the filing as well as the overall cost of processing of appeals and trials. These fees are necessary to help attain primary Office goals of recovering the aggregate cost of operations, along with key policy considerations such as encouraging efficient processing.

Costs and Benefits: This rulemaking is not considered to be economically significant under Executive Order 12866 (Sept. 30, 1993).

Discussion of Proposed Regulatory Changes

The USPTO proposes to amend §§ 2.6 and 7.6 to establish new or increase certain existing trademark fees, and to make other conforming changes, as described in the section-by-section analysis below.

The USPTO proposes to revise § 2.6(a)(1)(i) to increase the fee for an initial application filed on paper from $375 to $600 per class, and § 2.6(a)(1)(ii) to increase the fee for an initial application filed using the regular TEAS option from $325 to $400 per class. This increase would also apply to requests for extension of protection filed under the Madrid Protocol.

The USPTO proposes to revise § 2.6(a)(1)(v) to increase the fee for failure to meet TEAS Plus or TEAS RF requirements from $50 to $125 per class.

The USPTO proposes to revise § 2.6(a)(2) to read ''Amendment to allege use'' and to add §§ 2.6(a)(2)(i) and (ii) to

set out the fees for filing an amendment to allege use on paper and through TEAS, respectively. The proposed § 2.6(a)(2)(i) increases the paper filing fee, per class, from $100 to $200.

The USPTO proposes to revise § 2.6(a)(3) to read ''Statement of use'' and to add § 2.6(a)(3)(i) and (ii) to set out the fees for filing a statement of use on paper and through TEAS, respectively. The proposed § 2.6(a)(3)(i) increases the paper filing fee, per class, from $100 to $200.

The USPTO proposes to revise § 2.6(a)(4) to read ''Extension of time for filing statement of use'' and to add § 2.6(a)(4)(i) and (ii) to set out the fees for filing an extension of time to file a statement of use on paper and through TEAS, respectively. The proposed § 2.6(a)(4)(i) increases the paper filing fee, per class, from $150 to $250.

The USPTO proposes to revise § 2.6(a)(5)(i) to increase the fee for filing an application for renewal of a registration on paper from $400 to $500 per class.

The USPTO proposes to revise § 2.6(a)(6) to read ''Renewal during grace period'' and to add § 2.6(a)(6)(i) and (ii) to set out the fees for filing a renewal application during the grace period on paper and through TEAS, respectively. The proposed § 2.6(a)(6)(i) increases the paper filing fee, per class, from $100 to $200.

The USPTO proposes to revise § 2.6(a)(7) to read ''Publishing mark under section 12(c)'' and to add § 2.6(a)(7)(i) and (ii) to set out the fees for filing a request to publish a mark under section 12(c) on paper and through TEAS, respectively. The proposed § 2.6(a)(7)(i) increases the paper filing fee, per class, from $100 to $200.

The USPTO proposes to revise § 2.6(a)(8) to read ''New certificate of registration'' and to add § 2.6(a)(8)(i) and (ii) to set out the fees for a filing a request to issue a new certificate of registration on paper and through TEAS, respectively. The proposed § 2.6(a)(8)(i) increases the paper filing fee from $100 to $200.

The USPTO proposes to revise § 2.6(a)(9) to read ''Certificate of correction of registrant's error'' and to add § 2.6(a)(9)(i) and (ii) to set out the fees for filing a request to issue a certification of correction of a registrant's error on paper and through TEAS, respectively. The proposed § 2.6(a)(9)(i) increases the paper filing fee from $100 to $200.

The USPTO proposes to revise § 2.6(a)(10) to read ''Disclaimer to a registration'' and to add § 2.6(a)(10)(i) and (ii) to set out the fees for submitting a disclaimer to a registration on paper and through TEAS or the Electronic System for Trademark Trials and Appeals (ESTTA), respectively. The proposed § 2.6(a)(10)(i) increases the paper filing fee from $100 to $200.

The USPTO proposes to revise § 2.6(a)(11) to read ''Amendment of registration'' and to add § 2.6(a)(11)(i) and (ii) to set out the fees for filing an amendment to a registration on paper and through TEAS or ESTTA, respectively. The proposed § 2.6(a)(11)(i) increases the paper filing fee from $100 to $200.

The USPTO proposes to revise § 2.6(a)(12) to read ''Affidavit under section 8'' and to add § 2.6(a)(12)(i) and (ii) to set out the fees for filing an affidavit under section 8 of the Act on paper and through TEAS. The proposed § 2.6(a)(12)(i) increases the paper filing fee, per class, from $100 to $250, and the proposed § 2.6(a)(12)(ii) increases the electronic filing fee, per class, from $100 to $150.

The USPTO proposes to revise § 2.6(a)(13) to read ''Affidavit under section 15'' and to add § 2.6(a)(13)(i) and (ii) to set out the fees for filing an affidavit under section 15 of the Act on paper and through TEAS, respectively. The proposed § 2.6(a)(13)(i) increases the paper filing fee, per class, from $200 to $300.

The USPTO proposes to revise § 2.6(a)(14) to read ''Filing section 8 affidavit during grace period'' and to add § 2.6(a)(14)(i) and (ii) to set out the fees for filing an affidavit under section 8 of the Act during the grace period on paper and through TEAS, respectively. The proposed § 2.6(a)(14)(i) increases the paper filing fee, per class, from $100 to $200.

The USPTO proposes to revise § 2.6(a)(15) to read ''Petitions to the Director'' and to add § 2.6(a)(15)(i) and (ii) to set out the fees for filing a petition to the Director on paper and through TEAS. The proposed § 2.6(a)(15)(i) increases the paper filing fee from $100 to $200.

The USPTO proposes to revise § 2.6(a)(16) to read ''Petition to cancel'' and to add § 2.6(a)(16)(i) and (ii) to set out the fees for filing a petition to cancel on paper and through ESTTA. The proposed § 2.6(a)(16)(i) increases the paper filing fee, per class, from $300 to $500 and § 2.6(a)(16)(ii) increases the electronic filing fee, per class, from $300 to $400.

The USPTO proposes to revise § 2.6(a)(17) to read ''Notice of opposition'' and to add § 2.6(a)(17)(i) and (ii) to set out the fees for filing a notice of opposition on paper and through ESTTA. The proposed § 2.6(a)(17)(i) increases the paper filing fee, per class, from $300 to $500 and § 2.6(a)(17)(ii) increases the electronic filing fee, per class, from $300 to $400.

The USPTO proposes to revise § 2.6(a)(18) to read ''Ex parte appeal'' and to add § 2.6(a)(18)(i) and (ii) to set out the fees for filing an ex parte appeal on paper and through ESTTA. The proposed § 2.6(a)(18)(i) increases the paper filing fee, per class, from $100 to $300 and § 2.6(a)(18)(ii) increases the electronic filing fee, per class, from $100 to $200.

The USPTO proposes to revise § 2.6(a)(19) to read ''Dividing an application'' and to add § 2.6(a)(19)(i) and (ii) to set out the fees for filing a request to divide an application on paper and through TEAS, respectively. The proposed § 2.6(a)(19)(i) increases the paper filing fee from $100 to $200 per new application created.

The USPTO proposes to revise § 2.6(a)(20) to read ''Correcting deficiency in section 8 affidavit'' and to add § 2.6(a)(20)(i) and (ii) to set out the fees for filing a correction in a section 8 affidavit on paper and through TEAS, respectively. The proposed § 2.6(a)(20)(i) increases the paper filing fee from $100 to $200.

The USPTO proposes to revise § 2.6(a)(21) to read ''Correcting deficiency in renewal application'' and to add § 2.6(a)(21)(i) and (ii) to set out the fees for filing a correction in a renewal application on paper and through TEAS, respectively. The proposed § 2.6(a)(21)(i) increases the paper filing fee from $100 to $200.

The USPTO proposes to add § 2.6(a)(22) to read ''Extension of time for filing notice of opposition under § 2.102(c)(1)(ii) or (c)(2)'' and § 2.6(a)(22)(i) and (ii) to set out the fees for filing a request for an extension of time to file a notice of opposition pursuant to § 2.102(c)(1)(ii) or (c)(2) on paper and through ESTTA. The proposed § 2.6(a)(22)(i) sets the paper filing fee at $200 and § 2.6(a)(22)(ii) sets the electronic filing fee at $100.

The USPTO proposes to add § 2.6(a)(23) to read ''Extension of time for filing notice of opposition under § 2.102(c)(3)'' and § 2.6(a)(23)(i) and (ii) to set out the fees for filing a request for an extension of time to file a notice of opposition pursuant to § 2.102(c)(3) on paper and through ESTTA. The proposed § 2.6(a)(23)(i) sets the paper filing fee at $300 and § 2.6(a)(23)(ii) sets the electronic filing fee at $200.

The USPTO proposes to revise § 2.6(b)(9) to delete the current fee for self-service copies and replace it with a fee of $40 for overnight delivery.

The USPTO proposes to revise § 2.6(b)(10) to delete the current fee for labor charges and replace it with a fee of $160 for expedited service.

The USPTO proposes to delete the current § 2.6(b)(11) and to redesignate the current § 2.6(b)(12) as § 2.6(b)(11).

The USPTO proposes to delete the current § 2.6(b)(13) and (b)(13)(i), to redesignate the current § 2.6(b)(13)(ii) as § 2.6(b)(12), and to add the wording ''Deposit account'' at the beginning of the paragraph.

The USPTO proposes to revise § 2.200(b) to delete the reference to the extra charge in § 2.6(b)(10), pursuant to the proposed change to § 2.6(b)(10) set forth above.

The USPTO proposes to revise § 2.208(a) to delete the reference to the fee for establishing a deposit account and amend the reference regarding the service charge to § 2.6(b)(12), pursuant to the proposed changes to §§ 2.6(b)(13) through (13)(ii) set forth above.

The USPTO proposes to revise § 7.6(a)(1) to read ''Certification of international application based on single application or registration'' and to add § 7.6(a)(1)(i) and (ii) to set out the fees for certifying an international application based on a single basic application or registration on paper and through TEAS, respectively. The proposed § 7.6(a)(1)(i) increases the paper filing fee, per class, from $100 to $200.

The USPTO proposes to revise § 7.6(a)(2) to read ''Certification of international application based on more than one application or registration'' and to add § 7.6(a)(2)(i) and (ii) to set out the fees for certifying an international application based on a more than one application or registration on paper and through TEAS, respectively. The proposed § 7.6(a)(2)(i) increases the paper filing fee, per class, from $150 to $250.

The USPTO proposes to revise § 7.6(a)(3) to read ''Transmission of subsequent designation'' and to add § 7.6(a)(3)(i) and (ii) to set out the fees for transmitting a subsequent designation under § 7.21 on paper and through TEAS, respectively. The proposed § 7.6(a)(3)(i) increases the paper filing fee from $100 to $200.

The USPTO proposes to revise § 7.6(a)(4) to read ''Transmission of request to record an assignment or restriction'' and to add § 7.6(a)(4)(i) and (ii) to set out the fees for transmitting a request to record an assignment or restriction under § 7.23 or § 7.24 on paper and through TEAS, respectively. The proposed § 7.6(a)(4)(i) increases the paper filing fee from $100 to $200.

The USPTO proposes to revise § 7.6(a)(5) to read ''Notice of replacement'' and to add § 7.6(a)(5)(i) and (ii) to set out the fees for filing a notice of replacement under § 7.28 on paper and through TEAS, respectively. The proposed § 7.6(a)(5)(i) increases the fee, per class, for filing a notice of replacement on paper from $100 to $200.

The USPTO proposes to revise § 7.6(a)(6) to read ''Affidavit under section 71'' and to add § 7.6(a)(6)(i) and (ii) to set out the fees for filing an affidavit under section 71 of the Act on paper and through TEAS, respectively. The proposed § 7.6(a)(6)(i) increases the paper filing fee, per class, from $100 to $250, and the proposed § 7.6(a)(6)(ii) increases the electronic filing fee, per class, from $100 to $150.

The USPTO proposes to revise § 7.6(a)(7) to read ''Filing affidavit under section 71 during grace period'' and to add § 7.6(a)(7)(i) and (ii) to set out the surcharge for filing an affidavit under section 71 of the Act during the grace period on paper and through TEAS, respectively. The proposed § 7.6(a)(7)(i) increases the surcharge, per class, for filing an affidavit during the grace period on paper from $100 to $200.

The USPTO proposes to revise § 7.6(a)(8) to read ''Correcting deficiency in section 71 affidavit'' and to add §§ 7.6(a)(8)(i) and (ii) to set out the fees for correcting a deficiency in a section 71 affidavit on paper and through TEAS, respectively. The proposed § 7.6(a)(8)(i) increases the fee for filing the correction on paper from $100 to $200.

Rulemaking Requirements

America Invents Act

This rulemaking proposes to set and adjust fees under section 10(a) of the AIA. Section 10(a) of the AIA authorizes the Director to set or adjust by rule any trademark fee established, authorized, or charged under the Trademark Act for any services performed by, or materials furnished by the Office. *See* section 10 of the AIA, Public Law 112–29, 125 Stat. 284, 316–17. Section 10(e) of the AIA sets forth the general requirements for rulemakings that set or adjust fees under this authority. In particular, section 10(e)(1) requires the Director to publish in the **Federal Register** any proposed fee change under section 10, and include in such publication the specific rationale and purpose for the proposal, including the possible expectations or benefits resulting from the proposed change. For such rulemakings, the AIA requires that the Office provide a public comment period of not less than 45 days.

The TPAC advises the Under Secretary of Commerce for Intellectual Property and Director of the USPTO on the management, policies, goals, performance, budget, and user fees of Trademark operations. When adopting fees under section 10, the AIA requires the Director to provide the TPAC with the proposed fees at least 45 days prior to publishing the proposed fees in the **Federal Register**. The TPAC then has at least 30 days within which to deliberate, consider, and comment on the proposal, as well as hold public hearing(s) on the proposed fees. The TPAC must make a written report available to the public of the comments, advice, and recommendations of the committee regarding the proposed fees before the Office issues any final fees. The Office will consider and analyze any comments, advice, or recommendations received from the TPAC before finally setting or adjusting fees.

Consistent with the requirements of the AIA, on October 14, 2015, the Director notified the TPAC of the Office's intent to set or adjust trademark fees and submitted a preliminary trademark fee proposal with supporting materials. The preliminary trademark fee proposal and associated materials are available at *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.* The revenue estimate for the fee proposal considered by the TPAC was included in the USPTO FY 2017 President's Budget request. The fee schedule associated with the original proposal is presented as Alternative 4—Original Proposal to TPAC.

The TPAC held a public hearing in Alexandria, Virginia on November 3, 2015. Transcripts of this hearing and comments submitted to the TPAC in writing are available for review at *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.* The TPAC released its report regarding the preliminary proposed fees on November 30, 2015. The report can be found online at *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

Initial Regulatory Flexibility Analysis

The USPTO publishes this Initial Regulatory Flexibility Analysis (IRFA) as required by the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) to examine the impact of the Office's proposed changes to trademark fees on small entities and to seek the public's views. Under the RFA, whenever an agency is required by 5 U.S.C. 553 (or any other law) to publish a notice of proposed rulemaking (NPRM), the agency must prepare and make available

for public comment an IRFA, unless the agency certifies under 5 U.S.C. 605(b) that the proposed rule, if implemented, will not have a significant economic impact on a substantial number of small entities. 5 U.S.C. 603, 605.

Items 1–5 below discuss the five items specified in 5 U.S.C. 603(b)(1) through (5) to be addressed in an IRFA. Item 6 below discusses alternatives to this proposal that the Office considered.

1. Description of the reasons that action by the USPTO is being considered:

The USPTO proposes setting and adjusting certain trademark fees as authorized by section 10 of the AIA. The fee schedule proposed under section 10 in this rulemaking will recover the aggregate estimated trademark costs of the Office while achieving strategic and operational goals, such as maintaining an operating reserve, implementing measures to maintain trademark pendency and high trademark quality, modernizing the trademark IT systems, continuing programs for stakeholder and public outreach, and enhancing operations of the TTAB. Aggregate costs are estimated through the USPTO budget-formulation process with the annual preparation of a five-year performance-based budget request. Revenues are estimated based on the projected demand for trademark products and services and fee rates.

2. Succinct statement of the objectives of, and legal basis for, the proposed rule:

The policy objectives of the proposed rules are to: (1) Better align fees with full costs; (2) protect the integrity of the register; and (3) promote the efficiency of the trademark process. As to the legal basis for the proposed rules, Section 10 of the AIA provides the authority for the Director to set or adjust by rule any fee established, authorized, or charged under the Trademark Act of 1946, 15 U.S.C. 1051 *et seq.,* as amended. *See also* section 31 of the Trademark Act, 15 U.S.C. 1113.

3. Description of and, where feasible, estimate of the number of affected small entities:

The USPTO does not collect or maintain statistics in trademark cases on small- versus large-entity applicants, and this information would be required in order to determine the number of small entities that would be affected by the proposed rules. The USPTO believes that the overall impact of the proposed fee structure on applicants and registrants will be positive, because it promotes the more cost-effective electronic filing system. There will be little or no impact for the majority of applicants and registrants that file electronically and communicate on a timely basis.

The proposed rules could apply to any entity filing with USPTO. The USPTO estimates that during the first fiscal year under the rules as proposed, assuming an expected implementation date of January 2017, the USPTO would expect to collect approximately $18.4 million more in trademark processing, service, and TTAB fees. The USPTO would receive an additional $0.7 million in fees from paper-filed applications and $17.7 million more from electronically filed applications, including $3 million from TEAS applications for the registration of a mark, $3.2 million from requests for extension of protection and subsequent designations, $0.3 million for additional fees for applications failing to meet the TEAS Plus or TEAS RF requirements, and $7.8 million for affidavits of use under sections 8 and 71. TTAB fees would increase by $3.6 million, of which $2.1 million is expected from the newly established fees for filing extensions of time to file an opposition after the initial request.

Trademark fee category	Estimated collections with current fees	Estimated collections with proposed fees	Change
Total Trademark Fees	$307,468,600	$325,869,200	$18,400,600
Paper-Filed Applications	1,752,750	2,467,350	714,600
Electronically Filed Applications	294,063,575	311,739,100	17,675,500
TEAS Applications for the Registration of a Mark	17,787,900	20,763,600	2,975,700
Request for Extension of Protection and Subsequent Designations	19,384,950	22,567,950	3,183,000
Failing to Meet the TEAS Plus or TEAS RF Requirements	320,800	663,200	342,400
Affidavit under § 8 and § 71 of the Act	21,654,300	29,456,400	7,802,100
TTAB Fees	4,742,000	8,310,700	3,568,700
New TTAB Fees	0	2,142,300	2,142,300
Trademark Service Fees	11,652,240	11,663,440	11,200

4. Description of the reporting, recordkeeping, and other compliance requirements of the proposed rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record:

The proposed rule imposes no new reporting or recordkeeping requirements.

The proposed rule sets and adjusts trademark fees. The USPTO does not anticipate that the proposed rule would have a disproportionate impact upon any particular class of small or large entities.

5. Description of any significant alternatives to the proposed rule which accomplish the stated objectives of applicable statutes and which minimize any significant economic impact of the rule on small entities:

The USPTO considered a total of five alternatives for setting fee rates before recommending this proposal. A full list of current and proposed fees for each of the alternatives is available in the IRFA Tables and the Trademark Fee Aggregate Revenue Tables at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.* The alternatives are explained here with additional information regarding how each proposal was developed and the aggregate revenue was estimated. A description of the Aggregate Revenue Estimating Methodologies is available at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

The USPTO chose the alternative proposed herein because it will enable the Office to achieve its goals effectively and efficiently without unduly burdening small entities, erecting barriers to entry, or stifling incentives to innovate. The alternative proposed here secures the Office's required revenue to meet its aggregate costs, while meeting the strategic goals of better aligning fees with full costs, protecting the integrity of the register, and promoting the efficiency of the trademark process. The increased efficiencies realized through the proposed rule will benefit all applicants and registrants by allowing

registrations to be granted sooner and more efficiently removing unused marks from the register, thus allowing mark owners to more quickly and assuredly register their marks. All trademark applicants should benefit from the reduced pendency that will be realized under the proposed alternative. The proposed fee schedule for this alternative (labeled NPRM Proposal) is available at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

One alternative to setting and increasing the proposed fees would be to take no action at this time regarding trademark fees and to leave all trademark fees as currently set. This alternative was rejected because, due to rising personnel and IT costs, the Office has determined that a fee increase is needed to accomplish the stated objective of better aligning fees with the full cost of products and services. In addition, increasing the trademark fees will assist in protecting the integrity of the register by incentivizing more timely filing of applications and other filings and more efficient resolution of appeals and trials and will promote the efficiency of the process by, in part, increasing the affordability of electronic filing options relative to paper filings. The proposed fee schedule for this alternative (labeled Alternative 1—No Change) is available at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

Another alternative to setting and increasing the proposed fees that was considered was to tie all trademark fees to the Consumer Price Index (CPI), applying a 9.956%, multi-year, across-the-board inflationary increase to all trademark fees. The 9.956% represents the estimated cumulative inflationary adjustment from FY 2017 through FY 2021. As estimated by the Congressional Budget Office, projected inflationary rates by fiscal year are: 2.17% in FY 2017, 2.39% in FY 2018, 2.38% in FY 2019, 2.42% in FY 2020, and 2.42% in FY 2021. This alternative was rejected because, unlike the proposed fee structure, there would be no improvements in fee design to accomplish the stated objectives of protecting the integrity of the register by incentivizing more timely filing of applications and other filings and more efficient resolution of appeals and trials. In addition, it was determined that adjusting trademark fees in accordance with increases or decreases in the CPI would likely lead to user confusion as fees would be adjusted by what could be viewed as non-traditional or unpredictable increments. The proposed fee schedule for this alternative (labeled Alternative 2—CPI Increase) is available at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

Another alternative that was considered was full cost recovery per fee. This would require USPTO to set each trademark fee at 100% of unit cost to allow the USPTO to recover full cost per fee based on the most recent fee unit cost trends. The USPTO uses Activity Based Information to determine the historical costs of activities related to each fee. Additional information about the methodology is available at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

It is common practice in the Federal Government to set a particular fee at a level to recover the cost of a given good or service. In OMB Circular A–25: *User Charges,* the OMB states that user charges (fees) should be sufficient to recover the full cost to the Federal Government of providing the particular service, resource, or good, when the government is acting in its capacity as sovereign. This alternative was rejected because it was determined that the costs for any given product or service can vary from year to year, such that a yearly review of all, and adjustment to many, trademark fees would be required, and could also lead to consumer confusion regarding what any given trademark fee was currently set at and what the relevant fee would be in the future. This alternative would have increased revenue by more than the current proposal in part because workloads are expected to increase. In addition, it was determined that setting the trademark fees to recover 100% of all costs associated with each product or service would not properly promote the efficiency of the process. The proposed fee schedule for this alternative (labeled Alternative 3—Individual Cost Recovery) is available at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

For purposes of this discussion, the preliminary trademark fee proposal presented to the TPAC is identified as alternative 4 in the Trademark Fee Aggregate Revenue Tables available at *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.* The revenue estimate for the preliminary proposal considered by the TPAC was included in the USPTO FY 2017 President's Budget request. That proposal, as previously addressed in this notice, has been modified based on the feedback from the TPAC report received November 30, 2015 and feedback received from public comments. The preliminary proposal included an increase in the fee to file a request for an extenstion of time to file a statement of use that would apply only to U.S.-based applicants that filed an application based on a future intention to use the mark. The current proposal no longer includes an increase to that fee unless it is filed on paper, consistent with the increase in all paper-filed requests. Instead, the current proposal includes an increase in the fee for filing an affidavit under section 8 and 71 that would apply to the continued maintenance of a registration. The current proposal also increases the fee for filing a TEAS application. The proposed fee schedule for this alternative (labeled Alternative 4—Original Proposal to TPAC (FY 17 PB)) is available at: *http://www.uspto.gov/about-us/performance-and-planning/fee-setting-and-adjusting.*

6. Identification, to the extent practicable, of all relevant Federal rules which may duplicate, overlap, or conflict with the proposed rule:

The proposed rules would not duplicate, overlap, or conflict with any other Federal rules.

Executive Order 12866 (Regulatory Planning and Review): This proposed rule has been determined to be significant for purposes of Executive Order 12866 (Sept. 30, 1993).

Executive Order 13563 (Improving Regulation and Regulatory Review): The USPTO has complied with Executive Order 13563 (Jan. 18, 2011). Specifically, the USPTO has, to the extent feasible and applicable: (1) Made a reasoned determination that the benefits justify the costs of the rule; (2) tailored the rule to impose the least burden on society consistent with obtaining the regulatory objectives; (3) selected a regulatory approach that maximizes net benefits; (4) specified performance objectives; (5) identified and assessed available alternatives; (6) provided the public with a meaningful opportunity to participate in the regulatory process, including soliciting the views of those likely affected prior to issuing a notice of proposed rulemaking, and provided online access to the rulemaking docket; (7) attempted to promote coordination, simplification, and harmonization across government agencies and identified goals designed to promote innovation; (8) considered approaches that reduce burdens and maintain flexibility and freedom of choice for the public; and (9) ensured the objectivity of scientific and technological information and processes, to the extent applicable.

Executive Order 13132 (Federalism): This proposed rule does not contain policies with federalism implications sufficient to warrant preparation of a

Federalism Assessment under Executive Order 13132 (Aug. 4, 1999).

Congressional Review Act: Under the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*), prior to issuing any final rule, the USPTO will submit a report containing the final rule and other required information to the United States Senate, the United States House of Representatives, and the Comptroller General of the Government Accountability Office. The changes in this notice are not expected to result in an annual effect on the economy of 100 million dollars or more, a major increase in costs or prices, or significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets. Therefore, this action is not expected to result in a ''major rule'' as defined in 5 U.S.C. 804(2).

Unfunded Mandates Reform Act of 1995: The changes set forth in this rulemaking do not involve a Federal intergovernmental mandate that will result in the expenditure by State, local, and tribal governments, in the aggregate, of 100 million dollars (as adjusted) or more in any one year, or a Federal private sector mandate that will result in the expenditure by the private sector of 100 million dollars (as adjusted) or more in any one year, and will not significantly or uniquely affect small governments. Therefore, no actions are necessary under the provisions of the Unfunded Mandates Reform Act of 1995. *See* 2 U.S.C. 1501 *et seq.*

Paperwork Reduction Act: This proposed rule involves information collection requirements that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). The collection of information involved in this rule has been reviewed and previously approved by OMB under control numbers 0651–0009, 0651–0040, 0651–0050, 0651–0051, 0651–0054, and 0651–0055.

You may send comments regarding the collection of information associated with this rule, including suggestions for reducing the burden, to the Commissioner for Trademarks, by mail to P.O. Box 1451, Alexandria, VA 22313–1451, attention Catherine Cain; by hand delivery to the Trademark Assistance Center, Concourse Level, James Madison Building-East Wing, 600 Dulany Street, Alexandria, VA 22314, attention Catherine Cain; or by electronic mail message via the Federal eRulemaking Portal. All comments submitted directly to the USPTO or provided on the Federal eRulemaking Portal should include the docket number (PTO–T–2016–0005).

Notwithstanding any other provision of law, no person is required to respond to nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB control number.

List of Subjects

37 CFR Part 2

Administrative practice and procedure, Trademarks.

37 CFR Part 7

Administrative practice and procedure, International registration, Trademarks.

For the reasons stated in the preamble and under the authority contained in section 10(a) of the AIA, 15 U.S.C. 1113, 15 U.S.C. 1123, and 35 U.S.C. 2, as amended, the USPTO proposes to amend parts 2 and 7 of title 37 as follows:

PART 2—RULES OF PRACTICE IN TRADEMARK CASES

■ 1. The authority citation for 37 CFR part 2 continues to read as follows:

Authority: 15 U.S.C. 1113, 15 U.S.C. 1123, 35 U.S.C. 2, Section 10 of Pub. L. 112–29, unless otherwise noted.

■ 2. Revise § 2.6 to read as follows:

§ 2.6 Trademark fees.

(a) Trademark process fees.

(1) Application filing fees.

(i) For filing an application on paper, per class—$600.00

(ii) For filing an application through TEAS, per class—$400.00

(iii) For filing a TEAS Reduced Fee (RF) application through TEAS under § 2.23, per class—$275.00

(iv) For filing a TEAS Plus application through TEAS under § 2.22, per class—$225.00

(v) Additional processing fee under § 2.22(c) or 2.23(c), per class—$125.00

(2) Amendment to allege use.

(i) For filing an amendment to allege use under section 1(c) of the Act on paper, per class—$200.00

(ii) For filing an amendment to allege use under section 1(c) of the Act through TEAS, per class—$100.00

(3) Statement of use.

(i) For filing a statement of use under section 1(d)(1) of the Act on paper, per class—$200.00

(ii) For filing a statement of use under section 1(d)(1) of the Act through TEAS, per class—$100.00

(4) Extension of time for filing statement of use.

(i) For filing a request under section 1(d)(2) of the Act for a six-month extension of time for filing a statement of use under section 1(d)(1) of the Act on paper, per class—$250.00

(ii) For filing a request under section 1(d)(2) of the Act for a six-month extension of time for filing a statement of use under section 1(d)(1) of the Act through TEAS, per class—$150.00

(5) Application for renewal of a registration fees.

(i) For filing an application for renewal of a registration on paper, per class—$500.00

(ii) For filing an application for renewal of a registration through TEAS, per class—$300.00

(6) Renewal during grace period.

(i) Additional fee for filing a renewal application during the grace period on paper, per class—$200.00

(ii) Additional fee for filing a renewal application during the grace period through TEAS, per class—$100.00

(7) Publishing mark under section 12(c) of the Act.

(i) For filing to publish a mark under section 12(c) of the Act on paper, per class—$200.00

(ii) For filing to publish a mark under section 12(c) of the Act through TEAS, per class—$100.00

(8) New certificate of registration.

(i) For issuing a new certificate of registration upon request of registrant, request filed on paper—$200.00

(ii) For issuing a new certificate of registration upon request of registrant, request filed through TEAS—$100.00

(9) Certificate of correction of registrant's error.

(i) For a certificate of correction of registrant's error, request filed on paper—$200.00

(ii) For a certificate of correction of registrant's error, request filed through TEAS—$100.00

(10) Disclaimer to a registration.

(i) For filing a disclaimer to a registration, on paper—$200.00

(ii) For filing a disclaimer to a registration, through TEAS or ESTTA—$100.00

(11) Amendment of registration.

(i) For filing an amendment to a registration, on paper—$200.00

(ii) For filing an amendment to a registration, through TEAS or ESTTA—$100.00

(12) Affidavit under section 8 of the Act.

(i) For filing an affidavit under section 8 of the Act on paper, per class—$250.00

(ii) For filing an affidavit under section 8 of the Act through TEAS, per class—$150.00

(13) Affidavit under section 15 of the Act.

(i) For filing an affidavit under section 15 of the Act on paper, per class—$300.00

(ii) For filing an affidavit under section 15 of the Act through TEAS, per class—$200.00

(14) Filing section 8 affidavit during grace period.

(i) Additional fee for filing a section 8 affidavit during the grace period on paper, per class—$200.00

(ii) Additional fee for filing a section 8 affidavit during the grace period through TEAS, per class—$100.00

(15) Petitions to the Director.

(i) For petitions to the Director filed on paper—$200.00

(ii) For petitions to the Director filed through TEAS—$100.00

(16) Petition to cancel.

(i) For filing a petition to cancel on paper, per class—$500.00

(ii) For filing a petition to cancel through ESTTA, per class—$400.00

(17) Notice of opposition.

(i) For filing a notice of opposition on paper, per class—$500.00

(ii) For filing a notice of opposition through ESTTA, per class—$400.00

(18) Ex parte appeal.

(i) For ex parte appeal to the Trademark Trial and Appeal Board filed on paper, per class—$300.00

(ii) For ex parte appeal to the Trademark Trial and Appeal Board filed through ESTTA, per class—$200.00

(19) Dividing an application.

(i) Request to divide an application filed on paper, per new application created—$200.00

(ii) Request to divide an application filed through TEAS, per new application created—$100.00

(20) Correcting deficiency in section 8 affidavit.

(i) For correcting a deficiency in a section 8 affidavit via paper filing—$200.00

(ii) For correcting a deficiency in a section 8 affidavit via TEAS filing—$100.00

(21) Correcting deficiency in renewal application.

(i) For correcting a deficiency in a renewal application via paper filing—$200.00

(ii) For correcting a deficiency in a renewal application via TEAS filing—$100.00

(22) Extension of time for filing notice of opposition under § 2.102(c)(1)(ii) or (c)(2).

(i) For filing a request for an extension of time to file a notice of opposition under § 2.102(c)(1)(ii) or (c)(2) on paper—$200.00

(ii) For filing a request for an extension of time to file a notice of opposition under § 2.102(c)(1)(ii) or (c)(2) through ESTTA—$100.00

(23) Extension of time for filing notice of opposition under § 2.102(c)(3).

(i) For filing a request for an extension of time to file a notice of opposition under § 2.102(c)(3) on paper—$300.00

(ii) For filing a request for an extension of time to file a notice of opposition under § 2.102(c)(3) through ESTTA—$200.00

(b) Trademark service fees.

(1) For printed copy of registered mark, copy only. Service includes preparation of copies by the Office within two to three business days and delivery by United States Postal Service; and preparation of copies by the Office within one business day of receipt and delivery to an Office Box or by electronic means (*e.g.,* facsimile, electronic mail)—$3.00

(2) Certified or uncertified copy of trademark application as filed processed within seven calendar days—$15.00

(3) Certified or uncertified copy of a trademark-related official record—$50.00

(4) Certified copy of a registered mark, showing title and/or status:

(i) Regular service—$15.00

(ii) Expedited local service—$30.00

(5) Certified or uncertified copy of trademark records, per document except as otherwise provided in this section—$25.00

(6) For recording each trademark assignment, agreement or other document relating to the property in a registration or application

(i) First property in a document—$40.00

(ii) For each additional property in the same document—$25.00

(7) For assignment records, abstract of title and certification, per registration—$25.00

(8) Marginal cost, paid in advance, for each hour of terminal session time, including print time, using X-Search capabilities, prorated for the actual time used. The Director may waive the payment by an individual for access to X-Search upon a showing of need or hardship, and if such waiver is in the public interest—$40.00

(9) Additional Fee for Overnight Delivery—$40.00

(10) Additional Fee for Expedited Service—$160.00

(11) For processing each payment refused (including a check returned ''unpaid'') or charged back by a financial institution—$50.00

(12) Deposit account service charge for each month when the balance at the end of the month is below $1,000—$25.00

■ 3. Amend § 2.200 by revising paragraph (b) to read as follows:

§ 2.200 Assignment records open to public inspection.

* * * * *

(b) An order for a copy of an assignment or other document should identify the reel and frame number where the assignment or document is recorded.

■ 4. Amend § 2.208 by revising paragraph (a) to read as follows:

§ 2.208 Deposit accounts.

(a) For the convenience of attorneys, and the general public in paying any fees due, in ordering copies of records, or services offered by the Office, deposit accounts may be established in the Office. A minimum deposit of $1,000 is required for paying any fees due or in ordering any services offered by the Office. The Office will issue a deposit account statement at the end of each month. A remittance must be made promptly upon receipt of the statement to cover the value of items or services charged to the account and thus restore the account to its established normal deposit. An amount sufficient to cover all fees, copies, or services requested must always be on deposit. Charges to accounts with insufficient funds will not be accepted. A service charge (§ 2.6(b)(12)) will be assessed for each month that the balance at the end of the month is below $1,000.

* * * * *

PART 7—RULES OF PRACTICE IN FILINGS PURSUANT TO THE PROTOCOL RELATING TO THE MADRID AGREEMENT CONCERNING THE INTERNATIONAL REGISTRATION OF MARKS

■ 5. The authority citation for 37 CFR part 7 continues to read as follows:

Authority: 15 U.S.C. 1123, 35 U.S.C. 2, unless otherwise noted.

■ 6. Revise § 7.6 to read as follows:

§ 7.6 Schedule of U.S. process fees.

(a) The Office requires the following process fees:

(1) Certification of international application based on single application or registration.

(i) For certifying an international application based on a single basic application or registration, filed on paper, per class—$200.00

(ii) For certifying an international application based on a single basic application or registration, filed through TEAS, per class—$100.00

(2) Certification of international application based on more than one application or registration.

(i) For certifying an international application based on more than one basic application or registration filed on paper, per class—$250.00

(ii) For certifying an international application based on more than one basic application or registration filed through TEAS, per class—$150.00

(3) Transmission of subsequent designation.

(i) For transmitting a subsequent designation under § 7.21, filed on paper—$200.00

(ii) For transmitting a subsequent designation under § 7.21, filed through TEAS—$100.00

(4) Transmission of request to record an assignment or restriction.

(i) For transmitting a request to record an assignment or restriction, or release of a restriction, under § 7.23 or § 7.24 filed on paper—$200.00

(ii) For transmitting a request to record an assignment or restriction, or release of a restriction, under § 7.23 or § 7.24 filed through TEAS—$100.00

(5) Notice of replacement.

(i) For filing a notice of replacement under § 7.28 on paper, per class—$200.00

(ii) For filing a notice of replacement under § 7.28 through TEAS, per class—$100.00

(6) Affidavit under section 71 of the Act.

(i) For filing an affidavit under section 71 of the Act on paper, per class—$250.00

(ii) For filing an affidavit under section 71 of the Act through TEAS, per class—$150.00

(7) Filing affidavit under section 71 of the Act during grace period.

(i) Surcharge for filing an affidavit under section 71 of the Act during the grace period on paper, per class—$200.00

(ii) Surcharge for filing an affidavit under section 71 of the Act during the grace period through TEAS, per class—$100.00

(8) Correcting deficiency in section 71 affidavit.

(i) For correcting a deficiency in a section 71 affidavit filed on paper—$200.00

(ii) For correcting a deficiency in a section 71 affidavit filed through TEAS—$100.00

(b) The fees required in paragraph (a) of this section must be paid in U.S. dollars at the time of submission of the requested action. *See* § 2.207 of this chapter for acceptable forms of payment and § 2.208 of this chapter for payments using a deposit account established in the Office.

Dated: May 23, 2016.

Michelle K. Lee,

Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office.

BILLING CODE 3510–16–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R10–OAR–2016–0290; FRL–9946–95–Region 10]

Approval and Promulgation of Implementation Plans; Washington: Spokane Second 10-Year Carbon Monoxide Limited Maintenance Plan

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve the limited maintenance plan submitted on May 11, 2016, by the Washington Department of Ecology (Ecology), in cooperation with the Spokane Regional Clean Air Agency (SRCAA) for the Spokane carbon monoxide (CO) maintenance area (Spokane area or area). The Spokane area includes the cities of Spokane, Spokane Valley, Millwood, and surrounding urban areas in Spokane County, Washington. This plan addresses the second 10-year maintenance period for the National Ambient Air Quality Standards (NAAQS) promulgated for CO, as revised in 1985. The Spokane area has had no exceedances of the CO NAAQS since 1997 and monitored CO levels in the area continue to decline steadily. The EPA is also proposing approval of an alternative CO monitoring strategy for the Spokane area which was submitted as part of the limited maintenance plan.

DATES: Comments must be received on or before June 27, 2016.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R10–OAR–2016–0290 at *http://www.regulations.gov.* Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets.*

Docket: All documents in the electronic docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *i.e.,* CBI or other information that is restricted by statute from disclosure. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available at *http://www.regulations.gov* or at EPA Region 10, Office of Air, Waste and Toxics, 1200 Sixth Avenue, Seattle, Washington 98101. The EPA requests that you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT: Jeff Hunt at (206) 553–0256, *hunt.jeff@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document wherever ''we'', ''us'' or ''our'' is used, it is intended to refer to the EPA.

Table of Contents

I. This Action

The EPA is proposing to approve the limited maintenance plan for CO submitted by the State of Washington (Washington or the State), on May 11, 2016, for the Spokane area. A limited maintenance plan is a means of meeting Clean Air Act (CAA) requirements for formerly designated nonattainment areas that meet certain qualification criteria. The EPA is proposing to determine that Washington's submittal meets the limited maintenance plan criteria as described below.

II. Background

Under section 107(d)(1)(c) of the CAA, the Spokane area was designated nonattainment by operation of law upon enactment of the 1990 Amendments (56 FR 56694, November 6, 1991). On June 29, 2005, the EPA redesignated the area to attainment for the CO NAAQS and approved Washington's first maintenance plan designed to ensure compliance with the standard through the year 2015 (70 FR 37269). To meet section 175A(b) of the CAA, Washington submitted a second 10-year CO maintenance plan for the Spokane area that will apply until 2025.

III. The Limited Maintenance Plan Option for CO Areas

A. Requirements for the Limited Maintenance Plan Option

The EPA's requirements for a limited maintenance plan (LMP) are outlined in an October 6, 1995 memorandum from Joseph Paisie titled, ''Limited Maintenance Plan Option for Nonclassifiable CO Nonattainment Areas'' (CO LMP Option). To qualify for the LMP Option, the design value for an area, based on the eight consecutive quarters (two years of data) used to demonstrate attainment, must be at or below 7.65 parts per million (ppm). The CO LMP Option memo states the ''EPA believes that the continued applicability of Prevention of Significant Deterioration (PSD) requirements, any control measures already in the SIP, and Federal measures (such as the Federal motor vehicle control program) should provide adequate assurance of maintenance for these areas.'' The EPA has determined that the CO LMP Option is also available to all states for second 10-year maintenance plans, regardless of the original nonattainment classification.

B. Conformity Under the Limited Maintenance Plan Option

The transportation conformity rule and the general conformity rule (40 CFR parts 51 and 93) apply to nonattainment areas and maintenance areas covered by an approved maintenance plan. Under either conformity rule, an acceptable method of demonstrating a Federal action conforms to the applicable SIP is to demonstrate that expected emissions from the planned action are consistent with the emissions budget for the area.

While qualification for the CO LMP Option does not exempt an area from the need to affirm conformity, conformity may be demonstrated without submitting an emissions budget. Under the limited maintenance plan option, emissions budgets are treated as essentially not constraining for the length of the maintenance period because it is unreasonable to expect that the qualifying areas would experience so much growth in that period that a violation of the CO NAAQS would result. For transportation conformity purposes, the EPA would conclude that emissions in these areas need not be capped for the maintenance period and therefore a regional emissions analysis would not be required. Similarly, Federal actions subject to the general conformity rule could be considered to satisfy the ''budget test'' specified in 40 CFR 93.158 (a)(5)(i)(A) for the same reasons that the budgets are essentially considered to be unlimited.

Under the limited maintenance plan option, emissions budgets are treated as essentially not constraining for the maintenance period because it is unreasonable to expect that qualifying areas would experience so much growth in that period that a NAAQS violation would result. While areas with maintenance plans approved under the limited maintenance plan option are not subject to the budget test, the areas remain subject to the other transportation conformity requirements of 40 CFR part 93, subpart A. Thus, the metropolitan planning organization (MPO) in the area or the State must document and ensure that:

(a) Transportation plans and projects provide for timely implementation of SIP transportation control measures (TCMs) in accordance with 40 CFR 93.113;

(b) transportation plans and projects comply with the fiscal constraint element as set forth in 40 CFR 93.108;

(c) the MPO's interagency consultation procedures meet the applicable requirements of 40 CFR 93.105;

(d) conformity of transportation plans is determined no less frequently than every four years, and conformity of plan amendments and transportation projects is demonstrated in accordance with the timing requirements specified in 40 CFR 93.104;

(e) the latest planning assumptions and emissions model are used as set forth in 40 CFR 93.110 and 40 CFR 93.111;

(f) projects do not cause or contribute to any new localized carbon monoxide or particulate matter violations, in accordance with procedures specified in 40 CFR 93.123; and

(g) project sponsors and/or operators provide written commitments as specified in 40 CFR 93.125.

In approving the 2nd 10-year limited maintenance plan, the Spokane maintenance area will continue to be exempt from performing a regional emissions analysis, but must meet project-level conformity analyses as well as the transportation conformity criteria mentioned above.

IV. Review of the State's Submittal

A. Has the State demonstrated that the monitoring data meets the LMP Option criteria?

The CO NAAQS is attained when the annual second highest 8-hour average CO concentration for an area does not exceed a concentration of 9.0 ppm. The last monitored violation of the CO NAAQS in the Spokane area occurred in 1996, and CO levels have steadily declined ever since.

For areas using the CO LMP Option, the maintenance plan demonstration requirement is considered to be satisfied when the second highest 8-hour CO concentration (design value) is at or below 7.65 ppm (85 percent of the CO NAAQS) for 8 consecutive quarters. The 8-hour CO design value for the Spokane area is 2.3 ppm based on 2013–2014 data, the most recent quality-assured and quality-controlled data available. Therefore, Washington has demonstrated that the monitoring data for the Spokane area meets the CO LMP Option criteria.

B. Does the State have an approved attainment emissions inventory?

The maintenance plan must contain an attainment year emissions inventory to identify a level of CO emissions that is sufficient to attain the CO NAAQS. The May 11, 2016 SIP submittal contains a CO emissions inventory for the Spokane area using a base year of 2011, matching the most recent data available in the EPA's National Emissions Inventory (NEI), which was

then projected out to 2014 based on population growth. This inventory was then supplemented with more recent information for point sources and onroad motor vehicles. Onroad mobile emissions were calculated using the EPA's Motor Vehicle Emission Simulator (MOVES2014) model. Historically, exceedances of the CO NAAQS in the Spokane area have occurred during the winter months, when cooler temperatures contribute to incomplete combustion from motor vehicles. Therefore, consistent with the EPA's guidance, the emissions inventory is in a ''typical winter day'' format. Onroad mobile sources represent 69.4% of the typical winter day CO emissions, followed by 17.9% from area sources (primarily residential wood combustion), 12.3% from nonroad mobile sources, and 0.5% from point sources. With respect to calculating emissions inventories for the LMP, point sources were defined as any stationary source with CO emissions greater than or equal to 100 tons per year.

EMISSIONS INVENTORY, MAIN SOURCE CATEGORY SUBTOTALS

Main source category	CO emissions pounds per winter day
Point Sources	1,418
Onroad Mobile Sources	213,760
Non-road Mobile Sources	37,221
Area Sources	54,303
Total	306,702

C. What are the control measures for this area?

The first 10-year maintenance plan approved by the EPA for the Spokane area relied on the Federal Motor Vehicle Emission Control Program establishing emission standards for new motor vehicles (40 CFR part 86), a motor vehicle inspection and maintenance (I/M) program, and an administrative order and amendment for the Kaiser Aluminum and Chemical Corporation Mead Works facility. The EPA's 2005 approval of the first 10-year maintenance plan anticipated that more stringent Federal automobile standards and the removal of older, less efficient cars over time would result in an overall decline in CO emissions despite expected increases in vehicle miles traveled in the area (70 FR 37269, June 29, 2005, at page 37271). Consistent with the EPA's CO LMP Option memo, Washington concluded that continued applicability of the Prevention of Significant Deterioration requirements, any control measures already in the SIP, and Federal measures (such as the Federal motor vehicle control program) will provide adequate assurance of maintenance for the Spokane area. Based on our review of the 2011 attainment emissions inventory, showing dramatic emissions reductions as a result of the Federal motor vehicle control program, it is highly unlikely CO emissions in the Spokane area will violate the NAAQS. We also note that Washington's most recent updates to the Prevention of Significant Deterioration permitting program were approved by the EPA on April 29, 2015 (80 FR 23721).

Lastly, Washington is requesting no changes to the control measures contained in the SIP, except for one minor revision. As discussed in Washington's submittal, the first 10-year maintenance plan included administrative order number DE 01 AQIS–3285, and amendment #1 of that order, for the former Kaiser Aluminum and Chemical Corporation's aluminum reduction plant located in Mead, Washington, north of the City of Spokane. During the EPA's action on the first 10-year plan it was not known at that time whether the then closed facility or some portion of it would reopen, so the EPA retained the existing administrative order and amendment in the SIP to ensure that the facility could not contribute to an exceedance of the CO NAAQS if it reopened at some point in the future. On April 11, 2013, NMC Mead, LLC, the new owners of the facility, notified the Spokane Regional Clean Air Agency (SRCAA) that the facility, ''. . . has permanently shut down and is in the process of dismantling all equipment permitted under Air Operating Permit No. AOP–19-Renewal Permit #1. NMC Mead will not be renewing this Air Operating Permit, and is requesting that this permit be revoked effective March 31, 2013.'' On April 26, 2013, SRCAA voided the Air Operating Permit and all associated orders stating that, ''[i]f NMC Mead, LLC ever wants to operate any of the emission units at the facility again in the future, a new Notice of Construction (NOC) permit must be approved by the SRCAA prior to the installation and/or operation of the equipment.'' See Appendix D of Washington's submission. Because any potential, future NOC permit will be subject to the New Source Review (NSR) permitting program to ensure compliance with all NAAQS, Washington requested that the EPA remove the voided administrative order No. DE 01 AQIS–3285 and amendment #1 from the SIP codified in 40 CFR 52.2470(d) *EPA-Approved State Source-Specific Requirements.* The EPA is proposing to grant this request because the EPA has confirmed the facility is shutdown and dismantled.

C. Does the limited maintenance plan include an assurance of continued operation of an appropriate EPA-approved air quality monitoring network, in accordance with 40 CFR part 58?

The EPA's CO LMP Option memo states, ''[t]o verify the attainment status of the area over the maintenance period, the maintenance plan should contain provisions for continued operation of an appropriate, EPA approved air quality monitoring network, in accordance with 40 CFR part 58.'' Washington's most recent EPA-approved annual air quality monitoring network plan is included in the docket for this action. Under this plan, Washington currently operates a Federal Equivalent Method (FEM) CO monitor at 3rd and Washington in downtown Spokane. Due to the low and continually declining levels of CO monitored at this site over the past two decades since the last exceedance of the NAAQS, Washington requested the EPA's approval of an alternative monitoring strategy for verifying maintenance of the CO NAAQS similar to other altenative approaches used in CO areas in the nation (see 80 FR 17331, April 1, 2015, Great Falls, Montana; 80 FR 16571, March 30, 2015, Billings, Montana; and 73 FR 36439, June 27, 2008, Vancouver, Washington, for a few recent examples).

Washington's proposed alternative monitoring strategy generally mirrors the approach recently approved for the Grants Pass CO area on July 28, 2015 (80 FR 44864). Washington proposes that total CO emissions will be calculated, as detailed below, every three years in conjunction with the Statewide Emissions Inventory development process, which populates the EPA NEI. Under the proposed alternative monitoring strategy, SRCAA, in cooperation with Ecology, commits to reviewing future year 2017, 2020 and 2023 CO estimates for the three primary source categories (onroad mobile, nonroad mobile, and residential wood combustion (area sources)) which comprise 97% of CO emissions in the Spokane area. The aggregate total of these three source categories would then be compared to the corresponding 2002 level, which represents the emissions at the time EPA redesignated the area to attainment and approved the first 10-year maintenance plan. The 2002 emission level corresponds to a design

value of 5.2 ppm, well below the CO NAAQS of 9.0 ppm and the LMP qualification threshold of 7.65 ppm, giving adequate buffer to reestablish monitoring before any potential violation of the NAAQS and resulting contingency measures.

Because the calculated amounts of both the onroad and nonroad mobile CO emissions can change depending on the version of the EPA model required for use at that time (currently MOVES2014), SRCAA and Ecology commit to recalculating 2002 emission estimates for these two source categories using national default settings at the county-wide level with the most current EPA-mandated model, in order to ensure consistency in comparing future year inventories to 2002 levels. For the remaining source category, residential wood combustion, SRCAA and Ecology will compare future year inventories, calculated using the most up to date activity level, emission factor, and population data available, in accordance with the EPA's NEI guidance, to the annual 2002 county-wide inventories approved in the first 10-year maintenance plan (19,937 tons per year). If a future year aggregate total of the three source categories calculated for 2017, 2020, or 2023 exceeds the corresponding aggregate total of 2002 emissions, Ecology must reestablish monitoring in the area. In order to verify continued attainment in the area, continued qualification for the CO LMP Option, and provisions for triggering contingency measures should the area violate the CO NAAQS in the future, this review will be submitted annually by Ecology to the EPA as part of the monitoring network report for compliance under 40 CFR part 58.[1] Washington's annual network monitoring reports are available to the public at *https://fortress.wa.gov/ecy/publications/UIPages/Home.aspx.*

The State's request was made under 40 CFR 58.14(c) which allows approval of requests to discontinue ambient monitors ''on a case-by-case basis if discontinuance does not compromise data collection needed for implementation of a NAAQS and if the requirements of appendix D to 40 CFR part 58, if any, continue to be met.'' The EPA proposes to find that the alternative monitoring strategy meets the criteria of 40 CFR 58.14(c) for the Spokane area. Given the long history of low CO concentrations in the Spokane area, and the commitment to reestablish monitoring should NEI data show the potential for increasing CO emissions, the EPA is proposing to approve the State's request to discontinue the Spokane CO monitor and use the alternative monitoring strategy in its place.

D. Does the plan meet the Clean Air Act requirements for contingency provisions?

CAA section 175A states that a maintenance plan must include contingency provisions, as necessary, to ensure prompt correction of any violation of the relevant NAAQS which may occur after redesignation of the area to attainment. Washington's submittal makes no changes to the contingency provisions approved as part of the first 10-year maintenance plan (70 FR 37269, June 29, 2005, at page 37271). The EPA is proposing to determine that the existing contingency measure provisions from the first 10-year maintenance plan continue to satisfy the requirement under CAA section 175A.

V. Proposed Action

The EPA is proposing to approve the LMP submitted by the State of Washington, on May 11, 2016, for the Spokane CO area. We are proposing to approve the request to remove the associated order and amendment for the former Kaiser Aluminum and Chemical Corporation's aluminum reduction plant located in Mead, Washington from incorporation by reference in the Washington SIP because the facility has been shut down, dismantled, and the operating permit has been revoked. We are also proposing to approve the State's alternative CO monitoring strategy for the Spokane area. If finalized, the EPA's approval of this LMP will satisfy the CAA section 175A requirements for the second 10-year period in the Spokane CO area.

VI. Incorporation by Reference

In accordance with the requirements of 1 CFR 51.5, the EPA is proposing to revise the incorporation by reference contained in 40 CFR 52.2470(d) *EPA-Approved State Source-Specific Requirements* to remove the associated order and amendment for the former Kaiser Aluminum and Chemical Corporation's aluminum reduction plant located in Mead, Washington, as described above in Section V. Proposed Action. The EPA has made, and will continue to make, these documents generally available electronically through *www.regulations.gov* and/or in hard copy at the appropriate EPA office (see the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

VII. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submittal that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submittals, the EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- is not subject to the requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because this action does not involve technical standards; and
- does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

This SIP revision is not approved to apply on any Indian reservation land in Washington or any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas, the rule does not have tribal

[1] The EPA notes that emission inventory development for the NEI is done on a triennial basis, so reporting during off years between the 2017, 2020, and 2023 inventory cycles will likely refer back to the most recent inventory data available.

implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). However, consistent with EPA policy, the EPA provided a consultation opportunity to the Spokane Tribe in a letter dated September 11, 2015. The EPA did not receive a request for consultation.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 97

[FRL–9947–02–OAR]

Availability of Data on Allocations of Cross-State Air Pollution Rule Allowances From New Unit Set-Asides for the 2016 Compliance Year

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; notice of data availability (NODA).

SUMMARY: The Environmental Protection Agency (EPA) is providing notice of the availability of preliminary calculations of emission allowance allocations to certain units under the Cross-State Air Pollution Rule (CSAPR). Under the CSAPR federal implementation plans (FIPs), portions of each covered state's annual emissions budgets for each of the four CSAPR emissions trading programs are reserved for allocation to electricity generating units that commenced commercial operation on or after January 1, 2010 (new units) and certain other units not otherwise obtaining allowance allocations under the FIPs. The quantities of allowances allocated to eligible units from each new unit set-aside (NUSA) under the FIPs are calculated in an annual one- or two-round allocation process. EPA has completed preliminary calculations for the first round of NUSA allowance allocations for the 2016 compliance year and has posted spreadsheets containing the calculations on EPA's Web site. EPA will consider timely objections to the preliminary calculations (including objections concerning the identification of units eligible for allocations) and will promulgate a notice responding to any such objections no later than August 1, 2016, the deadline for recording the first-round allocations in sources' Allowance Management System accounts. This notice may concern CSAPR-affected units in the following states: Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Jersey, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, West Virginia, and Wisconsin.

DATES: Objections to the information referenced in this notice must be received on or before June 27, 2016.

ADDRESSES: Submit your objections via email to *CSAPR_NUSA@epa.gov.* Include ''2016 NUSA allocations'' in the email subject line and include your name, title, affiliation, address, phone number, and email address in the body of the email.

FOR FURTHER INFORMATION CONTACT: Questions concerning this action should be addressed to Robert Miller at (202) 343–9077 or *miller.robertl@epa.gov* or Kenon Smith at (202) 343–9164 or *smith.kenon@epa.gov.*

SUPPLEMENTARY INFORMATION: Under the CSAPR FIPs, the mechanisms by which initial allocations of emission allowances are determined differ for ''existing'' and ''new'' units. For ''existing'' units—that is, units commencing commercial operation before January 1, 2010—the specific amounts of CSAPR FIP allowance allocations for all compliance years have been established through rulemaking. EPA has announced the availability of spreadsheets showing the CSAPR FIP allowance allocations to existing units in previous notices.[1]

''New'' units—that is, units commencing commercial operation on or after January 1, 2010—as well as certain older units that would not otherwise obtain FIP allowance allocations do not have pre-established allowance allocations. Instead, the CSAPR FIPs reserve a portion of each state's total annual emissions budget for each CSAPR emissions trading program as a new unit set-aside (NUSA)[2] and establish an annual process for allocating NUSA allowances to eligible units. States with Indian country within their borders have separate Indian country NUSAs. The annual process for allocating allowances from the NUSAs and Indian country NUSAs to eligible units is set forth in the CSAPR regulations at 40 CFR 97.411(b) and 97.412 (NO_X Annual Trading Program), 97.511(b) and 97.512 (NO_X Ozone Season Trading Program), 97.611(b) and 97.612 (SO_2 Group 1 Trading Program), and 97.711(b) and 97.712 (SO_2 Group 2 Trading Program). Each NUSA allowance allocation process involves up to two rounds of allocations to new units followed by the allocation to existing units of any allowances not allocated to new units. EPA provides public notice at certain points in the process. This notice concerns preliminary calculations for the first round of NUSA allowance allocations for the 2016 compliance year.[3]

The units eligible to receive first-round NUSA allocations are defined in §§ 97.412(a)(1), 97.512(a)(1), 97.612(a)(1), and 97.712(a)(1). Generally, eligible units include any CSAPR-affected unit that has not been allocated allowances as an existing unit as well as certain units that have been allocated allowances as existing units but whose allocations have been deducted or not recorded because of corrections or multi-year breaks in operations. EPA notes that a valid allowance allocation may consist of zero allowances; thus, an existing unit specifically allocated zero allowances in the spreadsheet of CSAPR FIP allowance allocations to existing units is generally ineligible to receive a NUSA allowance allocation.

The quantity of allowances to be allocated through the 2016 NUSA allowance allocation process for each state and emissions trading program is generally the state's 2016 emissions budget less the sum of (1) the total of the 2016 CSAPR FIP allowance allocations to existing units and (2) the amount of the 2016 Indian country NUSA, if any.[4]

[1] The latest spreadsheet of CSAPR FIP allowance allocations to existing units, updated in 2014 to reflect changes to CSAPR's implementation schedule but with allocation amounts unchanged since June 2012, is available at *http://www3.epa.gov/crossstaterule/actions.html. See* Availability of Data on Allocations of Cross-State Air Pollution Rule Allowances to Existing Electricity Generating Units, 79 FR 71674 (December 3, 2014).

[2] The NUSA amounts range from two percent to eight percent of the respective state budgets. The variation in percentages reflects differences among states in the quantities of emission allowances projected to be required by known new units at the time the budgets were set or amended.

[3] At this time, EPA is not aware of any unit eligible for a first-round allocation from any Indian country NUSA.

[4] The quantities of allowances to be allocated through the NUSA allowance allocation process may differ slightly from the NUSA amounts set forth in §§ 97.410(a), 97.510(a), 97.610(a), and

The amounts of NUSA allowances may be increased in certain circumstances as set forth in §§ 97.412(a)(2), 97.512(a)(2), 97.612(a)(2), and 97.712(a)(2).

The amounts of first-round allocations to eligible units from each NUSA are calculated according to the procedures set forth in §§ 97.412(a)(3)–(7) and (12), 97.512(a)(3)–(7) and (12), 97.612(a)(3)–(7) and (12), and 97.712(a)(3)–(7) and (12). Generally, the procedures call for each eligible unit to receive a first-round 2016 NUSA allocation equal to its 2015 emissions as reported under 40 CFR part 75 unless the total of such allocations to all eligible units would exceed the amount of allowances in the NUSA, in which case the allocations are reduced on a pro-rata basis.[5]

EPA notes that an allocation or lack of allocation of allowances to a given EGU does not constitute a determination that CSAPR does or does not apply to the EGU. EPA also notes that allocations are subject to potential correction.

The detailed unit-by-unit data and preliminary allowance allocation calculations are set forth in Excel spreadsheets titled ''CSAPR_NUSA_2016_NO_X_Annual_1st_Round_Prelim_Data'', ''CSAPR_NUSA_2016_NO_X_OS_1st_Round_Prelim_Data'', and ''CSAPR_NUSA_2016_SO_2_1st_Round_Prelim_Data,'' available on EPA's Web site at *http://www3.epa.gov/crossstaterule/actions.html.* The three spreadsheets show EPA's initial determinations of 2016 NUSA allocations for new units subject to the CSAPR NO_X Annual, NO_X Ozone Season, and SO_2 (Group 1 and Group 2) trading programs, respectively. Each of the spreadsheets contains a separate worksheet for each state covered by that program showing, for each unit identified as eligible for a first-round NUSA allocation, (1) the unit's emissions in the 2015 control period (annual or ozone season as applicable), (2) the maximum first-round 2016 NUSA allowance allocation for which the unit is eligible (typically the unit's emissions in the 2015 control period), (3) various adjustments to the unit's maximum allocation, many of which are necessary only if the NUSA pool is oversubscribed, and (4) the preliminary calculation of the unit's first-round 2016 NUSA allowance allocation.

Each state worksheet also contains a summary showing (1) the quantity of allowances initially available in that state's 2016 NUSA, (2) the sum of the first-round 2016 NUSA allowance allocations that will be made to new units in that state, assuming there are no corrections to the data, and (3) the quantity of allowances that would remain in the 2016 NUSA for use in second-round allocations to new units (or ultimately for allocation to existing units), again assuming there are no corrections to the data.

Objections should be strictly limited to the data and calculations upon which the NUSA allowance allocations are based and should be emailed to the address identified in **ADDRESSES**. Objections must include: (1) Precise identification of the specific data and or calculations the commenter believes are inaccurate, (2) new proposed data and or calculations upon which the commenter believes EPA should rely instead to determine allowance allocations, and (3) the reasons why EPA should rely on the commenter's proposed data and or calculations and not the data referenced in this notice.

Authority: 40 CFR 97.411(b), 97.511(b), 97.611(b), and 97.711(b).

Dated: May 19, 2016.

Reid P. Harvey,

Director, Clean Air Markets Division, Office of Atmospheric Programs, Office of Air and Radiation.

[FR Doc. 2016–12485 Filed 5–26–16; 8:45 am]

BILLING CODE 6560–50–P

97.710(a) because of rounding in the spreadsheet of CSAPR FIP allowance allocations to existing units.

[5] Subsequent allocations of any allowances remaining in any 2016 NUSA after first-round allocations will be addressed in future notices. Any such allocations will be made according to the procedures set forth in §§ 97.412(a)(9), (10) and (12), 97.512(a)(9), (10) and (12), 97.612(a)(9), (10) and (12), and 97.712(a)(9), (10) and (12). Generally, new units that commenced commercial operations in 2015 or 2016 will receive second-round 2016 NUSA allocations sufficient to bring the totals of their first- and second-round allocations up to their 2016 emissions as reported under 40 CFR part 75 unless the total of such second-round allocations for all eligible units would exceed the remaining amount of allowances in the NUSA, in which case the second-round allocations will be reduced on a pro-rata basis. Any allowances remaining in any NUSA after second-round allocations to new units—along with any allowances remaining in any corresponding Indian country NUSA—will be allocated to the state's existing units in proportion to their respective 2016 CSAPR FIP allocations of non-NUSA allowances.

FEDERAL MARITIME COMMISSION

46 CFR Parts 502, 503, 515, 520, 530, 535, 540, 550, 555, and 560

[Docket No. 16–06]

RIN 3072–AC34

Update of Existing and Addition of New User Fees

AGENCY: Federal Maritime Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Federal Maritime Commission (Commission) proposes amending its current user fees and invites public comment on whether the Commission should amend its user fees. Specifically, the Commission proposes increasing fees for: Filing complaints and certain petitions; records searches, document copying, and admissions to practice; paper filing of ocean transportation intermediary (OTI) applications; filing applications for special permission; and filing agreements.

The Commission also proposes lowering fees for: Reviewing Freedom of Information Act (FOIA) requests; revising clerical errors on service contracts; Revising clerical errors on non-vessel-operating common carrier (NVOCC) service agreements; and Commission services to passenger vessel operators (PVOs).

In addition, the Commission proposes repealing four existing fees for: Adding interested parties to a specific docket mailing list; the Regulated Persons Index database; database reports on Effective Carrier Agreements; and filing petitions for rulemaking. The Commission also proposes adding a new fee for requests for expedited review of an agreement filing.

DATES: Comments are due on or before June 27, 2016.

ADDRESSES: You may submit comments, identified by the docket number in the heading of this document, by any of the following methods:

- *Email: secretary@fmc.gov*. Include in the subject line: ''Docket No. 16–06, Comments on ''Update of User Fees.'' Comments should be attached to the email as a Microsoft Word or text-searchable PDF document. Comments containing confidential information should not be submitted by email.
- *Mail:* Karen V. Gregory, Secretary, Federal Maritime Commission, 800 North Capitol Street NW., Washington, DC 20573–0001. *Phone:* (202) 523–5725. *Email: secretary@fmc.gov*.
- *Docket:* For access to the docket to read background documents or comments received, go to: *http://www.fmc.gov/16-06*.

FOR FURTHER INFORMATION CONTACT: Karen V. Gregory, Secretary, Federal Maritime Commission, 800 North Capitol Street NW., Washington, DC 20573–0001. *Phone:* (202) 523–5725. *Email: secretary@fmc.gov*.

SUPPLEMENTARY INFORMATION: The Commission's current user fees are based on an assessment of fiscal year 2004 costs and have not been updated

since 2005.[1] Consequently, many of the current user fees no longer represent the Commission's actual costs for providing services. The Commission is seeking comments on possible adjustments to its user fees based on fiscal year 2015 costs assessed through a new methodology for calculating costs for services provided by the Commission.

The Independent Offices Appropriation Act of 1952 (IOAA), 31 U.S.C. 9701, authorizes agencies to establish charges (user fees) for services and benefits that it provides to specific recipients. Under the IOAA, charges must be fair and based on the costs to the Government, the value of the service or thing to the recipient, the public policy or interest served, and other relevant facts. The IOAA also provides that regulations implementing user fees are subject to policies prescribed by the President, which are currently set forth in OMB Circular A–25, *User Charges* (revised July 8, 1993).

OMB Circular A–25 requires agencies to conduct a periodic reassessment of costs and, if necessary, adjust or establish new fees. Under OMB Circular A–25, fees should be established for Government-provided services that confer benefits on identifiable recipients over and above those benefits received by the general public. OMB Circular A–25 also provides that agencies should determine or estimate costs based on the best available records in the agency, and that cost computations must cover the direct and indirect costs to the agency providing the activity.

Fee Assessment Methodology

Applying the guidance for assessing fees provided in OMB Circular A–25, the Commission has revised its methodology for computing fees to determine the full costs of providing services.[2] A detailed description of the methodology, as established by the Commission's Office of Budget and Finance, is available in the docket to this rulemaking.

The Commission has developed data on the time and cost involved in providing particular services to arrive at the updated direct and indirect labor costs for those services. As part of its assessment, the Commission utilized salaries of Full Time Equivalents (FTEs) assigned to fee-generating activities to identify the various direct and indirect costs associated with providing services. Direct labor costs include clerical and professional time expended on an activity. Indirect labor costs include labor provided by bureaus and offices that provide direct support to the fee-generating offices in their efforts to provide services, and include managerial and supervisory costs associated with providing a particular service. Other indirect costs include Government overhead costs, such as fringe benefits and other wage-related Government contributions contained in OMB Circular A–76, *Performance of Commercial Activities* (revised May 29, 2003) and office general and administrative expenses.[3] The sum of these indirect cost components gives an indirect cost factor that is added to the direct labor costs of an activity to arrive at the fully distributed cost.

Proposed Fee Adjustments

The adjustments the Commission proposes will allow some user fees to remain unchanged; increase, reduce, or delete other fees; and add one new fee. The Commission proposes making upward adjustments of fees to reflect increases in salary and indirect (overhead) costs. For some services, an increase in processing or review time may account for all or part of increase in the amount of the proposed fees. For other services, fees may be lower than current fees due to an overall reduced cost to provide those services.

The Commission assesses nominal processing fees for services related to the filing of complaints and certain petitions; various public information services, such as records searches, document copying, and admissions to practice; and filing applications for special permission. Due to an increase in the processing cost of these services, the Commission is proposing adjusting upward these administrative fees based on an assessment of fiscal year 2015 costs. Similarly, the Commission proposes adjusting upward the user fees associated with agreements filed under 46 CFR part 535 because of the increase in reviewing and analyzing the agreement filings.

With respect to OTI license applications, the Commission offers lower fees for electronic filing of license applications through its FMC–18 automated filing system. The Commission first adopted lower fees in 2007 to promote the use of the electronic filing option by the public and to facilitate the transfer of OTI records from a paper-based format to a more convenient and accessible digital format.[4] As intended, the majority of OTI applicants are using the automated system and paying the reduced fees. In fiscal year 2015, the total number of OTI applicants using the automated filing system at the reduced fees was 619, and the total number of OTI applicants filing their applications in paper format at the higher fees was 44. This program has been successful and the Commission proposes continuing to offer the lower fees for electronic filing at the current fee amounts.[5]

The Commission proposes decreasing fees for the Commission's services to passenger vessel operators (PVOs) under 46 CFR part 540. These services include reviewing and processing the application for certification on performance; the supplemental application on performance for the addition or substitution of a vessel; the application for certification on casualty, and the supplemental application on casualty for the addition or substitution of a vessel.

For reviews of requests filed under FOIA, the Commission proposes lowering the fees due to the change in grade level of the professional staff that review FOIA requests. For revisions of clerical errors on service contracts, the Commission proposes lowing the fee due to the reduction in processing time.

The Commission proposes repealing the user fee for obtaining a copy of the Regulated Persons Index given that it is currently available on the Commission's Web site. The Commission also proposes repealing the current fee assessed for adding an interested party to a specific docket mailing list under § 503.50(d), and the fee assessed under § 535.401(h) for obtaining a Commission agreement database report.

In addition, the Commission proposes repealing the user fee for filing petitions for rulemaking found in § 503.51(a).

[1] The Commission established the fee for filing or updating OTI license applications electronically in 2007.

[2] The revised methodology also satisfies the recommendations set forth in the Commission's Office of Inspector General's report, *Review of FMC's User Fee Calculations* (May 27, 2010).

[3] OMB Circular A–76 lists the following indirect labor costs: Leave and holidays, retirement, worker's compensation, awards, health and life insurance, and Medicare. General and administrative costs are expressed as a percentage of basic pay. These include all salaries and overhead such as rent, utilities, supplies, and equipment allocated to Commission offices that provide direct support to fee-generating offices such as the Office of the Managing Director, Office of Information Technology, Office of Human Resources, Office of Budget and Finance, and the Office of Management Services.

[4] FMC Docket No. 07–08, *Optional Method of Filing Form FMC–18, Application for a License as an Ocean Transportation Intermediary,* 72 FR 44976, 44977 (Aug. 10, 2007).

[5] While the automated filing system allows users to file their applications electronically, the automated system for processing the applications is still under development. The fees for the electronic filing of OTI applications will be addressed by the Commission when the entire FMC–18 automated system is complete and operational, and the costs of the system and its impact on the review of OTI applications can be quantified.

This would align the Commission with the practice of other agencies, the vast majority of which do not impose a fee to file petitions for rulemaking. Repealing this user fee would also enhance access to the rulemaking process, thereby making it fairer and more open.

The Commission also proposes adding a new fee for processing requests for expedited review of an agreement under § 535.605, which allows filing parties to request that the 45-day waiting period be shortened to meet an operational urgency. The Commission believes that a fee for processing such requests is necessary to recoup the cost of publishing a separate **Federal Register** notice for expedited review. This new fee would be assessed in addition to the underlying agreement filing fee required by § 535.401(g).

The Commission welcomes comments on its new fee calculation methodology and possible fee adjustments.

Regulatory Analysis and Notices

Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.,* requires an agency to review regulations to assess their impact on small entities and prepare an initial regulatory flexibility analysis (IRFA), unless the agency head determines that the regulatory action will not have a significant impact on a substantial number of small entities. The proposed adjusted user fees reflect the costs of specific Commission services for identifiable recipients. The economic impact of user fees on a small entity results from the entity requesting a particular service that requires payment of a fee for that service. The dollar amount of each user fee proposed in this rule is not substantial enough to have a significant economic impact on any entity subject to the user fee. The proposed increases in user fees is below the rise in inflation and employment cost from the last assessment in fiscal year 2004. Furthermore, the Commission's regulations provide for a waiver or reduction of any fee in extraordinary situations. 46 CFR 503.42. The Chairman of the Commission, therefore, certifies that the proposed rule, if promulgated, will not have a significant economic impact on a substantial number of small entities.[6]

[6] In extraordinary situations, the Commission will accept requests for waivers or fee reductions. Such request must demonstrate that the waiver or reduction of a fee is in the best interest of the public, or that payment of a fee would impose an undue hardship.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) requires an agency to seek and receive approval from the Office of Management and Budget (OMB) before making most requests for information if the agency is requesting information from more than ten persons. 44 U.S.C. 3507. The agency must submit collections of information in proposed rules to OMB in conjunction with the publication of the proposed rulemaking. 5 CFR 1320.11. The Commission is not proposing any collections of information, as defined by 44 U.S.C. 3502(3) and 5 CFR 1320.3(c), as part of this proposed rule.

Regulation Identifier Number

The Commission assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions (Unified Agenda). The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. You may use the RIN contained in the heading at the beginning of this document to find this action in the Unified Agenda, available at *http://www.reginfo.gov/public/do/eAgendaMain*.

List of Subjects

46 CFR Part 502

Administrative practice and procedure, Claims, Equal access to justice, Investigations, Lawyers, Maritime carriers, Penalties, Reporting and recordkeeping requirements.

46 CFR Part 503

Classified information, Freedom of Information, Privacy, Sunshine Act.

46 CFR Part 515

Exports, Freight forwarders, Non-vessel-operating common carriers, Ocean transportation intermediaries, Licensing requirements, Financial responsibility requirements, Reporting and recordkeeping requirements.

46 CFR Part 520

Common carrier, Freight, Intermodal transportation, Maritime carriers, Reporting and recordkeeping requirements.

46 CFR Part 530

Freight, Maritime carriers, Report and recordkeeping requirements.

46 CFR Part 531

Freight, Maritime carriers, Report and recordkeeping requirements.

46 CFR Part 535

Administrative practice and procedure, Maritime carriers, Reporting and recordkeeping requirements.

46 CFR Part 540

Insurance, Maritime carriers, Penalties, Reporting and recordkeeping requirements, Surety bonds.

46 CFR Part 550

Administrative practice and procedure, Maritime carriers.

46 CFR Part 551

Administrative practice and procedure, Maritime carriers.

46 CFR Part 555

Administrative practice and procedure, Investigations, Maritime carriers.

46 CFR Part 560

Administrative practice and procedure, Maritime carriers.

For the reasons set forth above, the Federal Maritime Commission proposes to amend 46 CFR parts 502, 503, 515, 520, 530, 535, 540, 550, 555, and 560 as follows:

PART 502—RULES OF PRACTICE AND PROCEDURE

■ 1. The authority citation for part 502 continues to read as follows:

Authority: 5 U.S.C. 504, 551, 552, 553, 556(c), 559, 561–569, 571–584; 591–596; 18 U.S.C. 207; 28 U.S.C. 2112(a); 31 U.S.C. 9701; 46 U.S.C. 305, 40103–40104, 40304, 40306, 40501–40503, 40701–40706, 41101–41109, 41301–41309, 44101–44106; 5 CFR part 2635.

Subpart D—Rulemaking

§ 502.51 [Amended]

■ 2. In § 502.51, amend paragraph (a) by removing ''§ 502.74'' and adding in its place ''§ 502.69'' and removing the fourth sentence.

Subpart E—Proceedings; Pleadings; Motions; Replies

■ 3. In § 502.62, paragraph (a)(6) is revised to read as follows:

§ 502.62 Private party complaints for formal adjudication.

(a) * * *

(6) *Filing fee:* The complaint must be accompanied by remittance of a $289 filing fee.

* * * * *

■ 4. In § 502.75, revise paragraph (a)(3) to read as follows:

§ 502.75 Declaratory orders and fee.

(a) * * *

(3) Petitions must be accompanied by remittance of a $289 filing fee.

* * * * *

■ 5. In § 502.76, revise paragraph (b) to read as follows:

§ 502.76 Petitions-general and fee.

* * * * *

(b) Petitions must be accompanied by remittance of a $289 filing fee. [Rule 76.]

Subpart K—Shortened Procedure

■ 6. The last sentence of § 502.182 is revised to read as follows:

§ 502.182 Complaint and memorandum of facts and arguments and filing fee.

* * * The complaint must be accompanied by remittance of a $289 filing fee. [Rule 182.]

Subpart Q—Refund or Waiver of Freight Charges

■ 7. In § 502.271, revise paragraph (d)(5) to read as follows:

§ 502.271 Special docket application for permission to refund or waive freight charges.

* * * * *

(d) * * *

(5) Applications must be accompanied by remittance of a $117 filing fee.

* * * * *

Subpart S—Informal Procedure for Adjudication of Small Claims

■ 8. The last sentence of § 502.304(b) is revised to read as follows:

§ 502.304 Procedure and filing fee.

* * * * *

(b) * * * Such claims must be accompanied by remittance of an $85 filing fee.

* * * * *

PART 503—PUBLIC INFORMATION

■ 9. The authority citation for Part 503 continues to read as follows:

Authority: 5 U.S.C. 331, 552, 552a, 552b, 553; 31 U.S.C. 9701; E.O. 13526 of January 5, 2010 (75 FR 707), sections 5.1(a) and (b).

■ 10. In § 503.50, Paragraph (c)(1) introductory text, paragraphs (c)(1)(i) and (ii); the first sentence of paragraph (c)(2); paragraph (c)(3)(i), (ii) and (iii), paragraph (c)(4); and paragraph (e) are revised to read as follows:

§ 503.50 Fees for services.

* * * * *

(c) * * *

(1) Records search (including electronic search) will be performed by Commission personnel at the following rates:

(i) Search will be performed by clerical/administrative personnel at a rate of $27 per hour and by professional/executive personnel at a rate of $57 per hour.

(ii) Minimum charge for record search is $27.

(2) Charges for review of records to determine whether they are exempt from disclosure under § 503.33 must be assessed to recover full costs at the rate of $57 per hour. * * *

(3) * * *

(i) If performed by requesting party at the rate of ten cents per page (one side).

(ii) By Commission personnel, at the rate of ten cents per page (one side) plus $27 per hour.

(iii) Minimum charge for copying is $5.

* * * * *

(4) The certification and validation (with Federal Maritime Commission seal) of documents filed with or issued by the Commission will be available at $84 for each certification.

* * * * *

(e) Applications for admission to practice before the Commission for persons not attorneys at law must be accompanied by a fee of $153 pursuant to § 502.27 of this chapter.

Subpart H—Access to Any Record of Identifiable Personal Information

■ 11. In § 503.69, paragraphs (b)(1) and (2) are revised to read as follows:

§ 503.69 Fees.

* * * * *

(b) * * *

(1) The copying of records and documents will be available at the rate of ten cents per page (one side), limited to size 8¼″ x 14″ or smaller.

(2) The certification and validation (with Federal Maritime Commission seal) of documents filed with or issued by the Commission will be available at $84 for each certification.

* * * * *

PART 515—LICENSING, FINANCIAL RESPONSIBILITY REQUIREMENTS, AND GENERAL DUTIES FOR OCEAN TRANSPORTATION INTERMEDIARIES

■ 12. The authority citation for part 515 continues to read as follows:

Authority: 5 U.S.C. 553; 31 U.S.C. 9701; 46 U.S.C. 305, 40102, 40104, 40501–40503, 40901–40904, 41101–41109, 41301–41302, 41305–41307; Pub. L. 105–383,112 Stat. 3411; 21 U.S.C. 862.

Subpart A—General

■ 13. In § 515.5, paragraphs (c)(2)(i) and (ii) are revised to read as follows:

§ 515.5 Forms and Fees.

* * * * *

(c) * * *

(2) * * *

(i) Application for new OTI license as required by § 515.12(a): Automated filing $250; paper filing pursuant to waiver $1,055.

(ii) Application for change to OTI license or license transfer as required by § 515.20(a) and (b): Automated filing $125; paper filing pursuant to waiver $735.

* * * * *

Subpart D—Duties and Responsibilities of Ocean Transportation Intermediaries; Reports to Commission

■ 14. The last sentence of § 515.34 is removed and the second sentence is revised to read as follows:

§ 515.34 Regulated Persons Index.

* * * The database is available at no charge on the Commission's Web site at *www.fmc.gov.*

PART 520—CARRIER AUTOMATED TARIFFS

■ 15. The authority citation for part 520 continues to read as follows:

Authority: 5 U.S.C. 553; 46 U.S.C. 305, 40101–40102, 40501–40503, 40701–40706, 41101–41109.

Subpart B—Filing Requirements

■ 16. The last sentence of § 520.14 paragraph (c)(1) is revised to read as follows:

§ 520.14 Special permission.

* * * * *

(c) * * *

(1) * * * Every such application must be submitted to the Bureau of Trade Analysis and be accompanied by a filing fee of $299.

* * * * *

PART 530—SERVICE CONTRACTS

■ 17. The authority citation for part 530 continues to read as follows:

Authority: 5 U.S.C. 553; 46 U.S.C. 305, 40301–40306, 40501–40503, 41307.

Subpart B—Filing Requirements

■ 18. In § 530.10 paragraph (c) introuductory text is revised to read as follows:

§ 530.10 Amendment, correction, cancellation, and electronic transmission errors.

* * * * *

(c) *Corrections.* Requests must be filed, in duplicate, with the

Commission's Office of the Secretary within forty-five (45) days of the contract's filing with the Commission, accompanied by remittance of an $95 service fee, and must include:

* * * * *

PART 531—NVOCC SERVICE ARRANGEMENTS

■ 19. The authority citation for part 531 continues to read as follows:

Authority: 46 U.S.C. 40103.

■ 20. In § 531.8 paragraph (b)(1) is revised to read as follows:

§ 531.8 Amendment, correction, cancellation, and electronic transmission errors.

* * * * *

(b) * * *

(1) Requests must be filed, in duplicate, with the Commission's Office of the Secretary within forty-five (45) days of the contract's filing with the Commission, accompanied by remittance of an $95 service fee.

* * * * *

PART 535—AGREEMENTS BY OCEAN COMMON CARRIERS AND OTHER PERSONS SUBJECT TO THE SHIPPING ACT OF 1984

■ 21. The authority citation for part 535 continues to read as follows:

Authority: 5 U.S.C. 553; 46 U.S.C. 305, 40101–40104, 40301–40307, 40501–40503, 40901–40904, 41101–41109, 41301–41302, and 41305–41307.

Subpart D—Filing of Agreements

■ 22. In § 535.401 paragraphs (g) and (h) are revised to read as follows:

§ 535.401 General requirements.

* * * * *

(g) *Fees.* The filing fee is $3,218 for new agreements and any agreement modifications requiring Commission review and action; $526 for agreements processed under delegated authority (for types of agreements that can be processed under delegated authority, see § 501.27(e) of this chapter); $303 for carrier exempt agreements; and $90 for terminal exempt agreements.

(h) The fee for a request for expedited review of an agreement pursuant to § 535.605 is $159. This fee must be paid in addition to the carrier agreement filing fee required by paragraph (g) of this section.

PART 540—PASSENGER VESSEL FINANCIAL RESPONSIBILITY

■ 23. The authority citation for part 540 continues to read as follows:

Authority: 5 U.S.C. 552, 553; 31 U.S.C. 9701; 46 U.S.C. 305, 44101–44106.

Subpart A—Proof of Financial Responsibility, Bonding and Certification of Financial Responsibility for Indemnification of Passengers for Nonperformance of Transportation

■ 24. The last two sentences in § 540.4 paragraph (e) are revised to read as follows:

§ 540.4 Procedure for establishing financial responsibility.

* * * * *

(e) * * * An application for a Certificate (Performance), excluding an application for the addition or substitution of a vessel to the applicant's fleet, must be accompanied by a filing fee remittance of $2,284 An application for a Certificate (Performance) for the addition or substitution of a vessel to the applicant's fleet must be accompanied by a filing fee remittance of $1,224.

* * * * *

Subpart B—Proof of Financial Responsibility, Bonding and Certification of Financial Responsibility to Meet Liability Incurred for Death or Injury to Passengers or Other Persons on Voyages

■ 25. The last two sentences in § 540.23 paragraph (b) are revised to read as follows:

§ 540.23 Procedure for establishing financial responsibility.

* * * * *

(b) * * * An application for a Certificate (Casualty), excluding an application for the addition or substitution of a vessel to the applicant's fleet, must be accompanied by a filing fee remittance of $1,085. An application for a Certificate (Casualty) for the addition or substitution of a vessel to the applicant's fleet must be accompanied by a filing fee remittance of $593.

* * * * *

Subpart D—Petitions for Section 19 Relief

■ 26. Revise § 550.402 to read as follows:

§ 550.402 Filing of petitions.

Except for petitions for rulemaking, all requests for relief from conditions unfavorable to shipping in the foreign trade must be by written petition. An original and fifteen copies of a petition for relief under the provisions of this part must be filed with the Secretary, Federal Maritime Commission, Washington, DC 20573. The petition must be accompanied by remittance of a $289 filing fee.

PART 555—ACTIONS TO ADDRESS ADVERSE CONDITIONS AFFECTING U.S.-FLAG CARRIERS THAT DO NOT EXIST FOR FOREIGN CARRIERS IN THE UNITED STATES

■ 27. The authority citation for part 555 continues to read as follows:

Authority: 5 U.S.C. 553; sec. 10002 of the Foreign Shipping Practices Act of 1988 (46 U.S.C. 42301–42307).

■ 28. The last sentence in § 555.4 paragraph (a) is revised to read as follows:

§ 555.4 Petitions.

(a) * * * The petition must be accompanied by remittance of a $289 filing fee.

* * * * *

PART 560—ACTIONS TO ADDRESS CONDITIONS UNDULY IMPAIRING ACCESS OF U.S.-FLAG VESSELS TO OCEAN TRADE BETWEEN FOREIGN PORTS

■ 29. The authority citation for part 560 continues to read as follows:

Authority: 5 U.S.C. 553; secs. 13(b)(6), 15 and 17 of the Shipping Act of 1984, 46 U.S.C. 305, 40104, and 41108(d); sec. 10002 of the Foreign Shipping Practices Act of 1988 (46 U.S.C. 42301–42307).

■ 30. The last sentence in § 560.3 paragraph (a)(2) is revised to read as follows:

§ 560.3 Petitions for relief.

(a) * * *

(2) * * * The petition must be accompanied by remittance of a $289 filing fee.

* * * * *

By the Commission.

Karen V. Gregory,

Secretary.

[FR Doc. 2016–12326 Filed 5–26–16; 8:45 am]

BILLING CODE 6731–AA–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 79

[MB Docket No. 11–43; FCC 16–37]

Video Description: Implementation of the Twenty-First Century Communications and Video Accessibility Act of 2010

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Commission seeks comment on proposals to expand the amount of and access to video described programming, for the benefit of consumers who are blind or visually impaired.

DATES: Comments are due on or before June 27, 2016; reply comments are due on or before July 26, 2016.

ADDRESSES: You may submit comments, identified by MB Docket No. 11–43, by any of the following methods:

- *Federal Communications Commission (FCC) Electronic Comment Filing System (ECFS) Web site: http://fjallfoss.fcc.gov/ecfs2/.* Follow the instructions for submitting comments.
- *Mail:* U.S. Postal Service first-class, Express, and Priority Mail must be addressed to the FCC Secretary, Office of the Secretary, Federal Communications Commission, 445 12th Street SW., Washington, DC 20554. Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.
- *Hand or Messenger Delivery:* All hand-delivered or messenger-delivered paper filings for the FCC Secretary must be delivered to FCC Headquarters at 445 12th Street SW., Room TW–A325, Washington, DC 20554.
- *People with Disabilities:* Contact the FCC to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by email: *FCC504@fcc.gov* or phone: 202–418–0530; or TTY: 202–418–0432.

For detailed instructions for submitting comments and additional information on the rulemaking process, see the ''PROCEDURAL MATTERS'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Lyle Elder, *Lyle.Elder@fcc.gov,* of the Media Bureau, Policy Division, (202) 418–2120. For additional information concerning the Paperwork Reduction Act information collection requirements contained in this document, contact Cathy Williams at (202) 418–2918 or send an email to *PRA@fcc.gov.*

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *Notice of Proposed Rulemaking* (*NPRM*), FCC 16–37, adopted on March 31, 2016, and released on April 1, 2016. The full text of this document is available electronically via the FCC's Electronic Document Management System (EDOCS) Web site at *http://fjallfoss.fcc.gov/edocs_public/* or via the FCC's Electronic Comment Filing System (ECFS) Web site at *http://fjallfoss.fcc.gov/ecfs2/.* Documents will be available electronically in ASCII, Microsoft Word, and/or Adobe Acrobat. This document is also available for public inspection and copying during regular business hours in the FCC Reference Information Center, Federal Communications Commission, 445 12th Street SW., CY–A257, Washington, DC 20554. Alternative formats are available for persons with disabilities (Braille, large print, electronic files, audio format), by sending an email to *fcc504@fcc.gov* or calling the Commission's Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY).

I. Introduction

1. Since the video description rules were reinstated, they have provided substantial benefits to persons who are blind or visually impaired by making television programming more accessible. Through video description, individuals who are blind or visually impaired can independently enjoy and follow popular television programs and be more fully included in the shared cultural experience that television offers. The Federal Communications Commission (''FCC'' or ''the Commission'') is now proposing revisions to our rules that would expand the availability of, and support consumer access to, video described programming. In 2011, the Commission took the initial step in expanding access to video description, by reinstating the 2000 rules as directed by Section 202 of the Twenty-First Century Communications and Video Accessibility Act of 2010 (''CVAA'').[1] The CVAA gives the Commission authority, subject to certain limitations, to issue additional regulations, if the benefits of doing so outweigh the costs.[2] As discussed in greater detail below, we tentatively conclude that the substantial benefits for individuals who are blind or visually impaired outweigh the likely minimal costs of the proposals we make in this *NPRM.*

2. Specifically, we propose the following revisions to our video description rules:

- An increase in the amount of described programming on each included network (a network carried on a programming stream or channel on which a broadcaster or MVPD is required to provide video description) carried by a covered broadcast station or multichannel video programming distributor (''MVPD''), from 50 hours per calendar quarter to 87.5;
- An increase in the number of included networks carried by covered distributors, from four broadcast and five nonbroadcast networks to five broadcast and ten nonbroadcast networks;
- Adoption of a no-backsliding rule, which would ensure that once a network is designated an ''included network'' required to provide description, it would remain an ''included network'' even if it falls out of the top five or top ten ranking;
- Removal of the threshold requirement that nonbroadcast networks reach 50 percent of pay-TV (or MVPD) households in order to be subject to inclusion;
- A requirement that covered distributors provide dedicated customer service contacts who can answer questions about video description; and
- A requirement that petitions for exemptions from the video description requirements, together with comments on or objections to such petitions, be filed with the Commission electronically.

We seek comment on our tentative conclusion regarding the costs and benefits of these proposed rules, on the proposed rules themselves, on appropriate timelines for the proposed rules, and on other possible changes to the rules to ensure that blind and visually impaired consumers have access to television programming.

II. Background

3. The CVAA was enacted on October 8, 2010 for the purpose of ensuring that individuals with disabilities are able to fully utilize modern communications services and equipment and to better access video programming.[3] As part of

[1] *Video Description: Implementation of the Twenty-First Century Communications and Video Accessibility Act of 2010,* Report and Order, 26 FCC Rcd 11847, 11849, para. 3 (2011) (''*2011 Order*'').

[2] Public Law 111–260, 124 Stat. 2751, sec. 202 (2010). *See* 47 U.S.C. 613(f)(4).

[3] Twenty-First Century Communications and Video Accessibility Act of 2010, Public Law 111–260, 124 Stat. 2751 (2010). *See* H.R. Rep. No. 111–563, 111th Cong., 2d Sess. at 19 (2010); S. Rep. No. 111–386, 111th Cong., 2d Sess. at 1 (2010).

this legislation, Congress mandated that the Commission reinstate its previously adopted video description rules for television programming, required periodic reports on issues related to video description, and granted the Commission continuing authority to adopt additional regulations so long as the benefits of those new regulations outweigh their costs. Video description makes video programming accessible to individuals who are blind or visually impaired through ''[t]he insertion of audio narrated descriptions of a television program's key visual elements into natural pauses between the program's dialogue,'' and is typically provided through the use of a secondary audio stream, which allows the consumer to choose whether to hear the narration by switching from the main program audio.

4. In August 2011, the Commission reinstated the video description regulations that previously had been adopted in 2000, requiring certain television broadcast stations and MVPDs to provide video description for a portion of the video programming that they offer to consumers on television.[4] These covered broadcasters and MVPDs are required to provide video described programming only on certain networks, as defined by our rules. The Commission's rules play a key role in affording better access to television programs for individuals who are blind or visually impaired, ''enabling millions more Americans to enjoy the benefits of television service and participate more fully in the cultural and civic life of the nation.'' [5]

5. The Commission's video description rules require commercial television broadcast stations that are affiliated with ABC, CBS, Fox, or NBC and are located in the top 60 television markets to provide 50 hours per calendar quarter of video described prime time or children's programming.[6] In addition, MVPD systems that serve 50,000 or more subscribers must provide 50 hours of video description per calendar quarter during prime time or children's programming on each of the top five national nonbroadcast networks that they carry on those systems.[7] The nonbroadcast networks currently subject to these video description requirements are USA, TNT, TBS, History, and Disney Channel.[8] Any programming initially aired with video description must include video description if it is re-aired on the same station or MVPD channel, unless the station or MVPD is using the technology for another program-related purpose.

6. The rules also impose video description ''pass through'' obligations on all network-affiliated broadcast stations regardless of market size, and on all MVPDs regardless of the number of subscribers. Specifically, any broadcast station affiliated or otherwise associated with a television network must pass through video description when it is provided by the network, if the station has the technical capability necessary to do so [9] and if that technology is not being used for another purpose related to the programming. Similarly, MVPD systems of any size must pass through video description provided by a broadcast station or nonbroadcast network, if the channel on which the MVPD distributes the station or programming has the technical capability necessary to do so and if that technology is not being used for another purpose related to the programming. Broadcasters and MVPDs were required to be in compliance with the video description requirements beginning on July 1, 2012. The rules permit covered entities to seek a full or partial exemption based on economic burden; we have received no such exemption requests to date.

7. Pursuant to the direction of the CVAA, not more than two years after the completion of the phase-in of the reinstated video description rules, the Commission submitted a report to Congress with findings relating to the costs and benefits of video description ''in television programming'' and ''in video programming distributed on the Internet.'' [10] With regard to the video description rules that are currently in place, the report concluded that ''[t]he availability of video description on television programming has provided substantial benefits for individuals who are blind or visually impaired.'' Notably, the report found that video description greatly enhances the experience of viewing video programming because viewers who are blind or visually impaired no longer miss critical visual elements of television programming and, therefore, can fully understand and enjoy the program without having to rely on their sighted family members and friends to narrate these visual elements. Commenters expressed that this ability to watch video programming independently is an incredibly important benefit of video description. In addition, the report found that ''industry appears to have largely complied with their responsibilities under the Commission's 2011 rules,'' and that the rules have been implemented without exceptional or unexpected costs. It also found, however, that ''consumers report the need for increased availability of and easier access to video-described programming.'' With respect to video programming distributed on the Internet, the report found that there would be substantial benefits to wider availability, but that there were potential technical challenges and insufficient information to analyze costs. In February of 2016, the Video Description Working Group of the Video Programming Subcommittee of the FCC's Disability Advisory Committee released a list of recommended issues for our consideration; those issues are addressed throughout the item.[11]

III. Authority

8. *Additional Regulations and Cost/Benefit Analysis.* As discussed in more detail below, we tentatively conclude

[4] 47 CFR 79.3. *See generally 2011 Order. See also Video Description: Implementation of the Twenty-First Century Communications and Video Accessibility Act of 2010,* Notice of Proposed Rulemaking, 26 FCC Rcd 2975 (2011) (''*Reinstatement NPRM*'').

[5] *2011 Order,* 26 FCC Rcd at 11848, para. 1.

[6] Although the reinstated rules originally applied to the top 25 television markets, as of July 1, 2015, the rules were extended to the top four broadcasters in the top 60 television markets. 47 CFR 79.3(b)(2).

[7] For purposes of the rules, the top five national nonbroadcast networks are defined by an average of the national audience share during prime time of nonbroadcast networks that reach 50 percent or more of MVPD households and have at least 50 hours per quarter of prime time programming that is not live or near-live or otherwise exempt under the video description rules. 47 CFR 79.3(b)(4).

[8] *Video Description: Implementation of the Twenty-First Century Communications and Video Accessibility Act of 2010,* Order and Public Notice, 30 FCC Rcd 2071, 2071, para. 1 (2015) (''*Update Order*''). The list of the top five networks is updated every three years in response to any changes in ratings. 47 CFR 79.3(b)(4). The *Update Order* was the first of these periodic updates. Absent any revision to our rules, the next update will be in effect on July 1, 2018 based on the ratings for the time period from October 2016 to September 2017, and will be announced earlier in 2018.

[9] A station or MVPD system is technically capable of passing through video description if it has virtually all necessary equipment and infrastructure to do so, except for items that would be of minimal cost. *2011 Order,* 26 FCC Rcd at 11861, para. 27. *See also 2000 Order,* 15 FCC Rcd at 15243, para. 30. We expect that all stations and MVPDs now have this capability, because of the requirement to provide audible emergency information to persons who are blind or visually impaired, which is also accomplished by means of a secondary audio stream.

[10] *Video Description: Implementation of the Twenty-First Century Communications and Video Accessibility Act of 2010,* Report to Congress, 29 FCC Rcd 8011 (2014) (''*2014 Report*''). *See* 47 U.S.C. 613(f)(3).

[11] *Recommendation of the FCC Disability Advisory Committee, Video Description Working Group of the Video Programming Subcommittee,* MB Docket 11–43 (Feb. 23, 2016) (''*DAC Letter*'').

that the statutory requirement for the Commission to issue additional video description regulations is satisfied because ''the need for and benefits of'' providing video described programming as proposed here would be ''greater than the technical and economic costs'' if the rules are adopted. The statute grants the Commission ''continuing authority'' to regulate the provision of video described programming. Our continuing authority, however, is contingent on a finding that the benefits of additional video described programming outweigh the costs. Specifically, we may issue ''additional regulations'' if we determine that ''the need for and benefits of'' any video described programming required by the new rules ''are greater than the technical and economic costs.'' Furthermore, Congress directed us not to make such a determination until at least two years after release of the 2014 Report; as a result, the earliest the Commission can issue additional regulations is June 30, 2016. We therefore will take full consideration of the Report's findings, as well as the comments in this proceeding, when determining the relative costs and benefits of adopting additional requirements.

9. The 2014 Report found that ''[v]ideo description provides significant benefits to individuals who are blind or visually impaired'' by allowing ''them greater independence and the ability to follow and understand television programs.'' One commenter to the proceeding expressed that she enjoys video description immensely when it is available because ''[m]ost television shows are pointless to me unless I have description.'' Commenters who provided input for the Report described how video description allows them to directly follow the visual elements of television programming, including ''expressions, scene changes, visual jokes, and even things like visual clues in a murder mystery.'' For example, one commenter noted that without video description ''I'd just hear exciting music and have to guess what was happening, but now I can hear how the good guys caught the bad guys, or about the significant looks exchanged by two characters, or how the good guy escaped from some impossible situation. It's great!'' Commenters explained that this information is essential for providing access to the storytelling in what is a fundamentally visual medium, including for viewers who are not blind but who still can have difficulty with small visual details. Of arguably even more significance is the way this direct access to video programming provides greater independence to persons who are blind or visually impaired. Commenters made clear the immense value of not having to rely on spouses, family members, or friends to keep them ''up to speed'' on television programming. They talked about the value of being able to enjoy a program without waiting for someone else to want to watch the same thing, and ''interrupt their own viewing pleasure to try to tell [them] what was going on.'' As Mr. Rodgers' comment makes clear, the benefits of this independence accrue not just to viewers who are blind or visually impaired, but to the members of their households as well. We seek comment on whether there are any other studies or data points about the use and benefits of video description that should inform our deliberations.

10. While the benefits of video description are extensive, video description itself remains in relatively limited supply, and can be difficult to access even where it exists. The 2014 Report noted that consumers ''[o]verwhelmingly . . . desire an increased amount of video description in television programming''; have ''concerns regarding the availability of information about which television programs are video-described''; and ''express frustration with the quality of customer support service for video description.''

11. The 2014 Report also found that there were ''no significant issues with regard to the technical or creative aspects'' of providing video description, and that

> [t]he costs of video description are consistent with the expectations of industry at the time of rule adoption, and covered entities do not indicate that the costs of video description have impeded their ability to comply with the video description rules.

At the time of the 2014 Report, these costs included the ''start-up'' costs of developing the technical capability to provide video description, but, as explained in the Report, every distributor should now have that technical capacity.[12] The costs also include the actual description of video programming. According to the National Association of Broadcasters (''NAB''), the one-time cost to have an hour of programming video described can range from $2,500 to $4,100. The 2014 Report also observed that there had been no petitions for exemption based on economic burden, and that has continued to be the case even after the requirements were extended to broadcasters in smaller television markets. Since the initial rules were adopted, some distributors have provided video description in live and other marquee events.[13] In the 2014 Report, industry commenters noted that some included networks provide more hours than are required, and anticipate that the amount of described programming by some networks would grow even in the absence of additional regulation.

12. When the Commission reinstated the video description rules in 2011, it anticipated that the reinstated rules would ''enabl[e] millions more Americans to enjoy the benefits of television service and participate more fully in the cultural and civic life of the nation,'' and considered it ''unlikely that the modest requirement of 50 hours per quarter will be economically burdensome.'' Our experience to date has confirmed the soundness of those predictions. As discussed below, we are proposing to increase the amount of described programming and make it more accessible. Given the extensive benefits to consumers of the existing requirements, we believe that they will benefit further from the proposed new requirements. We also have no evidence that the total cost of the additional description requirements or our other proposals will impose substantial

[12] As of May 26, 2015, covered broadcasters and MVPDs are required to have the necessary equipment and infrastructure to deliver a secondary audio stream in order to provide timely, audible emergency information to consumers who are blind or visually impaired, which is required by our rules without exception for technical capability. Since video description is also provided via the secondary audio stream, compliance with the emergency information requirement will give covered broadcasters and MVPDs the technical capability to comply with the video description requirements. 47 CFR 79.2(b)(2)(ii) (implementing 47 U.S.C. 613(g)). *See also 2014 Report,* 29 FCC Rcd at 8028–29, para. 37.

[13] For example, people who are blind or visually impaired were able to join ''millions of Americans enjoying [the December 3, 2015] live broadcast of *The Wiz* on NBC, thanks to video description of the production.'' Alix Hackett, *Perkins Students Enjoy Accessible Broadcast of 'The Wiz Live!',* Dec. 4, 2015, *http://www.perkins.org/stories/news/perkins-students-enjoy-accessible-broadcast-of-the-wiz-live.* Carl Augusto, CEO of the American Foundation for the Blind, called the live description of The Wiz a ''godsend to people with vision loss.'' *Comcast, NBC Add Video Descriptions to 'The Wiz Live!',* Multichannel News, Dec. 2, 2015, *http://www.multichannel.com/news/content/comcast-nbc-add-video-descriptions-wiz-live/395671* (''This nationally described television broadcast will not only be a godsend to people with vision loss, but also to those who describe action to people with vision loss, and the general public, who will learn about the importance of audio description.''). CBS broadcast a two-hour special called ''Stevie Wonder: Songs in the Key of Life—An All-Star Grammy Salute'' with video description. *See CBS' Stevie Wonder Special to Air with Video Description for Visually Impaired,* Feb. 11, 2015, *http://www.broadwayworld.com/bwwtv/article/CBS-Stevie-Wonder-Special-to-Air-with-Video-Description-for-Visually-Impaired-20150211.*

economic burdens. Given the information currently in the record in this proceeding, we tentatively conclude that ''the need for and benefits of'' the increased availability and accessibility of video described programming would be ''greater than the technical and economic costs'' if the rules we propose are adopted. We seek comment on this tentative conclusion and the analysis set forth above. To the extent possible, commenters should provide specific data and information, such as actual or estimated dollar figures for each specific cost or benefit addressed, including a description of how the data or information was calculated or obtained, and any supporting documentation or other evidentiary support.

13. *Limitation.* If the Commission decides to issue additional regulations, the CVAA places a restriction on any increase in the number of hours required to be video described. Paragraph (4)(B) of the CVAA, entitled ''Limitation,'' reads:

> If the Commission makes the determination under subparagraph (A) and issues additional regulations, the Commission may not increase, in total, the hour requirement for additional described programming by more than 75 percent of the requirement in the regulations reinstated under paragraph (1).

The requirement in the reinstated regulations is the same for all included networks—50 hours of video description, per calendar quarter.[14] 75 percent of those 50 hours is 37.5 hours. We therefore read this provision to grant the Commission continuing authority to increase the per-network requirement by 37.5 hours (*i.e.,* up to 87.5 hours per quarter), but no more than this amount.

14. We find unpersuasive an alternative reading that suggests this provision caps the number of hours of video description a distributor must provide across all covered networks it carries. First, the CVAA's ''Limitation'' provision says nothing about any increase in the hour requirement being constrained by the number of included networks. The CVAA and reinstated rules imposed the ''hour requirement'' on MVPDs on a per-channel basis, and on broadcasters on a per-programming stream basis. Thus, we believe that the continuing authority limitation is best interpreted as applying on a per-channel and per-programming stream basis; the alternative reading would import an aggregate calculation that is simply foreign to the statute and regulations. Second, the Commission cannot control the aggregate number of hours of described programming carried by a given distributor, because that depends on the networks they choose to carry. For example, one MVPD might choose to carry a large number of covered networks, while another might carry few of them, making an aggregate limitation apply differently to different MVPDs. For this reason, we believe an approach that focuses on the hours required for individual included networks, rather than on a theoretical aggregate number of hours that a distributor may or may not carry, better effectuates Congress's goals. We read the phrase ''in total'' in the statute to mean that if the Commission increases the required hours per-network of video-described programming in increments, the total increase cannot exceed 75 percent. Finally, we think that if Congress intended to restrict the Commission from increasing the number of included entities, it would have done so explicitly, just as it did by specifying the maximum number of covered DMAs that the rule could be revised to reach over time. We seek comment on our analysis of the statute's hourly limitation.

15. *Additional Designated Market Areas.* In addition, the CVAA lays out a clear timeline for phasing in the video description regulations in designated market areas (''DMAs'') beyond the 25 included in the initial reinstated rules. A DMA is a Nielsen-defined television market consisting of a unique group of counties. The United States is divided into 210 DMA markets. Nielsen identifies television markets by placing each U.S. county (except for certain counties in Alaska) in a market based on measured viewing patterns and by MVPD distribution. The expansion to the top 60 DMAs occurred in 2015, pursuant to the existing rules. We may not expand beyond these 60 television markets, however, until 2020 at the earliest, and then only after completion of an additional study and report to Congress. The explicit timeline established by the CVAA does not contemplate any alternative approach to expanding the number of covered DMAs. As a result, it limits the Commission's authority to issue video description rules, at this time, to the top 60 television markets currently covered. We seek comment on this understanding of the scope of our authority.

16. *Television Programming.* Finally, we limit our proposals to programming ''transmitted for display on television.'' The 2014 Report did consider the issues, costs, and benefits of ''[v]ideo description in video programming distributed on the Internet,'' per the directive of the CVAA. The report discussed a range of comments supportive and skeptical of our authority to impose video description requirements on programming distributed on the Internet. We do not propose taking any action at this time with regard to video description on Internet programming.

IV. Increased Availability of Video Described Programming

17. We propose to increase the quarterly requirement for video described programming to 87.5 hours and to require six additional networks to provide such programing. The existing requirements have proven to be highly beneficial to persons who are blind or visually impaired, and we believe that these proposals will yield similar benefits. At the same time, we do not anticipate that the marginal cost of additional described programming would be higher than it is under the current rules or that the total cost of the requirements would be economically burdensome. As discussed above, in the 2014 Report we noted that the one-time cost to have an hour of programming video described can range from $2,500 to $4,100. This would constitute roughly 0.08–0.20 percent of the budget of an episode of an hour-long television drama, which regularly costs between $2.0 and $3.0 million.[15] We seek comment on whether there will be any other costs associated with the proposed increase. Accordingly, as noted above, we tentatively conclude that the benefits of our proposal will outweigh the costs, and we seek input on this tentative conclusion.

A. Hours per Included Network

18. As discussed above, the CVAA gives us authority to increase the number of hours of described programming required to be aired on each included broadcast and nonbroadcast network carried by an entity subject to the rules, from 50 per quarter to no more than 87.5. Given the extensive benefits and reasonable costs of video described programming, we propose to revise our rules to require the full 87.5 hours per quarter, per included network. Consumers have supported an increase in available video described programming. Although we propose to increase the total number of hours to the

[14] The rules as reinstated require distributors—broadcast stations and covered MVPDs—to provide video description. As a practical matter, however, the included networks themselves, rather than the broadcast stations and MVPDs, generally bear the efforts of preparing and providing video description, which the distributors pass through. *2011 Order,* 26 FCC Rcd at 11851–52, para. 8.

[15] *See* Bill Carter, *Cable TV, the Home of High Drama,* N.Y. Times, Apr. 5, 2010, at B1.

maximum extent permissible under the CVAA, the total amount of hours required per covered network will remain relatively small (*i.e.,* 87.5 hours per quarter amounts to approximately 6 hours and 45 minutes per week in a 13 week calendar quarter). As discussed above in paragraph 11, we have no evidence of compliance difficulties for covered distributors or the currently-included networks, and we do not believe any would arise if a limited amount of additional programming were required. Comments filed in the 2014 Report proceeding indicate that at least some networks are already offering as much described programming as would be required under the proposed revision to the rules. As discussed above, we anticipate that ''the need for and benefits of'' the increased availability of video described programming would be ''greater than the technical and economic costs'' of providing this additional video described programming. We seek comment on this proposal.

19. Commenters in this docket previously have expressed concern about having sufficient eligible prime time and children's programming to meet the requirement. In the 2011 Order, the Commission ''note[d] and acknowledge[d] NCTA's point that due to special circumstances, a covered network could theoretically have fewer than 50 hours of scheduled prime-time or children's programming that can count toward the requirement in a given quarter.'' However, the Commission ''anticipate[d] that these instances [would] be exceedingly rare'' because included networks ''air many, many hours of prime-time and children's programming each quarter.'' The Commission suggested that, if such a situation arose, a programming distributor or provider could seek a waiver for the relevant quarter under the Commission's general waiver authority. No such waivers have been requested under the existing rules. However, given the proposed increase in described hours, we seek comment on whether we should make any other changes to the rules to provide more flexibility. For instance, should we allow some amount of non-prime time, non-children's described programming to count toward the increased requirement? If we do, should we continue to require that at least 50 hours per quarter be provided in either prime time or children's programming? Should we require that any described programming that is counted toward the requirement run between 6 a.m. and Midnight local time? We seek comment on these questions.

B. Covered Networks

20. We propose to extend the requirement to provide video description to additional networks. It currently applies when a covered broadcast station carries one of four named commercial broadcast networks (ABC, CBS, Fox, and NBC) or when a covered MVPD carries one of five popular nonbroadcast networks. We propose to increase these to five broadcast, and ten nonbroadcast, networks. The benefits of video described programming are abundant, and experience to date has borne out predictions regarding the reasonable costs of adding description to programming.

21. Given the obvious parallels to closed captioning, which is required on virtually all television programming, it is not surprising that commenters have called for expanding the requirement for video description, with some going so far as to suggest that we echo the closed captioning requirement to extend the rules to virtually all programming. In the CVAA, however, Congress directed us to expand the video description rules in a measured fashion. Any proposed expansion must satisfy the statutory test that asks whether ''the need for and benefits of'' the additional video described programming would be ''greater than the technical and economic costs'' of providing it. In recognition of this directive for a measured approach, we propose a limited increase in the number of included broadcast and nonbroadcast networks on which covered broadcasters and MVPDs must provide video description. We believe that this approach will have a significant benefit to viewers who are blind or visually impaired, given the popularity of the additional programming networks. We seek comment below on whether we should add more or fewer networks at this time, and what the grounds would be for choosing any specific number of networks.

22. First, we propose to revise our rules to require any commercial television broadcast station that (i) is affiliated with ABC, CBS, Fox, and NBC or with any other of the top five commercial television broadcast networks, and (ii) is located in the top 60 television markets, to provide 87.5 hours per calendar quarter of video described prime time or children's programming on each programming stream on which they carry these networks. The original video description rules that Congress directed the Commission to reinstate specifically identified ABC, CBS, Fox, and NBC as subject to the description requirement. We propose to revise our rules to include those four networks, as well as any others in the top five nationally, determined triennially.[16] Barring any significant changes to the marketplace, we anticipate this rule change would result in one additional broadcast network being aired with 87.5 hours per quarter (or approximately 6 hours and 45 minutes per week in a 13 week calendar quarter) of video described programming.

23. In addition, we propose to revise our rules to require any MVPD system that serves 50,000 or more subscribers to provide 87.5 hours of video description per calendar quarter during prime time or children's programming on each channel on which they carry one of the top ten national nonbroadcast networks.[17] In adopting the current video description rules, the Commission recognized that the popularity of programming networks shifts over time, and therefore adopted a requirement that we review network ratings every three years to determine the top five. We propose to continue the existing review process, but to expand the number of included networks from five to ten. Because the number of nonbroadcast networks is much larger than the number of broadcast networks,[18] we

[16] The ''top five'' commercial broadcast networks will be determined in the same fashion as the nonbroadcast networks under the existing and proposed rules. Thus, every three years they will be the top five as determined by an average of the national audience share during prime time of broadcast networks, as calculated by Nielsen for the preceding ratings year, and that has at least 50 hours per quarter of prime time programming that is not live or near-live or otherwise exempt under the video description rules. As discussed above, the ''top five'' will include ABC, CBS, Fox, and NBC, regardless of their relative rankings. In the event that one or more of those named networks suffers a sustained drop below fifth place in relative broadcast network rankings, the ''top five'' broadcast networks for the purposes of these rules could consist of more than five networks.

[17] As under the current rules, these ''top ten'' would be determined by an average of the national audience share during prime time of nonbroadcast networks, as calculated by Nielsen for the preceding ratings year, and that has at least 50 hours per quarter of prime time programming that is not live or near-live or otherwise exempt under the video description rules.

[18] MVPD subscribers to the most popular tiers of service have access to more than six times as many nonbroadcast networks as broadcast networks. *Implementation of Section 3 of the Cable Television Consumer Protection and Competition Act of 1992; Statistical Report on Average Rates for Basic Service, Cable Programming Service, and Equipment,* MM Docket No. 92–266, Report on Cable Industry Prices, 29 FCC Rcd 14895, 14905–06, Tbls. 4, 5 (MB 2014) (showing an average of 250.8 total available channels on the most subscribed tiers of service, of which an average of 31.6 are local broadcast channels; these include

believe it is appropriate to include a larger increase in covered nonbroadcast networks. If adopted, once the new rules are in effect, a covered MVPD would be required to provide 87.5 hours per quarter of video described programming on each of the top ten nonbroadcast networks that it carries. Below, we discuss the timing for implementation of these proposed revisions.

24. With this proposal, we seek to ensure that consumers are able to realize the benefits of video description, keeping in mind our Congressional directive to proceed judiciously with any expansion of the requirements. Should we include more, or fewer, additional networks at this time? Commenters should provide justifications for any specific change in the number of included networks. Would an alternative approach to determining included networks, such as a rule that included networks based on a minimum average viewership level, or gross network revenues, be preferable to one based on relative prime time broadcast rankings? We seek comment on the proposed approach and any alternatives.

C. Other Changes

25. *No Backsliding.* We propose to adopt a ''no-backsliding'' requirement. Such a rule would state that once a network is designated an ''included network'' required to provide description, it would remain an ''included network'' even if it falls out of the top five or top ten ranking. Under the current rules, the covered nonbroadcast networks are those in the top five, recalculated triennially, and when a network drops from the top five during the applicable ratings period, as Nickelodeon did between 2012 and 2015,[19] MVPDs are no longer required to provide video description on that network once the triennial period has ended.[20] In 2011, the Commission declined to adopt a ''no backsliding'' rule, noting that it did not have authority at that time to go beyond the scope of the reinstated rules except to the extent provided by the CVAA. The Commission also noted, however, that it would have authority to adopt such a rule ''after the passage of time and a review of [the rules'] impact.''

26. Given the passage of time and the continuing authority granted to the Commission in the CVAA to adopt additional video description regulations, we believe that we now have authority to adopt a ''no-backsliding'' rule. In addition, we believe that there are substantial policy benefits to ensuring that video described programming continues to be offered on networks currently subject to the rules. Once a broadcaster or MVPD begins to carry video described programming on a given network, it creates an expectation in consumers that they will be able to rely on that channel for described programming in the future. A ''no-backsliding'' rule would ensure that such consumer expectations are fulfilled, and would also result in an increased amount of video described programming for individuals who are blind or visually impaired, as the popularity of networks shifts over time and new networks become subject to the rule. Further, we believe that the burden of continued compliance by formerly covered networks would be limited to the actual costs of describing specific programs, which as discussed above are low relative to the overall costs of television production. Since any included network would be broadcast or carried with video description for at least three years, the processes for including video description in that networks' programming will have been well established by the next time the Commission reviews rankings.

27. For these reasons, along with the extensive benefits and reasonable costs of video describing programming discussed above, we propose to adopt a ''no-backsliding'' requirement. We note that networks are not directly covered by the rules. As a practical matter, however, the included networks themselves, rather than the broadcast stations and MVPDs, generally prepare and provide video description, which the distributors pass through. Thus, under the current rules, a network that finds inclusion economically burdensome may petition, as a video programming provider, for exemption from the effect of the rules. We seek comment on whether there should also be an express exemption from the proposed no-backsliding rule for networks that drop significantly in relative rankings or overall viewership. We seek comment on this proposal.

28. *50 Percent Threshold Elimination.* The rules, as reinstated, exempt nonbroadcast networks from being included networks if they are not available in 50 percent or more of MVPD homes. Thus, for example, even if a network were one of the most popular in prime time, MVPDs would not be required to provide video description of any of that network's programming if it reaches only 40 percent of MVPD households. This exemption was initially adopted in 2001 at the request of HBO, and effectively exempts premium networks from the video description requirements.

29. We propose to eliminate the exemption for nonbroadcast networks that do not reach 50 percent or more of MVPD households. Given the increasing number of networks and fragmentation of the viewing public,[21] it is no longer clear that carriage into a given number of homes, even 50 percent, is sufficiently more important than prime time ratings for the purpose of establishing a threshold for determining which nonbroadcast networks should be covered by the video description requirements. Some premium networks offer very popular programming, including some of the ''must-watch'' shows that are very highly rated and have made an impact on popular culture. The proposed rule change would ensure that if any premium networks are among the ten most popular they will be covered. We seek comment on this proposal.

D. Timing and Coverage

30. We seek comment on the appropriate effective date of the 87.5 hours/quarter requirement and the other proposed rules changes. When we reinstated the rules in 2011, the time from their release to the full compliance date was approximately ten months. If we adopt these proposals, should we allow a similar amount of time for distributors to come into compliance? Under the current rules, July 1, 2018 is the date on which the new list of included nonbroadcast networks will go into effect, after having been determined by the ratings for the time period October 2016 to September 2017. If the

standard definition and high definition streams as well as secondary programming streams). *But see infra* note 21 (noting the ''average'' subscriber as determined by Nielsen actually receives around 180 channels; assuming the same number of broadcast channels in those average lineups, this would reflect roughly five times as many nonbroadcast as broadcast networks).

[19] Although Nickelodeon is no longer in the top five nonbroadcast networks currently subject to the video description rules, it appears that Nickelodeon has continued to provide video description voluntarily on some of its children's programming. *See* American Council of the Blind, The Audio Description Project, Video Described Shows by Network (updated 3/6/16), *available at http://www.acb.org/adp/tv.html#shows.*

[20] However, MVPDs must always pass through description on any channel if the network or broadcaster provides description, if they are not using that capacity for another program-related purpose. 47 CFR 79.3(b)(5).

[21] The number of cable channels received by the average subscriber has tripled since the original video description rules were adopted, from around 60 to more than 180. Sam Ro, *Americans Are Paying For a Lot of Channels They Don't Watch,* Business Insider, Oct. 25, 2015, *http://www.businessinsider.com/number-of-cable-channels-received-vs-viewed-2015-10. See also supra* note 18 (noting that as many as 251 channels are widely available, even if not all are received by Nielsen's ''average'' 180 channel subscriber).

proposed rules go into effect earlier than July 1, 2018, what ratings period should be used to determine the included networks? Should the effective date of these rules establish the beginning of a new three-year network-list update cycle, or should the existing cycle be retained even if the implementation of these rules requires a mid-cycle addition of some networks? In the alternative, what are the benefits and costs of delaying the effective date of the proposed revisions to the rules until July 1, 2018, and expanding the number of broadcast and nonbroadcast networks that will be determined in reference to the 2016–2017 ratings year? We propose that, as in 2015, in each cycle the Media Bureau will issue a Public Notice and undertake a process to formally establish the updated list of included networks. We seek comment on these questions and this proposal.

V. Improving Consumer Access to Video Description

31. The 2014 Report found significant consumer dissatisfaction with the availability of information about which programming is video described. This was contrary to the Commission's expectation that even without any requirements, such information would be made available ''in an accessible manner, including on [distributor] Web sites and to companies that publish television listings information.'' The 2014 Report also found that consumers are frustrated with MVPD customer service when they seek information about accessing video description. In both cases, we urged industry to take voluntary action to resolve these concerns. Therefore, we seek comment on the state of industry efforts, and propose requiring covered distributors to provide dedicated customer service contacts to assist viewers in accessing their video described programming. We tentatively conclude that the benefits of this proposal would exceed its costs, but seek comment on that tentative conclusion. We also seek comment on a requirement that covered distributors notify publishers of programming guides when a program will be video described.

32. *Programming Guide Information.* Although fragmented lists of some video described programming are available online,[22] some consumers report difficulty in finding information in programming guides, which for many remain the primary source of information about their viewing options.[23] Industry commenters state that at least some information is provided to guide services by some included networks, but even they acknowledge that the information does not always actually appear in the guides.[24] We seek comment on whether this situation has improved. Do networks provide information about video description to program guide services, and if not, why not? If they do provide such information, do program guide services choose to include that information in the guides, and if not, why not? Would a requirement that distributors consistently provide notice when a program is going to be described make guide services more likely to include that information in guides? In the children's programming context, our rules require commercial television broadcast licensees to provide to publishers of program guides information identifying programming specifically designed to educate and inform children. Has this requirement been effective in informing consumers about the availability of educational and informational children's programming, and if not, why not? Instead of, or in addition to the programming guide information, should distributors create an easily accessible list of described video programming? What are the benefits and drawbacks of requiring a centralized listing of all described video programming? Would the creation of such a listing assist in ensuring the accuracy and comprehensiveness of information available to the public? Would it be useful toward promoting best practices for identifying video described programming? We seek comment on the costs and benefits of a requirement that distributors provide information identifying video described programming to program guides, and whether we should adopt such a rule, or any other rule to improve consumer access to information about the availability of video described programming.

33. *Dedicated Customer Service Contacts.* A number of consumers have expressed significant frustration with inadequate MVPD customer support for video description services. The 2014 Report details instances where consumers would call their provider for help with video description and, after spending ''many hours on the phone with ill-informed customer services representatives'' ultimately discover that ''not one person knew what [the consumer] was talking about.'' They would be promised return or follow-up calls that never came, or directed to email addresses that proved unhelpful. In some cases it appears that customer support has been so poor that it has essentially denied some consumers the opportunity to access described programming at all. Recognizing this, the 2014 Report encouraged covered distributors to provide proper customer service training and a dedicated point of contact so that consumers could get video-description-specific customer service from knowledgeable representatives. We seek comment on whether customer service has improved since adoption of the 2014 Report. In light of previous shortcomings in customer support, we also propose to require that covered entities provide contact information for a person or office with primary responsibility for accessibility compliance issues to consumers who have questions about the availability of and access to video description services, or who request technical support. The point of contact must be able to address consumers' concerns about video description issues, and would be required to respond to consumer inquiries within one business day. Alternatively, we seek comment on whether we should adopt rules that parallel 47 CFR 79.1(i)(1–3). The rules at Section 79.1(i)(1–3) are similar to our proposal in that they require distributors of programming with closed captioning to provide contact information to consumers and to the Commission, and to assist in resolving consumers' technical problems. They also, however, establish detailed parameters for compliance with those requirements. What would be the costs and benefits of either approach? We seek comment on how, specifically, contact information should be provided to consumers under either approach.

34. *Timing.* We also seek comment on the timing for implementing the rule changes discussed in this Section. We believe that implementation of these consumer access and customer service rules could be accomplished quickly,

[22] Some covered networks provide information on their Web sites that identifies programming with video description, *see 2014 Report,* 29 FCC Rcd at 8023, para. 26, and where possible, the Commission has provided links to these network Web sites *at https://www.fcc.gov/encyclopedia/video-description.* However, consumers assert that information about video described programming available online is not always comprehensive or kept up to date. *See 2014 Report,* 29 FCC Rcd at 8023–24, para. 27.

[23] Concerns about not being able to easily locate information on video described programs also were raised by participants at the Commission's Video Description Roundtable Event held on June 22, 2015.

[24] *2014 Report,* 29 FCC Rcd at 8023, para. 26 (Although NAB claims that broadcast networks provide video description information to program guides, they acknowledge that ''this information appears not to be published regularly.'') (citing NAB Report Comments at 3–4).

but we seek input on a reasonable timeframe.

35. Are there other changes to the rules that we should adopt to improve consumer access without imposing excessive burdens on regulated parties? We seek comment on any such changes.

VI. Other Matters

36. *Electronic Filing.* We propose that petitions for exemption from the video description rules, and filings related to those requests, be filed exclusively electronically. In the 2011 Electronic Filing Report and Order,[25] the Commission amended certain of its procedural rules to increase the efficiency of Commission decision-making and modernize Commission procedures in the digital age, including adoption of a requirement to use electronic filing whenever technically feasible. In the closed captioning context, for example, requests for exemption are filed and available to the public electronically. Should we amend our rules to require the electronic filing of individual video description exemption requests in machine readable format, and further revise our rules to require that comments on and oppositions to such petitions also be filed electronically in machine readable format? We seek comment on the benefits of this approach, whether there would be associated costs, and the appropriate timing for implementing this rule change.

37. *Described Video-on-Demand.* We seek comment on a potential requirement that Video-On-Demand (''VOD'') programming include video description if it has been previously carried by that MVPD with video description. If a program is carried on a linear programming stream with description and also made available on the MVPD's VOD service, it is not clear whether MVPDs are making the video description available to the VOD viewer. We seek comment on whether this comports with our existing rules.[26] In 2014, we confirmed that closed captioning must be preserved in VOD programming.[27] Should we have a similarly explicit requirement in the video description context? What are the technical and financial costs of such a requirement for MVPDs and other distributors?

38. *Secondary Audio.* We seek comment on the state of the marketplace with regard to the use of multiple audio streams. The Commission previously has noted that ''digital transmission enables broadcasters and MVPDs to provide numerous audio channels for any given video stream,'' but that in practice many MVPDs were only capable of providing two audio streams, and many consumers were only capable of receiving two audio streams.[28] The Commission found video description was thus likely to be provided on the same secondary audio stream as other alternate audio uses, like foreign language audio tracks, but expected ''that at some point in the near future, due to voluntary upgrades and equipment obsolescence, broadcasters, MVPDs, and the installed base of consumer equipment will be sufficiently advanced to handle a video description audio track that does not conflict with any other program-related service.'' Has the marketplace moved toward a realization of this expectation? Should we revise our rules at this time to reflect any such changes, and if so, how?

39. *Terminology.* During the Commission's Video Description Roundtable, consumers observed that many other federal agencies use the term ''audio described'' to reference video programming containing audio description, rather than the term ''video described.'' We note that the CVAA uses the term ''video description,'' but we recognize that it may be preferable to use ''audio description'' if this is the term most common to a majority of federal agencies and more widely used by consumers. We seek comment on whether we should revise our rules and/or change our usage to reflect this different terminology.

40. *Statutory Authority.* As discussed above, we believe the CVAA grants the Commission ''continuing authority'' to regulate the provision of video described programming. We seek comment on our statutory authority to adopt the changes discussed above, both the proposed rules and the others on which we seek comment. Are our proposals above consistent with the CVAA?

41. *Other Comments Requested.* Finally, we invite comment on any other changes the Commission should consider making to the video description rules. For any other changes proposed, comments should include potential costs and benefits of such changes.

VII. Procedural Matters

A. Initial Regulatory Flexibility Act

42. As required by the Regulatory Flexibility Act of 1980, as amended (''RFA''),[29] the Commission has prepared this present Initial Regulatory Flexibility Analysis (''IRFA'') concerning the possible economic impact on small entities by the policies and rules proposed in the *Notice.* Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments as specified in the *Notice.* The Commission will send a copy of the *Notice,* including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration.[30] In addition, the *Notice* and this IRFA (or summaries thereof) will be published in the **Federal Register**.

1. Need for, and Objectives of, the Proposed Rule Changes

1. In the *Notice,* the Commission seeks comment on a series of proposals to increase the amount of video described programming available to consumers, and to make it easier to access. The NPRM tentatively concludes that the statutory requirement for the Commission to issue additional video description regulations is satisfied because ''the need for and benefits of'' providing video described programming as proposed here would be ''greater than the technical and economic costs'' if the rules are adopted. The proposed rules would require that each included network provide 75% more described programming, or 87.5 hours per quarter, and would include six additional networks within the rules, while revising the way included networks are determined. It proposes to require covered parties to provide dedicated

MVPD commenters argue that mandating more than two audio streams—one for main audio, one for video description, and one for emergency information—would be costly and, in some cases, would pose technical difficulties.'') (footnote omitted).

[29] *See* 5 U.S.C. 603. The RFA, *see* 5 U.S.C. 601–612, has been amended by the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121, Title II, 110 Stat. 857 (1996).

[30] *See* 5 U.S.C. 603(a).

consumer service contacts to deal with video description issues, and to file any exemption petitions electronically. It also seeks comment on a range of related issues.

2. Legal Basis

2. The authority for the action proposed in this rulemaking is contained in the Twenty-First Century Communications and Video Accessibility Act of 2010, Pub. L. 111–260, 124 Stat. 2751, and Sections 1, 2(a), 4(i), 303, 307, 309, 310, and 713 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 152, 154(i), 303, 307, 309, 310, and 613.

3. Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

3. The RFA directs the Commission to provide a description of and, where feasible, an estimate of the number of small entities that will be affected by the proposed rules, if adopted. The RFA generally defines the term ''small entity'' as having the same meaning as the terms ''small business,'' small organization,'' and ''small government jurisdiction.'' In addition, the term ''small business'' has the same meaning as the term ''small business concern'' under the Small Business Act. A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.

4. *Television Broadcasting.* This economic census category ''comprises establishments primarily engaged in broadcasting images together with sound. These establishments operate television broadcasting studios and facilities for the programming and transmission of programs to the public.'' The SBA has created the following small business size standard for Television Broadcasting firms: Those having $14 million or less in annual receipts. The Commission has estimated the number of licensed commercial television stations to be 1,390. In addition, according to Commission staff review of the BIA Advisory Services, LLC's Media Access Pro Television Database on March 28, 2012, about 950 of an estimated 1,300 commercial television stations (or approximately 73 percent) had revenues of $14 million or less. We therefore estimate that the majority of commercial television broadcasters are small entities.

5. We note, however, that in assessing whether a business concern qualifies as small under the above definition, business (control) affiliations must be included. Our estimate, therefore, likely overstates the number of small entities that might be affected by our action because the revenue figure on which it is based does not include or aggregate revenues from affiliated companies. In addition, an element of the definition of ''small business'' is that the entity not be dominant in its field of operation. We are unable at this time to define or quantify the criteria that would establish whether a specific television station is dominant in its field of operation. Accordingly, the estimate of small businesses to which rules may apply does not exclude any television station from the definition of a small business on this basis and is therefore possibly over-inclusive to that extent.

6. In addition, the Commission has estimated the number of licensed noncommercial educational (''NCE'') television stations to be 395. These stations are non-profit, and therefore considered to be small entities.

7. There are also 2,344 LPTV stations, including Class A stations, and 3689 TV translator stations. Given the nature of these services, we will presume that all of these entities qualify as small entities under the above SBA small business size standard.

8. *Wired Telecommunications Carriers.* The North American Industry Classification System (''NAICS'') defines ''Wired Telecommunications Carriers'' as follows: ''This industry comprises establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired telecommunications networks. Transmission facilities may be based on a single technology or a combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services; wired (cable) audio and video programming distribution; and wired broadband Internet services. By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry.'' The SBA has developed a small business size standard for wireline firms for the broad economic census category of ''Wired Telecommunications Carriers.'' Under this category, a wireline business is small if it has 1,500 or fewer employees. Census data for 2007 shows that there were 3,188 firms that operated for the entire year. Of this total, 3,144 firms had fewer than 1,000 employees, and 44 firms had 1,000 or more employees. Therefore, under this size standard, we estimate that the majority of businesses can be considered small entities.

9. *Cable Television Distribution Services.* Since 2007, these services have been defined within the broad economic census category of Wired Telecommunications Carriers, which category is defined above. The SBA has developed a small business size standard for this category, which is: All such businesses having 1,500 or fewer employees. Census data for 2007 shows that there were 3,188 firms that operated for the entire year. Of this total, 3,144 firms had fewer than 1,000 employees, and 44 firms had 1,000 or more employees. Therefore, under this size standard, we estimate that the majority of businesses can be considered small entities.

10. *Cable Companies and Systems.* The Commission has developed its own small business size standards for the purpose of cable rate regulation. Under the Commission's rules, a ''small cable company'' is one serving 400,000 or fewer subscribers nationwide. Industry data shows that there are currently 660 cable operators. Of this total, all but ten cable operators nationwide are small under this size standard. In addition, under the Commission's rate regulation rules, a ''small system'' is a cable system serving 15,000 or fewer subscribers. Current Commission records show 4,629 cable systems nationwide. Of this total, 4,057 cable systems have less than 20,000 subscribers, and 572 systems have 20,000 or more subscribers, based on the same records. Thus, under this standard, we estimate that most cable systems are small entities.

11. *Cable System Operators (Telecom Act Standard).* The Communications Act of 1934, as amended, also contains a size standard for small cable system operators, which is ''a cable operator that, directly or through an affiliate, serves in the aggregate fewer than 1 percent of all subscribers in the United States and is not affiliated with any entity or entities whose gross annual revenues in the aggregate exceed $250,000,000.'' There are approximately 54 million cable video subscribers in the United States today. Accordingly, an operator serving fewer than 540,000 subscribers shall be deemed a small operator if its annual revenues, when combined with the total annual revenues of all its affiliates, do not exceed $250 million in the aggregate. Based on available data, we find that all but ten incumbent cable operators are small entities under this size standard. We note that the Commission neither requests nor collects information on

whether cable system operators are affiliated with entities whose gross annual revenues exceed $250 million. Although it seems certain that some of these cable system operators are affiliated with entities whose gross annual revenues exceed $250,000,000, we are unable at this time to estimate with greater precision the number of cable system operators that would qualify as small cable operators under the definition in the Communications Act.

12. *Direct Broadcast Satellite (DBS) Service.* DBS service is a nationally distributed subscription service that delivers video and audio programming via satellite to a small parabolic ''dish'' antenna at the subscriber's location. DBS, by exception, is now included in the SBA's broad economic census category, Wired Telecommunications Carriers, which was developed for small wireline businesses. Under this category, the SBA deems a wireline business to be small if it has 1,500 or fewer employees. Census data for 2007 shows that there were 3,188 firms that operated for that entire year. Of this total, 2,940 firms had fewer than 100 employees, and 248 firms had 100 or more employees. Therefore, under this size standard, the majority of such businesses can be considered small entities. However, the data we have available as a basis for estimating the number of such small entities were gathered under a superseded SBA small business size standard formerly titled ''Cable and Other Program Distribution.'' As of 2002, the SBA defined a small Cable and Other Program Distribution provider as one with $12.5 million or less in annual receipts. Currently, only two entities provide DBS service, which requires a great investment of capital for operation: DIRECTV and DISH Network. Each currently offers subscription services. DIRECTV and DISH Network each report annual revenues that are in excess of the threshold for a small business. Because DBS service requires significant capital, we believe it is unlikely that a small entity as defined under the superseded SBA size standard would have the financial wherewithal to become a DBS service provider.

4. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements

13. The *Notice* proposes the following new or revised reporting or recordkeeping requirements that would be applicable to small entities. First, it proposes that all covered broadcasters and MVPDs provide dedicated customer service contacts to answer video description questions. In particular, it would require covered entities to provide contact information for a person or office with primary responsibility for accessibility compliance issues to consumers who have questions about the availability of or access to video description services, or who request technical support. The *Notice* also proposes to require all covered broadcasters and MVPDs to file petitions for exemption electronically.

14. With regard to other compliance requirements, the *Notice* proposes to revise the video description rules by requiring an increase in the amount of described programming on each included network carried by a covered broadcast station or MVPD, from 50 hours per calendar quarter to 87.5, as well as an increase in the number of included networks carried by covered distributors to five broadcast and ten nonbroadcast networks.

15. Finally, the *Notice* seeks comment on requiring distributors to notify program guides about the presence of video description, and to include video description with Video-on-Demand programming when that programming has been previously provided with descriptions.

16. While the economic impact of these proposed rules on small entities is not quantifiable at this time, they are not likely to be burdensome for small entities or to affect small entities disproportionately.

5. Steps Taken To Minimize Significant Impact on Small Entities and Significant Alternatives Considered

17. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.

18. The *Notice* proposes rules intended to expand consumer access to video described programming. The existing requirement to provide video description applies to commercial television broadcast stations that are affiliated with ABC, CBS, Fox, or NBC and are located in the top 60 television markets, as well as MVPD systems that serve 50,000 or more subscribers. Thus, the proposed increase in the amount of video description required and expansion of the video description requirements to additional included networks will impose no direct burden on small broadcasters or small MVPDs. Although the rules currently impose ''pass through'' obligations on all network-affiliated broadcast stations regardless of market size and on all MVPDs regardless of the number of subscribers, most all stations and MVPDs, including small entities, now have this capability. As such, we anticipate that these proposals will have little to no impact on small entities.

19. The proposed requirement to file exemption petitions electronically will not impose an additional burden on small entities, and may reduce the burden. The proposed requirement that covered broadcasters and MVPDs provide dedicated customer service contacts to answer video description questions may not require significant additional resources for small entities. Even if it requires additional resources, however, we believe it would provide benefits to consumers that outweigh any costs, and that those benefits would be undermined if the requirement were not universal. The item seeks comment on the timing for implementing the requirements. Finally, we invite comment on any other changes the Commission should consider making to the video description rules. For any other changes proposed, comments should include potential costs and benefits of such changes.

6. Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rule

20. None.

B. Paperwork Reduction Act

21. This document contains proposed new information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public and the Office of Management and Budget (OMB) to comment on the information collection requirements contained in this document, as required by the Paperwork Reduction Act of 1995. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, we seek specific comment on how we might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.''

C. Ex Parte Rules

22. This proceeding will be treated as a ''permit-but-disclose'' proceeding subject to the ''permit-but-disclose''

requirements under Section 1.1206(b) of the Commission's rules. *Ex parte* presentations are permissible if disclosed in accordance with Commission rules, except during the Sunshine Agenda period when presentations, *ex parte* or otherwise, are generally prohibited. Persons making oral *ex parte* presentations are reminded that a memorandum summarizing a presentation must contain a summary of the substance of the presentation and not merely a listing of the subjects discussed. More than a one- or two-sentence description of the views and arguments presented is generally required. Additional rules pertaining to oral and written presentations are set forth in Section 1.1206(b).

D. Filing Requirements

23. Pursuant to Sections 1.415 and 1.419 of the Commission's rules, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. All comments are to reference MB Docket No. 11–43 and may be filed using: (1) the Commission's Electronic Comment Filing System (ECFS) or (2) by filing paper copies.

- *Electronic Filers:* Comments may be filed electronically using the Internet by accessing the ECFS: *http://fjallfoss.fcc.gov/ecfs2/.*
- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th Street SW., Room TW–A325, Washington, DC 20554. The filing hours are 8:00 a.m. to 7:00 p.m. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes and boxes must be disposed of *before* entering the building.
- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.
- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW., Washington, DC 20554.

24. People with Disabilities: To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

25. *Availability of Documents.* Comments and reply comments will be publically available online via ECFS. These documents will also be available for public inspection during regular business hours in the FCC Reference Information Center, which is located in Room CY–A257 at FCC Headquarters, 445 12th Street SW., Washington, DC 20554. The Reference Information Center is open to the public Monday through Thursday from 8:00 a.m. to 4:30 p.m. and Friday from 8:00 a.m. to 11:30 a.m.

VIII. Ordering Clauses

26. Accordingly, *it is ordered* that, pursuant to the Twenty-First Century Communications and Video Accessibility Act of 2010, Public Law 111–260, 124 Stat. 2751, and the authority found in and Sections 1, 2(a), 4(i), 303, and 713 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 152, 154(i), 303, and 613, *comment is hereby sought* on the proposals described and rules set forth in this *Notice of Proposed Rulemaking.*

27. *It is further ordered* that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, *shall send* a copy of this *Notice of Proposed Rulemaking* in MB Docket No. 11–43, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

List of Subjects in 47 CFR 79

Cable television operators, Communications equipment, Multichannel video programming distributors (MVPDs), Satellite television service providers.

Federal Communications Commission.

Gloria J. Miles,

Federal Register Liaison Officer, Office of the Secretary.

Proposed Rules

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR part 79 as follows:

PART 79—ACCESSIBILITY OF VIDEO PROGRAMMING

■ 1. The authority for part 79 continues to read as follows:

Authority: 47 U.S.C. 151, 152(a), 154(i), 303, 307, 309, 310, 330, 544a, 613, 617.

■ 2. Amend § 79.3 by:
■ a. Adding paragraphs (a)(9) and (10), (b)(6) and (7) and,
■ b. Revising paragraphs (b) introductory text, (b)(1), (2) and (5), (c)(2), (3) and (4) introductory text.

The additions and revisions read as follows:

§ 79.3 Video description of video programming.

(a) * * *

(9) *Top commercial television broadcast networks.* ABC, CBS, Fox, NBC, and any other commercial television broadcast network in the top five as determined by an average of the national audience share during prime time of broadcast networks and that has at least 50 hours per quarter of prime time programming that is not live or near-live or otherwise exempt under these rules. Initially, the top five networks are those determined by The Nielsen Company, based on the ratings for the time period October 2016–September 2017, and will update at three year intervals. The first update will be July 1, 2021, based on the ratings for the time period October 2019–September 2020; the second will be July 1, 2024, based on the ratings for the time period October 2022–September 2023; and so on. Also, any commercial television broadcast network that the Commission identified as having met this definition as of 2018 or later, even if it is no longer in the top five based on subsequent ratings.

(10) *Top national nonbroadcast television networks.* Any nonbroadcast television network in the top ten, as determined by an average of the national audience share during prime time of nonbroadcast networks that have at least 50 hours per quarter of prime time programming that is not live or near-live or otherwise exempt under these rules. Initially, the top ten networks are those determined by The Nielsen Company, based on the ratings for the time period October 2016–September 2017, and will update at three year intervals. The first update will be July 1, 2021, based on the ratings for the time period October 2019–September 2020; the second will be July 1, 2024, based on the ratings for the time period October 2022–September 2023; and so on. Also, any nonbroadcast television network that the Commission

identified as having met this definition as of 2018 or later, even if it is no longer in the top ten based on subsequent ratings.

(b) The following video programming distributors must provide programming with video description and customer support as follows:

(1) Beginning July 1, 2015, commercial television broadcast stations that are affiliated with one of the top four commercial television broadcast networks (ABC, CBS, Fox, and NBC), and that are licensed to a community located in the top 60 DMAs, as determined by The Nielsen Company as of January 1, 2015, must provide 50 hours of video description per calendar quarter, either during prime time or on children's programming, on each programming stream on which they carry one of the top four commercial television broadcast networks. If a station in one of these markets becomes affiliated with one of these networks after July 1, 2015, it must begin compliance with these requirements no later than three months after the affiliation agreement is finalized;

(2) Beginning July 1, 2018, commercial television broadcast stations that are affiliated with one of the top commercial television broadcast networks and licensed to a community located in the top 60 DMAs, as determined by The Nielsen Company as of January 1, 2015, must provide 87.5 hours of video description per calendar quarter, either during prime time or on children's programming, on each programming stream on which they carry one of the top commercial television broadcast networks. If a station in one of these markets becomes affiliated with one of one of the top commercial television broadcast networks after July 1, 2018, it must begin compliance with these requirements no later than three months after the affiliation agreement is finalized;

* * * * *

(5) Beginning July 1, 2018, multichannel video programming distributor (MVPD) systems that serve 50,000 or more subscribers must provide 87.5 hours of video description per calendar quarter during prime time or children's programming, on each channel on which they carry one of the top national nonbroadcast television networks; and

(6) Multichannel video programming distributor (MVPD) systems of any size:

(i) Must pass through video description on each broadcast station they carry, when the broadcast station provides video description, and the channel on which the MVPD distributes the programming of the broadcast station has the technical capability necessary to pass through the video description, unless it is using the technology used to provide video description for another purpose related to the programming that would conflict with providing the video description; and

(ii) Must pass through video description on each nonbroadcast network they carry, when the network provides video description, and the channel on which the MVPD distributes the programming of the network has the technical capability necessary to pass through the video description, unless it is using the technology used to provide video description for another purpose related to the programming that would conflict with providing the video description.

(7) Each video programming distributor subject to paragraphs (b)(1), (2), (4), and/or (5) of this section shall make readily available contact information for a person or office with primary responsibility for accessibility compliance issues to consumers who have questions about the availability of or access to video description services, or who request technical support. The point of contact must be able to address consumers' concerns about video description issues, and must respond to consumer inquiries within one business day.

(c) * * *

(2) In order to meet its quarterly requirement, a broadcaster or MVPD may count each program it airs with video description no more than a total of two times on each channel on which it airs the program. A broadcaster or MVPD may count the second airing in the same or any one subsequent quarter. A broadcaster may only count programs aired on its primary broadcasting stream towards its quarterly requirement. A broadcaster carrying one of the top commercial television broadcast networks on a secondary stream may count programs aired on that stream toward its quarterly requirement for that network only.

(3) Once a commercial television broadcast station as defined under paragraph (b)(1) or (b)(2) of this section has aired a particular program with video description, it is required to include video description with all subsequent airings of that program on that same broadcast station, unless it is using the technology used to provide video description for another purpose related to the programming that would conflict with providing the video description.

(4) Once an MVPD as defined under paragraph (b)(4) or (b)(5) of this section:

Notices

Federal Register
Vol. 81, No. 103
Friday, May 27, 2016

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

Submission for OMB Review; Comment Request

May 23, 2016.

The Department of Agriculture will submit the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13 on or after the date of publication of this notice. Comments are requested regarding (1) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), New Executive Office Building, Washington, DC; New Executive Office Building, 725 17th Street NW., Washington, DC 20503. Commenters are encouraged to submit their comments to OMB via email to: *OIRA_Submission@omb.eop.gov* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602.

Comments regarding these information collections are best assured of having their full effect if received by June 27, 2016. Copies of the submission(s) may be obtained by calling (202) 720–8681.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Agricultural Marketing Service

Title: Mandatory Country of Origin Labeling of All Covered Commodities.

OMB Control Number: 0581–0250.

Summary of Collection: The 2002 (Pub. L. 107–171) and 2008 (Pub. L. 110–234) Farm Bills amended the Agricultural Marketing Act of 1946 (7 U.S.C. 1621–1627) to require retailers to notify their customers of the country of origin of muscle cuts and ground beef (including veal), lamb, pork, chicken, and goat; wild and farm-raised fish and shellfish; perishable agricultural commodities; peanuts, pecans, and macadamia nuts; and ginseng. Individuals who supply covered commodities, whether directly to retailers or indirectly through other participants in the marketing chain, are required to establish and maintain country of origin and, if applicable, method of production information for the covered commodities and supply this information to retailers. On February 29, 2016, a final rule was published to remove beef and pork. Covered commodities include muscle cuts of lamb, chicken, goat, ground lamb, ground chicken, and ground goat; wild and farm-raised fish and shellfish; perishable agricultural commodities; macadamia nuts; pecans; ginseng; and peanuts.

Need and Use of the Information: Producers, handlers, manufacturers, wholesalers, importers, and retailers of covered commodities are affected. This public reporting burden is necessary to ensure accuracy of country of origin and method of production declarations relied upon at the point of sale at retail. The public reporting burden also assures that all parties involved in supplying covered commodities to retail stores maintain and convey accurate information as required.

Description of Respondents: Business or other for-profit.

Number of Respondents: 652,842.

Frequency of Responses: Recordkeeping.

Total Burden Hours: 21,949,487.

Charlene Parker,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–02–P

DEPARTMENT OF AGRICULTURE

Forest Service

Missoula Resource Advisory Committee

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Missoula Resource Advisory Committee (RAC) will meet in Frenchtown, Montana. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (Pub. L. 110–343) (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with the title II of the Act. The meeting is open to the public. The purpose of the meeting is to distribute submitted proposals to RAC members, allow the opportunity for project proponents to present their proposals, and receive public comment on the meeting subjects and proceedings. We will also hold a voting meeting at a later date, to be determined, at the same location. The voting meeting information will be released to the public in a published news release and posted on the following Web site: *http://www.fs.usda.gov/main/lolo/workingtogether/advisorycommittees.*

DATES: The presentation meeting will be held on Wednesday, June 15, 2016 from 6:00 p.m. to 8:00 p.m.

All RAC meetings are subject to cancellation. For status of meeting prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

ADDRESSES: The meeting will be held at Frenchtown Rural Fire District Station 1, 16875 Marion Street, Frenchtown, Montana.

Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION**. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at Ninemile Ranger District.

FOR FURTHER INFORMATION CONTACT: Sari Lehl, RAC Coordinator, by phone at 406–626–5201, or via email at *slehl@fs.fed.us.*

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday. If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices or other reasonable accommodation for access to the facility or procedings by contacting the person listed above. All reasonable accommodation requests are managed on a case by case basis.

SUPPLEMENTARY INFORMATION: Additional RAC information, including the meeting agenda and the meeting summary/minutes can be found at the following Web site: *http://www.fs.usda.gov/main/lolo/workingtogether/advisorycommittees.* The agenda will include time for people to make oral statements of three minutes or less. Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. Written comments must be sent to Sari Lehl; Lolo National Forest, Ninemile Ranger District, 20325 Remount Road, Huson, Montana 59846; or by email: *slehl@fs.fed.us.*

Dated: May 19, 2016.

Erin M. Phelps,

Ninemile District Ranger.

BILLING CODE 3411–15–P

DEPARTMENT OF AGRICULTURE

Forest Service

Shoshone National Forest Travel Management; Shoshone National Forest, Wyoming

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The Forest Service intends to prepare an environmental impact statement to analyze and disclose the environmental effects of implementing travel management activities that include designating the class of vehicles, seasons of use, additions, and subtractions to the roads, trails, and areas open for recreational motorized use during summer and winter. The Forest is proposing changes to its Motor Vehicle Use Map (MVUM) and publication of the initial Over Snow Vehicle Use Map (OSVUM) per the requirements of 36 CFR parts 212 Travel Management, Designated Routes and Areas for Motor Vehicle Use, Final Rule (**Federal Register** 2005: 70 FR 68264).

DATES: Comments concerning the scope of the analysis must be received by June 27, 2016. The draft environmental impact statement is expected March 2017 and the final environmental impact statement is expected March 2018.

ADDRESSES: Send written comments to Rob Robertson, 333 East Main Street, Lander, Wyoming, 82520. Comments may also be sent via email to *travel-comments-rocky-mountain-shoshone@fs.fed.us,* or via facsimile to 307–332–0264.

FOR FURTHER INFORMATION CONTACT: Rob Robertson at 307–335–2156 or *rrobertson@fs.fed.us.*

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday.

SUPPLEMENTARY INFORMATION:

Purpose and Need for Action

The overall objective of the proposed action is to provide a manageable system of designated public motor vehicle access routes and areas within the Shoshone National Forest, consistent with the Forest Plan, Executive Orders 11644 and 11989, and the travel management regulations at 36 CFR 212 subparts B and C. The decisions associated with the designations of roads, trails, and areas open to the public will be published in maps for both summer and winter travel.

There were needs identified through the Forest Planning effort to examine the existing system and identify current routes with resource concerns or enforcement issues which could be removed or changed in the system.

- There is a need to provide some level of motorized routes to a growing user group on the Shoshone National Forest. The Forest Plan directs us to look for opportunities to provide ''loop'' opportunities for motorized use.
- An additional need of equal importance is to ensure or improve compliance and accountability on the existing road and trail system.
- Another need is to consider if there are current routes with resource concerns or enforcement issues which could be removed or changed in the system.
- Finally, there is a need to designate roads, trails, and areas for winter motorized travel and produce an over snow vehicle use map. This direction stems from a recent court decision and a subsequent revision of the 2005 Travel Management Rule.

Additionally, the Regional Forester, in The Record of Decision for the SNF Land Management Plan Revision acknowledged the Forest's recognition of these needs and directed the Shoshone National Forest to analyze additional motorized opportunities during the Travel Management planning process.

Proposed Action

The Shoshone National Forest is proposing to modify its current summer Motorized Vehicle Use Map (MVUM) and publish an Over Snow Motor Vehicle Use Map (OSVUM) to address the need to increase motorized recreation and loop opportunities while addressing concerns over resource conditions, unauthorized routes, and enforcement issues within the current system. The proposal is intended to provide a manageable system of designated public motor vehicle access routes and areas within the Shoshone National Forest, consistent with the Forest Plan, Executive Order 11644, and the travel management regulations at 36 CFR 212, subparts B and C. Specific Changes to the summer system are as follows:

- Addition of 36 miles of motorized routes (roads and motorized trails) to the system.
- Addition of 5.9 miles of motorized routes to access dispersed camping sites.
- Closing 12 miles of roads to address resource and/or enforcement concerns.
- Designate 16 miles of existing motorized trails to 65″ width.
- Designate 13.4 miles of new proposed motorized trails for 65″ width.
- Conversion of 2.1 miles of road to motorized trail, 65″ width.
- Addition of 61 miles of seasonal restrictions to reduce impacts to wildlife disturbance, increase wintertime safety, and protect road surfaces during the wet season.
- Consolidate the number of existing seasonal closure dates to help reduce confusion.

• Addition of 11 miles of ungroomed snowmobile trails.

• Close 1,354 acres of cross country skiing areas to motorized users.

• Prohibit tracked vehicles larger than a UTV from using groomed trails for public safety.

• Create two winter motorized seasons. The ''high elevation'' zone will have a season of 11/15 to 4/30. The ''low elevation'' zone will have a season of 12/1–4/1.

Responsible Official

The USDA Forest Service is the lead agency for this proposal. The Shoshone National Forest Supervisor is the responsible official.

Nature of Decision To Be Made

The decision to be made is whether to implement the proposed action as described above, or to meet the purpose and need for action through some other combination of activities, or to take no action at this time.

Scoping Process

This notice of intent initiates the scoping process, which guides the development of the environmental impact statement. Written comments should be submitted to Shoshone National Forest, Attn: Rob Robertson, 333 E. Main St., Lander, WY 82520, or fax: 307–332–0264; or email at *travel-comments-rocky-mountain-shoshone@fs.fed.us* . Hand-delivered comments must be provided at the Supervisors' office or any of the Ranger District offices during normal business hours (8:00 a.m. to 4:30 p.m., Monday through Friday, excluding holidays).

Electronic comments must be submitted to *travel-comments-rocky-mountain-shoshone@fs.fed.us* in an email message, or attached in portable document format (.pdf) or Word (.docx) format.

It is important that reviewers provide their comments at such times and in such manner that they are useful to the agency's preparation of the environmental impact statement. Therefore, comments should be provided prior to the close of the comment period and should clearly articulate the reviewer's concerns and contentions.

Comments received in response to this solicitation, including names and addresses of those who comment, will be part of the public record for this proposed action. Comments submitted anonymously will be accepted and considered, however.

Dated: May 17, 2016.

Joseph Alexander,

Forest Supervisor.

[FR Doc. 2016–12069 Filed 5–26–16; 8:45 am]

BILLING CODE 3410–11–P

DEPARTMENT OF AGRICULTURE

Forest Service

Notice of Proposed New Fee Site; Federal Lands Recreation Enhancement Act, (Title VIII, Pub. L. 108–447)

AGENCY: Uinta-Wasatch-Cache National Forest, USDA Forest Service.

ACTION: Notice of proposed new fee site.

SUMMARY: The Uinta-Wasatch-Cache National Forest, Salt Lake Ranger District, is proposing the following sites as standard-amenity fee sites under the authority of the Federal Lands Recreation Enhancement Act. The sites are all located in Big and Little Cottonwood Canyons and include Mill B South trailhead, Cardiff/Mill D South trailhead, Donut Falls trailhead, Silver Laker recreation complex, Spruces winter trailhead, Guardsman Pass trailhead, Temple Quarry trailhead and interpretive site, White Pine trailhead, Catherine's Pass trailhead, and Cecret Lake trailhead. The use site fee would be $6 for a 3-day pass and $45 for a Cottonwood Canyons annual pass. The ''America the Beautiful'' Interagency Passes would be honored at each site. Passes sold would be valid for all sites listed above. Cottonwood Canyon passes would be also be valid at the American Fork Canyon and Mirror Lake Scenic Byway standard-amenity fee sites. The American Fork Canyon and Mirror Lake Scenic Byway day and annual passes would be honored at the proposed sites in the Cottonwood Canyons. Fees collected at the proposed sites would be used to improved recreation site facilities, maintenance, and operations in the Cottonwood Canyons. Fees are assessed based on the level of amenities and services provided, cost of operations and maintenance, and market assessment. The fee is proposed and will be determined upon further analysis and public comment.

DATES: Comments will be accepted from May 27, 2016 through September 9, 2016. New fees would begin in June 2017.

ADDRESSES: David Whittekiend, Forest Supervisor, Uinta-Wasatch-Cache National Forest, 857 West South Jordan Parkway, South Jordan, UT 84095.

FOR FURTHER INFORMATION CONTACT: Matt Lane, Salt Lake Ranger District, 801–733–2662, *malane@fs.fed.us*. Information about proposed fee changes can also be found on the Uinta-Wasatch-Cache National Forest Web site: *http://www.fs.usda.gov/uwcnf.*

SUPPLEMENTARY INFORMATION: The Federal Recreation Lands Enhancement Act (Title VII, Pub. L. 108–447) directed the Secretary of Agriculture to publish a six month advance notice in the **Federal Register** whenever new recreation fee areas are established.

Once public involvement is complete, these new fees will be reviewed by a Recreation Resource Advisory Committee prior to a final decision and implementation.

Dated: May 20, 2016.

David Whittekiend,

Forest Supervisor.

BILLING CODE 3410–11–P

COMMISSION ON CIVIL RIGHTS

Agenda and Notice of Public Meeting of the Montana Advisory Committee

AGENCY: Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA), that a planning meeting of the Montana Advisory Committee to the Commission will convene at 10:00 a.m. (MDT) on Wednesday, June 8, 2016, via teleconference. The purpose of the planning meeting is for the Advisory Committee to continue their discussion and plans to conduct a community forum on Border Town Discrimination Against Native Americans in Billings, Montana.

Members of the public may listen to the discussion by dialing the following Conference Call Toll-Free Number: 1–888–468–2440; Conference ID: 8574571. Please be advised that before being placed into the conference call, the operator will ask callers to provide their names, their organizational affiliations (if any), and an email address (if available) prior to placing callers into the conference room. Callers can expect to incur charges for calls they initiate over wireless lines, and the Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free phone number.

Persons with hearing impairments may also follow the discussion by first calling the Federal Relay Service (FRS)

at 1–800–977–8339 and provide the FRS operator with the Conference Call Toll-Free Number: 1–888–468–2440, Conference ID: 8574571. Members of the public are invited to submit written comments; the comments must be received in the regional office by Friday, July 8, 2016. Written comments may be mailed to the Rocky Mountain Regional Office, U.S. Commission on Civil Rights, 1961 Stout Street, Suite 13–201, Denver, CO 80294, faxed to (303) 866–1050, or emailed to Evelyn Bohor at *ebohor@usccr.gov.* Persons who desire additional information may contact the Rocky Mountain Regional Office at (303) 866–1040.

Records and documents discussed during the meeting will be available for public viewing as they become available at *https://database.faca.gov/committee/meetings.aspx?cid=259* and clicking on the ''Meeting Details'' and ''Documents'' links. Records generated from this meeting may also be inspected and reproduced at the Rocky Mountain Regional Office, as they become available, both before and after the meeting. Persons interested in the work of this advisory committee are advised to go to the Commission's Web site, *www.usccr.gov,* or to contact the Rocky Mountain Regional Office at the above phone number, email or street address.

Agenda

Welcome

Norma Bixby, Chair

Roll Call and Introductions

Malee V. Craft, Regional Director and Designated Federal Official (DFO)

Discussion to Reset Date and Timeline for Community Forum in Billings

Next Steps

DATES: Wednesday, June 8, 2016, at 10:00 a.m. (MDT)

ADDRESSES: To be held via teleconference:

Conference Call Toll-Free Number: 1–888–468–2440, Conference ID: 8574571.

TDD: Dial Federal Relay Service 1–800–977–8339 and give the operator the above conference call number and conference ID.

FOR FURTHER INFORMATION CONTACT: Malee V. Craft, Regional Director, *mcraft@usccr.gov,* 303–866–1040.

Dated: May 23, 2016.

21st Century U.S. Port Competitiveness Initiative: Request for Public Comment

AGENCY: U.S. Department of Commerce.

ACTION: Notice and request for comments.

SUMMARY: The U.S. Department of Commerce (Department) is seeking public input on U.S. seaport efficiency and competitiveness issues for its 21st Century U.S. Port Competitiveness Initiative. In this effort, the Department is working with seaports, stakeholders, and port users to identify and share best practices in port-stakeholder-user coordination, collaboration, and information-sharing that are being used to resolve operational and infrastructure issues that affect freight flows and increase port and supply chain congestion. The Department's goal is to ensure that U.S. seaports and their supply chains have the tools they need to strengthen U.S. port and supply chain competitiveness, facilitate international trade, and catalyze local, regional, national economic growth and job creation. We welcome input from all interested parties.

DATES: Submit written comments on or before 5 p.m. Eastern time on July 11, 2016.

ADDRESSES: You may submit comments on this notice by any of the following methods:

- *Electronic Submissions:* Submit your comments via the Federal eRulemaking Portal. Go to *http://www.regulations.gov/#!docketDetail;D=DOC-2016-0003,* click the ''Comment Now!'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Russell Adise, U.S. Department of Commerce, 1401 Constitution Avenue NW., Room 11018, Washington, DC 20230. Include on the envelope the following identifier ''Attn: 21st Century U.S. Port Competitiveness Initiative.''

Comments submitted by email should be machine-readable and should not be copy-protected. Responders should include the name of the person or organization filing the comment, as well as a page number on each page of their submissions. Paper submissions should also include a CD or DVD with an electronic version of the document, which should be labeled with the name and organization of the filer. Please do not include in your comments information of a confidential nature, such as sensitive personal information or proprietary information. All comments received are a part of the public record and will generally be posted to *regulations.gov* without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Information obtained as a result of this notice may be used by the Federal Government for program planning on a non-attribution basis.

FOR FURTHER INFORMATION CONTACT: Russell Adise, U.S. Department of Commerce, 1401 Constitution Avenue NW., Room 11018, Washington, DC 20230; telephone: (202) 482–5086; email: *Russell.Adise@trade.gov.* Please direct media inquiries to the Department's Office of Public Affairs, (202) 482–4883.

SUPPLEMENTARY INFORMATION:

I. Background

The U.S. marine transportation system is an essential driver of the U.S. economy. Every day, U.S. ports and waterways handle millions of tons of domestic and international cargo, ranging from retail and agricultural products to finished goods and components, coal, petrochemicals, heating oil and automobiles. Those ports support more than 23 million American jobs throughout the supply chain, including the local economy in and around port communities.

America's seaports are crucial generators of economic development and well-paying jobs, both regionally and nationally, and throughout the supply chains that use the ports. They are also crucial to our nation's ability to take advantage of the leveled playing field and increased market access being enabled by Administration trade initiatives, including the Trans-Pacific Partnership (TPP). Approximately 75 percent of U.S. international merchandise exports and imports flow through our seaports including Made in America exports and the intermediate goods and components used in them.

Long-term port congestion and efficiency problems remain a major systemic threat that creates a drag on local, regional, and national economic growth and employment.[1] According to a recent *Journal of Commerce* seaport berth productivity report, U.S. West Coast container ports may be as much

[1] Please see Federal Maritime Commission, ''U.S. Container Port Congestion & Related International Supply Chain Issues: Causes, Consequences & Challenges,'' June 2015 *http://www.fmc.gov/NR15-11/.*

as 25 to 48 percent less productive than the world's most efficient container ports. As the nationwide port congestion and slowdown in 2014 and 2015 demonstrated, what happens at any one port, or group of ports, can have far-reaching and nationwide impacts on all U.S. ports and the companies and stakeholders that use and rely on them.

Port congestion and efficiency problems stem from a variety of factors, only some of which are directly under a seaport's control. Larger vessels, growing trade volumes, insufficient infrastructure, operating inefficiencies, poor labor-management relations, and lack of communication and collaboration among ports, stakeholders, and users can result in inefficient cargo movement and congestion that can dramatically slow the movement of trade to and through America's seaports, ultimately resulting in lost sales, markets, and jobs across the nation, and the loss of U.S. port and supply chain competitiveness in the global marketplace. U.S. seaports' inability to respond quickly enough to rapidly-changing industry and cargo flow demands further compromises U.S. trade, competitiveness, and resiliency.

In the U.S., most of the elements of these port-related challenges are owned by local government entities and domestic and foreign companies, with limited communication across the full range of ports, users, and stakeholders affected by these challenges. To address these issues comprehensively and nationally, the U.S. Department of Commerce is playing a convening role for seaports, stakeholders, and users to help them work together to identify how they can cooperate, collaborate, and share information more effectively and efficiently in order to achieve mutually beneficial improvements, and how the Federal Government can help spur increasing public-private partnerships and investment that can improve port-related operations, data-sharing technology, and infrastructure.

Under this initiative, the Department of Commerce has launched a series of regional port and supply chain competitiveness roundtables at key ports across the U.S., similar to the Administration's 21st Century Ports Roundtable in Baltimore in March 2016. Through these roundtables, the Department is learning what leading U.S. seaports are doing, together with their stakeholders, to improve their ability to coordinate, collaborate, and share information towards identifying and resolving operational port and infrastructure inefficiencies that negatively impact trade flows and cause congestion. The Department is also learning what additional steps could be taken to improve port/stakeholder collaboration and partnerships, as well as to improve investment in port infrastructure, equipment, and technology.

This Notice is intended to supplement the Department's roundtables by soliciting public comment on the issues described below. The information gained through these roundtables and this Notice will be used to develop a report on best practices that U.S. seaports, stakeholders, and users can use as appropriate as a tool to help develop and implement mutually beneficial congestion relief and efficiency improvement measures through coordination, collaboration, and information sharing. The report is intended to be released in December 2016.

II. Objectives of This Notice

This Notice offers an opportunity for all interested parties to share their perspectives and recommend actions that the Federal Government, state and local governments, and port users and stakeholders—individually and together—can take to help address U.S. port congestion and efficiency challenges, improve U.S. port and supply chain competitiveness, and enhance the role of ports as engines and catalysts of local, regional, and national economic development and job growth.

III. Questions

Commenters are encouraged to address any or all of the following questions. Please note in the response the number corresponding to the question(s). For any response, commenters may wish to consider describing specific goals; actions and roles that the United States Government, ports, stakeholders, and users might take to achieve these goals; evidence that demonstrates the benefits and costs associated with the action; and whether the proposal is inter-agency or agency-specific. Specific, actionable proposals for action and for policy mechanisms directed to the relevant government agencies are most useful.

The Department seeks public comment on the following questions:

1. What are the most important challenges and opportunities facing U.S. port-related operations and efficiency?

2. What are best practices for improving port-related operations? How can the Federal Government help to share these best practices nationwide?

3. How can the Federal Government best promote the coordinated use of public funds for the development of port-related infrastructure? What can the Federal Government do, that it is not doing now, to stimulate and/or leverage private funding for port-related infrastructure?

4. What Federal policies should be modernized to promote U.S. port-related investment and operational performance?

5. How can the Federal Government best collaborate with stakeholders (state, local, labor, industry, port authorities, academia, financial institutions, etc.) to enhance U.S. port-related competitiveness?

6. What can the Federal Government do—on its own or in coordination and collaboration with state and local governments and the private sector—to enhance the value of ports as engines of economic growth and job creation?

7. How can technology and data be used to improve U.S. port and supply chain performance? What mechanisms, if any, should the Federal Government deploy to promote information sharing and develop a common technology platform?

8. Are there actions that have been taken by specific U.S. or foreign ports or other nations that should be highlighted as best practices for ports? If so, please describe.

Dated: May 20, 2016.

Bruce H. Andrews,

Deputy Secretary.

BILLING CODE 3510–17–P

DEPARTMENT OF COMMERCE

Bureau of Economic Analysis

Proposed Information Collection; Comment Request; Direct Investment Surveys: BE–577, Quarterly Survey of U.S. Direct Investment Abroad—Transactions of U.S. Reporter With Foreign Affiliate, and Changes to Private Fund Reporting on Direct Investment Surveys

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: Written comments must be submitted on or before July 26, 2016

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer,

Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230, or via email at *jjessup@doc.gov.*

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Patricia Abaroa, Chief, Direct Investment Division (BE–49), Bureau of Economic Analysis, U.S. Department of Commerce, 4600 Silver Hill Rd., Washington, DC 20233; phone: (301) 278–9591; or via email at *Patricia.Abaroa@bea.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The Quarterly Survey of U.S. Direct Investment Abroad—Transactions of U.S. Reporter with Foreign Affiliate (Form BE–577) obtains quarterly data on transactions and positions between U.S.-owned foreign business enterprises and their U.S. parents. The survey is a sample survey that covers all foreign affiliates above a size-exemption level. The sample data are used to derive universe estimates in non-benchmark years from similar data reported in the BE–10, Benchmark Survey of U.S. Direct Investment Abroad, which is conducted every five years. The data are essential for the preparation of the U.S. international transactions accounts, the input-output accounts, the national income and product accounts, and the international investment position of the United States. The data are needed to measure the size and economic significance of direct investment abroad, measure changes in such investment, and assess its impact on the U.S. and foreign economies.

BEA proposes to change the reporting requirements for certain private funds that file BEA's surveys of U.S. direct investment abroad: The BE–577, Quarterly Survey of U.S. Direct Investment Abroad; and the BE–11, Annual Survey of U.S. Direct Investment Abroad. The BE–10, Benchmark Survey of U.S. Direct Investment Abroad, will also be affected by this change but will be addressed in a proposed rule in 2019.

BEA, in cooperation with the Treasury Department, proposes to instruct reporters of investments in private funds that meet the definition of direct investment (that is, ownership by one person of 10 percent or more of the voting interest of a business enterprise) but display characteristics of portfolio investment (specifically, investors do not intend to control or influence the management of an operating company) to report through the Treasury International Capital (TIC) reporting system, where other related portfolio investments are already being reported, and not to report on BEA's direct investment surveys. Direct investment in operating companies, including investment by and through private funds, will continue to be reported to BEA. This change will align the U.S. direct investment and portfolio investment data more closely with the intent of the investment. In addition, it will reduce burden for reporters, many of whom now report both to the TIC reporting system and to BEA's direct investment reporting system. Under the planned change, U.S. reporters will no longer be required to report on BEA surveys of U.S. direct investment abroad data for foreign affiliates that are private funds and do not own, directly or indirectly, 10 percent or more of the voting interest of another foreign business enterprise that is not also a private fund or holding company.

Other changes that are specific to the BE–577 survey include improvements to question wording, instructions, and formatting to elicit more complete and accurate responses. BEA also plans to add an additional question on certain gains/losses to the annual section of this form to help verify the quarterly data. BEA expects the additional burden to be negligible because this information is only collected once each year.

II. Method of Collection

Notice of specific reporting requirements, including who is to report, the information to be reported, the manner of reporting, and the time and place of filing reports, will be mailed to potential respondents each quarter. Reports are due 30 days after the close of each calendar or fiscal quarter—45 days if the report is for the final quarter of the respondent's financial reporting year. Reports are required from each U.S. person that has a direct and/or indirect ownership interest of at least 10 percent of the voting stock in an incorporated foreign business enterprise, or an equivalent interest in an unincorporated foreign business enterprise, and that meets the additional conditions detailed in Form BE–577. Entities required to report will be contacted individually by BEA. Entities not contacted by BEA have no reporting responsibilities.

Potential respondents are those U.S. business enterprises that reported owning foreign business enterprises in the 2014 benchmark survey of U.S. direct investment abroad, along with entities that subsequently entered the direct investment universe. The data collected are sample data. Universe estimates are developed from the reported sample data.

As an alternative to filing paper forms, BEA offers an electronic filing option, the eFile system, for use in reporting on Form BE–577. For more information about eFile, go to *www.bea.gov/efile.*

III. Data

OMB Control Number: 0608–0004.

Form Number: BE–577.

Type of Review: Regular submission.

Affected Public: Businesses or other for-profit organizations.

Estimated Number of Respondents: 2,090 U.S. parents filing for 16,720 foreign affiliates per quarter, 66,880 annually.

Estimated Time per Response: 1 hour is the average, but may vary considerably among respondents because of differences in company structure and complexity.

Estimated Total Annual Burden Hours: 66,880.

Estimated Total Annual Cost to Public: $0.

Respondent's Obligation: Mandatory.

Legal Authority: International Investment and Trade in Services Survey Act (Pub. L. 94–472, 22 U.S.C. 3101–3108, as amended by Pub. L. 98–573 and Pub. L. 101–533).

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (b) the accuracy of the Agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: May 23, 2016.

Glenna Mickelson,

Management Analyst, Office of Chief Information Officer.

Certain Polyethylene Terephthalate Resin From India: Notice of Correction to Antidumping Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

FOR FURTHER INFORMATION CONTACT: Fred Baker or Robert James, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–2924 or (202) 482–0649, respectively.

SUPPLEMENTARY INFORMATION: On May 6, 2016, the Department of Commerce (the Department) published the *Antidumping Duty Order* on certain polyethylene terephthalate resin from India.[1] The *Antidumping Duty Order* contained an error. Specifically, the cash deposit rate given for Ester Industries, Ltd. (Ester), contained a transposition of two numbers. The cash deposit rate in the *Antidumping Duty Order* for Ester is incorrectly listed as 9.31. The correct cash deposit rate for Ester is 9.13. As a result, we now correct the *Antidumping Duty Order* as noted above.

This correction to the *Antidumping Duty Order* is issued and published in accordance with section 777(i)(1) of the Tariff Act of 1930, as amended.

Dated: May 20, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

Judges Panel of the Malcolm Baldrige National Quality Award

AGENCY: National Institute of Standards and Technology, Department of Commerce.

ACTION: Notice of partially closed meeting.

SUMMARY: The Judges Panel of the Malcolm Baldrige National Quality Award (Judges Panel) will meet in on Wednesday, June 8, 2016, from 9:00 a.m. to 3:30 p.m. Eastern time. The purpose of this meeting is to discuss and review the role and responsibilities of the Judges Panel and information received from the National Institute of Standards and Technology (NIST) in order to ensure the integrity of the Malcolm Baldrige National Quality Award (Award) selection process. The agenda will include: Judges Panel roles and processes; Baldrige Program updates; new business/public comment; lessons learned from the 2015 judging process; and the 2016 Award process. A portion of this meeting is closed to the public in order to protect both proprietary data to be examined and discussed and information that could significantly frustrate implementation of a proposed agency action.

DATES: The Judges Panel meeting will be held on Wednesday, June 8, 2016 from 9:00 a.m. until 3:30 p.m. Eastern time. The portion of the meeting, from 9:00 a.m. to 11:30 a.m., will include discussions on the Judges Panel roles and processes and Baldrige program updates. This session is open to the public. Please note admittance instructions under the **SUPPLEMENTARY INFORMATION** section of this notice. The portion of the meeting, from 12:30 p.m. to 3:30 p.m., will include discussions on lessons learned from the 2015 judging process and on the 2016 Award process. This session is closed to the public in order to protect both proprietary data to be examined and discussed and information that could significantly frustrate implementation of a proposed agency action.

ADDRESSES: The meeting will be held at the National Institute of Standards and Technology, Building 101, Lecture Room A, 100 Bureau Drive, Gaithersburg, Maryland 20899.

FOR FURTHER INFORMATION CONTACT: Robert Fangmeyer, Director, Baldrige Performance Excellence Program, National Institute of Standards and Technology, 100 Bureau Drive, Mail Stop 1020, Gaithersburg, Maryland 20899–1020, at telephone number (301) 975–2360, or by email at *robert.fangmeyer@nist.gov.*

SUPPLEMENTARY INFORMATION:

Authority: 15 U.S.C. 3711a(d)(1) and the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

Pursuant to the Federal Advisory Committee Act, as amended, 5 U.S.C. App., notice is hereby given that the Judges Panel of the Malcolm Baldrige National Quality Award will meet on Wednesday, June 8, 2016 from 9:00 a.m. to 3:30 p.m. Eastern time. The Judges Panel is composed of twelve members, appointed by the Secretary of Commerce, chosen for their familiarity with quality improvement operations and competitiveness issues of manufacturing companies, services companies, small businesses, health care providers, and educational institutions. The Judges Panel will assemble to discuss and review the role and responsibilities of the Judges Panel and information received from NIST in order to ensure the integrity of the Malcolm Baldrige National Quality Award selection process. The agenda will include: Judges Panel roles and processes; Baldrige Program updates; new business/public comment; lessons learned from the 2015 judging process; and the 2016 Award process. A portion of this meeting is closed to the public in order to protect both proprietary data to be examined and discussed and information that could significantly frustrate implementation of a proposed agency action.

The portion of the meeting, from 9:00 a.m. to 11:30 a.m. Eastern time, will include discussions on the Judges Panel roles and processes and Baldrige program updates and is open to the public. Individuals and representatives of organizations who would like to offer comments related to the Judges Panel's general process are invited to request a place on the agenda. Approximately one-half hour will be reserved for public comments, and speaking times will be assigned on a first-come, first-served basis. The amount of time per speaker will be determined by the number of requests received, but is likely to be about 3 minutes each. The exact time for public comments will be included in the final agenda that will be posted on the Baldrige Performance Excellence Program Web site at *http://www.nist.gov/baldrige/community/overseers.cfm.* Questions from the public will not be considered during this period. Speakers who wish to expand upon their oral statements, those who had wished to speak, but could not be accommodated on the agenda, and those who were unable to attend in person are invited to submit written statements to the Baldrige Performance Excellence Program, Attention Nancy Young, National Institute of Standards and Technology, 100 Bureau Drive, Mail Stop 1020, Gaithersburg, Maryland 20899–1020, via fax at 301–975–4967 or electronically by email to *nancy.young@nist.gov.*

All visitors to the National Institute of Standards and Technology site will

have to pre-register to be admitted. Please submit your name, time of arrival, email address and phone number to Nancy Young no later than 4:00 p.m. Eastern time, Thursday, June 2, 2016, and she will provide you with instructions for admittance. Non-U.S. citizens must submit additional information; please contact Nancy Young by email at *nancy.young@nist.gov* or by phone at (301) 975–2361. Also, please note that under the REAL ID Act of 2005 (Pub. L. 109–13), federal agencies, including NIST, can only accept a state-issued driver's license or identification card for access to federal facilities if issued by states that are REAL ID compliant or have an extension. NIST also currently accepts other forms of federal-issued identification in lieu of a state-issued driver's license. For detailed information please contact Ms. Young or visit: *http://www.nist.gov/public_affairs/visitor/.*

The portion of the meeting from 12:30 p.m. to 3:30 p.m. Eastern time, will include discussions on lessons learned from the 2015 judging process and on the 2016 Award process, and is closed to the public in order to protect both proprietary data to be examined and discussed and information that could significantly frustrate implementation of a proposed agency action. The Chief Financial Officer and Assistant Secretary for Administration, with the concurrence of the Assistant General Counsel for Administration and Transactions, formally determined on May 19, 2016, pursuant to Section 10(d) of the Federal Advisory Committee Act, as amended by Section 5(c) of the Government in Sunshine Act, Public Law 94–409, that a portion of the meeting of the Judges Panel may be closed to the public in accordance with 5 U.S.C. 552b(c)(4) because the meeting is likely to disclose trade secrets and commercial or financial information obtained from a person which is privileged or confidential and 5 U.S.C. 552b(c)(9)(B) because for a government agency the meeting is likely to disclose information that could significantly frustrate implementation of a proposed agency action. Portions of the meeting involve examination of prior year Award applicant data. Award applicant data are directly related to the commercial activities and confidential information of the applicants.

Kevin Kimball,

NIST Chief of Staff.

National Oceanic and Atmospheric Administration

RIN 0648–XE645

Marine Fisheries Advisory Committee

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of open public meetings.

SUMMARY: This notice sets forth the schedule and proposed agenda of a forthcoming meeting of the Marine Fisheries Advisory Committee (MAFAC). The members will discuss and provide advice on the NOAA Fisheries Draft National Bycatch Reduction Strategy.

DATES: The meeting is scheduled for June 1, 2016, 4–5 p.m., Eastern Daylight Time.

ADDRESSES: Public access is available at 1315 East-West Highway, Silver Spring, MD 20910.

FOR FURTHER INFORMATION CONTACT: Any member of the public wishing to attend may contact Heidi Lovett, (301) 427–8034; email: *heidi.lovett@noaa.gov.*

SUPPLEMENTARY INFORMATION: The MAFAC was established by the Secretary of Commerce (Secretary), and, since 1971, advises the Secretary on all living marine resource matters that are the responsibility of the Department of Commerce. The charter and other information are located online at *http://www.nmfs.noaa.gov/ocs/mafac/.*

Matters To Be Considered

The Committee is convening to discuss and finalize comments and recommendations on the NOAA Fisheries Draft National Bycatch Reduction Strategy for submission to the NOAA Fisheries Assistant Administrator. Other administrative matters may be considered. This date, time, and agenda are subject to change.

Time and Date

The meeting is scheduled for June 1, 2016, 4–5 p.m., Eastern Daylight Time by conference call. Conference call information for the public will be posted at *http://www.nmfs.noaa.gov/ocs/mafac/* by May 27, 2016.

Pursuant to 41 CFR 102–3.150(b), this **Federal Register** notice for this meeting is being published fewer than 15 calendar days prior to the meeting as exceptional circumstances exist. It is imperative that the meeting be held to accommodate the scheduling priorities of MAFAC members who must meet a strict schedule to finalize and submit comments before the June 3, 2016, public comment period deadline on the draft National Bycatch Reduction Strategy. Notice of the meeting is also posted on MAFAC's Web site at: *http://www.nmfs.noaa.gov/ocs/mafac/.*

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Heidi Lovett, 301–427–8034 by May 31, 2016.

Dated: May 23, 2016.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The New England Fishery Management Council (Council) is scheduling a public meeting of its VMS/Enforcement Committee and Advisory Panel to consider actions affecting New England fisheries in the exclusive economic zone (EEZ). Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate.

DATES: This meeting will be held on Wednesday, June 15, 2016 beginning at 9:30 a.m.

ADDRESSES: The meeting will be held at the DoubleTree by Hilton, 50 Ferncroft Road, Danvers, MA 01923; phone: (978) 777–2500.

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Thomas A. Nies, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492.

SUPPLEMENTARY INFORMATION:

Agenda

The Committee and Advisory Panel will review feedback from other species

committees concerning Office of Law Enforcement Priorities. They will make recommendations on cod-end (date certain) certification and the Omega gauge for mesh measurement (based on the USCG demonstration). They will discuss other business as needed.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Thomas A. Nies, Executive Director, at (978) 465–0492, at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: May 24, 2016.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Mid-Atlantic Fishery Management Council (MAFMC); Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings.

SUMMARY: The Mid-Atlantic Fishery Management Council (Council) will hold public meetings of the Council and its Committees.

DATES: The meetings will be held Monday, June 13, 2016 through Thursday, June 16, 2016. For agenda details, see **SUPPLEMENTARY INFORMATION**.

ADDRESSES: The meeting will be held at: University of Delaware Clayton Hall, 100 David Hollowell Drive, Newark, DE 19716, telephone: (302) 831–2998.

Council address: Mid-Atlantic Fishery Management Council, 800 N. State St., Suite 201, Dover, DE 19901; telephone: (302) 674–2331.

FOR FURTHER INFORMATION CONTACT: Christopher M. Moore, Ph.D. Executive Director, Mid-Atlantic Fishery Management Council; telephone: (302) 526–5255. The Council's Web site, *www.mafmc.org* also has details on the meeting location, proposed agenda, webinar listen-in access, and briefing materials.

SUPPLEMENTARY INFORMATION: The following items are on the agenda, though agenda items may be addressed out of order (changes will be noted on the Council's Web site when possible.)

Monday, June 13, 2016

Ecosystem and Ocean Planning Committee

Review input from the Advisory Panel on fishing activities that impact habitat—draft policy document and provide comments/revisions to the draft document and any other committee updates.

Tuesday, June 14, 2016

Mackerel, Squid, Butterfish Specifications, Meeting as a Committee of the Whole

Review fishery performance and 2017 specifications, butterfish cap operation, and butterfish/longfin squid mesh information.

River Herring/Shad, Meeting as a Committee of the Whole

Review cap operation and management progress and ''Stock in the Fishery'' white paper outline.

Squid Capacity Amendment

Review action plan.

Climate Change and Mid-Atlantic Fishery

Presentation by John Hare of NOAA Fisheries and Malin Pinsky of Rutgers University.

BOEM's Renewable Energy Activities

Presentation by Brian Hooker of BOEM.

Mid-Atlantic Ocean Data Portal Presentation

Presentation by Jay Odell of the Nature Conservancy.

eVTR Framework—Meeting 1

Presentation by Andy Loftus of Loftus Consulting.

Wednesday, June 15, 2016

Industry-Funded Monitoring Amendment

Review draft EA and select preferred mackerel alternatives for public hearings.

Law Enforcement Report

Reports will be received from NOAA Office of Law Enforcement and the U.S. Coast Guard.

Surfclam and Ocean Quahog Specification

Develop recommendations for 2017–18 specifications.

Blueline Tilefish 2017 Recreational Specifications/Possible Reconsideration

Consider alternatives to proposed blueline tilefish recreational specifications.

Thursday, June 16, 2016

Business Session

Organization Reports; Liaison Reports; Executive Director's Report; Science Report; and Committee Reports.

- Continuing and New Business.

Although non-emergency issues not contained in this agenda may come before this group for discussion, in accordance with the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), those issues may not be the subject of formal action during these meetings. Actions will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under Section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aid should be directed to M. Jan Saunders, (302) 526–5251, at least 5 days prior to the meeting date.

Dated: May 24, 2016.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

South Atlantic Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting of the South Atlantic Fishery Management Council.

SUMMARY: The South Atlantic Fishery Management Council (Council) will hold meetings of the: Habitat Protection and Ecosystem-Based Management Committee; Scientific and Statistical Committee (SSC) Selection Committee (Closed Session); Southeast Data, Assessment and Review (SEDAR) Committee (Partially Closed Session); Advisory Panel Selection Committee; Joint Dolphin Wahoo and Snapper Grouper Committees; Snapper Grouper Committee; Law Enforcement Committee (Partially Closed Session); Spiny Lobster Committee; Protected Resources Committee; Data Collection Committee; Executive Finance Committee; King and Spanish Mackerel Committee; and a meeting of the Full Council.

The Council will also hold a formal public comment session. The Council will take action as necessary.

DATES: The Council meeting will be held from 1:30 p.m. on Monday, June 13, 2016 until 1 p.m. on Friday, June 17, 2016.

ADDRESSES:

Meeting address: The meeting will be held at the Hilton Cocoa Beach Oceanfront, 1550 N. Atlantic Avenue, Cocoa Beach, FL 32931; phone: (800) 445–8667 or (321) 799–0003; fax: (321) 799–0344.

Council address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N. Charleston, SC 29405.

FOR FURTHER INFORMATION CONTACT: Kim Iverson, Public Information Officer, SAFMC; phone: (843) 571–4366 or toll free (866) SAFMC–10; fax: (843) 769–4520; email: *kim.iverson@safmc.net.*

SUPPLEMENTARY INFORMATION:

Public comment: Written comments may be directed to Gregg Waugh, Executive Director, South Atlantic Fishery Management Council (see **ADDRESSES**) or electronically via the Council's Web site at: *http://safmc.net/CommentForm_June2016Council.* All comments must be received by June 6, 2016 in order to be considered by the Council prior to the meeting. For written comments received after the Monday before the meeting (after 6/6), individuals sending the comment must use the Council's online form ''*http://safmc.net/CommentForm_June2016Council''.* Comments will automatically be posted to the Web site and available for Council consideration. Comments received prior to noon on Thursday, June 16, 2016 will be a part of the meeting administrative record.

The items of discussion in the individual meeting agendas are as follows:

Habitat Protection and Ecosystem-Based Management Committee Meeting, Monday, June 13, 2016, 1:30 p.m. Until 5:30 p.m.

The Committee will receive a status report on the development of the Fishery Ecosystem Plan II. An Ocean Technology Session will be held as part of the Committee meeting with sessions addressing the use of Autonomous Underwater Vehicles (AUVs), Autonomous and 3D Mapping, Remotely Operated Vehicles Advances and Acoustics, and Unmanned Aircraft Systems (Drones) as Tools in the Ocean. The Committee will also receive presentations on Ocean Investment and Collaborative Sustainability, Applying Emerging Technologies and 21st Century Data Collection, and an overview of recent Council actions specific to Habitat.

SSC Selection Committee, Tuesday, June 14, 2016, 8:30 a.m. Until 9 a.m. (Closed Session)

The Committee will review applications for the SSC and provide recommendations for Council consideration.

SEDAR Committee (Partially Closed Session), Tuesday, June 14, 2016, 9 a.m. Until 10 a.m.

1. The Committee will recommend participants for the upcoming *Blueline Tilefish* Benchmark and *Red Grouper* SEDAR Stock Assessment (Closed Session). The Committee will discuss the timing and Terms of Reference for the assessment.

2. The Committee will receive updates on SEDAR projects, discuss future stock assessments for *cobia,* receive a SEDAR Steering Committee update, and receive the results of the SSC review of the NOAA Fisheries Assessment Priority Process.

Advisory Panel Selection Committee, Tuesday, June 14, 2016: 10 a.m. Until 10:30 a.m.

1. The Committee will review options to allow fishing representation on the Law Enforcement Advisory Panel (AP) and the Information and Education AP, and provide recommendations as appropriate.

2. The Committee will discuss modifications to the current AP application for SEDAR applicants and requirements for AP applicants relative to email accounts and Internet access.

Joint Dolphin Wahoo and Snapper Grouper Committees, Tuesday, June 14, 2016, 10:30 a.m. Until 12 Noon

1. The Committee will receive status updates from NOAA Fisheries on commercial and recreational catches versus annual catch limits (ACLs) for dolphin and wahoo and amendments currently under Secretarial review.

2. The Committee will receive an overview of Amendment 10 to the Dolphin Wahoo Fishery Management Plan (FMP)/Amendment 44 to the Snapper Grouper FMP addressing allocations for dolphin and yellowtail snapper, and provide direction to staff as appropriate.

Snapper Grouper Committee, Tuesday, June 14, 2016, 1:30 p.m. Until 5:30 p.m. and Wednesday, June 15, 2016; 8:30 a.m. Until 5:30 p.m.

1. The Committee will receive updates from NOAA Fisheries on the status of commercial and recreational catches versus quotas for species under ACLs, and the status of amendments currently under Secretarial review.

2. The Committee will receive updates on fishery-independent sampling programs and projects funded through Saltonstall-Kennedy Grant Program.

3. The Committee will receive reports from the Snapper Grouper Advisory Panel, the Scientific and Statistical Committee, and NOAA Fisheries' Southeast Fisheries Science Center regarding red snapper mortality for the 2015 and 2016 fishing season.

4. The Committee will receive an overview of Snapper Grouper Amendment 37 addressing measures for hogfish, modify the document as appropriate, and approve/disapprove all actions.

5. The Committee will review Snapper Grouper Amendment 41 addressing management measures for mutton snapper, modify the document as appropriate, and approve for public hearings.

6. The Committee will receive an overview of management options for red

snapper to be addressed in Amendment 43, modify the document as necessary, discuss and consider emergency action, and provide guidance to staff.

7. The Committee will review management options to include in Vision Blueprint Amendments, discuss and provide direction to staff.

8. The Committee will receive an overview of options for establishing a Control Date and Limited Entry program for federal For-Hire Permits in the Snapper Grouper, Coastal Migratory Pelagic, and Dolphin Wahoo fisheries in the South Atlantic/Atlantic. The Committee will discuss options and provide direction to staff.

Formal Public Comment, Wednesday, June 15, 2016, 5:30 p.m.—Public comment will be accepted on items on the Council agenda. Comment will be accepted first on items before the Council for approval for public hearings: (1) Snapper Grouper Amendment 41 (mutton snapper) and (2) Coastal Migratory Pelagics Framework Amendment 4 (Atlantic cobia). The Council Chair, based on the number of individuals wishing to comment, will determine the amount of time provided to each commenter.

Law Enforcement Committee, Thursday, June 16, 2016, 8:30 a.m. Until 9:30 a.m. (Partially Closed Session)

1. The Committee will review nominees for Law Enforcement Officer of the Year (Closed Session) and provide recommendations for Council consideration.

2. The Committee will discuss items for the Joint Advisory Panel/Committee meeting.

Spiny Lobster Committee, Thursday, June 16, 2016, 9:30 a.m. Until 10:30 a.m.

1. The Committee will receive a report on spiny lobster landings, receive a report from the joint meeting of the South Atlantic and Gulf of Mexico Spiny Lobster Advisory Panels, review recommendations from advisory panels and the Spiny Lobster Review Panel, and provide guidance to staff.

2. The Committee will receive a report on the compliance of trap prohibitions in Closed Areas in the Florida Keys, review specifications from NOAA Fisheries for gear marking requirements for recreational harvest of spiny lobster with traps outside of Florida, and provide recommendations as appropriate.

Protected Resources Committee, Thursday, June 16, 2016, 10:30 a.m. Until 11:30 a.m.

1. The Committee will receive an update from NOAA Fisheries on Protected Resources issues including the use of Turtle Excluder Devices (TEDs) for skimmer trawls and a 12-month determination for *Nassau grouper.* The Committee will also receive an update from the U.S. Fish and Wildlife Service.

Data Collection Committee, Thursday, June 16, 2016, 1 p.m. Until 2:30 p.m.

1. The Committee will receive an update from NOAA Fisheries on the status of work relative to Comprehensive Ecosystem-Based Amendment 3 (CE–BA 3) addressing bycatch, discuss the amendment and provide direction to staff.

2. The Committee will receive an update on the status of the Implementation Plan for commercial logbook electronic reporting and the NMFS pilot project, discuss and provide guidance to staff.

3. The Committee will also receive an overview of the Atlantic For-Hire Reporting Amendment, discuss core variables, and modify the document as appropriate.

4. The Committee will receive an update on the Council's Citizen Science Program, discuss, and take action as appropriate.

Executive Finance Committee, Thursday, June 16, 2016, 2:30 p.m. Until 3:30 p.m.

1. The Committee will review and approve the Calendar Year (CY) 2016 budget; review, modify, and approve the Council Follow-up and work priorities; and provide recommendations as appropriate.

2. The Committee will receive a report from the Council Coordinating Committee meeting, discuss standards and procedures for participating in Council webinar meetings and for accepting public comment, discuss the development of a Visioning Project for other species managed by the Council, and take action as appropriate.

3. The Committee will discuss the use of Atlantic Coastal Cooperative Statistical Program (ACCSP) data for developing FMP amendments and ACCSP housing commercial logbook data and headboat data and take action as appropriate.

King and Spanish Mackerel Committee, Thursday, June 16, 2016: 3:30 p.m. Until 5:30 p.m.

1. The Committee will receive a report from NOAA Fisheries on the recreational and commercial catches versus ACLs and the status of amendments under review, and a report from the April 2016 Gulf of Mexico Fishery Management Council meeting.

2. The Committee will receive updates on decisions relative to Atlantic cobia by the states and the Atlantic States Marine Fisheries Commission (ASMFC), review public input, and take action as necessary.

3. The Committee will receive an overview of Framework Amendment 4 to the Coastal Migratory Pelagic FMP addressing management measures for Atlantic cobia, review and approve actions and alternatives, modify the document as needed, select preferred alternatives, and approve the document for public hearings.

4. The Committee will review Framework Amendment 5 to the Coastal Migratory Pelagic FMP that would remove current restrictions on commercial king mackerel and Spanish mackerel permits that prohibit the retention of bag limit king mackerel and Spanish mackerel on recreational (non-commercial and non-charter/headboat) trips on federally permitted vessels when commercial harvest is closed for the Gulf of Mexico region. The Committee will consider a joint framework amendment with the Gulf Council in order to apply the regulations to the Gulf of Mexico, South Atlantic, and Mid-Atlantic regions, and provide recommendations as appropriate.

5. The Committee will receive an overview of options being considered in Amendment 29 to the Coastal Migratory Pelagic FMP to address allocations of Gulf migratory group king mackerel, discuss, and take action as needed.

Council Session: Friday, June 17, 2016, 8:30 a.m. Until 1 p.m.

8:30–8:45 a.m.: Call the meeting to order, adopt the agenda, and approve the March 2016 meeting minutes.

8:45–9:30 a.m.: The Council will receive a report from the Snapper Grouper Committee and approve/disapprove Snapper Grouper Amendment 41 (mutton snapper) for public hearings. The Council will consider other Committee recommendations and take action as appropriate.

9:30–10 a.m.: The Council will receive a report from the Mackerel Committee, approve/disapprove Coastal Migratory Pelagics Framework Amendment 4 (Atlantic cobia) for public hearings, consider other Committee recommendations, and take action as appropriate.

10 a.m.–10:10 a.m.: The Council will receive a report from the Spiny Lobster Committee, consider other Committee recommendations, and take action as appropriate.

10:10–10:30 a.m.: The Council will receive a report from the Joint Dolphin Wahoo and Snapper Grouper Committees, consider recommendations, and take action as appropriate.

10:30–10:40 a.m.: The Council will receive a report from the Protected Resources Committee, consider recommendations, and take action as appropriate.

10:40–10:50 a.m.: The Council will receive a report from the AP Selection Committee, consider Committee recommendations, and take action as appropriate.

10:50–11 a.m.: The Council will receive a report from the SSC Selection Committee, consider Committee recommendations, and take action as appropriate.

11:10–11:10 a.m.: The Council will receive a report from the SEDAR Committee, consider committee recommendations, and take action as appropriate.

11:10–11:20 a.m.: The Council will receive a report from the Data Collection Committee, consider committee recommendations, and take action as appropriate.

11:20–11:25 a.m.: The Council will receive a report from the Habitat Committee, consider committee recommendations, and take action as appropriate.

11:25–11:30 a.m.: The Council will receive a report from the Law Enforcement Committee, approve the recipient of the Law Enforcement Officer of the Year award, consider other committee recommendations, and take action as appropriate.

11:30–11:40 a.m.: The Council will receive a report from the Executive Finance Committee, approve the Council CY 2016 budget, approve the Council Follow-Up and Priorities, consider other Committee recommendations, and take action as appropriate.

11:40–1 p.m.: The Council will receive status reports from NOAA Fisheries Southeast Regional Office and the Southeast Fisheries Science Center; review and develop recommendations on Experimental Fishing Permits as necessary; receive an update on the Marine Resources Education Program—Southeast; receive agency and liaison reports; and discuss other business and upcoming meetings.

Documents regarding these issues are available from the Council office (see **ADDRESSES**).

Although non-emergency issues not contained in this agenda may come before these groups for discussion, those issues may not be the subject of formal action during these meetings. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for auxiliary aids should be directed to the Council office (see **ADDRESSES**) 3 days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: May 24, 2016.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 6330–01–M

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed Additions to and Deletions from the Procurement List.

SUMMARY: The Committee is proposing to add a product and services to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes products and a service previously furnished by such agencies.

Comments Must Be Received On Or Before: June 26, 2016.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION OR TO SUBMIT COMMENTS CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION:

This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice will be required to procure the product and services listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

The following product and services are proposed for addition to the Procurement List for production by the nonprofit agencies listed:

Product

NSN(s)—Product Name(s): MR 10738—Holder, Pot Lid and Utensil, Includes Shipper 20738

Mandatory for: The requirements of military commissaries and exchanges in accordance with the Code of Federal Regulations, Chapter 51, 51–6.4.

Mandatory Source(s) of Supply: Winston-

Salem Industries for the Blind, Inc., Winston-Salem, NC
Contracting Activity: Defense Commissary Agency
Distribution: C-List

Services

Service Type: Custodial Service
Mandatory for: Department of Homeland Securit, Federal Law Enforcement Training Center, 1131 Chapel Crossing Road, Glynco, GA
Mandatory Source(s) of Supply: Goodwill Industries of the Coastal Empire, Inc., Savannah, GA
Contracting Activity: Department of Homeland Security, Federal Law Enforcement Training Center, Glynco, GA
Service Type: Mailroom and Courier Service
Mandatory for: Office of Personnel Management, Federal Investigative Service, Boyers, PA
Mandatory Source(s) of Supply: Keystone Vocational Services, Inc., Hermitage, PA
Contracting Activity: Office of Personnel Management, Boyers, PA
Service Type: Contractor Operated Parts Store (COPARS)
Mandatory for: U.S. Marine Corps, Motor Transport Department, Contractor Operated Parts Store (COPARS), Marine Corps Air Station, Building 160, Cherry Point, NC
Mandatory Source(s) of Supply: Eastern Carolina Vocational Center, Inc., Greenville, NC
Contracting Activity: Dept. of the Navy, Commanding General, Camp Lejeune, NC
Service Type: Base Supply Center
Mandatory for: Defense Health Agency, Defense Health Headquarters, 7700 Arlington Boulevard, Falls Church, VA
Mandatory Source(s) of Supply: Virginia Industries for the Blind, Charlottesville, VA
Contracting Activity: Dept. of Defense, Defense Health Agency (DHA), Falls Church, VA

Deletions

The following products and service are proposed for deletion from the Procurement List:

Products

NSN(s)—Product Name(s):
6515–00–NSH–0004—Applicator, Disposable,
6515–00–NSH–0005—Applicator, Disposable
Mandatory Source(s) of Supply: Suburban Adult Services, Inc., Elma, NY
Contracting Activities: Department of Veterans Affairs, NAC, Hines, IL, Defense Logistics Agency Troop Support

Service

Service Type: Janitorial/Custodial Service
Mandatory for: U.S. Army Reserve, Chapman USARC, 2408 East Main Street, Danville, IL
Mandatory Source(s) of Supply: Child-Adult Resource Services, Inc., Rockville, IN
Contracting Activity: Dept. of the Army, W6QM MICC Ft. McCoy (RC), Ft. McCoy, WI

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Deletions from the Procurement List.

SUMMARY: The Committee is proposing to delete products and services from the Procurement List that were previously furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: *Effective Date:* June 26, 2016.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 715, Arlington, Virginia, 22202–4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION:

Deletions

On 4/22/2016 (81 FR 23682) and 4/29/2016 (81 FR 25652), the Committee for Purchase From People Who Are Blind or Severely Disabled published notices of proposed deletions from the Procurement List.

After consideration of the relevant matter presented, the Committee has determined that the products and services listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action may result in authorizing small entities to furnish the products and services to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the products and services deleted from the Procurement List.

End of Certification

Accordingly, the following products and services are deleted from the Procurement List:

Products

NSN(s)—Product Name(s):
MR 3206—Goody Hair Care Products—Stay Put Headbands sports 4ct
MR 3210—Goody Hair Care Products—Ouchless Elastic Long Thin
MR 3237—Goody Hair Care Products—Bobby Pin Box w/magnetic Top black
MR 3238—Goody Hair Care Products—Bobby Pin Box w/magnetic Top brown
MR 3244—Goody Hair Care Products—Comb, 7in Utility
Mandatory Source(s) of Supply: Association for Vision Rehabilitation and Employment, Inc., Binghamton, NY
Contracting Activity: Defense Commissary Agency

NSN(s)—Product Name(s):
7195–01–567–9518—Bulletin Board, Fabric, 48″ x 36″, Plastic Frame
7195–01–484–0015—Bulletin Board, Granite Finish, 48″ x 36″, Aluminum Frame
Mandatory Source(s) of Supply: The Lighthouse for the Blind, Inc. (Seattle Lighthouse), Seattle, WA
Contracting Activities:
Department of Veterans Affairs, NAC, Hines, IL
General Services Administration, Philadelphia, PA

NSN(s)—Product Name(s): 8455–01–591–5248—Lapel Pin, Navy Retired, Dual Flag
Mandatory Source(s) of Supply: Industries for the Blind, Inc., West Allis, WI
Contracting Activity: Defense Logistics Agency Troop Support

NSN(s)—Product Name(s): 7105–00–935–1845—Cover, Folding Cot
Mandatory Source(s) of Supply: Cambria County Association for the Blind and Handicapped, Johnstown, PA
Contracting Activity: Defense Logistics Agency Troop Support

NSN(s)—Product Name(s): 1055–01–141–5205—Webbing
Mandatory Source(s) of Supply: Huntsville Rehabilitation Foundation, Huntsville, AL
Contracting Activity: Defense Logistics Agency Land and Maritime

Services

Service Type: Janitorial/Custodial Service
Mandatory for: GSA PBS Region 3, Metro West, 300 and 400 North Greene Street, Baltimore, MD
Mandatory Source(s) of Supply: The Chimes, Inc., Baltimore, MD
Contracting Activity: GSA/PBS/R03, Regional Contracts Support Services Section, Philadelphia, PA

Service Type: Recycling Service

Mandatory for: Francis E. Warren Air Force Base, Francis E. Warren AFB, WY
Mandatory Source(s) of Supply: Magic City Enterprises, Inc., Cheyenne, WY
Contracting Activity: Dept of the Air Force, FA4613 90 CONS LGC, Francis E. Warren AFB, WY

Service Type: Laundry Service
Mandatory for: McChord Air Force Base: Lodging Colored Linen, McChord AFB, WA
Mandatory Source(s) of Supply: Northwest Center, Seattle, WA
Contracting Activity: Dept of the Air Force, FA4479 62 CONS LGC, McChord AFB, WA

DEPARTMENT OF DEFENSE

Department of the Navy

Meeting of the Ocean Research Advisory Panel (ORAP); Correction

AGENCY: Department of the Navy, DoD.

ACTION: Notice; correction.

SUMMARY: The Department of the Navy published a document in the **Federal Register** (81 FR 28054) on May 9, 2016, concerning the open meeting of Ocean Research Advisory Panel (ORAP). Due to the meeting location, pre-registration of public attendees is requested.

DATES: The meeting will be held on Tuesday, May 31, 2016 from 1 p.m. to 5 p.m. and on Wednesday, June 1, 2016 from 9 a.m. to 3 p.m. Members of the public should submit their comments in advance of the meeting to the meeting point of contact. Members of the public who expect to attend are asked to provide name and citizenship in advance to the meeting point of contact in order to facilitate entry in the office suite.

ADDRESSES: The meeting will be held at 4100 Fairfax Drive, Suite 800, Arlington, VA, 22203.

FOR FURTHER INFORMATION CONTACT: CDR Joel W. Feldmeier, Office of Naval Research, 875 North Randolph Street Suite 1425, Arlington, VA 22203–1995, telephone (703) 696–5121, or see *http://www.nopp.org/orap-meeting-rsvp/.*

Dated: May 25, 2016.

N.A. Hagerty-Ford,

Commander, Office of the Judge Advocate General, U.S. Navy, Federal Register Liaison Officer.

BILLING CODE 3810–FF–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2016–ICCD–0063]

Agency Information Collection Activities; Comment Request; Generic Clearance for Federal Student Aid Customer Satisfaction Surveys and Focus Groups Master Plan

AGENCY: Federal Student Aid (FSA), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing an extension of an existing information collection.

DATES: Interested persons are invited to submit comments on or before July 26, 2016.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2016–ICCD–0063. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E–105, Washington, DC 20202–4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Beth Grebeldinger, 202–377–4018.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Generic Clearance for Federal Student Aid Customer Satisfaction Surveys and Focus Groups Master Plan.

OMB Control Number: 1845–0045.

Type of Review: An extension of an existing information collection.

Respondents/Affected Public: Individuals or Households.

Total Estimated Number of Annual Responses: 200,000.

Total Estimated Number of Annual Burden Hours: 45,000.

Abstract: The Higher Education Amendments of 1998 established Federal Student Aid (FSA) as the first Performance-Based Organization (PBO). One purpose of the PBO is to improve service to student and other participants in the student financial assistance programs authorized under title IV of the Higher Education Act of 1965, as amended, including making those programs more understandable to students and their parents. To do that, FSA has committed to ensuring that all people receive service that matches or exceeds the best service available in the private sector. The legislation's requires establish an on-going need for FSA to be engaged in an interactive process of collecting information and using it to improve program services and processes. The use of customer surveys and focus groups allows FSA to gather that information from the affected parties in a timely manner so as to improve communications with our product users.

Dated: May 24, 2016.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Transition and Postsecondary Programs for Students with Intellectual Disabilities (TPSID) Evaluation Protocol.

OMB Control Number: 1840–0825.

Type of Review: A reinstatement of a previously approved information collection.

Respondents/Affected Public: Private Sector.

Total Estimated Number of Annual Responses: 48.

Total Estimated Number of Annual Burden Hours: 1,096.

Abstract: In October 2015, the Institute for Community Inclusion (ICI), UMass Boston received a five-year cooperative agreement from the Office of Postsecondary Education to serve as the National Coordinating Center (NCC) for colleges and universities implementing inclusive higher education programs for students with intellectual disabilities, including 25 newly-funded model demonstration projects aimed at creating inclusive comprehensive transition and postsecondary programs for students with intellectual disabilities known as Transition and Postsecondary Programs for Students with Intellectual Disabilities (TPSIDs).

To reduce respondent burden, the NCC has streamlined and simplified the previously approved evaluation system for the TPSID programs. The NCC will enhance the collection and analyses of longitudinal follow up data from the new 25 TPSID model programs via an already developed and previously OMB approved evaluation system for the TPSID programs. The revised data collection system is part of an evaluation effort. The system will collect program data at the institutions from TPSID program staff via an online, secure data management system.

Dated: May 24, 2016.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Agency Information Collection Extension

AGENCY: U.S. Department of Energy.

ACTION: Submission for Office of Management and Budget (OMB) review; comment request.

SUMMARY: The Department of Energy (DOE) has submitted an information collection request to the OMB for extension under the provisions of the Paperwork Reduction Act of 1995. The information collection requests a three-year reinstatement of its Historic Preservation for Energy Efficiency Programs, OMB Control Number 1910–5155. The proposed collection will allow DOE to continue data collection on the status of Weatherization Assistance Program (WAP), State Energy Program (SEP) and Energy Efficiency and Conservation Block Grant (EECBG) Program activities to ensure that recipients are compliant with section 106 of the National Historic Preservation Act (NHPA).

DATES: Comments regarding this collection must be received on or before June 27, 2016. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, please advise the OMB Desk Officer of your intention to make a submission as soon as possible. The Desk Officer may be telephoned at 202–395–4718.

ADDRESSES: Written comments should be sent to the:

DOE Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10102, 735 17th Street NW., Washington, DC 20503

and to

Sallie Glaize, EE–5W, U.S. Department of Energy, 1000 Independence Ave. SW., Washington, DC 20585, Email: *Sallie.Glaize@ee.doe.gov.*

FOR FURTHER INFORMATION CONTACT: James Carlisle, EE–5W, U.S. Department of Energy, 1000 Independence Ave. SW., Washington, DC 20585, Email: *James.Carlisle@ee.doe.gov.*

Additional information and reporting guidance concerning the Historic Preservation reporting requirement for the Weatherization Assistance Program (WAP), State Energy Program (SEP) and Energy Efficiency and Conservation Block Grant (EECBG) Program are available for review at the following Web site: *http://www1.eere.energy.gov/wip/historic_preservation.html.*

SUPPLEMENTARY INFORMATION: This information collection request contains: (1) OMB No. 1910–5155; (2) Information Collection Request Title: Historic Preservation for Energy Efficiency Programs; (3) Type of Request: Reinstatement; (4) Purpose: To collect data on the status of Weatherization Assistance Program (WAP), State Energy Program (SEP), and Energy Efficiency and Conservation Block Grant (EECBG) Program activities to ensure compliance with Section 106 of the NHPA; (5) Annual Estimated Number of Respondents: 275; (6) Annual Estimated Number of Total Responses: 275; (7) Annual Estimated Number of Burden Hours: 662; (8) Annual Estimated Reporting and Recordkeeping Cost Burden: $0.

Statutory Authority: Section 106 of the National Historic Preservation Act (Pub. L. 89–665 106) establishes that WAP, SEP and EECBG recipients must retain sufficient documentation to demonstrate that the recipient (or subrecipient) has received required approval(s) prior to the expenditure of project funds to alter any historic structure or site.

Issued in Washington, DC, on May 23, 2016.

James Carlisle,

Supervisory Policy Advisor, Weatherization and Intergovernmental, Office of Energy Efficiency and Renewable Energy, U.S. Department of Energy.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9947–11–Region 6]

Underground Injection Control Program; Hazardous Waste Injection Restrictions; Petition for Exemption Reissuance—Class I Hazardous Waste Injection; INEOS Nitriles USA LLC (INEOS)—Green Lake Complex, Port Lavaca, Texas

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of a final decision on a no migration petition reissuance.

SUMMARY: Notice is hereby given that a reissuance of an exemption to the land disposal Restrictions, under the 1984 Hazardous and Solid Waste Amendments to the Resource Conservation and Recovery Act, has been granted to INEOS for three Class I hazardous waste injection wells located at their Green Lake Complex located in Port Lavaca, Texas. The company has adequately demonstrated to the satisfaction of the Environmental Protection Agency by the petition reissuance application and supporting documentation that, to a reasonable degree of certainty, there will be no migration of hazardous constituents from the injection zone for as long as the waste remains hazardous. This final decision allows the underground injection by INEOS, of the specific restricted hazardous wastes identified in this exemption reissuance, into Class I hazardous waste injection Wells WDW–163, WDW–164, and WDW–165 until December 31, 2017, unless EPA moves to terminate this exemption. Additional conditions included in this final decision may be reviewed by contacting the Region 6 Ground Water/UIC Section. A public notice was issued March 16, 2016, and the public comment period closed on May 2, 2016. No comments were received. This decision constitutes final Agency action and there is no Administrative appeal. This decision may be reviewed/appealed in compliance with the Administrative Procedure Act.

DATES: This action is effective as of May 16, 2016.

ADDRESSES: Copies of the petition reissuance and all pertinent information relating thereto are on file at the following location: Environmental Protection Agency, Region 6, Water Division, Safe Drinking Water Branch (6WQ–S), 1445 Ross Avenue, Dallas, Texas 75202–2733.

FOR FURTHER INFORMATION CONTACT: Philip Dellinger, Chief, Ground Water/UIC Section, EPA—Region 6, telephone (214) 665–8324.

Dated: May 16, 2016.

David F. Garcia,

Deputy Director, Water Division.

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

Agency Information Collection Activities; Comment Request

AGENCY: Equal Employment Opportunity Commission.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the Commission announces that it intends to request an extension without change of the existing information collection described below from the Office of Management and Budget (OMB). The Commission is seeking public comments on the proposed extension.

DATES: Written comments on this notice must be submitted on or before July 26, 2016.

ADDRESSES: Comments on this notice may be submitted to the EEOC in three ways; please use only one. Comments and attachments may be submitted online at *http://www.regulations.gov,* which is the Federal eRulemaking Portal. Follow the instructions on the Web site for submitting comments. Comments received there will be posted publicly on the same portal without change, including any personal information you provide. However, the EEOC reserves the right to refrain from posting libelous or otherwise inappropriate comments including those that contain obscene, indecent, or profane language; that contain threats or defamatory statements; that contain hate speech directed at race, color, sex, national origin, age, religion, disability, or genetic information; or that promote or endorse services or products. Hard copy comments may be submitted to Bernadette Wilson, Acting Executive Officer, Executive Secretariat, Equal Employment Opportunity Commission, 131 M Street NE., Washington, DC 20507. The Executive Secretariat also will accept documents totaling six or fewer pages by facsimile (''fax'') machine at *(202) 663–4114.* (This is not a toll-free number.) Receipt of fax transmittals will not be acknowledged, except that the sender may request confirmation of receipt by calling the Executive Secretariat staff at *(202) 663–4070* (voice) or *(202) 663–4074* (TTY). (These are not toll-free telephone numbers.) Subject to the conditions noted above, the EEOC will post online at *http://www.regulations.gov* all comments submitted in hard copy or by fax with the Executive Secretariat.

All comments received, including any personal information provided, also will be available for public inspection during normal business hours by appointment only at the EEOC Headquarters' Library, 131 M Street NE., Washington, DC 20507. Upon request, individuals who require assistance viewing comments are provided appropriate aids such as readers or print magnifiers. To schedule an appointment to inspect the comments at the EEOC's library, contact the library staff at (202) 663–4630

(voice) or (202) 663–4641 (TTY). (These are not toll-free numbers.)

FOR FURTHER INFORMATION CONTACT: Thomas J. Schlageter, Assistant Legal Counsel, (202) 663–4668, or Savannah E. Marion, General Attorney, (202) 663–4909, Office of Legal Counsel, 131 M Street NE., Washington, DC 20507. Copies of this notice are available in the following alternate formats: Large print, braille, electronic computer disk, and audio-tape. Requests for this notice in an alternative format should be made to the Publications Center at 1–800–699–3362 (voice), 1–800–800–3302 (TTY), or 703–821–2098 (FAX—this is not a toll free number).

SUPPLEMENTARY INFORMATION: The Equal Employment Opportunity Commission (EEOC), in accordance with the Paperwork Reduction Act of 1995 (PRA) and OMB regulation 5 CFR 1320.8(d)(1), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the EEOC to assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public to understand the EEOC's information collection requirements and provide the requested data in the desired format. The EEOC is soliciting comments on the information collection that is described below. The EEOC is especially interested in public comment that will assist the EEOC in the following: (1) Evaluating whether the collection of information is necessary for the proper performance of the Commission's functions, including whether the information will have practical utility; (2) Evaluating the accuracy of the Commission's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used; (3) Enhancing the quality, utility, and clarity of the information to be collected; and (4) Minimizing the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. Please note that written comments received in response to this notice will be considered public records.

Overview of This Information Collection

Collection Title: Informational requirements under Title II of the Older Workers Benefit Protection Act of 1990 (OWBPA), 29 CFR 1625.22.

OMB Number: 3046–0042.

Type of Respondent: Business, State or local governments, not for profit institutions.

Description of Affected Public: Any employer with 20 or more employees that seeks waiver agreements in connection with an exit incentive or other employment termination program.

Number of Responses: 17,350.

Reporting Hours: 26,025.

Number of Forms: None.

Burden Statement: The only paperwork burden involved is the inclusion of the relevant data in requests for waiver agreements under the OWBPA.

Abstract: The EEOC enforces the Age Discrimination in Employment Act (ADEA) which prohibits discrimination against employees and applicants for employment who are age 40 or older. The OWBPA, enacted in 1990, amended the ADEA to require employers to disclose certain information to employees (but not to EEOC) in writing when they ask employees to waive their rights under the ADEA in connection with an exit incentive program or other employment termination program. The regulation at 29 CFR 1625.22 reiterates those disclosure requirements. The EEOC seeks an extension without change for the third-party disclosure requirements contained in this regulation.

For the Commission.

Dated: May 23, 2016.

Jenny R. Yang,

Chair.

[FR Doc. 2016–12568 Filed 5–26–16; 8:45 am]

BILLING CODE 6570–01–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–XXXX]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

DATES: Written PRA comments should be submitted on or before July 26, 2016. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicole Ongele, FCC, via email *PRA@fcc.gov* and to *Nicole.Ongele@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Nicole Ongele at (202) 418–2991.

OMB Control Number: 3060–XXXX.

Title: Connect America Fund-Alternative Connect America Cost Model Support.

Form Number: N/A.

Type of Review: New collection.

Respondents: Business or other for-profit.

Number of Respondents and Responses: 2,010 unique respondents; 2,090 responses.

Estimated Time per Response: 0.5 hours–2 hours.

Frequency of Response: On occasion and annual reporting requirements, one-time reporting requirement and recordkeeping requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 151–154, 155, 201–206, 214, 218–220, 251, 252, 254, 256, 303(r), 332, 403, 405, 410, and 1302.

Total Annual Burden: 1,780 hours.

Total Annual Cost: No Cost.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: We note that USAC must preserve the confidentiality of all data obtained from respondents; must not use the data except for purposes of administering the universal service programs; and must not disclose data in company-specific form unless directed to do so by the Commission.

Needs and Uses: The Commission is requesting approval for this new collection. In March 2016, the Commission adopted an order reforming its universal service support program in areas served by rate-of-return carriers. Connect America Fund; ETC Annual Reports and Certifications; Establishing Just and Reasonable Rates for Local Exchange Carriers; Developing a Unified Intercarrier Compensation Regime, WC Docket Nos. 10–90, 14–58, 07–135, 05–337, 03–109; CC Docket Nos. 01–92, 96–45, Report and Order, Order and Order on Reconsideration, and Further Notice of Proposed Rulemaking, FCC 16–33 (*Rate-of-Return Order*).

The Commission adopted a voluntary path for rate-of-return carriers to receive model-based universal service support in exchange for making a commitment to deploy broadband-capable networks meeting certain service obligation to a pre-determined number of eligible locations by state. The Commission addressed the requirement that carriers electing model-based support must notify the Commission of that election and their commitment to satisfy the specific service obligations associated with the amount of model support. In addition, the Commission adopted reforms to the universal service mechanisms used to determine support for rate-of-return carriers not electing model-based support. Among other such reforms, the Commission adopted an operating expense limitation to improve carriers' incentives to be prudent and efficient in their expenditures, a capital investment allowance to better target support to those areas with less broadband deployment, and broadband deployment obligations to promote ''accountability from companies receiving support to ensure that public investment are used wisely to deliver intended results.'' This information collection addresses the new burdens associated with those reforms.

Federal Communications Commission.

Gloria J. Miles,

Federal Register Liaison Officer, Office of the Secretary.

[FR Doc. 2016–12611 Filed 5–26–16; 8:45 am]

BILLING CODE 6712–01–P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The applications will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than June 24, 2016.

A. Federal Reserve Bank of Atlanta (Chapelle Davis, Assistant Vice President), 1000 Peachtree Street NE., Atlanta, Georgia 30309. Comments can also be sent electronically to *Applications.Comments@atl.frb.org:*

1. *Progressive Financial Group, Inc.,* Jamestown, Tennessee; to become a bank holding company by acquiring 100 percent of the voting shares of Progressive Savings Bank, Jamestown, Tennessee.

2. *Progressive Financial Group, Inc.,* Jamestown, Tennessee, to acquire up to 23.3 percent of the voting shares of Upper Cumberland Bancshares, Inc., Byrdstown, Tennessee, and thereby indirectly acquire People's Bank and Trust Company of Pickett County, Byrdstown, Tennessee, and Peoples Bank & Trust Company of Clinton, Albany, Kentucky.

Board of Governors of the Federal Reserve System, May 24, 2016.

Michele Taylor Fennell,

Assistant Secretary of the Board.

BILLING CODE 6210–01–P

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors of the Federal Reserve System.

SUMMARY: Notice is hereby given of the final approval of a proposed information collection by the Board of Governors of the Federal Reserve System (Board) under OMB delegated authority. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. Copies of the Paperwork Reduction Act Submission, supporting statements and approved collection of information instrument(s) are placed into OMB's public docket files. The Federal Reserve may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, Washington, DC 20551, (202) 452–3829. Telecommunications Device for the Deaf (TDD) users may contact (202) 263–4869, Board of Governors of the Federal Reserve System, Washington, DC 20551.

OMB Desk Officer—Shagufta Ahmed—Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW., Washington, DC 20503.

Final Approval Under OMB Delegated Authority of The Extension For Three Years, Without Revision, of the Following Reports

1. Report title: Written Security Program for State Member Banks.

Agency form number: FR 4198.

OMB control number: 7100–0326.

Frequency: On occasion.

Reporters: Bank holding companies, savings and loan holding companies, state member banks, state-licensed branches and agencies of foreign banks

(other than insured branches), and corporations organized or operating under sections 25 or 25A of the Federal Reserve Act (agreement corporations and Edge corporations).

Estimated annual reporting hours: Section 14 strategic planning and budgeting process: Large institutions: 20,160 hours; mid-sized institutions: 17,520 hours; small institutions: 428,080 hours. Section 20 liquidity risk reporters: 261,696 hours.

Estimated average hours per response: Section 14 strategic planning and budgeting process: Large institutions: 720 hours; mid-sized institutions: 240 hours; small institutions: 80 hours. Section 20 liquidity risk reporters: 4 hours.

Number of respondents: Section 14 strategic planning and budgeting process: Large institutions: 28; mid-sized institutions: 73; small institutions: 5,351. Section 20 liquidity risk reporters: 5,452.

General description of report: The Board's Legal Division has determined that this information collection is mandatory based on the following relevant statutory provisions.

- Section 9(6) of the Federal Reserve Act (12 U.S.C. 324) requires state member banks to make reports of condition to their supervising Reserve Bank in such form and containing such information as the Board may require.
- Section 5(c) of the Bank Holding Company Act (12 U.S.C. 1844(c)) authorizes the Board to require a BHC and any subsidiary to submit reports to keep the Board informed as to its financial condition, [and] systems for monitoring and controlling financial and operating risk.
- Section 7(c)(2) of the International Banking Act of 1978 (12 U.S.C. 3105(c)(2) requires branches and agencies of foreign banking organizations to file reports of condition with the Federal Reserve to the same extent and in the same manner as if the branch or agency were a state member bank.
- Section 25A of the Federal Reserve Act (12 U.S.C. 625) requires Edge and agreement corporations to make reports to the Board at such time and in such form as it may require.
- Section 10(b) of the Home Owners' Loan Act requires an SLHC to file reports on the operation of the SLHC and any subsidiary as the Board may require and in such form and for such periods as the Board may require.

Because the records required by the Guidance are maintained at the institution, issues of confidentiality are not expected to arise. Should the documents be obtained by the Federal Reserve System during the course of an examination, they would be exempt from disclosure under exemption 8 of FOIA, 5 U.S.C. 552(b)(8). In addition, some or all of the information may be ''commercial or financial'' information protected from disclosure under exemption 4 of FOIA, under the standards set forth in *National Parks & Conservation Ass'n* v. *Morton,* 498 F.2d 765 (D.C. Cir. 1974).

Abstract: On March 22, 2010, the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Reserve, and the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA) (the agencies) published a joint final notice in the **Federal Register** implementing guidance titled ''Interagency Policy Statement on Funding and Liquidity Risk Management'' (the ''Guidance''), effective May 21, 2010.[1]

The Guidance summarizes the principles of sound liquidity risk management that the agencies have issued in the past and, where appropriate, brings them into conformance with the ''Principles for Sound Liquidity Risk Management and Supervision'' issued by the Basel Committee on Banking Supervision (BCBS) in September 2008. While the BCBS liquidity principles primarily focuses on large internationally active financial institutions, the Guidance emphasizes supervisory expectations for all domestic financial institutions including banks, thrifts and credit unions.

The agencies [2] have identified two sections of the Guidance that fall under the definition of an information collection. Section 14 states that institutions should consider liquidity costs, benefits, and risks in strategic planning and budgeting processes. Section 20 requires that liquidity risk reports provide aggregate information with sufficient supporting detail to enable management to assess the sensitivity of the institution to changes in market conditions, its own financial performance, and other important risk factors.

Current Actions: On March 15, 2016, the Board published a notice in the **Federal Register** (81 FR 13791) requesting public comment for 60 days on the proposal to extend the FR 4198 for three years without revision. The comment period for the notice expired on May 16, 2016. The Federal Reserve did not receive any comments, and the information collection will be extended as proposed.

[1] 75 FR 13656 (March 22, 2010).

[2] As part of the Dodd-Frank Wall Street Reform and Consumer Protection Act, the OTS was abolished and its functions and powers were transferred to the OCC, the FDIC, and the Federal Reserve.

2. Report title: Recordkeeping Provisions Associated with Guidance on Leveraged Lending.

Agency form number: FR 4203.

OMB control number: 7100–0354.

Frequency: On occasion.

Reporters: All institutions that originate or participate in leverage lending.

Estimated annual reporting hours: 29,422 hours.

Estimated average hours per response: 754.4 hours.

Number of respondents: 39.

General description of report: The Board's Legal Division has determined that all financial institutions supervised by the Board and substantively engaged in leveraged lending activities are subject to the FR 4203:

- Regarding state member banks, the information collection is authorized by Section 11(a)(2) of the Federal Reserve Act, 12 U.S.C. 248(a)(2), which authorizes the Board to require any depository institution to make such reports of its assets and liabilities as the Board may determine to be necessary or desirable to enable the Board to discharge its responsibilities to monitor and control monetary and credit aggregates.
- With respect to bank holding companies, Section 5(c) of the Bank Holding Company Act, 12 U.S.C. 1844(c), authorizes the Board to require a bank holding company and any subsidiary ''to keep the Board informed as to—(i) its financial condition, [and] systems for monitoring and controlling financial and operating risks . . . .''
- With respect to savings and loan holding companies, 12 U.S.C. 1467a(b)(3), authorizes the Board to ''maintain such books and records as may be prescribed by the Board.''
- Regarding branches and agencies of foreign banking organizations, Section 7(c)(2) of the International Banking Act of 1978, 12 U.S.C. 3105(c)(2), subjects such entities to the requirements of section 11(a) of the Federal Reserve Act (12 U.S.C. 248(a)) ''to the same extent and in the same manner as if the branch or agency were a state member bank.''
- Under Section 25 of the Federal Reserve Act, 12 U.S.C. 602, member banks are required to furnish to the Board ''information concerning the condition of'' Edge and Agreement Corporations in which they invest. More generally with respect to Edge and Agreement Corporations, under Section 25A of the Federal Reserve Act, 12

U.S.C. 611a, the Federal Reserve may ''issue rules and regulations'' governing such entities ''consistent with and in furtherance of the purposes'' of that subchapter.

Because the information collection is called for in guidance and not in a statute or regulation, it is considered voluntary.

Because the information collected by the Proposed Guidance is maintained at the institutions, issues of confidentiality would not normally arise. Should the information be obtained by the Board in the course of an examination, it would be exempt from disclosure under exemption 8 of Freedom of Information Act (FOIA), 5 U.S.C. 552(b)(8). In addition, some or all of the information may be confidential commercial or financial information protected from disclosure under exemption 4 of FOIA, under the standards set forth in *National Parks & Conservation Ass'n* v. *Morton,* 498 F.2d 765 (D.C. Cir. 1974).

Abstract: The interagency guidance outlines high-level principles related to safe and sound leveraged lending activities, including underwriting considerations, assessing and documenting enterprise value, risk management expectations for credits awaiting distribution, stress testing expectations and portfolio management, and risk management expectations. This guidance applies to all financial institutions substantively engaged in leveraged lending activities supervised by the Federal Reserve, FDIC, and OCC (the Agencies).

The Agencies identified certain aspects of the proposed guidance that may constitute a collection of information. In particular, these aspects are the provisions that state a banking organization should (a) have underwriting policies for leveraged lending, including stress testing procedures for leveraged credits; (b) have risk management policies, including stress testing procedures for pipeline exposures; and (c) have policies and procedures for incorporating the results of leveraged credit and pipeline stress tests into the firm's overall stress testing framework.

Although the guidance is applicable to all institutions that originate or participate in leverage lending, due to the large exposures created by these types of loans, these credits are most likely originated primarily by larger institutions.

Current Actions: On March 15, 2016, the Board published a notice in the **Federal Register** (81 FR 13791) requesting public comment for 60 days on the proposal to extend the FR 4203 for three years without revision. The comment period for the notice expired on May 16, 2016. The Federal Reserve did not receive any comments, and the information collection will be extended as proposed.

3. Report title: Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulation NN.

Agency form number: Reg NN.

OMB control number: 7100–0353.

Frequency: On occasion.

Reporters: Banking organizations seeking to engage in off-exchange transactions in foreign currency with retail customers.

Estimated annual reporting hours: 1,972 hours.

Estimated average hours per response: Reporting, 16 hours; Recordkeeping, 183 hours; Disclosure, 787 hours.

Number of respondents: 2.

General description of report: This information collection is required by the Commodity Exchange Act (7 U.S.C. Section 2(c)(2)(E)), the Federal Reserve Act (12 U.S.C. Sections 248 and 321–338), the Federal Deposit Insurance Act (12 U.S.C. Section 1818), the International Banking Act (12 U.S.C. Section 3108), and Regulation NN (12 CFR part 240). The information collection is mandatory. The reported data are regarded as confidential under the Freedom of Information Act (5 U.S.C. Section 552(b)(4)).

Abstract: The reporting requirements associated with Regulation NN are found in section 240.4; the recordkeeping requirements are found in sections 240.7, 240.9, and 240.13(a); and the disclosure requirements are found in sections 240.5, 240.6, 240.10, 240.13b–d, 240.15, and 240.16. These requirements permit banking organizations under the Federal Reserve's supervision to engage in off-exchange transactions in foreign currency with retail customers and to describe various requirements with which banking organizations must comply to conduct such transactions.

Current Actions: On March 17, 2016, the Board published a notice in the **Federal Register** (81 FR 14444) requesting public comment for 60 days on the proposal to extend the FR 4203 for three years without revision. The comment period for the notice expired on May 16, 2016. The Federal Reserve did not receive any comments, and the information collection will be extended as proposed.

Board of Governors of the Federal Reserve System, May 24, 2016.

Robert deV. Frierson,

Secretary of the Board.

BILLING CODE 6210–01–P

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000–0173; Docket 2016–0053; Sequence 28]

Information Collection; Limitations on Pass-Through Charges

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice of request for public comments regarding an extension to an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division will be submitting to the Office of Management and Budget (OMB) a request to review and approve a previously approved information collection requirement regarding Limitations on Pass-Through Charges.

DATES: Submit comments on or before July 26, 2016.

ADDRESSES: Submit comments identified by Information Collection 9000–0173, Limitations on Pass-Through Charges by any of the following methods:

- *Regulations.gov: http://www.regulations.gov.* Submit comments via the Federal eRulemaking portal by searching the OMB control number. Select the link ''Submit a Comment'' that corresponds with ''Information Collection 9000–0173, Limitations on Pass-Through Charges''. Follow the instructions provided at the ''Submit a Comment'' screen. Please include your name, company name (if any), and ''Information Collection 9000–0173, Limitations on Pass-Through Charges'' on your attached document.
- *Mail:* General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405. ATTN: Ms. Flowers/IC 9000–0173, Limitations on Pass-Through Charges.

Instructions: Please submit comments only and cite Information Collection 9000–0173, Limitations on Pass-Through Charges, in all correspondence related to this collection. Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please

check *www.regulations.gov,* approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT: Mr. Michael O. Jackson, Procurement Analyst, Office of Acquisition Policy, at telephone 202–208–4949 or via email to *michaelo.jackson@gsa.gov*.

SUPPLEMENTARY INFORMATION:

A. Purpose

To enable contracting officers to verify that pass-through charges are not excessive, the provision at 52.215–22 requires offerors submitting a proposal for a contract, task order, or delivery order to provide the following information with its proposal: (1) The percent of effort the offeror intends to perform and the percent expected to be performed by each subcontractor. (2) If the offeror intends to subcontract more than 70 percent of the total cost of work to be performed—(i) The amount of the offeror's indirect costs and profit/fee applicable to the work to be performed by the subcontractor(s); and (ii) A description of the value added by the offeror as related to the work to be performed by the subcontractor(s). (3) If any subcontractor intends to subcontract to a lower-tier subcontractor more than 70 percent of the total cost of work to be performed under its subcontract—(i) The amount of the subcontractor's indirect costs and profit/fee applicable to the work to be performed by the lower-tier subcontractor(s); and (ii) A description of the value added by the subcontractor as related to the work to be performed by the lower-tier subcontractor(s).

B. Annual Reporting Burden

Respondents: 4,638.
Responses per Respondent: 8.7.
Total Responses: 40,347.
Hours per Response: 2.
Total Burden Hours: 80,694.
Frequency of Collection: On Occasion.
Affected Public: Businesses or other for-profit and not-for-profit institutions.

C. Public Comments

Public comments are particularly invited on: Whether this collection of information is necessary for the proper performance of functions of the FAR, and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected; and ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW., Washington, DC 20405, telephone 202–501–4755. Please cite OMB Control No. 9000–0173, Limitations on Pass-Through Charges, in all correspondence.

Dated: May 23, 2016.

Lorin S. Curit,

Director, Federal Acquisition Policy Division, Office of Governmentwide Acquisition Policy, Office of Acquisition Policy, Office of Governmentwide Policy.

BILLING CODE 6820–EP–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Agency for Healthcare Research and Quality, HHS.

ACTION: Notice.

SUMMARY: This notice announces the intention of the Agency for Healthcare Research and Quality (AHRQ) to request that the Office of Management and Budget (OMB) approve the proposed information collection project: ''*Eisenberg Center Voluntary Customer Survey Generic Clearance.*'' In accordance with the Paperwork Reduction Act, 44 U.S.C. 3501–3521, AHRQ invites the public to comment on this proposed information collection.

DATES: Comments on this notice must be received by July 26, 2016.

ADDRESSES: Written comments should be submitted to: Doris Lefkowitz, Reports Clearance Officer, AHRQ, by email at *doris.lefkowitz@AHRQ.hhs.gov.*

Copies of the proposed collection plans, data collection instruments, and specific details on the estimated burden can be obtained from the AHRQ Reports Clearance Officer.

FOR FURTHER INFORMATION CONTACT: Doris Lefkowitz, AHRQ Reports Clearance Officer, (301) 427–1477, or by email at *doris.lefkowitz@AHRQ.hhs.gov.*

SUPPLEMENTARY INFORMATION:

Proposed Project

Eisenberg Center Voluntary Customer Survey Generic Clearance

The Agency for Healthcare Research and Quality (AHRQ) requests that the Office of Management and Budget (OMB) renew under the Paperwork Reduction Act of 1995 AHRQ's Generic Clearance to collect information from users of work products and services produced by AHRQ's John M. Eisenberg Center for Clinical Decisions and Communications Science (Eisenberg Center). The Eisenberg Center is an innovative effort aimed at improving communication of findings to a variety of audiences (''customers''), including consumers, clinicians, and health care policymakers. The Eisenberg Center compiles research results into a variety of useful formats for stakeholders.

This effort has the following goals:

(1) Conduct research into effective communication of research findings in order to improve the usability and rapid incorporation of findings into medical practice and decision making.

(2) Conduct research into effective strategies for disseminating evidence-based products, tools, and resources to consumers, clinicians, and other health care professionals, and policymakers.

(3) Evaluate outcomes reported by clinicians and other health care professionals resulting from participation in continuing medical education (CME) initiatives and activities.

(4) Conduct research into factors associated with successful collaboration between AHRQ and partnering institutions and organizations in synthesizing, translating, and disseminating evidence-based research.

Clearance is being requested to cover a three-year period in which differing numbers of products and research activities may be conducted during each year. The collections proposed include activities to assist in the development of materials to be disseminated through the Eisenberg Center and to provide feedback to AHRQ on the extent to which these products meet customer needs. These materials include summary documents that summarize and translate the findings of research reports for various decision-making audiences, such as consumers, clinicians, and policymakers. The summaries are designed to help these decision makers use research evidence to maximize the benefits of health care, minimize harm, and optimize the use of health care resources. In addition, each year, a unique research project will be undertaken to study successful approaches to disseminating AHRQ

products in various health care settings and clinical environments. Also, each year, the Eisenberg Center will develop one interactive decision aid for clinical problems identified from selected research reports. The intent is for the decision aid to increase the decision maker's knowledge of the health condition, options, and risk/benefits; lead to greater assurance in making a decision; increase the congruence between values and choices; and enhance involvement in the decision making process. Information collections conducted under this generic clearance are not required by regulation and will not be used to regulate or sanction customers. Data collections will be entirely voluntary, and information provided by respondents will be combined and summarized so that no individually identifiable information will be released.

This study is being conducted by AHRQ through its contractor, Baylor College of Medicine, pursuant to AHRQ's statutory authority to conduct and support research on health care and on systems for the delivery of such care, including activities with respect to the quality, effectiveness, efficiency, appropriateness and value of health care services and with respect to quality measurement and improvement. 42 U.S.C. 299a(a)(1) and (2).

Method of Collection

The data collections listed below will be implemented to achieve project goals. Note: Assessments such as interviews and surveys are here denoted formative if conducted prior to product development or determination of dissemination channels; usability testing or pretesting if conducted while reviewing a draft product, proposed dissemination approach, or other proposed content/strategy; and evaluation if conducted for summative evaluation or to assess satisfaction after the product has been in use or the dissemination campaign, learning activity, or other initiative undertaken.

Data collections will include the following:

(1) *Interviews for Product and Decision Aid Development, Testing, and Use.* Individual interviews will be conducted with clinical professionals, patients, or other health care consumers, or health policymakers. In some cases focus groups may be substituted for patient interviews. These formative and pretesting/cognitive interviews will allow for (1) collecting input from target audiences regarding the development of summary products and decision aids; (2) determining if intended information and messages are being delivered effectively through products that are developed and disseminated through the Eisenberg Center; (3) assessing whether changes in topical knowledge levels can be identified following exposure to Eisenberg Center informational or instructional products or aids; (4) identifying product strengths and weaknesses to facilitate improvements that are practical and feasible; and (5) assessing decision support from the perspective of each audience. In addition, the Eisenberg Center will conduct a new research project annually to inform the enhancement of existing health information products, beyond what is currently being provided. The accompanying assessments will likely consist of interviews conducted with target audience members and may be integrated into the existing product interviews discussed above.

(2) *Interviews for Dissemination Activities.* Interviews will be conducted with leadership and staff of health systems, hospitals, and/or clinics in which dissemination activities are conducted to explore, prior to initiating the project, those pathways holding the greatest potential for successful uptake of the AHRQ materials. Interviews will be conducted again after project conclusion with administrators and product users (*e.g.,* consumers, clinicians) to assess success of dissemination efforts, perceptions around product access, challenges that arose, and strategies to facilitate future successful dissemination initiatives.

(3) *Survey for Decision Aids.* Following delivery of the decision aid, a user survey will be completed to explore subjects' impressions of the tool, including ease of use, clarity of presentation, length, balance of information, rating of interactive features, and overall satisfaction. Both clinicians and patients/consumers will be surveyed. For patients, the customer satisfaction survey may include decisional outcome measures (*e.g.,* decisional conflict, desire for involvement in decision-making), measures of attitudes and self-efficacy, and indicators of choice intention or actual choice made. If the aid is evaluated within a clinical context, measures of physician-patient interaction will also be considered. Additionally, clinicians may be interviewed about the impact of the aid on decision making, clinical flow, and patient outcomes.

(4) *Survey for Summary Products (initial, follow up).* Very brief surveys will be offered to health care professionals, consumers, and policymakers that use the online summaries. Immediately upon accessing the summaries, visitors will be asked to complete a brief survey assessing for whom they were seeking information, how the product might be used, and an email address for a follow-up survey. Respondents will subsequently be sent an email asking them to complete a follow-up online survey assessing how the information has been used, whether it influenced health care practices, and any barriers to use or suggestions for improvement.

(5) *Survey of Patient and Consumer Advocacy Organizations.* Each project year, representatives from consumer and patient advocacy organizations will be invited to attend a meeting and participate in ongoing activities to facilitate engagement in AHRQ systematic review, translation, and dissemination activities. Surveys by phone or online questionnaire will be used to assess the quality of the in-person meeting and ongoing activities, the impact and value of engaging with AHRQ, the value of research and translation products for the target audiences, how partners and their constituents are using the products, and ways to make the products and partnerships with AHRQ more useful for partners and have a broader reach.

(6) *Survey of AHRQ Partners.* AHRQ, through the Evidence-based Practice Center (EPC) Program and Eisenberg Center, works in partnership with organizations when developing, translating, and/or disseminating research reports and related products. AHRQ's partners include developers of clinical practice guidelines, payers, other Government agencies, private companies, consumer and patient advocacy groups, and health care systems. Surveys by phone or online questionnaire, followed by targeted interviews, will be used to assess the impact and value of AHRQ research products for the target audiences, determine how partners are using the products, and identify ways to make the products and partnerships more useful for partners and have a broader reach.

(7) *CME Outcomes Survey.* AHRQ through the Eisenberg Center will offer AMA PRA Category 1 CME credit for certain products that it develops. Clinicians wishing to claim credit must complete an outcome assessment survey delivered online two months after completing the activity.

(8) *Interviews and Surveys for Dissemination Research Project.* Each project year the Eisenberg Center will propose and conduct a unique research project aimed at disseminating products. As part of that project, formative interviews and potentially

cognitive testing will be conducted with consumers, clinicians, and administrators from participating health systems, hospitals, and/or clinics for purposes of assessing current dissemination initiatives, similar products available to their consumers, ways to optimize dissemination, and other indicators as determined by the project aims. These three audiences may also be asked to complete follow-up surveys and/or participate in interviews to document project outcomes and lessons learned from the study.

The information will be used to develop, improve and/or maintain high quality health care informational products and services for the lay public and health care professionals. Each product previously developed by the Eisenberg Center was proposed, drafted, tested, and revised with heavy reliance on data collected in a manner similar to those approaches described in this clearance. This includes data collected at the formative stage when ideas for the product and its information parameters are being developed, through draft testing and revisions, and finally product implementation and evaluation of its usefulness in practice. Work on implementing and evaluating dissemination strategies and approaches will complement the development activities in optimizing delivery to the targeted audiences.

Estimated Annual Respondent Burden

Exhibit 1 shows the estimated total burden for the respondents' time to participate in this research. These estimates assume a maximum of 141 Summary products over 3 years with separate products developed for clinicians, policymakers, and consumers.

Formative interviews, and in some cases focus groups, will be used to conduct needs assessment and will be held with clinicians and consumers for development of the products and decision aids, and additionally with policymakers for those products in which policy recommendations are applicable. Interviews will be conducted with no more than 2,115 persons for product development, 180 persons for decision aid development, and 180 persons for development of dissemination initiatives over 3 years, and each will last about 60 minutes.

Once the products are developed they will be subjected to in-person or telephone interviews for purposes of usability and product testing with clinicians, policymakers and consumers. In-person/telephone interviews will be conducted with about 2,115 persons for products and 180 persons for decision aids over 3 years and will take about 60 minutes on average. A second round of interviews will be conducted only occasionally with one or more of the targeted populations if necessary due to substantial product revisions. These interviews may also be used to inform product enhancements in relation to the annual enhancement study. Because these specifications cannot be determined in advance, clearance is being requested for two testing rounds with every product and every audience.

Evaluation surveys will be conducted with approximately 6,000 representatives across the targeted audiences (*i.e.,* consumer, clinician, policymaker) for the health information products and 2,400 persons who have used the decision aids over the 3-year period. The product surveys will take about 5 minutes to complete, and the decision aid surveys about 10 minutes. A follow-up survey will be completed for the product evaluations, which will also last about 5 minutes, while a subset of 180 of those having used the decision aids will be asked to participate in a follow-up evaluation interview lasting an hour.

Those involved in or targeted by the dissemination initiatives will be asked to participate in evaluation interviews, which will include up to 480 persons completing interviews across the 3 project years. *Note:* Because the timing of interviews with persons at the 6 total partner organizations has not yet been finalized, AHRQ is requesting that all dissemination-related interviews be approved for the first project year. For simplicity, the interviews are presented as annualized in Exhibits 1 and 2.

The unique dissemination research project to be proposed and completed annually will include 135 formative interviews with consumers, clinicians, and administrators, with each lasting 1 hour. Follow-up evaluation surveys and interviews will be conducted with 360 and 180 persons, respectively.

AHRQ partners will be asked to complete surveys and interviews in relation to their prior or ongoing collaborative work with AHRQ. These will include 150 people completing surveys and 60 follow-up interviews. Similar types of surveys designed with the goal of improving products and expanding their research will be completed by 90 representatives of advocacy organizations across the 3 years, with each survey lasting about 10 minutes.

Clinicians that have completed CME accrediting requirements and are requesting CME credit will be asked to complete a follow-up outcomes survey two months following completion of the online activity. These will be completed by no more than 27,000 clinicians over 3 years and will require 5 minutes to complete.

The total burden hours are estimated to be 13,875 annually or 41,625 over 3 years. The total annual cost burden is $237,604.

EXHIBIT 1—ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Number of respondents	Number of responses per respondent	Hours per response	Total burden hours
Product Formative Interviews	705	1	1	705
Product Pretesting Interviews	705	2	1	1,410
Product Evaluation Surveys	2,000	2	5/60	333
Dissemination Formative Interviews	40	1	1	40
Dissemination Evaluation Interviews	120	1	1	120
Decision Aid Formative Interviews	60	1	1	60
Decision Aid Pretesting Interviews	60	1	1	60
Decision Aid Evaluation Interviews	60	1	1	60
Decision Aid Evaluation Surveys	800	1	10/60	133
Research Project Formative Interviews	45	1	1	45
Research Project Evaluation Surveys	120	1	10/60	20
Research Project Evaluation Interviews	60	1	1	60
Partnership Evaluation Surveys	50	1	10/60	8
Partnership Evaluation Interviews	20	1	1	20

EXHIBIT 1—ESTIMATED ANNUALIZED BURDEN HOURS—Continued

Form name	Number of respondents	Number of responses per respondent	Hours per response	Total burden hours
Advocacy Meeting Evaluation Surveys	30	1	10/60	5
CME Outcomes Surveys	9,000	1	5/60	750
Total	13,875	na	na	3,830

* For the 3-year contract period, product formative interviews and product testing interviews will each comprise 300 consumers, 300 clinicians, and 105 policymakers; product evaluation surveys will include 800 consumers, 800 clinicians, and 400 policymakers; dissemination-related formative interviews will include 40 health system/hospital/clinic administrators; dissemination-related evaluation interviews will include 40 consumers, 40 clinicians, and 40 administrators; formative interviews, pretesting interviews, and evaluation interviews for the decision aids will each include 30 consumers and 30 clinicians; evaluation surveys for the decision aids will include 400 consumers and 400 clinicians; formative interviews for the annual dissemination research project will include 15 consumers, 15 clinicians, and 15 administrators; evaluation surveys for the research project will include 50 consumers, 50 clinicians, and 20 administrators; evaluation interviews for the research project will include 20 consumers, 20 clinicians, and 20 administrators; the AHRQ partner surveys will include 50 partners; the AHRQ partner evaluation interviews will include 20 partners; the health advocates surveys will include 30 participants; and CME outcomes surveys will include 500 clinicians for each of 18 CME activities.

EXHIBIT 2—ESTIMATED ANNUALIZED COST BURDEN

Form name	Number of respondents	Total burden hours	Average hourly wage rate *	Total cost burden
Product Formative Interviews	705	705	[a] $54.81	$38,641
Product Pretesting Interviews	705	1,410	[a] 54.81	77,282
Product Evaluation Surveys	2,000	333	[a] 54.00	17,982
Dissemination Formative Interviews	40	40	[a] 49.84	1,994
Dissemination Evaluation Interviews	120	120	[a] 54.74	6,568
Decision Aid Formative Interviews	60	60	[a] 57.19	3,431
Decision Aid Pretesting Interviews	60	60	[a] 57.19	3,431
Decision Aid Evaluation Interviews	60	60	[a] 57.19	3,431
Decision Aid Evaluation Surveys	800	133	[a] 57.19	7,606
Research Project Formative Interviews	45	45	[b] 54.74	2,463
Research Project Evaluation Surveys	120	20	[b] 55.96	1,119
Research Project Evaluation Interviews	60	60	[b] 54.74	3,284
AHRQ Partner Evaluation Surveys	50	8	[c] 54.50	436
AHRQ Partner Evaluation Interviews	20	20	[c] 54.50	1,090
Advocacy Meeting Evaluation Surveys	30	5	[d] 21.21	106
CME Outcomes Surveys	9,000	750	[e] 91.66	68,745
Total	13,875	3,830	na	237,604

* National Compensation Survey: Occupational wages in the United States May 2014, ''U.S. Department of Labor, Bureau of Labor Statistics.''

[a] Based on the mean and/or weighted mean wages for various combinations of consumers (00–0000 all occupations), clinicians (29–1060 physicians and surgeons, 29–1062 family and general practitioners), and health policymakers (11–0000 management occupations, 11–3111 compensation & benefits managers, 13–1141 compensation, benefits & job analysis specialists, 11–9111 medical and health service managers, 13–2053 insurance underwriters and 15–2011 actuaries).

[b] Based on the mean and/or weighted mean wages for various combinations of consumers (00–0000 all occupations), clinicians (29–1060 physicians and surgeons, 29–1062 family and general practitioners), and health system/hospital/clinic administrators (11–9111 medical and health services managers).

[c] Based on the mean wages for AHRQ partners (25–1071 health specialties teachers, postsecondary, 11–1021 general and operations managers, 21–0091 health educators, 21–1093 social and human service assistants, 11–9111 medical and health services managers).

[d] Based on the mean wages for health advocacy organizations (21–1093 social and human service assistants [social advocacy organizations], 21–0091 health educators).

[e] Based on the mean wages for clinicians (29–1060 physicians and surgeons, 29–1062 family and general practitioners).

Exhibit 2 depicts the estimated total cost burden associated with the respondents' time to participate in this research. The cost burden is estimated to be $237,604 annually.

Request for Comments

In accordance with the Paperwork Reduction Act, comments on AHRQ's information collection are requested with regard to any of the following: (a) Whether the proposed collection of information is necessary for the proper performance of AHRQ health care research and health care information dissemination functions, including whether the information will have practical utility; (b) the accuracy of AHRQ's estimate of burden (including hours and costs) of the proposed collection(s) of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information upon the respondents, including the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and included in the Agency's subsequent request for OMB approval of the proposed information collection. All comments will become a matter of public record.

Sharon B. Arnold,

Deputy Director.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Office of the Director, National Institutes of Health; Notice of Meeting

Pursuant to section 10(a) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of a meeting of the Recombinant DNA Advisory Committee.

The meeting will be open to the public, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

Name of Committee: Recombinant DNA Advisory Committee.

Date: June 21–22, 2016.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: The NIH Recombinant DNA Advisory Committee (RAC) will review and discuss selected human gene transfer protocols and related data management activities. In addition, Dr. Carl June (Perelman School of Medicine, Univ. of Pennsylvania) will present the results of findings of his group regarding a rare Chimeric Antigen Receptor (CAR) T cell manufacturing event. For more information, please check the meeting agenda at the OSP Web site, RAC Meeting Page (available at the following URL: *http://osp.od.nih.gov/office-biotechnology-activities/event/2016-06-21-120000-2016-06-210000/rac-meeting*).

Place: National Institutes of Health, Building 35, Conference Room 620/630, 9000 Rockville Pike, Rockville, MD 20852.

Contact Person: Shayla Beckham, Extramural Support Assistant, Office of Science Policy, National Institutes of Health, 6705 Rockledge Drive, Room 750, Bethesda, MD 20892–9606, 301–496–9838, *beckhams@mail.nih.gov.*

Information is also available on the Institute's/Center's home page: *http://oba.od.nih.gov/rdna/rdna.html,* where an agenda and any additional information for the meeting will be posted when available.

OMB's ''Mandatory Information Requirements for Federal Assistance Program Announcements'' (45 FR 39592, June 11, 1980) requires a statement concerning the official government programs contained in the Catalog of Federal Domestic Assistance. Normally NIH lists in its announcements the number and title of affected individual programs for the guidance of the public. Because the guidance in this notice covers virtually every NIH and Federal research program in which DNA recombinant molecule techniques could be used, it has been determined not to be cost effective or in the public interest to attempt to list these programs. Such a list would likely require several additional pages. In addition, NIH could not be certain that every Federal program would be included as many Federal agencies, as well as private organizations, both national and international, have elected to follow the NIH Guidelines. In lieu of the individual program listing, NIH invites readers to direct questions to the information address above about whether individual programs listed in the Catalog of Federal Domestic Assistance are affected.

(Catalogue of Federal Domestic Assistance Program Nos. 93.14, Intramural Research Training Award; 93.22, Clinical Research Loan Repayment Program for Individuals from Disadvantaged Backgrounds; 93.232, Loan Repayment Program for Research Generally; 93.39, Academic Research Enhancement Award; 93.936, NIH Acquired Immunodeficiency Syndrome Research Loan Repayment Program; 93.187, Undergraduate Scholarship Program for Individuals from Disadvantaged Backgrounds, National Institutes of Health, HHS)

Dated: May 23, 2016.

Carolyn Baum,

Program Specialist, Office of Federal Advisory Committee Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Request for Information on the Development of the FY 2018 Trans-NIH Plan for HIV-Related Research

SUMMARY: Through this Request for Information (RFI), the Office of AIDS Research (OAR) in the Division of Program Coordination, Planning, and Strategic Initiatives, National Institutes of Health (NIH) invites feedback from investigators in academia, industry, health care professionals, patient advocates and health advocacy organizations, scientific or professional organizations, federal agencies, and other interested constituents and the community on the development of the fiscal year 2018 Trans-NIH Plan for HIV-Related Research. This plan is designed to identify and articulate possible future directions to maximize benefits of investments in HIV/AIDS research.

DATES: The Office of AIDS Research Request for Information is open for public comment for a period of 30 days. Comments must be received by June 27, 2016 to ensure consideration. After the public comment period has closed, the comments received will be considered in a timely manner by the Office of AIDS Research in the Division of Program Coordination, Planning, and Strategic Initiatives.

ADDRESSES: Submissions may be electronically to *OAR_RFI18@od.nih.gov.*

FOR FURTHER INFORMATION CONTACT: Questions about this request for information should be directed to Shoshana Kahana, Ph.D., Office of AIDS Research, Division of Program Coordination, Planning, and Strategic Initiatives, Office of the Director, National Institutes of Health, 5601 Fishers Lane, Bethesda, MD 20892, *OAR_RFI18@od.nih.gov,* 301–496–0357.

SUPPLEMENTARY INFORMATION: OAR oversees and coordinates the conduct and support of all HIV/AIDS research activities at the NIH. The NIH-sponsored HIV/AIDS research program includes both extramural and intramural research, buildings and facilities, research training, and program evaluation and supports a comprehensive portfolio of research representing a broad range of basic, clinical, behavioral, social science, and translational research on HIV/AIDS and its associated coinfections. The NIH HIV/AIDS research program is conducted and supported by nearly all of the NIH Institutes and Centers (ICs).

OAR plans and coordinates research through the development of an annual Trans-NIH Plan for HIV-Related Research (the ''Plan'') that articulates the overarching HIV/AIDS research priorities and serves as the framework for developing the trans-NIH AIDS research budget. The Plan provides information about the NIH's HIV/AIDS research priorities to the scientific community, Congress, community stakeholders, HIV-affected communities, and the broad public at large. The fiscal year 2017 Plan was recently distributed on the OAR Web site: (*http://www.oar.nih.gov/strategic_plan/fy2017/OARStrategicPlan2017.pdf*).

New overarching priorities for HIV/AIDS research for the next three to five years were defined in the NIH Director's Statement of August 12, 2015 (*https://grants.nih.gov/grants/guide/notice-files/NOT-OD-15-137.html*).

High Priority topics of research for support include:

(1) Reducing the incidence of HIV/AIDS (including the development of a safe and effective vaccine, microbicides, and pre-exposure prophylaxis candidates);

(2) Developing the next generation of HIV therapies with less toxicity, better safety, and ease of use;

(3) Identifying strategies to cure AIDS; and

(4) Improving the prevention and treatment of HIV-associated comorbidities, coinfections, and complications.

There also are three cross-cutting areas associated with these overarching priorities which include:

(1) Basic research underlying the basic biology of HIV (*e.g.,* transmission and pathogenesis; immune dysfunction and chronic inflammation; host microbiome and genetic determinants);

(2) Research to reduce health disparities in the incidence of new HIV infections or in treatment outcomes of those living with HIV/AIDS; and

(3) Research training of the workforce required to conduct high priority HIV/AIDS research.

Information Requested

OAR is seeking input on the inclusion of important new and/or emerging areas of scientific investigation to inform the development of the fiscal year 2018 Trans-NIH Plan for HIV-Related Research. The overarching high-priority areas of research as delineated in NOT–15–137 will remain unchanged. OAR would like feedback on those scientific and research opportunities that refine the NIH HIV/AIDS research agenda and optimize the investment of HIV/AIDS research resources to search for critical strategies to prevent, treat, and cure AIDS.

Please provide your perspective on any of the following topics as they relate to the development of the fiscal year 2018 Trans-NIH Plan for HIV-Related Research. Comments can include but are not limited to the following areas:

1. Emerging strategies and technologies related to the development, testing, and production of promising HIV vaccine candidates (active and

passive), and novel adjuvants, including the coordinated role that mucosal and systemic immunity play in protection from viral acquisition and infection.

2. Emerging topics related to the development, testing, and formulation of microbicides, pre-exposure prophylaxis candidates, long acting/and/or injectable formulations of antiretroviral treatment candidates (and related methods of delivery for HIV treatments) that are less toxic, longer acting, have fewer side effects and complications, and easier to take and adhere to than current regimens.

3. Emerging topics that relate to the research toward a cure, including the development of novel approaches and strategies that could lead to sustained HIV remission or viral eradication without the continuing need for combination antiretroviral therapy, including studies of HIV persistence, latency, and reservoir formation.

4. Emerging topics that relate to the HIV cascade of care, including the development, testing, and implementation of integrated biomedical, behavioral, and social science strategies to improve HIV testing and entry into prevention and treatment services, including linkage, engagement, and retention in these services for optimal treatment response.

5. Emerging topics that relate to basic research underlying the basic biology of HIV, (*e.g.,* acquisition, transmission and pathogenesis; viral persistence; immune dysfunction and chronic inflammation; host microbiome and genetic determinants; and pathogenesis of opportunistic infections, coinfections, comorbidities, and HIV-related mortalities.

6. Emerging topics that relate to reducing health disparities in the incidence of new HIV infections or in treatment outcomes of those living with HIV/AIDS, with a specific focus on structural, environmental, and community-level determinants of health and the interplay of these determinants in developing strategies to mitigate the disparities in HIV incidence and access to HIV preventive and treatment services,

7. Emerging topics that relate to the challenges and opportunities that should be considered for research training and career development programs targeting researchers conducting high priority HIV/AIDS research.

Please limit responses to <1500 characters. Responses to this RFI Notice are voluntary. The submitted information will be reviewed by NIH staff and may be made available to the public. Submitted information will not be considered confidential. This request is for information and planning purposes and should not be construed as a solicitation or as an obligation of the federal government or the NIH. No awards will be made based on responses to this Request for Information. The information submitted will be analyzed and may be used in reports or presentations. Those who respond are advised that the NIH is under no obligation to acknowledge receipt of your comments, or provide comments on your submission. No proprietary, classified, confidential and/or sensitive information should be included in your response. The NIH and the government reserve the right to use any non-proprietary technical information in any future solicitation(s).

Dated: May 20, 2016.

Lawrence A. Tabak,

Deputy Director, National Institutes of Health.

Submission for OMB Review; 30-Day Comment Request; The Clinical Trials Reporting Program (CTRP) Database (NCI)

SUMMARY: Under the provisions of Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Cancer Institute (NCI), the National Institutes of Health, has submitted to the Office of Management and Budget (OMB) a request for review and approval of the information collection listed below. This proposed information collection was previously published in the **Federal Register** on March 11, 2016 (Vol. 81, P. 12914) and allowed 60-days for public comment. No public comments were received. The purpose of this notice is to allow an additional 30 days for public comment. The National Cancer Institute (NCI), National Institutes of Health, may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Direct Comments to OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, *OIRA_submission@omb.eop.gov* or by fax to 202–395–6974, Attention: NIH Desk Officer.

Comment Due Date: Comments regarding this information collection are best assured of having their full effect if received within 30 days of the date of this publication.

FOR FURTHER INFORMATION CONTACT: To obtain a copy of the data collection plans and instruments, or request more information on the proposed project, contact: Jose Galvez, MD, Office of the Director, National Cancer Institute, 9609 Medical Center Drive, Rockville, MD 20852 or call non-toll-free number 240–276–5206 or Email your request, including your address to: *jose.galvez@nih.gov.* Formal requests for additional plans and instruments must be requested in writing.

Proposed Collection: The Clinical Trials Reporting Program (CTRP) Database (NCI), 0925–0600, Expiration Date 05/31/2016—Revision, National Cancer Institute (NCI), National Institutes of Health (NIH).

Need and Use of Information Collection: The Clinical Trials Reporting Program (CTRP) is an electronic resource that serves as a single, definitive source of information about all NCI-supported clinical research. This resource allows the NCI to consolidate reporting, aggregate information and reduce redundant submissions. Information is submitted by clinical research administrators as designees of clinical investigators who conduct NCI-supported clinical research. The designees can electronically access the CTRP Web site to complete the initial trial registration. Subsequent to registration, four amendments and four study subject accrual updates occur per trial annually.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The estimated annualized burden hours are 18,000.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form	Number of respondents	Number of responses per respondent	Average time per response (in hours)	Total annual burden hours
Clinical Trials	Initial Registration	3,000	1	1	3,000
	Amendment	1,500	4	1	6,000
	Update	1,500	4	1	6,000
	Accrual Updates	3,000	4	15/60	3000
Total		9,000	27,000		18,000

Dated: May 20, 2016.

National Institutes of Health

Submission for OMB Review; 30-Day Comment Request a Generic Submission for Formative Research, Pretesting and Customer Satisfaction of NCI's Communication and Education Resources (NCI)

SUMMARY: Under the provisions of section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Cancer Institute, the National Institutes of Health, has submitted to the Office of Management and Budget (OMB) a request for review and approval of the information collection listed below. This proposed information collection was previously published in the **Federal Register** on March 9, 2016 P. 12514 and allowed 60 days for public comment. No public comments were received. The purpose of this notice is to allow an additional 30 days for public comment. The National Cancer Institute, NCI, National Institutes of Health, may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Direct Comments To OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, *OIRA_submission@omb.eop.gov* or by fax to 202–395–6974, Attention: NIH Desk Officer.

Comment Due Date: Comments regarding this information collection are best assured of having their full effect if received within 30 days of the date of this publication.

FOR FURTHER INFORMATION CONTACT: To obtain a copy of the data collection plans and instruments, or request more information on the proposed project, contact: Nina Goodman, Public Health Advisor, Office of Communication and Public Liaison, 9609 Medical Center Drive, RM 2E446 Rockville, MD 20850 or call non-toll-free number (240) 276–6600 or Email your request, including your address to: *nciocpl@mail.nih.gov.* Formal requests for additional plans and instruments must be requested in writing.

Proposed Collection: A Generic Submission for Formative Research, Pretesting and Customer Satisfaction of NCI's Communication and Education Resources (NCI), 0925–0046, Expiration

Date 05/31/2016, REVISION, National Cancer Institute (NCI), National Institutes of Health (NIH).

Need and Use of Information Collection: As part of NCI's mandate from Congress to disseminate information on cancer research, detection, prevention, and treatment, the Institute develops a wide variety of messages and materials. Testing these messages and materials assesses their potential effectiveness in reaching and communicating with their intended audience while they are still in the developmental stage and can be revised. The formative research and pretesting process thus contributes to maximizing NCI's limited dollar resources for information dissemination and education. NCI also must ensure the relevance, utility, and appropriateness of the many educational programs and products that the Institute produces. Customer satisfaction studies help NCI identify modifications necessary to meet the needs of NCI's various target audiences. Since the previous submission, there have been 10 approved sub-studies with an approved request of just under 1400 burden hours over 2.5 years. Approval is requested for the conduct of multiple studies annually using such methods as interviews, focus groups, and various types of surveys. The content, timing, and number of respondents to be included in each sub-study will vary, depending on the nature of the message/material/program being assessed, the methodology selected, and the target audiences.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 33,000.

ESTIMATED ANNUALIZED BURDEN HOURS

Category of respondents	Form name	Number of respondents	Frequency of response per respondent	Time per response (in hours)	Burden hours
Healthcare Providers and Professionals including those working in health field (*e.g.,* cancer researchers).	Focus Groups, Individual In-Depth Interviews, Brief Interviews, Surveys, Website Usability Testing.	16,500	1	1	16,500
General Public, Cancer Patients, Friends and Families of Patients.	Focus Groups, Individual In-Depth Interviews, Brief Interviews, Surveys, Website Usability Testing.	16,500	1	1	16,500
Totals		33,000	33,000		33,000

Dated: May 20, 2016.

Karla Bailey,

Project Clearance Liaison, National Cancer Institute, NIH.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 concerning opportunity for public comment on proposed collections of information, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer on (240) 276–1243.

Comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: SAMHSA SOAR Web-Based Data Form (OMB No. 0930–0329)—REVISION

In 2009 the Substance Abuse and Mental Health Services Administration (SAMHSA) of the U.S. Department of Health and Human Services established a Technical Assistance Center to assist in the implementation of the SSI/SSDI Outreach Access and Recovery (SOAR) effort in all states. The primary objective of SOAR is to improve the allowance rate for Social Security Administration (SSA) disability benefits for people who are experiencing or at risk of homelessness, and who have a serious mental illness.

During the SOAR training, the importance of keeping track of SSI/SSDI applications through the process is stressed. In response to requests from states implementing SOAR, the Technical Assistance Center, under SAMHSA's direction, developed a web-based data form that case managers can use to track the progress of submitted applications, including decisions received from SSA either on initial application or on appeal. This password-protected web-based data form is hosted on the SOAR Web site (*https://soartrack.prainc.com*). Use of this form is completely voluntary.

In addition, data from the web-based form can be compiled into reports on decision results and the use of SOAR core components, such as the SSA–1696 Appointment of Representative, which allows SSA to communicate directly with the case manager assisting with the application. These reports will be reviewed by agency directors, SOAR state-level leads, and the national SOAR Technical Assistance Center to quantify the success of the effort overall and to identify areas where additional technical assistance is needed.

The changes to this form include questions on military discharge status, VA disability compensation, applicant earnings per month, number of consultative exams ordered, and whether access to benefits facilitated housing. Additionally, we added three questions to the user registration form that include county, funding source, and SOAR training completed.

The estimated response burden has not changed and is as follows:

Information source	Number of respondents	Responses per respondent	Total responses	Hours per response	Total hours
SOAR Data Form	700	3	2100	.25	525

Send comments to Summer King, SAMHSA Reports Clearance Officer, Room 15E–57B, 5600 Fishers Lane, Rockville, MD 20857 *or* email her a copy at *summer.king@samhsa.hhs.gov.* Written comments should be received by July 26, 2016.

Summer King,

Statistician.

BILLING CODE 4162–20–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Submission for OMB Review; Comment Request

Periodically, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish a summary of information collection requests under OMB review, in compliance with the Paperwork Reduction Act (44 U.S.C. chapter 35). To request a copy of these documents, call the SAMHSA Reports Clearance Officer on (240) 276–1243.

Project: 2017 National Survey on Drug Use and Health (OMB No. 0930–0110)—Revision

The National Survey on Drug Use and Health (NSDUH) is a survey of the U.S. civilian, non-institutionalized population aged 12 years old or older. The data are used to determine the prevalence of use of tobacco products, alcohol, illicit substances, and illicit use of prescription drugs. The results are used by SAMHSA, the Office of National Drug Control Policy (ONDCP), Federal government agencies, and other organizations and researchers to establish policy, direct program activities, and better allocate resources.

While NSDUH must be updated periodically to reflect changing substance use and mental health issues and to continue producing current data, for the 2017 NSDUH only the following minor changes are planned: (1) Updated questions so respondents who report no use of alcohol are not asked about misuse of prescription drugs with alcohol; and (2) included other minor wording changes to improve the flow of the interview, increase respondent comprehension or to be consistent with text in other questions.

As with all NSDUH/NHSDA [1] surveys conducted since 1999, the sample size of the survey for 2017 will be sufficient to permit prevalence estimates for each of the fifty States and the District of Columbia. The total annual burden estimate is shown below in Table 1.

TABLE 1—ANNUALIZED ESTIMATED BURDEN FOR 2017 NSDUH

Instrument	Number of respondents	Responses per respondent	Total number of responses	Hours per response	Total burden hours
Household Screening	131,983	1	131,983	0.083	10,955
Interview	67,507	1	67,507	1.000	67,507
Screening Verification	3,755	1	3,755	0.067	252
Interview Verification	10,126	1	10,126	0.067	678
Total	131,983	.....	213,371	.....	79,932

Written comments and recommendations concerning the proposed information collection should be sent by June 27, 2016 to the SAMHSA Desk Officer at the Office of Information and Regulatory Affairs, Office of Management and Budget (OMB). To ensure timely receipt of comments, and to avoid potential delays in OMB's receipt and processing of mail sent through the U.S. Postal Service, commenters are encouraged to submit their comments to OMB via email to: *OIRA_Submission@omb.eop.gov.* Although commenters are encouraged to send their comments via email, commenters may also fax their comments to: 202–395–7285. Commenters may also mail them to: Office of Management and Budget, Office of Information and Regulatory Affairs, New Executive Office Building, Room 10102, Washington, DC 20503.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2016–0437]

Update to Alternative Planning Criteria (APC) National Guidelines

AGENCY: Coast Guard, OHS.

ACTION: Notice of availability; request for comments.

SUMMARY: The Coast Guard announces the availability of a draft update to the Alternative Planning Criteria (APC) National Guidelines. The APC

[1] Prior to 2002, the NSDUH was referred to as the National Household Survey on Drug Abuse (NHSDA).

Guidelines provide the maritime industry with updated information on the development and submission of an APC request made pursuant to existing regulations. In addition to providing guidance to vessel owners and operators on developing APC requests, the APC Guidelines will also facilitate consistency in the review of APC requests by Coast Guard personnel. This notice solicits public comment on the procedures contained in the draft update to the APC Guidelines.

DATES: Comments must reach the USCG by August 25, 2016.

ADDRESSES: To view the APC Guidelines as well as documents mentioned in this notice, go to *http://www.regulations.gov,* type ''USCG–2016–0437'' and click ''Search.'' Then click the ''Open Docket Folder.''

FOR FURTHER INFORMATION CONTACT:

For USCG: CDR Scott Stoermer, Office of Marine Environmental Response Policy, 202–372–2234.

SUPPLEMENTARY INFORMATION:

I. Public Participation and Request for Comments

The USCG encourages participation in updating the APC Guidelines by submitting comments and related materials. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information provided.

Submitting comments: If you submit a comment, please include the docket number (USCG–2016–0437), indicate the specific section of the APC Guidelines to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. We recommend that you include your name, a mailing address, an email address and/or a phone number in the body of your document to facilitate follow-up contact if we have questions regarding your submission.

To submit your comment online, go to *http://www.regulations.gov,* type ''USCG–2016–0437'' in the search box, and click ''Search.'' Then click ''Comment Now!'' on the appropriate line. If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the DHS Facility, please enclose a stamped, self-addressed postcard or envelope. We will consider all comments and material received during the comment period.

Viewing comments and documents: To view comments as well as documents mentioned in this notice as being available in the docket, go to *http://www.regulations.gov,* type ''USCG–2016–0437'' and click ''Search.'' Then click the ''Open Docket Folder.''

Privacy Act: Anyone can search the electronic material submitted into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review a Privacy Act and system of records notice regarding our public dockets in the January 17, 2008, issue of the **Federal Register** (73 FR 3316).

FR Federal Register
MSIB Marine Safety Information Bulletin
NTV Nontank Vessel
OPA Oil Pollution Act of 1990
USCG U.S. Coast Guard
VOO Vessel of Opportunity
VRP Vessel Response Plan

III. Background

Under 33 CFR 155.1015 and 155.5015, vessel response plans (VRPs) are required to cover all navigable waters of the U.S. in which a vessel operates. Several areas under U.S. jurisdiction do not have sufficient resources to meet the national planning criteria prescribed under 33 CFR part 155, Appendix B. In remote areas where typical response resources are not available, or the available commercial resources do not meet the national planning criteria, a vessel owner or operator may request that the Coast Guard accept an Alternative Planning Criteria (APC).

In August 2009, the Coast Guard published CG–543 Policy Letter 09–02, ''Industry Guidelines for Requesting Alternate Planning Criteria Approval, One Time Waivers and Interim Operating Authorization.'' The purpose of Policy Letter 09–02, was to provide guidance to the maritime industry in applying for an APC pursuant to 33 CFR 155.1065(f).

In September 2013, the Coast Guard published regulations (78 FR 60124) requiring NTVs over 400 gross tons to submit VRPs, which made the national planning criteria in 33 CFR part 155 applicable to thousands of additional vessels across the U.S., including geographic areas with limited commercially available response resources. Over time, it became apparent that additional guidance would be useful in addressing compliance issues that had developed from the promulgation of the nontank vessel (NTV) Final Rule.

In 2015, Coast Guard Dl 7 published a draft Marine Safety Information Bulletin (MSIB) that provided guidance for APC submissions and expectations within Alaskan waters, with a focus on NTV traffic. Dl 7 received a multitude of comments from various sectors of the maritime industry on the draft MSIB. By this time, the Coast Guard determined it would be best to update the national APC guidance rather than singularly focusing on APC guidelines specific to Alaska. The comments received on Dl 7's MSIB were strongly considered by the Coast Guard during the development of the revised APC national guidance now being published for public comment.

IV. Public Comment of APC Guidelines

The draft APC Guidelines may be amended by the Coast Guard, as appropriate, based upon public comment on this **Federal Register** notice.

This notice is issued under the authority of 5 U.S.C. 552 (a).

Dated: May 23, 2016.

J.B. Loring,

Captain, U.S. Coast Guard, Chief, Office of Marine Environmental Response Policy.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[CBP Dec. 16–08]

Western Hemisphere Travel Initiative: Designation of an Approved Native American Tribal Card Issued by the Hydaburg Cooperative Association of Alaska as an Acceptable Document To Denote Identity and Citizenship for Entry in the United States at Land and Sea Ports of Entry

AGENCY: U.S. Customs and Border Protection, DHS.

ACTION: Notice.

SUMMARY: This notice announces that the Commissioner of U.S. Customs and Border Protection is designating an approved Native American Tribal Card issued by the Hydaburg Cooperative Association of Alaska (HCA Tribe) to U.S. and Canadian citizens as an acceptable travel document for purposes of the Western Hemisphere Travel Initiative. The approved card may be used to denote identity and citizenship of HCA Tribe members entering the

United States from contiguous territory or adjacent islands at land and sea ports of entry.

DATES: This designation will become effective on May 27, 2016.

FOR FURTHER INFORMATION CONTACT: Arthur A. E. Pitts, Director, Traveler Policies Division, Admissibility and Passenger Programs, Office of Field Operations, U.S. Customs and Border Protection, via email at *arthur.a.pitts@cbp.dhs.gov.*

SUPPLEMENTARY INFORMATION:

Background

The Western Hemisphere Travel Initiative

Section 7209 of the Intelligence Reform and Terrorism Prevention Act of 2004 (IRTPA), Public Law 108–458, as amended, required the Secretary of Homeland Security (Secretary), in consultation with the Secretary of State, to develop and implement a plan to require U.S. citizens and individuals for whom documentation requirements have previously been waived under section 212(d)(4)(B) of the Immigration and Nationality Act (8 U.S.C. 1182(d)(4)(B)) to present a passport or other document or combination of documents as the Secretary deems sufficient to denote identity and citizenship for all travel into the United States. *See* 8 U.S.C. 1185 note. On April 3, 2008, the Department of Homeland Security (DHS) and the Department of State promulgated a joint final rule, effective on June 1, 2009, that implemented the plan known as the Western Hemisphere Travel Initiative (WHTI) at U.S. land and sea ports of entry. *See* 73 FR 18384 (the WHTI land and sea final rule). It amended various sections of the Code of Federal Regulations (CFR), including 8 CFR 212.0, 212.1, and 235.1. The WHTI land and sea final rule specifies the documents that U.S. citizens and nonimmigrant aliens from Canada, Bermuda, and Mexico are required to present when entering the United States at land and sea ports of entry.

Under the WHTI land and sea final rule, one type of citizenship and identity document that may be presented upon entry to the United States at land and sea ports of entry from contiguous territory or adjacent islands [1] is a Native American Tribal Card that has been designated as an acceptable document to denote identity and citizenship by the Secretary, pursuant to section 7209 of IRTPA. Specifically, 8 CFR 235.1(e), as amended by the WHTI land and sea final rule, provides that upon designation by the Secretary of Homeland Security of a United States qualifying tribal entity document as an acceptable document to denote identity and citizenship for the purposes of entering the United States, Native Americans may be permitted to present tribal cards upon entering or seeking admission to the United States according to the terms of the voluntary agreement entered between the Secretary of Homeland Security and the tribe. It provides that the Secretary of Homeland Security will announce, by publication of a notice in the **Federal Register**, documents designated under this paragraph. It further provides that a list of the documents designated under this section will also be made available to the public.

A United States qualifying tribal entity is defined as a tribe, band, or other group of Native Americans formally recognized by the United States Government which agrees to meet WHTI document standards.[2] Native American tribal cards are also referenced in 8 CFR 235.1(b) which lists the documents U.S. citizens may use to establish identity and citizenship when entering the United States. *See* 8 CFR 235.1(b)(7).

The Secretary has delegated to the Commissioner of U.S. Customs and Border Protection (CBP) the authority to designate certain documents as acceptable border crossing documents for persons arriving in the United States by land or sea from within the Western Hemisphere, including certain United States Native American tribal cards. *See* DHS Delegation Number 7105 (Revision 00), dated January 16, 2009.

Tribal Card Program

The WHTI land and sea final rule allowed U.S. federally recognized Native American tribes to work with CBP to enter into agreements to develop tribal ID cards that can be designated as acceptable to establish identity and citizenship when entering the United States at land and sea ports of entry from contiguous territory or adjacent islands. CBP has been working with various U.S. federally recognized Native American tribes to facilitate the development of such cards.[3] As part of the process, CBP will enter into one or more agreements with a U.S. federally recognized tribe that specify the requirements for developing and issuing WHTI-compliant tribal cards, including a testing and auditing process to ensure that the cards are produced and issued in accordance with the terms of the agreements.

After production of the cards in accordance with the specified requirements, and successful testing and auditing by CBP of the cards and program, the Secretary of Homeland Security or the Commissioner of CBP may designate the tribal card as an acceptable WHTI-compliant document for the purpose of establishing identity and citizenship when entering the United States by land or sea from contiguous territory or adjacent islands. Such designation will be announced by publication of a notice in the **Federal Register**. More information about WHTI-compliant documents is available at *www.cbp.gov/travel.*

The Pascua Yaqui Tribe of Arizona became the first Native American tribe to have its tribal card designated as a Western Hemisphere Travel Initiative compliant document by the Commissioner of CBP. This designation was announced in a notice published in the **Federal Register** on June 9, 2011 (76 FR 33776). Subsequently, the Commissioner of CBP announced the designation of the tribal cards of the Kootenai Tribe of Idaho and the Seneca Nation of Indians as Western Hemisphere Travel Initiative compliant documents. *See* 77 FR 4822 (January 31, 2012) and 80 FR 40076 (July 13, 2015).

HCA Tribe WHTI-Compliant Tribal Card Program

The HCA Tribe has voluntarily established a program to develop a WHTI-compliant tribal card that denotes identity and U.S. or Canadian citizenship. On May 11, 2011, CBP and the HCA Tribe signed a Memorandum of Agreement (MOA) to develop, issue, test, and evaluate tribal cards to be used for border crossing purposes. Pursuant to this MOA, the cards are issued to members of the HCA Tribe who can establish identity, tribal membership, and U.S. or Canadian citizenship. The cards incorporate physical security features acceptable to CBP as well as facilitative technology allowing for electronic validation of identity, citizenship, and tribal membership by CBP. On August 27, 2014, the HCA Tribe and CBP signed an addendum to the April 1, 2010 Pascua Yaqui Tribe Service Level Agreement that provides that the Pascua Yaqui Tribe would serve as the Information Technology

[1] Adjacent islands is defined in 8 CFR 212.0 as Bermuda and the islands located in the Caribbean Sea, except Cuba. This definition applies to 8 CFR 212.1 and 235.1.

[2] *See* 8 CFR 212.0. This definition applies to 8 CFR 212.1 and 235.1.

[3] The Native American tribal cards qualifying to be a WHTI-compliant document for border crossing purposes are commonly referred to as ''Enhanced Tribal Cards'' or ''ETCs.''

Coordinator and the manufacturer of the tribal cards on behalf of the HCA Tribe.

CBP has tested the cards developed by the HCA Tribe pursuant to the above agreements and has performed an audit of the tribe's card program. On the basis of these tests and audit, CBP has determined that the cards meet the requirements of section 7209 of the IRTPA and are acceptable documents to denote identity and U.S. and Canadian citizenship for purposes of entering the United States at land and sea ports of entry from contiguous territory or adjacent islands.[4] CBP's continued acceptance of the tribal card as a WHTI-compliant document is conditional on compliance with the MOA and all related agreements.

Acceptance and use of the WHTI-compliant tribal card is voluntary for tribe members. If an individual is denied a WHTI-compliant tribal card, he or she may still apply for a passport or other WHTI-compliant document.

Designation

This notice announces that the Commissioner of CBP designates the tribal card issued by the HCA Tribe in accordance with the MOA and all related agreements between the tribe and CBP as an acceptable WHTI-compliant document pursuant to section 7209 of the IRTPA and 8 CFR 235.1(e). In accordance with these provisions, the approved card, if valid and lawfully obtained, may be used to denote identity and U.S. or Canadian citizenship of HCA Tribe members for the purposes of entering the United States from contiguous territory or adjacent islands at land and sea ports of entry.

Dated: May 19, 2016.

R. Gil Kerlikowske,

Commissioner.

[FR Doc. 2016–12552 Filed 5–26–16; 8:45 am]

BILLING CODE 9111–14–P

[4] The Native American Tribal Card issued by the HCA Tribe may not, by itself, be used by Canadian citizen tribal members to establish that they meet the requirements of section 289 of the Immigration and Nationality Act (INA) [8 U.S.C. 1359]. INA § 289 provides that nothing in this title shall be construed to affect the right of American Indians born in Canada to pass the borders of the United States, but such right shall extend only to persons who possess at least 50 per centum of blood of the American Indian race. While the tribal card may be used to establish a card holder's identity for purposes of INA § 289, it cannot, by itself, serve as evidence of the card holder's Canadian birth or that he or she possesses at least 50% American Indian blood, as required by INA § 289.

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA–2015–0025; OMB No. 1660–NEW]

Agency Information Collection Activities: Submission for OMB Review; Comment Request; Individual & Community Preparedness Division (ICPD) Annual Youth Preparedness Council (YPC) Application Form

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: The Federal Emergency Management Agency (FEMA) will submit the information collection abstracted below to the Office of Management and Budget for review and clearance in accordance with the requirements of the Paperwork Reduction Act of 1995. The submission will describe the nature of the information collection, the categories of respondents, the estimated burden (*i.e.,* the time, effort and resources used by respondents to respond) and cost, and the actual data collection instruments FEMA will use.

DATES: Comments must be submitted on or before June 27, 2016.

ADDRESSES: Submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget. Comments should be addressed to the Desk Officer for the Department of Homeland Security, Federal Emergency Management Agency, and sent via electronic mail to *oira.submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection should be made to Director, Records Management Division, 500 C Street SW., Washington, DC 20472–3100, or email address *FEMA-Information-Collections-Management@fema.dhs.gov.*

SUPPLEMENTARY INFORMATION: This information collection previously published in the **Federal Register** on October 28, 2015, at 80 FR 66031 with a 60 day public comment period. No comments were received. The purpose of this notice is to notify the public that FEMA will submit the information collection abstracted below to the Office of Management and Budget for review and clearance.

Collection of Information

Title: Individual & Community Preparedness Division (ICPD) Annual Youth Preparedness Council (YPC) Application Form.

Type of information collection: New information collection.

OMB Number: 1660–NEW.

Form Titles and Numbers: FEMA Form 008–0–0–24, FEMA Youth Preparedness Council Application Form.

Abstract: FEMA Headquarters and regional staff review completed applications to select council members based on dedication to public service, efforts in making a difference in their community, and potential for expanding their impact as a national advocate for youth preparedness. Applicants for the YPC apply by downloading a PDF application from FEMA's Web site. They can either complete the written form or they can answer the questions in the form of a short video. They must then download their application and submit the application and related documents, including reference letters and academic records, to FEMA via the *FEMA-Youth-Prepareness-Council@fema.dhs.gov* email address. Fifteen youths are selected to serve as a council member.

Affected Public: Individuals or households.

Estimated Number of Respondents: 100.

Estimated Total Annual Burden Hours: 142 hours.

Estimated Cost: The estimated annual cost to respondents for the hour burden is $0. There are no annual costs to respondents' operations and maintenance costs for technical services. There are no annual start-up or capital costs. The cost to the Federal Government is $65,662.00.

Dated: May 18, 2016.

Richard W. Mattison

Records Management Program Chief, Mission Support, Federal Emergency Management Agency, Department of Homeland Security.

BILLING CODE 9111–46–P

DEPARTMENT OF HOMELAND SECURITY

[Docket No. DHS–2016–0030]

National Infrastructure Advisory Council

AGENCY: National Protection and Programs Directorate, DHS.

ACTION: Committee management; notice of an open Federal Advisory Committee meeting.

SUMMARY: The National Infrastructure Advisory Council will meet Friday, June 24, 2016 at the Los Angeles Enviromental Learning Center, 12000 Vista Del Mar, Los Angeles, CA 90293. This meeting will be open to the public.

DATES: The National Infrastructure Advisory Council will meet on June 24, 2016, 9:00 a.m.–1:00 p.m. PDT.

ADDRESSES: Los Angeles Enviromental Learning Center, 12000 Vista Del Mar, Los Angeles, CA 90293. For information on facilities or services for individuals with disabilities, or to request special assistance at the meeting, contact the person listed under **FOR FURTHER INFORMATION CONTACT** below as soon as possible.

Public comment, to be considered by the Council is highly encouraged. This is Item VI of the meeting agenda listed below. Written comments must be submitted no later than 12:00PM EDT on June 20, 2016, in order to be considered by the Council in its meeting. Comments must be identified by ''DHS–2016–0030,'' and may be submitted by any *one* of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* Follow ''submitting written comments'' instructions.
- *Email: NIAC@hq.dhs.gov.* Include the docket number in the subject line of the message.
- *Fax:* (703) 235–9707.
- *Mail:* Ginger Norris, National Protection and Programs Directorate, Department of Homeland Security, 245 Murray Lane SW., Mail Stop 0612, Washington, DC 20598–0607.

Instructions: All written submissions must include the words ''Department of Homeland Security'' and the docket number for this action. Written comments will be posted without alteration at *www.regulations.gov,* including any personal information provided.

Docket: For access to the docket and background documents, go to *www.regulations.gov.* Search ''NIAC'' for a list all relevant documents for your review.

Members of the public may provide oral comments on agenda items and previous National Infrastructure Advisory Council studies. All previous studies can be located at *www.dhs.gov/NIAC.* Written Comments received after 8:30 a.m. PDT on June 24, 2016, will still be accepted and reviewed by the members, but not by the time of the meeting. In-person comments are limited to three minutes per speaker. Members of the public making comments must register with NIAC Secretariat at the meeting location.

FOR FURTHER INFORMATION CONTACT: Ginger Norris, National Infrastructure Advisory Council, Alternate Designated Federal Officer, Department of Homeland Security, (703) 235–2888.

SUPPLEMENTARY INFORMATION: Notice of this meeting is given under the Federal Advisory Committee Act, 5 U.S.C. Appendix. The National Infrastructure Advisory Council shall provide the President, through the Secretary of Homeland Security, with advice on the security and resilience of the Nation's critical infrastructure sectors. At this meeting, the council will receive a final presentation on Water Resilience from its working group members and deliberate and vote upon the Water Resilience Recommendations as appropriate. All presentations will be posted at least three working days prior to the meeting on the Council's public Web page—*www.dhs.gov/NIAC.*

Public Meeting Agenda

I. Opening of Meeting
II. Roll Call of Members
III. Opening Remarks and Introductions
IV. Approval of March 2016 Meeting Minutes
V. Final Working Group Presentation and Recommendations on Water Resilience Study
VI. Public Comment
VII. Discussion and Deliberation on Recommendations for the Water Resilience Report
VIII. Discussion of New NIAC Business
IX. Closing Remarks
X. Adjournment

Dated: May 23, 2016.

Ginger Norris,

Alternate Designated Federal Officer, for the National Infrastructure Advisory Council.

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

[OMB Control Number 1615—NEW]

Agency Information Collection Activities: Application for Employment Authorization for Abused Nonimmigrant Spouse, Form I–765V; New Collection

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security.

ACTION: 60-Day notice.

SUMMARY: The Department of Homeland Security (DHS), U.S. Citizenship and Immigration Services (USCIS) invites the general public and other Federal agencies to comment upon this proposed new collection of information. In accordance with the Paperwork Reduction Act (PRA) of 1995, the information collection notice is published in the **Federal Register** to obtain comments regarding the nature of the information collection, the categories of respondents, the estimated burden (*i.e.* the time, effort, and resources used by the respondents to respond), the estimated cost to the respondent, and the actual information collection instruments.

DATES: Comments are encouraged and will be accepted for 60 days until July 26, 2016.

ADDRESSES: All submissions received must include the OMB Control Number 1615–NEW in the subject box, the agency name and Docket ID USCIS–2016–0004. To avoid duplicate submissions, please use only *one* of the following methods to submit comments:

(1) *Online.* Submit comments via the Federal eRulemaking Portal Web site at *http://www.regulations.gov* under e-Docket ID number USCIS–2016–0004;

(2) *Email.* Submit comments to *USCISFRComment@uscis.dhs.gov;*

(3) *Mail.* Submit written comments to DHS, USCIS, Office of Policy and Strategy, Chief, Regulatory Coordination Division, 20 Massachusetts Avenue NW., Washington, DC 20529–2140.

FOR FURTHER INFORMATION CONTACT: USCIS, Office of Policy and Strategy, Regulatory Coordination Division, Samantha Deshommes, Acting Chief, 20 Massachusetts Avenue NW., Washington, DC 20529–2140, telephone number 202–272–8377 (This is not a toll-free number. Comments are not accepted via telephone message). Please note contact information provided here is solely for questions regarding this notice. It is not for individual case status inquiries. Applicants seeking information about the status of their individual cases can check Case Status Online, available at the USCIS Web site at *http://www.uscis.gov,* or call the USCIS National Customer Service Center at 800–375–5283 (TTY 800–767–1833).

SUPPLEMENTARY INFORMATION:

Comments

You may access the information collection instrument with instructions, or additional information by visiting the Federal eRulemaking Portal site at: *http://www.regulations.gov* and enter USCIS–2016–0004 in the search box. Regardless of the method used for submitting comments or material, all

submissions will be posted, without change, to the Federal eRulemaking Portal at *http://www.regulations.gov,* and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to consider limiting the amount of personal information that you provide in any voluntary submission you make to DHS. DHS may withhold information provided in comments from public viewing that it determines may impact the privacy of an individual or is offensive. For additional information, please read the Privacy Act notice that is available via the link in the footer of *http://www.regulations.gov.*

Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* New Collection.

(2) *Title of the Form/Collection:* Application for Employment Authorization for Abused Nonimmigrant Spouse.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* I–765V; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary Individuals or households. Form I–765V, Application for Employment Authorization for Abused Nonimmigrant Spouse, will be used to collect information that is necessary to determine if an applicant is eligible for an initial Employment Authorization Document (EAD), a new EAD, or an interim EAD as a qualifying abused nonimmigrant spouse.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection Form I–765V is 1,000 and the estimated hour burden per response is 3 hours to complete the form, 1 hour for biometrics and .50 hours to obtain passport-style photographs.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 4,500 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is $265,000.

Dated: May 23, 2016.

Samantha Deshommes,

Acting Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security.

BILLING CODE 9111–97–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5921–N–03]

Implementation of the Privacy Act of 1974, as Amended; System of Records Notice Amendment, Home Equity Reverse Mortgage Information Technology

AGENCY: Office of Housing, HUD.

ACTION: System of records notice amendment.

SUMMARY: In accordance with the Privacy Act of 1974, the Department of Housing and Urban Development is giving notice that it intends to amend one of its systems of records published in the **Federal Register** at 77 FR 61620 on October 10, 2012, the Home Equity Reverse Mortgage Information Technology (HERMIT). This notice will be written to include updates to the former notice routine uses and records categories statements. This notice also incorporates administrative and format changes to convey already published information in a more synchronized format. A more detailed description of the revision created by this notice is defined under this notice supplementary information caption.

DATES:

Effective Date: The notice shall be effective immediately upon publication of this notice in the **Federal Register**, except for the new routine use created, which will become effective June 27, 2016, unless comments are received that would result in a contrary determination.

Comments Due Date: June 27, 2016.

ADDRESSES: Interested persons are invited to submit comments regarding this notice to the Rules Docket Clerk, Office of the General Counsel, Department of Housing and Urban Development, 451 Seventh Street SW., Room 10276, Washington, DC 20410–0500. Communication should refer to the above docket number and title. Faxed comments are not accepted. A copy of each communication submitted will be available for public inspection and copying between 8 a.m. and 5 p.m. weekdays at the above address.

FOR FURTHER INFORMATION CONTACT: Frieda B. Edwards, Acting Chief Privacy Officer, 451 Seventh Street SW., Room 10139, Washington, DC 20410, telephone number 202–402–6828 (this is not a toll-free number). Individuals who are hearing- and speech-impaired may access this number via TTY by calling the Federal Relay Service telephone number at 800–877–8339 (this is a toll-free number).

SUPPLEMENTARY INFORMATION: The HERMIT notice amendment will identify: (1) New disclosure requirements, by adding routine use number eight to clarify that records may be provided from this system to housing counselors when needed to comply with new housing counseling policies and training and certification related requirements; (2) updates to the record categories to include a ''Loan Production'' category, which will distinguish when specific records are collected by this system during this phase; (3) new records on the certificate of qualification to verify that a housing counselor is certified by HUD as a component to provide counseling services. Publication of this notice allows the Department to keep an up-to-date accounting of its system of records publications. This publication meets the threshold requirements pursuant to the Privacy Act and OMB Circular A–130. A report was submitted to the Office of Management and Budget (OMB), the Senate Committee on Homeland Security and Governmental Affairs, and the House Committee on Government Reform as instructed by Paragraph 4c of Appendix I to OMB Circular No. A–130, ''Federal Agencies Responsibilities for Maintaining Records About Individuals,'' July 25, 1994 (59 FR 37914).

Authority: 5 U.S.C. 552a; 88 Stat. 1896; 42 U.S.C. 3535(d).

Dated: April 28, 2016.

Patricia A. Hoban-Moore,

Senior Agency Official for Privacy.

SYSTEM OF RECORDS NO.:

HSNG/HWAT.01.

SYSTEM NAME:

Home Equity Reverse Mortgage Information Technology (HERMIT)—P271.

SYSTEM LOCATION:

The system is accessible at workstations located at the following locations: Department of Housing and Urban Development Headquarters, 451 Seventh Street SW., Washington, DC 20410; HUD's Field and Regional Office locations: The National Servicing Center, 2 West 2nd Street, Suite 400, Tulsa, OK 74103; Atlanta Homeownership Center, Five Points Plaza, 40 Marietta Street, Atlanta, GA 30303; Philadelphia Homeownership Center, Wanamaker Building, 100 Penn Square East, Philadelphia, PA 19107; Denver Homeownership Center, Processing and Underwriting, 20th floor, 1670 Broadway, Denver, CO 80202; and Santa Ana Homeownership Center, Santa Ana Federal Building, 34 Civic Center Plaza, Room 7015, Santa Ana, CA 92701. The system is externally hosted at the business service provider's site (contractor primary) and disaster recovery facilities.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

HECM mortgagees and HECM mortgagors for Home Equity Conversion Mortgages insured under HUD's HECM mortgage insurance program and FHA-Approved Housing Counselors who participate in the HECM program. Note: The Privacy Act applies to the extent that the information collected pertains to an individual; information pertaining to corporations and other business entities and organizations are not subject to the Privacy Act.

CATEGORIES OF RECORDS IN THE SYSTEM:

HERMIT information is collected on individual program participants.

- *Loan Production:* HERMIT loan production records include personally identifiable information (PII) data pertaining to HECM Housing Counseling data: Full name of HECM housing counselor, HECM Certificate of Counseling, HECM counselor ID numbers, and borrowers' full names, property addresses, birthdates, Social Security numbers, and phone numbers.
- *Insurance-in-Force (IIF)/Premiums:* HERMIT insurance-in-force and premium records include PII data pertaining to borrowers' full names, property addresses, birthdates, Social Security numbers, phone numbers and dates of death; maximum claim amount (MCA), property appraised values, initial and monthly mortgage insurance premiums (IMIP and MMIP), set asides, note interest rates and expected interest rates and case statuses and sub-case statuses; payment plan types, and other financial account data such as principal limits, monthly interest accruals, late charge and interest charge fees, historical transaction records for HECM cases, property taxes and hazard insurance amounts, business partners' banking information (routing and account numbers); and accounting data including accounts receivable and payable due to and from HUD.
- *HECM Claims:* Borrowers' names, addresses, Social Security numbers; MCAs, due and payable approvals; death notifications, deed-in-lieu; foreclosure actions, extension approvals, interest rates and account statuses; payment and other financial account data such as unpaid loan balances, interest accrued, service fees, expenses incurred for foreclosure and acquisition, protection and preservation, attorney fees, special assessments; disbursements for taxes, insurance, utilities, eviction fees, and any other miscellaneous disbursements; initial and monthly mortgage insurance premiums (IMIP and MMIP), appraisals, closing costs; claims filed and paid; indemnifications and claim blocks; business partner banking information tax identification number (TIN), routing and account numbers), mortgagee reference number; accounting data, including established accounts receivables and payables; and information for reporting and assumption of servicing activities in cases of investor claim or default.
- *HECM Loan Servicing:* Borrowers' and authorized contacts' names and addresses, birthdates, ages, Social Security numbers, phone numbers; email addresses; marital statuses, genders, preferred languages, banking information (institutional information, routings account numbers and account types) maximum loan amounts, premium collections, interest rates and account statuses; payments and other financial account data such as loan balances, loan history, interest accrued, fees incurred, claims filed and paid, real estate property information, property taxes and insurance amounts, accounting data, including debits and credits to HUD accounts based on transaction events, vendor information; and information for reporting and assuming servicing activities in case of servicer or investor claim or default.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Section 255 of the National Housing Act of 1934 authorizes the Federal Housing Administration (FHA) reverse mortgage program for the elderly, the Home Equity Conversion Mortgage (HECM) program (12 U.S.C. 1715Z–20). The Housing and Community Development Act of 1987 (42 U.S.C. 3543) specifically provides authority to collect Social Security numbers.

PURPOSE:

HERMIT integrates the endorsement; insurance servicing; claims payment; notes servicing, accounting, and reporting requirements of FHA's HECM insurance program. The HECM program promotes continued homeownership for the elderly by allowing elderly borrowers to access the equity in their homes while continuing to live in the property. HERMIT allows the Secretary to maintain the ''public trust'' over the HECM program by seamlessly, accurately, and timely managing the HECM program in an automated environment. HERMIT allows HECM program personnel to collect and maintain the data necessary to support activities related to the endorsement of loans and collection of IMIP and MMIP. The claims process includes the filing of claims for insurance benefits and disbursement of funds to lenders of loans insured under the HECM program. Servicing activities include maintaining the data necessary to support performance requirements of servicing for FHA-insured and Secretary-held first and second mortgages. The major activities include acceptance of assignment and title review, servicing requests for HECM endorsed cases from mortgagees (due and payable, short sale, preservation and protection costs, subordination extension requests, and partial releases), accounting functions, collections according to the Fair Debt Collection Practices Act, disbursement of payment, annual recertification, foreclosure activities, bankruptcy activities, and compliance monitoring. HERMIT provides HECM mortgagees with the ability to interact with HUD's National Servicing Center (NSC) to improve HECM loan servicing and to provide an automated claims filing process.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. Section 552a(b) of the Privacy Act, all or

a portion of the records or information contained in this system may be disclosed outside HUD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

(1) To servicing mortgagee to give notice of miscalculations or other errors in subsidy computation, to pay claims, or for other servicing-related functions.

(2) To taxing authorities, insurance companies, homeowners associations, or condominium associations for maintaining the property while HUD is the servicer of record to ensure property taxes are current.

(3) To the U.S. Department of the Treasury for collection and disbursement transactions (*Pay.gov,* Automated Clearing House (ACH)).

(4) To title insurance companies or financial institutions to allow HUD to respond to inquiries for payoff figures on HECM assigned loans.

(5) To recorders' offices for recording legal documents and responses to bankruptcy courts or other legal responses required during the servicing of the insured loan to allow HUD to release mortgage liens, respond to bankruptcies or deaths of mortgagors to protect the interest of the Secretary of HUD.

(6) To the Federal Bureau of Investigation to investigate possible fraud revealed in the course of servicing efforts to allow HUD to protect the interest of the Secretary.

(7) To an Administrative Law Judge and to the interested parties to the extent necessary for conducting administrative proceedings where HUD is a party.

(8) To welfare agencies for fraud investigation to allow HUD to respond to state government inquiries when a HECM mortgagor is committed to a nursing home.

(9) To housing counselors to comply with new HECM housing counseling policies to include training and certification.

(10) To FHA-approved HECM mortgagees to comply with new HECM statutory requirements and FHA HECM policies issued via mortgagee letters and updates to Housing handbooks.

(11) To appropriate agencies, entities, and persons to the extent such disclosures are compatible with the purpose for which the records in this system were collected, as set forth by Appendix I [1]—HUD's Routine Use Inventory Notice published in the **Federal Register**.

(12) To appropriate agencies, entities, and persons when:

(a) HUD suspects or has confirmed that the security or confidentiality of information in a system of records has been compromised;

(b) HUD has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft, or fraud, or harm to the security or integrity of systems or programs (whether maintained by HUD or another agency or entity) that rely upon the compromised information; and

(c) The disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with HUD's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm for purposes of facilitating responses and remediation efforts in the event of a data breach.

(13) The National Archives and Records Administration (NARA) and the General Services Administration (GSA) for records having sufficient historical or other value to warrant its continued preservation by the United States Government, or for inspection under authority of Title 44, Chapter 29, of the United States Code.

(14) A congressional office from the record of an individual, in response to an inquiry from the congressional office made at the request of that individual.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are stored electronically in secure facilities. Electronic files are stored in case files on secure servers and backup files are stored on tapes. Electronic files are replicated at a disaster recovery offsite location in case of loss of computing capability or other emergency at the primary facility. HERMIT does not have paper records.

RETRIEVABILITY:

Electronic records are retrieved by name, SSN, Loan Skey, home telephone number, personal email address, FHA case number and mortgagee TIN.

SAFEGUARDS:

Access to electronic records is by: (1) User ID and password and (2) code identification card access, and limited to authorized users with an approved need-to-know. In addition to the safeguards provided by access controls, all electronic data is encrypted while stored on any systems media within HERMIT or in any transport mode. Servers are contained in a secured facility with twenty four hours and seven days a week security, including security guards, electronic access and surveillance capabilities (Close Caption Television (CCTV) and recorders, motion detectors, hand geometry readers, and/or fiber vault) at an offsite location. HERMIT does not have paper records.

RETENTION AND DISPOSAL:

In accordance with General Records Schedule 1.1, Financial Management and Reporting Records, Items 010 and 011, the records are maintained for six years or when business use ceases. Paper records are not in use. Backup and Recovery digital media will be destroyed or otherwise rendered irrecoverable per NIST SP 800–88 ''Guidelines for Media Sanitization'' (September 2006).

SYSTEM MANAGER AND ADDRESS:

Director, Office of Housing, Office of Finance and Budget, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, DC 20410.

NOTIFICATION AND RECORD ACCESS PROCEDURES:

For Information, assistance, or inquiries about the existence of records contact Frieda B. Edwards, Acting Chief Privacy Officer, 451 Seventh Street SW., Room 10139, Washington, DC 20410, telephone number 202–402–6828. When seeking records about yourself from this system of records or any other HUD system of records, your request must conform with the Privacy Act regulations set forth in 24 CFR part 16. You must first verify your identity by providing your full name, current address, and date and place of birth. You must sign your request, and your signature must either be notarized or submitted under 28 U.S.C. 1746, a law that permits statements to be made under penalty of perjury as a substitute for notarization. In addition, your request should:

(1) Explain why you believe HUD would have information on you.

(2) Identify which HUD office you believe has the records about you.

(3) Specify when you believe the records would have been created.

(4) Provide any other information that will help the FOIA staff determine which HUD office may have responsive records.

If you are is seeking records pertaining to another living individual, you must obtain a statement from that individual certifying their agreement for you to access their records. Without the above information, the HUD FOIA Office may not be able to conduct an

[1] *http://portal.hud.gov/hudportal/documents/huddoc?id=append1.pdf.*

effective search, and your request may be denied due to lack of specificity or lack of compliance with applicable regulations.

CONTESTING RECORD PROCEDURES:

The Department's rules for contesting contents of records and appealing initial denials appear in 24 CFR part 16, Procedures for Inquiries. Additional assistance may be obtained by contacting Frieda B. Edwards, Acting Chief Privacy Officer, 451 Seventh Street SW., Room 10139, Washington, DC 20410, or the HUD Departmental Privacy Appeals Officers, Office of General Counsel, Department of Housing and Urban Development, 451 Seventh Street SW., Room 10110, Washington, DC 20410.

RECORD SOURCE CATEGORIES:

Records in the system are obtained from FHA-approved HECM mortgagees and third party providers, mortgagors, taxing authorities, insurance companies, and Housing counselors. FHA-approved HECM mortgagees collect the personal information from program participants (mortgagors) and enter the information into the FHA Connection—HUD's forward facing Web page portal. The FHA Connection transfers HECM information to the Computerized Homes Underwriting Management System (CHUMS). CHUMS updates HERMIT via an authorized interface to provide HECM information.

SYSTEMS EXEMPTED FROM CERTAIN PROVISIONS OF THE ACT:

None.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5907–N–22]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402–3970; TTY number for the hearing- and speech-impaired (202) 708–2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800–927–7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless* v. *Veterans Administration,* No. 88–2503–OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for ''off-site use only'' recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to: Ms. Theresa M. Ritta, Chief Real Property Branch, the Department of Health and Human Services, Room 5B–17, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443–2265 (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1–800–927–7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (*i.e.,* acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses AGRICULTURE: Ms. Debra Kerr, Department of Agriculture, Reporters Building, 300 7th Street SW., Room 300, Washington, DC 20024, (202) 720–8873; AIR FORCE: Mr. Robert E. Moriarty, P.E., AFCEC/CI, 2261 Hughes Avenue, Ste. 155, JBSA Lackland TX 78236–9853; COAST GUARD: Commandant, United States Coast Guard, Attn: Jennifer Stomber, 2703 Martin Luther King Jr. Avenue SE., Stop 7741, Washington, DC 20593–7714; (202) 475–5609; COE: Mr. Scott Whiteford, Army Corps of Engineers, Real Estate, CEMP–CR, 441 G Street NW., Washington, DC 20314; (202) 761–5542; GSA: Mr. Flavio Peres, General Services Administration, Office of Real Property Utilization and Disposal, 1800 F Street NW., Room 7040 Washington, DC 20405, (202) 501–0084; NASA: Mr. Frank T. Bellinger, Facilities Engineering Division, National Aeronautics & Space Administration, Code JX, Washington, DC 20546, (202) 358–1124; NAVY: Mr. Steve Matteo, Department of the Navy, Asset Management Division, Naval Facilities

Engineering Command, Washington Navy Yard, 1330 Patterson Ave. SW., Suite 1000, Washington, DC 20374; (202) 685–9426; (These are not toll-free numbers).

Dated: May 19, 2016.

Brian P. Fitzmaurice,

Director, Division of Community Assistance, Office of Special Needs Assistance Programs.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5921–N–06]

The Privacy Act of 1974, as Amended; System of Records Notice Amendment, Freedom of Information Act, Privacy Act, and Administrative Appeals Request Files, System of Records

AGENCY: Office of Administration, HUD.

ACTION: System of records notice amendment.

SUMMARY: In accordance with the requirements of the Privacy Act of 1974, as amended, 5 U.S.C. 552a, the Department's Office of the Executive Secretariat proposes to update and reissue a current system of records notice (SORN): Freedom of Information Act (FOIA), Privacy Act, and Administrative Appeals Request Files, ADMIN/AHFDC.01. This SORN was previously titled ''Privacy Act and Appeals Request Files,'' CIO/QMPP.01, and published at 79 FR 44854–55 (August 1, 2014). This amendment consolidates under one notice FOIA, Privacy Act, and administrative appeals procedures for requests and disclosures and updates the SORN, categories of individuals covered, categories of records, authority for maintenance, routine uses, storage, safeguards, retention and disposal, system manager and address, notification procedures, records access, contesting records procedures, and records source categories to indicate that the SORN now includes FOIA-related records. This notice deletes and supersedes SORN CIO/QMPP.01, Privacy Act and Appeals Request Files. This updated publication will be included in the Department's inventory of SORNs. Detailed information pertaining to this amendment appears under the SORN's ''Supplementary Information'' caption.

DATES:

Effective Date: This notice action shall be effective immediately, with the exception of the new routine uses added to the notice, which will become effective June 27, 2016.

Comments Due Date: June 27, 2016.

ADDRESSES: Interested persons are invited to submit comments regarding this notice to the Rules Docket Clerk, Office of General Counsel, Department of Housing and Urban Development, 451 Seventh Street SW., Room 10276, Washington, DC 20410–0500. Communications should refer to the above docket number and title. Faxed comments are not accepted. A copy of each communication submitted will be available for public inspection and copying between 8 a.m. and 5 p.m. weekdays at the above address.

FOR FURTHER INFORMATION CONTACT: Frieda B. Edwards, Acting Chief Privacy Officer, 451 Seventh Street SW., Room 10139, Washington, DC 20410, telephone number 202–402–6828 (this is not a toll-free number). Individuals who are hearing- and speech-impaired may access this number via TTY by calling the Federal Relay Service at 800–877–8339 (this is a toll-free number).

SUPPLEMENTARY INFORMATION: This SORN is being updated to encompass activities and procedures related to the Department's processing of FOIA, Privacy Act, and administrative appeals requests. The Department's Office of the Executive Secretariat consolidates under one notice processing activities related to FOIA, Privacy Act, and administrative appeals requests received or issued by the Department. The revised notice conveys subsequent updates to the system's title, categories of individuals covered, categories of records, authority for maintenance, routine uses, storage, safeguards, retention and disposal, system manager and address, notification procedures, records access and contesting procedures, and records source captions to identify that the updated notice now includes information related to FOIA requests. In addition, this notice identifies new disclosure requirements related to FOIA, by adding routine use (6) to clarify that records may be provided from this SORN to the National Archives and Records Administration (NARA), Office of Government Information Services (OGIS) for purposes set forth under 5 U.S.C. 552(h)(2)(A–B) and (3). Publication of this notice allows the Department to provide up-to-date information about its systems of records in a clear and cohesive format. The revised system of records incorporates Federal Privacy Act, FOIA, and HUD policy requirements. The Privacy Act places on Federal agencies principal responsibility for compliance with its provisions, by requiring Federal agencies to safeguard an individual's records against an invasion of personal privacy; protect the records contained in an agency system of records from unauthorized disclosure; ensure that the records collected are relevant, necessary, current, and collected only for their intended use; and adequately safeguard the records to prevent misuse of such information. In addition, this notice demonstrates the Department's focus on industry best practices and laws that protect interest such as

personal privacy and law enforcement records from inappropriate release. This notice states the name and location of the record system, the authority for and manner of its operations, the categories of individuals that it covers, the type of records that it contains, the sources of the information for the records, the routine uses made of the records, and the types of exemptions in place for the records. The notice also includes the business address of the HUD officials who will inform interested persons of how they may gain access to and/or request amendments to records pertaining to themselves.

Pursuant to the Privacy Act and the Office of Management and Budget (OMB) guidelines, a report of the amended system of records was submitted to OMB, the Senate Committee on Homeland Security and Governmental Affairs, and the House Committee on Oversight and Government Reform, as instructed by paragraph 4c of Appendix l to OMB Circular No. A–130, ''Federal Agencies Responsibilities for Maintaining Records About Individuals,'' November 28, 2000.

Authority: 5 U.S.C. 552a; 88 Stat. 1896; 42 U.S.C. 3535(d).

Dated: April 28, 2016.

Patricia A. Hoban-Moore,

Senior Agency Official for Privacy.

ADMIN/AHFDC.01

SYSTEM NAME:

Freedom of Information Act, Privacy Act, and Administrative Appeals Request Files.

SYSTEM LOCATION:

The system is physically located at the Department of Housing and Urban Development, Office of the Executive Secretariat, 451 Seventh Street SW., Washington, DC 20410; at the service providers under contract with HUD, and at HUD regional and field offices [1] where, in some cases, FOIA and Privacy Act records may be maintained or accessed.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

This system encompasses all individuals who submit FOIA and/or Privacy Act requests or administrative appeals to the Department. Other individuals covered by the system include HUD staff assigned to process a request and staff that may have responsive records or are mentioned in such records. Note: FOIA requests are subject to the Privacy Act only to the extent that the information pertains to personal information concerning an individual (*i.e.,* only the information that is personal about the individual who is the subject of the record is subject to the Privacy Act). Information pertaining to corporations, businesses, and organizations are not subject to the Privacy Act.

CATEGORIES OF RECORDS IN THE SYSTEM:

Records in this system may include information about the handling of FOIA and Privacy Act requests and administrative appeals. The information maintained by the system may include: (1) Records received, copied, created, or compiled during the search and processing of initial requests and administrative appeals; (2) fee schedules, cost calculations, and costs assessed for processing FOIA requests (disclosed FOIA records—cost can be incurred even for records that are not provided to requesters); (3) appeals, intra-agency or interagency memorandums, and correspondence with the requesters or entities who submitted the requests and appeals; (4) the Department's responses and transferals to HUD regional/field offices or other agencies; (5) copies of records disclosed or withheld; (6) requesters' names, organizations, titles, addresses, emails, telephone numbers, fax numbers, Social Security numbers (which may be submitted with documentation or as proof of identification when requesting access to Privacy Act records); (7) information compiled on and about the parties who made written requests or appeals, including individuals on whose behalf such written requests or appeals were made; (8) FOIA tracking numbers; (9) descriptions of the types of requests or appeals, and dates the requests or appeals were received by the Department; (10) statuses of Department responses (*i.e.,* the offices to which the requests were assigned, the dates by which responses to assigned request are due, the current dispositions of the requests); (11) and may include the requester's original Privacy Act/FOIA requests. The system also includes information on the Department personnel involved in the processing of FOIA and/or Privacy Act requests and appeals (*e.g.,* FOIA staff and/or Privacy Act staff, appeals officials, and members of the Office of General Counsel staff) who respond to requests or appeals and process any final dispositions. The system also covers records related to requests for OGIS assistance.

AUTHORITY FOR MAINTNENACE OF THE SYSTEM:

Freedom of Information Act, as amended, 5 U.S.C 552; Privacy Act, as amended, 5 U.S.C. 552a.

PURPOSE(S):

The purpose of the information maintained by the system is to allow the Department to effectively monitor and track FOIA and Privacy Act requests, and administrative appeals received or issued by the Department. The information gathered by the system is used by the Department to satisfy its annual reporting obligations under the FOIA, manage FOIA-related fees and calculations, and respond to FOIA and Privacy Act requests and appeals.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Records from this system may be disclosed for routine uses to:

1. A congressional office from the record of an individual, in response to a verified inquiry from the congressional office made at the request of that individual.

2. The Department of Justice for the purpose of obtaining advice regarding whether or not the records should be disclosed, when applicable.

3. Student volunteers, individuals working under a personal services contract, and other individuals performing functions for the Department, but technically not having the status of agency employees, if they need access to the records in order to perform their assigned agency functions.

4. Contractors, grantees, experts, consultants and their agents, or others performing or working under a contract, service, grant, or cooperative agreement with HUD, when necessary to accomplish the agency function related to a system of records. Disclosure requirements are limited to only those data elements considered relevant to accomplishing an agency function. Individuals provided information under this routine use conditions are subject to the Privacy Act requirements and disclosure limitations imposed on the Department.

5. Appropriate agencies, entities, and persons to the extent such disclosures are compatible with the purpose for which the records in this system were collected, as set forth by Appendix I, HUD's Routine Use Inventory notice [2] published in the **Federal Register**.

6. The National Archives and Records Administration, OGIS, to the extent necessary to allow OGIS to fulfill its

[1] *http://portal.hud.gov/hudportal/HUD?src=/localoffices.*

[2] *http://portal.hud.gov/hudportal/documents/huddoc?id=routine_use_inventory.pdf.*

responsibilities under 5 U.S.C. 552(h) to review administrative agency policies, procedures, and compliance with the FOIA, and to offer mediation services to resolve disputes between persons making FOIA requests and administrative agencies.

7. To appropriate agencies, entities, and persons when:

(a) HUD suspects or has confirmed that the security or confidentiality of information in a system of records has been compromised;

(b) HUD has determined that as a result of the suspected or confirmed compromise, there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of systems or programs (whether maintained by HUD or another agency or entity) that rely upon the compromised information; and

(c) The disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with HUD's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm for purposes of facilitating responses and remediation efforts in the event of a data breach.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM

STORAGE:

The originals, or a copy, of the incoming requests and the written responses are maintained in case file folders and stored in metal file cabinets. Cross-reference data is maintained electronically and on CD–ROM.

RETRIEVABILITY:

Electronic and paper records are almost always retrieved by the name of the individual who made the request, the FOIA control number, or the subject of the request.

SAFEGUARDS:

(1) Access Safeguards: Record access is restricted to FOIA and Privacy Act staff, involved program officials, appeals officials, and Office of General Counsel staff involved in the processing of such requests; (2) Physical Safeguards: Case file folders are stored in file cabinets located in secure areas that are either occupied by staff involved in processing FOIA and Privacy Act requests and administrative appeals or locked up during nonworking hours or whenever staff is not present in these areas, and entrance to the buildings where case files are maintained is controlled by security guards; (3) Logical Access: Records in the system are maintained in a secure area with access restricted to authorized personnel, security and hardware storage of backup material (*e.g.,* disk, tape, CD–ROM) are secured in accordance with HUD-wide guidance for handling and securing information systems and cross-reference data is maintained electronically and access to the records is granted by User ID and password; and (4) Procedural Safeguards: Access to the systems records is limited to those staff members who are familiar with FOIA- and Privacy Act-related requests and who have a need to know. System managers are held responsible for safeguarding the records that are under their control.

RETENTION AND DISPOSAL:

Computer and paper records will be maintained and disposed of in accordance with published NARA Transmittal No. 22, General Records Schedule 14, ''Information Services Records''.[3] Paper records will be destroyed by shredding or burning. Electronic records will be destroyed pursuant to NIST Special Publication 800–88, ''Guidelines for Media Sanitization.''

SYSTEM MANAGER(S) AND ADDRESS:

Frieda B. Edwards, Acting Chief Privacy Officer, 451 Seventh Street SW., Room 10139, Washington, DC 20410, telephone number 202–402–6828 (this is not a toll-free number) (refer to the SORN's location caption for additional locations where Privacy Act records are accessed and maintained).

NOTIFICATION AND ACCESS PROCEDURES:

For Information, assistance, or inquiries about the existence of records, contact Frieda B. Edwards, Acting Chief Privacy Officer, 451 Seventh Street SW., Room 10139, Washington, DC 20410, telephone number 202–402–6828 (this is not a toll-free number). When seeking records about yourself from this system of records or any other HUD system of records, your request must conform with the Privacy Act regulations set forth in 24 CFR part 16 ''Procedures for Inquiries''. You must first verify your identity by providing your full name, current address, and date and place of birth. You must sign your request, and your signature must either be notarized or submitted under 28 U.S.C. 1746, a law that permits statements to be made under penalty of perjury as a substitute for notarization. In addition, your request should:

(1) Explain why you believe HUD would have information on you.

(2) Identify which HUD office you believe has the records about you.

(3) Specify when you believe the records would have been created.

(4) Provide any other information that will help the FOIA staff determine which HUD office may have responsive records.

If you are seeking records pertaining to another living individual, you must obtain a statement from that individual certifying their agreement for you to access their records. Without the above information, the HUD Office may not be able to conduct an effective search, and your request may be denied due to lack of specificity or lack of compliance with applicable regulations.

CONTESTING RECORDS PROCEDURES:

The Department's rules for contesting contents of records and appealing initial denials appear in 24 CFR part 16, ''Procedures for Inquiries.'' Additional assistance may be obtained by contacting Frieda B. Edwards, Acting Chief Privacy Officer, 451 Seventh Street SW., Room 10139, Washington, DC 20410, or the HUD Departmental Privacy Appeals Officer, Office of General Counsel, Department of Housing and Urban Development, 451 Seventh Street SW., Room 10110, Washington, DC 20410.

RECORD SOURCE CATEGORIES:

The source of information is from the individuals making a FOIA request or a request for Privacy Act records, and components of the Department and other agencies that search for and provide records and related correspondence maintained in the case files.

SYSTEMS EXEMPTED FROM CERTAIN PROVISIONS OF THE ACT:

Pursuant to 5 U.S.C. 552a(k)(2), records in this system, which reflect records that are contained in other systems of records that are designated as exempt, are exempt from the requirements of subsections (c)(3), (d), (e)(1), (e)(4)(G), (H), (I), and (f) of 5 U.S.C. 552a. These exemptions apply only to the extent that information in the system is subject to an exemption pursuant to 5 U.S.C. 552a (k)(2) or a rule promulgated concerning the exemption of such records.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R6–ES–2015–N232; FXES11130600000–167–FF06E00000]

Endangered and Threatened Wildlife and Plants; Initiation of 5-Year Status Reviews of 21 Species in the Mountain-Prairie Region

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of initiation of reviews; request for information.

SUMMARY: We, the U.S. Fish and Wildlife Service, are initiating 5-year status reviews under the Endangered Species Act of 1973, as amended (Act), of 8 animal and 13 plant species. A 5-year status review is based on the best scientific and commercial data available at the time of the review; therefore, we are requesting submission of any new information on these species that has become available since the last review of the species.

DATES: To ensure consideration in our reviews, we are requesting submission of new information no later than July 26, 2016. However, we will continue to accept new information about any listed species at any time.

FOR FURTHER INFORMATION CONTACT: For information on a particular species, contact the appropriate person or office listed in the table in the **SUPPLEMENTARY INFORMATION** section. Individuals who are hearing impaired or speech impaired may call the Federal Relay Service at 800–877–8339 for TTY assistance.

SUPPLEMENTARY INFORMATION:

Why do we conduct 5-year reviews?

Under the Act (16 U.S.C. 1531 *et seq.*), we maintain Lists of Endangered and Threatened Wildlife and Plants (which we collectively refer to as the List) in the Code of Federal Regulations (CFR) at 50 CFR 17.11 (for animals) and 17.12 (for plants). Section 4(c)(2)(A) of the Act requires us to review each listed species' status at least once every 5 years. Our regulations at 50 CFR 424.21 require that we publish a notice in the **Federal Register** announcing those species under active review. For additional information about 5-year reviews, go to *http://www.fws.gov/endangered/what-we-do/recovery-overview.html,* scroll down to ''Learn More about 5-Year Reviews,'' and click on our factsheet.

What information do we consider in our review?

A 5-year review considers all new information available at the time of the review. In conducting these reviews, we consider the best scientific and commercial data that have become available since the listing determination or most recent status review, such as:

(A) Species biology, including but not limited to population trends, distribution, abundance, demographics, and genetics;

(B) Habitat conditions, including but not limited to amount, distribution, and suitability;

(C) Conservation measures that have been implemented that benefit the species;

(D) Threat status and trends in relation to the five listing factors (as defined in section 4(a)(1) of the Act); and

(E) Other new information, data, or corrections, including but not limited to taxonomic or nomenclatural changes, identification of erroneous information contained in the List, and improved analytical methods.

Any new information will be considered during the 5-year review and will also be useful in evaluating the ongoing recovery programs for the species.

Which species are under review?

This notice announces our active review of the 21 species listed in the table below.

Common name	Scientific name	Listing status	Historical range	Final listing rule (**Federal Register** citation and publication date)	Contact person, phone, email	Contact person's U.S. mail address

Schoenocrambe suffrutenscens.	Shrubby reed-mustard.	Endangered	Utah, U.S.A	52 FR 37416; 10/06/1987.	Larry Crist, Project Leader, 801–975–3330; *larry_crist@fws.gov.*	Ecological Services, Utah Field Office, 2369 W. Orton Circle, #50, West Valley City, UT 84119.
Schoenocrambe argillacea.	Clay reed-mustard.	Endangered	Utah, U.S.A	52 FR 37416; 10/06/1987.	Larry Crist, Project Leader, 801–975–3330; *larry_crist@fws.gov.*	Ecological Services, Utah Field Office, 2369 W. Orton Circle, #50, West Valley City, UT 84119.
Sclerocactus brevispinus.	Pariette cactus	Threatened	Utah, U.S.A	74 FR 47117; 09/15/2009.	Larry Crist, Project Leader, 801–975–3330; *larry_crist@fws.gov.*	Ecological Services, Utah Field Office, 2369 W. Orton Circle, #50, West Valley City, UT 84119.
Sclerocactus wetlandicus.	Uinta Basin hookless cactus.	Threatened	Utah, U.S.A	74 FR 47112; 09/15/2009.	Larry Crist, Project Leader, 801–975–3330; *larry_crist@fws.gov.*	Ecological Services, Utah Field Office, 2369 W. Orton Circle, #50, West Valley City, UT 84119.
Sclerocactus wrightiae.	Wright fishhook cactus.	Endangered	Utah, U.S.A	44 FR 58866; 10/11/1979.	Larry Crist, Project Leader, 801–975–3330; *larry_crist@fws.gov.*	Ecological Services, Utah Field Office, 2369 W. Orton Circle, #50, West Valley City, UT 84119.

Request for New Information

To ensure that a 5-year review is complete and based on the best available scientific and commercial information, we request new information from all sources. See ''What Information Do We Consider in Our Review?'' for specific criteria. If you submit information, please support it with documentation such as maps, bibliographic references, methods used to gather and analyze the data, and/or copies of any pertinent publications, reports, or letters by knowledgeable sources.

How do I ask questions or provide information?

If you wish to provide information for any species listed above, please submit your comments and materials to the appropriate contact in the table above. You may also direct questions to those contacts. Individuals who are hearing

impaired or speech impaired may call the Federal Relay Service at 800–877–8339 for TTY assistance.

Public Availability of Submissions

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Comments and materials received will be available for public inspection, by appointment, during normal business hours at the offices where the comments are submitted.

Completed and Active Reviews

A list of all completed and currently active 5-year reviews addressing species for which the Mountain-Prairie Region of the U.S. Fish and Wildlife Service has lead responsibility is available at *http://www.fws.gov/endangered/.*

Authority

This document is published under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Dated: April 19, 2016.

Matt Hogan,

Deputy Regional Director, Mountain-Prairie Region, U.S. Fish and Wildlife Service.

BILLING CODE 4310–55–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–HQ–IA–2016–0070; FXIA16710900000–156–FF09A30000]

Endangered Species; Marine Mammals; Receipt of Applications for Permit

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of applications for permit.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on the following applications to conduct certain activities with endangered species, marine mammals, or both. With some exceptions, the Endangered Species Act (ESA) and Marine Mammal Protection Act (MMPA) prohibit activities with listed species unless Federal authorization is acquired that allows such activities.

DATES: We must receive comments or requests for documents on or before June 27, 2016. We must receive requests for marine mammal permit public hearings, in writing, at the address shown in the **ADDRESSES** section by June 27, 2016.

ADDRESSES: *Submitting Comments:* You may submit comments by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments on Docket No. FWS–HQ–IA–2016–0070.
- *U.S. Mail or Hand-Delivery:* Public Comments Processing, Attn: Docket No. FWS–HQ–IA–2016–0070; U.S. Fish and Wildlife Service Headquarters, MS: BPHC; 5275 Leesburg Pike, Falls Church, VA 22041–3803.

When submitting comments, please indicate the name of the applicant and the PRT# you are commenting on. We will post all comments on *http://www.regulations.gov.* This generally means that we will post any personal information you provide us (see the Public Comments section below for more information). *Viewing Comments:* Comments and materials we receive will be available for public inspection on *http://www.regulations.gov,* or by appointment, between 8 a.m. and 4 p.m., Monday through Friday, except Federal holidays, at the U.S. Fish and Wildlife Service, Division of Management Authority, 5275 Leesburg Pike, Falls Church, VA 22041–3803; telephone 703–358–2095.

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, (703) 358–2104 (telephone); (703) 358–2281 (fax); *DMAFR@fws.gov* (email).

SUPPLEMENTARY INFORMATION:

I. Public Comment Procedures

A. How do I request copies of applications or comment on submitted applications?

Send your request for copies of applications or comments and materials concerning any of the applications to the contact listed under **ADDRESSES**. Please include the **Federal Register** notice publication date, the PRT-number, and the name of the applicant in your request or submission. We will not consider requests or comments sent to an email or address not listed under **ADDRESSES**. If you provide an email address in your request for copies of applications, we will attempt to respond to your request electronically.

Please make your requests or comments as specific as possible. Please confine your comments to issues for which we seek comments in this notice, and explain the basis for your comments. Include sufficient information with your comments to allow us to authenticate any scientific or commercial data you include.

The comments and recommendations that will be most useful and likely to influence agency decisions are: (1) Those supported by quantitative information or studies; and (2) Those that include citations to, and analyses of, the applicable laws and regulations. We will not consider or include in our administrative record comments we receive after the close of the comment period (see **DATES**) or comments delivered to an address other than those listed above (see **ADDRESSES**).

B. May I review comments submitted by others?

Comments, including names and street addresses of respondents, will be available for public review at the street address listed under **ADDRESSES**. The public may review documents and other information applicants have sent in support of the application unless our allowing viewing would violate the Privacy Act or Freedom of Information Act. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

II. Background

To help us carry out our conservation responsibilities for affected species, and in consideration of section 10(a)(1)(A) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), and the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), along with Executive Order 13576, ''Delivering an Efficient, Effective, and Accountable Government,'' and the President's Memorandum for the Heads of Executive Departments and Agencies of January 21, 2009—Transparency and Open Government (74 FR 4685; January 26, 2009), which call on all Federal agencies to promote openness and transparency in Government by disclosing information to the public, we invite public comment on these permit applications before final action is taken. Under the MMPA, you may request a hearing on any MMPA application received. If you request a hearing, give

specific reasons why a hearing would be appropriate. The holding of such a hearing is at the discretion of the Service Director.

III. Permit Applications

A. Endangered Species

Applicant: Zoological Society of Cincinnati, Cincinnati, OH; PRT–145194

The applicant requests a permit to import biological samples from wild black-footed cats (*Felis nigripes*) for the purpose of survival of the species/scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Odysea Aquarium, LLC, Scottsdale, AZ; PRT–87012B

The applicant requests a permit to import 20 captive bred, African penguins (*Spheniscus demersus*) for the purpose of enhancement of the survival of the species. This notification covers activities to be conducted by the applicant over a 1-year period.

Applicant: Dwayne Lake, East Dublin, GA; PRT–050246

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species to enhance species propagation or survival: Brown lemur (*Eulemur fulvus*), ring-tailed lemur (*Lemur catta*), black and white ruffed lemur (*Varecia variegate*), and red-ruffed lemur (*Varecia variegate ruber*). This notification covers activities to be conducted by the applicant over a 5-year period.

Multiple Applicants

The following applicants each request a permit to import the sport-hunted trophy of one male bontebok (*Damaliscus pygargus pygargus*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancement of the survival of the species.

Applicant: Patrick Ballenger, Morral, OH; PRT–93135B

Applicant: Geoffrey Stone, Fallon, NV; PRT–95502B

Applicant: Terry Jones, Bryan, TX; PRT–88951B

Applicant: Terry Freeman, Russellville, AZ; PRT–94211B

Applicant: Natural History Museum of Los Angeles County, Los Angeles, CA; PRT–78234B

The applicant requests renewal of a permit to acquire, import, and export legally taken specimens of polar bear (*Ursus maritimus*), walrus (*Odobenus rosmarus*), sea otter (*Enhydra lutris*), marine otter (*Lontra felina*), West Indian manatee (*Trichechus manatus*), Amazonian manatee (*Trichechus inunguis*), West African manatee (*Trichechus senegalensis*), and dugong (*Dugong dugon*) for purposes of scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Concurrent with publishing this notice in the **Federal Register**, we are forwarding copies of the above applications to the Marine Mammal Commission and the Committee of Scientific Advisors for their review.

Brenda Tapia,

Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

[FR Doc. 2016–12550 Filed 5–26–16; 8:45 am]

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Geological Survey

[USGS–GX16WC00COM0001]

Agency Information Collection Activities: Request for Comments

AGENCY: U.S. Geological Survey (USGS), Interior.

ACTION: Notice of revision of a currently approved information collection, (1028–0106).

SUMMARY: We (the U.S. Geological Survey) are notifying the public that we have submitted to the Office of Management and Budget (OMB) the information collection request (ICR) described below. To comply with the Paperwork Reduction Act of 1995 (PRA) and as part of our continuing efforts to reduce paperwork and respondent burden, we invite the general public and other Federal agencies to take this opportunity to comment on this ICR. This collection is scheduled to expire on May 31, 2016.

DATES: To ensure that your comments on this ICR are considered, OMB must receive them on or before June 27, 2016.

ADDRESSES: Please submit written comments on this information collection directly to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs, Attention: Desk Officer for the Department of the Interior, via email: (*OIRA_SUBMISSION@omb.eop.gov*); or by fax (202) 395–5806; and identify your submission with 'OMB Control Number 1028–0106 USGS Ash Fall Report'. Please also forward a copy of your comments and suggestions on this information collection to the Information Collection Clearance Officer, U.S. Geological Survey, 12201 Sunrise Valley Drive MS 807, Reston, VA 20192 (mail); (703) 648–7195 (fax); or *gs-info_collections@usgs.gov* (email). Please reference 'OMB Information Collection 1028–0106: USGS Ash Fall Report' in all correspondence.

FOR FURTHER INFORMATION CONTACT: Kristi Wallace, U.S. Geological Survey, Alaska Volcano Observatory, 4210 University Drive, Anchorage, Alaska 99508, office phone: 907–786–7109, email: *kwallace@usgs.* You may also find information about this ICR at *www.reginfo.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The USGS provides notifications and warnings to the public of volcanic activity in the U.S. in order to reduce the loss of life, property, and economic and societal impacts. Ash fallout to the ground can pose significant disruption and damage to buildings, transportation, water and wastewater, power supply, communications equipment, agriculture, and primary production leading to potentially substantial societal impacts and costs, even at thicknesses of only a few millimeters or inches. Additionally, fine grained ash, when ingested can cause health impacts to humans and animals. USGS will use reports entered in real time by respondents of ash fall in their local area to correct or refine ash fall forecasts as the ash cloud moves downwind. Retrospectively these reports will enable USGS to improve their ash fall models and further research into eruptive processes.

This project is a database module and web interface allowing the public and Alaska Volcano Observatory (AVO) staff to enter reports of ash fall in their local area in real time and retrospectively following an eruptive event. Users browsing the AVO Web site during eruptions will be directed towards a web form allowing them to fill in ash fall information and submit the information to AVO.

Compiled ashfall reports are available in real-time to AVO staff through the AVO internal Web site. A pre-formatted summary report or table that distills information received online will show ash fall reports in chronological order with key fields including (1) date and time of ash fall, (2) location, (3) positive or negative ash fall (4) name of observer, and (5) contact information is easily viewable internally on the report so that

calls for clarification can be made by AVO staff quickly and Operations room staff can visualize ashfall information quickly.

Ash fall report data will also be displayed on a dynamic map interface and show positive (yes ash) and negative (no ash) ash fall reports by location. Ash fall reports (icons) will be publically displayed for a period of 24 hours and shaded differently as they age so that the age of reports is obvious.

The ash fall report database will help AVO track eruption clouds and associated fallout downwind. These reports from the public will also give scientists a more complete record of the amount and duration and other conditions of ash fall. Getting first-hand accounts of ash fall will support model ash fall development and interpretation of satellite imagery. AVO scientists will—as time allows—be able to contact the individuals using their entered contact information for clarification and details. Knowing the locations from which ash-fall reports have been filed will improve ash fall warning messages, AVO Volcanic Activity Notifications, and make fieldwork more efficient. AVO staff will be able to condense and summarize the various ash fall reports and forward that information on to emergency management agencies and the wider public. The online form will also free up resources during exceedingly busy times during an eruption, as most individuals currently phone AVO with their reports.

Observers may also collect and submit a physical ashfall sample using mail services. The area over which ash can fall is large. Timely access is often difficult for USGS employees and local individuals are ideally positioned to collect quality samples.

II. Data

OMB Control Number: 1028–0106.

Form Number: NA.

Title: USGS Ash Fall Report.

Type of Request: Revision of a currently approved information collection.

Respondent Obligation: Participation is voluntary.

Frequency of Collection: On occasion, after each ashfall event.

Description of Respondents: Individuals and households.

Estimated Total Number of Annual Responses: Approximately 200 individuals will respond with an observation event each year.

Estimated Time per Response: We estimate the public reporting burden will average 3.5 minutes per response. This includes the time for reviewing instructions, and answering a web-based questionnaire.

Estimated Annual Burden Hours: 33 hours.

Estimated Reporting and Recordkeeping ''Non-Hour Cost'' Burden: There are a few optional ''non-hour cost'' burdens associated with this collection of information, such as clipboards, plastic bags, and preparing ash collection tools. We estimate the maximum for all respondents is $711.

Public Disclosure Statement: The PRA (44 U.S.C. 3501, *et seq.*) provides that an agency may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number. Until the OMB approves a collection of information, you are not obliged to respond.

Comments: On February 12, 2016, we published a **Federal Register** notice (81 FR 7582) announcing that we would submit this ICR to OMB for approval and soliciting comments. The comment period closed on April 12, 2016. We received no comments.

III. Request for Comments

We again invite comments concerning this ICR as to: (a) Whether the proposed collection of information is necessary for the agency to perform its duties, including whether the information is useful; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) how to enhance the quality, usefulness, and clarity of the information to be collected; and (d) how to minimize the burden on the respondents, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this notice are a matter of public record. Before including your personal mailing address, phone number, email address, or other personally identifiable information in your comment, you should be aware that your entire comment, including your personally identifiable information, may be made publicly available at any time. While you can ask us and the OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Thomas L. Murry,

Director, Volcano Science Center.

BILLING CODE 4338–11–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLNVC00000.L16100000.DR0000; 14–08807; MO# 4500084731]

Notice of Availability Nevada and California Greater Sage-Grouse Bi-State Distinct Population Segment Land Use Plan Amendment and Record of Decision

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The Bureau of Land Management (BLM) announces the availability of the Record of Decision (ROD) for the approved Nevada and California Greater Sage-Grouse Bi-State Distinct Population Segment Land Use Plan Amendment (LUPA) for the Carson City District and the Tonopah Field Office located in Nevada. The Nevada State Director signed the ROD on May 27, 2016, which constitutes the final decision of the BLM and makes the LUPA effective immediately.

ADDRESSES: Copies of the ROD/approved LUPA are available upon request from the Carson City District Manager, Bureau of Land Management, 5665 Morgan Mill Road, Carson City, NV 89701, Battle Mountain District Manager, Bureau of Land Management, 50 Bastian Road, Battle Mountain, NV 89820 or via the Internet at *http://www.blm.gov/nv/st/en/fo/carson_city_field.html*. Copies of the ROD/approved LUPA are available for public inspection at the Carson City or Battle Mountain District Offices at the above addresses.

FOR FURTHER INFORMATION CONTACT: Colleen Sievers, Project Manager, telephone: 775–885–6168; address: 5665 Morgan Mill Rd., Carson City, NV 89701; email: *blm_nv_ccdowebmail@blm.gov*. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, seven days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The Nevada California Greater Sage-Grouse Bi-State Distinct Population Segment Land Use Plan will amend the Carson City Field Office Consolidated Resource Management Plan (RMP) (2001) and the Tonopah Field Office RMP (1997). The LUPA and associated environmental

impact statement (EIS) were developed using a collaborative planning process. The United States Forest Service (USFS) was the lead agency for preparing the EIS and LUPA. The BLM was a cooperating agency. The LUPA encompasses approximately 280,000 acres of public land administered by the BLM Nevada, located in Carson City, Douglas, Esmeralda, Lyon, and Mineral counties in Nevada and Alpine County, California. The decision area does not include private lands, State lands, tribal lands, or Federal lands not administered by the BLM. The LUPA/ROD will add goals, objectives, action, and best management practices specifically designed to conserve, enhance, and restore habitats to provide for the long-term viability of the Greater Sage-Grouse Bi-State Distinct Population Segment (BSSG). The LUPA provides direction at the land-use-plan level to include regulatory mechanisms for the management and conservation of BSSG habitats within the BLM Carson City and Battle Mountain Districts to support the BSSG population management objectives within the States of Nevada and California.

The proposed LUPA/final EIS was made available to the public on February 13, 2015 (80 FR 8081). Three valid protest letters were received and seven issues were identified. No inconsistencies were identified by the Offices of the Governor for the States of California or Nevada during the Governor's consistency review. The Director's Protest Report is available from the Carson City District's Web site at: *http://www.blm.gov/nv/st/en/fo/carson_city_field.html*.

The following changes to the Proposed Amendment are made final in the ROD/Approved Amendment as a result of protests raised during the protest process and additional agency discussions: Set a total anthropogenic disturbance of no more than 3 percent of the total BSSG habitat on Federal lands within the Bodie Mountain/Grant, Desert Creek/Fales, and White Mountains population management unit boundaries (PMU); and a total anthropogenic disturbance of no more than 1.5 percent of the total BSSG habitat on Federal lands within the Pine Nut Mountains PMU; tall structures, which could serve as predator perches, will not be authorized within 4 miles of an active or pending lek; designate right-of-way exclusion areas within BSSG habitat for new high-power (120kV) transmission line corridors, rights-of-way, facilities, or construction areas in habitat (outside of existing corridors); and clarify that connective areas will be maintained or enhanced.

The EIS analyzes three alternatives: Alternative A (no action), Alternative B (Modified Proposed Action), and Alternative C (conservation). The BLM Proposed Plan Amendment is the same as Alternative B with the language modified to be consistent with BLM planning language. The BLM Proposed Plan Amendment as described in the Final EIS was selected in the ROD, with some modifications and clarifications based on protests raised during the protest process and additional agency discussions. The ROD adopts the final EIS's goals and objections and the management actions to reach those goals and objections.

The ROD does not directly implement any specific action. Future actions will be consistent with the management direction in the approved LUPA and will be made through a future decision-making process, including appropriate environmental review. Examples of site-specific planning efforts for resource-use activities are special recreation permits and right-of-way grants.

Authority: 40 CFR 1506.6.

John F. Ruhs,

State Director, Nevada.

Notice of Public Meeting, Twin Falls District Resource Advisory Council, Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meetings.

SUMMARY: In accordance with the Federal Land Policy and Management Act (FLPMA), the Federal Advisory Committee Act of 1972 (FACA), and the Federal Lands Recreation Enhancement Act of 2004 (FLREA), the U.S. Department of the Interior, Bureau of Land Management (BLM) Twin Falls District Resource Advisory Council (RAC) will meet as indicated below.

DATES: The Twin Falls District RAC will meet June 17, 2016 at the Twin Falls District Office, 2878 Addison Ave. E., Twin Falls, ID 83301. The meeting will begin at 8:00 a.m. and end no later than 6:00 p.m. The public comment period will take place from 8:15–8:45 a.m.

FOR FURTHER INFORMATION CONTACT: Heather Tiel-Nelson, Twin Falls District, Idaho, 2878 Addison Ave. E., Twin Falls, Idaho 83301, (208) 736–2352.

SUPPLEMENTARY INFORMATION: The 15-member RAC advises the Secretary of the Interior, through the Bureau of Land Management, on a variety of planning and management issues associated with public land management in Idaho. On June 17, the Twin Falls District RAC will develop permit renewal and travel management planning subcommittees in the morning. The rest of the day will be dedicated to wild horse education as they view the film *Unbranded* and take a field tour of the Bruneau Off-Range Corrals. Additional topics may be added and will be included in local media announcements.

More information is available at *http://www.blm.gov/id/st/en/get_involved/resource_advisory/twin_falls_district.html* RAC meetings are open to the public.

Authority: 43 CFR 1784.4–1.

Brian C. Amme,

BLM Twin Falls District Manager (Acting).

BILLING CODE 4310–GG–P

DEPARTMENT OF THE INTERIOR

National Indian Gaming Commission

2016 Final Fee Rate and Fingerprint Fees

AGENCY: National Indian Gaming Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given, pursuant to 25 CFR 514.2, that the National Indian Gaming Commission has adopted its 2016 final annual fee rates of 0.00% for tier 1 and 0.062% (.00062) for tier 2, which remain the same as the 2016 preliminary fee rates. The tier 2 annual fee rate represents the lowest fee rate adopted by the Commission in the last five years. These rates shall apply to all assessable gross revenues from each gaming operation under the jurisdiction of the Commission. If a tribe has a certificate of self-regulation under 25 CFR part 518, the 2016 final fee rate on Class II revenues shall be 0.031% (.00031) which is one-half of the annual fee rate. The final fee rates being adopted here are effective June 1, 2016, and will remain in effect until new rates are adopted.

Pursuant to 25 CFR 514.16, the National Indian Gaming Commission has also adopted its fingerprint processing fees of $21 per card effective June 1, 2016.

FOR FURTHER INFORMATION CONTACT: Yvonne Lee, National Indian Gaming Commission, C/O Department of the Interior, 1849 C Street NW., Mail Stop #1621, Washington, DC 20240; telephone (202) 632–7003; fax (202) 632–7066.

SUPPLEMENTARY INFORMATION: The Indian Gaming Regulatory Act (IGRA) established the National Indian Gaming Commission, which is charged with regulating gaming on Indian lands.

Commission regulations (25 CFR 514) provide for a system of fee assessment and payment that is self-administered by gaming operations. Pursuant to those regulations, the Commission is required to adopt and communicate assessment rates and the gaming operations are required to apply those rates to their revenues, compute the fees to be paid, report the revenues, and remit the fees to the Commission. All gaming operations within the jurisdiction of the Commission are required to self-administer the provisions of these regulations, and report and pay any fees that are due to the Commission.

Pursuant to 25 CFR 514, the Commission must also review annually the costs involved in processing fingerprint cards and set a fee based on fees charged by the Federal Bureau of Investigation and costs incurred by the Commission. Commission costs include Commission personnel, supplies, equipment costs, and postage to submit the results to the requesting tribe. Based on that review, the Commission hereby sets the 2016 fingerprint processing fee at $21 per card effective June 1, 2016.

Dated: May 24, 2016.

Jonodev O. Chaudhuri,

Chairman.

Dated: May 24, 2016.

Kathryn C. Isom-Clause,

Vice Chair.

Dated: May 24, 2016.

E. Sequoyah Simermeyer,

Associate Commissioner.

BILLING CODE 7565–01–P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–NERO–CAJO–20994; PPNECAJO00, PPMPSPD1Z.Y00000]

Selection of the Route of the Captain John Smith Chesapeake National Historic Trails

AGENCY: National Park Service, Interior.

ACTION: Notice of selection of trail route.

SUMMARY: Pursuant to the National Trails System Act, the National Park Service is publishing notice of its selection of the route of the Captain John Smith Chesapeake National Historic Trail. Congress established the trail in 2006, and the Secretary of the Interior designated portions of four rivers as historic components of the trail in 2012.

FOR FURTHER INFORMATION CONTACT: Charles Hunt, Superintendent, Captain John Smith Chesapeake National Historic Trail, National Park Service, 410 Severn Avenue, Suite 314, Annapolis, MD 21403, (410) 260–2471.

SUPPLEMENTARY INFORMATION: In 2006, Congress established the Captain John Smith Chesapeake National Historic Trail as a component of the National Trails System. Captain John Smith Chesapeake National Historic Trail Designation Act (Act), Public Law 109–418, 120 Stat. 2882 (2006). The Act describes the trail as ''a series of water routes extending approximately 3,000 miles along the Chesapeake Bay and the tributaries of the Chesapeake Bay in the States of Virginia, Maryland, and Delaware, and in the District of Columbia, that traces the 1607–1609 voyages of Captain John Smith to chart the land and waterways of the Chesapeake Bay,'' as generally depicted on the map referenced in the Act, which map is available at *https://www.nps.gov/cajo/planyourvisit/maps.htm.*

The map indicates that the water routes are located on portions of the Chesapeake Bay and of the James, Chickahominy, Nansemond, Elizabeth, York, Pamunkey, Mattaponi, Piankatank, Rappahannock, Pocomoke, Potomac, Anacostia, Nanticoke, Patuxent, Patapsco, Bush, Susquehanna, Northeast, Elk, and Sassafras Rivers. In 2012, the Secretary of the Interior, acting pursuant to 16 U.S.C. 1245, designated portions of the Susquehanna, Chester, Upper Nanticoke, and Upper James Rivers as historic components of the trail.

To guide management of the trail, the National Park Service prepared a comprehensive management plan, finalized in 2011, that provides a vision and decision-making framework for the trail; identifies significant natural, historical, and cultural resources to be preserved; and describes anticipated cooperative agreements with State and local government agencies, nonprofit organizations, and private entities. The trail route consists of a line on the waters of the Chesapeake Bay and certain of its tributaries tracing Captain John Smith's explorations and certain related natural, historic, or cultural sites or features located on lands abutting or near the water route, all as depicted or described in the trail's comprehensive management plan and related documents.

The National Park Service held a series of public meetings to elicit public input and met with representatives of State and local governments and Indian tribes. A trail conservation strategy and detailed segment plans for the James River and Potomac River were subsequently developed.

Pursuant to 16 U.S.C. 1244(a) and 1246(a)(2), the Secretary of the Interior must select the route for the trail and publish notice of the availability of appropriate maps or descriptions in the **Federal Register**.

This **Federal Register** notice announces the route for the Captain John Smith Chesapeake National Historic Trail as a line on the waters of the Chesapeake Bay and certain of its tributaries following the routes generally depicted on the map referenced in the Act or described in the 2012 secretarial order designating portions of the Susquehanna, Chester, Upper Nanticoke, and Upper James Rivers as historic components of the trail. The route also includes certain related natural, historic, or cultural sites or features located on lands abutting or near the designated water route. Both the water route and the related terrestrial sites or features are depicted or described in more detail in the *Captain John Smith Chesapeake National Historic Trail Comprehensive Management Plan* (2011), *A Conservation Strategy for the Captain John Smith Chesapeake National Historic Trail* (2013), and segment plans for the James River (2011) and Potomac River (2015), all of which are available at *https://www.nps.gov/cajo/getinvolved/planning.htm.*

Authority: National Trails System Act, 16 U.S.C. 1244(a)(25) and 1246(a)(2).

Dated: May 17, 2016.

Charles Hunt,

Superintendent, National Park Service.

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

[S1D1S SS08011000 SX064A000 167S180110; S2D2S SS08011000 SX064A000 16XS501520]

Notice of Proposed Information Collection; Request for Comments for 1029–0087

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Notice and request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the Office of Surface Mining Reclamation and Enforcement (OSMRE) is announcing its intention to request approval for the collection of information for the Abandoned Mine Land Problem Area Description form, OSM–76. This information collection activity was previously approved by the Office of Management and Budget (OMB), and assigned control number 1029–0087.

DATES: OMB has up to 60 days to approve or disapprove the information collection requests but may respond after 30 days. Therefore, public comments should be submitted to OMB by June 27, 2016, in order to be assured of consideration.

ADDRESSES: Submit comments to the Office of Information and Regulatory Affairs, Office of Management and Budget, Department of the Interior Desk Officer, via email at *OIRA_submission@omb.eop.gov,* or by facsimile to (202) 395–5806. Also, please send a copy of your comments to John Trelease, Office of Surface Mining Reclamation and Enforcement, 1951 Constitution Ave. NW., Room 203–SIB, Washington, DC 20240, or electronically to *jtrelease@osmre.gov.* Please reference 1029–0087 in your correspondence.

FOR FURTHER INFORMATION CONTACT: To receive a copy of the information collection request contact John Trelease at (202) 208–2783, or electronically at *jtrelease@osmre.gov.* You may also review the information collection request online at *http://www.reginfo.gov.* Follow the instructions to review Department of the Interior collections under review by OMB.

SUPPLEMENTARY INFORMATION: OMB regulations at 5 CFR part 1320, which implement provisions of the Paperwork Reduction Act of 1995 (Pub. L. 104–13), require that interested members of the public and affected agencies have an opportunity to comment on information collection and recordkeeping activities [see 5 CFR 1320.8(d)]. OSMRE has submitted a request to OMB to renew its approval for the collection of information found in the form OSM–76, Abandoned Mine Land Problem Area Description form. OSMRE is requesting a 3-year term of approval for this information collection activity.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control number for this collection of information is 1029–0087, and may be found on the OSM–76 form in OSMRE's e-AMLIS system.

As required by 5 CFR 1320.8(d), a **Federal Register** notice soliciting comments on this collection was published on February 16, 2016 (81 FR 7829). No comments were received. This notice provides the public with an additional 30 days in which to comment on the following information collection activity:

Title: OSM–76—Abandoned Mine Land Problem Area Description Form.

OMB Control Number: 1029–0087.

Summary: This form will be used to update the Office of Surface Mining Reclamation and Enforcement's electronic inventory of abandoned mine lands (e-AMLIS). From this inventory, the most serious problem areas are selected for reclamation through the apportionment of funds to States and Indian tribes.

Bureau Form Number: OSM–76.

Frequency of Collection: On occasion.

Description of Respondents: State governments and Indian tribes.

Total Annual Responses: 1,888.

Total Annual Burden Hours: 5,016.

Obligation to Respond: Required in order to obtain or retain benefits.

Send comments on the need for the collection of information for the performance of the functions of the agency; the accuracy of the agency's burden estimates; ways to enhance the quality, utility and clarity of the information collection; and ways to minimize the information collection burden on respondents, such as use of automated means of collection of the information, to the places listed in **ADDRESSES**. Please refer to control number 1029–0087 in all correspondence.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: May 20, 2016.

Harry J. Payne,

Chief, Division of Regulatory Support.

BILLING CODE 4310–05–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–559–561 and 731–TA–1317–1328 (Preliminary)]

Certain Carbon and Alloy Steel Cut-To-Length Plate From Austria, Belgium, Brazil, China, France, Germany, Italy, Japan, Korea, South Africa, Taiwan, and Turkey; Determinations

On the basis of the record [1] developed in the subject investigations, the United States International Trade Commission (''Commission'') determines, pursuant to the Tariff Act of 1930 (''the Act''), that there is a reasonable indication that an industry in the United States is materially injured by reason of imports of certain carbon and alloy steel cut-to-length plate from Austria, Belgium, Brazil, China, France, Germany, Italy, Japan, Korea, South Africa, Taiwan, and Turkey, provided for in subheadings 7208.51.00, 7208.52.00, 7211.13.00, 7211.14.00, 7225.40.11, 7225.40.30, 7226.20.00, and 7226.91.50 of the Harmonized Tariff Schedule of the United States, that are alleged to be sold in the United States at less than fair value (''LTFV'') and that are alleged to be subsidized by the governments of China and Korea. The Commission further determines that allegedly subsidized imports of certain carbon and alloy steel cut-to-length plate from Brazil are negligible pursuant to section 771(24) of the Act, and its countervailing duty investigation with regard to certain carbon and alloy steel cut-to-length plate from this country is thereby terminated pursuant to section 703(a)(1) of the Act.

Commencement of Final Phase Investigations

Pursuant to section 207.18 of the Commission's rules, the Commission also gives notice of the commencement of the final phase of its investigations on which it has made preliminary determinations. The Commission will

[1] The record is defined in sec. 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

issue a final phase notice of scheduling, which will be published in the **Federal Register** as provided in section 207.21 of the Commission's rules, upon notice from the Department of Commerce (''Commerce'') of affirmative preliminary determinations in the investigations under sections 703(b) or 733(b) of the Act, or, if the preliminary determinations are negative, upon notice of affirmative final determinations in those investigations under sections 705(a) or 735(a) of the Act. Parties that filed entries of appearance in the preliminary phase of the investigations need not enter a separate appearance for the final phase of the investigations. Industrial users, and, if the merchandise under investigation is sold at the retail level, representative consumer organizations have the right to appear as parties in Commission antidumping and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to the investigations.

Background

On April 8, 2016, ArcelorMittal USA LLC (Chicago, Illinois), Nucor Corporation (Charlotte, North Carolina), and SSAB Enterprises, LLC (Lisle, Illinois) filed a petition with the Commission and Commerce, alleging that an industry in the United States is materially injured or threatened with material injury by reason of subsidized imports of certain carbon and alloy steel cut-to-length plate from Brazil, China, and Korea, and LTFV imports of certain carbon and alloy steel cut-to-length plate from Austria, Belgium, Brazil, China, France, Germany, Italy, Japan, Korea, South Africa, Taiwan, and Turkey. Accordingly, effective April 8, 2016, the Commission, pursuant to sections 703(a) and 733(a) of the Act (19 U.S.C. 1671b(a) and 1673b(a)), instituted countervailing duty investigation Nos. 701–TA–559–561 and antidumping duty investigation Nos. 731–TA–1317–1328 (Preliminary).

Notice of the institution of the Commission's investigations and of a public conference to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** of April 14, 2016 (81 FR 22116). The conference was held in Washington, DC, on April 29, 2016, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission made these determinations pursuant to sections 703(a) and 733(a) of the Act (19 U.S.C. 1671b(a) and 1673b(a)). It completed and filed its determinations in these investigations on May 23, 2016. The views of the Commission are contained in USITC Publication 4615 (May 2016), entitled *Certain Carbon and Alloy Steel Cut-To-Length Plate from Austria, Belgium, Brazil, China, France, Germany, Italy, Japan, Korea, South Africa, Taiwan, and Turkey: Investigation Nos. 701–TA–559–561 and 731–TA–1317–1328 (Preliminary).*

By order of the Commission.

Issued: May 23, 2016.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–548 and 731–TA–1298 (Final)]

Welded Stainless Steel Pressure Pipe from India; Scheduling of the Final Phase of Countervailing Duty and Antidumping Duty Investigations

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the scheduling of the final phase of antidumping and countervailing duty investigation Nos. 701–TA–548 and 731–TA–1298 (Final) pursuant to the Tariff Act of 1930 (''the Act'') to determine whether an industry in the United States is materially injured or threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports of welded stainless steel pressure pipe from India, provided for in subheadings 7306.40.50 and 7306.40.10 of the Harmonized Tariff Schedule of the United States, preliminarily determined by the Department of Commerce to be subsidized and sold at less-than-fair-value.[1]

[1] For purposes of these investigations, the Department of Commerce has defined the subject merchandise as ''circular welded austenitic stainless pressure pipe not greater than 14 inches in outside diameter. References to size are in nominal inches and include all products within tolerances allowed by pipe specifications. This merchandise includes, but is not limited to, the American Society for Testing and Materials (''ASTM'') A–312 or ASTM A–778 specifications, or comparable domestic or foreign specifications. ASTM A–358 products are only included when they are produced to meet ASTM A–312 or ASTM A–778 specifications, or comparable domestic or foreign specifications.'' For a full description of the scope of the investigation, including product exclusions, *see Welded Stainless Pressure Pipe From India: Affirmative Preliminary Determination of Sales at Less Than Fair Value and Postponement of Final Determination,* 81 FR 28824, May 10, 2016.

DATES: *Effective Dates:* May 10, 2016.

FOR FURTHER INFORMATION CONTACT: Michael Szustakowski ((202) 205–3169), Office of Investigations, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its Internet server (*http://www.usitc.gov*). The public record for these investigations may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov*.

SUPPLEMENTARY INFORMATION:

Background.—The final phase of these investigations is being scheduled pursuant to sections 705(b) and 731(b) of the Tariff Act of 1930 (19 U.S.C. 1671d(b) and 1673d(b)), as a result of affirmative preliminary determinations by the Department of Commerce that certain benefits which constitute subsidies within the meaning of section 703 of the Act (19 U.S.C. 1671b) are being provided to manufacturers, producers, or exporters in India of welded stainless steel pressure pipe, and that such products are being sold in the United States at less than fair value within the meaning of section 733 of the Act (19 U.S.C. 1673b). The investigations were requested in petitions filed on September 30, 2015, by Bristol Metals, LLC, Bristol, TN; Felker Brothers Corp., Marshfield, WI; Marcegaglia USA, Munhall, PA; and Outokumpu Stainless Pipe, Inc., Wildwood, FL.

For further information concerning the conduct of this phase of the investigations, hearing procedures, and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A and C (19 CFR part 207).

Participation in the investigations and public service list.—Persons, including industrial users of the subject merchandise and, if the merchandise is sold at the retail level, representative consumer organizations, wishing to

participate in the final phase of these investigations as parties must file an entry of appearance with the Secretary to the Commission, as provided in section 201.11 of the Commission's rules, no later than 21 days prior to the hearing date specified in this notice. A party that filed a notice of appearance during the preliminary phase of the investigations need not file an additional notice of appearance during this final phase. The Secretary will maintain a public service list containing the names and addresses of all persons, or their representatives, who are parties to the investigations.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and BPI service list.—Pursuant to section 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in the final phase of these investigations available to authorized applicants under the APO issued in the investigations, provided that the application is made no later than 21 days prior to the hearing date specified in this notice. Authorized applicants must represent interested parties, as defined by 19 U.S.C. 1677(9), who are parties to the investigations. A party granted access to BPI in the preliminary phase of the investigations need not reapply for such access. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Staff report.—The prehearing staff report in the final phase of these investigations will be placed in the nonpublic record on September 8, 2016, and a public version will be issued thereafter, pursuant to section 207.22 of the Commission's rules.

Hearing.—The Commission will hold a hearing in connection with the final phase of these investigations beginning at 9:30 a.m. on Thursday, September 22, 2016, at the U.S. International Trade Commission Building. Requests to appear at the hearing should be filed in writing with the Secretary to the Commission on or before September 16, 2016. A nonparty who has testimony that may aid the Commission's deliberations may request permission to present a short statement at the hearing. All parties and nonparties desiring to appear at the hearing and make oral presentations should participate in a prehearing conference to be held on September 20, 2016, at the U.S. International Trade Commission Building, if deemed necessary. Oral testimony and written materials to be submitted at the public hearing are governed by sections 201.6(b)(2), 201.13(f), and 207.24 of the Commission's rules. Parties must submit any request to present a portion of their hearing testimony *in camera* no later than 7 business days prior to the date of the hearing.

Written submissions.—Each party who is an interested party shall submit a prehearing brief to the Commission. Prehearing briefs must conform with the provisions of section 207.23 of the Commission's rules; the deadline for filing is September 15, 2016. Parties may also file written testimony in connection with their presentation at the hearing, as provided in section 207.24 of the Commission's rules, and posthearing briefs, which must conform with the provisions of section 207.25 of the Commission's rules. The deadline for filing posthearing briefs is September 29, 2016. In addition, any person who has not entered an appearance as a party to the investigations may submit a written statement of information pertinent to the subject of the investigations, including statements of support or opposition to the petition, on or before September 29, 2016. On October 18, 2016, the Commission will make available to parties all information on which they have not had an opportunity to comment. Parties may submit final comments on this information on or before October 20, 2016, but such final comments must not contain new factual information and must otherwise comply with section 207.30 of the Commission's rules. All written submissions must conform with the provisions of section 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of sections 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on E-Filing,* available on the Commission's Web site at *http://edis.usitc.gov,* elaborates upon the Commission's rules with respect to electronic filing.

Additional written submissions to the Commission, including requests pursuant to section 201.12 of the Commission's rules, shall not be accepted unless good cause is shown for accepting such submissions, or unless the submission is pursuant to a specific request by a Commissioner or Commission staff.

In accordance with sections 201.16(c) and 207.3 of the Commission's rules, each document filed by a party to the investigations must be served on all other parties to the investigations (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.21 of the Commission's rules.

By order of the Commission.

Issued: May 24, 2016.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received a complaint entitled *Certain Semiconductor Devices, Semiconductor Device Packages, and Products Containing Same, DN 3150;* the Commission is soliciting comments on any public interest issues raised by the complaint or complainant's filing under section 210.8(b) of the Commission's Rules of Practice and Procedure (19 CFR 210.8(b)).

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at EDIS,[1] and will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000.

General information concerning the Commission may also be obtained by accessing its Internet server at United States International Trade Commission (USITC) at USITC.[2] The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at EDIS.[3] Hearing-impaired persons are advised that information on this matter can be obtained by contacting the

[1] Electronic Document Information System (EDIS): *http://edis.usitc.gov.*

[2] United States International Trade Commission (USITC): *http://edis.usitc.gov.*

[3] Electronic Document Information System (EDIS): *http://edis.usitc.gov.*

Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to section 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of Tessera Technologies, Inc.; Tessera, Inc. and Invensas Corporation on May 23, 2016. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain semiconductor devices, semiconductor device packages, and products containing same. The complaint names as respondents Broadcom Limited of Singapore; Broadcom Corporation of Irvine, CA; Avago Technologies Limited of Singapore; Avago Technologies U.S. Inc. of San Jose, CA; Arista Networks, Inc. of Santa Clara, CA; ARRIS International plc of Suwanee, GA; ARRIS Group, Inc. of Suwanee, GA; ARRIS Technology, Inc. of Horsham, PA; ARRIS Enterprises LLC of Suwanee, GA; ARRIS Solutions, Inc. of Suwanee, GA; Pace Ltd. (formerly Pace plc) of England; Pace Americas, LLC of Boca Raton, FL; Pace USA, LLC of Boca Raton, FL; ASUSTeK Computer Inc. of Taiwan; ASUS Computer International of Fremont, CA; Comcast Cable Communications, LLC of Philadelphia, PA; Comcast Cable Communications Management, LLC of Philadelphia, PA; Comcast Business Communications, LLC of Philadelphia, PA; HTC Corporation of Taiwan; HTC America, Inc. of Bellevue, WA; NETGEAR, Inc. of San Jose, CA; Technicolor S.A. of France; Technicolor USA, Inc. of Indianapolis, IN; and Technicolor Connected Home USA LLC of Indianapolis, IN. The complainant requests that the Commission issue a limited exclusion order, cease and desist orders and impose a bond upon respondents' alleged infringing articles during the 60-day Presidential review period pursuant to 19 U.S.C. 1337(j).

Proposed respondents, other interested parties, and members of the public are invited to file comments, not to exceed five (5) pages in length, inclusive of attachments, on any public interest issues raised by the complaint or section 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) Explain how the articles potentially subject to the requested remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;

(iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant's licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and

(v) explain how the requested remedial orders would impact United States consumers.

Written submissions must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register.** There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above and submit 8 true paper copies to the Office of the Secretary by noon the next day pursuant to section 210.4(f) of the Commission's Rules of Practice and Procedure (19 CFR 210.4(f)). Submissions should refer to the docket number (''Docket No. 3150'') in a prominent place on the cover page and/or the first page. (*See* Handbook for Electronic Filing Procedures, Electronic Filing Procedures.[4]) Persons with questions regarding filing should contact the Secretary (202–205–2000).

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.[5]

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of sections 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

By order of the Commission.

Issued: May 24, 2016.

Lisa R. Barton,

Secretary to the Commission.

DEPARTMENT OF JUSTICE

Federal Bureau of Investigation

[OMB Number 1110–0001]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Return A—Monthly Return of Offenses Known to Police and Supplement to Return A—Monthly Return of Offenses Known to Police; Revision of a Currently Approved Collection

AGENCY: Federal Bureau of Investigation, Department of Justice.

ACTION: 30-day notice.

SUMMARY: The Department of Justice (DOJ), Federal Bureau of Investigation (FBI), Criminal Justice Information Services (CJIS) Division will submit the following Information Collection Request to the Office of Management and Budget (OMB) for review and clearance in accordance with established review procedures of the Paperwork Reduction Act of 1995. This proposed information collection was previously published in the **Federal Register** at 81 FR 15350, on March 22, 2016, allowing for a 60 day comment period and no comments were received.

DATES: Comments are encouraged and will be accepted for an additional 30 days until June 27, 2016.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Mr. Samuel Berhanu, Unit Chief, Unit Chief, Federal Bureau of Investigation, CJIS Division, Module E–3, 1000 Custer

Hollow Road, Clarksburg, West Virginia 26306; facsimile (304) 625–3566. Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20503 or sent to *OIRA_submissions@omb.eop.gov.*

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and/or

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection:* Revision of a currently approved collection.

2. *The Title of the Form/Collection:* Return A—Monthly Return of Offenses Known to Police and Supplement to Return A—Monthly Return of Offenses Known to Police.

3. *The agency form number:* 1–720 and 1–706.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: City, county, state, federal, and tribal law enforcement agencies. Under title 28, U.S. Code, section 534, Acquisition, Preservation, and Exchange of Identification Records; Appointment of Officials, 1930, this collection requests part I offense and clearance data as well as stolen and recovered monetary values of stolen property throughout the United States from city, county, state, tribal, and federal law enforcement agencies in order for the FBI UCR Program to serve as the national clearinghouse for the collection and dissemination of crime data and to publish these statistics in the Semiannual and Preliminary Annual Reports and Crime in the United States.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* There are potential of 18,498 law enforcement agency respondents; calculated estimates indicate 10 minutes for the Return A and 11 minutes for the Supplement to Return A.

6. *An estimate of the total public burden (in hours) associated with the collection:* There are approximately 189,336.5 hours, annual burden, associated with this information collection.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E.405B, Washington, DC 20530.

Dated: May 23, 2016.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–02–P

MERIT SYSTEMS PROTECTION BOARD

Agency Information Collection Activities; Proposed Collection

AGENCY: Merit Systems Protection Board.

ACTION: Notice.

SUMMARY: The U.S. Merit Systems Protection Board (MSPB or the Board), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on an extension, without change, of a currently approved information collection. In accordance with the Paperwork Reduction Act of 1995, this notice seeks comments concerning the Board's Appeal Form (MSPB Form 185) and corresponding e-Appeal Online system (e-Appeal). MSPB Form 185 and e-Appeal provides an efficient way for respondents to submit information required by the Board's regulations to initiate an appeal. The MSPB has requested an emergency extension of this information collection, which expires on May 31, 2016, for 90 days.

DATES: Written comments must be received on or before July 26, 2016.

ADDRESSES: Submit written comments on the collection of information to William D. Spencer, Clerk of the Board, Merit Systems Protection Board, 1615 M Street NW., Washington, DC 20419. Because of possible mail delays, respondents are encouraged to submit comments by email to *mspb@mspb.gov* or by fax to 202–653–7130.

FOR FURTHER INFORMATION CONTACT: Please contact William D. Spencer, Clerk of the Board, Merit Systems Protection Board, 1615 M Street NW., Washington, DC 20419; telephone 202–653–7200; fax 202–653–7130; email to *mspb@mspb.gov.* Persons without internet access may request a paper copy of the MSPB Appeal Form from the Office of the Clerk of the Board.

SUPPLEMENTARY INFORMATION: The MSPB is an independent, quasi-judicial agency in the Executive branch that serves as the guardian of Federal merit systems. The Board was established by Reorganization Plan No. 2 of 1978, which was codified by the Civil Service Reform Act of 1978, Public Law 95–454. The Board is authorized to adjudicate appeals of certain Federal agency personnel and retirement actions and certain alleged violations of law. *See* 5 U.S.C. 1204, 1221, 3330a and 7701; 38 U.S.C. 4324. The Board has published its regulations for processing appeals at 5 CFR parts 1201, 1208, and 1209. In order to fulfill its statutory and regulatory mandates, the Board is authorized to collect information pertinent to a case, appeal, or request for review. 5 U.S.C. 1204. This information may include pleadings, evidence, and other case related information necessary for the adjudication and administration of the case. The parties to MSPB actions submit such records in the course of adjudication. The Board's regulations require that appellants provide certain information when filing an appeal so that the Board can determine whether it has jurisdiction over the appeal and whether it has been filed within the applicable time limit. Although an appeal may be filed in any format, including letter form, MSPB provides an appeal form so that a person seeking to file an appeal will know that he or she is providing all information required for the Board to initiate processing. An electronic filing system, e-Appeal, is also available to respondents to submit same required information.

Collection of Information

Title: Merit Systems Protection Board Appeal Form (MSPB FORM 185).

Type of Information Collection: Extension, without change, of a

currently approved information collection.

OMB Number: 3124–0009.

MSPB Forms: MSPB Form 185.

Abstract: MSPB's regulations (5 CFR 1201, 1208, and 1209) require appellants to provide certain information when filing an appeal to determine jurisdiction and timeliness. While the information may be submitted in any format, this form provides an efficient way to ensure that all of the required information is submitted. This form is available to download as a PDF or appellants may use the electronic filing system, e-Appeal.

Affected Public: Individuals or households.

Number of Respondents: 7,150.

Number of Responses: 7,150.

Estimated Total Annual Burden Hours: 7,150.

Estimated Cost: The estimated annual cost to respondents operations and maintenance costs for technical services is $232,518. There are no annual start-up or capital costs.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the agency, including whether the information shall have practical utility; (b) evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

William D. Spencer,

Clerk of the Board.

BILLING CODE 7400–01–P

THE NATIONAL FOUNDATION FOR THE ARTS AND THE HUMANITIES

Institute of Museum and Library Services

Notice of Proposed Information Collection Request: State Library Administrative Agencies Survey FY 2016 & FY 2018

AGENCY: Institute of Museum and Library Services, National Foundation for the Arts and the Humanities.

ACTION: Notice, request for comments, collection of information.

SUMMARY: The Institute of Museum and Library Service (''IMLS'') as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act (44 U.S.C. 3501 *et. seq.*). This pre-clearance consultation program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. The purpose of this Notice is to solicit comments concerning the continuance of the State Library Administrative Agencies Survey for FY 2016 & FY 2018.

A copy of the proposed information collection request can be obtained by contacting the individual listed below in the **ADDRESSES** section of this notice.

DATES: Written comments must be submitted to the office listed in the **ADDRESSES** section below on or before July 27, 2016.

The IMLS is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used;
- Enhance the quality, utility and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.* permitting electronic submissions of responses.

ADDRESSES: For a copy of the documents contact: Matthew Birnbaum, Senior Evaluation Officer, Office of Impact Assessment and Learning, Institute of Museum and Library Services, 955 L'Enfant Plaza North SW., Suite 4000, Washington, DC 20024–2135. Dr. Birnbaum can be reached by Telephone: 202–653–4760, Fax: 202–653–4604, or by email at *mbirnbaum@imls.gov* or by teletype (TTY/TDD) at 202–653–4614.

FOR FURTHER INFORMATION CONTACT: Stephanie Burwell, Chief Information Officer, Office of the Chief Information Officer, Institute of Museum and Library Services, 955 L'Enfant Plaza North SW., Suite 4000, Washington, DC 20024–2135. Mrs. Burwell can be reached by Telephone: 202–653–4684, Fax: 202–653–4625, or by email at *sburwell@imls.gov* or by teletype (TTY/TDD) at 202–653–4614. Office hours are from 8:30 a.m. to 5 p.m., E.T., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

I. Background

The Institute of Museum and Library Services (IMLS) is an independent Federal grant-making agency and is the primary source of federal support for the Nation's 123,000 libraries and 35,000 museums. IMLS provides a variety of grant programs to assist the Nation's museums and libraries in improving their operations and enhancing their services to the public. IMLS is responsible for identifying national needs for and trends in museum, library, and information services; measuring and reporting on the impact and effectiveness of museum, library and information services throughout the United States, including programs conducted with funds made available by IMLS; identifying, and disseminating information on, the best practices of such programs; and developing plans to improve museum, library and information services of the United States and strengthen national, State, local, regional, and international communications and cooperative networks (20 U.S.C. 9108).

II. Current Actions

The State Library Administrative Agencies Survey has been conducted by the Institute of Museum and Library Services under the clearance number 3137–0072, which expires 11/30/2016. State Library Administrative Agencies (''SLAAs'') are the official agencies of each state charged by state law with the extension and development of public

library services throughout the state. (20 U.S.C. 9122.) The purpose of this survey is to provide state and federal policymakers with information about SLAAs, including their governance, allied operations, developmental services to libraries and library systems, support of electronic information networks and resources, number and types of outlets, and direct services to the public. Through the FY 2010 collection, the SLAA Survey was conducted annually; beginning with the FY 2012 collection, the survey is conducted biennially. Because the FY 2016 collection will not begin until early 2017, we are carrying over the documentation and estimated burden associated with the FY 2014 data.

Agency: Institute of Museum and Library Services.

Title: State Library Administrative Agencies Survey, FY 2016 & FY 2018.

OMB Number: 3137–0072.

BILLING CODE 7036–01–P

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2016–141 and CP2016–178; Order No. 3310]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning the addition of First-Class Package Service Contract 54 to the competitive product list. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* June 2, 2016.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

In accordance with 39 U.S.C. 3642 and 39 CFR 3020.30–.35, the Postal Service filed a formal request and associated supporting information to add First-Class Package Service Contract 54 to the competitive product list.[1]

The Postal Service contemporaneously filed a redacted contract related to the proposed new product under 39 U.S.C. 3632(b)(3) and 39 CFR 3015.5. Request, Attachment B.

To support its Request, the Postal Service filed a copy of the contract, a copy of the Governors' Decision authorizing the product, proposed changes to the Mail Classification Schedule, a Statement of Supporting Justification, a certification of compliance with 39 U.S.C. 3633(a), and an application for non-public treatment of certain materials. It also filed supporting financial workpapers.

II. Notice of Commission Action

The Commission establishes Docket Nos. MC2016–141 and CP2016–178 to consider the Request pertaining to the proposed First-Class Package Service Contract 54 product and the related contract, respectively.

The Commission invites comments on whether the Postal Service's filings in the captioned dockets are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR part 3015, and 39 CFR part 3020, subpart B. Comments are due no later than June 2, 2016. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Jennaca D. Upperman to serve as Public Representative in these dockets.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. MC2016–141 and CP2016–178 to consider the matters raised in each docket.

2. Pursuant to 39 U.S.C. 505, Jennaca D. Upperman is appointed to serve as an officer of the Commission to represent the interests of the general public in these proceedings (Public Representative).

3. Comments are due no later than June 2, 2016.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Stacy L. Ruble,

Secretary.

POSTAL REGULATORY COMMISSION

[Docket No. CP2016–112; Order No. 3311]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning an amendment to the existing Priority Mail Express Contract 33 negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* June 2, 2016.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

On May 20, 2016, the Postal Service filed notice that it has agreed to an amendment to the existing Priority Mail Express Contract 33 negotiated service agreement approved in this docket.[1] In support of its Notice, the Postal Service includes a redacted copy of the amendment and a certification of compliance with 39 U.S.C. 3633(a), as required by 39 CFR 3015.5.

The Postal Service also filed the unredacted amendment and supporting financial information under seal. The Postal Service incorporates by reference the application for non-public treatment originally filed in this docket for the protection of information that it has filed under seal. Notice at 1.

The Postal Service states that the amendment changes the prices under Priority Mail Express Contract 33 as contemplated by the contract's terms. *Id.*

The Postal Service intends for the amendment to become effective two business days after the day that the Commission completes its review of the Notice. *Id.* The Postal Service asserts that the Amendment will not impair the ability of the contract to comply with 39 U.S.C. 3633. *Id.* Attachment B.

II. Notice of Filings

The Commission invites comments on whether the changes presented in the Postal Service's Notice are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR 3015.5, and 39 CFR part 3020, subpart B. Comments are due no later than June 2, 2016. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Natalie R. Ward to represent the interests of the general public (Public Representative) in this docket.

III. Ordering Paragraphs

It is ordered:

1. The Commission reopens Docket No. CP2016–112 for consideration of matters raised by the Postal Service's Notice.

2. Pursuant to 39 U.S.C. 505, the Commission appoints Natalie R. Ward to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in this proceeding.

3. Comments are due no later than June 2, 2016.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning the addition of Priority Mail Express Contract 37 to the competitive product list. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* June 2, 2016.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

In accordance with 39 U.S.C. 3642 and 39 CFR 3020.30–.35, the Postal Service filed a formal request and associated supporting information to add Priority Mail Express Contract 37 to the competitive product list.[1]

The Postal Service contemporaneously filed a redacted contract related to the proposed new product under 39 U.S.C. 3632(b)(3) and 39 CFR 3015.5. Request, Attachment B.

To support its Request, the Postal Service filed a copy of the contract, a copy of the Governors' Decision authorizing the product, proposed changes to the Mail Classification Schedule, a Statement of Supporting Justification, a certification of compliance with 39 U.S.C. 3633(a), and an application for non-public treatment of certain materials. It also filed supporting financial workpapers.

II. Notice of Commission Action

The Commission establishes Docket Nos. MC2016–139 and CP2016–176 to consider the Request pertaining to the proposed Priority Mail Express Contract 37 product and the related contract, respectively.

The Commission invites comments on whether the Postal Service's filings in the captioned dockets are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR part 3015, and 39 CFR part 3020, subpart B. Comments are due no later than June 2, 2016. The public portions of these filings can be accessed via the Commission's Web site (*http://www.prc.gov*).

The Commission appoints Lyudmila Y. Bzhilyanskaya to serve as Public Representative in these dockets.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. MC2016–139 and CP2016–176 to consider the matters raised in each docket.

2. Pursuant to 39 U.S.C. 505, Lyudmila Y. Bzhilyanskaya is appointed to serve as an officer of the Commission to represent the interests of the general public in these proceedings (Public Representative).

3. Comments are due no later than June 2, 2016.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Stacy L. Ruble,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–77885; File No. SR–NYSEArca–2016–75]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending the NYSE Arca Options Fee Schedule

May 23, 2016.

Pursuant to section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on May 17, 2016, NYSE Arca, Inc. (the ''Exchange'' or ''NYSE Arca'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the NYSE Arca Options Fee Schedule (''Fee Schedule''). The Exchange proposes to implement the fee change effective May 17, 2016. The proposed rule change is available on the Exchange's Web site at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this filing is to restructure the Lead Market Maker (''LMM'') Rights Fees (''Rights Fee'') and to provide new opportunities for LMMs to achieve a discounted Rights Fee based on volume executed on the Exchange. The Exchange proposes to implement the fee change effective May 17, 2016.

Currently, the Exchange charges a Rights Fee on each issue in an LMM's allocation, with rates based on the Average National Daily Customer Contracts (''CADV''). The monthly Rights Fee ranges from $45 per month to $1,500 per month. With one exception, under the current Fee Schedule the more active an issue, the higher the Rights Fee. The one exception to this general rule is that the Exchange currently charges a higher rate for the lowest-volume issues (*i.e.,* less than 101 CADV) to balance the Exchange's revenue with the cost of listing and maintaining these low-volume issues.

The Exchange proposes to restructure the LMM Rights Fee to be more aligned with the economic benefit of being the LMM in a given issue, based on trading activity in an issue. The Exchange proposes that some rates would decrease (for lower-volume issues) and others would increase (for higher-volume issues). Using the same CADV levels currently in place, the Exchange proposes to modify the Rights Fee as follows:

LMM RIGHTS FEE

Average national daily customer contracts	Current fee	Proposed fee
0–100	$125	$25
101–1,000	45	35
1,001–2,000	75	75
2,001–5,000	200	200
5,001–15,000	375	750
15,001–100,000	750	1,500
100,000+	1,500	3,000

As shown in the chart above, the Exchange proposes to significantly decrease the Rights Fee for the lowest-volume issues (*i.e.,* between 0–100 contracts) to better account for the costs to each LMM, irrespective of costs and revenue to the Exchange associated with listing an issue.[4] The Exchange also proposes to slightly decrease the Rights Fee for option issues trading between 101–1,000 CADV to similarly align with the cost to the Exchange associated with such issues. The Exchange believes the proposed reduction in the Rights Fee for issues trading under 1,001CADV [sic] would create an incentive for LMMs to request appointments in these lower-volume issues, which may result in increased liquidity to the benefit of market participants. In addition, the Exchange proposes to increase the Rights Fees associated with the three most active CADV categories of issues to better reflect the economic benefits of being an LMM in more actively-traded issues (*i.e.,* option issues trading more than 5,000 CADV). The Exchange believes the proposed modifications to the Rights Fee are appropriate as an LMM would have an opportunity to interact with fewer than 101 contracts per day to cover the proposed $25 per month Rights Fee and would have the opportunity to interact with more than 100,000 contracts per day to cover the proposed $3,000 per month Rights Fee.

To potentially offset the proposed increase in Rights Fees for the most actively traded issues, the Exchange also proposes to adopt two additional discounts to the Rights Fee for the three most active CADV categories of issues. Specifically, the proposed discounts would be available to LMMs with issues in their appointment with a CADV above 5,000 and would be based on the amount of monthly (i) total electronic volume and/or (ii) total posted volume executed by an LMM in the Market Maker range relative to other Marker [sic] Makers appointed in that issue.[5] The Exchange notes that there is only one LMM per issue, and only LMMs are subject to the Rights Fee. Under the proposal, each month the LMM in an issue would be ranked against non-LMM Market Makers that quote and trade in that LMM's issue. For each issue, each month, if the LMM achieves the highest total electronic volume amongst all Market Makers, the LMM would receive a 50% discount to its Rights Fee. In addition, as proposed, for each issue, each month, if the LMM achieves the second highest total electronic volume amongst all Market

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] In line with the proposed changes to the Rights Fee for the lowest-volume issues, the Exchange also proposes to delete from the Fee Schedule language regarding when the issues were listed and whether certain issues are ''grandfathered'' such that the LMM Rights Fee for the next highest tier applies, in addition to the related asterisk appearing after the 0–100 CADV level.

[5] Total posted volume executed by an LMM refers to the total volume executed from posted liquidity.

Makers, the LMM would receive a 25% discount to its Rights Fee. The Exchange believes the proposed discounts would incentivize an LMM to compete against non-LMMs in that issue to more aggressively quote in order to reduce the LMM's Rights Fee.

Similarly, for each issue, each month, if the LMM that [sic] achieves the highest total posted volume amongst all Market Makers, the LMM would receive a 50% discount to [sic] Rights Fee. And, for each issue, each month, if the LMM achieves the second highest posted volume amongst all Market Makers, the LMM would receive a 25% discount to [sic] Rights Fee. Again, the Exchange believes the proposed discounts would incentivize [sic] to compete against non-LMM Market Makers to reduce its own Rights Fee. For example, if one or more non-LMM Market Makers were ranked first and second in (i) total electronic volume and (ii) total posted volume, the LMM would not receive a discount to its Rights Fee. However, when the LMM achieves one or both of the top volume rankings, the LMM would be eligible for a reduction.

The Exchange notes that the proposed discounts would be cumulative and the same LMM would be eligible to achieve the discount for each monthly volume category. For example, if in a given month an LMM ranked 1st in Total Electronic Volume in the issue and also ranked 2nd in Total Posting Volume in the issue, that LMM would achieve a combined 75% discount in that issue. The Exchange believes that the proposed discounts may incent LMMs that already transact a significant amount of business on the Exchange to quote and trade competitively in their issues to achieve the highest (or second highest) monthly ranking in total electronic volume and total posted volume. The Exchange also believes the proposed changes may generate interest in LMMs to apply for new issue allocations, which would increase not only an LMM's volume, but would encourage liquidity on the Exchange to the benefit of all market participants.

The Exchange currently provides a 50% discount to an LMM's aggregate Rights Fees across all issues. This 50% discount is applied to an LMM that trades at least 50,000 contracts CADV, of which 10,000 such contracts are in its LMM appointment (the ''Existing LMM Discount''), which discount is not being altered by this proposal.[6] The Exchange would first determine whether an LMM qualified for the proposed per issue discounts and would apply any such discounts. Next, the Exchange would determine whether the LMM had qualified for the Existing LMM Discount. The 50% discount under the Existing LMM Discount would be applied only after any discount under the proposal is applied. Consider, for example, that an LMM has 10 issues in its allocation each of which are subject to a $500 per month Rights Fee (totaling $5,000). If the LMM achieved the proposed 50% discount for posted volume in two issues in its allocation, the LMM's Rights Fee for these issues would be reduced by $250 (reducing the LMM's overall Rights Fee to $4,500). If the LMM also qualified for the Existing LMM Discount, the Exchange would reduce the total Rights Fee of $4,500 by 50% to $2,250.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with section 6(b) of the Act,[7] in general, and furthers the objectives of sections 6(b)(4) and (5) of the Act,[8] in particular, because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members, issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

The Exchange believes that the proposed modifications to the LMM Rights Fees are reasonable, equitable and not unfairly discriminatory as the proposed Rights Fees are more closely aligned with the economic benefit of being LMM in a given issues. For example, an LMM would have an opportunity to interact with fewer than 101 contracts per day to cover the proposed $25 per month Rights Fee and would have the opportunity to interact with more than 100,000 contracts per day to cover the proposed $3,000 per month Rights Fee. The Exchange also believes that proposed Rights Fees are not unfairly discriminatory because they apply solely to LMMs (non-LMMs are not subject to this Fee) and LMMs trading issues with similar activity levels would be subject to the same Rights Fees. Moreover, the Exchange notes that an LMM can opt to relinquish any issue in its allocation to reduce its Rights Fee, so the proposed Rights Fees are completely voluntary.

The Exchange also believes the proposed discounts on the Rights Fees available to LMMs with issues in their appointment with a CADV of 5,001 or above are reasonable, equitable and not unfairly discriminatory for a number of reasons. First, all LMMs trading issues with similar activity levels would be eligible to achieve the discount (*e.g.,* those LMMs trading issues with a CADV of 5,001 or above). The Exchange notes that there is only one LMM per issue, and only LMMs are subject to the Rights Fee. Under the proposal, each month the LMM in an issue would be ranked against non-LMM Market Makers that quote and trade in that LMM's issue. Because the non-LMM Market Makers are not subject to the Rights Fee, the proposed discount would not disadvantage Market Makers. Instead, the proposed volume-based discounts would operate to incentivize each LMM to achieve first or second ranking in monthly volume for each issue, relative to non-LMM Market Makers to reduce its own Rights Fee. In addition, such discounts would reduce the overhead costs of LMM firms that are most actively trading in the issues, which reduced costs would enhance the ability of LMMs to provide liquidity to the benefit of all market participants.

Finally, the Exchange is subject to significant competitive forces, as described below in the Exchange's statement regarding the burden on competition.

For these reasons, the Exchange believes that the proposal is consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with section 6(b)(8) of the Act,[9] the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed modifications on the LMM Rights Fees would not impose an unfair burden on competition because the proposed Rights Fees would more closely align with the economic benefit of being LMM in a given issue. Because the non-LMM Market Makers are not subject to the Rights Fee, the proposed discount would not disadvantage Market Makers. Instead, the proposed volume-based discounts would operate to incentivize each LMM to achieve first or second ranking in monthly volume for each issue, relative to non-LMM Market Makers to reduce its own Rights Fee. The Exchange believes that the proposed discounts would encourage LMMs to quote and trade competitively in their issues and would reduce the burden on competition among LMMs in

[6] *See* Fee Schedule, Endnote 2, *available here, https://www.nyse.com/publicdocs/nyse/markets/arca-options/NYSE_Arca_Options_Fee_Schedule.pdf.* The Exchange is not making any changes to this discount.

[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(4) and (5).

[9] 15 U.S.C. 78f(b)(8).

the most actively-traded issues because LMMs that achieve the discounts would have reduced overhead.

The Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues. In such an environment, the Exchange must continually review, and consider adjusting, its fees and credits to remain competitive with other exchanges. For the reasons described above, the Exchange believes that the proposed rule change reflects this competitive environment.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to section 19(b)(3)(A) [10] of the Act and subparagraph (f)(2) of Rule 19b–4 [11] thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under section 19(b)(2)(B) [12] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml);* or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSEArca–2016–75 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEArca–2016–75. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml).* Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEArca–2016–75 and should be submitted on or before June 17, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[13]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–77884; File No. SR–BatsBZX–2016–17]

Self-Regulatory Organizations; Bats BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Related to Fees as They Apply to the Equity Options Platform

May 23, 2016.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on May 16, 2016, Bats BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend the fee schedule applicable to Members [3] and non-members of the Exchange pursuant to BZX Rules 15.1(a) and (c). Changes to the fee schedule pursuant to this proposal are effective upon filing.

The text of the proposed rule change is available at the Exchange's Web site at *www.batstrading.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The term ''Member'' is defined as ''any registered broker or dealer that has been admitted to membership in the Exchange.'' *See* Exchange Rule 1.5(n).

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify the fee schedule applicable to the Exchange's options platform (''BZX Options'') effective immediately, in order to: (i) Modify the fees for logical ports; and (ii) to no longer provide for separate fees based upon the number of logical ports utilized.

A logical port represents a port established by the Exchange within the Exchange's system for trading and billing purposes. Each logical port established is specific to a Member or non-member and grants that Member or non-member the ability to operate a specific application, such as FIX order entry or PITCH data receipt. The Exchange's Multicast PITCH data feed is available from two primary feeds, identified as the ''A feed'' and the ''C feed'', which contain the same information but differ only in the way such feeds are received. The Exchange also offers two redundant fees, identified as the ''B feed'' and the ''D feed.'' The Exchange also offers a bulk-quoting interface which allows Users [4] of BZX Options to submit and update multiple bids and offers in one message through logical ports enabled for bulk-quoting.[5] The bulk-quoting application for BZX Options is a particularly useful feature for Users that provide quotations in many different options.

The Exchange currently charges for logical ports (including Multicast PITCH Spin Server and GRP ports) $550 per port per month for the first five ports. Where a User subscribes to more than five ports, the Exchange charges for each port in excess of five $650 per logical port per month and $2,000 per month for logical ports with bulk quoting capabilities. Logical port fees are limited to logical ports in the Exchange's primary data center and no logical port fees are assessed for redundant secondary data center ports. The Exchange assesses the monthly per logical port fees for all of a Member and non-Member's logical ports.

The Exchange now proposes to amend the fee for logical ports, Multicast PITCH Spin Server Ports for a set of primary ports (A or C feed), and GRP Ports for a set of primary ports (A or C feed) to $650 per month. These fees would now be set and not vary based on the number of ports purchased. The Exchange will continue to offer for free the ports necessary to receive the Exchange's redundant Multicast ''B feed'' and ''D feed'', as well as all ports made available in the Exchange's secondary data center. The Exchange does not propose to amend the monthly fee for ports with bulk quoting capabilities, other than reorganizing the fee table to reflect the above changes.

Implementation Date

The Exchange proposes to implement these amendments to its fee schedule on June 1, 2016.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of section 6 of the Act.[6] Specifically, the Exchange believes that the proposed rule change is consistent with section 6(b)(4) of the Act,[7] in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and other persons using any facility or system which the Exchange operates or controls.

The Exchange operates in a highly competitive market in which exchanges offer connectivity services as a means to facilitate the trading activities of members and other participants. Accordingly, fees charged for connectivity are constrained by the active competition for the order flow of such participants as well as demand for market data from the Exchange. If a particular exchange charges excessive fees for connectivity, affected members will opt to terminate their connectivity arrangements with that exchange, and adopt a possible range of alternative strategies, including routing to the applicable exchange through another participant or market center or taking that exchange's data indirectly. Accordingly, the exchange charging excessive fees would stand to lose not only connectivity revenues but also revenues associated with the execution of orders routed to it by affected members, and, to the extent applicable, market data revenues. The Exchange believes that this competitive dynamic imposes powerful restraints on the ability of any exchange to charge unreasonable fees for connectivity.

The Exchange believes that the proposed fees for logical ports are equitably allocated, reasonable, and not unfairly discriminatory in that the proposed fees will help the Exchange to cover increasing infrastructure costs associated with offering and maintaining logical ports connections. The Exchange also notes its proposed fees equal that currently charged by the NASDAQ Stock Market LLC (''NASDAQ'').[8]

Lastly, the Exchange also believes that the proposed amendments to its fee schedule are non-discriminatory because they will apply uniformly to all Members. All Members that voluntarily select various service options will be charged the same amount for the same services. All Members have the option to select any connectivity option, and there is no differentiation among Members with regard to the fees charged for the services offered by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes its proposed amendments to its fee schedule would not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposed change represents a significant departure from previous pricing offered by the Exchange or pricing offered by the Exchange's competitors. Additionally, Members may opt to disfavor the Exchange's pricing if they believe that alternatives offer them better value. Accordingly, the Exchange does not believe that the proposed change will impair the ability of Members or competing venues to maintain their competitive standing in the financial markets.

The Exchange believes that fees for connectivity are constrained by the robust competition for order flow among exchanges and non-exchange markets. Further, excessive fees for connectivity, including logical port fees, would serve to impair an exchange's ability to compete for order flow rather than burdening competition. The Exchange also does not believe the proposed rule change would impact intramarket competition as it would apply to all Members and non-Members equally.

[4] A User on BZX Options is either a member of BZX Options or a sponsored participant who is authorized to obtain access to the Exchange's system pursuant to BZX Rule 11.3.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to section 19(b)(3)(A) of the Act [9] and paragraph (f) of Rule 19b–4 thereunder.[10] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–BatsBZX–2016–17 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–BatsBZX–2016–17. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–BatsBZX–2016–17, and should be submitted on or before June 17, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[11]

Robert W. Errett,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–77883; File No. SR–NYSEArca–2016–69]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending the Exchange's Schedule of Fees and Charges To Eliminate the Listing Fee in Connection With Exchange Listing of Certain Exchange Traded Products

May 23, 2016.

Pursuant to section 19(b)(1) [1] of the Securities Exchange Act of 1934 (the ''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on May 10, 2016, NYSE Arca, Inc. (the ''Exchange'' or ''NYSE Arca'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Exchange's Schedule of Fees and Charges (''Fee Schedule'') to eliminate the Listing Fee in connection with Exchange listing of certain Exchange Traded Products, effective May 10, 2016. The proposed rule change is available on the Exchange's Web site at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

Currently, the Exchange's Schedule of Fees and Charges (''Schedule'') provides that an issuer of a new Exchange Traded Product [4] (with the exception of Managed Fund Shares and Managed Trust Securities) shall pay a ''Listing Fee'' of $7,500 and an issuer of Managed Fund Shares and Managed Trust Securities shall pay a Listing Fee of $10,000.

The Exchange proposes to amend the Fee Schedule to eliminate the Listing Fee in connection with Exchange listing of certain Exchange Traded Products (''ETPs'') effective May 10, 2016, as described below. Exchange rules applicable to listing of certain ETPs provide for listing such products pursuant to Rule 19b–4(e) under the Act if they satisfy all criteria—referred to as ''generic'' listing criteria—in the

[4] For the purposes of the Schedule, the term ''Exchange Traded Products'' includes securities described in NYSE Arca Equities Rules 5.2(j)(3) (Investment Company Units); 8.100 (Portfolio Depositary Receipts); 8.200 (Trust Issued Receipts); 8.201 (Commodity-Based Trust Shares); 8.202 (Currency Trust Shares); 8.203 (Commodity Index Trust Shares); 8.204 (Commodity Futures Trust Shares); 8.300 (Partnership Units); 8.500 (Trust Units); 8.600 (Managed Fund Shares), and 8.700 (Managed Trust Securities).

applicable Exchange ETP rule. If an ETP does not satisfy all applicable generic criteria, the Commission must approve or issue a notice of effectiveness with respect to a proposed rule change filed by the Exchange pursuant to Section 19(b) of the Act prior to Exchange listing of such ETP.

The Exchange has determined to eliminate the Listing Fee for the following ETPs listed on the Exchange pursuant to Rule 19b–4(e) under the Act, and for which a proposed rule change pursuant to Section 19(b) of the Act is not required to be filed with the Commission: Investment Company Units; Portfolio Depositary Receipts; and Currency Trust Shares (collectively, ''Generically-Listed Exchange Traded Products''). Thus, no Listing Fee will be payable by an issuer of a Generically-Listed Exchange Traded Product, as defined above.

Other ETPs—specifically, Trust Issued Receipts,[5] Commodity-Based Trust Shares, Commodity Index Trust Shares, Commodity Futures Trust Shares, Partnership Units, Trust Units, and non-generically-listed Investment Company Units, Portfolio Depositary Receipts and Currency Trust Shares—would continue to be subject to a Listing Fee of $7,500.[6] Managed Fund Shares and Managed Trust Securities would continue to be subject to a Listing Fee of $10,000.

Elimination of the Listing Fee for Generically-Listed Exchange Traded Products would provide [sic] would help correlate the Listing Fee applicable to an issue of ETPs to the resources required to list such ETPs on the Exchange. The Exchange believes it is appropriate to continue to charge a Listing Fee for ETPs for which a proposed rule change pursuant to Section 19(b) of the Act is required to be filed because of the additional time and resources required by Exchange staff to prepare and review such filings and to communicate with issuers and the Commission regarding such filings. Application of a Listing Fee for Managed Fund Shares and Managed Trust Securities is appropriate because the Exchange generally incurs increased costs in connection with the rule-making process, listing administration process, issuer services, and consultative legal services where a proposed rule change pursuant to Section 19(b) of the Act is required to be filed with the Commission.

Annual Fees set forth in the Fee Schedule applicable to ETPs would remain unchanged.

Notwithstanding the elimination of the Listing Fee applicable to certain ETPs, as described above, the Exchange will continue to be able to fund its regulatory obligations.

2. Statutory Basis

NYSE Arca believes that the proposal is consistent with section 6(b)[7] of the Act, in general, and section 6(b)(4)[8] of the Act in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among its issuers and other persons using its facilities. In addition, the Exchange believes the proposal is consistent with the requirement under section 6(b)(5)[9] that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest; and are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The proposed elimination of the Listing Fee for Generically-Listed ETPs, as described above, is equitable and does not unfairly discriminate between issuers because it would apply uniformly to all Investment Company Units; Portfolio Depositary Receipts; and Currency Trust Shares that are listed generically under Exchange rules. The Exchange believes eliminating the Listing Fee for Generically-Listed ETPs, as described above, and continuing to impose Listing Fees for ETPs that are not generically listed is reasonable given the additional resources required by the Exchange in connection with ETPs requiring a proposed rule change pursuant to section 19(b). The Exchange believes it is appropriate to continue to charge a Listing Fee for ETPs for which a proposed rule change pursuant to section 19(b) of the Act is required to be filed because of the significant additional extensive time, legal and business resources required by Exchange staff to prepare and review such filings and to communicate with issuers and the Commission regarding such filings.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act. The Exchange believes the proposed rule change would promote competition because it will eliminate the Listing Fee for certain ETPs and will therefore encourage issuers to develop and list additional ETP issues on the Exchange.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to section 19(b)(3)(A)[10] of the Act and subparagraph (f)(2) of Rule 19b–4[11] thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act.

[5] Commentary .01 to NYSE Arca Equities Rule 8.200 provides generic standards for listing Trust Issued Receipts pursuant to Rule 19b–4(e) under the Act. However, the Exchange does not currently intend to list Trust Issued Receipts under Commentary .01, but instead lists Trust Issued Receipts under Commentary .02 to NYSE Arca Equities Rule 8.200, which does not provide generic standards for listing pursuant to Rule 19b–4(e) under the Act. Before listing any Trust Issued Receipts pursuant to Commentary .01 to NYSE Arca Equities Rule 8.200, the Exchange will first file a proposed rule change with respect to the Listing Fee applicable to any such generically-listed securities.

[6] Exchange rules applicable to Trust Issued Receipts (Commentary .02 to NYSE Arca Equities Rule 8.200); Commodity-Based Trust Shares (NYSE Arca Equities Rule 8.201), Commodity Index Trust Shares (NYSE Arca Equities Rule 8.203), Commodity Futures Trust Shares (NYSE Arca Equities Rule 8.204), Partnership Units (NYSE Arca Equities Rule 8.300), and Trust Units (NYSE Arca Equities Rule 8.500) do not provide for listing pursuant to Rule 19b–4(e) under the Act.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–77886; File No. SR–BatsBYX–2016–08]

Self-Regulatory Organizations; Bats BYX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Change to the Market Data Section of Its Fee Schedule

May 23, 2016.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on May 17, 2016, Bats BYX Exchange, Inc. (the ''Exchange'' or ''BYX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II and III below, which Items have been prepared by the Exchange. The Exchange has designated the proposed rule change as one establishing or changing a member due, fee, or other charge imposed by the Exchange under section 19(b)(3)(A)(ii) of the Act [3] and Rule 19b–4(f)(2) thereunder,[4] which renders the proposed rule change effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend the Market Data section of its fee schedule to: (i) Decrease the External Distribution and User fees for the BYX Top and BYX Last Sale feeds; and (ii) amend the New External Distributor Credit for the BYX Top, BYX Last Sale, and Bats One Feeds.

The text of the proposed rule change is available at the Exchange's Web site at *www.batstrading.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Market Data section of its fee schedule to: (i) Decrease the External Distribution and User fees for the BYX Top and BYX Last Sale feeds; and (ii) amend the New External Distributor Credit for the BYX Top, BYX Last Sale, and Bats One Feeds.

BYX Top and Last Sale Fees

BYX Top is a market data feed that includes top of book quotations and execution information for all equity securities traded on the Exchange.[5] BYX Last Sale is a market data feed that includes last sale information for all equity securities traded on Exchange.[6] The Exchange proposes to decrease the External Distribution and User fees for the BYX Top and BYX Last Sale feeds.[7]

The Exchange currently charges an External Distributor [8] of BYX Last Sale a flat fee of $1,250 per month. The Exchange also separately charges an External Distributor of BYX Top a flat fee of $1,250 per month.[9] The Exchange

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A)(ii).

[4] 17 CFR 240.19b–4(f)(2).

[5] *See* Exchange Rule 11.22(d).

[6] *See* Exchange Rule 11.22(g).

[7] The Exchange notes that Bats EDGA Exchange, Inc. (''EDGA'') and Bats EDGX Exchange, Inc. (''EDGX'') also filed proposed rule changes with Commission to amend similar fees for their respective Top and Last Sale market data products. *See* File Nos. SR–BatsEDGA–2016–09 and SR–BatsEDGX–2016–18. The Exchange represents that the proposed fees will continue to not cause the combined cost of subscribing to EDGX, EDGA, BYX, and Bats BZX Exchange Inc.'s (''BZX'') individual Top and Last Sale feeds to be greater than those currently charged to subscribe to the Bats One Feed. *See* Securities Exchange Act Release Nos. 74285 (February 18, 2015), 80 FR 9828 (February 24, 2015) (SR–BATS–2015–11); 74283 (February 18, 2015), 80 FR 9809 (February 24, 2015) (SR–EDGA–2015–09); 74282 (February 17, 2015), 80 FR 9487 (February 23, 2015) (SR–EDGX–2015–09); *and* 74284 (February 18, 2015), 80 FR 9792 (February 24, 2015) (SR–BYX–2015–09) (''Initial Bats One Feed Fee Filings''). In these filings, the Exchange represented that the cost of subscribing to each of the underlying individual feeds necessary to create the Bats One Feed would not be greater than the cost of subscribing to the Bats One Feed. *Id.*

[8] An ''External Distributor'' of an Exchange Market Data product is defined as ''a Distributor that receives the Exchange Market Data product and then distributes that data to a third party or one or more Users outside the Distributor's own entity.'' *See* the Exchange Fee Schedule *available at http://batstrading.com/support/fee_schedule/byx/.*

[9] Subscribers to either BYX Top or BYX Last Sale are able to receive, upon request and at no additional cost, BYX Last Sale or BYX Top, as applicable.

proposes to decrease the External Distribution fee for both the BYX Top and BYX Last Sale feeds to $1,000 per month.

The Exchange also charges those who receive either BYX Top or BYX Last Sale from External Distributors different fees for both their Professional [10] and Non-Professional [11] Users. The Exchange currently assesses a monthly fee for Professional Users of $2.00 per User. Non-Professional Users are assessed a monthly fee of $0.05 per User. The Exchange now proposes to decrease the Professional User fee to $1.00 per User per month and the Non-Professional User fee to $0.025 per User per month.[12]

The Exchange also offers a New External Distributor Credit under which new External Distributors of BYX Top or BYX Last Sale will not be charged a Distributor Fee for their first three (3) months. The Exchange now proposes to decrease the time a new External Distributor of BYX Top or BYX Last Sale will not be charged a Distributor Fee from their first three (3) months to their first one (1) month.[13]

Bats One Feed

In sum, the Bats One Feed is a data feed that disseminates, on a real-time basis, the aggregate best bid and offer (''BBO'') of all displayed orders for securities traded on BYX and its affiliated exchanges and for which the Bats Exchanges report quotes under the Consolidated Tape Association (''CTA'') Plan or the Nasdaq/UTP Plan. The Bats One Feed also contains the individual last sale information for the Bats Exchanges (collectively with the aggregate BBO, the ''Bats One Summary Feed''). In addition, the Bats One Feed contains optional functionality which enables recipients to receive aggregated two-sided quotations from the Bats Exchanges for up to five (5) price levels (''Bats One Premium Feed'').[14]

The Exchange charges External Distributors of the Bats One Summary Feed a monthly Distribution fee of $5,000. The Exchange also offers a New External Distributor Credit under which new External Distributors of the Bats One Feed will not be charged a Distributor Fee for their first three (3) months in order to allow them to enlist new Users to receive the Bats One Summary Feed. The Exchange now proposes to decrease the time a new External Distributor of the Bats One Feed will not be charged a Distributor Fee from their first three (3) months to their first one (1) month.[15]

Implementation Date

The Exchange proposes to implement the proposed changes to its fee schedule on June 1, 2016.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the objectives of section 6 of the Act,[16] in general, and furthers the objectives of section 6(b)(4),[17] in particular, as it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its members and other recipients of Exchange data. The Exchange believes that the proposed rates are equitable and non-discriminatory in that they apply uniformly to all recipients of Exchange data. The Exchange believes the proposed fees are competitive with those charged by other venues and, therefore, reasonable and equitably allocated to recipients. Lastly, the Exchange also believes that the proposed fees are reasonable and non-discriminatory because they will apply uniformly to all recipients of Exchange data.

The Exchange also believes that the proposed rule change is consistent with section 11(A) of the Act [18] in that it supports (i) fair competition among brokers and dealers, among exchange markets, and between exchange markets and markets other than exchange markets and (ii) the availability to brokers, dealers, and investors of information with respect to quotations for and transactions in securities. Furthermore, the proposed rule change is consistent with Rule 603 of Regulation NMS,[19] which provides that any national securities exchange that distributes information with respect to quotations for or transactions in an NMS stock do so on terms that are not unreasonably discriminatory. In adopting Regulation NMS, the Commission granted self-regulatory organizations and broker-dealers increased authority and flexibility to offer new and unique market data to the public. It was believed that this authority would expand the amount of data available to consumers, and also spur innovation and competition for the provision of market data.

In addition, the proposed fees would not permit unfair discrimination because all of the Exchange's customers and market data vendors will be subject to the proposed fees on an equivalent basis. BYX Last Sale, BYX Top and the Bats One Feed are distributed and purchased on a voluntary basis, in that neither the Exchange nor market data distributors are required by any rule or regulation to make this data available. Accordingly, Distributors and Users can discontinue use at any time and for any reason, including due to an assessment of the reasonableness of fees charged. The Exchange also believes the proposed decrease to the External Distribution fees for BYX Last Sale and BYX Top are reasonable and equitable in light of the continued benefits to data recipients. To the extent consumers do purchase the data products, the revenue generated will continue to offset the Exchange's fixed costs of operating and regulating a highly efficient and reliable platform for the trading of U.S. equities. It will also help the Exchange to continue to cover its costs in developing and running that platform, as well as ongoing infrastructure costs. Firms have a wide variety of alternative market data products from which to choose, such as similar proprietary data products offered by other exchanges and

[10] A ''Professional User'' is defined as ''any User other than a Non-Professional User.'' *See* the Exchange Fee Schedule *available at http://batstrading.com/support/fee_schedule/byx/.*

[11] A ''Non-Professional User'' is defined as ''a natural person who is not: (i) Registered or qualified in any capacity with the Commission, the Commodity Futures Trading Commission, any state securities agency, any securities exchange or association, or any commodities or futures contract market or association; (ii) engaged as an ''investment adviser'' as that term is defined in section 202(a)(11) of the Investment Advisers Act of 1940 (whether or not registered or qualified under that Act); or (iii) employed by a bank or other organization exempt from registration under federal or state securities laws to perform functions that would require registration or qualification if such functions were performed for an organization not so exempt.'' *Id.*

[12] Each External Distributor will continue to receive a credit against its monthly Distributor Fee for BYX Top or BYX Last Sale equal to the amount of its monthly Usage Fees up to a maximum of the Distributor Fee for BYX Top or BYX Last Sale. External Distributors may also continue to pay a monthly Enterprise Fee that permits a recipient firm who receives BYX Top or BYX Last Sale from an External Distributor to receive the data for an unlimited number of Professional and Non-Professional Users.

[13] The Exchange notes that New External Distributor Credit will continue to be available for three (3) months to those Distributors who began to distribute BYX Top or BYX Last Sale prior to June 1, 2016.

consolidated data feeds. Moreover, the Exchange is not required to make any proprietary data products available or to offer any specific pricing alternatives to any customers.

In addition, the fees that are the subject of this rule filing are constrained by competition. As explained below in the Exchange's Statement on Burden on Competition, the existence of alternatives to BYX Top, BYX Last Sale, and the Bats One Feed further ensures that the Exchange cannot set unreasonable fees, or fees that are unreasonably discriminatory, when vendors and subscribers can elect such alternatives because the Exchange competes with other exchanges (and their affiliates) that provide similar market data products. If another exchange (or its affiliate) were to charge less to consolidate and distribute its similar product than the Exchange charges to consolidate and distribute BYX Top, BYX Last Sale, or the Bats One Feed, prospective Users likely would not subscribe to, or would cease subscribing to, the BYX Top, BYX Last Sale, or the Bats One Feed.

The Exchange notes that the Commission is not required to undertake a cost-of-service or rate-making approach. The Exchange believes that, even if it were possible as a matter of economic theory, cost-based pricing for non-core market data would be so complicated that it could not be done practically.[20]

[20] The Exchange believes that cost-based pricing would be impractical because it would create enormous administrative burdens for all parties, including the Commission, to cost-regulate a large number of participants and standardize and analyze extraordinary amounts of information, accounts, and reports. In addition, it is impossible to regulate market data prices in isolation from prices charged by markets for other services that are joint products. Cost-based rate regulation would also lead to litigation and may distort incentives, including those to minimize costs and to innovate, leading to further waste. Under cost-based pricing, the Commission would be burdened with determining a fair rate of return, and the industry could experience frequent rate increases based on escalating expense levels. Even in industries historically subject to utility regulation, cost-based ratemaking has been discredited. As such, the Exchange believes that cost-based ratemaking would be inappropriate for proprietary market data and inconsistent with Congress's direction that the Commission use its authority to foster the development of the national market system, and that market forces will continue to provide appropriate pricing discipline. *See* Appendix C to NYSE's comments to the Commission's 2000 Concept Release on the Regulation of Market Information Fees and Revenues, which can be found on the Commission's Web site at *http://www.sec.gov/rules/concept/s72899/buck1.htm. See also* Securities Exchange Act Release No. 73816 (December 11, 2014), 79 FR 75200 (December 17, 2014) (SR–NYSE–2014–64) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Establish an Access Fee for the NYSE Best Quote and Trades Data Feed, Operative December 1, 2014).

The Exchange believes the proposed Professional and Non-Professional User fees for BYX Top and BYX Last Sale are equitable and reasonable because they will continue to result in greater availability to Professional and Non-Professional Users. The Exchange believes that the proposed fees are equitable and not unfairly discriminatory because they will be charged uniformly to recipient firms and Users. In addition, the proposed fees are reasonable when compared to similar fees for comparable products offered by the NYSE. Specifically, NYSE offers NYSE BBO, which includes best bid and offer for NYSE traded securities, for a monthly fee of $4.00 per professional subscriber and $0.20 per non-professional subscriber.[21] NYSE also offers NYSE Trades, which is a data feed that provides the last sale information for NYSE traded securities, for the same price as NYSE BBO. The Exchange's proposed per User Fees for BYX Top and BYX Last Sale are less than the NYSE's fees for NYSE Trades and NYSE BBO.

The Exchange also believes that amending the New External Distributor Credit for BYX Top, BYX Last Sale, and the Bats One Feed is equitable and reasonable. The Exchange notes that the New External Distributor Credit was initially adopted at the time the Exchange began to offer the Bats One Summary Feed to subscribers. It was intended to incentivize new Distributors to enlist Users to subscribe to the Bats One Summary Feed in an effort to broaden the product's distribution. The credit was also provided for BYX Top and BYX Last Sale in order to alleviate any competitive issues that may arise with a vendor seeking to offer a product similar to the Bats One Summary Feed based on the underlying data feeds. The Exchange also believes that decreasing the time during which the New External Distributor Credit is available from three (3) to one (1) month for BYX Top, BYX Last Sale, and the Bats One Feed is equitable and reasonable because the credit has been available to Distributors since January 2015 providing new Distributors with ample time to grow their subscriber bases during the available three (3) month periods. Decreasing the credit period to one (1) month is equitable and reasonable as it would continue to provide new Distributors ample time to grow their subscriber bases.

[21] *See* NYSE Market Data Pricing dated March 2016 *available at http://www.nyxdata.com/.*

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended. The Exchange's ability to price BYX Last Sale, BYX Top, and the Bats One Feed are constrained by: (i) Competition among exchanges, other trading platforms, and Trade Reporting Facilities (''TRF'') that compete with each other in a variety of dimensions; (ii) the existence of inexpensive real-time consolidated data and market-specific data and free delayed data; and (iii) the inherent contestability of the market for proprietary data. This competitive pressure is evidenced by the Exchange's proposal to decrease fees as described herein.

The Exchange and its market data products are subject to significant competitive forces and the proposed fees represent responses to that competition. To start, the Exchange competes intensely for order flow. It competes with the other national securities exchanges that currently trade equities, with electronic communication networks, with quotes posted in FINRA's Alternative Display Facility, with alternative trading systems, and with securities firms that primarily trade as principal with their customer order flow.

In addition, BYX Last Sale, BYX Top, and the Bats One Feed compete with a number of alternative products. For instance, BYX Last Sale, BYX Top, and the Bats One Feed do not provide a complete picture of all trading activity in a security. Rather, the other national securities exchanges, the several TRFs of FINRA, and Electronic Communication Networks (''ECN'') that produce proprietary data all produce trades and trade reports. Each is currently permitted to produce last sale information products, and many currently do, including Nasdaq and NYSE. In addition, market participants can gain access to BYX last sale prices and top-of-book quotations, though integrated with the prices of other markets, on feeds made available through the SIPs.

In sum, the availability of a variety of alternative sources of information imposes significant competitive pressures on the Exchange's data products and the Exchange's compelling need to attract order flow imposes significant competitive pressure on the Exchange to act equitably, fairly, and reasonably in setting the proposed data product fees. The proposed data product

fees are, in part, responses to that pressure. The Exchange believes that the proposed fees would reflect an equitable allocation of its overall costs to users of its facilities.

In addition, when establishing the proposed fees, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish fair, reasonable, and not unreasonably discriminatory fees and an equitable allocation of fees among all Users. The existence of alternatives to BYX Last Sale, BYX Top, and the Bats One Feed, including existing similar feeds by other exchanges, consolidated data, and proprietary data from other sources, ensures that the Exchange cannot set unreasonable fees, or fees that are unreasonably discriminatory, when vendors and subscribers can elect these alternatives or choose not to purchase a specific proprietary data product if its cost to purchase is not justified by the returns any particular vendor or subscriber would achieve through the purchase.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to section 19(b)(3)(A) of the Act [22] and paragraph (f) of Rule 19b–4 thereunder.[23] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File No. SR–BatsBYX–2016–08 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File No. SR–BatsBYX–2016–08. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR–BatsBYX–2016–08, and should be submitted on or before June 17, 2016.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[24]

Robert W. Errett,

Deputy Secretary.

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #14701 and #14702]

Mississippi Disaster Number MS–00085

AGENCY: U.S. Small Business Administration.

ACTION: Amendment 1.

SUMMARY: This is an amendment of the Presidential declaration of a major disaster for Public Assistance Only for the State of Mississippi (FEMA–4268–DR), dated 04/19/2016.

Incident: Severe Storms and Flooding.

Incident Period: 03/09/2016 through 03/29/2016.

Effective Date: 05/19/2016.

Physical Loan Application Deadline Date: 06/20/2016.

Economic Injury (EIDL) Loan Application Deadline Date: 01/19/2017.

ADDRESSES: Submit completed loan applications to: U.S. Small Business Administration, Processing and Disbursement Center, 14925 Kingsport Road, Fort Worth, TX 76155.

FOR FURTHER INFORMATION CONTACT: A. Escobar, Office of Disaster Assistance, U.S. Small Business Administration, 409 3rd Street SW., Suite 6050, Washington, DC 20416.

SUPPLEMENTARY INFORMATION: The notice of the President's major disaster declaration for Private Non-Profit organizations in the State of Mississippi, dated 04/19/2016, is hereby amended to include the following areas as adversely affected by the disaster.

Primary Counties: Issaquena, Lawrence.

All other information in the original declaration remains unchanged.

BILLING CODE 8025–01–P

SMALL BUSINESS ADMINISTRATION

Interagency Task Force on Veterans Small Business Development; Meeting

AGENCY: U.S. Small Business Administration.

ACTION: Notice of open Federal Interagency Task Force meeting.

Date and Time: June 9, 2016, from 9:00 a.m. to 12:00 p.m.

ADDRESSES: SBA Headquarters, 409 3rd Street SW., Washington, DC 20416, in the Administrator's Conference room, located on the 7th Floor.

Purpose: This public meeting is to discuss recommendations identified by the Interagency Task Force (IATF) to further enable veteran entrepreneurship policy and programs. In addition, the Task Force will allow public comment regarding the focus areas.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C., Appendix 2), SBA announces the meeting of the Interagency Task Force on Veterans Small Business Development. The Task Force is established pursuant to Executive Order 13540 and focused on coordinating the efforts of federal agencies to improve capital, business development opportunities and pre-federal contracting goals for small business concerns owned and controlled by veterans (VOB's) and service-disabled veterans (SDVOSB'S). Moreover, the Task Force shall coordinate administrative and regulatory activities and develop proposals relating to six focus areas: (1) Access to capital (loans, surety bonding and franchising); (2) Ensure achievement of pre-established contracting goals, including mentor protégé and matching with contracting opportunities; (3) Increase the integrity of certifications of status as a small business; (4) Reducing paperwork and administrative burdens in accessing business development and entrepreneurship opportunities; (5) Increasing and improving training and counseling services; and (6) Making other improvements to support veteran's business development by the federal government.

Additional Information: Advance notice of attendance is requested. Anyone wishing to attend and/or make a presentation to the tasks force must contact Jaime Wood no later than May 27, 2016 by email in order to be placed on the agenda. Comments for the record should be applicable to the six focus areas of the task force and emailed prior to the meeting for inclusion in the public record. Comments will be limited to five minutes in the interest of time and to accommodate as many presenters as possible. Written comments should be emailed to Jaime Wood, Director of Policy and Engagement for the task force, Office of Veterans Business Development at *vetstaskforce@sba.gov.* If participants need accommodations because of a disability or require additional information, please contact Jaime Wood, Director of Policy and Engagement at (202) 205–6773 or via email at *vetstaskforce@sba.gov.* For more information, please visit our Web site at *www.sba.gov/vets.*

Dated: May 16, 2016.

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #14725 and #14726]

Arkansas Disaster #AR–00089

AGENCY: U.S. Small Business Administration.

ACTION: Notice.

SUMMARY: This is a notice of an Administrative declaration of a disaster for the State of Arkansas dated 05/18/2016.

Incident: Severe Storms, Tornadoes, Straight-line Winds and Flooding.

Incident Period: 03/08/2016 through 03/13/2016.

Effective Date: 05/18/2016.

Physical Loan Application Deadline Date: 07/18/2016.

Economic Injury (EIDL) Loan Application Deadline Date: 02/20/2017.

ADDRESSES: Submit completed loan applications to: U.S. Small Business Administration, Processing and Disbursement Center, 14925 Kingsport Road, Fort Worth, TX 76155.

FOR FURTHER INFORMATION CONTACT: A. Escobar, Office of Disaster Assistance, U.S. Small Business Administration, 409 3rd Street SW., Suite 6050, Washington, DC 20416.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the Administrator's disaster declaration, applications for disaster loans may be filed at the address listed above or other locally announced locations.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties: Ashley, Chicot, Desha.

Contiguous Counties:

Arkansas: Arkansas, Bradley, Drew, Lincoln, Phillips, Union.

Louisiana: East Carroll, Morehouse, Union, West Carroll.

Mississippi: Bolivar, Coahoma, Issaquena, Washington.

Advisory Committee on Veterans Business Affairs

AGENCY: U.S. Small Business Administration.

ACTION: Notice of open Federal Advisory Committee meeting.

SUMMARY: The SBA is issuing this notice to announce the location, date, time, and agenda for the next meeting of the Advisory Committee on Veterans Business Affairs. The meeting will be open to the public.

DATES: Wednesday, June 8, 2016 from 9 a.m. to 4 p.m.

ADDRESSES: U.S. Small Business Administration, 409 3rd Street SW., Washington, DC 20416. *Room:* Administrator's Conference Room, located on the 7th Floor.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C., Appendix 2), SBA announces the meeting of the Advisory Committee on Veterans Business Affairs. The Advisory Committee on Veterans Business Affairs serves as an independent source of advice and policy recommendation to the Administrator of the U.S. Small Business Administration. The purpose of this meeting is to discuss the formation and growth of small business concerns owned and controlled by veterans and service disabled-veterans and to focus on strategic planning and

provide updates on past and current events. For information regarding our veterans' resources and partners, please visit our Web site at *www.sba.gov/vets*.

Additional Information: The meeting is open to the public. Advance notice of attendance is requested. Anyone wishing to attend and/or make a presentation to the Advisory Committee must contact Jaime Wood, no later than May 27, 2916 via email in order to be placed on the agenda. Verbal presentations will be limited to five minutes in the interest of time and to accommodate as many presenters as possible. Written comments for the record or for special accommodations during the meeting should be emailed to Jaime Wood, Director of Policy and Engagement, Office of Veterans Business Development, at *vetstaskforce@sba.gov,* no later than May 27, 2016. For more information, please visit our Web site at *www.sba.gov/vets*.

Culturally Significant Objects Imported for Exhibition Determinations: ''Garden, Art, and Commerce in Chinese Woodblock Prints'' Exhibition

SUMMARY: Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), E.O. 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.;* 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236–3 of August 28, 2000 (and, as appropriate, Delegation of Authority No. 257 of April 15, 2003), I hereby determine that the objects to be included in the exhibition ''Garden, Art, and Commerce in Chinese Woodblock Prints,'' imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to a loan agreement with the foreign owners or custodians. I also determine that the exhibition or display of the exhibit objects at The Huntington Library, Art Collections, and Botanical Gardens, San Marino, California, from on or about September 17, 2016, until on or about January 9, 2017, and at possible additional exhibitions or venues yet to be determined, is in the national interest. I have ordered that Public Notice of these Determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: For further information, including a list of the imported objects, contact the Office of Public Diplomacy and Public Affairs in the Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6471; email: *section2459@state.gov*). The mailing address is U.S. Department of State, L/PD, SA–5, Suite 5H03, Washington, DC 20522–0505.

Dated: May 19, 2016.

Mark Taplin,

Principal Deputy Assistant Secretary, Bureau of Educational and Cultural Affairs, Department of State.

BILLING CODE 4710–05–P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 290 (Sub-No. 324X)]

Norfolk Southern Railway Company—Abandonment Exemption—in Durham County, N.C.

Norfolk Southern Railway Company (NSR) has filed a verified notice of exemption under 49 CFR pt. 1152 subpart F—*Exempt Abandonments* to abandon approximately 1.9 miles of rail line between milepost DP 0.3 and milepost DP 2.2 in Durham County, N.C. (the Line). The Line traverses United States Postal Service Zip Code 27701.

NSR has certified that: (1) No local traffic has moved over the Line for at least two years; (2) no overhead traffic has moved over the Line for at least two years, and that over overhead traffic, if there were any, could be rerouted over other lines; (3) no formal complaint filed by a user of rail service on the Line (or by a state or local government entity acting on behalf of such user) regarding cessation of service over the Line either is pending with the Surface Transportation Board (Board) or with

any U.S. District Court or has been decided in favor of a complainant within the two-year period; and (4) the requirements at 49 CFR 1105.7(c) (environmental report), 49 CFR 1105.11 (transmittal letter), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to governmental agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received, this exemption will be effective on June 28, 2016, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues,[1] formal expressions of intent to file an OFA under 49 CFR 1152.27(c)(2),[2] and interim trail use/rail banking requests under 49 CFR 1152.29 must be filed by June 6, 2016. Petitions to reopen or requests for public use conditions under 49 CFR 1152.28 must be filed by June 16, 2016, with the Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001.

A copy of any petition filed with the Board should be sent to applicant's representative: William A. Mullins, Baker & Miller PLLC, 2401 Pennsylvania Ave. NW., Suite 300, Washington, DC 20037.

If the verified notice contains false or misleading information, the exemption is void ab initio.

NSR has filed a combined environmental and historic report that addresses the effects, if any, of the abandonment on the environment and historic resources. OEA will issue an environmental assessment (EA) by June 3, 2016. Interested persons may obtain a copy of the EA by writing to OEA (Room 1100, Surface Transportation Board, Washington, DC 20423–0001) or by calling OEA at (202) 245–0305. Assistance for the hearing impaired is available through the Federal Information Relay Service at (800) 877–8339. Comments on environmental and historic preservation matters must be filed within 15 days after the EA becomes available to the public.

Environmental, historic preservation, public use, or trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), NSR shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the Line. If consummation has not been effected by filing of a notice of consummation by May 27, 2017, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

Board decisions and notices are available on our Web site at *WWW.STB.DOT.GOV.*

Decided: May 24, 2016.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Raina S. Contee,

Clearance Clerk.

[FR Doc. 2016–12610 Filed 5–26–16; 8:45 am]

BILLING CODE 4915–01–P

[1] The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Office of Environmental Analysis (OEA) in its independent investigation) cannot be made before the exemption's effective date. *See Exemption of Out-of-Serv. Rail Lines,* 5 I.C.C. 2d 377 (1989). Any request for a stay should be filed as soon as possible so that the Board may take appropriate action before the exemption's effective date.

[2] Each OFA must be accompanied by the filing fee, which is currently set at $1,600. *See* 49 CFR 1002.2(f)(25).

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

Office of Agricultural Affairs; Fiscal Year 2016 Allocation of Additional Tariff-Rate Quota Volume for Raw Cane Sugar

AGENCY: Office of the United States Trade Representative.

ACTION: Notice.

SUMMARY: The Office of the United States Trade Representative (USTR) is providing notice of country-by-country allocations of additional Fiscal Year (FY) 2016 in-quota quantity of the tariff-rate quota (TRQ) for imported raw cane sugar as announced by Secretary of Agriculture on May 18, 2016.

DATES: *Effective Date:* May 27, 2016.

FOR FURTHER INFORMATION CONTACT: Ronald Baumgarten, Office of Agricultural Affairs, telephone: 202–395–9583 or facsimile: 202–395–4579.

SUPPLEMENTARY INFORMATION: Pursuant to Additional U.S. Note 5 to Chapter 17 of the Harmonized Tariff Schedule of the United States (HTS), the United States maintains TRQs for imports of raw cane and refined sugar. Section 404(d)(3) of the Uruguay Round Agreements Act (19 U.S.C. 3601(d)(3)) authorizes the President to allocate the in-quota quantity of a TRQ for any agricultural product among supplying countries or customs areas. The President delegated this authority to the United States Trade Representative under Presidential Proclamation 6763 (60 FR 1007).

On May 18, 2016, the Secretary of Agriculture announced an additional in-quota quantity of the TRQ for raw cane sugar for the remainder of FY 2016 (ending September 30, 2016) in the amount of 127,006 metric tons, raw value (MTRV). This quantity is in addition to the minimum amount to which the United States has already committed to pursuant to the World Trade Organization (WTO) Uruguay Round Agreements (1,117,195 MTRV, as announced by **Federal Register** notice on June 15, 2015, 80 FR 34129). USTR is allocating this total quantity of 127,006 MTRV to the following countries in the amounts specified below:

Country	FY 2016 raw cane sugar increase (MTRV)
Argentina	6,159
Australia	11,888
Belize	1,576
Brazil	20,768
Colombia	3,437
Costa Rica	2,148
Dominican Republic	15,000
Ecuador	1,576
El Salvador	3,724
Fiji	1,289
Guatemala	6,875
Guyana	1,719
Honduras	1,432
India	1,146
Jamaica	1,576
Malawi	1,432
Mauritius	1,719
Mozambique	1,862
Nicaragua	3,008
Panama	4,154
Peru	5,872
Philippines	19,336
South Africa	3,294
Swaziland	2,292
Thailand	2,005
Zimbabwe	1,719

These allocations are based on the countries' historical shipments to the United States. The allocations of the raw cane sugar TRQ to countries that are net importers of sugar are conditioned on receipt of the appropriate verifications of origin, and certificates for quota eligibility must accompany imports from any country for which an allocation has been provided.

Conversion factor: 1 metric ton = 1.10231125 short tons.

Michael Froman,

United States Trade Representative.

BILLING CODE 3290–F6–P

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

Office of Agricultural Affairs: Fiscal Year 2017 Tariff-Rate Quota Allocations for Raw Cane Sugar, Refined and Specialty Sugar and Sugar-Containing Products

AGENCY: Office of Agricultural Affairs, Office of the United States Trade Representative.

ACTION: Notice.

SUMMARY: The Office of the United States Trade Representative (USTR) is providing notice of country-by-country allocations of the Fiscal Year (FY) 2017 (Oct. 1, 2016 through Sept. 30, 2017) in-quota quantity of the tariff-rate quotas for imported raw cane sugar, certain sugars, syrups and molasses (also known as refined sugar), specialty sugar, and sugar-containing products.

DATES: *Effective Date:* May 27, 2016.

FOR FURTHER INFORMATION CONTACT: Ronald Baumgarten, Office of Agricultural Affairs, telephone: 202–395–9583 or facsimile: 202–395–4579.

SUPPLEMENTARY INFORMATION: Pursuant to Additional U.S. Note 5 to chapter 17 of the Harmonized Tariff Schedule of the United States (HTS), the United States maintains tariff-rate quotas (TRQs) for imports of raw cane sugar and refined sugar. Pursuant to Additional U.S. Note 8 to Chapter 17 of the HTS, the United States maintains a TRQ for imports of sugar-containing products.

Section 404(d)(3) of the Uruguay Round Agreements Act (19 U.S.C. 3601(d)(3)) authorizes the President to allocate the in-quota quantity of a TRQ for any agricultural product among supplying countries or customs areas. The President delegated this authority to the United States Trade Representative under Presidential Proclamation 6763 (60 FR 1007).

On May 6, 2016 (81 FR 27390), the Secretary of Agriculture (Secretary) announced the sugar program provisions for Fiscal Year (FY) 2017. The Secretary announced an in-quota quantity of the TRQ for raw cane sugar for FY 2017 of 1,117,195 metric tons * raw value (MTRV), which is the minimum amount to which the United States is committed under the World Trade Organization (WTO) Uruguay Round Agreements. USTR is allocating this quantity (1,117,195 MTRV) to the following countries in the amounts specified below:

Country	FY 2017 raw cane sugar allocations (MTRV)
Argentina	45,281
Australia	87,402
Barbados	7,371
Belize	11,584
Bolivia	8,424
Brazil	152,691
Colombia	25,273
Congo	7,258
Costa Rica	15,796
Cote d'Ivoire	7,258
Dominican Republic	185,335
Ecuador	11,584
El Salvador	27,379
Fiji	9,477
Gabon	7,258
Guatemala	50,546
Guyana	12,636
Haiti	7,258
Honduras	10,530
India	8,424
Jamaica	11,584
Madagascar	7,258
Malawi	10,530
Mauritius	12,636
Mexico	7,258
Mozambique	13,690
Nicaragua	22,114
Panama	30,538
Papua New Guinea	7,258
Paraguay	7,258
Peru	43,175
Philippines	142,160
South Africa	24,220
St. Kitts & Nevis	7,258
Swaziland	16,849
Taiwan	12,636
Thailand	14,743
Trinidad & Tobago	7,371
Uruguay	7,258
Zimbabwe	12,636

These allocations are based on the countries' historical shipments to the United States. The allocations of the in-quota quantities of the raw cane sugar TRQ to countries that are net importers of sugar are conditioned on receipt of the appropriate verifications of origin, and certificates for quota eligibility must accompany imports from any country for which an allocation has been provided.

On May 6, 2016, the Secretary also announced the establishment of the in-quota quantity of the FY 2017 refined sugar TRQ at 162,000 MTRV for which the sucrose content, by weight in the dry state, must have a polarimeter reading of 99.5 degrees or more. This amount includes the minimum level to which the United States is committed under the WTO Uruguay Round Agreements (22,000 MTRV of which 1,656 MTRV is reserved for specialty sugar) and an additional 140,000 MTRV for specialty sugars. USTR is allocating the refined sugar TRQ as follows: 10,300 MTRV of refined sugar to Canada, 2,954 MTRV to Mexico, and 7,090 MTRV to be administered on a first-come, first-served basis.

Imports of all specialty sugar will be administered on a first-come, first-served basis in five tranches. The Secretary has announced that the total in-quota quantity of specialty sugar will be the 1,656 MTRV included in the WTO minimum plus an additional 140,000 MTRV. The first tranche of 1,656 MTRV will open October 3, 2016. All types of specialty sugars are eligible for entry under this tranche. The second tranche of 40,000 MTRV will open on October 26, 2016. The third tranche of 40,000 MTRV will open on January 6, 2017. The fourth and fifth tranches of 30,000 MTRV each will open on April 7, 2017 and July 7, 2017, respectively. The second, third, fourth and fifth tranches will be reserved for organic sugar and other specialty sugars not currently produced commercially in the United States or reasonably available from domestic sources.

With respect to the in-quota quantity of 64,709 MTRV of the TRQ for imports of certain sugar-containing products maintained under Additional U.S. Note 8 to chapter 17 of the HTS, USTR is allocating 59,250 MTRV to Canada. The remainder, 5,459 MTRV, of the in-quota quantity is available for other countries on a first-come, first-served basis.

Raw cane sugar, refined and specialty sugar and sugar-containing products for FY 2017 TRQs may enter the United States as of October 1, 2016.

* *Conversion factor:* 1 metric ton = 1.10231125 short tons.

Michael Froman,

United States Trade Representative.

BILLING CODE 3290–F6–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Request To Release Airport Property

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of intent to rule on request to release airport property at The Eastern Iowa Airport, Cedar Rapids, Iowa.

SUMMARY: The FAA proposes to rule and invites public comment on the release of land at The Eastern Iowa Airport, Cedar

Rapids, Iowa, under the provisions of 49 U.S.C. 47107(h)(2).

DATES: Comments must be received on or before June 27, 2016.

ADDRESSES: Comments on this application may be mailed or delivered to the FAA at the following address: Lynn D. Martin, Airports Compliance Specialist, Federal Aviation Administration, Airports Division, ACE–610C, 901 Locust, Room 364, Kansas City, MO 64106.

In addition, one copy of any comments submitted to the FAA must be mailed or delivered to: Donald D. Swanson, Director of Finance & Administration, 2515 Arthur Collins Parkway SW., Cedar Rapids, IA 52404–8952, (319) 362–3131.

FOR FURTHER INFORMATION CONTACT: Lynn D. Martin, Airports Compliance Specialist, Federal Aviation Administration, Airports Division, ACE–610C, 901 Locust, Room 364, Kansas City, MO 64106, (816) 329–2644, *lynn.martin@faa.gov.*

The request to release property may be reviewed, by appointment, in person at this same location.

SUPPLEMENTARY INFORMATION: The FAA invites public comment on the request to release approximately 46.8± acres of airport property at The Eastern Iowa Airport (CID) under the provisions of 49 U.S.C. 47107(h)(2). On March 3, 2016, the Director of Finance and Administration at The Eastern Iowa Airport requested from the FAA that approximately 46.8± acres of property be released for sale to Nordstrom, Inc. for use as a fulfillment center and employee parking or other purposes consistent with the zoning ordinances of the City. On May 18, 2016, the FAA determined that the request to release property at The Eastern Iowa Airport (CID) submitted by the Sponsor meets the procedural requirements of the Federal Aviation Administration and the release of the property does not and will not impact future aviation needs at the airport. The FAA may approve the request, in whole or in part, no sooner than thirty days after the publication of this notice.

The following is a brief overview of the request:

The Eastern Iowa (CID) is proposing the release of airport property totaling 46.8 acres, more or less. This land is to be used for a fulfillment center with employee parking lot. The release of land is necessary to comply with Federal Aviation Administration Grant Assurances that do not allow federally acquired airport property to be used for non-aviation purposes. The sale of the subject property will result in the land at The Eastern Iowa Airport (CID) being changed from aeronautical to non-aeronautical use and release the lands from the conditions of the Airport Improvement Program Grant Agreement Grant Assurances. In accordance with 49 U.S.C. 47107(c)(2)(B)(i) and (iii), the airport will receive fair market value for the property, which will be subsequently reinvested in another eligible airport improvement project for general aviation facilities at The Eastern Iowa Airport.

Any person may inspect, by appointment, the request in person at the FAA office listed above under **FOR FURTHER INFORMATION CONTACT**. In addition, any person may, upon appointment and request, inspect the application, notice and other documents determined by the FAA to be related to the application in person at The Eastern Iowa Airport.

Issued in Kansas City, MO, on May 18, 2016.

Jim A. Johnson,

Manager, Airports Division.

Pipeline and Hazardous Materials Safety Administration

Hazardous Materials: Actions on Special Permit Applications

AGENCY: Office of Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: Notice of actions on special permit applications.

SUMMARY: In accordance with the procedures governing the application for, and the processing of, special permits from the Department of Transportation's Hazardous Material Regulations (49 CFR part 107, Subpart B), notice is hereby given of the actions on special permits applications in (October to October 2014). The mode of transportation involved are identified by a number in the ''Nature of Application'' portion of the table below as follows: 1—Motor vehicle, 2—Rail freight, 3—Cargo vessel, 4—Cargo aircraft only, 5—Passenger-carrying aircraft. Application numbers prefixed by the letters EE represent applications for Emergency Special Permits. It should be noted that some of the sections cited were those in effect at the time certain special permits were issued.

Issued in Washington, DC, on May 12, 2016.

Donald Burger,

Chief, Special Permits and Approvals Branch.

S.P. No.	Applicant	Regulation(s)	Nature of special permit thereof
MODIFICATION SPECIAL PERMIT GRANTED			
15628–M ...	Chemours Company FC, LLC, Wilmington, DE.	49 CFR 179.100–12(c)	To modify the special permit to authorize an additional hazardous material.
16510–M ...	Apple, Inc., Cupertino, CA	49 CFR Subparts C through H of Part 172, 173.185(f).	To modify the special permit originally issued on an emergency basis to authorize an additional two years.
13213–M ...	Washington State Ferries, Seattle, WA.	49 CFR 172.101(10a)	To modify the special permit to increase the quantity of Petroleum gases, liquefied or Liquefied Petroleum Gas from 100 lbs to 143 lbs.
16566–M ...	Sunset Helicopters, Inc., Aurora, OR.	49 CFR 172.200, 172.300, 172.400, 173.27, 173.220(b)(1), 173.220(g), 175.30, 175.33, 175.75.	To modify the special permit originally issued on an emergency basis to authorize an additional two years.

S.P. No.	Applicant	Regulation(s)	Nature of special permit thereof
16555–M ...	Advance Research Chemicals, Inc., Catoosa, OK.	49 CFR 173.227(b)(2)(iii)	To modify the special permit originally issued on an emergency basis to authorize an additional two years and identify Advance Research Chemicals, Inc. as an offeror of hazardous materials.
		NEW SPECIAL PERMIT GRANTED	
16584–N	Visuray LLC, Houston, TX	49 CFR 171–180	To authorize the transportation in commerce of sulfur hexafluoride in a non-DOT specification cylinder, which is part of an oil well downhole logging tool. (modes 1, 2, 3, 4, 5)
16591–N	Department of Defense, Scott AFB, IL.	49 CFR 171.23(a), 173.302(a), ICAO TI Part 6, Chapters, Paragraph 5.1.1.2, IMDG Code Part 6, Chapter 6.2 Section 6.2.1.1.2.	To authorize the transportation in commerce of compressed argon in non-DOT specification cylinders. (modes 1, 3, 4)
16587–N	Mobis Parts America, LLC, Fountain Valley, CA.	49 CFR 172.102(c)(2), Special Provision A54, ICAO T1 Special Provision A99.	To authorize the transportation in commerce of lithium-ion polymer battery assemblies exceeding a net weight of 35 kg when transported aboard cargo aircraft. (mode 4)
16601–N	SAFC Hitech, Inc., Haverhill, MA	49 CFR 173.181(b), IMDG Code Packing Instruction P400, paragraph (2).	To authorize the manufacture, mark, sale and use of specially-designed combination packagings for the transportation in commerce of certain pyrophoric hazardous materials. (modes 1, 3)
16602–N	Hydrite Chemical Co., Brookfield, WI.	49 CFR 173.158(b), 173.158(e), 173.158(1) ..	To authorize the transportation in commerce of nitric acid with concentrations up to 50% in UN 3HI jerricans and UN IHI plastic drums. (mode 1)
20244–N	Kalitta Air, LLC, Ypsilanti, MI	49 CFR 172.101 Table Column (9B), 172.204(c)(3), 173.27(b)(2), (3), and 175.30(a)(1).	To authorize the transportation in commerce of certain explosives that are forbidden for transportation by cargo only aircraft. (mode 4)
20233–N	National Air Cargo Group, Inc., Orlando, FL.	49 CFR 172.101 Table Column (9B), 172.204(c)(3), 173.27(b)(2), (3), and 175.30(a)(1), 49 CFR 173.158(b), 173.158(e), 173.158(1).	To authorize the transportation in commerce of certain explosives that are forbidden for transportation by cargo only aircraft (mode 4). To authorize the transportation in commerce of nitric acid with concentrations up to 50% in UN 3141 jerricans and UN 1111 plastic drums. (mode 1)
		DENIED	
15507–M ...	Request by Yiwu Jinyu Machinery Factory Jiangwan Town, Yiwu City, April 08, 2016. To modify the special permit to authorize an additional non-refillable, non-DOT specification inner container similar to a DOT specification 2Q.

Pipeline and Hazardous Materials Safety Administration

Hazardous Materials: Delayed Applications

AGENCY: Office of Hazardous Materials Safety, Pipeline and Hazardous Materials Safety Administration (PHMSA), DOT.

ACTION: List of application delayed more than 180 days.

SUMMARY: In accordance with the requirements of 49 U.S.C. 5117(c), PHMSA is publishing the following list of special permit applications that have been in process for 180 days or more. The reason(s) for delay and the expected completion date for action on each application is provided in association with each identified application.

FOR FURTHER INFORMATION CONTACT: Ryan Paquet, Director, Office of Hazardous Materials Special Permits and Approvals, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, East Building, PHH–30, 1200 New Jersey Avenue Southeast, Washington, DC 20590–0001, (202) 366–4535.

Key to "Reason for Delay"

1. Awaiting additional information from applicant
2. Extensive public comment under review
3. Application is technically complex and is of significant impact or precedent-setting and requires extensive analysis
4. Staff review delayed by other priority issues or volume of special permit applications

Meaning of Application Number Suffixes

N—New Application
M—Modification Request
R—Renewal Request
P—Party To Exemption Request

Issued in Washington, DC, on May 11, 2016.

[Docket No. DOT–OST–2012–0087]

Advisory Committee for Aviation Consumer Protection

AGENCY: Office of the Secretary (OST), Department of Transportation (DOT).

ACTION: Notice of Intent to Continue the Advisory Committee for Aviation Consumer Protection (''ACACP'' or ''Committee''); Solicitation of Applications and Nominations for Membership.

SUMMARY: The Department of Transportation (''Department,'' ''DOT,'' or ''we'') announces its intention to continue the ACACP as a discretionary Federal advisory committee in the event that the authority for the Committee under section 411 of the FAA Modernization and Reform Act of 2012 (Pub. L. 112–95, 126 Stat. 11), as amended, is not extended by Congress through legislation. The current authorization is set to expire on July 15, 2016. The Department is soliciting applications and nominations for new members of the Committee.

DATES: Nominations for ACACP membership must be received on or before June 27, 2016.

FOR FURTHER INFORMATION CONTACT: If you have questions about the ACACP, you may contact Stuart Hindman, Trial Attorney, U.S. Department of Transportation, by email at *stuart.hindman@dot.gov,* or by telephone at 202–366–9342. You may also contact Vinh Nguyen, at *vinh.nguyen@dot.gov,* or by telephone at 202–366–9342.

SUPPLEMENTARY INFORMATION:

Background

On May 24, 2012, the Secretary, as mandated by section 411 of the FAA Modernization and Reform Act of 2012 (Pub. L. 112–95, 126 Stat. 11 (2012)) (2012 FAA Act), established the Advisory Committee for Aviation Consumer Protection (ACACP). The committee's charter, drafted in accordance with the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. App. 2, sets forth policies for the operation of the advisory committee and is available online at *http://www.facadatabase.gov/committee/charters.aspx?cid=2448&aid=47.* That charter of the ACACP was set to expire on September 30, 2015, but the Airport and Airway Extension Act of 2015 (Pub. L. 114–55, 129 Stat. 522) and then the Airport and Airways Extension Act of 2016 (Pub. L. 114–141, 130 Stat 322) extended the duration of the Committee to July 15, 2016.

Since the ACACP has been established, it has held nine meetings and examined a broad range of issues affecting consumers which culminated in the Committee submitting two reports to the Secretary for improving existing aviation consumer protection programs and for establishing new ones, if needed. A third report from the ACACP is currently set to be provided to the Secretary before July 15, 2016.

The Department has implemented a number of the recommendations from the ACACP, such as finalizing a rulemaking mandating service animal relief areas, with limited exceptions, be located in the sterile area of each airport terminal.[1] The Department has also issued a rule requiring the accessibility of airport kiosks and airline Web sites as recommended by the ACACP.[2] Additionally, the Committee recommended that the Department work with the airlines to survey how they define certain terms frequently used in their contracts of carriage and customer service plans. The Department worked with Airlines for America to develop such a document, which it then placed on its Web site to assist consumers with understanding the terms and conditions of their travel. See *https://www.transportation.gov/airconsumer/common-terms-air-travel.* Various recommendations of the Committee, such as ensuring transparency in air carrier pricing, requiring ticket agents to disclose they do not offer for sale all airlines' tickets, and expanding the airlines that report quality service data (*e.g.,* on-time performance) to the Department, are all being considered by the Department through rulemaking.[3]

The ACACP has contributed significantly to the Department's aviation consumer protection program as it provides a forum for public discussion of important consumer issues and helps air and address issues that do not have simple answers. As mentioned earlier, the statutory termination date for the ACACP was originally established by the 2012 FAA Act as September 30, 2015, but was extended by the Airport and Airway Extension Act of 2015 (Pub. L. 114–55, 129 Stat. 522), and further extended by the Airport and Airway Extension Act of 2016 (Pub. L. 114–141, 130 Stat 322) to the current termination date of July 15, 2016. If Congress extends the termination date of the ACACP through legislation, the Committee will continue as mandated by Congress. If Congress does not extend the ACACP beyond July 15, 2016, the Secretary, under the authority of FACA, will continue the ACACP as a discretionary advisory committee.

The Department is currently in the process of updating the ACACP's charter to provide for this contingency and is making other minor amendments, such as clarifying that the Committee's work should concern aviation consumer protection issues that fall within the current statutory authority of the Department. Additionally, the Secretary is soliciting applications and nominations for membership to the ACACP. The membership of the committee shall be composed of a representative each of the following:

- Air carriers;
- Airport operators;
- State or local governments with expertise in consumer protection matters; and
- Nonprofit public interest groups with expertise in consumer protection matter.

This notice requests nominations and applications for members of the ACACP

[1] See Nondiscrimination on the Basis of Disability in Programs or Activities Receiving Federal Financial Assistance (U.S. Airports), Final Rule, 80 FR 46508 (August 5, 2015).

[2] See Nondiscrimination on the Basis of Disability in Air Travel: Accessibility of Web Sites and Automated Kiosks at U.S. Airports, Final Rule, 78 FR 67882 (November 12, 2013).

[3] See Airline Pricing Transparency and Other Consumer Protection Issues, Notice of Proposed Rulemaking, 79 FR 29970 (May 23, 2014).

to ensure a wide range of candidates and a balanced committee. The Secretary of Transportation will appoint four Committee members, who will each serve for a term of two years.

The Department will choose the Committee members based on three main criteria: (1) Representativeness (does the applicant represent a significant one of the four groups outlined above?); (2) expertise (does the applicant bring essential knowledge, expertise and/or experience regarding aviation consumer protection and the topic area(s) of interest that will enrich the discussion of the available options and their respective costs and benefits?); and (3) willingness to participate fully (is the applicant able and willing to attend meetings and generally contribute constructively to a rigorous policy development process?).

Individuals applying for membership should keep in mind that Committee members will be selected based on their ability and willingness to effectively represent the interests of all stakeholders in their category, as distinct from their parochial or personal interests. For example, an individual selected to serve on the Committee as a representative of air carriers would represent not only his or her own airline, but all air carriers. As such, the individual would be expected to consult with other airlines in bringing issues to the table and making decisions on proposals before the Committee.

The Department's Office of Aviation Enforcement and Proceedings will provide appropriate funding, logistics, administrative, and technical support for the Committee. DOT subject matter experts will also provide support to the Committee. At this time, we anticipate that the ACACP will meet twice a year at the Department's headquarters in Washington, DC. Although we do not have proposed dates for these meetings at this time, we anticipate one meeting to be in the spring and one meeting to be in the fall each year. Individuals interested in serving on the Committee should plan to attend each of these meetings in person.

Process and Deadline for Submitting Nominations: Organizations and/or persons who believe they meet the criteria listed above are invited to apply for membership on the ACACP to represent the interests of their stakeholder category. Organizational applicants should indicate both the stakeholder category they propose to represent and the individual from their organization applying to serve on the Committee; describe the responsibilities and qualifications of that person; and describe the qualifications of any alternates or professional colleagues who will be assisting the principal representative in the process.

Qualified individuals can self-nominate or be nominated by any stakeholder or stakeholder organization. To be considered for the ACACP, nominators should submit the following information:

(1) Name, title, and relevant contact information (including phone and email address) and the interests such a person shall represent;

(2) A letter of support from a company, union, trade association, or non-profit organization on letterhead containing a brief description why the nominee is qualified and should be considered for membership;

(3) Short biography of nominee including professional and academic credentials; and

(4) An affirmative statement that the nominee meets all Committee eligibility requirements.

All individuals who wish to serve on the ACACP should apply for membership by supplying the information listed above. Please do not send company, trade association, or organization brochures or any other information. Materials submitted should total two single-spaced pages or less. Should more information be needed, DOT staff will contact the nominee, obtain information from the nominee's past affiliations, or obtain information from publicly available sources, such as the Internet. Nominations may be emailed to *ACACP@dot.gov.* Nominations must be received by June 27, 2016. Nominations are open to all individuals without regard to race, color, religion, sex, national origin, age, disability, marital status, or sexual orientation. Notice to the public will be published in the **Federal Register** at least 15 days prior to each plenary meeting of the ACACP and members of the public will be invited to attend.

Viewing Documents

You may view any documents mentioned in this preamble as being available in the docket at *http://www.regulations.gov.* After entering the docket number, click the link to ''Open Docket Folder'' and choose the document to review. If you do not have access to the Internet, you may view the docket online by visiting the Docket Management Facility in Room W12–140 on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., E.T., Monday through Friday, except Federal holidays.

Submitting Nominations

All nomination materials should be submitted electronically via email to *ACACP@dot.gov.* Any person needing accessibility accommodations with submitting nominations should contact Stuart Hindman, Trial Attorney, U.S. Department of Transportation, by email at *stuart.hindman@dot.gov,* or by telephone at 202–366–9342.

Dated: May 19, 2016.

Anthony R. Foxx,

Secretary.

BILLING CODE 4910–9X–P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Agency Information Collection Activities: Information Collection Renewal; Submission for OMB Review; Disclosure of Financial and Other Information by National Banks

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Notice and request for comment.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on a continuing information collection, as required by the Paperwork Reduction Act of 1995 (PRA).

In accordance with the requirements of the PRA, the OCC may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number.

The OCC is soliciting comment concerning renewal of its information collection titled, ''Disclosure of Financial and Other Information by National Banks.'' The OCC also is giving notice that it has sent the collection to OMB for review.

DATES: Comments must be submitted on or before June 27, 2016.

ADDRESSES: Because paper mail in the Washington, DC area and at the OCC is subject to delay, commenters are encouraged to submit comments by email, if possible. Comments may be sent to: Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, Attention: 1557–0182, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219. In addition, comments may be sent by fax to (571) 465–4326 or by

electronic mail to *prainfo@occ.treas.gov.* You may personally inspect and photocopy comments at the OCC, 400 7th Street SW., Washington, DC 20219. For security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling (202) 649–6700 or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597. Upon arrival, visitors will be required to present valid government-issued photo identification and submit to security screening in order to inspect and photocopy comments.

All comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

Additionally, please send a copy of your comments by mail to: OCC Desk Officer, 1557–0182, U.S. Office of Management and Budget, 725 17th Street NW., #10235, Washington, DC 20503, or by email to: *oira submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Shaquita Merritt, OCC Clearance Officer, (202) 649–5490 or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219.

SUPPLEMENTARY INFORMATION: The OCC requests that OMB extend its approval of the following collection:

Title: Disclosure of Financial and Other Information by National Banks.

OMB Control No.: 1557–0182.

Type of Review: Extension, without revision, of a currently approved collection.

Description: The collections of information are found in 12 CFR 18.3, 18.4, and 18.8. Section 18.3 requires the preparation of an annual disclosure statement and specifies when a national bank must make the statement available to shareholders. Section 18.4 outlines what information the disclosure statement must contain and provides that a national bank may, at its option, supplement its annual disclosure statement with a narrative discussion. Lastly, § 18.8 requires that a national bank promptly mail or otherwise furnish its annual disclosure statement upon request.

The information collected under part 18 is also collected through the Consolidated Reports of Condition and Income. Therefore, the OCC has proposed to remove part 18 in its entirety, 81 FR 13607 (March 14, 2016). Following issuance of a final rule removing part 18, the OCC will discontinue this information collection.

Affected Public: Businesses or other for-profit.

Burden Estimates:

Estimated Number of Respondents: 1,100.

Estimated Total Annual Burden: 555 hours.

Frequency of Response: On occasion.

Comments: On February 25, 2016, the OCC issued a notice for 60 days of comment concerning the collection, 81 FR 9584. The OCC received one comment from an individual.

The commenter questioned the utility and benefit of the information collection compared to the burden because the rule requires information that is already available through OCC's program of periodic and financial disclosure and other sources. The commenter suggested that the rule should be replaced with easy to understand measures or statistics or rewritten to minimize the burden and enhance the quality and clarity of the information collected. The information collected is available through the Consolidated Reports of Condition of Income and, as indicated above, this information collection will be discontinued following the issuance of a final rule removing part 18.

The commenter stated that the OCC improves the quality, utility, and clarity of information when it attentively responds to all significant public comments before finalizing rules. The commenter also believes that when the OCC leaves unclear whether it considered comments, the public record is incomplete and the OCC creates the perception that it makes final decisions on rules without considering the data, views, and arguments of others. The OCC carefully considers all comments received.

Comments continue to be invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the OCC, including whether the information has practical utility;

(b) The accuracy of the OCC's estimate of the information collection burden;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of the collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: May 23, 2016.

Mary Hoyle Gottlieb,

Regulatory Specialist, Legislative and Regulatory Activities Division.

BILLING CODE 4810–33–P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Agency Information Collection Activities; Information Collection Renewal; Submission for OMB Review; Funding and Liquidity Risk Management

AGENCY: Office of the Comptroller of the Currency (OCC), Treasury.

ACTION: Notice and request for comment.

SUMMARY: The OCC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on a continuing information collection, as required by the Paperwork Reduction Act of 1995 (PRA).

In accordance with the requirements of the PRA, the OCC may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number.

The OCC is soliciting comment concerning renewal of its information collection titled, ''Funding and Liquidity Risk Management.'' The OCC also is giving notice that it has sent the collection to OMB for review.

DATES: Comments must be received by June 27, 2016.

ADDRESSES: Because paper mail in the Washington, DC area and at the OCC is subject to delay, commenters are encouraged to submit comments by email, if possible. Comments may be sent to: Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, Attention: 1557–0244, 400 7th Street SW., Suite 3E–218, Mail Stop 9W–11, Washington, DC 20219. In addition, comments may be sent by fax to (571) 465–4326 or by electronic mail to *prainfo@occ.treas.gov.* You may personally inspect and photocopy comments at the OCC, 400 7th Street SW., Washington, DC 20219. For security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling (202) 649–6700 or, for persons who are deaf or hard of hearing, TTY,

(202) 649–5597. Upon arrival, visitors will be required to present valid government-issued photo identification and submit to security screening in order to inspect and photocopy comments.

All comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

Additionally, please send a copy of your comments by mail to: OCC Desk Officer, 1557–0244, U.S. Office of Management and Budget, 725 17th Street NW., #10235, Washington, DC 20503, or by email to: *oira__submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Shaquita Merritt, OCC Clearance Officer, (202) 649–5490 or, for persons who are deaf or hard of hearing, TTY, (202) 649–5597, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 400 7th Street SW., Suite 3E–218, Mailstop 9W–11, Washington, DC 20219.

SUPPLEMENTARY INFORMATION: The OCC requests that OMB extend its approval of the following collection:

Title: Funding and Liquidity Risk Management.

OMB Control No.: 1557–0244.

Type of Review: Extension, without revision, of a currently approved collection.

Description: The Interagency Policy Statement on Funding and Liquidity Risk Management [1] (Policy Statement) summarizes the principles of sound liquidity risk management that the Federal banking agencies have issued in the past [2] and, where appropriate, harmonizes these principles with the international statement issued by the Basel Committee on Banking Supervision titled ''Principles for Sound Liquidity Risk Management and Supervision.'' [3] The Policy Statement emphasizes supervisory expectations for all depository institutions including banks, savings associations, and credit unions.

Section 14 of the Policy Statement provides that financial institutions should consider liquidity costs, benefits, and risks in strategic planning and budgeting processes. Significant business activities should be evaluated for liquidity risk exposure as well as profitability. More complex and sophisticated financial institutions should incorporate liquidity costs, benefits, and risks in the internal product pricing, performance measurement, and new product approval process for all material business lines, products, and activities. Incorporating the cost of liquidity into these functions should align the risk-taking incentives of individual business lines with the liquidity risk exposure their activities create for the institution as a whole. The quantification and attribution of liquidity risks should be explicit and transparent at the line management level and should include consideration of how liquidity would be affected under stressed conditions.

Section 20 of the Policy Statement states that liquidity risk reports should provide aggregate information with sufficient supporting detail to enable management to assess the sensitivity of the institution to changes in market conditions, its own financial performance, and other important risk factors. Institutions also should report on the use of and availability of government support, such as lending and guarantee programs, and implications on liquidity positions, particularly since these programs are generally temporary or reserved as a source for contingent funding.

Affected Public: Businesses or other for-profit.

Frequency: On occasion.

Estimated Burden: The OCC estimates the burden of this collection of information on national banks and Federal savings associations as follows:

Estimated Number of Respondents: 1,469 total, 15 large (over $100 billion in assets), 46 mid-size ($10–$100 billion), 1,408 small (less than $10 billion).

Total Estimated Burden Hours: 102,496 hours.

On February 29, 2016, the OCC published a notice for 60 days of comment concerning the collection, 81 FR 10364. One comment was received from an individual.

The commenter stated that the collection is burdensome and that the regulatory expectations have no practical utility. Specifically, the commenter questioned whether there is any empirical evidence showing the association between inaccurate performance measurements and liquidity risk and whether it should be labeled operational risk instead. The commenter noted the lack of guidance on how product pricing, performance measurement, and internal approval processes impact liquidity risk, which they believe is likely due to the lack of connection between these factors and an institution's ability to meet its obligations. The commenter suggested that the OCC remove the portions of the guidance regarding the risk in internal product pricing, performance measurement, and new product approval process and replace them with definitions, explanations, or examples.

The comprehensive set of reports used by banks to identify, measure, monitor and control liquidity risk have been shown to be effective by helping to identify risk so that management can implement appropriate mitigation actions. An institution's obligations, and the funding sources used to meet those obligations, depend significantly on its business mix, balance-sheet structure, and the cash flow profiles of its on- and off-balance sheet obligations. A necessary part of controlling liquidity risk is understanding how liquidity risk can be created. While it is prudent for banks to understand the product pricing, performance measurement and internal approval processes, the agencies restricted those expectations to complex and sophisticated organizations.

(a) Whether the information collections are necessary for the proper performance of the functions of the OCC, including whether the information has practical utility;

(b) The accuracy of the OCC's estimate of the information collection burden;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of information collections on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of the services necessary to provide the required information.

[1] 75 FR 13656 (Mar. 22, 2010).

BILLING CODE 4810–33–P

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

May 24, 2016.

The Department of the Treasury will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, Public Law 104–13, on or after the date of publication of this notice.

DATES: Comments should be received on or before June 27, 2016 to be assured of consideration.

ADDRESSES: Send comments regarding the burden estimates, or any other aspect of the information collection, including suggestions for reducing the burden, to (1) Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for Treasury, New Executive Office Building, Room 10235, Washington, DC 20503, or email at *OIRA_Submission@OMB.EOP.gov* and (2) Treasury PRA Clearance Officer, 1750 Pennsylvania Ave. NW., Suite 8117, Washington, DC 20220, or email at *PRA@treasury.gov*.

FOR FURTHER INFORMATION CONTACT: Copies of the submission may be obtained by emailing *PRA@treasury.gov,* calling (202) 622–1295, or viewing the entire information collection request at *www.reginfo.gov*.

Financial Crimes Enforcement Network (FinCEN)

OMB Control Number: 1506–0049.

Type of Review: Extension of a previously approved collection.

Title: Expansion of Special Information Sharing Procedures to Deter Money Laundering and Terrorist Activity.

Abstract: The relevant Bank Secrecy Act (''BSA'') information sharing rules that allow certain foreign law enforcement agencies, and State and local law enforcement agencies, to submit requests for information to financial institutions. The rule also clarifies that FinCEN itself, on its own behalf and on behalf of other appropriate components of the Department of the Treasury, may submit such requests. Modification of the information sharing rules is a part of the Department of the Treasury's continuing effort to increase the efficiency and effectiveness of its anti-money laundering and counter-terrorist financing policies.

Affected Public: Businesses or other for-profits; State, local, or tribal governments.

Estimated Total Annual Burden Hours: 1,087,236.

Brenda Simms,

Treasury PRA Clearance Officer.

[FR Doc. 2016–12625 Filed 5–26–16; 8:45 am]

BILLING CODE 4810–02–P

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

May 24, 2016.

The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, Public Law 104–13, on or after the date of publication of this notice.

DATES: Comments should be received on or before June 27, 2016 to be assured of consideration.

ADDRESSES: Send comments regarding the burden estimates, or any other aspect of the information collections, including suggestions for reducing the burden, to (1) Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for Treasury, New Executive Office Building, Room 10235, Washington, DC 20503, or email at *OIRA_Submission@OMB.EOP.gov* and (2) Treasury PRA Clearance Officer, 1750 Pennsylvania Ave. NW., Suite 8117, Washington, DC 20220, or email at *PRA@treasury.gov.*

Alcohol and Tobacco Tax and Trade Bureau (TTB)

OMB Control Number: 1513–0093.

Type of Review: Revision of a currently approved collection.

Title: Supporting Data for Nonbeverage Drawback Claims.

Form: TTB F 5600.38.

Abstract: TTB uses the information collected on form TTB F 5600.38 to determine if a taxpayer meets the criteria to be granted an extension of the time period to make their tax payment because of circumstances beyond the taxpayer's control. TTB is increasing the estimated number of respondents and the resulting total annual burden hours associated with this information collection due to an increase in the number of industry members requesting an extension of time for payment of tax.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 8.

OMB Control Number: 1513–0098.

Type of Review: Revision of a currently approved collection.

Title: Record of Operations—Importer of Tobacco Products or Processed Tobacco.

Form: TTB F 5451.2.

Abstract: Manufacturers of nonbeverage alcohol products use TTB F 5451.2 to submit the data required to support claims for drawback of Federal alcohol excise taxes. TTB uses the data collected on this form to verify claims for drawback of taxes and, hence, to protect the revenue. This form is used to verify that all distilled spirits can be accounted for and that drawback is paid only in the amount prescribed by law. TTB is decreasing the estimated number of respondents and the resulting total annual burden hours associated with this information collection due to a decrease in the number of drawback claims TTB receives.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 2,272.

OMB Control Number: 1513–0106.

Type of Review: Revision of a currently approved collection.

Title: Application, Permit and Report—Wine and Beer (Puerto Rico), and Application, Permit and Report—Distilled Spirits Products (Puerto Rico).

Abstract: Under the authority of the Internal Revenue Code at 26 U.S.C. 5741, the TTB regulations require importers of tobacco products or processed tobacco to maintain records of physical receipts and disposition of tobacco products or processed tobacco. The respondents use these usual and customary business records to prepare TTB Form 5220.6, Monthly Report—Tobacco Products or Processed Tobacco (approved under OMB control number 1513–0107). TTB is decreasing the estimated number of respondents to reflect a decrease in the number of importers of tobacco products or processed tobacco regulated by TTB.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 1.

Brenda Simms,

Treasury PRA Clearance Officer.

[FR Doc. 2016–12626 Filed 5–26–16; 8:45 am]

BILLING CODE 4810–31–P

DEPARTMENT OF THE TREASURY

Proposed Collections; Comment Requests

AGENCY: Departmental Offices; Department of the Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork burdens, invites the general public and other Federal agencies to comment on revisions of an information collection that are proposed for approval by the Office of Management and Budget. The Office of International Affairs within the Department of the Treasury is soliciting comments concerning Treasury International Capital Forms CQ–1 and CQ–2, ''Financial and Commercial Liabilities to, and Claims on, Unaffiliated Foreign Residents.''

DATES: Written comments should be received on or before July 26, 2016 to be assured of consideration.

ADDRESSES: Direct all written comments to Dwight Wolkow, International Portfolio Investment Data Systems, Department of the Treasury, Room 5422, 1500 Pennsylvania Avenue NW., Washington, DC 20220. In view of possible delays in mail delivery, please also notify Mr. Wolkow by email (*comments2TIC@treasury.gov*), fax (202–622–2009) or telephone (202–622–1276).

FOR FURTHER INFORMATION CONTACT: Copies of the proposed forms and instructions are available on the Treasury's TIC Web page for forms, *http://www.treasury.gov/resource-center/data-chart-center/tic/Pages/forms.aspx*. Requests for additional information should be directed to Mr. Wolkow.

SUPPLEMENTARY INFORMATION:

Title: Treasury International Capital Form CQ–1, ''Financial Liabilities to, and Claims on, Unaffiliated Foreign Residents;'' and Treasury International Capital Form CQ–2, ''Commercial Liabilities to, and Claims on, Unaffiliated Foreign Residents.''

OMB Number: 1505–0024.

Abstract: Forms CQ–1 and CQ–2 are part of the Treasury International Capital (TIC) reporting system, which is required by law (22 U.S.C. 286f; 22 U.S.C. 3103; E.O. 10033; 31 CFR part 128), and is designed to collect timely information on international portfolio capital movements. Forms CQ–1 and CQ–2 are quarterly reports filed by non-financial enterprises in the U.S. to report their international portfolio transactions with unaffiliated foreign residents. This information is necessary for compiling the U.S. balance of payments accounts and the U.S. international investment position, and for use in formulating U.S. international financial and monetary policies.

Current Actions: No changes are proposed at this time.

Type of Review: Extension of a currently approved data collection.

Affected Public: Business or other for-profit organizations.

Forms: CQ–1 and CQ–2 (1505–0024).

Estimated Number of Respondents: 148.

Estimated Average Time per Respondent: Six and nine-tenths (6.9) hours per respondent per filing. This average time varies from 13 hours for the approximately 12 major data reporters to 6.5 hours for the other reporters.

Estimated Total Annual Burden Hours: 4,085 hours, based on 4 reporting periods per year.

Request For Comments: Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval. All comments will become a matter of public record. The public is invited to submit written comments concerning: (a) Whether Forms CQ–1 and CQ–2 are necessary for the proper performance of the functions of the Office, including whether the information will have practical uses; (b) the accuracy of the above estimate of the burdens; (c) ways to enhance the quality, usefulness and clarity of the information to be collected; (d) ways to minimize the reporting and/or record keeping burdens on respondents, including the use of information technologies to automate the collection of the data; and (e) estimates of capital or start-up costs of operation, maintenance and purchase of services to provide information.

Dwight Wolkow,

Administrator, International Portfolio Investment Data Systems.

[FR Doc. 2016–12273 Filed 5–26–16; 8:45 am]

BILLING CODE 4810–25–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0823]

Proposed Information Collection Activity; Comment Request (Expanded Access to Non-VA Care Through the Veterans Choice Program)

AGENCY: Veterans Health Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: The Veterans Health Administration (VHA), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each extension collection, and allow 60 days for public comment in response to the notice. This notice solicits comments on the information needed for Veterans, Veteran Representatives and health care providers to request reimbursement from the federal government for emergency services at a private institution.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before July 26, 2016.

ADDRESSES: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at *www.Regulations.gov;* or Brian McCarthy, Office of Regulatory and Administrative Affairs, Veterans Health Administration (10B4), Department of Veterans Affairs, 810 Vermont Avenue NW., Washington, DC 20420 or email: *Brian.McCarthy4@va.gov.* Please refer to ''OMB Control No. 2900–0823'' in any correspondence. During the comment period, comments may be viewed online through the FDMS.

FOR FURTHER INFORMATION CONTACT: Brian McCarthy at (202) 461–6345.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995 (Pub. L. 104–13; 44 U.S.C. 3501–3521), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to Section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VHA invites comments on: (1) Whether the proposed

collection of information is necessary for the proper performance of VHA's functions, including whether the information will have practical utility; (2) the accuracy of VHA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Titles: Election to Receive Authorized Non-VA Care and Selection of Provider for the Veterans Choice Program (VA Form 10–10143).

OMB Control Number: 2900–0823.

Type of Review: Extension.

Abstract: Section 17.1515 requires eligible veterans to notify VA whether the veteran elects to receive authorized non-VA care through the Veterans Choice Program, be placed on an electronic waiting list, or be scheduled for an appointment with a VA health care provider. Section 17.1515(b)(1) also allows eligible veterans to specify a particular non-VA entity or health care provider, if that entity or provider meets certain requirements.

Affected Public: Individuals or Households.

Estimated Annual Burden: 928,606 burden hours.

Estimated Average Burden per Respondent: 10 minutes.

Frequency of Response: 12.64 times per year.

Estimated Number of Respondents: 440,794 respondents.

Titles: Health-Care Plan Information for the Veterans Choice Program (VA Form 10–10143a).

OMB Control Number: 2900–0823.

Type of Review: Extension.

Abstract: Section 17.1510(d) requires eligible veterans to submit to VA information about their health-care plan to participate in the Veterans Choice Program.

Affected Public: Individuals or Households.

Estimated Annual Burden: 88,159 burden hours.

Estimated Average Burden per Respondent: 10 minutes.

Frequency of Response: 1.2 times per year.

Estimated Number of Respondents: 440,794 respondents.

Titles: Submission of Medical Record Information Under the Veterans Choice Program (VA Form 10–10143b).

OMB Control Number: 2900–0823.

Type of Review: Extension.

Abstract: Participating eligible entities and providers are required to submit a copy of any medical record related to hospital care or medical services furnished under this Program to an eligible veteran.

Affected Public: Individuals or Households.

Estimated Annual Burden: 464,428 burden hours.

Estimated Average Burden per Respondent: 5 minutes.

Frequency of Response: 29.80 times per year.

Estimated Number of Respondents: 187,000 respondents.

Titles: Submission of Information on Credentials and Licenses by Eligible Entities or Providers (VA Form 10–10143c).

OMB Control Number: 2900–0823.

Type of Review: Extension.

Abstract: Section 17.1530 requires eligible entities and providers to submit verification that the entity or provider maintains at least the same or similar credentials and licenses as those required of VA's health care providers, as determined by the Secretary.

Affected Public: Individuals or Households.

Estimated Annual Burden: 15,583 burden hours.

Estimated Average Burden per Respondent: 5 minutes.

Frequency of Response: Once annually.

Estimated Number of Respondents: 187,000 respondents.

Titles: Secondary Authorization Request for VA Community Care (VA Form 10–10143e).

OMB Control Number: 2900–0823.

Type of Review: New.

Abstract: VA Form 10–10143e would require non-VA health care providers to submit requests for additional services supporting the original authorized plan of care to the agency. A copy of all medical and dental records (including but not limited to images, test results, and notes or other records of what care was provided and why) related to a Veteran's care provided under this Program must be submitted to VA for entry into the veteran's electronic medical record. Providers will be required to submit records produced as a result of care authorized after the beginning of the Program.

Affected Public: Individuals or Households.

Estimated Annual Burden: 289,826 burden hours.

Estimated Average Burden per Respondent: 20 minutes.

Frequency of Response: 4.56 times per year.

Estimated Number of Respondents: 190,675 respondents.

By direction of the Secretary.

Kathleen M. Manwell,

Program Analyst, VA Privacy Service, Office of Privacy and Records Management, Department of Veterans Affairs.

21 CFR Part 101

[Docket No. FDA–2012–N–1210]

RIN 0910–AF22

Food Labeling: Revision of the Nutrition and Supplement Facts Labels

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA or we) is amending its labeling regulations for conventional foods and dietary supplements to provide updated nutrition information on the label to assist consumers in maintaining healthy dietary practices. The updated information is consistent with current data on the associations between nutrients and chronic diseases, health-related conditions, physiological endpoints, and/or maintaining a healthy dietary pattern that reflects current public health conditions in the United States, and corresponds to new information on consumer understanding and consumption patterns. The final rule updates the list of nutrients that are required or permitted to be declared; provides updated Daily Reference Values and Reference Daily Intake values that are based on current dietary recommendations from consensus reports; amends requirements for foods represented or purported to be specifically for children under the age of 4 years and pregnant and lactating women and establishes nutrient reference values specifically for these population subgroups; and revises the format and appearance of the Nutrition Facts label.

DATES: *Effective date:* The final rule becomes effective on July 26, 2016. *Compliance date:* The compliance date of this final rule is July 26, 2018 for manufacturers with $10 million or more in annual food sales and July 26, 2019 for manufacturers with less than $10 million in annual food sales. See section III, Effective and Compliance Dates, for more detail. The incorporation by reference of certain publications listed in the rule is approved by the Director of the Federal Register as of July 26, 2016.

FOR FURTHER INFORMATION CONTACT: Blakeley Fitzpatrick, Center for Food Safety and Applied Nutrition (HFS–830), Food and Drug Administration, 5100 Paint Branch Pkwy., College Park, MD 20740, 240–402–5429, email: *NutritionProgramStaff@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION:

Table of Contents

Executive Summary

Purpose of the Regulatory Action

We are amending our regulations for the nutrition labeling of conventional foods and dietary supplements to help consumers maintain healthy dietary practices. Section 403(q) of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 343(q)) specifies certain nutrients to be declared in nutrition labeling, and authorizes the Secretary of Health and Human Services to require other nutrients to be declared if the Secretary determines that a nutrient will provide information regarding the nutritional value of such food that will assist consumers in maintaining healthy dietary practices. The Secretary also has discretion under section 403(q) of the FD&C Act to remove, by regulation and under certain circumstances, nutrient information that is otherwise explicitly required in food labeling under this section.

The final rule revises our regulations to provide updated nutrition information on the label and to improve how the nutrition information is presented to consumers.

Summary of the Major Provisions of the Regulatory Action in Question

The final rule revises the Nutrition Facts label by:

- Removing the declaration of ''Calories from fat'' because current science supports a view that the type of fat is more relevant than overall total fat intake in increased risk of chronic diseases;
- Requiring the declaration of the gram amount of ''added sugars'' in a serving of a product, establishing a Daily Reference Value (DRV), and requiring the percent Daily Value (DV) declaration for added sugars;
- Changing ''Sugars'' to ''Total Sugars'' and requiring that ''Includes 'X' g Added Sugars'' be indented and declared directly below ''Total Sugars'' on the label;
- Updating the list of vitamins and minerals of public health significance. For example, the final rule requires the declaration of vitamin D and potassium and permits, rather than requires, the declaration of vitamins A and C;
- Updating certain reference values used in the declaration of percent DVs of nutrients on the Nutrition Facts and Supplement Facts labels;
- Revising the format of the Nutrition Facts and Supplement Facts labels to increase the prominence of the term ''Calories;''
- Removing the requirement for the footnote table listing the reference values for certain nutrients for 2,000 and 2,500 calorie diets;
- Requiring the maintenance of records to support the declarations of certain nutrients under specified circumstances. For example, because there are no analytical methods that can distinguish between dietary fiber (soluble and insoluble fiber) and nondigestible carbohydrates that do not meet the definition of dietary fiber; added and naturally occurring sugars or the various forms of vitamin E; or folate and folic acid, the final rule requires manufacturers to make and keep certain written records to verify the declarations of dietary fiber, added sugars, vitamin E, and folate and folic acid in the labeling of the food associated with such records. The final rule requires these records to be kept for at least 2 years after introduction or delivery for introduction of the food into interstate commerce. A similar requirement exists with respect to added sugars in foods subject to non-enzymatic browning and fermentation because there are no analytical methods that can determine the amount of added sugar in specific foods containing added sugars alone or in combination with naturally occurring sugars, where the added sugars are subject to non-enzymatic browning and fermentation. However, for manufacturers of such foods who are unable to reasonably approximate the amount of added sugars in a serving of food to which the records requirements apply, the final rule allows manufacturers to submit a petition to request an alternative means of compliance; and
- Establishing a compliance date of 2 years after the final rule's effective date, except that manufacturers with less than $10 million in annual food sales have a compliance date of 3 years after the final rule's effective date. (For more details, see part III.)

The final rule is the result of significant stakeholder engagement. We received nearly 300,000 comments, conducted several consumer studies and made those studies publicly available, and, in light of new scientific recommendations (particularly for added sugars), issued a supplemental notice of proposed rulemaking.

Elsewhere in this issue of the **Federal Register**, we have published a final rule that amends the definition of a single-serving container, requires dual column labeling for certain containers, updates the reference amounts customarily consumed and serving sizes for several food product categories, and amends the serving size for breath mints.

Costs and Benefits

We have developed one final regulatory impact analysis (FRIA) for this final rule as well as the final rule entitled ''Food Labeling: Serving Sizes of Foods That Can Reasonably Be Consumed at One Eating Occasion; Dual-Column Labeling; Updating, Modifying, and Establishing Certain Reference Amounts Customarily Consumed; Serving Size for Breath Mints; and Technical Amendments.'' The FRIA discusses key inputs in the estimation of costs and benefits of the changes finalized by the rules and assesses the sensitivity of cost and benefit totals to those inputs. The two nutrition labeling rules—which have a compliance date of 2 years after the final rule's effective date for manufacturers with $10 million or more in annual food sales, and 3 years after the final rule's effective date for manufacturers with less than $10 million in annual food sales—have impacts, including the sign on net benefits, that are characterized by substantial uncertainty. The primary sensitivity analysis shows benefits having the potential to range between $0.2 and $2 or $5 billion, and costs ranging between $0.2, $0.5 and $0.8 billion (annualized over the next twenty years, in 2014 dollars, at seven percent interest).[1]

TABLE 1—SUMMARY OF THE PRIMARY SENSITIVITY ANALYSIS OF THE COSTS AND BENEFITS OF THE FINAL RULES

[in billions of 2014$]

	Benefits (Low)	Benefits (Mean)	Benefits (High)	Costs (Low)	Costs (Mean)	Costs (High)
Present Value						
3%	$2.8	$33.1	$77.7	$2.3	$4.8	$8.6

[1] There is substantial uncertainty regarding the impacts of the two nutrition labeling rules. For a full discussion of the uncertainty, please see the Welfare Estimates—Primary Sensitivity Analysis section of the regulatory impact analysis.

TABLE 1—SUMMARY OF THE PRIMARY SENSITIVITY ANALYSIS OF THE COSTS AND BENEFITS OF THE FINAL RULES—Continued

[in billions of 2014$]

	Benefits (Low)	Benefits (Mean)	Benefits (High)	Costs (Low)	Costs (Mean)	Costs (High)
7%	1.9	22.3	52.5	2.2	4.5	8.3
Annualized Amount						
3%	0.2	2.2	5.2	0.2	0.3	0.6
7%	0.2	2.1	5.0	0.2	0.4	0.8

Notes: Costs estimates reflect an assumption that the rules have the same compliance date. Compliance period is 36 months for small businesses and 24 months for large businesses. For purposes of this analysis, we consider a small business to be a business with annual food sales of less than $10 million, and a large business to be a business with annual food sales of $10 million or more. Costs include relabeling, recordkeeping, fiber study, additional labeling, future UPC growth labeling, and reformulation costs. Annualized Amount = Amount/Annualizing Factor. Three percent annualizing factor = 14.88. Seven percent annualizing factor = 10.59. The annualizing factors are calculated by summing the inverse of 1 plus the discount rate to the power of the year (t = 1 through t = 20).

I. Background

In general, under section 403(q) of the FD&C Act, a food is deemed misbranded unless its label or labeling bears nutrition information for certain nutrients. To implement section 403(q) of the FD&C Act, we have issued regulations related to:

- Declaration of nutrients on food labeling, including nutrients that are required or permitted to be declared and the format for such declaration;
- Label reference values for use in declaring the nutrient content of a food on its label or labeling;
- Two types of reference values, Reference Daily Intakes (RDIs) for vitamins and minerals and DRVs for certain nutrients, which are used to declare nutrient contents as percent DVs on the Nutrition Facts label;
- Exemptions for certain specified products; and
- A simplified form of nutrition labeling and the circumstances in which such simplified nutrition labeling can be used.

These regulations are at § 101.9 (21 CFR 101.9).

Elsewhere in this issue of the **Federal Register**, we are publishing a final rule that amends the definition of a single-serving container, requires dual column labeling for certain containers, updates the reference amounts customarily consumed and serving sizes for several food product categories and amends the serving size for breath mints.

In addition, section 403(q)(5)(F) of the FD&C Act imposes specific requirements that relate to the labeling of dietary supplement products. Accordingly, our food labeling regulations, at §§ 101.9(j)(6) and 101.36, establish requirements for nutrition labeling of dietary supplements.

A. Legal Authority

We are updating the Nutrition Facts label and Supplement Facts label, as set forth in this final rule, consistent with our authority in section 403(q) of the FD&C Act. Section 403(q)(1) of the FD&C Act states that a food shall be deemed to be misbranded if, with certain exceptions, it fails to bear nutrition labeling and identifies specific nutrient and calorie information required in labeling. Section 403(q)(2)(A) of the FD&C Act gives the Secretary, and by delegation, FDA, the discretion to require, by regulation, nutrition information about nutrients other than those specified in section 403(q)(1) of the FD&C Act to assist consumers in maintaining healthy dietary practices. Section 403(q)(2)(B) of the FD&C Act permits the Secretary, and by delegation, FDA, to remove information relating to a nutrient required by section 403(q)(1) or 403(q)(2)(A) of the FD&C Act if the Secretary determines that it is not necessary to assist consumers in maintaining healthy dietary practices. Consistent with these authorities, we are revising certain nutrient declarations in the Nutrition Facts label and Supplement Facts label. In addition, FDA's authority includes section 2(b)(1) of the Nutrition Labeling and Education Act of 1990 (NLEA) (21 U.S.C. 343 note). Specifically, section 2(b)(1)(A) of the NLEA requires nutrition label information be conveyed in a manner that enables the public to readily observe and comprehend the information and to understand its relative significance in the context of a total daily diet. Section 2(b)(1)(A) of the NLEA also states that such information should be consistent with current scientific knowledge about nutrients and health. We are changing DVs (RDIs and DRVs, as applicable) for some nutrients, and these values are used to calculate the percent DV for use on food labels. The use of reference values based on current science and the use of such values to calculate the percent DV can help consumers understand the nutrition information and its relative significance in a total daily diet. Furthermore, section 2(b)(1)(C) of the NLEA requires that the regulations permit the label or labeling of food to include nutrition information which is in addition to the information required by section 403(q) of the FD&C Act and ''which is of the type described in subparagraph (1) or (2) of such section . . . .'' We are changing the voluntary declaration of certain nutrients in the Nutrition Facts label consistent with this authority.

Other relevant authorities include sections 701(a), 403(a)(1) and 201(n) of the FD&C Act (21 U.S.C. 371(a), 21 U.S.C. 343(a)(1), and 21 U.S.C. 321(n), respectively). Under section 701(a) of the FD&C Act, we may issue regulations for the efficient enforcement of the FD&C Act to ''effectuate a congressional objective expressed elsewhere in the Act'' (*Association of American Physicians and Surgeons, Inc.* v. *FDA,* 226 F. Supp. 2d 204 (D.D.C. 2002) (citing *Pharm. Mfrs. Ass'n.* v. *FDA,* 484 F. Sup. 1179, 1183 (D. Del. 1980)).

We are relying on our authority under sections 403(q), 403(a), 201(n) and 701(a) of the FD&C Act to establish record requirements to support nutrient declarations in labeling for added sugars, dietary fiber, soluble fiber, insoluble fiber, vitamin E, and folate/folic acid, under certain circumstances, so that we can determine compliance with labeling requirements and take enforcement action as needed. For these nutrients, there is no official method of analysis of the Association of Official Analytical Chemists (AOAC) International or other reliable or appropriate analytical procedure, otherwise required by § 101.9(g), available for us to quantify the declared amount of the nutrient, under certain circumstances. Section 101.9(g) sets forth the standards for accuracy of the amount statements of nutrients on food labels. Failing to accurately state the amounts of nutrients on the label under

§ 101.9(g) would result in a product being misbranded. Under section 403(q) of the FD&C Act, a food must bear, in its label or labeling, the amount of the nutrient the food contains. Moreover, the nutrient declaration must be truthful and not misleading under sections 403(a)(1) and 201(n) of the FD&C Act. Thus, when a food product contains dietary fiber (whether soluble, insoluble, or a combination of both) and added non-digestible carbohydrate(s) that does not meet the definition of dietary fiber, we are requiring manufacturers to make and keep certain written records to verify the amount of added non-digestible carbohydrate that does not meet the definition of dietary fiber. When vitamin E is present in a food as a mixture of *all rac*-α-tocopherol acetate and RRR-α-tocopherol, we are requiring manufacturers to make and keep written records to verify the amount of *all rac*-α-tocopherol acetate added to the food and RRR-α-tocopherol in the finished food. When a mixture of folate and folic acid is present in a food, we are requiring manufacturers to make and keep records to verify the amount of folic acid added to the food and folate in the finished food. When added sugars as well as naturally occurring sugars are present in a food, we are requiring manufacturers to make and keep records to verify the declared amount of added sugars in the food. Finally, we are requiring manufacturers to make and keep records to verify the declared amount of added sugars in specific foods, alone or in combination with naturally occurring sugars, where the added sugars are subject to non-enzymatic browning and/or fermentation.

The final rule's record requirements for these nutrients are designed to ensure that the nutrient declarations are accurate, truthful, and not misleading, based on information known only to the manufacturer, and to facilitate efficient and effective action to enforce the requirements when necessary. Our authority to establish records requirements has been upheld under other provisions of the FD&C Act where we have found such records to be necessary (*National Confectioners Assoc.* v. *Califano,* 569 F.2d 690, 693–94 (D.C. Cir. 1978)). The records we are requiring are only for foods for which an adequate analytical method is not available. The records will allow us to verify the declared amount of each nutrient and that such amount is truthful and not misleading. Thus, the records requirements will help in the efficient enforcement of the FD&C Act.

The authority granted to FDA under sections 701(a), 403(q), 403(a)(1) and 201(n) of the FD&C Act not only includes the authority to establish records requirements, but also includes access to such records. Without such authority, the nutrient declarations for these specific nutrients that we have determined are necessary to assist consumers in maintaining healthy dietary practices under section 403(q)(2)(A) of the FD&C Act are, practically speaking, not enforceable. Without access to such records, we would not know whether the amount declared on the label or in the labeling of these nutrients, under the circumstances described, is truthful and not misleading under sections 403(a)(1) and 201(n) of the FD&C Act. The introduction or delivery for introduction into interstate commerce of a misbranded food is a prohibited act under section 301(a) of the FD&C Act (21 U.S.C. 331(a)). Thus, to determine whether the food is misbranded and the manufacturer has committed a prohibited act, we must have access to the manufacturer's records that we are requiring be made and kept under sections 403(q), 403(a)(1), 201(n) and 701(a) of the FD&C Act. Failure to make and keep records and provide the records to us, as described in § 101.9(g)(10) and (11), would result in the food being misbranded under sections 403(q) and 403(a)(1) of the FD&C Act.

B. Need To Update the Nutrition Facts and Supplement Facts Labels

We first issued regulations related to the Nutrition Facts label in 1993 and amended them in 1995 (to establish new DVs and to update the DVs (60 FR 67164, December 28, 1995)) and in 2003 (to address the declaration of *trans* fats (68 FR 41434, July 11, 2003)). From July 2003 to November 2007, we also issued three advance notices of proposed rulemaking (ANPRMs) seeking public comment on issues relevant to updating the Nutrition Facts label. These ANPRMs sought comment on:

- Data that could be used to establish new nutrient content claims about *trans* fatty acids; to establish qualifying criteria for *trans* fat in nutrient content claims for saturated fatty acids and cholesterol, lean and extra lean claims, and health claims that contain a message about cholesterol raising lipids; and, in addition, to establish disclosure and disqualifying criteria to help consumers make heart healthy food choices. We also requested comments on whether we should consider statements about *trans* fat, either alone or in combination with saturated fat and cholesterol, as a footnote in the Nutrition Facts label or as a disclosure statement in conjunction with claims to enhance consumer understanding about cholesterol-raising lipids and how to use the information to make healthy food choices (68 FR 41507, July 11, 2003). We later extended the comment period (69 FR 20838, April 19, 2004) to receive comments that considered the information in the 2004 meeting of the Nutrition Subcommittee of the Food Advisory Committee which addressed whether the available scientific evidence supported listing the percent DV for saturated fat and *trans* fat together or separately on the Nutrition Facts label and what the maximal daily intake of *trans* fat may be;
- The prominence of calories on the food label (70 FR 17008, April 4, 2005) (the 2005 ANPRM). We took this action in response to recommendations from the Obesity Working Group established by the Commissioner of Food and Drugs to develop an action plan to address the growing incidence of obesity in the United States. The 2005 ANPRM, in part, requested comments on whether giving more prominence to the declaration of calories per serving would increase consumer awareness of the caloric content of the packaged food and whether providing a percent DV for total calories would help consumers understand the caloric content of the packaged food in the context of a 2,000 calorie diet. We also requested comments on questions concerning the declaration of ''Calories from fat;'' and
- The revision of reference values and mandatory nutrients (72 FR 62149, November 2, 2007) (the 2007 ANPRM). The 2007 ANPRM requested comment on various aspects of nutrition labeling, including new reference values we should use to calculate the percent DV in the Nutrition Facts and Supplement Facts labels and factors we should consider in establishing such new reference values. We also requested comments on whether we should require that certain nutrients be added or removed from the Nutrition Facts and Supplement Facts labels.

Additionally, between 1993 and 2013, we received 12 citizen petitions asking us to make various changes to the Nutrition Facts and Supplement Facts labels. For example, some petitions asked us to permit the use of a different term on the Nutrition Facts label, while others sought changes in definitions, values (such as caloric values or the DV for a specific nutrient), or the inclusion of more information on the Nutrition Facts label.

Yet, as we considered the issues raised in the ANPRMs and the citizen petitions, the public health profile of the U.S. population changed, and new

information became available about nutrient definitions, reference intake values, and analytical methods. New dietary recommendations also were published. We reconsidered what nutrients we should require or permit to be listed on the Nutrition Facts label and what nutrient reference intake values we should use as a basis for calculating the percent DVs in food labeling. We also considered corresponding changes to the Supplement Facts labels. Consequently, in the **Federal Register** of March 3, 2014 (79 FR 11879), we issued a proposed rule to amend our labeling regulations for conventional foods and dietary supplements to provide updated nutrition information on the label and to help consumers maintain healthy dietary practices. The preamble to the proposed rule discussed, in some detail, the reasons why we felt it necessary to update the Nutrition Facts and Supplement Facts labels (see 79 FR 11879 at 11884 through 11889). In brief, the preamble to the proposed rule discussed:

- Rates of chronic disease, such as cardiovascular disease, diabetes, and cancer, and changes in obesity rates (79 FR 11879 at 11885);
- Dietary recommendations, consensus reports, and national survey data, such as the Institute of Medicine (IOM) Dietary Reference Intakes Reports (which resulted in the development of a set of reference values known collectively as Dietary Reference Intakes (DRIs) (id. at 11885 through 11887). The DRIs themselves consist of four categories of reference values: (1) The Estimated Average Requirement (EAR); (2) Recommended Dietary Allowance (RDA); (3) Adequate Intake (AI); and (4) Tolerable Upper Intake Level (UL) (id.). The preamble to the proposed rule explained that the EAR is the average daily nutrient intake level that is estimated to meet the requirements of half of the healthy individuals in a particular life stage and gender group and that EARs are used for assessing the statistical probability of adequacy of nutrient intakes of groups of people. The RDA is an estimate of the average intake level that meets the nutrient requirements of nearly all (97 to 98 percent) healthy individuals in a particular life stage and gender group and is set using the EAR. In general, the RDA is the EAR plus two times the standard deviation of the EAR. The RDA is used to plan nutrient intakes for individuals to ensure a low probability of inadequacy. The AI is the level determined for an essential nutrient or a nutrient that is beneficial for human health when there is insufficient evidence to calculate an EAR for that nutrient, and therefore insufficient evidence on which to establish an RDA. AIs can be based on a variety of data, including scientific evidence about the essentiality of a nutrient (*i.e.,* choline, biotin, fluoride), experimental data on risk reduction of chronic disease (*i.e.,* dietary fiber, potassium), and median intakes of a nutrient using national survey data (*i.e.,* vitamin K, pantothenic acid, chromium, manganese, linoleic acid, and α-linolenic acid). Although there is less certainty about an AI value than about an RDA value, the AI is similarly designed to cover the needs of nearly all individuals. The UL is the highest average daily intake level likely to pose no risk of adverse health effects for nearly all people in a particular group. The UL is not intended to be a recommended level of intake, but is used to assess the risk of adverse health effects from excessive nutrient intake. As intake above the UL increases, so does the potential for risk of adverse health effects (id. at 11885 through 11886). The preamble to the proposed rule also discussed the Dietary Guidelines for Americans (DGA); the DGA is developed jointly by the U.S. Department of Agriculture and the U.S. Department of Health and Human Services and provides key recommendations on dietary patterns and quantitative intake recommendations with respect to micronutrients and macronutrients (id. at 11886). Although the preamble to the proposed rule discussed the DGA that was issued in 2010, in February 2015, the Scientific Report of the 2015 Dietary Guidelines Advisory Committee (DGAC Report) became publicly available. While the DGAC Report is not a DGA itself (because the Federal government must determine how to use the information in the DGAC Report to develop the 2015–2020 version of the DGA), the DGAC Report contains scientific information on specific nutrients and vitamins as well as a review of the underlying scientific evidence. For example, the DGAC Report contains scientific evidence related to a daily intake recommendation for added sugars. In the **Federal Register** of July 27, 2015 (80 FR 44303), we issued a supplemental proposed rule with respect to the scientific evidence in the DGAC Report pertaining to added sugars and the possible inclusion of added sugars to the Nutrition Facts and Supplement Facts labels.
- Consumer use and understanding of the Nutrition Facts label (79 FR 11879 at 11887). The preamble to the proposed rule discussed, among other things, the frequency at which consumers use food labels and the purposes for which they consulted food labels (id.). The preamble to the proposed rule also noted that consumer research data suggested that, despite widespread use of food labels, certain elements of the Nutrition Facts label ''may need improvement'' (such as consumer understanding of the concept of percent DVs) (id.). We also stated that we intended to continue performing research during the rulemaking process to evaluate how variations in label format may affect consumer understanding and use of the Nutrition Facts label as well as to help inform consumer education (id.).
- Other considerations, including the focus of the Nutrition Facts label itself and practical limitations (id. at 11887 through 11888). For example, we noted that the Nutrition Facts label information is to help consumers make more informed choices to consume a healthy diet and not intended for the clinical management of an existing disease. However, we also said that we were considering the large proportion of the U.S. population that is at risk for chronic disease as we proposed changes to the Nutrition Facts label's content and format (id. at 11887). Simultaneously, we recognized that there is not room on the label for all information that may be related to maintaining healthy dietary practices and that space constraints on the label of most foods make it impractical to declare all essential nutrients (id. at 11888). We added that having a large amount of information on the label could interfere with consumers' abilities to use the information that has the greatest public health significance and that, given the amount and format of information that we require on the label, limits to the voluntary information on the label are necessary so that voluntary information does not clutter the label, does not mislead, confuse, or overwhelm the consumer, and does not take away prominence of and emphasis on the required information (id.).

The preamble to the proposed rule also discussed the citizen petitions and ANPRMs (id. at 11888 through 11889) as influencing our development of the proposed rule. Additionally, as stated earlier in part I.B, in the **Federal Register** of July 27, 2015 (80 FR 44303), we issued a supplemental proposed rule to establish a DRV of 10 percent of total energy intake from added sugars, require the declaration of the percent DV for added sugars on the label, and to provide text for the footnotes to be used on the Nutrition Facts label. The

supplemental proposed rule also provided additional data and information to support the declaration of added sugars on the label and made our consumer research regarding the footnote text and added sugars declarations publicly available.

II. Comments to the Proposed Rule and the Supplemental Proposed Rule, Our Responses, and a Description of the Final Rule

A. Introduction

The proposed rule would amend our labeling regulations for conventional foods and dietary supplements to provide updated nutrition information on the label. In brief, the proposed rule would (among other things):

- Require the declaration of ''Added Sugars'' on the label. ''Sugars'' include both ''added sugars'' and sugars that are naturally occurring in food. The proposed rule would require the declaration of ''Added Sugars'' indented under ''Sugars'' so that both would be listed;
- Remove the requirement for declaring ''Calories from fat.'' Current research shows that the total fat in the diet is less important than the type of fat. In addition, our consumer research shows that removal of the declaration of ''calories from fat'' has no effect on consumers' ability to judge the healthfulness of a product;
- Revise the nutrients of public health significance that must be declared on the label. The proposed rule would require the declaration of vitamin D and potassium. Vitamin D is important for its role in bone development and general health, and intakes among some population groups are inadequate. Adequate potassium intake is beneficial in lowering blood pressure, and intakes of this nutrient are also low among some population groups. The proposed rule also would no longer require mandatory labeling for vitamin C or vitamin A because data indicate that deficiencies are not common. Voluntary labeling for vitamins C and A would be allowed; and
- Revise DVs for certain nutrients that are either mandatory or voluntary on the label. Examples include calcium, sodium, dietary fiber and vitamin D. Some DVs are intended to guide consumers about maximum intake—saturated fat, for example—while others are intended to help consumers meet a nutrient requirement—iron, for example. DVs are used to calculate the percent Daily Value (% DV) on the label, which helps consumers understand the nutrient information on the product label in the context of the total diet. We considered revisions to the DVs based on scientific evidence related to recommendations published by the IOM and other reports such as the DGA. In addition to changing some DVs, the proposed rule would change the units used to declare vitamins A, E, and D from ''international units,'' or ''I.U.'' to a metric measure, milligrams or micrograms, and also would include the absolute amounts in milligrams or micrograms of vitamins and minerals, in addition to the % DV, on the label.

The proposed rule also would change the appearance of the label itself by highlighting key parts of the label that are important in addressing current public health problems. For example, the proposed rule would:

- Highlight the caloric content of foods by increasing the type size and placing in bold type the number of calories and servings per container;
- Shift to the left of the label % DV. The % DV is intended to help consumers place nutrient information in the context of a total daily diet;
- Declare the actual amount, in addition to % DV, for all vitamins and minerals when they are declared;
- Change ''Amount Per Serving'' to ''Amount per ___'', with the blank filled in with the serving size in common household measures, such as ''Amount per 1 cup'';
- Replace the listing of ''Total Carbohydrate'' with ''Total Carbs'' and add an indented listing of ''Added Sugars'' directly beneath the listing for ''Sugars;''
- Right justify the actual amounts of the serving size information;
- Reverse the order of ''Serving Size'' and ''Servings Per Container'' declarations; and
- Remove the existing footnote that describes the DVs for 2,000 and 2,500 calories to provide more space to better explain the percent dietary value.

The proposed label changes were intended to help consumers maintain health dietary practices, and we based the updated information on current data on associations between specific nutrients and chronic diseases or health-related conditions in the United States and on new information regarding consumer understanding of the label and consumption patterns.

We provided a 90-day comment period for the proposed rule. In the **Federal Register** of May 27, 2014 (79 FR 30055), we extended the comment period by 60 more days after receiving multiple requests to extend the comment period. In the **Federal Register** of May 29, 2014 (79 FR 30763), we announced a public meeting to discuss the proposed rule, as well as the proposed rule on serving size requirements, and to solicit oral stakeholder and public comments and to respond to questions about the proposed rules. Additionally, as we stated in part I.B, in the **Federal Register** of July 27, 2015 (80 FR 44303), we issued a supplemental proposed rule to establish a DRV of 10 percent of total energy intake from added sugars, to require the declaration of the percent DV for added sugars, and to provide text for the footnotes to be used on the Nutrition Facts label. The supplemental proposed rule also provided additional information to support the declaration of added sugars on the label and made our consumer research regarding added sugars declarations and the footnote text publicly available. We also reopened the comment period for the purpose of inviting public comment on two consumer studies we added to the administrative record (80 FR 44302). The two consumer studies pertained to proposed changes to the format of the Nutrition Facts label and to consumers' interpretations of information on the Nutrition Facts label. Collectively, with respect to the proposed rule, the supplemental proposal, and the related **Federal Register** documents, we received nearly 300,000 comments from consumers, foreign governments, industry, trade associations, professional societies, academia, health professionals, and other government agencies.

We discuss the issues raised in the comments on the proposed rule and supplemental proposed rule and also describe the final rule, in part II. We preface each comment discussion with a numbered ''Comment,'' and each response by the word ''Response'' to make it easier to identify comments and our responses. We have numbered each comment to help distinguish among different topics. The number assigned is for organizational purposes only and does not signify the comment's value, importance, or the order in which it was received.

Incorporation by Reference

Additionally, the final rule incorporates by reference the ''Official Methods of Analysis of the AOAC International,'' 19th Edition. The ''Official Methods of Analysis of AOAC International'' (AOAC Methods) is a comprehensive collection of chemical and microbiological methods of analysis. The AOAC Methods have undergone rigorous scientific review and validation to determine the performance characteristics for the intended analytical application and

fitness for purpose. Each method includes specific instructions for performing the chemical analysis of a substance in a particular matrix.

Although the 19th Edition of the AOAC Methods was available for purchase from AOAC when we drafted the proposed rule, the reference has since been sold out at AOAC INTERNATIONAL. Copies, however, can be obtained or downloaded from secondary sources, and the final rule identifies one such source. However, we do not endorse any particular secondary source or reseller and note that other resellers also may have the 19th Edition of the AOAC Methods for sale.

B. General Comments

Some comments raised issues that were general in nature or affected multiple parts of the rule.

Additionally, one foreign government agency, Health Canada, provided factual information and comments on various aspects of its review and update of nutritional information on the Canadian food label. Health Canada did not advocate a particular outcome or did not provide comments on possible changes or suggestions to our proposed rule.

1. Comments Seeking an Education Campaign or Program

(Comment 1) Several comments suggested that we develop a well-funded, coordinated, multi-component consumer education campaign to promote and explain the new Nutrition Facts label, the changes to the label, and the use of the label to help consumers to make healthier food and beverage choices. Many comments suggested that we coordinate our consumer education campaign with other Federal government Agencies including the Centers for Disease Control and Prevention (CDC), other parts of the Department of Health and Human Services, the U.S. Department of Agriculture (USDA), State health departments, and non-government entities, including food manufacturers, retailers, and non-profit organizations with an interest in nutrition and health.

Several comments suggested that our education campaign emphasize calories because knowledge of calories is important for rolling back the obesity epidemic. Other comments would focus on sodium because of its contribution to cardiovascular disease or on nutrients (such as added sugars) that would be on the Nutrition Facts label for the first time and nutrients (such as total fat) for which the science has changed significantly.

Several comments noted that, although some revisions (such as the declaration of *trans* fatty acids and the declaration of food allergens) have been made to nutrition labeling since implementation of the NLEA, there have not been changes to the label of the magnitude in the proposed rule. The comments said, therefore, that public outreach, through avenues such as Webinars, town hall meetings, and social media, will be a key component of the nutrition labeling modernization effort. A few comments suggested that the consumer education program should be informed by any relevant consumer research. Several comments noted that there is consumer confusion over the meaning of percent DV and consumer research had found that consumers do not understand or know how to use the DVs; thus, the percent DV should be a key area in which to focus consumer education efforts. One comment specifically stated that percent DV/added sugars disclosure will create substantial consumer confusion that does not exist today and that we would need to provide consumer education in attempt to overcome the confusion. Several comments stated that education is needed to help consumers understand the meaning of percent DVs, with inclusion of a brief footnote on packages, but additional consumer education should be done online.

Several comments suggested that, although the education campaign is important for all consumers to know about, understand, and use the revised Nutrition Facts label, an education campaign should primarily be designed to reach consumers who are least likely to understand and use the label, including lower income consumers, communities with diverse languages and literacy levels who are also more likely to suffer from many obesity- and nutrition-related chronic diseases than those with higher incomes and education. The comments stated that we should use multiple and culturally relevant communication channels and messengers, and we should field test our messages to ensure they are relevant and compelling for audience segments. One comment noted that a Canadian study (Ref. 1) found that participants were significantly less likely to correctly assess the Nutrition Facts label for calorie and nutrient information if they reported lower educational attainment, lower income, or non-white ethnicity. The comment also stated that the 2012 IOM report on front-of-pack labeling (Ref. 2) found that ''a lack of nutrition knowledge is a major barrier to effective use of the [Nutrition Facts label] and may actually lower the motivation of some consumers to use the nutrition information on the label,'' and that ''some racial groups . . . are less likely . . . to use and understand nutrition labels, primarily because of lack of time to read labels and lack of understanding of the nutrition information.'' The comment stated that working with other health departments and organizations could help extend our educational resources to all rural and urban communities. Another comment suggested that, to be most effective, we should incorporate lessons learned on how individuals from various subpopulations interpret the new label design. The comment noted that such education needs to accommodate individuals at various levels of educational achievement and with cultural and ethnic diversity.

A few comments suggested that we conduct the education campaign after the final rule's publication and before the rule's compliance date. One comment suggested that our recommendations be publicized to groups who interact with the public at least 3 months before implementation of the new Nutrition Facts label style and elements to allow for preparation of curricula and development of local educational and media efforts.

One comment suggested that, similar to our earlier public service campaigns such as ''The Real Cost'' campaign targeting youth tobacco use, we have a unique ability to get the attention of the public and shape understanding about the risks of lifestyles habits and choices. Other comments suggested that we integrate the education campaign with preexisting consumer education programs and initiatives, including the USDA's Supplemental Nutrition Assistance Program Education (SNAP-Ed) (the nutrition promotion and obesity prevention component of SNAP), school-based nutrition education programs, and grocery store labeling and education initiatives, such as the Boston Public Health Commission's ''Re-Think Your Drink'' campaign. One comment suggested that we develop a similar outreach campaign as ''Read the Label'' to enable Americans to understand the revised label and its uses.

One comment noted that, while nutrition education has been shown to have a positive impact on consumers' dietary choices and patterns, multiple studies suggest that education alone is not adequate to change consumer behavior around healthy eating for a sustained amount of time. The comment suggested that, for education efforts to be effective and sustainable, they should be combined with policy, systems, and environmental changes that support healthful choices. For example, food

environmental changes, such as increased availability of and access to healthful foods, combined with education efforts, have been found to be significantly more effective in changing consumer behavior in the long run.

(Response) We agree that a consumer education and outreach campaign will assist in making the new food label a successful tool in continuing to help consumers to make healthy food and beverage choices. Currently, we have available a collection of various educational materials (*e.g.,* videos, an array of public education materials and brochures (in English and Spanish)) on numerous nutrition topics, including materials on the Nutrition Facts label (*e.g.,* ''Read the Label,'' Make Your Calories Count, Sodium: Look at the Label) (Ref. 3). These materials are intended for educators, teachers, health professionals (*e.g.,* dietitians, physicians, and nurses) as well as for general consumers. Our intent is to update our existing educational materials and create new educational opportunities to explain how to use the label to help consumers make healthy dietary choices, with an emphasis on each of the new changes of the label. We intend to continue to work on and to create new partnership opportunities with other Federal government Agencies including other parts of the Department of Health and Human Services, USDA, State health departments, health professional organizations, food manufacturers, retailers, and non-profit organizations that have an interest and responsibilities in nutrition education and health promotion. These partnerships will help us develop and disseminate our educational materials that will ease the transition to the revised nutrition label and help consumers to understand and use the label to make well-informed dietary choices. Through our work with both government and non-government entities, our continued goal is to increase consumers' knowledge and effective use of the new Nutrition Facts label and to ensure that consumers have accurate and adequate resources, materials, and information for making healthy food and beverage choices. Furthermore, we intend to continue a variety of activities such as conduct and report on existing and planned food labeling research; to develop education initiatives at the national and local levels; to build labeling education exchanges; and to integrate food labeling education into existing programs (*e.g.,* USDA-school-based nutrition education programs). We plan to continue to build partnerships capable of developing and evaluating labeling education targeted to the dietary needs of diverse populations, such as low literacy consumers, lower incomes, minorities, and various subpopulations (*e.g.,* children, older subpopulation, women of childbearing age) as well as to the general public.

As for the comments stating that the percent DV should be a key area to focus consumer education efforts, and that the disclosure of ''% DV/Added sugars'' will create substantial consumer confusion, we will continue to provide education and outreach to consumers about using the Nutrition Facts label to make healthful dietary choices. (We also note that the comments' use of the term ''confusion'' is, itself, misplaced; a more appropriate characterization would be whether some consumers we tested ''understand'' or ''misunderstand'' the declaration of added sugars. However, because the comments used the term ''confusion,'' for convenience, we will use the same term in this response as well as in other responses on the subject of added sugars, consumer research, and education, in reference to the findings that some consumers we tested seemed to misunderstand that the term ''added sugars'' referred to a subcomponent of total sugars on the label.) The changes in the ''new'' label will be highlighted and clarified through these education and outreach endeavors. We are not planning to focus educational activities on the ''% DV/Added Sugars'' disclosure of the Nutrition Facts label in isolation. Instead, education and outreach will focus on a number of aspects of the label to enhance its use and understanding by consumers.

As for the comment stating that education efforts should be combined with policy, systems, and food environmental changes that support healthy dietary choices, we understand that combining the Nutrition Facts label education efforts with other policies may be more effective in supporting healthy dietary choices; however, many policies, such as consumer access to or increased availability of healthful foods, are not under our purview and are outside the scope of this rulemaking. As part of supporting access to healthy foods, we continue to encourage food product reformulation, such as reducing sodium content in the food supply.

2. Comments Linking the Nutrition Facts Label to Specific Diseases

(Comment 2) Many comments recommended mandatory declaration of specific nutrients (*e.g.,* phosphorous, added sugars, potassium) on the Nutrition Facts label because, according to the comments, these nutrients are or may be helpful to persons with an existing acute or chronic disease (*e.g.,* heart disease, chronic kidney disease, diabetes). According to the comments, mandatory declaration of the specific nutrient would be helpful for the management of specific diseases or conditions.

(Response) While the Nutrition Facts label information has never been, nor is it now, targeted to individuals with acute or chronic disease (*e.g.,* diabetes, chronic kidney disease or cardiovascular disease (CVD)), consumers with these types of diseases may be able to use quantitative information on the label to follow advice they have received from a health care professional concerning their conditions. However, the nutrient declaration and percent DVs on the label are to help consumers make more informed choices to consume a healthy diet and not intended for the clinical management of an existing disease.

3. Use of Household Measures

(Comment 3) Many comments recommended that the amount of total fat, carbohydrate, sugars, added sugars, protein, and sodium be declared in common household measurements (*e.g.* teaspoons) instead of or in addition to grams (g). The comments said that the metric system has not been widely adopted in the United States, and the average consumer is more familiar with household measurements than with grams. The comments also said that, if the purpose of the information on the label is to help consumers understand the actual amount of nutrients in a food product, the declaration of these nutrients in grams defeats the intended purpose of the label because consumers cannot conceptualize gram amounts. One comment suggested that we include an icon that would allow the consumer to visualize a gram and that we could use a teaspoon for such an icon. Another comment suggested using ounces instead of or in addition to grams because consumers can understand this information more easily than gram amounts. The comment also recommended stating on the label that there are 28 grams in an ounce and 448 grams in a pound.

(Response) We decline to require the declaration of total fat, carbohydrate, sugars, added sugars, protein, and sodium in household measurements or in ounces. Using a volume measure rather than a weight measurement for total fat, carbohydrate, sugars, added sugars, and protein would provide inaccurate information. The gram is a measure of mass or weight while a teaspoon is a measure of volume. The

gram weight of different carbohydrates, fats, and proteins is different. For example, a teaspoon of sucrose or table sugar weighs 4.2 grams, but a teaspoon of corn syrup weighs 7.3 grams (Ref. 4) and has 1.5 grams of water and 5.1 grams of sugar.

Additionally, many ingredients provide multiple nutrients, so it may not be possible for manufacturers to determine the volume contribution that each ingredient provides towards the various macronutrients. For example, salt is composed of sodium and chloride. Other ingredients, such as baking soda, contain sodium. It would be very difficult for a manufacturer to determine the volume of sodium contributed by both salt and baking soda in a food such as a cookie.

We also reiterate that the gram weight is a more precise measurement. When it comes to some nutrients, particularly added sugars and sodium, most products contain a fraction of a teaspoon.

Additionally, dietary recommendations for total fat, total carbohydrate, sugars, added sugars, protein, and sodium are provided in grams and milligrams (mg) (Ref. 5). The declaration of these nutrients in household measurements would make it more difficult for consumers to compare the amount of the nutrient in a serving of a product to current dietary recommendations.

As for the comments suggesting the declaration of teaspoon amounts in addition to grams, there is limited space available on the label, especially for small packages and dual column labeling (see part II.Q). Adding a teaspoon amount before or after the gram declaration of the nutrients could make it more difficult to read the information on the label. Therefore, we decline to allow for voluntary declaration of household measurements of total fat, carbohydrate, sugars, added sugars, protein, and sodium.

Finally, with respect to declaring nutrients in ounces or pounds, we decline to revise the rule as suggested by the comment. Many products contain an ounce or less of food per serving. If ounces or pounds were declared on the label for these nutrients, fractions would have to be declared. The gram weight of a nutrient is a more precise measurement than ounces or pounds.

4. Impact on Other Regulations

(Comment 4) Several comments expressed concern that revision of the RDIs would necessitate revisions to other regulations for nutrient content claims and health claims. Several comments noted that many products (such as juices and dairy products) that are now eligible to make nutrient content claims for nutrients that are increasing (such as potassium, calcium, vitamin D, and vitamin C) would no longer be able to do so. Other comments expressed concern that standards of identity for yogurt, milk, and cheeses might need to be updated. Other comments noted that food additive regulations for the addition of calcium and vitamin D to juice would need to be reevaluated; some comments suggested that we delay finalizing the rule until we update our rules on nutrient content claims.

(Response) We will address, as appropriate and as time and resources permit, the impact on our other regulations that are outside the scope of this rulemaking in separate rulemaking actions. While we do intend to revisit our regulations for nutrient content claims at a later date to determine if changes are necessary, we recognize that changes to the list of nutrients declared on the Nutrition Facts label or the RDIs or DRVs of nutrients could affect the ability of some products to bear certain nutrient content or health claims. We also recognize that changes to the RDIs for calcium, for example, may impact certain other regulations, including our food additive regulations in § 172.380 (21 CFR 172.380), where the use of vitamin D is based on a product containing a certain percentage of the RDI for calcium.

We also do not agree to delay finalizing this rule until we provide any updates to our rules on nutrient content claims. The RDIs are based on how much of a nutrient should be consumed to meet nutrient needs and not based on eligibility to make a nutrient content claim.

(Comment 5) One comment said we should try to finalize all the anticipated changes to the food package labels simultaneously, including Nutrition Facts label, a front-of package panel, and health claims so that a consumer education program about the revised Nutrition Facts label also could explain all changes at one time, thereby minimizing consumer confusion and maximizing resources available for education.

(Response) We do not agree that the rule should be delayed until we provide any updates to rules on health claims or any possible rule on front of pack labeling. The pace at which each individual rulemaking activity proceeds may be affected by our resources and other priorities; consequently, it would be impractical to defer action on this final rule until we complete other possible regulatory actions.

5. Consumer Research

In the preamble to the supplemental proposed rule (80 FR 44303 at 44305 through 44306), we discussed, among other things, information on two consumer studies (80 FR 44303), and in the **Federal Register** of July 27, 2015 (80 FR 44302), we reopened the comment period for the proposed rule for inviting public comments on two additional consumer studies. These four consumer studies, conducted in 2014 and 2015, were randomized controlled experimental studies with English-speaking adult consumers: (1) The Experimental Study on Consumer Responses to Nutrition Facts Labels with Declaration of Amount of Added Sugars (''the added sugars study''); (2) the Experimental Study on Consumer Responses to Nutrition Facts Labels with Various Footnote Formats (''the footnote study''); (3) the Experimental Study of Proposed Changes to the Nutrition Facts Label Formats (''the format study''); and (4) the Eye-tracking Experimental Study on Consumer Responses to Modifications to the Nutrition Facts Label Outlined in the Food and Drug Administration's Proposed Rulemaking (''the eye-tracking study''). All study participants were adults 18 years of age or older. The overarching purpose of these studies was to explore how and to what extent different presentations of the label and its components (*e.g.,* different formats of the entire Nutrition Facts label or different formats of how added sugars may be declared on the label) may affect consumer responses to the presentations. In addition, the added sugars study was conducted to enhance our understanding of how inclusion of added sugars declarations on the Nutrition Facts label may affect how consumers perceive a product or a label and how to better educate people in using the Nutrition Facts label in general. In the following paragraphs, we briefly describe the methodology and key findings of each study and discuss the characteristics and proper use of the study data and findings.

The added sugars study was a randomized, controlled, Web-based experiment conducted in July and August of 2014 to enhance our understanding of how inclusion of added sugars declarations on the Nutrition Facts label may affect how consumers perceive a product or a label and how to better educate people in using the Nutrition Facts label in general. At the time the research was designed, we were not aware of any previous studies of consumer responses to added sugars information. We

engaged in this research to help inform our potential consumer education efforts if added sugars were declared on the Nutrition Facts label. The research design did not include a percent Daily Value for added sugars on the food label or the ingredient listing that will appear on packages and therefore did not provide data on how those pieces of information would affect consumer responses to an added sugars declaration. Nevertheless, the study achieved its intended objectives of providing an initial understanding of potential consumer reactions to added sugars declarations on Nutrition Facts labels.

Participants (n = 6,480) self-administered the study on their own computers and were randomly assigned to view mock-ups of one of three formats of the current Nutrition Facts label: (1) The ''Added Sugars'' format, in which an added sugars declaration was indented below a ''Sugars'' declaration; (2) the ''Total Sugars + Added Sugars'' format, in which an added sugars declaration was indented below a ''Total Sugars'' declaration; and (3) the ''Current'' format, in which ''Sugars,'' but not added sugars, was declared on the label. While viewing their assigned label images, participants answered questions on their ability to recognize and compare nutrient amounts on the Nutrition Facts label and their judgments about the foods' overall healthfulness and relative nutrient levels. The Nutrition Facts label images were accompanied by a product identity caption (*e.g.,* ''Frozen Meal'' or ''Cereal''), but no front panel or brand name, either fictitious or real. The study was designed as a controlled experimental study that employed random assignment in order to establish causal relationships between test conditions and consumer responses. Because the study was not intended to generate population estimates, participants were selected from members of an online consumer panel in the United States. To recruit a diverse study sample, quotas were constructed with the aim of making the sample's distributions of age, gender, education, race/ethnicity, and census region resemble that of the U.S. population as closely as possible.

The added sugars study found that, while added sugars declarations increased the ability of some participants to identify those products with less added sugars and to determine the quantity of added sugar in a food, the declarations decreased the ability of some participants to correctly identify the quantity of total sugars in a food. The ''Total Sugars + Added Sugars'' format appeared to help participants better comprehend the total amount of sugars in a food than the ''Added Sugars'' format. More details about the study methodology, tested label formats, and results can be found in an Administrative File entitled ''Experimental Study on Consumer Responses to Nutrition Facts Labels with Declaration of Amount of Added Sugars (OMB No. 0910–0764)'' (Docket FDA–2012–N–1210).

The footnote study was a randomized, controlled, Web-based experiment conducted concurrently with the added sugars study. The footnote study included 3,866 participants who were different participants from those in the added sugars study but selected from the same online consumer panel using the same sampling methodology as that used in the added sugars study. The purpose of the footnote study was to explore consumer responses to various formats for the footnote area of the Nutrition Facts label, including those that provide information such as various definitions for percent Daily Value, a succinct statement about daily caloric intake, and general guidelines for high and low nutrient levels. Participants self-administered the study on their own computers and were randomly assigned to view a mock-up of one of seven Nutrition Facts label formats. Five of these Nutrition Facts formats included modified footnotes; one included the current footnote, and one included no footnote at all. The footnotes displayed variations of information such as a description of percent Daily Value, a succinct statement about daily caloric intake, or a general guideline for interpreting percent Daily Values, or noted nutrients whose daily intake should be limited. While viewing a label, participants answered questions about their judgments of the foods' overall healthfulness and levels of vitamin A, vitamin C, dietary fiber, fat, and sodium. After rating the product's nutritional attributes, participants who viewed labels that included one of the five modified footnotes or the current footnote were asked to rate the footnote statement's understandability, usefulness, believability, and helpfulness for the following dietary tasks: Comparing products, planning a healthy diet, determining the healthfulness of a food, and deciding how much of a food to eat.

The footnote study found that all five footnote options produced similar perceptions and judgments relative to the current footnote and the no-footnote control. Nevertheless, all five modified footnotes were rated as easier to understand than the current footnote. Footnote 1 was perceived to be more believable than the current footnote. Footnote 1 stated the following: ''2,000 calories a day is used for general nutrition advice. * The % Daily Value tells you how much a nutrient in a serving of food contributes to a daily diet.'' More details about the study methodology, tested label formats, and results can be found in an Administrative File entitled ''Experimental Study on Consumer Responses to Nutrition Facts Labels with Various Footnote Formats (OMB No. 0910–0764)'' (Docket FDA–2012–N–1210).

The format study was a Web-based study conducted in February–March, 2015, to explore consumer responses to: (1) Three different formats of the Nutrition Facts label (the Current format, the Proposed format, and the Alternative format discussed in the proposed rule) (80 FR 11879), with each format embodying all current label elements or most of the potential changes to them as outlined in the proposed rule (*e.g.,* the prominence of the calorie declaration, the position of the percent Daily Value column); (2) the location of the percent Daily Value column (right or left side of the label); (3) column type (single-column, dual-column, and dual-calorie); (4) location of sodium declaration on the Proposed single column label; and (5) the declaration of voluntary vitamins and fats (voluntary vitamins, voluntary fats, and both vitamins and fats). A total of 5,430 consumers participated in the format study; they were recruited from the same online consumer panel with the same sampling methodology as in the added sugars and the footnote studies. As in the added sugars study and the footnote study, participants were randomly assigned to view different Nutrition Facts label mock-ups and answer questions about their: (1) Perceptions of the healthfulness and levels of nutrients of a product; (2) identification of which product in a pair of products was considered healthier; (3) accuracy of identifying the amount of nutrients per serving and per container and number of servings per container; and (4) perceptions of the understandability, usefulness, believability, and helpfulness of the label for various dietary tasks such as comparing products and deciding how much of a food to eat.

We did not find many significant or consistent effects of these label variations on the answers to the questions we asked. However, there were some notable and statistically significant differences when comparing

the current, single-column Nutrition Facts label with the % DV on the right (the ''Current label''), the single-column Nutrition Facts label with the % DV on the left (which we had proposed (the ''Proposed label'')), and an alternative, single-column label with the % DV on the left (the ''Alternative label''). Respondents were more accurate in identifying the grams of saturated fat and the % DV for sodium using the single-column Proposed label (% DV left) compared to the single-column Current label (% DV right). Respondents were more accurate in identifying the grams of sugars per serving using the single-column Current label (% DV right) compared to the single-column Proposed (% DV left) or single-column Alternative label (% DV left), and they were more accurate in identifying the grams of sugars per container using the single-column Current label (% DV right) compared to the single-column Proposed label (% DV left). Finally, respondents were more accurate in identifying the grams of added sugars with the single-column Proposed label (% DV left) as compared to the single-column Alternative label (% DV left) (respondents assigned to view the Current label were not asked this question). Among the Proposed labels with % DV on the left (single-column, dual-column, and dual-calorie), we found that dual-column labeling significantly improved respondents' ability to identify the amount of nutrients in the entire container. More details about the study methodology and results can be found in an Administrative File entitled ''Experimental study of proposed changes to the Nutrition Facts label formats (OMB No. 0910–0774)'' (Docket FDA–2012–N–1210).

The eye-tracking study, conducted in January–March, 2015, was to explore whether and to what extent most of the potential label changes as outlined in the proposed rule (80 FR 11879), in their totality, may increase consumer attention to various label elements (*e.g.,* calories, number of servings) and lessen consumer effort in searching for specific label information. In addition, the eye-tracking study explored how the difference in the location of the percent Daily Value column may cause any changes in consumer attention to various label elements. A total of 160 English-speaking adult consumers in four cities (Washington, DC, Chicago, IL, Boston, MA, and San Francisco, CA) participated in the eye-tracking study. They were recruited by telephone and the sample was composed of some degree of diversity in socio-demographic characteristics and experience with the Nutrition Facts label. Due to an unexpected issue during recruiting, the eye-tracking study did not include any participants who were 35 years of age or younger. We asked study participants to come to a central location in each city to view mock-ups of three label formats (the Current format, the Proposed format and the Alternative format) (80 FR 11879) on a computer screen, recorded participants' eye-movement data to examine and compare the degree of attention paid to some of the possible label changes and the level of effort participants used to perform three categories of task (browsing a label, searching for specific information on a label such as the amount of sodium per serving in a product, and identifying which of a pair of products they would choose for a given purpose such as if they were to buy a healthier product for themselves). Labels used in this study were borrowed or adapted from the format study.

The eye-tracking study showed few statistically significant differences between the Current and the Proposed formats or between their variants. Among these differences, no one single format or variant consistently stood out as the ''best'' format in terms of degree of participant attention to label information, level of effort in using label information, or accuracy of information search or dietary choices. Many of the format differences pertained to two specific label components: (1) Sodium, carbohydrate, and protein; and (2) vitamins and minerals. There was little evidence that the Proposed format led participants to re-allocate their attention to or effort spent on different label components while browsing a label or making the dietary choices. More details about the study methodology and results can be found in an Administrative File entitled ''Eye-tracking experimental study on consumer responses to modifications to the Nutrition Facts label outlined in the Food and Drug Administration's proposed rulemaking (OMB No. 0910–0774)'' (Docket FDA–2012–N–1210).

For all four studies, we employed a randomized controlled experimental approach. According to the Office of Management and Budget (OMB), when Federal Agency research questions involve trying to determine whether there is a causal relationship between two variables or whether a program caused a change for participants, the Agency will need to employ an experimental or quasi-experimental design (rather than other approaches such as population surveys) to demonstrate how the study design will allow the Agency to determine causality (Ref. 6).

We chose to conduct the added sugars, the footnote, and the format studies using a Web-based approach with mock-ups of the Nutrition Facts label and footnote. The Web-based approach is quicker in administration and data collection and more efficient in including participants from many different parts of the country than other modes of data collection such as in-person interviews. The approach also reduces administrative errors in terms of assignment of labels for different participants. We used mock-ups of the label and footnote rather than real food packages because the approach helps the studies accomplish their goal of exploring consumer responses to differences in the presentation of the label rather than of a food package, which includes other components such as the front panel, the ingredient list, and imageries. The presence of these other label elements can weaken a study's ability to obtain key information on the label and the footnote to answer its research questions.

All studies used non-probability samples recruited from either members of the public at selected geographic locations with a certain degree of diversity in sociodemographic characteristics (*i.e.,* age, gender, education, race/ethnicity), as in the eye-tracking study, or members of a commercial online consumer panel with the sample's sociodemographic characteristics matched to that of the general population, as in the added sugars, the footnote, and the format studies; in all these cases, an individual's probability of being selected into a sample was unknown. In particular, the online panel recruitment methodology was based on the opt-in approach, a non-probability sampling technique. In contrast to probability sampling in which every individual has some chance of being selected to participate in a study, not all individuals have some chances of being selected in a study. To ensure representativeness of selected participants of the population, it is necessary that everyone has a known probability and that no one is left out (Ref. 7). In addition, according to OMB's Guidance on Agency Survey and Statistical Information Collections, for the purpose of making estimates with measurable sampling error that represent a population, the sample must be selected using probability methods, where a subset of the population is chosen randomly such that each unit has a known nonzero probability of

selection (Ref. 6). Therefore, none of the studies could provide nationally representative population estimates of consumer understanding, behaviors, or perceptions, nor could their data be considered nationally representative.

The samples of our studies were not selected using a probability sampling method and the samples came from consumers in selected locations or an opt-in online consumer panel. Therefore, based on the AAPOR and OMB guidelines, we do not consider the findings of any of the four studies projectable to the general population.

The overarching purpose of our research was to explore how and to what extent different presentations of the label and its components may affect consumer responses to the presentations. The added sugars study also was conducted to enhance our understanding of how inclusion of added sugars declarations on the Nutrition Facts label may affect how consumers perceive a product or a label and how to better educate people in using the Nutrition Facts label in general. We did not aim to use these studies to help us develop a label that will be understood by all consumers. We recognize that, regardless of how well a label is designed, there is always a certain proportion of consumers who encounter challenges in understanding and using the label.

In the **Federal Register** of July 27, 2015 (80 FR 44302), we added a description and our findings of these four studies to the administrative record, and we reopened the comment period for the sole purpose of inviting public comments on the eye-tracking and the format studies. We also published a supplemental proposed rule that discussed, among other things, information on the added sugars and the footnote studies (80 FR 44303). In response, many comments discussed our studies' findings, methodologies, and implications. Some comments provided new consumer research information related to issues examined in our studies, particularly the added sugars declaration. To the extent that the comments pertained to general issues involving our study results and methodologies, we address them here. We respond to comments related to research implications that are specific to the added sugars declaration or to format issues, such as the footnote, elsewhere in this document (see, *e.g.,* part II.H.3, ''Added Sugars,'' and part II.Q, ''Format'').

(Comment 6) While many comments referred to our research findings as part of the evidence used to support their positions, some comments suggested that we conduct additional consumer research on selected changes outlined in the proposed rule. The comments felt further research is needed because it is difficult to examine the effects of individual proposed changes based on our studies.

(Response) One of our missions is to assist in providing the public with the accurate, science-based information it needs to use medicines and foods to maintain and improve health (Ref. 8). The objective of the Nutrition Facts label is to provide nutrition information about products to help consumers in maintaining healthy dietary practices. Therefore, as part of our continuing effort to enable consumers to make informed dietary choices and construct healthful diets, we intend to, subject to program priorities and resource availability, conduct more consumer research to help enhance the usefulness and understandability of the label.

In the format and the eye-tracking experimental studies, we chose to examine the combined effects of most of the changes outlined in the proposed rule, in totality. Nevertheless, in both studies, we also examined selected individual changes where we thought original consumer research would be helpful. For example, we were interested in the effect of the location of the percent Daily Value (left or right) independent of other format elements and therefore studied that change on all three label formats (Current, Proposed, and Alternative) (in both the format and the eye-tracking studies). We also were interested in the effect of column type (single-column, dual-column, and dual-calorie) independent of other label format changes and therefore studied that on all three label formats (in the format study). We also were interested in some other possible label format changes and therefore chose to study the effects of moving the location of sodium declaration on the Proposed single column label (in the format study), as well as the declaration of voluntary vitamins and fats (voluntary vitamins, voluntary fats, and both vitamins and fats) (in both the format and the eye-tracking studies). We believed the original consumer research on these topics was more useful than on other topics. Therefore, we took a hybrid approach of studying the differences between the Current, Proposed, and Alternative formats in totality and as well as in isolation for selected individual changes.

(Comment 7) Some comments questioned whether participants in our studies generally or as assigned in individual conditions were representative of the consumers in the nation. The comments stated that such representativeness was important for assessing the effects of the proposed label format changes on consumer understanding and use of the label. In particular, the comments were concerned that the lack of such representativeness, for example, the absence of participants 35 years of age and younger in the eye-tracking study, would render results imprecise or misleading. Some comments also encouraged us to obtain nationally representative samples of the population for future consumer research studies.

(Response) While we recognize that our study samples are not nationally representative, we disagree that the use of such samples would render our findings imprecise or misleading. The purpose of our studies was to investigate and compare how different presentations of label information may cause different responses by consumers. In other words, we sought to understand the causal relationships between the label presentations and consumer response rather than develop nationally representative estimates of the prevalence or extent of various responses. Therefore, our primary consideration in the study design was internal validity (*i.e.,* the validity of the causal relationships) rather than external validity (*i.e.,* the extent that the results can be generalized to the population or to presentations other than those studied). Even though we focused on internal validity, we recognized that, to make the study findings more robust, it was important that the studies included participants from different segments of the population in terms of education, gender, race/ethnicity, and geographic regions. Moreover, the causal relationships we examined were not necessarily particular to certain segments of the population, and our samples included consumers with a wide range of label reading and use practices.

We doubt the absence of study participants aged 35 years and under in the eye-tracking study, which was due to an unexpected issue in recruiting participants from this segment, would have led us to reach noticeably different conclusions about the label formats. While all of the eye-tracking participants were over age 35, they were diverse in many other important factors that the literature suggests may be related to label viewing and use, such as gender, education, race/ethnicity, label reading practices, attitudes toward the label, and nutritional interest (Refs. 9–11).

(Comment 8) One comment said that the use of terms such as ''healthy'' and ''healthier'' in our studies represented a misuse of a defined nutrient content claim. The comment also noted that consumers have different interpretations of the term ''healthy'' and that these interpretations may be based on considerations that are different from those defined for the claim ''healthy'' in FDA regulations. In addition, the comment said that the use of the term ''healthy'' in the eye-tracking study was a cue to participants that there is a correct answer and the criterion was ''healthy.''

(Response) In the consumer studies we conducted for informing this rulemaking, research participants were presented with and asked to respond to a Nutrition Facts label. Neither the front panel of a package nor the ingredient list was provided to participants. In our studies, the questions that asked participants to assess products' healthfulness served as one type of measure of potential consumer reactions to the tested Nutrition Facts label formats and content modifications. These questions were not connected to the regulatory meaning of a ''healthy'' claim, which usually appears on the front panel of a package, and we disagree that the healthfulness questions in our studies reflect ''a misuse,'' as asserted in the comments, which mischaracterize the purpose of the healthfulness questions in the studies we conducted.

We agree, in part, and disagree, in part, that the use of the term ''healthy'' in the eye-tracking study was a cue to participants that there was a correct answer and the criterion was ''healthy.'' We agree that this term was used in the study to prompt participants to use ''healthy'' as the criterion in deciding their response to the task of choosing which of two products they thought was healthier for themselves. The primary purpose of this design was to examine whether and how different label presentations would lead to differences in participant attention to various parts of a label if participants were considering a healthy dietary choice. The accuracy of choice was of less interest in this design. In addition, one of the products presented to the participants always had lower content of calories, total fat, saturated fat, sodium and sugars than the other, so the ''correct'' choice was unambiguous. Therefore, we do not believe that the study design would have biased the answers participants gave in this task.

(Comment 9) One comment suggested that we conduct studies that are not electronically based so that we may have more reliable data that can contribute to a more successful solution.

(Response) The comment did not explain why data collected non-electronically are more reliable than data collected electronically. We believe the Web-based approach is appropriate for the purposes of our studies. Furthermore, the comment did not assert that our study results were necessarily flawed because we collected data electronically.

(Comment 10) One comment asked us to clarify a conclusion reported in the preamble to the supplemental proposed rule that when participants viewing Nutrition Facts labels without added sugars declarations could not accurately determine the amount of added sugars in the products and that many participants who viewed Nutrition Facts labels without added sugars declarations assumed that the more nutritious products in the study had less added sugars (80 FR 44303 at 44306). The comment asked us to clarify the preceding statement because it further noted that another document, namely, ''Experimental Study of Proposed Changes to the Nutrition Facts Label Formats,'' stated that ''respondents assigned to view the Current label were not asked to identify the grams of added sugars.'' The comment questioned how we were able to arrive at the conclusion referenced in the supplemental proposed rule, reasoning that the two statements appear contradictory, as participants in the format study who viewed the Current label were not asked questions regarding the amount of added sugars.

(Response) The two statements are not contradictory because the two statements refer to different studies. Due to the different purposes of the studies, the format study did not ask participants who were assigned to the Current label about the amount of added sugars, whereas the added sugars study did. We used results from the added sugars study, rather than findings from the format study, to arrive at the conclusion stated in the supplemental proposed rule.

(Comment 11) One comment asked if we balanced the sample for demographic characteristics in the added sugars and format studies.

(Response) In the added sugars and format studies, we did balance our samples on key demographic characteristics. We selected our samples by matching their key demographic characteristics (*i.e.,* age, gender, education, race/ethnicity, and census region) to that of the U.S. population.

(Comment 12) Some comments said that the order in which we assigned label formats to participants in the eye-tracking study could have affected the participants' responses. The comments attributed the concern to the design that showed all participants the Current label in the first set of tasks and showed the Proposed or Alternative labels randomly in the second set of tasks, rather than showing the three labels to three randomly assigned groups of participants in one set of tasks. The comments further stated that the design choice was not explained.

(Response) We acknowledge that the design could potentially have yielded different results than a design that randomly assigned participants to the three formats. We chose our design because the Current Nutrition Facts label has been on products for approximately 20 years and most, if not all, consumers have had exposure to or used the label. Consumers have likely developed their own patterns of reading and use of the Current label. Furthermore, the objective of the study was to explore whether and how much the two label formats outlined in the proposed rule would help raise consumer attention to certain label elements and reduce reading efforts. The design we chose recognized that participants would carry their own patterns of reading and using the Current label into tasks based on the Proposed and the Alternative labels. To the extent that the patterns could have varied between participants, each participant's responses to the Current label in the first set of tasks was used as her/his own baseline when we examined the responses to the Proposed or the Alternative labels in the second set of tasks. This approach, in turn, could minimize the within-subject differences between study participants and help reveal the true differential effects of label format on attention and efforts. Correspondingly, we applied the difference-in-difference analysis for this purpose. Therefore, although our design could have produced different results than a design that randomly assigned participants to the three label formats, we believe our design is appropriate under the particular circumstances.

(Comment 13) One comment said that the sample size of the eye-tracking study was too small to produce reliable empirical evidence. The comment also said that, despite the study's claim that the sample represented a wide variety of demographics, the claim is misleading because the South and Midwest regions were not included and 69 percent of the sample had a college or advanced degree.

(Response) We disagree with the comment. Our sample size calculations

suggested that the numbers of participants included in various statistical tests were sufficient to achieve the conventional degree of statistical power of at least a medium effect size for the non-parametric analyses we conducted. This is particularly true in terms of key outcome measures during label browsing (proportion of participants who noticed a label component at least once, length of time it took participants to notice a label component for the first time, proportion of total label viewing time spent on a label component, proportion of total number of notices spent on a label component), during information search (proportion of participants who identified target information, length of time it took participants to find target information, number of notices of target information before it was found), and during product identification (length of time it took participants to enter a choice, proportion of participants who selected a given label, proportion of participants who noticed a label component at least once on either of a pair of labels, proportion of total number of notices spent on a label component, and proportion of total label viewing time spent on a label component). Additionally, as shown in the study report, the participants varied in education attained, gender, race/ethnicity, and geographic locations. Thus, contrary to what the comment said, the sample did include a wide variety of demographics.

(Comment 14) Some comments questioned certain design aspects of how the format experimental study tested the different Nutrition Facts label formats. In particular, some comments said that the overall study design was complex and that 29 labels were too many to test at once and recommended a simpler design. One comment said that questions related to calories per serving and number of servings were comparatively less important because they appeared later in the questionnaire. In addition, the comment asked why the subjective numeracy questions, which asked participants to self-rate their aptitude for working with fractions and percentages, appeared at the beginning of the questionnaire.

Other comments questioned why certain topics were not included as part of the questionnaire. For example, one comment noted that, although the term ''% DV'' was used in place of ''% Daily Value'' in the Proposed and Alternative label formats, there were no questions specific to this change in the study. The comment also asked why there were not more direct questions about serving size. In addition, one comment said that the study report did not include respondents' perceptions of each label's ''helpfulness.''

(Response) The main purpose of the format study was to compare consumer use and understanding of Current, Proposed, and Alternative label formats (in their totality). Additionally, the study was designed to test the effects of the location of Percent Daily Value, column type (single- vs. dual-column vs. dual-calorie), location of sodium declaration on the Proposed single-column label, and declaration of voluntary vitamins and fats on the Proposed label. Given the priorities chosen, we carefully designed the study, including the necessary number of test labels, to ensure that the study could provide adequate statistical power to test hypotheses related to the priority topics. Thus, the overall study design and number of labels were appropriate.

Moreover, we disagree with the comment stating the questions about calories per serving and number of servings appeared later in the questionnaire and were less important. These questions appeared in the first half of the questionnaire. In addition, with respect to the comment on the order of questions related to subjective numeracy, we conducted the cognitive interviews with the subjective numeracy questions at the beginning of the study and found that the overall flow of the questionnaire was working well. We did not use these questions to screen participants in or out of the study.

With respect to comments related to questions not included in the format study, we narrowed our questions to the purpose of the study. For example, although we did not include specific questions to assess consumer understanding of the terms ''% DV'' and ''% Daily Value, '' we assessed the effects of the location of Percent Daily Value through a question that used the definition of % Daily Value as part of the question. Specifically, we included a question asking respondents the percentage of sodium for the day in a serving of a product to see how the labels compared in helping respondents find the % Daily Value. In addition, the focus of this study was not on consumer use and understanding of the meaning of serving size and therefore did not include a specific question about it. Instead, we focused on how the label formats affected consumers': (1) Perceptions of the healthfulness and levels of nutrients of a product; (2) identification of which product in a pair of products was considered healthier; (3) accuracy of identifying the amount of nutrients per serving and per container and number of servings per container; and (4) perceptions of the understandability, usefulness, believability, and helpfulness of the label for various dietary tasks such as comparing products and deciding how much of a food to eat.

Lastly, we disagree with the comment that we did not report on respondents' perceptions of label ''helpfulness.'' We reported on respondents' perceptions of ''helpfulness'' for each set of label comparisons in the ''Label preference'' rating.

(Comment 15) Some comments asked us to conduct additional analyses with the format experimental study on the Nutrition Facts label formats data. Some comments requested that we provide an analysis specifically comparing the single-column Current label format to the dual-column Proposed label format. Another comment asked us to provide the results related the effect of adding absolute values to the vitamins and minerals as was found on the Proposed and Alternative labels. One comment asked why we did not include an analysis of the number of servings per container.

(Response) In the notice on Food Labeling: Revision of the Nutrition and Supplement Facts Labels; Reopening of the Comment Period as to Specific Documents (80 FR 44302), we reported on the results of our consumer study ''Experimental Study of Proposed Changes to the Nutrition Facts Label Formats'' related to key aspects of the changes we proposed to the format of the nutrition label. The comparisons suggested by the comments could be made through additional analyses of the data we collected. While we reported the effects of the format types within the same column type and the column-type within the same format type, we did not report the comparison between the Current single-column format and Proposed dual-column format. Such an analysis would not have provided us with information on the differences in formats in which we were most interested. However, for our own interest, we have since conducted that analysis and the results do not provide any new information related to our consideration of the format of the nutrition label. The results of this analysis seem to corroborate our main finding related to the effects of dual-column labeling compared to single-column labeling as described in table 7 of our June 30, 2015 memo to the file (Ref. 12). As reported in that memo, the Proposed dual-column label (% DV left) scored higher than the Proposed single-column label (% DV left) on the Total correct per container measure.

Similarly, in the new comparison, the Proposed dual-column label (% DV left) scored higher than the Current single-column label (% DV right) on that same measure. The new comparison demonstrates that the Proposed dual-column (% DV left) also scored higher on the Total Correct per serving measure than the Current single-column (% DV right) label.

In addition, the purpose of our evaluation of consumer views about how high or low the product is in a vitamin or mineral when absolute values were provided, compared to a label without this information, was to understand how some consumers perceive different numbers associated with various units of measure. In response to the comment on our findings on absolute amounts, we did complete a review of that aspect of the data, and the results do not provide any new information related to our consideration of the declaration of absolute amounts for some or all nutrients (Ref. 13)). The study did not address how consumers use or understand absolute amounts for following dietary advice. Participants who viewed the different label conditions were asked to rate on a 5-point scale (1 = none or very little; 5 = a lot) how much of various nutrients they thought were in one serving of the product. Because the questions asked participants to offer their subjective perception, rather than report the absolute amount for a nutrient, no rating offered could be judged as correct or incorrect. Instead, the ratings simply provided information about how pairing the correct absolute nutrient amount with the correct % DV affected participants' perceptions.

Further analysis found that there was no difference in correctly identifying the number of servings per container between the single-column labels, the dual-column labels, or between the Current single-column (% DV right), and the Proposed dual-column (% DV left) (Ref. 13). Thus, none of these formats had any influence on how participants identified the number of servings per container, and therefore, did not provide any new information related to our consideration of the servings per container.

(Comment 16) One comment mentioned an eye-tracking study that the comment did to examine and compare participants' attention to the Nutrition Facts label either in its current format or in the proposed format. The comment stated that the study did not find significant differences between the two formats either in attention to the label in its totality or in terms of the vitamins and mineral section nor in healthful food choices made. The comment also stated that moving the percent Daily Value column to the left side of the label reduced participants' attention to the percent Daily Value information. In addition, the comment suggested that more noticeable changes to the label format, such as using traffic light colors, or descriptors, such as ''high'' or ''low,'' may have a greater impact on attention and choice than the changes we proposed.

(Response) We decline to comment on the findings because the comment did not provide sufficient details about how the study was designed and analyzed.

As for other possible changes of the label that the comment speculated might affect consumer attention and food choices, *e.g.,* traffic light colors or text descriptors, such issues are outside of the scope of this rulemaking.

(Comment 17) One comment said that FDA's added sugars study seemed to be unduly focused on whether consumers could correctly identify added sugars and how identification of added sugars affected overall judgment of the product. The comment also stated that the study design steered participants to think specifically about added sugars throughout the survey, potentially leading them to judge the labels on the amount of added sugars.

(Response) We disagree that the design of the added sugars study unduly emphasized, or otherwise steered participants to focus on, added sugars beyond a level necessary to meet the key objectives of the study. A primary focus of FDA's added sugars study was to explore participants' understanding of Nutrition Facts labels that include added sugars declarations relative to participants' understanding of Nutrition Facts labels that do not include added sugars declarations. Although the primary objectives of the study pertained to added sugars declarations, we used a variety of measures to assess a range of participant reactions to the different labels. For example, we asked participants to evaluate foods' overall healthfulness as well as the levels of various nutrients such as saturated fat, sodium, dietary fiber, and others, in addition to added sugars.

(Comment 18) One comment noted that the added sugars study varied the experimental conditions in an unbalanced way, making it difficult to make inferences about the experimental conditions. The comment also said that we did not keep the caloric value consistent across products and, therefore, did not isolate the effect of the added sugars declarations separately from the effect of calories. The comment also noted that, in Appendix A of the FDA study report about the results of the added sugars study (Ref. 14), the ''most nutritious'' frozen meal had more calories, sodium, fat, and saturated fat, and lower iron and vitamin C than the ''least nutritious'' frozen meal.

(Response) Because the comment does not specify what was ''unbalanced'' in the experimental conditions and what specific inferences were therefore precluded, we do not have sufficient information to respond to this comment. We disagree that the study did not isolate the effect of added sugars declarations separately from the effect of calories because that is in fact what the experimental design achieved. In other words, by randomly assigning participants to different experimental conditions, we were able to compare participant responses in experimental conditions that were treated identically in all respects other than the display of added sugars information, thus isolating the effect of added sugars declarations from the effect of other experimental factors, such as calorie information.

Regarding Appendix A of the FDA study report (Ref. 14), there was a typographic error on the nutrition profiles for the frozen meals. Meal 1 should have been labeled the ''least nutritious,'' whereas Meal 3 should have been labeled the ''most nutritious.'' This typographic error, however, did not in any way affect the rest of the study description or reported findings.

(Comment 19) One comment noted that in table 8 of the added sugars study report (Ref. 14), the mean ''usefulness'' score for those viewing the control format was 3.93, whereas the mean ''usefulness'' score for those viewing the added sugars declaration format was 3.97. The comment stated that the report noted a significant difference between these scores and requested clarification.

(Response) The comment is incorrect. The report indicated that there was no statistically significant difference between the two means in question.

(Comment 20) One comment stated that the voluntary responses from study participants during the debriefing phase of the eye-tracking study showed that consumers had difficulties using the Current label and did not understand terms such as saturated fat and *trans* fat.

(Response) We disagree that the indicated responses showed that consumers have difficulties using the Current label and do not understand terms such as saturated fat and *trans* fat. The comment did not interpret this finding in context. The full statement in our study report is ''When asked, most participants did not report having difficulties using the Current format as

long as they knew what to look for on the label (table 25) (Ref. 15). Some, however, mentioned that they did not understand some of the information on the label, such as fats and *trans* fat, or had problems with the small font size of the information'' (eye-tracking study memo in the re-opener, July 27, 2015, p. 25). Contrary to the comment, the report states that most of the study participants did not have difficulties using the Current label, and only some said they did not understand fats and *trans* fat.

C. Comments on Legal Issues

Several comments addressed legal issues. Some comments asserted that FDA cannot compel an added sugars declaration in nutrition labeling under the First Amendment. We also received comments that questioned whether our proposed requirement for an added sugars declaration and certain other proposed requirements are consistent with the requirements in the Administrative Procedure Act (APA) and our authority under the FD&C Act. In addition, we received comments questioning our authority to require and access records related to the declarations for added sugars, dietary fiber, soluble fiber, insoluble fiber, vitamin E, and folate/folic acid. Other comments raised miscellaneous legal issues.

1. First Amendment

Many comments on the proposed requirement to include an added sugars declaration on food labels related to our ability to compel such speech under the First Amendment. Some comments supported our proposed requirement for the declaration of added sugars as factual, uncontroversial information, based on the application of the First Amendment test set forth in *Zauderer* v. *Office of Disciplinary Counsel of Supreme Court,* 471 U.S. 626 (1985). Most comments raising First Amendment arguments did not support the proposed declaration, but differed in their assertion of the applicable First Amendment test. Many comments asserted that the proposed declaration did not satisfy the Zauderer test, while other asserted that it failed under the test set forth in *Central Hudson Gas & Electric Corp.* v. *Public Service Comm'n,* 447 U.S. 557 (1980). Still others asserted that the proposed declaration was subject to, and failed to satisfy, strict scrutiny review.

(Comment 21) Some comments said the added sugars declaration is not subject to the test in *Zauderer,* or, even if subject, does not meet such test. Specifically, one comment stated that *Zauderer* does not apply to misleading statements or statements that are subject to misinterpretation. Other comments said that because there is already a declaration for total sugars and there is no material difference, or scientific rationale, for distinguishing between added and intrinsic sugars, including no ''sufficient nexus to consumer health,'' the declaration of added sugars is not purely factual and uncontroversial information for which the First Amendment test in *Zauderer* would apply. One comment stated that because added sugars are not chemically distinct from natural sugars and do not have different health effects, the declaration of added sugars would be false and misleading and the Agency could not compel it under the First Amendment. Several comments stated there are no physiological distinctions between added and naturally occurring sugars, and therefore, no connection to consumer health on which to compel such speech.

(Response) The disclosure of added sugars is factually accurate nutrition information and industry's interest in not disclosing such factual information is minimal. In *Zauderer,* the Supreme Court explained that ''[b]ecause the extension of First Amendment protection to commercial speech is justified principally by the value to consumers of the information such speech provides, [a speaker's] constitutionally protected interest in not providing any particular factual information in his advertising is minimal'' (see 471 U.S. at 651 (internal citations omitted)). Providing consumers the amount of added sugars in a serving of food ''does not offend the core First Amendment values of promoting efficient exchange of information'' and ''furthers, rather than hinders, the First Amendment goal of the discovery of the truth and contributes to the efficiency of the 'marketplace of ideas' '' (*Nat'l Elec. Mfrs. Ass'n* v. *Sorrell,* 272 F.3d 104, 113 through 114 (2d Cir. 2001). As a result, government requirements to disclose factual commercial speech are subject to a more lenient constitutional standard than that set forth under the Central Hudson framework (*Zauderer,* 471 U.S. at 651). Under *Zauderer,* the government can require disclosure of factual information in the realm of commercial speech as long as the disclosure provides accurate, factual information; is not unjustified or unduly burdensome; and ''reasonably relate[s]'' to a government interest (id.).

The required added sugars declaration readily satisfies the *Zauderer* test. First, the declaration of added sugars, which is being finalized in this rule, provides accurate disclosures of factual commercial information about the amount of added sugars contained in a food. The required disclosure requires only facts about the product (*Am. Meat Inst.* v. *United States,* 760 F.3d 18 (D.C. Cir. 2014) (''country-of-origin labeling qualifies as factual, and the facts conveyed are directly informative of intrinsic characteristics of the product AMI is selling'')). This required labeling will help facilitate the free flow of commercial information by providing a declaration of added sugars on food labels, and does not ''prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion'' (*Zauderer,* 471 U.S. at 651 (quoting *W. Va. State Bd. of Educ.* v. *Barnette,* 319 U.S. 624, 642 (1943))).

As for the comments stating that there is no material difference or scientific rationale for distinguishing between total sugars and added sugars, or between added sugars and naturally occurring sugars, these comments relate to our rationale for why an added sugars declaration will assist consumers to maintain healthy dietary practices and not to whether the declaration is factual and accurate information. We address these comments in part II.H.3.i. The added sugars declaration conveys factual and accurate information about the amount of added sugars in a serving of food.

Second, the required added sugars declaration is not unduly burdensome. Factual nutrition information for a number of other nutrients is currently required to be provided on packaged foods. The space that is occupied by the indented line for the ''Includes 'XX' g Added Sugars'' declaration, below the ''Total Sugars'' declaration does not increase the size of the existing Nutrition or Supplement Facts label, given changes made elsewhere to the label, such as reducing the size of the footnote in the label. We also note that, as discussed in our economic analysis (Ref. 16), the cost to manufacturers is reduced from that in the proposed rule under the compliance timelines in the final rule which will allow most manufacturers to make revisions to the label during regularly scheduled label changes for their products.

Third, the required added sugars declaration is reasonably related to our government interests in promoting the public health, preventing misleading labeling, and providing information to consumers to assist them in maintaining healthy dietary practices, and thus amply satisfies the remaining element of the *Zauderer* test. Providing consumers with information about the added sugars content of food would promote the

public health by ensuring they have information to assist them in meeting nutrient needs within calorie limits and to assist them in constructing a healthy dietary pattern that is limited in added sugars to reduce the risk of CVD. As explained in the preamble to the proposed rule (79 FR 11879 at 11903), Americans consume too many calories from solid fats and added sugars, which makes it difficult for consumers to meet nutrient needs within their calorie limits. The 2010 DGA noted that solid fats and added sugars contribute a substantial portion of calories (35 percent) in the American diet, with 16 percent on average from added sugars. Recommended calorie limits for most consumers, as set forth in the 2010 DGA, can only reasonably accommodate 5 to15 percent of calories from solid fats and added sugars combined (id.). While it is true that excess calorie consumption from any source can lead to weight gain, the statistics on calorie consumption from solid fats and added sugars suggest that, for many consumers, added sugars contribute to excess calorie intake. In fact, the 2010 DGA also noted that excess calories from solid fats and added sugars have implications for weight management (id.). Moreover, there is strong evidence showing that children who consume more sugar-sweetened beverages have greater adiposity (body fat) compared to those with a lower intake (id.).

The 2015 DGAC report further contributed to the scientific support for the added sugars declaration. For the first time, the 2015 DGAC conducted a systematic review of the relationship between dietary patterns and health outcomes. The DGAC found a strong association of a dietary pattern characterized, in part, by lower consumption of sugar-sweetened foods and beverages relative to a less healthy dietary pattern and reduced risk of CVD. We reviewed and considered the evidence that the 2015 DGAC relied upon, including an existing review from the Nutrition Evidence Library (NEL) Dietary Patterns Systematic Review Project as well as the NHLBI Lifestyle Interventions to Reduce Cardiovascular Risk: Systematic Evidence Review from the Lifestyle Work Group (''NHLBI Lifestyle Evidence Review'') (Ref. 17) and the associated American Heart Association (AHA)/American College of Cardiology (ACC) Guideline on Lifestyle Management to Reduce Cardiovascular Risk (''Lifestyle Management Report'') (Ref. 18). The diet quality of the general U.S. population ''does not meet recommendations for vegetables, fruit, dairy, or whole grains, and exceeds recommendations, leading to overconsumption, for the nutrients sodium and saturated fat and the food components refined grains, solid fats, and added sugars.'' While intake levels of added sugars still remain high at an average of 13.4 percent of calories among the U.S. population, the amount of added sugars available for the calorie ranges covered by the USDA Food Patterns (1,000 to 3,200 calories) ranges from only 4 to 9 percent (Ref. 19).

The scientific evidence, and other data and information, supports the need for an added sugars declaration to promote the public health.

In addition, the declaration of added sugars provides information that is material because, without the declaration of added sugars, consumers would not have access to information about the amount of added sugars in a serving of food. The current ''Sugars'' declaration on the label does not provide information on how much added sugars are present in a food, nor does the ingredient listing. The contribution of naturally occurring sugars and added sugars cannot be determined based on the ''Sugars'' declaration that includes both types of sugars. In addition, although ingredients are listed in order of predominance by weight (21 CFR 101.4), the ingredient information is not a substitute for the gram amount of added sugars. An ingredient listing would not enable the consumer to understand the amount of added sugars in grams and therefore, the contribution of the food to the daily dietary recommended limit of less than 10 percent of calories from added sugars.

Added sugars are found in many foods in the marketplace. Consumers are likely to be aware that added sugars are present in some sweet foods, such as sugar-sweetened beverages and candy, but in other foods, such as sweetened grains, mixed dishes, condiment, gravies, spreads, and salad dressings, the presence of added sugars is not as obvious. The majority of food sources of added sugars are beverages (excluding milk and 100 percent fruit juice), snacks, and sweets; however, 22 percent of food sources of added sugars are from other categories of foods such as grains, mixed dishes, dairy, condiments, gravies, spreads, salad dressings, fruits and fruit juice, and vegetables (Ref. 20). Small amounts of added sugars that are contributed to diet by a wide variety of foods can add up over the course of the day and can make it difficult for an individual to eat sufficient amounts of foods from the basic food groups to meet nutrient needs without exceeding the amount of calories they need in a day for weight maintenance. Because added sugars are in such a wide variety of foods in the food supply, consumers need to have information on the label so that they can consider the amount of added sugars in both foods that supply large amounts of added sugars as well as those that supply smaller amounts when constructing a healthy dietary pattern that contains less than 10 percent of calories.

Without the declared amount of added sugars, consumers would be denied access to the information they need to reduce the intake of added sugars to the recommended daily limit. As discussed in our response to comment 159, added sugars is a material fact, within the meaning of section 201(n) of the FD&C Act. Mandatory labeling that provides information about the contribution to daily caloric intake of added sugars is necessary to ensure that full, factual information is imparted to consumers so they have access to the information needed to follow a healthy dietary pattern and will not be misled in purchasing decisions because they have no information about added sugars content and further could not calculate it based on the other information on the label—total sugars content or ingredient labeling.

Furthermore, the declaration of added sugars is also reasonably related to the government's interest in providing information needed to assist consumers in maintaining healthy dietary practices by providing them with information about added sugars content in a serving of food to construct diets containing more nutrient-dense foods and reduce calorie intake from added sugars by reducing consumption of added sugars to less than 10 percent calories. Survey data show that consumers use the Nutrition Facts label and the percent Daily Value at point-of-purchase and review the nutrient contribution of food (Refs. 21–23) products. Thus, by requiring the added sugars declaration on the Nutrition Facts label, we will give consumers a tool they need to include added sugars as part of a healthy dietary pattern that avoids excess calories from added sugars and is associated with a reduced risk of CVD.

Some comments asserted that *Zauderer* is limited to cases where the government interest is in preventing consumer deception. Case law interpreting *Zauderer* clarifies that the government need not establish that compelled disclosure will prevent consumer deception for the *Zauderer* standard to apply. In *American Meat Institute,* the court held that ''[t]he language with which *Zauderer* justified its approach . . . sweeps far more

broadly than the interest in remedying deception'' 760 F.3d 18, 22 (D.C. Cir. 2014) (en banc). In reaching the conclusion that the applicability of *Zauderer* extends beyond regulations in which the government is attempting to mandate a disclosure to remedy deception, the court focused on the ''material differences between disclosure requirements and outright prohibitions on speech,'' (id. at 21 (quoting *Zauderer,* 471 U.S. at 650)), the fact that ''the First Amendment interests implicated by disclosure requirements are substantially weaker than those at stake when speech is actually suppressed,'' (id. (quoting *Zauderer,* 471 U.S. at 652 n.14)), and the fact that ''[b]ecause the extension of First Amendment protection to commercial speech is justified principally by the value to consumers of the information such speech provides, [a] constitutionally protected interest in not providing any particular factual information in his advertising is minimal,'' (id. (citing *Zauderer,* 471 U.S. at 651)). The court found that, ''[a]ll told, *Zauderer*'s characterization of the speaker's interest in opposing forced disclosure of such information as 'minimal' seems inherently applicable beyond the problem of deception'' (id.). Several other circuits concur (see *Pharm. Care Mgmt. Ass'n* v. *Rowe,* 429 F.3d 294, 297 through 298, 310, 316 (1st Cir. 2005); *N.Y. State Rest. Ass'n* v. *N.Y. City Bd. of Health,* 556 F.3d 114, 133 (2d Cir. 2009); *Nat'l Elec. Mfrs. Ass'n* v. *Sorrell,* 272 F.3d 104, 115 (2d Cir. 2001) (affirming use of the ''reasonable-relationship *Zauderer* standard when the compelled disclosure at issue . . . was not intended to prevent 'consumer confusion or deception' ''); *Disc. Tobacco City & Lottery, Inc.* v. *United States,* 674 F.3d 509, 556 (6th Cir. 2012) (holding that ''*Zauderer*'s framework can apply even if the required disclosure's purpose is something other than or in addition to preventing consumer deception'')).

(Comment 22) One comment stated the proposed declaration of added sugars violates the First Amendment because the requirement is not reasonably related to a legitimate regulatory interest. Another comment asserted that an added sugars declaration would not assist consumers in maintaining healthy dietary practices. Another comment stated that even if the declaration of added sugars was purely factual and not controversial, the declaration is ''unjustified and unduly burdensome'' (citing *Zauderer,* 471 U.S. at 651), where there is no scientific evidence that added sugars contributes to obesity or heart disease and there is no recommended daily allowance.

(Response) As explained in our response to comment 21, the required added sugars declaration assists consumers in maintaining healthy dietary practices and is reasonably related to our government interests in promoting the public health, preventing misleading labeling, and providing information to consumers to assist them in maintaining healthy dietary practices. Furthermore, we disagree with the comment suggesting that the added sugars declaration is unjustified and unduly burdensome because ''no scientific evidence exists to support FDA's assumption that added sugars contribute to obesity or heart disease'' and due to the lack of a DV for added sugars. To the extent the comment suggests we were relying on a specific nutrient-disease relationship between added sugars and obesity or heart disease in the general population, the comment misunderstands our rationale for the declaration. We stated that our scientific basis for the added sugars declaration, in fact, differed from our rationale to support other mandatory nutrients related to the intake of a nutrient and risk of chronic disease, a health-related condition or a physiological endpoint (see 79 FR 11879 at 11904). Although we recognized that U.S. consensus reports do not support a cause and effect relationship between added sugars consumption and risk of obesity or heart disease (id.), we considered, in the preamble to the proposed rule (79 FR 11879 at 11902 through 11908) and the supplemental proposed rule (80 FR 44303 at 44307 through 44309), the contribution of added sugars to healthy dietary patterns, and the impact to public health from such patterns. In the latter, we included a proposed DV for the added sugars declaration.

(Comment 23) One comment stated that the disclosure of added sugars is disclosure of factually accurate nutritional data and analogized the disclosure to the disclosure of allergens under the Federal Food Allergen Labeling and Consumer Protection Act (FALCPA). The comment said that Congress imposed requirements for nutrient and allergen disclosures so consumers can make ''safer, healthier, and more informed choices about the foods they eat'' and not because food labels were deceptive without the information. The comment cited *Zauderer* and *Nat'l Elec. Mfrs. Ass'n* v. *Sorrell,* 272 F.3d 104, 113 through 114 (2d Cir. 2001) for support that industry's interest in not disclosing such factual information is minimal. The comment also stated that we articulated a rational basis for requiring consumers to maintain healthy dietary practices (citing *N.Y. State Rest. Ass'n* v. *N. Y. City Bd. of Health,* 556 F.3d 114, n.21 and at 136 (2d Cir. 2009), and *Pharm. Care Mgmt. Ass'n* v. *Rowe,* 429 F.3d 294 (1st Cir. 2005)).

(Response) We agree that the disclosure of added sugars is factually accurate nutrition information and that industry's interest in not disclosing such factual information is minimal. We also agree that Congress imposed nutrition labeling requirements to help consumers have access to information that would assist them in choosing healthy diets. Congress prescribed that foods subject to the nutrition-label requirements are ''deemed to be misbranded'' if they do not provide nutrition labels as required (see section 403 and 403(q) of the FD&C Act). Congress also has indicated that labeling's failure to provide certain material information is to be taken into account in determining whether such labeling is misleading (see section 201(n) of the FD&C Act). We do not respond to the portion of the comment on Congress' intent with respect to allergen labeling under FALCPA because it is outside the scope of this rule.

(Comment 24) One comment stated the added sugars labeling is not to provide purely factual information to prevent consumer deception, but to shape consumer behavior.

(Response) As explained in the preamble to the proposed rule (see 79 FR 11879 at 11905), the added sugars declaration will provide information to consumers on the amount of added sugars in a serving of food. We recognize that added sugars can be a part of a healthy dietary pattern when not consumed in excess amounts. The purpose of the added sugars declaration is not to discourage the consumption of the class of foods that contain added sugars, but rather to increase consumer understanding of the quantity of added sugars in foods to enable the consumer to understand the relative significance of the contribution of added sugars from a serving of a particular food in the context of the total daily diet. A consumer may or may not elect to reduce the consumption of certain foods with added sugars, based on his or her individual need and dietary choice. The declaration provides purely factual information so that consumers will have access to the information they need about the amount of added sugars in a food, and that they are not able to obtain from the current nutrient declaration of ''Sugars'' or ''Total Sugars'' alone.

Through our consumer education, we plan to help consumers understand the changes we are making in the final rule and how the information can assist them to include a variety of foods in their daily diet so that they understand how to achieve a healthy dietary pattern.

(Comment 25) One comment stated the added sugars declaration would compel misleading labeling because it would mislead consumers into believing that a sweetened dried cranberry is less healthy than a naturally sweetened dried fruit, due to the cranberry's added sugar content.

(Response) The comment seems to refer to the consumer research data related to consumer perceptions of ''healthful'' that we discuss in our response to comment 184. We do not agree that the results in our added sugars study or the results submitted by comments on consumer perceptions support the assertion that an added sugars declaration would compel misleading labeling. As we have stated, a consumer's belief, opinion, or previous exposure to information about added sugars and their impact to health, whether based on science or not, may affect how a consumer may view a food with an added sugars declaration. These factors can influence how a consumer perceives the factual statement about the amount of added sugars on a label and may result in some consumer confusion and misunderstanding about the food containing the added sugars that is not based on the declaration itself, but instead, on the consumer's own misperceptions. For example, a consumer may erroneously think a food, which can be part of a healthy dietary pattern, is not ''healthful'' because it contains some amount of added sugars. This is likely not unique to added sugars. Consumers obtain information from a number of sources, previous experiences, or in response to specific health concerns. For example, there is a large body of data and information on other nutrients to limit, *e.g.,* saturated fat, cholesterol, and sodium, which may influence consumer perception of how ''healthful'' a food may be. A consumer may choose to avoid all or most sources of food with sodium or saturated fat present, or present in a certain amount, based on their beliefs or specific dietary needs.

A consumer's lack of understanding about what added sugars are or how to use the added sugars declaration to limit added sugars intake does not mean the factual declaration of the amount of added sugars in a serving of food is misleading. Consumers need more, not less, information about the added sugars content of a food to learn how to understand and use the information in planning a healthy dietary pattern. Furthermore, the term ''unhealthful'' when describing a food with added sugars is a relative term and must be viewed in the context of the day's total dietary intake. For example, a food with a high amount of added sugars may be understandably viewed as ''unhealthful'' because, if consumed, it may result in overconsumption of added sugars for the day. We need to correct the misperceptions consumers may have about added sugars and provide them with information they need to include a variety of foods in their diet, as part of a healthy dietary pattern, so they can understand how to include added sugars in their diets at levels less than 10 percent of calories to avoid overconsumption. We intend to educate consumers on the changes to the food label, and in particular, to the declaration of added sugars so that consumers can expand their food choices to include nutrient dense foods, such as cranberries with added sugars, and still achieve a healthy dietary pattern.

(Comment 26) Another comment stated that an added sugars declaration and percent DV will compel false information on the label because the amount of added sugars will need to be overstated on yeast-leavened products, in violation of the First Amendment.

(Response) We disagree that an added sugars declaration on yeast-leavened products will need to be overstated and therefore compel false information on the label. We allow for reasonable deficiencies in foods generally for label amounts of calories, sugars, added sugars, saturated fat, *trans* fat, cholesterol and sodium, within current good manufacturing practices (see final § 101.9(g)(6)). Furthermore, as we have stated in our response to comment 200, we recognize that labeling of added sugars in products that undergo fermentation and non-enzymatic browning may not be exact, but that manufacturers of most products that participate in these reactions should be able to provide a reasonable approximation of the amount of added sugars in a serving of their product based on information in the literature and their own analyses. To the extent a manufacturer has reason to believe the amount of added sugars in a serving of food may be significant enough to impact the label declaration by an amount that exceeds the reasonable deficiency acceptable within current manufacturing practice, and is unable to reasonably approximate the amount of added sugars in a serving of food, the manufacturer may submit a petition to request an alternative means of compliance.

(Comment 27) One comment stated that, even if the added sugars declaration is not false or misleading, *Zauderer* still would not apply to the requirement to include a % DV for the declaration of added sugars because the % DV is not designed to prevent consumer fraud or deception. The comment stated it is not clear whether consumers know what the % DV represents. The comment suggested that the mere declaration may lead a consumer to consider added sugars as ''inherently dangerous.''

(Response) We disagree with the suggestion that, if the % DV is not designed to prevent consumer fraud or deception, *Zauderer* would not apply. As we explained in our response to comment 21, the *Zauderer* test is not limited in this way. Moreover, we are unclear as to the comment's basis for its assertion that consumers would consider added sugars as ''inherently dangerous.'' The comment provided no data or information for its assertion. We consider that view, should it exist, to be a consumer misperception. We plan to address consumer misperceptions about added sugars as part of our consumer education effort.

(Comment 28) Some comments asserted that the test in *Zauderer* is not applicable to the added sugars declaration and that *Central Hudson* provides the appropriate test with which to evaluate the declaration under the First Amendment.

(Response) While we disagree that the required added sugars declaration should be subject to the *Central Hudson* standard, it would nonetheless be Constitutional under the standard set forth in *Central Hudson.* If the *Central Hudson* standard were applicable to the required added sugars declaration, we would need to identify a ''government interest [that] is substantial,'' establish that ''the regulation directly advances the government interest asserted,'' and show that the regulation ''is not more extensive than is necessary to serve that interest'' (*Central Hudson,* 447 U.S. at 566). Under the *Central Hudson* test, we have the discretion to ''judge what manner of regulation may best be employed'' to serve the substantial government interest (see *City of Cincinnati* v. *Discovery Network, Inc.,* 507 U.S. 410, 416 n.12 (1993) (citing *Bd. of Trustees* v. *Fox,* 492 U.S. 469, 480 (1989))).

(Comment 29) Some comments stated there is no substantial government interest for which we can require an added sugars declaration under *Central*

Hudson because there is no material difference between added and intrinsic sugars in food. One comment stated that ''scientific studies have not sufficiently shown that FDA has a substantial interest in preventing consumer intake of added sugars.'' Another comment stated that FDA's interest in compelling an added sugars declaration is not substantial where there is no causal relationship between added sugars and risk of chronic disease, but only evidence of a strong association between a dietary pattern characterized, in part, by a reduced intake of sugar-sweetened foods and beverages and a reduced risk of CVD. The comment further stated that, just as there is no substantial government interest for added sugars, there is no such interest for total sugar content or for the percent DV for added sugars; the comment stated there is no material health or safety difference between a food with added sugars as compared to naturally occurring sugars.

(Response) We disagree that we have no substantial government interest to support the declaration of added sugars. We have an interest in promoting the public health, preventing misleading labeling, and providing information to consumers to assist them in maintaining healthy dietary practices. Promoting the public health is part of our mission to ensure, in part, that foods are properly labeled (section 1003 of the FD&C Act (21 U.S.C. 393)). In addition, for over 20 years, we have had a substantial government interest in ensuring that consumers have access to information about food on the nutrition label that is truthful and not misleading, and an interest in ensuring that nutrition information will assist consumers in maintaining healthy dietary practices. Based on the more recent scientific evidence on reducing added sugars consumption as part of a healthy dietary pattern, we have a substantial interest in ensuring the accuracy and completeness of added sugars information in labeling. Our government interests are substantial and supported as such (*Rubin* v. *Coors Brewing Co.,* 514 U.S. 476, 485 (1995) (recognizing that the government has a substantial interest in promoting the health of its citizens); see also, *Am. Meat Inst.* v. *U.S. Dep't Agric.,* 760 F.3d 18 (D.C. Cir. 2014) (en banc) (finding the context and history of disclosures in labeling by USDA one of several interests to support a substantial government interest under *Central Hudson*); *N.Y. State Rest. Ass'n* v. *N.Y. City Bd. of Health* (556 F.3d 114, 134 (2d Cir. 2009) (finding the promotion of ''informed consumer decision-making so as to reduce obesity and the diseases associated with it'' through posting of calorie content information on menus to be a substantial government interest)).

We also disagree that there is no material difference between added and intrinsic sugars for purposes of achieving a healthy dietary pattern to avoid excess discretionary calories from added sugars and reduced risk of chronic disease. As we discuss in our response to comment 143, there is a strong association with respect to the consumption of a healthy dietary pattern characterized, in part, by a lower intake of sugar-sweetened foods and beverages, and a reduced risk of CVD, compared to less healthy dietary patterns with higher intakes of added sugars. Foods that are composed of naturally occurring or intrinsic sources of sugars, *e.g.,* fruits and vegetables, are distinct from the category of sugar-sweetened foods and beverages and are not food categories recommended to be reduced as part of the healthy dietary pattern. Furthermore, evidence and conclusions from the 2010 DGA support the conclusion that consumption of excess calories from added sugars can lead to a less nutrient-dense diet. With respect to the comments related to the scientific support for the added sugars declaration, we disagree that a causal relationship must be shown between added sugars and a risk of chronic disease (*e.g.,* a dose-response relationship between a nutrient and risk of disease) before we can make the requisite finding under section 403(q)(2)(A) of the FD&C Act that added sugars would assist consumers in maintaining healthy dietary practices (see part II.H.3.a). No such dose-response requirement exists in section 403(q) of the FD&C Act or in implementing regulations. Furthermore, the comment's characterization that ''scientific studies have not sufficiently shown that FDA has a substantial interest in preventing consumer intake of added sugars'' mischaracterizes the purpose of the nutrient declaration. We are not ''preventing'' consumer intake of added sugars. Instead, we are providing factual, accurate information to the consumer about the amount of added sugars in serving of food to enable consumers to understand and use the information to make informed dietary choices and construct their daily diets.

(Comment 30) One comment said that consumer interest alone does not make information material and consumer interest is not a substantial government interest, and therefore, the added sugar declaration cannot be compelled under the First Amendment.

(Response) We are not requiring the declaration of added sugars based on consumer interest. We are requiring an added sugars declaration to provide information to assist consumers with food purchases that can reduce their intake of added sugars and enable them to achieve a healthy dietary pattern. A healthy dietary pattern, characterized in part by lower amounts of added sugars than that found in the U.S. general population's dietary pattern, is strongly associated with a reduced risk of chronic disease (*Disc. Tobacco & Lottery, Inc.* v. *United States,* 674 F.3d 509, 564 (6th Cir. 2012) (finding a reasonable relationship between tobacco warning statements and a government interest in ''promoting greater public understanding of the risks''); *Sorrell,* 272 F. 3d at 115 (finding a rational relationship between the state's goal of reducing mercury contamination and required label disclosures on mercury-containing light bulbs). The required declaration of added sugars is consistent with the First Amendment and our authority in sections 403(a), 201(n), 403(q)(2)(A) and 701(a) of the FD&C Act.

(Comment 31) Some comments questioned how an added sugars declaration would directly advance the government interest related to consumer health. One comment stated that, even if FDA had a substantial government interest, FDA has not shown that the declaration directly advances that interest (citing *Central Hudson,* 447 U.S. at 566) and to a ''material degree'' (citing *Florida Bar* v. *Went For It, Inc.,* 515 U.S. 618, 626 (1995)) because FDA has not shown there would be any ''discernable effect on consumer behavior'' and that FDA must demonstrate that an added sugars declaration is related to ''its desired change in consumer behavior or an improvement in consumer health.'' Another comment cited *Edenfeld* v. *Fain,* 507 U.S. 761 at 770 through 771 (1993), stating that FDA will not be able to carry the burden to ''demonstrate that the harms it recites are real and that its restriction will in fact alleviate them to a material degree.'' The comment stated that we have not and cannot demonstrate a concrete harm in the absence of a mandatory added sugars declaration.

(Response) The added sugars declaration directly advances our government interests in promoting consumer health, preventing misleading labeling, and assisting consumers in maintaining healthy dietary practices. As we explain in our response to comment 137, Americans consume too many calories from solid fats and added sugars, which replace nutrient-dense foods and make it difficult for consumers to achieve the recommended

nutrient intake while controlling their calorie intake. Consumers can only reasonably accommodate 5 to 15 percent of calories from solid fats and added sugars combined, yet the 2015 DGAC found intakes from added sugars alone at approximately 13.4 percent. Excess calories from solid fats and added sugars have implications for weight management. Moreover, there is strong evidence showing that children who consume more sugar-sweetened beverages have greater adiposity (body fat) compared to those with a lower intake.

The scientific evidence shows that, although there is moderate evidence of an association with healthy dietary patterns (with lower added sugars) compared to less healthy patterns and measures of increased body weight or obesity, type 2 diabetes, cancer, and congenital anomalies, there is a strong association of a dietary pattern characterized, in part, by lower consumption of sugar-sweetened foods and beverages, relative to a less healthy dietary pattern found in the general U.S. population, and reduced risk of CVD. Thus, the scientific review supports that a healthy dietary pattern that is characterized by a lower consumption of added sugars, not a lower consumption of naturally occurring sugars, is strongly associated with a reduced risk of CVD.

The declaration of added sugars would provide consumers with information about the amount of added sugars in a food product that is currently absent from the label. The failure to disclose the amount of added sugars in a product is an omission of a material fact. The reasonable consumer would expect that the information on the label would give them the most important nutrition information, relative to the need to construct a healthy dietary pattern that limits the excess consumption of added sugars. The omission of added sugars runs counter to that expectation, impeding rational consumer choice. A healthy dietary pattern, when compared to the current dietary pattern in general U.S. population, is associated with a reduced risk of CVD and avoids excess discretionary calories from added sugars and solid fats. Consumers need information about added sugars in all foods, not just those that contain a certain threshold level or that are found in select food categories (*e.g.,* beverages) to reduce overall intake of added sugars in the diet. Consumers can use the declared amount of added sugars to compare products and make food selections to achieve a healthy dietary pattern that is associated with a reduced risk of CVD. Therefore, the added sugars declaration is required to ensure that the labeling is not misleading.

Consumers need to understand the amount of added sugars in food to understand the relative contribution of the food to total dietary intake. The percent DV provides information on how much added sugars in a serving of food contributes to the recommended limit of less than 10 percent calories from added sugars. As we explain in our response to comment 21, consumers use the Nutrition Facts label at point-of-purchase and review the nutrient contribution of food products to help them choose products and compare products. By providing this information, consumers can have the information they need to achieve a healthy dietary pattern that is characterized by lower levels of added sugars through a lower total consumption of sugar-sweetened foods and beverages. A healthy dietary pattern is also characterized by a higher consumption of vegetables, fruits, whole grains, low-fat dairy, and seafood, and lower consumption of red and processed meat and refined grains. In addition, the declaration of added sugars on the nutrition label would assist consumers in maintaining healthy dietary practices by providing them with information necessary to meet the key recommendations to construct daily diets containing nutrient-dense foods and reduce calorie intake from added sugars by reducing consumption of added sugars to less than 10 percent calories. Thus, by providing this information on the food label, we can directly and materially advance an interest in promoting public health, preventing misleading labeling, and assisting consumers in maintaining healthy dietary practices. We have sufficient support to demonstrate that the declaration directly advances our government interests, including scientific support for the added sugars declaration, evidence to support consumer use of the label, and expert opinion to support consumer understanding of the added sugars declaration based on changes made to the proposed declaration (see *Florida Bar* v. *Went For It, Inc.,* 515 U.S. 618, 628 (1995) (justifying speech restrictions ''by reference to studies, and anecdotes pertaining to different locales altogether . . . or even, in a case applying strict scrutiny, to justify restrictions based solely on history, consensus, and 'simple common sense' '') (citations omitted)).

We disagree with the comment's assertion that we must show a ''discernable effect on consumer behavior'' and that we must demonstrate that an added sugars declaration is related to a ''desired change in consumer behavior or an improvement in consumer health.'' Achieving specific changes in consumer behavior and/or health are not the government interests we assert, and the law does not require that these specific showings be made. We note that, to the extent the comment suggests we need a connection to consumer health for purposes of the added sugars declaration, we have described that relationship in the proposed rule, the supplemental proposed rule, and the final rule.

(Comment 32) One comment acknowledged the strong association between a dietary pattern characterized, in part, by a reduced intake of sugar-sweetened foods and beverages and reduced CVD risk. However, most comments questioned how an added sugars declaration would directly advance our government interest to assist consumers to maintain healthy dietary practices and focused on health outcomes for which they say there is only moderate or no direct evidence of an association between added sugars consumption and a disease or health-related condition. For example, some comments stated there is no evidence that added sugars has an impact on obesity, and therefore, a declaration would not assist consumers to maintain healthy dietary practices. Another comment said that a link to added sugars intake and health based on the 2010 DGA is flawed, citing to a statement in the preamble to the proposed rule that added sugars do not contribute to weight gain more than any other source of calories (79 FR 11879 at 11904) even though the 2010 DGA recommendation is to reduce the intake of calories from added sugars. Other comments focused on the evidence in Chapter 6 of the DGAC Report, which the comments describe as ''moderate'' evidence, to support a specific relationship between added sugars and disease risk. The comments appeared to suggest that we are relying only on evidence in Chapter 2 Part D of the 2015 DGAC Report to support our basis for the added sugars declaration, and not the moderate evidence in Chapter 6. One comment suggested the moderate evidence provides a lower level of scientific certainty to support a reasonable fit between the disclosure and FDA's government interest.

(Response) The comments focusing on evidence related to a specific relationship between added sugars intake in the general U.S. population and a direct link to obesity to support a mandatory declaration of added sugars

may have overlooked the discussion in the preamble to the proposed rule (79 FR 11879 at 11904). We are not establishing or relying on a direct link to obesity from added sugars intake for the general population. There is adequate evidence that the U.S. population consumes excess calories from added sugars, above the discretionary calories permitted within a recommended caloric intake (id. at 11903). The 2010 DGA supports the need for an added sugars declaration to provide the information necessary for consumers to identify the contribution of discretionary calories from added sugars, which are consumed in excess by the general U.S. population based on recommended calorie limits, to their daily diet in order to reduce their intake of added sugars to within recommended calorie limits. While it is true that excess calories from any source leads to weight gain, we know that the U.S. general population consumes added sugars in excess of the recommended limit of less than 10 percent of calories. Moreover, we have additional support for the declaration of added sugars, as lower intakes of sugar-sweetened foods and beverages were part of a healthy dietary pattern that was found to be strongly associated with a decreased risk of CVD (see part II.H.3.a and II.H.3.b). Furthermore, we disagree we are mischaracterizing the evidence on which we rely because we do not cite to moderate evidence in the 2015 DGAC. Although the evidence concerning a cause and effect relationship between added sugars intake and reduced risk of a disease is still emerging, there is a strong association found for a healthier dietary pattern, characterized in part by a reduced intake of overall added sugars compared to less healthy dietary patterns like those consumed by the general U.S. population, and reduced risk of CVD.

(Comment 33) One comment said that we have not identified any direct relationship between the added sugars declaration and an interest in helping consumers to maintain healthy dietary practices by reducing added sugars consumption. The comment questioned the strong association found between dietary patterns and risk of CVD in the 2015 DGAC Report, based on criticisms by FDA of menu modeling to establish DRVs in the preamble to the proposed rule (79 FR 11895 at 11896).

(Response) To the extent the comment asserts we must have a direct relationship between a nutrient and a reduced risk of disease before the nutrient is eligible for mandatory labeling under section 403(q)(2)(A) of the FD&C Act, we disagree for the reasons we set forth in our response to comment 58. Furthermore, the analysis that was conducted related to dietary patterns and health outcomes that is discussed in Chapter 2 of the 2015 DGAC Report is not based on modeling of dietary patterns, but rather on a review of diet quality studies where dietary quality indices were used to assess how adherence to a healthy dietary pattern is associated with health outcomes (Ref. 19). Therefore, statements that we have made in the past related to food pattern modeling do not apply to the evidence that we considered related to healthy dietary patterns that are characterized, in part, by lower intakes of sugar-sweetened foods and beverages relative to less healthy dietary patterns and CVD risk.

(Comment 34) One comment stated that consumer research demonstrates that, while an added sugars declaration may allow consumers to determine the amount of added sugars in a product accurately and compare products based on the amount of added sugars and percent DV contribution, the evidence does not demonstrate that consumers would maintain healthy dietary practices or that consumer understanding of a product's healthfulness is improved. Another comment suggested that we must demonstrate that a % DV disclosure for added sugars would have a ''direct and material effect on consumer behavior.'' The comment said there is no evidence that consumers understand the % DV and how to use the information for the added sugars declaration.

(Response) We interpret the comments as questioning how an added sugars declaration (and percent DV) would directly advance our government interest to assist consumers to maintain healthy dietary practices. The comments may misunderstand our authority under section 403(q)(2)(A) of the FD&C Act. Section 403(q) of the FD&C Act gives us the discretion to require a nutrient declaration when we determine that the information is necessary to assist consumers to maintain healthy dietary practices. The determination is based on a review of the scientific evidence and other available data and information related to the need for the nutrition information to be available to the consumer as part of the Nutrition Facts label. The declaration places the information in the hands of the consumer so that the consumer can make a judgment about whether to purchase a given food based on the nutrient content and can understand the relative significance of the information in the context of a total daily diet (see our response to comment 33). Our government interest does not rest on the notion that there must be some percent of consumers who we know will modify their diet to consume more or less of a nutrient before we can compel a label declaration for that nutrient or the percent DV. Consumers do not know the amount of added sugars in foods without a required declaration. Furthermore, the comment may misunderstand that the nutrition information on Nutrition Facts label is to assist consumers in understanding the relative significance of the information in the context of a total daily diet and does not require a threshold level of a change in consumer behavior before the nutrient can then be required on the nutrition label. The final rule does not define when a food is ''healthy'' based on the amount of added sugars in a serving of the food; instead, through the Nutrition Facts label, we are providing information about the amount of added sugars so that consumers can understand the relative significance of a food's contribution to the total added sugars intake in the context of the total daily diet and use that information to decide what foods to choose as part of that dietary intake for the day.

(Comment 35) One comment stated the added sugars declaration must be understandable to directly advance the government interest to assist consumers to maintain healthy dietary practices. The comment said the added sugars study provides only weak evidence that consumers understand the declaration. The comment cited our statements in the supplemental proposed rule and study memorandum that acknowledge that a number of participants were confused about the distinction between sugars and added sugars on the labels studied and that some participants identified a more nutritious product with more added sugars as less healthy.

(Response) We considered the results from our consumer research on the added sugars declaration, in addition to consumer research on the declaration submitted in comments (see part II.B.5). As a result of the findings showing that some consumers may be confused by the juxtaposition of total sugars followed by added sugars indented below total sugars, we revised the declaration to address those concerns. We now include the word ''Total'' before ''Sugars'' and use the phrase ''Includes ''XX'' g Added Sugars'' indented below ''Total Sugars'' to mitigate the observed misunderstanding by some consumers to add the total and added sugars values together. With the change to the declaration, we expect that consumers will understand that

added sugars are a component of total sugars (see our response to comment 188). We also considered results showing that some consumers may perceive products with more added sugars as less healthy (see our responses to comments 55 and 184) and plan to address consumer perceptions as part of our consumer education. The factual declaration of the amount of added sugars in a serving of food is not misleading based on consumer perceptions about whether a food with added sugars is ''unhealthful.''

(Comment 36) One comment said that we must identify the public harm caused by not declaring added sugars, demonstrate how the declaration will alleviate this harm, and show this is the least intrusive approach to comport with a company's constitutional protection of its right to free speech. The comment also said that we must show there is a different or greater harm from added sugars that is not present for the same level of naturally occurring sugars.

(Response) We discuss how the added sugars declaration comports to the *Central Hudson* analysis, including why added sugars are distinguished from naturally occurring sugars, in our response to comment 29. *Central Hudson* requires the regulation to be no more extensive than necessary to serve the asserted government interest (*Central Hudson,* 447 U.S. at 566). This standard does not require the government to employ ''the least restrictive means'' of regulation or to achieve a perfect fit between means and ends (see *Bd. of Trustees* v. *Fox,* 492 U.S. 469, 480 (1989)). Instead, it is sufficient that the government achieve a ''reasonable'' fit by adopting regulations '' 'in proportion to the interest served.' '' (id. (quoting *In re R.M.J.,* 455 U.S. at 203)). The requirement of narrow tailoring is satisfied ''so long as the . . . regulation promotes a substantial government interest that would be achieved less effectively absent the regulation'' (*United States* v. *Albertini,* 472 U.S. 675, 689 (1985)). The added sugars declaration will give consumers a tool they need to include added sugars as part of a healthy dietary pattern—information that would not be readily available absent the regulation.

(Comment 37) One comment took exception to the fact that the requirement for added sugars labeling is for all foods and not limited to a smaller subset of foods that account for the majority of added sugars consumption (*e.g.,* sweetened beverages), and thus, is ''more extensive than necessary to serve [the government] interest'' (citing *Central Hudson,* 447 U.S. at 566).

(Response) We disagree. The required added sugars declaration is no more extensive than necessary to serve its purpose (see *Central Hudson,* 447 U.S. at 566). Again, this standard does not require the government to employ ''the least restrictive means'' of regulation or to achieve a perfect fit between means and ends, but rather a ''reasonable'' fit by adopting regulations '''in proportion to the interest served''' (*Bd. of Trustees* v. *Fox,* 492 U.S. 469, 480 (1989)). Moreover, the required disclosure does more to advance our interests to promote public health, prevent misleading labeling, and assist consumers in maintaining healthy dietary practices than a disclosure that was limited to a subset of foods. Added sugars are used in a variety of foods from all food categories. For example, although some foods, such as sugar-sweetened beverages, may contain more added sugars relative to other beverages, that does not mean that a consumer is going to consume only those sugar-sweetened beverages that contain the most added sugars, and therefore, would only need added sugars information on the foods that contain some higher threshold of added sugars. Furthermore, the percent DV of less than 10 percent of calories from added sugars pertains to all calorie sources of added sugars, not just those categories that contain a certain higher amount of added sugars per serving of food relative to other foods in the same or similar food category. Therefore, a consumer needs to understand the contribution of all sources of added sugars in his or her diet to reduce calories from added sugars to less than 10 percent of the total. Those foods with fewer added sugars consumed over the course of a day can add up to levels that may meet or exceed 10 percent of total calories. Moreover, for some food categories, consumers may not even recognize the food as one that contributes added sugars to the diet (*e.g.,* condiments, sauces, canned fruits and vegetables, and some snacks), much less, the relative contribution. Limiting the required disclosure to only certain foods that exceed a certain level of added sugars before a declaration is required would undermine our efforts in getting information needed for making informed food purchases into the hand of consumers to enable them to achieve a healthy dietary pattern. In addition, the required disclosure is not unduly burdensome in that it is a factual disclosure confined to one line on the Nutrition Facts label and will enable consumers to understand the information in the Nutrition Facts label and how the contribution of added sugars from a food fits into the daily diet.

(Comment 38) One comment questioned whether the use of the Nutrition Facts format was too restrictive under the First Amendment for conveying nutrition information about a product, noting that Congress did not prescribe a particular format or means by which to convey nutrition information. The comment stated that section 403(q) of the FD&C Act provides that a food will be misbranded ''unless its label or labeling bears nutrition information.'' The comment suggested that nutrition information conveyed through labeling that does not physically accompany the product, such as at the point of purchase, on the Internet, or through a smart phone application, would be a less prescriptive means of conveying the required information.

(Response) To the extent the comment suggests a completely different approach to conveying nutrition information that is separated from, and not on, the food label itself, by use of a smart phone, Internet, or posted somewhere in the store, the comment provided no data or information to support why those approaches would assist consumers as well as, if not better, than having the information on the label itself at point-of-purchase. Not all consumers own smart phones or computers, or even if they did, would necessarily take these electronic devices to the store to research the nutrient profile of each food they are considering to purchase. It also is unclear how added sugars and other nutrient information in the Nutrition Facts label would be accessed by posting in the aisles or somewhere else in the store for the number of foods stocked within each area or how a consumer would find the information that matched the product picked up off the shelf. The Nutrition Facts label provides product-specific information that is readily accessible to the consumer at point-of-purchase in the store, when consumers would use the information to understand the nutrient content and compare products for purposes of deciding whether to purchase the product. Because the comment's suggested alternative would be less effective than the required disclosure in advancing the relevant government interests, we disagree with the comment.

(Comment 39) One comment stated the compelled disclosure of added sugars is more extensive than necessary to serve ''a speculative interest by FDA.'' The comment suggested that an

interest to help consumers select diets that are nutrient rich, where foods high in solid fats and added sugars do not displace food with greater nutrient density, could be served by consumer education and not a listing of added sugars.

(Response) We disagree our interest is speculative. We have substantial government interests in promoting the public health, preventing misleading labeling, and assisting consumers to maintain healthy dietary practices. These interests are supported by the science and our 20-plus year history of the use of the Nutrition Facts label to convey accurate, truthful, non-misleading information about the nutrient content of a food to the consumer at point-of-purchase. We do not consider consumer education alone to be a reasonable alternative to the declaration on the label because consumers need to know the amount of added sugars in specific foods, not simply general concepts, and to understand how to incorporate added sugars into a healthy dietary pattern. Providing the gram amount of added sugars in a serving of food on the label, which is the same information provided for other nutrients on the label, is sufficiently narrowly tailored to advance our interests in providing nutrition information to promote the public health, prevent misleading labeling, and assist consumers in maintaining healthy dietary practices. The nutrition information will be readily available to consumers at point-of-purchase which is the time and place that is critical to a consumer's purchasing decision and considering the relative significance of the information in the context of their total daily diet. Because the proposed alternative would be less effective than the required disclosure in advancing the relevant government interests, we disagree with the comment.

(Comment 40) One comment stated an added sugars declaration does not seem to fit the requirements under *Central Hudson* to directly advance the government interest asserted or not be more extensive than necessary to serve that interest because: (1) The current label already provides information on nutrient density and total sugar content; (2) there is no consumer research showing that consumers understand the meaning and role of added sugars; (3) there is no nutritional or physiological difference between added and naturally occurring sugars; and (4) other sources of excess calories would contribute to weight gain.

(Response) We have explained, in our response to comment 39, why the added sugars declaration directly advances our substantial government interests. We also explained, in our response to comment 39, why the added sugars declaration is not more extensive than necessary to serve our government interests. We disagree that the current label provides information on nutrient density because, although the current label provides information on total sugar content, it does not provide information on added sugars content which is information consumers need to understand to avoid the excess contribution of empty calories. To the extent the comment suggests that we would need consumer research showing that consumers understand the meaning and role of added sugars before we require a declaration of added sugars, we disagree. The FD&C Act does not require us to establish that consumers have a level of understanding about a nutrient before we can compel disclosure of that nutrient on the label. In fact, the label is the means by which the consumer can access new nutrition information that we have determined is necessary to maintain healthy dietary practices.

(Comment 41) One comment stated that added sugars declaration is subject to strict scrutiny (citing *Reed* v. *Town of Gilbert,* 135 S. Ct. 2218 (2015)) because of discrimination between added and naturally occurring sugars. The comment stated that the two categories of label declarations for added sugars and naturally occurring sugars is a content-based regulation of speech. In particular, the comment stated that cranberries and other fruit to which sugar is added are nutritionally comparable to fruit that contains only natural sugars, so a declaration of added sugars would mislead consumers into believing the products without added sugars are healthier. The comment said there is no compelling government interest, and the declaration is not narrowly tailored, where the added sugars are listed in the ingredient statement. The comment said a footnote could be provided to clarify the sugars are added for palatability.

(Response) We disagree that the added sugars declaration is subject to strict scrutiny under *Reed* v. *Town of Gilbert. Reed* involved a town sign code, which involves ''quintessential public fora'' (*McLaughlin* v. *City of Lowell,* 2015 U.S. Dist. LEXIS 144336 (D. Mass. Oct. 23, 2015)). *Reed* does not apply to commercial speech, which is the only type of speech at issue here (see, *e.g., CTIA—The Wireless Ass'n* v. *City of Berkeley,* Cal., Civ. No. 15–2529 (EMC), 2015 U.S. Dist. LEXIS 126071 *31 through 33 (N.D. Cal. Sept. 21, 2015) (''[A]s the Supreme Court has emphasized, the starting premise in all commercial speech cases is the same: The First Amendment values commercial speech for different reasons than non-commercial speech, and nothing in its recent opinions, including *Reed,* even comes close to suggesting that that well-established distinction is no longer valid.''); *Chiropractors United for Research & Educ., LLC* v. *Conway,* 2015 U.S. Dist. LEXIS 133559 (W.D. Ky. Oct. 1, 2015) (''Because the New Solicitation Statute constrains only commercial speech, the strict scrutiny analysis of *Reed* is inapposite.''); *San Francisco Apt. Ass'n* v. *City & Cnty. of San Francisco,* 2015 U.S. Dist. LEXIS 150630 (N.D. Cal. Nov. 5, 2015) (''*Reed* is inapplicable to the present case, for several reasons, including that it does not concern commercial speech.''); *Cal. Outdoor Equity Partners* v. *City of Corona,* 2015 U.S. Dist. LEXIS 89454 (C.D. Cal. July 9, 2015) (''*Reed* does not concern commercial speech''); *Timilsina* v. *West Valley City,* 2015 U.S. Dist. LEXIS 101949 (D. Utah June 30, 2015) (''Because the parties agree this case concerns commercial speech and the *Central Hudson* applies, the Court need not address how the regulation would fare under [Reed]'')). Moreover, *Reed* involved review of ''content-based *restrictions* on speech'' (*Reed,* 135 S. Ct. at 2231). Here, we are requiring the *disclosure* of factual information, which is properly reviewed under the standards articulate in *Zauderer* and its progeny (*Sorrell,* 272 F.3d at 113 to 114 (''Commercial disclosure requirements are treated differently from restrictions on commercial speech because mandated disclosure of accurate, factual, commercial information does not offend the core First Amendment values of promoting efficient exchange of information or protecting individual liberty interests. Such disclosure furthers, rather than hinders, the First Amendment goal of the discovery of truth and contributes to the efficiency of the 'marketplace of ideas.' '')). The added sugars declarations, together with the other nutrient declaration on the nutrition label, contribute to the marketplace of ideas by providing information that may help consumers to use and understand the amount of added sugars, along with the other nutrients listed, in constructing a healthy dietary pattern to reduce the risk of chronic disease and achieve a calorie intake that limits excess intake of empty calories from unhealthy types of fats and from added sugars.

With respect to the comment's assertion that products with different

added sugars content would mislead consumers into believing the products without added sugars are healthier, we explain in our discussion of consumer research in part II.H.3.g why the findings of some consumer perceptions about what is ''healthy'' does not mean that the added sugars declaration is misleading. Furthermore, we also explain, in our response to comment 21, why the ingredient listing is not sufficient to convey the amount of added sugars in serving of a product. With respect to the use of a footnote or other language on the palatability of a food without added sugars, we are not setting forth requirements in this final rule on labeling information about this practice, and any labeling information must be truthful and not misleading. Lastly, as we explain in our response to comment 28, we disagree that we do not have a substantial government interest or that the added sugars declaration is not narrowly tailored.

(Comment 42) One comment stated that an added sugars declaration is inconsistent with the First Amendment because it would send a message with which the manufacturer disagrees. The comment said it is the total number of calories consumed, not the type of calories consumed, which determines the potential for weight gain. Another comment stated that a strict scrutiny test should be applied to the added sugars declaration because the declaration is ''an inherently subjective, judgmental statement in the guise of a purely factual declaration.'' The comment stated that the declaration is ''designed to convey the unsupported opinion that added sugars are somehow more adverse to health than sugars that occur naturally.'' Another comment stated that an added sugars declaration would compel food producers to tell their consumers that avoiding added sugars is a meaningful factor in maintaining healthy dietary practices, which producers do not believe to be true, and requires a higher level of scrutiny to support (citing *United States* v. *United Foods,* 533 U.S. 405, 411 (2001)). Some comments said that we have conceded that the declaration is not meaningful based on statements we made in the preamble to the proposed rule (79 FR 11879 at 11903 through 11904) about added sugars, *e.g.,* that added sugars are not chemically different than natural sugars, and there is lack of scientific agreement on the effects from added sugars to health outcomes and contribution to weight gain compared to other calorie sources.

(Response) The declaration of added sugars is an assertion of fact in the context of a commercial communication; it is not subjective, judgmental, or a matter of opinion. Courts have rejected similar arguments from industry attempting to assert that heightened scrutiny should be applied to regulation of commercial speech (see, *e.g., N.Y. State Rest. Ass'n* v. *N.Y. City Bd. of Health,* 556 F.3d 114, 134 (2d Cir. 2009) (rejecting argument that menu calorie content disclosures be subject to strict scrutiny review); *Discount Tobacco,* 674 F.3d at 525–27 (rejecting argument that strict scrutiny applied to tobacco warnings, as a compelled '' 'subjective and highly controversial' marketing campaign expressing its disapproval of their lawful products'')). In contrast, *United Foods* (533 U.S. 405 at 411), which concerned the payment of subsidies for speech that was disfavored, has no bearing on the nutrient declaration for added sugars.

The scientific evidence on which we rely relates to dietary patterns and impact to health from consumption of a healthy dietary pattern characterized, in part, by a reduced added sugars intake. Added sugars are distinguishable from naturally occurring sugars when consumed as part of a healthy dietary pattern compared to the current U.S. general population's dietary pattern. Indeed, the declaration of added sugars is not based on a specific relationship between added sugars and disease risk, contrary to what the comments suggest. We made that distinction clear in the preamble to the proposed rule (79 FR 11879 at 11904) when we stated that our rationale to support an added sugars mandatory declaration in labeling is different from our rationale to support other mandatory nutrients to date which generally relates to the intake of a nutrient and a risk of chronic disease.

2. Administrative Procedure Act

(Comment 43) One comment said that we do not have the required reasonable basis to mandate the added sugars declaration because, unlike the differences between saturated fats and *trans* fat, there is no physiological distinction between added and naturally occurring sugars, no analytical methods to distinguish these sugars, inadequate evidence to support a direct contribution of added sugars to obesity or heart disease, and that our rationale does not relate to the intake of a nutrient and risk of chronic disease, health-related condition or physiological endpoint. Another comment cited specific statements we made related to added sugars and their link to obesity and other statements in which we have stated there is inadequate evidence to support the direct contribution of added sugars to obesity, suggesting that this is a reversal of the Agency position.

(Response) We disagree that we do not have a sufficient scientific basis to support an added sugars declaration. As we stated in our response to comment 21, a physiological distinction between added and naturally occurring sugars is not a prerequisite to mandatory declaration under section 403(q)(2)(A) of the FD&C Act. Nor is an analytical method specific to added sugars a prerequisite to mandatory declaration under this section (see the discussion in our response to comment 45). Furthermore, we explained in the preamble to the proposed rule that our scientific basis for the added sugars declaration for the general population, in fact, differed from our rationale to support other mandatory nutrients related to the intake of a nutrient and risk of chronic disease, a health-related condition or a physiological endpoint (see 79 FR 11879 at 11904). Rather than relying on a causal relationship between added sugars to obesity or heart disease, we considered, in the preamble to the proposed rule (79 FR 11879 at 11902 through 11908) and the preamble to the supplemental proposed rule (80 FR 44303 at 44307 through 44309), the contribution of added sugars as part of healthy dietary patterns and the impact to public health from such patterns. Thus, the comments erroneously focused on the nutrient, added sugars, and its independent relationship to health in the general population rather than our rationale for mandatory declaration of added sugars as part of a healthy dietary pattern.

(Comment 44) One comment stated the added sugars declaration appears to be arbitrary and capricious because the rationale to support the added sugars declaration is dramatically different from the rationale to support other mandatory nutrients and the added sugars content of a food does not always reflect a food's nutritional value (such as yogurt) or convey information that is not otherwise available from the total sugars declaration. Another comment suggested that the supplemental proposed rule does not provide adequate notice and explanation for the departures from established precedent and must acknowledge the change and provide a reasoned explanation for the change (citing *Prevor* v. *FDA,* 895 F. Supp. 2d 90 (D.D.C. 2012) and *Paralyzed Veterans of Am.* v. *DC Arena L.P.,* 117 F.3d 579, 586 (D.C. Cir. 1997)).

(Response) We disagree with the comments that suggest the required added sugars declaration is arbitrary and capricious under the APA. For each nutrient we require be declared on the nutrition label, we consider whether the nutrient will assist consumers in

maintaining healthy dietary practices, consistent with our statutory authority in section 403(q) of the FD&C Act. We consider the scientific evidence related to that standard for each nutrient we consider for mandatory declaration. The scientific evidence on which we rely to make that determination for a particular nutrient may differ. With respect to added sugars, we considered the evidence related to a healthy dietary pattern that is associated with a reduced risk of CVD, consumption data showing that Americans are consuming too many calories from added sugars, evidence showing that it is difficult to meet nutrient needs within calorie limits if one consumes too many added sugars, and evidence showing that increased intake of sugar-sweetened beverages is associated with greater adiposity in children. Specifically, we explained that we were reconsidering whether to require the declaration of added sugars based on new data and information, including U.S. consensus reports and recommendations related to the consumption of added sugars, a citizen petition, and public comments (79 FR 11879 at 11902). We explained our rationale for requiring an added sugars declaration in the preambles to the proposed rule (79 FR 11879 at 11904 and the supplemental proposed rule (80 FR 44303 at 44308)). The evidence in the 2015 DGAC report, through the use of studies on diet quality, supports evidence of a strong association between a dietary pattern characterized, in part, by a reduced intake of sugar-sweetened foods and beverages and a reduced risk of CVD. We also set forth in the supplemental proposed rule our rationale for use of the reference amount for added sugars of less than 10 percent total daily caloric intake (*id.*). Thus, we provided the requisite showing, consistent with our obligations under the APA, for why an added sugars declaration is necessary to assist consumers in maintaining healthy dietary practices (see *Home Care Ass'n of Am.* v. *Weil,* 799 F.3d 1084 (D.C. Cir. 2015) (stating the APA imposes ''no special burden when an Agency elects to change course'' and the ''reasoned explanation'' under the APA for an alternative approach includes an Agency awareness of the change in position and good reasons for the change (citing *FCC* v. *Fox Television Stations, Inc.,* 556 U.S. 502, 515 (2009)). We are not limited to one body of scientific evidence when exercising our discretion under section 403(q)(2)(A) of the FD&C Act; instead, we have broad discretion to consider the new scientific evidence and how nutrition information may impact human health.

Moreover, with respect to the comment that the added sugars declaration conveys no more information than one could obtain from the total sugars declaration, we disagree. As we explain in our response to comment 161, the added sugars declaration does convey information that is not otherwise available from the total sugars declaration. Furthermore, it is not clear why the comment suggests the added sugars content does not reflect a food's nutritional value (such as yogurt). The added sugars declaration reflects the contribution of that nutrient in a serving of the food. We agree that a food, such as yogurt, can provide nutritional value to the overall diet even though it contains added sugars. The added sugars declaration is one piece of information on the nutritional label to help inform the consumer about how the food fits into the overall dietary pattern so that the consumer can use that information to help achieve a healthy dietary pattern. The cases cited by the comment (*Prevor* v. *FDA,* 895 F. Supp. 2d 90 (D.D.C. 2012) and *Paralyzed Veterans of Am.* v. *D.C. Arena L.P.,* 117 F.3d 579, 586 (D.C. Cir. 1997) (overruled in part by *Perez* v. *Mortg. Bankers Ass'n,* 135 S. Ct. 1199 (2015))) involve questions related to interpretative rules. Therefore, we do not consider them to be applicable to this final rule, which is a legislative rule, for which we provided notice and an opportunity to comment.

(Comment 45) Some comments stated that the declaration of added sugars is inconsistent with FDA's approach on whether to declare other nutrients, specifically stearic acid, acetic, propionic and butyric acids, dietary fiber, and carbohydrates, and cited statements in the preamble to the proposed rule related to chemically distinct nutrients. The comments stated that our rationale for not labeling these other substances separately is based on the fact that these are not chemically distinct or are based on whether analytical techniques are available to verify the declared amount on the label. The comments said that we did not explain why we departed from our traditional approach for the added sugars declaration, and, therefore, our decision regarding the declaration of added sugars appears arbitrary and capricious under the APA (citing *Atchison, T. & S. F. R.* v. *Witchita Board of Trade,* 412 U.S. 800 (1973) and *Allentown Mack Sales and Serv.* v. *NLRB,* 522 U.S. 359 (1998)).

(Response) We disagree with the suggestion that we only consider requiring the mandatory declaration of a nutrient where the nutrient is chemically distinct from other nutrients or when there is an available analytical method to test the presence of the nutrient in a food. The comment cited particular statements in the preamble to the proposed rule in which we made reference to a nutrient's chemical definition, composition, or structure. However, the statements cited in the comment do not support the propositions asserted by the comment. We consider the need for a mandatory declaration based on whether the nutrient is necessary to assist consumers to maintain healthy dietary practices, consistent with our authority under section 403(q)(2)(A) of the FD&C Act, whereas the statements cited by the comment concern characteristics of nutrients that are not necessarily related to whether the nutrient can assist consumers to maintain healthy dietary practices. For example, as part of our discussion of stearic acid in the preamble to the proposed rule (79 FR 11879 at 11894), we did not agree to declare stearic acid as a nutrient rather than as part of the saturated fat declaration because saturated fat intake is based on scientific evidence related to the intake of all saturated fatty acids, including stearic acid, and the potential effects to human health from changes in the dietary intake of stearic acid on the risk of CVD remain unclear (79 FR 11879 at 11894 through 11895). Furthermore, we discussed, in response to a request in a petition requesting FDA to define total fat to exclude acetic, propionic, and butyric acids, based on the chemical differences of these acids from other fatty acids comprising total fat, that these acids were not chemically distinct based on the reasons set forth by the petitioner (79 FR 11879 at 11893). We further explained that the petitioner did not explain why we should define total fat based on physiological differences, even if such differences existed (*id.*). Thus, we examine, on a case-by-case basis, whether a nutrient is necessary to assist consumers to maintain healthy dietary practices.

Similarly, the statements the comment included for dietary fibers and carbohydrate classification are taken out of context and do not support the comment's proposition. We discussed the reasons for separating dietary fiber from the definition of total carbohydrate and determined, for several reasons, it was not necessary to change the calculation of carbohydrate by difference (79 FR 11879 at 11900). We also referenced the 2007 ANPRM in

which we were considering whether to classify carbohydrates by chemical definition or physiological effect (79 FR 11878 at 11901). While we recognized that analytical methods would distinguish carbohydrates based on chemical structure and not physiological effects, we determined that given the various components of total carbohydrate and different types of physiological effects of these components that, for the class of total carbohydrates, a definition based on physiological effects would not be a better approach than a chemical definition (*id.*). We did not consider an analytical method to be a necessary prerequisite to the declaration for carbohydrate. Thus, we have not limited ourselves to the need for a chemical distinction for a nutrient before we would consider the mandatory declaration of the nutrient under section 403(q)(2)(A) of the FD&C Act. For these reasons, we disagree with the comment's apparent assertion that we departed from a traditional approach related to requiring a nutrient be chemically distinct for mandatory labeling, and that therefore the added sugars declaration is somehow arbitrary and capricious under the APA.

(Comment 46) One comment stated that we would violate section 706(2) of the APA if we finalized a declaration for added sugars because the proposed declaration of added sugars was not reasoned decision making, where we did not complete the consumer study before proposing the required declaration. The comment cited references that would analogize this situation to one where an Agency relied on a defective or discredited study to support a rule (*e.g., St. James Hospital* v. *Heckler,* 760 F. 2d 1460, 1468 (7th Cir. 1985); *Almay, Inc.* v. *Califano,* 569 F.2d 674 (D.C. Cir. 1977), or where the study authors did not agree with the use of the research for a particular application relied on by an Agency (*Humana of Aurora, Inc.* v. *Heckler,* 753 F.2d 1579 (10th Cir. 1985)). With respect to the consumer research we conducted on added sugars, the comment asserted that, ''FDA in this situation recognized that such a study was essential'' and that without a consumer study, the factual basis for the requirement would be lacking (citing *Motor Vehicle Mfrs. Ass'n of United States* v. *State Farm Mut. Auto. Ins. Co.,* 463 U.S. 29, 43 (1983)). The comment also said we failed to provide an adequate notice and opportunity for comment on the results of the consumer research study because the comment period would be closed before the study is completed (citing *Doe* v. *Rumsfeld,* 341 F. Supp. 2d 1 (D.D.C. 2004); *Service* v. *Dulles,* 354 U.S. 363 (1957); *Conn. Light & Power Co.,* v. *Nuclear Regulatory Com,* 673 F.2d 525, 530 through 531 (D.C. Cir. 1982); and *American Iron & Steel Inst.* v. *OSHA,* 939 F.2d 975, 1009 through 1010 (D.C. Cir. 1991); *Small Refiner Lead Phase-Down Task Force* v. *Environmental Protection Agency,* 705 F.2d 506, 540 through 541 (D.C. Cir. 1983); *Sierra Club* v. *Costle,* 657 F.2d 298, 398 (D.C. Cir. 1981)).

(Response) We disagree that a consumer study related to the added sugars declaration is required before we can finalize a requirement to compel the declaration under section 403(q)(2)(A) of the FD&C Act. Our discretionary authority to require an added sugars declaration can be exercised if we determine the declaration is necessary to assist consumers to maintain healthy dietary practices. Our rationale for the declaration is supported by sufficient evidence set forth in the 2010 DGA and the 2015 DGAC Report, in part, related to the role of sugar-sweetened foods and beverages as part of a healthy dietary pattern compared to less healthy dietary patterns, and the relationship between healthy dietary patterns and risk of chronic disease. In addition, the evidence and conclusions from the 2010 DGA support that consumption of excess calories from added sugars can lead to a less nutrient-dense diet and that current consumption data show that Americans are consuming too many calories from added sugars. Moreover, there is strong evidence that greater intake of sugar-sweetened beverages is associated with increased adiposity in children. Furthermore, section 403(q) of the FD&C Act does not require us to complete a consumer study before we can make the finding in section 403(q)(2)(A) of the FD&C Act to require a nutrient declaration.

We explained why we were conducting consumer research in the preamble to the proposed rule. We discussed, in the context of the placement of added sugars on the label, our plan to conduct a consumer study to help enhance our understanding of how consumers would comprehend and use the new information and to publish the results of the consumer research when available (79 FR 11879 at 11952). We published the results of our consumer research in a supplemental proposed rule to present those study findings (80 FR 44303; July 27, 2015), and provided the raw data for the consumer study in response to requests for such data (80 FR 54446; September 10, 2015). Contrary to what the comment suggested, the consumer research studied consumer reactions to the declaration to help inform our future educational efforts related to food labeling and was not conducted for the purpose of determining whether we had the requisite scientific basis to declare added sugars under section 403(q)(2)(A) of the FD&C Act (80 FR 44303 at 44306). We consider consumer research helpful to understand how to best utilize our consumer education efforts when changes to the label are made. Moreover, in response to our findings from the ''Experimental Study on Consumer Responses to the Nutrition Facts Labels with Declaration of Amount of Added Sugars'' that showed some participants were confused by the total sugars declaration when added sugars was indented below total sugars, we considered these findings and comments received on the consumer research in making changes to the declaration of added sugars to reduce the potential for consumer confusion. With respect to the comment that we failed to provide an adequate notice and opportunity for comment on the results of the consumer research study, we note that this comment was submitted in response to the proposed rule published in March 2014, before the publication of the consumer research results in July 2015 and raw data in September 2015. Therefore, the cases to which the comment cites, concerning the need for notice and opportunity for comment, are moot. Furthermore, we are not relying on a defective or discredited study to support a rule or one where the study authors do not agree with the use of the research for a particular application relied on by the Agency and therefore do not need to address the cases cited in comments on these issues.

(Comment 47) One comment asserted that we did not provide an adequate legal justification for why we were not relying on the IOM DRI Report with respect to developing a DRI for added sugars and instead relying on evidence in the DGAC Report.

(Response) We disagree that we did not provide an adequate explanation for the DRV for added sugars, nor did the comment further explain the basis for its assertion. We explained why we were not relying on the IOM DRI Report in the preamble to the proposed rule (79 FR 11879 at 11906). Specifically, we explained that the IOM did not establish a DRI, such as a UL, for added sugars, nor did the IOM define an intake level at which an inadequate micronutrient intakes occur. Thus, there was no level for added sugars, based on the IOM review, on which we could rely for a reference amount. In the preamble to the

supplemental proposed rule (80 FR 44303 at 44308), we discussed the availability of the data and information from the 2015 DGAC Report to support a DRV for added sugars to below 10 percent of total energy intake based on the modeling of dietary patterns, current added sugars consumption data, and a published meta-analysis on sugars intake and body weight (*id.*). We tentatively concluded that the scientific information in the 2015 DGAC Report provided the basis on which we could rely to support a DRV reference point for the added sugars declaration (*id.*). We respond to comments in this final rule to further explain the basis for the added sugars declaration under our authority in section 403(q)(2)(A) of the FD&C Act.

(Comment 48) One comment questioned whether we provided stakeholders with an opportunity to provide meaningful comments. Specifically, the comment seemed to object to the period provided for comment on the raw data for the consumer studies, and the limited scope of the comment on the supplement proposed rule to the issues presented in that document. The comment stated that we have no authority to propose rules in a ''piecemeal fashion'' and must consider comments that address the impact of the final rule as a whole.

(Response) We consider the comment periods provided for the supplemental proposed rule (80 FR 44303; July 27, 2015) and the raw data on the consumer studies (80 FR 5446; September 10, 2015), to October 13, 2015 to be sufficient. The comment did not provide any basis for why the comment period did not provide a sufficient time during which meaningful comments could be submitted, nor did the comment provide a basis to support its assertion that we lack authority to issue a supplement to the proposed rule. The supplemental proposed rule (80 FR 44303) provided notice and an opportunity for comment on relevant new data and information for consideration in the final rule, including the findings of the consumer study on the added sugars declaration and footnote. Thus, there was adequate notice and an opportunity for comment on the issues. We considered the comments we received in response to the proposed rule and supplemental proposed rule when developing the final rule.

(Comment 49) One comment suggested that we are ignoring the section of the DGAC Report that focuses on scientific studies about the specific relationship between added sugars and CVD, for which there is moderate evidence, and referred to this as a ''blatant abuse of discretion.'' The comment stated that we are mischaracterizing the evidence related to a specific relationship between added sugars and CVD as ''strong'' rather than ''moderate'' and described this outcome as arbitrary and capricious and an abuse of discretion in violation of the APA. Other comments stated that the ''moderate'' evidence does not meet our standard of ''significant scientific consensus'' or the ''factual basis'' standard required (citing *Motor Vehicle Mfrs Ass'n* v. *State Farm Mut. Auto. Ins Co.,* 463 U.S. 29 (1983) and *A.L. Pharma, Inc.* v. *Shalala,* 62 F.3d 1484, 1491 (D.C. Cir. 1995)). One comment further stated the specific relationship between added sugars and CVD is moderate, and as such, the evidence is mixed and inconclusive and therefore such a change in policy will be overturned (citing *AFL–CIO* v. *Dole,* 745 F. Supp. 18, 21 (D.D.C. 1990) *rev'd on other grounds,* 923 F.2d 182 (DC Dir. 1991)).

(Response) The comments may not have considered or appreciated the evidence on which we rely for the added sugars declaration. There is scientific evidence demonstrating a strong association between a healthy dietary pattern characterized, in part, by a lower amount of sugar-sweetened foods and beverages and the reduced risk of CVD. The scientific evidence in Chapter 6 of the 2015 DGAC report, concerns an entirely different body of evidence based on an independent relationship of added sugars with chronic disease risk. The comments do not address the evidence of the strong association between a healthy dietary pattern (including, with regard to added sugars, lower intakes of sugar-sweetened foods and beverages), relative to less healthy dietary patterns, and reduced risk of chronic disease, set forth in Chapter 2 Part D of the 2015 DGAC report. Our reliance on this scientific evidence does not mean we abused our discretion, nor does it mean we are mischaracterizing the evidence. We are not relying on the scientific evidence with regard to the independent relationship of added sugars and specific chronic diseases as the basis to require an added sugars declaration, and we have described the basis for our required added sugars declaration and the evidence we rely on in the preamble to the proposed rule (79 FR 11879 at 11902 through 11905), the supplemental proposed rule (80 FR 44303 at 44307 through 44308) and this final rule.

(Comment 50) One comment asserted the DGAC report violates the National Nutrition Monitoring and Related Research Act of 1990 (NNMRRA) because there were no scientific studies reviewed by the DGAC on consumer comprehension of an added sugars declaration, and therefore, the recommendation for added sugars labeling was not based on a preponderance of the scientific and medical knowledge required under section 301(a) of the NNMRRA for information and guidelines in the report. The comment stated that FDA's reliance on the DGAC report for added sugars labeling therefore violates section 706(2) of the APA in that it lacks a factual basis and is thus arbitrary and capricious in violation of the APA. The comment also stated that the HHS and USDA violated section 5 of the Federal Advisory Committee Act (FACA) in creating the 2015 DGAC because the committee was not ''fairly balanced.'' The comment said that our reliance on the DGAC Report is arbitrary and capricious in violation of section 706(2) of the APA. Another comment said the proposed added sugars declaration and DRV violate FACA because the DGAC Report and the science supporting the requirements are not sufficiently reliable or objective.

(Response) We disagree that the required declaration of added sugars violates section 706(2) of the APA based on independent authorities in NNMRRA and FACA with respect to the 2015 DGAC Report. The mandatory added sugars declaration in nutrition labeling is based on our authority in section 403(q)(2)(A) of the FD&C Act and not on the separate and independent authority in NNMRRA. Contrary to what the comments stated, we considered and relied on the scientific evidence in the DGAC Report for the purpose of determining whether an added sugars declaration will assist consumers in maintaining healthy dietary practices, and did not rely on a DGAC Report recommendation. The comment concerning whether the 2015 DGAC Report violated section 301(a) of NNMRRA is separate and distinct from our authority under section 403(q)(2)(A) of the FD&C Act and outside the scope of this rule.

Moreover, with respect to the comments expressing concerns about section 5 of FACA in relation to the 2015 DGAC Report, we reviewed the available scientific evidence to determine whether to require an added sugars declaration, based on our authority in section 403(q)(2)(A) of the FD&C Act. We included, in our review, evidence from the 2015 DGAC Report, the 2010 DGA, NHANES data on U.S. consumption patterns, and other data and information. The DGAC selection and review process is an interagency

process that includes HHS and USDA and is outside the scope of this rule.

(Comment 51) One comment stated that we should further consider the effects of the definitions (such as dietary fiber) and Daily Values on existing nutrient content and health claims authorized under section 403(r) of the FD&C Act. The comment stated that claims for certain foods that currently qualify for a claim may no longer qualify, and the comment stated it anticipated that restrictions may include claims that are part of brand names and trademarks, and therefore, implicate First Amendment and Fifth Amendment ''takings'' issues. The comment further stated that, without a thorough evaluation of these ''collateral implications'' the final rule ''would fall short of administrative law requirements'' (citing *Prometheus Radio Project* v. *FCC,* 373 F.3d 372, 420–21) (3d Cir. 2004) and *Sprint Corp.* v. *FCC,* 315 F.3d 369, 377 (D.C. Cir. 2003)).

(Response) In the preamble to the proposed rule (79 FR 11879 at 11889), we recognized that changes to the list of nutrients declared on the label and changes to the RDIs and DRVs of nutrients could affect whether some foods that contained a nutrient content or a health claim prior to the publication of the final rule would no longer meet a defined term or eligibility requirement to make the claim. We stated that we plan to evaluate the impact of any changes in a final rule on other FDA regulations and address them, as appropriate, in a future rulemaking (*id.*). To the extent the comment suggests we must consider impacts to food products that currently declare certain non-digestible carbohydrates as dietary fiber, but that may no longer be able to declare these carbohydrates as dietary fiber based on the definition of ''dietary fiber'' in the final rule, we provided notice and an opportunity to comment on the proposed definition and have responded to comments in this final rule.

To the extent the comment suggests we must enlarge the scope of this rulemaking to consider what specific food products may no longer qualify for a nutrient content or health claim, or may include claims that are part of brand names, we disagree. The final rule concerns changes to the nutrient declarations in the Nutrition Facts label and Supplement Facts label under our authority in section 403(q) of the FD&C Act. The final rule does not include within its scope nutrient content claim or health claim regulations we promulgated under our independent authority in section 403(r) of the FD&C Act. Our decision on what RDI or DRV we select for a nutrient for purposes of nutrition labeling to ensure the information will assist consumers in maintaining healthy dietary practices is distinct from, and would precede a decision on, how to define a term for a nutrient content claim or establish an eligibility criterion for a health claim. Therefore, we are not obligated to consider changes to the requirements for nutrient content claims or health claims in this final rule (see *Home Box Office, Inc.* v. *FCC,* 567 F.2d 9, 36 n. 58 (D.C. Cir. 1977), *cert. denied,* 434 U.S. 829 (1977) (''In determining what points are significant, the 'arbitrary and capricious' standard of review must be kept in mind . . . only comments which, if true, raise points relevant to the agency's decision and which, if adopted, would require a change in an agency's proposed rule cast doubt on the reasonableness of a position taken by the agency.'')).

For example, we have established a number of defined terms for nutrient content claims based on the percent of the DV provided in a reference amount customarily consumed for food that bears the claim (*e.g.,* ''high'' and ''good source'' in 21 CFR 101.54). Any changes we may consider to the definition of those terms based on changes made to the DV in this final rule would be in a separate rulemaking, consistent with our authority in section 403(r) of the FD&C Act. We plan to evaluate the impact of any changes on other FDA regulations and address, as appropriate, those impacts in a future rulemaking. Furthermore, the comment suggesting there may be restrictions in using claims that include brand names and trademarks did not provide any further explanation. To the extent there are such circumstances, those would be considered in a separate rulemaking where we consider such claims. Lastly, the cases cited by the comment concern the distinction between an interpretive rule and a legislative rule and are inappropriate to this final rule, which is a legislative rule for which we provided notice and an opportunity to comment.

3. Federal Food, Drug, and Cosmetic Act

We are updating the Nutrition Facts label and Supplement Facts label, as set forth in this final rule, consistent with our authorities in sections 403(q), 403(a)(1) and 201(n), and 701(a) of the FD&C Act.

(Comment 52) Some comments questioned whether the declaration of added sugars to limit consumption of added sugars was a material fact under sections 403(a) and 201(n) of the FD&C Act. One comment stated that we must demonstrate that the absence of a declaration of added sugars on the nutrition label would be misleading to consumers.

(Response) The declaration of added sugars is a material fact under sections 403(a) and 201(n) of the FD&C Act, as we explain in our response to comment 159. Under section 201(n) of the FD&C Act, labeling is misleading if it fails to reveal facts that are material with respect to consequences which may result from the use of the article to which the labeling relates under the conditions of use prescribed or under conditions of use as are customary or usual.

Here, we have determined that the evidence shows that healthy dietary patterns associated with a decreased risk of chronic disease are lower in added sugars, consumption of too much added sugars can impact the nutrient density of the diet, and consumption of sugar-sweetened foods and beverages are associated with increased adiposity in children. Furthermore, the scientific evidence supports limiting added sugars intake to less than 10 percent of total calories. We note that this limit was adopted as a recommendation in the 2015–2020 DGA. The current intake of discretionary calories from added sugars in the U.S. population is excessive. The excess intake of calories from added sugars displaces the calories from other foods that are needed as part of a healthy dietary pattern in order to reduce the risk of CVD. Without information on the amount of added sugars in a serving of a food, consumers would not be able to determine the amount of added sugars in particular foods, and therefore would not have the information they need to place a particular food in the context of their total daily diet to construct a healthy dietary pattern that contains less than 10 percent of calories from added sugars. Thus, the amount of added sugars in a food is a material fact with respect to the consequences which may result from the use of the article under the conditions of use prescribed or under conditions of use as are customary or usual.

Moreover, section 403(q) of the FD&C Act gives us the authority to require nutrient declarations that we have determined provide information that will assist consumers to maintain healthy dietary practices.

(Comment 53) Some comments said the declaration of added sugars is itself misleading. The comments highlighted statements in the preamble of the proposed rule that there is no physiological difference between added sugars and those sugars that are intrinsic to food and there is no scientifically supported quantitative intake

recommendation for added sugars on which a DRV for added sugars can be derived and that U.S. consensus reports have determined that inadequate evidence exists to support the direct contribution of added sugars to obesity or heart disease (79 FR 11879 at 11905 through 11906). Another comment stated that because added sugars are not chemically distinct from natural sugars or have different health effects, the declaration of added sugars would be false and misleading.

(Response) We disagree that the declaration of added sugars is misleading. The statutory basis for requiring an added sugars declaration is whether the Secretary, and by delegation, FDA, determines that the nutrient should be included in the labeling of food for the purpose of providing information regarding the nutritional value of such food that will assist consumers in maintaining healthy dietary practices. The statutory framework does not require that the nutrient be linked in isolation to any particular chronic diseases nor does it specify that the nutrient must be physiologically unique. Furthermore, we have determined that there is a scientifically supported basis for requiring a DRV of 10 percent for added sugars. We address questions as to the specific scientific basis for that DRV in part II.H.3. The inclusion of this DRV and the other issues described by the comment do not make the declaration of added sugars misleading. The declaration of added sugars is a factual statement of the amount of this nutrient in the product.

(Comment 54) One comment said that the declaration of added sugars, as applied to cranberry juice products that are nutrient dense and sweetened for palatability, presents the same issue related to misleading labeling under section 403(a)(1) of the FD&C Act, where foods naturally free or low in a nutrient that bear a claim of ''free'' or ''low'' must be labeled as a food that is low in that nutrient (''broccoli, a fat free food'') to avoid implying the food has been altered as compared to foods of the same type. The comment said that requiring an added sugars declaration on a cranberry juice product that has fewer total sugars than juice containing all natural sugars is misleading because it implies the cranberry product with added sugars is less nutritious and generally unhealthy (citing *United States* v. *Ninety-Five Barrels,* 265 U.S. 438, 442–443 (1924) and *United States* v. *An Article of Food . . . ''Manischevitz . . . Diet Thins,''* 377 F.Supp. 746 (E.D.N.Y. 1974)). The comment expressed concern that a shopper would focus on the added sugars declaration and not the total sugars declaration.

(Response) The listing of added sugars, which is a subset of the amount of total sugars, is not misleading. It is the factual statement of the amount of added sugars in a product and the declaration of added sugars is one of a number of nutrient declarations on the label which consumers can use to assist them in maintaining healthy dietary practices. We disagree that the declaration of added sugars is equivalent to the need to clarify that all broccoli is fat-free when making a fat-free claim about broccoli. First, the declaration of the amount of added sugars is not a claim, it is a required declaration. A package of broccoli would be required to declare 0 grams of fat on the Nutrition Facts label without any additional explanation (§ 101.9(c)(2)). Furthermore, the two cited cases cited by the comment are not relevant to the requirement to state the factual declaration of the amount of added sugars in a product. The Supreme Court in *Ninety-Five Barrels* was discussing a label of an imitation product that claimed to contain the actual ingredient. The *Manischevitz Diet Thins* case was addressing a product using the name ''diet'' that had the same calories and overall nutritional profile as the regular non-diet product. Both cases found these specific terms used were misleading and noted that the FD&C Act condemned statements that mislead about the make-up of the product. The declaration of added sugars provides more information to consumers about the nutritional make-up of the product to use to help them maintain healthy dietary practices. Consumers may have perceptions or preferences about a number of nutrients, and which nutrients they focus on in choosing food may vary. As we discuss in our response to comment 184, whether consumers regard a product as healthy can be a combination of many factors, and we intend to engage in education and outreach efforts to help consumers understand the role of the added sugars declaration and other aspects of the revised Nutrition Facts and Supplement Facts labels.

(Comment 55) One comment stated that the declaration of added sugars on cranberry juice, even if true, is ''grossly misleading'' under sections 403(a)(1) and 201(n) of the FD&C Act because of a failure to reveal the material fact that the human body processes added sugars and naturally occurring sugars in the same way. The comment said that consumers will falsely regard the cranberry juice as less healthy when compared to other fruit juices that have all naturally occurring sugars. The comment suggested an alternative method for labeling to ensure the added sugars declaration is no longer misleading. The alternative method would apply to ''nutritious products made from unpalatable fruits'' and would remove the indented Added Sugars declaration such that ''The grams and percent of daily value for added sugars in a dried unpalatable fruit (a fruit in its raw state has total sugars of less than 5 percent and an average Brix-to-acid ration of six or less), and a juice product made with at least 27 percent juice of an unpalatable fruit, that is sweetened for fruit palatability and contains total sugars comparable to naturally sweetened dried fruits and 100 percent fruit juices, may be declared by an asterisk next to the declaration of total sugars with a footnote at the bottom of the nutrition facts panel that shall state: '**Total sugars include sugars added for fruit palatability.' ''

(Response) We disagree with the comment stating that the lack of difference in the way the body processes added versus naturally occurring sugars is a material fact with regard to the rationale for the added sugars declaration. The added sugars declaration is intended to assist consumers in maintaining healthy dietary practices based on the recommendation to decrease consumption of added sugars and the impact of a diet that includes high amounts of added sugars on chronic disease measures. We have addressed the consumer research on cranberry juice in our response to comment 184 and disagree that the added sugars declaration on cranberry juice misbrands the product. While we have modified the declaration of added sugars in the final rule, we have determined that no additional labeling is needed, as discussed in our response to comment 184.

(Comment 56) One comment stated that the term ''nutrient'' is not defined in the FD&C Act or FDA regulations and that it is reasonable for Congress to have intended the term to refer to substances that are chemically and structurally distinct from each other, with different physiological effects, and not based on whether the substance is added or inherent to a food. For these reasons, the comment suggested added sugars are not an additional nutrient within the context of section 403(q)(2)(A) of the FD&C Act. The comment referred to the listing of nutrients in section 403 of the FD&C Act (*e.g.,* total fat, saturated fat, cholesterol, sodium) as scientifically or chemically distinct substances and that the nutrients listed in section

403(q)(1)(D) and (E) of the FD&C Act are not distinguished based on whether they are added or inherent to a product. Furthermore, the comment said that the fact that verification of the added sugars declaration cannot be achieved through objective testing and requires records is another reason why Congress did not intend added sugars to be a nutrient (citing *Util. Air Regulatory Group* v. *EPA,* 134 S. Ct. 2427 (2014)). Another comment stated that we do not have the statutory authority to require the declaration of added sugars because they are not ''additional nutrients'' and are part of total sugars.

(Response) We disagree with the comments that added sugars is not compatible with the term ''nutrient'' in sections 403(q)(2) and 403(q)(1)(D) of the FD&C Act. With regard to the argument that it cannot be an additional nutrient if it is a component of total sugars or if it is not chemically distinct from total sugars, section 403(q)(1)(D) of the FD&C Act includes several nutrients that are subcomponents of other nutrients on the list, so the comments' arguments that each nutrient currently required is chemically distinct or that each nutrient is not a subcomponent of another listed nutrient is simply not correct. Total fat includes saturated fat, and total carbohydrates include sugars and dietary fiber. As these nutrients were all required by Congress to be declared on the label, we further disagree that Congress intended the nutrients to all be chemically and structurally distinct from each other and to have distinct physiological effects. Furthermore, the House committee report for the NLEA (H.R. 3562) (Report 101–538, June 13, 1990 at page 14) states that the Secretary may provide definitions of the nutrients required under 403(q)(1)(D) or 403(q)(2) of the FD&C Act, and we have done so consistent with the public health and based on sound scientific principles.

Additionally, the specific concerns and recommendations about added sugars' contribution to the daily diet that are distinct from total sugars has led to the requirement for the declaration of added sugars, consistent with the stated statutory purpose of assisting consumers to maintain healthy dietary practices. Nutrient content claims are defined in § 101.13(b) as claims that expressly or implicitly characterize the level of a nutrient of the type required to be in nutrition labeling under § 101.9 or under § 101.36. We have a ''no added sugar,'' ''without added sugar,'' or ''no sugar added'' nutrient content claim regulation (§ 101.60(c)(2)), supporting the fact that added sugars are considered to be a nutrient under the FD&C Act.

Also, we disagree that, because records would be needed to enforce the added sugars declaration, Congress did not intend that added sugars be considered a nutrient. Congress did not include any reference to ''objective testing'' or how enforcement would occur in the statutory language with regard to what nutrients should be declared on the label. The only criterion discussed in the statutory provision for adding a nutrient to the label is whether it will assist consumers in maintaining healthy dietary practices. Thus, the comment's reference to *Util. Air Regulatory Group* v. *EPA,* where the Supreme Court determined that an Agency had applied a more general definition to a statutory provision with a more narrow meaning given the context of the program, is also misplaced in this context. There is no context in the specific statutory provision about which nutrients should be declared on the label that indicates that it should be limited to nutrients that can be ''objectively measured.''

(Comment 57) Some comments stated the added sugars declaration does not assist consumers in maintaining healthy dietary practices under section 403(q)(2)(A) of the FD&C Act because it misleads consumers into believing that products without added sugars, but with the same or greater calories and total sugars, are healthier if the product contains naturally occurring sugars. Some comments considered our past statements, including that added sugars are not chemically distinct from naturally occurring sugars and added sugars are not independently and directly linked to any disease, health-related condition such as obesity, or physiological endpoint, to support the proposition that the added sugars declaration would not assist consumers in maintaining healthy dietary practices by providing consumers information to construct diets that are nutrient dense and reduce calorie intake from added sugars.

(Response) We do not agree that the declaration of added sugars misleads consumers based on our consumer research results and those results submitted in the comments in response to questions about how ''healthy'' a product is that contains added sugars. The declaration of added sugars provides information about the amount of a single nutrient that consumers can use as part of their decisions in building a healthy dietary pattern. We are requiring the declaration of added sugars because a dietary pattern characterized, in part, by larger amounts of added sugars is associated with greater risk of CVD than a healthy dietary pattern that includes less added sugars. Therefore, inclusion of added sugars above and beyond what is naturally present in foods that are part of a healthy dietary pattern is a public health concern. The declaration is needed for consumers to be able to identify the amount of added sugars in a serving of a product in order to fit that product into their total daily diet.

Added sugars are not chemically different than sugars that are naturally present in foods, and one should not avoid all foods that are relatively higher in added sugars than others. Consumers can eat a healthy diet that includes added sugars, but, in order to carefully choose foods so that the overall diet is not high in added sugars relative to calorie needs, it is important to consider the amount of added sugars in a serving of a product and how the added sugars content of that product should be balanced with other food choices.

(Comment 58) One comment stated that an added sugars declaration is not related to the purpose of the NLEA because it does not help consumers reduce the risk of a diet-related disease (citing House Committee Report 101–538, 101st Congress, 2nd Sess., 13 through 14 and the Congressional Record (136 Cong. Rec. H5836 101st Cong. 2nd Sess. (July 30, 1990 at 19 and 21)), S. 16610 Cong. Rec. (Oct. 24, 1990)). The comment referenced statements from the preamble to the proposed rule related to our rationale for other mandatory nutrient declarations that relate to the intake of a nutrient that is specifically related to the risk of chronic disease, health-related condition, or a physiological endpoint. Another comment stated that the purpose of our added sugars declaration is to help consumers with dietary planning and is not reasonably related to the requirements and purpose of the statute.

(Response) First, we note again that the statutory language in section 403(q)(2) of the FD&C Act is that a nutrient can be required for the purposes of providing information regarding the nutritional value of such food that will assist consumers in maintaining healthy dietary practices. This statutory basis is how we determined to propose the mandatory declaration of added sugars. Furthermore, the statements cited by the comment relating to the Congressional history of the NLEA are taken out of context and inappropriately limit the scope of the NLEA and its nutrient declaration requirements. The purpose statement at the beginning of the House

Committee Report that the comment referenced actually states, ''The purpose of this legislation is to clarify and to strengthen the Food and Drug Administration's legal authority to require nutrition labeling on foods, and to establish the circumstances under which claims may be made about nutrients in foods'' (House Committee Report 101–538, 101st Congress, 2nd Sess., 7). The comment's reference to the statements on the House floor by Congressman Madigan excluded the most relevant point about his more narrow bill with respect to specific chronic disease outcomes, that ''Chairman Waxman has graciously included much of the language in my bill in this comprehensive nutrition labeling bill'' (136 Cong. Rec. H5836 101st Cong. 2nd Sess. (July 30, 1990, at H5843). The statement from Senator Hatch seemingly focused on chronic disease also follows the more general statement by his co-sponsor Senator Metzenbaum that described the broader focus on healthy dietary practices, stating, ''By providing the public with better nutrition information, this bill makes a major step forward in enabling consumers to select foods to protect and improve their health'' (136 Cong. Rec. No. 147, S. 16607 101st Cong. 2nd Sess. (Oct 24, 1990, at S. 16608)).

While the preamble to the proposed rule discussed a different framework than an independent relationship between the nutrient and a risk of chronic disease, a health-related condition, or a physiological endpoint in the general population, added sugars are part of a dietary pattern linked to health effects and has been discussed in the recent DGA. In 2010, the scientific evidence supported a key DGA recommendation to reduce consumption of added sugars because of their effect on health due to the inability to eat excess added sugar and consume necessary nutrients within recommended calorie limits. In 2015, the DGAC Report included evidence that diets that included high amounts of added sugars were linked to increased risk of CVD compared to dietary patterns that included lower consumption of added sugars. The declaration of added sugars squarely fits within the statutory framework to assist consumers to maintain healthy dietary practices.

(Comment 59) One comment said we cannot rely on section 403(q)(2)(A) of the FD&C Act to support an added sugars declaration where we do not rely on an added sugars content of a food to determine if the food is ''healthy'' consistent with the nutrient content claim requirements for ''healthy'' in 21 CFR 101.65(d)(2). The comment seemed to assert that finalizing a requirement for an added sugars declaration, where the term ''healthy'' requires no limitation on added sugars content, is arbitrary and capricious under section 706(2) of the APA (5 U.S.C. 706(2)) and a violation of section 403(q)(1)(D) the FD&C Act (also citing *Frisby* v. *HUD,* 755 F.2d 1052, 1055 through 1056 (3d Cir. 1985) for the proposition that the Agency must follow its own regulations). Another comment stated that added sugars content is not included in the nutrient content claim for ''healthy,'' and, therefore, an added sugars declaration would not assist consumers in maintaining healthy dietary practices.

(Response) We are relying on our authority in section 403(q)(2)(A) of the FD&C Act to require the declaration of added sugars, and the only consideration for that statutory provision is whether the declaration will assist consumers to maintain healthy dietary practices. The *Frisby* case cited by the comment is not relevant because the definition of the voluntary ''healthy'' claim under section 403(r) of the FD&C Act does not bear on the determination of whether to require a declaration on the nutrition facts label, and we plan to revisit claims, including the healthy claim, after we finish this rulemaking. Furthermore, our finalizing a requirement for an added sugars declaration and any separate consideration of the healthy claim under section 403(r) of the FD&C Act do not violate the APA, as discussed in our response to comment 51.

(Comment 60) One comment stated the proposed added sugars declaration and DRV violate the NLEA because the 2015 DGAC Report and the science on which we rely are not sufficiently reliable or objective. Another comment suggested that the declaration of added sugars violates the FD&C Act and the APA because the DRV for added sugars is not based on a NAS report, which the comment stated ''the House Committee Report urged'' FDA to rely on for nutrients listed on the label, and therefore, presents impermissible and inconsistent Agency reasoning that is arbitrary and capricious (citing *Allentown Mack. Sales & Serv., Inc.* v. *NLRB,* 522 U.S. 359, 374 through 375 (1998)). The comment considered the use of the 2015 DGAC Report as the basis for the DRV to be a departure from past practice that is not sufficiently explained and without ''sufficient scientific consensus.''

(Response) The comment conflates several arguments and statements and is incorrect in its reliance on the NLEA's legislative history to support its position. The reference to the National Academy of Science report in this context also is misplaced. As stated in the comment itself, the House Committee's reference in 1990 was to a specific National Academy of Science report that had been commissioned at the time. The report stated that the ''Committee expects the Secretary to consider the hearing record before the Subcommittee and the NAS study on nutrition labeling, if that study is available in sufficient time to meet the statutory deadline'' (H.R. Rep. No. 101–538, at 17). If the report was not completed, it did not need to be taken into consideration. Furthermore, this statement in the report did not constitute a limiting statement as to future decisions regarding other nutrients and what they should be based on. In addition, the comment only stated that the decision with regard to the DRV for added sugars is based on an impermissible source and did not dispute the entire decision to require the declaration of added sugars.

The reference to the *NLRB* case is similarly misplaced. The case refers to an Agency changing the standard it is applying to a determination of the evidence without describing any reasoned basis for the change. Here, we have provided a reasoned explanation for requiring the declaration and DRV for added sugars, and have done so throughout the rulemaking process. The science on the contributions of dietary patterns has evolved, and the 2015 DGAC Report contains evidence with regard to the effect of a diet that includes lower amounts of added sugars compared to a diet that includes higher amounts of added sugars. This evidence supplements the growing scientific evidence from the 2010 DGA and concern about added sugars and their impact on public health and the ability to maintain healthy dietary practices by consuming a diet sufficient in nutrients within calorie limits, which we included in our rationale for the proposed declaration for added sugars. The ability of a nutrient declaration to assist consumers in maintaining healthy dietary practices remains the determination upon which a new nutrient declaration is based.

(Comment 61) One comment said that we have not adequately explained our departure from what the comment characterized as the 2010 DGA's focus on added sugars labeling, stating further that we relied on the 2015 DGAC Report for a strong association between a dietary pattern characterized, in part, by a reduced intake of sugar-sweetened foods and beverages and reduced risk of

CVD, which the comment stated is contrary to the law (citing *Motor Vehicle Mfrs. Ass'n* v. *State Farm Mut. Auto. Ins. Co.,* 463 U.S. 29, 42 (1983) and *Nat'l Ass'n of Home Builders* v. *EPA,* 682 F.3d 1032, 1037 (D.C. Cir. 2012)). The comment suggested that NLEA does not authorize us to rely on this basis for labeling, and, instead, we must rely on the presence or absence of a specific nutrient and disease relationship between added sugars and CVD before requiring such labeling, for which the comment states only moderate evidence is available. The comment cited studies to suggest there is no reliable correlation between added sugar content in food and healthy dietary choices or patterns.

(Response) First, this comment misrepresents the 2010 DGA, citing and quoting a line from Appendix 4 that lists the current nutrients that are displayed on the Nutrition Facts label and saying that this statement is the focus of the 2010 DGA recommendation with regard to added sugars, rather than the key recommendation and substantive chapter of the 2010 DGA. The comment also mistakenly states that the proposed rule and the supplemental proposed rule rely on the findings in the 2015 DGAC Report. As we stated in the preamble to the supplemental proposed rule (80 FR 44303 at 44307 through 44308), the science underlying the 2015 DGAC Report provides further support for the declaration of added sugars, which was supported in the proposed rule in part by the scientific evidence in the 2010 DGA related to reducing calories from added sugar. Thus, contrary to what the comment seemed to suggest, we are not departing from the science set forth in the 2010 DGA that is included in the evidence on which we rely for added sugars, but are also including additional evidence from the 2015 DGAC Report to further support the added sugars declaration, so the cases cited regarding the level of explanation that is necessary to explain a change in policy are not relevant.

The comment suggested that reliance on a rationale other than a specific disease relationship between added sugars and CVD is not permitted by the NLEA. The NLEA and FD&C Act state that nutrient declarations can be added if determined to assist consumers in maintaining healthy dietary practices. There is no further restriction on the evidence that can be used to support a declaration in the statute. Both the preamble to proposed rule and the preamble to the supplemental proposed rule thoroughly explain the rationale for the required declaration for added sugars.

Furthermore, a healthy dietary pattern, characterized in part by a reduced amount of sugar sweetened foods and beverages, is strongly associated with a reduced risk of CVD compared to less healthy dietary patterns. Thus, we disagree with the comment's statement that there is no reliable correlation between added sugar content in food and healthy dietary choices or patterns. The studies cited by the comment that looked at nutrient content claims and the data underlying a 2002 IOM suggested maximum intake level of 25 percent or less of added sugars are not relevant to the basis for our declaration of added sugars. One study cited by the comment described how small amounts of added sugars may increase the palatability of nutrient-dense foods. We acknowledged this finding in the preamble to the proposed rule (79 FR 11879 at 11905), and it is consistent with the requirement to declare added sugars and the percent DV so that consumers can understand how to incorporate such amounts of added sugars into their daily diets.

4. Recordkeeping Authority

The preamble to the proposed rule (79 FR 11879 at 11884 and 11956 through 11957) discussed our legal authority for the proposed recordkeeping requirements. We stated that we were relying on our authority under sections 403(q), 403(a), 201(n) and 701(a) of the FD&C Act, to propose record requirements to support nutrient declarations in labeling for added sugars, dietary fiber, soluble fiber, insoluble fiber, vitamin E, and folate/folic acid, under certain circumstances, so that we can determine compliance with labeling requirements and take enforcement action, as needed. We described how the records requirements would apply only to the narrow circumstances where there are not any appropriate reliable analytical methods that can be used to verify the compliance of a nutrient declaration.

We noted that failing to accurately state the amounts of nutrients on the label under § 101.9(g) would result in a product being misbranded. Under section 403(q) of the FD&C Act, a food must bear, in its label or labeling, the amount of the nutrient the food contains and, moreover, the nutrient declaration must be truthful and not misleading under sections 403(a)(1) and 201(n) of the FD&C Act. Thus, we stated that the proposed recordkeeping requirements are designed to ensure that the nutrient declarations are accurate, truthful and not misleading, based on information known only to the manufacturer, and to facilitate efficient and effective action to enforce the requirements when necessary. Furthermore, the records would allow us to verify the declared amount of each of these nutrients and that such amount is truthful and not misleading. Thus, the proposed records requirements would help in the efficient enforcement of the FD&C Act. We also noted that our authority to establish records requirements has been upheld under other provisions of the FD&C Act where we have found such records to be necessary, and cited *National Confectioners Assoc.* v. *Califano,* 569 F.2d 690, 693 through 694 (D.C. Cir. 1978)) (79 FR 11879 at 11884 and 11957). In addition to having the authority to require the maintenance of such records, we further stated that our authority also provided for FDA to have access to such records because in order to determine whether the food is misbranded and the manufacturer has committed a prohibited act, we must have access to the manufacturer's records that we are requiring be made and kept under sections 403(q), 403(a)(1), 201(n) and 701(a) of the FD&C Act. Without such authority to access the records supporting the declarations, these nutrient declarations that have been determined to be necessary to assist consumers to maintain healthy dietary practices would be unenforceable.

(Comment 62) While several comments supported our proposed requirement, many comments broadly asserted that we do not have the authority to require recordkeeping.

(Response) The FD&C Act requires foods to bear truthful and not misleading information about the amount of nutrients in the food to assist consumers in maintaining health dietary practices (sections 403(q), 403(a)(1), and 201(n) of the FD&C Act). As we stated in the preamble to the proposed rule (79 FR 11879 at 11956), under section 701(a) of the FD&C Act, we may issue regulations for the efficient enforcement of the FD&C Act in order to ''effectuate a congressional objective expressed elsewhere in the Act'' (*Association of American Physicians and Surgeons, Inc.* v. *FDA,* 226 F. Supp. 2d 204 (D.D.C. 2002) (citing *Pharm. Mfrs. Ass'n.* v. *FDA,* 484 F. Supp. 1179, 1183 (D. Del. 1980))). The recordkeeping requirements are intended to ensure that the nutrient declarations, which would be based on information known only to the manufacturer, are truthful and not misleading, and to facilitate efficient enforcement of the requirements for nutrient declaration when necessary. The recordkeeping requirements are only for foods for which official AOAC or other reliable and appropriate

analytical methods are not available. FDA access to information, in the form of a record, required to support an added sugars, dietary fiber, soluble fiber, insoluble fiber, vitamin E, and/or folate/folic acid declaration, where the information is known only to the manufacturer, is a practical alternative means by which we can verify that the nutrient declarations comply with section 403(q) of the FD&C Act and thus, assist in the efficient enforcement of the FD&C Act. Moreover, such information would also be necessary for the manufacturer to maintain in order to ensure the accuracy of the label.

(Comment 63) Several comments stated that the FD&C Act does not give us express authority to require recordkeeping for nutrition labeling. Other comments specifically argued that sections 403(q), 403(a) and 201(n) of the FD&C Act do not provide for recordkeeping authority and that Congress had exercised care in defining the scope of our recordkeeping authority in the statute. Additionally, some comments said that Congress has not given FDA general records authority and Congress must grant specific authority to FDA to access manufacturing records but declined to do so for nutrition labeling. Several comments pointed out instances in the FD&C Act that provide express recordkeeping authority, arguing that the fact that Congress provided it in certain contexts means that it was not intended here.

(Response) Courts have not found that a specific grant of authority from Congress is necessary in order to promulgate every portion of every regulation (see, *e.g., American Trucking Ass'ns, Inc.* v. *United States,* 344 U.S. 298, 308–313 (1953) (''the promulgation of these rules . . . falls within the Commission's power, despite the absence of specific reference to leasing practices in the Act [citation omitted]. The grant of general rulemaking power necessary for enforcement compels this result.'') and *Permian Basin Area Rate Cases,* 390 U.S. 747, 780 (1968) (''We are, in the absence of compelling evidence that such was Congress' intention, unwilling to prohibit administrative action imperative for the achievement of an Agency's ultimate purposes.'')). This was also held to be true in *Califano,* where the court found that Congress had not intended to immunize the manufacturers from requirements, including recordkeeping, by not having an express recordkeeping provision in the statute (*Califano,* 569 F.2d at 693; see also *Morrow* v. *Clayton,* 326 F.2d 36, 44 (10th Cir. 1963) (Powers of an Agency are not limited to those expressly granted by statutes—where the end is required, appropriate means are given and every grant of power carries with it the use of necessary and lawful means for its effective execution) and *Weinberger* v. *Bentex Pharmaceuticals, Inc.,* 412 U.S. 645, 653 (1973) (Some Agency authority is ''implicit in the regulatory scheme, not spelled out in haec verba'' in the statute)).

Furthermore, we disagree that the express grant of records authority in other contexts means that it was expressly contemplated and rejected under the circumstances proposed here. The provision for efficient enforcement of the FD&C Act in section 701(a) of the FD&C Act, along with the authority to require or voluntary permit these nutrient declarations under section 403(q) of the FD&C Act to prevent misleading labeling, provides the ability to require such records to effectuate the goal of enforcing nutrition labeling for those limited products covered by the recordkeeping requirements.

(Comment 64) Several comments stated that courts have repeatedly explained that FDA cannot create records access using section 701(a) of the FD&C Act, citing *Association of American Physicians & Surgeons* v. *FDA,* 226 F. Supp. 2d 204 (D.D.C. 2002) and *National Confectioners Association* v. *Califano,* 569 F.2d 690, 695 (D.C. Cir. 1978).

(Response) The comments' reading of these cases is not correct. First, while the cited cases state that section 701(a) of the FD&C Act is not an unlimited or stand-alone provision, neither case found that maintenance of records was not a proper exercise of authority related to section 701(a) of the FD&C Act, when combined with authority provided in other substantive sections of the FD&C Act. In fact, maintenance of records was one requirement that the court in *Califano* upheld, stating, ''In our opinion however the coding and record-keeping requirements here at issue clearly do not distend the scope of regulation authorized by the Act'' (*Califano,* 569 F.2d at 695). One section in *Assn. Amer. Physicians & Surgeons* that the comment quoted is ''Section 371 [701(a)] does not constitute an independent grant of authority that permits FDA to issue any regulation the Agency determines would advance the public health. Rather, 371 permits FDA to use rules as a means of administering authorities otherwise delegated to it by the Congress.'' Unlike the separate requirement to do testing and include labeling that were discussed in *Assn. Amer. Physicians & Surgeons,* the limited records requirement discussed here is for the express purpose of administering the delegated authority in section 403(q) of the FD&C Act to require truthful and not misleading labeling and accurate nutrition labeling for the purpose of assisting consumers to maintain healthy dietary practices. In essence, it is a requirement simply to document how the manufacturer complied with the substantive requirements in certain circumstances.

The cited cases support the requirement of records to simply document how the manufacturer complies with the rule in this context. The court in *Califano* even cites case law that specifically addresses the relevance of remedying enforcement problems, which is the basis for the recordkeeping requirement here, stating that ''. . . whether statutory scheme as a whole justified promulgation of the regulation . . . will depend not merely on an inquiry into statutory purpose, but concurrently on an understanding of what types of enforcement problems are encountered by FDA, the need for various sorts of supervision in order to effectuate the goals of the Act, and the safeguards devised to protect legitimate trade secrets'' (*Califano,* 569 F.2d at 693 (citing *Toilet Goods Association, Inc.* v. *Gardner,* 387 U.S. 158, 163 (1967))). As we have discussed, in the case of the Nutrition Facts rule, the purpose of the statute is to ensure truthful and not misleading labeling as well as to assist consumers to maintain healthy dietary practices by providing nutrition information on the labels of food. The requirement to maintain these records would effectuate that purpose by allowing enforcement of the declarations of certain required nutrients.

(Comment 65) One comment argued that section 701(a) of the FD&C Act cannot be reasonably construed to authorize records access because it does not constitute a separate grant of authority and cannot be read to authorize recordkeeping authority if that authority is not already included in the other sections being used for authority, such as sections 403(q), 403(a), and 201(n) of the FD&C Act, in this case.

(Response) We agree that section 701(a) of the FD&C Act does not constitute a completely separate grant of authority to promulgate any regulation to protect the public health, but we disagree that it cannot be used to authorize records access for the nutrient declarations identified when there is no express authority in section 403(q) of the FD&C Act to require and access these specific records, as the comment argues. If there had to be an express provision in every relevant substantive provisions of the statute, such as section

403(q) of the FD&C Act, reference to section 701(a) of the FD&C Act and its use to effectuate the efficient enforcement of the FD&C Act would never be necessary, and it would be rendered superfluous.

Furthermore, as discussed in greater detail in our response to comment 64, this notion was explicitly rejected in *Califano,* where the court stated that it was rejecting the idea that the regulation must stand or fall on the substantive section alone and found that Congress had not intended to immunize the manufacturers from requirements, including recordkeeping, by not having an express provision in the statute (*Califano,* 569 F.2d at 693; see also *Morrow* v. *Clayton,* 326 F.2d 36, 44 (10th Cir. 1963) and *Weinberger* v. *Bentex Pharmaceuticals, Inc.,* 412 U.S. 645, 653 (1973)). In the current context, records access is necessary to efficiently enforce the statutory requirements in certain limited circumstances.

(Comment 66) One comment argued that the case law we cited did not support our records access authority because the cases were not specific to nutrition labeling and were related to drug labeling. The comment said that the cases have no bearing on the issues here. Another comment argued that we should not have relied on *National Confectioners Association* v. *Califano* because it was decided before the NLEA was enacted.

(Response) We first note that many cases cited by these and other comments are not specific to nutrition labeling and were decided well before the NLEA was enacted. We disagree with these comments and find the cases, which many comments also cited, to be both applicable and the best indication of the proper reading of the FD&C Act. While it is rare to find case law that directly mirrors the situation at issue, *Califano* is striking in that it specifically affirms our authority to promulgate a recordkeeping requirement for certain food products when needed to be able to effectuate the statutory purpose. Congress has not acted to overturn that decision, which was the applicable existing legal framework when Congress was enacting the NLEA.

(Comment 67) Several comments referenced section 301(e) of the FD&C Act, regarding what recordkeeping violations constitute a prohibited act, as an exclusive list of what recordkeeping provisions are authorized and as evidence that sections 403(q), 403(a), 201(n), and 701(a) of the FD&C Act do not authorize recordkeeping provisions.

(Response) We disagree that the absence of the specified provisions in the list of prohibited acts regarding records bears on whether we have the authority to require records under the statute. Section 301(e) of the FD&C Act, regarding prohibited acts, refers to the express recordkeeping requirements in the FD&C Act. Moreover, a prohibited act violation in section 301(e) of the FD&C Act is separate and distinct from a misbranding violation in section 403(q) of the FD&C Act. It is a prohibited act under section 301(a) of the FD&C Act to introduce, or deliver for introduction, a misbranded food into interstate commerce. Thus, the fact that there is not a prohibited act violation for access to, and copying of, records related to the nutrient declarations for these select nutrients under section 403(q) of the FD&C Act does not mean that we do not have authority under sections 403(q) and 701(a) of the FD&C Act to require these records under these circumstances. As we explained earlier, express authority in section 403(q) of the FD&C Act is not needed for these records (see *Califano,* 569 F.2d at 693). Maintenance of and access to records for certain nutrition labeling declarations only under certain circumstances is necessary for the efficient enforcement of the Nutrition Facts labeling requirements, whether or not compliance with the those requirements are included as prohibited act under the statute.

(Comment 68) Several comments referenced a statement in the preamble to the 1993 nutrition labeling final rule stating that, to support a misbranding charge for inaccurate nutrient content information, we must have accurate, reliable, and objective data to present in a court of law and that, to obtain that information, we rely upon the work performed by our trained employees because we do not have legal authority in most instances to inspect a food manufacturing firm's records (58 FR 2079 at 2110, January 6, 1993). The comments asserted that this statement was evidence that we recognized that we do not have the authority to access manufacturing records as part of our enforcement of the nutrition labeling requirements.

(Response) We do not agree with this characterization of the statement in the 1993 final rule. The cited statement was part of a discussion of why we perform our own laboratory analyses and use those results for enforcement, rather than looking at or verifying laboratory analysis results kept in the records of a manufacturer. When there are available reliable laboratory analyses in order to test for a specific nutrient, we still rely on those analyses for compliance purposes. As we have described, the records requirements in this final rule apply only to the narrow circumstances where there are not any appropriate reliable analytical methods that can be used to verify the compliance of a nutrient declaration.

Where there are appropriate reliable analytical methods, we would not need to access manufacturing records in order to enforce the FD&C Act. However, the narrow circumstances where we do have the authority and are exercising the authority here are those circumstances where we do not have access to appropriate reliable analytical methods.

(Comment 69) While one comment pointed out that § 101.9(g)(9) already contemplates and provides a mechanism for the use of an alternative means of compliance for nutrition labeling, supporting our use of an alternative means to enforce compliance here, a few comments took exception to the preamble to the proposed rule's reference to situations where our regulations already provided for maintenance of records in the nutrition context. The comments stated that those instances regarding aeration to reduce fat and caloric content of foods (58 FR 2229 at 2271, January 6, 1993) and caloric content of new products with reduced digestibility (58 FR 2079 at 2111) were optional recordkeeping in instances where a manufacturer chooses to depart from the established regulations or to support a voluntary claim, rather than the broad regulations we proposed here for all manufacturers.

(Response) These examples were provided as illustrations of the use of records in a compliance context, not to demonstrate our authority. Any discussion of these other regulatory examples does not affect our authority with regard to this particular records requirement. We do not agree that these are broad regulations; rather, they are for a quite limited purpose and scope—only required when the manufacturer is including a mixture of products that cannot be distinguished by the analytical methods detailed in the regulations. The requirements also are quite flexible, not requiring any particular records and allowing the manufacturer to determine the best records to establish and maintain in order to comply. Furthermore, we disagree with the comment that the cited existing regulations with reliance on records for compliance purposes are all optional or voluntary. In the context of calculating appropriate caloric content of new products with reduced digestibility, the caloric declaration is a required declaration, and products wishing to adjust the declared amount because they are using certain novel

ingredients would need to submit documentation of their calculations to FDA.

(Comment 70) Several comments stated that, because they believed we did not have a scientific basis for requiring the declaration of added sugars, our authority to require records to verify the added sugars declaration was questionable.

(Response) Please see part II.H.3 for a more detailed discussion of our scientific basis for requiring the declaration of added sugars. Because the added sugar declaration is necessary to assist consumers in maintaining healthy dietary practices, which is the statutory mandate, the recordkeeping requirements are necessary and authorized for the efficient enforcement of the FD&C Act.

(Comment 71) Multiple comments argued that our authority excludes access to ''recipes for food,'' among other proprietary information. Some comments stated that we may not access or that we lack authority to access recipes for food, or that recipes were protected by Congress. Another comment stated that it is ''beyond the scope of the Agency to inspect records related to product formulation.'' Other comments noted that the Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (Pub. L. 107–188) (BT Act), as well as section 414 of the FD&C Act, expressly carve out recipes as a record that we cannot access even in food safety emergency situations.

(Response) The exclusion of recipes that several comments referred to is found in the BT Act, and there is no more general protection of recipes by Congress. We further disagree that the parameters of the recordkeeping authority in the BT Act affect our ability to require records here. The purpose of the review of records under the BT Act is distinct from the purpose of the record review for nutrition labeling, and section 306 of the BT Act says that it shall not be construed to limit the ability of the Secretary to require records under other provisions of the FD&C Act.

Furthermore, the final rule's recordkeeping requirement is flexible and does not require any specific document to support the declarations. While the preamble to the proposed rule provided some examples of records that manufacturers may choose to maintain (see, *e.g.,* 79 FR 11879 at 11956), they are not required to maintain any particular record and would also be permitted to maintain redacted documents if they established the necessary information. See part II.R.3 for a description of the variety of records that manufacturers can establish or maintain to meet the requirements.

We discuss other comments regarding the proper handling and confidentiality of any proprietary information that is submitted in part II.R.3.

(Comment 72) Some comments said that the recordkeeping authority previously given to FDA, as in the case of the Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (Pub. L. 107–188), were unrelated to nutrition labeling.

(Response) We agree that the BT Act authority is unrelated, and we disagree that the scope of recordkeeping authority in the BT Act limits our ability to require records. Section 306 of the BT Act states that it shall not be construed to limit the ability of the Secretary to require records under other provisions of the FD&C Act.

(Comment 73) Some comments stated that we did not need records access to enforce the nutrition declarations because companies are already required to ensure that their labels are not false or misleading under section 403(a)(1) of the FD&C Act and § 101.9(g).

(Response) While we agree with the comment that manufacturers are already required to ensure that their labels are not false or misleading, we are requiring that records be maintained that can specifically support certain declarations required under § 101.9(g) because without access to those records, we are not able to verify the accuracy of the required declared amounts.

(Comment 74) Some comments argued that, even if we had the authority to access records, we did not have the authority to copy records, stating that copying of records is not required for the efficient enforcement of the FD&C Act and that inspectors should be able to inspect and evaluate records onsite at the manufacturing facility without copying them.

(Response) We disagree with this comment. As we stated in the preamble to the proposed rule (79 FR 11879 at 11957), in order to determine whether the food is misbranded and the manufacturer has committed a prohibited act, we must have access to the manufacturer's records that we are requiring be made and kept under sections 403(q), 403(a)(1), 201(n) and 701(a) of the FD&C Act. Without the authority to access the records supporting the declarations, the nutrient declarations that we have determined to be necessary to assist consumers in maintaining healthy dietary practices would be unenforceable. While we understand the concerns with confidentiality of certain corporate information, and we discuss safeguards for such information in part II.R.3, practically, we need to be able to copy the records and access them at FDA headquarters in order to fully evaluate them to determine compliance or the need for any further regulatory action or enforcement proceedings (see FDA Regulatory Procedure Manual, section 4–1–4, regarding Center concurrence for labeling violations). Such full evaluation by us is not possible onsite at the facility.

(Comment 75) One comment suggested that the inspectional authority in section 704 of the FD&C Act did not provide for access to these records.

(Response) Section 704 of the FD&C Act states that the inspection ''shall'' extend to records when section 414 of the FD&C Act applies. We do not interpret this as an exclusive extension. Section 414 of the FD&C Act specifically states that it does not limit the authority of the secretary to inspect records under other provisions of the FD&C Act. This specific grant of authority applies to a single specific statutory provision regarding food safety, and does not address false and misleading labeling. It does not prevent us from accessing records that we can require by other regulations.

5. Miscellaneous Comments

Several comments raised other legal issues with respect to various parts of the rule.

Dietary Fiber

(Comment 76) One comment stated the definition of dietary fiber, which requires a dietary fiber to have a physiological effect beneficial to health, would ''prohibit the use of accurate, well substantiated dietary fiber determinations in nutrition labeling for many foods.'' The comment said that the restriction is not adequately justified to advance FDA's labeling objectives, nor is adequately tailored, to satisfy the First Amendment.

(Response) We disagree that, by defining ''dietary fiber,'' we are prohibiting the use of ''accurate, well substantiated dietary fiber determinations'' as the comment suggests. As we explain in our response to comment 252, the definition includes dietary fibers that have been shown to have a physiological effect beneficial to human health, and therefore, the declared amount of dietary fiber will include information about the amount of fibers in a serving of food that are necessary to maintain healthy dietary practices, consistent with our authority in section 403(q)(2) of the FD&C Act. Manufacturers will be able to petition

FDA to request that we amend the definition to include additional fibers, as appropriate. If a substance is a fiber, but not a ''dietary fiber'' that has a physiological effect beneficial to human health (such that the fiber is not eligible to be, and not listed as, a ''dietary fiber'' in the codified definition of ''dietary fiber''), a manufacturer may still declare the substance as part of total carbohydrate. Furthermore, a manufacturer may make a statement about the amount of these other fiber substances in the food, provided the statement is truthful and not misleading. The comment did not provide further explanation for why our definition for dietary fiber is not adequately justified or adequately tailored under the First Amendment and, based on the reasons we provide, we are not making any changes in response to this comment.

D. Factors for Mandatory or Voluntary Declaration of Non-Statutory Nutrients

The preamble to the proposed rule (79 FR 11879 at 11890 through 11891) discussed the factors that we primarily considered in requiring the declaration of most non-statutory nutrients or providing for the voluntary declaration of such nutrients. Our discussion of these factors in the proposed rule related to the nutrients for which there is an independent relationship between the nutrient and risk of a chronic disease, health-related condition, or physiological endpoint. We did not consider these factors for added sugars because our rationale for the declaration of added sugars differs and is not based on an independent relationship between added sugars and risk of chronic disease, health-related condition, or physiological endpoint. Thus, to help clarify when we refer to a nutrient for which there is such an independent relationship, we refer to the nutrient as ''this type of'' or ''this category of'' or, if plural, ''these types of'' nutrient(s), or similar phrase. We discuss our rationale for requiring added sugars separately because our rationale for added sugars is distinct from the factors that applied more generally to these other types of nutrients. In general, we continue to consider mandatory declaration appropriate for these types of nutrients when there is public health significance and a quantitative intake recommendation that can be used for setting a DV (DRV or RDI). However, we also have considered mandatory declaration based, in part, on evidence highlighting the role of a nutrient (*e.g., trans* fat) in chronic disease risk. The preamble to the proposed rule (79 FR 11879 at 11889) explained that, under section 403(q)(1)(C) and (D) of the FD&C Act, nutrition information in food labeling must include the total number of calories, derived from any source and derived from the total fat, and the amounts of total fat, saturated fat, cholesterol, sodium, total carbohydrates, complex carbohydrates, sugars, dietary fiber, and total protein. We referred to the nutrients that are explicitly required by the FD&C Act to be declared on the Nutrition Facts label as ''statutorily required nutrients.'' Section 403(q)(2)(B) of the FD&C Act permits us to remove a statutorily required nutrient from the label or labeling of food, by regulation, if we determine the information related to that nutrient is not necessary to assist consumers in maintaining healthy dietary practices.

Section 403(q)(2)(A) of the FD&C Act also gives us the authority to require, by regulation, other nutrients to be declared if the we determine that a nutrient will provide information regarding the nutritional value of such food that will assist consumers in maintaining healthy dietary practices. The preamble to the proposed rule explained that we consider such nutrients that are not statutorily required, but subject to our discretion under section 403(q)(2)(A) of the FD&C Act, to be ''non-statutory nutrients'' to distinguish them from the ''statutorily required nutrients'' (79 FR 11879 at 11889). Thus, insofar as ''non-statutory nutrients'' are concerned, previously we have: (1) Required the declaration of certain essential vitamins and minerals (such as vitamins A and C, iron, and calcium) for which an RDI was established and that were determined to have public health significance; and (2) permitted the declaration of the remaining essential vitamins and minerals for which there was an established RDI or DRV (*i.e.,* vitamin E) or that had public health significance, and permitted the declaration of certain subcategories of macronutrients for which a DRV was not established (including monounsaturated fat, polyunsaturated fat, soluble fiber, insoluble fiber, sugar alcohol, and other carbohydrate) (id.).

The preamble to the proposed rule (id. at 11890) explained that, to help us determine whether a non-statutory nutrient, for which there is an independent relationship between the nutrient and risk of chronic disease, health-related condition, or physiological endpoint, should be a required or permitted declaration, we consider: (1) The existence of quantitative intake recommendations; and (2) public health significance. Quantitative intake recommendations are reference intake levels provided in consensus reports that can be used to set a DRV or RDI. We expect these consensus reports to be published for the purpose of setting quantitative intake recommendations (*e.g.,* the IOM DRI reports), but, if DRIs are not available for nutrients, other than essential vitamins and minerals, then we consider the scientific evidence from other U.S. consensus reports or the DGA. Public health significance refers to two elements. First, we consider whether there is evidence of a relationship between the nutrient and a chronic disease, health-related condition, or health-related physiological endpoint. This can be demonstrated either by well-established evidence (in the form of U.S. consensus reports) or, for essential vitamins and minerals, the health consequences of inadequacy of the nutrient. Second, we consider whether there is evidence of a problem related to health in the general U.S. population. This is demonstrated by both evidence of a problem with the intake of the nutrient in the general U.S. population and evidence of the prevalence of the chronic disease, health-related condition, or health-related physiological endpoint that is linked to that nutrient in the general U.S. population.

For mandatory declaration of this type of non-statutory nutrient, in general, we consider mandatory declaration appropriate when there is public health significance and scientific evidence to support a quantitative intake (which, for purposes of convenience, we will refer to as ''a quantitative intake recommendation'') that can be used for setting a DV (DRV or RDI). However, we have also considered mandatory declaration based, in part, on evidence highlighting the role of a nutrient (*e.g., trans* fat) in chronic disease risk.

For voluntary declaration of a non-essential vitamin or mineral (*e.g.,* fluoride, soluble and insoluble fiber, monounsaturated fatty acids and polyunsaturated fatty acids), we consider voluntary declaration to be appropriate when the nutrient either has a quantitative intake recommendation, but does not have public health significance, or does not have a quantitative intake recommendation available for setting a DRV but has public health significance. In addition, we permit voluntary declaration for essential vitamins or minerals that we determine do not fit within our considerations for mandatory declaration, but that have an RDI.

The preamble to the proposed rule also noted that we continue to be mindful of factors such as the number

of nutrients that can be listed in nutrition labeling, the possibility that some individuals could interpret a long list of nutrients as implying that a food has greater nutritional significance than is the case, and that there is limited space for nutrition information on the label (id.).

(Comment 77) The preamble to the proposed rule (id. at 11891) invited public comment on our factors for mandatory and voluntary declarations of these types of nutrients. Some comments supported the factors. One comment, however, also suggested that, if the 2015–2020 DGA is released before we publish a final rule, the vitamins and minerals considered to be of public health significance should be based on the most recent version of the DGA.

(Response) As discussed in the preamble to the proposed rule (79 FR 11879 at 11890 and 11918), the factors that we consider for determining the essential vitamins and minerals with the greatest public health significance to be those for which the IOM based DRIs on a chronic disease risk, or health related condition, or a nutrient deficiency with clinical significance. Additionally, we consider whether nutrient intake data, and/or, when available, biomarkers of nutrient status, provide evidence of inadequate intakes in the general healthy U.S. population (ages 4 years and older) and whether a substantial prevalence of a disease, or health related condition or a nutrient deficiency with clinical significance exists that was linked to the particular nutrient. Our intake and status biomarker analysis is conducted for the U.S. general population, ages 4 years and older, which is the focus of the label, while the DGA focuses on the U.S. population ages 2 years and older. The 2015 DGAC (Ref. 19) used a three-pronged approach similar to our factors for determining the nutrients of public health concern, including analysis of intake data, available valid biochemical indices from NHANES dietary survey, and data on the prevalence of health condition in the U.S. population. Based on the scientific evidence in the 2015 DGAC approach, vitamin D, calcium, potassium, iron, and fiber were considered as nutrients of public health concern for under consumption.

(Comment 78) Another comment agreed with the factors, but suggested that we use the 2010 DGA or the 2015–2020 DGA (if it became available) when a quantitative intake recommendation by the IOM is not available and can be supported by a ''Nutrition Evidence Library Review system.''

(Response) We agree that it is often appropriate to consider the scientific information in the DGA when the IOM does not provide a quantitative intake recommendation. The preamble to the proposed rule stated that we will consider quantitative intake recommendations from the IOM report, but if DRIs are not available for nutrients (other than essential vitamins and minerals), we will consider science-based recommendations from other U.S. consensus reports or the DGA policy reports (id. at 11890).

E. Calories

Under section 403(q)(1)(C)(i) of the FD&C Act, nutrition information in food labels or labeling must include the total number of calories derived from any source. Our preexisting regulations require the total caloric content of a food to be declared on the Nutrition Facts label (§ 101.9(c)(1)), and the proposed rule would not modify the requirement to declare total calories. However, in the preamble to the proposed rule (79 FR 11879 at 11891), we stated that we were reconsidering a number of other requirements related to the declaration of information about calories. The other requirements related to ''Calories from fat,'' ''Calories from saturated fat,'' the 2,000 reference calorie intake level, a percent DV for calories, and requirements related to prominence of the calorie declaration and the footnote statement and table of DVs for 2,000 and 2,500 calorie diets.

1. Calories From Fat

Our preexisting regulations, at § 101.9(c)(1)(ii), require the declaration of ''Calories from fat'' on the label. This requirement stems from section 403(q)(1)(C)(ii) of the FD&C Act which, in turn, requires total calories from fat to be declared on the label or labeling of food. However, section 403(q)(2)(B) of the FD&C Act gives us the discretion to remove the requirement by regulation if we determine that the requirement is not necessary to assist consumers in maintaining healthy dietary practices. The preamble to the proposed rule (79 FR 11879 at 11891) explained that we reviewed current scientific evidence and consensus reports in determining whether information on calories from fat is necessary to assist consumers in maintaining healthy dietary practices. Current dietary recommendations no longer emphasize total fat. Certain fatty acids are understood to be beneficial, while others are understood to have negative health effects, particularly related to cardiovascular disease. Consequently, the proposed rule would no longer require, nor would it allow voluntarily, the declaration of ''Calories from fat'' on the Nutrition Facts label. In the preamble to the proposed rule (79 FR 11879 at 11891), we acknowledged that eliminating the declaration of ''Calories from fat'' may appear to be a loss of information on the amount of fat being consumed, but noted that the amount of fat being consumed can still be obtained from the total fat declaration elsewhere on the Nutrition Facts label, and consumers can still use the percent DV for total fat to put fat content in the context of a total daily diet, compare products, and plan diets. Thus, the proposed rule would remove § 101.9(c)(1)(ii), which requires declaration of calories from fat, and redesignate § 101.9(c)(1)(iii) as § 101.9(c)(1)(ii).

(Comment 79) Several comments supported removing the declaration of ''Calories from fat'' because current dietary recommendations emphasize that the intake of total calories and the type of fat consumed are more important than information on calories from fat in maintaining healthy dietary practices.

Many comments opposed removing the declaration of ''Calories from fat'' because of the importance of knowing this information for consumers who are diabetic, overweight, have high blood pressure, or are at risk of heart disease. Several comments also noted that, in general, the information was useful to monitor the amount of calories from fat consumed in packaged foods. These comments noted that some people use the ''Calories from fat'' information to make a choice between similar products and that, because of fat's caloric density, consumers need to be informed regarding the amount of calories they were getting from fat. Other comments also suggested that we require the declaration of ''Percent of calories from fat,'' and some comments supported removing the ''Calories from fat'' declaration if a declaration of monounsaturated and polyunsaturated fats was mandatory.

A few comments opposed to removing the ''Calories from fat'' declaration stated that this information remains useful to consumers; the comments, however, did agree that the total number of calories and types of fatty acids consumed are more important than total fat consumption in maintaining healthy dietary practices and reducing cardiovascular risk. One comment stated that it is important for total fat consumption to be within the acceptable range (*i.e.,* 20 to 35 percent of daily caloric intake) established by the IOM, and that ''Calories from fat'' provides valuable information to help consumers put the Dietary Guidelines into action. Another comment disagreed

with our assessment that removing ''Calories from fat'' does not constitute a loss of information to consumers because there is presently no other means for conveying differences in nutrient density between macronutrients on the Nutrition Facts label. One comment indicated that, as long as the ''Calories from fat'' declaration is truthful and not misleading, the information is protected commercial speech under the First Amendment and that there is no legal basis to prohibit it. The comment said that ''Calories from fat'' should continue to be allowed on the Nutrition Facts label on a voluntary basis.

(Response) We disagree that the labeling of ''Calories from fat'' is required for specific health conditions or that it is necessary for consumers to monitor their calories from total fat. The Nutrition Facts label is intended to provide nutrition information to the general U.S. population and not for specific populations with specific diseases. Current dietary recommendations no longer emphasize total fat. Consumers already have information on the quantitative amount of total fat on the label as well as information of its DV on the label. The extra emphasis of calories from fat is not needed based on the new science for total fat. As we stated in the preamble to the proposed rule (79 FR 11879 at 11891), U.S. consensus reports recognized that there are benefits to consuming moderate amounts of fat and that different types of fat have different roles in chronic disease risk, so the additional emphasis of ''Calories from fat'' is not warranted. The results of these reports and dietary recommendations also establish why a declaration of ''Percent of Calories from Fat'' is not necessary to assist consumers in maintaining healthy dietary practices, because the reports emphasize the intake of ''total calories'' and the type of fat consumed. We also note that the information required for fats in the Nutrition Facts label, in the absence of a declaration of ''Calories from Fat,'' provides consumers with the information to compare similar products and make healthy dietary choices.

Information on monounsaturated and polyunsaturated fats is voluntary on the Nutrition Facts label due to their role in health, and information on saturated fat will still be required. Ultimately, we do not think mandatory information on the amounts of monounsaturated and polyunsaturated fats is necessary to help consumers maintain healthy dietary practices because information on the quantitative amount and the percent DV of total fat and saturated fat will still be required on the Nutrition Facts label. We discuss monounsaturated and polyunsaturated fats in greater detail in part II.F.4.

We disagree that the declaration of ''Calories from fat'' should be voluntary on the Nutrition Facts label. Based on current scientific evidence and dietary recommendations, we have concluded that the declaration of ''Calories from fat'' is not necessary to assist consumers in maintain health dietary practices. Information on total calories, the quantitative and percent DVs for total fat and saturated fat, and quantitative amount of *trans* fat provides consumers with information to maintain healthy dietary practices and to put total fat and saturated fat in the context of a total daily diet, to compare products, and to plan diets.

(Comment 80) Some comments supporting the continued declaration of ''Calories from fat'' suggested requiring a declaration only for certain foods that contained above a specified level of total fat or if the food contained more than a certain amount of saturated and *trans* fat.

(Response) We decline to revise the rule as suggested by the comments. To require a declaration for ''Calories from fat'' only on certain products would not be consistent with our conclusion that information on ''Calories from fat'' is not necessary to help consumers in maintaining healthy dietary practices. Furthermore, the quantitative amounts and percent DV for total fat and saturated fat are already provided, as well as the quantitative amount of *trans* fat. Finally, the DGAs and other consensus reports emphasize the importance of total calories rather than the amount of calories from any particular macronutrient.

2. Calories From Saturated Fat

Under our preexisting regulations at § 101.9(c)(1)(iii), the declaration of ''Calories from saturated fat'' is voluntary. The preamble to the proposed rule noted that saturated fat is known to increase the risk of cardiovascular disease and, unlike ''Calories from fat,'' which could include calories attributable to fatty acids that decrease or increase the risk of certain diseases, ''Calories from saturated fat'' would provide information about calories from a source known to increase disease risk (79 FR 11879 at 11892). Although we tentatively concluded that mandatory declaration of ''Calories from saturated fat'' is not necessary because the amount of saturated fat being consumed can be obtained from the total saturated fat declaration elsewhere on the Nutrition Facts label and because consumers can still use the percent DV for saturated fat to put saturated fat content in the context of a total daily diet, compare products, and plan diets, we decided that, due to the strong evidence associating higher intakes of saturated fat with higher low-density lipoprotein (LDL) cholesterol levels, information on ''Calories from saturated fat'' can assist consumers in maintaining healthy dietary practices. Therefore, the proposed rule would not change the current voluntary labeling of ''Calories from saturated fat'' in the Nutrition Facts label as specified in § 101.9(c)(1)(iii). However, considering our proposal to eliminate the declaration of ''Calories from fat'' on the Nutrition Facts label (see part II.E.1.), the proposed rule would revise § 101.9(c)(1)(iii) and (d)(5) to specify that the statement ''Calories from saturated fat,'' when declared, must be indented under the statement of calories. In addition, the proposed rule would redesignate § 101.9(c)(1)(iii) as proposed § 101.9(c)(1)(ii).

We did not receive comments on this topic and have finalized the revisions without change.

3. Two Thousand Calories as the Reference Caloric Intake Level

Our preexisting regulations, at § 101.9(c)(9), establish a reference calorie intake level of 2,000 calories to set DRVs for total fat, saturated fat, total carbohydrate, protein, and dietary fiber. In addition, the preexisting regulation requires a footnote on the Nutrition Facts label that states, ''Percent Daily Values are based on a 2,000 calorie diet. Your daily values may be higher or lower depending on your calorie needs,'' followed by a table with certain DVs based on 2,000 and 2,500 calorie diets.

The preamble to the proposed rule (79 FR 11879 at 11892) discussed recommendations from the IOM macronutrient report that provided estimated energy requirements (EERs) and the IOM labeling report (Refs. 24–25), as well as comments (Ref. 26) received in response to the 2007 ANPRM, in which we asked whether 2,000 calories should continue to be used as the reference calorie intake level and asked questions related to the use of the EERs. The preamble to the proposed rule explained that an EER is a DRI set by the IOM for energy intake and is defined as the dietary energy intake that is predicted to maintain energy balance in a healthy adult of defined age, gender, weight, height, and level of physical activity consistent with good health. The IOM set EERs for all

life-stage and gender groups and based these EERs on normal weight individuals (*i.e.,* Body Mass Index (BMI) < 25) (Ref. 24). The IOM Labeling Committee considered whether there was a basis to use the EERs for developing a new reference calorie intake level for macronutrients in nutrition labeling. The IOM Labeling Committee found that the data necessary to use the EER concept as the basis for a reference calorie intake level for nutrition labeling were incomplete and that retaining the current 2,000 reference calorie intake level would be the best approach as it would provide continuity and would not encourage higher calorie intake and overconsumption of energy (Ref. 25). The proposed rule would not suggest any changes to the current use of 2,000 reference calorie intake level as the basis for setting DRVs for total fat, saturated fat, total carbohydrate, dietary fiber, and protein.

(Comment 81) Many comments supported using 2,000 calories as the reference caloric intake levels based on the same rationale provided by U.S. consensus reports and the IOM labeling report mentioned in the preamble to the proposed rule and agreed that the EER was not an appropriate way to set a reference caloric intake level.

In contrast, many other comments opposed using 2,000 calories as a reference caloric intake level. The comments said that many individuals do not consume 2,000 calories (*i.e.,* individuals may need more or less depending on age, sex, weight, height and physical activity level). Other comments wanted us to use a different reference calorie intake level (*i.e.,* 1,400 calories, 1,800 calories or more than 2,000 calories) or to eliminate the concept of a reference calorie intake level because, according to the comments, it is not useful or accurate because all individuals do not consume 2,000 calories per day.

(Response) We agree that an individual's caloric needs can vary; however, we disagree that the reference caloric intake level should be a value other than 2,000 calories or that there should not be one at all. As we stated in the preamble to the proposed rule, the reference calorie intake level is not used as a target for caloric intake, but rather to set DVs for total fat, saturated fat, total carbohydrate, protein, and dietary fiber (see 79 FR 11879 at 11892). We agree with the IOM labeling report (Ref. 25) that a reference caloric intake level of 2,000 calories provides continuity and would not encourage higher calorie intake and overconsumption of energy (id.).

We also use 2,000 calories because a rounded value is easier for other consumers to use and is less likely suggest an inappropriate level of precision as would 1,500 calories, 1,800 calories, or 2,350 calories. The comments supporting a different reference caloric intake level did not provide evidence to support these values for our consideration; consequently, we do not have sufficient information to determine the advantages or disadvantages associated with a different value or how the values compare against the 2,000 calorie value used now.

4. Percent DV Declaration for Calories

Our preexisting regulations do not provide for a DRV for calories. The preamble to the proposed rule (79 FR 11879 at 11892 through 11893) explained that setting a DRV for calories would necessitate determining a quantitative intake recommendation for calories, but also noted that there is no appropriate quantitative intake recommendation and that we were not aware of any other data or information on which a DRV for calories could be determined. Thus, the proposed rule would not set a DRV for calories and, as a result, neither require nor permit a percent DV declaration for calories.

(Comment 82) Many comments agreed with our rationale for not providing a percent DV for calories. Some comments said that a percent DV for calories would be misleading, not accurate, or not useful because not all individuals consume 2,000 calories a day.

In contrast, other comments supported a declaration for percent DV because, according to the comments, this information would be useful to consumers by allowing them to learn about the relationship between portion size and calorie intake. Another comment noted that an optional declaration of a percent DV for calories would allow consumers to make more informed decisions regarding selection of processed foods. Some comments suggested having different percent DVs for calories (*i.e.,* one for men and woman, or one for growing children and adults, or two DVs of 1,500 and 2,000 calories).

(Response) We do not agree that a DV for calories, for purposes of nutrition labeling, should be set at any caloric level. We continue to believe that, to provide a DV, a DRV based on quantitative intake recommendations for calories would need to be set. Quantitative intake recommendations for calories are called estimated energy requirements (EERs), and they are based on normal weight healthy individuals of defined age, gender, weight, height, and level of physical activity. It would be difficult to combine the EERs into a single reference calorie level applicable to the general population because calorie needs vary based on many factors.

As for the comments suggesting that a DV could help consumers with the relationship between portion size and calorie intake and to make informed food selections, we note that the declaration of ''Calories'' can by itself alert consumers to the amount of calories in a serving of a food and assist consumers to make informed decisions about their food selections based on the calorie content.

As for the comments suggesting different percent DVs for calories, the comments did not indicate what those DVs would be or how we might calculate them. Therefore, for the same reasons we expressed earlier in this response, we do not have sufficient information to set a DV or multiple DVs, and so the final rule does not establish a percent DV for calories. However, we consider that a statement about daily calorie intake (2,000 calories) should be a necessary part of the footnote in the Nutrition Facts label because 2,000 calories is consistent with widely used food plans and will serve as a basis for menu labeling (79 FR 71156, December 1, 2014). Likewise, the second sentence of the footnote will state: ''2,000 calories a day is used for general nutrition advice'' (see part II.Q.11).

F. Fat

The preamble to the proposed rule (79 FR 11879 at 11893 through 11899) discussed considerations related to definitions, declaration, and DRVs for total fat, saturated fat, *trans* fat, monounsaturated fat, and polyunsaturated fat.

1. Total Fat

a. Definition. Our preexisting regulations at § 101.9(c)(2) define ''fat, total'' or ''total fat'' as a statement of the number of grams (g) of total fat in a serving defined as total lipid fatty acids and expressed as triglycerides.

In the preamble to the proposed rule (79 FR 11879 at 11893), we discussed a 1997 citizen petition submitted by Nabisco, Inc. (Docket No. FDA–1997–P–0476) asking us to amend the definitions of ''total fat'' and ''saturated fat'' to clarify that acetic, propionic, and butyric acids may be excluded when calculating the amount of fat in a food product. We tentatively concluded that the petitioner did not provide a scientific basis on which we could rely to propose to exclude acetic, propionic,

and butyric acids from the definition of total fat based on differences in chemical composition. We therefore, did not propose any changes to the definition of ''total fat'' found in § 101.9(c)(2).

To clarify what we consider to be a fatty acid, we proposed to define ''fatty acids'' in § 101.9(c)(2) as ''aliphatic carboxylic acids consisting of a chain of alkyl groups and characterized by a terminal carboxyl group.'' We explained that this definition is consistent with other similar definitions found in nutrition and chemistry references (79 FR 11879 at 11893).

(Comment 83) Several comments supported our current definition of ''total fat'' and our proposed definition of ''fatty acids.'' The comments also agreed with our tentative conclusion that acetic, propionic, and butyric acids should continue to be included in the definition of total fat because they are short-chain fatty acids and that the basic chemical group (*i.e.,* the terminal carboxyl group attached to a chain of alkyl groups containing carbon atoms) should remain the main defining factor of a fatty acid.

However, one comment suggested that acetic and propionic acids should not be considered fatty acids, but that butyric acid should be considered both a fatty acid and a saturated fatty acid. The comment cited the International Union of Pure Applied Chemistry (IUPAC) definition of fatty acids, which indicates that ''natural fatty acids commonly have a chain of 4 to 28 carbons'' (Ref. 27). The comment noted that acetic and propionic acid have 2 and 3 carbon chains, respectively, so the comment said extending the definition of fatty acids to these two substances is unjustified. Furthermore, the comment said that acetic and proprionic acids are not functionally fatty acids because acetic acid is a primary component of vinegar and propionic acid is most commonly used as a food stabilizer or anti-microbial agent in the form of sodium or ammonium salts, and is also used in its free form as a taste additive.

(Response) We agree that butyric acid should be considered both a fatty acid and a saturated fatty acid. However, we disagree that acetic acid and propionic acid should be excluded from the declaration of total fat based on their carbon chain length. The IUPAC definition provided says that fatty acids ''commonly'' have a chain length of 4 to 28 carbons, but this definition does not exclude the possibility that there may be fatty acids with carbon chain lengths of less than 4 carbons. Furthermore, other definitions of fatty acids include monocarbonic acids with chain lengths between 1 and nearly 30 carbon atoms (79 FR 11879 at 11893). The final rule, therefore, does not change our pre-existing definition of ''total fat.''

The comment noted that acetic acid is most commonly found in the human diet in vinegar, either separately or as an ingredient, and is responsible for its distinctive odor and taste. The comment noted that propionic acid is used in food as a stabilizer, anti-microbial agent, and as a taste additive. The comment used this information to explain why these acids are not functionally fatty acids rather than explaining how the function of acetic and propionic acids differ from those of other fatty acids. Therefore, the comment did not provide sufficient information for us to consider in determining whether acetic and propionic acid should be excluded from the declaration based on their functional attributes, and we have finalized the definition of ''fatty acids'' in § 101.9(c)(2) without change.

(Comment 84) One comment recommended that consumer education is warranted to make consumers aware that the physiological effects of acetic, propionic, and butyric acids are different from the health effects that have been linked to longer-chain fatty acids.

(Response) The health effects of acetic, propionic, and butyric acids have not been well established in the scientific literature. Therefore, it would be premature to provide consumer education on acetic, propionic, and butyric acids until more is known about these acids.

b. Mandatory declaration. Section 403(q)(1)(D) of the FD&C Act requires the declaration of the amount of total fat on food labels. Consequently, the Nutrition Facts label includes the mandatory declaration of the gram amount for total fat in § 101.9(c)(2).

The preamble to the proposed rule (79 FR 11879 at 11893) stated that the 2010 DGA recognizes that the types of fatty acids consumed are more important in influencing the risk of CVD than the total amount of fat in the diet. It also stated that current dietary recommendations and clinical guidelines encourage replacing saturated and *trans* fatty acids with beneficial fats, such as polyunsaturated and monounsaturated fatty acids, and that a high intake of most types of saturated fatty acids, *trans* fatty acids, and cholesterol can increase LDL cholesterol levels, which in turn may increase the risk of CHD (id.). Although we concurred with the 2010 DGA that consuming a diet low in saturated fatty acids and cholesterol is more important for reducing CVD risk than consuming a diet low in total fat, we tentatively concluded in the preamble to the proposed rule that mandatory declaration of total fat on the Nutrition Facts label continues to be necessary to assist consumers in maintaining healthy dietary practices (id.) for the following reasons:

- Total fat is a calorie-yielding macronutrient and an important piece of the macronutrient profile of a food;
- Consumption of a low fat, high carbohydrate diet can increase the risk of chronic diseases such as CHD and type 2 diabetes; and

Increased fat intake, as a result of increased saturated fat intake, has been shown to increase LDL cholesterol concentrations, and therefore risk of CHD.

(Comment 85) Several comments supported the mandatory declaration of total fat on the Nutrition Facts label. The comments suggested that retaining the declaration of total fat also would help consumers who are trying to consume foods with a lower calorie density because foods higher in fat have a higher caloric density. (Caloric density is the amount of calories per unit of food weight.) Some comments provided evidence to show that consumption of a lower-fat, lower-calorie diet promotes weight loss, weight maintenance, and the reduction in risk of diabetes. Other comments stated that consumers can use a food's total and saturated fat content to estimate its unsaturated fat content. As discussed in part II.F.4, replacing saturated fats with unsaturated fats can lower LDL cholesterol levels and the risk of CVD.

Other comments disagreed with our conclusion and suggested that, rather than listing total fat on the label, we should require the declaration of the amount of each type of fat (*i.e.,* saturated fat, *trans* fat, polyunsaturated fat, and monounsaturated fat). The comments noted that total fat consumption is no longer emphasized in the DGA. Instead consumers are advised to limit their consumption of saturated and *trans* fats, and replace them with monounsaturated and polyunsaturated fats. One comment questioned whether including total fat on the label may inadvertently discourage consumers from selecting foods that appear to be high in fat without regard to the source of fat.

(Response) We agree, in part, and disagree, in part, with the comments. As we stated in the preamble to the proposed rule (79 FR 11879 at 11893), we agree with the recommendations of the 2010 DGA that the types of fatty acids consumed are more important in influencing the risk of CVD than the total amount of fat in the diet. However,

we decline to remove the declaration of total fat from the label as some comments suggested. Total fat continues to be associated with the risk of chronic disease and so a declaration of total fat provides important information about the nutrient profile of a food (79 FR 11879 at 11893). Increased fat intake, as a result of increased saturated fat intake, has been shown to increase LDL cholesterol concentrations, and therefore risk of CHD.

As for the comment asserting that including total fat on the label may inadvertently discourage consumers from selecting healthful foods because of the amount of total fat declared on the label, the comment did not provide any data or other information to support the assertion. We recognize that how a total fat declaration may be understood and used by consumers could have important implications for how we focus our consumer education.

c. DRV. The DRV for total fat is 30 percent of calories (65 grams/day) (§ 101.9(c)(9)). The proposed rule would not change the DRV. The preamble to the proposed rule (79 FR 11879 at 11894) discussed the absence of an AI and RDA for total fat and how the IOM established an AMDR for total fat intake of 20 to 35 percent of energy for adults and an AMDR of 25 to 35 percent of energy for children age 4 to 18 years. (The AMDRs are associated with reduced risk of chronic diseases, such as CHD, while providing for adequate intake of essential nutrients.) We noted that the 2010 DGA acknowledged the IOM's AMDR and indicated that total fat intake should fall within the AMDRs set by the IOM. We explained that the IOM Labeling Committee recommended a population-weighted midpoint of the AMDR because AMDRs vary with age; thus, a population-weighted mid-point of the AMDR for adults, *i.e.,* 20 to 35 percent, yields a DRV of 28 percent or 62 grams of total fat. However, we declined to adjust the DRV because we concluded, in the preamble to the proposed rule (79 FR 11879 at 11894), that the upper level of the AMDR of 35 percent of 2,000 calories as the basis for a DRV would provide no meaningful health benefit and that a population-weighted mid-point of 28 percent of the AMDR (28 percent of calories) as the basis for the DRV is not significantly different from a public health outcome standpoint than the current value of 30 percent of calories.

(Comment 86) One comment agreed that we should not change the DRV for total fat. The comment noted that there is little or no advantage to making a change on this basis because the actual change in the DRV amount is minimal compared to the cost and effort required to educate consumers about the rationale for the change and its significance related to dietary choices.

One comment said we should reduce the DRV for total fat to 40 grams/day (18 percent of calories based on a 2,000 calorie diet), but the comment did not provide a rationale or other information to support the recommended change.

Another comment suggested that we eliminate the DRV for total fat to allow consumers to focus on replacing saturated fats with unsaturated fats. The comment stated that the types of fat consumed are more important in influencing the risk of heart disease than is the total amount of fat. The comment noted that current dietary recommendations and clinical guidelines recommend replacing saturated and *trans* fats with polyunsaturated and monounsaturated fats to reduce the risk of heart disease.

(Response) Since we published the proposed rule in the **Federal Register**, new information and evidence has become available that corroborates the position that the types of fats consumed are more important in influencing the risk of heart disease than is the total amount of fat. The 2015 DGAC concluded that strong and consistent evidence from randomized controlled trials shows that replacing saturated fatty acids with unsaturated fats, especially polyunsaturated fatty acids, significantly reduces total and LDL cholesterol. The 2015 DGAC also concluded that there is strong evidence that dietary patterns that are lower in saturated fat, cholesterol, and sodium and richer in fiber, potassium, and unsaturated fats are beneficial for reducing CVD risk. The 2015 DGAC noted that, in low-fat diets, fats are often replaced with refined carbohydrates and this is of particular concern because such diets are generally associated with changes in blood cholesterol levels associated with an increased risk of disease. The 2015 DGAC suggested that dietary advice should put the emphasis on optimizing types of dietary fat consumed and not on reducing total fat intake. The 2015–2020 DGA did not include a recommendation that Americans should reduce their intake of total fat, but did recommend that sources of saturated fat should be replaced with unsaturated fat, particularly polyunsaturated fatty acids (Ref. 28). These recommendations and conclusions are supported by the Lifestyle Management Report and the evidence reviewed for the NHLBI Lifestyle Evidence Review (Refs. 17–18).

We disagree with the comment recommending the elimination of the declaration of the percent DV for total fat because we have concluded that the declaration of the amount of total fat is necessary to assist consumers in maintaining healthy dietary practices and the percent DV declaration can help consumers put the gram amount of total fat declared on the label into the context of their total daily diet. Furthermore, the comment did not explain how removing the declaration of the percent DV for total fat from the label will help consumers focus on replacing saturated fats with monounsaturated fats, especially if the total gram amount of total fat in a serving of a product is still declared on the label. Therefore, we decline to remove the declaration of the percent DV for total fat from the label.

We also disagree that the DRV for total fat should be decreased from 65 grams/day to 40 grams/day. The comment did not provide a basis for the change, so, absent data or evidence to support decreasing the DRV, we do not have sufficient information to support the change and also are unable to determine if the change would be appropriate.

Although we disagree with the comment suggesting that we eliminate the percent DV declaration for total fat, we are reconsidering our position that increasing the DRV for total fat to 35 percent, which is the upper end of the AMDR range, would provide no meaningful health benefit. The scientific community continues to focus on the types of fats consumed and less on the total amount of fat consumed. Current clinical guidelines and dietary recommendations do not include guidance or recommendations to limit total fat. We do not place limitations on the total amount of fat. We are concerned that keeping the DRV for total fat of 30 percent of calories may be misinterpreted as advising consumers to limit their intake of total fat to 30 percent or less. It is also conceivable that consumers could view foods which are good sources of mono and polyunsaturated fats negatively because their percent DV declaration for total fat is high. Given that current dietary recommendations and clinical guidelines corroborate our action to not place limitations on the total amount of fat which should be consumed and acknowledge that replacing total fat in the diet with carbohydrates can have negative health effects, we have reconsidered our statement that the upper level of the AMDR of 35 percent would provide no meaningful health benefit compared to the current value of 30 percent calories. Thus, we are increasing the DRV for total fat from 30 percent of calories to 35 percent of

calories, which results in a DRV of 78 grams.

d. *Declaration of total fat.* The proposed rule would not change the preexisting requirement for mandatory declaration of total fat on the Nutrition Facts label.

(Comment 87) Several comments recommended decreasing the prominence of total fat on the label while increasing the prominence of saturated and *trans* fatty acids because the scientific evidence shows that the type of fat consumed is more important than the total amount consumed. The comments stated that more emphasis on saturated and *trans* fatty acids could help consumers reduce their intake of these types of fats. One comment recommended that the total fat declaration should be listed right after protein and carbohydrate on the label to reduce its prominence. The comment suggested that this change is necessary because high fat diets have been proven to reduce body weight, normalize blood sugars for diabetics, improve cardiac risk profiles, and reduce the risk for other comorbidities, such as the risk of stroke.

(Response) We decline to change the order of nutrients on the label to decrease the prominence of total fat. Fat is one of three major macronutrients in the diet. The listing of the amount of total fat in a product provides valuable information to the consumer about the nutrient profile of a food. While we agree that it is important for consumers to consider the amount of saturated and *trans* fat in a product, these fatty acids are components of total fat. They are indented and listed below total fat on the Nutrition Facts label so that consumers can see that they are part of the total fat declaration. If the declaration of the amount of total fat in a product is separated from the declaration of its components, as suggested in the comment recommending its placement below carbohydrate and protein, it could appear as though saturated and *trans* fat are not part of the total fat declaration.

As for the comment suggesting that high fat diets have been proven to be beneficial for weight loss and to have other beneficial health effects, the comment did not provide evidence related to how the order of nutrients on the label may impact consumers wishing to follow a high fat diet. Without such evidence, we are unable to evaluate the impact of the suggested change in the order of nutrients declared on the label.

(Comment 88) Some comments recommended declaring total fat as a percentage of the total weight of a product or as a percentage of calories in a serving of the product. One comment expressed concern that some manufacturers are making false claims about the percentage of fat in a product, and the comment suggested that knowing the percentage attributed to the total weight of the food by the fat in the product would be beneficial for consumers. The comment also stated that most calculations of body fat and daily intakes are expressed as percentages.

(Response) We decline to require the declaration of total fat as a percentage of the weight of the food or as a percentage of calories in a serving of the product.

We disagree that declaration of the amount of fat as a percentage of weight or as a percentage of calories would be helpful to consumers in maintaining healthy dietary practices. Information found on the label can be used to determine the amount of a nutrient in a food so that it can be used for product comparison or to determine how the food contributes towards recommended amounts of nutrients (see part I.B). The declaration of a percentage of weight that is attributable to the total fat content of a food product would not allow for easy product comparison and would not allow a consumer to determine how the product compares to dietary recommendations for total fat. Dietary recommendations for total fat are provided in grams rather than in percentages (Ref. 29).

Additionally, as discussed in part II.E.1, we are removing calories from fat from the label because the type of fat consumed is more relevant in reducing the risk of CHD than overall total fat intake. Therefore, the declaration of a percentage of calories from fat also is unwarranted.

2. Saturated Fat

a. Definition. Our preexisting regulations define ''Saturated fat'' in § 101.9(c)(2)(i) as the sum of all fatty acids containing no double bonds. We did not propose to change the definition.

(Comment 89) Most comments supported our decision not to revise the definition of saturated fat. However, one comment argued that we should exclude the short-chain fatty acids, acetic acid and proprionic acid, from the definition of both total fat and saturated fat, but another short-chain fatty acid, butyric acid, could remain in the definitions. The comment argued that both acetic acid and proprionic acid have carbon chains shorter than four carbons and that the International Union of Pure Applied Chemistry (IUPAC) has a definition of fatty acids which indicates that ''natural fatty acids commonly have a chain of 4 to 28 carbons'' (Ref. 27).

(Response) We decline to exclude acetic and propionic acid from the declaration of saturated fat based on the length of the carbon chains for reasons already discussed in part II.F.1.

b. Mandatory declaration. Section 403(q)(1)(D) of the FD&C Act requires the declaration of the amount of saturated fat on food labels. Accordingly, our preexisting regulations require mandatory declaration of the gram amount for saturated fat (§ 101.9(c)(2)). We did not propose any changes to the mandatory declaration of the gram amount for saturated fat.

(Comment 90) Most comments supported our decision not to change the mandatory declaration of saturated fat.

Other comments opposed listing saturated fats because, the comments said, saturated fats are not detrimental to health. One comment that suggested we should break down saturated fat further into medium chain and long chain saturated fatty acids because medium chain saturated fatty acids are beneficial to health, while long chain saturated fatty acids are not.

(Response) We disagree that the Nutrition Facts label no longer needs to list saturated fats and also decline to break down saturated fat further into medium chain and long chain saturated fatty acids. Section 403(q)(1)(D) of the FD&C Act requires the declaration of the amount of saturated fat on food labels, and, in the preamble to the proposed rule (79 FR 11879 at 11895), we described how dietary recommendations continue to recognize the well-established relationship between consumption of saturated fat, which include all saturated fatty acids chain lengths, and its effect on blood cholesterol levels. In addition, the 2010 DGA provided scientific evidence supporting a quantitative intake recommendation for saturated fat which likewise, include all saturated fatty acid chain lengths.

The comments suggesting that saturated fat did not need to be declared or should be further broken down by chain length did not provide any information that could be used to contradict the dietary recommendations, nor did they provide information that would enable us to determine that the nutrient information is no longer necessary to assist consumers in maintaining healthy dietary practices (as section 403(q)(2)(B) of the FD&C Act requires when removing nutrient information). Thus, based on the science and dietary recommendations and the absence of evidence indicating that the

information is no longer necessary to assist consumers in maintaining healthy dietary practices, we are retaining the declaration of saturated fat in the Nutrition Facts label.

c. DRV. Under our preexisting regulations at § 101.9(c)(9), the DRV for saturated fat is 20 grams, which is 10 percent of calories based on a 2,000 reference calorie intake level. In the preamble to the proposed rule (79 FR 11879 at 11895), we discussed how current consensus reports, such as the IOM DRIs, the 2010 DGA, and a 2002 report from the National Cholesterol Education Program of the NIH National Heart, Lung, and Blood Institute, continue to recommend saturated fat intakes of no more than 10 percent of calories, based on risk of CVD. Additionally, the scientific evidence in the 2015–2020 DGA supports limiting calories from saturated fat which corroborates the consensus reports. Consequently, we did not propose to change the DRV for saturated fat in § 101.9(c)(9).

(Comment 91) Many comments supported our decision to keep the existing saturated fat DRV of 20 grams, but some comments would have us lower the DRV to 6 or 7 percent of calories. The comments indicated that this range would calculate to a DRV of approximately 13 to 15 grams of saturated fat. Other comments noted that recent guidelines published by the American Heart Association and American College of Cardiology, in collaboration with the National Heart, Lung, and Blood Institute, concluded that no more than 5 to 6 percent of calories should come from saturated fat. One comment also argued that the saturated fat DRV was too low and that human diets, both historical and among different cultures, are consistent with diets higher in saturated fat and that current science supports higher levels of intake.

Two comments suggested that we remove stearic acid from any calculation of the percent DV. The comments argued that the DRV is based on adverse physiological effect and that each saturated fatty acid should be considered individually regarding these effects. The comments suggested that a percent DV for saturated fat of an individual food could be calculated using different weighting factors for saturated fatty acids dependent on the level of adverse effect of each individual fatty acid. The comments also argued that, because stearic acid is neutral in regard to effects on levels of serum total and LDL-cholesterol compared to other saturated fatty acids, stearic acid would end up being left out of the calculation for the percent DV.

(Response) We decline to revise the DRV for saturated fat. As we discussed in the preamble to the proposed rule (79 FR 11879 at 11895), current consensus reports reviewing the scientific evidence related to saturated fatty acid intake continue to support saturated fat intakes of no more than 10 percent of calories, based on risk of CVD. For example, the scientific evidence in the 2010 DGA (Ref. 30) supports reducing saturated fatty acid intake to less than 10 percent of calories, and the scientific evidence in the 2015 DGAC supports retaining the 10 percent upper limit for saturated fat intake. These guidelines apply to intake levels for the general population. Other guidelines that support lower than 10 percent of calories do exist for therapeutic uses, which would apply to specific populations in need of, for example, lowering of LDL cholesterol levels in the blood (Ref. 31). These are specific populations such as those with diagnosed heart disease or type 2 diabetes, those with family histories of high blood cholesterol, and others with high risk for CVD (Ref. 32).

As for the comment claiming that the DRV for saturated fat is too low, the comment did not provide evidence for increasing the DRV, and we are unaware of current scientific information that would support an increase. The current dietary recommendations for intake of saturated fatty acids, of less than 10 percent of calories, are still applicable to the general U.S. population. Thus, the existing DRV of 20 grams is consistent with the scientific evidence supporting a maximum intake level that covers the general U.S. population.

We also disagree with comments that would exclude stearic acid from the calculation of an individual food's percent DV for saturated fat. The scientific evidence supporting the current dietary recommendations for saturated fat, does not differentiate among the individual saturated fatty acids. The scientific evidence relates to the intake of all saturated fatty acids combined, and this would include stearic acid. We note that the 2015–2020 DGA recommendation to consume less than 10 percent of calories from saturated fatty acids makes no specific exclusion of stearic acid and, instead, relates to the intake of total saturated fatty acids (Ref. 28). Because the DRV is based on the intake of all saturated fatty acids, determination of percent DV is also based on content of all saturated fatty acids in the individual food.

3. *Trans* Fat

a. Definition. Our preexisting regulations, at § 101.9(c)(2)(ii), define ''*Trans* fat'' or ''*Trans*'' as the sum of all unsaturated fatty acids that contain one or more isolated (*i.e.,* non-conjugated) double bonds in a *trans* configuration. The proposed rule would not change the definition.

(Comment 92) Most comments supported our decision to retain the definition of *trans* fat.

One comment, however, said that the physiological effects of *trans* fat from ruminant sources differs from the effects of *trans* fat from industrial sources (*i.e.,* partially hydrogenated oils). The comment said we should exclude *trans* fat from ruminant sources from the definition of *trans* fat.

(Response) We decline to exclude *trans* fat from ruminant sources from the definition of *trans* fat. *Trans* fat is generally understood to be any unsaturated fatty acid that contains a double bond, regardless of source (Ref. 29). Additionally, as we stated in the preamble to the proposed rule (79 FR 11879 at 11896), the chemical definition is consistent with how we define polyunsaturated fat as cis, cis-methylene-interrupted (§ 101.9(c)(2)(ii)).

We also note that, in the **Federal Register** of June 17, 2015 (80 FR 34650), we issued a declaratory order making a final determination that there is no longer a consensus among qualified experts that partially hydrogenated oils (PHOs), which are the primary dietary source of industrially produced *trans* fatty acids (IPTFA) are generally recognized as safe (GRAS) for any use in human food. The major provisions of our declaratory order were that:

- PHOs are not GRAS for any use in human food;
- Any interested party may seek food additive approval for one or more specific uses of PHOs with data demonstrating a reasonable certainty of no harm of the proposed use(s); and
- For the purposes of the declaratory order, FDA defined PHOs as those fats and oils that have been hydrogenated, but not to complete or near complete saturation, and with an iodine value (IV) greater than 4.

We established a compliance date of June 18, 2018 for the declaratory order.

b. Mandatory declaration. Our preexisting regulations, at § 101.9(c)(2)(ii), require the declaration of *trans* fat on the Nutrition Facts label (§ 101.9(c)(2)(ii)). In the preamble to the proposed rule (79 FR 11879 at 11896), we tentatively concluded that information on the amount of *trans* fat in food products allows consumers to

reduce their intake of *trans* fat, and thus, reduce the risk of CHD, so we did not propose to change this requirement. However, we also stated that, in the **Federal Register** of November 8, 2013 (78 FR 67169), we had published a tentative determination that partially hydrogenated oils (PHOs), the source of industrially produced *trans* fat, may not be generally recognized as safe (GRAS), and we invited comment on whether mandatory labeling of *trans* fat would still be necessary if we finalized our determination (79 FR 11879 at 11896).

(Comment 93) Regarding the mandatory declaration of *trans* fat, all comments supported our decision to continue requiring the declaration of *trans* fats.

With respect to the GRAS determination of PHOs, the comments were divided. Some comments supported requiring the declaration of *trans* fats on the label regardless of the final GRAS determination; other comments supported removing the declaration of *trans* fat from label if PHOs are no longer GRAS.

The comments supporting the declaration of *trans* fat on the label, even if PHOs are no longer declared GRAS, discussed the continued presence of *trans* fat in products even after PHOs are removed from foods. The comments explained that *trans* fat could come from both natural sources, such as the *trans* fat in dairy products, and from uses of oils that are either currently allowed as food additives or could potentially be permitted in the future. The comments said that *trans* fat content is still information that consumers need even if total overall presence in the food supply is reduced.

Other comments supporting removal of the *trans* fat declaration if PHOs are no longer GRAS said that, if PHOs are no longer GRAS, most foods would not have any *trans* fat, except for the *trans* fat that comes from animal sources. Thus, to these comments, few foods would have declarable levels of *trans* fat, and most foods would indicate a *trans* fat content of zero. Because so few foods would contain *trans* fat, the comments stated, a *trans* fat declaration would no longer be needed on the label. Some comments also noted that animal products, such as dairy, are considered part of normal, healthful diets, and *trans* fat information on those products is not necessary. Some comments, however, did suggest that if *trans* fat from animal sources exceeded a certain level, such as 1.0 g per serving, then we should require its disclosure on the label.

(Response) Based on the available scientific evidence and the findings of expert scientific panels, in the **Federal Register** of June 17, 2015 (80 FR 34650), we published a declaratory order stating that PHOs are not GRAS for any use in human food. Although we have made this determination regarding PHOs, some *trans* fats will continue to be present in foods. For example, the declaratory order provided a compliance date of June 18, 2018; this gives manufacturers up to 3 years to remove PHOs, and the accompanying *trans* fats in PHOs, from foods. The 3 years also provides time for manufacturers to petition us for approval of PHOs as food additives, which could allow PHOs to be included in food in certain circumstances. Moreover, *trans* fat will always be naturally present in foods from ruminant sources (*e.g.,* beef products and dairy foods). Using the latest data from the Gladson database (data current as of March 2015), we calculate that, based on the Gladson values, there could potentially be more than 5,000 foods remaining with declarable levels of *trans* fat, after removal of PHOs. Thus, it is premature to consider removing *trans* fat from the Nutrition Facts label at this time. We expect there to be a great deal of reformulation of products over the next 3 years, and we will need to evaluate the remaining *trans* fat content in foods, both from approved or potentially approved food additive uses of PHOs and from naturally occurring *trans* fat, after the expected reformulations have occurred. We will then be able to consider whether, in light of any remaining *trans* fat content in foods, declaring *trans* fat on the label continues to assist consumers in maintaining healthy dietary practices. Until such time, however, the scientific evidence continues to support the need to inform consumers about the continued presence of *trans* fat in foods.

c. DRV. Our preexisting regulations do not provide a DRV for *trans* fat. In the preamble to the proposed rule (79 FR 11879 at 11896 through 11897), we described various efforts (such as the use of ANPRMs) to consider determining a DRV for *trans* fat, including the use of food composition data, menu modeling and data from dietary surveys, and a potential joint percent DV for *trans* fat and saturated fat. We described how a number of evaluations of the existing scientific evidence were not able to set a definitive quantitative intake recommendation for *trans* fat. We tentatively concluded that there was not a basis for setting a DRV for *trans* fat, and so we did not propose a DRV for *trans* fat.

(Comment 93a) Most comments agreed that the scientific evidence is insufficient to set a DRV. In contrast, two comments said we should set a DV for *trans* fat, but did not provide information that would enable us to establish a DRV.

(Response) We decline to revise the rule to establish a DV for *trans* fat. The comments did not provide information that would enable us to establish a DV, and, as we discussed in the preamble to the proposed rule (id.), consensus reports were unable to determine a specific level of *trans* fat intake that would likely pose no risk of adverse health effects. The IOM, for example, said that a DV for *trans* fat could not be established because ''any increase in *trans* fat intake increases CHD risk but because *trans* fats are unavoidable in ordinary diets, consuming zero percent of calories would require significant changes in dietary intake patterns that may introduce undesirable effects and unknown and unquantifiable health risks'' (Ref. 29). We continue to adhere to the recommendation from the IOM that *trans* fatty acid consumption be as low as possible while consuming a nutritionally adequate diet.

d. Declaring the amount of trans fat. Our preexisting regulations, at § 101.9(c)(2)(ii), state that, if the serving contains less than 0.5 grams, the content declared on the Nutrition Facts label must be expressed as zero. For most nutrients, the maximum amount permitted for a zero declaration is governed by the limitations associated with analytical methods available, and, in the preamble to the proposed rule (79 FR 11879 at 11896), we said that validated analytical methodologies that provide sensitive and reliable estimates of *trans* fatty acids in all foods at levels below 0.5 grams per serving are currently not available. Thus, we did not propose to change the requirements for a zero declaration of *trans* fat.

(Comment 94) Several comments asked us to lower the maximum amount permitted for a zero declaration. The comments provided several different values, such as 0.0 grams, 0.05 grams, 0.1 grams, and 0.2 grams, as alternatives to the preexisting value of 0.5 grams. The comments argued that even very small amounts of *trans* fat in a food (*i.e.,* less than 0.5 grams) could be harmful to consumers' health, and consumers should know if foods contained any *trans* fat at all. Most comments did not address the issue of a lack of validated analytical methodologies. One comment did, however, state that a validated analytical methodology did exist to detect *trans* fat below 0.5 grams per

serving and cited AOAC 996.06 (Ref. 33).

(Response) We agree that consumers should be informed of *trans* fat content in foods. With the current analytical methodologies, however, quantification of *trans* fat content in foods is limited. When determining the maximum amount permitted for a zero declaration, we need to consider, for compliance purposes, whether the *trans* fat content at those low levels can be reliably and accurately measured in all foods by an analytical method(s) that has been validated to do so. Currently, there are no validated analytical methods to determine *trans* fat content at levels less than 0.5 grams for all foods.

With respect to the comment that cited AOAC 996.06 as a methodology to detect *trans* fat, AOAC 996.06 does not provide validation data for *trans* fatty acids. AOAC 996.06 does provide validation data for total fat, saturated fat, and monounsaturated fat (Ref. 33). We are aware of ongoing efforts for validation of improved analytical methods for *trans* fat (Ref. 34), and if new validated methods become available, we may reevaluate the threshold for a zero declaration of *trans* fat.

4. Monounsaturated Fat and Polyunsaturated Fat

a. Voluntary declaration. Our preexisting regulations, at § 101.9(c)(2)(iii) and (iv), permit, but do not require, the declaration of monounsaturated fat (defined as cis-monounsaturated fatty acids (*e.g.,* oleic acid)) and the declaration of polyunsaturated fat (defined as cis, cis-methylene-interrupted polyunsaturated fatty acids) on the Nutrition Facts label.

The preamble to the proposed rule (79 FR 11879 at 11897 through 11899) described how we considered recommendations in current consensus reports, as well as comments received in response to the 2007 ANPRM in which we requested comment on whether declaration of monounsaturated fat and polyunsaturated fat should remain voluntary or be made mandatory. We noted that we have been unable to set a DRV for monounsaturated fat and polyunsaturated fat due to the absence of DRIs for both (id.)

Consistent with the 2010 DGA, the 2015–2020 DGA recommends that foods high in saturated fats should be replaced with foods high in unsaturated fats (Ref. 28).

(Comment 95) One comment supported voluntary declaration of monounsaturated and polyunsaturated fats and said that omitting unsaturated fats would reduce label clutter.

(Response) While it is possible that omitting unsaturated fats would reduce label clutter, our reason for not requiring the declaration of monounsaturated or polyunsaturated fats is due to the lack of a DRV and our consideration of the factors for mandatory and voluntary declaration for these types of nutrients. We consider voluntary declaration to be appropriate when the nutrient either has a quantitative intake recommendation, but does not have public health significance or does not have a quantitative intake recommendation available for setting a DRV, but has public health significance.

(Comment 96) Some comments supported voluntary declaration of monounsaturated and polyunsaturated fats because, according to the comments, they were a key recommendation in the 2010 DGA, ''Consume less than 10 percent of calories from saturated fatty acids by replacing them with monounsaturated and polyunsaturated fatty acids.''

Other comments supporting mandatory declaration of monounsaturated and polyunsaturated fats also referred to the 2010 DGA recommendation. Some comments asserted that being a key recommendation was sufficient for mandatory listing of added sugars and claimed that we were being inconsistent with the use of dietary guidance recommendations, especially because the scientific evidence is stronger for monounsaturated and polyunsaturated fats than for added sugars.

(Response) We proposed to retain the voluntary declaration of monounsaturated and polyunsaturated fats based on the factors identified for the mandatory and voluntary listing of these types of non-statutory nutrients. While added sugars is not a statutory nutrient, we are requiring the declaration of added sugars based on the need for consumers to have this information, which relates to a dietary pattern, to assist consumers to maintain healthy dietary practices and not based on a specific relationship of added sugars to chronic disease risk. Thus, the basis for requiring the declaration of added sugars differs from that for monounsaturated and polyunsaturated fats. We acknowledge that the 2010 DGA provided a key recommendation for monounsaturated and polyunsaturated fats because of the strong evidence (79 FR 11879 at 11898); however, some evidence supporting this is replacing saturated fat with monounsaturated and polyunsaturated fats. Because saturated fat is on the label, we believe consumers can use that information in addition with total fat DV to maintain healthy dietary practices. The scientific evidence for added sugars (and solid fats) is based on the modeling of dietary patterns to ensure adequate consumption of nutrient dense foods and avoidance of excess empty calories that can lead to weight management issues and obesity.

(Comment 97) One comment supporting mandatory declaration noted that the 2010 DGA stated that there is well established evidence that replacing saturated fat with monounsaturated and polyunsaturated fat lowers LDL cholesterol and has health benefits.

(Response) We agree that there is well established evidence that replacing saturated fat with monounsaturated and polyunsaturated fats lowers LDL cholesterol and therefore reduces the risk of heart disease, and the preamble to the proposed rule (79 FR 11879 at 11897 through 11898) discussed how replacing saturated fatty acids with monounsaturated or polyunsaturated fats reduced blood LDL cholesterol levels. A quantitative intake recommendation, however, is not available for either monounsaturated or polyunsaturated fat. Therefore, in considering the factors for mandatory or voluntary declaration, we determined that monounsaturated and polyunsaturated fat warrants voluntary declaration.

An FDA health claim is available for the labeling of foods: ''Replacing saturated fat with similar amounts of unsaturated fats may reduce the risk of heart disease. To achieve this benefit, total daily calories should not increase'' (see ''Health Claim Notification for the Substitution of Saturated Fat in the Diet with Unsaturated Fatty Acids and Reduced Risk of Heart Disease'') (Ref. 35).

(Comment 98) One comment supported mandatory declaration of polyunsaturated fat because, according to the comment, polyunsaturated fat includes essential nutrients.

(Response) We agree that polyunsaturated fat includes essential fatty acids (*i.e.,* linoleic and alpha linolenic acid). We disagree, however, that the listing of polyunsaturated fat should be mandatory for this reason. Essentiality of a nutrient is not factor considered for the mandatory or voluntary labeling of these types of non-statutory nutrients, other than essential vitamins and minerals. The basis for proposing voluntary declaration of polyunsaturated fat was because of its role in reducing the risk of CVD when replacing saturated fat, which has public health significance.

(Comment 99) One comment supporting mandatory declaration noted that the 2002 IOM report (Ref. 29) concluded that the type of fat, rather than total fat, was relevant to health and the 2010 DGA shifted the focus from total fat to the type of fat. Another comment noted that we were no longer requiring ''Calories from fat'' because the focus is more on the type of fat. Several comments supporting mandatory declaration of monounsaturated and polyunsaturated fats noted that it is not possible to identify these types of fats which have health benefits, and, therefore, it is not possible to differentiate from unhealthy fats. One comment said that listing these fats can help people distinguish between fatty foods that can be eaten more often compared to those with higher saturated fat content to be eaten less often.

Other comments supporting mandatory declaration claimed that consumers need to be able to compare products and select foods that are not only lower in saturated fat but contain monounsaturated and polyunsaturated fats.

(Response) We agree that the four chemically defined categories of type of fat (*i.e.,* saturated, *trans,* monounsaturated fat, and polyunsaturated fat), rather than total fat, are relevant to health, specifically CVD risk. Current dietary recommendations no longer emphasize total fat. Certain categories of fatty acids are beneficial, while others categories have negative health effects, particularly related to CVD (see 79 FR 11879 at 11891). We recognize that monounsaturated and polyunsaturated fat have public health relevance when they replace saturated fat (id. at 11898). There is not a quantitative intake recommendation available, however, that identifies how much monounsaturated and polyunsaturated fat must replace saturated fat, and there is no dose-response relationship between mono- and polyunsaturated fats to risk of CHD, independent of saturated fat, similar to the relationship between *trans* fat and risk of CHD. Therefore, we decline to require the declaration of monounsaturated and polyunsaturated fat. A quantitative intake recommendation is a factor we considered for mandatory declaration of these types of non-statutory nutrients (79 FR 11879 at 11890).

b. DRV. The proposed rule would not establish DRVs for either monounsaturated or polyunsaturated fat because quantitative intake recommendations are not available for setting DRVs (79 FR 11879 at 11897, 11899).

(Comment 100) One comment agreed with not setting a DRV for monounsaturated or polyunsaturated fat because there is no agreed upon scientific basis for establishing a DV due to diverse nature of these fatty acids.

(Response) We maintain that there is an insufficient basis to set a DRV for either monounsaturated or polyunsaturated fat, so the final rule does not establish a DRV for either monounsaturated or polyunsaturated fat.

c. Declaration of individual polyunsaturated fatty acids. Polyunsaturated fats represent two general categories: n-6 and n-3 polyunsaturated fatty acids. The most common n-6 and n-3 polyunsaturated fatty acid in food is linoleic acid and α-linolenic acid, respectively. Other n-3 fatty acids found in foods, particularly in fish, are the long chain fatty acids, eicosapentaeneoic acid (EPA) and docosahexaenoic acid (DHA).

The preamble to the proposed rule (79 FR 11879 at 11898) discussed the possibility of establishing separate DRVs for linoleic acid and α-linolenic acid, and, if so, whether the declaration of these nutrients should be voluntary or made mandatory. We decided that, because of the lack of well-established evidence for a role of n-3 or n-6 polyunsaturated fatty acids in chronic disease risk and the lack of a quantitative intake recommendation, the declarations of n-3 and n-6 polyunsaturated fatty acids are not necessary to assist consumers to maintain healthy dietary practices. Thus, the proposed rule would not provide for the individual declaration of either n-3 or n-6 polyunsaturated fatty acids on the Nutrition Facts label. Similarly, because of the lack of well-established evidence for a role of EPA and DHA in chronic disease risk and the lack of a quantitative intake recommendation, the proposed rule would not provide for the declarations of EPA and DHA.

(Comment 101) Although some comments agreed with our decision not to require the declaration of n-3 or n-6 polyunsaturated fatty acids, other comments would revise the rule to allow for the voluntary declaration of the n-3 polyunsaturated fatty acids, eicosapentaeneoic acid (EPA), and docosahexaenoic acid (DHA). One comment supported the voluntary declaration of EPA and DHA because humans have a limited capability to synthesize, elongate, and desaturate α-linolenic acid (ALA) to EPA and DHA.

(Response) While humans may have a limited capability to elongate and desaturate ALA to EPA and DHA, we do not have evidence to demonstrate that biosynthesis of EPA and DHA is insufficient in the general population such that EPA and DHA are essential in the diet. Therefore, there is no basis on which we can rely to support a voluntary declaration.

(Comment 102) Other comments supporting the voluntary declaration of n-3 and n-6 polyunsaturated fatty acids noted that monounsaturated fat, polyunsaturated fat, sugars, soluble fiber, insoluble fiber, sugar alcohols, and added sugars are being allowed or required on the label but do not have a DV. Therefore, the comments argued, we should treat n-3 and n-6 polyunsaturated fatty acids in the same manner.

(Response) There is well-established evidence for the role of sugars, monounsaturated fat, polyunsaturated fat, soluble fiber, insoluble fiber, and sugar alcohols in reducing the risk of chronic disease or providing a beneficial physiological effect. Therefore, these nutrients have public health relevance, which is the basis for voluntary labeling. Specifically, there is strong evidence for sugars increasing the risk of dental caries (see 79 FR 11879 at 11902), as well as reducing the risk of dental caries when sugar alcohols replace sugar in the diet (id. at 11908). There also is well established evidence that replacing saturated fat with monounsaturated and polyunsaturated fat reduces the risk of CVD (Ref. 35). There is strong evidence that soluble fibers reduce the risk of CHD (see 79 FR 11879 at 11911). There is well established evidence that insoluble fibers can improve laxation, a beneficial physiological effect (Ref. 36). Moreover, the scientific evidence for added sugars differs from that for n-3 and n-6 polyunsaturated fatty acids. There is a strong association between a healthy dietary pattern characterized by a lower intake of sugar sweetened foods and beverages, as compared to less healthy dietary patterns, and a reduced risk of CVD. A DV is being provided for added sugars (see part II.H.3).

In contrast, there is supportive, but not conclusive, evidence to suggest that n-3 polyunsaturated fatty acids reduce the risk of CHD (Ref. 37). Furthermore, there is no conclusive evidence for an independent role of n-6 polyunsaturated fatty acids in reducing blood cholesterol levels, and consequently, risk of CHD (see 79 FR 11879 at 11898). Therefore, we disagree that there is a sufficient basis to treat n-3 and n-6 polyunsaturated fatty acids the same as

the other nutrients discussed in the comment, so the final rule does not provide for voluntary declaration of n-3 and n-6 polyunsaturated fatty acids.

(Comment 103) One comment supporting the voluntary declaration of n-3 polyunsaturated fatty acids said that we could have reached the same conclusion for n-3 polyunsaturated fatty acid in the same way that we did for vitamin D. The 2010 DGA recommendation to increase the amount and variety of seafood in place of some meat and poultry was made to increase EPA and DHA in the American diet, as well as the total package of benefits seafood provides, including vitamin D.

(Response) We disagree that n-3 polyunsaturated fatty acids were handled differently than vitamin D. There is strong evidence for a relationship between vitamin D intake and risk of osteoporosis (see 79 FR 11879 at 11921). Furthermore, the IOM provided a quantitative intake recommendation (*i.e.,* RDA) for vitamin D (Ref. 38). We considered the scientific evidence for this recommendation when setting an RDI (see our response to comment 372). In contrast, the evidence for n-3 polyunsaturated fatty acids is not well-established, and a quantitative intake recommendation is not available (see 79 FR 11879 at 11897 through 11899).

(Comment 104) Several comments supporting the voluntary declaration of n-3 polyunsaturated fatty acids stated that not providing information on n-3 polyunsaturated fatty acids affords the consumer little opportunity to apply important dietary guidance as in the 2010 DGA. The comments said that, while the IOM did not set a DRI for EPA and/or DHA, this is an insufficient reason for disallowing the voluntary declaration of these essential fatty acids on the Nutrition Facts label. The comments said that the DGA concluded that moderate evidence indicates that 250 mg EPA and DHA daily is associated with reduced cardiac deaths among individuals with and without preexisting CVD and this recommendation contributes to prevention of heart disease. The comments also noted that, while we have not authorized a health claim regarding EPA and DHA and CVD risk, we have allowed the use of qualified health claims for 10 years.

(Response) The 2010 DGA concluded that moderate evidence shows that the consumption of 8 ounces per week of a variety of seafood, which provides an average consumption of 250 mg per day of EPA and DHA, is associated with reduced cardiac deaths among individuals with and without preexisting CVD. A DGA key recommendation was not provided for EPA and DHA, but rather for seafood. It is not clear whether EPA and DHA per se, or other substances in fish contribute to cardiac deaths. The qualified health claim on EPA and DHA and CVD risk is supportive, but not conclusive, evidence to suggest that n-3 polyunsaturated fatty acids reduce the risk of CHD (Ref. 37). The factors for mandatory and voluntary labeling of these types of non-statutory nutrients on the Nutrition Facts label depend on strong (rather than moderate or inconclusive) evidence. Therefore, we disagree that the information provided in the 2010 DGA report is sufficient to warrant the voluntary declaration of EPA and DHA.

(Comment 105) One comment supporting the voluntary declaration of n-3 polyunsaturated fatty acids noted that an article on a summary of a workshop stated that, ''National public health initiatives to increase n-3 fatty acid consumption are needed: The working group believes that data are currently sufficient to indicate that intake of n-3 fatty acids is suboptimal and a national and international initiative should be launched to shift n-3 fatty acid intake upward'' (Ref. 39). Another comment cited a paper which concluded that a large percentage of the U.S. adult population is not meeting recommendations for omega-3 fatty acid consumption set forth by the 2010 DGA (Ref. 40). One comment cited an article that evaluated intakes of ALA, EPA, and DHA intake in children 4 to 8 years of age (Madden *et al.*, 2009).

(Response) We disagree with the comments' interpretation of the cited articles. With respect to the cited articles, we note that the Akabas and Decklebaum article did not provide information to explain the basis for concluding that the intake of n-3 polyunsaturated fatty acids is suboptimal. The Papanikolaou article used 250 mg/day to assess adequacy of intake, however, the value was not a recommendation put forth by the 2010 DGA. The article by Madden *et al.* (2009) used the AI of 900 mg/day to assess adequacy of ALA, and 10 percent of this value (90 mg/day) was used to assess intake adequacy for EPA and DHA. We disagree with how Madden (Ref. 41) assessed nutrient intake for EPA and DHA because the IOM did not set an AI or EAR for EPA and DHA. The IOM only noted that EPA and DHA contribute approximately 10 percent of the total n-3 polyunsaturated fat intake (Ref. 29). There is no quantitative intake recommendation (*i.e.,* EAR) available for assessing inadequate intake in populations. Furthermore, there are a number of nutrients for which there is suboptimal intake which was considered as part of the factors for mandatory or voluntary declaration. However, we did not rely on suboptimal intake alone for such voluntary declarations in the Nutrition Facts label.

(Comment 106) Other comments supporting the voluntary declaration of n-3 polyunsaturated fats cited published articles or gave Web site addresses to discuss the health benefits of these fatty acids.

(Response) We have reviewed the articles and Web sites and, based on our review, decline to revise the rule to provide for the voluntary declaration of n-3 polyunsaturated fats.

- Many articles were review articles or meta-analyses that included studies that tested individuals who had a previous coronary event; therefore, the studies were evaluating the effect of the n-3 polyunsaturated fatty acids on secondary prevention of CVD (Refs. 42–47). Furthermore, some articles included observational studies on the association between the intake of polyunsaturated fatty acids and CVD risk. Scientific conclusions from such studies are not sufficient to support conclusions about the causal role of these n-3 polyunsaturated fatty acids on CHD risk in the general population.
- One article (Ref. 48) was a one-page abstract from a meeting. The Web site address that was cited (*http://www.goedomega3.com/healthcare*) is a general resource for health care professionals. Another Web site provided a list of organizations that have intake recommendations for EPA and DHA (*http://www.goedomega3.com/index.php/files/download/304*). None of the citations provided information that we would consider for voluntary declaration of EPA and DHA related to a relationship between these nutrients and risk of CHD.
- One article (Ref. 49) evaluated the relationship between plasma phospholipid EPA and DHA as a biomarker of intake and mortality. Figure 2 of this article showed that the dose-response relationship between EPA and DHA intake and plasma phospholipid EPA and DHA was not linear and plateaued at around 0.5 grams/day. Therefore, plasma phospholipid EPA and DHA is not a reliable indicator of EPA and DHA consumption, and scientific conclusions could not be drawn from such as study.
- One article (Ref. 50) was on an animal study that tested the effect of DHA on melanoma. The article did not present the totality of the evidence on DHA and risk of melanoma.

Furthermore, we would not rely on animal data for evaluating the efficacy of DHA to reduction of risk to melanoma in humans to establish a nutrient declaration.

• One article (Ref. 51) was a meta-analysis on EPA and DHA intake and blood pressure. There are several limitations of this meta-analysis including: (1) Not providing all of the relevant studies on EPA and DHA and blood pressure; (2) including studies that lacked an appropriate control group; and (3) including studies that conducted inappropriate statistical analyses.

• One article (Ref. 52) was an European Food Safety Association (EFSA) scientific opinion on a labeling reference value for n-3 and n-6 polyunsaturated fatty acids in which EFSA provided a recommended intake level of 250 mg/day of EPA and DHA. The article did not discuss the scientific evidence in detail to show how this quantitative intake recommendation was determined. Furthermore, while the scientific opinion cited several references to support 250 mg/day, a number of these included observational data in which information was obtained on fish consumption. The IOM did not set a DRI for EPA or DHA because much of the observational evidence measured fish or fish oil intake as a proxy for n-3 polyunsaturated fat intake, and other components in fish may have effects that are similar to n-3 fatty acids and therefore may confound the results of the observational studies (Ref. 29).

(Comment 107) Some comments supporting the voluntary declaration of individual polyunsaturated fatty acids discussed consumer use or consumer understanding as reasons for allowing voluntary declaration.

One comment cited the 2014 IFIC Food and Health survey data to assert that the data suggests that voluntary declaration of individual polyunsaturated fatty acids is necessary for the consumer to make the purchase decisions that they intend. The comment indicated that 21 percent of consumers are looking to increase their omega-3 intake.

Some comments stated that a distinction between the different n-3 polyunsaturated fatty acids is necessary so that consumers seeking specifically EPA or DHA are not misled by voluntary declaration of polyunsaturated fat, because the levels are inflated by the presence of n-6 polyunsaturated fatty acids and ALA. The comments said that, while 85 percent of Americans are aware the n-3 polyunsaturated fatty acids reduce the risk CHD, not all n-3 polyunsaturated fatty acids are equal.

Other comments said that, while manufacturers may express the content of EPA and DHA in a product bearing a claim, doing so outside the Nutrition Facts label denies the consumer an opportunity to recognize if a meaningful amount of these fatty acids are provided relative to the other fats in the product.

(Response) We recognize that the 2014 IFIC survey concluded that 21 percent of consumers are trying to increase their consumption of omega-3 fats. We also recognize that the majority of polyunsaturated fats in foods are in the form of n-6 polyunsaturated fatty acids and that not all n-3 polyunsaturated fatty acids have the same effect on CHD risk. However, because of the lack of well-established evidence for a role of n-3 or n-6 polyunsaturated fatty acids in chronic disease risk and the lack of a quantitative intake recommendation, the declarations of n-3 and n-6 polyunsaturated fatty acids are not necessary to assist consumers to maintain healthy dietary practices. Because neither of these factors for voluntary declaration for these types of nutrients has been met, and the comments provided no scientific basis on which we could rely to support the declaration, we disagree that meaningful amounts of EPA and DHA should be voluntarily listed to provide its amount relative to the other fats in the product.

(Comment 108) Some comments supporting the voluntary declaration of n-3 polyunsaturated fatty acids stated that the recognition of only polyunsaturated fat may have unintended consequences of consumers failing to understand differences in biopotency of n-3 long-chain polyunsaturated fatty acids compared to other polyunsaturated fatty acids. According to the comments, not declaring n-3 polyunsaturated fatty acids may confuse consumers who are not aware of differences among individual polyunsaturated fatty acids with respect to their ability to reduce heart disease risk.

(Response) We disagree that potential differences in biopotency of n-3 polyunsaturated fatty acids is a basis for voluntary declaration. While there may be differences in biopotency with respect to CHD risk, there is insufficient scientific evidence and information to warrant voluntary declaration.

With respect to possible consumer confusion and unintended consequences, the comments did not describe the extent to which consumers might be confused or what the unintended consequences might be, so we do not have sufficient information to evaluate those aspects of the comments.

G. Cholesterol

1. Mandatory Declaration

Section 403(q)(1)(D) of the FD&C Act requires the declaration of the amount of cholesterol on food labels, and cholesterol content must be declared on the Nutrition Facts label in accordance with § 101.9(c)(3). In the preamble to the proposed rule (79 FR 11879 at 11899), we explained that current dietary recommendations continue to recognize the well-established relationship between consumption of cholesterol and its effect on blood cholesterol levels, which are a surrogate endpoint for CHD risk and that we were unaware of evidence that would support a change to the requirement for mandatory declaration of cholesterol on the Nutrition Facts label in § 101.9(c)(3). Consequently, we did not propose any changes to the requirement for mandatory declaration of cholesterol.

Relying on information provided in the NHLBI Lifestyle Evidence Review (Ref. 17), the 2015 DGAC Report concluded that cholesterol is not a nutrient of public health concern (Ref. 19). The 2015–2020 DGA noted that, while adequate evidence is not available for a quantitative limit for dietary cholesterol specific to the Dietary Guidelines, individuals should eat as little dietary cholesterol as possible while consuming a healthy dietary pattern that includes eggs and shellfish (Ref. 28).

Much of the published evidence, as was analyzed and reported by the IOM (Ref. 53), has demonstrated a positive association between cholesterol intake and total cholesterol in the blood. The IOM conducted a dose-response analysis of clinical trials to evaluate the relationship between dietary cholesterol and blood total cholesterol because most of the available evidence was on total cholesterol (Ref. 53). From this IOM analysis, it was concluded that, on average, an increase of 100 mg/day of dietary cholesterol is predicted to result in a 0.05 to 0.1 mmol/L increase in total serum cholesterol, of which approximately 80 percent is in the LDL fraction. The IOM cited evidence showing that the majority of the increase in serum total cholesterol with increased dietary cholesterol was due to an increase in LDL cholesterol (rather than HDL) concentration, therefore adversely affecting the cholesterol profile. The IOM analysis was the basis for the IOM concluding that cholesterol consumption should be as low as

possible while consuming a nutritionally adequate diet.

Data from NHANES (2007–2010) show that, for all individuals over 1 year of age, 32 percent consume cholesterol in excess of the DRV of 300 mg. For men and women 19 years of age and older, 59 percent and 17 percent consume in excess of 300 mg/day of cholesterol, respectively. These findings are indicative that a significant portion of the U.S. population consumes amounts of cholesterol in excess of the DRV of 300 mg.

We do not consider there to be new information that alters the conclusions of the 2002 IOM report. Therefore, we conclude that the declaration of cholesterol on the Nutrition Facts label can assist consumers in maintaining healthy dietary practices and therefore should remain mandatory.

(Comment 109) One comment supporting mandatory declaration of cholesterol noted that the 2002 IOM report (Ref. 53) showed a strong positive relationship between cholesterol intake and increased LDL cholesterol levels. The comment cited a meta-analysis of clinical studies in which people consumed eggs or a cholesterol-free egg substitute found that LDL cholesterol rose by 2 mg/dL for every 100 mg of cholesterol consumed (Ref. 54).

(Response) While the 2002 IOM report provided its own analysis that evaluated the relationship between dietary cholesterol and cholesterol levels, it specifically evaluated total cholesterol levels, rather than LDL cholesterol levels. The IOM reported a positive association between change in cholesterol intake and change in total cholesterol levels which supports our position for mandatory listing. We recognize that the meta-analysis cited in the comment (Weggemans et al. 2001 (Ref. 54)) estimated that each additional 100 mg of dietary cholesterol would increase serum LDL cholesterol by 0.036 (1.4 mg/dL) in the studies with a background diet low in saturated fat and by 0.061 (2.4 mg/dL) in the studies with a background high in saturated fat (P = 0.03). However, this study only evaluated the effect of cholesterol from eggs rather than total dietary cholesterol. Thus, this meta-analysis, by itself, is insufficient to evaluate the effect of total cholesterol intake on blood cholesterol levels, and therefore CVD risk.

(Comment 110) Some comments opposed mandatory declaration of cholesterol because, the comments said, saturated fat has the biggest negative impact on blood cholesterol. The comments said that the EFSA concluded that, ''Although there is a positive-dose-dependent relationship between the intake of dietary cholesterol with blood LDL cholesterol concentrations, the main dietary determinant of blood LDL cholesterol concentrations is saturated fat.'' Other comments said there is not enough evidence on the effect of dietary cholesterol on blood cholesterol, the relationship between cholesterol consumption and blood cholesterol levels is weak and has been overestimated, and cholesterol intake does not raise blood cholesterol levels. Some comments cited several meta-analyses that concluded that there were small, modest reductions in serum cholesterol with reductions (*e.g.,* 100 mg/day) in dietary cholesterol (Refs. 55–57).

(Response) We agree that saturated fat has a larger impact on raising blood cholesterol levels. We disagree that there is not enough evidence or that the evidence for the cholesterol-raising effects of dietary cholesterol is weak or does not exist. Numerous clinical studies have reported a cholesterol-raising effect of dietary cholesterol (Ref. 53). Using such studies, the IOM illustrated a curvilinear relationship between change in dietary cholesterol and change in serum total cholesterol levels ranging from 0 to 4,500 mg/day, with the greatest change (increase) in serum cholesterol occurring with an increased cholesterol intake of up to 50 mg/day.

The comments about EFSA support mandatory listing of both cholesterol and saturated fat because EFSA recognizes that intake of both nutrients have a positive association with blood cholesterol levels.

The final rule, therefore, does not change the pre-existing requirement for mandatory declaration of cholesterol.

(Comment 111) Some comments opposed to mandatory declaration of cholesterol noted that the NHLBI Lifestyle Evidence Review (Ref. 17) states that there is insufficient evidence to determine whether lowering dietary cholesterol reduced LDL cholesterol in the blood.

(Response) While we recognize the conclusion of the NHLBI Lifestyle Evidence Review in addition to blood LDL cholesterol being a surrogate endpoint for CHD risk, blood total cholesterol is also considered a valid predictor of CHD risk as approximately 80 percent of total cholesterol is LDL cholesterol (Ref. 29). The NHLBI Lifestyle Evidence Review did not review the findings for blood total cholesterol. Much of the evidence, as was analyzed and reported by the IOM (2002), demonstrated a positive association between cholesterol intake and total cholesterol in the blood. While the 2015 DGAC concluded that there was no appreciable relationship between the consumption of dietary cholesterol and serum cholesterol, the only information the DGAC considered was that in the NHLBI Lifestyle Evidence Review, which was specific to studies that measured LDL cholesterol.

(Comment 112) One comment opposed to mandatory declaration of cholesterol stated that clinical trials have identified individuals across all ages who have very limited or no increase in plasma cholesterol as a result of additional dietary cholesterol. The comments said that, even among hyper-responders (high response in blood cholesterol to dietary cholesterol), the response is an increase in both LDL and HDL cholesterol levels, such that the LDL/HDL ratio, a key marker of CHD risk, does not change (Refs. 58–61). Furthermore, the comments said, the amounts of cholesterol provided in clinical trials are well in excess of normal consumption.

(Response) We agree that individual's blood cholesterol levels respond differently to dietary cholesterol; this difference in individual response is true for most nutrients when they are associated with chronic disease risk. We disagree that differences in individual response is a basis for not considering the numerous studies showing that cholesterol intake raises average blood cholesterol levels. The reported findings on blood cholesterol levels from clinical trials usually represent the averages of these blood levels of the study subjects, including those who respond and those who do not respond. Assessment of the average findings from clinical studies is more relevant because the Nutrition Facts label is intended for the general U.S. population.

We also disagree that the ratio of LDL cholesterol to HDL cholesterol is a key marker of CHD risk. We do not consider HDL cholesterol, and therefore the LDL:HDL cholesterol ratio, to be a key marker (*i.e.,* surrogate endpoint) of CHD risk. Blood HDL cholesterol has not been qualified as being a strong predictor of CHD risk. Therefore, the evidence on LDL cholesterol outweighs any evidence on the LDL:HDL cholesterol ratio with respect to evaluating the role of cholesterol in CHD risk.

(Comment 113) Some comments opposed to the mandatory declaration of cholesterol said that the 2010 DGA stated that an egg a day does not increase blood cholesterol levels, that eggs are not associated with greater risk of CVD, and that eggs are nutrient-dense. Other comments cited a number

of studies and meta-analyses (Refs. 62–66) concluding that there was not an association between egg consumption and CVD or CHD risk.

(Response) We recognize that the 2010 DGA noted that evidence suggests that one egg (*i.e.,* egg yolk) per day does not result in increased blood cholesterol levels, nor does it increase the risk of cardiovascular disease in healthy people. The 2010 DGAC, however, noted that, while eggs are a major source of cholesterol in the American diet, eggs and egg mixed dishes provide 25 percent of total cholesterol intake. Therefore, we do not consider studies involving only eggs to be sufficient to understand the role of total cholesterol intake on CVD risk.

As for the comments stating that eggs are nutrient-dense, the mandatory declaration of cholesterol relates to the relationship between cholesterol intake from consumption of all food sources, as part of the total daily dietary intake, and risk of CHD. Therefore, the comment does not change our conclusion about the scientific basis for the mandatory declaration of cholesterol. As we stated in the preamble to the proposed rule (79 FR 11879 at 11899), current dietary recommendations continue to recognize the well-established relationship between consumption of cholesterol and its effect on blood cholesterol levels, which are a surrogate endpoint for CHD risk. We continue to believe that information regarding cholesterol is necessary to assist consumers in maintaining healthy dietary practices.

As for the studies cited in the comments, the studies do not imply that total cholesterol intake (from all dietary sources) does not contribute to CHD risk. Consequently, rather than view eggs and cholesterol content in eggs in isolation, our Nutrition Facts label provides information to help the consumer understand the ''relative significance'' of eggs and their cholesterol content in the context of a ''total daily diet'' (see section 2(b)(1)(A) of the NLEA).

(Comment 114) Some comments opposed to mandatory declaration of cholesterol stated that dietary cholesterol has been proven to be unrelated to CVD and CVD mortality. The comments cited review articles (Refs. 67–68) to assert such studies do not support a connection between dietary cholesterol and CHD events. The review articles summarized observational studies, as well as some clinical trials, that questioned an association between cholesterol intake and risk of CHD.

(Response) We agree that some observational studies have failed to support an association between dietary cholesterol and CHD events. However, we put greater reliance on clinical trials when substantiating nutrient and disease relationships. Observational studies measure associations between foods/nutrients and diseases without demonstrating that the food or nutrient caused, in part, the change in risk of a chronic disease. The IOM (2002) (Ref. 29) noted that the lack of consistency in observational studies on dietary cholesterol may be due to many factors, including inaccuracies of dietary intake data, and to the limited ability to distinguish the effects of dietary cholesterol, independent of energy intake and other dietary variables that may be positively (*e.g.,* saturated fat) or negatively (*e.g.,* dietary fiber intake) associated with dietary cholesterol and heart disease risk. Individual studies, as well as an analysis of a number of these studies (Ref. 29), have demonstrated a positive association between cholesterol intake and total cholesterol, which is a risk factor of CHD. Therefore, we rely on the best available data and use clinical trial data more heavily than observational data when they are available for evaluating the role of dietary cholesterol in CHD risk. These two review articles (Refs. 67–68) also cited clinical trial data and noted that, while dietary cholesterol raises LDL cholesterol, it also raises HDL cholesterol and therefore does not change the LDL:HDL ratio. While LDL cholesterol is considered a surrogate endpoint for CHD risk, HDL is not. Therefore, the LDL:HDL ratio is not relied on for evaluating CHD risk.

(Comment 115) One comment opposed to the mandatory declaration of cholesterol stated that the evidence is questionable for an association between cholesterol intake and risk of type 2 diabetes.

(Response) Whether or not the evidence supporting cholesterol's role in type 2 diabetes risk may be questionable, the basis for mandatory declaration of cholesterol on the label is because of its role in CHD risk.

(Comment 116) One comment opposed to the mandatory declaration of cholesterol said that overconsumption of cholesterol is not a concern in the United States. The comment said that the average dietary cholesterol intake reported by CDC is 307 mg/day for men and 225 mg/day for women and that, among men, the average consumption exceeds 300 mg/day by only 2 percent while, among women, the average consumption is 25 percent below 300 mg/day (NHANES 1999–2000).

(Response) We disagree with the comment. Data from NHANES (2007–2010) show that, for all individuals over 1 year of age, 32 percent consume cholesterol in excess of 300 mg/day. For men and women 19 years of age and older, 59 percent and 17 percent consume in excess of 300 mg/day of cholesterol, respectively. These findings are indicative that a significant portion of the U.S. population consumes amounts of cholesterol in excess of the DRV of 300 mg. Therefore, we decline to make changes in response to this comment.

(Comment 117) Other comments opposed the mandatory declaration of cholesterol for several reasons. The comments said that:

- Consumers who want to take care of their blood cholesterol levels may orient their food choices only towards foods that contain low amounts of cholesterol, regardless of their saturated fat content. A focus on saturated fat may lead to better results in terms of public health.
- Listing cholesterol could have a negative impact on protein intake. According to the comments, because most meat and other protein rich foods also contain cholesterol, cholesterol declaration will likely dissuade consumers from eating protein-rich foods. The result will be an increase in the consumption of carbohydrate-rich foods, causing delayed satiety and contributing to increased caloric consumption.

(Response) We require declaration of cholesterol on the Nutrition Facts label pursuant to section 403(q) of the FD&C Act. Cholesterol intake is related to the risk of CHD. The comments did not provide information on the impact of the mandatory declaration of cholesterol on the consumer's intake of saturated fat, protein or carbohydrate-rich foods. We are not aware of information indicating that mandatory listing of cholesterol over the past 20 years has resulted in more focus on cholesterol, less focus on saturated fat, and reduced intake of protein-rich foods. We consider the declaration of cholesterol is necessary to assist consumers maintain healthy dietary practices and are making no changes in response to this comment.

(Comment 118) One comment said that mandatory declaration of cholesterol was not necessary because cholesterol consumption has not been a concern for a long time in treating patients with high cholesterol levels.

(Response) The Nutrition Facts label is intended for the general U.S. population, and nutrient declarations and percent DVs on the label are to help consumers make more informed choices to consume a healthy diet and there is a strong relationship between dietary cholesterol intake and total serum

cholesterol which is a marker of CVD risk (see 79 FR 11879 at 11887 and part II.C.).

(Comment 119) One comment opposed to the mandatory declaration of cholesterol said that the U.S. government's advice to reduce cholesterol intake is unusual compared to other countries in focusing on dietary cholesterol. The comment said that dietary recommendations in other countries, such as Canada, do not have an upper limit for cholesterol intake and, instead, focus on saturated and *trans* fat.

(Response) There is a strong relationship between dietary cholesterol intake and total serum cholesterol which is a marker of CVD risk. Section 403(q)(2)(B) of the FD&C Act authorizes us to remove, by regulation and under certain circumstances, nutrient information. We would need a scientific basis about the relationship between total cholesterol intake and CVD risk to no longer require the mandatory declaration of cholesterol. While other countries may not require the listing of cholesterol on their food labels, section 403(q)(1)(D) of the FD&C Act requires the declaration of the amount of cholesterol on the food label. The fact that other countries lack cholesterol recommendations is, alone, an insufficient reason for us to no longer require the mandatory listing of cholesterol.

2. DRV

Our preexisting regulations, at § 101.9(c)(9), provide a DRV for cholesterol of 300 mg. In the preamble to the proposed rule (79 FR 11879 at 11899), we discussed how the IOM Labeling Committee had recommended that the DV for cholesterol (along with saturated fat and *trans* fat) be set at a level that is as low as possible in keeping with an achievable health-promoting diet and how, in the 2007 ANPRM, we asked for public comment on whether the current DRV for cholesterol of 300 mg should be retained. We also noted that, although the 2010 DGA recommended that cholesterol intake levels should be less than 200 mg/day for individuals at high risk of CVD, we considered the DGA recommendation of 300 mg/day for maintaining normal blood cholesterol levels as an appropriate basis for setting a DRV because it represents the maximum intake level that covers the general U.S. population 4 years of age and older (id.). Consequently, we did not propose changes to the DRV for cholesterol of 300 mg specified in § 101.9(c)(9).

(Comment 120) One comment did not support a DRV for cholesterol because cholesterol is made in the body.

(Response) We agree that cholesterol is made in the body and is therefore not essential in the diet. However, the basis for the DRV is an intake level not to exceed to reduce the risk of CHD, rather than an intake level to achieve (*e.g.,* a DV for essential vitamins and minerals). Therefore, we decline to revise § 101.9(c)(9) insofar as a DRV for cholesterol is concerned.

H. Carbohydrate

1. Total Carbohydrate

a. Calculation of total carbohydrate. Under our preexisting regulations, at § 101.9(c)(6), total carbohydrate content is calculated by subtracting the sum of protein, total fat, moisture, and ash from the total weight of the food. This calculation method is called ''carbohydrate by difference'' and is described in A.L. Merrill and B.K. Watt, ''Energy Value of Foods—Basis and Derivation,'' in the USDA Handbook No. 74 (Ref. 69). Total carbohydrate includes starch, sugars, sugar alcohols, and dietary fiber.

We did not propose to change the method for calculating carbohydrate content.

(Comment 121) While some comments agreed with our decision to retain the calculation method for total carbohydrate content, other comments suggested that dietary fiber should not be included in the declaration of total carbohydrate. The comments stated that a significant number of consumers, especially individuals who have diabetes, want to know the amount of carbohydrates excluding dietary fiber (also known as ''net carbs'') because it is helpful to know when trying to control blood glucose. One comment recommended that carbohydrate should be calculated by difference, but that moisture, fat, protein, dietary fiber, and ash should be excluded from the declaration of carbohydrate. The comment suggested that the benefits of such an approach include easy comparison of carbohydrates between food choices that do or do not contain dietary fiber, easy calculation of calories from carbohydrates with a value of 4 calories per gram, and easy calculation of calories from dietary fiber with a value of approximately 2 calories per gram. In addition, the comment stated that such an approach would encourage manufacturers to increase the dietary fiber content of their product without increasing the carbohydrate content of their product and that it would simplify consumer education and understanding. The comment further stated that nutrient databases can easily exclude dietary fiber from the calculation of carbohydrate because analytical laboratories are easily able to determine total carbohydrate by excluding protein, total fat, moisture, dietary fiber, and ash from the total weight of the food and nutrient composition tables will continue to change on a regular basis to provide new and updated data.

(Response) We decline to change the current method of calculating carbohydrate by difference. Total carbohydrate is one of the macronutrients and includes starch, sugars, sugar alcohols, and fiber. As discussed in the preamble to the proposed rule (79 FR 11879 at 11900), dietary fibers, with the exception of lignin, are considered carbohydrates and are listed as a subset of total carbohydrate on the label. Individuals who are interested in knowing the amount of carbohydrate in a serving of a product less the amount of dietary fiber may determine this information based on what is currently declared on the label. Because dietary fibers are a type of carbohydrate, to maintain consistency with how components of macronutrients are declared on the label, we decline to remove dietary fiber from the calculation of total carbohydrate, as suggested by the comments.

With respect to comments suggesting that dietary fiber should be excluded from the calculation of total carbohydrate because such a change would be helpful to diabetics when managing their blood sugar levels, we disagree that this should be a reason to remove dietary fiber from the declaration of carbohydrate. The information found in the Nutrition Facts and Supplement Facts labels is not targeted to individuals with acute or chronic diseases, such as diabetics (see part II.B.2; 79 FR 11879 at 11887).

We also disagree that removal of dietary fiber from the declaration of total carbohydrate would allow consumers to compare products that do and do not contain dietary fiber more easily. It is not clear how the comparison would be made easier by removal of dietary fiber from the total carbohydrate declaration because, if the consumer is interested in knowing how much dietary fiber is in a product, the consumer can take that information into consideration by looking for the declaration of the amount of dietary fiber on the label.

Calories from total carbohydrate may be declared voluntarily on the label. We discuss calculation of calories from total carbohydrate in greater detail later in

this part. We agree that additional steps are necessary to calculate calories from total carbohydrates when dietary fiber is included in the declaration. However, we did not receive any comments that the calculation of total carbohydrate when dietary fiber is included in the declaration would be unnecessarily burdensome or difficult for manufacturers to perform. The calculation would not require additional laboratory analysis or expense.

We disagree that exclusion of dietary fiber from the declaration of total carbohydrate would encourage manufacturers to raise dietary fiber values independent from raising carbohydrate values. So long as the dietary fiber added to a product meets our definition of dietary fiber, the additional fiber added by the manufacturer would be reflected in the dietary fiber declaration. Consumers who are interested in consuming more dietary fiber may use the dietary fiber declaration to determine which products they purchase. Therefore, it is not clear how removing dietary fiber from the declaration of carbohydrate on the label would encourage manufacturers to add dietary fiber to their products.

With respect to the assertion that exclusion of dietary fiber from the calculation of total carbohydrate simplifies the education process and understanding for consumers, absent additional information, we are unable to judge whether such a change would lead to better understanding of the total carbohydrate and/or dietary fiber declaration on the label, and thus, whether consumers would benefit from such a change in how carbohydrate is calculated.

With respect to the comment asserting that nutrient databases can easily exclude dietary fiber from the calculation of carbohydrate, we disagree that this is a reason to exclude dietary fiber from the calculation of total carbohydrate. Although nutrient databases may be updated, we decline to exclude dietary fiber from the calculation of total carbohydrate because dietary fiber is a carbohydrate and should be declared as such to maintain consistency with how other macronutrients are determined and declared on the label.

(Comment 122) One comment encouraged us to conduct consumer studies to examine if the separation of dietary fiber from total carbohydrate on the label would benefit the overall use of the Nutrition Facts label as a tool for nutrition literacy and education.

(Response) We are always interested in understanding how consumers interpret and use information on the label. However, we are not aware of a specific need, and the comment did not specify how this information could aid consumers. Therefore, we decline to conduct these studies. We will consider conducting such studies if we have information showing that there is a need for these studies and we have the resources available to conduct such studies.

b. Classification of carbohydrates based on a chemical definition or physiological effect. The preamble to the proposed rule (79 FR 11879 at 11900 through 11901) discussed how the 2007 ANPRM invited comment on whether carbohydrates should be classified and declared in nutrition labeling based on their chemical definition (which is the current method) or on their physiological effect (*e.g.,* attenuation of blood sugar or laxation), and whether additional types of carbohydrates (*e.g.,* starch) should be listed separately on the Nutrition Facts label. We explained that carbohydrates include starch, sugars, sugar alcohols, and dietary fibers and that different carbohydrates have different physiological effects (id. at 11901). Within the different types of carbohydrate (*i.e.,* starch, sugars, sugar alcohols, and dietary fibers), too, specific carbohydrates may have different physiological effects (*e.g.,* different types of dietary fibers) making it difficult to apply a definition that is based on physiological effects across a category of carbohydrates. Furthermore, analytical methods for measuring different types of carbohydrates are based on chemical structure rather than physiological effect. Given the various components of total carbohydrate and different types of physiological effects of each, we decided not to change our provisions for the classification or declaration of carbohydrates specified in § 101.9(c)(6).

(Comment 123) One comment recommended that complex carbohydrates should be listed separately under total carbohydrate on the label. The comment stated that people do not understand that they have to subtract in order to get an idea of how much good carbohydrates are in a food product.

(Response) We decline to list complex carbohydrates separately on the label. The comment did not provide any information to explain what is considered to be a ''complex'' or ''good carbohydrate,'' and it did not explain what subtraction method can be used to calculate ''good'' or ''complex'' carbohydrates from information found on the label.

We have allowed for voluntary declaration of ''other carbohydrate'' on the Nutrition Facts label (§ 101.9(c)(6)(iv)). Our regulations define ''other carbohydrate'' as the difference between total carbohydrate and the sum of dietary fiber, sugars, and sugar alcohol, except that if sugar alcohol is not declared, ''other carbohydrate'' is defined as the difference between total carbohydrate and the sum of dietary fiber and sugars (§ 101.9(c)(6)(iv)). Thus, the category of ''other carbohydrate'' includes what are typically considered to be complex carbohydrates. As discussed in part II.H.6, the final rule does not permit the category of ''other carbohydrate'' to be declared on the label.

c. Separate declaration of additional individual types of carbohydrates. In the preamble to the proposed rule (79 FR 11879 at 11901), we discussed how the 2007 ANPRM asked whether additional types of carbohydrates (*e.g.,* starch) should be listed separately on the Nutrition Facts label. We stated that the comments we received in response to the 2007 ANPRM did not support the declaration of additional types of carbohydrates (*e.g.,* starch). Thus, the proposed rule would not require the separate declaration of additional types of individual carbohydrates, such as starch, on the Nutrition Facts label.

(Comment 124) Several comments discussed Allulose. Allulose (also known as psicose) is a monosaccharide that is derived from fructose. According to the comments, Allulose is approximately 70 percent as sweet as sucrose, but contributes less than 0.2 calories/gram to the diet. The comments said that Allulose is added to foods and beverages as a partial replacement for sugars and/or high-fructose corn syrup because of its low, near zero, calorie content and other organoleptic properties (*e.g.* mouthfeel, texture, etc.).

One comment said we should not include Allulose in the declaration for total carbohydrate and added sugar. In contrast, another comment said Allulose should be included in the declaration of ''total carbohydrate'' for nutrition labeling purposes, but should not be included in the declaration of ''sugars'' or ''added sugars.'' The comments suggested that Allulose does not have the metabolic properties of fructose or other sugars and does not contribute calories or raise blood sugar levels like other sugars do. The comments said that, upon ingestion, approximately 70 percent of Allulose is unabsorbed in the small intestine, passes into the bloodstream and is then excreted in the urine, without significant metabolism; the other 30 percent that is not absorbed

is transported to the large intestine where it is not fermented. Allulose is then excreted without being absorbed (Refs. 70–71).

One comment stated that, when Allulose is used in food, there should be a reduction in the amount of calories declared of 4 calories/gram.

(Response) On April 10, 2015, we received a citizen petition from Tate & Lyle Ingredients Americas LLC (Docket Number FDA–2015–P–1201) requesting that Allulose be exempt from being included as a carbohydrate, sugars, or added sugar in the Nutrition Facts label on foods and beverages. The petition provided data and other information suggesting that Allulose is different from other sugars in that it is not metabolized by the human body, has negligible calories (0.2 calories per gram or less), does not contribute to increases in blood glucose or insulin levels, and, if included as carbohydrates and sugars (added sugars) on the Nutrition Facts label, would lead to consumer confusion, particularly consumers with diabetes or consumers otherwise concerned with accurately monitoring blood glucose. The petition, which was submitted after the comment period for the proposed rule had ended, provided new evidence that was not previously submitted in comments to the proposed rule. We need additional time to fully consider the information provided in the comments and the citizen petition. Therefore, the final rule does not reach a decision as to whether Allulose should be excluded from the labeling of carbohydrate, sugars and/or added sugars, and Allulose, as a monosaccharide, must be included in the declaration of each pending any future rulemaking that would otherwise exclude this substance from the declaration.

d. Mandatory declaration. Section 403(q)(1)(D) of the FD&C Act requires the declaration of total carbohydrate, and our preexisting regulations, at § 101.9(c)(6), require the declaration of the amount of total carbohydrate on the Nutrition Facts label. In the preamble to the proposed rule (79 FR 11879 at 11901), we said that carbohydrates are an essential part of the diet because they provide energy to the cells in the body, especially the brain, which is dependent on carbohydrate for proper functioning, and we tentatively concluded that the declaration of carbohydrates on the Nutrition Facts label continues to be necessary to assist consumers in maintaining healthy dietary practices.

(Comment 125) Many comments supported the continued mandatory declaration of total carbohydrates; some comments stated that the reason that total carbohydrates should continue to be declared on the label is because the information is used by individuals who have diabetes to ''count carbs.''

(Response) While we agree that total carbohydrates should continue to be declared on the label, we disagree with the comments' rationale for the continued mandatory labeling of total carbohydrates. As discussed in part II.B.2, the information on the label is intended for the general healthy population rather than individuals with chronic diseases such as diabetes. In the preamble to the proposed rule (79 FR 11879 at 11901), we explained that carbohydrates are an essential part of the diet because they provide energy to the cells in the body, especially the brain, which is dependent on carbohydrate for proper functioning. Thus, the declaration of carbohydrates on the Nutrition Facts label continues to be necessary to assist consumers in maintaining healthy dietary practices, and so the final rule does not change the requirement in § 101.9(c)(7) for mandatory labeling of total carbohydrate.

e. DRV. The DRV for total carbohydrate is 300 grams (§ 101.9(c)(9)). Consistent with calculating total carbohydrate ''by difference,'' the proposed rule would not change the approach to calculate the percent DV for carbohydrate ''by difference'' as well. In addition, the proposed rule would not change the DRVs for fat or protein (see parts II.F.1.c, II.F.2.c, II.F.3.c, II.F.4.b, and II.I.3), which are used to derive the DRV for total carbohydrate. The DRV for total carbohydrate would remain at 300 grams/day. We note that the RDA for carbohydrate for men and women 19 years of age and older is 130 grams/day. Therefore, the DRV should not be viewed as an intake requirement, but as a reference amount.

(Comment 126) One comment said we should no longer require a percent DV declaration for total carbohydrate because consumption of some carbohydrates, such as naturally occurring sugars from fruit and milk, are not a public health concern.

(Response) We disagree with the comment that the percent DV declaration for total carbohydrate should no longer be required. Total carbohydrate is one of the three major macronutrients in the diet. It provides basic information about a food's nutrient profile. The percent DV declaration for total carbohydrate helps consumers put the amount of total carbohydrate in a serving of a food into the context of their total daily diet.

(Comment 127) One comment supported maintaining the current DRV for total carbohydrate of 300 grams. The comment stated that it falls within the AMDR range. In addition, the comment said, although there is an EAR and RDA for total carbohydrate, neither is appropriate or needed to serve as the basis for the DRV because relevant public health concerns are the ratio of carbohydrate to total fat and the source and type of carbohydrate in the diet.

Other comments suggested that the DRV of 300 grams is too high and that we should take a different approach to setting the DRV for total carbohydrate. One comment stated that, even though the DRV should not be viewed as an intake requirement, but rather as a reference amount, consumers often perceive it as recommended amount. The comment recommended using the population-weighted mid-point of the AMDR for adults and children of 275 grams to encourage reduction in carbohydrate consumption. The comment suggested that the current DRV of 300 grams is excessive given that the RDA for carbohydrate for adults 19 years of age and older is 130 grams/day, and that excessive carbohydrate intake is a central cause of the American obesity epidemic.

Another comment recommended reducing the DRV for total carbohydrate because the American population is sedentary and prone to metabolic syndrome. The comment also referred to the current DRV of 300 grams as a recommended intake level for a daily energy intake of 2,000 calories.

(Response) We agree with the comments recommending a reduction in the DRV for total carbohydrate, but for different reasons. We disagree with the comment that recommended decreasing the DRV for total carbohydrate because the American population is sedentary and prone to metabolic syndrome. It is unclear, based on the comment, what the comment is suggesting regarding the relationship between consumption of carbohydrates and a sedentary lifestyle or risk of metabolic syndrome. Furthermore, we disagree with the comment that the current DRV is a recommended intake level. As stated in the preamble to the proposed rule (79 FR 11879 at 11901), the DRV should not be viewed as an intake requirement, but as a reference amount.

We agree that neither the EAR or RDA values for total carbohydrate are appropriate to serve as the basis for a DRV, but we agree for different reasons than those stated in the comment. As discussed in the preamble to the proposed rule (79 FR 11879 at 11901), the EAR and RDA values set by the IOM

do not include sugar alcohols or dietary fiber. Our calculation of total carbohydrate, for the purposes of nutrition labeling, accounts for all types of carbohydrates, including sugar alcohols and dietary fiber. Therefore, using the EAR and RDA to set a DRV for total carbohydrate would result in a reference value that is based on recommendations specifically for sugars and starches. As we stated in the preamble to the proposed rule (id.), if the midpoint of the AMDR range is used as the basis for the DRV, there would be a discrepancy in what carbohydrates are encompassed in the information provided on the label for the absolute gram amount versus the percent DV.

The current DRV for total carbohydrate of 300 grams is calculated based on 60 percent of a 2,000 calorie diet ((0.60 × 2,000 calories)/4 calories per gram of carbohydrate = 300 grams). The percentage of calories contributed by total fat, total carbohydrate, and protein add up to 100 percent on the label. The DRV for carbohydrate of 60 percent of a 2,000 calorie diet is determined by the difference of what is left over by the DRVs for total fat and protein and 100 percent. As discussed in part II.F.1, we are increasing the DRV for total fat from 30 to 35 percent. Therefore, in order for the percentages of calories contributed by total fat, total carbohydrate, and protein to add up to 100 percent, either the percentage of calories contributed by the DRV for total carbohydrate or protein needs to decrease. Some comments suggested that the DRV for total carbohydrates be decreased, and the DRV for total carbohydrate is significantly greater than the RDA for carbohydrate for adults 19 years of age and older of 130 grams/day. Reducing the DRV for protein to 5 percent of calories to account for the 5 percent increase in the DRV for fat would result in a DRV value of 25 grams of protein, which is below the RDA for protein for children and adults 9 years and older. Therefore, we conclude that the DRV for total carbohydrate should be decreased from 60 percent of calories to 55 percent of calories for a DRV of 275 grams.

f. How total carbohydrates appears on the label.

(Comment 128) Several comments discussed the placement of carbohydrates on the label itself. One comment said that consumers need to be made aware of the fact that carbohydrates are sugars chemically because, according to the comment, most consumers believe that carbohydrates and sugars are two distinct nutrients. The comment would place the word ''sugars'' in parentheses next to ''Total Carbs'' or place ''Total Carbs'' in parentheses next to ''Total Sugars.''

(Response) We disagree that carbohydrates are chemically sugars. Although the body converts carbohydrates to sugars, the chemical structure of some carbohydrates (*e.g.,* starches) differs from the chemical structure of sugars. Sugars are a subset of carbohydrates and are declared as such on the label. Some examples of carbohydrates include sugars, such as sucrose and lactose, and polysaccharides, such as cellulose, glycogen, and starch. Therefore, we decline to change the label's format as suggested by the comment.

(Comment 129) Some comments would move ''Total Carbohydrates'' to the top of the list of declared nutrients on the label. The comments cited the significant rise in diabetes and the need to make the declared amount of total carbohydrates more prominent on the label.

(Response) We disagree that the increase in diabetes in the United States is a reason to move total carbohydrates to the top of list of declared nutrients on the label. As stated in part II.B.2, the intended purpose of information on the Nutrition Facts label is to assist the general healthy population in maintaining healthy dietary practices.

(Comment 130) One comment recommended listing the amount of total carbohydrate in a product in teaspoons rather than grams. The comment said that people do not understand what gram of carbohydrate would look like and providing the information in teaspoons would be more helpful for consumers.

(Response) We decline to revise the rule as suggested by the comment. We address arguments regarding the use of household measures, rather than in gram amounts on the label, in part II.B.3.

g. Calculation of calories from carbohydrate. Our preexisting regulations, at § 101.9(c)(1)(i)(C), require that the calories from total carbohydrate be calculated by using the general factor of 4 calories/gram of carbohydrate less the amount of insoluble dietary fiber. The proposed rule also would revise the definition of dietary fiber so that only those dietary fibers that we have determined to have a physiological effect that is beneficial to human health would be considered to be ''dietary fiber'' on the Nutrition Facts label. For the purposes of calculating calories from carbohydrate, when it is voluntarily declared, all soluble and insoluble non-digestible carbohydrates should be excluded from the calculation, not just those known to meet the definition of dietary fiber. To ensure that all soluble and insoluble non-digestible carbohydrates are excluded from the calculation of calories from carbohydrate, we proposed to amend § 101.9(c)(1)(i)(C) to require that calories from carbohydrate be calculated using a general factor of 4 calories/g of total carbohydrate less the amount of non-digestible carbohydrates and sugar alcohols, and the caloric value of each (the non-digestible carbohydrates and sugar alcohols) is then added to the sum of the carbohydrates.

We did not receive any comments on this proposed amendment, and so we have finalized the rule without change.

2. Sugars

a. Definition. Our preexisting regulations, at § 101.9(c)(6)(ii), define sugars as a statement of the number of grams of sugars in a serving. They are the sum of all free mono and disaccharides (*e.g.,* glucose, fructose, lactose, and sucrose). We considered whether we should continue to require mandatory declaration of sugars on the label in the proposed rule, but tentatively concluded that the declaration of sugars continues to be necessary to assist consumers in maintaining healthy dietary practices, and thus did not propose to change the current requirement for mandatory declaration of sugars (79 FR 11879 at 11902).

As discussed in the total carbohydrates section at part II.H.1, some comments and a citizen petition said we should exclude Allulose from the declaration of sugars. We discuss those comments in part II.H.1 (see comment 124).

b. Mandatory declaration. Section 403(q)(1)(D) of the FD&C Act requires the declaration of sugars, and our preexisting regulations, at § 101.9(c)(6)(ii), require the declaration of sugars on the Nutrition Facts label. We did not propose to change this requirement.

(Comment 131) Several comments supported the continued mandatory declaration of sugars. One comment stated that sugars should continue to be labeled as part of total carbohydrate because they are a type of carbohydrate. The comment added that the amount of declared sugar is possible to quantify, easy to verify using analytical methods, and is information that is easily understood by consumers, nutritionists, and health professionals.

In contrast, other comments asked us to remove sugars from the label or replace it with a declaration of added sugars or ''fruit & milk sugars.'' The

comments recommending replacement of sugars with added sugars said that consumers, including individuals who have diabetes, focus on the sugars instead of the total carbohydrate amount declared on the label. One comment suggested that, when registered dietitians provide Medical Nutrition Therapy for diabetics, the sugars line is not valuable and contributes to information overload. The comment also stated that the sugars declaration makes consumers reluctant to eat foods, such as fruit and milk, which contain sugars as their source of carbohydrates.

One comment would replace sugars with fruit and milk sugars and place the new heading directly under dietary fiber; the comment said this change would clearly distinguish added sugars from naturally occurring sugars in whole fruit and from sugars from dairy ingredients and also eliminate the need for a double indentation (for declaration of added sugars) under the ''Total Carbs'' heading. The comment cited data from an online survey of 500 participants showing that, when ''Sugars'' is replaced with ''Fruit & Milk Sugars'' on the Nutrition Facts label, significantly more individuals were able to correctly identify the amount of naturally occurring sugars in one serving of the food (Ref. 72).

(Response) We decline to remove the declaration of sugars from the label because consumption of sugars continues to be associated with an increased risk of dental caries; thus, the information continues to be necessary to assist consumers in maintaining healthy dietary practices. We agree that sugars should continue to be labeled as part of total carbohydrate and that the amount of total sugars can be quantified using existing analytical methods.

Similarly, we disagree with the comments suggesting that the total sugars declaration should be removed from the label because consumers, especially individuals with diabetes, focus on the sugars declaration rather than the total carbohydrate declaration and may be overwhelmed by the information. The comments did not provide data or other evidence, nor are we aware of such data or evidence, to support this assertion. The total carbohydrate and sugars declaration has been on the label for over 20 years. Furthermore, as noted in part II.B.2, the information on the label is intended for the general healthy population and not for individuals with chronic diseases, such as diabetes.

Likewise, we are unable to evaluate whether the sugars declaration results in a reluctance to consume foods, such as fruit or milk, which are natural sources of sugars because the comment did not provide data or information, and we are not aware of such data or information, to support this assertion.

We disagree with the comment which would replace ''Sugars'' with ''Fruit & Milk Sugars'' on the Nutrition Facts label. Total sugars continue to be associated with risk of dental caries. Furthermore, our definition of added sugars includes (see part II.H.3.n) some fruit and milk sugars, such as sugars found in concentrated fruit juice that is not reconstituted to 100 percent fruit juice.

c. Changing ''Sugars'' to ''Total Sugars''. In the preamble to the proposed rule (79 FR 11879 at 11902), we said that we were considering whether to use the term ''Total Sugars'' instead of ''Sugars'' on the label if we finalize a declaration of added sugars. We also said that we planned to conduct consumer research that would include, among other things, questions regarding the declaration of added sugars on the Nutrition Facts label in order to help or enhance our understanding of how consumers would comprehend and use this new information, and to inform education efforts (id.). In the supplemental proposed rule (80 FR 44303 at 44306, 44308), we discussed the results of our consumer research which showed that when an ''Added Sugars'' declaration was indented below a ''Total Sugars'' declaration on the label, participants appeared to be better able to comprehend the total amount of sugars in a food than if an ''Added Sugars'' declaration was indented below a ''Sugars'' declaration. In the supplemental proposed rule (id. at 44304), we asked for comment on whether the term ''Total Sugars'' should be declared on the label instead of ''Sugars.''

The final rule uses the term ''Total Sugars'' to replace the declaration of ''Sugars.'' We explain our rationale and respond to comments on this change in part II.H.3.

d. DRV. Our preexisting regulations do not specify a DRV for sugars. In the preamble to the proposed rule (79 FR 11879 at 11902), we explained that consensus reports did not set dietary reference values based on which we could derive an appropriate DRV for total sugars. Therefore, we did not propose to establish a DRV for total sugars.

(Comment 132) Some comments submitted in response to the proposed rule agreed that there is insufficient information to establish a DRV for sugars. However, others comments recommended establishing a DRV and requiring mandatory declaration of a percent DV for sugars. One comment stated that such information would help consumers choose food and beverages that are low in sugar. Another comment said that, with ''skyrocketing'' overweight, obesity, and their co-morbidities, a percent DV for sugar would be a useful tool for informing consumers of sugar content and would help consumers make better choices. The comment said that the declaration could help consumers to visually understand approximately how much sugar they should be getting each day and how much sugar they are actually consuming. One comment suggested that a declaration of a percent DV for sugars would allow consumers to compare products more easily.

Other comments said that a DRV for sugars could be based on recommendations from the World Health Organization or the American Heart Association. One comment said that the National Institutes of Health should ask the IOM to set a suggested limit on how much sugar one should consume on a daily basis.

(Response) We decline to set a DRV for sugars or to require the declaration of a percent DV for sugars. We are not aware of data or information related to a quantitative intake recommendation for sugars that we could use as the basis for a DRV for total sugars.

With respect to the comments suggesting that the World Health Organization (WHO) or the American Heart Association (AHA) could give us a basis to establish a DRV, we acknowledge that the WHO recently released guidelines for sugars intake for adults and children (Ref. 73). The WHO recommends reducing the intake of free sugars to less than 10 percent of total energy intake in both children and adults. It also provided a conditional recommendation which suggested further reduction of the intake of free sugars to below 5 percent of total energy intake. The WHO defines ''free sugars'' as monosaccharides and disaccharides added to foods and beverages by the manufacturer, cook, or consumer, and sugars naturally present in honey, syrups, fruit juices and fruit juice concentrates (Ref. 73). The WHO definition of ''free sugars'' is not consistent with our definition of ''sugars'' because the WHO definition does not include all free mono and disaccharides. It excludes some naturally occurring sugars, such as lactose. Therefore, we disagree that the WHO's recommendations could be used to establish a DRV for sugars. The AHA recommended limits for intake of added sugars and not total sugars (Ref. 74). Therefore, it would not be appropriate

to use the AHA recommendations to establish a DRV for total sugars.

As for the comment suggesting that the IOM could set a maximum intake recommendation, the IOM reviewed the evidence on this topic in the Macronutrient report (Ref. 75). As discussed in the preamble to the proposed rule (79 FR 11879 at 11902), the IOM found an association between sugar consumption and risk of dental caries, but, due to the various factors that contribute to dental caries, the IOM could not determine an intake level of sugars that is associated with increased risk of dental caries and, therefore, did not have sufficient evidence to set a UL for sugars.

e. Seasonal variation in sugars content.

(Comment 133) One comment noted that, depending on the time of year, the sugar content of fruit changes, which could impact the sugar content of products to which fruit is added. The comment questioned whether the product labels have to change throughout the year to reflect the seasonal variation in sugar content of the fruit or fruit juice in a product. The comment also questioned if the seasonal variation in the sweetness of fruit is compensated for by adjusting the amount of sugar alcohols in the product and whether a label change would be required. Another comment suggested that sugars may be added to fruits and vegetables to achieve a standard flavor profile and said that the amount of sugars added to the food may change throughout the year.

(Response) Our compliance requirements in § 101.9(g)(5) state that a food with a label declaration of calories, sugars, total fat, saturated fat, *trans* fat, cholesterol, or sodium shall be deemed to be misbranded under section 403(a) of the FD&C Act if the nutrient content of the composite is greater than 20 percent in excess of the value for that nutrient declared on the label. However, no regulatory action will be based on a determination of a nutrient value that falls above this level by a factor less than the variability generally recognized for the analytical method used in that food at the level involved. This approach takes into account seasonal variability as well as variability due to the analytical method used. Therefore, so long as the variability in the sugars content of the fruit does not cause the total sugars comment to be greater than 20 percent in excess of the declared value, the manufacturer of a product containing fruit would not be in violation of the regulation. The manufacturer is in the best position to determine if and when a label change is needed based on the total sugar content and the amount of sugars or sugar alcohols added to standardize the flavor profile of the food.

The declaration of the amount of sugar alcohols on the Nutrition Facts label is voluntary, so if a manufacturer uses sugar alcohols to account for the variation in the sugar content of the product, the label would only need to change if the amount of sugar alcohol is voluntarily declared on the label. However, if a food product does not typically contain a certain sugar alcohol which is added to adjust for the sugars content of fruit, that sugar alcohol would need to be declared in the ingredient list.

3. Added Sugars

In the preamble to the proposed rule, we explained that current regulations neither define the term ''added sugars'' nor require or permit the declaration of added sugars on the label. We considered requiring the declaration of added sugars taking into account new information. We tentatively concluded that the declaration of added sugars on the label is necessary to assist consumers to maintain healthy dietary practices, and we proposed to require the declaration of the amount of added sugars in a serving of a product (79 FR 11879 at 11905). We are finalizing the requirement for mandatory labeling of added sugars in § 101.9(c)(6)(iii), and our rationale for doing so is discussed in this section below.

We have requirements for label statements that must be made if a product contains an insignificant amount of many nutrients on the label such as carbohydrate, sugars, and dietary fiber. We also have requirements for when the nutrient content can be expressed as zero. We proposed that a statement of added sugars content would not be required for products that contain less than 1 gram of added sugars in a serving if no claims are made about sweeteners, sugars, or sugar alcohol content and we are finalizing this requirement, as proposed, in § 101.9(c)(6)(iii). We proposed to require that the phrase ''Not a significant source of added sugars'' be placed at the bottom of the table of nutrient values if a statement of the added sugars content is not required, and as a result, is not declared. Alternatively, we proposed to permit the use of the alternative statements ''Contains less than 1 g'' and ''less than 1 g'' to be declared. We also proposed to permit the added sugars content to be expressed as zero if a serving of food contains less than 0.5 grams of added sugars. We are finalizing the requirements for when label statements if a product contains an insignificant amount of added sugars and for when the added sugars content may be expressed as zero, as proposed, in § 101.9(c)(6).

Because our preexisting regulations do not define ''added sugars,'' the proposed rule would define ''added sugars'' as sugars that are added during the processing of foods, or are packaged as such, and include sugars (free, mono- and disaccharides), syrups, naturally occurring sugars that are isolated from a whole food and concentrated so that sugar is the primary component (*e.g.* fruit juice concentrates), and other caloric sweeteners. A summary of the comments regarding our proposed definition of added sugars, and our responses to those comments, can be found in part II.H.3.a.

In February 2015, the 2015 DGAC submitted the 2015 DGAC Report to the Secretaries of the U.S. Department of Health and Human Services and the U.S. Department of Agriculture. The 2015 DGAC reaffirmed recommendations in the 2010 DGA, which included recommending the reduction of added sugars intake. For the first time, the 2015 DGAC conducted a systematic review of the evidence related to dietary patterns and health outcomes, including cardiovascular disease (CVD), body weight and type 2 diabetes, cancer, congenital abnormalities, neurological and psychological illness, and bone health. The 2015 DGAC concluded that there is strong and consistent evidence that healthy dietary patterns characterized, in part, by lower intakes of sugar-sweetened foods and beverages relative to less healthy patterns, are associated with a reduced risk of CVD. We considered the evidence that the 2015 DGAC relied upon in making its determinations, and tentatively concluded, in the preamble to the supplemental proposed rule (80 FR 44303), that this information provides further support for our proposal to require the mandatory declaration of the amount of added sugars in a serving of a product on the label.

The proposed rule would not establish a DRV for added sugars. We explained, in the preamble to the proposed rule (79 FR 11879 at 11906), that the USDA Food Patterns specify the maximum amount of calories from solid fats and added sugars that can be consumed at each calorie level, while staying within calorie limits. A 2,000 calorie diet could contain approximately 260 calories from solid fats and added sugars (id.). The limit of 260 calories served as a reference to ensure the selection of a nutrient dense

diet without excess discretionary calories from added sugars and solid fats. These limits established for calories from solid fats and added sugars in the USDA Food Patterns are based on food pattern modeling. Because the limits are not based on any biomarker of risk of disease from an independent relationship between a nutrient and chronic disease risk we stated that we did not have a quantitative intake recommendation upon which a DRV for added sugars could be derived. The statement was not intended to suggest a limitation for when we can mandate a nutrient declaration in the nutrition label, as some comments seem to suggest. The 2015 DGAC further evaluated limits for added sugars in the diet based, in part, on food pattern modeling and recommended that Americans limit their intake of added sugars to a maximum of 10 percent of total daily caloric intake. The 2015 DGAC said that its recommendation was supported by a food pattern modeling analysis conducted by the 2015 DGAC and the scientific evidence review on added sugars and chronic disease risk. In the preamble to the supplemental proposed rule (80 FR 44303 at 44308), we reconsidered our tentative conclusion that a DRV for added sugars could not be established and proposed to establish a DRV for added sugars of 10 percent of total energy intake from added sugars and to require the declaration of the percent DV for added sugars on the label.

Thus, we have scientific evidence to support a limit for added sugars that can serve as the basis for a DRV for added sugars. The limit for calories from added sugars to less than 10 percent of calories is a reference value that is appropriate for use as a DRV for added sugars. The DRV is used to calculate the percent DV, and a percent DV provides information that Americans can use to determine how the amount of added sugars in a serving of food contributes to his or her individual total daily diet. The food pattern modeling used to support a limit in the intake of added sugars to less than 10 percent of calories was used to create the USDA Food Patterns. The USDA Food Patterns provide suggested amounts of food to consume from the basic food groups, subgroups, and oils to meet recommended nutrient intakes at 12 different calorie levels. They can be used by Americans to construct a healthful dietary pattern that is consistent with current recommendations. We have concluded that evidence on dietary patterns and health outcomes showing that healthy dietary patterns characterized, in part, by lower amounts of sugar-sweetened foods and beverages are associated with a reduced risk of CVD supports a mandatory declaration of added sugars. Both the USDA Food Patterns and the dietary patterns and health outcomes analysis that were discussed in the 2015 DGAC Report provide information about healthy dietary patterns. Therefore, the DRV of 10 percent of calories and the mandatory declaration of the amount of added sugars in a serving of food are related to providing information that will assist consumers in constructing a healthy dietary pattern.

On January 7, 2016, the Secretaries of the U.S. Department of Health and Human Services and the U.S. Department of Agriculture released the 2015–2020 DGA (Ref. 28). The 2015–2020 DGA focuses on eating patterns in addition to nutrients and foods because healthy dietary patterns may be more predictive of overall health status and disease risk than individual foods or nutrients. A key recommendation of the 2015–2020 DGA is to limit calories from added sugars and saturated fats and reduce sodium intake. In order to achieve this recommendation, the 2015–2020 DGA says that Americans should consume an eating pattern that is low in added sugars. Another key recommendation of the 2015–2020 DGA is to consume less than 10 percent of calories per day from added sugars. The 2015–2020 DGA is consistent with the recommendations and the science presented in the 2015 DGAC Report. We considered the scientific evidence in the 2015 DGAC Report related to dietary patterns, as well as evidence related to limiting calories from added sugars that served as our basis for proposing a DRV for added sugars of 10 percent of total calories.

Throughout this part, we refer to the underlying scientific evidence that we have reviewed and considered which supports our basis for the mandatory declaration of the amount of added sugars in a serving of a product, the DRV, and the declaration of the percent DV for added sugars. The need for a mandatory declaration of added sugar is supported by strong and consistent evidence that dietary patterns characterized by higher consumption of vegetables, fruits, whole grains, low-fat dairy, and seafood, and lower consumption of red and processed meat, and lower intakes of refined grains, and sugar-sweetened foods and beverages relative to less healthy dietary patterns; regular consumption of nuts and legumes; moderate consumption of alcohol; lower in saturated fat, cholesterol, and sodium and richer in fiber, potassium, and unsaturated fats are associated with a decreased risk of CVD. The scientific evidence from the 2010 DGA supporting that consumption of excess calories from added sugars can lead to a less nutrient-dense diet, current consumption data showing that Americans are consuming too many calories from added sugars, and the strong evidence that greater intake of sugar-sweetened beverages is associated with increased adiposity in children also support mandatory declaration of added sugars.

We reviewed and considered the evidence that the 2015 DGAC relied upon for its conclusion that healthy dietary patterns characterized, in part, by lower intakes of sugar-sweetened foods and beverages are associated with a decreased risk of CVD relative to less healthy dietary patterns, which included an existing review from the NEL Dietary Patterns Systematic Review Project as well as the NHLBI Lifestyle Evidence Review and the associated Lifestyle Management Report (Refs. 17–18). We have concluded that it is appropriate to rely on evidence that considered not only added sugars but also sugar-sweetened foods and beverages to support the mandatory declaration of added sugars on the label because sugars are added to sugar-sweetened foods and beverages and provide extra calories in those foods. When those foods are consumed in excess, they are not consistent with healthy dietary patterns. We also note that the strong and consistent association with CVD risk was seen when healthy dietary patterns were compared with less healthy dietary patterns. As discussed in the 2015 DGAC Report, dietary patterns of the American public are suboptimal and are causally related to poor individual and population health and higher chronic disease rates. On average, the U.S. diet is low in vegetables, fruits, and whole grains, and high in sodium, calories, saturated fat, refined grains, and added sugars. Underconsumption of the essential nutrients vitamin D, calcium, potassium, and fiber are public health concerns for the majority of the U.S. population, and iron intake is of concern among adolescents and premenopausal females (Ref. 19).

There were many statements made in the 2010 DGA related to consuming a dietary pattern that is nutrient dense. Those statements included the concepts that added sugars displace other nutrient-dense foods in the diet and that as the amount of solid fats and added sugars increase in the diet, it becomes more difficult to also eat foods with sufficient dietary fiber and essential vitamins and minerals, and still stay

within calorie limits. The 2010 DGA relied on food pattern modeling done for the USDA Food Patterns to support statements in the 2010 DGA related to nutrient density. We considered these statements and evidence from the IOM macronutrient report (Ref. 75) showing that decreased intake of some micronutrients occurs when individuals consume in excess of 25 percent of calories from added sugars.

The 2015 DGAC said that current intake of added sugars remains high at 268 calories, or 13.4 percent of total calories per day among the total population ages 1 year and older (Ref. 19). Intake data from the What We Eat In America, 2007–2010 (Ref. 76), the dietary component of NHANES was used by the 2015 DGAC to answer questions related to current intake of added sugars. We also considered how this current intake data relates to recommendations from the 2015 DGAC when concluding that Americans are consuming too many calories from added sugars.

We considered the scientific evidence in the 2010 DGAC Report supporting the conclusion related to consumption of sugar-sweetened beverages and adiposity in children when determining that the evidence supports the mandatory declaration of added sugars. The 2010 DGAC conducted a full NEL search to evaluate the association between sugar-sweetened beverages and adiposity in children. Results of this review, covering 2004–2009 were supplemented by the findings of prospective studies included in an earlier evidence review conducted by the American Dietetic Association (ADA) (1982–2004). Although we have concluded that this body of evidence provides further support for a mandatory declaration of added sugars on the label, it is limited to children. Therefore, we refer to the general population, which includes both children and adults, when we discuss the evidence on dietary patterns characterized, in part, by lower intakes of sugar-sweetened foods and beverages and decreased risk of CVD because the healthy dietary pattern components described in the literature for adults are reaffirmed with the USDA Food Patterns, which aim to meet nutrient needs across the lifespan, including children 2 years of age and older.

a. Declaration

(i) Comments on the Rationale for Requiring Mandatory Declaration of Added Sugars

In the preamble to the proposed rule, we identified the factors that we considered when determining which non-statutory (those that are not explicitly required by the FD&C Act) nutrients should be declared on a mandatory and voluntary basis on the label (79 FR 11879 at 11889). We considered whether a quantitative intake recommendation existed and whether there is public health significance when determining which nutrients should be declared on the label. We considered mandatory declaration to be appropriate when there is public health significance and a quantitative intake recommendation that can be used for setting a DV for a nutrient (79 FR 11879 at 11890). For nutrients that are not essential vitamins and minerals, we considered voluntary declaration to be appropriate when the nutrient either has a quantitative intake recommendation but does not have public health significance, or does not have a quantitative intake recommendation available for setting a DRV but has public health significance (79 FR 11879 at 11891). We also considered the scientific evidence from the 2010 DGA related to the intake of added sugars in the diet and the role of such information in assisting consumers to maintain healthy dietary practices. We noted that our review for added sugars was not based on the factors we have traditionally considered for mandatory declaration that are related to an independent relationship between the particular nutrient and a risk of chronic disease, health-related condition, or health-related physiological endpoint.

(Comment 134) Many comments addressed our rationale for requiring the declaration of added sugars on the label in relation to the risk of chronic disease. One comment recognized that our rationale for proposing to require the mandatory declaration of added sugars is atypical and is not based on a traditional nutrient health-outcome linkage. In contrast, other comments suggested that we not require the declaration of added sugars on the label because they do not meet the factors outlined in our criteria for mandatory labeling. One comment also objected to voluntary declaration of added sugars because, according to the comment, it does not meet either of our proposed factors. Another comment said that we have not shown that a public health significance exists for added sugars labeling through well-established scientific evidence. The comments also noted that our rationale for requiring the declaration of added sugars differs from our rationale for declaring other nutrients on the label.

(Response) Our determination under section 403(a)(2)(A) of the FD&C Act of whether a nutrient is necessary to assist consumers in maintaining healthy dietary practices is not limited to the factors we have used when assessing nutrients for which there is an independent relationship between the nutrient and risk of disease, a health-related condition, or a physiological endpoint (see our response to comment 45). Our rationale for requiring the mandatory declaration of added sugars is different from that of nutrients for which such an independent relationship exists. Rather than basing a declaration of added sugars on an association with risk of chronic disease, a health-related condition, or a physiological endpoint, for the purposes of the general population (see part II.H.3), we are considering a declaration of added sugars in the context of how it can assist consumers in maintaining healthy dietary practices by providing information to help them limit consumption of added sugars, and to consume a healthy dietary pattern. Instead of considering an association with risk of chronic disease, for the purposes of the general population, our review for the proposed rule was based on information which supported the need for further information about added sugars on the label to assist consumers to maintain healthy dietary practices and the need for consumers to be able to readily observe and comprehend the information and to understand its relative significance in the context of a total daily diet (79 FR 11879 at 11891). We relied on multi-faceted evidence showing that added sugars consumption in the United States is a public health concern. We cited information from the 2010 DGA indicating that a high intake of calories from excess solid fats and added sugars can decrease the intake of nutrient-dense foods in the diet and can increase the overall caloric intake, which could lead to weight management issues (79 FR 11879 at 11904). We considered evidence related to excess consumption of calories from added sugars. For many years, added sugars have contributed a significant amount of calories to the American diet. The 2010 DGA cited intake data showing that Americans consumed approximately 16 percent of calories from added sugars (Ref. 77). More recent data shows that consumption of added sugars has decreased to approximately 13.4 percent of calories in recent years; however, the intake still remains high and exceeds 10 percent of total calorie intake. In the preamble to the proposed rule, we also

cited to the strong evidence reviewed by the 2010 DGAC that shows that children who consume sugar-sweetened beverages have increased adiposity (increased body fat) (79 FR 11879 at 11904).

The evidence we considered when determining that the amount of added sugars in a serving of a product must be declared on the label includes the scientific evidence from the 2010 DGA and the 2015 DGAC Report related to limiting calories from added sugars. The 2015–2020 DGA also includes this scientific evidence.

A recommendation to limit the intake of added sugars has been long-standing in the various editions of the DGA, although the terminology and specificity of the guidance has evolved over time. In fact, we considered requiring the declaration of added sugars on the label in the January 6, 1993 final rule for the Mandatory Status of Nutrition Labeling and Nutrient Content Revision, Format for Nutrition Label (58 FR 2079 at 2098). The comments that we received to a 1990 proposed rule recommended mandating the declaration of added sugars only, rather than total sugars, because dietary recommendations urged the use of sugar in moderation, while at the same time recommending increased consumption of fruits, which are sources of naturally occurring sugars. Though the terminology ''added sugars'' was not introduced into the DGA until 2005, when Americans were advised to ''choose and prepare foods and beverages with little added sugars or caloric sweeteners, such as amounts suggested by the USDA Food Guide and the DASH eating plan,'' the DGA has included key recommendations advising Americans to limit their intake of ''sugar'' since the first report in 1980 (Refs. 30, 78–83). Even in the 1980 DGA, Americans were advised to ''avoid excessive sugars'' by using less of all sugars, including white sugar, brown sugar, raw sugar, honey, and syrups. Consumers were also advised to reduce their consumption of foods containing these sugars such as candy, soft drinks, ice cream, cakes, and cookies. All of the ingredients that consumers were advised to limit in their diet in the 1980 DGA would meet our current definition of an added sugars, and the foods that Americans were advised to limit are some of the largest contributors to added sugars intake today.

Over the past century the health profile of Americans has changed. Deficiencies of essential nutrients have dramatically decreased, and chronic diseases that are related to poor quality dietary patterns and physical inactivity, such as obesity, CVD, type 2 diabetes, and diet-related cancers, have become much more prevalent in the population (Ref. 19). Dietary patterns and their food and nutrient characteristics were at the core of the conceptual model that guided the 2015 DGAC's work and resulted in scientific evidence supporting the recommendations from both the 2015 DGAC Report and the 2015–2020 DGA related to healthy dietary patterns (Refs. 19, 28). For the first time, the 2015 DGAC completed a systematic review to examine the relationship between dietary patterns and health outcomes. The data related to dietary patterns and health outcomes, which was reviewed by the 2015 DGAC, focused on specific health outcomes including: CVD, measures of body weight or obesity, type 2 diabetes, cancer, congenital anomalies, neurological and psychological illnesses, and bone health. The 2015 DGAC concluded that the overall body of evidence examined by the 2015 DGAC identifies that a healthy dietary pattern is higher in vegetables, fruits, whole grains, low- or non-fat dairy, seafood, legumes, and nuts; and moderate in alcohol (Ref. 19). The 2015 DGAC also concluded that dietary patterns characterized, in part, by lower consumption of sugar-sweetened foods and beverages relative to less healthy dietary patterns were strongly and consistently associated with a reduced risk of CVD (Ref. 19). Evidence for dietary patterns and the other health outcomes that were included in the analysis was moderate or limited. The new evidence from the systematic review examining the relationship between dietary patterns and health outcomes provide further support for a mandatory declaration of added sugars because consumers need to know how much added sugars are in their foods in order for them to construct an overall healthy dietary pattern and to limit consumption of added sugars. The scientific evidence also was included in the 2015–2020 DGA. Furthermore, consumers need to know how much added sugars are in a serving of a product so that they can avoid consuming excess calories from added sugars, at the expense of calories from other components as part of a healthy dietary pattern within calorie limits, such as fruits, vegetables, fat-free and low-fat dairy, grains, protein foods, and oils.

We disagree with the comment that added sugars should not be required on the label because we have not shown that a public health significance exists for added sugars labeling through well-established scientific evidence. The comment is considering the guidance we have given related to determining public health significance in our proposed factors for mandatory and voluntary labeling, which are focused on nutrients for which there is a relationship with a risk of a chronic disease, a health-related condition, or a physiological endpoint. However, we are using a different paradigm for the labeling of added sugars for the general population (see part II.H.3) than has been used traditionally. We have established that there is public health significance of added sugars through other evidence and recommendations related to a healthy dietary pattern low in sugar-sweetened foods and beverages that is associated with reduced risk of CVD, through consumption data showing that Americans are consuming too many calories from added sugars, through evidence showing that it is difficult to meet nutrient needs within calorie limits if one consumes too many added sugars, and through evidence showing that increased intake of sugar-sweetened beverages is associated with greater adiposity in children.

We disagree with the comments that suggested that added sugars should not be required to be declared on the label because they do not meet the factors we consider for mandatory labeling of nutrients for which there is an independent relationship between the nutrient and a risk of chronic disease, a health-related condition, or a physiological endpoint. We must evaluate the current nutrition science and determine whether a nutrient will assist consumers in maintaining healthy dietary practices. We are not bound by certain factors when determining if any and all nutrients should be declared on the label now or in the future (see part II.C.3).

The final rule, therefore, at § 101.9(c)(6)(iii), requires the mandatory declaration of added sugars.

(Comment 135) Many comments said we should not require the declaration of added sugars on the label because they do not have a unique role in causing weight gain or increasing the risk of chronic disease when compared to other macronutrients. Many comments cited the 2010 DGA's conclusion that added sugars are no more likely to contribute to weight gain or obesity than any other source of calories (Ref. 30). Some comments also cited the conclusion in the IOM DRI report for macronutrients that there is no clear and consistent association between increased intake of added sugars and BMI (Ref. 75). The comments noted that studies have shown that with respect to weight loss, reducing total caloric intake is more

important than the source of calories. The comments asserted that excess energy in any form will promote body fat accumulation.

(Response) We agree that excess calories from any source can contribute to weight gain. However, Americans are consuming too many calories from added sugars, and those calories typically are not accompanied by other beneficial nutrients. The comments are considering the evidence that we have used to support a declaration of added sugars against our proposed factors for mandatory and voluntary declaration of non-statutory nutrients for which there is an independent relationship between the nutrient and a risk of chronic disease, a health-related condition, or a physiological endpoint. Rather than considering a direct relationship between consumption of added sugars and risk of a chronic disease, health-related condition, or physiological endpoint, for the purposes of the general population (see part II.H.3), we have focused on how added sugars found in sugar-sweetened foods and beverages contribute to a dietary pattern, and how the contribution of added sugars to the total diet impacts health. The evidence points to the need for consumers to know how much added sugars are in a serving of a product to assist them in achieving a healthy dietary pattern and maintaining healthy dietary practices.

(ii) Evidence on Added Sugars and Risk of Chronic Disease

(Comment 136) Many comments suggested that, if we are using the traditional relationship between a nutrient and risk of chronic disease, a health-related condition, or a physiological endpoint when determining if added sugars should be declared on the label, there is specific scientific evidence on added sugars and risk of disease that we should consider. Many comments suggested that a declaration of added sugars is necessary because consumption of added sugars is associated with an increased risk of chronic disease or markers for chronic disease. Some comments provided evidence that increased consumption of sugar-sweetened beverages, which are the primary source of added sugars in the American diet, is associated with increased body weight, an increase in body mass index (BMI), adiposity (body fat), increased blood pressure leading to increased incidence of hypertension, and in increased risk of metabolic syndrome, type 2 diabetes, and gout. Other comments provided evidence that high intakes of fructose-containing sugars can raise levels of triglycerides, visceral fat, liver fat, blood glucose, insulin, and LDL cholesterol. The comments suggested that the findings indicate that diets high in fructose increase markers or risk factors for heart disease, diabetes, non-alcoholic fatty liver disease, and metabolic syndrome. The comments noted that randomized, controlled clinical trials to test the hypothesis that added sugars increase disease risk would violate ethical standards, and therefore, are impossible to conduct.

In contrast, many comments argued that there is no association between consumption of added sugars and risk of chronic disease, and therefore, there is a lack of a scientific basis to require the mandatory declaration of added sugars on the label. One comment stated that evidence available since the 2010 DGA is conflicting and inconclusive. In reference to the evidence showing that all sugars contribute to dental caries, one comment suggested that there are many factors that can contribute to dental caries, including oral bacteria, salivary flow, oral hygiene behavior, and susceptibility of the tooth. The comment stated that it was not aware of any evidence showing that added sugars presents a unique risk for causing dental caries.

Some comments criticized studies on added sugars and risk of disease. The comments suggested that scientific consensus groups have found difficulty in determining any relationship between added sugars intake and health outcomes due to a variety of complex reasons. The reasons cited included lack of harmonization within the scientific literature of the definition and inclusion of ingredients considered to be added sugars, difficulty comparing studies where the primary health outcomes measured are not consistent across studies, systematic reviews draw conclusions across multiple studies with various inclusion criteria and designs, excess energy intake may not be controlled for in the analysis, much of the information about added sugar content of products is proprietary, and methodological problems with observational studies which have suggested detrimental associations of added sugars intake with health outcomes. The comments also noted that sugar-sweetened beverages are often inappropriately used as a proxy or surrogate for total added sugars intake.

(Response) Added sugar in the diet is an area that is of particular interest in the nutrition community. A substantial amount of research has been conducted on the association between consumption of sugar-sweetened beverages and risk of chronic disease, as noted in the comments. The 2010 DGAC concluded that an increased intake of sugar-sweetened beverages is associated with greater adiposity in children. Since 2010, additional evidence on sugar-sweetened beverages and their association with risk of disease has emerged. The 2015 DGAC concluded that there is strong and consistent evidence that intake of added sugars from foods and/or beverages is associated with excess body weight in children and adults (Ref. 19). We note that the majority of the evidence that the 2015 DGAC relied on for this conclusion was from studies on the relationship between intake of sugar-sweetened beverages and body weight. Although the evidence on sugar-sweetened beverages and body weight/adiposity is strong and consistent, sugar-sweetened beverages represent only 39 percent of food sources of added sugars. As noted in the comments, sugar-sweetened beverages may not be an appropriate proxy or surrogate for total added sugars intake.

Research on the health effects of total added sugars continues to emerge. One difficulty that researchers face when designing studies on added sugars from all food sources is that there are many ingredients containing added sugars by different names, and no single definition of added sugars has been adopted by the scientific community. In § 101.9(c)(6)(iii) of the final rule, we are establishing a regulatory definition of added sugars. We expect that, by requiring the declaration of the amount of added sugars in a serving of a product on the label, and by establishing a definition of added sugars, additional research on the health effects of added sugars from food and beverages will be conducted in the future that will further clarify the direct relationship of added sugars with risk of chronic diseases, health-related conditions, and physiological endpoints.

Although we are not basing a mandatory declaration of added sugars for the general population on an independent relationship between added sugars and risk of chronic disease, we are, instead, basing an added sugars declaration on the need to provide consumers with information to construct a healthy dietary pattern that is low in added sugars. We intend to monitor the evidence in this area and will consider how any new evidence may impact our regulations in the future.

(Comment 137) In the preamble to the proposed rule (79 FR 11879 at 11904), we suggested that the disclosure of saturated fat and *trans* fat on the label not only provides information to consumers for managing their risk of

CVD, but the declaration of these nutrients also could provide a marker for foods that contain solid fats (fats which are solid at room temperature and contain a mixture of saturated and unsaturated fatty acids but tend to contain a high percentage of saturated and *trans* fats). We suggested that there is not currently information on the label that could serve as a marker for added sugars.

Some comments took issue with comparisons made between fats and sugars in the proposed rule. The comments noted that there are significant health differences between fats in general and solid fats. The comments asserted that those differences provide a defensible basis for delineating the types of fats on the label, and there are no similar functional health differences between sugars and added sugars. Therefore, the comments said we do not have a basis for requiring a separate declaration for added sugars on the label.

(Response) Our basis for requiring the declaration of added sugars for the general population (see part II.H.3) is not related to an independent relationship between added sugars and a risk of chronic disease, but rather on the contribution of added sugars to an overall dietary pattern. Added sugars consumption among the general U.S. population exceeds what can reasonably be consumed within calorie limits and can have a negative impact on health. The declaration of added sugars will assist consumers in maintaining healthy dietary practices. In the preamble to the proposed rule, we were not making a comparison between the level of evidence related to an independent relationship between the intake of fats and sugars and chronic disease risk. Instead, we were describing whether information on the label for certain fats and sugars would allow the consumer to use the label to reduce their consumption of calories from solid fats and added sugars.

(Comment 138) Some comments likened the public interest in added sugars to that in total fat in previous years and suggested that we consider the unintended consequences associated with a single nutrient-type approach.

(Response) We disagree with the comment's suggestion that we are taking a single nutrient-type approach to the labeling of added sugars. We are considering how added sugars interact with other components in the diet and make it difficult for individuals to meet nutrient needs within calorie limits and to construct a healthful dietary pattern. As noted in the 2015 DGAC Report, added sugars are not intended to be reduced in isolation; in fact, sodium and saturated fats are also recommended to be reduced in order to achieve a healthy dietary pattern that is balanced, as appropriate, in calories (Ref. 19). These considerations have led us to conclude that consumers need information on the amount of added sugars in a serving of a product as well as a percent DV declaration to help them maintain healthy practices and determine how a serving of a product fits into the context of their total daily diet. Furthermore, the declaration of added sugars will be included with other nutrient declarations on the label. This is one of many pieces of nutrition information that consumers should use when making food choices.

(iii) New Evidence Presented in the 2015 DGAC Report

After publication of the 2010 DGA, the USDA NEL completed a systematic review project examining the relationships between dietary patterns and several health outcomes, including CVD, body weight, type 2 diabetes, and dental caries. In addition, the DGAC reviewed the NHLBI Lifestyle Evidence Review and the Lifestyle Management Report. Based on the information provided in the NEL report, the 2015 DGAC made conclusions about the association of healthy dietary patterns and the risk of the named health outcomes. In particular, the 2015 DGAC concluded that strong and consistent evidence demonstrates that dietary patterns characterized by higher consumption of vegetables, fruits, whole grains, low-fat dairy, and seafood, and lower consumption of red and processed meat, and lower intakes of refined grains, and sugar-sweetened foods and beverages relative to less healthy patterns; regular consumption of nuts and legumes; moderate consumption of alcohol; lower in saturated fat, cholesterol, and sodium, and richer in fiber, potassium, and unsaturated fats is associated with a decreased risk of CVD. We reviewed and considered the evidence that the DGAC relied on for making this conclusion, and determined that it supports our basis for requiring the mandatory declaration of the gram amount of added sugars on the label. We requested comment on this new information in the supplemental proposed rule.

(Comment 139) Some comments supporting our inclusion of the new information on dietary patterns and CVD risk in our rationale for the declaration of added sugars said that the U.S. population should be encouraged and guided to consume dietary patterns that are rich in vegetables, fruit, whole grains, seafood, legumes, and nuts; moderate in low- and non-fat dairy products and alcohol (among adults); lower in red and processed meat; and low in sugar-sweetened foods and beverages and refined grains. One comment noted that the dietary patterns that are now recommended for CVD reduction by the American Heart Association and the American College of Cardiology and the new part 2 recommendations of the National Lipid Association all refer to a dietary pattern low in sweets and sugar-sweetened beverages.

Many comments supported the 2015 DGAC's recommendation that Americans reduce their intake of added sugars and said that the recommendation is consistent with the American Cancer Society's nutrition and physical activity guidelines, the recent guidelines from the World Health Organization on added sugars intake, and recent lifestyle guidelines from the American Heart Association and the American College of Cardiology.

(Response) We have reviewed and considered the data and information underlying the 2015 DGAC's recommendations and have concluded that the declaration of added sugars is necessary to assist consumers in maintaining healthy dietary practices. The declaration would enable consumers to limit added sugars as part of a healthy dietary pattern.

(Comment 140) Although we did not propose to rely on the analysis conducted by the 2015 DGAC (Ref. 84) on the relationship between the intake of added sugars and CVD, body weight/obesity, type 2 diabetes, and dental caries, some comments addressed the analysis and whether it supports a mandatory declaration of added sugars.

Some comments said that it is appropriate for us to rely on information from the 2015 DGAC Report as well as the robust science upon which that report is based regarding the health risks of added sugars. The comments said that the DGAC comprehensively reviewed the current scientific literature and concluded that added sugars increase the risk of multiple health outcomes, including excess body weight, type 2 diabetes, CVD and dental caries. According to the comments, the evidence, which was graded either as ''strong'' or ''moderate'' by the DGAC, further supports the mandatory declaration of added sugars on the label and supports the addition of a percent DV declaration on the label. The comments cited additional scientific evidence supporting an association between consumption of added sugars and/or sugar-sweetened beverages and

the risk of the health outcomes named in the 2015 DGAC Report or endpoints such as serum triglycerides, LDL cholesterol, and blood pressure.

Other comments suggested that the existing evidence related to consumption of added sugars and the risk of various chronic diseases and health-related conditions is limited and does not demonstrate a clear, causative relationship or direct contribution of added sugars to obesity, heart disease, or other diseases or conditions.

Some comments questioned why we are relying on evidence related to dietary patterns and risk of disease to support a mandatory declaration of added sugars when a review was done by the DGAC that specifically looked at consumption of added sugars and risk of CVD and the DGAC concluded that the evidence was moderate rather than strong. The comments noted that the evidence reviewed by the DGAC in chapter 6 (clinical trials and observational studies on sources of added sugars and CVD risk) provides a more direct and specific evaluation on added sugars and CVD risk than from data on dietary patterns and CVD risk.

(Response) As discussed in part II.H.3.a, we are requiring an added sugars declaration so that consumers can limit calories from added sugars as part of a healthy dietary pattern lower in sugar-sweetened foods and beverages which is associated with a reduced risk of chronic disease and can meet nutrient needs within calorie limits. We do not need to limit our review of the science to the moderate evidence related to an independent relationship between added sugars and risk of chronic disease; instead, we can include in our review the strong and consistent association between the healthy dietary pattern with lower amounts of sugar-sweetened foods and beverages, compared to less healthy dietary patterns, and reduced risk of CVD (see added sugars introduction). Although the 2015 DGAC concluded that strong and consistent evidence shows that intake of added sugars from food and/or sugar-sweetened beverages are associated with excess body weight in children and adults, the evidence reviewed by the 2015 DGAC was primarily on sugar-sweetened beverages, which only represent 39 percent of food sources of added sugars. The consumption of added sugars and their impact on health continues to be an area of great interest to the scientific community and to consumers. We intend to monitor future research that may impact the labeling of added sugars.

(Comment 141) Some comments suggested that our review is inconsistent and selective. The comments said that the particular dietary pattern related to CVD was singled out from the DGAC Report of dietary patterns and other chronic diseases (*e.g.* cancer, type 2 diabetes) in the supplemental proposed rule because it was the only chronic disease for which the evidence was considered to be strong and, as such, we consider strong evidence to be necessary for requiring added sugars on nutrients in the proposed rule.

(Response) We have strong and consistent evidence that dietary patterns associated with a decreased risk of CVD are characterized by higher consumption of fruits, vegetables, whole grains, low-fat dairy, and seafood, and lower consumption of red and processed meats, and lower intakes of refined grains and sugar-sweetened foods and beverages relative to less healthy dietary patterns. The dietary pattern approach focuses on components of the diet and how they contribute to an overall healthy dietary pattern that is associated with a decreased risk of disease. Although this is the first time that the 2015 DGAC has conducted a systematic review of the evidence related to dietary patterns and health outcomes, analysis of diet quality using scoring indices is an accepted scientific method that has been used for years to assess diet quality. The evidence that the 2015 DGAC considered related to dietary patterns and CVD risk adds to information that we provided in the proposed rule to support an added sugars declaration and is not the only evidence that we are relying on to support the declaration. Evidence related to an independent association between consumption of added sugars and risk of chronic disease continues to emerge. Although science related to the independent relationship between total added sugars and risk of chronic disease is not conclusive at this point, it does not mean that we cannot and should not rely on the evidence that we currently have related to healthy dietary patterns characterized, in part, by a reduced intake of sugar-sweetened foods and beverages and reduced risk of CVD, which is strong and consistent.

(Comment 142) Some comments cited reasons why the type of analysis which was conducted to examine the relationship between healthy dietary patterns and health outcomes cannot be used to make conclusions regarding single nutrients, food components, or foods. The comments noted that we have stated that we do not accept this type of extrapolation from an association of a complex mixture with disease risk to determine the association between a single component of the mixture to disease risk in our Guidance on Evidenced Based Review (Ref. 85). The comments said that the extrapolation does not establish a public health endpoint to justify mandatory declaration added sugars. Some comments also said that the evidence on dietary patterns is not nutrient specific and a dietary pattern is defined as the quantities, proportions, variety or combinations of different foods and beverages in diets, and the frequency with which they are habitually consumed.

(Response) This type of analysis that was conducted to examine the relationship between healthy dietary patterns and health outcomes is appropriate to answer questions about how dietary patterns, as a whole, impact disease risk. This type of analysis also takes into account relationships between components of a healthy dietary intake, which cannot be determined when looking at specific associations with a nutrient and risk of disease. Other analyses are more appropriate for answering questions related to a direct cause and effect relationship between a nutrient and the risk of a disease or health-related endpoint.

The evidence considered by the 2015 DGAC related to dietary patterns and CVD risk provides us with information about the components of a healthy dietary pattern and how those components, when taken in combination, make up a dietary pattern that is associated with the reduced risk of CVD. As noted by the 2015 DGAC, it is often not possible to separate the effects of individual nutrients and foods. The 2015 DGAC Report says that the components of the eating pattern can have interactive and potentially cumulative effects on health (Ref. 19). The 2015–2020 DGA also says that people do not eat food groups and nutrients in isolation but rather in combination, and the totality of the diet forms an overall eating pattern.

The dietary pattern analysis as well as information from the USDA food patterns showing how much added sugars individuals can reasonably consume in their diet while meeting nutrient needs, and consumption data showing that consumption of added sugars among Americans remains high supports limiting consumption of added sugars. In order for consumers to limit consumption of added sugars in the diet, it is necessary for information to be provided on the label that allows consumers to determine how much added sugars is in a serving of food, so

they can determine whether and how that food fits into their total daily diet. Therefore, information about what constitutes a healthy dietary pattern that is associated with a decreased risk of disease supports a label declaration of added sugars even though conclusions about a nutrient-specific association with risk of disease cannot be drawn from this type of evidence.

(Comment 143) Some comments noted that the 2010 DGA said that individuals can achieve a healthy diet in multiple ways and preferably with a wide variety of foods and beverages. Optimal nutrition can be attained by many different dietary patterns, and a single dietary pattern approach or prescription is unnecessary. The comments said that dietary patterns other than those evaluated in Chapter 2 of the 2015 DGAC Report might not have necessarily shown that reduced added sugars intake was associated with increased risk of CVD.

(Response) While individuals can follow a number of different healthful dietary patterns, the NEL review on dietary patterns and CVD risk did not specifically look at studies where individuals were placed on a particular diet or were instructed to follow a specific diet. The 2015 DGAC did consider evidence from DASH trials where participants were placed on the DASH diet. With the exception of the DASH trials, the analyses included free-living individuals who were following many dietary patterns. Certain scoring indices were then applied to intake data to look at how closely the diets of study participants matched certain types of healthy dietary patterns. Scores were then given based on adherence to the dietary pattern of interest. The dietary quality analyses included individuals that did not closely adhere to a particular dietary pattern of interest. In looking at all reports, which included an analysis of adherence to multiple types of healthy dietary patterns, the 2015 DGAC concluded that closer adherence to the healthy dietary patterns of interest, which tended to include less sugar-sweetened foods and beverages, resulted in a decreased risk of CVD. Therefore, the analysis included individuals who followed a wide variety of dietary patterns, some of which were determined to be more strongly associated with chronic disease risk than others. Although it is possible that some dietary patterns including substantial amounts of sugar-sweetened foods and beverages are associated with a decreased risk of CVD, research conducted across cohorts using multiple dietary pattern indices show that there is a high degree of correlation (highest quintile of scores) across scoring indices, and that higher diet quality is significantly and consistently associated with a reduced risk of death due to all causes, CVD, and cancer compared to the lowest quintile of scores (Ref. 86). Therefore, it is very unlikely that the majority of the population can consume a high quality diet that incorporates the proper amounts from food groups to meet nutrient needs as well as a significant amount of added sugars and still stay within calorie limits. The research suggests that there is a high level of consistency between different scoring indices in what is considered to be a healthy diet. Furthermore, as shown in the USDA Food Patterns for three patterns of health eating (a Healthy U.S.-Style Eating Pattern, a Healthy Mediterranean-Style Eating Pattern, and a Healthy Vegetarian Eating Pattern (Ref. 19)), in order to eat a dietary pattern that includes the amounts of other healthy dietary components, it is not possible to consume large amounts of empty calories.

b. The 2015 DGAC Analysis of Dietary Patterns and Health Outcomes

(Comment 144) In the analysis of dietary patterns and health outcomes, dietary quality indices were used to evaluate adherence to certain dietary patterns. An individual's score is derived by comparing and quantifying their adherence to the criterion food and/or nutrient component of the index and then summed over all components (Ref. 19). A population's average mean and individual component scores can be similarly determined. Some examples of the dietary quality scores used for the analysis include: The Health Eating Index (HEI)–2005 and 2010, the Alternate HEI (AHEI) and updated AHEI–2010, the Recommended Food Score (RFS), the Mediterranean Diet Score (MDS), and the Alternate Mediterranean Diet Score (aMed).

Some comments took issue with the various scoring algorithms used to evaluate adherence to certain dietary patterns as well as with the studies included in the analysis. One criticism of the scoring algorithms was that the majority of dietary pattern index studies cited by the 2015 DGAC did not include an added sugars criterion. The comments noted that the MDS, the aMed, the AHEI, and the RFS do not include a ''sweets or sugar products'' component. The comments said the HEI–2005 included sugar in a combined category of solid fats, alcoholic beverages and added sugars, the AHEI–2010 included sugar-sweetened beverages and fruit juice, and the Dietary Approaches to Stop Hypertension adherence index included soda, sugar sweetened beverages or a broader ''sweets'' category depending on the scoring method used. The comments said that none of these indices specifically address added sugars independently. One comment stated that not one of the Mediterranean dietary pattern studies cited by the DGAC had a sugars or added sugars criterion.

Other comments singled out studies from the 55 that were included in the NEL review based on whether they included a measure of added sugars in the study. The comments suggested that studies with scoring indices that did not include a measure of added sugars should be excluded from our analysis. Some comments suggested that, when only the studies in which dietary pattern scoring indices were used that included a measure of added sugars are considered, the evidence related to CVD risk is not strong and consistent. The comments noted that the 2015 DGAC Report says that ''certain scores also included added sugars or sugar-sweetened beverages as negative components.''

(Response) While a number of index studies did not include a direct measure of added sugars or sugar-sweetened foods and/or beverages, the scoring systems in the study were measuring adherence to an overall dietary pattern, such as the Mediterranean diet, that is typically low in added sugars. Furthermore, research shows that there is consistency in scoring as well as association with health outcomes across dietary quality indices, including two that do not typically include a sugar-sweetened food and beverages component (*i.e.* aHEI and AMED) (Ref. 86).

The Dietary Patterns Methods Project conducted standardized and parallel analyses of the prospective association of select dietary patterns characterized by dietary quality indices and mortality outcomes in three large cohort studies conducted in the United States. The investigators selected four commonly used dietary quality indices including the HEI–2010, the AHEI–2010, the aMED, and the DASH (Ref. 86). The comments noted that the AHEI and aMED dietary quality indices do not have a specific measure of added sugars. Liese et al. found that the indices were highly correlated, which means that individuals with the highest scores of adherence were likely to be scored similarly across all of the four dietary quality indices. They also found that higher diet quality (highest quintile of scores) was associated with lower all-

cause, CVD, and cancer mortality when compared to lower diet quality (lowest quintile of scores) across the diet quality indices. Similar findings have been seen across dietary quality scoring indices and large prospective cohort studies (Refs. 87–89). These results suggest that dietary quality scoring indices consistently determine diet quality, regardless of whether they include a component for sugar-sweetened foods and/or beverages. The research also suggests that, because the diet quality indices are so comparable in what they measure as a high quality diet, it is very likely that the diets of individuals with higher diet quality scores will have a lower intake of sugar-sweetened foods and/or beverages. Furthermore, it is very unlikely that participants with high diet quality scores across the various scoring indices would be able to consume enough of the other components of a healthy dietary pattern to receive a high score if they were consuming large amounts of sugar-sweetened foods and beverages.

We also note that the dietary pattern scoring indices were modified by study investigators, so it is necessary to review each study to determine whether the diet quality index used in a particular study included a component that measured added sugars. Table 4–B–I–1 from the 2015 DGAC Report shows a comparison of the dietary components across some of the major diet scoring indices (Ref. 19). The comment noting that the MDS, the aMed, the AHEI, and the RFS do not include a ''sweets or sugar products'' component was likely referring to the information in Table 4–B–I–1. However, to determine if the scoring index used in a particular index study included a measure of sugars-sweetened foods or beverages, it is necessary to go to the study report because investigators did include measures of types of sugar-sweetened foods and/or beverages in most of the studies included in the analysis. For example, Trichopoulou et al. evaluated adherence to a Mediterranean diet by using the MDS, but included sweets as a component of the scoring algorithm.

(Comment 145) One comment noted that, if a company wanted to make a voluntary claim that there is a strong association between diets low in added sugars and a decreased risk of CVD, we would not consider the underlying evidence that the DGAC relied upon as sufficient to support such a claim, yet we are relying on this same level of evidence to require that companies include a mandatory claim on their labels that is potentially false and misleading for certain foods which undergo chemical processes that reduce the amount of sugar in a product.

(Response) To the extent that the comments are suggesting that it is not appropriate for us to rely on evidence related to dietary patterns and health outcomes to support a mandatory declaration of added sugars, we disagree. The scientific evidence related to dietary patterns and health outcomes that was presented in the 2015 DGAC Report, and more specifically the evidence related to a healthy dietary pattern that is associated with a decreased risk of CVD relative to less healthy dietary patterns does show that there are certain characteristics of a healthy dietary pattern that consumers need when selecting foods to eat and when determining how much of those foods they should eat. The information that we are relying upon related to healthy dietary patterns characterized, in part, by lower amounts of sugar-sweetened foods and beverages and CVD risk is directly related to the need for consumers to have information on the label, which they do not currently have in the case of added sugars, so that they can construct a healthy dietary pattern that is associated with a decreased risk of disease and maintain healthy dietary practices.

In response to the comment's suggestion that an added sugars declaration is potentially false and misleading for certain foods which undergo chemical processes that reduce the amount of sugar in a product, we have concluded that, generally, manufacturers of foods that undergo non-enzymatic browning and fermentation are able to determine a reasonable approximation of the amount of added sugars in a serving of their finished product (see part II.H.3.k). Therefore, added sugars declarations on foods that undergo non-enzymatic browning and fermentation are not potentially false and misleading.

(Comment 146) Some comments noted that the studies that did include an assessment of sugar sweetened foods and/or beverages did not include an assessment of everything that we would consider to be added sugars. One comment said that some of the studies only assessed sugars-sweetened beverage intake, and some considered fruit juices to be sugar-sweetened beverages. The studies included no assessment of intake of sugar-containing foods.

Other comments noted that the scoring algorithms used to evaluate dietary pattern adherence may differ and may affect the results of studies examining specific health outcomes. The comments said that this factor may hamper cross-study comparisons and limit reproducibility.

(Response) Some studies included only sugar-sweetened beverages, while others included ''sugar'' or ''sweets.'' The scoring algorithms also did vary from study to study. However, research shows that different dietary quality indices are very comparable in what they consider to be a high quality versus a low-quality diet (Ref. 86). The different dietary quality indices also are very consistent in their association with health outcomes (Ref. 86). Although the studies included different types of added sugars as components of their analysis, when taken as a whole, the data generally shows that healthy dietary patterns that are associated with a decreased risk of CVD relative to less healthy dietary patterns are characterized, in part, by lower amounts of sugar-sweetened foods and beverages. Additionally, it would be extremely difficult for individuals consuming large amounts of empty calories from sugar-sweetened foods and beverages to be able to consume enough of the other components of a healthy dietary pattern to be able to receive a high diet quality score.

We also recognize that the scoring algorithms used in the studies included in the analysis differ from study to study. However, despite having different ways to evaluate many different types of healthy diets, a strong and consistent pattern emerged from the evidence. We view the variety of scoring algorithms to be a strength of the review because, despite the differences in scoring algorithms, there was consistency in what constituted a diet that would receive a high dietary quality score and there was consistency in the association between higher dietary quality scores and CVD risk versus lower diet quality scores.

(Comment 147) Some comments noted that none of the definitions of added sugars used in the studies included in the analysis of dietary patterns and CVD risk are consistent with our proposed definition since it was not released until 2014 and the studies were conducted prior to that date. One comment suggested that many more sources of sugar are included in our proposed definition than in the studies cited in the 2015 DGAC Report.

(Response) The studies included in the analysis on dietary patterns and CVD risk assessed the intake of foods that are part of an eating pattern rather than intake of specific nutrients. Therefore, we would not expect, nor would it be necessary for, our proposed definition of added sugars to be consistent with how sugar-sweetened

foods and beverages were defined for the purposes of this type of analysis. Furthermore, we would not anticipate that researchers would have used our proposed definition as a guide when determining what foods include added sugars because, at the time the studies were conducted, we had not finalized the rule.

(Comment 148) One comment cited several epidemiological studies which evaluated the DASH dietary scoring pattern and CVD outcomes. The comment said that, in one study included in the 2015 DGAC analysis (Ref. 90), the range of sweetened beverage intake across the DASH score quintile was narrow (0.3 servings per day in the lowest quintile and 0.2 servings per day in the highest quintile). The comment noted that the authors of the study concluded that a diet that resembles the DASH eating plan was significantly associated with lower risk of CHD and stroke, but they made no mention of reduced consumption of sweetened beverages as part of the diet. The comment also referred to a subsequent study in the Women's Health Study cohort which evaluated the relationship between adherence to a DASH dietary pattern score and risk of CVD. In this study, an apparently strong association of adherence to the DASH diet with incidence of CVD was attenuated upon control for confounding variables. The comment noted that, Folsom et al. found that adherence to the DASH diet, where sweets were evaluated as a broad category, did not have an independent long-term association with hypertension or CVD mortality after adjustment for confounding variables in a cohort of women (Ref. 91).

(Response) Although study authors may not have mentioned sweetened beverages as part of the DASH eating plan, the DASH diet is typically lower in the category of food called ''sweets.'' Therefore, it is appropriate to rely on studies where a DASH scoring index was used because the scoring algorithm is based on a diet that is low in sweets.

We considered all 55 articles reviewed by the NEL, which summarized evidence from 52 prospective cohort studies and 7 randomized-controlled trials (RCTs), and the NHLBI Lifestyle Evidence Review and the associated Lifestyle Management Report, which included primarily RCTs. Although some studies where a DASH dietary quality scoring index was used did not show an association with CVD risk, and some DASH dietary quality scoring indices did not include a direct measure of sugar-sweetened foods and beverages, as noted in the comments, when taken together with other studies included in the analysis, the body of evidence supports the conclusion that there is strong and consistent evidence dietary patterns characterized by higher consumption of vegetables, fruits, whole grains, low-fat dairy, and seafood, and lower consumption of red and processed meat, and lower intakes of refined grains, and sugar-sweetened foods and beverages relative to less healthy patterns; regular consumption of nuts and legumes; moderate consumption of alcohol; lower in saturated fat, cholesterol and sodium and richer in fiber, potassium, and unsaturated fats are associated with decreased CVD risk.

(Comment 149) Some comments cited a number of studies where an association with higher adherence scores and CVD risk, CHD risk, or ischemic stroke was found, but when an analysis of sugar sweetened foods and/or beverages was done in the same data set, an association with the outcome of interest was not found. The comments referred to component analyses that were conducted as part of some of the studies included in the analysis of the evidence related to dietary patterns and CVD risk. In these component analyses, the data for intake of certain dietary components, such as fruits and vegetables, were looked at more closely to see if they were associated with the outcome of interest (CVD risk) when looked at in isolation. The comments said that ''added sugars'' intake was not a factor in the observed differences in CVD risk in some of the studies where component analyses were performed. Additionally, the comments said that sugars are only one of many dietary factors included in the scoring indexes, and interplay between multiple factors in the dietary patterns cannot be excluded. Some comments said that the analysis is limited because not all of the studies included in the NEL review included a component analysis. The comments pointed to the statement in the 2015 DGAC Report which says ''although a large number of the studies assessed food group components and their association with CVD outcomes, many did not, and more precise determination of the benefits and risks of individual components (*e.g.,* alcohol) would be helpful for policy recommendations. One comment noted that the 2015 DGAC Report fails to mention all of the individual components that were tested that had no effect on CVD (*e.g.,* added sugars). Another comment noted that throughout the studies, the impact of dairy on the association between a dietary pattern and a health outcome was inconsistent, which shows that the methodology used is imprecise.

(Response) For the first time, the 2015 DGAC conducted a systematic review of the evidence related to dietary patterns and health outcomes. The analysis was included because people do not eat nutrients or foods in isolation. Rather than focusing on specific nutrients, the 2015 DGAC and the 2015–2020 DGA focused on eating patterns and shifts that Americans need to make in order to move towards a healthier diet that is associated with a decreased risk of chronic disease. The 2015–2020 DGA said that the key recommendations for healthy eating patterns should be applied in their entirety, given the interconnected relationship that each dietary component can have with others (Ref. 28). The 2015 DGAC Report said, and we agree, that it is often not possible to separate the effects of individual nutrients and foods and that the totality of the diet-the combinations and quantities in which foods and nutrients are consumed may have synergistic and cumulative effects on health and disease (Ref. 19). It is with this information in mind that we reviewed the evidence related to dietary patterns and health outcomes presented in the 2015 DGAC Report.

We disagree with the comments stating that studies that included a component analysis for added sugars and CVD risk that did not show a favorable association cannot be used to support an added sugars declaration. Investigators use component analyses as an exploratory measure to see if the result seen is mainly due to one component or another. How these component analyses are conducted varies from study to study because there is not consensus within the scientific community yet on what methods should be used for component analyses. For example, in some studies, the effects of individual components of the diet are looked at separately without controlling for the effects of other components of the diet, while in other studies investigators control for other variables in the diet when looking at the effect of an individual dietary component. Because the methodology related to dietary pattern component analyses is still evolving and there is a great deal of variability between studies in how the component analyses are performed, we believe that it would not be appropriate to conclude that sugar-sweetened beverages have no responsibility for the overall relationship that is seen with CVD risk just because a component analysis indicates that there is no

independent effect of sugar-sweetened beverage consumption on CVD risk in the data set. Instead, we have considered the evidence related to the totality of the dietary pattern. By considering the makeup of the entire healthy dietary pattern, we can take into account connections that foods and dietary components may have with one another.

As noted in the 2015 DGAC Report, the analysis of dietary patterns and health outcomes captures the relationship between the overall diet and its constituent foods, beverages and nutrients in relationship to outcomes of interest and quality, thereby overcoming the collinearity (closely aligned relationship) among single foods and nutrients (Ref. 19). Therefore, we agree with the comment that said that interplay between multiple factors in dietary patterns cannot be excluded. The dietary pattern should be looked at as a whole rather than a sum of its parts because there is interplay between the multiple factors. When certain nutrients or foods are looked at individually without taking into account the relationships that the nutrient or food component has with other pieces of the dietary pattern, the effects of those relationships are lost. Information that would allow consumers to understand how a food fits into their overall dietary pattern is therefore important to be declared on the label.

In addition, investigators often analyze data using different methods, depending on the research question, and not all articles include a report of all of the study findings. Therefore, it is possible that sugar-sweetened foods and beverages could have been measured or that a component analysis was conducted for sugar-sweetened foods and/or beverages, but the findings were not reported in a particular published article.

(Comment 150) Some comments said that the evidence related to healthy dietary patterns characterized, in part, by lower intakes of sugar-sweetened foods and beverages is not strong and questioned whether we relied on the DGAC's analysis and conclusion rather than doing our own analysis of the studies.

(Response) We reviewed and considered the evidence that was considered by the 2015 DGAC when making their conclusions in Chapter 2 of the 2015 DGAC Report. We concluded based on that review and consideration of the evidence that strong and consistent evidence demonstrates that healthy dietary patterns are characterized by higher consumption of vegetables, fruits, whole grains, low-fat dairy, and seafood, and lower consumption of red and processed meat, and lower intakes of refined grains, and sugar-sweetened foods and beverages.

The comments that said that the data does not support a strong and consistent relationship with CVD risk were looking at the data in more limited way than we have. They focused their review on a specific nutrient-disease relationship whereas we considered the whole of the dietary pattern. Some comments included conclusions from their own review of the evidence. In those comments, studies were excluded based on whether the dietary quality index used in each study included a measure of added sugars, whether the studies were conducted in the United States, whether a component analysis for a measure of added sugars was conducted, and whether that analysis showed an association with CVD risk. As previously discussed in our responses to comments 147 and 148, we do not agree that it is appropriate to discount studies from the body of evidence considered based on these factors and have looked at the data and the dietary pattern as a whole rather than a sum of its parts.

(Comment 151) One comment questioned the scientific validity of using hypothesis-based dietary pattern scores for determining health outcomes. The comment said that the use of adherence scores, cluster or factor analysis as a science-based measure for predicting health outcomes is flawed and not an accepted scientific methodology. The comment provided an example where an analysis based on dietary pattern scores showed that individuals with higher adherence to the dietary pattern of interest compared to individuals with lower adherence actually had an almost 300 percent increased chance of dying from CVD, which is an incorrect conclusion (Ref. 92).

(Response) The use of this type of scientifically valid approach to looking at complex relationships between dietary patterns at health endpoints is being used by well-established scientific bodies. In fact, some of the dietary quality scoring indices were developed by Federal Agencies (*e.g.,* the HEI). Although this is the first time that the DGAC has conducted a systematic review of the evidence related to dietary patterns and health outcomes, the use of diet quality indexes to look at an association between dietary patterns and health outcomes is not new. For example, the USDA's Center for Nutrition Policy and Promotion created the HEI in 1995. Dietary pattern analysis is becoming more widely accepted in the scientific community because there has been a shift in recent years from focusing on nutrients and their association with disease risk to a dietary pattern approach that considers the fact that individuals do not eat nutrients or foods in isolation. The 2015 DGAC based their conclusions and recommendations on the results of this type of analysis to look at dietary patterns as a whole rather than specific nutrient and disease relationships, and the DGAC uses scientifically valid approaches that are widely accepted in the scientific community.

Other comments suggested that the use of dietary pattern indices to assess the relationship between dietary patterns and health outcomes is flawed for specific reasons. We address those issues in our responses to comment 143.

(Comment 152) Several comments cited a number of limitations of how the dietary intake data was collected in studies included in the analysis. The comments cited a number of criticisms of the use of Food Frequency Questionnaires (FFQs), which were used in the observational studies included in the analysis to assess adherence to scoring patterns. The comments suggested that added sugars are poorly measured by FFQs. Another limitation of FFQs mentioned in comments is that they are based on self-report and may introduce levels of report bias that can attenuate diet-health relationships. The comments stated that the extent to which data from FFQs are valid measures of dietary patterns is not well established. One comment said that FFQs are not designed to assess absolute intakes of foods, and when used only at baseline, the assumption is that intake does not change over several years, when health outcome is measured. The comment also said that FFQs provide little information on how the food was prepared.

Other comments said that the dietary patterns do not assess the frequency of meal and snack consumption, specific combinations of foods consumed together, and aspects of food purchase and preparation, all of which may influence an overall dietary pattern.

One comment said that fats and oils are spread across food groups, making them difficult to account for.

(Response) FFQs are a relatively efficient and cost effective way to collect information about usual intakes in a large population study, which is why they are often used to assess intake in large-scale cohort studies. FFQs are often used in studies because they are inexpensive, can be self-administered, take less time for participants to

complete compared to other dietary assessment methods, and can be read by machines rather than being hand-entered and analyzed (Ref. 93). Although there may be more precise ways to assess dietary intake patterns, other intake methods, such as multiple 24-hour recalls are often less practical for use in large population studies. There are many advantages to having a larger sample size when evaluating habitual intake, which can provide robust results (Ref. 94). FFQs have been shown to be reasonably accurate in reporting food use (Ref. 93). FFQs also provide a better estimate of usual intakes that can be used to assess dietary patterns because they assess intake over a longer period of time than other dietary assessment techniques, such as 24-hour recalls, diet histories, and dietary records. FFQs are also almost always used in retrospective reports about diet (Ref. 95). We accept the use of data from FFQs in observational studies used to support an association between a substance and a disease or health-related condition for health claims (Ref. 85).

We recognize that there are some limitations to the use of FFQs, and that one limitation is that in many of the studies FFQs were only administered at baseline. FFQs do not assess the frequency of meal and snack consumption, specific food combinations, and food preparation. Dietary pattern analysis considers combinations of foods and how they relate to health outcomes, but questions about the frequency of meal and snack consumption, specific food combinations, and food preparation would require a more specific analysis. Like other types of dietary assessment, this type of analysis can only be used to draw general conclusions about what components are included in a dietary pattern that is associated with risk of disease and the relative contribution (higher or lower) of that dietary component to the overall dietary pattern. Further analyses would be required to answer questions related to frequency of meal and snack consumption, specific food combinations that may associated with disease risk, and specific aspects of food preparation.

Fats and oils are spread across food groups, which make them more difficult to account for; however, we are most interested in sugar-sweetened food and beverages and how they fit into the dietary pattern. Sugar-sweetened foods and beverages can be isolated from the diet by the dietary assessment tools used in the studies included in the dietary pattern and health outcomes analysis.

(Comment 153) One comment said that the observational data used in these studies, and the way that they are analyzed, make the findings highly subjected to residual confounding (error that can occur when either the categories of the variables related to the outcome of interest (*e.g.* CVD risk), called confounding variables, are too broad or when some confounding variables are not accounted for). The comment said that even with adjustment for confounders, residual confounding cannot be eliminated from observational studies. More specifically, higher/better dietary index scores were associated with a number of factors, such as higher education, increased physical activity, non-smoker, multivitamin use, hormone therapy (women), and being married vs. single.

(Response) Residual confounding is a general limitation of all observational studies and is not specific to just this type of analysis. The comment did not provide specifics about individual studies for which confounders were not appropriately adjusted. Therefore, the comment does not change our consideration of the data.

(Comment 154) Some comments said that the patterns may be population-specific and therefore, are not generalizable. The comments also noted that some studies were not conducted in the United States and suggested that these studies cannot be used to draw conclusions about the general U.S. population.

(Response) We agree that patterns may be population-specific; however, care was taken to include studies conducted in populations that were very similar to the U.S. population (*e.g.* countries in the E.U.) and that data was collected in populations that would be generalizable to the U.S. population (Ref. 19).

(Comment 155) Some comments said that the NEL project based its conclusions only on those studies where score adherence was associated with decreased CVD risk, leaving all of the studies showing no effect out of the analysis.

(Response) We disagree with the comment that the NEL and the 2015 DGAC based their conclusions only on studies where score adherence was associated with decreased CVD risk. As stated in the 2015 DGAC Report, after the exclusion criteria were applied, a total of 55 studies met the inclusion criteria for the systematic review. The NEL found that the majority of the 55 studies that assessed CVD incidence or mortality reported an inverse association between increased adherence to a healthy dietary pattern and decreased risk of CVD. The NEL considered the results of all 55 studies rather just a subset where score adherence was associated with a decreased CVD risk.

c. Authority for Labeling

(i) Statutory Authority

(Comment 156) Many comments addressed our authority to require the mandatory declaration of added sugars on the label. We discuss our authority under the FD&C Act and our recordkeeping authority in parts II.C.3 and C.4.

Many other comments questioned our authority to require added sugars on the label because the purpose of the Nutrition Facts label is to help consumers reduce their risk of diet-related disease and added sugars are not associated with risk of disease. One comment noted that each of the nutrients currently on the label relate to a disease or serious health condition. Other comments said that we lack the authority to require the disclosure of added sugars because our rationale for requiring labeling, which is related to encouraging consumers to eat a more nutrient-dense diet or dietary planning, is by our own admission not related to a disease or health-related condition, such as obesity.

One comment suggested that, because there is no scientifically supported quantitative intake recommendation for added sugars upon which a DRV can be derived and because no authoritative scientific body has found a public health need to set an Upper Level (UL) for added sugars intake, we have not sufficiently shown that there is a public health need to monitor added sugars intake through labeling for consumers to maintain healthy dietary practices. The comment further stated that our admission in the proposed rule that we cannot establish a DV for added sugars further indicates that added sugars is not the type of nutrition disclosure that Congress intended for the Agency to require on the label.

(Response) As discussed in part II.C.3, under section 403(q)(2)(A) of the FD&C Act, the Secretary of the Department of Health and Human Services may require, by regulation, that information related to additional nutrients be included in the label or labeling of food, if the Secretary determines that providing information regarding the nutritional value of such food will assist consumers in maintaining healthy dietary practices. The FD&C Act requires that nutrition information on

the label be conveyed to the public in a manner which enables the public to readily observe and comprehend such information and to understand its relative significance in the context of the total daily diet. There is evidence that excess consumption of added sugars is a public health concern. Healthy dietary patterns characterized, in part, by lower intakes of foods and beverages which contain added sugars are associated with a decreased risk of CVD. Current scientific evidence supports limiting consumption of added sugars. Without a label declaration of added sugars, consumers are unable to determine how much added sugars a serving of a particular food would contribute to their diet and how to fit that food within an overall healthy eating pattern. We have concluded that the declaration of added sugars will assist consumers in maintaining healthy dietary practices, as required under the FD&C Act.

We disagree with the comment that asserted that added sugars is not the type of nutrient disclosure Congress intended for FDA to require because there is no scientifically supported quantitative intake recommendation for added sugars upon which a DRV can be derived. We are not limited to establishing a quantitative intake recommendation to circumstances in which there is a biomarker of risk of disease. Instead, we are relying on other evidence to support a mandatory declaration of added sugars for the general population which is not based on an independent relationship with a chronic disease, health-related condition, or physiological endpoint, but is based, instead, on constructing an overall healthy eating pattern that is low in added sugars.

As discussed in part II.H.3.o.(i), new evidence has become available since publication of the proposed rule in March 2014 related to limiting intake of added sugars to less than 10 percent of calories (Ref. 19). We have considered the underlying scientific evidence in the 2015 DGAC Report and have determined that the evidence supports establishing a DRV of 10 percent of total calories. The DRV for added sugars of 10 percent of calories is based on the amount of added sugars that can be reasonably accommodated within a healthy dietary pattern. As discussed in part II.H.3, the evidence that we are relying on for a mandatory declaration of added sugars for the general population and for the DRV is based on information related to healthy dietary patterns. Therefore, the comment's concern about a lack of a quantitative intake recommendation for added sugars has been addressed.

(Comment 157) Some comments said that a stronger case can be made for including whole grains or stearic acid on the label.

(Response) The FD&C Act gives us the authority to add and remove nutrients from the label based on whether we determine the nutrients are necessary to assist consumers in maintaining healthy dietary practices. We did not consider whether it would be appropriate to consider whole grains as a nutrient, nor propose a declaration of whole grains on the nutrition label, in the context of this rulemaking. Whole grains are made up of a variety of different grains (*e.g.* amaranth, barley, buckwheat, whole kernel corn, millet, oats, quinoa, rice, rye, sorghum, teff, triticale, wheat, and wild rice), and we would need to give further consideration about whether it would be appropriate to consider whole grains as a nutrient for purposes of nutrition labeling.

In the preamble to the proposed rule (79 FR 11879 at 11894), we considered whether the labeling of stearic acid should be mandatory or voluntary on the label and concluded that the evidence for a role of stearic acid in human health (*e.g.* changes in plasma LDL cholesterol levels) is not well-established. We tentatively concluded that the individual declaration of stearic acid is not necessary to assist consumers in maintaining healthy dietary practices. We also have declined to exclude stearic acid from the calculation of an individual food's percent DV for saturated fat elsewhere in this document (see part II.F.2) because current dietary recommendations for saturated fat, such as those of the DGA, do not differentiate among the individual saturated fatty acids in providing the recommended intake levels. In addition, the DGA recommendation to consume less than 10 percent of calories from saturated fatty acids makes no specific exclusion of stearic acid, and instead, relates to the intake of total saturated fatty acids. Therefore, we have determined that stearic acid should not be specifically listed on the label and should not be excluded from the calculation of an individual food's percent DV for saturated fat.

(Comment 158) One comment discussed how the declaration of the amount of added sugars in a product ''could compromise legitimate trade secrets'' based on the declared amount being made public.

(Response) To the extent that the comment argued that the declaration of the amount of added sugars could compromise legitimate trade secrets, we disagree. We are not requiring the public disclosure of formulations or recipes. We are requiring, for all products, the declaration of specific nutrients that have been determined to assist consumers to maintain healthy dietary practices (cf. *Philip Morris, Inc.* v. *Reilly,* 312 F.3d 24 (1st Cir. 2002)). It would be unreasonable for manufacturers to expect that the nutrients on the Nutrition Facts label would never change based on updated scientific evidence and the need to provide information that will assist consumers to maintain healthy dietary practices (see, *e.g., Ruckelhaus* v. *Monsanto Co.,* 467 U.S. 986 (1984), *Corn Products Refinery Co.* v. *Eddy,* 249 U.S. 427 (1919)).

(ii) Material Fact

(Comment 159) Some comments said that a declaration of added sugars is not a material fact because a declaration does not appear to be necessary for consumers to make healthy dietary choices and that, absent a declaration of added sugars, the label is not false or misleading to consumers.

(Response) Under section 403(a)(1) of the FD&C Act, a food is misbranded if its labeling is false or misleading in any particular. Section 201(n) of the FD&C Act further defines misleading labeling. In determining whether labeling is false or misleading, we take into account representations made or suggested in the labeling and the extent to which the labeling fails to reveal facts material in light of the representations or with respect to consequences that may result from the use of the food to which the labeling relates under the conditions of use prescribed in the labeling, or under such conditions of use as are customary or usual (id.). In the context of nutrition labeling, we have considered the declaration of meaningful sources of calories or nutrients to be a material fact (see 55 FR 29487 at 29491 through 29492, July 19, 1990 and 68 FR 41434 at 41438, July 11, 2003). Nutritive value cannot be determined without a declaration. Thus, the final rule will ensure that information that relates to the added sugars content of a serving of food, which is fundamental to people's food choices, is available on the food label. The added sugars declaration will provide consumers with information that is material with respect to the consequences of consuming a particular food (see 55 FR 29487 at 29491 through 29492).

We have determined that there is adequate evidence to demonstrate that consumption of added sugars is a public health concern because evidence shows that heathy dietary patterns associated

with a decreased risk of chronic disease are lower in sugar-sweetened foods and beverages that have been sweetened with added sugars, consumption of too much added sugars can impact the nutrient density of the diet, and consumption of sugar-sweetened foods and beverages is associated with increased adiposity in children. Furthermore, the scientific evidence supports that consumers limit their intake of added sugars to less than 10 percent of total calories. Without information on the amount of added sugars in a serving of a food, consumers would not have the information they need to construct a healthy dietary pattern that contains less than 10 percent of calories from added sugars. Therefore, we have concluded that this evidence is adequate to compel a label declaration of added sugars on the Nutrition and Supplement Facts labels.

(iii) Regulations Must Bear a Reasonable Relationship to the Requirements and Purposes of the Statute

(A) Consumers Are Eating Too Many Added Sugars

(Comment 160) Some comments suggested that an added sugars declaration would be beneficial for consumers because evidence shows that Americans are consuming too many added sugars. The comments cited survey data showing that from 2003 to 2006, added sugars, on average, provided about 14 percent of total calories in the American diet, and 25 percent or more of total calories for over 36 million Americans. The comments argued that Americans consume an average of 152 pounds of sugar per year, the average 6- to 11-year-old American boy consumes 22 teaspoons of added sugars per day, and the average girl of that age consumes 18 teaspoons of added sugars per day. The comments also cited data on the average per-capita loss-adjusted food availability data from 2012 showing that, on average, Americans consumed between 18 to 23 teaspoons (about 300 to 390 calories worth) of added sugars per day.

Other comments suggested that the declaration of added sugars is not necessary because current evidence shows that consumption of added sugars is declining in the United States. One comment noted that the American public is already reducing its consumption of sugar-sweetened beverages, especially carbonated sweetened beverages, and it is doing so without having an added sugars declaration on the Nutrition Facts label. Some comments provided evidence that the decrease in the intake of added sugars has been pronounced with an approximate decrease of about 25 percent on a per person basis between 1999 and 2010 (Ref. 96). One comment noted that sugar/sucrose consumption has declined by 33 percent in the United States and that per capita added sugars consumption has declined since 1970 when obesity was not a public health concern.

One comment suggested that the contribution from added sugars to the increase in total calories over the past 30 years is relatively minor. The comment cited evidence from USDA that between 1970 and 2009 there was an increase of 425 calories per person per day, and added sugars contributed less than 10 percent (38 calories) of this increased caloric intake.

One comment suggested that the problem of increasing added sugars consumption has mainly been a problem with beverages, not food. The comment said that almost all of the increase in consumption of sugars between the late 1970s and about 2005 has been in beverages. The total amount of added sugars consumed in sweet pastry, dairy and non-dairy desserts, candy, and other sugars-containing foods has remained almost constant, but the added sugars contributed by sweetened beverages has doubled. Total sugars consumption increased from about 59 grams per person per day to about 84 grams per person per day, and added sugars in sweetened beverages increased from about 17.5 to 41.5 grams per person per day. Twenty-four of the twenty-five grams of increase were in sweetened beverages.

(Response) Although added sugars consumption has decreased in recent years, consumption of added sugars still remains high at an average of 13.4 percent of calories among the U.S. population (Ref. 19). The scientific evidence supports Americans limiting their intake of added sugars to no more than 10 percent of calories (Ref. 19). The scientific evidence also is included in the 2015–DGA. Current consumption exceeds the recommended limit for added sugars. Usual intake data shows that added sugars consumption among some populations, especially children and young adults, is even higher. Based on food intakes in the U.S. population from 2007 to 2010, the usual median intake of added sugars exceeded 15 percent of calories and 300 calories for males 4 to 50 years old. For males 14 to 18 years old, the usual median intake was 22.2 teaspoons per day and 492.3 calories per day. The usual median intake of added sugars for males 19 to 30 years was 21.2 teaspoons per day and 454.6 calories per day. Consumption is also high in females. The usual median intake exceeds 15 teaspoons and 300 calories per day in females aged 9 through 30 years (Ref. 97). At the highest calorie level of 3,200 calories per day in the USDA Food Patterns described in the 2015 DGAC Report, the empty calorie limit available for added sugars is 275 calories (Ref. 98). This means that the median usual intake for most age groups based on 2007 to 2010 intake data exceeds the highest empty calorie limits available for added sugars in the USDA Food Intake Patterns. This information shows that added sugars intake in the U.S. population continues to be excessive. Knowing the amount of added sugars in the foods that we eat may help Americans limit their intake of calories from added sugars and reduce their overall consumption of calories.

(B) Comments on Whether an Added Sugars Declaration Is Necessary To Assist Consumers in Limiting Their Added Sugars Consumption

(Comment 161) Many comments supported mandatory declaration of added sugars on the label because the information is necessary to assist consumers in limiting their intake of added sugars. The comments argued that consumers have no way of knowing the quantity of added sugars in a product unless they are listed on the label, and such a declaration would help consumers avoid the consumption of too much added sugars. The comments stated that, in reading ingredient labels, consumers may not know all forms of added sugars that can be in a food, such as concentrated fruit juice, and they may not understand that ingredients are listed in order of predominance. One comment noted that, for many programs across the country in schools and other institutions, the preexisting label makes it difficult for those developing program guidelines to follow the DGA's recommendations and limit the amount of added sugars in provided foods. To date, limiting total sugars has been the only option, which results in complex standards with detailed exemptions for foods with naturally occurring sugars, such as fruit and dairy.

In contrast, many other comments opposed to the mandatory declaration of added sugars on the label argued that a label declaration of the amount of added sugars is not necessary because it does not convey information that consumers cannot already obtain from total sugars and calorie declarations or from the ingredient list. One comment said that we are already addressing how to help consumers maintain appropriate caloric

balance through increasing the prominence of calories on the Nutrition Facts label, and the DGAs are already providing consumers with recommended food choices to increase consumption of nutrient dense foods. Other comments stated that we did not show how an added sugars declaration would provide consumers with any additional information to help consumers maintain healthy dietary practices or enhance the information that the Nutrition Facts label already provides, and therefore, the added sugars declaration fails to assist consumers in maintaining healthy dietary practices. One comment suggested that an added sugars declaration will not help consumers select a nutrient-dense diet because information on total calories and nutrient content already allows for the identification of other nutrient-dense foods. Other comments noted that foods that are major sources of added sugars are products for which all or virtually all sugar is added and the current sugars declaration already reflects the amount of added sugars.

(Response) The calorie declaration, the total sugars declaration, and the ingredient list do not provide the consumer with the amount of added sugars in a serving of a product. An added sugars declaration is necessary to provide consumers with a measure to assess the relative contribution of the added sugars from a serving of food as part of a healthy dietary pattern and enable consumers to avoid a dietary pattern containing excess calories from added sugars. In some foods that are high in added sugars, such as sugar-sweetened beverages, virtually all sugars in the products are added sugars. In these types of foods, it would be possible for the consumer to determine the amount of added sugars in the product by looking at the (total) sugars declaration. However, many other foods contain a mixture of naturally occurring and added sugars. Based on information that is currently declared on the label, the consumer is unable to determine what portion of the total sugars declaration is naturally occurring and what portion of the total sugars declaration is added sugars. Small amounts of added sugars found in many different foods and ingredients can add up throughout the day and can contribute empty calories in the diet at levels that exceed what would otherwise be reasonable within recommended calorie limits. Therefore, an added sugars declaration allows consumers to better compare products and assess whether a particular product fits into a healthy diet. Furthermore, the calorie declaration reflects calories from all macronutrients, and the total sugars declaration would only be a reflection of the amount of added sugars in a product if all of the sugars are added rather than naturally occurring.

Consumers would not be able to determine the relative amount of added sugars in a serving of a product from the ingredient list for several reasons. There are many different types and forms of sugar that may be added to a food during processing and preparation. Consumers also may not recognize the names of some types of sugars to be a sugar (*e.g.* trehelose). Finally, consumers may also not know that the ingredients are listed in order of predominance by weight, and no quantitative information is provided in the ingredient list.

Although the DGA already provides information on recommended food choices to increase consumption of nutrient dense foods, the DGA does not provide the amount of added sugars in a serving of food that nutritional labeling provides. While some added sugars can be part of a healthy dietary pattern, without a label declaration for added sugars, consumers will not have the information they need to limit added sugars to less than 10 percent of calories. Information about the amount of added sugars in a serving of food and how to put that amount of added sugars into the context of the total daily diet can further assist consumers in reducing their intake of calories from added sugars.

With respect to the comments that suggested we did not show how added sugars would provide consumers with any additional information to help them maintain healthy dietary practices or enhance what the Nutrition Facts label already provides, we are not required to show that consumers will use new information on the label to change their behaviors or dietary practices before requiring the declaration of information on the label. Furthermore, our consumer research shows that without an added sugars declaration, consumers are unable to determine the amount of added sugars in a serving of a product (Ref. 14). Further, the current label provides only information on total carbohydrates and total sugars. A declaration of added sugars on the label would provide the needed information about the added sugars content of a food.

A declaration of the amount of added sugars in a serving of a product will provide more specific quantitative information about the amount of all added sugars found in a serving of a product that is not currently available on the label. We anticipate that providing a declaration of the amount of added sugars in a serving of a product would assist government programs, schools, and other institutions in limiting the amount of added sugars in foods they provide.

(Comment 162) Some comments suggested that added sugars should be declared on the label because this is information that consumers have the right to know.

(Response) While we appreciate consumers' interests, the statutory framework for the declaration of a nutrient under section 403(q)(2) of the FD&C Act is whether the declaration will provide information that will assist consumers in maintaining healthy dietary practices, not whether consumers want access to the information. Furthermore, consumer interest or demand alone does not constitute a material fact under section 201(n) of the FD&C Act and is not a sufficient basis upon which we can require additional labeling for foods (see, *e.g., Stauber* v. *Shalala,* 895 F. Supp. 1178, 1193 (W.D. Wisc. 1995) and *Alliance for BioIntegrity* v. *Shalala,* 116 F. Supp. 2d 166, 179 (D.D.C. 2000)).

Although consumer interest alone is not sufficient to require mandatory labeling, we have discussed in part II.C that the amount of added sugars in a serving of food is a declaration that meets the statutory framework in section 403(q)(2) of the FD&C Act and, furthermore, it is a material fact because added sugars is a public health concern and knowing the amount of added sugars in a serving of food will assist consumers in maintaining healthy dietary practices.

(Comment 163) In our Preliminary Regulatory Impact Analysis (PRIA), we extrapolated from the welfare effects estimated in a retrospective study on the impact of the Nutrition Labeling and Education Act of 1990 (Ref. 99) to quantify benefits of the proposed rule. Some comments suggested that it was inappropriate for us to rely on a paper written by a graduate student, which was not peer-reviewed, as the basis for our proposal to require the mandatory declaration of added sugars. Another comment argued that we provided no basis to require the mandatory declaration of added sugars on the label other than the Abaluck paper.

(Response) We note that we did not rely on the information provided in the Abaluck paper as the basis for our proposal to require the mandatory declaration of added sugars on the label. The information in the Abaluck paper was used to estimate economic benefits

of our proposal for the PRIA. We are relying on information related to overconsumption of added sugars, the reduction of the nutrient density of the diet when substantial amounts of added sugars are present, evidence showing the consumption of sugar-sweetened beverages is associated with increased body weight and adiposity, and evidence showing that consumption of health dietary patterns characterized, in part, by lower consumption of sugar-sweetened foods and beverages is associated with a decreased risk of CVD.

(Comment 164) One comment noted that the FD&C Act only gives us the authority to add nutrients to the Nutrition Facts label to help consumers maintain healthy dietary practices, but our definition of ''healthy'' excludes any consideration of sugars content.

(Response) The comment is referring to our regulation for implied nutrient content claims (§ 101.65). Section 101.65(d)(1)(ii)(2) provides requirements for the use of the term ''healthy'' or related terms on the label or in the labeling of foods. The regulation requires that a food must meet requirements for fat, saturated fat, cholesterol, and other nutrients, but does not include limitations on the amount of total or added sugars that a food may have if it bears an implied ''healthy'' nutrient content claim. Our authority in section 403(r) of the FD&C Act to define a term, by regulation, to characterize the level of a nutrient in the label or labeling is distinct from our authority in section 403(q) of the FD&C Act to require the declaration of a nutrient in nutrition labeling. As previously discussed in part II.B.4, we intend to revisit our other regulations for nutrient content claims at a later date to determine if changes are necessary.

(Comment 165) One comment said that sources of sugar contribute the same number of calories per gram weight of food, and calories should be the principal nutrient of concern of a population striving to achieve desired weight and control obesity. The comment suggested that giving consumers a false impression that reducing added sugars without reducing calories may actually delay finding a real solution to the problem.

(Response) We have increased the prominence of calories on the label because of its importance for consumers to consider for the purposes of weight management. We are not suggesting that consumers should ignore or consider information about the amount of calories in a serving of a food to be secondary to the amount of added sugars in a serving of food. Instead, we are requiring the declaration of added sugars on the label to provide one additional piece of information to consumers to assist them in selecting foods that contribute to a healthy dietary pattern. Therefore, we do not agree that an added sugars declaration is unnecessary because the total amount of calories in a serving of a food is already displayed on the label.

(Comment 166) One comment stated that by mandating declaration of both total sugars and added sugars, we are creating an arbitrary distinction between two types of sugars which will not lead to any nutritional differences for consumers.

(Response) We do not agree with the comment that the distinction between total and added sugars is arbitrary and will not lead to any nutritional differences in the foods that consumers select. The addition of added sugars to foods provides additional calories which can make it difficult for consumers to meet nutrient needs within calorie limits and can lead to issues with weight management. Sugars, added in excess, do not provide any health benefits. In addition, foods high in added sugars tend to be lower in beneficial nutrients. By providing a declaration of added sugars on the label, consumers will have additional information about a product that can assist them in determining how much sugars have been added to a food. Moreover, the intake of added sugars from sugar-sweetened foods and beverages needs to be reduced as part of a healthy dietary pattern. A healthy dietary pattern, when compared to less healthy dietary patterns, such as the dietary pattern of the current U.S. general population, is strongly associated with a reduced risk of CVD. The intake of foods with naturally occurring sugars, such as fresh fruits and vegetables, is encouraged as part of a healthy dietary pattern and not recommended to be reduced.

(C) Comments on a Lack of a Chemical or Physiological Distinction Between Naturally Occurring and Added Sugars

(Comment 167) In the preamble to the proposed rule (79 FR 11879 at 11905), we recognized a lack of a chemical or physiological distinction between added and naturally occurring sugars. Many comments agreed that naturally occurring and added sugars are the same and argued that, because there is no chemical or physiological distinction, we should not require the mandatory labeling of added sugars. One comment cited a paper by Murphy and Johnson (2003) that discusses added sugars in the context of the 2000 DGA and suggested that it would be challenging to require a declaration of added sugars on the label because they are not chemically or physiologically distinct from naturally occurring sugars (Ref. 100).

However, other comments suggested that there is evidence that not all sugars are chemically the same. The comments suggested that different sugars are metabolized differently in the body. One comment stated that naturally occurring sugars have more nutritional value than those added to foods. Another comment stated that sugars that are found naturally in foods are consumed in combination with all other ingredients and nutrients in that food and that the body reacts to inherent sugars in such combinations. The comment noted that emerging studies suggest that inherent sugars in combination with plant nutrients, for example, behave differently in the body than added sugars without such accompanying nutrients. These comments indicated that it is important for consumers to know how much added sugars are in their products because they are inherently different from naturally occurring sugars.

(Response) A physiological or chemical distinction between added and naturally occurring sugars is not a prerequisite to mandatory declaration under section 403(q)(2)(A) of the FD&C Act. We explained in the preamble to the proposed rule that our scientific basis for the added sugars declaration, in fact, differed from our rationale to support other mandatory nutrients related to the intake of a nutrient and risk of chronic disease, a health-related condition, or a physiological endpoint (see 79 FR 11879 at 11904). Rather than relying on a causal relationship between added sugars to obesity or heart disease, we considered, in the preamble to the proposed rule (79 FR 11879 at 11902 through 11908) and the preamble to the supplemental proposed rule (80 FR 44303 at 44307 through 44309), the contribution of added sugars as part of healthy dietary patterns and the impact to public health from such patterns for the purposes of the general population. Thus, the comments did not focus on added sugars as a component of sugar-sweetened foods and beverages that have been found to have health implications as part of a dietary pattern, or as a nutrient that provides a source of empty calories consumed by the U.S. population in excess, which make it difficult for consumers to meet nutrient needs within calorie limits. Providing consumers with information about the amount of added sugars in a serving of a product will assist consumers in

planning a healthy diet. We have concluded that the consumption of added sugars is related to health for a number of reasons, and consumers will benefit from information about the added sugars content of a food on the label.

(Comment 168) Many comments did not support an added sugars declaration because added sugars are not chemically or physiologically distinct from naturally occurring sugars, and a separate declaration of added sugars implies that there is a distinction. The comments suggested that an added sugars declaration would arguably be false and misleading because it would convey to the reasonable consumer that added sugars are chemically different than naturally occurring sugars and/or that added sugars has different health effects than naturally occurring sugars. One comment further asserted that implying superiority of one source of a nutrient versus another, when they are not materially different and are chemically, nutritionally, and functionally equivalent, is inherently misleading. Another comment suggested that a separate declaration for added sugars could cause consumers to believe that naturally occurring sugars are more beneficial.

(Response) As we explained in our response to comment 167, a physiological or chemical distinction between added and naturally occurring sugars is not a prerequisite to mandatory declaration under section 403(q)(2)(A) of the FD&C Act. In fact, some nutrients currently declared on separate lines in the Nutrition Facts label may be related to the same chronic disease risk or physiological endpoint (*e.g.,* saturated fat and *trans* fat and risk of CVD). Therefore, we disagree that a separate declaration necessarily implies a chemical or physiological distinction. Furthermore, the comments may not have considered the basis for why the declaration of added sugars is necessary to assist consumers in maintaining healthy dietary practices. A dietary pattern characterized, in part, by larger amounts of sugar-sweetened foods and beverages is associated with greater risk of CVD than a healthy dietary pattern that includes less sugar-sweetened foods and beverages. Moreover, added sugars provide excess calories in the U.S. diet (see our responses to comment 29 and comment 177), and these additional empty calories make it difficult for consumers to meet nutrient needs within their calorie limits and can lead to issues with weight management. Therefore, the intake of added sugars in the current U.S. dietary pattern is a public health concern. The declaration of added sugars provides factual, accurate information about the amount of added sugars in a serving of food, and we are requiring the declaration consistent with our authority in section 403(q) of the FD&C Act. The added sugars declaration is not inherently misleading as the comments suggest, as is addressed further in part II.C.3.

(Comment 169) Some comments suggested that we are being inconsistent in our treatment of the evidence for nutrients because we are considering whether certain dietary fibers have a beneficial physiological effect, but we are not considering whether added sugars have a separate and distinct physiological effect in our determination that added sugars should be declared on the label.

(Response) In the case of dietary fiber, we are requiring that a dietary fiber have a beneficial physiological effect to human health for the purposes of declaration because there are dietary fibers currently present in foods that are being declared on the label indicating to consumers that they have the same beneficial physiological effects to human health as other fibers, when in fact, they do not. We previously have discussed in this section that added sugars, independent of sugars naturally present in foods, can have a negative impact on health. A decision to not require a separate declaration of added sugars on the label would not allow consumers to determine the additional sugars which have been added above and beyond what is naturally present in a food which are contributing extra calories to their diet and could also contribute to a dietary pattern that is associated with disease risk.

(Comment 170) One comment stated that the Nutrition Facts label must remain a source of information about nutrients that are chemically distinct based on analysis. The comment asserted that we have not provided a reasonable basis for defining added sugars based on source rather than chemical composition.

(Response) We disagree with the comment that a chemical distinction must be a requirement for declaration of a nutrient on the label. Section 403(q)(2)(A) of the FD&C Act provides discretion to the Secretary, and by delegation, to FDA, to determine whether providing nutrition information regarding a nutrient will assist consumers in maintaining healthy dietary practices and when to require information relating to such additional nutrient be included in the label or labeling of the food. This section does not include limitations on chemical distinctions.

(D) Comments Questioning our Reliance on Conclusions and Information From the 2010 DGA and the 2015 DGAC

(Comment 171) Many comments questioned our reliance on conclusions and information in the 2010 DGAC Report and 2010 DGA. One comment asserted that it is a gross expansion of the law governing the DGA to use selective dietary guidance from a single edition to promulgate food labeling regulations. Some comments suggested that the evidence cited by the 2010 DGAC and 2010 DGA was not strong enough to support a declaration of added sugars. One comment stated that neither the 2010 DGA nor the 2010 DGAC Report provided a preponderance of scientific information or conclusive, documented, or strong scientific evidence to support these suppositions. The comments asserted that we did not address the strength of the evidence that the 2010 DGAC reviewed as the basis for their recommendations. One comment also noted that the 2010 DGAC addressed few or limited questions related to impact of added sugars on health due to lack of available evidence. The comment stated that what evidence there was at the time that the 2015 DGAC Report was published was not conclusive.

(Response) We note that we did not specifically rely on conclusions or recommendations made by the 2010 DGAC Report or in the 2010 DGA. We considered the information and underlying data presented in the 2010 DGAC Report and 2010 DGA that was used as the basis for their conclusions and recommendations and determined that, for the purposes of nutrition labeling, the evidence in the 2010 DGAC and 2010 DGA, along with other data and information we considered, supports the declaration of added sugars on the Nutrition and Supplement Facts labels (79 FR 11879 at 11902 through 11908). The DGAs have recommended that Americans reduce their intake of what we are defining to be added sugars since the early 1980s, so the recommendation to limit consumption of added sugars is not new. Since publication of the 2010 DGA and 2010 DGAC Report, new evidence has become available on added sugars and dietary patterns that we have considered. We have determined that this evidence further supports a declaration of added sugars on the label.

The comment suggesting that the evidence on added sugars is not conclusive, documented, or strong is referring to the factors that we considered for mandatory declaration of nutrients on the label for which there is

an independent relationship between the nutrient and chronic risk of disease. Our determination that added sugars should be declared on the label for the general population (see part II.H.3) was not based on the factors used to determine mandatory or voluntary declaration for these other non-statutory nutrients that have an independent relationship related to a chronic disease, a health-related condition, or health-related physiological endpoint. Instead, our review is based on the need for the declaration of nutrient information on the labels to assist consumers in limiting their consumption of calories from added sugars found in sugar-sweetened foods and beverages and consuming a healthy dietary pattern that is associated with a reduce risk of CVD.

(Comment 172) Many comments took issue with the 2010 DGA's use of food pattern modeling to support the recommendation to reduce the intake of calories from added sugars. One comment stated that the amount of solid fats and added sugars in the USDA food patterns is the outcome of using the remaining calories in that pattern rather than the evidence-based research. Other comments said that the USDA Food Patterns lack the scientific underpinning on which to base official recommendations.

Some comments said that the same issues that prevent FDA from using food consumption data, menu modeling, and dietary survey data to determine DRVs are also applicable when considering the mandatory declaration of non-statutory nutrients. One comment noted that we have concluded that menu modeling is not related to disease risk and is not suitable for determining recommended intakes.

Some comments also noted that the 2010 DGA clearly states that the USDA Food Patterns are only one example of suggested eating patterns and that the USDA Food Patterns have not been specifically tested for health benefits. Another comment said that the extremely low suggested intakes of 6 to 12 teaspoons of added sugars in the USDA Food Patterns have no historical basis and lack context.

(Response) We disagree with comments that questioned the use of evidence based on food pattern modeling to support the added sugars declaration so that consumers can use the information to reduce calories from solid fats and added sugars. While the food pattern modeling used to create the USDA Food Patterns was used to compare current consumption data with recommended intakes from the USDA Food Patterns, the 2010 DGA also considered information about the impact of added sugars on nutrient density and on their implications for weight management (Ref. 77). Furthermore, the fact that the USDA food patterns were not studied for health effects until recently, does not lessen our reliance on the information as part of our basis for a mandatory declaration of added sugars. Since publication of the proposed rule, the USDA Food Patterns have been studied for their association with disease risk (Ref. 101). We also have evidence that dietary patterns characterized, in part, by lower intakes of sugar-sweetened foods and beverages are associated with a reduced risk of CVD that further supports a mandatory declaration of added sugars on the label for the general U.S. population. It is not clear what is meant by the comment which stated that the extremely low suggested intakes of 6 to 12 teaspoons of added sugars in the USDA Food Patterns have no historical basis and lack context. To the extent the comment disagrees with the suggested intakes of 6–12 teaspoons of added sugars, we note that there is evidence showing that Americans are consuming too many calories from added sugars as well as evidence that it is difficult to meet nutrient needs within calorie limits when excessive amounts of added sugars are consumed.

(Comment 173) In the preamble to the proposed rule (79 FR 11879 at 11890), we discussed the factors that we considered for mandatory and voluntary declaration of non-statutory nutrients. We considered the scientific evidence from other U.S. consensus reports or DGA policy reports (79 FR 11879 at 11890). We also listed the DGA policy reports among other reports that we would consider to be U.S. consensus reports.

One comment questioned whether the DGA is a consensus report because it is a report that is issued jointly every 5 years by the USDA and HHS. The comment said that the DGAC Report is an advisory report, and the Secretaries of USDA and HHS have sole responsibility and discretion as to the final content of the DGA. The comment also noted that the DGAC Report does not undergo independent external review.

(Response) In the preamble to the proposed rule (79 FR 11879 at 11885 through 11887), we listed new dietary recommendations, consensus reports, and national survey data as sources of information that we considered when developing the proposed amendments to the regulations. Furthermore, our review of the scientific evidence in the 2010 DGA relates to the intake of added sugars and the role of such information in assisting consumers to maintain healthy dietary practices and the need for consumers to be able to readily observe and comprehend the information and to understand its relative significance in the context of a total daily diet (79 FR 11879 at 11891). Therefore, whether the 2015 DGAC Report is or is not a consensus report is not relevant for the added sugars declaration. Furthermore, we considered the underlying evidence related to added sugars that supported the recommendation to limit consumption of calories from solid fats and added sugars and did propose to require a declaration of the amount of added sugars in a serving of a product on the label because of the 2010 DGA recommendation related to calories from solid fats and added sugars. We considered the evidence in the 2010 DGAC Report and 2010 DGA, along with other data and information in the proposed rule to support a declaration of added sugars on the Nutrition Facts and Supplement Facts labels (79 FR 11879 at 11902 through 11908).

(Comment 174) One comment said that the proposed rule incorrectly assumes that reduced consumption of added sugars will reduce the problem of obesity, but noted that we acknowledged in the proposed rule that solid fats and added sugars do not contribute to weight gain any more than another source of calories.

(Response) We have not changed our position with regard to the effect of calories from solid fats and added sugars on weight gain. However, as noted in the 2010 and 2015–2020 DGAs, consumption of excess solid fats and added sugars make it difficult to meet nutrient needs within calorie limits (Refs. 28, 30). Because sugars added to foods during processing increase the calorie content of the food without increasing other nutrients in the food, added sugars as an ingredient could conceivably lead to weight gain if a consumer striving to meet their nutrient needs does so by consuming foods containing too many added sugars. Further, we stated in the proposed rule that we know that foods containing solid fats and added sugars make up a significant percentage of the American diet and are a source of excess calories (79 FR 11879 at 11904).

(Comment 175) Some comments said that we are not being consistent with the dietary recommendations we use for requiring nutrients on the label because the 2010 DGA also recommended replacing saturated fats with mono and polyunsaturated fats, yet the labeling of mono and polyunsaturated fats is voluntary on the label.

(Response) We do not rely on the 2010 DGA recommendation to reduce calories from solid fats and added sugars. Instead, we examined the underlying evidence and concluded that added sugars should be declared on the label. Furthermore, the 2010 DGA recommendations related to mono and polyunsaturated fats are about replacing saturated fats with the mono and polyunsaturated fats, because reduction of saturated fats is associated with reductions in blood LDL cholesterol and, therefore, the risk of CVD. The 2015 DGA corroborates this finding. Saturated fats are already declared on the label, so consumers have the information they need to reduce their intake of saturated fat. In addition, current evidence does not show that there is an inherent benefit to consumption of mono and polyunsaturated fats by themselves. The benefit comes from reduction of saturated fats in the diets by way of replacement. Furthermore, the scientific evidence supports consuming a healthy dietary pattern that is low in saturated fats. A healthy eating pattern limits saturated fats, and the scientific evidence supports consumption of added sugars to to less than 10 percent of calories per day from saturated fats (Ref. 19). Therefore, Americans currently have the information on the label which will allow them to limit saturated fats in their diet.

d. Nutrient Density

(Comment 176) Many comments suggested that including a declaration of the amount of added sugars in a serving of a product can help consumers select foods that contribute to a more nutrient-dense diet. The comments noted that the 2010 DGA suggested that reduced intake of added sugars allows for increased intake of nutrient-dense foods which may help individuals to control their total caloric intake and better manage their weight. The comments also said that sugars intrinsic to foods are accompanied by nutrients, whereas added sugars are not. The comments referred to the discussion in the proposed rule related to intake of added sugars and its association with a lower intake of essential nutrients (79 FR 11879 at 11903) and suggested that most major sources of added sugars are high in calories and fats, but lack meaningful amounts of dietary fiber, essential vitamins or minerals. The comments said that, when added sugars intake is 10 to 15 percent of calories, the median intakes of nine nutrients (vitamin A, vitamin E, vitamin C, folate, magnesium, potassium, vitamin K, fiber, and total choline) are significantly lower than the median intakes of those nutrients for someone consuming 0 to 5 percent of their calories from added sugars (Ref. 102). Another comment noted that IOM recommends that the intake of added sugars not exceed 25 percent of energy to ensure adequate intake of essential micronutrients that are typically not present in foods high in added sugars (Ref. 75). One comment said that consumers who eat less added sugars consume fewer calories and more foods rich in essential nutrients.

In contrast, many comments said that a declaration of added sugars on the label will not assist consumers in constructing a more nutrient dense diet. The comments said that there is a lack of science to support the contention that added sugars intake displaces nutrients or causes a decrease in the intake of nutrient-rich foods in the diet of the general population, at current intake levels. One comment cited the 2010 DGA conclusion that added sugars replace nutrient-dense foods and beverages and make it difficult for people to achieve the recommended nutrient intake while controlling their calorie intake, but noted that no evidence-based review was conducted on this topic, and no conclusive, documented, or strong evidence was cited to support that added sugars intake causes nutrient displacement, or decreased consumption of nutrient-rich foods. Another comment noted that although a recent analysis of NHANES data (Ref. 102) reaffirmed the conclusion of the 2002 IOM report (Ref. 75), individuals with intakes of greater than 25 percent of calories from added sugars appear to be at greater risk for nutrient inadequacy based on comparison with the DRIs. The comment said that the authors of the study also clarify the real-world impact from these higher intake amounts, and stated ''However, high levels of added sugars intake occur among only a small proportion of the population and cannot explain the existing problem of poor nutrient intake in the U.S. population as a whole.''

(Response) We agree that a declaration of the amount of added sugars can assist consumers in selecting foods that contribute to a more nutrient dense diet. The IOM did not establish a UL for sugars or added sugars, however they did conclude that increased consumption of added sugars can result in decreased intakes of certain micronutrients based on their review of the evidence available at the time that the IOM Dietary Reference Intakes for energy, carbohydrate, fiber, fat, fatty acids, cholesterol, protein, and amino acids were published (Ref. 103). As noted in comments, additional evidence has become available since the IOM DRI reports were published, which supports their conclusion (Ref. 102). Therefore, although the 2010 DGAC did not conduct an evidence-based review on this topic, there is documented evidence that increased consumption of added sugars can make it difficult for individuals to meet nutrient needs.

We disagree with the suggestion added sugars consumption is not contributing to poor nutrient intake in the U.S. population as a whole and thus should not be required on the label because only a small proportion of the population is consuming large amounts of added sugars. The 2015 DGAC found that the general U.S. population is consuming 13.4 percent of its calories from added sugars. As the comments noted, Marriott et al. found that median nutrient intakes were lower when added sugars intake was 10 to 15 percent of calories (Ref. 102). Therefore, even at intake levels below 25 percent of calories, nutrient intake can be negatively impacted by increased consumption of added sugars. Furthermore, based on NHANES data from 2007 to 2010, males aged 9 to 50 are consuming more than 300 calories per day from added sugars, and females aged 9 to 30 are consuming more than 250 calories per day from added sugars (Ref. 104). Males between the ages of 14 to 18 years old consumed almost 400 calories per day from added sugars (Ref. 104). Although these subpopulations may not make up a majority of the population, these groups include children and young adults who are growing and need nutrients for proper growth. Therefore, the impact of added sugars consumption on nutrient density in these specific populations is an important consideration for the declaration of added sugars.

As for the comment which said that consumers who eat less added sugars consume fewer calories and more foods rich in essential nutrients, the comment did not provide evidence to support this statement. Therefore, we are unable to determine if this information adds to other evidence we have, which suggests that added sugars can decrease the nutrient density of the diet.

(Comment 177) Many comments suggested that the added sugars declaration does not assist consumers in constructing a nutrient dense diet because there are nutrient dense foods which contain added sugars, and the declaration may obscure the fact that some foods with added sugars may actually be good sources of beneficial nutrients. One comment argued that the added sugars declaration does not meet

the proposed rule's stated goal to convey information necessary to meet recommendations to construct diets containing nutrient-dense foods because the declaration does not provide consumers with any means to differentiate between foods that will contribute phytonutrients to their diet from foods with empty calories. The comments provided examples of nutrient-dense foods, such as yogurt, cranberries, tart cherries, and cereal, which contain added sugars.

Some comments from the cranberry industry asked that we make an exception to added sugars labeling for cranberries, which require sweetening for palatability. The comments noted that cranberries are a nutrient-dense fruit with many known health benefits. Unlike other fruits, cranberries have little natural sugar and, therefore, have a uniquely tart taste. The comments expressed concern that cranberry products would be considered ''unhealthy'' based solely on their added sugars content. The comments said that the evidence shows that cranberries are rich in polyphenols, specifically flavonoids, and have a positive impact on urinary health. The comments also cited evidence that the addition of sugar to cranberry products does not decrease the polyphenol content. Furthermore, according to the comments, the calorie content of each serving of dried cranberries is similar to that of other dried fruits, and cranberry juice cocktail (27 percent juice) is the standard equivalent to other 100 percent juices with similar total calorie and sugar levels. The comments also noted that they contribute to recommended fruit intake amounts in the DGA.

The comments said that requiring the declaration of added sugars on cranberry products may mislead consumers to believe that nutrient-dense foods, such as cranberries, with their proven health benefits, are somehow less nutritious than foods with the same amount of naturally occurring sugar, or even those with more total sugars. The comments expressed concern that a focus on added sugars may have the unintended consequence of driving consumers away from nutrient dense products with moderate amounts of sugar.

Many comments said that a mandatory declaration of added sugars could be damaging for the cranberry industry or for the tart cherry industry. One comment noted that the drying operation used by the tart cherry industry reduces the moisture content while simultaneously increasing the percentage of sugar. The use of sugar as a natural preservative combats the threat of mold and yeast contamination.

Several comments noted that USDA grants an exemption, which is similar to that which the comments requested for the labeling of added sugars on cranberry products, for cranberry products offered for sale in our nation's schools. One comment noted that the IOM, in its report titled ''Nutrition Standards for Foods in Schools: Leading the Way Toward Healthier Youth,'' made recommendations for nutrition standards for competitive foods offered in schools, and has made an exception for yogurt from its recommended general sugar standard of 35 percent or less of calories from total sugars.

One comment suggested that the added sugars declaration will not help consumers select foods that contribute to a nutrient dense diet because information on total calories and nutrient content (*e.g.* fiber plus vitamins and minerals) already allows for the identification of nutrient-dense foods.

(Response) Consumers now have access to nutrient information provided on the nutrition label that they can use to plan a nutrient dense diet. We have required those nutrients that are of the greatest public health significance be declared in nutrition labeling (58 FR 2079, 2107). An added sugars declaration is an important piece of information because consumers need to ensure their diet does not contain excess calories from added sugars which can make it difficult for consumers to meet nutrient needs within calorie limits and can lead to issues with weight management.

As mentioned in the 2010 DGA, many foods that contain added sugars often supply calories, but few or no essential nutrients, and no dietary fiber (Ref. 77). However, there are some foods, such as dried fruits, yogurt, and cereal, that contain significant amounts of beneficial nutrients as well as added sugars. The declaration of added sugars will enable consumers to understand the relative significance of the added sugars content in a serving of dried fruit, yogurt, cereal, and other foods that may contribute beneficial nutrients to the diet and determine how to incorporate those foods into a healthy dietary pattern and meet their nutrient needs within calorie limits. As discussed in the 2015 DGAC report, there is room for Americans to include limited amounts of added sugars in their eating patterns, including to improve the palatability of some nutrient-dense foods, such as fruits and vegetables that are naturally tart (*e.g.* cranberries and rhubarb). Healthy eating patterns can also accommodate other nutrient dense foods with small amounts of added sugars, such as whole-grain breakfast cereals or fat-free yogurt, as long as the calories from added sugars do not exceed 10 percent per day, total carbohydrate intake remains within the AMDR, and total calorie intake remains within limits (Ref. 19).

The added sugars declaration is just one piece of information that consumers can use to help them construct a healthful dietary pattern that may include some added sugars. We acknowledge that some consumers may focus in on the amount of added sugars in a product and may judge it to be a less nutritious product even though it contains beneficial nutrients. The added sugars declaration on the label is new information that consumers will not have seen before. In collaboration with Federal and other partners, we plan to engage in educational and outreach activities for consumers and health professionals about the use of information on the Nutrition Facts and Supplement Facts labels. Part of that education will include information about added sugars. A key message related to added sugars will be that consumers should consider all of the information on the label when constructing a healthful dietary pattern and not focus in on one specific nutrient, such as added sugars. The message related to consumption of added sugars is not to eliminate added sugars or foods high in added sugars from the diet; instead, the message is to limit overall consumption of added sugars in the diet to less than 10 percent of total calorie intake. Therefore, if consumers choose to eat foods with sugars added to them for palatability, such as cranberries, they may do so in moderation, and cut back on added sugars elsewhere in the diet.

We decline to exempt certain nutrient dense foods containing added sugars from the requirement to declare the amount of added sugars in a serving of a product on the label. If such products are exempt from added sugars labeling, consumers may assume incorrectly that they contain no added sugars. Providing added sugars information on the label for all foods allows consumers to compare foods and make informed choices. It allows them to also make trade-offs in their diet to achieve an overall healthy dietary pattern that contains less than 10 percent of total calories from added sugars. As part of our education and outreach activities, we plan to educate consumers that the amount of added sugars in a serving of a product should be considered along with other information on the label

when constructing a healthy dietary pattern.

While other government programs and consensus bodies have excluded cranberries and yogurt from their programs or recommended limits on sugars, the purpose of those programs and reports are different than the purpose of the information on the Nutrition and Supplement Facts labels. The purpose of the Nutrition and Supplement Facts labels is to provide nutrition information to consumers to allow them to make informed choices about the foods that they eat. Therefore, although some nutrient-dense foods containing added sugars have been excluded from government programs or recommendations, the same approach does not apply to the Nutrition and Supplement Facts labels.

With regard to the comment that said that the drying operation used by the tart cherry industry reduces the moisture content while simultaneously increasing the percentage of sugar, we would not consider sugars that naturally exist in the tart cherries prior to the drying process to be added sugars. Only sugars that have been added to the fruit would be required to be declared as added sugars on the label.

e. Reformulation

(Comment 178) While some comments said that an added sugars declaration will be an incentive for food manufacturers to reformulate, other comments said that reformulation of products to reduce the added sugars content may not result in products that are healthier. Some comments said that an added sugars declaration may lead to reformulation or changes in consumer behavior that would not improve overall nutritional profile or nutrient density of the diet and may result in overconsumption of other macronutrient sources (*e.g.* fat) without a reduction of calories. The comments said that added sugars could be replaced with bulking agents, which provide calories and carbohydrate. Another comment said that reformulation of products containing added sugars could result in an increased use of artificial sweeteners (*i.e.* low calorie sweeteners), which could be bad for health. Other comments noted that consumers have many food and beverage choices that are reduced in total and added sugars.

(Response) Absent data, we do not know whether manufacturers will reformulate their products if we require the declaration of added sugars on the label. Likewise, absent data, we do not know whether consumers will select reformulated products that may be higher in fat, calories, or low-calorie sweeteners. In our efforts to educate consumers and health professionals about the use of the label, we intend to encourage consumers to consider all of the information on the label when making decisions about what foods to eat and how much rather than focusing on one specific nutrient, such as added sugars. If consumers take all label information into consideration when making dietary choices, they will recognize when a product is low in added sugars, but still contains a significant amount of calories and carbohydrate or fat per serving. They can also see if low-calorie sweeteners have been added to a product by looking at the ingredient list.

With respect to the comment which suggested that low-calorie sweeteners may be harmful to health, as noted in our Overview of Food Ingredients, Additives & Colors, there is no convincing evidence of a cause and effect relationship between these sweeteners and negative health effects in humans. We have monitored consumer complaints of possible adverse reactions for more than 15 years (Ref. 105).

(Comment 179) One comment asked what studies we used to suggest that declaring added sugars on the label will result in firms reducing the amount of added sugars in products and result in an overall reduction of sugar consumption.

(Response) In the preamble to the proposed rule (79 FR 11879 at 11904), we said that the mandatory declaration of added sugars may prompt product reformulation of foods high in added sugars like what was seen when *trans* fat labeling was mandated. We do not know whether or how manufacturers will reformulate their foods as the result of a mandatory added sugars declaration.

f. Calories From Solid Fats and Added Sugars

(Comment 180) The 2010 DGA provided a key recommendation that Americans should reduce their intake of calories from solid fats and added sugars (SoFAS). In the preamble to the proposed rule (79 FR 11879 at 11904), we concluded that the disclosure of saturated fat and *trans* fat on the label not only provides information to consumers which can be used to reduce their intake of these nutrients, and thus reduce their risk of CVD, but the declaration of saturated and *trans* fats on the label could also provide a marker for foods that contain solid fats that are abundant in the diets of Americans and contribute significantly to excess calorie intake. We stated that similar information is not available on the label for calories from added sugars (id.).

Several comments disagreed that the declared amounts of saturated and *trans* fats can be used as markers for solid fats in the diet. The comments stated that the calculation of calories from SoFAS is not feasible based on the information that is proposed for the label, and the nature of the calculation that consumers would need to perform would not be consistent with our objectives to make the label more usable and understandable for consumers. The comments noted that it is not feasible to determine the amount of solid fats from the saturated and *trans* fat declarations alone because the label does not provide the quantity of solid fat that USDA used in its menu modeling analysis. The comments further stated that, while saturated fat and *trans* fat may be components of solid fats, those values alone cannot be used to determine the solid fat content of a food because it is not known what portion of these declarations would be identified in the menu modeling program used by USDA.

One comment said that the declaration of saturated and *trans* fat declarations are for the purposes of lowering risk of CVD and not for estimating the SoFAS content of a food. The identification of SoFAS is for the purposes of developing the USDA Food Patterns and is not a suitable approach for mandating an added sugars declaration.

Another comment suggested that the sugars declaration on the label can serve as a marker for added sugars in the same way that saturated fats serves as a marker for solid fats. The comment also suggested that saturated fats in certain foods are not solid fats (such as in nuts) in the same way that sugars in certain foods are not added sugars (such as fruit juice and milk).

(Response) We used the term ''marker'' in the preamble to the proposed rule to mean that the amount of saturated and *trans* fats on the label would give consumers a very good idea or a reasonable estimate of the quantity of solid fats in a serving of a food. Although many fat containing foods have a mixture of fats, such as nuts and oils that may contain some solid fats and some unsaturated fats, the saturated fat and *trans* fat declarations would account for these differences. In addition, even though one would need more information on how saturated fats were quantified for the development of the USDA Food Patterns to determine the exact amount of calories from solid fats, such specificity would not be needed to obtain a reasonable estimate of solid fats using the declared value of

saturated fat and *trans* fat combined. Furthermore, unlike solid fats, there is no information currently on the label that could give consumers an estimate of the amount of added sugars in a serving of food when the food contains both naturally occurring and added sugars. In such a case, the amount of total carbohydrate or total sugars in a serving of a food cannot be used as a reasonable estimate of the amount of added sugars in a serving of the food.

We disagree with the comment suggesting that the total sugars declaration can serve as a marker of added sugars in the same way that the saturated fat and *trans* fat declaration can serve as a marker for solid fat. When both naturally occurring and added sugars are present in a food, the consumer has no way of knowing from the total sugars declaration what portion of that total sugars declaration represents the amount of added sugars in a serving of the food.

Since the publication of the proposed rule, the 2015 DGAC Report became available. In that report, the solid fats and added sugars were divided within the ''empty calories'' category with 45 percent of the empty calorie allowance allocated to added sugars and 55 percent of the empty calorie allowance allocated to solid fats. Furthermore, the scientific evidence in the 2015 DGAC Report for limiting calories from added sugars is separate from that for limiting saturated fats, which are a key contributor of solid fats to the diet. There is adequate information available to consumers on the label to assist them in meeting the key recommendation to limit calories from saturated fats to less than 10 percent of total calories; however, there is no such information on the label to help consumers limit their consumption of added sugars to no more than 10 percent of total calories. Whether there is adequate information on the label to assist consumers in limiting solid fats is not related to an added sugars declaration.

(Comment 181) The comments were divided on whether calories from added sugars should be declared on the label. One comment said that, if added sugars are declared on the label, we should require the declaration of calories from added sugars. Another comment stated that concerns about the scientific evidence on the health effects of added sugars and the usefulness of a declaration to improve food choices apply to whether the declaration of added sugars is in gram units or declared as calories from added sugars. Other comments suggested that a declaration of calories from added sugars is unnecessary and not beneficial. The comments noted that the total number of calories in a serving of food is prominently displayed in the proposed format. The comments said that a declaration of calories from added sugars could cause consumer confusion, particularly for consumers who are unable to readily understand the distinction between a gram value and calories from added sugars. The comments noted that consumers are already familiar with the gram unit from the total sugars declaration. The comments said there is no evidence from consumer research that a declaration of calories from added sugars in lieu of grams would lead consumers to greater reductions in intake of added sugars.

(Response) Evidence shows that heathy dietary patterns associated with a decreased risk of chronic disease are lower in sugar-sweetened foods and beverages. Consumption of too much added sugars can impact the nutrient density of the diet, and consumption of sugar-sweetened beverages are associated with increased adiposity in children. Thus, the added sugars declaration is information that is necessary for consumers to construct a healthy dietary pattern lower in added sugars and that is less than 10 percent of calories from added sugars. The information on the label includes the gram amount of added sugars in a serving of a food product and the percent DV declaration for added sugars. There is no need for consumers to be able to determine the amount of calories from added sugars in a serving of a food because we are establishing a DV that is based on 10 percent of total calories (50 grams in children and adults 4 years of age and older and 25 grams for foods purported to be for children 1 through 3 years of age). Consumers can use the percent DV declaration to determine what percentage of total calories a serving of a food contributes. They can also use the gram declaration of added sugars to construct a diet that is low in added sugars by comparing the amount of added sugars between products and by using trade-offs in the diet if they choose to include certain foods which have a large amount of added sugars.

g. Consumer Research and Consumer Use of Added Sugars Declaration

(Comment 182) One comment said that research does not substantiate a causal effect between including added sugars information on the Nutrition Facts label and decreased added sugars intake. The comment cited a study in which data from the 1994–96 Continuing Survey of Food Intakes by Individuals (CSFII) was used to model total consumption of added sugars and the Diet and Health Knowledge Survey conducted by the USDA was used to determine usage of labeling information on total sugars (Ref. 106).

(Response) Although the results of the study showed that regular use of sugar information on nutrition labels is associated with a significantly lower density of added sugar in the diet, the results of this study cannot be used to determine whether there is a causal effect between including added sugars information on the Nutrition Facts label and decreased added sugars intake. The study did not assess use of labeling information on added sugars, but rather use of information on total sugars.

(Comment 183) One comment noted that the use of the ''no added sugars'' or ''without added sugars'' nutrient content claim focuses on ingredients used in a product (§ 101.60(c)). The comment said that manufacturers must put a disclaimer on the label of their product if the food is not low or reduced in calories so that consumers are not misled about the calories associated with such products. The comment suggested that consumers could potentially be misled because when the amount of added sugars in a serving of a product is declared on the label, manufacturers who are currently using a ''no added sugars'' or ''without added sugars'' claim would be less likely to use the claim because the amount of added sugars is stated on the label, and thus, a disclaimer with regard to the calorie content of a product would not be declared.

(Response) We do not have data or information about whether manufacturers may elect to use a voluntary nutrient content claim once they are required to declare the amount of added sugars in a serving of their product. Consequently, we also cannot determine whether consumers might be misled, so we decline to revise the rule in response to this comment.

(Comment 184) Several comments addressed additional consumer research on Nutrition Facts labels that include added sugars declarations. One comment included two reports that described methods and results of two studies, including one controlled experiment and one cross-sectional survey study, both on cranberry and other fruit products. Both studies included, among other formats of the Nutrition Facts labels, Nutrition Facts labels with declarations of the gram amount of added sugars in a serving of the product and the percent Daily Value for added sugars displayed below a ''Total Sugars'' declaration. Regarding

the experiment on cranberry and other fruit products, the comment described an online study conducted in a sample of 1,448 adults age 18 or older in the United States At the start of the study, participants were shown a set of five statements, including two statements that referred to added sugars: ''Americans should reduce consumption of sodium, saturated fat, refined grains and added sugars;'' and ''Too much added sugar in a person's diet can be bad for them and their total added sugar intake should not exceed 10 percent of their total calorie intake.''

The comment described selected results including, but not limited to, findings related to study participants who viewed a single Nutrition Facts label, in FDA's proposed format, either for cranberry juice cocktail or 100 percent grape juice. The cranberry juice cocktail label showed 110 calories, 28 grams of total sugars, and 25 grams (50 percent DV) of added sugars. The 100 percent grape juice label showed 140 calories, 36 grams of total sugars, and 0 grams (0 percent DV) of added sugars. The comment noted that when both groups of participants were asked to describe ''the amount of sugar'' that the product contains on a scale of 1 to 10, where 10 equaled ''extremely high,'' the average rating of the sugar content for the cranberry juice cocktail was statistically significantly higher than the average rating of the sugar content for the grape juice. The comment also described findings from a group of participants who viewed a single Nutrition Facts label, in FDA's proposed format, for dried cranberries, and another group of participants who viewed a single nutrition label, in FDA's proposed format, for raisins. The dried cranberries label showed130 calories, 3 grams (12 percent DV) of dietary fiber, 29 grams of total sugars, 26 grams (52 percent DV) of added sugars; 0 percent DV of vitamin D, calcium, and iron; and 1 percent DV of potassium in a serving of the product. The raisins label showed 130 calories, 2 grams (8 percent DV) of dietary fiber, 29 grams of total sugars, 0 grams (0 percent DV) of added sugars, 0 percent DV of vitamin D, 2 percent DV of calcium, 6 percent DV of iron, and 9 percent DV of potassium. The comment said that when both groups of participants were asked to describe ''the amount of sugar'' and ''the amount of calories'' that the product contains by rating each item on a scale of 1 to 10, where 10 equaled ''extremely high,'' the average ratings of the sugar and calorie content for the dried cranberries were statistically significantly higher than the average ratings of the sugar and calorie content for the raisins. In the same study, a subset of participants also completed a ''forced choice task'' in which they were shown Nutrition Facts labels for two products presented, displayed in FDA's proposed label format, side-by-side, and were asked to choose which of the two products was ''better described'' by eight different phrases. Some participants were shown a Nutrition Facts label for dried cranberries plus a Nutrition Facts label for raisins, both in FDA's proposed format. The report submitted in the comment said that among those who completed this task, statistically significantly more participants selected the dried cranberries as being ''better described'' as containing ''more sugar'' and ''more calories,'' whereas statistically significantly more participants selected the raisins as being ''better described'' as ''healthy.''

The same comment described selected results from a cross-sectional survey study on cranberry products. The survey was conducted online in September 2015 and included 1,000 adults of 18 and over in the United States. The study participants were asked how likely they are to consume or purchase cranberry juice cocktail, apple juice, and grape juice for their household on a regular basis. Participants were then asked how strongly they agreed or disagreed with four statements: (1) ''Too much added sugar in a person's diet can lead to obesity and risk of chronic health problems;'' (2) ''Many Americans do not meet dietary recommendations for servings of fruit;'' (3) ''One should reduce consumption of sodium, saturated fat, refined grains and added sugar;'' and (4) ''Dried fruits and fruit juices can form a nutritious part of a well-balanced diet and help provide nutrients and servings of fruit.'' Participants were then shown nutrition information for three juice products, displayed in FDA's proposed label format, in a rotating order. One product was cranberry juice cocktail of which label showed 110 calories, 28 grams of total sugars, and 25 grams (50 percent DV) of added sugars. One product was grape juice of which the label showed 140 calories, 36 grams of total sugars, and 0 grams (0 percent DV) of added sugars. One product was apple juice of which the label showed 120 calories, 24 grams of total sugars, and 0 grams (0 percent DV) of added sugars. As each product label was shown, participants were asked, ''How does the information on this label affect your likelihood to consume or purchase [name of juice] for your household?'' The comment said that 39 percent of participants were less likely to consume or purchase the cranberry juice cocktail after viewing the FDA-proposed nutrition label, versus 29 percent for the grape juice and 18 percent for the apple juice. Participants were also asked to identify ''how many grams of sugar'' were in each juice. The comment said that 30 percent of participants could not answer the question correctly when viewing the label for cranberry juice cocktail, versus 7 percent for the grape juice and 7 percent for the apple juice. After answering questions about the grams of sugar in each juice, participants who indicated that they would be less likely to consume or purchase cranberry juice cocktail were asked, ''Why do you say that?'' The comment said that the ''main reason'' for most of the participants who answered this question was ''sugar content.'' The comment reported similar research findings for participants who viewed Nutrition Facts labels, in our proposed format, for dried cranberries versus raisins.

Based on the research findings from the two cranberry studies, the comment said that consumers misunderstood the sugar content of cranberry juice cocktail and dried cranberries, and believed that cranberry products contain more calories and more sugars and are less healthy than competitive products, when presented with FDA-proposed labels for each, both alone and as compared to competitive products. Therefore, the comment said that requiring a naturally unpalatable fruit product that has been sweetened to label the gram amount and percent DV for added sugars, in comparison with naturally sweetened fruit products labeled as having zero grams and zero percent DV for added sugars, is misleading because it implies that a sweetened unpalatable fruit with the same or fewer total calories and sugars as the naturally sweetened fruit product is less nutritious and ''generally unhealthy.''

Both cranberry studies also tested an alternative label format in which the declaration of the grams and percent DV for added sugars was replaced by a double asterisk symbol on the declaration of ''Total Sugars,'' (instead of ''Sugars''), and a footnote placed at the bottom of the label that stated, ''** Total sugars include sugars added for fruit palatability.'' The comment said that the alternative label format alleviated the confusion regarding the sugar content of cranberry juice cocktail compared to grape juice and the confusion regarding the sugar content of dried cranberries compared to raisins.

Another comment described a separate, online experiment that tested

Nutrition Facts labels for fictitious products without any product identities. The study, co-sponsored by five trade associations, was conducted in October, 2015, among a sample of 2,014 U.S. adult consumers aged 18 years or older. Half of the sample saw ''Control labels'' that included only gram amounts of ''Sugars.'' The other half of the sample saw ''Added Sugars labels'' that featured gram amounts of added sugars and the percent Daily Value for added sugars displayed below a ''Total Sugars'' declaration. All participants performed two product comparison tasks. In the first product comparison task, participants who saw the ''Control labels'' were shown two labels side-by-side that displayed identical nutrition profiles, whereas participants who saw ''Added Sugars labels'' saw two labels side-by-side which were almost nutritionally identical, except that one declared 4 grams of added sugars whereas the other declared 0 grams of added sugars. All participants were asked to indicate which of the two products was: (1) The ''healthier'' choice and (2) the ''best choice for maintaining weight.'' The comment said that the results showed that compared to those who saw two ''Control labels'' side-by-side, participants who saw two ''Added Sugars labels'' side-by-side were less likely to say that the product declaring 4 grams of added sugars was equally healthy to, or equally helpful in maintaining a healthy weight as, an identical product that declared 0 grams of added sugars. In the second product comparison task, participants were shown two labels side-by-side that displayed different nutrition profiles. One product contained 190 calories, 2 grams (3 percent DV) of total fat, 37 grams (12 percent DV) of total carbohydrates, 7 grams (28 percent DV) of dietary fiber, 16 grams of total sugars, and, in the ''Added Sugars labels'' but not the ''Control labels,'' 0 grams (0 percent DV) of added sugars. The other product contained 190 calories, 3 grams (5 percent DV) of total fat, 35 grams (12 percent DV) of total carbohydrates, 10 grams (40 percent DV) of dietary fiber, 8 grams of total sugars, and, in the ''Added Sugars labels'' but not the ''Control labels,'' 8 grams (16 percent DV) of added sugars. All other nutrients were declared in identical amounts for both products. In this case, the comment said that of the participants who saw ''Control labels,'' 56 percent selected the product with 10 grams (40 percent DV) of dietary fiber and 8 grams of total sugars as the healthier choice, versus 32 percent of participants who saw the ''Added Sugars labels.''

Many comments referenced a study that was initially submitted as a comment and report to the proposed rule and subsequently published in 2015 (Ref. 107). The report provided qualitative and quantitative results of a study conducted with 1,088 U.S. adults recruited from an online consumer panel. The report said that study participants generally did not understand the term ''added sugars'' and had difficulty correctly identifying the amount of ''sugars'' on the label when ''added sugars'' were declared. Some study participants perceived that products with an ''Added Sugars'' declaration had a higher sugar content than was actually present. The published paper of the study also said that participants were shown three Nutrition Facts labels, side-by-side, for three products that were nutritionally identical, except that two of the three labels included ''Added Sugars'' declarations whereas one of the three included only a ''Sugars'' declaration. The paper said that, when participants were asked to rank in order of descending preference which product they would buy based on the label information, 76 percent of the participants gave the highest preference to the label that included only a ''Sugars'' declaration.

(Response) The findings from the research submitted in the comments and from our own added sugars study suggest more limited conclusions than the comments assert. Regarding the findings that some study participants appeared to have overestimated the sugar content of the products included in the study as a result of summing total and added sugar amounts, we address this issue in our response to comment 188. Regarding the comments' assertions that the study findings demonstrate that our proposed label declaration of the percent Daily Value and grams of added sugars would ''mislead'' consumers based on study participants' responses to questions posed (which reflect participant perceptions), we disagree that the results support such a conclusion (see our response to comment 35).

Our consumer study on added sugars was conducted to help inform our consumer education. In particular, we were interested in better understanding how the inclusion of added sugars declarations on the Nutrition Facts label might influence consumer perceptions of various products and comprehension of the label. A consumer's belief, opinion, or previous exposure to information about added sugars and the impact added sugars may have on health may affect how a consumer may view a label with an added sugars declaration, whether the belief, opinion, or information is grounded in scientific evidence or not. These factors can influence how a consumer perceives information on a label and may result in some consumer confusion and misunderstanding, *e.g.,* when a consumer thinks a food, which can be part of a healthy dietary pattern for the day, is not ''healthful'' simply because it has a certain amount of added sugars. We want to ensure, through our consumer education, that consumers understand how to include a variety of foods in their diet as part of a healthy dietary pattern and focus on providing consumers the tools they need to understand how to include added sugars in their diets and where calories from added sugars can be included within calorie limits. FDA's consumer research on added sugars suggests that in comparison to participants who saw the current label without any added sugars declarations, some study participants' perceptions of the healthfulness of a given product varied when added sugars declarations were included on the Nutrition Facts label. Specifically, the study showed that when participants compared two products that declared added sugars, and the more nutritious product had more added sugars, some participants had difficulty assessing the relative healthfulness of the more nutritious product. This variation in healthfulness perceptions suggests that, when presented with Nutrition Facts labels that included added sugars declarations, some FDA study participants may have applied their own understanding of added sugars in deciding how to evaluate this new information, relative to other, more familiar nutrients shown on the label, which may have, in turn, affected these participants' perceptions about the healthfulness of a given food. A variety of factors may account for some of the product perceptions (*e.g.,* healthfulness of a product) found in our research, including but not necessarily limited to: (1) Dietary advice disseminated since 1980 about limiting ''sugar'' intake, particularly from sources of added sugars; (2) preexisting perceptions and knowledge (both correct and incorrect) about ''sugars'' and ''added sugars;'' and (3) potential confusion among some consumers about the fact that the existing ''Sugars'' declarations on the current Nutrition Facts label refers to the components of ''sugars,'' which include both naturally occurring and added sugars.

The information on the Nutrition Facts label provides consumers with

information they need to maintain healthy dietary practices. Our consumer research on added sugars was informative with respect to the need for information about the amount of added sugars in a serving of food to enable consumers to incorporate added sugars into a healthy eating pattern. Our consumer research on added sugars demonstrated that, without the added sugars declaration, consumers will not have information they need to construct a dietary pattern that is low in added sugars. Not all consumers understand the distinction between ''Sugars'' and ''Added Sugars,'' and, therefore, some consumers do not understand that added sugars, along with naturally occurring sugars, are components of ''Sugars.'' We found that some study participants think a food with added sugars is less ''healthful,'' even though the food could be included as part of a healthy dietary pattern.

Without the factual information about the amount of added sugars in a serving of food and percent DV declaration, consumers would not be able to choose from a variety of foods for a healthy dietary pattern and would not be provided with information about appropriate limits on calories from added sugars in their diet. It is important to provide consumers with the information on the amount of added sugars in a serving of food so they can better manage their daily intake of added sugars, rather than having consumers avoid foods with added sugars in the ingredient list or conversely consume excess amounts of added sugars because they are uninformed about the contribution of added sugars in a serving of food. Information about added sugars on the nutrition label will provide material information to the consumer to better enable them to construct a healthy dietary pattern from a variety of foods.

In addition to our consumer study on added sugars, the comments provided consumer research on added sugars related to consumer perceptions. The research provided in the comments was designed to show differences in how people view added sugars on the label, but did not discuss the need for the added sugars declaration and its importance in enabling consumers to construct healthy dietary patterns. If we do not include added sugars on the label, based on how consumers may misperceive added sugars or be confused about how to include it as part of a healthy dietary pattern on intake, consumers could be harmed by not having critical information needed to maintain healthy dietary practices.

The studies submitted in comments demonstrate the same issue we have noted with respect to some consumers adding total and added sugar declarations together, which led to our revisions to the final declaration of added sugars to clarify that added sugars is a subcomponent of total sugars (''included'' in total sugars). Furthermore, due to a number of deficiencies in the information provided about the cranberry studies as well as in the described study methodologies, we are not able to assess the merits of any conclusions described in the comments related to cranberry products. For example, in the cranberry experiment, one dietary statement that participants were shown at the beginning of the study about added sugars said: ''Too much added sugar in a person's diet can be bad for them and their total added sugar intake should not exceed 10 percent of their total calorie intake.'' A DRV for added sugars of less than 10 percent calories suggests that some added sugars can be part of a healthy diet. In fact, the food pattern modeling that was part of the basis for establishing the DRV for added sugars included 4 to 9 percent of calories from added sugars. Therefore, some study findings in the cranberry experiment may be attributable to participants having seen the negative dietary statement before evaluating the label formats tested in the study.

Additionally, it is not clear whether the cranberry experiment tested how participants would have evaluated the cranberry juice cocktail versus grape juice, or dried cranberries versus raisins when using the current Nutrition Facts label and, more importantly, the proposed Nutrition Facts label without the proposed declaration of added sugars. Without such test results, it is not possible to ascertain whether the reported results could be attributed, as the comment asserted, to the added sugars declaration or were influenced by other label elements. Moreover, although the comment said that the cranberry experiment reduced confusion with an alternative label in which the declaration of the grams and percent DV for added sugars was replaced by a footnote that stated, ''** Total sugars include sugars added for fruit palatability,'' based on findings from eye-tracking studies (Refs. 15, 108), we suspect that the reduced confusion is related more to participants overlooking the information in the footnote, which is located at the bottom of the label. Regardless of the findings described in the comment, the alternative label format included in the cranberry experiment would not provide consumers with essential information about the quantity of added sugars in a food or what that amount of added sugars contributes to a daily diet. Without this information, consumers will not be able to consume less added sugars or put the added sugars declaration in the context of their daily diet. Finally, although we acknowledge that the cranberry experiment showed that statistically significantly more participants selected raisins as being ''better described'' as ''healthy'' in comparison to the dried cranberries, we note that there were other differences between the dried cranberries and the raisins besides the amount of added sugars. For example, the raisins contained more protein, iron, potassium and calcium than cranberries. It is unclear from the study results if the participants solely chose raisins based on their lack of added sugars or if the increased levels of these other nutrients may have impacted the participant's choice for the ''healthy'' product.

In the cranberry survey study, selective reporting of the verbatim results that were used to identify the reported reasons for the decreases in purchase or consumption intentions, the absence of a baseline assessment of how participants would respond to the study questions using the current Nutrition Facts label, and the sequence and nature of the questions described preclude a determination of the extent to which the findings produced in the study are attributable to the FDA-proposed label or to added sugars declarations. For example, the cranberry survey study first asked participants to express agreement or disagreement with a statement, ''Too much added sugar in a person's diet can lead to obesity and risk of chronic health problems.'' Given that 91 percent of the study sample said that they strongly or somewhat agreed with this statement, it is reasonable to infer that the study participants' preconceived beliefs and/or heightened attention on added sugars may account for many of the cranberry survey study findings reported in the comment, rather than the declaration of added sugars. Given that study participants have various preconceived perceptions about added sugars, it is not surprising that participants have different purchase intentions or perceptions. Furthermore, because the cranberry survey study led participants through a sequence of questions where they answered questions about grams of sugar in the products before viewing an alternative label that was advocated by the authors of the comment, the study methods

deliberately led participants to focus on information that they may not have naturally focused on in other circumstances, therefore calling into question whether the alternative label would produce less confusion while also producing better comprehension about the added sugars content of the tested foods if a different set or sequence of questions had been employed.

In the experiment that was co-sponsored by five trade associations, we are unable to conclude that added sugars declarations were the reason for the findings in the second product comparison task because the experimental conditions included variations in total fat and dietary fiber values, in addition to varying added sugars. For example, in the second product comparison task, in which respondents viewed ''nutritionally different'' products, 50 percent of participants who selected the product that declared 0 grams of added sugars as ''better for maintaining healthy weight'' indicated ''it was low in fat'' as a reason for their selection; in addition, our analysis of the raw data submitted by the commenter shows that, 36 percent indicated ''has no grams of added sugars'' as a reason for their selection. On the other hand, our analysis of the raw data shows that among participants who selected the product that declared 8 grams of added sugars as ''better for maintaining healthy weight,'' 55 percent indicated ''is higher in fiber'' as a reason for their selection, and 39 percent indicated ''contains less sugar'' as a reason. As for the findings from the first comparison task, in which participants viewed two labels that were almost nutritionally identical, we do not agree that participants ''misjudged'' the healthfulness or weight-related attributes of the foods in the presence of added sugars information, because the difference in added sugars content between the foods meant that the two foods were, in fact, nutritionally different. Without added sugars declarations, participants were unable to discern that such a difference existed. Similarly, in the paper by Laquatra et al., participants who expressed a purchase preference for the label that included only a ''Sugars'' declaration may not have understood that the food contained added sugars and may have based their preference on that mistaken understanding.

Some research referenced different approaches for the labeling of added sugars for certain nutrient-dense fruit products that are high in acid. The proposed alternative approach to added sugars labeling for dried unpalatable fruit and juices made with at least 27 percent juice of an unpalatable fruit includes a proposed definition for an unpalatable fruit. We note that there are other fruits, such as lemons and limes, which contain nutrients, but have a low Brix value. When the juices of such fruits are consumed, they typically have sugar added to them for palatability. It is not clear what the impact of this approach suggested in the comment, which includes a definition of dried unpalatable fruit as well as use of a Brix-to-acid ratio that is not defined by regulation, would have on other dried fruit products or products made from juices of other fruits that typically have sugars added to them. An alternative approach provided in comments includes the use of a footnote in the Nutrition Facts box to explain that added sugars are added to increase the palatability of the food. However, we are concerned about the use of the Nutrition Facts label to convey this type of information and the precedent such an approach may set for other possible statements related to a nutrient declared on the label, such as the purpose for its addition, and information related to the characteristics or use of the nutrient. We consider it important to maintain the consistency of the information contained within the Nutrition Facts label, which provides factual information about the amount of a nutrient in a serving of food. This ensures that consumers can continue to readily use the Nutrition Facts label to make comparisons across all packaged foods. Manufacturers who are interested in communicating, through labeling, how products made from fruits that have sugars added to them in order for the product to be acceptable to consumers are free to make a statement elsewhere on the label or in labeling, outside of the Nutrition Facts box, to explain the purpose for which the sugars has been added, provided the information is consistent with other labeling requirements, *e.g.,* is truthful and not misleading. Thus, for example, manufacturers could include a truthful and not misleading statement explaining that total sugars include sugars added for fruit palatability.

(Comment 185) One comment described a reanalysis of the raw data from our added sugars study, the availability of which we announced in the **Federal Register** of September 10, 2015 (80 FR 54446). The reanalysis confirmed some of the findings reported in an FDA memo (see part II.H.3.g), but also found that participant perceptions of the products in the study were inconsistent depending on race, education level, or both. Based on the findings from the reanalysis and prior published research that has examined how nutrition label use varies with education level and ethnic minority status, the comment said that the presence of added sugars information on the label produced misperceptions and confusion, and that low-education consumers and ethnic minorities seemed especially prone to ''unintended consequences'' when added sugars was displayed on the label. The comment said that more research is needed to thoroughly understand how the provision of added sugars on the Nutrition Facts label would affect ''at-risk segments'' of the population.

(Response) We agree that some findings suggest the potential for consumer responses to labels vary depending on race, ethnicity, and education level; this type of variation has been shown in prior published research. On the other hand, because the reanalysis ventured beyond the primary objectives of what the study was designed to explore and because some findings reported in the comment were based on fewer than five participants, many findings of the reanalysis are unreliable. We also disagree with the comment's basis for asserting a need for additional research as discussed in our response to comment 40. Due to the limitations of the sample, limitations which the comment acknowledged, we view the reanalysis as exploratory and inconclusive, although potentially informative for future education efforts. Furthermore, as addressed in our responses to comments 1 and 244, we have considered, and will continue to consider, a variety of educational efforts to assist consumers in comprehending and using the Nutrition Facts label to maintain healthy dietary practices.

h. Voluntary labeling. In the preamble to the proposed rule (79 FR 11879 at 11905), we considered the appropriateness of the voluntary declaration of added sugars. However, we said that we were concerned that voluntary declaration of added sugars may not ensure that consumers have the information that will allow them to follow the current dietary recommendations (id.). We also said that added sugars declared voluntarily by manufacturers could be confusing to consumers and would not provide consumers with the information they need to plan their dietary pattern to reduce consumption of calories from added sugars (id.).

(Comment 186) Several comments disagreed with our tentative conclusion that the labeling of added sugars should be mandatory and provided a number of

reasons why the declaration of added sugars should be voluntary rather than mandatory. Most comments suggested that labeling of added sugars should be voluntary rather than mandatory for the same reasons that they opposed mandatory labeling of added sugars. The comments, and our responses to the comments, are provided in part II.H.3.a. Other comments, which recommended that if we determine that added sugars should be declared on the label, the label declaration should be voluntary rather than mandatory, provided the following reasons:

- One comment referred to our discussion of voluntary labeling of added sugars in the proposed rule (79 FR 11879 at 11905), and said that whether declaration of a nutrient on the Nutrition Facts label is mandatory or voluntary does not correspond to its bearing on maintaining healthy dietary practices;
- The sole macronutrient made mandatory by regulation is *trans* fat due to its established relationship to risk of chronic diseases and health-related conditions;
- Other voluntary nutrients, such as polyunsaturated fat, monounsaturated fat, potassium, soluble fiber, and sugar alcohol, are the subject of authorized health claims;
- Executive Order 13563 requires us to consider less burdensome alternatives;
- Consumers' understanding of the differences between added and naturally present sugars should be determined before becoming mandatory;
- Voluntary labeling would be consistent with the labeling of added sugars in the United Kingdom, Canada, Australia, and New Zealand, and would not run afoul of the World Trade Organization's Agreement on Technical Barriers to Trade (''TBT Agreement''); and
- Manufacturers of foods containing a significant amount of added sugars would likely be disinclined to declare added sugars if labeling is voluntary, however manufacturers of foods containing an insignificant amount of added sugars would likely use the added sugars declaration to highlight the added sugars content by juxtaposing sugars and added sugars declarations on the label.

(Response) Since the publication of the proposed rule, additional evidence has become available that further supports the need for a mandatory declaration of added sugars. The scientific evidence supports Americans limiting their calories from added sugars by consuming an eating pattern low in added sugars. We explained that consumers need to know how much added sugars is in a serving of a product in order to consume a healthy dietary pattern that is low in added sugars because we have evidence that healthy dietary patterns characterized, in part, by lower intakes of sugar-sweetened foods and beverages when compared to less healthy dietary patterns are associated with a decreased risk of CVD. We have the authority to require the declaration of a nutrient on the label if we determine the declaration will assist consumers in maintaining healthy dietary practices. Our discretion includes whether to permit the voluntary declaration or require the mandatory declaration of a nutrient (56 FR 60366, November 27, 1991).

With respect to the comment which noted that the only nutrient which has been added to the label by regulation is *trans* fat, which was based on its relationship to CVD risk, our basis for requiring the declaration of added sugars for the general population is not its independent association with the risk of chronic disease, a health-related condition, or a physiological endpoint. Instead, we are requiring the mandatory declaration of added sugars because evidence shows that heathy dietary patterns associated with a decreased risk of chronic disease are lower in added sugars, consumption of too much added sugars can impact the nutrient density of the diet, and consumption of sugar-sweetened beverages are associated with increased adiposity in children.

With respect to the comment that suggested that a declaration of added sugars should be voluntary because it is not the subject of an authorized health claim, our authority to add additional nutrients to the label under section 403(q) of the FD&C Act is distinct from our authority to authorize health claims.

With respect to the comment suggesting that we should consider less burdensome alternatives as directed by Executive Order 13563, we did consider voluntary labeling of added sugars in the preamble to the proposed rule (79 FR 11879 at 11905) and determined that a voluntary declaration would not provide the information consumers need to understand the relative contribution of added sugars from all food in the context of a total daily diet and achieve a healthy dietary pattern that is associated with a reduced risk of chronic disease. The 2015 DGA provides further support for this conclusion.

With respect to the comment that consumers' understanding of the differences between added and naturally present sugars should be determined before we can require the declaration of added sugars, that is not consistent with our authority for when we can require a nutrient declaration, as discussed in our response to comment 156.

Concerning the comments raised with the TBT Agreement, the comments have not explained why we would be acting inconsistently with our WTO obligations if we require the declaration of added sugars, as compared to other countries that allow for the voluntary declaration of added sugars on their labels. As we have explained, our objectives will not be fulfilled by voluntary labeling. Rather, the scientific evidence supports the mandatory disclosure of the amount of added sugars in the nutritional labeling of food. The dietary pattern of the general United States population contains excessive calories from solid fats and added sugars. The consumption of excess calories above calorie needs can lead to overweight and obesity. There is public health need to reduce excess calories from solid fats and added sugars to ensure that nutrient needs are met within calorie limits. Moreover, a healthy dietary pattern that is characterized, in part, by lower intakes of sugar-sweetened foods and beverages relative to less healthy dietary patterns is associated with a reduced risk of CVD. Thus, we have determined that there is a public health need for Americans to be able to determine the amount of added sugars in a serving of foods and to be able to put that amount into the context of their total daily diet so that they can consume a healthy dietary pattern that is lower in added sugars. We have a legitimate regulatory objective to provide nutrition information to consumers that includes the added sugars content in a serving of food to protect the health of United States consumers. The scientific evidence indicates that requiring disclosure of added sugar content is necessary to achieving this objective. We address comments related to international trade in part II.H.3.m.

We have considered the comment about the possible inclination of manufacturers to declare added sugars on their labels as a basis for determining whether to require or permit the declaration of added sugars on the label and consider the required declaration of added sugars to be necessary to assist consumers in maintaining healthy dietary practices. If consumers do not have information on the amount of added sugars in foods available in the marketplace, they will not be able to compare products so that they can avoid excess calories from added sugars and

construct an overall healthy dietary pattern that has less than 10 percent of calories from added sugars.

i. How added sugars are declared. Many comments provided recommendations for how information about added sugars in products should be conveyed to consumers on the label.

(i) Changing ''Sugars'' to ''Total Sugars''

In the preamble to the proposed rule (79 FR 11879 at 11902), we said that we were considering whether to use the term ''Total Sugars'' instead of ''Sugars'' on the label if we finalize a declaration of added sugars. We also said that we planned to conduct consumer research that would include, among other things, questions regarding the declaration of added sugars on the Nutrition Facts label in order to help or enhance our understanding of how consumers would comprehend and use this new information, and to inform our education activities and outreach. In the preamble to the supplemental proposed rule (80 FR 44303 at 44306), we discussed the results of our consumer research which showed that when an ''Added Sugars'' declaration was indented below a ''Total Sugars'' declaration on the label, participants appeared to be better able to comprehend the total amount of sugars in a food than if an ''Added Sugars'' declaration was indented below a ''Sugars'' declaration. In the preamble to the supplemental proposed rule (id. at 44304), we asked for comment on whether the term ''Total Sugars'' should be declared on the label instead of ''Sugars.''

(Comment 187) Many comments to both the proposed rule and the supplemental proposed rule addressed this topic. The comments generally preferred the term ''Total Sugars'' rather than ''Sugars'' on the label. Although some comments did not support a declaration of added sugars on the label, the comments said that, if we require the declaration of added sugars in the final rule, the term ''Total Sugars'' should be used on the label rather than ''Sugars.'' The comments said that such a change to the terminology used will likely increase consumer understanding that ''Added Sugars'' are included in the ''Total Sugars'' declaration. The comments would change the ''Sugars'' declaration to ''Total Sugars'' to provide a clearer distinction between total and added sugars and to prevent consumers from adding the ''Added Sugars'' and ''Sugars'' declarations together. The comments said that this change would be consistent with the declarations for ''Total Fat'' and ''Total carb.'' Other comments suggested that using the heading ''Total Sugars'' would provide interpretive data that is consistent with the need to make information clearer for consumers with lower levels of health literacy, numeracy, and English language limitations. One comment said that an analysis of our research indicates that replacing the term ''Sugars'' with ''Total Sugars'' on the label will enhance the consumers' ability to discern the overall nutritional value and compare nutrient density of food products at the point of selection (Ref. 109).

Other comments provided evidence that consumer's understanding of label information about sugars is improved when the ''Sugars'' term is replaced with ''Total Sugars.'' One comment provided the results of a qualitative and quantitative study that it conducted showing that, when ''Total Sugars'' was declared on a label rather than ''Sugars,'' participants were more likely to understand that the sugars in an ''Added Sugars'' line would be included in a ''Total Sugars'' line (Ref. 107). These results are consistent with our findings. Another comment cited a study by Laquatra et al., which the comment said suggests that consumers' understanding of the amount of sugar indicated on a food label was improved when the term ''total sugars'' was used rather than ''sugars'' (Ref. 107).

One comment said that our consumer research results are ambiguous, and requested that we undertake sufficient education activities to ensure that consumers understand that ''Added Sugars'' are included in the ''Total Sugars'' declaration. Another comment also said that it is premature to comment on using the term ''Total Sugars'' instead of ''Sugars'' on the label because additional consumer research that includes a label format that represents our proposed added sugars labeling declarations (including a percent DV declaration) is needed to gauge consumer understanding and usage of the new label information.

(Response) Since the publication of the supplemental proposed rule, our finding that participants appear have better comprehension of the total amount of sugars in a food when ''Sugars'' is replaced with ''Total Sugars'' on the label has been replicated by others, as noted in some comments. We disagree that additional consumer research testing the proposed label format with a percent DV declaration for added sugars is needed before we can finalize a change to the label which replaces the term ''Sugars'' with ''Total Sugars.'' ''Total Sugars'' will help improve comprehension of information on the label related to total and added sugars (see part II.H.2.c). Therefore, we are replacing ''Sugars'' with ''Total Sugars'' throughout §§ 101.9 and 101.36.

(Comment 188) Many comments raised concerns about our proposal to require added sugars declarations due to findings from consumer research conducted by FDA and others. The comments said consumer research showed that added sugars declarations decreased the ability of some participants to correctly identify the quantity of total sugars in a food. Specifically, FDA's studies as well as other studies cited in the comments showed that when viewing nutrition labels with added sugars declarations, some participants mistakenly summed the value for total sugars and the value for added sugars when they were asked to identify the total amount of sugars in a serving of a product. Some comments also said that the research suggests that the proposed label is more likely than the current label to mislead or confuse consumers with regard to total grams of sugars in the product; the comments would exclude an added sugars declaration from the label. Another comment suggested that FDA should conduct additional research to find other ways to present added sugars and total sugars declarations to reduce consumer confusion.

(Response) We acknowledge that our consumer research and those referenced in the comments showed statistically significant decreases in participants' understanding of total sugars in a serving of a product when a label included an added sugars declaration, either with or without the corresponding percent Daily Value of added sugars, compared to when a label did not include an added sugars declaration. Our study showed that the most common error was for our study participants to overestimate the quantity of total sugars in the product by summing the product's ''total sugars'' (or just ''sugars,'' depending on which label format was used) and ''added sugars.'' We note, however, that in our study and in a study conducted by IFIC, including ''total'' in front of ''sugars'' helped study participants better comprehend the total amount of sugars in a serving of a product. Therefore, the final rule includes ''total'' in front of ''sugars'' to better enable consumers to correctly assess the quantity of total sugars in a product.

We also note that in our research, when compared to the control group viewing the current label with no ''added sugars'' declaration, some study participants still did not report the correct amount of ''sugars'' in one serving of the product, even when the

word ''total'' was included in front of ''sugars.'' It is also important to note that when using the sugars declaration on the current label, some participants were unable to determine the total amount of sugars, even when only ''sugars'' was listed on the label. Additionally, our research found that the majority of study participants could not identify the correct amount of ''added sugars'' on the label when it was not declared, thereby not giving participants a key piece of information needed to maintain healthy dietary practices.

We plan to include ''added sugars'' in our consumer education and outreach efforts on the Nutrition Facts label. This will address some consumer confusion. However, to the extent some confusion was identified in the studies, we want to correct this potential confusion by adding the word ''includes'' in front of added sugars. The added sugars declaration will now read ''Includes X g Added Sugars'' below the ''Total Sugars'' line. The addition of ''includes'' will enable consumers to understand that ''added sugars'' are a sub-component of ''total sugars.'' We also are minimizing the hairline between total sugars and added sugars to help denote that ''added sugars'' are a subcomponent of ''total sugars.'' Minimizing the hairline between the two sugars will ''chunk'' the sugars together instead of them being distinct and separate. We base our decision on the expert opinion of two scientists in the fields of consumer research and risk communication and a review of literature as explained below surrounding the use of connecting words to clarify relationships between subject matter.

We enlisted the aid of two independent FDA experts, one whose expertise is in consumer research and the other whose expertise is in risk communication. These experts were not affiliated with our current consumer studies work on added sugars and were asked to evaluate whether using the word ''includes'' as well as minimizing the line between ''total sugars and ''added sugars'' are likely to ameliorate the consumer confusion found in our consumer research as well as the research of others. The experts independently agreed that these changes should help consumers better understand that ''added sugars'' is a subcomponent of ''total sugars'' (Refs. 110–111). The consumer research expert noted that including the word ''total'' in front of ''sugars'' should be particularly helpful to regular label users since this format is consistent with what is used for ''total fat'' and ''total carbohydrate.'' The expert also suggested that use of the word ''includes'' should reinforce for consumers that ''added sugars'' is a component of ''total sugars'' and not merely a complement. The expert also noted that any lingering confusion with the format related to determining total amount of sugars in a serving of a product should dissipate over time as users of the Nutrition Facts label become accustomed to the new label.

The second expert in risk communication noted that the presence of the word ''includes'' provides clarity that she expects will reduce confusion among those consumers who summed ''Added Sugars'' and ''Total Sugars'' and allow consumers to determine the total amount of sugars in one serving of a product.

In addition to the expert opinion, some literature suggests linking terms (words or phrases that reveal relationships between ideas in content) are useful for increasing comprehension, indicating that using the word ''includes'' may help consumers understand that ''added sugars'' are a subcomponent of ''total sugars.'' Comprehension of information in text takes place when the reader can identify new text information and relate it to the information already given or known. The more information that coincides with what readers already know, the easier it will be for them to integrate new information into their existing knowledge base, hence coming to understand the material presented in the information (Ref. 112). One principle commonly used to facilitate comprehension is to make each sentence explicitly related to the next. One possible approach to implement this principle is to use sentence connectors to clarify relationships between sentences. Similarly, Spyridakis 1989 (Ref. 113) suggested that because comprehension of text requires readers to make inferences, a text that provides clues to the links between discrete units of information can help readers make appropriate inferences and therefore contribute to overall learning of the content of the text. There are different types of ''connector'' or ''signal'' words, phrases, or statements that preannounce content and/or reveal a relationship between ideas in content (Ref. 114). The latter, sometimes called logical connectors, can be words or phrases such as ''first,'' ''moreover,'' ''because,'' ''for example,'' and ''in other words.'' The literature has demonstrated that logical connectors can be helpful in improving text comprehension (Refs. 113–115). We acknowledge that text and tables are different formats of presentation, however the understanding of tabular information and understanding of textual information share similar psychological processes (Ref. 116). The literature thus lends support that a linking word such as ''includes'' may help consumers better comprehend that ''added sugars'' are a sub-component of ''total sugars.''

Furthermore, in the previous final rule implementing the NLEA (57 FR 32070 at 32071), we noted that several comments suggested using terms such as ''includes,'' ''including,'' and ''of which,'' before the subcomponent for fats and carbohydrates to indicate that the subcomponent is a part of a broader classification. We agreed that these words would add clarity to the label but declined to include them at that time because they could ''clutter'' the label. While label clutter is a concern, decreasing potential consumer confusion outweighs any cluttering of the label that would result from the addition of a word before ''added sugars.'' We also note that the European Union, in its new nutritional labeling requirements, is requiring ''of which'' to help denote the sub-components of fats and carbohydrates, which is a similar linking phrase.

With regard to the comment that asked us to conduct further consumer research on this topic, we decline to do so at this time. While we may consider additional consumer research in the future to help inform consumer education regarding the ''added sugars'' or other declarations, we have incorporated changes intended to minimize consumer confusion regarding the ''added sugars'' declaration on the label and have finalized this requirement. We have sufficient information to move forward with the requirement for the added sugars declaration based on a review of the scientific evidence and other available data and information which support the need for added sugars information to be available to the consumer as part of the nutrition label.

(ii) Declaration of Added Sugars in Teaspoons

(Comment 189) While one comment said that a gram disclosure for added sugars would be more readily understood by consumers because it is consistent with the manner in which total sugars are disclosed on the label, a number of comments suggested that added sugars should be declared in teaspoons or in teaspoons as well as grams. The comments said Americans understand household measures better than they do the metric system because they use household measures at home.

The comments said that listing the amount of added sugars in both grams and teaspoons would improve the clarity of the information provided about added sugars. The comments also suggested that a gram and teaspoon declaration for added sugars would help consumers readily observe and comprehend the information on sugars and to understand its relative significance in the context of a total daily diet.

The comments provided the results of survey data to support an added sugars declaration in teaspoons. One comment provided the results of a 2010 telephone survey which it said showed that 72 percent of respondents favored listing teaspoons of sugar on the label. Another comment referenced the results of a 2012 survey of readers by Consumer World, an Internet-based publisher of a consumer resource guide. The comment said that, when exposed to label information in which the amount of added sugars in a product was expressed in grams, up to 80 percent of survey participants could not accurately say how much sugar was contained in a product, and many participants underestimated the actual amount of sugar in the product.

(Response) We decline to revise the rule as suggested by the comments. We address issues regarding the use of household measures (such as teaspoons) in part II.B.3.

Additionally, we note that there are many ingredients that supply added sugar, so it would be difficult, if not impossible, for a manufacturer to determine the volume contribution that each ingredient provides towards the added sugars declaration. For example, a cookie made with white chocolate chips and dried fruit would have added sugars in the form of sugar in the batter as well as in the white chocolate chips and the dried fruit.

Because many products would not have amounts of added sugars in a serving of a product that would result in the declaration of an even teaspoon or multiple thereof, the requirement to declare added sugars in teaspoons rather than in grams would result in fractional declarations of teaspoons of added sugars. Indeed, under § 101.9(c)(6)(iii) of the final rule, a statement of added sugars content is not required for products that contain less than 1 gram of added sugars in a serving if no claims are made about sweeteners, sugars, or sugar alcohol content. The final rule also states that if a product contains an insignificant amount of added sugars, the added sugars content may be expressed as zero.

Additionally, the USDA Food Patterns provide limits for added sugars that can be reasonably consumed while meeting all other nutrient and food group requirements that are listed in grams rather than in teaspoons. The declaration of added sugars in teaspoons rather than in grams would make it difficult for consumers to determine how their consumption of added sugars relates to the recommended limits in the USDA Food Patterns.

There is limited space on the label, so the declaration of both gram and teaspoon amounts of added sugars on the label could cause clutter and make the label more difficult to read. We have determined that the amount of other nutrients on the label should not be declared in teaspoons, so if added sugars were declared in both grams and teaspoons, it could draw the reader's attention to the added sugars declaration and make it appear as though the information should be more important or considered in a different way than declarations of other nutrients when the declarations of other nutrients are just as important to consider when constructing a healthful dietary pattern.

While we take into consideration consumer preference, manufacturers must provide information on the label that is as accurate as possible. Although consumers may prefer the declaration of added sugars in teaspoons because household measures are more familiar to them than gram amounts, the need for accurate labeling of added sugars is of greater importance.

We have conducted our own research, and that research showed that when the gram amount of added sugars is declared on the label, study participants are able to determine the amount of added sugars in a serving of a product. Furthermore, the percent DV declaration for added sugars is also required. Therefore, we disagree that consumers are unable to determine the amount of added sugars when the gram amount is declared on the label.

(iii) Distinguishing Between Naturally Occurring and Added Sugars on the Label

(Comment 190) Some comments thought that we proposed to require both a declaration for naturally occurring and added sugars. Other comments suggested that the Nutrition Facts label include separate declarations for naturally occurring and added sugars so that consumers could clearly identify the amount of both naturally occurring and added sugars on the label.

(Response) We did not propose to require separate declarations for naturally occurring and added sugars on the label. The comments did not provide a basis upon which we can rely to support a separate declaration of naturally occurring sugars, and so we decline to revise the rule as suggested by the comments.

(Comment 191) One comment recommended that we propose a Nutrition Facts label format that clearly distinguishes added sugars from naturally occurring sugars in whole fruit and from sugars from dairy ingredients. The comment also recommended replacing ''sugars'' with ''fruit & milk sugars''.

(Response) We address this comment in part II.H.2.

(iv) Replacing ''Sugars'' With ''Added Sugars''

(Comment 192) Some comments would replace ''Sugars'' with ''Added Sugars.'' One comment said that foods like fruits have natural sugars in them, but when people see the amount of sugars they may think the food is bad for them.

(Response) We decline to revise the rule as suggested by the comment. The consumption of sugars continues to be associated with an increased risk of dental caries (Ref. 75); thus, a declaration of the total amount of sugars in a serving of a product continues to be necessary to assist consumers in maintaining healthy dietary practices.

(v) Distinguishing Between Different Types of Sugars or Sweeteners

(Comment 193) One comment suggested listing all sugars separately on the label.

(Response) We decline to revise the rule as suggested by the comment. There are many different kinds of sugars and ingredients containing sugars. The declaration of the amount of each type of sugar in a serving of a product would result in a very large and cluttered Nutrition Facts label. While all nutrient declarations are important to build healthy dietary patterns, current science focuses on added sugars in total rather than focusing on specific sugars. If consumers are interested in knowing whether certain sugars are in a product, specific sugars are listed in the ingredient list.

(Comment 194) One comment requested that we allow the inclusion of ''nutritive sweetener'' in a parenthetical after added sugars so manufacturers could identify the name of the added sugar. The comment also requested that, if the added sugar is high fructose corn syrup, we allow manufacturers to identify the percentage of fructose on the Nutrition Facts label (*e.g.,* high fructose corn syrup-42 or high fructose

corn syrup-55). The comment said that listing ''nutritive sweetener,'' the name of the added sugar, and the percentage of fructose in high fructose corn syrup is essential for the consumer to make a fully informed choice about the caloric contribution of sweeteners and the composition of ingredients in the product they are consuming.

Other comments supported the declaration of the amount of fructose in a serving of a product on the label. One comment said that the information is needed because metabolizing fructose puts an extra load on the liver. The comment suggested that adding fructose and deleting added sugars in the quantitative information would add value without adding complexity.

(Response) We decline to revise the rule as suggested by the comments. Added sugars are nutritive sweeteners, so it is not clear why ''nutritive sweetener'' needs to be declared in parentheses behind the words ''added sugars'' on the label. As previously discussed in our response to comment 193, current science focuses on added sugars in total rather than focusing on specific sugars.

(Comment 195) One comment objected to the use of the term ''added sugars'' because, according to the comment, it improperly combines compositionally and metabolically distinct caloric sweeteners.

(Response) We are not basing our declaration of added sugars on an independent relationship between added sugars, or different types of added sugars, and risk of chronic disease. To the extent that the comment is suggesting that different types of sugars are chemically distinct, so the term added sugars is inappropriate, there are different types of naturally occurring sugars as well as different types of carbohydrates, but we use the terms ''total sugars'' and ''total carbohydrate'' to capture all sugars and all carbohydrates respectively. Therefore, using one broad term to capture all sugars that have been added to a food is consistent with the approach that we have taken for other nutrients. Furthermore, caloric sweeteners that have been added to a food are added sugars, therefore we do not agree that it is inappropriate to use the term added sugars to include caloric sweeteners that have different chemical structures.

(vi) Warning Statements

(Comment 196) Several comments suggested that we require various warning statements on the label related to added sugars to warn consumers of the negative health effects of added sugars. One comment suggested that we require a warning statement that says ''WARNING: THIS PRODUCT CONTAINS A SIGNIFICANT AMOUNT OF ADDED TEASPOONS OF SUGAR WHICH STUDIES HAVE LINKED TO OBESITY, TYPE II DIABETES, CARDIOVASCULAR DISEASE AND CERTAIN CANCERS. CONSULT YOUR PHYSICIAN ABOUT AN APPROPRIATE DIET WITH A REDUCED AMOUNT OF ADDED SUGAR.'' Another comment suggested that we should require a warning label that says ''IT [added sugar] IS ADDICTIVE. IT CAN LEAD TO OBESITY. OBESITY CAN LEAD TO DIABETES, HEART DISEASE, ETC.''

One comment suggested that we require, or offer an incentive for, a disclaimer about added sugars and sodium. The disclaimer would explain the health effects on the body and connections to disorders such as diabetes and hypertension. The comment said that, similar to cigarette packets, consumers should be warned of the health effects of added sugars.

(Response) We decline to revise the rule as suggested by the comments. The statements are not consistent with our review of the evidence (see our response to comments 136 and 137), and we do not require warning labels or disclaimers for other nutrients on the label. Furthermore, some added sugars can be included as part of a healthy dietary pattern.

(Comment 197) Several comments suggested that we use wording to convey that the DRV of 10 percent of calories from added sugars is a maximum amount rather than a recommended amount. One comment would include language to state that ''no consumption is recommended. But if you choose to consume, then this absolute maximum should be observed to avoid increasing adverse health exposure.'' Another comment would require a statement on the label that the average woman should consume no more than 24 grams of sugar per day, and the average man should consume no more than 34 grams of sugar per day.

(Response) We decline to revise the rule as suggested by the comments. In response to the comment that would include language to convey that the DRV is a maximum amount rather than a recommended amount, such language would not be appropriate because we do not require this information for other nutrients with DRVs or RDIs that are based on an amount not to exceed.

As for a statement regarding ''no consumption,'' the current evidence does not support a need to eliminate all added sugars from the diet. In fact, the USDA Food Patterns show that one can carefully construct a healthful diet that includes calories from added sugars.

Finally, regarding a statement on the label with limits for the amount of added sugars that the average man or woman should consume, we do not provide this information for any other nutrients which are to be limited in the diet, and it is not clear what the scientific basis is for the suggested limits.

j. Variability in sugar content.

(Comment 198) One comment noted that manufacturers may add varying amounts of sugars due to variation in maturity of a fruit or vegetable ingredient during the course of a growing season to attain a consistent level of soluble solids and a consistent taste profile of the food. The comment further said that food manufacturers and marketers would not prepare multiple labels for different batches, so the declared amount would reflect the highest possible amount of added sugars and may overstate the actual amount.

(Response) Variation in the sugar content of fruits and vegetables due to growing conditions is something that manufacturers have had to take into account with their labeling of total sugars since 1993. Manufacturers are in the best position to determine how much of a nutrient is in their product given the variability of the nutrients in their product. They are also in the best position to determine when a label change is needed because the declaration would no longer be in compliance with our requirements under § 101.9(g).

k. Non-enzymatic browning and fermentation. In the preamble to the proposed rule (79 FR 11879 at 11906), we recognized that sugars in some foods may undergo changes mediated by chemical reactions from non-enzymatic browning (*i.e.* Maillard reaction and caramelization) and fermentation that would result in compounds that are no longer recognizable or detectable as sugars through conventional analytical methods. We tentatively concluded that the amount of added sugars transformed during non-enzymatic browning reactions is insignificant relative to the initial levels of sugars. We also tentatively concluded based on the information available to us that the amount of added sugars present in foods prior to undergoing fermentation, with the exception of yeast-leavened bakery products, wines with less than 7 percent alcohol by volume, and beers that do not meet the definition of a ''malt beverage'' as defined by the Federal Alcohol Administration Act (27 U.S.C. 211(a)(7)) with sugars added during the formation process, will not be

significantly affected by virtue of the food having undergone fermentation (79 FR 11879 at 11907). We acknowledged that we do not have adequate information to assess the degradation of added sugars during fermentation for yeast-leavened bakery products, wine with less than 7 percent alcohol by volume, and beers that do not meet the definition of a malt beverage with sugars added before fermentation. We requested the submission of available data and information on our tentative conclusions as well as the submission of data on the amount of variability that occurs among various types of products where added sugars are transformed into other compounds as a result of chemical reactions during food processing.

The proposed rule, at § 101.9(g)(10)(v), would require a manufacturer of yeast-leavened bakery products, wines with less than 7 percent alcohol by volume, and beers that do not meet the definition of a malt beverage with sugars added before and during the fermentation process to make and keep records of added sugars necessary to determine the amount of added sugars present in the finished food. The proposed rule would require manufacturers of such foods to make and keep records of all relevant scientific data and information relied upon by the manufacturer that demonstrates the amount of added sugars in the food after fermentation and a narrative explaining why the data and information are sufficient to demonstrate the amount of added sugars declared in the finished food, provided the data and information used is specific to the type of fermented food manufactured. Alternatively, under the proposed rule, manufacturers would be able to make and keep records of the amount of added sugars added to the food before and during the processing of the food and, if packaged as a separate ingredient, as packaged. We said that the amount of added sugars declared should not exceed the amount of total sugars on the label (79 FR 11879 at 11908).

(Comment 199) One comment said that we have not demonstrated why distinguishing between a fermented added sugar and a fermented naturally occurring sugar or why the type of sugar that participates in reactions due to heat treatment improves the health of consumers. The comment questioned what the compelling government interest is in knowing which molecule of sugar participates in these reactions.

(Response) To the extent that the comment is suggesting that our focus on added sugars is misplaced because added sugars are not chemically distinct from naturally occurring sugars and are not associated with health or the risk of disease, we respond to such issues in part II.H.3.i. We also have stated, in part II.H.3.a, that added sugars consumption is a significant public health concern which warrants mandatory declaration.

(Comment 200) Several comments suggested that there are a wide variety of fermented foods (*e.g.,* fermented vegetables, beverages, fruits, condiments, products made with grains and/or pulses, dairy replacement products, and meat products) and ingredients (*e.g.,* vinegars, enzymes, vitamins, and amino acids in pure form or in mixtures) to which sugars are added, and where the sugars content is significantly diminished or entirely removed through fermentation. The comments also disagreed with our tentative conclusion that the amount of added sugars transformed by fermentation will be insignificant relative to the initial levels of sugars in foods and ingredients other than yeast-leavened bakery products, wines with less than 7 percent alcohol by volume, and beers that do not meet the definition of a malt beverage. The comments noted that the effect of fermentation is variable. According to the comments, the net effect can depend on details of the starting materials, fermentation process, and length of fermentation.

Several comments noted that there are many processing and ingredient variables that influence the fermentation process in yeast-leavened bakery products. The comments said that our assumption that manufacturers have information about reduction of added sugars in yeast-leavened bakery products is incorrect. One comment stated that, because manufacturers would be unable to determine the amount of added sugars consumed during fermentation in yeast-leavened bakery products, manufacturers would have to declare the amount of sugars added before leavening under the proposed rule, resulting in an overstatement of the amount of added sugars in the finished product, which is false and misleading.

Other comments suggested that added sugars that are converted through fermentation to other compounds should be subtracted from the added sugars declaration, and any sugars produced during fermentation should be omitted from the declaration of added sugars.

One comment suggested that proposed § 101.9(g)(10)(v), which would permit manufacturers of yeast-leavened bakery products, wines with less than 7 percent alcohol by volume, and beers that do not meet the definition of a malt beverage to make and keep records of scientific data and information to demonstrate the amount of added sugars remaining in the finished food, when that amount is less than the initial amount of added sugars, be extended to all food manufacturers that must declare added sugars in the labeling of their products.

Other comments disagreed with our tentative conclusion that the amount of added sugars transformed by non-enzymatic browning reactions will be insignificant relative to the initial levels of sugars. One comment provided the example of the manufacture of caramel. The comment suggested that this process converts sugars into thousands of new chemical compounds that include oligomers, dehydration and hydration products, disproportionation products, and colored aromatic products. The comment noted that the decrease in added sugars in a wide variety of products undergoing such chemical reactions may depend on the ingredients, moisture levels, presence of acids or bases, exposure to heat, etc., but that the decrease is not uniformly insignificant.

(Response) Although comments said that the amount of added sugars converted to other compounds during fermentation and non-enzymatic browning is significant in a wide variety of foods, few comments provided data to support their conclusions. One comment provided information about the amount of sugars which are converted to other compounds in kimchi, a fermented vegetable product (Refs. 117–118). Another comment provided information about caramel candy (Ref. 119). In a memo to the file for the proposed rule (Ref. 120), we tentatively concluded that the amount of added sugars which are converted to other compounds through Maillard browning, a type of non-enzymatic browning, is insignificant. Although the comments generally disagreed with our conclusion that all products participating in non-enzymatic browning have an insignificant reduction in the amount of added sugars, no comments specifically disagreed with our conclusion about products that participate in Maillard browning. Therefore, in products affected by Maillard browning, the amount of sugars added before Maillard browning is a reasonable approximation of the amount of added sugars in the finished product in most, if not all, products.

With the exception of the comment which cited caramelization as an

example of a non-enzymatic browning process where the reduction in the amount of added sugars present in a finished food could be significant, we did not receive any other specific data or information about foods that undergo non-enzymatic browning to support the comments' position that the amount of added sugars converted to other compounds is significant. Therefore, we expect that the amount of sugars added before non-enzymatic browning in these foods would be a reasonable approximation of the amount of added sugars in the finished product. We also expect that manufacturers of such products would be able to make and keep documentation to show a reasonable basis for how they determined the declared value for added sugars.

We recognize that there may be a larger amount of variability in fermented products with respect to the amount of added sugars that are converted to other compounds. Although the comments provided examples of products that participate in fermentation, the comments provided very little data or information to support the assertion that the added sugars content is significantly reduced in a large number of fermented foods. We are aware of only a small number of fermented foods where the reduction in added sugars may significant (where the reduction in added sugars after fermentation may be significant enough to impact the label declaration for added sugars) after fermentation. Therefore, we expect that the majority of manufacturers would be able to use the amount of added sugars added as an ingredient as a reasonable approximation of the amount of added sugars in a serving of their product.

If a manufacturer has a basis on which to support a declaration of added sugars based on the amount of added sugars present in a food after non-enzymatic browning or fermentation, the label declaration must be supported by records demonstrating the accuracy of the declared amount. The records should include all relevant scientific data and information relied upon by the manufacturer that demonstrates the amount of added sugars in the food after non-enzymatic browning and/or fermentation and a narrative explaining why the data and information are sufficient to demonstrate the amount of added sugars declared in the finished food.

There may be a small number of foods which undergo non-enzymatic browning and/or fermentation for which manufacturers have reason to believe that the amount of added sugars in a serving of the finished food product is significantly less (*i.e.,* where the reduction in added sugars after fermentation may be significant enough to impact the label declaration for added sugars) than the amount added prior to non-enzymatic browning and/or fermentation, and the manufacturer has no way to reasonably approximate the amount of added sugars in a serving of the finished food. Therefore, we have revised § 101.9(g)(10)(v)(C) to state that manufacturers may submit a petition, under § 10.30 (21 CFR 10.30), to request an alternative means of compliance. The petition must provide scientific data or other information for why the amount of added sugars in a serving of the product is likely to have a significant reduction in added sugars compared to the amount added prior to non-enzymatic browning and/or fermentation. A significant reduction would be where reduction in added sugars after non-enzymatic browning and/or fermentation may be significant enough to impact the label declaration for added sugars by an amount that exceeds the reasonable deficiency acceptable within current good manufacturing practice under § 101.9(g)(6). In addition, the scientific data or other information must include the reason that the manufacturer is unable to determine a reasonable approximation of the amount of added sugars in a serving of their finished product and a description of the process that they used to come to that conclusion.

We recognize that labeling of added sugars in products that undergo fermentation and non-enzymatic browning may not be exact, but manufacturers of most products that participate in these reactions should be able to provide a reasonable approximation of the amount of added sugars in a serving of their product based on information in the literature and their own analyses. Most manufacturers should be able to provide documentation to support the value that they declare on the label. Therefore, the majority of manufacturers of such foods will be able to provide a reasonable approximation of the amount of added sugars in a serving of their product as well as documentation showing a reasonable basis for how they determined the declared value.

As some comments recommended, we agree that it is appropriate to allow manufacturers of all products which undergo non-enzymatic browning and/or fermentation to make and keep records of the type that we proposed. Therefore, we have revised § 101.9(g)(v) to say that when the amount of sugars added to food products is reduced through non-enzymatic browning and/or fermentation, manufacturers must:

- Make and keep records of all relevant scientific data and information relied upon by the manufacturer that demonstrates the amount of added sugars in the food after non-enzymatic browning and/or fermentation and a narrative explaining why the data and information are sufficient to demonstrate the amount of added sugars declared in the finished food, provided the data and information used is specific to the type of food manufactured; or
- Make and keep records of the amount of sugars added to the food before and during the processing of the food, and if packaged as a separate ingredient, as packaged (whether as part of a package containing one or more ingredients or packaged as a single ingredient) and in no event shall the amount of added sugars declared exceed the amount of total sugars on the label; or
- Submit a petition, under § 10.30, to request an alternative means of compliance. The petition must provide scientific data or other information for why the amount of added sugars in a serving of the product is likely to have a significant reduction in added sugars compared to the amount added prior to non-enzymatic browning and/or fermentation.

A significant reduction would be where reduction in added sugars after non-enzymatic browning and/or fermentation may be significant enough to impact the label declaration for added sugars by an amount that exceeds the reasonable deficiency acceptable within current good manufacturing practice under § 101.9(g)(6). In addition, the scientific data or other information must include the reason that the manufacturer is unable to determine a reasonable approximation of the amount of added sugars in a serving of their finished product and a description of the process that they used to come to that conclusion.

(Comment 201) One comment noted that sugar content of products can be increased through hydrolysis and enzymatic reactions using carbohydrate containing ingredients. The comment questioned what the classification would be of the sugars (natural or added) produced by such reactions during food processing. The comment also noted that the possibility of having sugars produced ''in situ'' (meaning in place or in position) shows the difficulty of drawing a clear line between the two types of sugars.

(Response) Sugars content can be increased through acid, heat, or

enzymatic hydrolysis of complex carbohydrates (*e.g.* starch). Sometimes, the increase is incidental as a consequence of other food manufacturing processes, such as acidification, heating, and/or fermentation. For example, during yeast bread fermentation, natural enzymes present in the flour can hydrolyze starch into maltose. Other than sugar syrup types of products where the sugars are specifically and purposely produced via hydrolysis, we do not have information suggesting that sugars produced through incidental hydrolysis of complex carbohydrates results in a significant increase in the sugar content of foods. Sugars which are produced through incidental hydrolysis would be captured in the total sugars declaration, but we do not have any comments or other information suggesting that these sugars should be captured under the added sugars declaration. Therefore, they are not included in our definition of added sugars and would not be declared as added sugars on the label. In the previous example of the enzymatic hydrolysis of maltose from starch during bread fermentation, we would not require the maltose formed during this process to be declared as added sugar. However, sugar present in corn syrup produced from hydrolysis of corn starch would be considered added sugar because the hydrolysis was specifically done to generate mono- and di-glycerides. In addition, if a manufacturer purposely employs a hydrolysis step as part of a food manufacturing process to increase the sugar content of a food product (*e.g.* enzymatic hydrolysis of corn starch to make corn syrup in the same facility as part of the cookie-making process), we would consider the sugar generated from the hydrolysis step to be added sugars, since hydrolysis was purposely used by the manufacturer to increase the sugar content of the product.

l. Impact on nutrient databases.

(Comment 202) One comment said that we failed to provide a framework and/or an approved database that harmonizes implementation across industry. The comment also said that it is unclear how FDA-approved databases would be revised in order to be used to calculate added sugars or to distinguish between amounts of naturally occurring sugars and added sugars, such as how to calculate the varying sugar content of a food that contains naturally occurring and added sugars given the common fluctuations in foods containing naturally occurring sugars.

(Response) Under § 101.9(g)(8), we allow for compliance with § 101.9(g)(1) through (g)(6) by use of an FDA approved database that has been computed following FDA guideline procedures and where food samples have been handled in accordance with current GMPs to prevent nutrition loss. Our Guidance for Industry: Nutrition Labeling Manual—A Guide for Developing and using Data Bases, the manual provides generic instructions for developing and preparing an acceptable database, as well as the recommended statistical methodology to develop nutrition label values. The guide is based on doing laboratory analyses of food samples. Because added sugars and naturally occurring sugars are not chemically distinct, it is not possible to do a laboratory analysis to determine the amount of added sugars in a product that contains both naturally occurring sugars and added sugars. If a product contains only added sugars, the procedures outlined in our guidance could be used by manufacturers to develop a database of values for added sugars. However, if both naturally occurring and added sugars are present, manufacturers will have to use other information that they have to determine a label value. They will also have to make and keep records to support the declared value, as discussed in part II.H.3.p.

With respect to calculating the varying sugar content of foods that contain naturally occurring and added sugars given seasonal variability and variability due to other growing conditions in products containing naturally occurring sugars, such as fruits and vegetables, manufacturers should know how much sugars they add to a product to account for the variability in the sugars naturally present in a food. They should be able to use the amount that they add to determine the value that they declare on the label. The variability in naturally occurring sugar content would not be a new variable for manufacturers to consider.

m. International labeling guidelines.

(Comment 203) Some comments noted that Codex Alimentarius Guidelines on Nutrition Labeling require the labeling of total, but not added sugars (Ref. 121). The comments said that our proposal to require the mandatory declaration of added sugars is not in line with international guidelines on nutrition labeling. The comments said that a revision of the Guidelines was undertaken by a working group within the Codex Committee on Food Labeling (CCFL) and discussed at the 38th Session of the CCFL (2010). The comments also said that, based on reports from that CCFL meeting, the Codex Committee considered the following evidentiary support for labeling only total sugars: (1) The body cannot differentiate between added sugars and total sugars in physiologic response; (2) the absence of any analytical differentiation between added and inherent sugars, which would create difficulties for enforcement; and (3) the importance of declaration of total sugars for certain populations including diabetics. The comment also said that the WHO advised that ''total sugars is the only practical way of labeling the sugars content of food since sugars cannot be distinguished analytically from intrinsic sugars.''

Other comments said that no other country has adopted mandatory added sugars declarations as part of nutrition labeling of foods and beverages. The comments noted that the purpose of the Codex Guidelines on Nutrition Labeling is to promote fair trade through international harmonization in the approach to nutrition labeling.

Other comments said that we need to be in compliance with the TBT Agreement, which insures that technical regulations ''do not create unnecessary obstacles to international trade.''

Some comments referred to previous positions that we have taken with respect to Codex and said that our proposal to require the mandatory declaration of added sugars is a total reversal from those previous positions.

(Response) The Codex standards are recommendations for voluntary application by countries. For nutrition labeling, the Codex Guidelines on Nutrition Labeling provide that where a nutrient declaration is applied, the declaration of total sugars should be mandatory. Although Codex does not state or imply that the declaration of added sugars should be mandatory, the guidelines provide for mandatory declaration when ''The amount of any other nutrient [is] considered to be relevant for maintaining a good nutritional status, as required by national legislation or national dietary guidelines.'' ((Ref. 121) at section 3.2.1.4). We have determined that the declaration of added sugars in necessary to assist consumers in maintaining healthy dietary practices, consistent with our authority in section 403(q) of the FD&C Act for when the labeling of a nutrient is required. The provision of such information is necessary to achieve our legitimate objective of protecting human health. We have established elsewhere in this section that the mandatory declaration of the amount of added sugars in a serving of a product is necessary to protect human health because scientific evidence supports that healthy dietary patterns

characterized, in part, by lower intakes of added sugars are associated with a decreased risk of CVD, sugar-sweetened beverage consumption is associated with adiposity in children, added sugars can lead to displacement of nutrient-dense foods in the diet, and intake data shows that Americans, on average, are exceeding the recommended limit for added sugars consumption. As such, our requirements to include the declaration of added sugars in nutrition labeling and for manufacturers to make and keep records of the amount of sugars they add to their products do not constitute an unnecessary obstacle to trade. Firms, whether domestic or foreign, must include an added sugars declaration on the label and must make and keep records, as appropriate, to verify the amount of added sugars in a product.

Manufacturers already know how much sugar is added to their product based on the formulation or should be able to reasonably estimate the amount of sugars added in products that undergo non-enzymatic browning and fermentation. We also do not consider that the records we are requiring would be unnecessarily burdensome for manufacturers to make and keep (see part II.C.1).

Our position on requiring the labeling of added sugars has developed in response to additional information that we did not have in the past. At the time that previous statements with respect to our official position on labeling of added sugars were made, the 2010 DGA and 2015 DGAC Report were not yet available. Based on information provided in the 2010 DGA and the 2015 DGAC Report, such as the underlying evidence used to support the 2015 DGAC conclusion that there is strong evidence that healthy dietary patterns characterized, in part, by lower intakes of sugar-sweetened foods or beverages are associated with a decreased risk of CVD and evidence that it is difficult to meet nutrient needs within calorie limits when individuals consume large amounts of added sugars, we had reason to revisit the requirement for a declaration of added sugars on the Nutrition and Supplement Facts labels in the proposed rule and in the supplemental proposed rule. We considered comments to the proposed rule and the supplemental proposed rule and have concluded that the evidence supports the mandatory declaration of added sugars on the label to fulfill the legitimate objective of protecting human health.

With respect to the comments that suggest no other country has adopted mandatory labeling of added sugars, we note that the comments do not address the relevance of these circumstances with respect to our objectives and the scientific evidence before us.

With respect to the comments on the evidentiary support considered by the CCFL on the reporting of added sugars, we have addressed these points in response to comments in this final rule. Furthermore, we require records, as appropriate, to verify the declaration of added sugars, and do not rely on analytical methods, as addressed by the WHO. In the six years since that decision, the evidence that has developed indicates that reporting of added sugars is of clear benefit in terms of public health.

n. Definition of added sugars. Added sugars are not currently defined by regulation. We proposed to define added sugars in § 101.9(c)(6)(iii) as sugars that are either added during the processing of foods, or are packaged as such, and include sugars (free, mono- and disaccharides), syrups, naturally occurring sugars that are isolated from a whole food and concentrated so that sugar is the primary component (*e.g.* fruit juice concentrates), and other caloric sweeteners. We also clarified in preamble to the proposed rule (79 FR 11879 at 11906) that the definition would include single ingredient foods such as individually packaged table sugar, and that sugar alcohols are not considered to be added sugars. We provided the following examples of names for added sugars: Brown sugar, corn sweetener, corn syrup, dextrose, fructose, fruit juice concentrates, glucose, high-fructose corn syrup, honey, invert sugar, lactose, maltose, malt sugar, molasses, raw sugar, turbinado, sugar, trehalose, and sucrose. We note that this is not an exhaustive list of all added sugars.

Although some comments supported the proposed definition, other comments said that the proposed definition is ambiguous, confusing, and will lead to inconsistent application across the food industry. As discussed in the following responses to comments on the definition of added sugars, the final rule revises the definition of added sugars in § 101.9(c)(6)(iii) that is specific and provides clarity on issues raised in the comments. As such, the definition of added sugars can be applied by the food industry in a consistent manner.

(i) Fruit and Vegetable Juice Concentrates

(Comment 204) Many comments related to the inclusion of juices and juice concentrates in the definition of added sugars. Some comments suggested that the definition include sugars from fruit juice as well as fruit juice concentrate. However, many other comments disagreed with the inclusion of both fruit juices and fruit juice concentrates in the definition of added sugars. The comments said that 100 percent fruit juices, and 100 percent juice reconstituted from concentrate should not be considered to be added sugars. The comments suggested that fruit juice concentrates should be considered an added sugar only if they are not brought back to single strength by dilution with water in the product or by the end-user. One comment stated that 100 percent juice from concentrate and 100 percent juice not from concentrate are nutritionally identical, and there is no reason to require declaration of the added sugar content differently. One comment questioned why we are proposing to require different labeling for fruit juice depending upon whether it is a stand-alone product or an ingredient in another product. Another comment stated that a juice product formulated with juice that is reconstituted from a juice concentrate would appear as if it is making a greater calorie contribution because the juice concentrate would be deemed an ''added sugar'' when in fact, the calorie contribution of these two products is exactly the same. The comments argued that, if a juice product is sweetened with added sugars, the underlying juice before sweetening should not be considered an added sugar.

(Response) Single strength or 100 percent fruit juices (which, for purposes of this document, we will refer to collectively as 100 percent fruit juice) contribute calories from sugars as well as nutrients. The comments did not provide data or other information to demonstrate that exclusion of information on sugars from fruit juices would be scientifically unjustified, potentially disadvantageous for consumers, and inconsistent with growing expert opinion and international approach. We note that sugars from 100 percent fruit juices have never been considered to be added sugars in the DGA. In fact, the USDA Food Patterns include 100 percent fruit juices in the fruit group, and the DGA has recommended increased consumption of fruits for many years (Refs. 28, 30, 78–83). It was not our intent to include the sugars from 100 percent fruit and vegetable juices in the definition of added sugars in the proposed rule. Therefore, the final rule does not include 100 percent fruit or vegetable juices in the added sugars definition.

While fruit or vegetable juice concentrates can supply the same

nutrients as single strength or 100 percent fruit juice, they are a highly concentrated source of sugar. They may be used in small quantities for purposes other than to sweeten a food; however they are increasingly added to foods for sweetening purposes. They are identified in the ingredient list as concentrated fruit or vegetable juice. Some consumers could assume that the sugars that a concentrated fruit or vegetable juice contributes to a product are beneficial because they come from fruits or vegetables rather than from a more refined source. While foods sweetened with concentrated fruit or vegetable juices can be a part of a healthful diet, the sugars contributed by the concentrated fruit or vegetable juice provide additional calories to a product just as another source of refined sugar would provide additional calories. Over the course of the day, small amounts of calories in sugar-sweetened foods and beverages can add up and can make it difficult to balance the amount of calories consumed with the amount of calories expended. We consider foods sweetened with concentrated fruit or vegetable juices to be sugar-sweetened foods. The 2015 DGAC concluded that healthy dietary patterns characterized, in part, by lower intakes of sugar-sweetened foods and beverages are associated with a reduced risk of CVD. Therefore, it is important for consumers to be aware that when products are sweetened with concentrated fruit or vegetable juices; the extra sugars and calories that they contribute to products are like any other source of added sugars. When added to foods for the purpose of sweetening, we consider the sugars in a fruit juice concentrated which are used for sweetening purposes to be added sugars.

We recognize that juice concentrates may be added to food products in varying levels of concentration. For example, a product may use juice concentrate as an ingredient to achieve equivalent juice percentage as discussed in this section (*e.g.* a juice drink with 50 percent juice) or at 100 percent juice (*e.g.* 100 percent juice, from concentrate) based on our juice percentage declaration regulation in § 101.30 (also see our response to comment 205). An applesauce may have concentrated fruit juice added which has not been reconstituted at all. Because the nutrient profiles of fruit juice concentrates are the same as 100 percent fruit juices, we consider the amount of sugars above and beyond what would be contributed by the same volume of the same type of juice which is reconstituted to 100 percent juice to be added sugars. For example, if 15 grams of concentrated apple juice, which has 6 grams of sugars, is added to sweeten an applesauce and the same amount (15 grams) of 100 percent apple juice contains 1.7 gram of sugar, we would consider 4.3 grams of the sugars contributed to the applesauce (6 grams sugar in 15 grams apple juice concentrate 1.7 gram sugar in 15 grams 100 percent apple juice = 4.3 grams added sugars) by the apple juice concentrate to be added sugars. Another example to consider is an apple juice concentrate added to 100 percent pear juice for the purposes of sweetening. If 30 grams of apple juice concentrate, which contributes 10 grams of sugars is present in a serving of the finished product, the amount of added sugars which should be declared can be calculated by subtracting the amount of sugars present in 30 grams of 100 percent apple juice (3.4 grams) from the amount of sugars present in 30 grams of the fruit juice concentrate (10 grams of sugar in 30 grams apple juice concentrate 3.4 grams sugar in 30 grams 100 percent apple juice = 6.6 grams added sugars).

Fruit juice concentrates made from 100 percent juice that are sold directly to consumers (*e.g.* in grocery stores or on the Internet) are typically reconstituted with water by consumers before consumption. The packaging of these fruit juice concentrates typically provides information about the amount of water that consumers should use to reconstitute the juice. Concentrated juice products must bear a percentage juice declaration and that declaration may not be greater than 100 percent (Ref. 122). The label may explain that when the product is diluted according to label directions, the product yields a ''____ percent juice from concentrate,'' with the blank being filled in with the correct percentage based on the Brix values set out in 21 CFR 101.30(h)(1), as applicable (Ref. 122). We expect that consumers will reconstitute these types of fruit juice concentrates to 100 percent juice based on the instructions provided on the label for reconstituting frozen fruit juice. Therefore, we do not consider 100 percent juice concentrate sold directly to consumers as added sugar.

Accordingly, we have revised the definition of added sugars to exclude frozen fruit juice concentrates from 100 percent juice and to include only additional sugars contributed by fruit juice concentrates not reconstituted to full strength to be declared on the label. This approach is consistent with our position that only the amount of sugar which is above and beyond what would be expected in the same type of 100 percent juice is considered added sugar. However, concentrated juice cocktails, drinks, or beverages do not reconstitute to 100 percent juice and often contain sweeteners, such as sugar and syrup. For these types of products, all sugar except the sugar from the juice ingredients should be declared as added sugar on the label.

We note that we are also excluding fruit juice concentrates which are used to formulate the fruit component of jellies, jams, or preserves in accordance with the standard of identities set forth in § 150.140 and § 150.160 as discussed in our response to comment 211.

As for juice concentrates, juice concentrates may be added for many different purposes and they may have multiple functions in a food. For example, an orange juice concentrate could be added to a muffin batter to give it orange flavor, to add vitamin C, and to provide sweetness. If one purpose of adding the juice concentrate to a product is to provide sweetness, manufacturers should declare the amount of sugar provided from the juice which is in excess of what would be provided from the same volume of the same type of 100 percent juice as added sugars on the label.

We are aware that there are syrup-like products made by concentrating fruit juice that has been processed specifically to remove organic acid, minerals, and insoluble fruit materials. These types of products are not fruit juice concentrates, but are fruit syrups. All of the sugar contents in these types of ingredients should be declared as added sugars on the label.

We proposed to require manufacturers to make and keep records to verify the amount of added sugars in a serving of a product when the product contains both naturally occurring and added sugars. If a juice concentrate is added to a food and is not brought back to 100 percent juice, we are unable to determine how much of the sugars provided by the juice is in excess of what would be expected for the same volume of the same type of 100 percent juice, therefore, manufacturers of such products must include a calculation of how they determined the amount of sugars from the juice concentrate that contribute to the added sugars declaration. Because juice concentrates contain naturally occurring sugars, all manufacturers of products containing juices that are not brought back to 100 percent strength in the finished food must make and keep records to verify how they arrived at their determination of the amount of added sugars which are contributed by the concentrated juice.

(Comment 205) Some comments noted that juice concentrates are commonly used to adjust the Brix levels of directly expressed juice, and these juice concentrates are not required to be reflected in the common or usual name of such juices under the regulation for beverages that contain fruit or vegetable juice (§ 102.33(g)(2)). The comments said that fruit juice concentrates are not added sugars if they qualify to be included in the percent juice declaration found on beverage labels. The comments asked us to clarify that added sugars do not include fruit or vegetable juice concentrates used to formulate 100 percent juice or 100 percent juice blends, or dilute juice beverages, and do not include juice concentrates that are added to juices and dilute juice beverages to adjust soluble solids content in accordance with § 102.33 (21 CFR 102.33) and the standards of identity in parts 146 and 156 (21 CFR parts 146 and 156).

(Response) We do allow for the use of juice concentrates in the formulation of 100 percent juice, 100 percent juice blends, and diluted juice beverages under § 101.30 (percentage juice declaration for foods purporting to be beverages that contain fruit or vegetable juice), § 102.33 (beverages that contain fruit or vegetable juices), part 146 (requirements for specific standardized canned fruit juices and beverage), and part 156 (vegetable juices). For consistency with our current regulations, we agree that juice concentrates should be exempt from the definition of added sugars if they are: (1) Counted towards percentage juice declaration in accordance with § 101.30 for 100 percent juice and juice beverages (§ 102.33); and (2) used to standardize the Brix values of a single species juice consisting juice directly expressed from a fruit or vegetable in accordance with § 102.33(g)(2). Therefore, we have revised the definition of added sugars to make an exception for juice concentrates which contribute to the percentage juice label declaration under § 101.30 and for Brix value standardization under § 102.33(g)(2).

(Comment 206) One comment noted that, under the proposed definition for added sugars, a fruit juice concentrate that is 45 percent sugar, 50 percent water, and 5 percent other components would not be considered an added sugar because sugar would not be the primary component. The comment said that this is a potential loophole that manufacturers could exploit.

(Response) The comment is referencing the language in our proposed added sugars definition which would state that ''naturally occurring sugars that are isolated from a whole food and concentrated so that sugar is the primary component (*e.g.,* fruit juice concentrates)'' are added sugars. We recognize that there could be fruit juice concentrates that do not have sugar as the primary component. Therefore, we have revised the definition of added sugars to remove the language regarding naturally occurring sugars that are isolated from a whole food and concentrated so that sugar is the primary component (*e.g.,* fruit juice concentrates), and instead specifically listing the types of fruit juice concentrates that we consider to be added sugars.

(ii) Intended Purpose of Sweetening

(Comment 207) Many comments argued that sugars are an ingredient which may have multiple functions in a food. The comments recommended that we exclude certain ingredients which are not added for the intended purpose of sweetening a food. Most comments suggested defining added sugars based on the intended use of the sugar which has been added and not exclusively on the nature of the product. The comments would define added sugars as the sum of all mono- and disaccharides that are added to a food for purposes of sweetening the food.

Other comments said that, even when added as an ingredient in foods (as opposed to beverages), fruit juice concentrates are not always used for a sweetening purpose. One comment stated that apple juice concentrates can be added to produce a browning color as the food is heated and the sugars in the concentrate are caramelized. Many yogurt manufacturers, for example, use small amounts of fruit juice concentrates (such as carrot juice concentrate) in their yogurt products for purposes of coloring or flavoring. The comments suggested that fruit juice concentrates which are not used to sweeten a food not be counted as ''added sugars'' given that they: (1) Are not being used as a sweetener; (2) do not materially sweeten the product when used in the amounts necessary for their intended purpose of coloring or flavoring; and (3) only contain naturally occurring sugars derived from fruit.

(Response) We acknowledge that fruit juice concentrates, sugars, honey, or syrups may be added for many reasons to a food, and they may have many affects in a food other than adding sweetness. As previously discussed in this part, we have evidence that excess calorie consumption from added sugars is a public health concern. In determining which sugars should be included in the definition of added sugars, we have considered the presence of added sugars as a component of dietary intake and whether it is consistent with the concept of empty calories, as discussed in the 2015 DGAC Report.

(Comment 208) One comment recommended that mono and disaccharides from any pure (*i.e.* with no added sugars) fruit ingredient, such as juices, concentrates, fruit pieces, pulps, and purees should not count as added sugars if these ingredients are not added for sweetening purposes.

(Response) We decline to revise the rule as suggested by the comment. We agree that whole fruit, fruit pieces, pulps, purees, 100 percent fruit juices, and certain fruit juice concentrates should not be considered added sugars because they are nutrient rich and maintain the basic properties of a fruit, which is not considered to be an added sugar. We have, in the final rule's definition of added sugars, excluded whole fruits, fruit pieces, pulps, purees, and certain concentrated fruit juices that are reconstituted to full strength or that may be added to other fruit juices, jellies, jams, and preserves under our standards of identity. However, we consider other mono and disaccharides from fruit ingredients to be added sugars. Sugars from fruits as well as fruit juices can be isolated (removed from the fruit), concentrated (decreased in volume by removing water), and stripped of nutrients such that they are essentially sugars that provide a concentrated source of calories to a food without other redeeming qualities (*e.g.* fruit syrups). Therefore, we are not excluding all mono and disaccharides from any pure fruit ingredient.

(Comment 209) Many comments opposed the inclusion of dried and concentrated dairy ingredients in the definition of added sugars. The comments explained that a number of dairy-based ingredients are isolated from milk and concentrated such that lactose, the naturally occurring sugar in milk, is the primary component. Examples of such ingredients include non-fat dry milk powder, dry whole milk, some forms of concentrated whey and dried whey, and milk and whey permeate. According to the comments, under the proposed definition of added sugars, the lactose in these dried and concentrated dairy ingredients would be considered an added sugar because it is the ''primary ingredient.''

The comments also explained that lactose is not added to foods for the purpose of sweetening, and is instead added for other functional properties. Lactose contributes viscosity and mouthfeel, serves as a fermentation

source in yogurt, increases shelf-life, provides foaming properties which are beneficial for cakes and frozen desserts, and serves as an emulsifier in sausages, soups, sauces, beverages, and salad dressing. Milk and whey protein concentrates, some of which contain lactose as the primary component, are typically used to increase the protein content of foods or as salt replacers to reduce the amount of sodium in a broad range of foods because of their unique salt enhancement characteristics.

The comments said that it would not be possible to make foods if lactose were used as the sole sweetener in the formulation, replacing the traditional sugar (*e.g.,* sucrose). Lactose has about one sixth of the sweetness of sucrose. The amount of lactose required to achieve the same level of sweetness would compromise basic attributes of the product itself. For example, if lactose were added to a typical ice cream, the amount of lactose that would have to be added to sweeten the product would either depress the freezing point of the ice cream mix such that the product would not be able to freeze under normal conditions, or if it did freeze, would result in an extremely gritty texture defect which would make the product unacceptable to consumers.

One comment said that the common and usual names for dairy ingredients would cause confusion with added sugars declarations. For example, according to the comment, we allow manufacturers to identify skim milk, concentrated skim milk, and nonfat dry milk as ''skim milk'' or ''nonfat milk'' in an ingredients listing. In addition, two nonfat yogurt products could be formulated to the same final product composition, and the ingredient statements for both could read ''nonfat milk and culture.'' However, under the proposed definition of added sugars, a yogurt made using fluid skim milk as the sole dairy ingredient would have no added sugars, while a yogurt made using nonfat dry milk powder as the sole source of dairy solids would have to declare added sugars on the Nutrition Facts label.

One comment said that, when dry milk ingredients are added, consumers may be confused about the source of added sugar in the food if the food contains no obvious sweetener. For example, if a food with a dairy-based ingredient, such as nonfat dry milk or whey protein concentrate, would be required to declare the inherent lactose as added sugars on the Nutrition Facts label and the food contained no easily identifiable source of added sugars, consumers reading the ingredient list likely would not expect or recognize dairy ingredients as sources of ''added sugars.''

The comments noted that dairy ingredients containing lactose may be added so that a dairy product meets the standards for identity. One comment stated that California's standard for fluid milk mandates higher milk solids than the Federal standard of identity, requiring the addition of nonfat dried milk or condensed skim milk containing lactose. The comment said that the lactose in these milk solids should not be considered an added sugar because it is not added for sweetening purposes. The comments also noted that for standardized dairy products such as milk and yogurt, current regulations do not require that a sweetener be added. The comments said that the exclusion of dairy-based ingredients as sweeteners in the standards is acknowledgement by FDA that the lactose in these dairy-derived ingredients is not primarily added to provide sweetness.

(Response) Lactose is a major component of milk solids. Many common concentrated or dried dairy ingredients, such as nonfat dry milk and whey powder contain lactose as the primary component. We agree that many dairy ingredients, even though high in lactose, are not considered a source of added sugars. Dairy ingredients and nutritive carbohydrate sweeteners are often considered to be in two separate ingredient categories during food formulation. The proposed definition of added sugars captured such dairy ingredients because it included naturally occurring sugars that are isolated from a whole food and concentrated so that sugar (in this case lactose) is the primary component. We did not intend to capture dairy ingredients under this portion of the definition. Therefore, we have removed the language from the definition of added sugars stating that naturally occurring sugars that are isolated from a whole food and concentrated so that sugar is the primary component are added sugars.

FDA regulations, at § 168.122, establish a standard of identity for lactose. The standard of identity for lactose states that it must contain not less than 98 percent lactose, mass over mass (m/m), calculated on a dry basis. We have historically considered purified lactose as a sweetener as it is included in 21 CFR part 168 under sweeteners and table syrups. We consider lactose as defined in § 168.122 to be an added sugar. Lactose, as defined under § 168.122 would be captured under the definition of added sugars because it is a free disaccharide. Therefore, with the revised definition, dairy ingredients, except lactose as defined in § 168.122, are not included in the definition of added sugars.

(iii) The ''No Added Sugars'' Nutrient Content Claim

(Comment 210) Many comments argued that the proposed definition is inconsistent with the regulation for the ''no added sugars'' nutrient content claim in § 101.60(c)(2) because the regulation recognizes that ingredients that contain sugars do not preclude the use of the claim unless the ingredients ''functionally substitute for added sugars.'' The comments noted that, if the definition of added sugars is not consistent with the ''no added sugars'' nutrient content claim regulation, products could conceivably bear ''no added sugars'' claims but have a gram amount of added sugars declared on the Nutrition Facts label, which would be confusing and misleading. One comment provided the example of a juice that is reconstituted from juice concentrate which meets the Brix standard for single-strength juices. The comment said that such a product can factually claim that it is ''unsweetened'', but the manufacturer would have to disclose the amount of added sugars under the proposed rule.

Other comments noted that in the 1993 preamble to our rule defining the ''no added sugars'' nutrient content claim, we clarified that sugars inherent in a product, such as those found in fruit juices, would not disallow a no added sugars claim. One comment further noted that we advised that ''the addition of water to a juice concentrate to produce a single strength juice would not preclude the use of a ''no added sugar'' claim; however the other conditions for the claim must still be met'' (see 58 FR 2328). The comment said that this statement makes it clear that the presence of a fruit juice concentrate in a food does not prevent the use of a no added sugar claim. Another comment suggested that, in addition to fruit juice concentrates that are reconstituted to single strength in 100 percent juices, juice blends, juice drinks, and juice drink blends also should be excluded from the definition of added sugars because doing so would align with the current definition of no added sugars.

(Response) The comments expressed concern that fruit juice concentrates added to a single strength juice or dairy ingredients that are not added for the intended purpose of sweetening can currently bear the ''no added sugars'' claim, but sugars from the concentrated fruit juice or dairy ingredient would have to be declared as added sugars

under the proposed definition. We have revised the rule to exclude certain fruit juice concentrates that are added to juices and that dilute juice beverages to adjust soluble solids content in accordance with § 102.33 and the standards of identity in parts 146 and 156. We are also excluding fruit juice concentrates that are reconstituted to 100 percent single strength juice. In addition, we have removed the language from the definition of added sugars which states that naturally occurring sugars that are isolated from a whole food and concentrated so that sugar is the primary component are added sugars. Therefore, dairy ingredients containing lactose, except lactose as defined in § 168.122, are no longer captured under the definition of added sugars. With these revisions to the definition of added sugars, there is no longer a conflict between the definition of added sugars and the requirements for use of the ''no added sugars'' nutrient content claim.

We decline to define added sugars based on the intended purpose of the ingredient as suggested by the comments because we are providing specifics of what we consider to be added sugars in the definition. In addition, in determining which sugars should be included in the definition of added sugars, we have considered the presence of added sugars as a component of dietary intake and whether it is consistent with the concept of empty calories, as discussed in the 2015 DGAC Report.

(iv) Fruit Jellies, Jams, and Preserves

(Comment 211) Several comments suggested that fruit jellies, jams, and preserves not be considered as added sugars. The comments noted that fruit jellies, jams, and preserves are subject to standards of identity set forth in § 150.140 and § 150.160 and are manufactured using certain fruit and fruit juice ingredients in combination with added sugars. One comment suggested that it is appropriate for such ingredients, regardless of whether they are derived from cane sugar, fruit juice syrup, fruit juice concentrates, etc., to count towards an added sugars declaration when used as sweeteners. The comment said that characterizing fruit and fruit juices in jellies, jams, and preserves (before the addition of sweeteners) should be excluded from the definition of added sugar because they do not serve as sugar substitutes, and are not ''added'' to a food for purposes of sweetening a food.

(Response) The definition of added sugars excludes fruits and 100 percent fruit juices. However, sugars from certain fruit juice concentrates fall within what we consider to be added sugars. Because fruit juice concentrates may be used as ingredients in fruit jellies, jams, and preserves, we have excluded those fruit juice concentrates that are used in accordance with the standards of identity in § 150.140 and § 150.160 from the definition of added sugars. However, any additional sugars that are added to the jelly, jam, or preserve would need to be declared as added sugars on the label.

(v) Dried Fruits

(Comment 212) Some comments said that dried fruit added to a product should not be considered to be an added sugar.

(Response) We agree that dried fruits which have not had any sugar added to them should not be considered to be an added sugar because they are essentially a dehydrated whole fruit and still retain the nutrients and other components of a whole fruit. However, if additional sugar is added to a dried fruit, the sugar added to the dried fruit must be declared on the label as added sugars.

(vi) Other Sugars/Sweeteners

(Comment 213) One comment would exempt isomaltulose and D-tagatose from labeling as added sugars due to their effect on reducing the risk of dental caries. The comment said that the proposed declaration for added sugars would not allow for adequate information to be provided to the consumer about carbohydrates such as isomaltulose (a disaccharide) and D-tagatose (a monosaccharide) that are ''sugars'' from a regulatory standpoint, but at the same time have very different and beneficial physiological properties than traditional ''sugars.'' The comment noted that isomaltulose and D-tagatose are noncariogenic carbohydrate sweeteners, and products containing these sweeteners can bear the dietary noncariogenic carbohydrate sweeteners and dental caries health claim if they meet the requirements of § 101.80. The comment also stated that these dental health benefits of isomaltulose and D-tagatose can also be the subject of a health claim under EU regulation 432/2012. The comment said that, aside from the dental health benefits, isomaltulose and D-tagatose are low-glycemic carbohydrate(s) resulting in a reduced blood glucose response and that this health effect is the subject of EU health claim 432/2012. The comment argued that such a health benefit provides the basis for a structure-function claim under the FD&C Act.

(Response) We have recognized through our health claim for noncariogenic carbohydrate sweeteners and dental caries that the sugars D-tagatose and isomaltulose may reduce the risk of dental caries (tooth decay). However, D-tagatose and isomaltulose are chemically sugars. Because these sweeteners are chemically sugars, and other substances are included or excluded from the definition of sugars and added sugars based on whether they are a free mono or disaccharide rather than on their physiological effects, including D-tagatose and isomaltulose is consistent with how we have characterized other sugars. As such, we are not excluding D-tagatose and isomaltulose from the added sugars declaration. However, manufacturers may still use the noncariogenic carbohydrate sweeteners and dental caries health claims on their products to make consumers aware that sugars contained in a food may reduce the risk of dental caries.

(Comment 214) Some comments would exclude Allulose (psicose) from the definition of added sugars because ketohexose sugars, such as Allulose, do not provide calories, are not metabolized, and do not raise blood sugar levels.

(Response) As discussed in our response to comment 124, we received a petition on this subject after the comment period closed. We intend to address this issue at a later date when we have had time to consider the information presented in the petition.

(Comment 215) Some comments stated that the proposed language, which states that ''other caloric sweeteners'' are considered added sugars, is confusing and unclear. One comment provided the example of applesauce, which can be used to replace oil in baking. In this example, unsweetened applesauce contains no added sugars, but can be used to both replace an oil and sweeten baked goods.

(Response) We agree that the language that states that ''other caloric'' sweeteners are considered to be added sugars may not be clear to manufacturers or consumers. We have removed this language from the definition of added sugars because caloric sweeteners, which are chemically sugars, are free mono or disaccharides and are captured elsewhere in the definition.

(vii) Other Comments

(Comment 216) Some comments noted that ingredients such as fruit juice concentrates, high fructose corn syrup, honey, and molasses contain significant amounts of water (*e.g.,* 30 percent). The

ingredients may contain a range of naturally occurring constituents besides sugars (*e.g.,* polysaccharides, anthocyanins, vitamins, minerals, etc.). Therefore, to avoid overstating the amounts of added sugars, the comments said that it is important to take into account the actual ''sugars'' content of the ingredients. The comments suggested adding language to clarify that the quantity of added sugars declared in labeling will include only the actual ''sugars'' portion of the ingredient.

(Response) We agree that some ingredients containing sugars, such as syrups, contain water and other components that are not sugars, and that those components should not be considered as part of the added sugars declaration. Therefore, when such ingredients are included in foods, only the sugar portion of the ingredient should be declared on the label. The definition of added sugars states that free mono and disaccharides are considered added sugars, thus water and other components of sugar-containing ingredients are not added sugars and should not be declared as such. We have also revised the definition to say ''sugars from syrups'' to clarify that only the sugars component of the product should be declared as added sugars.

(Comment 217) Several comments would not consider natural sources of sugar (*e.g.,* honey or maple syrup) to be added sugars. One comment would exempt natural, unrefined honey and other natural liquid or semi-liquid, unrefined, un-concentrated, whole-food sweetening agents because they are whole food products in an unrefined, un-concentrated, whole-food form. Conversely, the comment suggested that other sweeteners which are extracted, refined, and concentrated such as agave syrup, maple syrup, and evaporated cane juice syrup should be considered added sugars.

(Response) We disagree that all natural sources of sugar which have not been processed or refined should not be considered added sugars. In determining which sugars should be included in the definition of added sugars, we have considered the presence of added sugars as a component of dietary intake and whether it is consistent with the concept of empty calories, as discussed in the 2015 DGAC Report. The processing history (*e.g.,* concentration or refinement) does not entirely determine whether or not sugar in an ingredient is added sugar. For example, natural sources of sugar present in foods, such as whole fruits, 100 percent juice, and dried fruits, are not considered added sugars because these foods are nutrient rich. However, products such as maple syrups or honey are included in the ''empty calories'' or ''calories for other uses'' category in the USDA Food Patterns. Therefore, we decline to exclude sugars from honey and maple syrup from the added sugars definition.

(Comment 218) One comment stated that consistency is needed in the definition of added sugars across Federal Agencies as well as by scientists, health professionals, manufacturers, and others. The comment identified fruit juice concentrate as one example of inconsistency among Federal Agencies. The comment cited a paper on the development of USDA estimates of added sugars (Ref. 123).

(Response) When establishing a regulatory definition for the purposes of nutrition labeling, we consider other regulatory aspects such as the impact on other regulations. We expect that establishing a regulatory definition of added sugars for the purpose of nutrition labeling will help other Federal Agencies and the scientific community in determining a definition for added sugars for Federal guidelines, programs, and research.

(Comment 219) One comment would not consider incidental additives or flavors containing sugars, such as dextrose, which are not added for sweetness as added sugars.

(Response) The comment did not explain what ''incidental additives'' are. However, we disagree that dextrose should be excluded from the definition of added sugars. Dextrose is a sugar, and, when added to a food, it acts in the same manner as other types of added sugars.

(Comment 220) Some comments said it will be difficult for manufacturers to obtain information about added sugars content of sourced ingredients that they get from suppliers. The comments questioned whether ingredients used in the formulation that are not an isolated sugar but are part of a compound ingredient must be labeled. One comment noted that, aside from the ingredients used in traditional food processing, there are ingredients that are used in ''better for you'' formulated foods that would be required to be listed on the label.

(Response) The added sugars declaration in the finished product includes added sugars present as sub-ingredients. For example, if a cookie product uses strawberry jams as an ingredient, the added sugar present in the strawberry jam would count towards the added sugars declaration for the finished cookie product. Manufacturers need to collect nutrient information for ingredients in their products from suppliers. Manufacturers have the ability to select which suppliers they use. If a supplier is not willing or able to provide information about the added sugars content of an ingredient, the manufacturer may wish to consider another supplier.

With respect to the comment suggesting that manufacturers may have difficulty obtaining information about the added sugars content of ''better for you'' formulated foods, manufacturers need to obtain information about the added sugars content of all ingredients in order to provide accurate labeling, regardless of whether they are used to formulate ''better for you foods.''

(Comment 221) One comment would expand the added sugars definition to encompass all added sweeteners.

(Response) It is not clear from the comment which sweeteners that the comment is suggesting are not included in an added sugars declaration. Therefore, we are not revising the added sugars definition in response to the comment.

o. Establishing a DRV and mandatory declaration of the percent DV for added sugars.

(i) Mandatory Declaration of a Percent DV and Whether a DRV Should Be Established

(Comment 222) Many comments both to the proposed rule and the supplemental proposed rule discussed establishing a DRV that can be used to calculate a percent DV for added sugars as well as a mandatory declaration of a percent DV for added sugars on the label. Most comments favored establishing a DRV and requiring the percent DV declaration of added sugars. Many comments to the proposed rule recommended establishing a DRV for added sugars of 10 percent of calories, and provided several rationales to justify the suggested DRV. The comments said that, since the 1977 Dietary Goals, health officials have consistently recommended an upper limit of 10 percent of calories from added sugars. The comments referred to the WHO recommended limit of 50 grams or 10 percent of total calories from added sugars and the American Heart Association recommendation to limit added sugars consumption to 25 grams per day for women and 37.5 grams per day for men. The comments also noted that the 1992 USDA Food Guide Pyramid suggested an upper limit of 6, 12, and 19 teaspoons of sugars, respectively, for diets of 1,600, 2,200, and 2,800 calories, respectively. This comes to 7, 10, and 13 percent of calorie

intake, respectively, for an average of 10 percent of total calories from added sugars. One comment said that the 2010 DGA stated that no more than 5 to 15 percent of calories should come from a combination of solid fats and added sugars. The comment stated that this implies that added sugars should be less than 10 percent of calories. Another comment quoted a pediatric endocrinologist who says that a ''dose'' of added sugars of up to 50 grams a day poses little risk for metabolic or chronic disease, but that the amount consumed by Americans is toxic.

One comment to the proposed rule suggested that the discretionary calorie allowance from the USDA Food Patterns presented in the 2005 DGA could serve as a basis for a DRV. The comment suggested that, using the food patterns provided in the 2005 DGA at the 2,000 calorie level, one would have a limit of 267 discretionary calories to use on solid fats and added sugars (assuming no alcohol consumption). The discretionary calorie allowance could be divided equally between solid fats and added sugars resulting in a limit of no more than 133 calories, 33 grams, or 8 teaspoons of added sugars per day. This would result in a DRV for added sugars of 6 percent of total calories.

Other comments in favor of a percent DV declaration suggested that a percent DV declaration is necessary for consumers to be able to put the amount of added sugars in a serving of a food into the context of their total daily diet. The comments said that, without a DV, consumers could only compare the relative amounts of added sugars among products, but would not know how much of a day's worth of added sugars a food contains. The comments said that the percent DV advises the consumer of how much of a recommended intake of that nutrient is provided by a particular food. The comments also suggested that a percent DV declaration could help parents and other caregivers make informed decisions about the food products children consume and be more confident that their intake of added sugars does not exceed healthy daily limits. One comment provided survey data showing that consumers would like to have a DV for added sugars on the label.

Many comments supporting a mandatory declaration of a percent DV of added sugars also suggested that the information is necessary because added sugars consumption is associated with the risk of chronic diseases and health-related conditions such as diabetes, CVD, and metabolic syndrome.

One comment noted that the 2014 IOM workshop summary on Health Literacy and Health Numeracy documents that most Americans have limited numeracy skills, and disparities exist in those skills. The comment further stated that providing simpler, clearer food labeling information is needed to reach a larger segment of the population, and suggested that providing a percent DV declaration may be an easier way for consumers with limited numeracy skills to understand an added sugars declaration.

In contrast, many comments opposed establishing a DRV for added sugars and the mandatory declaration of a percent DV for added sugars. The comments said there is no scientific basis upon which to base a DRV for added sugars. Other comments said that we should not establish a DRV for added sugars or require the percent DV declaration for added sugars because the declaration of any information related to added sugars is not scientifically supported. The comments' rationale relates to our basis for requiring an added sugars declaration, and we address those topics are provided elsewhere in this part.

The comments also opposed the mandatory declaration of a percent DV for added sugars because sugars are converted to other products during processing (caramelization, Maillard browning, and fermentation), and thus the amount declared on the label may be inaccurate for some products. (We respond to comments pertaining to non-enzymatic browning and fermentation in part II.H.3.k and have determined that it is possible for manufacturers of products which undergo these chemical reactions to provide a reasonable approximation of the amount of added sugars in a serving of their product.)

Many comments also said that added sugar is not a necessary nutrient and should be avoided or should not be consumed in any amount. The comments said that it is inappropriate for us to recommend the consumption of any amount of added sugars in the diet. One comment suggested that added sugars should be viewed similarly to *trans* fats because they are not essential in the diet and are detrimental to health. The comment said that we should not set a recommended level of added sugars because, like *trans* fats, Americans should be consuming as little added sugars as possible in their diet.

One comment said that a percent DV declaration for added sugars just confuses the public, many of whom have diabetes, and should be focused on their intake on total carbohydrates rather than sugars or added sugars. Another comment said that, because there are no studies which support the proposed value, if the value is determined to be incorrect at a future date, it will remain in the public's mind long after it has been proven to be incorrect.

(Response) Consumers need to know how much added sugars are in a serving of a product in order to maintain healthy dietary practices. As discussed in part II.H.3, our rationale for the declaration of added sugars for the general U.S. population is focused on assisting consumers in maintaining healthy dietary practices by providing the information that consumers need to construct a healthful dietary pattern that meets nutrient needs within calorie limits and is associated with a decreased risk of chronic disease. While the gram declaration for added sugars gives consumers the information that they need to construct a healthy dietary pattern that is low in added sugars, it does not provide the information that they need in order to put the amount of added sugars in a serving of a product in the context of their total daily diet. The gram amount of added sugars also does not give consumers the information that they need to determine if a food is relatively high or relatively low in added sugars or a frame of reference that they can use to determine how to include a food in their overall diet. The percent DV declaration provides that missing piece of information that will allow consumers to more easily compare products and determine the relative contribution that a serving of a food will provide towards their diet.

After publication of the proposed rule, the 2015 DGAC recommended that Americans limit their consumption of added sugars to a maximum of 10 percent of total calories (Ref. 19). The 2015 DGAC based this recommendation on modeling of dietary patterns, current added sugars consumption data, and a published meta-analysis on sugars intake and body weight. We considered the evidence that the 2015 DGAC relied on in making this recommendation, and tentatively concluded in the supplemental proposed rule that limiting consumption of added sugars to 10 percent of daily calories is a reasonable goal for consumers to achieve and would assist consumers in choosing and maintaining a healthful dietary pattern. We proposed to require the mandatory declaration of a percent DV for added sugars, and we proposed a DRV of 50 grams for added sugars for children and adults 4 years of age and older from which the percent DV can be calculated. The DRV of 50 grams is determined by first multiplying the 2,000 reference calorie intake by 10

percent (2,000 × 0.1 = 200 calories) and then by dividing the resulting 200 calories by 4 calories per gram for carbohydrates (200 ÷ 4 = 50 grams). We proposed a DRV of 25 grams of added sugars for children 1 through 3 years of age. A 1,000 calorie reference amount would be used to calculate the DRV for children under the age of 4 (1,000 calories × 0.1 = 100 calories and 100 calories ÷ 4 calories per gram for carbohydrates = 25 grams).

Before proposing a DRV for added sugars, we considered the approaches suggested in comments to the proposed rule for establishing a DRV of 10 percent of total calories for added sugars, but declined to accept the comments' various approaches for supporting a DRV of 10 percent of calories from added sugars because the approach provided a recommended limit for added sugars, which was not based on total added sugars information (*e.g.* the WHO recommendations which are based on ''free sugars'' and include fruit juices), because it is not clear how the recommended limits were derived and whether they were based on any scientific data or evidence (*i.e.,* AHA recommendation and recommendation from an endocrinologist), or because the 2015 DGAC provided updated USDA Food Patterns that are specific to added sugars, unlike previous editions of the USDA Food Patterns included in the 1992, 2005, and 2010 DGAs.

With respect to the comments suggesting that we do not have a scientific basis to establish a DRV for added sugars, we have a recommended limit for added sugars of no more than 10 percent of total calories that was developed using food pattern modeling. We address these issues later in this part.

We want to clarify that the DRV for added sugars should not be viewed as a recommended amount for consumption. The percent DV declaration for nutrients, which is calculated based on the DRV or RDI, represents a reference value that serves as a general guide to consumers. It would be inappropriate to view all DRVs and RDIs as recommended amounts to consume because some are based on amounts to limit (*e.g.,* sodium and saturated fat) while others are based on amounts that individuals should strive to consume (*e.g.,* calcium and potassium). Furthermore, individuals have varying nutrient and calorie needs, so consumers may need more or less of a particular nutrient based on their specific nutrient needs. As such, consumers with higher calorie needs can consume more added sugars in their diet relative to individuals with lower calorie needs.

While consumers are interested in seeing a DV for added sugars on the label, as discussed in part II.C.1, consumer interest alone cannot be used to justify a label declaration. There is a need for a percent DV declaration for added sugars so that consumers can put the amount of added sugars in a serving of a product into the context of their total daily diet so that they can meet nutrient needs within calorie limits and construct a healthy dietary pattern that is associated with a reduced risk of CVD.

We disagree with the comment suggesting that we should take the same approach that we have taken with *trans* fat and not establish a DRV for added sugars because Americans should be consuming as little added sugars in their diets as possible. The current evidence on added sugars does not show a linear relationship with chronic disease risk, and therefore, the evidence does not support limiting added sugars to as little in the diet as possible, similar to current recommendations for *trans* fat. In fact, individuals can carefully incorporate limited amounts of added sugars into a healthy diet. The USDA Food Patterns suggest that individuals who need between 1,000 and 3,200 calories per day can reasonably consume between 4 to 9 percent of their calories from added sugars and still meet their nutrient needs within calorie limits.

As for the assertion that a percent DV declaration for added sugars will confuse the public, the comments did not provide evidence to support the assertion. Some comments submitted consumer research that included a percent DV declaration for added sugars in the labels, and the participants were shown the percent DV declaration. However, the research did not isolate the effect of the percent DV declaration from that of the gram amount declaration, so it is not possible to determine if the effects seen in those studies were due to confusion about a percent DV declaration for added sugars or more generally about information on the label related to added sugars. Other consumer research showed that participants reported similar responses about percent DV declarations for saturated fat and for added sugars, which suggests that a percent DV declaration for added sugars may not have specifically caused the confusion shown in the research. In both cases, it is unclear what conclusions related to confusion about a percent DV declaration for added sugars can be drawn from the evidence provided in comments.

With respect to the suggestion that, if the DRV for added sugars is determined to be incorrect later, the DRV will remain in the public's mind long after it has been proven to be incorrect, a change in the science related to added sugars in the future should not prevent us from establishing a DRV at this time that is based on currently available evidence. Science evolves over time, and it is possible that we could have additional evidence in the future that would lead us to re-evaluate the DRV for added sugars. In fact, we are updating DRVs and RDIs for a number of different nutrients on the label based data and information that has become available since 1993.

(Comment 223) Some comments to the proposed rule recommended that we commission the IOM to review the evidence and recommend a figure that could be used as the basis for a DV. The comments suggested that a quantitative limit will help consumers reduce added sugars by giving them a specific target or goal to work towards.

(Response) We have evidence that added sugars are a public health concern, and a percent DV declaration that is calculated based on a DRV for added sugars will assist consumers in putting the amount of added sugars in a serving of a product into the context of the total daily diet. We also have scientific evidence to support limiting calories from added sugars to less than 10 percent of calories that can be used to establish a DRV. We are acting on the evidence that we currently have available to us because a percent DV declaration for added sugars is important to assist consumers in maintaining healthy dietary practices.

(Comment 224) Some comments opposed establishing a DRV and requiring the mandatory declaration of a percent DV for added sugars when we have not established a DRV for total sugars. The comments said that establishing a DRV and requiring the percent DV declaration for added sugars without a DRV or percent DV declaration for total sugars will cause confusion. One comment questioned our conclusion that there is adequate evidence to establish a DRV for added sugars but not total sugars, especially when much data used to support the declaration of added sugars was based on research looking at total sugars. Another comment said that a percent DV declaration for total sugars is more important than one for added sugars because a percent DV for added sugars does not represent the true caloric or metabolic contributions of sugars to a food product.

(Response) As discussed in the preamble to the proposed rule (79 FR 11879 at 11902), we do not have a reference value upon which we can derive an appropriate DRV for total sugars. The IOM has not set a UL for sugars. We also do not have scientific evidence to support a reference value for total sugars from another U.S. consensus report. However, we have considered the scientific evidence that supports the 2015 DGAC recommendation (which we note is also included in the 2015–2020 DGA) to limit calories from added sugars to no more than 10 percent of calories. Although this reference level is different than other scientifically supported quantitative intake recommendations that have been used to establish DRVs and RDIs for other nutrients, it was derived from food pattern modeling of a healthy dietary pattern that is low in added sugars. We are focusing on what healthy dietary patterns look like and what information is needed for consumers to construct a healthy dietary pattern. The USDA Food Patterns that support limiting consumption of calories from added sugars to less than 10 percent of calories per day, are examples of the type of healthy dietary pattern that consumers could use to reduce their risk of disease. Therefore, although a limit of calories to no more than 10 percent of calories provides a reference value that is different than other scientifically supported quantitative intake recommendations, it was derived using a dietary pattern approach, which is consistent with our basis for requiring the declaration of added sugars on the label.

In response to the comments suggesting that consumers will be confused if there is a percent DV declaration for added but not total sugars, the comments did not provide data or other information to support this assertion. A declaration of the gram amount of sugars has been on the label for over 20 years without a declaration of a percent DV for sugars, so consumers are familiar with the information that will be on the label for total sugars.

With respect to the comment stating that it is more important to require a percent DV declaration for total rather than added sugars because a percent DV for added sugars would not represent the true caloric or metabolic contributions of sugars to a food product, we have concluded that consumption of too many added sugars has health implications. Consumers need specific information on how much added sugars is in a serving of a product and the contribution that a serving of a product makes towards the total daily diet.

To the extent that comments are suggesting that we should be able to establish a DRV for total sugars because much evidence which is being used to support an added sugars declaration is on total sugars, we disagree. Total sugars includes both naturally occurring and added sugars. Although a small number of the studies that we are relying on to support an added sugars declaration included fruit juices, which contain naturally occurring sugars, the vast majority of the evidence was on only added sugars, or on foods and beverages to which sugars have been added. Furthermore, we are basing the DRV on food pattern modeling and not on the Chapter 2 analysis related to dietary patterns and health outcomes.

Although we do not currently have a reference value that can be used to establish a DRV for total sugars, information could become available in the future that may cause us to reconsider.

(Comment 225) One comment said that we should not require a percent DV declaration for added sugars because other countries have evaluated added sugars and have concluded that the declaration of added sugars should not be mandatory as there is little evidence to support such identification.

(Response) We address similar comments related to the declaration of the gram amount of added sugars on the label in part II.H.3.

(Comment 226) Some comments suggested that additional research needs to be conducted to determine how much added sugars is harmful before establishing a DRV for added sugars or requiring a percent DV declaration on the label.

(Response) We disagree that additional research on added sugars should be conducted before we establish a DRV for added sugars or to require a percent DV declaration on the label. Although a linear relationship has not been established between added sugars intake and risk of disease upon which a UL can be based, we do have evidence showing that consumption of too much added sugars is harmful to health. We also have scientific evidence that supports limiting added sugars consumption to less than 10 percent of calories that includes modeling of healthy dietary patterns.

(Comment 227) One comment, as part of its argument that the declaration of added sugars information is not material and provides no added importance to consumer product purchase or use decisions, stated that, based on its own research of our eye-tracking study data, participants spent statistically significantly less time on added sugars than on carbohydrate on the Proposed label and spent statistically the same amount of time on carbohydrate and added sugars on the Proposed label as that on carbohydrate on the Current label. The comment also asked how we made the distinction between participants' attention on carbohydrate and on added sugars on the proposed label. Another comment questioned whether adding percent DV for added sugars will increase consumer attention to the added sugars declaration, including the percent DV for added sugars. The comment stated that, although percent DV for added sugars was not specifically tested in our eye-tracking study, the study showed that: (1) There were no statistically significant differences between the current and the proposed formats in the proportion of participants who noticed percent DV information or the share of time they spent on the information; and (2) the added sugars declaration received relatively little attention (on the proposed label). The comment concluded that these results suggest that the percent DV information receives low priority from consumers or the information is not prominent or easy to understand and it is not clear if including the percent DV for added sugars will enhance consumer attention to the added sugars declaration.

(Response) We disagree that our eye-tracking study findings on the percent DV information and on added sugars declaration mean that adding percent DV for added sugars will not increase consumer attention to the added sugars declaration. Our study did not include a percent DV for added sugars on any labels tested, did not compare participants' responses to a label with a percent DV declaration for added sugars and responses to a label without such a declaration, and did not examine participants' attention to this percent DV information. Therefore, the cited findings cannot be used to infer the amount of attention the percent DV for added sugars would receive by consumers if and when it is present on labels. We also disagree that one can infer from our eye-tracking study findings that an added sugars declaration, including the percent DV, is of no value to consumers. Our decision to require the declaration is not determined by how much attention it receives from the study participants. Instead, we are requiring the declaration of added sugars on the label because consumers need the information in order to maintain healthy dietary

practices. We clarify that, in our eye-tracking study, the label element ''carbohydrate'' on the Proposed label included these areas of the label: Total carbohydrate, dietary fiber, sugars and protein. ''Added sugars'' was considered in the study as a separate area on the label.

(ii) DRV of 10 Percent of Total Calories From Added Sugars

In the supplemental proposed rule, we proposed to establish a DRV for added sugars of 10 percent of total calories (50 grams for children and adults 4 years of age and older and 25 grams for children 1 through 3 years of age). The scientific evidence from the 2015 DGAC Report supports Americans keep added sugars intake below 10 percent of total energy intake, based on modeling of dietary patterns, current consumption data, and a published meta-analysis on sugars intake and body weight (80 FR 44303 at 44308). We concluded that the scientific information from the 2015 DGAC Report provides a basis for FDA to establish a DRV for added sugars. The 2015 DGAC relied on both food pattern modeling information from the USDA Food Patterns as well as information from the Te Morenga et al. paper for their recommendation to limit added sugars to a maximum of 10 percent of total daily caloric intake.

(Comment 228) One comment cited work sponsored by ILSI North America that suggests a lack of strong evidence for a dietary recommendation to limit added sugars to no more than 10 percent of calories. The comment cited reviews by ILSI North America related to dental caries and BMI which led it to conclude that frequency of consumption of fermentable carbohydrates is a driver of dental caries along with oral hygiene, exposure to fluoride, and salivary flow and composition and that sustained overconsumption of energy, irrespective of the energy sources, leads to weight gain. The comment concluded from the evidence reviewed that the scientific evidence is lacking with respect to quantifying a level of sugar or added sugar relative to health outcomes.

(Response) The comment provided a review of the evidence related to a specific relationship between intake of added sugars and risk of disease. As discussed in our response to comment 224, we are establishing a DRV for added sugars using a different type of intake recommendation than what has been used for other nutrients with a linear relationship with disease risk, which was developed primarily by food pattern modeling. Our rationale for requiring the mandatory declaration of added sugars relates to consuming a healthy dietary pattern that meets nutrient needs within calorie limits and is associated with a decreased risk of chronic disease. The food pattern modeling that was done for the USDA Food Patterns provides a conceptual framework for selecting the kinds and amounts of foods of various types, which together, provide a nutritionally satisfactory diet. Therefore, the scientific evidence that supports limiting calories from added sugars to less than 10 percent of calories per day that was derived from food pattern modeling is related to our basis for requiring the mandatory declaration of added sugars for the general population, which is focused on consumption of a healthy dietary pattern.

(Comment 229) Several comments recommended that the IOM re-evaluate the added sugars intake recommendations. The comments said that the IOM is the appropriate body to establish a DRI upon which to base a DRV for added sugars because:

- The scope of work for the IOM DRI committees is specifically to develop the DRIs, which are intended to inform nutrition labeling;
- The DRI process provides a rigorous and methodological process to determine nutrient values used in nutrition labeling and includes guidance on when a percent DV may be established;
- The IOM DRI considers the risks of adverse effects associated with low as well as high nutrient intakes;
- The IOM adheres to a structured risk assessment approach to ensure that the evidence is systematically and consistently evaluated; and
- The IOM ensures and fosters transparency in decision-making.

The comments said that we have based all other DRVs on the IOM DRI reports. The comments noted that more than a decade has passed since IOM concluded in 2005 that, based on the data available on dental caries, behavior, cancer, risk of obesity, and risk of hyperlipidemia, there is insufficient evidence to set a daily intake for total and added sugars or to set an upper limit for added sugars. The comments said that the process the DGAC used to develop its recommendations did not have the scientific rigor of the IOM process. The comments recommended that we defer any final rule, especially changes related to the declaration of added sugars, until the IOM can review the available evidence and develop a DRI for added sugars.

(Response) While the IOM has been the source of data that we have relied upon when setting other DVs, it is not the only source of information on which we can rely. While we recognize that a DRV that is derived primarily based on food pattern modeling is different from a UL that is determined by IOM, a DRV based on food modeling is a valid approach that provides consumers with a tool that they can use to help them put the amount of added sugars in a serving of a product into the context of their total daily diet. In response to the comments suggesting that the process that is used by the IOM to set ULs is more scientifically rigorous than food pattern modeling, the IOM process is different than food pattern modeling, but we have the ability to use different approaches to set DRVs based on the information we have available to us if the information will assist consumers in maintaining healthy dietary practices.

We also disagree with the comment stating that all other DRVs were established based on IOM DRI reports. Some DRVs were set based on scientific evidence from consensus reports or by other means. In the Reference Daily Intakes and Daily Reference Values proposed rule, we proposed to establish eight DRVs for persons 4 or more years of age based on information presented in the ''Diet and Health: Implications for Reducing Chronic Disease Risk report,'' the ''Surgeon General's Report on Nutrition and Health,'' and the ''Report of the Expert Panel on Population Strategies for Blood Cholesterol Reduction'' (55 FR 29476 at 29483). The DRVs were finalized in the 1993 Reference Daily Intakes and Daily Reference Values final rule (58 FR 2206, Jan. 6, 1993).

As new evidence emerges, we will consider whether we need to update the DRV. In the future, there may be more information available that would allow us to establish a DRV for added sugars that is based on a linear relationship with the risk of disease. We intend to monitor the evidence related to added sugars and consider whether changes need to be made to the label based on the evidence in the future.

(Comment 230) One comment referred to the DGA recommendation that Americans consume fatty fish due to their omega-3 fatty acid content, but noted that there is no reference value for omega-3 fatty acids. The comment said that added sugars are no different than omega-3 fatty acids and suggested that added sugars can be reduced in the diet, even while there is not sufficient evidence to recommend that they be limited to a particular intake level.

(Response) We do not agree that omega-3 fatty acids are an appropriate comparison to added sugars. For

example, we do not have scientific evidence to support a reference value for omega-3 fatty acids. We include a reference value for added sugars in the final rule to provide information that allows consumers to put the amount of the nutrient into the context of the total daily diet.

(iii) Food Pattern Modeling

(Comment 231) Food pattern modeling was used to support the 2015 DGAC recommendation that Americans should limit added sugars to a maximum of 10 percent of total caloric intake. For the 2015 DGAC, USDA used a modeling process to develop new USDA Food Patterns based on different types of evidence: The ''Healthy Vegetarian Pattern,'' which takes into account food choices of self-identified vegetarians, and the ''Healthy Mediterranean-style Pattern,'' which takes into account food group intakes from studies using a Mediterranean diet index to assess dietary patterns. The USDA Food Patterns provide suggested amounts of foods to consume from the basic food groups, subgroups, and oils to meet recommended nutrient intakes at 12 different calorie levels. They also show the number of calories from solid fats and added sugars that can be accommodated within each calorie level, in addition to the suggested amounts of nutrient-dense forms of foods in each food group.

Many comments questioned the use of food pattern modeling to establish a DRV for added sugars. The comments noted that, when we considered establishing a DRV for *trans* fat using menu modeling, we said that we continue to adhere to the approach of determining DRVs for a nutrient based on the nutrient's association with a specific health outcome (*e.g.,* LDL cholesterol levels), yet we proposed to use food pattern modeling to establish a DRV for added sugars rather than data on an association with a health outcome. The comment noted that we stated previously in the proposed rule, as well as in 1993, that we do not consider the use of food composition data, menu modeling, or dietary survey data as a suitable approach to determine DRVs. The comments explained that menu modeling involves individual foods, whereas food pattern modeling involves food group composites, but the process for menu and food pattern modeling is similar. The comments said that the issues that we raised for not using menu modeling for setting a DV for *trans* or saturated fat are the same for a food pattern modeling approach and would therefore apply to added sugars.

(Response) Although we have stated in the past that use of food composition data, menu modeling, or dietary survey data is not a suitable approach to determine DRVs, these statements were made in the context of establishing DRVs for nutrients where a causal relationship between consumption of the nutrient and risk of disease exists. Added sugars are different than *trans* fats in that there is a linear relationship between consumption of *trans* fats and LDL cholesterol whereas, for added sugars we do not have the type of direct association with risk of disease, based on the evidence we are using to support a mandatory declaration of added sugars for the general U.S. population, that we do with *trans* fats. When a linear relationship with disease risk is present, there are other, more appropriate, ways to establish a DRV for the nutrient. Because the current evidence supports more of a dietary pattern approach than a specific nutrient-disease approach, it is appropriate to use methods for the development of a DRV for added sugars that are based on constructing a healthy dietary pattern that is low in added sugars. The food pattern modeling that was done when developing the healthy U.S.-style, the healthy Mediterranean-style, and healthy vegetarian patterns provides a model of what a healthy dietary pattern should look like at different calorie levels. Therefore, the use of food pattern modeling to support a DRV for added sugars is closely aligned with our rationale for requiring the mandatory declaration of added sugars for the general U.S. population on the label.

(Comment 232) Some comments noted that the 2010 DGA states that the USDA Food Patterns are only one example of suggested eating patterns and that the USDA Food Patterns have not been scientifically tested for health benefits.

(Response) We acknowledge that the USDA Food Patterns are only one example of a healthy eating pattern and that it is possible for individuals to consume other patterns that are associated with a decreased risk of disease. However, analyses using diet quality index scores show that there is a great deal of consistency in what is considered a healthy dietary pattern that is associated with a decreased risk of disease (Ref. 86). Although it is possible to eat other healthy dietary patterns, it would be very difficult to meet nutrient needs within calorie limits by consuming enough of the other components of a healthy dietary pattern while consuming high levels of added sugars.

We also recognize that individuals may be able to accommodate more or less than 10 percent of calories in their diet while meeting nutrient needs within calorie limits. The purpose of a percent DV is to provide context to consumers so that they can determine how a food fits within their diet. The percent DV declaration can also allow for consumers to determine if a product is relatively high or low in a nutrient based on a reference amount. Therefore, a DRV of 10 percent of total calories should not be viewed as a recommended consumption level, but rather a reference amount that consumers can use as a guide.

We disagree with the comment that the USDA Food Patterns have not been scientifically tested for health benefits. Schroeder et al. assessed the effects of a diet based on the USDA Food Patterns used in the 2010 DGA, a Korean diet, and a typical American diet on blood lipid (fat) levels and blood pressure in overweight, non-Asian individuals in the United States with elevated LDL cholesterol (Ref. 101). They found that total cholesterol and LDL cholesterol significantly decreased when subjects were on fed a diet that is consistent with the USDA Food Patterns. Although the USDA Food Patterns in the 2015 DGAC Report differ slightly from those included in the 2010 DGA, they were designed in a very similar manner with the goal of meeting nutrient needs within calorie limits.

(Comment 233) Some comments objected to the use of food pattern modeling to establish a DRV for added sugars because, according to the comments, it lacks a scientific basis. The comments said that the reference value of 10 percent of total calories that the 2015 DGAC produced using modeling is a mathematical calculation of empty calories ''left over'' after the recommendations for food groups and nutrients in the different dietary patterns have been met. It does not signify a level at which negative metabolic effects occur. The comments asserted that the calories available for solid fats or added sugars in the ''empty calories'' category would completely change based on one addition or deletion of a serving of food.

The comments cited a number of limitations of food pattern modeling, such as:

- It is not evidence-based or nutrient specific so conclusions cannot be drawn with respect to health-related outcomes;
- It was designed to study the impact of an overall diet, not to evaluate the effect of a single nutrient;
- The nutritional adequacy was derived from a limited number of

representative foods, limiting the ability to extrapolate the nutritional adequacy of the food patterns beyond these ''representative foods;''

- Table sugar was used as a surrogate for added sugar in the USDA Food Patterns. As such, the model only identifies how much pure sugar can be consumed after achieving nutrient requirements, and not how to incorporate foods with added sugars into a dietary pattern;
- The modeling is based on a misperception that added sugars provide no additional nutritional value and are merely ''empty calories.'' Sugars are added to many nutrient-dense foods;
- The contribution of the representative foods to total daily added sugar intake was not considered or reported;
- It presents one modeling scenario with one set of assumptions and presents no uncertainty around their assumptions. Micronutrient requirements in the USDA Food Pattern are not always based on established intakes *i.e.,* the USDA Food Patterns calcium intakes can range from 110 percent of the RDA at the lower calorie range to 138 percent of the RDA at the highest, the RDA range for iron is 110 to 265 percent. As caloric levels increase, there is a disregard for the percent adequacy of micronutrients;
- The model did not test if nutritional adequacy could be achieved at added sugar intake levels above 10 percent and was not tested to assess efficacy or sensitivity;
- The USDA food modeling (with few exceptions) does not take into consideration fortification in the food supply, which could dramatically reduce the number of food servings in the USDA Food Patterns and increase the calories designated as leftover; and
- Food formulations and food consumption is continually changing. With continuing changes to food composition databases, information derived from food pattern modeling could change frequently. Using such changing information to update daily values could be costly to manufacturers for frequent changes to labels especially when based on an approach that has no public health relevance. The comment said that we chose, in part, to not use similar type data (*i.e.,* census data) for using a population weighted approach for setting daily values for vitamins and minerals.

(Response) As previously noted in our response to comment 224, we do not have the type of quantitative intake recommendation for added sugars that we have for other nutrients that have an independent association with the risk of chronic disease. However, we do have evidence that added sugars are a public health concern, and that consumers need information about of added sugars in a serving of food to maintain healthy dietary practices. Consumers also need to know how that amount of added sugars in a serving of food fits into the context of their total daily diet. Although we do not have the same type of reference amount for added sugars that we do for other nutrients that are associated with chronic disease risk, the scientific evidence supporting a limit in consumption of added sugars to a maximum of 10 percent of total calories provides a reference value that can be used to give context to the gram declaration for added sugars. The DRV, in general, should not be viewed as a precisely defined limit, but rather a guide to help consumers when selecting foods and determining how much of those foods they can eat within a healthful diet.

We recognize that empty calories allotment in the USDA Food Patterns represents an amount that is left over once all other requirements of the diet are met. We also recognize that conclusions related to health outcomes cannot be drawn from food pattern modeling. However, the dietary patterns approach to setting a DRV is consistent with the dietary pattern approach that we are taking to the evidence that we have considered to support the mandatory declaration of added sugar. Rather than basing the declaration on a nutrient-disease relationship, we are considering how a dietary pattern that is lower in added sugars is characterized, in part, by lower intakes of sugar-sweetened foods and beverages.

We disagree with the comment that said that the USDA Food Patterns were designed to study the impact of an overall diet and not to evaluate the effect of a single nutrient. The USDA Food Patterns were not designed to study nutrient or diet/disease relationships. They provide a conceptual framework for selecting the kinds and amounts of foods of various types, which together, provides a nutritionally satisfactory diet. The USDA Food Patterns assist Americans in meeting their nutrient requirements based on different caloric needs. In general, food patterns, such as the USDA food patterns, translate recommendations on nutrient intake into recommendations on food intake based on selective nutrient-dense foods.

During the modeling of the USDA intake patterns, 292 representative foods were chosen in order to provide healthy food intake patterns to meet nutrient needs for various age/sex groups of Americans ages 2 years and older within their calorie limits. We disagree with the comment stating that the contribution of the representative foods to total daily added sugar intake was not considered or reported. About 7 percent of these representative foods contain some added sugars (Ref. 124). For all added sugars in the USDA food patterns, the nutrients in granulated white sugar were used for the nutrient profile; however, this does not limit the application of the information for use as a DRV. While sugars are added to many nutrient-dense foods, and the assumption is made for the purposes of the USDA Food Patterns that the sugars do not come along with other nutrients, they provide a way to identify how much added sugars one could consume in various forms in the diet while meeting nutrient needs within calorie limits. The empty calorie allotment in the USDA Food Patterns gives Americans a general sense of how many calories from added sugars they can incorporate into a nutrient-dense diet without exceeding calorie limits. It is up to each individual to determine if he or she wants to consume those extra calories in the form of a food that is nutrient dense (*e.g.,* cereal, yogurt, or dried fruit with sugar added to them) or whether to consume it in a less nutrient-dense form such as a cola. The Nutrition Facts label also provides factual information that consumers can use to make choices about their diet.

With respect to the suggestion that micronutrient requirements in the USDA Food Patterns are not always based on established intakes, we agree. Instead, they are based on nutrient requirements for specific age and sex groups. However, the nutrient profiles of the food groups and subgroups used to construct the USDA Food Patterns are calculated and weighted by consumption of the U.S. population. It is not clear what the comment meant when it said that, as caloric levels increase in the USDA Food Patterns, there is a disregard for the percent adequacy of micronutrients. To the extent that the comment is suggesting that at higher calorie levels, the amounts of nutrients provided in the USDA Food Patterns exceed nutrient recommendations, as long as the food pattern does not exceed the UL for nutrients, it should not be a concern if the USDA Food Patterns exceed nutrient recommendations.

In developing the dietary intake patterns, USDA built nutrient adequacy in its dietary pattern by selecting a nutrient-dense food to represent each item cluster (Ref. 19). The selection of item clusters is based on the

consumption amount of the U.S. population (more than 1 percent of the weighted amount). A limited number of the representative foods for an item cluster were fortified foods. These fortified representative foods were selected when fortification of the food is mandatory, such as folate in enriched cereal grains, the food is typically fortified, or when the market leader for the food is fortified and its consumption in the population was consistent over time. Most nutrients in the USDA Food Patterns come from non-fortified food sources. It is possible that, if other fortified foods are used as representative foods in the model, the quantities of foods in the USDA Food Patterns may increase or decrease thereby increasing or decreasing the empty calorie allotment. The USDA Food Patterns are a theoretical model that is used to help Americans put the dietary recommendations into practice. The amount of added sugars that could be reasonably consumed while eating a healthy dietary pattern may be slightly more or less depending on the foods included when modeling the dietary patterns; however, they show that, across calorie levels, it would be very difficult to consume significantly more than 10 percent of calories as added sugars while still consuming enough foods from the food groups to meet nutrient needs within calorie limits.

We agree that nutrient intake data can be affected due to factors such as nutrient database changes, reformulation, or change of dietary behaviors. This is a limitation with the use of all intake data, and affects evidence that we rely on for other label declarations as well (*e.g.,* assessment of nutrient adequacy when determining what the nutrients of public health concern are). The DRV of 10 percent of calories from added sugars is based on the data that we have available to us at this time. We plan to monitor intake data and other evidence and information on added sugars and will consider whether and how it affects both an added sugars declaration and a DRV for added sugars in the future.

(Comment 234) The 2015 DGAC Report explains that, for purposes of the USDA Food Pattern Food Groups, the term solid fats and added sugars is an analytic grouping, but the 2015 DGAC elected to use the term ''empty calories'' for the food grouping in the USDA Food Patterns which includes solid fats and added sugars. The empty calorie allowance in the USDA Food Patterns is 8 to 19 percent of calories, and, based on current consumption patterns, 45 percent of empty calories were allocated to limits for added sugars with the remainder (55 percent) allocated to solid fats.

Some comments opposed the assignment of 45 percent of empty calories to added sugars based on current consumption data. The comments said that consumption data changes, so the assignment of 45 percent of calories to added sugars could change. Furthermore, the comments noted that Americans are consuming too many calories from added sugars, so using current consumption data to set a limit for added sugars consumption is inappropriate. One comment said that current intake of solid fats and added sugars has no relevance to the intended use of the USDA Food Patterns (*e.g.,* nutrient density). The intent is for these leftover calories to be used at the discretion of the individual as to how they consume these calories all added sugars, all solid fats, or a combination. The comments also said that the assignment of 45 percent of calories to added sugars in the USDA Food Patterns is not linked to a health-related outcome or a healthy diet.

(Response) We agree that consumption data changes and the designation of 45 percent of empty calories to added sugars could change. Consumption of added sugars could change in the future, which may prompt a change to the recommendations and the how empty calories from solid fats and added sugars are divided in the USDA Food Patterns. If changes are made to the USDA Food Patterns in the future related to added sugars, we will consider whether and how those changes impact the DRV for added sugars. We also acknowledge that Americans are currently consuming too much added sugars, so the assignment of 45 percent of the empty calories allotment could reflect overconsumption. However, Americans also are consuming too many solid fats, so the relative proportion of empty calories assigned to both solid fats and added sugars reflects overconsumption of both components of the diet. Although the empty calorie allotment is intended to be used by Americans based on their discretion, using consumption data to provide a percentage of empty calories from solid fats and added sugars can be consumed within a healthy dietary pattern reflects how Americans currently are using those left over calories. The modeling of dietary patterns for the USDA Food Patterns is done for a different reason than to evaluate a dietary pattern for health-related outcomes, so the assignment of 45 percent of calories to added sugars is not expected to be linked to a health-related outcome. However, we disagree that the assignment of 45 percent of calories to added sugars is not associated with a healthy diet. The purpose of the USDA Food Patterns is to assist consumers in putting intake recommendations for nutrients, foods, and food groups into practice so that they can construct a healthful diet. After nutrient needs are met, the left over calories are empty calories which Americans can choose to consume in the form of solid fats and/or added sugars. Therefore, how the empty calorie allowance was derived was based on getting adequate amounts of nutrients from a variety of foods in the diets to make up a healthy diet.

(Comment 235) One comment said that we should not base a DRV for added sugars on the USDA Food Patterns because they have not been validated. The comment noted that, although the 2015 DGAC Report states that an extensive effort was made to validate the food patterns, the DGAC did not actually test the patterns in a clinical study. Instead, it plotted the USDA food groups against those found in published hypothesis-based dietary pattern studies on a graph. The comment questioned whether the data provided by USDA to support a validation of the USDA food patterns is empirical evidence that the USDA food patterns are evidence-based guides for food consumption because, the comment said, the majority of food group intakes from the USDA Food Patterns do not actually fall within the range of intakes in the published dietary pattern study recommendations and because the majority of dietary pattern index studies used for the exercise did not included added sugars criteria.

(Response) The comment is suggesting that the USDA Food Patterns are not evidence based guides for food consumption and have not been validated because it is comparing them to dietary pattern studies where dietary quality indices are used to evaluate dietary patterns and health outcomes. Comparing the USDA Food Patterns, which have been developed through the process of menu modeling, to studies evaluating certain dietary patterns and health outcomes is not an appropriate way to assess the validity of the USDA Food Patterns. The USDA Food Patterns have been developed to be used as an example of a nutritionally adequate and balanced diet. Although the purpose is not to provide an example of a diet that is associated with decreased risk of disease, Schroeder et al. did assess the effects of the USDA Food Patterns from the 2010 DGA and found that total and LDL cholesterol were significantly lower in participants on the 2010 DGA diet

compared to typical American diet (Ref. 101). The proper assessment of the USDA Food Patterns is to consider whether they meet current dietary recommendations. The 2015 DGAC evaluated the Healthy U.S.-style, Mediterranean-style, and Vegetarian-style Patterns and determined that they meet nutritional goals without excess calories, and use a variety of foods (Ref. 19).

(Comment 236) In the preamble to the supplemental proposed rule (80 FR 44303 at 44307 through 44308), we noted that the 2015 DGAC based its recommendation that Americans limit their added sugars intake to no more than 10 percent of total energy intake, in part, on current consumption data. For many of the same reasons that comments opposed the use of current consumption data to allocate 45 percent of available empty calories in the USDA Food Patterns to added sugars, some comments generally opposed the use of current consumption data to support a DRV of 10 percent of total calories. The comments noted that consumption of added sugars has been declining in recent years although the prevalence of overweight and obesity have increased. One comment said that intake data do not support ''added sugars'' intake as a major source of increased caloric intake. The comment said that, in the past 40 years, U.S. per capita consumption of sugar/sucrose declined by 33 percent as obesity and other serious diseases increased. The comment noted that a recent analysis of U.S. National Health and Nutrition Examination Survey (NHANES) data found that ''added sugars'' consumption has declined to 14.6 percent of energy, which is a decrease of 19.3 percent over a period of 8 years (2000 to 2008) and as the 2015 DGAC noted intake continues to decrease and current intake is now 13.4 percent of energy. The comment also said that, according to USDA data, Americans are consuming 425 more calories per person per day than they did in 1970 and of these 425 calories only 38 calories are attributed to ''added sugars'' intake (2009).

Other comments said that a maximum limit for added sugars should not be based on consumption data but rather on science with meaningful endpoints. While current intake of added sugars (13 percent of calories) is above but near a maximum level of 10 percent of calories, suggesting that this current intake makes 10 percent a reasonable goal is also not a health-based approach for setting a maximum intake level. The comments noted that current average intake of sodium is approximately 3,400 mg/day, but that the IOM panel set the upper level at 2,300 mg/day based on a public health outcome, even though they said it is generally agreed this is not a reasonable intake level that can be achieved in the near future. The comments said that current intakes are used to estimate prevalence of overconsumption by comparing to a maximum intake level tied to an adverse outcome rather using current intake to set the maximum intake level.

(Response) Americans are still consuming 13.4 percent of their calories from added sugars, which is a significant proportion of calories. Despite the fact that consumption of added sugars may have declined in recent years, consumption among the U.S population remains high. While current consumption data was a consideration in the 2015 DGAC's recommendation, it was used more to show that limiting calories from added sugars is a reasonable goal for Americans to strive for than it was to establish a precise limitation. Furthermore, current consumption data was not the only information that was used by the 2015 DGAC to support a recommendation to limit added sugars to a maximum of 10 percent of total calories. Information from the USDA Food Patterns showing that one can reasonably accommodate approximately 4 to 9 percent of calories in a diet that meets nutrient needs within calorie limits as well as data information from a published meta-analysis, also supported the 2015 DGAC's recommendation.

We explain, in our response to other comments in part II.H.3.o, that we are considering how added sugars interact with other components of a healthy dietary pattern. When too many added sugars are consumed, it makes it difficult to meet nutrient needs within calorie limits and it also makes it difficult for one to consume the recommended amount of other foods that make up a healthy dietary pattern that is associated with a decreased risk of CVD. Because our basis for requiring the mandatory declaration of added sugars on the label for the general U.S. population is related to consumption of a healthy dietary pattern that is low in added sugars, it is appropriate to establish a DRV that is based, in part, on information derived from modeling of healthy dietary patterns. The IOM has not set a UL for added sugars so we do not have a maximum intake level tied to an adverse outcome to which we can compare current intake levels. The USDA Food Patterns show that it would be difficult for Americans to consume a nutritionally adequate diet within calorie requirements if they are consuming more than 4 to 9 percent of their calories from added sugars. Because Americans are consuming approximately 13.4 percent of their calories, or even more in some segments of the population, the evidence supports that Americans are consuming too many calories from added sugars.

(Comment 237) Some comments questioned our reliance on findings and recommendations in the 2015 DGAC Report for establishing a DRV for added sugars. The comments asked whether we took the conclusions and recommendations from the 2015 DGAC at face value or whether we conducted our own rigorous review of the scientific evidence. The comments (which were submitted in response to the proposed rule before the 2015 DGAC Report became available) said that the DGAC Report has not yet been sanctioned by the Secretaries of Health and Human Service and the U.S. Department of Agriculture, which are under Congressional mandate to ensure that the general dietary guidance for the American public in the DGA is based on the preponderance of scientific and medical knowledge at the time of the report. The comments noted that the Secretaries not only consider the recommendations in this advisory report to ensure the Dietary Guidelines are based on the preponderance of science and medical knowledge, but also take into consideration public comment, a process that has not yet been completed. The comments said that our reliance on information and conclusions from the DGAC Report is setting a new precedent.

Other comments said that the DGAC was not convened with the purpose and intent of establishing specific reference values for labeling. The comments noted that the 2015 DGAC did not include a carbohydrate and/or ''added sugars'' expert. The comments suggested that a robust review by carbohydrate and sugars experts familiar with the entire body of high-quality scientific literature is necessary for establishing a reference value for added sugars. The comments said that the lack of ''added sugars'' expertise on the DGAC not only calls into question the legitimacy of the DGAC's ''added sugars'' upper daily intake limit intake recommendation, but also disputes the validity of the 2015 DGAC Report as a ''consensus report'' from which we can establish a DRV.

One comment said that the IOM recommendations are based on thorough and systematic reviews of the scientific literature; a process that usually takes 2 to 3 years to complete by experts in the field of investigation. The comment said that the DGAC did not conduct a

thorough review of the evidence to determine its recommendation to limit consumption of added sugars to less than 10 percent of calories. The comment said that the DGAC did not convene the Added Sugars Working Group until a few months before the DGAC process concluded. The comment suggested that, because the Added Sugars Working Group was not established earlier on, the DGAC had only 90 days to collect, review, synthesize and formulate conclusions on the extensive body of literature on sugars, with no experts in carbohydrate metabolism on the 2015 DGAC.

(Response) Since the publication of the supplemental proposed rule, the Secretaries of the U.S. Department of Health and Human Services and the U.S. Department of Agriculture released the 2015–2010 DGA (Ref. 28). During the process of developing the 2015–2020 DGA, government officials considered the recommendations from the 2015 DGAC as well as comments from the public. The scientific evidence in the 2015–2020 DGA related to added sugars corroborates the scientific evidence in the 2015 DGAC. The scientific evidence supports limiting calories from added sugars and saturated fats and reducing sodium intake. Americans can achieve this by consuming an eating pattern low in added sugars, saturated fats, and sodium as well as by cutting back on foods and beverages higher in these components to amounts that fit within healthy eating patterns. A healthy eating pattern accounts for all foods and beverages within an appropriate calorie level and limits saturated fats and *trans* fats, added sugars, and sodium. The scientific evidence, from the 2015 DGAC (that is corroborated by the 2015–2020 DGA) supports the recommendation from the 2015 DGAC for Americans to consume less than 10 percent of calories per day from added sugars. Therefore, because the 2015–2020 DGA is in agreement with the 2015 DGAC, the concern related to us basing an added sugars declaration on the evidence from the 2015 DGAC have been addressed.

(iv) The Te Morenga et al. Meta-Analysis

(Comment 238) The 2015 DGAC reported that its recommendation to limit added sugars to a maximum of 10 percent of total daily caloric intake is supported by scientific evidence on added sugars and chronic disease risk conducted by the DGAC. The 2015 DGAC Report also says that the data analyzed by Te Morenga et al. supports limiting added sugars to no more than 10 percent of daily total energy intake based on lowest versus highest intakes from prospective cohort studies (Ref. 125). The Te Morenga et al. study is a systematic review and meta-analysis of randomized controlled trials and prospective cohort studies that was commissioned by the WHO to look at the relationship between dietary sugars and body weight (Ref. 125). Several comments criticized the Te Morenga paper, stating that:

- It is a meta-analysis commissioned by the WHO and not a U.S. consensus report;
- Although Te Morenga et al concluded that among free living people consuming ad libitum diets, intake of free sugars or sugar-sweetened beverages is a determinant of body weight, the comments noted that in the WHO report on sugars intake for adults and children, they graded their own evidence for free sugars intake and body weight for both adults and children to be of moderate quality at best;
- The Te Morenga et al. interpretation did not establish a reference value for intake of free sugars and body weight;
- The definition of free sugars differs from our proposed definition of added sugars. The WHO defines ''free sugars'' as all monosaccharides and disaccharides added to foods by the manufacturer, cook or consumer, plus the sugars that are naturally present in honey, syrups and fruit juices. In particular, the definition of free sugars includes natural sugars from fruit juices which are not included in our proposed definition of added sugars;
- Te Morenga et al. investigates the relationship between added sugars intake and body weight rather than CVD risk;
- The authors' conclusion that any role of sugars on body weight results from alteration in energy balance rather than a physiological or metabolic consequence of monosaccharides or disaccharides. The paper further stated that ''the extent to which population-based advice to reduce sugars might reduce risk of obesity cannot be extrapolated from present findings'' because few studies lasted longer than 10 weeks;
- Many studies in the meta-analysis fail to provide any comparative associations between total sugar intakes and metrics of obesity (*i.e.,* BMI, adiposity measures) in comparison with their analyses of free sugar intakes. The comments said that this may be a source of bias for their conclusions that only ''free sugars'' contribute to weight gain and fatness;
- Of the 77 studies evaluated for full review, only 11 isoenergetic studies were identified and composite results from those studies provided ''no evidence of difference in weight change as a result of difference in sugar intakes when energy intakes were equivalent.'' The comments concluded that it cannot be assumed that ''free sugars'' is linked to fatness when excess energy intake was not taken into consideration in the meta-analysis for non-isoenergetic studies;
- The authors noted significant heterogeneity (the studies included in the meta-analysis were not undertaken in the same way using the same experimental design) and potential bias in some of the trials examined;
- The authors concluded that comparison of the lowest to highest intakes in cohort studies was compatible (not supportive as the 2010 DGAC Report indicates) with a recommendation to restrict intake to below 10 percent of total energy. However, there is no evidence of a dose-response relationship, a key component of elucidating potential mechanisms, was provided through the array of research studies evaluated;
- The findings are consistent with the 2010 DGA advice that states, ''Foods containing solid fats and added sugars are no more likely to contribute to weight gain than any other source of calories in an eating pattern that is within calorie limits; and
- The research included in Te Morenga et al. is not current. Less than 10 percent of the studies included in the report were published after 2010, more than 50 percent of the studies are over 10 years old, more than 70 percent of the trials (in children and adults) are over 10 years old, and 80 percent of the randomized trials on adults are over 10 years old.

Other comments questioned our reliance on the Te Morenga et al. paper due to a number of factors and suggested that the results of this study should not be extrapolated to nutrient-dense foods and beverages with small amounts of added sugars.

The comments questioned our reliance on a meta-analysis for the proposed DRV of 10 percent of calories from added sugars and said that a meta-analysis does not provide sufficient scientific support to make an intake recommendation of 10 percent of energy.

One comment noted that the Te Morenga et al. paper was published and available to us at the time of the March 2014 proposed rule, but we said, in the preamble to the proposed rule (79 FR 11879 at 11906), that we reviewed scientific evidence and recommendations of consensus reports

and concluded that we could not propose to establish a DRV for added sugars. The comment questioned why we now have determined that the Te Morenga et al. paper provides suitable evidence to establish a DRV, but not when we developed the proposed rule.

(Response) We are relying on information from the USDA Food Patterns showing that it would be difficult for one to consume more than 10 percent of their calories from added sugars and still be able to consume enough of the other components of a healthy dietary pattern to meet nutrient needs within calorie limits to support a DRV for added sugars. We are also relying on consumption data showing that, on average, Americans are consuming 13.4 percent of calories from added sugars. Therefore, because we are not relying on the Te Morenga et al. paper to support a DRV for added sugars, we need not address specific comments on the merits of the Te Morenga et al. paper. We have determined that, because we are focusing on a healthy dietary pattern, the interactions that sugar-sweetened foods and beverages have with other components of a healthy dietary pattern, and how that healthy dietary pattern is associated with health outcomes, and basing a DRV for added sugars on data that takes into consideration the whole of a healthy dietary pattern, we do not need to rely on evidence related to a direct association between added sugars and risk of disease for a DRV. It also suggests that a DRV for added sugars of 10 percent of total calories is not an unrealistic reference value. We note that the 2015–2020 DGA also bases the recommendation to limit intake of calories from added sugars to less than 10 percent per day on food pattern modeling and national intake data on intakes of calories from added sugars that demonstrate the public health need to limit calories from added sugars to meet food group and nutrient needs within calorie limits. The 2015–2020 DGA states that, for most calorie levels in the USDA Food Patterns, there are not enough calories available after meeting food group needs to consume 10 percent of calories from added sugars and 10 percent of calories from saturated fats and still stay within calorie limits.

(Comment 239) One comment said that our scientific justification for proposing a DRV for added sugars of 10 percent of total energy is not clear because it is based on menu-modeling and is not included in the meta-analysis conducted by Te Morenga et al.

(Response) We proposed to establish a DRV for added sugars of 10 percent of total calories (50 grams for children and adults 4 years of age and older and 25 grams for children 1 through 3 years of age). We said that the 2015 DGAC Report recommended that Americans keep added sugars intake below 10 percent of total energy intake, and that recommendation was based on modeling of dietary patterns, current consumption data, and a published meta-analysis on sugars intake and body weight (80 FR 44303 at 44308). We concluded that the scientific information from the 2015 DGAC report provides a basis for FDA to establish a DRV for added sugars. The 2015 DGAC relied on both food pattern modeling information from the USDA Food Patterns as well as information from the Te Morenga et al. paper for its recommendation to limit added sugars to a maximum of 10 percent of total daily caloric intake.

After further consideration, we are establishing a DRV for added sugars of 10 percent of total calories, and are relying on information from the USDA Food Patterns as well as current consumption data for this determination.

(Comment 240) Some comments said it would be inappropriate to base a DRV for added sugars on recommendations from the WHO. The comments said that the WHO recommendation to limit intake of free sugars to 10 percent of energy intake was based on evidence for dental caries and not body weight or CVD risk. In reference to the Te Morenga et al. paper, the comments said that there was no effect of sugar and measures of weight found in children based on the reviews of randomized controlled trials and only a minor effect was found in cohort studies with intake of sugar-sweetened beverages but no other sugar-containing foods.

Other comments referred to the new WHO conditional recommendation to further reduce free sugars intake to 5 percent of total calories and said that this recommendation appears to be based solely on data from several studies that are more than 50 years old. The comments noted that the findings of the evidence-based review are described by the review authors as of ''very low quality'' (Ref. 126).

(Response) Although the WHO commissioned a systematic literature review to answer a series of questions relating to the effects of sugars on excess adiposity that resulted in the Te Morenga et al. paper, the 2015 DGAC considered the evidence discussed to the Te Morenga et al. paper and concluded that the evidence reviewed by Te Morenga et al., as well as food pattern modeling analysis conducted by the 2015 DGAC and consumption data supported a recommendation to limit added sugars to a maximum of 10 percent of total daily caloric intake. We did not propose to establish a DRV based on recommendations from the WHO, nor are we finalizing a DRV for added sugars based on recommendations from the WHO.

(v) The Iom Suggested Maximum Intake Level of 25 Percent or Less of Energy From Added Sugars

(Comment 241) Some comments noted that the 2005 IOM Macronutrient Committee concluded that ''based on the data available on dental caries, behavior, cancer, risk of obesity, and risk of hyperlipidemia, there is insufficient evidence to set a UL for total or added sugars. Although a UL is not set for sugars, a maximum intake level of 25 percent or less of energy from added sugars is suggested based on the decreased intake of some micronutrients of American subpopulations exceeding this level'' (Ref. 75). The comments asked why we did not use this 25 percent level as the basis for a DRV for added sugars because it was determined using an evidence-based approach.

(Response) We have concluded that using the IOM suggested maximum intake level of 25 percent or less of energy from added sugars to set a DRV for added sugars would be inappropriate. As noted in the IOM macronutrient report, the IOM could not establish a UL for total or added sugars based on the evidence, and the less than 25 percent of total energy recommendation should not be viewed as a UL. Setting a DRV for added sugars that is one quarter of a 2,000 calorie diet would result in a DRV for added sugars of 125 grams ($2{,}000 \times 0.25 = 500$ calories and $500 \div 4 = 125$ grams). Such a DRV for added sugars would be greater than the DRV for protein and fat, and would be approximately 42 percent of the DRV for total carbohydrate. Although DRVs are reference values rather than precise recommended intake levels, the percent DV declaration, which is calculated based on the DRV, gives the consumer a general idea of how much of a nutrient should be consumed (79 FR 11879 at 11926). A DRV of 25 percent of calories would indicate to consumers that foods containing a significant amount of added sugars are relatively low in added sugars. Such a DRV also would send the message to the American public that consuming one fourth of one's calories in the form of added sugars is appropriate. If a consumer chooses to eat those added sugars in the form of foods that contain few or little other nutrients, it would be very difficult, if

not impossible, to consume a healthful dietary pattern that includes adequate amounts from food groups, meets nutrient needs, and is within calorie limits. As such, a DRV for added sugars that is 25 percent of total calories could have negative public health implications. Therefore, we are not setting a DRV for added sugars based on the IOM suggested maximum level of 25 percent of total calories.

(vi) DRV of 10 Percent of Total Calories

Many comments to the supplemental proposed rule discussed whether a DRV of 10 percent of total energy intake is appropriate or whether another number should be chosen.

(Comment 242) Many comments suggested that the DRV for added sugars should be lower than 10 percent of calories. The comments referred to the 2015 WHO Guideline for Sugars intake for adults and children which recommends reducing the intake of free sugars to less than 10 percent of total energy intake. In the report, the WHO also suggested a further reduction of the intake of free sugars below 5 percent of total energy intake as a ''conditional recommendation.'' The comments also recommended that we follow the recommendation of the Scientific Advisory Committee on Nutrition in the United Kingdom that added sugars should account for no more than 5 percent of daily energy intake. The comments said that the American Heart Association (AHA) also recommends limiting added sugars consumption to no more than 5 percent of total energy intake. The comments also said that a DRV of 5 percent of total energy intake would align with AHA's recommendation that no more than one-half of discretionary calories should come from added sugars. The AHA recommends that most women consume no more than 100 calories (6 teaspoons) from added sugars per day and no more than 150 calories (9 teaspoons) per day for most men. The comments suggested that a DRV of 5 percent of total energy intake would be more appropriate than a DRV of 10 percent of total energy intake because the 2,000-calorie ''Healthy U.S.-Style,'' ''Healthy Mediterranean-Style,'' and ''Healthy Vegetarian'' dietary patterns developed for the DGAC Report included only 6 or 7 percent of calories from added sugars.

(Response) We disagree that the DRV for added sugars should be lower than 10 percent of calories or that there is adequate evidence at this time to set a DRV for added sugars of less than 5 percent of calories. While the WHO and other health organizations have recommended that individuals should consume 5 percent or less of total calories from added sugars, those recommendations are not consistent with those of U.S. consensus reports. Furthermore, current consumption data shows that Americans, on average, are consuming 13.4 percent of calories from added sugars, and the USDA Food Patterns show that it is possible to construct a healthful dietary pattern that includes more than 5 percent of calories from added sugars. The USDA Food Patterns were developed using representative foods with very little or no added sugars or solid fats. Even with using representative foods with little or no added sugars, the amount of calories left over that consumers can use to incorporate added sugars into their diet was 5 percent or more for all but two calorie levels (Ref. 19). A DRV of 10 percent of total calories provides a value that is more realistic considering current consumption of added sugars in the United States as well added sugars in the food supply.

(Comment 243) Several comments recommended lowering the added sugars DRV for children. The comments said that a DRV of 50 grams of added sugars for children 4 years of age and older which is based on the 2,000 reference value is too high. The comments said that according to USDA, 4 year olds should be consuming 1,400 calories per day, assuming moderate activity. The comments said that under our proposal, a 4 year old could consume more than 14 percent of calories from added sugars and still be within the guidelines. The comments noted that this disparity does not align with the 2015 DGAC's or WHO's recommendations for added sugars accounting for no more than 10 percent of total calories until age 11 for boys and age 12 for girls. The comments suggested changing the DRV to 25 grams of added sugars for children aged 1 to 11years, and no more than 50 grams of added sugars for individuals 12 and older. The comments said that this change would bring our recommendations more in line with the stated goal of consuming less than 10 percent of total calories from added sugars. The comments also said that for products marketed to children between the ages of 1 to 11 years old, we should require the use of a DRV of 25 grams for added sugars. The comments suggested criteria that could be used to identify products marketed to children.

One comment noted that in the United Kingdom health authorities further stratify recommendations for children to include no more than 19 grams for children ages 4 to 6 and no more than 24 grams for children ages 7 to 10.

(Response) We decline to revise the rule as suggested by the comments. DRVs should be viewed as reference amounts that consumers can use to determine how a serving of a food fits within their total daily diet. A DRV for children between the ages of 4 through 11 or 7 through 10, as the comments suggested, could clutter the label, cause confusion, and draw attention to the added sugars declaration because more space would be required for two separate percent DV declarations on the label. In addition, the approach we have taken for setting a DRV for added sugars for children and adults 4 years of age and older is consistent with that of total and saturated fat where the DRVs are based on an amount not to exceed.

(vii) Education

(Comment 244) Many comments discussed the need for consumer education to help consumers understand the addition of an added sugars disclosure to the Nutrition Facts label and to help consumers use this information to make healthy food choices. Other comments suggested that education should focus on total calories, total sugars, and the ingredient list—information which can already be found on the current Nutrition Facts label. One comment suggested that we educate consumers about the fact that sugars are included in total carbohydrates, instead of requiring an added sugars declaration on the label. Many comments also said that Nutrition Facts labels that declare added sugars in addition to total sugars will be confusing to consumers, suggest to consumers that added sugars are more harmful than naturally occurring sugars, or suggest that consumers should focus on added sugars more than on other nutrients.

One comment argued that consumer responses to added sugars declarations could lead to unintended consequences, citing studies that have found that ''low-fat'' labels may reduce consumers' experience of guilt associated with excess consumption of foods bearing such labels or may increase what consumers perceive to be an appropriate serving size of such foods. Many comments said that requiring a new line for added sugars could suggest to consumers that they should give increased attention to added sugars whereas current U.S. dietary guidelines do not support an overemphasis on added sugars. One comment said that an added sugars declaration could call undue attention to added sugars as a source of calories when it is no different from other caloric sources. This

comment said that emphasis on reducing individual macronutrients, in lieu of reducing total energy intake defeats the primary goals of our Calories Count report (Ref. 127). Another comment said that the addition of added sugars declarations to the label may lead consumers to opt for foods of equal total sugar content but lesser nutrition, and to overlook health benefits that some foods have to offer.

In contrast, some comments said that listing added sugars on the Nutrition Facts label would provide vital information on the amount of added sugars in a food and help consumers eat less added sugars.

Some comments also said that public education on the food sources and health consequences of excessive added sugars intake is needed. One comment suggested that we develop materials to explain that consuming foods high in added sugars makes it difficult to meet nutritional needs and stay within calorie limits. The comment also suggested that we emphasize that naturally occurring sugars in fruits, vegetables, and dairy products do not pose any health problem, and that people should consume more fruits, vegetables, and low-fat dairy products.

One comment said that an industry-sponsored reanalysis of FDA's added sugars consumer study and a consumer study commissioned by a group of national food and beverage associations showed that the ''% DV/Added Sugars'' information will create consumer confusion that does not exist today. The comment said that we would face education campaign challenges such as confusion related to the concept of percent DV, possible misinterpretation of the new term ''Added Sugars,'' and ''unintended effects'' of placing a percent DV next to ''Added Sugars'' and not ''Total Sugars.'' The comment also said that when misperceptions of ''% DV/Added Sugars'' arise in the marketplace, it will be difficult to correct those misperceptions, particularly given that the new rule and label changes would be interpreted and defined by many other communicators outside FDA. The comment cited examples of other campaigns that faced similar obstacles, and concluded that any campaign FDA undertook related to added sugars would not succeed. Some comments said that some segments of the population may be more susceptible to misunderstanding added sugars information than the general population. Another comment suggested explaining ''daily values'' better and to clarify that the daily value for added sugars does not represent a suggested amount one should eat, but rather, represents a ''conservative estimate'' of the highest amount one should consume of added sugar. The comment also said that if subsequent research were to show that the current daily value for added sugars is too high or too low, the ''incorrect'' value may remain in the public mind long after it has been proven to be incorrect.

One comment included information from a consumer study that sampled 1,088 participants aged 18 years and older from an online respondent panel. The comment described results including, but not limited to, participants' understanding of the term ''Added Sugars'' as displayed on Nutrition Facts labels used in the study. Respondents' answers reflected a range of interpretations, including, but not limited to, beliefs that added sugars refer to specific types of sugars (*e.g.,* ''white sugar'') or artificial sweeteners. The comment said that 30 percent of participants said they ''don't know'' what added sugars are or provided no answer. The comment said that the study findings indicated that there is confusion among consumers regarding what added sugars are and that ''consistent, coordinated communication efforts'' will be needed to educate consumers about the Nutrition Facts label and added sugars.

(Response) Increased consumer education about nutrition and healthy dietary practices would likely benefit a number of consumers in the United States. The updated Nutrition Facts label promulgated by this rule is an important foundational tool for that consumer education. As noted in part II.B.1, we are committed to increasing understanding and use of the Nutrition Facts label to improve healthy dietary patterns through consumer education, in collaboration with key Federal partners such as USDA and CDC, health professionals, and the broader public health community, as well as with industry partners. One aspect of those education and outreach activities will be increasing understanding of new components to the label including added sugars (*e.g.,* definition, relationship to total sugars), considerations for how to interpret the information on added sugars in the context of a healthy diet, and how all of the information provided on the Nutrition Facts label is important to consider when constructing a healthy dietary pattern—not only information on added sugars, but the nutrients declared, the percent Daily Value, and the importance of being mindful of total caloric intake. Attention to calories is highlighted by the substantially increased font size of the calorie declaration per serving of a product discussed in part II.Q. Focusing on the totality of nutrition information on the label in education activities will enable consumers to identify foods that are nutrient rich and may contain some added sugars, and reinforces the recommendations of the 2015 DGAC Report and 2015–2020 DGA to increase fruit and vegetable consumption, decrease saturated fat and sodium, and to limit added sugar intake to less than 10 percent of total calories.

With regard to the comment stating that no education initiative can be successful in helping consumers understand added sugars, and therefore implying that added sugars should not be on the Nutrition Facts label, we disagree. The requirement to declare added sugars on the label is important public health information based on the latest science. Not requiring this important information to be declared would be detrimental to public health and run counter to our mandate to promote healthy dietary practices, even if not all consumers understand and use the information immediately.

With regard to the comments questioning the addition of added sugars to the label, we have determined that there is a public health need for this declaration and that it is necessary to assist consumers in maintaining healthy dietary practices (see part II.H.3.a). We have the legal authority to require this declaration (see part II.C.3). Moreover, we are not aware of any data or information suggests that consumers will focus undue attention on added sugars as a source of calories any more than other nutrients on the label that are a source of calories. Our determination that added sugars should be declared on the label is consistent with the intent of our Calories Count report because the information an assist consumers in limiting their total energy intake.

With regard to the comments questioning the confusion about a percent DV relating to added sugars and not total sugars, we address the need for a percent DV for added sugars and why it is not appropriate for total sugars (see part II.H.3).

Regarding the question about consumer confusion about the concept of the percent DV, we have updated the footnote explaining the percent DV (see part II.Q.11).

With regard to the question about consumer confusion on the relationship between total and added sugars, as described in our response to comment 188, we have modified the format of the added sugars declaration to appear indented under total sugars using the phrasing: ''Includes X g Added Sugars.''

p. Records. When a mixture of naturally occurring and added sugars is present in a food, the proposed rule, at § 101.9(g)(10)(iv), would require manufacturers to make and keep written records of the amount of added sugars added to the food during the processing of the food, and if packaged as a separate ingredient, as packaged (whether as part of a package containing one or more ingredients or packaged as a single ingredient) to verify the amount of added sugars present in the food. We also proposed specific recordkeeping requirements specific to yeast-leavened bakery products, wines with less than 7 percent alcohol by volume, or beer that does not meet the definition of a ''malt beverage,'' as defined by the Federal Alcohol Administration Act (27 U.S.C. 211(a)(7)), if the amount of added sugars in those products is reduced through the process of fermentation.

Several comments addressed the proposed recordkeeping requirements for added sugars. We discuss those comments in part II.R.3.

As discussed in part II.H.3.n, we are requiring manufacturers of products containing fruit and vegetable juice concentrates as an ingredient that have not been reconstituted to 100 percent juice in the finished food to provide documentation that shows how they determined how much of the sugars provided by the juice concentrate should be declared as added sugars.

Also, as discussed in part II.H.3.k, when the amount of added sugars in a product is reduced through non-enzymatic browning and/or fermentation, we are requiring manufacturers to make and keep records to demonstrate the amount of amount of added sugars after non-enzymatic browning and/or fermentation, make and keep records of the amount of sugars added to the food before and during the processing of the food, or the submission of a citizen petition requesting an alternative means of compliance if the manufacturer has reason to believe that the amount of added sugars in the finished product is significantly less than the amount added prior to non-enzymatic browning and fermentation but they have no way to determine a reasonable approximation of the amount in the finished food.

4. Sugar Alcohols

Our preexisting regulations, at § 101.9(c)(6)(iii), define sugar alcohols, in part, as the sum of saccharide derivatives in which a hydroxyl group replaces a ketone or aldehyde group (*e.g.,* mannitol or sorbitol).

a. Voluntary declaration. Our preexisting regulations, at § 101.9(c)(6)(iii), permit the voluntary declaration of sugar alcohols on the Nutrition Facts label. The preamble to the proposed rule (79 FR 11879 at 11908) discussed how, in reaction to a citizen petition and in the 2007 ANPRM, we considered whether to make the declaration of sugar alcohols on the Nutrition Facts label mandatory. We tentatively concluded that the declaration of sugar alcohols should remain voluntary, and so the proposed rule would not revise the requirement but would, because of other changes, renumber the provision as § 101.9(c)(6)(iv).

We did not receive any comments regarding the voluntary declaration of sugar alcohols, and so the final rule continues to provide for their voluntary declaration.

b. Use of the term ''sugar alcohols''. In the preamble to the proposed rule (79 FR 11879 at 11908), we discussed our consideration of a citizen petition and comments to the 2007 ANPRM regarding the use of the term ''polyols'' (a contraction of the term ''polyalcohol'' instead of ''sugar alcohols''). We determined that ''polyols'' could be potentially more confusing to consumers than the term ''sugar alcohol,'' but acknowledged that consumers also may not be familiar with the term ''sugar alcohol.'' Nevertheless, we continued to support the term ''sugar alcohols'' rather than ''polyols'' because we stated that ''sugar alcohols'' more accurately describes the group of substances encompassed in the definition in § 101.9(c)(6)(iii) (79 FR 11879 at 11908). We explained that ''polyols'' includes non-carbohydrate polyalcohols, such as polyesters, whereas ''sugar alcohols,'' as defined by FDA, includes only carbohydrates, and so the proposed rule would not change the term ''sugar alcohols'' when used on the Nutrition Facts label.

(Comment 245) Several comments supported using the term ''polyols'' instead of ''sugar alcohols.''

Some comments said that sugars are mono- and disaccharides, whereas most sugar alcohols are pentoses and hexoses. The comments said that the chemical structures of sugars are rings, and the chemical structure of sugar alcohols are chains. The comments also said that sugars and sugar alcohols have different calorie contributions. Therefore, the comments said that the term ''polyols'' is more appropriate in reference to carbohydrate-based polyalcohols.

(Response) We disagree with the comments. Both sugars and sugar alcohols contain saccharides. Sugars are defined as mono- and disaccharides (§ 101.9(c)(6)(ii)). Sugars alcohols are defined as the ''sum of saccharide derivatives in which a hydroxyl group replaces a ketone or aldehyde group'' (§ 101.9(c)(6)(iv)). The presence of the hydroxyl group is the basis for these modified sugars being called ''sugar alcohols.'' The term ''sugar alcohols'' more accurately reflects the chemical composition of these compounds than ''polyols.'' Because of the difference in chemical composition, they are metabolized differently and have different caloric contributions. Analytical methods are available to measure sugar alcohols based on their chemical composition and structure (79 FR 11879 at 11901), and they are listed separately in the Nutrition Facts label. ''Sugar alcohols'' more accurately describes the group of substances encompassed in the definition in § 101.9(c)(6)(iii). ''Polyols'' includes non-carbohydrate polyalcohols, such as polyesters, whereas ''sugar alcohols,'' as defined by FDA, includes only carbohydrates (see 79 FR 11879 at 11908). Thus, we decline to revise § 101.9(c)(6)(iii) to use the term ''polyols.''

(Comment 246) One comment supporting use of the term polyols noted that our explanation in the preamble to the proposed rule, that polyols only cover non-carbohydrate polymers while sugar alcohols include only carbohydrates, is not supported. The comment said that polyols are low-digestible carbohydrates and the only sugar alcohols used in foods are also considered polyols.

(Response) We disagree that polyols only pertain to non-digestible carbohydrate polymers. We consider polyols to include low-digestible carbohydrates (*i.e.,* sugar alcohols) that are used in foods, as well as non-carbohydrate polyalcohols (see 79 FR 11879 at 11908). Therefore, ''sugar alcohols'' is a more specific description of the listing of these ingredients in the Nutrition Facts label.

(Comment 247) One comment said that ''sugar alcohol'' may be confusing to consumers and that ''polyols'' is less likely to cause confusion. The comment said that ''sugar alcohol'' may mislead the consumer regarding health effects, given the negative health connotations of the terms ''sugar'' and ''alcohol'' separately. The comment said that we, at the very least, should conduct consumer testing of the term ''polyols'' and ''sugar alcohols.''

Another comment cited a 1995 survey provided to FDA in a citizen petition in 1995, stating that there is strong evidence that ''sugar alcohols'' is a term widely misunderstood by consumers, with most consumers mistakenly

believing that foods containing sugar alcohols contain both sugar and alcohol. Another comment cited a 2012 survey, ''Adults Remain Confused about 'Sugar Alcohol'—and Whether It Contains Sugar and/or Alcohol,'' which observed that a majority of the 1,000 adults polled believed that ''sugar-free'' products containing ''sugar alcohols'' contained sugar (74 percent) or alcohol (64 percent).

(Response) We previously considered the use of the term ''polyol'' and determined that it could be potentially more confusing to consumers than ''sugar alcohols.'' However, we acknowledge that consumers may not be familiar with the term ''sugar alcohol'' (see 79 FR 11879 at 11908). Therefore, we allow for the listing of the name of the specific sugar alcohol instead of ''sugar alcohols,'' provided that only one sugar alcohol is present in the food, because many sugar alcohols are listed as ingredients (*e.g.,* sorbitol, mannitol, and xylitol) and therefore may be more recognizable to consumers.

(Comment 248) One comment supporting use of the term ''polyols'' said that the EU has introduced optional declaration for ''polyols'' (Ref. 128) (''on the provision of food information to consumers'').

(Response) We acknowledge that the EU provides for the option to declare ''polyols'' which is defined as ''alcohols containing more than two hydroxyl groups.'' The EU, however, does not allow for the optional listing of specific sugar alcohols. ''Sugar alcohols'' more accurately reflects the chemical composition of these ingredients than ''polyols.'' Furthermore, unlike the EU, we allow for the listing of specific sugar alcohols because consumers may not be familiar with the term ''sugar alcohol.''

c. DRV. Our preexisting regulations do not provide a DRV for total sugar alcohols or for individual sugar alcohols. The preamble to the proposed rule (79 FR 11879 at 11908) explained that a quantitative reference intake recommendation for sugar alcohols is not available from current consensus reports, so we have no basis on which to consider setting an appropriate DRV. Therefore, we did not propose to set a DRV for sugar alcohols.

(Comment 249) One comment agreed that there was no scientific basis to establish a DRV for ''sugar alcohols.''

(Response) Because we continue to lack a basis to set an appropriate DRV for sugar alcohols, the final rule does not establish a DRV for sugar alcohols.

d. Caloric value. The caloric value for carbohydrates, other than insoluble fiber, is 4 kcal/gram (§ 101.9(c)(1)(i)(C)). Sugar alcohols have been shown to have a caloric value lower than 4 kcal/gram (Refs. 129–130). In the preamble to the proposed rule (79 FR 11879 at 11908 through 11909), we explained that we considered revising the energy contribution of sugar alcohols and also considered relevant caloric values recommended by the Life Sciences Research Office (LSRO). The LSRO expert panel reports provided the following caloric values for individual sugar alcohols: Isomalt (2.0 kcal/gram), lactitol (2.0 kcal/gram), xylitol (2.4 kcal/gram), maltitol (2.1 kcal/gram), sorbitol (2.6 kcal/gram), hydrogenated starch hydrolysates (3.0 kcal/gram), and mannitol (1.6 kcal/gram). Consequently, we proposed to amend § 101.9(c)(1)(i)(F) to establish the following general factors for caloric values of sugar alcohols, using the values recommended by LSRO: Isomalt—2.0 kcal/gram, lactitol—2.0 kcal/gram, xylitol—2.4 kcal/gram, maltitol—2.1 kcal/gram, sorbitol—2.6 kcal/gram, hydrogenated starch hydrolysates—3.0 kcal/gram, and mannitol—1.6 kcal/gram. We also proposed to amend § 101.9(c)(1)(i)(C) such that the 4 kcal/gram value is not applied to sugar alcohols.

(Comment 250) Several comments supported the proposed caloric values. Some comments, however, noted that we did not identify a caloric value for erythritol. Some comments noted that a caloric value of 0.2 kcal/gram was consistent with the EU and Health Canada, while other comments supported 0 kcal/gram as a value consisted with the EU. One comment provided a review of the evidence, including a publication by Livesey (1992) (Ref. 131) and more recent evidence from human (Ref. 132) and rat studies to support of a caloric value of 0 kcal/gram for erythritol.

(Response) We agree that a caloric value for erythritol should be considered. We generally do not consider animal studies for determining the caloric contribution of nutrients. Livesey (1992) determined that the caloric value for erythritol was 0.2 kcal/gram in humans. Applying the factors that Livesey (1992) used for determining the caloric value for erythritol and considering the newer evidence using radiolabelled erythritol in humans (Ref. 132), the review submitted as part of the comment concluded that erythritol is a substrate that is readily absorbed, and undergoes no metabolism, therefore providing 0 calories. These methods are consistent with those used for establishing caloric values for the other sugars alcohols determined by LSRO (79 FR 11879 at 11909). Therefore, the final rule provides a caloric value of 0 kcal/gram for erythritol.

5. Dietary Fiber

a. Dietary fiber.

(i) Definition

Our preexisting regulations do not establish a definition for dietary fiber. Dietary fiber represents a heterogeneous group of compounds that vary in their carbohydrate composition, linkages between carbohydrates, and molecular weight. Therefore, there is no specific chemical definition for dietary fiber. The amount of dietary fiber that is currently declared is based on analytical methods such as the AOAC analytical methods.

In the preamble to the proposed rule (79 FR 11879 at 11909), we explained how the IOM had issued a report defining ''total fiber'' as the sum of ''dietary fiber'' and ''added fiber,'' where ''dietary fiber'' consists of non-digestible carbohydrates and lignin that are intrinsic and intact in plants, and ''added fiber'' (referred to as ''functional fiber'' in the IOM Macronutrient Report) consists of isolated, non-digestible carbohydrates that have beneficial physiological effects in humans. We proposed to adopt a definition for dietary fiber that is equivalent to the IOM's definition of ''total fiber'' and therefore would include fibers that the IOM defines as ''dietary fiber'' and ''functional fiber.'' Both ''dietary fiber'' and ''functional fiber,'' as defined by the IOM, are considered to have beneficial health effects, so there is little benefit for consumers in distinguishing between these two types of fiber on the Nutrition Facts label. In addition, the IOM recognized analytical limitations in distinguishing between ''dietary fiber'' and ''functional fiber'' and noted that the labeling of ''total fiber'' would be more practical than labeling ''dietary fiber'' and ''functional fiber'' separately (79 FR 11879 at 11909). Specifically, the proposed rule would amend § 101.9(c)(6)(i) to include the definition for dietary fiber. The proposed definition would include: (1) Non-digestible soluble and insoluble carbohydrates (with 3 or more monomeric units) and lignin that are intrinsic and intact in plants; (2) isolated and synthetic non-digestible carbohydrates (with 3 or more monomeric units) that we have granted be included in the definition of dietary fiber, in response to a citizen petition we received demonstrating that such carbohydrates have a physiological effect(s) that is beneficial to human health; or (3) isolated and synthetic non-digestible carbohydrates (with 3 or more monomeric units) that are the subject of an authorized health claim. Our

proposed definition for total fiber also would include a minimum degree of polymerization (DP) greater or equal to 3 monomeric units.

In the preamble to the proposed rule (79 FR 11879 at 11909 through 11910), we proposed to list isolated and synthetic non-digestible carbohydrates with beneficial physiological effect(s) in the definition of dietary fiber. In the proposed codified language, we identified two ways the list of dietary fibers could be amended to include new fibers in the definition. Specifically, we identified the existing citizen petition process in § 10.30 that a manufacturer could use to request an amendment to the definition of dietary fiber and the petition process for the authorization of a health claim (21 CFR 101.70) where a fiber that is the subject of an authorized claim would be considered a dietary fiber that we could add to the list of fibers in the definition. We would consider an isolated or synthetic non-digestible carbohydrate that meets the significant scientific agreement standard in section 403(r)(3) of the FD&C Act, for which a health claim is authorized, to be a dietary fiber with a beneficial physiological effect to human health. Two dietary fibers, for which an authorized health claim exists, *i.e.,* β-glucan soluble fiber and barley β-fiber, were included in the proposed definition. The two types dietary fibers, for which an authorized health claim exists (*i.e.,* β-glucan soluble fiber and psyllium husk), are included in the codified definition for dietary fiber in this final rule.

(Comment 251) Some comments stated that it would be a burden to us to maintain and update an approved list of dietary fibers.

(Response) We consider a listing of dietary fibers that provide a beneficial physiological effect to be an efficient way to ensure the use of a common definition on which all manufacturers can rely to evaluate the fiber content of their products for purposes of the dietary fiber declaration and that we can use to evaluate compliance. Therefore, we decline to revise the rule in response to this comment.

(Comment 252) Some comments expressed concern about using the citizen petition process in § 10.30 to amend the listing of isolated and synthetic non-digestible carbohydrates in the definition of dietary fiber. Some comments considered this aspect of the definition as creating an approval process for dietary fiber and stated that we did not have legal authority for such a process. The comments said our pre-approval authority is limited to the premarket review of food additives, color additives, and health and nutrient/content claims and that section 403(q) of the FD&C Act does not provide a legal basis to support premarket approval. The comments also asserted that, under the Administrative Procedure Act, our actions must be consistent with the authority given to us under the FD&C Act and cannot be arbitrary or capricious.

(Response) We disagree that defining the term ''dietary fiber'' to include the identification of specific isolated and synthetic non-digestible carbohydrates is a pre-approval process for dietary fibers like that for food additives, color additives, and health or nutrient content claims. First, the listing of isolated and synthetic dietary fibers in the definition of dietary fiber does not constitute a pre-approval process related to the safety of the food as an ingredient. We are defining dietary fiber under our authorities in sections 403(q), 403(a), 201(n) and 701(a) of the FD&C Act and not under the food additive approval provisions in section 409 of the FD&C Act (21 U.S.C. 348). Moreover, the definition of dietary fiber does not prevent the use of an isolated or synthetic non-digestible carbohydrate to be used as an ingredient in the manufacture of a food. The use of such an added fiber as an ingredient must be lawful under the relevant provisions in the FD&C Act. Second, our definition of dietary fiber for a label declaration does not constitute a health claim or a nutrient content claim under the provisions to authorize such claims in section 403(r) of the FD&C Act. By defining the term dietary fiber, based on beneficial physiological effects in human health rather than by chemical definition, we will ensure that the dietary fiber declared amount will assist consumers to maintain healthy dietary practices, consistent with our labeling authorities under section 403(q) the FD&C Act.

To avoid confusion in the final rule about the citizen petition process at § 10.30, we removed the language that referred to dietary fibers ''that FDA has granted be included in the definition of dietary fiber, in response to a petition submitted to FDA under § 10.30 demonstrating that such carbohydrates have a physiological effect that is beneficial to health.'' The language is not necessary. Any interested person may seek to amend the listing of added fibers through the existing citizen petition process in § 10.30. We do not need to cite to that process within the codified definition of dietary fiber for that process to be available or used to amend the definition of dietary fiber.

(Comment 253) Some comments expressed concern about the citizen petition process with respect to the time for FDA to respond and about the priority of review. Several comments said that, if we did not respond to a citizen petition after 180 days, the dietary fiber should be considered to be officially recognized. One comment would change the deadline for responding to a petition to 30 days or to 90 days.

(Response) Under § 10.30(e)(2), the Commissioner is to provide a response to a petitioner within 180 days of receipt of the petition to approve the petition, deny the petition, or provide a tentative response. In addition, under § 10.30(e)(3), the Commissioner may grant such other relief or take other action as the petition warrants. The comment that requests a shorter time period for review under § 10.30 would require a substantive amendment to the existing regulation in § 10.30 and is outside the scope of this rule. Therefore, we decline to revise the rule in response to this comment.

(Comment 254) Several comments asked how we would handle more than one petition on the same added non-digestible carbohydrate. For example, if two petitions were submitted on the same added non-digestible carbohydrate, but for different endpoints, and the added non-digestible carbohydrate meets the dietary fiber definition based on one endpoint, but not the other endpoint, would the added non-digestible carbohydrate meet the dietary fiber definition? Another comment stated that it is unlikely that a single dietary fiber source will produce all of the potential health outcomes anticipated for dietary fiber consumption. Some comments questioned whether all manufacturers would have to submit a citizen petition for the same fiber.

(Response) We recognize that different isolated or synthetic non-digestible carbohydrates can have different beneficial physiological effects. An isolated or synthetic non-digestible carbohydrate only needs to demonstrate one beneficial physiological effect. Therefore, for example, if the non-digestible carbohydrate attenuates blood glucose levels, but not blood cholesterol levels, it would meet the definition of dietary fiber. As long as one of the petitions provided sufficient evidence for a beneficial physiological effect, we could add the dietary fiber to the regulation. After an isolated or synthetic non-digestible carbohydrate is included in the list of such fibers in the definition of dietary fiber in § 101.9(c)(6)(i), all manufacturers must list the dietary fiber

as part of the total dietary fiber declaration if it is present in their product. Manufacturers would not have to individually submit a citizen petition for the same fiber already listed before being subject to the mandatory declaration for that fiber.

(Comment 255) One comment said we should authorize only specific formulations of an isolated or synthetic non-digestible carbohydrate. The comment said that generic approval of many added fibers would be inappropriate because companies produce a wide variety of each fiber.

(Response) We recognize that companies may produce a wide variety of specific formulations of isolated or synthetic non-digestible carbohydrates, and we would, as appropriate, provide the needed specificity in a list of isolated or synthetic non-digestible carbohydrates in the definition, including their source and chemical structure to ensure clarity in what fibers must be declared as ''dietary fiber'' if present as an ingredient in food. We intend to issue a guidance document on the information we recommend be provided to us for scientific review, the approach we intend to use to evaluate the studies, including the approach for our evaluation of the strength of the scientific evidence, if a company petitions us to amend the definition of dietary fiber to include an additional fiber in the definition.

(Comment 256) One comment suggested that we use a voluntary pre-notification process, such as that used for FDAMA health claims, to substantiate an added non-digestible carbohydrate. Other comments suggested the use of a voluntary GRAS notification process that involves submitting a detailed summary of a determination for safety or, for companies that have self-determined their ingredient as GRAS, their self-determination process. Other comments said that added non-digestible carbohydrates that are GRAS should meet the dietary fiber definition. Many comments suggested that we use a pre-market notification process, such as that used for structure/functions claims, where the evidence is on file and the evidence is publically available.

(Response) We decline to revise the rule as suggested by the comments. A voluntary process, such as the GRAS notification program, is not consistent with ensuring that there is a singular definition of dietary fiber for purposes of the declaration in the Nutrition Facts label. Furthermore, the GRAS review system evaluates ingredients for their safety, rather than beneficial physiological effects. A dietary fiber that is GRAS does not necessarily meet the definition of dietary fiber for purposes of a nutrient declaration. A non-digestible carbohydrate that is added to a food by a manufacturer must be approved as a food additive under section 409 of the FD&C Act or be GRAS under the conditions of its intended use (see sections 201(s) and 409 of the FD&C Act). The lawfulness of the use of various fibers added to food is outside the scope of this rule.

Moreover, a process whereby a firm retains the evidence that its fiber meets the definition of dietary fiber would not ensure that there is a singular definition of dietary fiber for purposes of the declaration in the Nutrition Facts label. By including a list of all isolated or synthetic dietary fibers that meet the definition of dietary fiber, manufacturers will know that, when they use those fibers as an ingredient in their product, they must include the fibers in the declaration of dietary fiber. Consumers will have a consistent basis on which the declared values for dietary fiber are derived and can use that information in making healthy dietary choices and for comparing products. We are establishing a definition for dietary fiber that includes isolated or synthetic non-digestible carbohydrates that have a beneficial physiological effect to human health and are to be included in the declaration for dietary fibers on the Nutrition Facts label. Without a consistent regulatory definition, we would not be able to determine the veracity of a dietary fiber declaration on the Nutrition Facts label for purposes of compliance, and consumers would not be assured that the fibers declared as dietary fiber on the label are those that will assist them in maintaining healthy dietary practices.

Furthermore, although we consider an isolated or synthetic fiber that is the subject of an authorized health claim to meet the definition of dietary fiber, we are not able to make the same determination for such a fiber if subject of a health claim notification submitted under section 403(r)(3)(C) of the FD&C Act. (We refer to this health claim as a ''FDAMA health claim'' based on the statutory language enacted as part of the Food and Drug Administration Modernization Act of 1997, Pub. L. 105–115, 111 Stat. 2296 (1997).) A FDAMA health claim relates to an authoritative statement made by a scientific body of the U.S. Government with official responsibility for public health protection or research directly relating to human nutrition (section 343(r)(3)(C)(i)) of the FD&C Act). A FDAMA health claim may be used on food in the market within 120 days of a submission; however, there are certain circumstances under which we may object to the content of the submission. For FDAMA health claims in use, for which the 120-day period has passed, we must issue a regulation to prohibit or modify the claim or make other findings to prevent the use of the claim (section 343(r)(3)(D) of the FD&C Act). There are a number of factors we must evaluate during the 120-day period of review that could raise questions about the use of the claim. For example, we may have questions about the source of the statement and whether the statement is a health claim, whether the notification contains a balanced representation of the scientific literature about the health claim and whether the claim is misleading. Thus, unlike the 540-day period available to publish a final rule to authorize a health claim (section 403(r)(4)(A)(i) of the FD&C Act), we may not have adequate time during a FDAMA health claim review period to address additional questions about the fiber as it relates to our authority in section 403(q) of the FD&C Act for purposes of nutrient declaration. Therefore, we plan to consider, on a case-by-case basis, whether the scientific evidence for a fiber that is the subject of a FDAMA health claim notification is sufficient to amend the list of dietary fibers in the dietary fiber definition for nutrient declaration.

(Comment 257) One comment asked us to clarify that, when a company makes a structure/function claim (*e.g.,* fiber helps maintain healthy digestive function), the substantiation for that claim would need to be based on a physiological effect. The comment said that companies already must substantiate all claims on the label and said we could issue a guidance document to clarify how substantiation of a claim should be done.

(Response) Structure or function claims are outside the scope of this rule. Therefore, we are making no clarifying statements with respect to structure or function claims in this final rule.

(Comment 258) One comment that objected to the proposed rule's mention of citizen petitions stated that the evidence for meeting the dietary fiber definition should meet the significant scientific agreement (SSA) standard for health claims and that small, short-term studies of varying quality with conflicting results would not suffice. The comment also said that a health claim authorization would require us to consider whether levels of an added non-digestible carbohydrate in foods are sufficient to cause the physiological effect. Other comments said we should only require evidence needed to

demonstrate the physiological effect of the added non-digestible carbohydrate, regardless of the amount in the finished food.

Another comment said that we should not expect the evidence to be equivalent to the significant scientific agreement (SSA) standard required for an authorized health claim. Instead, the comment said the evidence considered could include animal and in vitro studies or else the evidentiary standard would be the same as for structure function and health claims. The comment said we should provide the evidentiary standard in the final rule.

(Response) The comments express concern about the level and sufficiency of the scientific evidence necessary to demonstrate a fiber provides a beneficial physiological benefit to health and whether a certain level of such a fiber in food is needed in order to be considered a ''dietary fiber'' for purposes of a Nutrition Facts label declaration. A health claim and a nutrient declaration are distinct from each other. A health claim is a statement about the relationship between a food or a food component and risk of chronic disease or a health-related condition. A nutrient declaration on a food label is a statement of the amount of the nutrient in a serving of a food that is necessary to assist consumers to maintain healthy dietary practices. A beneficial physiological effect to human health for purposes of nutrition labeling may be based on a relationship between the nutrient (*e.g.,* dietary fiber) and a risk of chronic disease or a health-related condition, but that is not a prerequisite. Not all beneficial physiological effects are specific to chronic disease risk (*e.g.,* attenuation of postprandial blood glucose, improved bowel function). Thus, for purposes of the Nutrition Facts label, the evidence to support a beneficial physiological effect on human health may differ from that required for a health claim that relates to a relationship between an isolated or synthetic non-digestible carbohydrate and a risk of chronic disease. As part of the factors for mandatory declaration, the evidence for a relationship between the nutrient and a health-related physiological endpoint should be ''well-established'' which includes conclusive or strong evidence (79 FR 11879 at 11890). For evidence submitted as part of a citizen petition, we consider that the strength of the total evidence should demonstrate a specific beneficial physiological effect and that the beneficial effect should be replicated (Ref. 133), consistent with generally accepted scientific evidence to competent authorities in the Codex definition of dietary fiber in 2010 (79 FR 11879 at 11909). Accordingly, we do not consider animal or in vitro data to be sufficient. The physiology of animals is different than that of humans. In vitro studies are conducted in an artificial environment and cannot account for a multitude of normal physiological processes such as digestion, absorption, distribution, and metabolism that affect how humans respond to the consumption of foods and dietary substances (Ref. 134). Animal and in vitro studies can be used to generate hypotheses, investigate biological plausibility of hypotheses, or explore a mechanism of action of a specific food component through controlled animal diets; however, these studies do not provide information from which scientific conclusions can be drawn regarding the beneficial physiological effects of a food component, such as added non-digestible carbohydrates.

If a dietary fiber is the subject of an authorized health claim, we would consider the relationship between the fiber and the chronic disease risk or health-related condition, to provide a beneficial physiological benefit to health. In fact, we proposed, and include in this final rule, two dietary fibers in the definition of dietary fiber that are the subject of an authorized health claim. Prospectively, if we issue a final rule authorizing a health claim for a dietary fiber, we intend to modify the dietary fiber definition accordingly.

Moreover, we are not including a requirement that an isolated or synthetic non-digestible carbohydrate that has beneficial physiological benefit be included at or above a certain level in food in order to be declared as dietary fiber on the Nutrition Facts label. The dietary fiber declaration is not a health claim. We do not consider it necessary to titrate an amount of a dietary fiber in a food with the beneficial physiological effect of the fiber for purposes of a nutrient declaration. We recognize that dose-response relationships may exist between certain isolated or synthetic non-digestible carbohydrates and a beneficial physiological endpoint. We also recognize that the amount of an isolated or synthetic non-digestible carbohydrate will vary in similar and different marketed food products. The scientific evidence from a clinical study to support a beneficial physiological effect should provide an amount of the fiber that is a reasonable level to be expected in a food and relevant based on typical consumption of dietary fiber.

(Comment 259) Several comments said we should accept functional fibers (*i.e.,* isolated or synthetic non-digestible carbohydrates) identified in the IOM macronutrient report (Ref. 5) that summarizes the scientific evidence and where sufficient data documents their beneficial physiological effect. The comments said that the 2002 IOM report already included inulin and oligofructose as dietary fibers in table 7–1 and pages 345 through 346.

(Response) We disagree with the comments. The IOM (Ref. 5) did not consider whether the scientific evidence is sufficient to support a beneficial physiological effect to human health for specific isolated or synthetic non-digestible carbohydrates, but rather identified or classified which non-digestible carbohydrates would be considered to be a functional fiber and, therefore, would need to demonstrate a beneficial physiological effect to fall within the dietary fiber definition. For example, the IOM report states that inulin, oligofructose, and fructooligosaccharides ''could be classified as functional fibers where there are sufficient data to show positive physiological effects in humans'' (Ref. 135). Table 7–1 of the IOM report simply provides the general characteristics of what could qualify as a dietary fiber. The IOM did not evaluate the beneficial physiological effects of the individual non-digestible carbohydrates for the purpose of identifying those that meet the dietary fiber definition. Instead, the IOM provided a brief science review rather than an indepth review for the various physiological endpoints. The IOM stated that it is important to note that the discussions on the potential benefits of what might eventually be classified as functional fibers should not be construed as endorsements of those fibers.

(Comment 260) One comment said our consideration of physiological effects was arbitrarily limited to three endpoints. Many comments said we should use and incorporate into a guidance document the endpoints identified at the Vahouny Fiber Symposium, besides the three endpoints listed in the IOM report (and the proposed rule).

(Response) We disagree that we limited the physiological effects to three endpoints. In the preamble to the proposed rule (79 FR 11879 at 11910), we identified examples of physiological effects that are beneficial to human health, such as attenuation of postprandial blood glucose concentrations, attenuation of blood cholesterol concentrations, and improved laxation. The terms ''such as'' indicate that the subsequent list of items is merely an illustration rather than an exhaustive list.

As for the comments' reference to Vahouny endpoints, at the 9th Vahouny Fiber Symposium, nine physiological health effects were identified: (1) Total/LDL cholesterol; (2) post-prandial glucose and insulin; (3) increased fecal bulk and laxation; (4) colonic transit time; (5) blood pressure; (6) colonic fermentation and short chain fatty acid production; (7) modulation of the colonic microflora; (8) weight loss, weight maintenance, and reduction in satiety; and (9) increased satiety (Ref. 136). We agree that lowering total/LDL levels, lowering post-prandial glucose levels, reducing gut transit time and improving laxation (fecal output), reduced blood pressure, and increased satiety associated with reduced energy intake and with possible associated outcomes on body weight are beneficial to human health. We consider colonic fermentation and short chain fatty acid production and modulation of the colonic microflora to be processes that may be associated with a physiological endpoint, rather than physiological endpoints themselves.

(Comment 261) One comment said that requiring added non-digestible carbohydrates to have a beneficial physiological effect will require research, and funds to support such research, to demonstrate such an effect. The comment said this would be a burden to firms who seek to develop new fibers. Another comment said we should accept the existing body of evidence as an appropriate demonstration of benefit, in many cases, without requiring new substantiation for a beneficial ingredient already in common use.

(Response) The final rule does not require a firm to demonstrate that there is a beneficial physiological effect before it can add an isolated or synthetic non-digestible carbohydrate to a food and declare it as part of the Total Carbohydrate declaration. We recognize that firms may develop new fibers and that we may not be aware of all of the added fibers that a manufacturer may be using as an ingredient in its products. For example, there may be some fibers that a manufacturer has self-determined to be GRAS for which we did not receive a GRAS notification. In addition, isolated or synthetic added fibers may be approved for use as a food additive. Moreover, even if a manufacturer self-determines that a fiber is GRAS, or there is a food additive approval for the fiber, whether the fiber has a beneficial physiological effect to health is a separate question. Therefore, given the potential uncertainties and possible inconsistencies in what fibers may be declared as dietary fiber, we define dietary fiber to include a listing of isolated or synthetic non-digestible carbohydrate that will provide a beneficial physiological effect. In this way, there is transparency in what added fibers are included in the definition that will assist consumers in maintaining healthy dietary practices and certainty in what must be declared for compliance purposes.

Numerous studies have already been conducted on many different types of isolated or synthetic non-digestible carbohydrates. We reviewed the publically available studies for various non-digestible carbohydrates. Based on our review, we found that a number of isolated or synthetic fibers have a demonstrated beneficial physiological effect to health (Ref. 137), and we include such fibers in the definition for dietary fiber (§ 101.9(c)(6)(i)). We consider the totality of the evidence when evaluating the beneficial physiological effect(s) of an isolated or synthetic non-digestible carbohydrate. We reviewed several non-digestible carbohydrates for which the publically available scientific evidence indicated mixed results, or appears to be insufficient. It is not clear whether there may be additional data or information concerning the beneficial health effects of these non-digestible carbohydrates that interested persons have and are not yet publically available. Therefore, we decline to make a determination on whether these non-digestible carbohydrates meet the definition of ''dietary fiber'' without first providing an opportunity for comment on the available scientific evidence for these non-digestible carbohydrates. We intend to publish a separate notice to seek comment on the available scientific data on these non-digestible carbohydrates to determine if we should consider additional non-digestible carbohydrates to be added to the list of dietary fibers. We also intend to publish a guidance document on the type of evidence we recommend be provided and the approach we plan to use to evaluate the beneficial physiological effect of a non-digestible carbohydrate.

If a manufacturer wants to add an isolated or synthetic non-digestible carbohydrate to the listing of fibers in the dietary fiber definition, it can petition us to amend the definition to include that fiber in the dietary fiber listing for these types of carbohydrates. Under § 10.30(b), the citizen petition must include all relevant information and views on which the petitioner relies, as well as representative information known to the petitioner which is unfavorable to the petitioner's position. Thus, any petition to request an amendment to the definition to include an additional dietary fiber should include all publically available evidence relevant to the review about a beneficial effect of the isolated or synthetic added non-digestible carbohydrate.

(Comment 262) The proposed definition of dietary fiber would mention citizen petitions submitted to us pursuant to § 10.30. One comment said that requiring a citizen petition to seek approval of currently used fibers will cause disruption in the food supply. The comment said there could be a backlog of petitions.

Several comments raised concerns that a review of new fibers that manufacturers want to include as part of a listing of fibers within the definition of dietary fiber will result in lag time resulting in manufacturers dropping the extrinsic fiber they use in products. With a label compliance period of 2 years, the comments questioned whether we could review and respond to citizen petitions within this time period and allow manufacturers to design and secure new packaging. Some comments said that, once we begin implementing the final rule, the time for review of subsequent petitions may be unreasonable and that some added non-digestible carbohydrates that are currently declared as dietary fiber may have to come off the Nutrition Facts label. The comments said that a lengthy petition process undermines the overall purpose to promote the healthful consumption of dietary fibers and that industry would have to make the other label changes in response to the final rule without knowing the amount of dietary fiber to declare and could lose dietary fiber health claims. Some comments said that premarket review should only apply to those fibers that we did not identify as dietary fiber. One comment said that we should issue the guidance document along with the listing of the dietary fibers, including the commonly used added non-digestible carbohydrates that we have determined to have a beneficial effect without submission of formal petitions.

(Response) We recognize that there may be uncertainty about whether certain isolated or synthetic non-digestible carbohydrates, currently in use by manufacturers and declared as dietary fiber, meet the dietary fiber definition. We proposed to list isolated or synthetic non-digestible carbohydrates that we have been determined to have a physiological effect that is beneficial to human health in § 101.9(c)(6)(i), and the final rule includes additional dietary fibers in the definition based on the review of

publically available evidence (Ref. 137). These reviews identify a number of isolated or synthetic non-digestible carbohydrates for which the publically available scientific evidence supports a beneficial physiological effect to human health.

With respect to the concern about a possible backlog in petitions, we did not receive any comment about numbers of specific isolated or synthetic fibers used as an ingredient in food that would not otherwise have been included in our review of publically available evidence. Our review was necessarily limited to the publically available evidence on such fibers. Therefore, to the extent there are uses of isolated or synthetic fibers that are specific to a particular manufacturer, we will need to consider those case-by-case in the context of petition submitted under § 10.30 and consider the resources needed to evaluate such requests as we receive them.

(Comment 263) Several comments said that certain added non-digestible carbohydrates meet the dietary fiber definition. Some comments would add psyllium husk to the list of approved fibers and said that there is a wealth of clinical trial data on inulin which met the dietary fiber definition based on the 2002 IOM report and that there were data to support galactooligosaccharides (GOS) as a dietary fiber.

Other comments supported the inclusion of bamboo fiber, soy fiber, pea fiber, wheat fiber, cellulose, cotton seed fiber, sugar cane fiber, sugar beet fiber, and oat fiber. One comment said that cellulose is GRAS under a ''prior sanctioned category.''

(Response) We agree that psyllium husk meets the dietary fiber definition (§ 101.81(c)(2)(B)) and have revised the definition accordingly. We have reviewed the publicly available scientific evidence for some of the isolated or synthetic non-digestible carbohydrates, including cellulose (Ref. 137). Based on our review, we determined that the scientific evidence supports a showing of a beneficial physiological effect to human health from the following fibers: Cellulose, guar gum, pectin, locust bean gum, and hydroxypropylmethylcellulose. Cellulose was determined to improve bowel function. Guar gum, pectin, locust bean gum and hydroxypropylmethylcellulose were determined to lower blood total and/or LDL cholesterol levels. Therefore, we include these isolated or synthetic dietary fibers in the final rule's definition of dietary fiber.

As for the other carbohydrates mentioned in the comments, the comments did not provide data on beneficial physiological effects, so we are unable to conduct a scientific review. However, we intend to publish a separate notice to seek comment on the available scientific data on non-digestible carbohydrates to assist us in the review of the scientific evidence. Publically available clinical trial data will be identified and summarized for non-digestible carbohydrates, including inulin, bamboo fiber, soy fiber, pea fiber, wheat fiber, cotton seed fiber, sugar cane fiber, sugar beet fiber, and oat fiber.

(Comment 264) Several comments stated that we should provide guidance to industry on submissions to demonstrate physiological effects that are beneficial to humans before we issue the final rule so that meaningful comments can be provided on the process. The comments said that our failure to provide notice and an opportunity to comment on a guidance document would violate the Administrative Procedure Act. Other comments stated that, once we have identified the dietary fibers, we should reopen the dietary fiber section of the proposed rule for public comment, including the requirements for defining dietary fiber.

(Response) We intend to issue guidance concerning the evidence to submit and our approach to reviewing the science in a request to amend the dietary fiber definition to support a fiber's beneficial physiological effect to human health. We do not consider it necessary to publish the draft guidance before the final rule is published. There will be an opportunity to submit comments to the guidance, consistent with our good guidance practices regulation at 21 CFR 10.115.

To the extent the comment asserts a failure to receive comment on the draft guidance before the publication of the final rule violates the Administrative Procedure Act (APA), we disagree. The publication of a draft guidance document is not a general notice of proposed rulemaking to which the APA requirements under 5 U.S.C. 553 would otherwise apply. Furthermore, we provided adequate notice and opportunity to comment on our proposed definition of dietary fiber and provided the Codex definition that includes isolated or synthetic non-digestible carbohydrates that have been shown to have a beneficial physiological effect to health as demonstrated by generally accepted scientific evidence to competent authorities (79 FR 11879 at 11909). We provided examples of beneficial physiological effects (*e.g.,* attenuation of blood glucose and cholesterol levels and improved laxation) and the reference to the IOM reports (Ref. 138) (id.). We also asked for comment on the IOM definition of dietary and functional fibers dating back to the 2007 ANPRM (id.). Therefore, we decline to delay issuance of the final rule as suggested by the comments. Furthermore, the administrative process for submitting a request to amend the definition of dietary fiber is in § 10.30. We have not proposed changes to that regulation in the context of this rulemaking, and, therefore, comments to § 10.30 are outside the scope of this rule.

(Comment 265) Many comments supported the proposed definition of dietary fiber, but for different reasons. Some comments supported the proposed definition because, according to the comments, dietary fibers should show a physiological benefit, and the proposed definition would facilitate the development of healthier products. Other comments said the proposed definition aligns with the IOM and Codex definitions for dietary fiber.

Several comments, however, asked us for clarification. Some comments asked us to clarify what we meant by ''intact and intrinsic in plants'' and ''isolated and synthetic.''

(Response) Consistent with the IOM fiber report (Ref. 138), we consider ''intact'' as having no relevant component removed or destroyed and ''intrinsic'' as originating and included wholly within a food. Intact and intrinsic fibers are naturally present such that they are integrated within the plant matrix and contain other nutrients naturally present in proportions that exist in the plant cell. For example, brans, which are obtained by grinding, are anatomical layers of the grain consisting of intact cells and substantial amounts of starch, protein and other nutrients. Non-digestible carbohydrates that are created during normal food processing (*e.g.,* cooking, rolling, or milling) are intrinsic and intact (*e.g.,* non-digestible (resistant) starch in flaked corn cereal). However, a resistant starch that has been extracted and isolated from the flaked corn cereal, such that it is no longer part of the food matrix (intrinsic) and no longer consists of relevant food components (intact), often with an increased concentration of non-digestible carbohydrates, would be considered an isolated non-digestible carbohydrate. The term ''isolated'' is used to describe isolated non-digestible carbohydrates that are isolated from plant sources such that they are no longer intrinsic or intact. Some of these isolated fibers can be further modified. The term ''synthetic'' is used to describe

synthetic non-digestible carbohydrates that are not isolated from plant sources, but rather chemically synthesized.

We note that the distinction between ''intrinsic and intact'' and ''isolated or synthetic'' is important because foods that contain intrinsic and intact fibers include naturally occurring dietary fibers that contain other nutrients normally found in foods that may be associated with beneficial physiological effects. Such beneficial physiological effects, associated with natural dietary fibers, cannot be assumed to exist when non-digestible carbohydrates are isolated from foods, and especially when synthesized. We note that the IOM (2002) cited an earlier IOM report (Ref. 139), which stated that, while dietary fiber intake is associated with decreased risk or improvements in several chronic diseases, there is no conclusive evidence that dietary fiber, rather than the other components of vegetables, fruits, and cereal products, reduces the risk of those diseases. Furthermore, the IOM stated that there are many constituents of whole grains, in addition to dietary fiber, that may reduce the risk of CHD. These statements emphasize the inherent benefits of intact and intrinsic non-digestible carbohydrates.

(Comment 266) Several comments would change ''intact and intrinsic in plants'' to ''intact or intrinsic.'' The comments said that, without this change, the definition would exclude almost all fiber ingredients.

(Response) We disagree with the comment. These two terms collectively require that the non-digestible carbohydrate is naturally present such that it is integrated within the plant matrix and contains other nutrients naturally present in proportions that exist in the plant cell. These conditions (integration in the plant matrix and providing proportional nutrients that are present naturally in the plant cell) are considered to be inherent in the health benefits associated with naturally occurring dietary fibers. The definition of dietary fiber includes these intact and intrinsic fibers in addition to isolated or synthetic fibers that have a beneficial physiological effect. Therefore, we disagree that the definition of dietary fiber would ''exclude almost all fiber ingredients'' if we retained ''intrinsic and intact in plants'' in the definition. We decline to revise the definition as suggested by the comment.

(Comment 267) One comment suggested changing ''isolated and synthetic'' to ''isolated or synthetic.''

(Response) We agree with the comment. Non-digestible carbohydrates that are added to foods are either isolated from foods or synthesized, and so we have revised the rule as suggested by the comment.

(Comment 268) One comment stated that brans, obtained by mechanical action (grinding), are a layer of grains and therefore should be a dietary fiber.

(Response) We agree that brans that are obtained by mechanical actions are unique and, unlike other fibers subject to mechanical actions, are intact and intrinsic and therefore meet the dietary fiber definition. Bran is the hard outer layer of cereal grain and is obtained by mechanical processing. Bran is rich in dietary fiber, as well as other nutrients including starch, protein, vitamins, and minerals. Furthermore, naturally occurring dietary fiber is part of the matrix in bran. Therefore, dietary fiber in bran is intact and intrinsic.

(Comment 269) One comment opposed to the proposed definition of dietary fiber stated that, as is the case for most dietary components, the health benefits of dietary fiber have only been studied in clinical trials in isolated forms rather than in their intrinsic and intact forms. The comment said it is nearly impossible to separate out any associated health outcome from other bioactive components within the food matrix.

(Response) We agree that the health benefits of non-digestible carbohydrates have been studied in numerous clinical trials in isolated forms. These clinical trials have been used to identify those added non-digestible carbohydrates that meet the dietary fiber definition (Ref. 137). Fiber-containing fruits, vegetable, and grain products have been shown to have beneficial health effects via such clinical trials, as well as observational studies on chronic disease risk (*e.g.,* CHD). The collective information from such studies has been used to substantiate the evidence for the relationship between soluble fibers and CHD risk (*e.g.,* §§ 101.77 and 101.81), as well as the establishment of an AI for dietary fiber (Ref. 36). Thus, the health benefits of foods that contain naturally occurring dietary fibers have already been substantiated.

(Comment 270) Several comments asked us to clarify the meaning of a ''physiological effect that is beneficial to human health.''

(Response) In the preamble of the proposed rule (79 FR 11879 at 11909), we explained that a regulatory definition for dietary fiber, such as those consistent with the IOM and Codex, should be one that emphasizes its physiological effect that is beneficial to human health to assist consumers in maintaining healthy dietary practices. We also identified, in the preamble to the proposed rule (id. at 11910), physiological effects that are beneficial, such as attenuation of blood glucose and cholesterol levels (*i.e.,* total or LDL). We also would consider the lowering of blood pressure to be a beneficial physiological effect. The attenuation/lowering of these biomarkers (lowering of blood glucose and cholesterol levels and lowering of blood pressure) are associated with reduced risk of type 2 diabetes or CVD. Another outcome we consider a beneficial physiological effect is increased satiety, where an isolated or synthetic non-digestible carbohydrate is associated with a reduced energy intake. A reduced energy intake can reduce the risk of being overweight or obese. In addition, improved laxation and bowel function is a beneficial physiological effect where an isolated or synthetic non-digestible carbohydrate shows a reduced intestinal transit time or an increase in the passage of stools. These outcomes result in an increased rate of defecation to improve bowel function. Increased absorption of minerals, such as calcium, are considered to provide beneficial physiological effects because increased absorption of calcium is associated with increased bone mineral density which may reduce osteoporosis. For the purposes of Nutrition Facts labeling, we do not consider processes and mechanisms (*e.g.,* fermentation) per se as beneficial physiological effects for determining whether an isolated or synthetic non-digestible carbohydrate meets the definition of dietary fiber. Fermentation is not a physiological benefit; rather, it is a process associated with the digestion of the non-digestible carbohydrate itself. Unless there is information to support a beneficial physiological effect, such non-digestible carbohydrates would not assist consumers in maintaining healthy dietary practices. As stated in the IOM Diet and Health report (Ref. 139), while dietary fiber intake is associated with decreased risk or improvements in several chronic diseases, there is no conclusive evidence that it is dietary fiber, rather than the other components of vegetables, fruits, and cereal products, that reduces the risk of those diseases. There are many constituents in whole grains, in addition to dietary fiber, that may reduce the risk of CHD. Therefore, unlike the inherent benefits of intact non-digestible carbohydrates, isolated or synthetic non-digestible carbohydrates must be independently shown to have physiological health benefits, and not all such fibers have these types of benefits. One example of a process that is not considered to be a

beneficial physiological effect is fermentation. Another example is changes in the microbiota in the large intestine as a result of the consumption of non-digestible carbohydrates. Physiological effects that are beneficial (*e.g.,* satiety) may be an outcome of a process, such as fermentation and changes in the colonic microbiota.

(Comment 271) One comment said that the food industry will be able to demonstrate at least one physiological effect for each type of isolated or synthetic non-digestible carbohydrate and those effects may be less significant than the benefits from intact fiber. For example, the comment said, referring to EFSA, reduced post-prandial glycemic response would apply for all isolated or synthetic non-digestible carbohydrates (compared to sugar). The comment also said that the evidence showing that isolated or synthetic non-digestible carbohydrates are beneficial is often inconsistent and based on poorly established biomarkers. Thus, according to the comment, added fiber may have less benefit than its intact counterpart.

(Response) Without reviewing the evidence on the beneficial physiological effects of non-digestible carbohydrates, it is premature for us to state whether or not at least one physiological effect for each type of isolated or synthetic non-digestible carbohydrate can be demonstrated. We disagree with the comment, referring to EFSA, that reduced post-prandial glycemic response would apply for all isolated or synthetic non-digestible carbohydrates. As an example, EFSA concluded that a relationship has not been established between acacia gum and reduced postprandial glycemic response (Ref. 140). While some studies may have used poorly established biomarkers, our science reviews have included endpoints that are reliable measurements of physiological effects (*e.g.,* total and LDL cholesterol levels, and intestinal transit time and frequency of bowel movements as a measure of laxation) (Ref. 137).

(Comment 272) One comment said there is an insufficient understanding of the complex interactions among and between gut microbiota and the human host. The comment said these interactions are affected by total fiber intake, but the effects of specific fiber components can be difficult to define. Another comment said that we should indicate that the list of beneficial physiological effects is not exhaustive and is evolving.

(Response) We agree that scientific knowledge of beneficial physiological effects to human health is evolving. The physiological endpoints that we have considered in our science reviews include those that are supported by the current scientific evidence (Ref. 137). We recognize that, as the science evolves, the list of dietary fibers in the definition may change. Thus, our list is not exhaustive.

(Comment 273) One comment presumed that, based on the proposed factor of 2 kcal/gram, ''non-digestible carbohydrates'' includes partially and totally digested carbohydrates. The comment said that, for this reason, we should define ''non-digestible carbohydrate'' to mean ''carbohydrates that are partially or totally fermentable by colonic microflora.''

(Response) As provided in the IOM fiber report (Ref. 138), ''non-digestible'' is an adjective that implies a substance is not broken down to simpler chemical compounds in the living body chiefly through the action of secretion-containing enzymes such as the saliva and the gastric, pancreatic, and intestinal juices in the alimentary canal. Thus, non-digestible carbohydrates are not digested by human enzymes and pass into the colon where they may or not be fermented by colonic microflora, and so we decline to revise the rule as suggested by the comment.

(Comment 274) Many comments disagreed with the proposed definition of dietary fiber. Several comments said that the amount of dietary fiber declared in the Nutrition Facts label should continue to be based on AOAC methods because the measured amount aligns more closely to the chemical composition and structure and is more feasible and practical. The comments also said that natural and isolated fibers are chemically identical.

Other comments argued that using the more recently developed methods (*e.g.,* AOAC 2011.25) allows for a comprehensive isolation and quantitation of all dietary fiber ingredients, without relying on a definition. The comments said that the newer AOAC methods capture the more highly soluble non-digestible carbohydrates (*i.e.,* non-digestible oligosaccharides) that were not captured in the methods available at the time when the IOM considered the definitions for dietary fiber and therefore not considered in the 2002 IOM report.

(Response) We disagree with the comments. While the AOAC methods may be more feasible, practical, and inclusive in measuring non-digestible carbohydrate compared to the amount of non-digestible carbohydrates that meets the dietary fiber definition, these methods are not able to distinguish and measure non-digestible carbohydrates that do not provide a beneficial physiological effect. Therefore, relying on AOAC methods can overestimate the amount of non-digestible carbohydrates that can assist consumers in maintaining healthy dietary practices.

We agree that the newer methods that can measure lower molecular weight non-digestible carbohydrates were not available when the IOM was developing the dietary fiber definitions. However, the availability of analytical methods had no bearing on the IOM's definitions, and the IOM definition included the lower molecular weight non-digestible oligosaccharides as part of the definition of dietary fiber. The focus was on ensuring that all added non-digestible carbohydrates that meet the dietary fiber definition have a beneficial physiological effect. Even though natural and isolated fibers can be identical chemically, they may not provide the same beneficial physiological effect.

(Comment 275) Several comments supported using the American Association of Cereal Chemist International (AACCI) definition because the AACCI definition was consistent with the Codex definition and would support global harmonization. The AACCI definition is:

> Dietary fiber is the edible parts of plants or analogous carbohydrates that are resistant to digestion and absorption in the human small intestine with complete or partial fermentation in the large intestine. Dietary fiber includes polysaccharides, oligosaccharides, lignin, and associated plant substances. Dietary fibers promote beneficial physiological effects including laxation, and/or blood cholesterol attenuation, and/or blood glucose attenuation.

(Response) We decline to revise the rule as suggested by the comment. While the AACCI definition distinguishes between natural and isolated or synthetic non-digestible carbohydrates, it does not specify the need for isolated or synthetic non-digestible carbohydrates to demonstrate a beneficial physiological effect. Foods that contain naturally occurring dietary fibers are usually a mixture of polysaccharides that are integral components of the plant cell wall or intercellular structure. Naturally occurring dietary fibers have the three-dimensional plant matrix that is responsible for some of the physicochemical properties attributed to dietary fiber (Ref. 138). Furthermore, foods that contain naturally occurring dietary fibers contain other nutrients normally found in foods that may be associated with beneficial physiological effects. Such beneficial physiological

effects, associated with natural dietary fibers, cannot be assumed to exist when non-digestible carbohydrates are isolated from foods, and especially when synthesized.

We also disagree that the AACCI definition is consistent with the Codex definition. The Codex definition includes the need for isolated or synthetic fibers to have been shown to have a physiological effect of benefit to health.

(Comment 276) One comment said we should establish a definition that is consistent with other long-recognized definitions regardless of whether that definition is based on clinical evidence or to include greater than DP >3. The comment, however, did not identify any other definitions.

(Response) To the extent the comment suggests that we should not consider clinical evidence of beneficial physiological effect or length of monomeric units in the dietary fiber definition, we disagree. Consistent with the IOM, we recognize that those non-digestible carbohydrates that have been isolated from foods or synthesized need to demonstrate a physiological benefit in humans and may include a DP of ≥3. Evidence of such a benefit is obtained primarily through human clinical studies that have evaluated the effect of isolated or synthetic non-digestible carbohydrates on individual physiological effects.

(Comment 277) Several comments stated that, for the sake of harmonization, we should adopt the Codex definition, but without footnote 2. Footnote 2 states that the decision on whether to include carbohydrates from 3 to 9 monomeric units should be left to national authorities.

(Response) We decline to revise the rule as suggested by the comments. Codex defines dietary fiber to mean carbohydrate polymers with ten or more monomeric units, which are not hydrolyzed by the endogenous enzymes in the small intestine of humans and belong to the following categories:

- Edible carbohydrate polymers naturally occurring in the food as consumed;
- carbohydrate polymers, which have been obtained from food raw material by physical, enzymatic, or chemical means and which have been shown to have a physiological effect of benefit to health as demonstrated by generally accepted scientific evidence to competent authorities; and
- synthetic carbohydrate polymers which have been shown to have a physiological effect of benefit to health as demonstrated by generally accepted scientific evidence to competent authorities.

The Codex and IOM definitions are consistent with our definition in that they specify that isolated or synthetic non-digestible carbohydrates that are added to foods need to show a beneficial physiological effect. The footnote is left up to competent authorities, such as FDA, and we have chosen to include non-digestible oligosaccharides with a DP of 3 to 9 monomeric units as part of the dietary fiber definition to include fibers with beneficial physiologic effects regardless of size.

(Comment 278) One comment stated that the dietary fiber definition should include non-digestible carbohydrates with a DP = 2 (*e.g.,* non-digestible disaccharides such as galacto-oligosaccharides (GOS)) to capture all added non-digestible carbohydrates that have a beneficial physiological effect.

(Response) Non-digestible oligosaccharides, such as GOS, vary in size. GOS is a mixture of β-linked polymers in various configurations and the DP ranges from 2 to 8 (Ref. 141). The currently available AOAC methods measure non-digestible carbohydrates at a DP ≥3. Furthermore, non-digestible monosaccharides and disaccharides meet the definition of sugar (see part II.H.3.n). Therefore, we disagree that non-digestible mono- and disaccharides should be considered as dietary fiber.

(Comment 279) One comment said that the IOM definition could be enhanced by including other minor substances that are intrinsic in plant fibers to make it more compatible with a variety of other definitions, such as those issued by Codex and AACCI.

(Response) The IOM (and Codex) definition did not address minor components such as waxes, cutin, and suberin, that are intrinsic in plant fibers. However, like lignin, waxes, cutin, and suberin are not carbohydrates that are closely associated with non-digestible carbohydrates within plants. Therefore, like lignin, these minor components are included in the amount of intact and intrinsic fibers that would be declared as dietary fiber. Newer methods, such as AOAC 2011.25, include waxes, cutin, and suberin in the measurement of non-digestible carbohydrates.

(Comment 280) Several comments said that the proposed requirement to demonstrate a physiological benefit is a drastic shift from the analytical-based approach and dietary fiber would be the only nutrient listed in the Nutrition Facts label that requires a physiological benefit. The comments said our approach contradicts with the rationale (chemical composition) for not excluding certain fatty acids (*i.e.,* stearic acid) from the definition of total fat.

(Response) We disagree with the comments. The definition for saturated fat in § 101.9(c)(2)(i) includes all fatty acids without double bonds, and the accepted analytical methods capture all of the saturated fatty acids, including stearic acid. In adopting this definition, we addressed the issue of the inclusion or exclusion of individual saturated fatty acids and determined that a chemical definition which includes all fatty acids containing no double bonds was the appropriate approach to define saturated fat (see 79 FR 11879 at 11894). The scientific evidence to recommend that saturated fatty acids provide no more than 10 percent of total calories does not exclude stearic acid. As we discussed in the preamble to the proposed rule (79 FR 11879 at 11894), the scientific evidence in the 2010 DGA to consume less than 10 percent of calories from saturated fatty acids makes no specific exclusion of stearic acid and, instead, relates to the intake of total saturated fatty acids. Therefore, the DRV that is based on 10 percent of calories includes stearic acid. The DV of 28 grams for dietary fiber is based on the AI set by the IOM for total fiber (Ref. 36). The DV reflects the IOM definition for dietary fiber which excludes those isolated or synthetic non-digestible carbohydrates that do not provide a beneficial physiological effect. Furthermore, the listing of individual nutrients based on physiological effect is not new. Soluble and insoluble dietary fibers can be voluntarily listed separately because of their distinct physiological effects.

(Comment 281) One comment that objected to the proposed definition said that the criteria for listing dietary fiber differ from the criteria used for protein. The comment said there are many sources of protein (soy protein) that are used as ingredients, but they are not reviewed individually for their health benefits.

(Response) Protein is listed because it is a major macronutrient category, as is the case for total carbohydrate. Protein contains amino acids that are essential in the diet. Dietary fiber is not essential in the diet and is listed because of its beneficial physiological effects, rather than essentiality. The DV for protein is based on providing a certain percent of calories, relative to total fat and carbohydrate, whereas the DV for dietary fiber is based chronic disease risk. Therefore, the basis for declaring protein, including protein ingredients, is not comparable to dietary fiber.

As for the comment's mention of soy protein, soy protein that is naturally

present in a food is an intact and intrinsic protein, and thus, is a protein for purposes of nutrient declaration.

(Comment 282) One comment that objected to the proposed definition of dietary fiber said that vitamins naturally present in food and those added through fortification can work effectively together to fulfill nutrient needs in the same manner that added fibers can interact with intrinsic fibers to meet the requirement.

(Response) We agree that different forms of naturally occurring and isolated or synthetic non-digestible carbohydrates that meet the dietary fiber definition can work together to assist consumers in maintaining healthy dietary practices, but this fact does not necessitate a change to the definition. The comparison of different sources of fibers to different sources of the same vitamin, as the comment suggests, is not accurate. Fibers represent a heterogeneous group of compounds, and not all isolated or synthetic non-digestible carbohydrates may provide a beneficial physiological effect.

(Comment 283) One comment said that we should base the listing of dietary fiber on physicochemical properties instead of physiological benefit. The comment would define dietary fiber as ''non-digestible soluble and insoluble carbohydrates (with 3 or more monomeric units) and lignin.'' The comment said this definition would allow any review or consideration of dietary fiber to be predicated on its physicochemical characteristics.

(Response) We disagree that the declaration of dietary fiber should be based on physicochemical properties. Although a physiochemical property, such as viscosity (degree of thickness and resistance to flow), is linked to health benefits, it is not known at what level of viscosity a dietary fiber begins to have a physiological effect (see 79 FR 11879 at 11911). Moreover, there are no scientifically valid methods available that we could use to measure the amount of various dietary fibers defined by their physicochemical properties in various food matrices, whereas scientifically valid methods to measure soluble and insoluble fiber are available.

(Comment 284) One comment stated that, instead of using the proposed dietary fiber definition, we should require the listing of soluble and insoluble fiber and conduct an education campaign to understand the difference which might prove to be more beneficial for consumers.

(Response) We disagree that soluble and insoluble fiber should be listed instead of the dietary fiber definition. Both soluble and insoluble fibers should provide a beneficial physiological effect to assist consumers in maintaining healthy dietary practices. Under § 101.9(c)(6)(i) of the final rule, soluble fiber and insoluble fiber that meet the dietary fiber definition may be declared voluntarily.

As for education campaigns, we address such issues in part II.B.1.

(Comment 285) One comment said that all insoluble non-digestible carbohydrates should meet the proposed fiber definition. The comment said that cellulose and lignin do not dissolve in water and are not digested by bacteria in the colon adding bulk to the stool for improved laxation. Furthermore, the comment said that the IOM noted that the body of evidence indicates that non-fermentable fiber sources (often isolated as insoluble fiber) promote laxation and that improved laxation is an established physiological effect that is beneficial to human health.

(Response) We agree that if the scientific evidence for a particular isolated or synthetic non-digestible carbohydrate demonstrates improved laxation, the fiber would meet the dietary fiber definition because improved laxation is a beneficial physiological effect. However, we are not able to conclude that all isolated or synthetic non-digestible carbohydrates improve laxation and therefore meet the dietary fiber definition. Cellulose is a fiber for which the science supports its role in improved laxation (Ref. 138). Therefore, we are listing cellulose in the definition of dietary fiber.

With respect to lignin, and as we stated in the preamble to the proposed rule (79 FR 11879 at 11900), all dietary fibers, with the exception of lignin, are carbohydrate polymers. Although lignin is not a carbohydrate, it is tightly bound to other dietary fibers and cannot be easily isolated using AOAC or other reliable and appropriate analytical procedures. It is, therefore, included in the declaration of dietary fiber.

(Comment 286) One comment stated that fiber-containing ingredients can have a variety of physiological effects that do not depend on whether they are characterized as intrinsic and intact or isolated and synthetic. The comment said that requiring added non-digestible carbohydrates demonstrate a physiological benefit falsely implies a nutritional superiority of fibers that have not been separated from their natural source. The comment added that such a distinction that is not factual from a food chemistry or physiological perspective. Other comments noted that the dietary fiber definition has the potential to be exclusionary and limit the benefits that consumers realize from certain fiber sources that may not meet the dietary fiber definition. One comment stated that all non-digestible carbohydrates have a physiological effect by virtue of not being digested and present in the colon. Another comment questioned why there is not a call to demonstrate physiological benefits of natural dietary fibers.

(Response) We agree that some fiber-containing ingredients may have a variety of physiological effects that do not depend on whether they are characterized as intrinsic and intact or isolated or synthetic. The presence of a fiber in the colon alone is not necessarily beneficial. While one comment did not provide an example of how non-digestible carbohydrates have a physiological effect by virtue of not being digested and present in the colon, not all measurements in a study necessarily demonstrate a physiological effect, much less a beneficial physiological effect. For example, fermentation and changes in the colonic microflora is a process rather than a physiological effect.

Moreover, unlike foods that contain only isolated or synthetic non-digestible carbohydrate as a fiber source, foods that contain intrinsic and intact fibers contain other nutrients normally found in foods, and the foods with these fibers are associated with beneficial physiological effects. Such beneficial physiological effects cannot be assumed to exist when non-digestible carbohydrates are isolated from foods and thereby separated from other nutrients found in the food. The same is true for synthetic fibers which do not have other nutrients present that are found in the food.

(Comment 287) One comment stated that isolated plant fibers are chemically identical to intrinsic fibers and have no similarity with synthetic fibers. The comment said that we should not hold isolated fibers to the same standards as synthetic fibers.

(Response) While some isolated non-digestible carbohydrates may be chemically identical or similar to the forms (including molecular weight) that occur naturally in food, the basis for isolated non-digestible carbohydrates showing a beneficial effect is not chemical composition. Isolated or synthetic fibers are similar in that they are not part of the three-dimensional plant matrix that is responsible for some physicochemical properties attributed to dietary fiber (Ref. 138) or in foods that contain other nutrients normally found in foods that may be associated with beneficial physiological effects.

(Comment 288) Some comments objecting to the proposed definition of

dietary fiber stated that consumers will not easily understand our dietary fiber and functional fiber definition, and these definitions will cause consumer confusion. One comment said that changing the declaration of dietary fiber could cause consumer confusion when a product no longer lists dietary fiber.

(Response) The comments may have misinterpreted the rule. The rule does not change the term ''dietary fiber'' on the Nutrition Facts label, nor does it use the term ''functional fiber'' on the Nutrition Facts label. Consumers generally view dietary fiber as being a beneficial nutrient (Ref. 142). Including fibers in the definition of dietary fiber that do not have a beneficial physiological effect would be misleading in that the fiber listed would not assist consumers in maintaining healthy dietary practices. Therefore, ensuring that all non-digestible carbohydrates that are declared as dietary fiber have a beneficial physiological effect will provide a consistent benchmark with respect to the types of fibers included in the declaration so that consumers can understand the relative significance of the amount of dietary fiber declared in a product in the context of a total daily diet. We expect that some dietary fiber label declarations will need to change to comply with the definition of dietary fiber. Consumers may have questions about fiber ingredients based on changes in dietary fiber declarations and will be better informed as to the dietary fiber content of a product that provides a beneficial nutrient.

(Comment 289) One comment said that our rule would prevent consumers from knowing how much fiber in many foods has been linked to a lower risk of disease and how much fiber has some ''physiological benefit'' that may be far less consequential.

(Response) While there can be a distinction between physiological benefit and lower chronic disease risk, a number of the endpoints for a physiological benefit also are surrogate endpoints for chronic disease risk (*e.g.,* fasting blood cholesterol and glucose levels, blood pressure). Furthermore, requiring that an added non-digestible carbohydrate meet the dietary fiber definition will better identify those dietary fibers that have a beneficial role in human health than the current process of declaring dietary fiber solely based on analytical methods. A dietary fiber is not necessarily limited to one physiological health benefit, and there may be multiple types of dietary fibers present in a particular food. Thus, to the extent the comment suggests the Nutrition Facts label needs to list individual dietary fibers so that consumers can match particular beneficial physiological effects with each, we disagree and consider such an approach to be unwieldy.

(Comment 290) One comment said that the proposed definition of dietary fiber, insofar as it states that non-digestible carbohydrates have a physiological effect that is beneficial to human health, will reduce the availability of high fiber products and reduce their use as ingredients. The comment said that regulatory hurdles will discourage manufacturers from innovating fiber containing products and reduce the intake of dietary fiber. Another comment stated that these ingredients are used as thickeners, bulking agents, or anti-caking agents, in addition to fiber fortification.

(Response) We agree that many non-digestible carbohydrates are added to foods for a technical effect other than as a source of dietary fiber. There are numerous non-digestible carbohydrates approved as foods additives and GRAS notifications submitted to FDA about manufacturers' determinations that certain non-digestible carbohydrates added to food provide a technical effect and are safe. The final rule does not prohibit isolated or synthetic non-digestible carbohydrates from being added to foods.

Manufacturers have a responsibility to ensure that the ingredients they use are safe and do not adulterate the food and to obtain FDA pre-market approval as appropriate. Innovative non-digestible carbohydrate-containing products have been shown to provide a variety of technical effects. If the isolated or synthetic non-digestible carbohydrate is included in the listing of fibers in the definition of dietary fiber, then the dietary fiber must be included in the declaration of declared as dietary fiber in addition to the declaration of Total Carbohydrate. If the added fiber is not included in the listing of dietary fibers in the definition, the added fiber is not a dietary fiber and must not be part of the declaration of dietary fiber; instead, the added fiber would only need to be included in the declaration of Total Carbohydrate.

(Comment 291) Some comments said that there may be a need to make significant product changes to maintain current dietary fiber label values. The comments explained that a dietary fiber that is now a significant source may no longer be a significant source if we change the definition of dietary fiber. The comments said that companies would lose their ability to make fiber claims that have been marketed for years and that significant reformulation would be needed to be eligible for claims.

(Response) We recognize that some non-digestible carbohydrates added to foods may not meet the dietary fiber definition in the final rule, resulting in a lower amount of dietary fiber being declared on the Nutrition Facts label. We also recognize that the definition may affect the number of foods that voluntarily make a nutrient content or health claim. However, we disagree that this is a sufficient basis for not requiring added non-digestible carbohydrates to meet the dietary fiber definition; the declaration of dietary fiber should assist consumers in maintaining healthy dietary practices.

(Comment 292) One comment said that the dietary fiber definition would encourage the food industry to market cookies, candies, ice cream, refined grains, and other highly processed and relatively non-nutritious foods that would compete with the fiber-rich fruits, vegetables, beans, and whole grains that are linked to a lower risk of disease.

(Response) We disagree with the comment. The comment did not provide, and we are not aware of, evidence to suggest that the dietary fiber definition would encourage the food industry to market cookies, candies, ice cream, refined grains, and other highly processed and relatively non-nutritious foods that would compete with the fiber-rich fruits, vegetables, beans, and whole grains that are linked to a lower risk of disease. Furthermore, the current process of relying solely on analytical methods does not ensure that isolated or synthetic non-digestible carbohydrates provide any beneficial physiological effect. While we do have a fortification policy in place (see § 104.20), manufacturers can and currently do add these non-digestible carbohydrates to a variety of foods that may or may not have a beneficial physiological effect. The final rule's definition of dietary fiber would prevent the declaration of isolated or synthetic non-digestible carbohydrates that have no beneficial physiological effect as dietary fiber. If there were to be a change in the marketing of snack foods, it would more likely result in a reduction of the use of isolated or synthetic non-digestible carbohydrates that do not meet the dietary fiber definition.

(Comment 293) One comment said that the definition could result in unintended consequences (*i.e.,* reduced dietary fiber intake) because only dietary fibers would be based on physiological function.

(Response) We disagree with the comment. Those dietary fibers that

occur naturally in food must be declared as dietary fiber. Information on the amount of isolated or synthetic non-digestible carbohydrates that demonstrate a beneficial physiological effect to human health can assist consumers in maintaining healthy dietary practices. While the dietary fiber declaration may need to be revised to a lower value in some foods based on the definition of dietary fiber, that does mean that consumption of the various carbohydrates will change or that consumers will not seek out other foods to achieve a desired dietary fiber intake.

(Comment 294) One comment stated that some added fibers have adverse effects (flatulence, exacerbation of irritable bowel syndrome) that outweigh their benefits.

(Response) While the comment did not provide information as to which isolated or synthetic non-digestible carbohydrates have adverse effects, the overall health implications of fibers in the context of the daily diet have been considered. While the safety of added fibers is outside the scope of this rule, we have approved many isolated or synthetic non-digestible carbohydrates as food additives, and there have been determinations that certain non-digestible carbohydrates added to food provide a technical effect and are safe. Furthermore, natural dietary fibers also can cause flatulence.

(Comment 295) One comment asked whether dietary fibers that are currently declared in the Nutrition Facts label would have to be removed until approved. The comment said we should allow industry to continue using and labeling fibers already on the market during the authorization process.

(Response) The compliance date for the final rule is 2 years after the effective date, except that the compliance date for manufacturers with less than $10 million in annual food sales is 3 years after the final rule's effective date. After the compliance date, foods must declare dietary fiber in accordance with the requirements of the final rule. Thus, if fibers are included as an ingredient in a food and do not meet the definition of dietary fiber after that date, the declaration of dietary fiber must not include those fibers. We are not aware of how many isolated or synthetic fibers may be used as an ingredient in food that we have not already evaluated and that are not already included in the definition of dietary fiber. Thus, we have no information to suggest that we would receive numerous petitions or that, if we were to receive petitions, our review would extend beyond the compliance dates.

(Comment 296) Several comments said we should allow isolated or synthetic non-digestible carbohydrates identified by other governmental organizations to meet the dietary fiber definition. The comments further stated that our isolated or synthetic non-digestible carbohydrates that meet the dietary fiber definition should be harmonized with those approved by Canada (*e.g.,* inulin) or Europe so as to not hinder trade. Some comments noted that EFSA mentions physiological endpoints such as improved bowel function, colonic fermentation, maintenance of cholesterol levels, and lowered glycemic response. Other comments said we should consider Health Canada and EFSA decisions to grandfather in our isolated or synthetic non-digestible carbohydrates that meet the dietary fiber definition.

(Response) We decline to revise the rule as suggested by the comments.

Health Canada provides a list novel fibers that are ingredients manufactured to be sources of dietary fiber and consist of carbohydrates with a DP of 3 or more that are not digested and absorbed by the small intestine. Novel fibers are synthetically produced or are obtained from natural sources which have no history of safe use as a dietary fiber or which have been processed so as to modify the properties of the fiber. Health Canada considers the following to be beneficial effects: (1) Improved laxation or regularity by increasing stool bulk; (2) reduced blood total and/or low-density lipoprotein cholesterol levels; (3) reduced post-prandial blood glucose and/or insulin levels; and (4) energy-yielding metabolites through colonic fermentation. There are distinct differences between how novel fibers are identified and our definition of dietary fiber. First, a novel fiber need only show a physiological effect, rather than a beneficial physiological effect. We do not consider energy-yielding metabolites (*e.g.,* short chain fatty acids) to be a beneficial physiological effect but rather an end product of fermentation that may result in a physiological effect that may be beneficial. Second, Health Canada does not require that all added non-digestible carbohydrates demonstrate a physiological effect. Isolated or synthetic non-digestible carbohydrates that have a history of safe use are considered to be traditional fibers rather than novel fibers and do not have to demonstrate a physiological effect. We have determined that a fiber must have beneficial physiological effects to human health to assist consumers in maintaining healthy dietary practices, consistent with section 403(q) of the FD&C Act.

As for the comments' reference to EFSA, in response to evidence submitted in a petition, EFSA conducts premarket reviews of added non-digestible carbohydrates and their role in beneficial physiological effects for health claims (claims that are similar to our structure function claims). Simply adopting isolated or synthetic non-digestible carbohydrates approved by other countries or organizations without determining if they have a beneficial physiological effect would not ensure that there is a consistent basis for an isolated or synthetic non-digestible carbohydrate meeting the definition of dietary fiber for purposes of the declaration in the Nutrition Facts label.

(ii) Mandatory Declaration

Section 403(q)(1)(D) of the FD&C Act specifies, in part, that for each serving size or other unit of measure of a food, the amount of dietary fiber must be provided. Accordingly, our preexisting regulations, at § 101.9(c)(6)(i), require the declaration of dietary fiber on the Nutrition Facts label.

In the preamble to the proposed rule (79 FR 11879 at 11910), we mentioned that the 2007 ANPRM did not ask any questions about the mandatory labeling of dietary fiber and that we received no comments on this subject. Dietary fiber is not an essential nutrient, although it has physiological effects that are beneficial to human health, such as attenuation of postprandial blood glucose concentrations, attenuation of blood cholesterol concentrations, and improved laxation. The consumption of certain dietary fibers, particularly those that are poorly fermented (*i.e.,* insoluble fiber), improve fecal bulk and laxation and ameliorate constipation, and soluble fiber plays a beneficial role in reducing the risk of heart disease (id.). Given the health benefits of dietary fiber, we did not propose any changes to our current requirement for the mandatory declaration of dietary fiber in § 101.9(6)(i).

We received no comments on this topic, and so no changes to the final rule, with respect to mandatory declaration of dietary fiber, are necessary.

With respect to the term used to declare dietary fiber content on the Nutrition Facts label, the preamble to the proposed rule (79 FR 11879 at 11910) said that the term ''dietary fiber'' has been listed on the Nutrition Facts label since 1993. Thus, we did not propose to change the current requirement to declare dietary fiber

using the term ''dietary fiber,'' as specified in § 101.9(f).

(Comment 297) One comment supported the current single disclosure of dietary fiber because, according to the comment, all fibers have a beneficial effect.

(Response) We agree that there should be a single disclosure for dietary fiber. While it is premature to know whether all isolated or synthetic non-digestible carbohydrates have a beneficial physiological effect, and therefore are a ''dietary fiber'' as defined in the final rule, the final rule does not affect the preexisting requirement to use the term ''dietary fiber.''

(Comment 298) Several comments supported a separate disclosure (*e.g.,* subcategory) of added fiber. Some comments said that consumers should know the amount of added (processed) versus natural (unprocessed) non-digestible carbohydrates in a product so that consumers who want to increase their intake of only intact fiber are able to do so. Other comments noted that the 2010 DGA stated that it is unclear whether added fibers provide the same health benefits as naturally occurring dietary fiber. Other comments said that a separate declaration of added non-digestible carbohydrates would exclude non-digestible carbohydrates that do not have a demonstrated health benefit.

One comment supporting a separate listing of added non-digestible carbohydrates stated that, although the IOM concluded that functional (added) fiber should be included in total fiber, the IOM clearly had more confidence in the benefits of foods rich in intact fiber than in the benefits of added fiber. The comment said that, in the years since the IOM report was issued, the evidence that dietary fiber lowers the risk of heart disease, diabetes, and diverticular disease continues to come from studies of people who consume foods rich in intact fiber, especially whole grains and wheat bran. The comment said that allowing labels to combine intact and added fiber misleads consumers into believing that added fiber has the same health benefits as intact fiber. The comment said we have tentatively concluded that there is little benefit for consumers in distinguishing between intact and added fiber on the Nutrition Facts label because ''both have beneficial health effects.'' However, the comment said that the two types of fiber do not necessarily have equivalent health effects, as labels would imply.

(Response) We agree that intact and intrinsic (naturally occurring) dietary fibers may have different health effects than isolated or synthetic non-digestible carbohydrates. For example, some soluble naturally occurring dietary fibers are associated with CVD risk, whereas insoluble naturally occurring dietary fiber, such as some forms of cellulose, is associated with improved laxation. However, we disagree that the differences in health effects warrant separate declarations on the Nutrition Facts label when both categories are composed of a heterogeneous group of compounds with variable health effects, all of which assist consumers to maintain healthy dietary practices. We have no basis on which we could rely, nor has the comment provided one, to separate the dietary fiber declaration in the Nutrition Facts label into two separate listings; one for intact and intrinsic fibers, and the other for isolated or synthetic non-digestible fibers that provide a physiological benefit to human health. Therefore, we disagree that the declaration of dietary fiber, as proposed, would mislead consumers, and we decline to revise the rule in response to this comment.

(iii) Analytical Methods

Under our preexisting regulations, at § 101.9(g)(2), compliance with the requirement for declaration of dietary fiber is determined using appropriate AOAC analytical methods. In the preamble to the proposed rule (79 FR 11879 at 11910), we discussed comments to the 2007 ANPRM regarding the use of analytical methods and our review of other analytical methods. We noted that while some AOAC methods, such as AOAC 985.29, 991.43 and 994.13, measure soluble and insoluble polysaccharides, lignin, higher molecular weight non-digestible oligosaccharides (DP >12), and some measure resistant starch, inulin and low molecular weight non-digestible oligosaccharides (DP <10), they do not measure all non-digestible carbohydrates with a DP <10 (id.). In contrast, newer methods (AOAC 2009.01 and AOAC 2011.25) measure all low molecular weight non-digestible carbohydrates (*i.e.,* non-digestible oligosaccharides) in addition to the higher molecular weight non-digestible carbohydrates, and we said that the newer, more inclusive AOAC methods would be more consistent with our proposed definition of dietary fiber (id.). We acknowledged, however, that there is no analytical method that can distinguish non-digestible carbohydrates that have a beneficial physiological effect from those that do not (id.).

Thus, we proposed to amend § 101.9(c)(6)(i) to indicate that dietary fiber content may be determined by subtracting the amount of non-digestible carbohydrates added during processing that do not meet the definition of dietary fiber (in proposed § 101.9(c)(6)(i)) from the value obtained using AOAC 2009.01, AOAC 2011.25 or an equivalent AOAC method of analysis as given in the ''Official Methods of Analysis of the AOAC International'' 19th Edition. If a product contains only non-digestible carbohydrates that meet the proposed definition of dietary fiber, using AOAC 2009.01, AOAC 2011.25, or an equivalent method would be sufficient to quantify the dietary fiber content of a food. However, if the product contains both dietary fiber that is included in the proposed definition (*e.g.,* naturally occurring fibers) and non-digestible carbohydrates not included in the definition (*e.g.,* synthetic fibers without a physiological effect that is beneficial to human health), neither AOAC 2009.01 or AOAC 2011.25 nor an equivalent AOAC method would accurately quantify the dietary fiber that could be declared on the Nutrition Facts label, because the determination of fiber by these methods would include the non-digestible carbohydrates that do not meet the proposed definition of dietary fiber.

To verify that the quantity of dietary fiber declared on the Nutrition Facts label includes only those fibers that meet the regulatory definition of dietary fiber, when a food contains a mixture of non-digestible carbohydrates that meet the proposed dietary fiber definition and those that do not, we also proposed, in §§ 101.9(c)(6) and (g)(10), to require manufacturers to make and keep written records to verify the amount of added non-digestible carbohydrates that do not meet the proposed definition of dietary fiber. The amount of non-digestible carbohydrate measured by AOAC 2009.01 or AOAC 2011.25 (or an equivalent AOAC method) minus the amount of added non-digestible carbohydrate which is not included in the definition of ''dietary fiber'' would reflect the amount of dietary fiber lawfully declared on the label. Only those fibers that have been determined by FDA to have a physiological effect that is beneficial to human health would be included in the definition of ''dietary fiber.''

(Comment 299) One comment stated that AOAC 2009.01 is suitable to measure low molecular weight non-digestible oligosaccharides, as well as the higher molecular weight non-digestible carbohydrates and quantitatively cover inulin and oligofructose while the older methods did not. Another comment supported acceptance of the ''all-inclusive'' methods of analysis, AACCI 32–45

(AOAC 2009.01) and AACCI 32–50 (AOAC 2011.25), as well as other equivalent and validated AACCI and AOAC Approved or Official methods. Several comments stated that AOAC 2009.01 and 2011.25 are not the only methods that can be used to measure dietary fiber. Some comments suggested that we allow for other dietary fiber analytical methods, such as AOAC 985.29, AOAC 991.43 and AOAC 2001.03. One comment would revise the rule to allow the use of alternative methods provided they have been sufficiently validated (*e.g.,* if they are noted in USP or CFR citations). The comment said that test methods may evolve to incorporate superior measurement technologies and will better keep pace with the science and understanding of dietary fiber. Several comments stated that we should allow the use of methods that measure specific non-digestible carbohydrates such as GOS, β-glucan, fructans, polydextrose, *trans* galactose oligosaccharides, and resistant starch.

(Response) The proposed rule did not specify the use of AOAC 2009.01 and AOAC 2011.25 for measuring and declaring dietary fiber. We stated that dietary fiber content may be determined by subtracting the amount of non-digestible carbohydrates added during processing that do not meet the definition of dietary fiber from the value obtained using AOAC 2009.01, AOAC 2011.25, or an equivalent method of analysis as given in the ''Official Methods of Analysis of the AOAC International, 19th Ed., 2012 (see 79 FR 11879 at 11968). The methods used must support the dietary fiber definition and therefore must measure lower molecular weight non-digestible oligosaccharides (DP 3–9) if present in a food.

(Comment 300) One comment stated that AOAC 2009.01 and 2011.25 do not capture all types of resistant starch (RS) (*e.g.,* RS4).

(Response) We agree that AOAC 2009.01 and 2011.25 do not measure all forms of RS4, such as cross-linked wheat starch (Ref. 143). In these cases, when submitting a citizen petition or a health claim petition, a more appropriate method can be identified that can measure all of the RS4.

(iv) DRV

The DRV for dietary fiber is 25 grams (§ 101.9(c)(9)). In the preamble to the proposed rule (79 FR 11879 at 11911), we noted that, in 2002, the IOM set an AI of 14 grams/1,000 kcal for ''total fiber'' and that the AI was primarily based on the intake level that was associated with the greatest reduction in the risk of CHD. Therefore, we proposed to use 14 grams/1,000 kcal as the basis for a DRV for dietary fiber and to amend § 101.9(c)(9) to set a DRV of 28 grams (14 grams/1,000 kcal × 2,000 kcal/day) for dietary fiber.

(Comment 301) Some comments supported the proposed DV (also a DRV) of 28 grams based on most recent findings by the IOM and current dietary recommendations. One comment supported increasing the DV from 25 to 28 grams after we have a better understanding of consumer and shopper dynamics.

In contrast, one comment objected to a DV of 28 grams; the comment said that the AI is based on observational data rather than clinical trial data.

(Response) We proposed the DV of 28 grams based on the current scientific evidence evaluated by the IOM. The comments objecting to a DV of 28 grams did not provide a basis on which we could rely that would cause us not to use the current DRIs provided by the IOM. The AI was set by the IOM based on three prospective cohorts that consistently demonstrated that the greatest reduction in CVD risk could be achieved when consuming 14 grams/1,000 kcal of dietary fiber. We agree that observational data alone are insufficient for evaluating the causal relationship between a nutrient and a health endpoint, such as CVD. The IOM noted that there are a large number of intervention trials on blood lipid concentrations that alter the risk of CHD (Ref. 29). In our science review of the evidence to authorize a health claim for dietary fiber-containing fruits, vegetables and grain products and CVD (§ 101.77), numerous intervention studies were cited that showed a cholesterol-lowering effect (58 FR 2552 at 2552 through 2559). Furthermore, our recent review of intervention studies on some added fibers (*e.g.,* pectin, guar gum, hydroxypropylmethylcellulose and locust bean gum) has shown a cholesterol-lowering effect (Ref. 138) Because of the available underlying evidence from intervention studies to support a cholesterol-lowering effect of dietary fibers, we disagree that a quantitative intake recommendation based on observational data related to CVD risk is inadequate for setting a DV, and the final rule sets a DRV of 28 grams for dietary fiber.

(Comment 302) Several comments supported retaining the DV of 25 grams rather than the proposed DV of 28 grams for dietary fiber. One comment stated that 28 grams is based on an AI of 14 grams/1,000 calories and is tied to calories rather than reflecting the energy needs of children and women. The comment said that recommendations to reduce calorie intake will make it more difficult to increase dietary fiber intake and to increase the DV to 28 grams will require consumers to increase their calorie intake.

(Response) We disagree with the comments' assertion that an AI based on calories is not a sufficient basis for setting the DV. There have been a number of DVs based on calories other than dietary fiber (*e.g.,* total fat and saturated fat). Furthermore, the AI was not set based on energy needs but rather on energy intake. While there may be recommendations to reduce calorie intake for some individuals, the 2010 DGA encourages consumption of fruits, vegetables and whole grains which are sources of dietary fiber.

(Comment 303) Several comments opposed a DV of 28 grams because, according to the comments, some foods that are a good source of dietary fiber would no longer qualify if the DV was set at 28 grams.

(Response) We will address, as appropriate, the impact on our other regulations that are outside the scope of this rulemaking, such as the regulations for nutrient-content claims, in separate rulemaking actions. While some foods may no longer qualify as a good source of dietary fiber, the DV is based on evidence linking dietary fiber to reduced risk of chronic disease. Therefore, this DV and nutrient-content claims based on this DV can assist consumers in maintaining healthy dietary practices.

(Comment 304) One comment opposed to setting the DV at 28 grams said that increasing the level of dietary fiber to meet the increased DV will present many technical and economic hurdles to ingredient suppliers and manufacturers. The comment said manufacturers would be deterred from developing products that help consumers close the dietary fiber intake gap.

(Response) While it is unclear how an increased DV would present technical and economic hurdles or deter the development of products, the DV of 28 grams is a quantitative intake recommendation set by the IOM (14 grams/1,000 calories) based on reducing the risk of CVD and therefore should inform the consumer on the contribution of a food to dietary fiber to assist the consumer in maintaining healthy dietary practices. Increasing the DV for dietary fiber (which may result in a corresponding reduction in the percent DV for some foods) tells the consumer how much that food contributes to the overall dietary fiber intake as part of a healthy diet.

Consumers attempting to meet a certain percent DV could increase their dietary fiber intake based on the new DV and based on the dietary fiber definition are assured that the percent DV reflects beneficial physiological effects.

(Comment 305) One comment would keep the DV at 25 grams and noted that WHO/FAO and EFSA recommend 25 grams/day as an amount needed for healthy laxation.

(Response) We disagree that a DV of 25 grams should be set based on laxation. The WHO/FAO (Ref. 144) did not provide a recommendation for dietary fiber, but stated that the recommended intake of fruits and vegetables is likely to provide greater than 25 grams/day of total dietary fiber. This amount would only reflect dietary fiber that is naturally occurring in food.

While EFSA set a Nutrient Reference Value of 25 grams/day based on laxation, EFSA also noted that there is evidence of benefit to health associated with the consumption of dietary fiber intakes greater than 25 grams/day (*e.g.,* reduced risk of CHD) (Ref. 145).

(Comment 306) One comment opposed to a DV of 28 grams stated that this value represents intact dietary fiber only because the IOM relied on evidence from studies of intact fiber to set the AI.

(Response) We disagree with the comment. The AI of 28 grams/day (14 grams/1,000 calories) set by the IOM represents total dietary fiber which includes both naturally occurring and added dietary fiber (IOM).

b. Soluble and insoluble fiber. Dietary fibers can be classified as being soluble or insoluble. Soluble fibers, such as pectin and gums, dissolve in water and are digested by the bacteria in the large intestine. Insoluble fibers, such as some forms of cellulose and lignin, do not dissolve in water and are not digested by bacteria in the large intestine, adding bulk to the stool for improved laxation.

(i) Definition

Our preexisting regulations do not define soluble or insoluble fiber. In the preamble to the proposed rule (79 FR 11879 at 11911), we explained that, because soluble and insoluble fibers are components of dietary fiber, they must meet the proposed definition of dietary fiber. Therefore, we proposed, in § 101.9(c)(6)(i)(A) and (c)(6)(i)(B), that soluble fiber and insoluble fiber, respectively, must meet the definition of dietary fiber in § 101.9(c)(6)(i).

(Comment 307) One comment said that the terms soluble and insoluble fiber did not clearly identify physiological or nutritional functions.

(Response) We agree that the terms soluble and insoluble fiber do not necessarily reflect physiological or nutrition functions. In the preamble to the proposed rule (79 FR 11879 at 11911), we considered physicochemical terms such as ''viscous'' or ''fermentable.'' The standardization of the characterization of such terms, however, has not yet occurred. Furthermore, the viscosity of a fiber does not necessarily predict fermentability, and it is not known at what level of viscosity a fiber begins to have a physiological effect. Therefore, we did not propose to change the terms soluble and insoluble fiber.

The final rule, at § 101.9(c)(6)(i)(A) and (c)(6)(i)(B), requires soluble fiber and insoluble fiber, respectively, to meet the definition of dietary fiber in § 101.9(c)(6)(i).

(ii) Voluntary Declaration

Our preexisting regulations permit, but do not require, the declaration of soluble fiber (§ 101.9(c)(6)(i)(A)) and insoluble fiber (§ 101.9(c)(6)(i)(B)) on the Nutrition Facts label. We did not propose any changes to these provisions with respect to voluntary declaration.

(Comment 308) One comment supported voluntary declaration of soluble and insoluble fiber. The comment said consumers may not know the difference between these two categories of dietary fiber.

In contrast, another comment supported mandatory declaration of soluble and insoluble fiber. The comment said that, while the IOM did not provide DRIs for each category of dietary fiber, there is a recommendation of a 3:1 ratio of insoluble fiber to soluble fiber. Furthermore, the comment said, there is little burden to measure both, consumers may make more informed choices that offer a balance of soluble and insoluble fiber, and the solubility relates to physiological benefit.

(Response) We decline to revise the rule to provide for the mandatory declaration of soluble and insoluble fiber. We are unaware of a recommended ratio for insoluble to soluble fiber intake, and, therefore, we do not know on what basis such a declaration would allow consumers to make more informed choices on an appropriate balance of soluble and insoluble fibers. However, to meet the dietary fiber definition, all non-digestible carbohydrates declared as dietary fiber should assist consumers in maintaining healthy dietary practices, regardless of the ratio of such fibers. While there is evidence to suggest that, in general, solubility relates to physiological benefit, we consider it important to evaluate the physiological benefits of individual isolated or synthetic non-digestible carbohydrates.

(iii) Analytical Methods

Our preexisting regulations, at § 101.9(g)(2), state that compliance with any declaration of soluble or insoluble fibers is to be determined using appropriate AOAC analytical methods. In the preamble to the proposed rule (79 FR 11879 at 11911), we said that there are a number of traditional AOAC methods available for measuring soluble fiber (*e.g.,* AOAC 991.43 and 993.19) and insoluble fiber (*e.g.,* AOAC 991.42 and 991.43), but that, as is the case with dietary fiber, these methods cannot measure all non-digestible carbohydrates with a DP <10. Similarly, a newer method, AOAC 2011.25, can measure low molecular weight non-digestible carbohydrates and separately measure soluble and insoluble non-digestible carbohydrates, but AOAC 2011.25 cannot distinguish soluble and insoluble non-digestible carbohydrates that have a physiological effect that is beneficial to human health from those that do not (id.).

The proposed rule would amend § 101.9(c)(6)(i)(A) and (c)(6)(i)(B) to indicate that the soluble and insoluble non-digestible carbohydrate content may be calculated by first using AOAC 2011.25, or an equivalent AOAC method of analysis. If a food contains only non-digestible carbohydrates that meet the proposed definition of dietary fiber (*e.g.,* contains naturally occurring fiber only), then AOAC 2011.25 or an equivalent AOAC method would measure the amount of soluble or insoluble fiber that can be declared on the Nutrition Facts label. If a food contains a mixture of non-digestible carbohydrates that do and do not meet the proposed dietary fiber definition, and the label of the food declares soluble or insoluble fiber content, proposed § 101.9(c)(6)(i)(A) and (c)(6)(i)(B) would require manufacturers to make and keep records to verify the amount of soluble or insoluble non-digestible carbohydrates that do not meet the proposed definition of dietary fiber that have been added to the food product during processing.

(Comment 309) Some comments said that other analytical methods (*e.g.* AOAC 991.43) are cited in a health claim regulation for soluble fiber from certain foods and risk of CHD (§ 101.81). One comment further stated that there is an opportunity to incorporate HPLC analysis to quantify the DP 3–9 fraction which previously has not been detected by the health claim-mandated method for psyllium husk.

(Response) We recognize that § 101.81(c)(G)(2)(ii) states that β-glucan soluble fiber from the whole oat and barley sources will be determined by AOAC 992.28 and that we will determine the amount of soluble fiber provided by psyllium husk by using a modification of AOAC 991.43. We intend to update this regulation in the future such that these soluble fibers would be required to be measured by methods that meet the dietary fiber definition (DP >3). However, the final rule no longer refers to AOAC methods in § 101.9(c)(6)(i), (i)(A), and (i)(B). We discuss the omission of the AOAC methods in these provisions in our response to comment 524.

(iv) DRV

Our preexisting regulations do not establish DRVs for soluble fiber or insoluble fiber. In the preamble to the proposed rule (79 FR 11879 at 11912), we explained that no DRIs were established for soluble or insoluble fiber during the IOM's evaluation of a DRI for dietary fiber, so we have no basis on which to derive an appropriate DRV. Therefore, we did not propose to set a DRV for either soluble fiber or insoluble fiber.

We did not receive any comments on a DRV for soluble or insoluble fiber. The final rule, therefore, does not establish a DRV for soluble or insoluble fiber.

(v) Caloric Value

Under our preexisting regulations, at § 101.9(c)(1)(i)(C), the caloric content of a food may be calculated by, among other methods, using the general factors of 4, 4, and 9 kcal/gram for protein, total carbohydrate less the amount of insoluble dietary fiber, and total fat, respectively. Soluble fiber, which is encompassed within ''total carbohydrate,'' is assigned a general factor of 4 kcal/gram. In the preamble to the proposed rule (79 FR 11879 at 11912), we explained how comments to the 2007 ANPRM and a citizen petition supported a caloric value of 2 kcal/gram for soluble fiber, and so we proposed to amend § 101.9(c)(1)(i)(C) to establish a general factor of 2 kcal/gram as the caloric value of soluble non-digestible carbohydrates. Insoluble non-digestible carbohydrates are not included in the caloric calculation.

We also proposed a corresponding change to the introductory text in § 101.9(c)(1)(i)(C) to reflect the caloric value of total carbohydrate based on the new caloric contribution of soluble fiber. We explained that our regulations require that the calories from total carbohydrate be calculated by using the general factor of 4 kcal/gram of carbohydrate less the amount of insoluble dietary fiber (§ 101.9(c)(1)(i)(C)) (79 FR 11879 at 11912). Because the proposed rule would establish a new definition of dietary fiber that only allows for the declaration of dietary fibers that are added to foods that we have determined to have a physiological effect that is beneficial to human health, the proposed definition of dietary fiber would exclude soluble and insoluble non-digestible carbohydrates that do not meet the proposed definition of dietary fiber. Thus, to calculate calories from soluble and insoluble non-digestible carbohydrate, the proposed factor of 2 kcal/gram and 0 kcal/gram, respectively, would apply to those soluble and insoluble non-digestible carbohydrates that both do and do not meet the proposed definition of dietary fiber. To ensure that soluble non-digestible carbohydrates that do and do not meet the proposed definition of dietary fiber are considered in the caloric contribution of total carbohydrate, such that a general factor of 2 kcal/gram is applied to these non-digestible carbohydrates, we proposed to amend § 101.9(c)(1)(i)(C) to require that calories from carbohydrate be calculated using a general factor of 4 kcal/gram of total carbohydrate less the amount of non-digestible carbohydrates, which includes soluble (2 kcal/gram) and insoluble (0 kcal/gram) non-digestible carbohydrates that do and do not meet the definition of dietary fiber. The calorie contribution of soluble non-digestible carbohydrate would be added to that sum to determine the total carbohydrate calorie contribution.

(Comment 310) Several comments agreed with a caloric value of 2 kcal/gram for soluble, non-digestible carbohydrates. Some comments, however, said the final rule should provide for exceptions when the difference in energy value would be significant and has been established by science.

(Response) We decline to revise the rule to provide for exceptions. We recognize that fermentation of fibers can yield different caloric values and that a fermentable fiber is not equivalent to a soluble fiber. We agree that exceptions could be considered for changing the caloric value of a soluble non-digestible carbohydrate when the difference in energy value is significant and when we determine that the evidence is established by science. We would need to evaluate any requests for exceptions case-by-case in a request to amend § 101.9(c)(1)(i)(C) to include the greater caloric value of the fiber in the total carbohydrate calorie amount. Thus, the final rule retains a general factor of 2 calories per gram for soluble non-digestible carbohydrates.

(Comment 311) One comment supported a caloric value of 1 kcal/gram for polydextrose. The comment said that, in 1981, FDA recognized that polydextrose has a biocalorie value of 1 kcal/gram and that the science supporting this value has been reviewed (Ref. 146).

(Response) The comment is referring to a 1981 letter from the Bureau of Foods, Division of Food and Color Additives that did not object to the caloric value of 1 kcal/gram from polydextrose. This letter was in reference to food additive petition 9A3441. We disagree that the 1981 FDA letter related to polydextrose is a basis for establishing a caloric value for polydextrose for the Nutrition Facts label. Polydextrose is a synthetic, non-digestible carbohydrate. We are establishing, in this final rule, a definition for dietary fiber that does not include polydextrose as a listed dietary fiber. Thus, polydextrose would be considered a component of total carbohydrate subject to the calculation of the value for total carbohydrate in § 101.9(c)(1)(i)(C) and not as a dietary fiber.

As for the comment's reference to a specific scientific article, the publication was a review article on studies that had evaluated the caloric contribution of polydextrose in humans and animals (Ref. 146). We have not considered all of the caloric values of individual components of total carbohydrate as part of this rule, and all are subject to § 101.9(c)(1)(i)(C) for total carbohydrate, unless otherwise specified.

6. Other Carbohydrate

Our preexisting regulations, at § 101.9(c)(6)(iv), define ''other carbohydrate'' as the difference between total carbohydrate and the sum of dietary fiber, sugars, and sugar alcohol, except that if sugar alcohol is not declared, ''other carbohydrate'' is defined as the difference between total carbohydrate and the sum of dietary fiber and sugars. Examples of ''other carbohydrate'' include starch and oligosaccharides. Our preexisting regulations, at § 101.9(c)(6)(iv), also provide for the voluntary declaration of the amount of ''other carbohydrate'' on the Nutrition Facts label.

The preamble to the proposed rule (79 FR 11879 at 11912) explained that we were reconsidering the voluntary declaration of ''Other carbohydrate'' on the Nutrition Facts label based on the factors we consider for the mandatory

and voluntary declaration. We stated that ''other carbohydrate'' represents different types of carbohydrate, and, unlike sugars and dietary fiber, carbohydrates covered under this category have no shared physiological effects and that there is no well-established evidence to support the role of particular types of carbohydrate that fall within the ''Other carbohydrate'' category, such as starch and oligosaccharides, in human health that is based on reliable and valid physiological or clinical endpoints (id.). We also noted that a quantitative intake recommendation for ''Other carbohydrate'' is not available from relevant consensus reports, and so, given the lack of public health significance or a quantitative intake recommendation for ''other carbohydrate'' as a category, we tentatively concluded that ''Other carbohydrate'' should no longer be permitted to be declared on the Nutrition Facts label (id.). Thus, the proposed rule would remove the provision that allows for the voluntary declaration of ''Other carbohydrate'' on the Nutrition Facts label, and we would make a corresponding revision to § 101.9(g)(4) and (g)(6) to remove references to ''Other carbohydrates.''

(Comment 312) Several comments supporting the removal of ''Other carbohydrate.'' Some comments agreed that there is no quantitative intake recommendation and the scientific evidence does not demonstrate public health significance. Other comments said that retaining ''Other carbohydrate'' may be confusing and that most consumers are not likely to understand what the term ''Other carbohydrate'' represents. One comment said it was not aware of any data or other factual information around consumer understanding of the term.

In contrast, some comments said we should retain the voluntary declaration of ''Other carbohydrate'' because, according to the comments, consumers use the information to determine the carbohydrate content of foods that are not attributable to sugars and dietary fiber or because removing the voluntary declaration could confuse consumers. Some comments said that the ''Other carbohydrate'' declaration allows consumers to better understand the total carbohydrates portion of the Nutrition Facts label because the various components that constitute ''Total carbohydrate'' approximates the sum when ''Other carbohydrate'' is included.

(Response) The comments did not provide data or information, nor are we aware of any, to support their view that consumers use, are confused by, or do not understand the ''Other carbohydrate'' declaration.

In any case, the declaration of ''Other carbohydrate'' was voluntary, so most products did not contain the declaration. The FDA Food Label and Package Survey (FLAPS) (2006–2007) estimated that about 4 percent of products list ''Other carbohydrate.'' As a result, consumers had limited ability to be informed about the components of total carbohydrate on most products. The contribution of ''Other carbohydrate'' can be determined by subtracting dietary fiber and sugars from the ''Total carbohydrate'' declaration. The declaration of ''Total carbohydrate,'' is mandatory, so the total carbohydrate content is available on all products that must bear a Nutrition Facts label. Consequently, the final rule removes the provision that allows for the voluntary declaration of ''Other carbohydrate'' on the Nutrition Facts label, and we also have revised § 101.9(g)(4) and (g)(6) to remove references to ''Other carbohydrates.''

I. Protein

1. Mandatory and Voluntary Declaration

Section 403(q)(1)(D) of the FD&C Act requires food labeling to bear nutrition information about protein, and so our preexisting regulations, at § 101.9(c)(7)(i), require the declaration of the amount of protein by weight and provide for voluntary declaration of the percent DV for protein on the Nutrition Facts label (§ 101.9(c)(7)(i)). In the preamble to the proposed rule, we stated that there is strong evidence, based on valid physiological and clinical endpoints, that protein is an essential nutrient that is necessary for human health and growth and that the declaration of protein content remains necessary to assist consumers in maintaining healthy dietary practices. We also stated that, because protein intake in the U.S. population continues to be adequate when compared to the EAR, absent a mandatory percent DV declaration, the declaration of protein as a percent DV should remain voluntary (id.). Consequently, we did not propose any changes to the requirement for declaration of the quantitative amount of protein and the voluntary declaration of this amount as a percent DV on the Nutrition Facts label.

(Comment 313) Several comments supported the continued mandatory declaration of protein on the label.

(Response) Because we did not propose to change the preexisting requirement to declare the amount of protein by weight, no changes to the final rule are necessary.

2. Analytical Methods

Our preexisting regulations, at § 101.9(c)(7), state that protein may be calculated on the basis of 6.25 times the nitrogen content of the food determined by the appropriate method of analysis as given in the Official Methods of Analysis of AOAC International, 15th ed. (1990), except when the official procedure for a specific food requires another factor. The preamble to the proposed rule discussed a citizen petition that asked us to consider other methods of analysis as set forth in a newer edition of the Official Methods of Analysis of AOAC International, and we agreed that we should update the version of the Official Methods of Analysis of the AOAC International that we use for compliance purposes because newer, and sometimes better, analytical methods for many nutrients are included in new or revised versions of the methods (79 FR 11879 at 11913). The proposed rule, therefore, would amend § 101.9(c)(7) to incorporate by reference the Official Methods of Analysis of the AOAC International, 19th ed. (2012) by removing ''15th Ed. (1990)'' and adding in its place ''19th Ed. (2012).''

We did not receive any comments on the AOAC methods for the determination of protein. The Official Methods of Analysis of AOAC International, 20th Edition was published in 2016. The 20th Edition includes a number of new methods of analysis as well as changes to current methods. We need additional time to consider the additions and changes, and to determine if additional public comment is necessary on the 20th Edition of the AOAC Methods of Analysis. Therefore, we are finalizing the regulation as proposed, and are incorporating the 19th Edition of the Official Methods of Analysis of the AOAC International by reference. Consequently, we have finalized § 101.9(c)(7), insofar as the AOAC methods are concerned, without change.

(Comment 314) Although we did not propose any changes to how the gram amount of protein in a serving of a food product is calculated, several comments addressed this subject. Our preexisting regulations, at § 101.9(c)(7), require that protein content be calculated using a factor of 6.25 times the nitrogen content of the food as determined by the appropriate method of analysis in the ''Official Methods of Analysis of the AOAC International'' (15th Ed.), except when the official procedure for a specific food requires another factor. We also state in § 101.9(c)(7)(ii) that the protein digestibility-corrected amino

acid score (PDCAAS) must be determined by methods given in sections 5.4.1, 7.2.1, and 8.00 in ''Protein Quality Evaluation, Report of the Joint FAO/WHO Expert Consultation on Protein Quality Evaluation,'' Rome, 1990 (which we also proposed changing the publication year to 1991; hereafter referred to as the 1991 FAO/WHO Protein Quality Report), except that when official AOAC procedures described in § 101.9(c)(7) require a specific food factor other than 6.25, that specific factor shall be used.

One comment noted that the language related to use of nitrogen to protein conversion factors in § 101.9(c)(7) and (c)(7)(ii) is inconsistent. The comment suggested that the term ''official procedure'' is vague, and the term ''food'' does not allow for the differentiation between single foods like peas, or a blend like beans and rice. The comment suggested revising both § 101.9(c)(7) and (c)(7)(ii) to say ''or if another scientifically supported factor is generally accepted.'' The comment said that this change would allow for the use of nitrogen to protein conversion factors other than 6.25 that are commonly used throughout industry. The comment noted that a number of sources have suggested that the factor of 6.25 does not reflect an accurate nitrogen level for all foods, particularly non-meat items and that other commodity-specific nitrogen-to-protein conversion factors are included in reports from USDA (Ref. 69).

(Response) We agree, in part, with the comment and disagree, in part, with the comment. We agree that the language in § 101.9(c)(7) and (c)(7)(ii) should be consistent and have revised § 101.9(c)(7) to say ''except that when official AOAC procedures described in paragraph (c)(7) require a specific factor other than 6.25, that specific factor shall be used'' and have made a corresponding edit to § 101.9(c)(7)(ii). We also agree that the generally accepted factors (*i.e.,* the Jones' factors) should be used when specified in official AOAC procedures. We decline to allow for the use of other factors for the reasons discussed in this response.

For purposes of nutrition labeling, among others, protein is estimated by determining the nitrogen content of an ingredient and multiplying it by a nitrogen-to-protein conversion factor. A number of Jones factors cited in the USDA references provided in the comment have been in use for a wide variety of foods for about 75 years. These conversion factors for calculating protein from nitrogen content for 43 foods were published in 1973 by USDA (Ref. 69). Use of Jones' factors provides a value for ''crude protein'' since the factors are derived by applying the appropriate factor to the total nitrogen present. For groups of foods for which a conversion factor is not provided, a general factor of 6.25 is used. This general conversion factor is derived from observations that many commonly occurring proteins contain about 16 percent nitrogen (*i.e.,* (100/16 = 6.25)) (Ref. 69). A single nitrogen-to-protein conversion factor may be sufficient if the aim is to indicate the amount of nitrogen present and to present it as an average protein content. In contrast, specific conversion factors rather than a single general factor provide a more accurate indication of dietary amino acids in a food (Ref. 147).

As for the comment's assertion that the word ''food'' does not allow for differentiation between single foods or a blend of foods, we disagree. Food is defined in section 201(f) of the FD&C Act as articles used for food or drink for man or other animals, chewing gum, and articles used for components of any such article. Therefore, ''food'' refers to both single-ingredient foods, such as peas, and blends such as beans and rice. We note, however, that all of the Jones' factors were determined for specific single foods and not for blends of foods as suggested in the comment (Ref. 69). We are not aware of any conversion factors that have been developed for blends of foods (*e.g.* a mixture of beans and rice).

With respect to the comment's assertion regarding other, more accurate food factors, we note that, in the 1993 Final Rule for Mandatory Nutrition Labeling, we responded to a comment requesting that food-specific conversion factors used by AOAC be allowed for calculating the PDCAAS whenever such factors are available (58 FR 2079 at 2102). The PDCAAS is an amino acid scoring procedure that takes into account digestibility of a protein. The PDCAAS provides a reasonable measure of protein quality. We acknowledged that the method for calculating PDCAAS described in the 1991 FAO/WHO Protein Quality Report specifies a conversion factor of 6.25, but agreed to allow for the use of other food-specific conversion factors when the official AOAC procedures require them (58 FR 2079 at 2102). When amending our regulations to allow for use of such conversion factors, we intended to allow for the use of food-specific conversion factors that are specified in official AOAC procedures. The conversion factors specified in official AOAC procedures are commodity-specific Jones' factors.

In recent years, a number of conversion factors have been recalculated based on the best available data, including the amino acid composition of foods rather than the nitrogen content. Conversion factors calculated from the nitrogen content provide a measure of the ''crude protein'' content (Refs. 147–152). However, the amino acid composition rather than the nitrogen content of a protein is increasingly viewed as the more important quality of a protein for nutrition purposes. This is because ''protein'' is increasingly taken to mean ''amino acids,'' which is the focus of greatest concern to those interested in human nutrition (Ref. 147). Theoretically, these newer factors may provide a more nutritionally relevant way to estimate protein quantity and quality. As discussed in our response to comment 317, other comments have raised issues related to the determination of protein for the purposes of nutrition labeling which require additional review and consideration. We need to evaluate the use of methods which include conversion factors other than those specified in official AOAC procedures to determine if they are appropriate and in context with other changes to how protein is determined for the purposes of nutrition labeling before amending the regulation. We therefore decline to allow for the use of conversion factors other than those specified in the official AOAC procedures at this time, but will continue to monitor future developments in the determination of protein and will consider amendments to our requirements for protein labeling, as appropriate.

In the future, it may be possible to accept factors other than Jones' factors if there is a description of methods used for their determination (*e.g.* complete amino acid determination) and a description of the foods to which such new factors are applicable. Because a nitrogen-to-protein conversion factor can be ''calculated'' by simply dividing 100 by the total nitrogen content of a food, it will be critical that newer factors be accompanied by publicly available documentation of the amino acid analyses by which they were developed and the specific foods to which the new factors apply. Continued use of Jones' factors other than 6.25 (*e.g.,* 5.7 for wheat, 6.38 for milk, 5.46 for peanuts and Brazil nuts, 5.18 for almonds) in AOAC Official Methods is appropriate. These factors are used in commodity-specific analytical methods which have been replicated in

numerous laboratories and, as a result, have achieved Official Method status.

(Comment 315) One comment stated that, because the regulation says that ''protein content may be calculated on the basis of the factor 6.25 times the nitrogen content of the food,'' manufacturers are using various practices in calculating protein for the labeling of foods (*e.g.,* breakfast cereal, meal replacement products, and dietary supplements) that contain protein combined with non-protein sources of nitrogen such as free amino acids and non-proteinogenic nitrogen compounds (*e.g.,* L-carnitine, creatine, D-phenalalanine, adenosine, niacinamide, etc.). Two comments recommended that we revise the rule so that the declared content of protein in grams does not include non-protein nitrogen sources and to define protein as ''a chain of amino acids connected by peptide bonds.'' One comment suggested that, if these changes are made, there are two means by which the appropriate label declaration for protein may be determined. The first is by subtracting the quantity of non-protein nitrogen sources from the total protein calculated based on the nitrogen content. The second is by measuring the total amino acids in the food and subtracting the free amino acids present. The comment acknowledged that methods for various non-protein nitrogen sources may not exist or may not be valid for a given food matrix. The comment recommended that we should give manufacturers greater flexibility to select an appropriate test method or to rely on recordkeeping to determine the quantities of non-protein nitrogen sources.

Another comment noted that § 101.36(b)(2) states that protein shall not be declared on labels of products that, other than ingredients added solely for technological reasons, contain only individual amino acids. The comment argued that this requirement does not prevent foods from containing non-amino acid nitrogen compounds as the only source of nitrogen (*e.g.,* a dietary supplement containing vitamins or nucleotides, but no amino acids) from being labeled as containing protein.

(Response) We agree with comments that the term ''may'' in § 101.9(c)(7) could be interpreted to mean that a variety of different practices could be used to determine the amount of protein in a serving of food. However, we decline to replace the term ''may'' with other terms that would require manufacturers to calculate the amount of protein in a serving of a product on the basis of 6.25 times the nitrogen content of the food, except when the official procedure requires another factor. Replacement of the term ''may'' with other terms in § 101.9(c)(7) would prevent the use of all other means of protein determination. Manufacturers are permitted to use other means, such as databases, to determine the amount of protein in a serving of their product, and the suggested change would not permit such practices. Therefore, the final rule does not prohibit the use of values derived from databases or other methods, but the protein value declared in labeling must meet the value that we obtain using our compliance criteria for the product to not be misbranded. Regardless of the means used to determine the amount of protein, a manufacturer is responsible for the accuracy and compliance of the information presented on the label. We will determine whether a product complies with § 101.9(g) by laboratory analysis.

We also agree that methods for the determination of non-protein nitrogen sources may not yet be available or may not be valid for a given food matrix. We are currently aware of such methods for milk, but not for other matrices. For example, a number of AOAC Official Methods are available, including a method for TCA-precipitated protein nitrogen in milk (AOAC Official Methods 991.20, 991.21, and 991.22). These methods have been validated for milk and are considered to be adequate to determine true protein and non-protein nitrogen in milk. It may be possible to extend these methods or to develop analogous methods for other food matrices in the future.

We disagree with the comments that we should define protein as ''a chain of amino acids connected by peptide bonds;'' such a definition is overly simplistic and would not prevent the declaration of compounds, such as di- and tri-peptides, from being declared as protein on the label.

Methods for the determination of such compounds may not be widely available. There is also no definition of protein that is generally accepted by the scientific community that could be applied to a regulatory framework. The development of validated analytical methods for the determination of non-protein nitrogen containing compounds to match a scientifically sound regulatory definition of protein will take time. Therefore, we plan to revisit the determination of protein on the label once validated analytical methods and/or a regulatory definition for protein can be established.

(Comment 316) We did not propose any changes to how the quality of a protein is determined, yet some comments addressed this subject. Our preexisting regulations, at § 101.9(c)(7), require the use of a PDCAAS for determining whether a food contains a significant amount of protein per serving and for calculating the percent DV for protein. When the protein in foods represented or purported to be for adults and children 4 or more years of age has a PDCAAS of less than 20 expressed as a percent, or when the protein in a food represented or purported to be for children greater than 1 but less than 4 years of age has a PDCAAS of less than 40 expressed as a percent, a statement must be placed on the label indicating that the food is not a significant source of protein or the percent DV for protein must be declared.

We also require, in § 101.9(c)(7)(ii), that the PDCAAS be multiplied by the actual amount of protein in grams to determine the ''corrected amount of protein (gram) per serving''. Under our preexisting regulations, at § 101.9(c)(7)(i), the corrected amount of protein per serving must then be used to calculate a percentage of the RDI or DRV for protein, as appropriate. The PDCAAS must be determined by methods given in the 1991 FAO/WHO Protein Quality Report, which is incorporated by reference in § 101.9(c)(7)(ii).

Some comments expressed support for continued use of the PDCAAS for calculation of the percent DV for protein. However, other comments recommended replacing the PDCAAS method with the Digestible Indispensable Amino Acid Score (DIAAS) in § 101.9(c)(7) because the comments believed the DIAAS to be a more accurate method of evaluating protein quality (Ref. 153). DIAAS is defined as: DIAAS percent = 100 × [(mg of digestible dietary indispensable amino acid in 1 g of the dietary protein/(mg of the same dietary indispensable amino acid in 1 g of the reference protein)] (Ref. 154). Indispensable or ''essential'' amino acids are those that the body cannot make and that can only be obtained from the diet. The comments referred to conclusions and recommendations from the FAO Expert Consultation on Dietary Protein Quality Evaluation in Human Nutrition (Ref. 154). The 2013 FAO Protein Quality Report states that for regulatory purposes, DIAAS is the recommended method for dietary protein quality assessment. A key recommendation by the FAO Expert Consultation was to replace PDCAAS with DIAAS because DIAAS more accurately reflects protein digestion and amino acid absorption compared to the single fecal crude

protein values used as part of the PDCAAS calculation. Some comments noted that the 2013 FAO Protein Quality Report states that DIAAS should optimally be based on known values of ileal amino acid digestibility for human foods, and such data are currently lacking. According to the comments, the FAO Expert Consultation suggested that, until such data become available, DIAAS values could be calculated by applying fecal crude protein digestibility values to dietary amino acid contents.

(Response) We agree that the DIAAS is an important new method of evaluating protein quality when true ileal amino acid digestibility data are used. However, we decline to replace the PDCAAS with DIAAS in the final rule because there are insufficient data available to implement the DIAAS. The digestibility of protein has traditionally been determined from fecal digestibility, which does not take into account metabolism of protein in the colon. Unabsorbed amino acids are largely metabolized by bacteria in the colon and then converted into other compounds that can be absorbed; therefore, determination of fecal digestibility may provide inaccurate measurements of amino acids absorbed from the small intestine (Refs. 153, 155–156). Digestibility measured at the terminal ileum (that is, at the end of the intestine) has been suggested by some in the scientific community (Ref. 153) to be more accurate than fecal digestibility for determination of dietary amino acid digestibility. The difference between DIAAS and PDCAAS is that true ileal amino acid digestibility for the dietary indispensable amino acids is used for the calculation of DIAAS rather than a single fecal crude protein digestibility value.

As mentioned in the comments, a key finding of the 2013 FAO Protein Quality Report is that digestibility should be based on the true ileal digestibility of each amino acid, preferably determined in humans. If collection of human data is not possible, the true ileal digestibility can be determined in growing pigs or in growing rats, in that order. However, the report noted that, after assessment of the ileal amino acid digestibility dataset, the FAO Expert Consultation concluded that currently available data are insufficient to implement true ileal amino acid digestibility in the calculation of DIAAS. Furthermore, until such time that a dataset of true ileal amino acid digestibility for human foods becomes available, the report suggested that values for fecal crude protein digestibility should be used in the calculation of DIAAS (Ref. 154).

Notes from the Sub-Committee Report (Ref. 157) express the conclusions of the Sub-Committee members that, while there is a sound scientific case for using ileal digestibility, it derives almost entirely from work with animals. Based on limitations and the nature of data currently available, a case cannot be made for changing from fecal to ileal digestibility. The Sub-Committee also concluded that, ''For an organization like the FAO representing the whole World, a change will produce confusion. Before the change is made, sufficient data on comparisons across animal species and humans are needed'' (Ref. 157). Therefore, we decline to propose to replace PDCAAS with DIAAS until such time that a database of true ileal amino acid digestibility for humans that is widely accepted by the scientific community has been developed. We will continue to monitor future developments in the evaluation of dietary protein quality, and will consider amendments to our requirements for protein labeling based on new information, as appropriate.

(Comment 317) One comment recommended replacing the scoring pattern for PDCAAS found in the 1991 FAO/WHO Protein Quality Report, which is incorporated by reference in § 101.9(c)(7)(ii), with the scoring patterns found in the 2007 WHO/FAO/UNU Report ''Protein and Amino Acid Requirements in Human Nutrition, Report of a Joint WHO/FAO/UNU Expert Consultation'' (Ref. 158). Specifically, the comment would amend § 101.9(c)(7)(ii) by removing the incorporation by reference of the determination of PDCAAS by methods in sections 5.4.1, 7.2.1, and 8.00 of the 1991 Protein Quality Report and incorporating by reference sections 6.2 and 6.3, section 8.3 (including Table 23), section 9.4.2 (including Table 36), and section 14.7 (including Tables 49 and 50) from the 2007 Protein and Amino Acid Requirements Report. Specifically, section 5.4 of the 1991 Protein Quality Report provides recommended procedures for methods for the determination of all amino acids, partial amino acid analysis, and recommendations regarding the use of published amino acid data. Section 7 of the Protein Quality Report identifies digestibility methods and provides a detailed description of the in vivo rat assay for true protein digestibility. This section also describes the composition of experimental diets to be used, rat feeding protocol, collection of food and feces, and calculations to be performed. Section 8.00 of the Protein Quality Report describes how the PDCAAS is determined, describes the analyses needed for test foods, the amino acid scoring pattern, and calculation of amino acid scores. The four sections from the 2007 Protein and Amino Acid Requirements Report include the following information: Current concerns about the PDCAAS approach (sections 6.2 through 6.3), summary of adult indispensable amino acid requirements (section 8.3), summary of indispensable amino acid requirements for older infants and children (section 9.4.2.) and summaries of requirements for various age groups (section 14.7). The comment recommended these changes because it said there have been advances in science since the 1991 FAO/WHO Protein Quality Report was published. The comment said that the 2007 Protein and Amino Acid Requirements Report provides updated adult indispensable amino acid requirements as well as corrections to the calculation of the PDCAAS for food mixtures.

(Response) We decline to amend § 101.9(c)(7)(ii) as suggested by the comment. The amendment sought by the comment would eliminate important information that identifies and describes the methods and procedures for determination of the PDCAAS, would remove the current preschool child scoring pattern used for PDCAAS, and would replace the scoring patterns with newer ones that were developed in a different manner than those in the 1991 FAO/WHO Protein Quality Report.

None of this methods-related and procedural information is included in the 2007 Protein and Amino Acid Requirements Report, including those sections mentioned specifically for inclusion (*i.e.,* sections 6.2 and 6.3, section 8.3, section 9.4.2 and section 14.7).

In addition to removing important methods-related information for the calculation of PDCAAS, replacement of the 1991 FAO/WHO Protein Quality Report with specific sections of the 2007 Protein and Amino Acid Recommendations Report would remove the current preschool child scoring pattern for the PDCAAS and replace it with an adult scoring pattern. The amino acid scoring pattern currently in use by FDA is that for the preschool child (age 2 to 5 years), as recommended in the 1991 FAO/WHO Protein Quality Report. This scoring pattern was established by FAO/WHO/UNU in 1985 for preschool children 2 to 5 years of age (''Energy and protein requirements: Report of a Joint FAO/WHO/UNU Expert Consultation'' (Ref. 159). The 1985 Report suggested separate amino acid scoring patterns for

infants, pre-school children 2 to 5 years of age, and adults, implying that protein quality varies with the age of the individual. The 1985 Report stated that protein and diets containing essential amino acids that met the greater needs of young children were also adequate for older children and adults, whereas the reverse may not be true (Ref. 159).

In 1991, the FAO/WHO Consultation evaluated the 1985 Report and recommended that the FAO/WHO/UNU amino acid scoring pattern for preschool children be used to evaluate protein quality for all age groups except infants (Ref. 160). The FAO Expert Consultation also concluded that the PDCAAS is the most suitable regulatory method for evaluating protein quality of foods (Ref. 160). We reviewed the 1991 FAO/WHO Protein Quality Report, tentatively accepted its conclusions, and proposed to require the use of PDCAAS as the method for determining protein quality for food intended for children over 1 year of age and adults in the 1991 proposed rule for Reference Daily Intakes and Daily Reference Values; Mandatory Status of Nutrition Labeling and Nutrient Content Revision (56 FR 60366 at 60370).

We responded to comments on this subject in the 1993 final rule for Mandatory Status of Nutrition Labeling and Nutrient Content Revision, Format for Nutrition Label (58 FR 2079 at 2104) and concluded that the proposed amino acid scoring pattern for preschool age children was the most suitable pattern for use in the evaluation of dietary protein quality for all age groups, except infants.

We also decline to replace the incorporation by reference of information from the 1991 FAO/WHO 1991 Protein Quality Report with the information cited in the comment from the 2007 Protein and Amino Acid Requirements Report. The use of the 2007 Report's scoring pattern for adults would provide significantly lower amounts of specific indispensable amino acids (*i.e.,* histidine, lysine, phenylalanine + tyrosine, and tryptophan) than those provided by use of the scoring pattern in the 1991 FAO/WHO Protein Report. The scoring patterns in the 2007 Protein and Amino Acid Requirements Report were based on amino acid requirement values divided by the mean protein requirement while the scoring patterns provided in the 1991 FAO/WHO Protein Quality Report were estimated by dividing amino acid requirements by what was considered a safe level of protein intake (Refs. 158, 160). Further evaluation of the two approaches used to derive scoring patterns is necessary before we can determine which approach provides a better estimation determination of protein quality. We will continue to monitor future developments in the determination of protein quality and will consider amendments to our requirements for protein labeling based on new information, as appropriate.

(Comment 318) One comment recommended that, in § 101.9(c)(7), when the protein in foods represented or purported to be for adults and children 4 or more years of age has a PDCAAS of less than 20 expressed as a percent, or when the protein in a food represented or purported to be for children older than 1 but less than 4 years of age has a PDCAAS of less than 40 expressed as a percent, the statement ''not a significant source of protein'' should be changed to ''not a source of complete protein'' for products that supply a non-trivial amount of protein but which have a low PDCAAS. The comment explained that many consumers, especially vegetarians, are familiar with the concept of complete vs. incomplete protein and, even for consumers who are unfamiliar with the concept, the statement ''not a source of complete protein'' provides notice that the food in question cannot be relied upon as the sole source of protein in the diet. (Complete proteins are those that contain all of the ''essential'' amino acids, or those amino acids that cannot be made by the body. An incomplete protein is one that is low in one or more of the essential amino acids (Ref. 161).

The comment stated that the label for a product that contains 10 grams of protein per serving (which would provide 20 percent of the DRV for adults) from low-PDCAAS proteins such as gelatin or collagen as the sole source of amino acids will often have ''10 g of protein'' declared and a ''not a significant source of protein'' declaration as well. The comment suggested that such a situation is confusing and misleading to the consumer.
